

Electronic Laboratory Notebooks

John Conway

LabAnswer

Achieving the electronic laboratory environment (ELE) is a journey for many organizations that must be carefully planned and executed. LabAnswer will share its years of experience and lessons learned from a capabilities and functionality perspective, exploring how different components, including ELN, SDMS, LES, and LIMS and others fit in the new ELE environment. Failure to understand the role individual software components play, and how these work together from a work process and integration standpoint, leads to an inadequate environment and further inadequacies.
