Final CCL 3

EPA is including twelve pathogens on the final Candidate Contaminant List 3 (CCL 3), one more than the eleven pathogens on the Draft CCL 3. The Agency is adding Adenovirus, Enterovirus, and *Mycobacterium avium*, and is removing *Vibrio cholerae* and *Entamoeba histolytica* from the Final CCL 3 (See Exhibit 1).

The protocol EPA used to select the microbial contaminants for the Draft CCL 3 is described in detail in the February 21, 2008, notice (73 FR 9631, 9644; USEPA, 2008a). Except for a minor change in the scoring step of the microbial CCL 3 process, (see the Final CCL 3 Microbes: PCCL to CCL Process) the protocol for selecting pathogens for the final CCL 3 remains the same as the protocol for the draft CCL 3. Specifically, this step of the process for identifying the universe is unchanged from the Draft CCL 3.

CCL 3 Microbes: Identifying the Universe

The Universe process began with the list of 1,415 human pathogens compiled by Taylor et al. (2001). This list of bacteria, viruses, protozoa, helminths, and fungi was adopted upon the recommendation of the National Drinking Water Advisory Committee (NDWAC) as the starting point for the CCL 3 microbial universe. The Agency added organisms to the Taylor et al. (2001) list and updated some nomenclature. EPA acknowledges that given the dynamic nature of ongoing microbial research, any list of all human pathogens must be periodically updated to remain accurate.

1.0 Background and Scope

The Safe Drinking Water Act (SDWA), as amended in 1996, requires EPA to publish a list of contaminants that are known or anticipated to occur in public water systems and which may require regulation under the SDWA. This list is called the Contaminant Candidate List (CCL). The first CCL (CCL 1) was published in March 1998 (USEPA, 1998) and the second CCL (CCL 2) was published February 24, 2005 (USEPA, 2005).

EPA requested assistance from the National Academy of Sciences National Research Council's Water Science and Technology Board (NRC) for developing a more robust approach for identifying and prioritizing potential drinking water contaminants. The NRC formed the Committee on Drinking Water Contaminants, and the committee published their recommendations in 1999 and 2001 (NRC, 1999a; NRC, 1999b; NRC, 2001).

In September 2002, at EPA's request, NDWAC formed the CCL Classification Process workgroup to evaluate the NRC recommendations and provide advice to EPA regarding implementation of the recommendations. The NDWAC workgroup completed its deliberations and issued a report in May, 2004.

2.0 Additions to the List Compiled by Taylor et al., 2001

EPA followed NDWAC's recommendation to specifically use Taylor, et al. (2001) and literature reviews as the starting point for the Microbial CCL 3 Universe (NDWAC, 2004). As EPA reviewed Taylor et al. (2001), additional microbial contaminants were also identified. EPA looked at fungi in drinking water literature and identified 6 fungi reported to occur in drinking water distribution systems that did not appear on the Taylor list (Exhibit 1). EPA also added reovirus to the universe based on additional health effects information (Tyler, et al., 2004).

In October 2006, EPA published a notice in the *Federal Register* (USEPA, 2006) requesting chemical and microbial contaminant nominations as part of the process to identify emerging contaminants that should be considered for the CCL. Through this process, 24 microbial contaminants were nominated by the public (USEPA, 2007). Twenty-two of the microbes were already included on the CCL 3 Universe. The two additional microbes nominated were *Methylobacterium* (with two species) and mimivirus. These bacterial species, two viral groups and six fungal species were added to the microbial universe which brings the universe list to 1,425 microbes (noted with an *). The full CCL 3 microbial universe list is presented in Exhibit 2.

Appendix A: The CCL 3 Microbial Universe List

The CCL 3 Microbial Universe List

The list of 1,415 microorganisms compiled by Taylor et al. (2001) includes bacteria and rickettsia, viruses and prions, protozoa, helminths, and fungi. The the microbial nomenclature of the list represents the nomenclature used by the original author and the taxonomic understanding as of the date of publication. Due to the dynamic nature of microbial research, Appendix A is incomplete, and in a few instances inaccurate (e.g., listing a microorganism under different names). No attempt was made to correct errors in the list; and it was adopted verbatim. Additions to the list were made by EPA following solicitation of nominations from the scientific community and as the result of new information on emerging pathogens of potential relevance. The list is presented alphabetically for each of the five microbiological groups in Exhibit 2.
