

EPA Lead Renovation, Repair and Painting Rule Enforcement Cases

October 2014 – September 2015

Garden Homes Management, Corp.

Overview of Company and Facility Location

Garden Homes Management, Corp. (the Company) is located in Stamford, Connecticut. The settlement involves renovations conducted by the Company's employees or agents in properties that the Company owns or operates in Connecticut. The settlement also involves lease transactions for such properties. The properties were constructed prior to 1978.

Violations

The Consent Agreement and Final Order (CAFO) settles allegations in a Complaint that the Company committed violations of the Toxic Substances Control Act (TSCA); the Renovation, Repair and Painting Rule (RRP Rule), 40 C.F.R. Part 745, Subpart E; and the Residential Lead-Based Paint Hazard Reduction Act's Disclosure Rule, 40 C.F.R. Part 745, Subpart F. In the Complaint, the United States alleged that the Company committed the following violations:

- RRP Rule Violations:
 - Failure to obtain initial firm certification.
 - Failure to provide an EPA-approved lead hazard information pamphlet to the tenant or adult occupant before commencing renovation.
 - Failure to ensure that an individual performing renovation activities was either a certified renovator or trained by a certified renovator; and failure to ensure that a certified renovator was assigned to the renovation to carry out required responsibilities.
 - Failure to retain records necessary to demonstrate compliance.

- Disclosure Rule Violations:
 - Failure to provide prospective tenants the EPA-approved lead hazard information pamphlet prior to such persons becoming obligated under lease contracts.
 - Failure to include a Lead Warning Statement in or attached to lease contracts before prospective lessees become obligated under the leases.
 - Failure to include a statement disclosing the presence of known lead-based paint and/or lead-based paint hazards, or indicating no knowledge of the presence of lead-based paint and/or lead-based paint hazards, in or attached to lease contracts.
 - Failure to include a list of records or reports, or a statement indicating none is available, in or attached to lease contracts.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the rule.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old and younger are most at risk. If not detected early, children with high levels of lead in their bodies can suffer from:

- Damage to the brain and nervous system
- Behavior and learning problems, such as hyperactivity
- Slowed growth
- Hearing problems
- Headaches
- Anemia
- In rare cases of acute lead poisoning from ingestion of lead, seizures, coma and even death.

Lead can accumulate in our bodies over time, where it is stored in bones along with calcium. During pregnancy, lead is released from bones as maternal calcium is used to help form the bones of the fetus. This is particularly true if a woman does not have enough dietary calcium. Lead can also be easily circulated from the mother's blood stream through the placenta to the fetus. Mothers with high levels of lead in their bodies can expose their developing fetuses, resulting in serious and developmental problems including:

- Miscarriages,
- Premature births or low birth weight,
- Brain damage, decreased mental abilities and learning difficulties, and/or
- Reduced growth in young children.

Civil Penalty

The Company will pay a civil penalty of \$54,644, and will perform a window replacement Supplemental Environmental Project valued at \$20,000.

The Whalley Glass Company

Overview of Company and Facility Location

The Whalley Glass Company (the Company) is located in New Haven, Connecticut.

The settlement involves renovation projects conducted at properties located in New Haven, West Haven and Madison, Connecticut. The properties were constructed prior to 1978.

Violations

The Consent Agreement and Final Order (CAFO) settles violations, alleged in a Complaint, of the Toxic Substances Control Act (TSCA), and the Renovation, Repair and Painting Rule (RRP Rule), 40 C.F.R. Part 745, Subpart E. In the CAFO, the United States alleges that the Company committed the following violations:

- Failure to obtain firm certification.
- Failure to ensure that a certified renovator is assigned to each renovation and discharges all of the duties charged to a certified renovator under the RRP Rule.
- Failure to: (a) provide a copy of the required lead hazard information pamphlet to the property owners; and (b) obtain either a written acknowledgment that each owner received the pamphlet or certificates of mailing at least seven days prior to renovations.
- Failure to retain all records documenting compliance with the RRP Rule.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the rule.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old and younger are most at risk. If not detected early, children with high levels of lead in their bodies can suffer from:

- Damage to the brain and nervous system
- Behavior and learning problems, such as hyperactivity
- Slowed growth
- Hearing problems
- Headaches
- Anemia
- In rare cases of acute lead poisoning from ingestion of lead, seizures, coma and even death.

Lead can accumulate in our bodies over time, where it is stored in bones along with calcium. During pregnancy, lead is released from bones as maternal calcium is used to help form the bones of the fetus. This is particularly true if a woman does not have enough dietary calcium. Lead can also be easily circulated from the mother's blood stream through the placenta to the fetus. Mothers with high levels of lead in their bodies can expose their developing fetuses, resulting in serious and developmental problems including:

- Miscarriages,
- Premature births or low birth weight,
- Brain damage, decreased mental abilities and learning difficulties, and/or
- Reduced growth in young children.

Civil Penalty

The Company will pay a civil penalty of \$ 31,286.

Whitney Management and Maintenance Co.

Overview of Company and Facility Location

Whitney Management and Maintenance Co. (the Company) is located in Hamden, Connecticut. The settlement involves a renovation conducted at a property located in East Haven, Connecticut. The property was constructed prior to 1978.

Violations

The Consent Agreement and Final Order (CAFO) settles alleged violations of the Toxic Substances Control Act (TSCA), and the Renovation, Repair and Painting Rule (RRP Rule), 40 C.F.R. Part 745, Subpart E. In the CAFO, the United States alleges that the Company committed the following violations:

- Failure to obtain firm certification.
- Failure to ensure that a certified renovator is assigned and discharges all of the responsibilities of a certified renovator.
- Failure to provide the owner EPA's lead hazard information pamphlet.
- Failure to retain records demonstrating compliance.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the enforcement order.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old and younger are most at risk. If not detected early, children with high levels of lead in their bodies can suffer from:

- Damage to the brain and nervous system
- Behavior and learning problems, such as hyperactivity
- Slowed growth
- Hearing problems
- Headaches
- Anemia
- In rare cases of acute lead poisoning from ingestion of lead, seizures, coma and even death.

Lead can accumulate in our bodies over time, where it is stored in bones along with calcium. During pregnancy, lead is released from bones as maternal calcium is used to help form the bones of the fetus. This is particularly true if a woman does not have enough dietary calcium. Lead can also be easily circulated from the mother's blood stream through the placenta to the fetus. Mothers with high levels of lead in their bodies can expose their developing fetuses, resulting in serious and developmental problems including:

- Miscarriages,
- Premature births or low birth weight,
- Brain damage, decreased mental abilities and learning difficulties, and/or
- Reduced growth in young children.

Civil Penalty

The Company will pay a civil penalty of \$10,285.

DiNuzzo LLC (d/b/a DiNuzzo Painting)

Overview of Company and Facility Location

DiNuzzo LLC, doing business as DiNuzzo Painting (the Company), is located in Wallingford, Connecticut. The settlement involves a renovation project conducted at a property located in New Haven, Connecticut. The property was constructed prior to 1978.

Violations

The RRP Settlement Agreement (Agreement) settles alleged violations of the Toxic Substances Control Act (TSCA) and the Renovation, Repair and Painting Rule (RRP Rule), 40 C.F.R. Part 745, Subpart E. In the Agreement, the United States alleges that the Company committed the following violations:

- Failure to obtain initial firm certification.
- Failure to provide the unit owner EPA's approved lead hazard information pamphlet;
- Failure to comply with work practice standards for exterior renovations, i.e., failure to use a HEPA exhaust control while power-sanding paint removal.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the rule.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old and younger are most at risk. If not detected early, children with high levels of lead in their bodies can suffer from:

- Damage to the brain and nervous system
- Behavior and learning problems, such as hyperactivity
- Slowed growth
- Hearing problems
- Headaches
- Anemia
- In rare cases of acute lead poisoning from ingestion of lead, seizures, coma and even death.

Lead can accumulate in our bodies over time, where it is stored in bones along with calcium. During pregnancy, lead is released from bones as maternal calcium is used to help form the bones of the fetus. This is particularly true if a woman does not have enough dietary calcium. Lead can also be easily circulated from the mother's blood stream through the placenta to the fetus. Mothers with high levels of lead in their bodies can expose their developing fetuses, resulting in serious and developmental problems including:

- Miscarriages,
- Premature births or low birth weight,
- Brain damage, decreased mental abilities and learning difficulties, and/or
- Reduced growth in young children.

Civil Penalty

The Company will pay a civil penalty of \$ 1,480. The penalty was reduced because the Company qualified as a micro-business under the penalty program for micro-businesses.

John Fogg Jr. Enterprises, LLC

Settlement

Overview of Company and Facility Location

John Fogg Jr. Enterprises, LLC (the Company) is located in Ledyard, Connecticut. The settlement involves a renovation project conducted at E.C. Scranton Memorial Library in Madison, Connecticut. The property was constructed prior to 1978.

Violations

The Consent Agreement and Final Order (CAFO) settles violations of the Toxic Substances Control Act (TSCA), and the Renovation, Repair and Painting Rule (RRP Rule), 40 C.F.R. Part 745, Subpart E, which were alleged in the Complaint. The Complaint alleges that the Company committed the following violations:

- Failure to obtain initial firm certification.
- Failure to use required HEPA equipment, adequately cover the ground, and contain renovation wastes, as required.
- Failure to provide notification of renovation activities to residents, and to obtain written acknowledgement of renovation notification to the property owner.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the rule.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old and younger are most at risk. If not detected early, children with high levels of lead in their bodies can suffer from:

- Damage to the brain and nervous system
- Behavior and learning problems, such as hyperactivity
- Slowed growth
- Hearing problems
- Headaches
- Anemia
- In rare cases of acute lead poisoning from ingestion of lead, seizures, coma and even death.

Lead can accumulate in our bodies over time, where it is stored in bones along with calcium. During pregnancy, lead is released from bones as maternal calcium is used to help form the bones of the fetus. This is particularly true if a woman does not have enough dietary calcium. Lead can also be easily circulated from the mother's blood stream through the placenta to the fetus. Mothers with high levels of lead in their bodies can expose their developing fetuses, resulting in serious and developmental problems including:

- Miscarriages,
- Premature births or low birth weight,
- Brain damage, decreased mental abilities and learning difficulties, and/or
- Reduced growth in young children.

Civil Penalty

The Company will pay a civil penalty of \$1,000. The penalty was reduced based on ability to pay.

Hatillo, LLC Home Improvement Services

Overview of Company and Facility Location

Hatillo, LLC Home Improvement Services (the Company) is located in New Haven, Connecticut. The settlement involves a renovation conducted at a property located in New Haven, Connecticut. The property was constructed prior to 1978.

Violations

The Expedited Settlement Agreement (ESA) settles alleged violations of the Toxic Substances Control Act (TSCA), and the Renovation, Repair and Painting Rule (RRP Rule), 40 C.F.R. Part 745, Subpart E. In the ESA, the United States alleges that the Company committed the following violation(s):

- Failure to obtain firm certification.
- Failure to provide the property owner EPA's lead hazard information pamphlet.
- Failure to assign a certified renovator to the renovation.
- Failure to retain records necessary to demonstrate compliance.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the enforcement order.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old and younger are most at risk. If not detected early, children with high levels of lead in their bodies can suffer from:

- Damage to the brain and nervous system
- Behavior and learning problems, such as hyperactivity
- Slowed growth
- Hearing problems
- Headaches
- Anemia
- In rare cases of acute lead poisoning from ingestion of lead, seizures, coma and even death.

Lead can accumulate in our bodies over time, where it is stored in bones along with calcium. During pregnancy, lead is released from bones as maternal calcium is used to help form the bones of the fetus. This is particularly true if a woman does not have enough dietary calcium. Lead can also be easily circulated from the mother's blood stream through the placenta to the fetus. Mothers with high levels of lead in their bodies can expose their developing fetuses, resulting in serious and developmental problems including:

- Miscarriages,
- Premature births or low birth weight,
- Brain damage, decreased mental abilities and learning difficulties, and/or
- Reduced growth in young children.

Civil Penalty

The Company will pay a civil penalty of \$1,290. The penalty was reduced because the Company qualified under the pilot micro-business penalty policy.

8AS Construction

Overview of Company and Facility Location

8AS Construction (the Company) is located in Wallkill, New York. The settlement involves a renovation project conducted at a property located in Newburgh. The property was constructed prior to 1978.

Violations

The Expedited Settlement Agreement (ESA) settles alleged violations of the Toxic Substances Control Act (TSCA), and the Renovation, Repair and Painting Rule (RRP Rule), 40 C.F.R. Part 745, Subpart E. In the ESA, the United States alleges that the Company committed the following violations:

- Failure to obtain firm certification.
- Failure to obtain a renovator course completion certificate (proof of training).

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the RRP Rule.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old and younger are most at risk. If not detected early, children with high levels of lead in their bodies can suffer from:

- Damage to the brain and nervous system
- Behavior and learning problems, such as hyperactivity
- Slowed growth
- Hearing problems
- Headaches
- Anemia
- In rare cases of acute lead poisoning from ingestion of lead, seizures, coma and even death.

Lead can accumulate in our bodies over time, where it is stored in bones along with calcium. During pregnancy, lead is released from bones as maternal calcium is used to help form the bones of the fetus. This is particularly true if a woman does not have enough dietary calcium. Lead can also be easily circulated from the mother's blood stream through the placenta to the fetus. Mothers with high levels of lead in their bodies can expose their developing fetuses, resulting in serious and developmental problems including:

- Miscarriages,
- Premature births or low birth weight,
- Brain damage, decreased mental abilities and learning difficulties, and/or
- Reduced growth in young children.

Civil Penalty

The Company will pay a civil penalty of \$2,000.

Star Painting Services, LLC

Overview of Company and Facility Location

Star Painting Services, LLC (the Company) is located in Stirling, New Jersey. The settlement involves a renovation conducted at a property located in New Providence, New Jersey. The property was constructed prior to 1978.

Violations

The Consent Agreement and Final Order (CAFO) settles alleged violations of the Toxic Substances Control Act (TSCA), and the Renovation, Repair and Painting Rule (RRP Rule), 40 C.F.R. Part 745, Subpart E. In the CAFO, the United States alleges that the Company committed the following violations:

- Failure to obtain initial firm certification.
- Failure to post warning signs.
- Failure to cover the ground, and clean the work area, as required.
- Failed to clean the work area after the renovation.
- Failure to maintain records.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the rule.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old and younger are most at risk. If not detected early, children with high levels of lead in their bodies can suffer from:

- Damage to the brain and nervous system
- Behavior and learning problems, such as hyperactivity
- Slowed growth
- Hearing problems
- Headaches

- Anemia
- In rare cases of acute lead poisoning from ingestion of lead, seizures, coma and even death.

Lead can accumulate in our bodies over time, where it is stored in bones along with calcium. During pregnancy, lead is released from bones as maternal calcium is used to help form the bones of the fetus. This is particularly true if a woman does not have enough dietary calcium. Lead can also be easily circulated from the mother's blood stream through the placenta to the fetus. Mothers with high levels of lead in their bodies can expose their developing fetuses, resulting in serious and developmental problems including:

- Miscarriages,
- Premature births or low birth weight,
- Brain damage, decreased mental abilities and learning difficulties, and/or
- Reduced growth in young children.

Civil Penalty

The Company will pay a civil penalty of \$5,510. The penalty was reduced because the Company qualified for the pilot micro-business penalty policy.

Total Perfection Construction, Inc.

Overview of Company and Facility Location

Total Perfection Construction, Inc. (the Company) is located in Hollis, New York. The settlement involves a renovation conducted at a property located in Brooklyn, New York. The property was constructed prior to 1978.

Violations

The Expedited Settlement Agreement (ESA) settles alleged violations of the Toxic Substances Control Act (TSCA), and the Renovation, Repair and Painting Rule (RRP Rule), 40 C.F.R. Part 745, Subpart E. In the ESA, the United States alleges that the Company committed the following violation:

- Failure to obtain firm certification.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the RRP Rule.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old and younger are most at risk. If not detected early, children with high levels of lead in their bodies can suffer from:

- Damage to the brain and nervous system
- Behavior and learning problems, such as hyperactivity
- Slowed growth
- Hearing problems
- Headaches
- Anemia
- In rare cases of acute lead poisoning from ingestion of lead, seizures, coma and even death.

Lead can accumulate in our bodies over time, where it is stored in bones along with calcium. During pregnancy, lead is released from bones as maternal calcium is used to help form the bones of the fetus. This is particularly true if a woman does not have enough dietary calcium. Lead can also be easily circulated from the mother's blood stream through the placenta to the fetus. Mothers with high levels of lead in their bodies can expose their developing fetuses, resulting in serious and developmental problems including:

- Miscarriages,
- Premature births or low birth weight,
- Brain damage, decreased mental abilities and learning difficulties, and/or
- Reduced growth in young children.

Civil Penalty

The Company will pay a civil penalty of \$1,000.

American Remodeling and Roofing, Inc.

Overview of Company and Facility Location

American Remodeling and Roofing, Inc. (the Company) is located in Schuylkill Haven, Pennsylvania. The settlement involves a renovation project conducted at a property located in Maryland, Pennsylvania. The property was constructed prior to 1978.

Violations

The Consent Agreement and Final Order (CAFO) settles alleged violations of the Toxic Substances Control Act (TSCA), and the Renovation, Repair and Painting Rule (RRP Rule), 40 C.F.R. Part 745,

Subpart E. In the CAFO, the United States alleges that the Company committed the following violations:

- Failure to obtain firm certification.
- Failure to either obtain the owner's written acknowledgement that the owner received the required lead hazard information pamphlet, or obtain a certificate of mailing at least seven (7) days prior to the renovation.
- Failure to ensure that a certified renovator was assigned to the renovation.
- Failure to retain records documenting compliance with work practice standards.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the rule.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old and younger are most at risk. If not detected early, children with high levels of lead in their bodies can suffer from:

- Damage to the brain and nervous system
- Behavior and learning problems, such as hyperactivity
- Slowed growth
- Hearing problems
- Headaches
- Anemia
- In rare cases of acute lead poisoning from ingestion of lead, seizures, coma and even death.

Lead can accumulate in our bodies over time, where it is stored in bones along with calcium. During pregnancy, lead is released from bones as maternal calcium is used to help form the bones of the fetus. This is particularly true if a woman does not have enough dietary calcium. Lead can also be easily circulated from the mother's blood stream through the placenta to the fetus. Mothers with high levels of lead in their bodies can expose their developing fetuses, resulting in serious and developmental problems including:

- Miscarriages,
- Premature births or low birth weight,
- Brain damage, decreased mental abilities and learning difficulties, and/or
- Reduced growth in young children.

Civil Penalty

The Company will pay a civil penalty of \$1,000. The penalty was reduced based on the Company's ability to pay.

AAPCO LC

Overview of Company and Facility Location

AAPCO LC (the Company) is located in Virginia Beach, Virginia. The settlement involves renovation projects at properties located in Suffolk, Norfolk, Hampton, and Virginia Beach, Virginia; and Crestview, North Carolina. The properties were constructed prior to 1978.

Violations

The Consent Agreement and Final Order (CAFO) settles alleged violations of the Toxic Substances Control Act (TSCA), and the Renovation, Repair and Painting Rule (RRP Rule), 40 C.F.R. Part 745, Subpart E. In the CAFO, the United States alleges that the Company committed the following violations:

- Failure to provide the property owner with the required lead hazard information pamphlet.
- Failed to obtain written acknowledgement of receipt of the pamphlet from respective owners.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the rule.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old and younger are most at risk. If not detected early, children with high levels of lead in their bodies can suffer from:

- Damage to the brain and nervous system
- Behavior and learning problems, such as hyperactivity
- Slowed growth
- Hearing problems
- Headaches
- Anemia
- In rare cases of acute lead poisoning from ingestion of lead, seizures, coma and even death.

Lead can accumulate in our bodies over time, where it is stored in bones along with calcium. During pregnancy, lead is released from bones as maternal calcium is used to help form the bones of the fetus. This is particularly true if a woman does not have enough dietary calcium. Lead can also be easily circulated from the mother's blood stream through the placenta to the fetus. Mothers with high levels of lead in their bodies can expose their developing fetuses, resulting in serious and developmental problems including:

- Miscarriages,
- Premature births or low birth weight,
- Brain damage, decreased mental abilities and learning difficulties, and/or
- Reduced growth in young children.

Civil Penalty

The Company will pay a civil penalty of \$ 12,800. The penalty considered the Company's ability to pay, among other factors.

Blue Door Painters, Inc.

Overview of Company and Facility Location

Blue Door Painters, Inc. (the Company) is located in Arlington, Virginia. The settlement involves renovation projects at properties located in Arlington, Fairfax, McLean and Falls Church, Virginia; and Washington, D.C. The properties were constructed prior to 1978.

Violations

The Consent Agreement and Final Order (CAFO) settles alleged violations of the Toxic Substances Control Act (TSCA), and the Renovation, Repair and Painting Rule (RRP Rule), 40 C.F.R. Part 745, Subpart E. In the CAFO, the United States alleges that the Company committed the following violations:

- Failure to contain and clean work area.
- Failure to ensure that a certified renovator is assigned to each renovation and discharges all of the responsibilities charged to a certified renovator.
- Failure to obtain acknowledgment of receipt of lead hazard information pamphlet
- Failure to retain records demonstrating compliance with work practice standards.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the rule.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old and younger are most at risk. If not detected early, children with high levels of lead in their bodies can suffer from:

- Damage to the brain and nervous system
- Behavior and learning problems, such as hyperactivity
- Slowed growth
- Hearing problems
- Headaches
- Anemia
- In rare cases of acute lead poisoning from ingestion of lead, seizures, coma and even death.

Lead can accumulate in our bodies over time, where it is stored in bones along with calcium. During pregnancy, lead is released from bones as maternal calcium is used to help form the bones of the fetus. This is particularly true if a woman does not have enough dietary calcium. Lead can also be easily circulated from the mother's blood stream through the placenta to the fetus. Mothers with high levels of lead in their bodies can expose their developing fetuses, resulting in serious and developmental problems including:

- Miscarriages,
- Premature births or low birth weight,
- Brain damage, decreased mental abilities and learning difficulties, and/or
- Reduced growth in young children.

Civil Penalty

The Company will pay a civil penalty of \$18,000. The penalty considered the Company's ability to pay, among other factors.

Cardo Windows, Inc.

Overview of Company and Facility Location

Cardo Windows, Inc. (the Company) is located in Mt. Laurel, New Jersey. The settlement involves renovation projects conducted at 26 properties located in Delaware, Pennsylvania, Maryland, and West Virginia. The properties were constructed prior to 1978.

Violations

The Consent Agreement and Final Order (CAFO) settles alleged violations of the Toxic Substances Control Act (TSCA), and the Renovation, Repair and Painting Rule (RRP Rule), 40 C.F.R. Part 745, Subpart E. In the CAFO, the United States alleges that the Company committed the following violations:

- Failure to obtain acknowledgement of receipt of lead hazard information pamphlet.
- Failure to retained required records.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the rule.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old and younger are most at risk. If not detected early, children with high levels of lead in their bodies can suffer from:

- Damage to the brain and nervous system
- Behavior and learning problems, such as hyperactivity
- Slowed growth
- Hearing problems
- Headaches
- Anemia
- In rare cases of acute lead poisoning from ingestion of lead, seizures, coma and even death.

Lead can accumulate in our bodies over time, where it is stored in bones along with calcium. During pregnancy, lead is released from bones as maternal calcium is used to help form the bones of the fetus. This is particularly true if a woman does not have enough dietary calcium. Lead can also be easily circulated from the mother's blood stream through the placenta to the fetus. Mothers with high levels of lead in their bodies can expose their developing fetuses, resulting in serious and developmental problems including:

- Miscarriages,
- Premature births or low birth weight,
- Brain damage, decreased mental abilities and learning difficulties, and/or
- Reduced growth in young children.

Civil Penalty

The Company will pay a civil penalty of \$27,000. The penalty considered the Company's ability to pay, among other factors.

CertaPro Main Line Painters

Overview of Company and Facility Location

CertaPro Main Line Painters (the Company) is located in Bryn Mawr, Pennsylvania. The settlement involves a renovation project conducted at a property located in Bala Cynwyd, Pennsylvania. The property was constructed prior to 1978.

Violations

The Consent Agreement and Final Order (CAFO) settles alleged violations of the Toxic Substances Control Act (TSCA), and the Renovation, Repair and Painting Rule (RRP Rule), 40 C.F.R. Part 745, Subpart E. In the CAFO, the United States alleges that the Company committed the following violations:

- Failure to either obtain the owner's written acknowledgement that the owner received the required lead hazard information pamphlet, or obtain a certificate of mailing at least seven (7) days prior to the renovation.
- Failure post warning signs and cover the ground, as required.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the rule.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old and younger are most at risk. If not detected early, children with high levels of lead in their bodies can suffer from:

- Damage to the brain and nervous system
- Behavior and learning problems, such as hyperactivity
- Slowed growth
- Hearing problems
- Headaches
- Anemia
- In rare cases of acute lead poisoning from ingestion of lead, seizures, coma and even death.

Lead can accumulate in our bodies over time, where it is stored in bones along with calcium. During pregnancy, lead is released from bones as maternal calcium is used to help form the bones of the fetus. This is particularly true if a woman does not have enough dietary calcium. Lead can also be easily circulated from the mother's blood stream through the placenta to the fetus. Mothers with high levels of lead in their bodies can expose their developing fetuses, resulting in serious and developmental problems including:

- Miscarriages,
- Premature births or low birth weight,
- Brain damage, decreased mental abilities and learning difficulties, and/or
- Reduced growth in young children.

Civil Penalty

The Company will pay a civil penalty of \$7,536. The penalty considered the Company's ability to pay, among other factors.

Chesapeake Finishing, Inc.

Overview of Company and Facility Location

Chesapeake Finishing, Inc. (the Company) is located in Gaithersburg, Maryland. The settlement involves a renovation project conducted at a property located in Silver Spring, Maryland. The property was constructed prior to 1978.

Violations

The Expedited Settlement Agreement (ESA) settles alleged violations of the Toxic Substances Control Act (TSCA), and the Renovation, Repair and Painting Rule (RRP Rule), 40 C.F.R. Part 745, Subpart E. In the CAFO, the United States alleges that the Company committed the following violations:

- Failure to obtain, from the owner, a written acknowledgement that the owner has received the required lead hazard information pamphlet, or obtain a certificate of mailing at least seven (7) days prior to the renovation.
- Failure to perform recordkeeping and reporting requirements.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the rule.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old and younger are most at risk. If not detected early, children with high levels of lead in their bodies can suffer from:

- Damage to the brain and nervous system
- Behavior and learning problems, such as hyperactivity
- Slowed growth
- Hearing problems
- Headaches
- Anemia
- In rare cases of acute lead poisoning from ingestion of lead, seizures, coma and even death.

Lead can accumulate in our bodies over time, where it is stored in bones along with calcium. During pregnancy, lead is released from bones as maternal calcium is used to help form the bones of the fetus. This is particularly true if a woman does not have enough dietary calcium. Lead can also be easily circulated from the mother's blood stream through the placenta to the fetus. Mothers with high levels of lead in their bodies can expose their developing fetuses, resulting in serious and developmental problems including:

- Miscarriages,
- Premature births or low birth weight,
- Brain damage, decreased mental abilities and learning difficulties, and/or
- Reduced growth in young children.

Civil Penalty

The Company will pay a civil penalty of \$2,000.

Colossal Contractors, Inc.

Overview of Company and Facility Location

Colossal Contractors, Inc. (the Company) is located in Burtonsville, Maryland. The settlement involves a renovation project conducted at a property located in Clarksburg, Maryland. The property was constructed prior to 1978.

Violations

The Consent Agreement and Final Order (CAFO) settles alleged violations of the Toxic Substances Control Act (TSCA), and the Renovation, Repair and Painting Rule (RRP Rule), 40 C.F.R. Part 745,

Subpart E. In the CAFO, the United States alleges that the Company committed the following violations:

- Failure to obtain either the owner's written acknowledgement of receiving the required lead hazard information pamphlet, or a certificate of mailing at least seven days prior to the renovation.
- Failure to retain all records documenting compliance with work practice standards.
- Failure to comply with work practice standards to post warning signs; cover the ground; cover the floor ; close windows and doors in the work area, and cover doors to the work area; and remove objects from the work area or cover them, as required.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the rule.

Health and Environmental Effects

- Reduced growth in young children.

Civil Penalty

The Company will pay a civil penalty of \$600.

Castillo Construction Services, Inc.

Overview of Company and Facility Location

Castillo Construction Services, Inc. (the Company) is located in Tampa, Florida. The settlement involves a renovation conducted at a property located in Tampa, Florida. The property was constructed prior to 1978.

Violations

The Consent Agreement and Final Order (CAFO) settles alleged violations of the Toxic Substances Control Act (TSCA), and the Renovation, Repair and Painting Rule (RRP Rule), 40 C.F.R. Part 745, Subpart E. In the CAFO, the United States alleges that the Company committed the following violation:

- Failure to obtain firm certification.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the rule.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old and younger are most at risk. If not detected early, children with high levels of lead in their bodies can suffer from:

- Damage to the brain and nervous system
- Behavior and learning problems, such as hyperactivity
- Slowed growth
- Hearing problems
- Headaches
- Anemia
- In rare cases of acute lead poisoning from ingestion of lead, seizures, coma and even death.

Lead can accumulate in our bodies over time, where it is stored in bones along with calcium. During pregnancy, lead is released from bones as maternal calcium is used to help form the bones of the fetus. This is particularly true if a woman does not have enough dietary calcium. Lead can also be easily circulated from the mother's blood stream through the placenta to the fetus. Mothers with high levels of lead in their bodies can expose their developing fetuses, resulting in serious and developmental problems including:

- Miscarriages,
- Premature births or low birth weight,
- Brain damage, decreased mental abilities and learning difficulties, and/or
- Reduced growth in young children.

Civil Penalty

The Company will pay a civil penalty of \$420.

Door Store of Louisville, LLC

Overview of Company and Facility Location

Door Store of Louisville, LLC (the Company) is located in Louisville, Kentucky. The settlement involves a renovation conducted at a property located in Louisville, Kentucky. The property was constructed prior to 1978.

Violations

The Consent Agreement and Final Order (CAFO) settles alleged violations of the Toxic Substances Control Act (TSCA), and the Renovation, Repair and Painting Rule (RRP Rule), 40 C.F.R. Part 745, Subpart E. In the CAFO, the United States alleges that the Company committed the following violation:

- Failure to retain, from the owner and/or adult occupant, a signed and dated acknowledgement of receipt of EPA's lead hazard information pamphlet.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the rule.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old and younger are most at risk. If not detected early, children with high levels of lead in their bodies can suffer from:

- Damage to the brain and nervous system

Civil Penalty

The Company will pay a civil penalty of \$420.

Omni Services, LLC

Overview of Company and Facility Location

Omni Services, LLC (the Company) is located in South Carolina. The settlement involves renovation conducted at properties located in Charleston, South Carolina. The properties were constructed prior to 1978.

Violations

The Consent Agreement and Final Order (CAFO) settles alleged violations of the Toxic Substances Control Act (TSCA), and the Renovation, Repair and Painting Rule (RRP Rule), 40 C.F.R. Part 745, Subpart E. In the CAFO, the United States alleges that the Company committed the following violation:

- Failure to either obtain the owner/occupant's written acknowledgement of having received EPA's lead hazard information pamphlet, or obtain a certificate of mailing the pamphlet at least seven (7) days prior to the renovation.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the rule.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old and younger are most at risk. If not detected early, children with high levels of lead in their bodies can suffer from:

- Damage to the brain and nervous system

Civil Penalty

The Company will pay a civil penalty of \$730.

Arch Environmental Group, Inc.

Overview of Company and Facility Location

Arch Environmental Group, Inc. (the Company) is a training provider located in Farmington Hills, Michigan. The settlement involves lead-based paint training courses.

Violations

The Expedited Settlement Agreement (ESA) settles alleged violations of the Toxic Substances Control Act (TSCA), and the Lead-Based Paint Activities Rule (LBPA Rule), 40 C.F.R. Part 745, Subpart L. The LBPA Rule establishes requirements for training programs for renovators and dust sampling technicians who perform renovations subject to the Renovation, Repair and Painting Rule (“RRP Rule”), 40 C.F.R. Part 745, Subpart E. In the ESA, the United States alleges that the Company committed the following violation:

- Failure to notify EPA following completion of training courses.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the RRP Rule.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old and younger are most at risk. If not detected early, children with high levels of lead in their bodies can suffer from:

- Damage to the brain and nervous system

- Brain damage, decreased mental abilities and learning difficulties, and/or
- Reduced growth in young children.

Civil Penalty

The Company will pay a civil penalty of \$200.

Ohio Laborer’s Training & Apprenticeship Trust Fund

Overview of Company and Facility Location

Ohio Laborer’s Training & Apprenticeship Trust Fund (the Company) is a training provider located in Howard, Ohio. The settlement involves lead-based paint training courses.

Violations

The Expedited Settlement Agreement (ESA) settles alleged violations of the Toxic Substances Control Act (TSCA), and the Lead-Based Paint Activities Rule (LBPA Rule), 40 C.F.R. Part 745, Subpart L. The LBPA Rule establishes requirements for training programs for renovators and dust sampling technicians who perform renovations subject to the Renovation, Repair and Painting Rule (“RRP Rule”), 40 C.F.R. Part 745, Subpart E. In the ESA, the United States alleges that the Company committed the following violation:

- Failure to provide EPA advance notification of training courses.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the RRP Rule.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old and younger are most at risk. If not detected early, children with high levels of lead in their bodies can suffer from:

- Damage to the brain and nervous system
- Behavior and learning problems, such as hyperactivity
- Slowed growth
- Hearing problems
- Headaches
- Anemia
- In rare cases of acute lead poisoning from ingestion of lead, seizures, coma and even death.

- Reduced growth in young children.

Civil Penalty

The Company will pay a civil penalty of \$1,000.

Rohrer Group, Inc.
d/b/a Window World of Akron, Ohio

Overview of Company and Facility Location

Rohrer Group, Inc., doing business as Window World of Akron, Ohio (the Company) is located in Akron, Ohio. The settlement involves renovations at properties located in Akron, Canton, Medina, Kent, and Cuyahoga Falls, Ohio. The properties were constructed prior to 1978.

Violations

The Consent Agreement and Final Order (CAFO) settles alleged violations of the Toxic Substances Control Act (TSCA), and the Renovation, Repair and Painting Rule (RRP Rule), 40 C.F.R. Part 745, Subpart E. In the CAFO, the United States alleges that the Company committed the following violations:

- Failure to obtain from the property owner written acknowledgement that the owner received the required lead hazard information pamphlet.
- Failure to retain all records necessary to demonstrate compliance with work practice standards.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the rule.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old and younger are most at risk. If not detected early, children with high levels of lead in their bodies can suffer from:

- Damage to the brain and nervous system
- Behavior and learning problems, such as hyperactivity
- Slowed growth
- Hearing problems
- Headaches
- Anemia
- In rare cases of acute lead poisoning from ingestion of lead, seizures, coma and even death.

Lead can accumulate in our bodies over time, where it is stored in bones along with calcium. During pregnancy, lead is released from bones as maternal calcium is used to help form the bones of the fetus. This is particularly true if a woman does not have enough dietary calcium. Lead can also be easily circulated from the mother's blood stream through the placenta to the fetus. - Miscarriages,
- Premature births or low birth weight,
- Brain damage, decreased mental abilities and learning difficulties, and/or
- Reduced growth in young children.

Civil Penalty

The Company will pay a civil penalty of \$3,600. The penalty considered the Company's ability to pay, among other factors.

William DeMarse d/b/a Bill DeMarse Professional Painting

Overview of Company and Facility Location

William DeMarse, doing business as Bill DeMarse Professional Painting (the Company) is located in Grand Haven, Michigan. The settlement involves a renovation conducted at a property located in Grand Haven, Michigan. The property was constructed prior to 1978.

Violations

The Consent Agreement and Final Order (CAFO) settles alleged violations of the Toxic Substances Control Act (TSCA), and the Renovation, Repair and Painting Rule (RRP Rule), 40 C.F.R. Part 745, Subpart E. In the CAFO, the United States alleges that the Company committed the following violations:

- Failure to obtain firm certification.
- Failure to direct a renovation with a certified renovator, or perform it with a certified renovator or individuals trained by a certified renovator.
- Failure to cover the ground or clean the work area as required.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the rule.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old and younger are most at risk. If not detected early, children with high levels of lead in their bodies can suffer from:

- Damage to the brain and nervous system
- Behavior and learning problems, such as hyperactivity

- Brain damage, decreased mental abilities and learning difficulties, and/or
- Reduced growth in young children.

Civil Penalty

The Company will pay a civil penalty of \$1,200.

Bielenberg Builders Inc.

Overview of Company and Facility Location

Bielenberg Builders Inc. (the Company) is located in Lincoln, Nebraska. The settlement involves a renovation conducted at a property located in Lincoln, Nebraska. The property was constructed prior to 1978.

Violations

The Consent Agreement and Final Order (CAFO) settles alleged violations of the Toxic Substances Control Act (TSCA), and the Renovation, Repair and Painting Rule (RRP Rule), 40 C.F.R. Part 745, Subpart E. In the CAFO, the United States alleges that the Company committed the following violations:

- Failure to obtain firm certification.
- Failure to post signs, cover the ground and contain waste, as required.
- Failure to provide EPA's lead hazard information pamphlet to the property owner.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the enforcement order.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old and younger are most at risk. If not detected early, children with high levels of lead in their bodies can suffer from:

- Damage to the brain and nervous system
- Behavior and learning problems, such as hyperactivity
- Slowed growth
- Hearing problems
- Headaches
- Anemia
- In rare cases of acute lead poisoning from ingestion of lead, seizures, coma and even death.

Lead can accumulate in our bodies over time, where it is stored in bones along with calcium. During pregnancy, lead is released from bones as maternal calcium is used to help form the bones of the fetus. This is particularly true if a woman does not have enough dietary calcium. Lead can also be easily circulated from the mother's blood stream through the placenta to the fetus. Mothers with high levels of lead in their bodies can expose their developing fetuses, resulting in serious and developmental problems including:

- Miscarriages,
- Premature births or low birth weight,
- Brain damage, decreased mental abilities and learning difficulties, and/or
- Reduced growth in young children.

Civil Penalty

The Company will pay a zero civil penalty, based on ability to pay.

Blues Springs Siding and Windows, LLC

Overview of Company and Facility Location

Blues Springs Siding and Windows, LLC (the Company) is located in Blue Springs, Missouri. The settlement involves renovation conducted at properties located in Kansas City, Missouri. The properties were constructed prior to 1978.

Violations

The Consent Agreement and Final Order (CAFO) settles alleged violations of the Toxic Substances Control Act (TSCA), and the Renovation, Repair and Painting Rule (RRP Rule), 40 C.F.R. Part 745, Subpart E. In the CAFO, the United States alleges that the Company committed the following violations:

- Failure to obtain firm certification.
- Failure to maintain records documenting compliance.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the enforcement order.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. - Miscarriages,
- Premature births or low birth weight,
- Brain damage, decreased mental abilities and learning difficulties, and/or
- Reduced growth in young children.

Civil Penalty

The Company will pay a civil penalty of \$2,198. Also, the Company will perform a voluntary lead-based paint abatement Supplemental Environmental Project, valued at \$19,782, to replace 28 windows.

Brown Restoration, Inc.

Overview of Company and Facility Location

Brown Restoration, Inc. (the Company) is located in Raymore, Missouri. The settlement involves renovations at properties located in Kansas City, Missouri. The properties were constructed prior to 1978.

Violations

The Consent Agreement and Final Order (CAFO) settles alleged violations of the Toxic Substances Control Act (TSCA), and the Renovation, Repair and Painting Rule (RRP Rule), 40 C.F.R. Part 745, Subpart E. In the CAFO, the United States alleges that the Company committed the following violation:

- Failure to retain all records necessary to demonstrate compliance.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the rule.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. During pregnancy, lead is released from bones as maternal calcium is used to help form the bones of the fetus. This is particularly true if a woman does not have enough dietary calcium. Lead can also be easily circulated from the mother's blood stream through the placenta to the fetus. Mothers with high levels of lead in their bodies can expose their developing fetuses, resulting in serious and developmental problems including:

- Miscarriages,
- Premature births or low birth weight,
- Brain damage, decreased mental abilities and learning difficulties, and/or
- Reduced growth in young children.

Civil Penalty

The Company will pay a civil penalty of \$3,033. Also, the Company will perform a voluntary lead-based paint abatement Supplemental Environmental Project, valued at \$27,304, for the replacement of up to 25 windows.

Repairs Unlimited, Inc.

Overview of Company and Facility Location

Repairs Unlimited, Inc. (the Company) is located in Kansas City, Kansas. The settlement involves renovations conducted at properties located in Kansas City, Garden City and Plattsburg, Missouri. The properties were constructed prior to 1978.

Violations

The Consent Agreement and Final Order (CAFO) settles alleged violations of the Toxic Substances Control Act (TSCA), and the Renovation, Repair and Painting Rule (RRP Rule), 40 C.F.R. Part 745, Subpart E. In the CAFO, the United States alleges that the Company committed the following violation:

- Failure to retain records documenting compliance.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the enforcement order.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old and younger are most at risk. If not detected early, children with high levels of lead in their bodies can suffer from:

- Damage to the brain and nervous system
- Behavior and learning problems, such as hyperactivity
- Slowed growth
- Hearing problems
- Headaches
- Anemia
- In rare cases of acute lead poisoning from ingestion of lead, seizures, coma and even death.

Lead can accumulate in our bodies over time, where it is stored in bones along with calcium. During pregnancy, lead is released from bones as maternal calcium is used to help form the bones of the fetus. This is particularly true if a woman does not have enough dietary calcium. Lead can also be easily circulated from the mother's blood stream through the placenta to the fetus. Mothers with high levels of lead in their bodies can expose their developing fetuses, resulting in serious and developmental problems including:

- Miscarriages,
- Premature births or low birth weight,
- Brain damage, decreased mental abilities and learning difficulties, and/or
- Reduced growth in young children.

Civil Penalty

The Company will pay a civil penalty of \$4,284.

Springer Building & Design, Inc.

Overview of Company and Facility Location

Springer Building & Design, Inc. (the Company) is located in Kansas. The settlement involves renovations conducted at properties located in Kansas City, Missouri. The properties were constructed prior to 1978.

Violations

The Consent Agreement and Final Order (CAFO) settles alleged violations of the Toxic Substances Control Act (TSCA), and the Renovation, Repair and Painting Rule (RRP Rule), 40 C.F.R. Part 745,

Subpart E. In the CAFO, the United States alleges that the Company committed the following violations:

- Failure to apply for and obtain firm certification.
- Failure to obtain written acknowledgment from the property owner for receipt of the EPA lead hazard information pamphlet.
- Failure to maintain records necessary to demonstrate compliance.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the rule.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old and younger are most at risk. If not detected early, children with high levels of lead in their bodies can suffer from:

- Damage to the brain and nervous system
- Behavior and learning problems, such as hyperactivity
- Slowed growth
- Hearing problems
- Headaches
- Anemia
- In rare cases of acute lead poisoning from ingestion of lead, seizures, coma and even death.

Lead can accumulate in our bodies over time, where it is stored in bones along with calcium. During pregnancy, lead is released from bones as maternal calcium is used to help form the bones of the fetus. This is particularly true if a woman does not have enough dietary calcium. Lead can also be easily circulated from the mother's blood stream through the placenta to the fetus. - Miscarriages,
- Premature births or low birth weight,
- Brain damage, decreased mental abilities and learning difficulties, and/or
- Reduced growth in young children.

Civil Penalty

The Company will pay a civil penalty of \$1,120. The penalty was reduced because the Company qualified as a micro-business under the penalty program for micro-businesses.

Tony Kapple d/b/a Kapples Building Remodeling

Overview of Company and Facility Location

Tony Kapple doing business as Kapples Building Remodeling (the Company) is located in Carter Lake, Iowa. The settlement involves a renovation conducted at a property located in Omaha, Nebraska. The property was constructed prior to 1978.

Violations

The Consent Agreement and Final Order (CAFO) settles alleged violations of the Toxic Substances Control Act (TSCA), and the Renovation, Repair and Painting Rule (RRP Rule), 40 C.F.R. Part 745, Subpart E. In the CAFO, the United States alleges that the Company committed the following violations:

- Failure to obtain initial firm certification.
- Failure to assign a certified renovator.
- Failure to post warning signs, cover the ground and contain waste, as required.
- Failure to provide the property owner the EPA-approved lead hazard information pamphlet.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the rule.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old and younger are most at risk. If not detected early, children with high levels of lead in their bodies can suffer from:

- Damage to the brain and nervous system

Civil Penalty

The Company will pay a civil penalty of \$1,000.

Blue Mountain Air, Inc.

Overview of Company and Facility Location

Blue Mountain Air, Inc. (the Company) is located in Vacaville, California. The settlement involves renovations conducted at properties located in Napa, Santa Rosa and El Sobrante, California. The properties were constructed prior to 1978.

Violations

The Consent Agreement and Final Order (CAFO) settles alleged violations of the Toxic Substances Control Act (TSCA), and the Renovation, Repair and Painting Rule (RRP Rule), 40 C.F.R. Part 745, Subpart E. In the CAFO, the United States alleges that the Company committed the following violations:

- Failure to obtain firm certification.
- Failure to keep documentation that a certified renovator was assigned to renovations, provided on-the-job training to workers; performed or directed workers who performed renovation tasks; and performed post-renovation cleaning verification.
- Failure to keep copies of training certificates for certified renovators.
- Failure to keep certification by the certified renovator that training was provided to workers, work practice standards were met, and the certified renovator performed post-renovation cleaning verification.
- Failure to ensure that all individuals performing renovations were either certified renovators or had been trained by a certified renovator.
- Failure to ensure that a certified renovator was assigned who discharged the responsibilities of a certified renovator.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the enforcement order.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old and younger are most at risk. If not detected early, children with high levels of lead in their bodies can suffer from:

Superior Inspection Services, Inc.

Overview of Company and Facility Location

Superior Inspection Services, Inc. (the Company) is located in Portland, Oregon. The settlement involves a renovation conducted at a property located in Portland, Oregon. The property was constructed prior to 1978.

Violations

The Consent Agreement and Final Order (CAFO) settles alleged violations of the Toxic Substances Control Act (TSCA), and the Oregon Administrative Rules (Division 70) which are the EPA-authorized equivalent to the federal Renovation, Repair and Painting Rule (RRP Rule), 40 C.F.R. Part 745, Subpart E. In the CAFO, the United States alleges that the Company committed the following violation:

- Failure to obtain firm certification.

Pollutant Reductions

It is expected that potential lead exposures and environmental contamination will be significantly reduced because the Company has taken prompt steps to come into compliance with the rule.

Health and Environmental Effects

Lead exposure affects the nervous system and can cause a range of health effects, from behavioral problems and learning disabilities, to seizures and death. Children six years old and younger are most at risk. If not detected early, children with high levels of lead in their bodies can suffer from:

- Damage to the brain and nervous system
- Behavior and learning problems, such as hyperactivity
- Slowed growth
