old wells. and mudloff says the old wells, which were functioning until 2005, is what made people sick..and he wants the new wells to more heavily tested. "if i knew what i know now i would have never drank the water and i would have cautioned other people not to." we do want to point out.. that's impossible to tell if the groundwater is now contaminated.. i did try calling dte rail services twice over the past couple of days to see if they've made any adjustments to ensure their workers safety. my call has not been returned. as for the epa, whitley tells me the investigation should be complete, by the beginning of summer. -----o>> three people are recovering in the hospital and two are dead this morning after

seizure's which make him twitch, memory loss and fatigue, just a few of the problems he began noticing about two years ago. mudloff worked at dte rail services, just outside of grand island for twenty years. that facility is in the same spot the old cornhusker ammunition plant was at until the early 70's. it's where the army used to manufacture different types of artillery. at one point a chemical compound was found in the ground water there. and mudloff believes that water is the reason his life has been forever altered. "i think somebody needs to make things right for the people who have been sick or will be in the future." the **environmental protection agency** is now investigating whether the water is still contaminated. i spoke with chris whitley from the epa's kansas city office on the phone. he told me it's still too soon to tell if the water is what made mudloff and several of his coworkers sick. we checked with health and human services.. they say a new well that has since been built at the sight has been tested and comes up clean..but they admit they didn't test for the chemical compound previously found in the
