

**RESULTS OF COMMUNITY ENVIRONMENTAL SAMPLING:**  
**IN THE COLLEGEVILLE, HARRIMAN PARK AND FAIRMONT NEIGHBORHOODS, NORTH BIRMINGHAM, AL**

Number 1

November 2010

**INTRODUCTION**

The U.S. Environmental Protection Agency (EPA) is announcing the results of environmental sampling conducted by Walter Coke in the Summer of 2009. EPA’s goal is to keep the local community informed and engaged.

*An example of a soil sample being taken in a front yard.*

**PURPOSE**

Walter Coke (formerly, Sloss Industries) agreed to sample yards, drainage areas and public areas (e.g., schools) in North Birmingham for chemicals of potential concern, namely arsenic (As) and Benzo(a)pyrene toxicity equivalents (BaP TEQ). The purpose was to investigate the presence of these chemicals of potential concern in soil. EPA provided oversight of these sampling activities in the adjacent neighborhoods of the facility.

**FINDINGS**

In the Summer of 2009, soil samples were collected at numerous properties. What followed was an in-depth laboratory analysis of the soil samples, a Walter Coke sampling report, rigorous EPA review and comments, and EPA risk assessor evaluations. The Birmingham City School District has already been notified of findings associated with the following schools: Riggins Alternative School, former Hudson School, former Carver High School, and the Calloway Head Start school. [This Fact Sheet outlines the findings for the residential areas.](#) The results show levels of As and BaP TEQ at or above screening levels of concern at 24 different properties.

**SOIL Sampling Results AT or ABOVE Screening Levels**

Arsenic	BaP—TEQ
<b>1/70 properties</b>	<b>24/70 properties</b>

- Soil screening levels are conservative risk-based values developed by EPA that are health-based. Results above screening levels may present a 1 in 10,000 ( $1 \times 10^{-4}$ ) excess cancer risk over a lifetime.
- Based upon the sampling results compared to screening levels, and other factors, EPA will determine whether further investigation or cleanup is warranted. Being above a particular screening level indicates further evaluation may be necessary, but does not necessarily mean that any further action or cleanup is warranted.

## NEXT STEPS: SHORT-TERM

The EPA plans to hold “one-on-one” Information Sessions with the property owners or renters on November 3-5 to answer questions about their results.

Other organizations have been invited to be at the Information Sessions as well, such as: Agency for Toxic Substance and Disease Registry (ATSDR), Alabama Department of Environmental Management (ADEM), the Jefferson County Department of Health (JCDH) and Walter Coke. Later, we plan to hold public meetings locally to inform the entire community of the findings.

## NEXT STEPS: LONG-TERM

Long term actions may include: 1) develop an environmental action plan to address the chemicals of potential concern; 2) work with ATSDR on any public health related matters associated with the chemicals of potential concern; and 3) provide opportunities for the public to meaningfully engage in this process.

## HEALTH QUESTIONS

The Agency for Toxic Substances and Disease Registry (ATSDR) is our lead federal agency on public health issues. To help answer health questions, please contact Mr. Ben Moore with ATSDR at (404) 562-1784, or the ATSDR Hotline at 1 (888) 422-8737.

For the public, ATSDR has created Fact Sheets on frequently asked health questions on Arsenic and Polycyclic Aromatic Hydrocarbons (PAHs), related to the two chemicals of potential concern for which the soil was tested. These 2 Fact Sheets will be distributed to the community. To view these 2 Fact Sheets produced by ATSDR on the internet, please refer to the following web-site pages:

**Arsenic** <http://www.atsdr.cdc.gov/tfacts2.pdf>  
**PAHs** <http://www.atsdr.cdc.gov/toxfaqs/tf.asp?id=121&tid=25>

## BASIS OF INVESTIGATION

The Congressional law, the Resource Conservation and Recovery Act (RCRA) authorizes EPA to require facilities to examine the nature and extent of their potential pollution that may endanger human health or the environment. Currently, the lead regulatory program on this sampling matter is the EPA’s RCRA Corrective Action program in the Southeast Region 4 Office in Atlanta.

## INFORMATION REPOSITORY

Related materials to this sampling event may be viewed at the following location: *North Birmingham Regional Branch Library*; 2501 31st Ave North Birmingham, AL 35207 (205) 226-4025

## INTERNET LINKS

Be sure to visit <http://www.epa.gov/region4/foiapg/readingroom/index.htm> as documents related to this sampling event become available.
