the real price tag will surface after the vote... even the **epa** says after were done with this phase ii study we don't have sufficient data to provide a cost estimate for what it's going to cost to clean up if we did a phase iii study maybe we'd have sufficient information to make that judgment... but supporter of the arena dick campbell says there isn't a phase iii but the next step would be to create and submit a plan to clean up the toxins... he says the projected cost will cover the job... the 7.5 million that is budgeted for clean-up is more than enough is cost **us** $300,008 to clean up the haymarket ball field area that had similar toxins and so this is a brown field site this isn't a super funded clean up... the no2arena group also believes the clean up should be paid for by burlington northern not the tax payers... but the city says áit wants to buy the land.. so we'll have to clean it up.. which can't begin
