TIER II ACUTE AND CHRONIC AQUATIC LIFE VALUES FOR  
BIS(2-ETHYHEXYL) PHTHALATE

Standard:

The procedures described in the Tier II methodology indicate that, except possibly where a locally important species is very sensitive, aquatic organisms should not be affected unacceptably if the four (4) day average concentration of bis(2-ethylhexyl) phthalate (DEHP) does not exceed 88 µg/L more than once every three (3) years on the average and if the one (1) hour average concentration does not exceed 384 µg/L more than once every three (3) years on the average.

Calculations:

Acute Aquatic Life:

$$\text{SAV} = \text{lowest GMAV}/\text{SAF}$$

$$\begin{aligned}\text{Lowest GMAV} &= 4,690 \text{ } \mu\text{g/L} \\ \text{SAF} &= 6.1\end{aligned}$$

$$\text{SAV} = 4,690/6.1 = 768.9 \text{ } \mu\text{g/L}$$

$$\text{SMC} = \text{SAV}/2 = 768.9/2 = \mathbf{384 \text{ } \mu\text{g/L}}$$

Chronic Aquatic Life:

$$\text{SCV} = \text{SAV}/\text{SACR}$$

$$\text{SACR} = 8.7 \text{ (geometric mean of 18, 18, and 2)}$$

$$\text{SCV} = 768.9/8.7 = \mathbf{88 \text{ } \mu\text{g/L}}$$

Calculation of ACR's

Fathead Minnows

$$\text{MATC} = 1.0 \text{ mg/L (geometric mean of LOEC and NOEC)}$$

$$\text{ACR} = \text{LC}_{50}/\text{MATC} = 2/1 = 2.0$$

Notes:

NONE

Table 1. GMAVs and SMAVs for DEHP

<u>Genus Mean Acute Value (µg/L)</u>	<u>Species</u>	<u>Species Mean Acute Value (µg/L)</u>	<u>Reference Number</u>
4,690	Cladoceran <u>Daphnia magna</u>	4,690	1,4
>91,657	Bluegill <u>Lepomis macrochirus</u>	>91,657	2,5,6
>10,000	Fathead Minnow <u>Pimephales promelas</u>	>10,000	5
44,159	Rainbow Trout <u>Onchorhynchus mykiss</u>	44,159	4
	Coho Salmon <u>Oncorhynchus kisutch</u>	>100,000	6
>31,622	Channel Catfish <u>Ictalurus punctatus</u>	>31,622	5
>21,715	Scud <u>Gammarus pseudolimnaeus</u>	>21,715	5,6,7
>10,000	Crayfish <u>Orconectes nais</u>	>10,000	5
