MEMORAN	DUM	
SUBJECT:	Gold King Mine F(b) (6)	
FROM:	(b) (6) On-Scene Coordig	
TO:	Site File	· · · · · · · · · · · · · · · · · · ·

The following is a partial chronology of events from the Gold King Mine Release incident that occurred on August 5, 2015, and covers approximately the first 48 hours of the incident. I was in the Denver EPA Office serving as phone duty officer. I received the notification from the National Response Center and found two related e-mails on the Region 8 RRC e-mail box (e-mails attached) from CDPHE. All other events noted below were based on conversations with others such as the EPA OSC at the mine site, EPA employees serving in the REOC during the subsequent days of the incident, conference calls with stakeholders such as La Plata County, and written information from EPA's START contractor and an e-mail from personnel at the Colorado Division of Reclamation, Mining and Safety (DRMS).

# 8/5/2015

- Release occurs (10:51am).
- Safety of on-site personnel is secured.
- The road at the mine site was destroyed and the crew was trapped with no cell phone coverage. The EPA crew radios to an EPA ERRS contractor who was off-site to notify him of the situation. The contractor finds the DRMS team who was off-site. EPA and DRMS communicate via radio (approximately 11:45 a.m.) and the OSC instructs DRMS to make notifications.
- 11:50 a.m. The EPA OSC and the ERRS contractor response manager left the Gold King Mine
  on foot to get picked up and driven to an area with phone reception to notify authorities. The
  START contractor stayed at the mine adit area to monitor the mine for additional surges of water
  and to provide support to the ERRS operator rebuilding the road.
- 12:20 The ERRS contractor began reconstructing the exit road from the site to help demobilize the equipment, vehicles, and personnel.
- CDPHE is notified by DRMS (12:40 pm)

- CDPHE makes notifications to Durango, San Juan Basin Health Dept., and water intakes, and notifications are complete by 1:39 pm. The EPA Phone Duty Officer also notifies Colorado downstream water intakes (the same ones that CDPHE notified) later in the afternoon. The DRMS e-mail indicated that CDPHE was supposed to ensure agricultural users were also notified.
- DRMS notifies the National Response Center (12:27 pm). The NRC makes notification to the EPA Region 8 phone duty officer. (NRC reports are automatically forwarded to a number of other agencies including CDPHE, Colorado Information Analysis Center, U.S. Department of Interior which includes the U.S. Fish & Wildlife Service, and others).
- The DRMS e-mail states that they coincidentally met the San Juan County Sheriff as the release was flowing down Cement Creek at approximately 12:47 p.m.
- There is an EPA and contractor team in the area for another project and they are familiar with Animas River sampling locations. They are diverted to the incident and begin collecting river water samples. (first round collected at 6pm, second round near midnight, another round the following morning).
- The plume reaches Silverton.
- EPA issues first press release (11:26 pm)

## 8/6/2015

- EPA Region 8 stands up the REOC (10:00 a.m.).
- EPA Headquarters, Region 6 and Region 9 are notified (11:00).
- The Animas River is closed to recreational users (there was coordination with local agencies and ATSDR to make this decision at approximately 10:30; EPA saw an official printed release later in the afternoon).
- EPA Region 8 Acting Water Program Director confirmed that the State had notified water users the previous day.
- The OSC met with the Town of Silverton at 11:00 a.m. He was also going to meet with La Plata County/Durango at 2:00 p.m.
- EPA Region 8 conference call with the La Plata County Emergency Manager around 11:00 a.m. or so. He reported that major irrigation users had shut their head gates.
- The Durango Treatment Plant is secure per reports from the EPA Water Program (3:45 p.m.).
- Conference call with EPA Region 6 in the afternoon before 2:00 p.m. They reported that their Water Program had contacted New Mexico.

- The plume reaches Durango (late afternoon).
- EPA deploys an additional OSC, two START contractors, the ASPECT plane (Airborne Spectral Photometric Environmental Collection Technology), and Community Involvement Coordinator personnel (varied, beginning at 12:30 pm).
- EPA issued SitRep (approx. 3:30 pm).

# 8/7/2015

- ASPECT flyover (initiated at 7:30 a.m., found extent of plume at 8:30 a.m.; lat/longs received, map pending).
- Coordination call with R6, R9 and HQ. Region 9 was planning to sample at the Navajo Reservation.
- Preliminary results for sampling and monitoring is expected to be received on this day.
- As of 8:30 a.m. the plume had not yet reached New Mexico.
- OSC in the field reports that private residential wells were showing yellow color and requests ERRS support for alternative water (distribution began that evening).
- EPA requests information from USGS regarding a stream gauge on Cement Creek and USGS reports that the release was larger than 1,000,000 gallons.
- Region 8 receives a call from FEMA R8 because their tribal liaison was getting calls from the Navajo Nation and EPA Region 8 provided Region 9's OSC contact info to FEMA.
- EPA Region 8 holds call with the Region 8 Regional Response Team (including the U.S. Department of Interior from R6 and R8, and multiple Forest Service representatives,)

CAUSE: OTHER

CAUSE INFORMATION: While working on the portal for this mne/EPA Superfund Site, over a million gallons of water surged out to Upper Cement Creek, which leads to the Animas River. The water is very orange, carrying dissolved iron and zinc. Caller wanted WQ to notify downstream users that the surge is expected to reach Silvertown and downstream users shortly. (b) (c) was reached and is working on calling downstream users. They do not expect the water to exceed the banks of the river. Water is still being released more slowly from the mine site.

## Subject:

Re: CDPHE Spills Tracking System Data Entry Form 2015-0492

Just talked to (b) (6) with the Town of Silverton. They do not take out of that fork of Cement Creek, so they are ok. He did say that the creek is opaque orange. We have notified all other downstream users that we can identify, including Town of Durango, San Juan Basin Health, Glacier View (Cameron), Animas Water Co. and Colorado Rural Water (they are currently working on a watershed plan for that area and may have a mailing list of users).

On Wed, Aug 5, 2015 at 1:13 PM, (b) (6) - CDPHE, (b) (6) <u>@state.co.us</u> wrote: Attached is a report for San Juan County, headed for Silverton, of a mine blowout and release of at least a million gallons of orange water to Upper Cement Creek and to the Animas River. Water is continuing to release from the mine at a slower rate.

DRMS requested that WQ assist with notification of downstream users, and (b) (6) has begun this process.
