

**TIER II ACUTE AND CHRONIC AQUATIC LIFE VALUES**

**BORON**

CAS RN: 7440-42-8

**Standard**

The procedures described in the Tier II methodology indicate that, except possibly where a locally important species is very sensitive, aquatic organisms should not be affected unacceptably if the four (4) day average concentration of boron does not exceed 1,600 µg/L more than once every three (3) years on the average and if the one (1) hour average concentration does not exceed 10,000 µg/L more than once every three (3) years on the average.

**Calculations**

Acute Aquatic Life:

$$\text{SAV} = \text{lowest GMAV}/\text{SAF}$$

$$\text{Lowest GMAV} = 108,145 \text{ } \mu\text{g}/\text{L}$$

$$\text{SAF} = 5.2$$

$$\text{SAV} = 108,145/5.2 = 20,797 \text{ } \mu\text{g}/\text{L}$$

$$\text{SMC} = \text{SAV}/2 = 20,797/2 = \mathbf{10,000 \text{ } \mu\text{g}/\text{L}}$$

Chronic Aquatic Life:

$$SCC = SAV/SACR$$

$$SACR = 13.02 \text{ (geometric mean of 18, 18, 6.812)}$$

$$SCC = 20,797/13.02 = \mathbf{1,600 \mu\text{g/L}}$$
