

Fact Sheet Date: March 12, 1998

**NEW YORK STATE
- HUMAN HEALTH FACT SHEET -**

**Ambient Water Quality Value for
Protection of Sources of Potable Water**

SUBSTANCE: alpha,3,4-Trichlorotoluene

CAS REGISTRY NUMBER: 102-47-6

AMBIENT WATER QUALITY VALUE: 5 ug/L

BASIS: Surface Water: Principal Organic Contaminant Classes
 Groundwater: Former Reference to 10 NYCRR Subpart 5-1 Principal
 Organic Contaminant (POC) General Maximum
 Contaminant Level (MCL)

SUMMARY OF INFORMATION

A search of relevant databases revealed very little information on alpha-3,4-trichlorotoluene. The substance does not appear on IRIS. There is insufficient information with which to determine its carcinogenicity or to derive an Acceptable Daily Intake for non-carcinogenic effects.

alpha,3,4-Trichlorotoluene is in a principal organic contaminant class (class 3, halobenzenes and substituted halobenzenes) as defined in 6 NYCRR 700.1.

DERIVATION OF VALUE

Surface Water

Regulations [6 NYCRR 702.2(b)] require that the value be the most stringent of the values derived using the procedures found in sections 702.3 through 702.7. The principal organic contaminant class value of 5 ug/L (702.3(b)) represents the most stringent value that can be derived for alpha,3,4-trichlorotoluene. Therefore, the ambient surface water quality value for alpha,3,4-trichlorotoluene is 5 ug/L.

Groundwater

The principal organic contaminant (POC) groundwater standard of 5 ug/L (6 NYCRR 703.5) applies to alpha,3,4-trichlorotoluene. This standard became effective on January 9, 1989 by inclusion by reference to 10 NYCRR Subpart 5-1 standards. The basis and derivation of the POC standard are described in a separate fact sheet.
