PROJECT BACKGROUND:

The targeted property had once been used as a railroad maintenance facility that included coach yard buildings, a carpet and paint shop, oil house and power house structures, a coach unwheeling shop, and coal storage areas. The property later became the site of a bulk petroleum storage facility and a manufactured gas plant. The land was left degraded and vacant from the 1950s until 1997, when activists from the East Side neighborhood joined with the Lowertown community to reclaim this area in the hopes of creating a nature sanctuary. The City of St. Paul received EPA grants to assist with cleanup of petroleum and other hazardous substances on the property.

Key Accomplishments:

- Cleaned up heavy metals and polynuclear aromatic hydrocarbons (PAHs).
- Created a greenspace area with new trails and bicycle paths.
- Leveraged more than \$5 million and partnered with over 25 organizations in order to purchase the property.

OUTCOME:

Having completed cleanup in December 2004 with the assistance of neighborhood groups, the Bruce Vento Nature Sanctuary now provides essential greenspace for residents of the City of St. Paul.

Volunteers help reestablish native vegetation at the Bruce Vento Nature Sanctuary.

A portion of the property was restored as a natural habitat, while another was redeveloped for recreational use. The sanctuary opened to the public in May 2005. Prior to EPA's involvement, project partners raised more than \$5 million for acquisition of the property, which has reestablished the floodplain forest and wetlands and provides a new home for migratory birds and other wildlife.
