

# Partnership for Clean Indoor Air

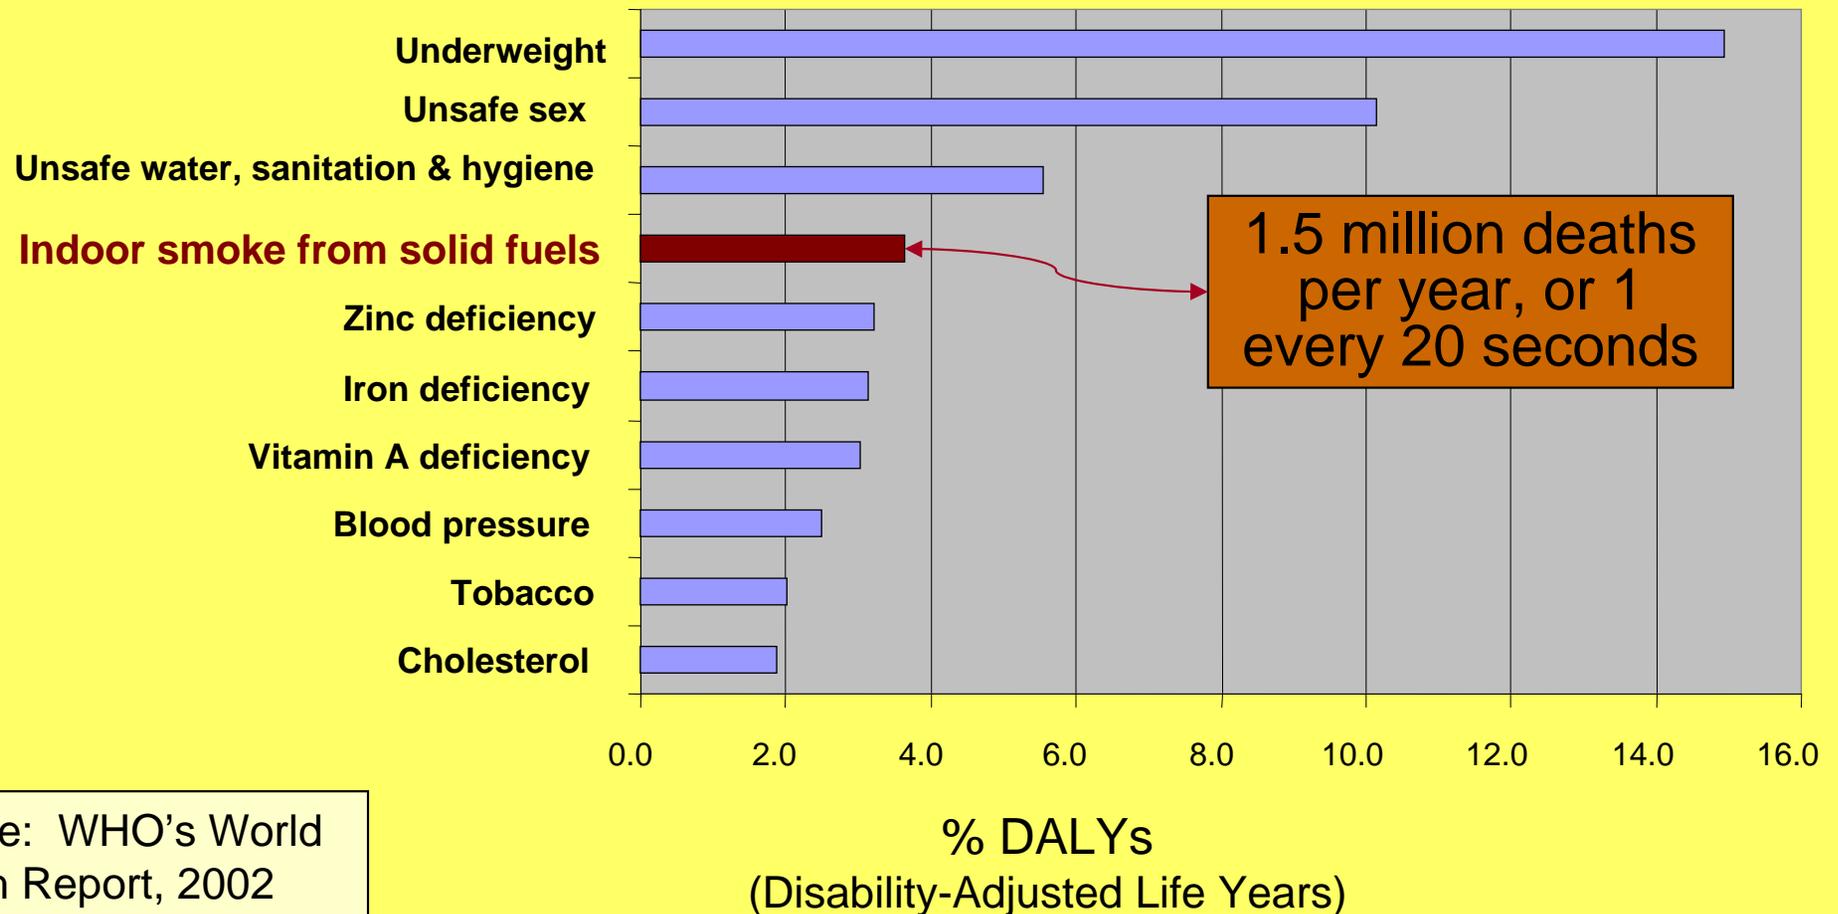

## Solving the Biggest Health Risk Factor You've Never Heard Of

Presentation for the Clean Air Act Advisory Committee  
September 20, 2007

Jacob Moss, US EPA

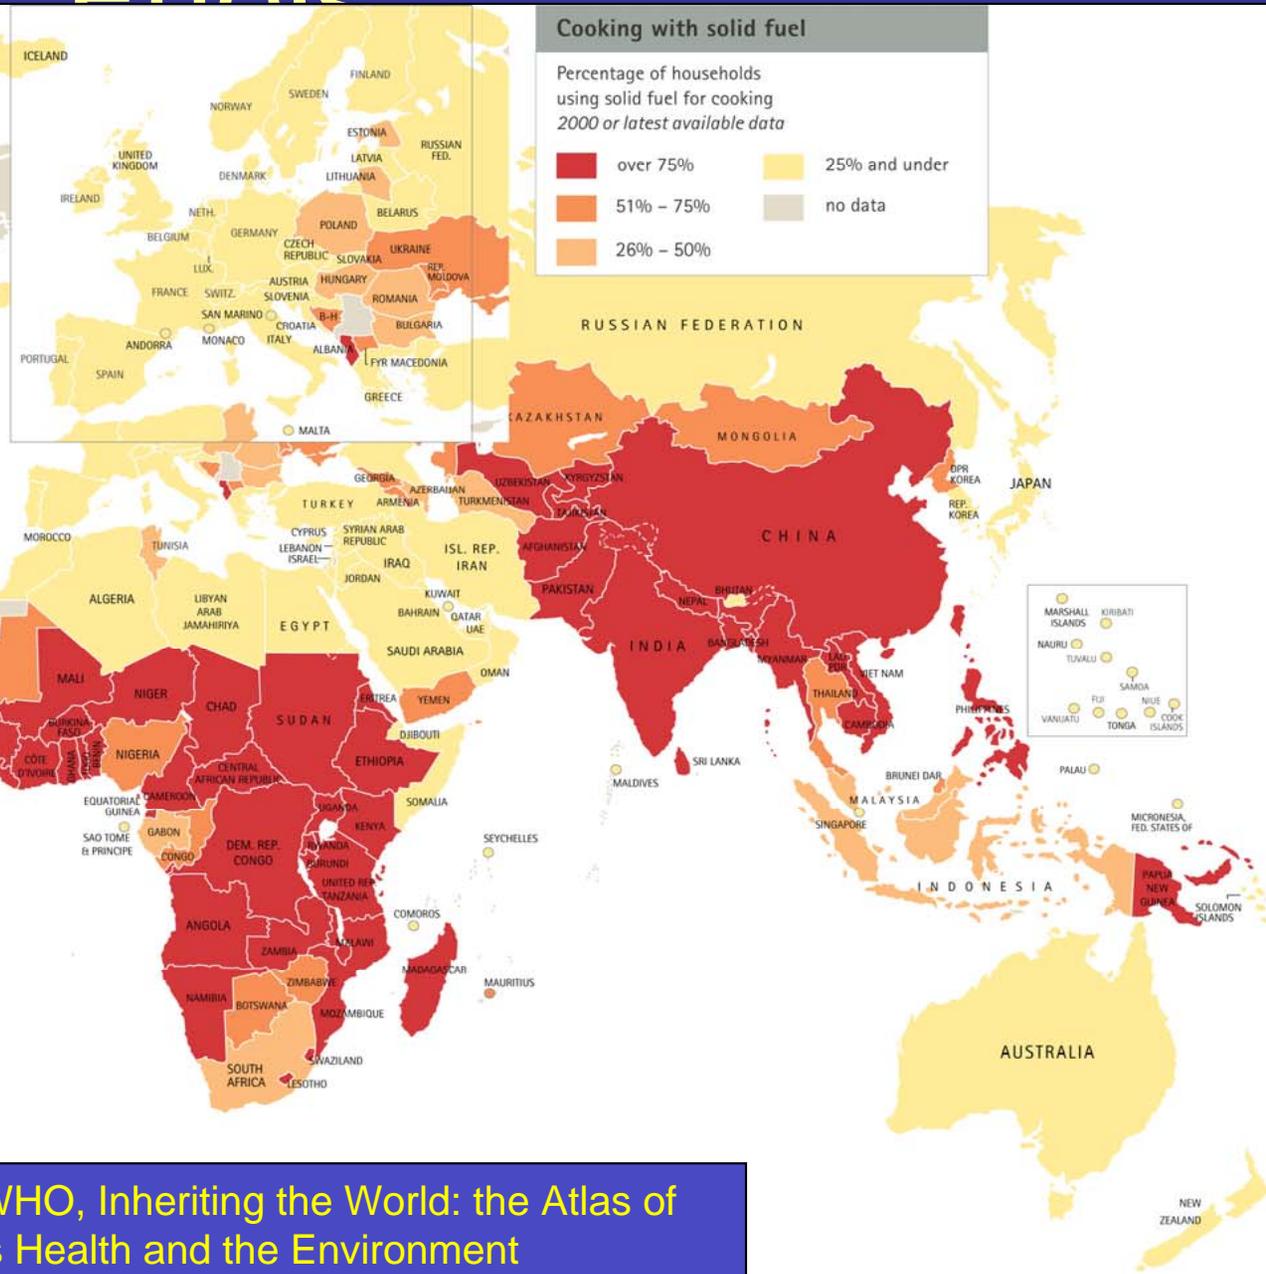

# What are the Ten Worst Health Risk Factors in Poor Developing Countries?

Indoor Smoke is the 4<sup>th</sup> Worst Health Risk Factor in Poor Developing Countries

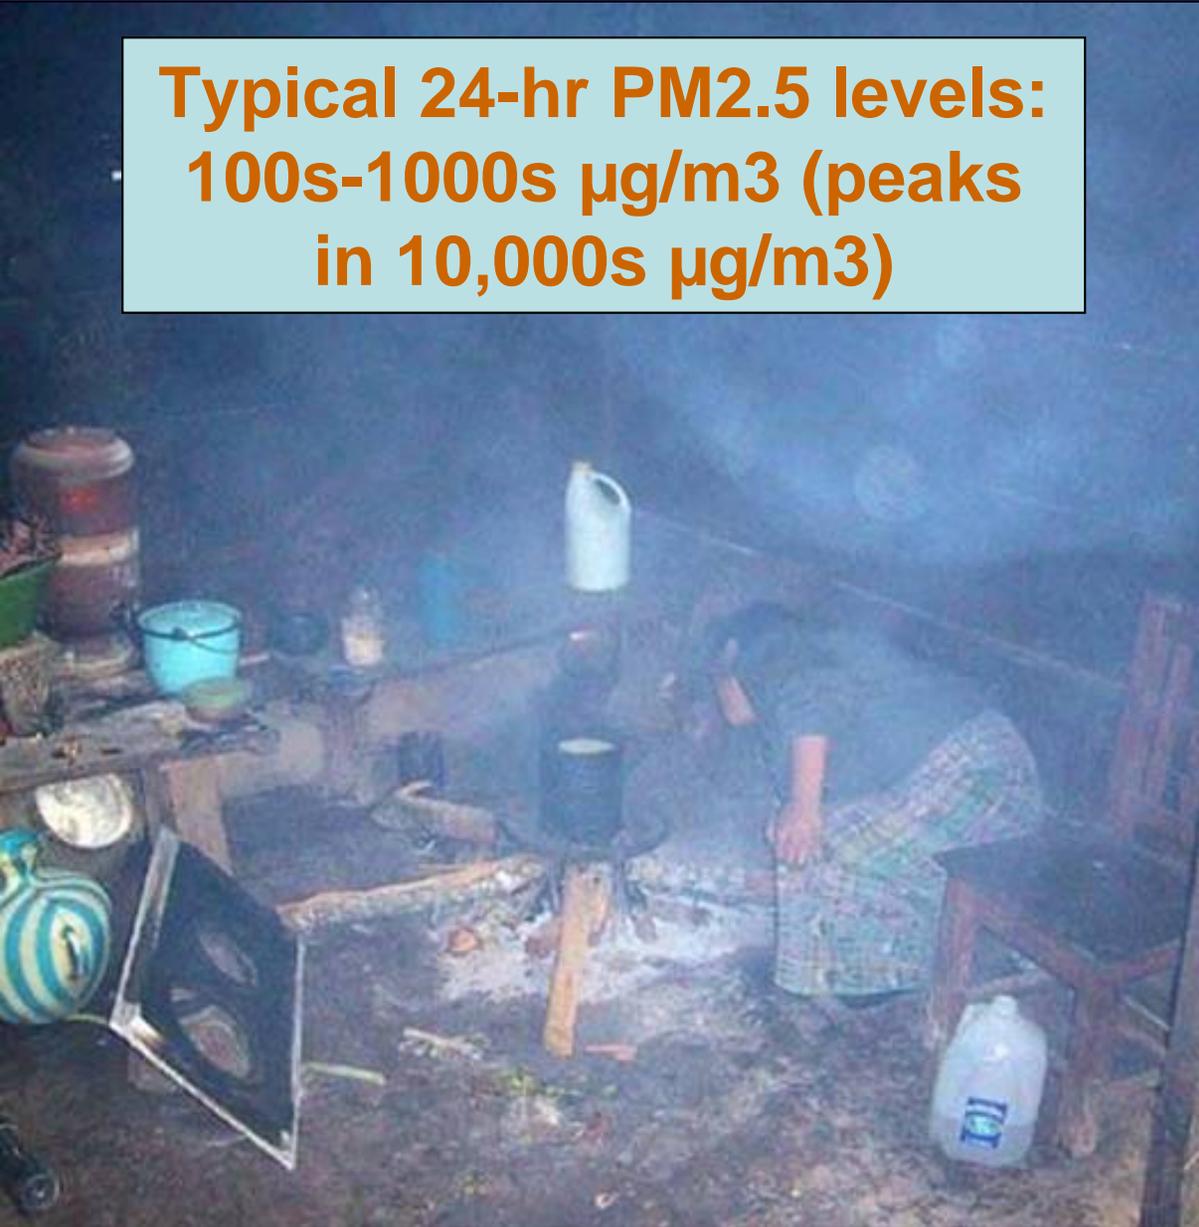

# Half the World Cooks with Solid Fuel

## Indoor Smoke: Breaking Down Respiratory Defences

# Indoor Smoke from Cook Stoves

**Typical 24-hr PM<sub>2.5</sub> levels:  
100s-1000s  $\mu\text{g}/\text{m}^3$  (peaks  
in 10,000s  $\mu\text{g}/\text{m}^3$ )**

Traditional stoves fueled by biomass, coal, dung, etc. are very poor combustors.

A complex mix of pollutants, incl.:

- PM<sub>2.5</sub>, CO, NO<sub>2</sub>
- Toxics such as formaldehyde, benzene, 1-3 butadiene, toluene, styrene, etc.
- Polyaromatic hydrocarbons
- For coal: SO<sub>2</sub>, As, Pb, Hg, & F.

WHO: Over 80% of global PM exposure is indoors in developing world.

# Solutions: Moving up Energy Ladder

Dun  
g

Wood & Crop  
Residues

Charcoal

Liquid Fuels

Gaseous Fuels

**The transition to clean fuels and stoves is not typically incremental – most cooks continue to use traditional stoves and fuels, even as they start to invest in cleaner options.**

# Household Energy/Indoor Air Pollution: *a seemingly simple issue*

China

Uganda

Guatemala  
a

**Improved cooking stoves are typically over 50% more efficient.**

**Improved cooking stoves typically reduce emissions by 50-90%.**

**This is still not clean.**

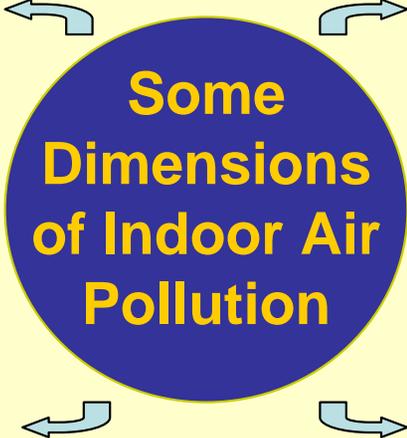

# Household Energy/Indoor Air Pollution: *an incredibly complex issue*

## Health

- Our understanding of many of the health impacts is weak.
- How does this risk compare to other health risks?
- Are interventions effective?
- What is the cost/life saved?

## Technology

- Clean stoves in lab do not always yield results in field.
- What is a “clean” stove or fuel? Now vs. in future?
- Improved stoves often look very similar to poor stoves.
- Life-cycle fuel studies

## Some Dimensions of Indoor Air Pollution

## Commercial-Scale Solutions

- Sustainable, large-scale solutions must be enterprise-based.
- How can stove/fuel businesses serve the scale of this problem?
- How can clean stove and fuel

## Social Issues

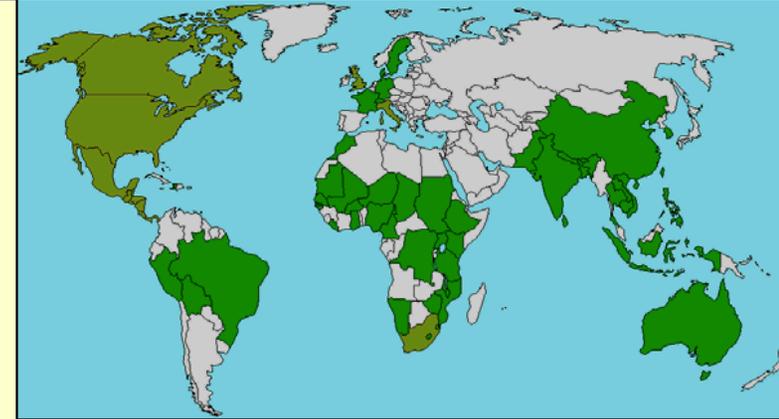

- Cooking practices are driven by local customs and needs.
- Social factors include: local foods, available fuels, traditional stoves, gender roles, ventilation customs
- Solutions depend upon

needed.

behavior.

# About the Partnership for Clean Indoor Air (PCIA)

- PCIA Launch: World Summit on Sustainable Development
- USG Funding: ~\$7M total from FY2003-2007 (budget, staff, travel, etc.); leveraging significant additional resources
- Activities to Date:
  - pilot projects, biennial forums, networking and advocacy, tools and resources, website, quarterly bulletins, stove testing
  - capacity building: stove design & performance, monitoring & evaluations, commercializing enterprises, social marketing

In 5 years, PCIA has grown from 10 to 140 partners, working in 60+ countries.

# PCIA Stove Testing (EPA/ORD)

Stoves tested:

A: 3-stone fire

B: Ecostove

C: VITA

D: UCODEA charcoal

E: WFP rocket

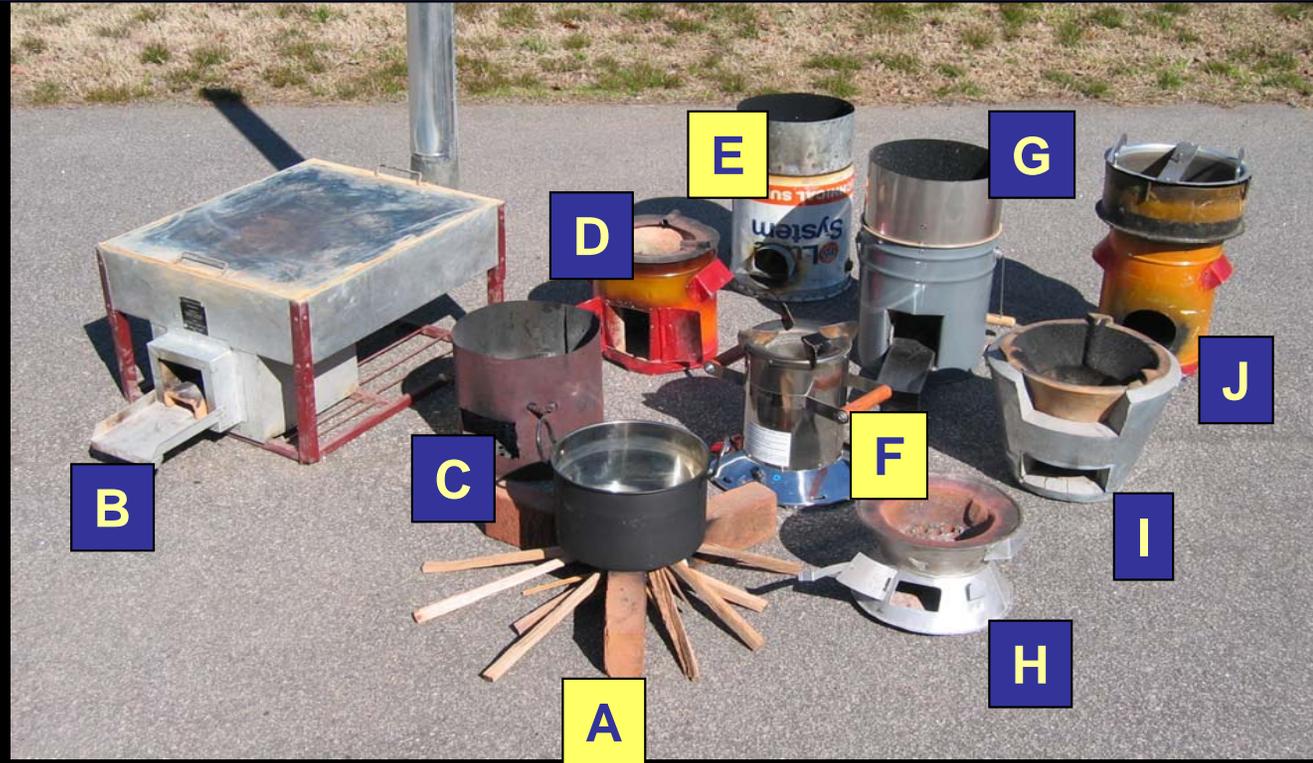

F: Philips

G: 6-brick rocket stove

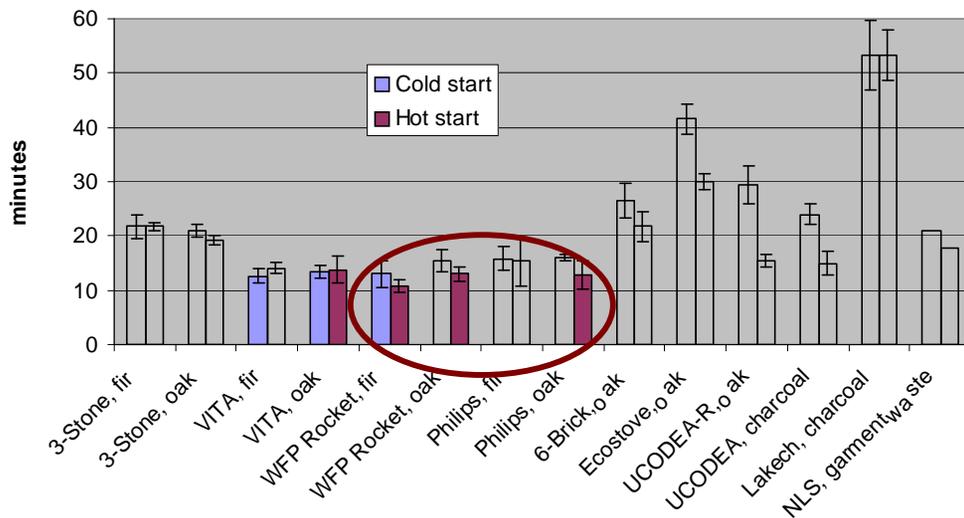

H: Lakech charcoal

I: NLS

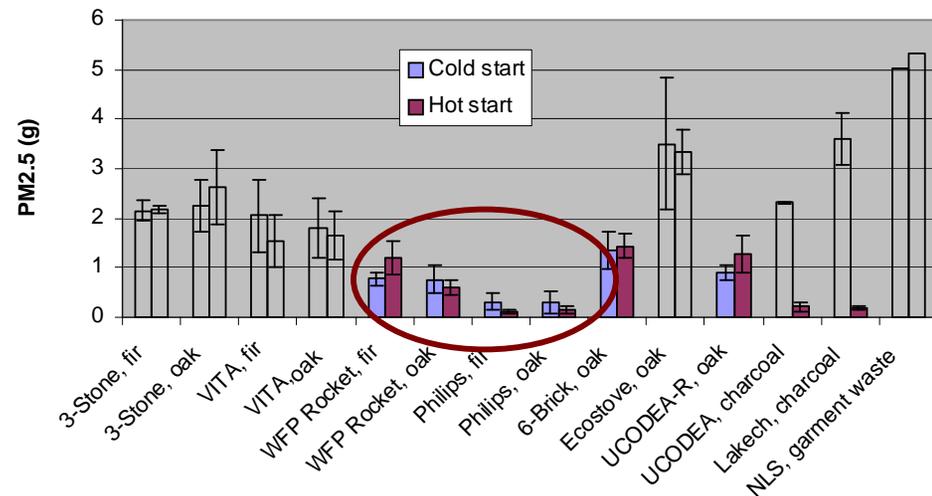

J: UCODEA rocket

Time to Boil

PM2.5 Emissions, High Power

# Results of 10 PCIA Pilot Projects

USG investment of \$1.2 million resulted in:

- 1.5 million households educated about IAP
- 76,000 homes using clean & fuel-efficient practices
- 700(?) new small businesses producing & marketing improved technologies
- Over 320,000 people with reduced exposure to indoor smoke

Overall cost =

< \$4 per person

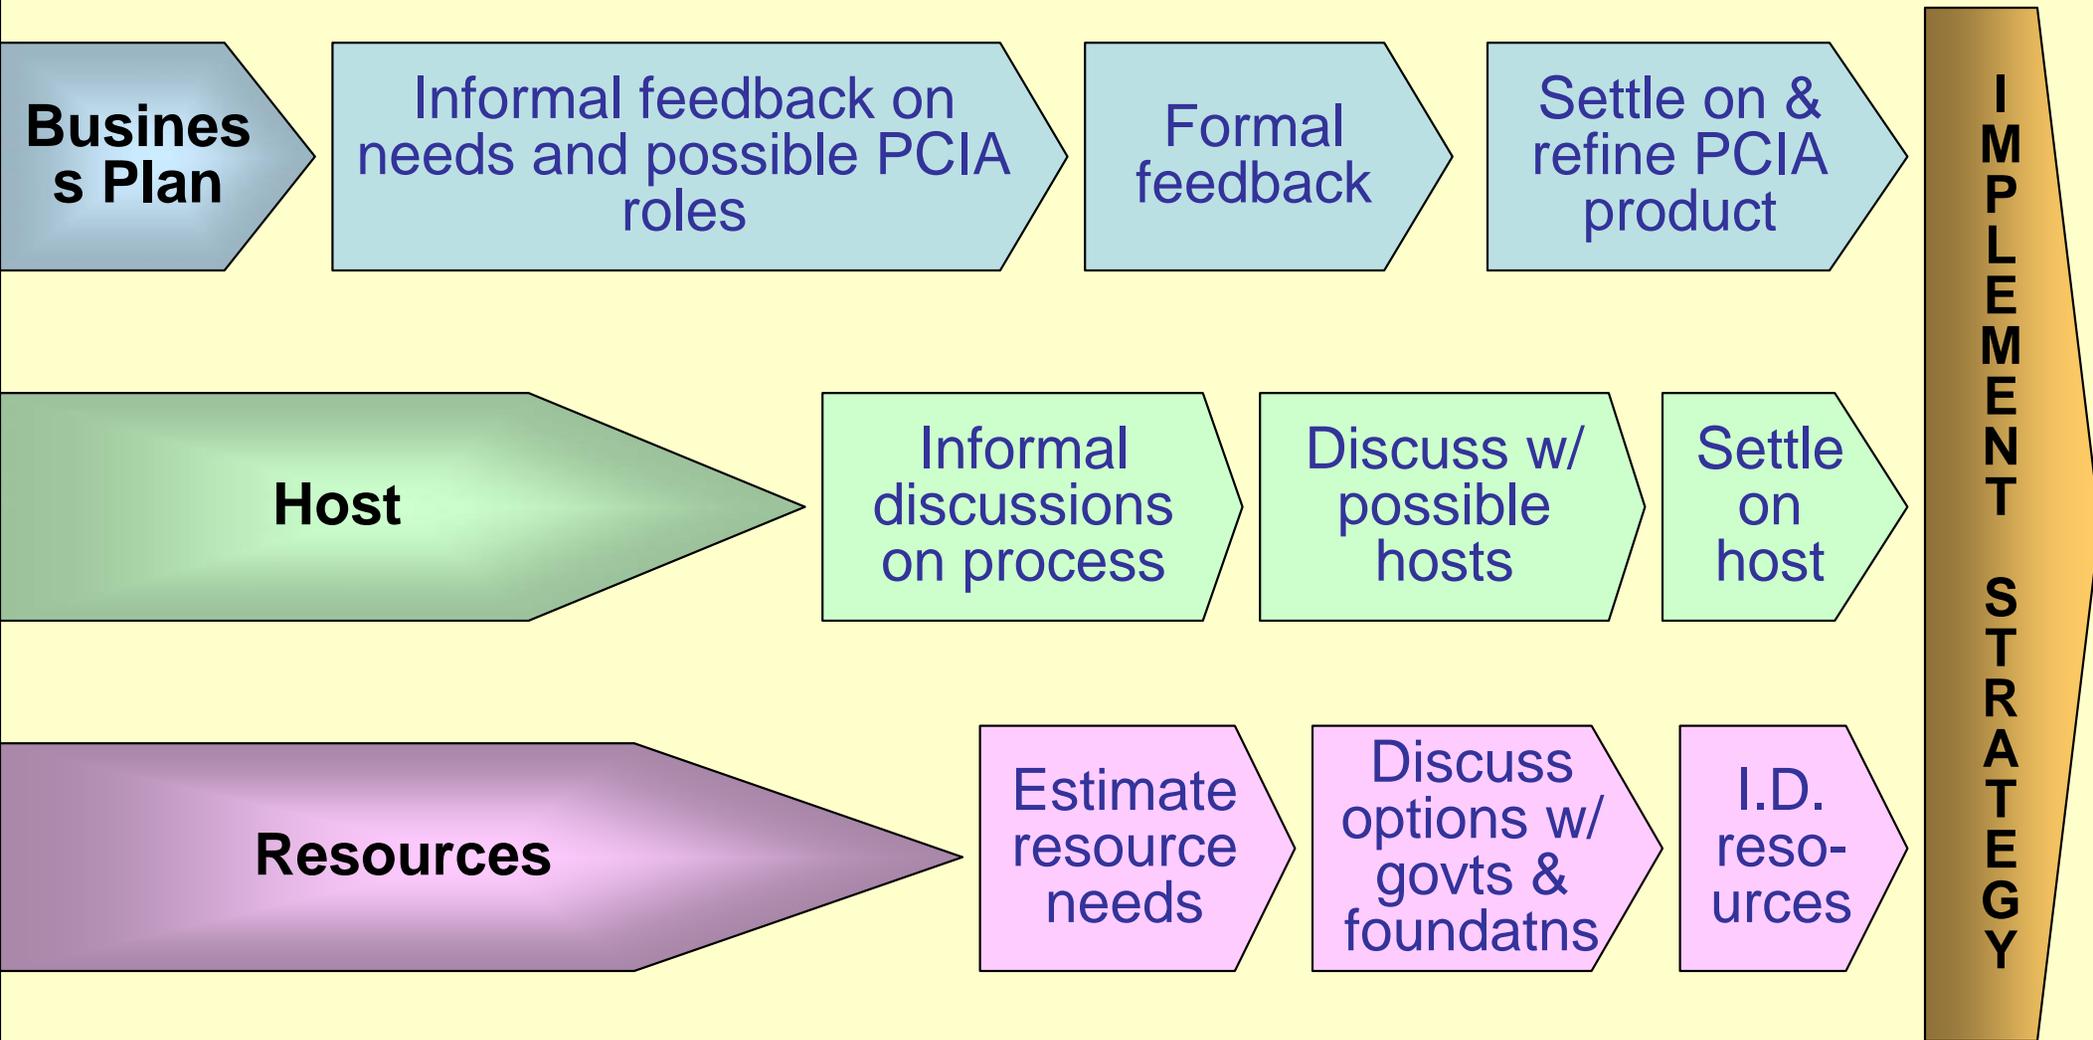

# Progress and Goals Reported at PCIA Forum Last March

	<b># Homes with Clean Stoves</b>	<b># People Affected</b>
<b>Target Population</b>	<b>231 million</b>	<b>&gt; 1 billion</b>
<b>Results: 2003-6</b>	<b>1.3 million</b>	<b>~6 million</b>
<b>Goal: 1 Year</b>	<b>~1.4 million</b>	<b>~6.7 million</b>
<b>Goal: 2-3 Years</b>	<b>~6.5 million</b>	<b>~31 million</b>

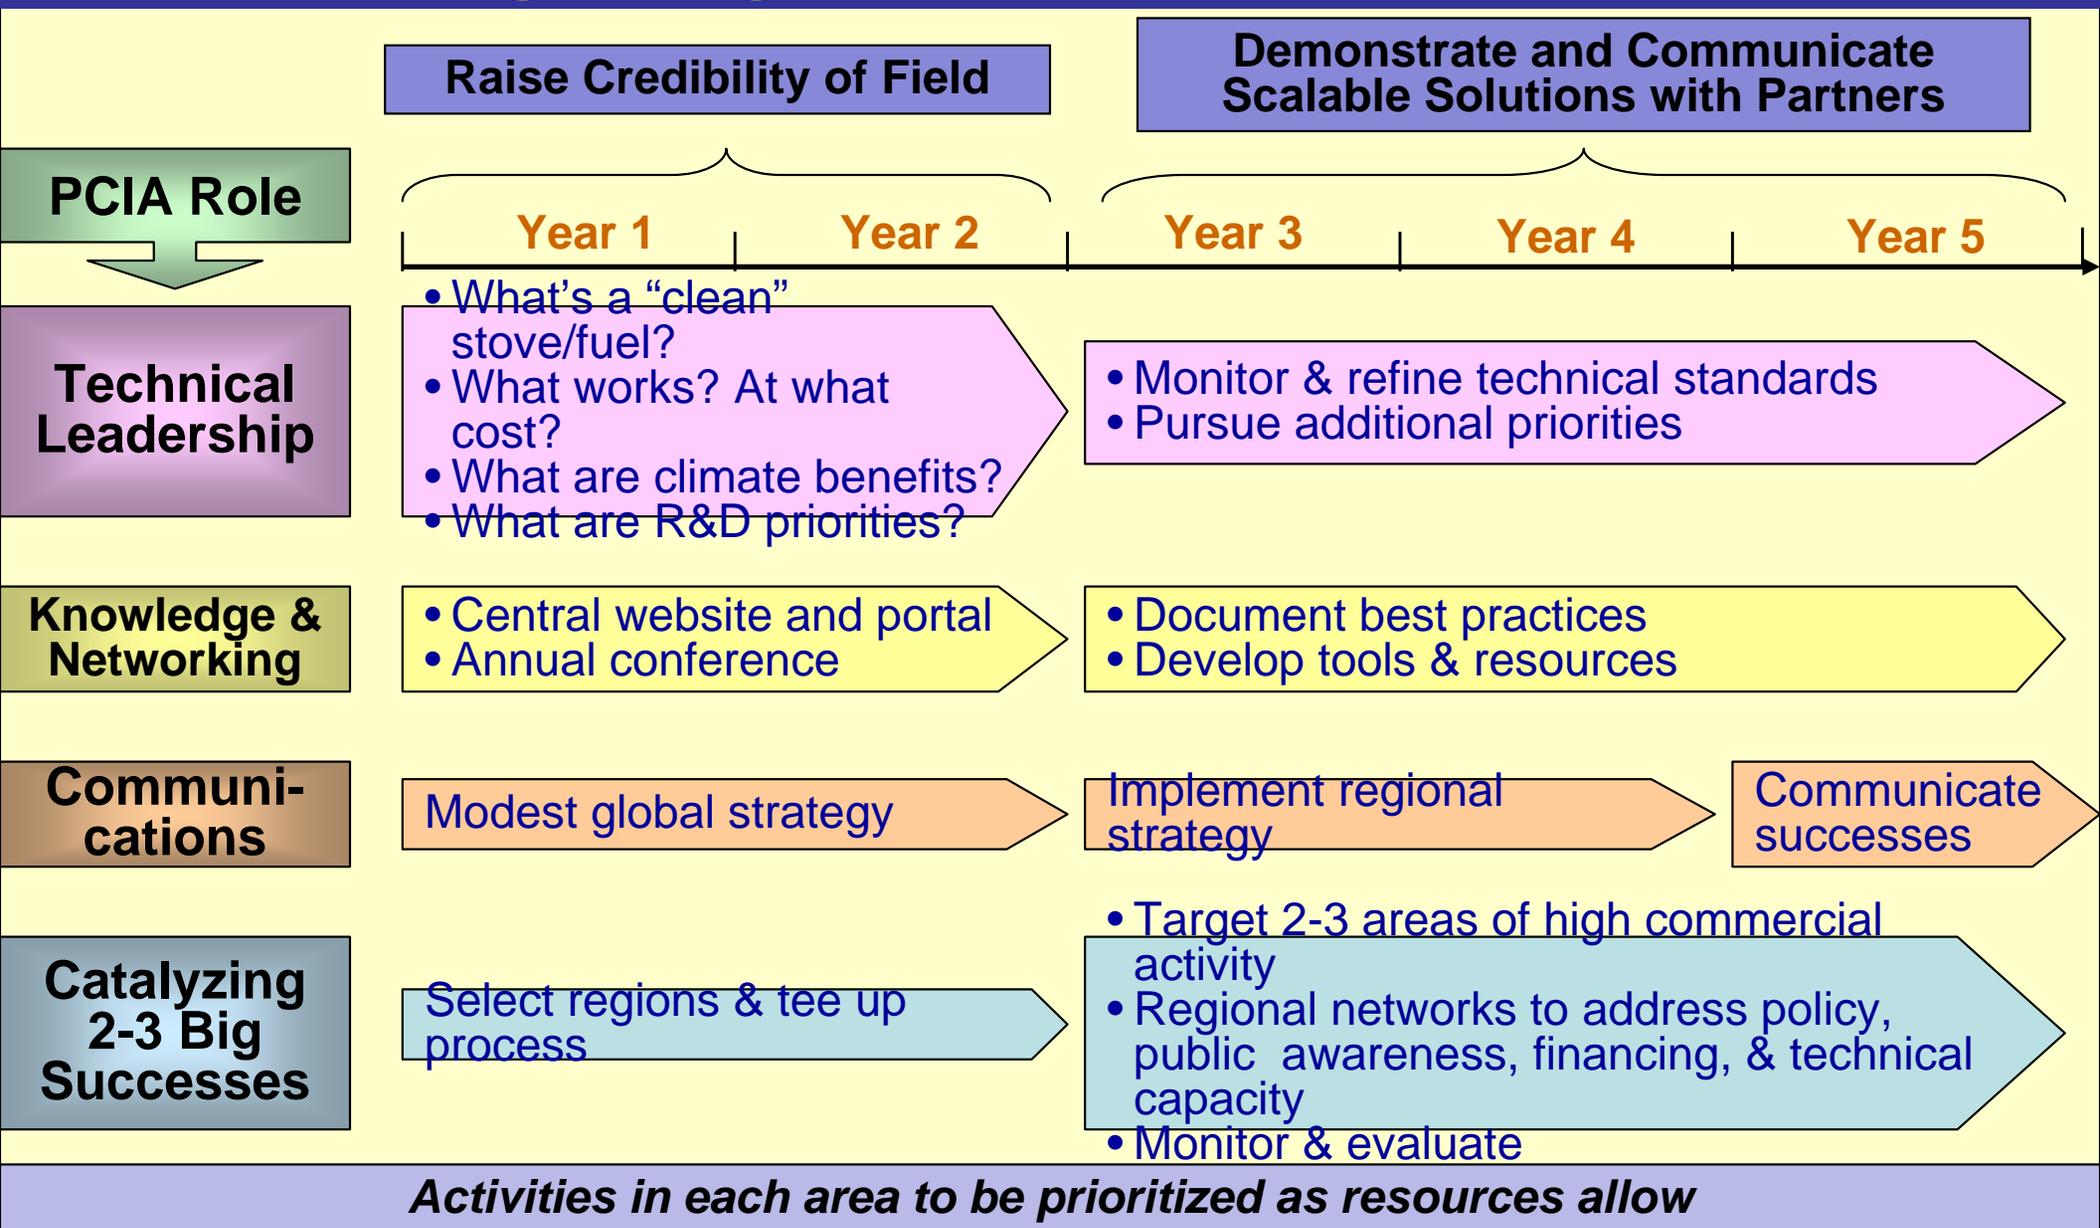

Figures based on reports from 34 organizations at the 3<sup>rd</sup> Biennial PCIA Forum ( Bangalore, India – March 2007)

# PCIA

**Question:** *How can government can incubate a sustainable development initiative, and then re-launch it as a bigger, independent, & sustainably funded entity?*

# Emerging Vision for PCIA

# Concept Behind *Catalyzing 2-3 Big Successes*: Aligning all Actors in Region to Demonstrate Scalable Solutions

**Enterprises**  
 major corporations, domestic supply chains (layer on stoves), domestic stove manufacturers

+

**Regional Networks**  
 private sector, govts, multilateral, NGO, donor,...

↓

Technical Demands
Set national or regional, stove/fuel stds or labels
Establish regional stove testing labs
Capacity building/training
Broad R&D if possible
<i>PCIA, donors, universities, NGOs</i>

↓

Government Policy
Macro: MDG goals, PRSP, white papers
National Policies: stds, economic, agriculture, health, energy, enviro...
Regional Policies...
<i>multilaterals, PCIA, governments</i>

↓

Financing Tools
For profit centers in stoves/fuel supply
Stove/fuel enterprises (manufacture, retail,...)
Women's businesses
Purchase of stove/fuel?
<i>banks, finance, multilaterals</i>

↓

Awareness Campaign
Radio, TV, print, other...
Regional, national, local
Govt: health, education
NGO networks
Advertising
<i>governments, NGOs, private sector, PCIA</i>

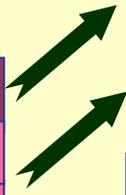

↓ ↓ ↓

Monitoring & Evaluation
# of Households Using Clean Stoves/Fuels
Exposure (e.g., pollutants, timeframe)
Environmental (e.g., efficiency, fuels, climate)
Economic (e.g., time, illness, lost work days)
Monitor at: installation, +6 months, +1 year, +3 years
<i>private sector, NGOs, PCIA, independent organizations</i>

**Iterate and Demonstrate Successful Models at Scale**

↓ ↓ ↓

Communications
Professional strategy
Let world know of success
Use to catalyze major global effort
<i>PCIA, donors, + all partners</i>

# Organizations That Have Expressed an Interest in Hosting PCIA

## Universities

- UC/Berkeley
- Columbia University
- Colorado State Univ.
- Univ. of Maryland
- Univ. of Wisconsin
- Univ. of Liverpool

## Other Orgs

- NAS/NRC
- Global Village Energy Partnership International
- Global Environment & Technology Foundation
- WHO
- TERI

# The Time is Ripe for PCIA to Lead a Quantum Leap for this Field

## **Broad Mission:**

- IAP intersects many development priorities, including energy, poverty, children's health, gender, & climate.
- IAP has received far less attention

***PCIA addresses a major cross-cutting and under-addressed health risk.***

## **Commercial Scale:**

- Only market-based solutions can access sufficient capital to address this issue at a meaningful scale.
- The private sector needs to partner with several sectors to reach scale.

***PCIA networks can help enable sustainable and scalable commercial solutions.***

## **Is the Field at a Tipping Point?**

- Leading donors are ramping up efforts.
- Major corporations are investing.
- Climate change is causing global environmental awareness to peak.

***It is a particularly ripe and important time to enter and catalyze this field.***

## **Leadership:**

- This is little agreement among leaders in this field on what works.
- Most orgs are working independently.
- A need exists to convene and

***It is a rare opportunity to lead solutions to such a critical global health risk.***

# Discussion Questions

1. Do you have any advice on the PCIA process or strategic vision I have outlined?
  - What's strong and likely to succeed in this vision?
  - What's missing from this vision?
2. Do you have any suggestions of possible hosts or funders for the re-launched PCIA?
3. How can CAAAC or its members support the goals of an independent PCIA?

# Thank You

Jacob Moss

# Appendices

# Urban Air Quality & PM in the U.S.

Chicago, IL: August 16, 2000

$PM_{10} \approx 18 \mu\text{g}/\text{m}^3$

$PM_{2.5} < 10 \mu\text{g}/\text{m}^3$

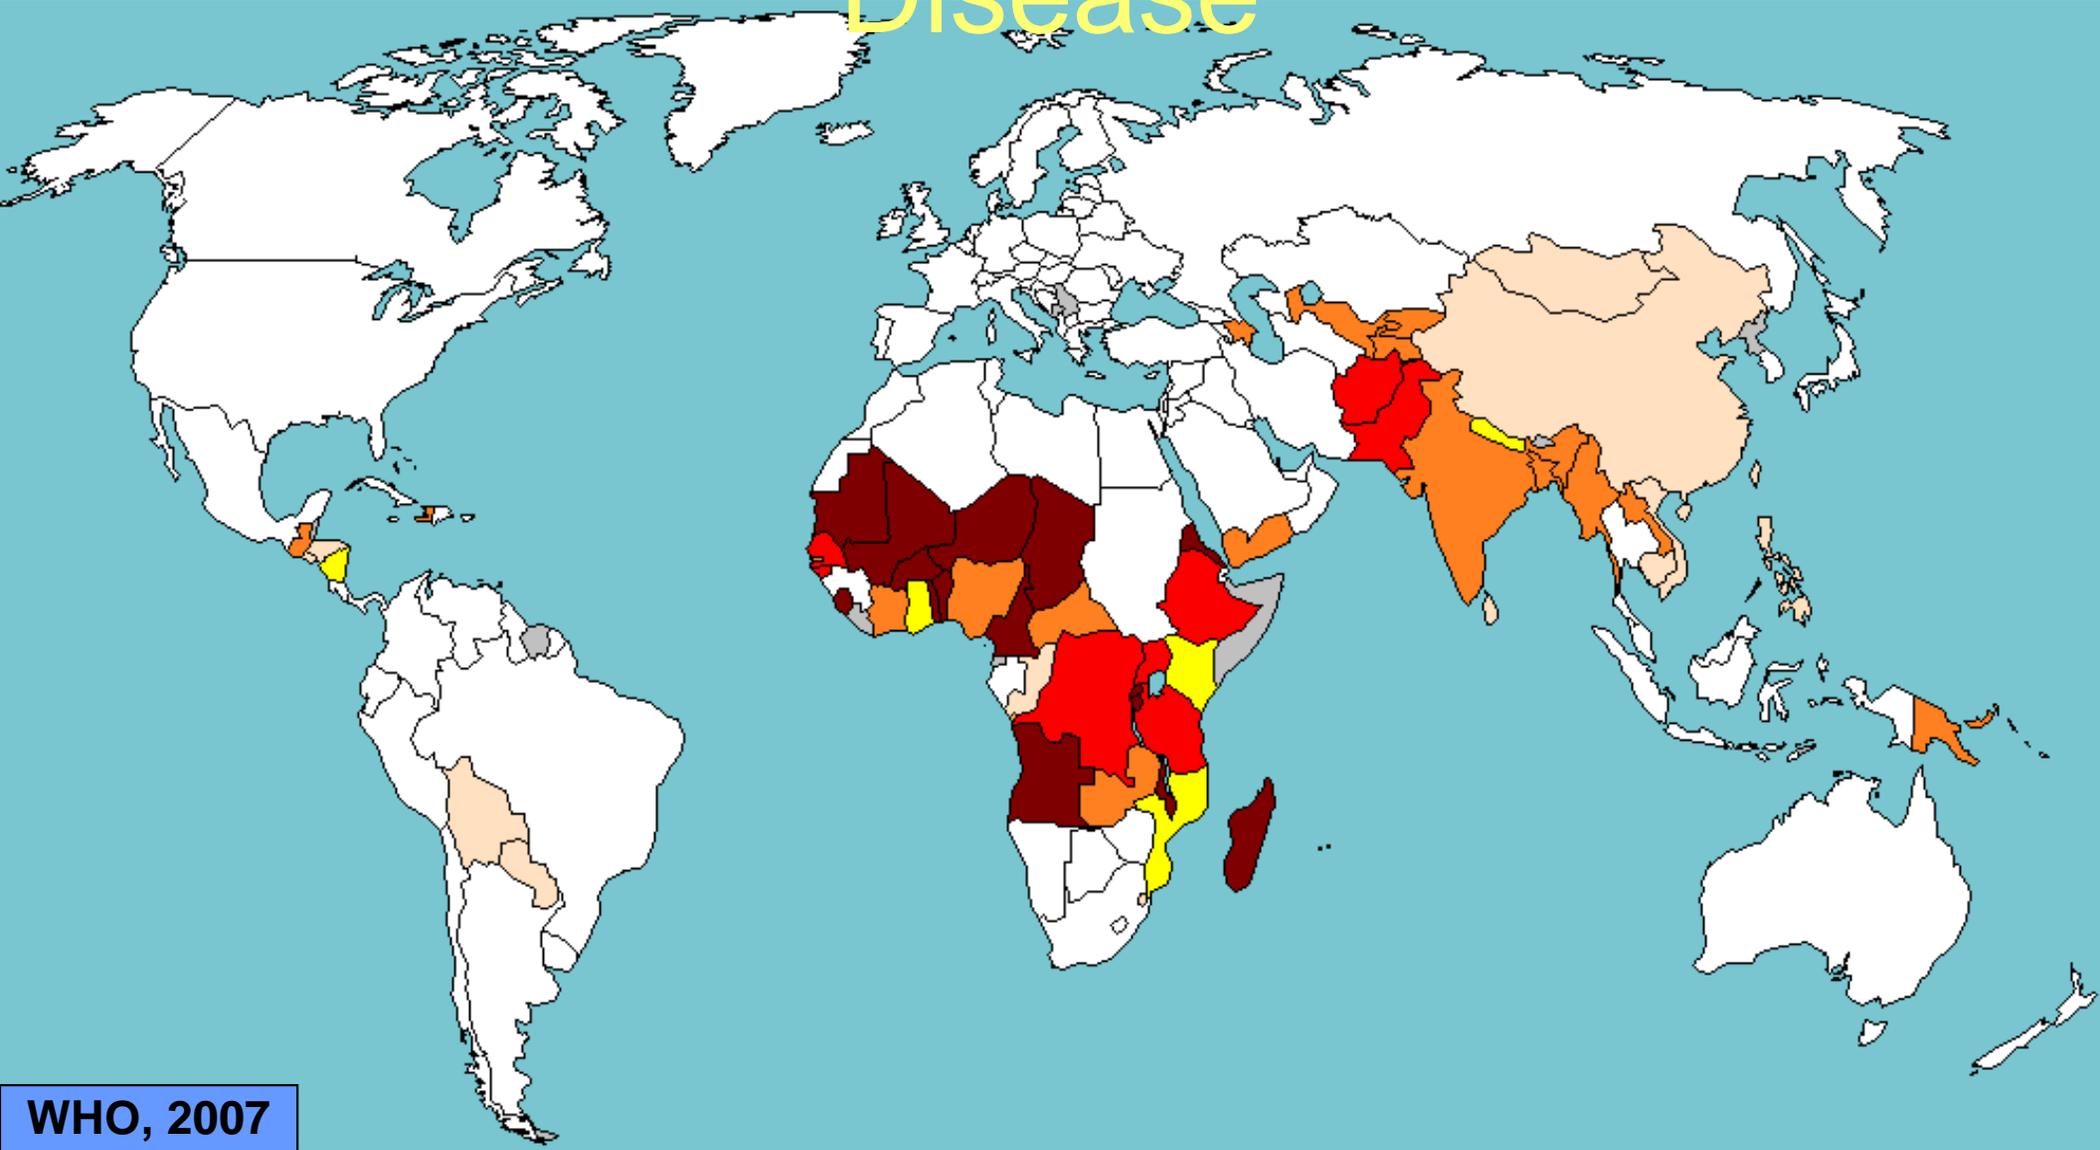

Chicago, IL: August 26, 2000

$PM_{10} \approx 63 \mu\text{g}/\text{m}^3$

$PM_{2.5} = 34 \mu\text{g}/\text{m}^3$

	Annual Standard		24-hour Standard	
	EPA	WHO	EPA	WHO
$PM_{10}$	Revoked	$20.0 \mu\text{g}/\text{m}^3$	$150 \mu\text{g}/\text{m}^3$	$50.0 \mu\text{g}/\text{m}^3$
$PM_{2.5}$	$15.0 \mu\text{g}/\text{m}^3$	$10.0 \mu\text{g}/\text{m}^3$	$35 \mu\text{g}/\text{m}^3$	$25.0 \mu\text{g}/\text{m}^3$

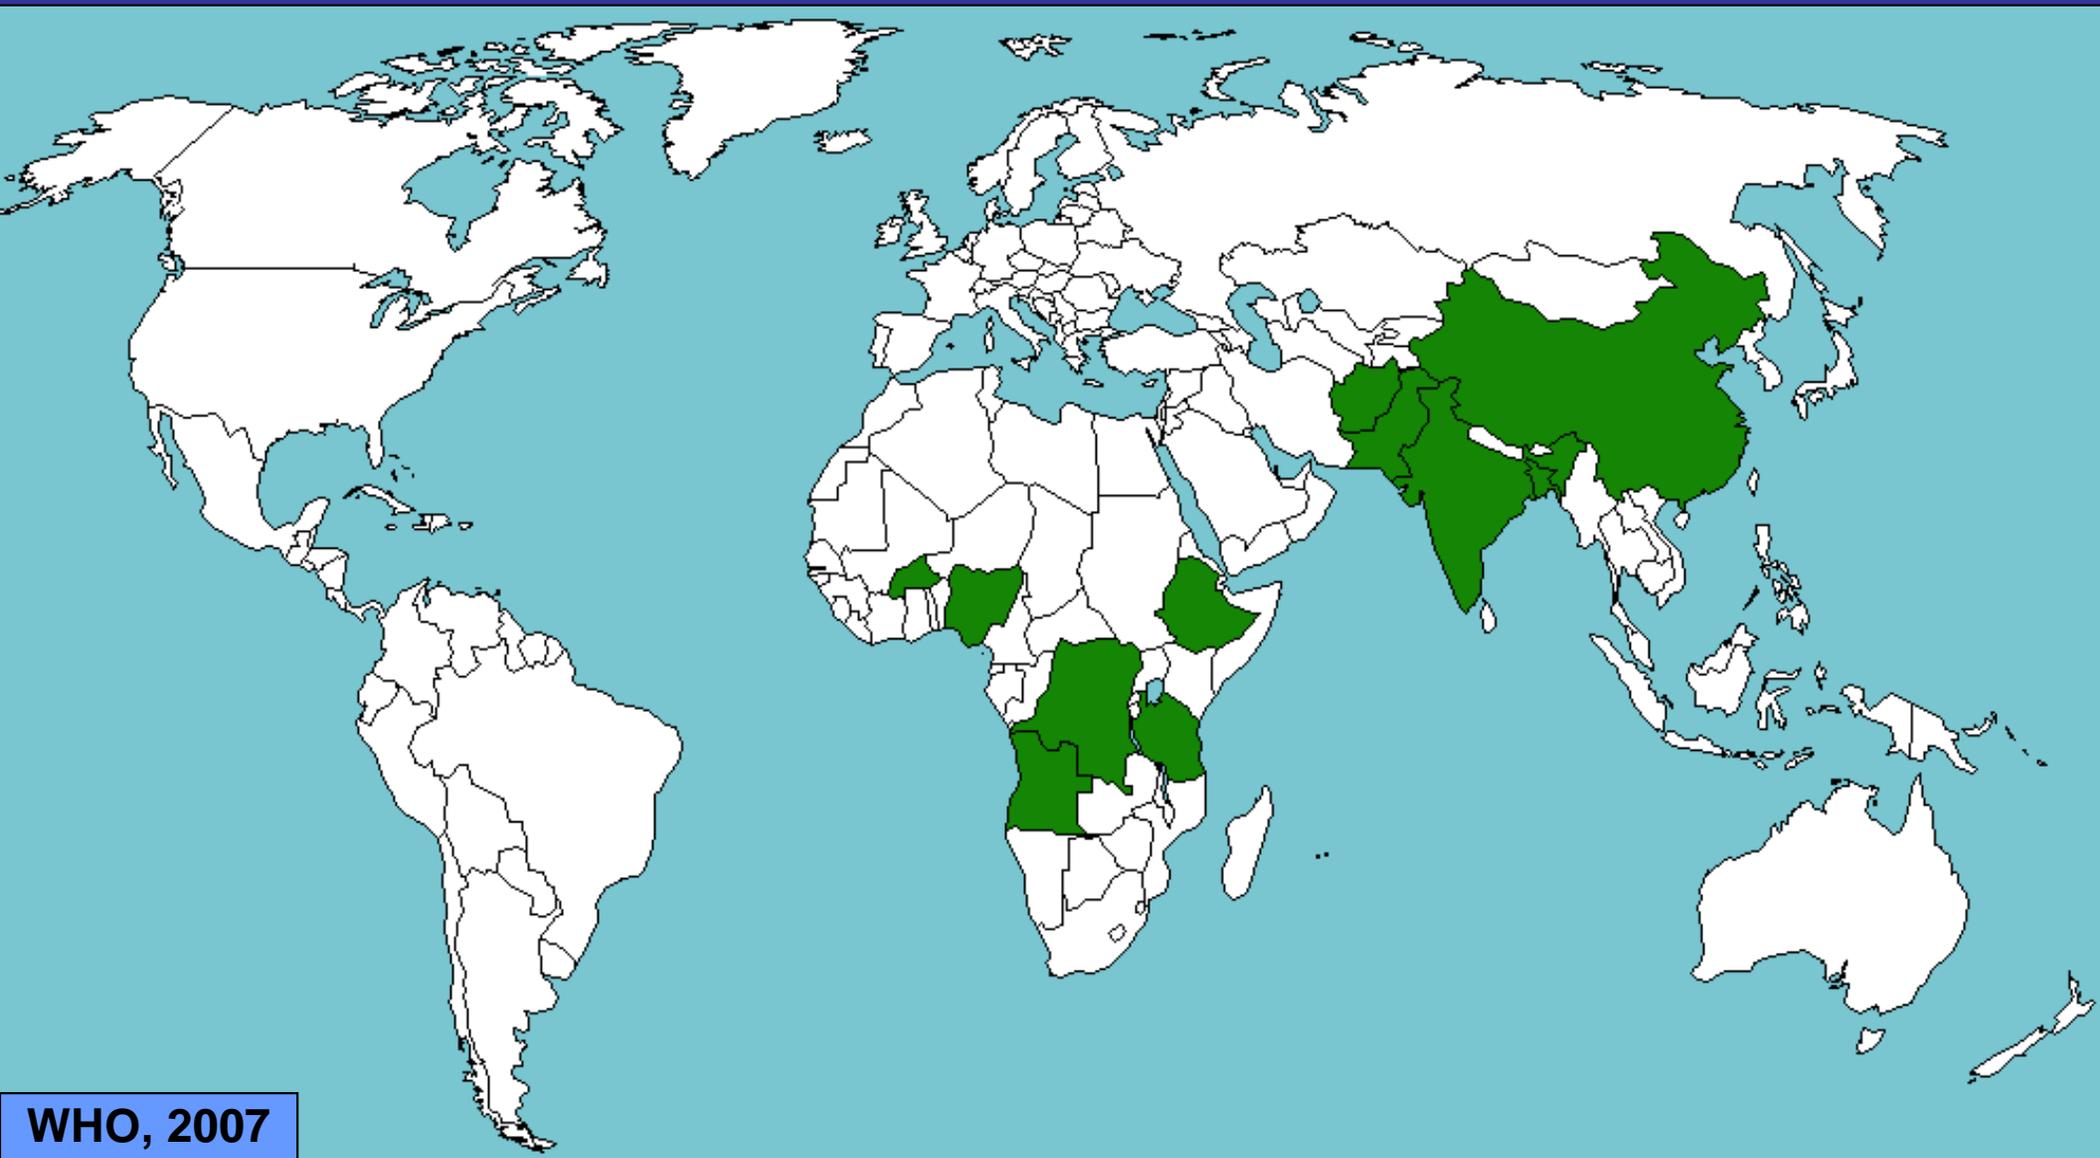

# Indoor Air Pollution: Estimate of Percentage of National Burden of Disease

WHO, 2007

# Indoor Air Pollution: 80% of 1.5 million global deaths each year occur in just 11 countries

WHO, 2007

# Mortality Comparisons to Recent Disasters

## IAP leads to....

- Hurricane Katrina, Aug. 23, 2005: 1,836 fatalities
  - ....over 800 “Katrinas” every year (nearly 2.5/day)
- Terrorist Attacks, September 11, 2001: 2,973 fatalities
  - ...over 500 “9/11s” every year (~1.5/day)
- Iran Landslide, June 20, 1990: 40-50,000 fatalities (est.)
  - ...over 30 “Iran landslides” every year
- Pakistani earthquake, Oct. 8, 2005: 74,500+ fatalities
  - ...over 20 “Kashmir earthquakes” ever year

# Major Burden of Disease: 10 leading diseases/injuries; leading 10 selected risk factors (high mortality)

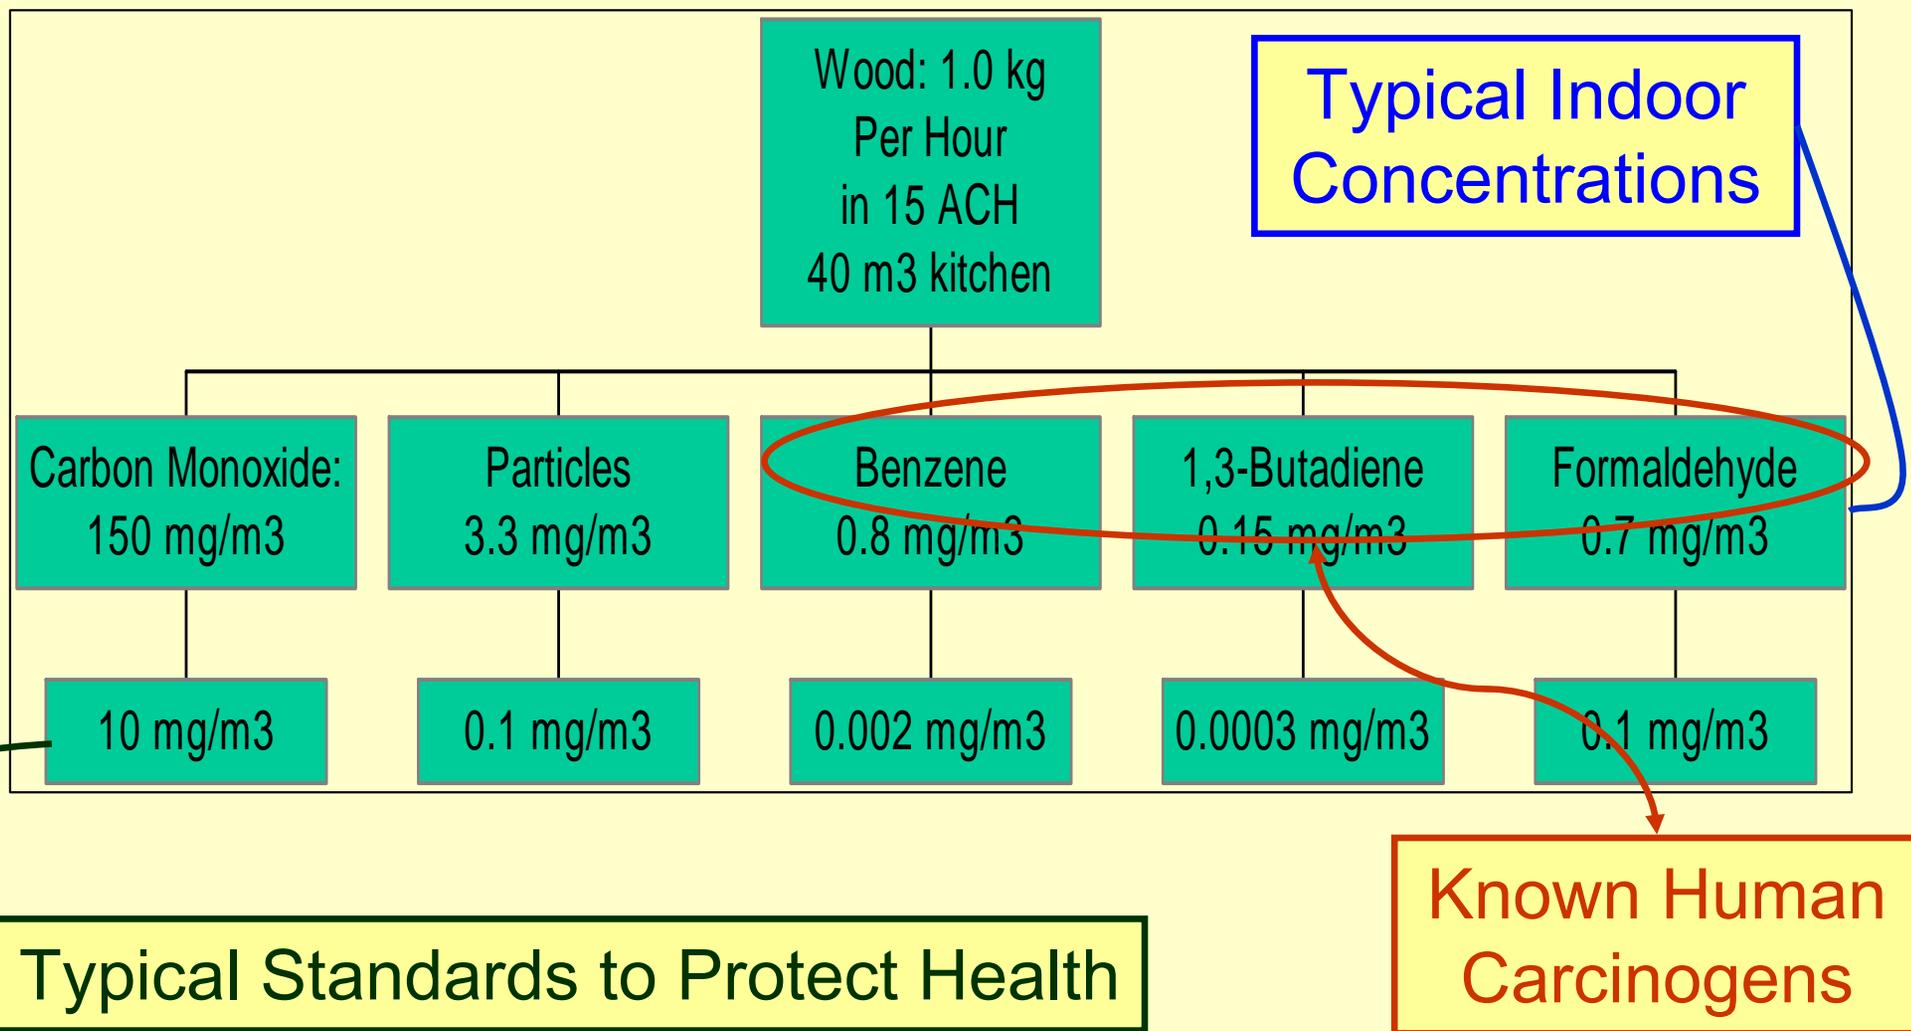

Risk Factor	% DALYs	Disease or Injury	% DALYs
Underweight	14.9	HIV/AIDS	9.0
Unsafe sex	10.2	<b>Lower respiratory infections</b>	8.2
Unsafe water, sanitation, & hygiene		<b>infections</b>	
		Diarrhoeal diseases	6.3
<b>Indoor smoke from solid fuels</b>	3.7	Childhood illness & disability	
Zinc deficiency	3.2	Low birth weight	5.0
Iron deficiency	3.1	Malaria	4.9
Vitamin A deficiency	3.0	Unipolar	
Blood pressure	2.5	Ischaemic	
Tobacco	2.0	Tuberculosis	2.9
Cholesterol	1.9	Road traffic injury	2.0

ARI is the most common cause of illness & disability in children in the developing world.

ALRI accounts for 20% of annual deaths of children < 5 (nearly all deaths are in developing countries).

# Typical Indoor Pollution Concentrations from a Typical Wood-Fired Cookstove

Source: Smith et al, 2000

# Evidence for a Health Impact of Indoor Smoke

Source: Smith, Mehta, & Feuz, 2004; IARC 2006

Health outcome	Evidence	Strength of Evidence
<ul style="list-style-type: none"> <li>* ALRI (children &lt;5yr)</li> <li>* COPD (adults)</li> <li>* Lung cancer (coal)</li> </ul>	<ul style="list-style-type: none"> <li>* Between 10 - 20 studies</li> <li>* Few measured exposure</li> <li>* Confounding problematic</li> </ul>	Strong
<ul style="list-style-type: none"> <li>* Tuberculosis</li> <li>* Cataract</li> <li>* Upper airway cancer</li> <li>* Asthma</li> </ul>	Several consistent studies (more conflicting for asthma)	Moderate
<ul style="list-style-type: none"> <li>* Low birth weight</li> <li>* Perinatal mortality</li> <li>* <i>Otitis media</i></li> </ul>	Very few studies – support from environmental tobacco smoke & ambient air pollution studies	Moderate
Cardiovascular disease	No studies, but suggestive	Weak

# Relative Risk Estimates

Source: Smith, Mehta, & Feuz, 2004

- Children exposed to indoor smoke are more than twice as likely to suffer from pneumonia than children not exposed.
- Women exposed to indoor smoke are more than three times as likely to suffer from chronic respiratory disease than women not exposed.

Illness	Population	Relative risk	Confidence interval
ALRI	Children <5	2.3	1.9 – 2.7
COPD	Women $\geq 30$	3.2	2.3 – 4.8
Lung cancer (coal)	Women $\geq 30$	1.9	1.1 – 3.5
COPD	Men $\geq 30$	1.8	1.0 – 3.2
Lung cancer (coal)	Men $\geq 30$	1.5	1.0 – 2.5

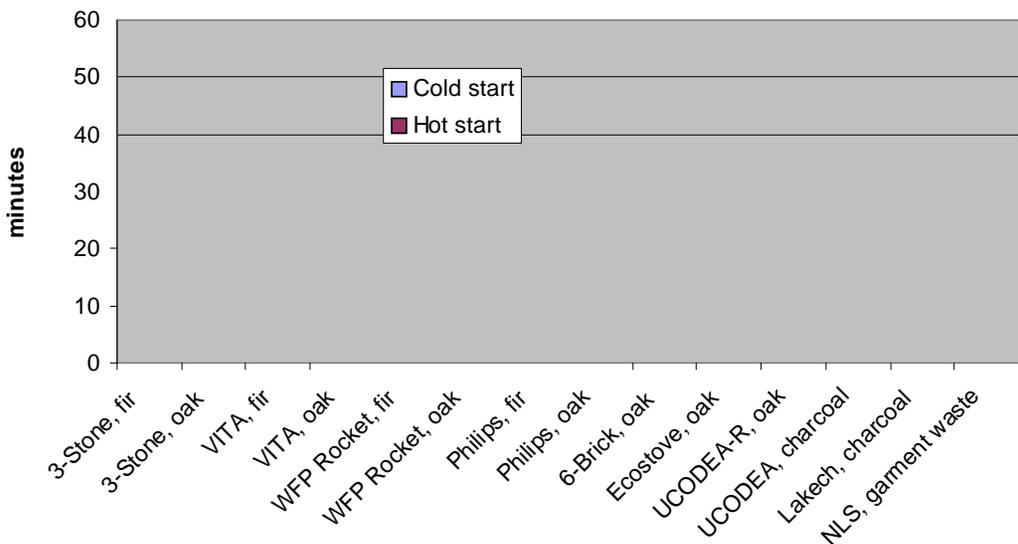

# The Number of People in Developing Countries Who Rely on Biomass Fuel to Cook Their Food is Growing

IEA,  
2006

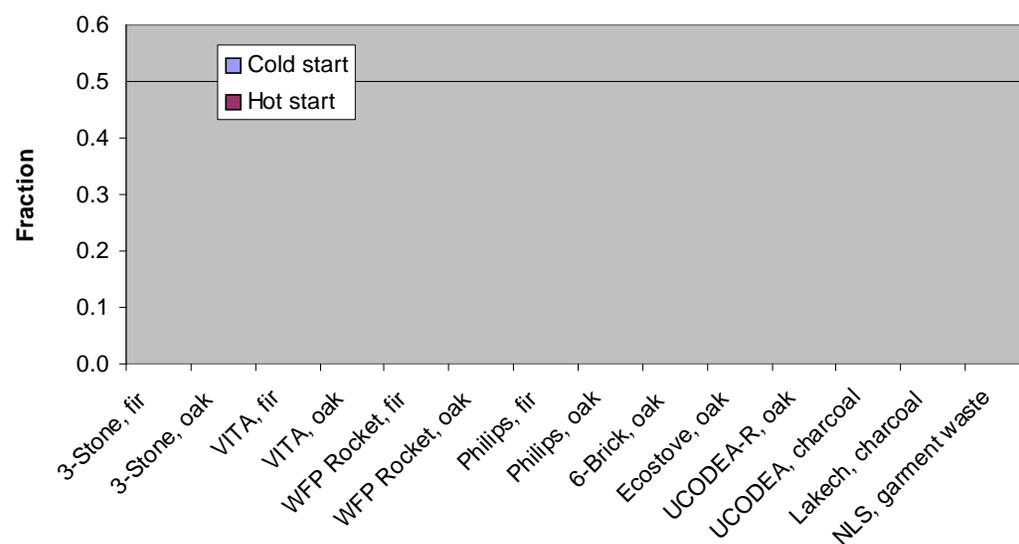

Country/ Region	2004 (million)	2015 (million)	2030 (million)	Change 2004- 2030
Sub-Saharan Africa	575	627	720	+25%
India	740	777	782	+6%
China	480	453	394	-18%
Indonesia	156	171	180	+15%
Rest of Asia	489	521	561	+15%
Brazil	23	26	27	+17%
Rest of Latin America	60	60	58	-3%
Developing Countries (Total)	2528	2640	2727	+8%

# PCIA Stove Testing – Performed by ORD

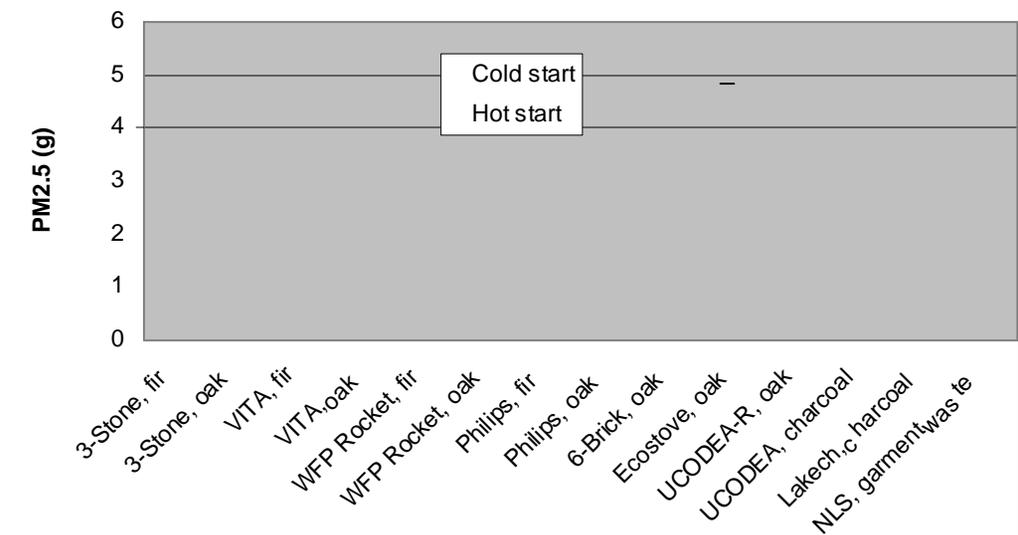

### Time to Boil

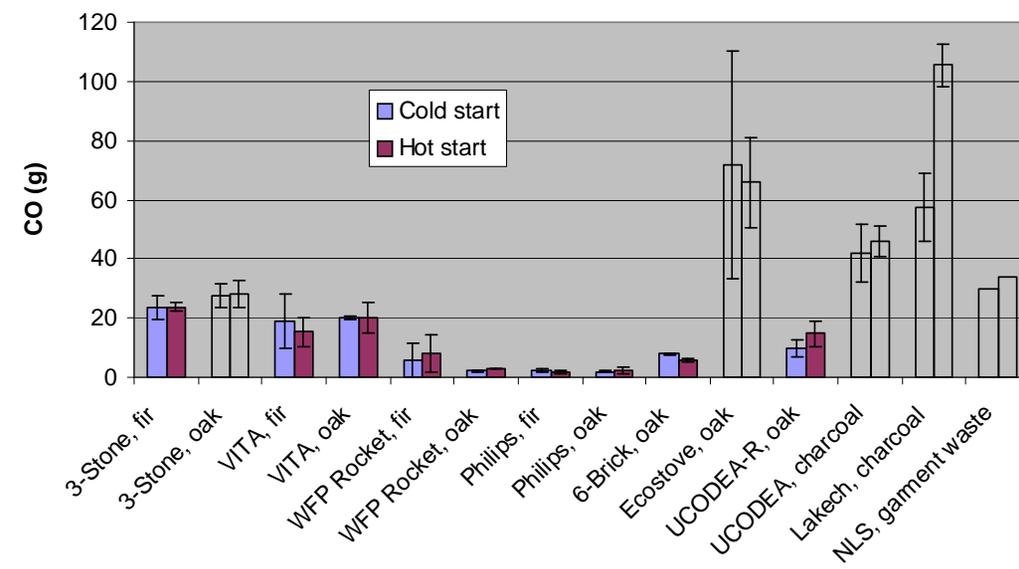

### Thermal Efficiency, High Power

### PM2.5 Emissions, High Power

### CO Emissions, High Power

## Partnership for Clean Indoor Air: Summary of Feedback re. Future Strategy (May 2007)

Feedback	General Role	Specific Roles	Notes
<b>Strong Agreement – Roles to Play</b>	<b>Technical</b>	<ul style="list-style-type: none"> <li>○ Standards: emissions &amp; efficiency (What’s an ICS?)</li> <li>○ Monitoring and Evaluation strategy (What’s working?)</li> <li>○ Climate: develop robust protocols (Climate impacts of ICS?)</li> <li>○ R&amp;D: coordinate global agenda/strategy (Who does what?)</li> <li>○ Cost-effectiveness &amp; cost-benefit (What’s cost/life-saved?)</li> </ul>	<ul style="list-style-type: none"> <li>○ Goal: meet core needs to establish credibility for the field</li> <li>○ PCIA as global convener to lead progress for each of these items</li> <li>○ What’s good enough (stoves, results)? Now vs. In Future</li> <li>○ Strong expressed need to look at climate interactions</li> </ul>
	<b>Information &amp; Resources</b>	<ul style="list-style-type: none"> <li>○ Coordinate on central clearinghouse for information – websites, portals for tools and resources, publications, etc.</li> <li>○ Document and publicize best practices and case studies</li> <li>○ Produce priority tools, kits, and other resources</li> <li>○ Establish simple, key reporting metrics for PCIA members</li> </ul>	<ul style="list-style-type: none"> <li>○ Goal: collect, digest, and disseminate information from/to partners</li> <li>○ Balance between not-duplicating existing efforts &amp; meeting needs</li> <li>○ Requires intense dialogue and coordination with existing knowledge hubs (HEDON, CREST, Bioenergy, Sparknet...)</li> <li>○ Broad focus: health, stoves, fuels, climate, gender, env, financing...</li> </ul>
	<b>Networking</b>	<ul style="list-style-type: none"> <li>○ Host annual conference/forum</li> <li>○ Convene high level policy briefings</li> <li>○ Develop global map/database of activity</li> <li>○ Attend/speak at priority international fora</li> <li>○ Coordinate on central hub for dialogues</li> </ul>	<ul style="list-style-type: none"> <li>○ Goal: effective networking at global policy level &amp; among partners</li> <li>○ Balance between not-duplicating existing efforts &amp; meeting needs</li> <li>○ Requires intense dialogue and coordination with existing networking hubs (HEDON, CREST, Bioenergy, Sparknet...)</li> <li>○ Requires needs assessment to identify partners’ priorities</li> </ul>
	<b>Catalyze 2-3 Big Successes</b>	<ul style="list-style-type: none"> <li>○ Select regions (key: where is scalable commercial activity?)</li> <li>○ Convene active regional networks with all necessary leaders</li> <li>○ Work jointly to create ideal conditions (macro &amp; micro policies, financing, awareness, technical capacity, etc.)</li> <li>○ Implement robust monitoring &amp; evaluation strategy</li> <li>○ Success could catalyze a “Global Indoor Smoke Initiative”</li> </ul>	<ul style="list-style-type: none"> <li>○ Goal: demonstrate large-scale, commercially sustainable solutions</li> <li>○ Over time, requires strong infrastructure in-region – PCIA office, stove testing labs &amp;/or resource centers</li> <li>○ Policy issues include: white papers; stove stds/label; policy barriers; incentives; financing tools; needed public resources</li> <li>○ Targets specific geography, but results should support all partners</li> </ul>
	<b>Communications</b>	<ul style="list-style-type: none"> <li>○ Develop strategy to raise issue’s profile (not just health)</li> <li>○ Focus initially on U.S. &amp; E.U., over time on priority regions</li> <li>○ Multimedia campaign via print, television, radio,...</li> <li>○ Communicate successes via professional strategy</li> </ul>	<ul style="list-style-type: none"> <li>○ Goal: raise awareness of issue (initially) and solutions (over time)</li> <li>○ Need to balance between global and local press needs/focus</li> <li>○ Explore range of innovative tools (“IAP days”, celebrities,...)</li> <li>○ Requires up-front planning and high-level commitment by partners</li> </ul>
<b>Some Agreement – Roles to Play</b>	<b>Broader Capacity Building</b>	<ul style="list-style-type: none"> <li>○ For implementers/evaluators (businesses, NGOs, etc. )</li> <li>○ Prioritize trainings: stove design &amp; performance; M&amp;E; social marketing; commercialization; climate; finance; etc.</li> <li>○ Targeted towards “catalyzing” regions (with all invited)?</li> </ul>	<ul style="list-style-type: none"> <li>○ Or is this a global effort that seeks to directly support all partners?</li> <li>○ Does PCIA do this itself, or do other partners take it on?</li> <li>○ Need to increase application of trainings (follow-up; evaluation;...)</li> <li>○ Establish mechanisms to expand breadth of trainers available</li> </ul>
	<b>PCIA as Source of Funding</b>	<p>Flexible &amp; relatively small pot of funds to support:</p> <ul style="list-style-type: none"> <li>○ R&amp;D needs as they arise</li> <li>○ innovative proposals that emerge</li> <li>○ additional capacity building tools and resources</li> </ul>	<ul style="list-style-type: none"> <li>○ Part of much larger questions: Convener vs. Funder; (big staff &amp; in-house focus) vs. (small staff &amp; contract out large roles)</li> <li>○ Provides organization flexibility to stay current with field needs</li> <li>○ High transaction costs (issuing; overseeing) – affects org design</li> </ul>
<b>Significant Agreement – Roles <u>Not</u> to Play</b>	<b>Implementation</b>	<ul style="list-style-type: none"> <li>○ Directly performed by PCIA: demands extensive in-country infrastructure and building up enormous capacity in org</li> <li>○ Funded by PCIA: demands identifying grantees who can reach scale to catalyze that process</li> </ul>	<ul style="list-style-type: none"> <li>○ Very resource-intensive – diminishes capacity in other areas</li> <li>○ PCIA-direct requires significant in-country presence</li> <li>○ Puts partnership in position of playing same roles as its partners</li> <li>○ Very high transaction costs</li> </ul>
