

Camp Minden M6 Disposal

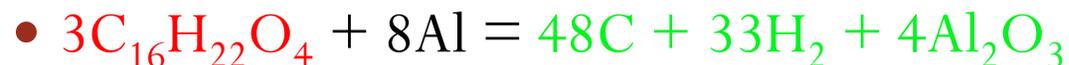

CO2AL, LLC

CO2AL Solution

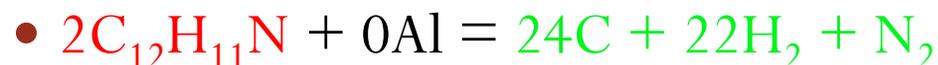

- Eliminate and recycle M6 using molten alloy bath.
- Similar testing performed with powdered Lignite coal with auto-ignition temperature of 400° F (M6 383 ° F).
- Results from coal testing proved efficacy of the system. Results showed the carbon / oxygen and sulfur bonds were broken.
- Process is expected to reduce the CBI to elemental material, alumina and aluminum salts. Additional information on actual chemistry would need to be provided.

Chemical Composition

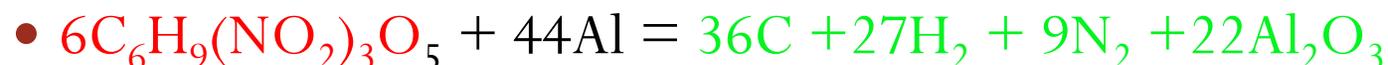

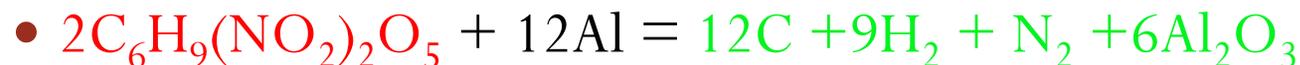

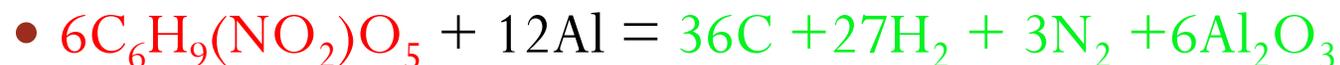

- Dibutyl Phthalate

- Diphenylamine

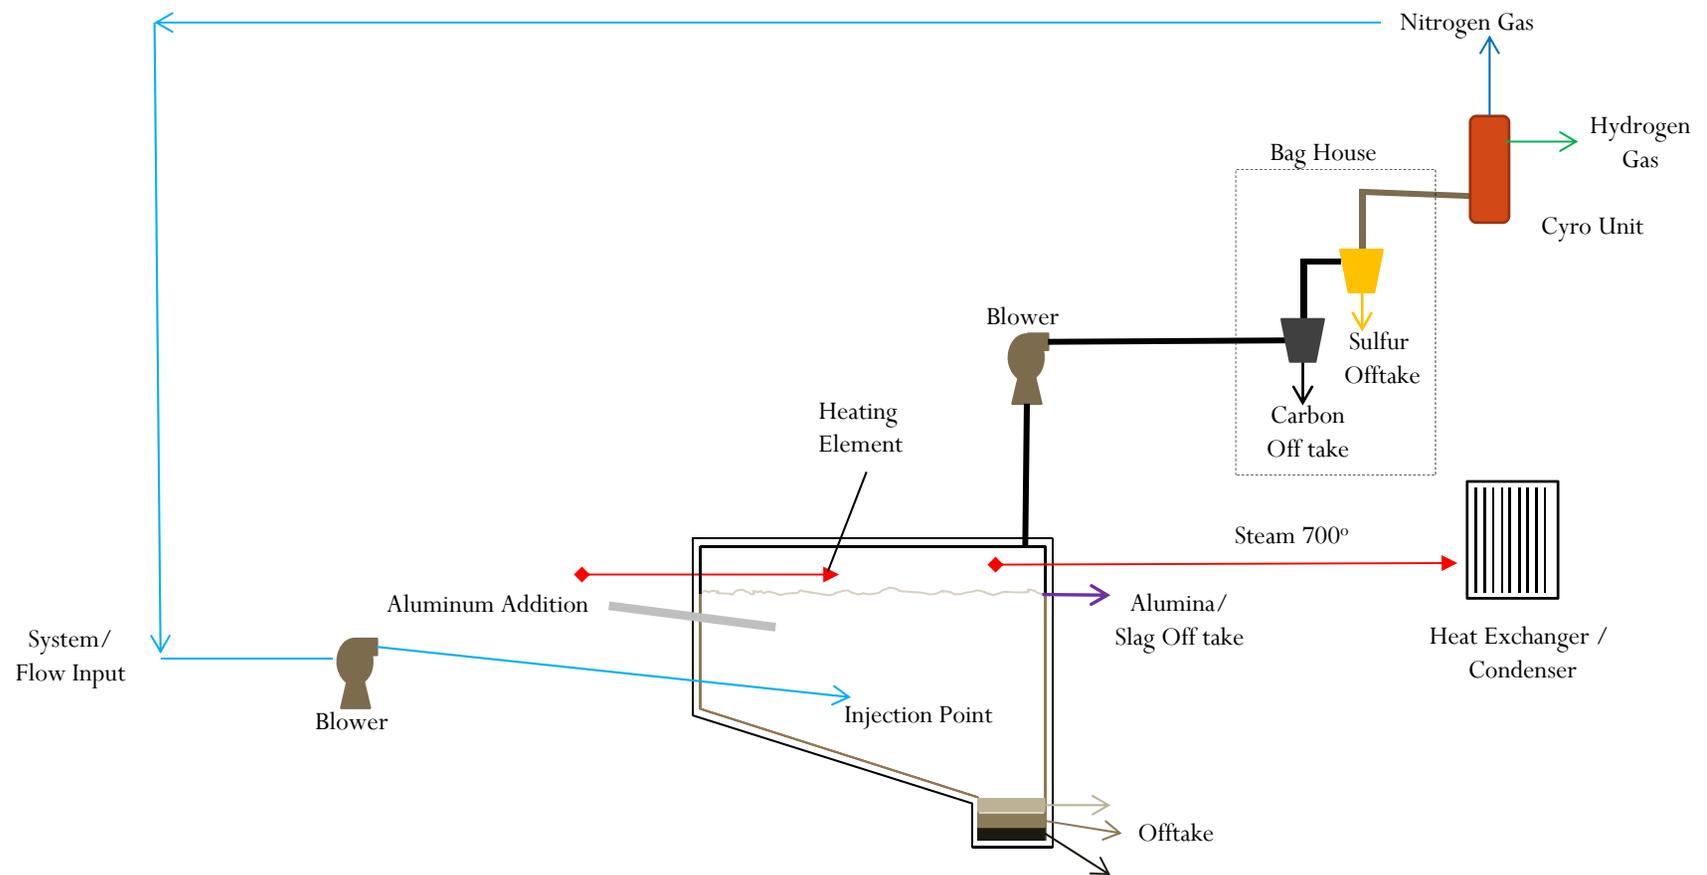

- Nitrocellulose

- Dinitrotoluene
