Subject: Kiln 6 Permit Modification Update

Kelly,

This email is an update on PotlatchDeltic's request to modify specific conditions in the Kiln 6 air permits. One of the requested permit modifications included the ability to dry lumber over a short-time during the summer months; however, EPA Region 10 requested a revised PM2.5 modeling analysis in their April 10, 2020 letter to PotlatchDeltic. Over the past two months we have had several follow-up conversations with Mr. Jay McAlpine on the requested modeling analysis. At this time, PotlatchDeltic is removing the request for shorter lumber drying times during the summer because of issues with trying to find a new meteorological dataset required to conduct EPA's requested modeling analysis.

PotlatchDeltic requests EPA continue to process the other requested changes that we discussed in March and early April (kiln-wide average temperature limits and updated VOC emission factors.)

Please feel free to call with any questions.
