Subchapter 23. Control of Emissions from Cotton Gins [AMENDED]

Subchapter 24. Control of Emissions from Grain Elevators [AMENDED]

Appendix L. PM-10 Emission Factors for Permit by Rule for Grain Elevators [NEW]

Subchapter 25. Smoke, Visible Emissions and Particulates [AMENDED]

Subchapter 37. Control of Emission of Organic Materials [AMENDED]

Subchapter 39. Emission of Organic Materials in Nonattainment Areas [AMENDED]

Subchapter 41. Control of Emission of Hazardous and Toxic Air Contaminants [AMENDED]

SUMMARY:

In Subchapter 5, the Department is considering possible increases in annual operating fees for both minor facilities and Part 70 sources.

The proposed revisions to Subchapter 7 will modify language applicable to de minimis facilities, Permit by Rule (PBR), and general permits. First, actual emissions of Total Suspended Particulates (TSP) will no longer be counted in determining whether a facility meets the definition of "de minimis facility." Second, the proposed revisions will delete the lower limit of 5 tons per year for PBR facilities. This will allow those facilities with less than 5 tons per year emissions, which are subject to New Source Performance Standards (NSPS) or National Emissions Standards for Hazardous Air Pollutants (NESHAP), to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a

PBR for specific facilities will be referenced under this new Part also. Third, the proposed revisions will delete the lower limit for general permits. This will allow facilities that may have less than 40 tons per year of emissions, but for which no PBR has been written, the opportunity to apply for coverage under an applicable general permit. The Department also proposes to delete the definition for "Volatile Organic Solvents (VOS)," because the proposed changes to Subchapters 37 and 39 would exclude that term from the rules.

The Department is considering increases in the permit application fees in both Subchapters 7 and 8.

The proposed revisions to Subchapters 23 and 24 would simplify the language under the agency-wide re-write/de-wrong initiative. It is also proposed to add a new PBR section to both subchapters. The PBR will streamline the permitting process by creating a mechanism that will eliminate the necessity for some cotton gins and elevators to obtain an individual air quality permit. Also, a new Appendix L is proposed which contains PM-10 emission factors for PBR grain elevators. Additional changes to both subchapters follow a proposed amendment of Subchapter 25 concerning short-term exceedances of the opacity standard. The revised rules would allow such exceedances during one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours.

The proposed amendments to Subchapter 25 would fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the Department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P. Additionally, the Department proposes to exempt from Appendix P requirements those sources already subject to a new source performance standard and sources scheduled for retirement within 5 years after the amended rule takes effect. The amended rule would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include exempting sources subject to opacity standards promulgated under Section 111 of the Federal Clean Air Act, along with a clarification of how the opacity standard will be determined at sources that have CEMs and how it will be determined at sources without CEMs. Other

6759

Notices of Rulemaking Intent

proposed amendments to Subchapter 25 are designed to simplify and clarify the rule.

The proposed changes to Subchapters 37 and 39 include clarification of language, correction of typographical errors, deletion of redundant language, and reformatting. Three substantive changes are proposed for each Subchapter. One of those substantive changes affects both Subchapter 37 and 39. The definition of "volatile organic compounds (VOC)" in 252:100-37-2 and 252:100-39-2 has been revised in response to the Air Quality Council's direction to the staff to review the petition from the Chemical Manufacturers Association dated October 25, 1995, to exclude acetone from the definition of VOC; the request from American Airlines, Boeing, and Nordam, dated January 19, 1998, that acetone be excluded from the definition of VOC; a request dated April 21, 1997, from the Halogenated Solvents Industry Alliance, requesting that perchloroethylene be excluded from the definition of VOC; a request from Dow Corning that methylated siloxanes be excluded from the definition of VOC; and a request on behalf of the Eastman Chemical Company dated August 18, 1998, that methyl acetate be excluded from the definition of VOC. The definition of VOC has been modified to be consistent with the EPA definition. The second substantive change to Subchapter 37 is the removal of the requirement for permits and best available control technology (BACT) for new sources of VOC contained in 252:100-37-3(a). The third substantive change for Subchapter 37 deals with the first sentence in 252:100-37-36 regarding fuel-burning and refuse-burning equipment, which has been deleted to resolve the contradiction between the first and second sentences. The second substantive change to Subchapter 39 is the correction of the placement of "prior to lease custody transfer" in 252:100-39-30(b)(2). The third substantive change is the addition of a minimum annual throughput of 120,000 gallons and a minimum storage capacity of 2,000 gallons to 252:100-39-41(c) to determine applicability of subsection (c). In addition, the Department is requesting comments on 252:100-39-47, Control of VOS Emissions from Aerospace Industries Coatings Operations. Options include (1) retain the present (ARACT) rule and enforce the emissions reduction plan specified therein; (2) repeal the present rule and promulgate new rules regulating specialty coatings; or (3) retain the present plan, promulgate new rules for specialty coatings, and allow the facility to choose which of the two they prefer. These options recognize that the new NESHAP for the aerospace industry controls VOC emissions except for specialty coatings. The proposed amendments to Subchapter 41 include adopting by reference the Maximum Available Control Technology (MACT) standards for hazardous air pollutants that have been promulgated in 40 CFR 63 from July 1, 1997, through July 1, 1998. These are Subparts S and LL. The Department is also updating in Subchapter 41 the incorporation by reference of the NESHAP found in 40

CFR 61 to July 1, 1998. The Department is requesting comments on these proposed changes.

AUTHORITY:

Environmental Quality Board, 27A O.S.Supp. 1997, §§ 2-2-101 and 2-5-101 *et seq.*

COMMENT PERIOD:

Tuesday, September 15, 1998, through Tuesday, October 20, 1998. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by Tuesday, October 13, 1998

Also scheduled before the Environmental Quality Board at their meeting on Tuesday, November 10, 1998 - 9:30 a.m. in Poteau (Location to be determined. See contact person)

PUBLIC HEARINGS:

Tuesday, October 20, 1998 - 9:30 a.m. briefing and 1:00 p.m. hearing, at the Tulsa City-County Health Department, 5051 South 129th East (Northeast corner of 51st and 129th), Tulsa, Oklahoma

COPIES OF PROPOSED RULES:

Copies of the rules will be available September 15, 1998, for review at the Air Quality Division office at 707 North Robinson, Suite 4100, Oklahoma City, Oklahoma, 73102, or may be obtained from Myrna Bruce at 405-702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statements may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Shawna McWaters-Khalousi (Subchapters 5 and 8), Michelle Martinez (Subchapter 24), Jeanette Buttram (Subchapters 7 and 25), Becky Mainord (Subchapter 23), Joyce Sheedy, Ph.D. (Subchapters 37, 39 and 41). Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

ADDITIONAL INFORMATION:

Additional proposed revisions have been made to the versions of Subchapters 7, 23, 24, 25, 37 and 39 that were the subject of a public hearing on August 18, 1998.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

None

INCORPORATIONS BY REFERENCE:

None for 100-25-1 through 100-25-4. Yes for 100-25-5

Incorporated standards:

40 CFR Part 51, Appendix P

Incorporating rule:

100-25-5

Availability:

The standards are available to the public for examination at the Department of Environmental Quality office at 707 N. Robinson, 4th Floor, Oklahoma City, OK

ANALYSIS:

The changes to Subchapter 25 simplify and clarify the rule. Also, they fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the Department proposes to incorporate by reference the Federal opacity monitoring requirements for fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries and fossil fuel-fired

steam generators as specified in 40 CFR Part 51, Appendix P. Additionally, the rule would exempt from Appendix P requirements sources already subject to a new source performance standard and sources scheduled for retirement within 5 years after the amended rule takes effect. The amended rule would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include exempting sources subject to opacity standards promulgated under Section 111 of the Federal Clean Air Act from the State opacity standard, along with a clarification of how the opacity standard will be determined at sources that have CEMs and how it will be determined at sources without CEMs. Other proposed amendments to Subchapter 25 were designed to simplify and clarify the rule.

The Air Quality Advisory Council recommended these amendments for adoption at their meeting on October 20, 1998.

PURSUANT TO THE ACTIONS DESCRIBED HEREIN, THE FOLLOWING RULES ARE CONSIDERED FINALLY ADOPTED AS SET FORTH IN 75 O.S., SECTION 308.1(A), WITH AN EFFECTIVE DATE OF JUNE 1, 1999.

SUBCHAPTER 25. SMOKE, VISIBLE EMISSIONS AND PARTICULATES

252:100-25-1. Purpose

The purpose of this Subchapter is to control the ~~amount of smoke, visible emissions and particulates~~ particulate matter from the operation of any air contaminant source.

252:100-25-2. General prohibition

(a) ~~No person owning, leasing, or controlling the operation of any air contaminant source shall willfully, negligently, or through failure to provide necessary equipment or facilities or to take necessary precautions, permit the emission from said air contaminant source of such quantities of air contamination as will cause a condition of air pollution. No owner or operator of any air contaminant source shall allow emissions from said source so as to cause or contribute to air pollution.~~

(b) All installations shall comply with this Subchapter upon and after February 1, 1984.

252:100-25-2.1. Definitions

The following words and terms when used in this Subchapter shall have the following meaning unless the context clearly indicates otherwise:

"One-hour period" means, for units with an operable Continuous Opacity Monitor (COM), any 60-minute period commencing on the hour.

6761

Permanent Final Adoptions

"Opacity" means the degree to which emissions reduce the transmission of light and obscure the view of an object in the background.

"Six-minute period" means, for units with an operable COM, any one of the ten equal parts of a one-hour period.

"Unit" means any piece of equipment that has the potential to emit air contaminants in the form of visible emissions.

252:100-25-3. Smoke, visible emissions and particulates opacity limit

(a) Units subject to an opacity limit promulgated under section 111 of the Federal Clean Air Act are exempt from this section.

(a)(b) No person shall cause, suffer, allow, or permit the discharge of any fumes, aerosol, mist, gas, smoke, vapor, particulate matter, or any combination thereof of a shade or density exhibiting greater than twenty (20) percent equivalent 20% opacity, except for:

(b) Subsection 252:100-25-3(a) shall not apply to:

(1) Smoke or visible emissions emitted during the cleaning of a fire, the building of a new fire or the blowing of soot from boilers, or other short-term occurrences, the shade or density of which is not greater than sixty (60) percent opacity for a period aggregating no more than five (5) minutes in any sixty (60) consecutive minutes and/or no more than 20 minutes in any 24-hour period. Short term occurrences, which consist of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. For units with COMs operated and maintained in accordance with Performance Specification 1 (40 CFR Part 60, Appendix B), short term occurrences which consist of not more than one six-minute period in any one-hour period, not to exceed three such periods in any consecutive 24 hours. In neither case shall the average of any six-minute period exceed 60% opacity.

(2) Smoke resulting from fires covered by the exceptions outlined in 252:100-13-7.

(3) An emission, where the presence of uncombined water is the only reason for failure to meet the requirements of 252:100-25-3(a).

(4) Smoke generated due to a malfunction in a facility, wherein when the source of the fuel, which is being burned produces producing the smoke, is not under the direct and immediate control of the facility and wherein the immediate constriction of the fuel flow at the facility would produce a hazard to life and/or property upstream from the facility to the point of the fuel source.

(c) To determine compliance with this Section, opacity shall be read by either:

(1) A Certified Visible Emission Evaluator using Test Method 9 (40 CFR Part 60, Appendix A).

(2) A COM installed, calibrated, operated and

maintained in accordance with Performance Specification 1 (40 CFR Part 60, Appendix B).

252:100-25-4. Alternative for particulates

(a) The 20 percent 20% opacity limit as required under 252:100-25-3 may be increased, for particulates only, provided that the owner/operator owner or operator demonstrates to the satisfaction of the Oklahoma Air Quality Council at public hearing that:

(1) that the owner/operator The owner or operator has installed air pollution control equipment to attempt to control both visible and particulate matter emissions to the limit required by applicable Subchapters;

(2) that the The pollution control equipment so installed has been properly maintained, is in good working order and is operated so as to minimize emissions;

(A) Has been properly maintained.

(B) Is in good working order.

(C) Is operated to minimize emissions.

(3) that the The installed control equipment does not, in fact, control opacity to the limit required in 252:100-25-3;

(4) that the owner/operator The owner or operator has conducted stack test(s) using appropriate test methods as approved by the Air Quality Division to determine mass emissions at maximum allowed capacity and has determined such emissions meet all applicable particulate matter requirements (i.e., permit limit, rule limit, process limit); and,

(5) that the owner/operator conducts The owner or operator has conducted detailed modeling and/or and other measures (e.g., monitoring) deemed necessary by the Executive Director (e.g., monitoring) to demonstrate that the maximum impact of any increase of opacity will not exceed 5 ug/m³ 24-hour PM-10 24-hour average at any point of impact or 1 ug/m³ PM-10 annual average at any point of impact.

(b) Upon completion of the demonstration specified in (a) of this Section, the opacity allowed will be as based on the opacity read by an Oklahoma Certified Visible Emission Evaluator at the time of the maximum operation stack test.

(c) All applications Applications for an alternative under 252:100-25-4 will be submitted to the Director of Air Quality the Division for his review and recommendation to the Air Quality Council for final action.

252:100-25-5. Continuous emission monitoring for opacity

(a) Continuous monitoring of opacity is required for fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries and fossil fuel-fired steam generators in accordance with 40 CFR Part 51, Appendix P, which is hereby incorporated by reference as it existed on July 1, 1998.

(b) Owners or operators of these emission sources shall:

(1) Install, calibrate, operate, and maintain all monitoring equipment necessary for continuously monitoring opacity.

(2) Complete the installation and performance tests of such equipment and begin monitoring and recording by January 1, 2001.

(c) This section shall not apply to:

(1) Sources already subject to a new source performance standard promulgated in 40 CFR Part 60 pursuant to section 111 of the Clean Air Act.

(2) Sources scheduled for retirement within 5 years after the effective date of this rule, provided adequate evidence and guarantees are available to show the source will cease operations prior to such date.

(d) Alternative monitoring requirements different from the provisions of Parts 1 through 5 of Appendix P may be approved by the DEO and EPA on a case-by-case basis if continuous monitoring cannot be implemented by a source due to physical plant limitations or extreme economic reasons. For example, the following alternative monitoring requirements may be used for natural gas-fired facilities that burn oil on an emergency basis only (including periodic system testing not to exceed 40 hours per calendar year):

(1) A Certified Visible Emission Evaluator shall read visual emissions once per day when fuel oils are burned.

(2) Visual emissions readings shall be conducted in accordance with EPA Test Method 9 (40 CFR Part 60, Appendix A).

(3) Records of fuel oil burned (including type, amount, and duration burned) and visible emissions read shall be maintained for 2 years.

MEMORANDUM

TO: Air Quality Council

FROM: David Dyke, Interim Division Director
Air Quality Division *DD*

SUBJECT: Modifications to Subchapter 25

Enclosed is a copy of the proposed draft modifications to Subchapter 25, Smoke, Visible Emissions and Particulates. Also enclosed is a copy of 40 CFR Part 51, Appendix P, which will be incorporated by reference in the rule. The rule will be brought to public hearing on April 21, 1998. The proposed modifications to Subchapter 25 are needed to fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule. In order to adequately respond to comments received, the staff will recommend that the hearing on this matter be carried on to the Council's June 16 meeting.

Enclosures: 2

TITLE 252 DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL

SUBCHAPTER 25. SMOKE, VISIBLE EMISSIONS AND PARTICULATES

252:100-25-1. Purpose

The purpose of this Subchapter is to control the amount of smoke, visible emissions and particulates from the operation of any air contaminant source.

252:100-25-2. General prohibition; effective date

(a) ~~No person owning, leasing, or controlling the operation~~ owner or operator of any air contaminant source shall ~~willfully, negligently, or through failure to provide necessary equipment or facilities or to take necessary precautions, permit the emission from said air contaminant source of such quantities of air contamination~~ permit smoke, visible emissions or particulates to be discharged from said source so as to as will cause a condition of air pollution.

(b) Effective February 1, 1984, Allall installations shall comply with this Subchapter ~~upon and after February 1, 1984.~~

252:100-25-3. ~~Smoke, visible emissions and particulates~~ Opacity limit

(a) No person shall ~~cause, suffer, allow, or permit~~ the discharge of any fumes, aerosol, mist, gas, smoke, vapor, particulate matter, or any combination thereof of a shade or density greater than twenty (20) percent equivalent opacity.

(b) Subsection 252:100-25-3(a) shall not apply to:

(1) ~~Smoke or visible emissions emitted during the cleaning of a fire, the building of a new fire or the blowing of soot from boilers, or other short term occurrences, with a~~ the shade or density of which is not greater than sixty (60) percent opacity for a period aggregating no more than five (5) minutes in any sixty (60) consecutive minutes and/or no more than 20 minutes in any 24-hour period.

(2) Smoke resulting from fires covered by the exceptions outlined in 252:100-13-7.

(3) An emission, where the presence of uncombined water is the only reason for failure to meet the requirements of 252:100-25-3(a).

(4) Smoke generated due to a malfunction in a facility, ~~where in when~~ the source of the fuel, ~~which is being burned produces~~ producing the smoke, is not under the direct and immediate control of the facility and ~~wherein~~ the immediate constriction of the fuel flow at the facility would produce a hazard to life and/or property upstream from the facility to the point of the fuel source.

252:100-25-4. Alternative for particulates

DRAFT - March 18, 1998

(a) The 20 percent opacity limit as required under 252:100-25-3 may be increased, for particulates only, provided that the ~~owner/operator~~ owner or operator demonstrates to the satisfaction of the Oklahoma Air Quality Council at public hearing that:

(1) ~~that the~~The ~~owner/operator~~ owner or operator has installed air pollution control equipment to attempt to control both visible and particulate matter emissions to the limit required by applicable Subchapters.

(2) ~~that the~~The pollution control equipment ~~so installed has been properly maintained, is in good working order and is operated so as to minimize emissions,~~

(A) Has been properly maintained.

(B) Is in good working order.

(C) Is operated to minimize emissions.

(3) ~~that the~~The installed control equipment does not, ~~in fact,~~ control opacity to the limit required in 252:100-25-3.

(4) ~~that the~~The ~~owner/operator~~ owner or operator has conducted stack test(s) using appropriate test methods as approved by the Air Quality Division to determine mass emissions at maximum allowed capacity (i.e., permit limit, rule limit, process limit), ~~and,~~

(5) ~~that the~~The ~~owner/operator~~ owner or operator conducts detailed modeling and/or other measures deemed necessary by the Executive Director (e.g., monitoring) to demonstrate that the maximum impact of any increase of opacity will not exceed 5 ug/m³ 24-hour average at any point of impact or 1 ug/m³ annual average at any point of impact.

(b) Upon completion of the demonstration specified in (a) of this Section, the opacity allowed will be the opacity as read by an Oklahoma Certified Visible Emission Evaluator at the time of the maximum operation stack test.

(c) ~~All applications~~ Applications for an alternative under 252:100-24-4 will be submitted to the Director of Air Quality Division for his review and recommendation to the Air Quality Council for final action.

252:100-25-5. Continuous emission monitoring for opacity

(a) Continuous monitoring of opacity is required for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries in accordance with 40 CFR Part 51, Appendix P, which is hereby incorporated by reference as it existed on July 1, 1997.

(b) Owners or operators of these emission sources shall:

(1) Install, calibrate, operate, and maintain all monitoring equipment necessary for continuously monitoring opacity.

(2) Complete the installation and performance tests of such equipment and begin monitoring and recording within 18 months after promulgation of the rule.

(c) This section shall not apply to:

(1) Sources already subject to a new source performance standard promulgated in 40 CFR Part 60 pursuant to section 111

of the Clean Air Act.

(2) Sources scheduled for retirement within 5 years after the effective date of this rule, provided adequate evidence and guarantees are available to show the source will cease operations prior to such date.

DRAFT - March 18, 1998

The
April 21, 1998
meeting of the
Air Quality Council
was cancelled
for lack of a
quorum.

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

[OAR Docket #98-798]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking.

Proposed rules:

252:100. Air Pollution Control
Subchapter 25. Smoke, Visible Emissions and
Particulates [AMENDED]

Summary:

The proposed amendments to Subchapter 25 would fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the Department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P. Additionally, the Department proposes to exempt from Appendix P requirements those sources already subject to a new source performance standard and sources scheduled for retirement within 5 years after the amended rule takes effect. The amended rule would also provide criteria for approval of alternative monitoring requirements. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule.

AUTHORITY:

Environmental Quality Board, 27A O.S. Supp. 1993, §§ 2-2-101 and 2-5-101 *et seq.*

COMMENT PERIOD:

Friday, May 15, 1998, through Tuesday, June 16, 1998. Also scheduled before the Environmental Quality Board at their meeting on Tuesday, September 15, 1998 - 9:30 a.m. in Alva (Location to be determined. See contact person.)

PUBLIC HEARINGS:

Before the Air Quality Council on Tuesday, June 16, 1998, 9:30 a.m. briefing and 1:00 p.m. hearing, at the Tulsa City-County Health Department, 5051 South 129th East (Northeast corner of 51st and 129th), Tulsa, Oklahoma.

COPIES OF PROPOSED RULES:

Copies of the rule will be available May 15, 1998, for review at the Air Quality Division office at the address listed below or may be obtained from the contact person.

RULE IMPACT STATEMENT:

The rule impact statement may be obtained from the Air Quality Division at the address below.

CONTACT PERSON:

Jeanette Buttram, Department of Environmental Quality, Air Quality Division, 4545 N. Lincoln Blvd., Suite 250, Oklahoma City, Oklahoma 73105-3483; (405) 290-8247. The address and phone number for Ms. Buttram will change during May 1998. The exact date has not yet been determined. Before submitting any written comments, contact Ms. Buttram for the appropriate address.

ADDITIONAL INFORMATION:

This rule was originally scheduled for public hearing at the April 21, 1998, meeting of the Air Quality Council, which was cancelled for lack of a quorum. An updated version of the proposal, incorporating written comments received from the public, is now available.

The Air Quality Division will move in May 1998. The new address is Department of Environmental Quality, Air Quality Division, 707 North Robinson, Oklahoma City,

DEPARTMENT OF ENVIRONMENTAL QUALITY REGULAR MEETING

MEMORANDUM

TO: Air Quality Council

FROM: David Dyke, Interim Division Director
Air Quality Division 

SUBJECT: Modifications to Subchapter 25

Enclosed is a copy of the proposed draft modifications to Subchapter 25, Smoke, Visible Emissions and Particulates. Also enclosed is a copy of 40 CFR Part 51, Appendix P, which will be incorporated by reference in the rule. The rule will be brought to public hearing on June 16, 1998. The proposed amendments to Subchapter 25 would fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Additionally, the Department proposes to exempt from Appendix P requirements those sources already subject to a new source performance standard and sources scheduled for retirement within 5 years after the amended rule takes effect. The amended rule would also provide criteria for approval of alternative monitoring requirements. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule. In order to adequately respond to comments received, the staff will recommend that the hearing on this matter be carried on to the Council's August 18 meeting.

Enclosures: 2

TITLE 252 DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL

SUBCHAPTER 25. SMOKE, VISIBLE EMISSIONS AND PARTICULATES

252:100-25-1. Purpose

The purpose of this Subchapter is to control ~~the amount of smoke,~~ visible emissions and ~~particulates~~ from the operation of any air contaminant source.

252:100-25-2. General prohibition

~~(a) No person owning, leasing, or controlling the operation owner or operator of any air contaminant source shall willfully, negligently, or through failure to provide necessary equipment or facilities or to take necessary precautions, permit the emission from said air contaminant source of such quantities of air contamination allow visible emissions to be discharged from said source so as to as will cause or contribute to a condition of air pollution.~~

~~(b) All installations shall comply with this Subchapter upon and after February 1, 1984.~~

252:100-25-3. ~~Smoke, visible emissions and particulates~~ Opacity limit

(a) No person shall ~~cause, suffer, allow, or permit~~ allow the discharge of any fumes, aerosol, mist, gas, smoke, vapor, particulate matter, or any combination thereof of a shade or density greater than twenty (20) percent equivalent opacity.

(b) Subsection 252:100-25-3(a) shall not apply to:

(1) ~~Smoke or visible~~ Visible emissions, the shade or density of which is greater than twenty (20) percent but not more than sixty (60) percent opacity, emitted during the cleaning of a fire, the building of a new fire or the blowing of soot from boilers, or other short term occurrences, the shade or density of which is not greater than sixty (60) percent opacity for a period aggregating no more than five (5) minutes in any sixty (60) consecutive minutes and/or no more than 20 minutes in any 24-hour period.

(2) Smoke resulting from fires covered by the exceptions outlined in 252:100-13-7.

(3) An emission, where the presence of uncombined water is the only reason for failure to meet the requirements of 252:100-25-3(a).

(4) Smoke generated due to a malfunction in a facility, where in when the source of the fuel, ~~which is being burned produces~~ producing the smoke, is not under the direct and immediate control of the facility and ~~wherein~~ the immediate constriction of the fuel flow at the facility would produce a hazard to life and/or property upstream from the facility to the point of the fuel source.

252:100-25-4. Alternative for particulates

(a) The 20 percent opacity limit as required under 252:100-25-3 may be increased, for particulates only, provided that the ~~owner/operator~~ owner or operator demonstrates to the satisfaction of the Oklahoma Air Quality Council at public hearing that:

(1) ~~that the~~The owner/operator ~~owner or operator~~ has installed air pollution control equipment to attempt to control both visible and particulate matter emissions to the limit required by applicable Subchapters, ~~and~~.

(2) ~~that the~~The pollution control equipment ~~so installed has been properly maintained, is in good working order and is operated so as to minimize emissions,~~

(A) Has been properly maintained.

(B) Is in good working order.

(C) Is operated to minimize emissions.

(3) ~~that the~~The installed control equipment does not, ~~in fact,~~ control opacity to the limit required in 252:100-25-3, ~~and~~.

(4) ~~that the~~The ~~owner/operator~~ owner or operator has conducted stack test(s) using appropriate test methods as approved by the Air Quality Division to determine mass emissions at maximum allowed capacity and has determined such emissions meet all applicable particulate matter requirements (i.e., permit limit, rule limit, process limit) ~~and~~.

(5) ~~that the~~The ~~owner/operator~~ owner or operator ~~has conducted~~ conducts detailed modeling and/or other measures deemed necessary by the Executive Director (e.g., monitoring) to demonstrate that the maximum impact of any increase of opacity will not exceed 5 ug/m³ PM-10 24-hour average at any point of impact or 1 ug/m³ PM-10 annual average at any point of impact.

(b) Upon completion of the demonstration specified in (a) of this Section, the opacity allowed will be based on the opacity as read by ~~an Oklahoma~~ a Certified Visible Emission Evaluator at the time of the maximum operation stack test.

(c) ~~All applications~~ Applications for an alternative under 252:100-25-4 will be submitted to the Director of Air Quality Division for his review and recommendation to the Air Quality Council for final action.

252:100-25-5. Continuous emission monitoring for opacity

(a) Continuous monitoring of opacity is required for fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries and fossil fuel-fired steam generators in accordance with 40 CFR Part 51, Appendix P, which is hereby incorporated by reference as it existed on July 1, 1997.

(b) Owners or operators of these emission sources shall:

(1) Install, calibrate, operate, and maintain all monitoring equipment necessary for continuously monitoring opacity.

(2) Complete the installation and performance tests of such equipment and begin monitoring and recording within 18 months after promulgation of this section.

(c) This section shall not apply to:

(1) Sources already subject to a new source performance standard promulgated in 40 CFR Part 60 pursuant to section 111 of the Clean Air Act.

(2) Sources scheduled for retirement within 5 years after the effective date of this rule, provided adequate evidence and guarantees are available to show the source will cease operations prior to such date.

(d) Alternative monitoring requirements different from the provisions of Parts 1 through 5 of Appendix P may be approved by the DEQ and EPA on a case-by-case basis if continuous monitoring cannot be implemented by a source due to physical plant limitations or extreme economic reasons. For example, the following alternative monitoring requirements may be used for natural gas-fired facilities that burn oil on an emergency basis only:

(1) A Certified Visible Emission Evaluator shall read visual emissions on a daily basis when fuel oils are burned.

(2) Visual emissions readings shall be conducted in accordance with EPA Reference Method 9.

(3) Daily records of the types of fuel burned and visible emissions read shall be maintained for two (2) years.

PUBLIC MEETING

Notice of Public Meeting for June 16, 1998 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance door of the meeting room and also at the old location. Due to location change and notice restraints, this meeting was changed to a Special Meeting because location change had not been made to Office of Secretary of State more than ten days prior to the meeting. The Regular Meeting was cancelled and a Special Meeting was set for the same date.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Mr. Wilson - aye; Mr. Branecky - aye; Ms. Slagell - aye; Mr. Kilpatrick - aye; Dr. Grosz - aye; Ms. Myers - aye; Mr. Breisch - aye. Ms. Andrews and Dr. Canter were absent.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the February 18, 1998 Public Meeting/Hearings. Motion was made by Mr. Kilpatrick to approve the Minutes as presented and second to the motion was made by Mr. Branecky. Roll call as follows: Mr. Wilson - aye; Mr. Branecky - aye; Ms. Slagell - aye; Mr. Kilpatrick - aye; Dr. Grosz - aye; Ms. Myers - aye; Mr. Breisch - aye. Ms. Andrews and Dr. Canter were absent.

PUBLIC HEARING

OAC 252:100-25 Smoke, Visible Emissions and Particulates [Amended]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Jeanette Buttram to give staff's position on this rule. Ms. Buttram advised Council that proposed changes to this rule were to simplify and clarify the rule and to fulfill an EPA State Implementation Plan (SIP) requirement concerning Continuous Emission Monitoring (CEM); specifically, to make the federal standards and SIP requirements compatible by incorporating by reference the federal opacity monitoring requirements for existing catalytic cracking unit catalyst regenerators at petroleum refineries and fossil fuel-fired steam generators as specified in 40CFR51, Appendix P. Ms. Buttram reviewed Appendix P of 40CFR Part 51 which contains the requirements for preparation, adoption, and submittal of state implementation plans that lists the minimum emission monitoring requirements for continuous emission monitoring and recording that each SIP must include. Ms. Buttram then reviewed the proposed changes and stated that staff's recommendation was to continue the hearing to the August 18, 1998 Council meeting. After discussion, Chairman Breisch asked for a motion and Ms. Myers made the second. Roll call was as follows: Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Kilpatrick – aye; Dr. Grosz – aye; Ms. Myers – aye; Mr. Breisch – aye.

PUBLIC HEARING

OAC 252:100-4 New Source Performance Standards [NEW]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Michelle Martinez who gave an overview of the new subchapter. Ms. Martinez pointed out that the new rule would incorporate by reference the federal new source performance standards (NSPS) as they existed on July 1, 1997. Ms. Martinez advised that it was staff's request that Council recommend this new rule to the Environmental Quality Board as a permanent and emergency rule.

After discussion, Chairman Breisch asked for motion. Motion was made by Mr. Kilpatrick that Council adopt the proposed new subchapter 4 for both emergency and permanent and recommend same for adoption by the Environmental Quality Board. Second was made by Ms. Slagell with roll call as follows: Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Kilpatrick – aye; Dr. Grosz – aye; Ms. Myers – aye; Mr. Breisch – aye.

PUBLIC HEARING

OAC 252:100-47 Control of Emissions from Existing Municipal Solid Waste Landfills [NEW]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Cheryl Bradley to give staff recommendations on this rule. Ms. Bradley advised that this new rule would establish state standards to control emissions from municipal solid waste (MSW) landfills that commenced construction, modification, or reconstruction before May 10, 1991 and accepted waste after November 8, 1987. She pointed out that the rule will be included in Oklahoma's State 111(d) Plan and will provide the enforceable mechanism for implementing the provisions of the Emission Guidelines for MSW landfills. Ms. Bradley pointed out that the draft 111(d) Plan had been

presented to the Solid Waste Management Advisory Council at its April 16, 1998 hearing. It's members voted to support the Air Quality Council's approval of any rules necessary to complete Oklahoma's state 111(d) Plan.

After further discussion, Chairman Breisch entertained a motion to continue the hearing to Council's August 18 meeting. Ms. Myers made that motion with second made by Mr. Grosz. Roll call as follows: Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Kilpatrick – aye; Dr. Grosz – aye; Ms. Myers – aye; Mr. Breisch – aye.

INDIVIDUAL PROCEEDING -- WEYERHAEUSER

As hearing officer, David Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51 and Title 27A Oklahoma Statutes. Mr. Dyke pointed out that the purpose of this individual proceeding was to respond to the request made by Weyerhaeuser Company for the termination of their alternate opacity limits granted by Council Order on June 6, 1989. Mr. Dyke called upon Barbara Hoffman to give staff position on this request.

Ms. Hoffman advised that on June 6, 1989, the Council granted Weyerhaeuser's request for an alternative opacity limit allowing the company's Valiant facility to have an opacity limit of 34%. Weyerhaeuser is at this time requesting that Order be terminated. Ms. Hoffman advised that staff supports the request and called upon Mike Woods, Weyerhaeuser, to explain why the alternative opacity limit is no longer needed. Following discussion, Chairman Breisch entertained motion to OK this termination. Mr. Branecky made motion to terminate this Order and second was made by Mr. Grosz. Roll call as follows: Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Kilpatrick – aye; Dr. Grosz – aye; Ms. Myers – aye; Mr. Breisch – aye.

NEW BUSINESS – None

ADJOURNMENT With no further business, meeting was adjourned and next regularly scheduled meeting being August 18, 1998 at newly relocated DEQ Tower, 707 North Robinson, Room 101, Oklahoma City, Oklahoma.

NOTE: The sign-in sheet and the hearing records are attached as an official part of these Minutes.

BRIEFING AGENDA
Department of Environmental Quality
AIR QUALITY COUNCIL REGULAR MEETING
TUESDAY, AUGUST 18, 1998, 9:30 A.M.
4545 NORTH LINCOLN BOULEVARD
BURGUNDY ROOM
Oklahoma City, Oklahoma

1. **Call to Order** Chairman
2. **Division Director's Report** Dyke
Informational update of current events and AQD activities

PUBLIC HEARINGS

3. **OAC 252:100-47 Control of Emissions from Existing Municipal Solid Waste Landfills [NEW]** Bradley
Proposes to establish state standards to control emissions from certain existing municipal solid waste landfills that commenced construction, modification, or reconstruction before May 30, 1991 and accepted waste after November 8, 1987. The proposed rules to be included in Oklahoma's State 111(d) Plan provide the enforceable mechanism for implementing the federal emission guidelines (40 CFR 60 subpart Cc.)
Discussion by Council/Public
4. **State 111(d) Plan for Municipal Solid Waste Landfills** Bradley
The proposed State 111(d) Plan outlines Oklahoma's program to implement the emission guidelines for municipal solid waste landfills. Federal regulations (40 CFR 60 Subparts B and Cc) require that a public hearing be held to receive comments from the Council and public on the proposed plan.
Discussion by Council/Public; Council approval is not required.
5. **OAC 252:100 Air Pollution Control:** Martinez
Appendix E, Primary Ambient Air Quality Standards [AMENDED]
Appendix F, Secondary Ambient Air Quality Standards [AMENDED]
Proposed revisions to Appendices E and F will mirror the revised federal national ambient air quality standards for particulate matter and ozone announced by EPA in the July 18, 1997, *Federal Register*.
Discussion by Council/Public
6. **OAC 272:100-7 Permits [AMENDED]** Buttram
Proposed revisions will delete the lower limit of 5 tons per year for Permit by rule (PBR) facilities allowing those facilities with less than 5 tons per year emissions which are subject to new source performance standards and national emissions standards for hazardous air pollutants to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a PBR for specific facilities will be referenced under this new Part also.
Discussion by Council/Public

7. **OAC 252:100-25 Smoke, Visible Emissions and Particulates [AMENDED]** **Buttram**
The proposed amendments to Subchapter 25 are needed to fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P. and would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include changing the time allowed for visible emissions during short-term occurrences to exceed the opacity standard to one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. A new subsection would contain methods for determining compliance with the opacity limits. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule.
Discussion by Council/Public
8. **OAC 252:100-23 Control of Emissions from Cotton Gins [AMENDED]** **Mainord**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and add a new PBR section.
Discussion by Council/Public
9. **OAC 252:100-24 Control of Emissions from Grain Elevators [AMENDED]** **Martinez**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and add a new PBR section.
Discussion by Council/Public
10. **OAC 252:100-37 Control of Emissions of Organic Materials [AMENDED]** **Sheedy**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. A substantive change deletes a sentence regarding fuel-burning and refuse-burning equipment resolving a contradiction.
Discussion by Council/Public
11. **OAC 252:100-39 Emissions of Organic Materials in Nonattainment Areas [AMENDED]** **Sheedy**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC.
Discussion by Council/Public

PUBLIC HEARINGS

5. **OAC 252:100-47 Control of Emissions from Existing Municipal Solid Waste Landfills [NEW]** Bradley
Proposes to establish state standards to control emissions from certain existing municipal solid waste landfills that commenced construction, modification, or reconstruction before May 30, 1991 and accepted waste after November 8, 1987. The proposed rules to be included in Oklahoma's State 111(d) Plan provide the enforceable mechanism for implementing the federal emission guidelines (40 CFR 60 subpart Cc.)
Discussion by Council/Public; possible action by Council
6. **State 111(d) Plan for Municipal Solid Waste Landfills** Bradley
The proposed State 111(d) Plan outlines Oklahoma's program to implement the emission guidelines for municipal solid waste landfills. Federal regulations (40 CFR 60 Subparts B and Cc) require that a public hearing be held to receive comments from the Council and public on the proposed plan.
Discussion by Council/Public; Council approval is not required.
7. **OAC 252:100 Air Pollution Control:** Martinez
Appendix E, Primary Ambient Air Quality Standards [AMENDED]
Appendix F, Secondary Ambient Air Quality Standards [AMENDED]
Proposed revisions to Appendices E and F will mirror the revised federal national ambient air quality standards for particulate matter and ozone announced by EPA in the July 18, 1997, *Federal Register*.
Discussion by Council/Public; possible action by Council
8. **OAC 272:100-7 Permits [AMENDED]** Buttram
Proposed revisions will delete the lower limit of 5 tons per year for Permit by rule (PBR) facilities allowing those facilities with less than 5 tons per year emissions which are subject to new source performance standards and national emissions standards for hazardous air pollutants to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a PBR for specific facilities will be referenced under this new Part also.
Discussion by Council/Public; possible action by Council

9. **OAC 252:100-25 Smoke, Visible Emissions and Particulates [AMENDED]** **Buttram**
 The proposed amendments to Subchapter 25 are needed to fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P. and would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include changing the time allowed for visible emissions during short-term occurrences to exceed the opacity standard to one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. A new subsection would contain methods for determining compliance with the opacity limits. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule.
 Discussion by Council/Public; possible action by Council

10. **OAC 252:100-23 Control of Emissions from Cotton Gins [AMENDED]** **Mainord**
 Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and add a new PBR section.
 Discussion by Council/Public; possible action by Council

11. **OAC 252:100-24 Control of Emissions from Grain Elevators [AMENDED]** **Martinez**
 Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and add a new PBR section.
 Discussion by Council/Public; possible action by Council

12. **OAC 252:100-37 Control of Emissions of Organic Materials [AMENDED]** **Sheedy**
 Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. A substantive change deletes a sentence regarding fuel-burning and refuse-burning equipment resolving a contradiction.
 Discussion by Council/Public; possible action by Council

13. **OAC 252:100-39 Emissions of Organic Materials in Nonattainment Areas [AMENDED]** **Sheedy**
 Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC.
 Discussion by Council/Public; possible action by Council

14. **New Business** **Chairman**
 Discussion/consideration of subjects/business arising within the past 24 hours
 Possible action by Council

15. **Adjournment** **Chairman**
 Next Regular Meeting **TUESDAY, OCTOBER 20, 1998**
 Tulsa City-County Auditorium
 5051 South 129th East Tulsa OK

July 20, 1998

MEMORANDUM

TO: Air Quality Council

FROM: David Dyke, Interim Division Director
Air Quality Division *DD*

SUBJECT: Modifications to Subchapter 25

Enclosed in the council packet are a copy of the proposed draft modifications to Subchapter 25, Smoke, Visible Emissions and Particulates; a copy of 40 CFR Part 51, Appendix P; a rule impact statement; comments received from OG&E and Fort Howard; and a Summary of Comments and Staff's Responses. Originally Subchapter 25 was brought before the council on June 16, 1998. During that meeting staff recommended the rule be brought to public hearing on August 18, 1998. The proposed amendments to Subchapter 25 would fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Thus, 40 CFR Part 51, Appendix P, will be incorporated by reference in the rule. Additionally, Staff proposes to exempt from Appendix P requirements those sources already subject to a new source performance standard and sources scheduled for retirement within 5 years after the amended rule takes effect. The amended rule would also provide criteria for approval of alternative monitoring requirements.

Additional changes to the existing rule include changing the time allowed for visible emissions during short-term occurrences to exceed the opacity standard to one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. The revised time periods are consistent with the methods historically used by the Department for determining compliance with the opacity limits. These methods are now specified in a new subsection. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule.

Staff will suggest that the proposed rule be recommended to the Board for permanent adoption.

Enclosures: 6

6801

TITLE 252 DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL

SUBCHAPTER 25. SMOKE, VISIBLE EMISSIONS AND PARTICULATES

252:100-25-1. Purpose

The purpose of this Subchapter is to control the amount of smoke, visible emissions and particulates particulate matter from the operation of any air contaminant source.

252:100-25-2. General prohibition

~~(a) No person owning, leasing, or controlling the operation owner or operator of any air contaminant source shall willfully, negligently, or through failure to provide necessary equipment or facilities or to take necessary precautions, permit the emission from said air contaminant source of such quantities of air contamination allow emissions from said source so as to as will cause or contribute to a condition of air pollution.~~

~~(b) All installations shall comply with this Subchapter upon and after February 1, 1984.~~

252:100-25-3. ~~Smoke, visible emissions and particulates~~ Opacity limit

(a) No person shall ~~cause, suffer, allow, or permit the~~ discharge of any fumes, aerosol, mist, gas, smoke, vapor, particulate matter, or any combination thereof ~~of a shade or density exhibiting greater than twenty (20) percent~~ 20% equivalent opacity-except for:

~~(b) Subsection 252:100-25-3(a) shall not apply to:~~

~~(1) Smoke or visible emissions emitted during the cleaning of a fire, the building of a new fire or the blowing of soot from boilers, or other short term occurrences, the shade or density of which is not greater than sixty (60) percent opacity for a period aggregating no more than five (5) minutes in any sixty (60) consecutive minutes and/or no more than 20 minutes in any 24 hour period. Short term occurrences, which may consist of one six-minute period in any consecutive 60 minutes not to exceed three such periods in any consecutive 24 hours during which the average opacity of emissions may not exceed 60%.~~

~~(2) Smoke resulting from fires covered by the exceptions outlined in 252:100-13-7.~~

~~(3) An emission, where the presence of uncombined water is the only reason for failure to meet the requirements of 252:100-25-3(a).~~

~~(4) Smoke generated due to a malfunction in a facility, where in when the source of the fuel, which is being burned produces producing the smoke, is not under the direct and immediate control of the facility and wherein the immediate constriction of the fuel flow at the facility would produce a hazard to life and/or property upstream from the facility to the point of the~~

~~fuel source.~~

(b) To determine compliance with this Section, opacity shall be read by either:

(1) A Certified Visible Emission Evaluator using Test Method 9 (40 CFR Part 60, Appendix A).

(2) A continuous opacity monitor installed, calibrated, operated and maintained in accordance with Performance Specification 1 (40 CFR Part 60, Appendix B).

252:100-25-4. Alternative for particulates

(a) The 20% ~~percent~~ opacity limit as required under 252:100-25-3 may be increased, for particulates only, provided that the ~~owner/operator~~ owner or operator demonstrates to the satisfaction of the Oklahoma Air Quality Council at public hearing that:

~~(1) that the~~The owner/operator owner or operator has installed air pollution control equipment to attempt to control both visible and particulate matter emissions to the limit required by applicable Subchapters.

~~(2) that the~~The pollution control equipment ~~so installed has been properly maintained, is in good working order and is operated so as to minimize emissions;~~

(A) Has been properly maintained.

(B) Is in good working order.

(C) Is operated to minimize emissions.

~~(3) that the~~The installed control equipment does not, in fact, control opacity to the limit required in 252:100-25-3.

~~(4) that the~~The owner/operator owner or operator has conducted stack test(s) using appropriate test methods as approved by the Air Quality Division to determine mass emissions at maximum allowed capacity and has determined such emissions meet all applicable particulate matter requirements (i.e., permit limit, rule limit, process limit) and.

~~(5) that the~~The owner/operator owner or operator has ~~conducted~~ conducted detailed modeling ~~and/or~~ and other measures (e.g., monitoring) deemed necessary by the Executive Director ~~(e.g., monitoring)~~ to demonstrate that the maximum impact of any increase of opacity will not exceed 5 ug/m³ PM-10 24-hour average at any point of impact or 1 ug/m³ PM-10 annual average at any point of impact.

(b) Upon completion of the demonstration specified in (a) of this Section, the opacity allowed will be based on the opacity as read by an ~~Oklahoma~~ a Certified Visible Emission Evaluator at the time of the maximum operation stack test.

~~(c) All applications~~ Applications for an alternative under 252:100-25-4 will be submitted to the Director of the Air Quality Division for ~~his~~ review and recommendation to the Air Quality Council for final action.

252:100-25-5. Continuous emission monitoring for opacity

(a) Continuous monitoring of opacity is required for fluid bed

catalytic cracking unit catalyst regenerators at petroleum refineries and fossil fuel-fired steam generators in accordance with 40 CFR Part 51, Appendix P, which is hereby incorporated by reference as it existed on July 1, 1997.

(b) Owners or operators of these emission sources shall:

(1) Install, calibrate, operate, and maintain all monitoring equipment necessary for continuously monitoring opacity.

(2) Complete the installation and performance tests of such equipment and begin monitoring and recording by January 1, 2001.

(c) This section shall not apply to:

(1) Sources already subject to a new source performance standard promulgated in 40 CFR Part 60 pursuant to section 111 of the Clean Air Act.

(2) Sources scheduled for retirement within 5 years after the effective date of this rule, provided adequate evidence and guarantees are available to show the source will cease operations prior to such date.

(d) Alternative monitoring requirements different from the provisions of Parts 1 through 5 of Appendix P may be approved by the DEQ and EPA on a case-by-case basis if continuous monitoring cannot be implemented by a source due to physical plant limitations or extreme economic reasons. For example, the following alternative monitoring requirements may be used for natural gas-fired facilities that burn oil on an emergency basis only (including periodic system testing not to exceed 40 hours per calendar year):

(1) A Certified Visible Emission Evaluator shall read visual emissions once per day when fuel oils are burned.

(2) Visual emissions readings shall be conducted in accordance with EPA Test Method 9 (40 CFR Part 60, Appendix A).

(3) Records of fuel oil burned (including type, amount, and duration burned) and visible emissions read shall be maintained for 2 years.

SUBCHAPTER 25. ~~SMOKE~~, VISIBLE EMISSIONS AND PARTICULATES

Council Members Absent

Larry Canter

PUBLIC MEETING

Notice of Public Meeting for August 18, 1998 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance door of the meeting room and also at the DEQ Tower.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Ms. Myers - aye; Dr. Grosz - aye; Mr. Kilpatrick - aye; Mr. Wilson - aye; Mr. Branecky - aye; Ms. Slagell - aye. Dr. Canter did not attend.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the June 16, 1998 Public Meeting/Hearings. Motion was made by Mr. Kilpatrick to approve the Minutes as presented and second to the motion was made by Mr. Branecky. Roll call as follows: Ms. Myers - aye; Dr. Grosz - aye; Mr. Kilpatrick - aye; Mr. Wilson - aye; Mr. Branecky - aye; Ms. Slagell - aye; Mr. Breisch - aye.

PUBLIC HEARING

**OAC 252:100-47 Control of Emissions from Existing Municipal Solid Waste Landfills
[NEW]**

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Cheryl Bradley to give staff recommendations on this rule. Ms. Bradley advised that the rule was first considered by the Council on June 16, 1998 at which time the hearing was continued because EPA was in the process of amending the federal standards that are the basis for the draft rule. These amendments became effective August 17, 1998. Ms. Bradley stated that staff had made the revisions consistent with the amended federal regulations and addressed all comments received.

After discussion, Chairman Breisch entertained a motion to recommend adoption of this rule as emergency and permanent to the Environmental Quality Board at its September 15, 1998 meeting. Dr. Grosz made that motion with second made by Mr. Branecky. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

State 111(d) Plan for Municipal Solid Waste Landfills

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Cheryl Bradley for staff position regarding this State Plan. Ms. Bradley pointed out the criteria for approval of a state plan and advised that Oklahoma's mechanism to implement this Plan is OAC252:100-47. Ms. Bradley related that although no Council action was necessary, the staff requests to hear comments from the Council members and the public regarding the State Plan.

See attached transcript.

PUBLIC HEARING

OAC 252:100 Air Pollution Control:

Appendix E, Primary Ambient Air Quality Standards [AMENDED]

Appendix F, Secondary Ambient Air Quality Standards [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Michelle Martinez who stated that the revisions to these appendices would be identical to the revised federal National Ambient Air Quality Standards (NAAQS) for particulate matter and ozone

announced by EPA in the July 18, 1997 *Federal Register*. Ms. Martinez pointed out that according to the Secretary of State's Rules on Rulemaking, an appendix cannot be amended; therefore, staff recommended that Council vote to revoke the old appendices and pass the new appendices as permanent.

After discussion, Chairman Breisch entertained a motion to recommend this rule to the Environmental Quality Board as a permanent rule at its September 15, 1998 meeting. Mr. Kilpatrick moved that Council revoke the existing rule and replace them with the new rules as presented. Second to the motion was made by Mr. Branecky. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-7 Permits [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Jeanette Buttram for staff position regarding this rule. Ms. Buttram pointed out revisions made to date and advised that staff was recommending that the comment period be left open until August 24 after which staff would revise the rule based upon comments received from Council and public; and would bring again to the Council's October 20 meeting.

Following discussion and comments, Chairman Breisch entertained a motion to continue this rule to the Council's October 20, 1998 meeting. Ms. Myers made that motion with second made by Ms. Slagell. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-25 Smoke, Visible Emissions and Particulates [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Jeanette Buttram to give staff's position on this rule. Ms. Buttram advised that the rule was presented to Council's June 16 meeting where changes to simplify and clarify the rule and to fulfill an EPA State Implementation Plan (SIP) requirement concerning Continuous Emission Monitoring (CEM) were proposed. Ms. Buttram advised that comments received have been addressed and incorporated into the current draft rule. Following discussion with new comments, staff

recommended that the hearing be continued on this rule to the October 20 meeting to allow time for further comments.

Mr. Breisch asked for a motion to continue the hearing. Mr. Wilson made the motion and Ms. Slagell made the second. Roll call was as follows: Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Kilpatrick – aye; Dr. Grosz – aye; Ms. Myers – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-23 Control of Emissions from Cotton Gins [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Becky Mainord who related that the draft rule included simplification of language according to the Agency's re-write/de-wrong initiative and the addition of a Permit by Rule section. She then pointed out the changes made and stated that it was staff's recommendation to continue the hearing until Council's next meeting.

Following discussion, Mr. Breisch entertained a motion to continue this rule. Dr. Grosz made that motion with second made by Mr. Wilson. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-24 Control of Emissions from Grain Elevators [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Michelle Martinez who related that revisions were made to simplify the language according to the Agency's re-write/de-wrong initiative, the addition of a Permit By Rule section, and to add a new Appendix L which would include PM₁₀ emission factors for the Permit By Rule. Ms. Martinez pointed out that comments had been received and considered, and that staff's recommendation was to continue the hearing to the next meeting.

After discussion, Mr. Breisch entertained a motion to continue this rule to the Council's October 20, 1998 meeting. Ms. Myers made that motion with second made by Mr. Branecky. Roll call

as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-37 Control of Emissions of Organic Materials (AMENDED)

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy who stated that the revisions are part of the Agency's re-write/de-wrong initiative and respond to industry requests to exempt acetone, perchloroethylene, and methylated siloxanes from being considered VOCs. She advised that staff held a workshop on July 7 requesting public input and comments. She said there are numerous changes to be made in language, format and with the three substantive changes, staff recommended that the rule be continued to the next meeting.

Mr. Breisch entertained a motion to continue this rule. Mr. Branecky made motion with second made by Mr. Kilpatrick. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-39 Control of Organic Materials in Nonattainment Areas [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy who stated that there were numerous revisions as part of the Agency's re-write/de-wrong initiative and also five substantive changes to be considered; therefore, staff would recommend that the hearing be continued.

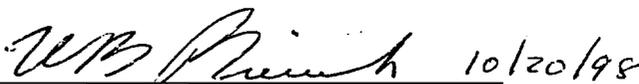

Mr. Breisch entertained a motion to continue this rule to the Council's October 20 meeting. Dr. Grosz made that motion with second made by Mr. Branecky. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

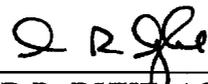

NEW BUSINESS – None

ADJOURNMENT With no further business, meeting was adjourned and next regularly scheduled meeting being October 20, 1998 at Tulsa City-County Health Department Auditorium, 5051 South 129th East, Tulsa, Oklahoma.

NOTE: The sign-in sheet and the hearing records are attached as an official part of these Minutes.

AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
REGULAR MEETING/HEARING
AIR QUALITY COUNCIL

Tuesday October 20, 1998 1:00 p.m.
Tulsa City-County Health Department Auditorium
5051 South 129 East --- Tulsa, Oklahoma

1. Call to Order – Bill Breisch
2. Roll Call – Myrna Bruce
3. Approval of Minutes of the August 18, 1998 Regular Meeting
4. CY99 Meeting Schedule
 - A. Discussion by Council
 - B. Possible action by Council
 - C. Roll call vote
5. OAC 252:100-5 Registration, Emission Inventory and Annual Operating Fees [AMENDED]
OAC 252:100-7 Permits [AMENDED]
OAC 252:100-8 Permits for Part 70 Sources [AMENDED]
In Subchapter 5, the Department is considering possible increases in annual operating fees for both minor facilities and Part 70 sources with possible increases of permit application fees in Subchapters 7 and 8.
 - A. Presentation – Shawna McWaters-Khalousi
 - B. Questions and discussion by Council / Public
 - C. Roll call vote
6. OAC 272:100-7 Permits [AMENDED]
Proposed revisions will delete the lower limit of 5 tons per year for Permit by rule (PBR) facilities allowing those facilities with less than 5 tons per year emissions which are subject to new source performance standards and national emissions standards for hazardous air pollutants to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a PBR for specific facilities will be referenced under this new Part also. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Jeanette Buttram
 - B. Questions and discussion by Council / Public
 - C. Possible action by Council
 - D. Roll call vote
7. OAC 252:100-25 Smoke, Visible Emissions and Particulates [AMENDED]
Proposed amendments to Subchapter 25 are needed to fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P, and would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include exempting sources subject to opacity standards promulgated under Section 111 of the Federal Clean Air Act, along with a clarification of how the opacity standard will be determined at sources that have CEMs and how it will be determined at sources without CEMs. A new subsection would contain methods for determining compliance with the opacity limits. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Jeanette Buttram
 - B. Questions and discussion by Council / Public
 - C. Possible action by Council
 - D. Roll call vote

8. **OAC 252:100-23 Control of Emissions from Cotton Gins [AMENDED]**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and add a new PBR section. Continued from August 18, 1998 Air Quality Council meeting.

 - C. Possible action by Council
 - D. Roll call vote

10. **OAC 252:100-37 Control of Emissions of Organic Materials [AMENDED]**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. A substantive change deletes a sentence regarding fuel-burning and refuse-burning equipment resolving a contradiction. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public
 - C. Possible action by Council
 - D. Roll call vote

11. **OAC 252:100-39 Emissions of Organic Materials in Nonattainment Areas [AMENDED]**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public
 - C. Possible action by Council
 - D. Roll call vote

12. **OAC 252:100-41 Control of Emission of Hazardous and Toxic Air Contaminants [AMENDED]**
The proposed amendments to Subchapter 41 include adopting by reference the Maximum Available Control Technology (MACT) standards for hazardous air pollutants that have been promulgated in 40 CFR 63 from July 1, 1997, through July 1, 1998. These are Subparts S and LL. The Department is also updating in Subchapter 41 the incorporation by reference of the NESHAP found in 40 CFR 61 to July 1, 1998. The Department is requesting comments on these proposed changes.
 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public
 - C. Possible action by Council
 - D. Roll call vote

13. **NEW BUSINESS**
 - A. Discussion/consideration of subjects / business arising within the past 24 hours
 - B. Possible action by Council

14. **ADJOURNMENT – Next Regular Meeting** **TUESDAY, DECEMBER 15, 1998**
Lincoln Plaza Office Park - Burgundy Room 4545 North Lincoln Boulevard, Oklahoma City, Oklahoma

Should you desire to attend but have a disability and need an accommodation,
please notify our Department three days in advance at (405) 702-4100.

October 1, 1998

MEMORANDUM

TO: Air Quality Council

FROM: Eddie Terrill, Director ^{E.T.}
Air Quality Division

SUBJECT: Modifications to Subchapter 25

Enclosed in the council packet are a copy of the proposed draft modifications to Subchapter 25, Smoke, Visible Emissions and Particulates; a copy of 40 CFR Part 51, Appendix P; a rule impact statement; and a Summary of Comments and Staff's Responses. Originally, Subchapter 25 was brought before the council on June 16 and August 18, 1998. The proposed amendments to Subchapter 25 would fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM) by incorporating by reference Appendix P of 40 CFR Part 51. The amended rule would require certain fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries to install CEMs. Additionally, Staff proposes to exempt from Appendix P requirements those sources already subject to a new source performance standard and sources scheduled for retirement within 5 years after the amended rule takes effect. The amended rule would also provide criteria for approval of alternative monitoring requirements.

Additional changes to the existing rule include exempting sources subject to opacity standards promulgated under Section 111 of the Federal Clean Air Act, along with a clarification of how the opacity standard will be determined at sources with and without continuous opacity monitors. A new subsection was added that contains methods for determining compliance with the opacity limits. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule.

Staff will suggest that the proposed rule be recommended to the Board for permanent adoption.

TITLE 252 DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL

SUBCHAPTER 25. ~~SMOKE~~, VISIBLE EMISSIONS AND PARTICULATES

252:100-25-1. Purpose

The purpose of this Subchapter is to control ~~the amount of smoke,~~ visible emissions and particulates~~particulate matter~~ from the operation of any air contaminant source.

252:100-25-2. General prohibition

~~(a) No person owning, leasing, or controlling the operation~~ owner or operator of any air contaminant source shall ~~willfully, negligently, or through failure to provide necessary equipment or facilities or to take necessary precautions, permit the emission from said air contaminant source of such quantities of air contamination~~ allow emissions from said source so as to ~~as will~~ cause or contribute to a condition of air pollution.

~~(b) All installations shall comply with this Subchapter upon and after February 1, 1984.~~

252:100-25-2.1. Definitions

The following words and terms when used in this Subchapter shall have the following meaning unless the context clearly indicates otherwise:

"One-hour period" means, for units with an operable Continuous Opacity Monitor (COM), any 60-minute period commencing on the hour.

"Opacity" means the degree to which emissions reduce the transmission of light and obscure the view of an object in the background.

"Six-minute period" means, for units with an operable COM, any one of the ten equal parts of a one-hour period.

"Unit" means any piece of equipment that has the potential to emit air contaminants in the form of visible emissions.

252:100-25-3. ~~Smoke, visible emissions and particulates~~ Opacity limit

(a) Units subject to an opacity limit promulgated under section 111 of the Federal Clean Air Act are exempt from this section.

~~(a)(b) No person shall cause, suffer, allow, or permit the discharge of any fumes, aerosol, mist, gas, smoke, vapor, particulate matter, or any combination thereof of a shade or density exhibiting greater than twenty (20) percent~~ 20% equivalent opacity, except for:

~~(b) Subsection 252:100-25-3(a) shall not apply to:~~

~~(1) Smoke or visible emissions emitted during the cleaning of a fire, the building of a new fire or the blowing of soot from boilers, or other short term occurrences, the shade or density of which is not greater than sixty (60) percent opacity for a period aggregating no more than five (5) minutes in any sixty~~

~~(60) consecutive minutes and/or no more than 20 minutes in any 24 hour period. Short term occurrences, which consist of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. For units with COMs operated and maintained in accordance with Performance Specification 1 (40 CFR Part 60, Appendix B), short term occurrences consist of not more than one six-minute period in any one-hour period, not to exceed three such periods in any consecutive 24 hours. In neither case shall the average of any six-minute period exceed 60% opacity.~~

(2) Smoke resulting from fires covered by the exceptions outlined in 252:100-13-7.

(3) An emission, where the presence of uncombined water is the only reason for failure to meet the requirements of 252:100-25-3(a).

(4) Smoke generated due to a malfunction in a facility, ~~where in~~ when the source of the fuel, ~~which is being burned produces~~ producing the smoke, is not under the direct and immediate control of the facility and ~~wherein~~ the immediate constriction of the fuel flow at the facility would produce a hazard to life and/or property ~~upstream from the facility to the point of the fuel source.~~

(c) To determine compliance with this Section, opacity shall be read by either:

(1) A Certified Visible Emission Evaluator using Test Method 9 (40 CFR Part 60, Appendix A).

(2) A COM installed, calibrated, operated and maintained in accordance with Performance Specification 1 (40 CFR Part 60, Appendix B).

252:100-25-4. Alternative for particulates

(a) The ~~20 percent~~ opacity limit as required under 252:100-25-3 may be increased, for particulates only, provided that the ~~owner/operator~~ owner or operator demonstrates to the satisfaction of the ~~Oklahoma~~ Air Quality Council at public hearing that:

~~(1) that the~~The owner/operator owner or operator has installed air pollution control equipment to attempt to control both visible and particulate matter emissions to the limit required by applicable Subchapters ~~7.~~

~~(2) that the~~The pollution control equipment ~~so~~ installed: ~~has been properly maintained, is in good working order and is operated so as to minimize emissions;~~

(A) Has been properly maintained.

(B) Is in good working order.

(C) Is operated to minimize emissions.

~~(3) that the~~The installed control equipment does not, ~~in fact,~~ control opacity to the limit required in 252:100-25-3 ~~7.~~

~~(4) that the~~The owner/operator owner or operator has conducted stack test(s) using appropriate test methods as approved by the Air Quality Division to determine mass emissions at maximum allowed capacity and has determined such emissions meet all

applicable particulate matter requirements (i.e., permit limit, rule limit, process limit), and,

~~(5) that the~~The owner/operator owner or operator has conducted detailed modeling ~~and/or~~and other measures ~~(e.g., monitoring)~~ (e.g., monitoring) deemed necessary by the Executive Director ~~(e.g., monitoring)~~ to demonstrate that the maximum impact of any increase of opacity will not exceed 5 ug/m³ PM-10 24-hour average at any point of impact or 1 ug/m³ PM-10 annual average at any point of impact.

(b) Upon completion of the demonstration specified in (a) of this Section, the opacity allowed will be based on the opacity as read by an ~~Oklahoma~~ a Certified Visible Emission Evaluator at the time of the maximum operation stack test.

~~(c) All applications~~ Applications for an alternative under 252:100-25-4 will be submitted to the Director of the Air Quality Division for ~~his~~ review and recommendation to the Air Quality Council for final action.

252:100-25-5. Continuous emission monitoring for opacity

(a) Continuous monitoring of opacity is required for fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries and fossil fuel-fired steam generators in accordance with 40 CFR Part 51, Appendix P, which is hereby incorporated by reference as it existed on July 1, 1997.

(b) Owners or operators of these emission sources shall:

(1) Install, calibrate, operate, and maintain all monitoring equipment necessary for continuously monitoring opacity.

(2) Complete the installation and performance tests of such equipment and begin monitoring and recording by January 1, 2001.

(c) This section shall not apply to:

(1) Sources already subject to a new source performance standard promulgated in 40 CFR Part 60 pursuant to section 111 of the Clean Air Act.

(2) Sources scheduled for retirement within 5 years after the effective date of this rule, provided adequate evidence and guarantees are available to show the source will cease operations prior to such date.

(d) Alternative monitoring requirements different from the provisions of Parts 1 through 5 of Appendix P may be approved by the DEQ and EPA on a case-by-case basis if continuous monitoring cannot be implemented by a source due to physical plant limitations or extreme economic reasons. For example, the following alternative monitoring requirements may be used for natural gas-fired facilities that burn oil on an emergency basis only (including periodic system testing not to exceed 40 hours per calendar year):

(1) A Certified Visible Emission Evaluator shall read visual emissions once per day when fuel oils are burned.

(2) Visual emissions readings shall be conducted in accordance with EPA Test Method 9 (40 CFR Part 60, Appendix A).

(3) Records of fuel oil burned (including type, amount, and

duration burned) and visible emissions read shall be maintained
for 2 years.

**see attached list

PUBLIC MEETING

Notice of Public Meeting for October 20, 1998 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance door of the meeting room.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Mr. Branecky - aye; Ms. Myers - aye; Mr. Wilson - aye; Dr. Grosz - aye. Mr. Kilpatrick, Ms. Slagell and Dr. Canter did not attend.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the August 18, 1998 Public Meeting/Hearings. Motion was made by Mr. Wilson to approve the Minutes as presented and second to the motion was made by Dr. Grosz. Roll call as follows: Mr. Branecky - aye; Ms. Myers - aye; Mr. Wilson - aye; Dr. Grosz - aye; Mr. Breisch - aye.

1999 Meeting Schedule - Mr. Dyke presented Council with proposed scheduled for 1999 meetings with the suggestion that the December 21 date mentioned in the packet memo be changed to December 14. Ms. Myers made motion to accept the schedule as proposed: Wednesday, February 17, Tuesday, April 20, Tuesday, August 17, and Tuesday, December 14 at OKC, DEQ Multi-Purpose Room; with Tuesday, June 15 and October 19 at Tulsa, TCCHD Auditorium. Second to motion was made by David Branecky. Roll call as follows: Mr. Branecky - aye; Ms. Myers - aye; Mr. Wilson - aye; Dr. Grosz - aye; Mr. Breisch - aye.

Auditorium. Second to motion was made by David Branecky. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-7 Permits [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Jeanette Buttram for staff position regarding this rule. Ms. Buttram pointed out proposed revisions would modify language applicable to de minimis facilities, Permit by Rule (PBR), and general permits stating that actual emissions of Total Suspended Particulates (TSP) will no longer be counted in determining whether a facility meets the definition of “de minimis facility.” Also, she stated that proposed revision would delete the lower limit of five tons per year for PBR facilities allowing those facilities with less than five tons per year emissions which are subject to NSPS or NESHAP to apply for a PBR instead of having to obtain an individual permit. Ms. Buttram advised that staff proposed that a new Part 9 be added that would outline the requirements necessary for a facility to qualify for a PBR. A third point she brought out was the proposed revision to delete the lower limit for general permits allowing facilities that may have less than 40 tons per year of emissions, but for which no PBR had been written, the opportunity to apply for coverage under an applicable general permit. Lastly, she added that the Department proposed to amend 252-7-3 to increase fees for minor facilities for applicability determinations, relocation permits, and applications for individual permits.

Following discussion and comments, Chairman Breisch entertained a motion to continue this rule to the Council’s October 20, 1998 meeting. Ms. Myers made that motion with second made by Dr. Grosz. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-25 Smoke, Visible Emissions and Particulates [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Jeanette Buttram to give staff’s position on this rule. Ms. Buttram pointed out that the proposed amendments would fulfill an EPA requirement concerning Continuous Emissions Monitoring proposing to incorporate by reference the Federal opacity monitoring requirements for fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries and fossil fuel-fired steam generators as specified in 40 CFR 51, Appendix P. She noted that the Department proposed to exempt from Appendix P requirements for those sources already subject to a new source performance standard and for sources scheduled for retirement within five years after the

amended rule takes effect. Ms. Buttram added that the amended rule would also provide criteria for approval of alternative monitoring requirements with additional changes that would clarify how the opacity standard is determined.

Mr. Breisch asked for a motion to recommend the rule as proposed to the Environmental Quality Board for permanent adoption. Mr. Wilson made the motion with David Branecky making the second. Roll call was as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-23 Control of Emissions from Cotton Gins [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Michelle Martinez who related that the draft rule included simplification of language according to the Agency's re-write/de-wrong initiative and the addition of a Permit by Rule section. She then pointed out that the proposed revisions add a new Permit by Rule section that would streamline the permitting process by creating a mechanism that eliminates the necessity for some cotton gins to obtain an individual air quality permit. Ms. Martinez added that additional changes would allow exceedances of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours.

Following discussion, Mr. Breisch entertained a motion to recommend this rule to the Environmental Quality Board for permanent adoption. Ms. Myers made the motion with second made by Mr. Branecky. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-24 Control of Emissions from Grain Elevators [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Michelle Martinez who advised that the proposed revisions would simplify the language under the agency-wide re-right/de-wrong initiative and would add a new Permit by Rule section to streamline the permitting process by creating a mechanism that would eliminate the necessity for some grain elevators to obtain an individual air quality permit. Ms. Martinez added that a new Appendix L proposed would contain PM-10 emission factors for PBR grain elevators. Additional changes follow a proposed amendment of Subchapter 25 concerning short-term exceedances of the

opacity standard allowing exceedances of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours.

Mr. Breisch entertained a motion to recommend the rule to the Environmental Quality Board for permanent adoption at its November 10 meeting. Mr. Wilson made that motion with second made by Ms. Myers. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-37 Control of Emissions of Organic Materials (AMENDED)

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy who advised that proposed changes included language consistent with the re-right/de-wrong initiative. She then pointed out four substantive changes that were proposed for Subchapter 37 as well as Subchapter 39:

- 1) to change the definition of “volatile organic compounds (VOC)” per Council’s direction and requests from industry to exclude acetone, perchloroethylene, methylated siloxanes, methyl acetate from the definition of VOC and to modify the definition of VOC to be consistent with the EPA definition;
- 2) to remove of the requirement for permits and best available control technology (BACT) for new sources of VOC contained in 252:100-37-3(a);
- 3) a change regarding fuel-burning and refuse-burning equipment, which has been deleted to resolve the contradiction between the first and second sentences; and
- 4) to add a new Part 9, Permit by Rule for Volatile Organic Liquid Storage and Loading Facilities.

Mr. Breisch entertained a motion to continue this rule to Council’s December meeting. Ms. Myers made motion with second made by Dr. Grosz. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-39 Control of Organic Materials in Nonattainment Areas [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy who advised that proposed changes included language consistent with the re-right/de-wrong initiative. She stated that one substantive change affects both Subchapters 39 and 37

which is to change the definition of "volatile organic compounds" per Council's direction and requests from industry to exclude acetone, perchloroethylene, methylated siloxanes, methyl acetate from the definition of VOC and to modify the definition of VOC to be consistent with the EPA definition;

In Subchapter 39, Dr. Sheedy pointed out the need for correction of the placement of "prior to lease custody transfer" in 252:100-39-30(b)(2) which would be a substantive change along with the addition of a minimum annual throughput of 120,000 gallons and a minimum storage capacity of 2,000 gallons to 252:100-39-41(c) to determine applicability of subsection (c).

Following discussion, Mr. Breisch entertained a motion to continue this rule to the Council's December 15 meeting. Mr. Branecky made that motion with the second made by Mr. Wilson. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-41 Control of Emission of Hazardous and Toxic Air Contaminants [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy who stated that the proposed revisions would update the adoption by reference of 40 CFR Part 63 to include Maximum Achievable Control Technology (MACT) standards promulgated or amended between July 1, 1997 and July 1, 1998. She pointed out that the new standards are Subpart S – NESHAP for Pulp and Paper Production and Subpart LL – NESHAP for Aluminum Production Plants. The proposed revisions will also update the adoption by reference of the NESHAP as found in 40 CFR Part 61 (with the exception of Subparts B, H, I, K, Q, R, T, and W. and Appendices D and E which address radionuclides) to July 1, 1998. Dr. Sheedy advised the Council that these modifications were necessary to obtain EPA's delegation of authority to implement the federal hazardous air pollutant program in Oklahoma.

Mr. Breisch entertained a motion to recommend this rule to the Environmental Quality Board for permanent adoption. Mr. Wilson made that motion with the second made by Mr. Branecky. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

**OAC 252:100-5 Registration, Emission Inventory and Annual Operating Fees
[AMENDED]**

OAC 252:100-7 Permits [AMENDED]

OAC 252:100-8 Permits for Part 70 Sources [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Shawna McWaters-Khalousi for staff recommendation. Ms. Khalousi advised that the Department is proposing to amend 252:100-5-2.2 to increase annual operating fees assessed to minor facilities; amend 252:100-7-3 to increase fees for minor facilities for applicability determinations, relocation permits, and applications for individual permits; and amend 252:100-8-1.7 to increase applicability determination fees for Part 70 Sources. Ms. Khalousi stated that if was staff's recommendation that this rule be continued to Council's December 15 meeting.

Mr. Breisch entertained motion to continue these rules to the December meeting. Ms. Myers made the motion and second was made by Mr. Branecky. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes.

NEW BUSINESS – None

ADJOURNMENT With no further business, meeting was adjourned and next regularly scheduled meeting being December 15, 1998 at Lincoln Plaza Office Complex Burgundy Room, 4545 North Lincoln, Oklahoma City, Oklahoma.

NOTE: The sign-in sheet and the hearing records are attached as an official part of these Minutes.

AIR QUALITY COUNCIL
RULEMAKING RECOMMENDATION TO THE ENVIRONMENTAL QUALITY BOARD

Identification of Proposed Rulemaking:

Chapter Number and Title – OAC 252:100

Subchapters or Sections Involved – [new, amended or revoked]

-25 Smoke, Visible Emissions and Particulates [AMENDED]

On OCTOBER 20, 1998 the members of this Council, by authority vested in them by the Oklahoma Environmental Quality Code (27 O.S.Supp. 1993, § 2-2-201), by roll call vote, recommended to the Environmental Quality Board that the rulemaking described above be adopted as:

permanent [take effect after legislative review]

emergency [temporary, to take effect upon approval by the Governor because of time; and/or special reason: _____]

This Council has considered the proposed rulemaking and comments about it and determined, to the best of its knowledge, that all applicable requirements of the Oklahoma Administrative Procedures Act have been followed.

This Council authorizes the Department to prepare this recommended rulemaking for the Board, making any changes approved by the Council, correcting typographical, grammatical and reference errors, and formatting them as required by the Office of Administrative Rules. This is to be done with the understanding that such changes shall neither alter the sense of what this Council recommends nor invalidate this recommendation.

Respectfully,

Date signed: 10-20-98

Chair or Designee

Environmental Quality Board

REGULAR MEETING AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
OKLAHOMA ENVIRONMENTAL QUALITY BOARD

A Public Meeting: 9:30 a.m., Tuesday, November 10, 1998
Kerr Country Mansion and Conference Center
1507 South McKenna
Poteau, Oklahoma

1. Call to Order - Herschel Roberts
2. Roll Call - Lynda Finch
3. Approval of Minutes of the September 15, 1998 Regular Meeting
4. **OAC 252:002 Procedures of the Department of Environmental Quality:**

Subchapter 17 of OAC 252:002 deals with the processing of citizen complaints received by the DEQ. The proposed amendment to Section 17-2 expands the definition of "enforcement action" to include a referral by a DEQ division to the Oklahoma Attorney General's Office, a district attorney's office, a state or federal law enforcement agency, or the DEQ's Environmental Crimes Investigation Team for investigation of possibly criminal environmental violations. Because criminal referral processes and criminal investigations typically are relatively involved and lengthy, this amendment is proposed to allow the DEQ to pursue possible criminal enforcement actions while still meeting agency complaint procedures and timelines.

Because this is an amendment to the procedural rules of the DEQ, it is not within the jurisdiction of an advisory council. Thus, the opportunity for public comment on this agenda item constitutes the rulemaking hearing on the proposal.

- A. Presentation – Jimmy Givens, DEQ General Counsel
 - B. Questions and discussion by the Board
 - C. Questions, comments and discussion by the public
 - D. Discussion by the Board
 - E. Roll call vote for permanent adoption
5. **OAC 252:100 Air Pollution Control:**

Three sets of changes are proposed:

- The proposed revisions to Subchapters 23 (Cotton Gins) and 24 (Grain Elevators) simplify the language under the DEQ's "re-right/de-wrong" rules simplification initiative. It is also proposed to add a new Permit by Rule section to both subchapters. The Permit by Rule will streamline the permitting process by creating a mechanism that will eliminate the need for some cotton gins and elevators to obtain an individual air quality permit. Also, a new Appendix L is proposed which contains Particulate Matter (PM)-10 emission factors for Permit by Rule grain elevators. Additional changes to both subchapters track proposed amendments of Subchapter 25 concerning opacity.

- In addition to “re-right/de-wrong” simplification changes, the proposed revisions to Subchapter 25 (Smoke, Visible Emissions and Particulates) incorporate by reference the federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries, subject to certain exceptions. Additional changes include exempting sources subject to opacity standards promulgated under the Federal Clean Air Act from the state opacity standard, and clarifying how the opacity standard will be determined at sources that have Continuous Opacity Monitors and those that do not.
- The proposed revisions to Subchapter 41 (Control of Emission of Hazardous and Toxic Air Contaminants) update the adoption by reference of federal rules to include Maximum Achievable Control Technology (MACT) standards promulgated or amended between July 1, 1997 and July 1, 1998. The new standards relate to pulp and paper production and to aluminum production plants. The proposed revisions also update the adoption by reference of the federal National Emission Standards for Hazardous Air Pollutants (NESHAP) to July 1, 1998, with certain exceptions.

These changes were recommended by the Air Quality Council at their meeting on October 20, 1998.

- A. Presentation - David Branecky, Air Quality Council member
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote(s) for permanent adoption

6. Consideration of the Environmental Quality Report:

The Oklahoma Environmental Quality Code requires the DEQ to prepare an Environmental Quality Report and to submit it to the Governor, Speaker of the House and Senate President Pro Tem by January 1st of each year. Contrary to the statutory title, the purpose of this report for a fairly small targeted audience is to outline the DEQ’s two-year needs for providing environmental services within its jurisdiction, and to reflect any new federal mandates and recommended statutory changes. The Environmental Quality Board is to review, amend and approve the report.

- A. Presentation – Mark Coleman, DEQ Executive Director
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote

- 7. New Business (any matter not known about and which could not reasonably have been foreseen prior to the time of posting of agenda)
- 8. Executive Director’s Report
- 9. Vote on 1999 Environmental Quality Board meeting dates
- 10. Adjournment

Public Forum: The Board meets four times a year at different locations across the State to hear the views and concerns of all Oklahomans about environmental issues. This opportunity is informal, and we invite you to sign the register to speak.

Should you have a disability and need an accommodation, please notify the DEQ three days in advance at 702-7100.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL

SUBCHAPTER 25. SMOKE, VISIBLE EMISSIONS AND PARTICULATES

252:100-25-1. Purpose

The purpose of this Subchapter is to control the amount of smoke, visible emissions and particulates particulate matter from the operation of any air contaminant source.

252:100-25-2. General prohibition

~~(a) No person owning, leasing, or controlling the operation of any air contaminant source shall willfully, negligently, or through failure to provide necessary equipment or facilities or to take necessary precautions, permit the emission from said air contaminant source of such quantities of air contamination as will cause a condition of air pollution. No owner or operator of any air contaminant source shall allow emissions from said source so as to cause or contribute to air pollution.~~

~~(b) All installations shall comply with this Subchapter upon and after February 1, 1984.~~

252:100-25-2.1. Definitions

The following words and terms when used in this Subchapter shall have the following meaning unless the context clearly indicates otherwise:

"One-hour period" means, for units with an operable Continuous Opacity Monitor (COM), any 60-minute period commencing on the hour.

"Opacity" means the degree to which emissions reduce the transmission of light and obscure the view of an object in the background.

"Six-minute period" means, for units with an operable COM, any one of the ten equal parts of a one-hour period.

"Unit" means any piece of equipment that has the potential to emit air contaminants in the form of visible emissions.

252:100-25-3. ~~Smoke, visible emissions and particulates~~ Opacity limit

(a) Units subject to an opacity limit promulgated under section 111 of the Federal Clean Air Act are exempt from this section.

~~(a)(b) No person shall cause, suffer, allow, or permit the discharge of any fumes, aerosol, mist, gas, smoke, vapor, particulate matter, or any combination thereof of a shade or density exhibiting greater than twenty (20) percent equivalent 20% opacity, except for:~~

~~(b) Subsection 252:100 25 3(a) shall not apply to:~~

~~(1) Smoke or visible emissions emitted during the cleaning of a fire, the building of a new fire or the blowing of soot from boilers, or other short term occurrences, the shade or density of which is not greater than sixty (60) percent opacity for a period aggregating no more than five (5) minutes in any sixty (60) consecutive minutes and/or no more than 20 minutes in any~~

~~24 hour period.~~ Short term occurrences, which consist of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. For units with COMs operated and maintained in accordance with Performance Specification 1 (40 CFR Part 60, Appendix B), short term occurrences which consist of not more than one six-minute period in any one-hour period, not to exceed three such periods in any consecutive 24 hours. In neither case shall the average of any six-minute period exceed 60% opacity.

(2) Smoke resulting from fires covered by the exceptions outlined in 252:100-13-7.

(3) An emission, where the presence of uncombined water is the only reason for failure to meet the requirements of 252:100-25-3(a).

(4) Smoke generated due to a malfunction in a facility, wherein when the source of the fuel, which is being burned produces producing the smoke, is not under the direct and immediate control of the facility and wherein the immediate constriction of the fuel flow at the facility would produce a hazard to life and/or property upstream from the facility to the point of the fuel source.

(c) To determine compliance with this Section, opacity shall be read by either:

(1) A Certified Visible Emission Evaluator using Test Method 9 (40 CFR Part 60, Appendix A).

(2) A COM installed, calibrated, operated and maintained in accordance with Performance Specification 1 (40 CFR Part 60, Appendix B).

252:100-25-4. Alternative for particulates

(a) The ~~20 percent~~ 20% opacity limit as required under 252:100-25-3 may be increased, for particulates only, provided that the ~~owner/operator~~ owner or operator demonstrates to the satisfaction of the ~~Oklahoma~~ Air Quality Council at public hearing that:

(1) ~~that the owner/operator~~ The owner or operator has installed air pollution control equipment to attempt to control both visible and particulate matter emissions to the limit required by applicable Subchapters.

(2) ~~that the~~ The pollution control equipment ~~so installed has been properly maintained, is in good working order and is operated so as to minimize emissions.~~

(A) Has been properly maintained.

(B) Is in good working order.

(C) Is operated to minimize emissions.

(3) ~~that the~~ The installed control equipment does not, in fact, control opacity to the limit required in 252:100-25-3.

(4) ~~that the owner/operator~~ The owner or operator has conducted stack test(s) using appropriate test methods as approved by the ~~Air Quality~~ Division to determine mass emissions at maximum allowed capacity and has determined such emissions meet all applicable particulate matter requirements (i.e., permit limit, rule limit, process limit) and.

(5) ~~that the owner/operator conducts~~The owner or operator has conducted detailed modeling and/or and other measures (e.g., monitoring) deemed necessary by the Executive Director (e.g., monitoring) to demonstrate that the maximum impact of any increase of opacity will not exceed 5 ug/m³ ~~24-hour~~PM-10 24-hour average at any point of impact or 1 ug/m³ PM-10 annual average at any point of impact.

(b) Upon completion of the demonstration specified in (a) of this Section, the opacity allowed will be ~~as based on the opacity~~based on the opacity read by an ~~Oklahoma~~Oklahoma Certified Visible Emission Evaluator at the time of the maximum operation stack test.

(c) ~~All applications~~Applications for an alternative under 252:100-25-4 will be submitted to the Director of ~~Air Quality~~the Division for ~~his~~ review and recommendation to the Air Quality Council for final action.

252:100-25-5. Continuous emission monitoring for opacity

(a) Continuous monitoring of opacity is required for fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries and fossil fuel-fired steam generators in accordance with 40 CFR Part 51, Appendix P, which is hereby incorporated by reference as it existed on July 1, 1998.

(b) Owners or operators of these emission sources shall:

(1) Install, calibrate, operate, and maintain all monitoring equipment necessary for continuously monitoring opacity.

(2) Complete the installation and performance tests of such equipment and begin monitoring and recording by January 1, 2001.

(c) This section shall not apply to:

(1) Sources already subject to a new source performance standard promulgated in 40 CFR Part 60 pursuant to section 111 of the Clean Air Act.

(2) Sources scheduled for retirement within 5 years after the effective date of this rule, provided adequate evidence and guarantees are available to show the source will cease operations prior to such date.

(d) Alternative monitoring requirements different from the provisions of Parts 1 through 5 of Appendix P may be approved by the DEQ and EPA on a case-by-case basis if continuous monitoring cannot be implemented by a source due to physical plant limitations or extreme economic reasons. For example, the following alternative monitoring requirements may be used for natural gas-fired facilities that burn oil on an emergency basis only (including periodic system testing not to exceed 40 hours per calendar year):

(1) A Certified Visible Emission Evaluator shall read visual emissions once per day when fuel oils are burned.

(2) Visual emissions readings shall be conducted in accordance with EPA Test Method 9 (40 CFR Part 60, Appendix A).

(3) Records of fuel oil burned (including type, amount, and duration burned) and visible emissions read shall be maintained for 2 years.

Additional Comments

CHAPTER 100. AIR POLLUTION CONTROL
SUBCHAPTER 25. SMOKE, VISIBLE EMISSIONS AND PARTICULATES

EXECUTIVE SUMMARY: The proposed amendments to Subchapter 25 would fulfill an EPA requirement concerning Continuous Emissions Monitoring (CEM). Specifically, the Department proposes to incorporate by reference the Federal opacity monitoring requirements for fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries and fossil fuel-fired steam generators as specified in 40 CFR 51, Appendix P. Additionally, the Department proposes to exempt from Appendix P requirements those sources already subject to a new source performance standard and sources scheduled for retirement within 5 years after the amended rule takes effect. The amended rule would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include exempting sources subject to opacity standards promulgated under Section 111 of the Federal Clean Air Act from the State opacity standard, along with a clarification of how the opacity standard will be determined at sources that have Continuous Opacity Monitors (COMs) and how it will be determined at sources without COMs. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule.

DIFFERENCES FROM ANALOGOUS FEDERAL RULES: None.

ENVIRONMENTAL BENEFIT STATEMENT: Not required because no one federal rule corresponds to these rules.

SUMMARY OF COMMENTS AND RESPONSES:

Comment: A comment from O.G.& E. was received requesting that the proposed rule be modified to include an exemption similar to that found in 40 CFR Part 75 for those units that are predominantly natural gas fired but do burn limited amounts of oil.

Response: According to 40 CFR 51, Appendix P, alternative monitoring requirements different from the provisions of Parts 1 through 5 of Appendix P may be approved by the DEQ and EPA on a case-by-case basis if continuous monitoring cannot be implemented by a source due to physical plant limitations or extreme economic reasons. Therefore, an alternative monitoring requirement for natural gas-fired facilities that burn oil on an emergency basis only was added to the rule.

Comment: A second comment from O.G.& E. was received requesting additional language be added to the proposed language in section 252:100-25-5 for clarification purposes.

Response: Staff reviewed the proposed language from O.G.&E. and agreed to amend the language in 252:100-25-5(d), (d)(1), and (d)(3).

Comment: A comment from Fort James Corporation was received requesting that the opacity standard in OAC 252:100-25-3(a) and (b) be made consistent with NSPS requirements promulgated by the US EPA. The following language was suggested: For sources subject to a twenty (20) percent opacity standard provided in an applicable new source performance standard promulgated in 40 CFR Part 60 pursuant to section 111 of the Clean Air Act, determining compliance with the twenty (20) percent equivalent opacity provided in this subsection shall be consistent with the method or manner provided in such new source performance standard.

Response: Staff has reviewed the proposed wording and determined it would not address facilities that have NSPS opacity requirements other than 20% or those that are not even affected by a NSPS. The original language in the rule was clarified and amended to allow the opacity to be based on a six-minute average, which will make it easier to determine compliance with the standard using NSPS Method 9. Also, Staff included a new subsection (252:100-25-3(b)) which outlines the methods for determining compliance with the opacity limits. These methods are consistent with those outlined in NSPS requirements.

Comment: A second comment from Fort James Corporation was received requesting staff add language to the rule which allows sources subject to a 20% equivalent opacity standard, provided in an applicable NSPS in 40 CFR Part 60, to determine compliance with the 20% equivalent opacity provided in Section 252:100-25-3(a) using the method or manner provided in such NSPS. Fort James is concerned that the opacity limits in permits will be a hybrid made from the most stringent portions of applicable NSPS and State standards. The company also believes this would create confusion among permit writers and source owners.

Response: Staff decided to add a section to the rule which will exempt sources subject to opacity standards promulgated under Section 111 of the Federal Clean Air Act from the State opacity standard.

Comment: A comment made at the August 18, 1998, public hearing requested that the rule be revised to explain how compliance will be determined at facilities that have COMs.

Response: The terms "one-hour period" and "six-minute period" have been defined for facilities that have COMs, and a new sentence was added to 252:100-25-3(a) to explain how compliance with the rule will be determined at such facilities.

Comment: A comment was made during the October 20, 1998, public hearing regarding section 252:100-25-4(a)(3). The commentator wanted to know why we allow an alternative limit if installed control equipment does not control opacity to the limit required in 252:100-25-3.

Response: First, staff did not propose to make any substantive changes to this section. Also, the purpose of this section is to allow alternatives for owners or operators who are unable to meet the 20% opacity limit, but who have attempted to meet the standard by properly installing and maintaining control equipment. If the installed control equipment allowed the owner or operator to meet the opacity limit, there would be no need to request an alternative. The applicant for an alternative limit must perform modeling, meet all of the criteria contained in section 252:100-25-4(a), and obtain the approval of the Air Quality Council at public hearing. Staff feels this procedure is adequate to fulfill the needs of the owners or operators of industry and the concerns of the public.

CHAPTER 100. AIR POLLUTION CONTROL
SUBCHAPTER 25. SMOKE, VISIBLE EMISSIONS AND PARTICULATES

Council Meeting: April 21, 1998

(NOTE: The first comment from OG&E was for the draft rule to be presented to the council April 21, 1998, but the meeting was cancelled due to lack of quorum)

SUMMARY OF COMMENTS AND RESPONSES:

Comment Period: March 16, 1998 - April 21, 1998

Comment:

A comment from OG&E was received requesting that the proposed rule be modified to include an exemption similar to that found in 40 CFR Part 75 for those units that are predominantly natural gas fired but do burn limited amounts of oil.

Response:

According to 40 CFR Part 51, Appendix P, alternative monitoring requirements different from the provisions of Parts 1 through 5 of Appendix P may be approved by the DEQ and EPA on a case-by-case basis if continuous monitoring cannot be implemented by a source due to physical plant limitations or extreme economic reasons. Therefore, an alternative monitoring requirement for natural gas-fired facilities that burn oil on an emergency basis only was added to the rule.

Council Meeting: June 16, 1998

SUMMARY OF COMMENTS AND RESPONSES:

Comment Period: May 15, 1998 - June 23, 1998

Comment:

A comment from OG&E was received requesting additional language be added to the proposed language in section 252:100-25-5 for clarification purposes.

Response:

Staff reviewed the proposed language from OG&E and agreed to clarify the language in 252:100-25-5(d), (d)(1), and (d)(3).

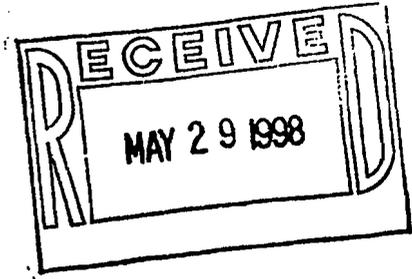

Comment:

A comment from Fort James Corporation was received requesting ODEQ make the opacity standard provided at OAC 252:100-25-3(a) and (b) consistent with NSPS requirements promulgated by the US EPA. They request we add the following language: For sources subject

to a twenty (20) percent opacity standard provided in an applicable new source performance standard promulgated in 40 CFR Part 60 pursuant to section 111 of the Clean Air Act, determining compliance with the twenty (20) percent equivalent opacity provided in this subsection shall be consistent with the method or manner provided in such new source performance standard.

Response:

Staff has reviewed the proposed wording and determined it would not address facilities that have NSPS opacity requirements other than 20% or those that are not even affected by a NSPS. The original language in the rule was clarified and amended to allow the opacity to be based on a six-minute average. Also, Staff included a new subsection (252:100-25-3(b)) which outlines the methods for determining compliance with the opacity limits. These methods are consistent with those outlined in NSPS requirements.

electric services

Ms. Jeanette Buttram
Oklahoma Department of Environmental Quality
Air Quality Division
P.O. Box 1677
Oklahoma City, Oklahoma 73101-1677

Dear Ms. Buttram:

Oklahoma Gas & Electric Company (OG&E) appreciates the opportunity to comment on the proposed revisions to OAC 252:100-25, Smoke Visible Emissions and Particulates. After reviewing the May 15, 1998 proposal, OG&E feels further clarification of the rule would be helpful and offers the following suggestions concerning Paragraph 5, Continuous Emission Monitoring for Opacity.

- The definition of emergency should be further defined to allow for periodic testing of the emergency fuel system. In order to maintain a system to be ready for operation when needed periodic testing is required;
- The wording "shall read visual emissions on a daily basis" under section (1) should be more clearly stated to reflect the intent to have the plume read once per day during the combustion of fuel oil;
- The wording "Daily records of fuel burned" under section (3) should be changed to record only those days in which fuel oils are burned. Other days would be presumed to have combusted natural gas. Also, in order to show compliance with the suggested allowance for periodic testing, wording should be added to section (3) to record not only the type of fuel oils burned but the amounts and the duration in which they were burned.

Based on the above OG&E suggests the following wording changes:

"Alternative monitoring different from the provisions of Parts 1 through 5 of Appendix P may be approved by the DEQ and EPA on a case by case basis if continuous monitoring cannot be implemented by a source due to physical plant limitations or extreme economic reasons. For example, the following alternative monitoring requirements may be used for natural gas-fired facilities that burn oil on an emergency basis only (including periodic system testing not to exceed forty (40) hours per calendar year):

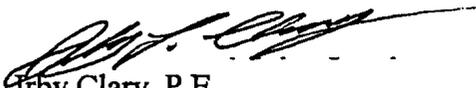

- (1) A Certified Visible Emission Evaluator shall read visual emissions once per day when fuel oils are burned.

Ms. Jeanette Buttram
OG&E Comments on OAC 2.100-25
May 28, 1998

- (2) Visual emissions readings shall be conducted in accordance with EPA Reference Method 9.
- (3) ~~Daily~~ Records of the types of fuel oil burned (including type, amount, and duration burned) and visible emissions read shall be maintained for two (2) years."

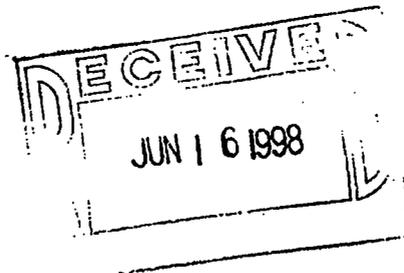

If you have any questions on the above, please call me at 553-3554.

Sincerely,

Kirby Clary, P.E.

RE: Proposed Changes to OAC sec. 252:100-25-3(a) and
(b); Air Pollution Control

Dear Ms. Buttram:

Fort James Operating Company ("Fort James" or the "Company") appreciates the opportunity to provide these comments to the Oklahoma Department of Environmental Quality ("ODEQ") in connection with the proposed amendments to OAC 252:100-25-3(a) and (b) concerning opacity emissions.

Fort James owns and operates a pulp and paper facility in Muskogee, Oklahoma. The facility includes an on-site power plant, which generates most of the steam and electrical needs of the facility. The power plant consists of, among other pieces of equipment, 3 fossil fuel fired boilers that are subject to certain federal new source performance standards ("NSPS") promulgated in 40 CFR Part 60.

Subpart D of 40 CFR Part 60 (an NSPS applicable to certain fossil fuel fired boilers) provides an opacity emission standard of 20% based on a six minute rolling average (except that one six-minute average per hour of up to 27% opacity need not be reported as an excess emission). It has never been entirely clear how the opacity standards set forth at OAC 252:100-25-3(a) and (b) comport with this (and other) NSPS opacity requirements. For instance, while the opacity standard in Subpart D is generally based on a six-minute average, OAC 252:100-25-3 provides exceptions to its opacity standard based on readings "for a period aggregating no more than five (5) minutes in any sixty (60)

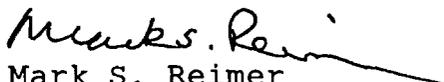

consecutive minutes and/or no more than 20 minutes in any 24-hour period."

We believe ODEQ should take this opportunity to make the opacity standard provided at OAC 252:100-25-3(a) and (b) consistent with NSPSs promulgated by US EPA. Accordingly, we request OAC 252:100-25-3(a) as proposed to be amended in the public notice package be further amended as follows:

"(a) No person shall allow the discharge of any fumes, aerosol, mist, gas, smoke, vapor, particulate matter, or any combination thereof of a shade or density greater than twenty (20) percent equivalent opacity. For sources subject to a twenty (20) percent opacity standard provided in an applicable new source performance standard promulgated in 40 CFR Part 60 pursuant to section 111 of the Clean Air Act, determining compliance with the twenty (20) percent equivalent opacity provided in this subsection shall be consistent with the method or manner provided in such new source performance standard."

I understand, based on conversations with representatives from the Company's Muskogee facility, that this matter will not come before the Air Quality Council at its June 16, 1998 meeting. Rather, your office intends to continue to work on this rule package and perhaps bring it before the Council at its regularly scheduled August or October 1998 meeting. I look forward to working with you on this matter. If you have questions in the meantime, please feel free to contact me at 847/317-5326.

Sincerely,
Fort James Corporation

15 PROCEEDINGS

16 MR. BREISCH: We will call this
17 session of the meeting to order. David
18 Dyke will act as Protocol Officer. David.

19 MR. DYKE: Okay. Roll call.

20 MS. BRUCE: Mr. Wilson.

21 MR. WILSON: Here.

22 MS. BRUCE: Mr. Branecky.

23 MR. BRANECKY: Here.

24 MS. BRUCE: Ms. Slagell.

25 MS. SLAGELL: Here.

26 MS. BRUCE: Mr. Kilpatrick.

27 MR. KILPATRICK: Here.

28 MS. BRUCE: Mr. Gross.

29 MS. GROSZ: Here.

30 MS. BRUCE: Ms. Myers.

1 MS. MYERS: Present.

2 MS. BRUCE: Mr. Breisch.

3 MR. BREISCH: Here.

4 MS. BRUCE: And for the record,
5 absent is Dr. Cantex, and Ms. Andrews.

6 MR. BREISCH: I'm sorry, I jumped
7 a little bit out of turn here. We have to
8 approve the Minutes before we go into the
9 public hearing. Point of order. Lets see,
10 we didn't have an agenda in the April -- we
11 had no Minutes, true? So, that's why it's
12 February. Okay. Need a motion to approve
13 the February Minutes.

14 MR. KILPATRICK: So move.

15 MR. BRANECKY: Second.

16 MR. BREISCH: A motion has been
17 made and seconded. Is there any additions
18 or comments to the Minutes? If not, Myrna,
19 call the roll.

20 MS. BRUCE: Mr. Wilson.

21 MR. WILSON: Aye.

22 MS. BRUCE: Mr. Branecky.

23 MR. BRANECKY: Aye.

24 MS. BRUCE: Ms. Slagell.

25 MS. SLAGELL: Aye.

26 MS. BRUCE: Mr. Kilpatrick.

27 MR. KILPATRICK: Aye.

28 MS. BRUCE: Mr. Gross.

29 MR. GROSZ: Aye.

30 MS. BRUCE: Ms. Myers.

1 MS. MYERS: Aye.

2 MS. BRUCE: Mr. Breisch.

3 MR. BREISCH: Aye.

4 MR. BREISCH: Now at this time,
5 I'll turn the meeting over to David Dyke
6 who will act as the Protocol Officer.

7 MR. DYKE: Ladies and gentlemen,
8 my name is David Dyke. I'm the Interim
9 Director of the Air Quality Division. As
10 such, I will act as the Protocol Officer
11 for this hearing.

12 This hearing is convened by the Air
13 Quality Council in compliance with the
14 Oklahoma Administrative Procedures Act, in
15 Title 40 of the Code of Federal
16 Regulations, Part 51, as well as the
17 Authority of Title 27A of the Oklahoma
18 Statutes.

19 The hearing was advertised in the
20 Oklahoma Register for the purpose of
21 receiving comments pertaining to the
22 proposed revisions to OAC 252:100-25,
23 Smoke, Visible Emissions and Particulates.
24 If you wish to make a statement, please
25 complete the form at the registration table
26 and you will be called upon at the
27 appropriate time.

28 At this time, I will call upon Ms.
29 Jeanette Buttram of the staff to give our
30 position. Ms. Buttram.

1 MS. BUTTRAM: bers of the
2 Council, ladies and gentlemen, proposed
3 changes to Subchapter 25 are brought to you
4 today in order to accomplish two tasks, to
5 simplify and Clarify the rule, and to
6 fulfill an EPA State Implementation Plan
7 requirement concerning Continuous Emission
8 Monitoring. Specifically, the department
9 proposes to incorporate by reference the
10 Federal opacity monitoring requirements for
11 existing Catalytic Cracking Unit Catalyst
12 Regenerators at Petroleum Refineries and
13 Fossil Fuel-Fired Steam Generators as
14 specified in 40 CFR 51, Appendix F.
15 According to EPA, this is necessary so that
16 State CEM requirements are compatible with
17 Federal Standards and SIP requirements.

18 Before we discuss the proposed
19 changes to Subchapter 25, I think it would
20 be useful to quickly review Appendix F.
21 Appendix F is located in you packet behind
22 the proposed Subchapter 25 rule. 40 CFR
23 Part 51 contains the "Requirements for
24 Preparation, Adoption, and Submittal of
25 Implementation Plans." It includes
26 Appendix F which lists the "Minimum
27 Emission Monitoring Requirements" for
28 continuous emission monitoring and
29 recording that each State Implementation
30 Plan must include.

5

1 The only source categories listed in
2 Appendix F that our proposed rule affects
3 are the Fluid Bed Catalytic Cracking Unit
4 Catalyst Regenerators at Petroleum
5 Refineries and Fossil Fuel-Fired Steam
6 Generators. Both have to meet certain size
7 requirements in order to be affected.

8 The other source categories and
9 parameters listed in Appendix F, other than
10 opacity, have already been addressed in our
11 rules or are not applicable to the State.
12 Appendix F requires that the owner or
13 operator of an existing emission source of
14 the two categories mentioned earlier,
15 install, calibrate, operate, and maintain
16 all monitoring equipment necessary for
17 continuously monitoring opacity; complete
18 the installation and performance tests of
19 such equipment and begin monitoring and
20 recording within 18 months of plan approval
21 or promulgation.

22 Appendix F allows States to include
23 provisions within their regulations to
24 grant exemptions from the monitoring
25 requirements. Those exemptions, which are
26 taken from a list in Appendix F, are listed
27 under our proposed rule as 252:100-25-5(c).
28 Appendix F allows States to approve
29 reasonable extensions of time provided
30 certain provisions are met. Appendix F

6

1 allows States to utilize different, but
2 equivalent, procedures and requirements for
3 continuous monitoring systems. However,
4 the rule must provide a description of such
5 alternative procedures for approval by the
6 Administrator.

7 Appendix F sets forth the minimum data
8 reporting requirements.

9 Before we discuss the proposed rule,
10 remember in the subchapter you will see
11 revisions that include strikeouts or
12 underlined text. The struck out text is
13 language we are proposing be deleted, and
14 the underlined text is proposed new
15 language.

16 Most of the proposed changes made to
17 the existing language of the rule were for
18 clarification and simplification purposes.
19 However, a couple of the sections need
20 additional discussion.

21 Section 252:100-25-3(b)(1),
22 originally, staff attempted to clarify this
23 section with the proposed language in the
24 draft rule, but soon found out that did not
25 occur. Therefore, after much discussion
26 and research staff had decided to develop
27 alternative language for this section.
28 However, the alternative language
29 represents a substantive change which will
30 be mentioned in the notice of rule making

7

1 intent to be published July 15th.

2 At this point, staff thinks the best
3 approach would be to, delete the language
4 in 252:100-25-3(b)(1) and, replace it with
5 the provision that visible emissions cannot
6 exceed 20 percent opacity except for, short
7 term occurrences, which may consist of one
8 six-minute period in any consecutive 60
9 minutes not to exceed three such periods in
10 any consecutive 24 hours during which the
11 average opacity of emissions may not exceed
12 60 percent. Add a new subsection for
13 compliance purposes which reads as follows:
14 to determine compliance with this section,
15 opacity shall be read by either, (1) A
16 Certified Visible Emission Evaluator using
17 Test Method 9 (40 CFR Part 60, Appendix A)
18 or, (2) A continuous opacity monitor
19 installed, calibrated, operated and
20 maintained in accordance with Performance
21 Specification 1 (40 CFR Part 60, Appendix
22 B).

23 Section 252:100-25-3(b)(4), starting
24 at the last struckout word 'wherein' staff
25 suggest 'upstream from the facility to the
26 point of the fuel source' be deleted.
27 Staff feels the point of hazard to life
28 and/or property should not be limited to
29 this one location.

30 Section 252:100-25-4(a)(5), staff

8

1 feels the type of particulates to which
2 this criteria applies be specified in the
3 rule and is considering using PM 10.

4 New section 252:100-25-5, this new
5 section was added to the rule to comply
6 with the EPA SIP requirement. Staff
7 proposes to incorporate by reference, 40
8 CFR Part 51, Appendix F, in relation to the
9 continuous monitoring of opacity at
10 existing fluid bed catalytic cracking unit
11 catalyst regenerators at petroleum
12 refineries and fossil fuel-fired steam
13 generators.

14 Section 252:100-25-5(b)(2),
15 currently the rule states the owners or
16 operators of these emission sources shall
17 complete the installation and performance
18 tests of such equipment and begin
19 monitoring and recording within 18 months
20 after promulgation of this section. Staff
21 is considering putting in an actual
22 compliance date in the rule. Since we
23 anticipate the rule will take effect July
24 1, 1999, the compliance date should be set
25 for January 1, 2001. This would be in line
26 with the rewrite dewrong initiative and
27 assist the regulated community.

28 During the first comment period for
29 the draft rule dated March 18, 1998, one
30 set of comments was received from OG&E

9

1 regarding the new section added. OG&E
2 request that section 252:100-25-5 be
3 modified to include an exemption similar to
4 that found in 40 CFR, Part 75 for those
5 units that are predominantly natural gas
6 fired but do burn limited amounts of oil.

7 After review staff determined OG&E
8 is unable to meet the exceptions listed in
9 Appendix F for fossil fuel-fired steam
10 generators since they burn oil or a mixture
11 of gas and oil and have a cyclone separator
12 for the removal of ash during the
13 combustion of oil. However, Appendix F
14 does allow the State, on a case-by-case
15 basis, to utilize different, but
16 equivalent, procedures and requirements for
17 continuous monitoring systems in the rule.
18 Therefore, under 252:100-25-5(d), staff
19 included proposed wording in the rule to
20 address alternative monitoring requirements
21 different from the provisions of Parts 1
22 through 5 of Appendix F. However, a
23 description of such alternative procedures
24 must also be submitted to EPA for approval.
25 During the second comment period for the
26 draft rule dated May 15, 1998, additional
27 comments were received from OG&E regarding
28 the proposed language from staff added to
29 the rule to address alternative monitoring
30 requirements.

10

1 The following are suggested changes
2 from OG&E. Under 252:100-25-5(d), suggest
3 we add the following language to the end of
4 the paragraph - including periodic system
5 testing not to exceed forty (40) hours per
6 calendar year. Under 252:100-25-5(d)(1)
7 suggest we delete "on a daily basis" and
8 change it to "once per day."

9 Under 252:100-25-5(d)(3), suggest we
10 change the wording to read "Records of fuel
11 oil burned (including type, amount and
12 duration burned) and visible emissions read
13 shall be maintained for two years."

14 Staff has reviewed the proposed
15 language from OG&E and agrees with the
16 changes. However, staff may have a couple
17 of minor changes to the proposed language
18 for clarification purposes. A letter was
19 received from EPA supporting the States
20 proposed incorporation by reference of 40
21 CFR Part 51, Appendix F, for opacity
22 monitoring. The letter also reaffirms the
23 States ability to provide for approval, on
24 a case-by-case basis, of alternative
25 monitoring requirements for affected
26 facilities. Finally, a representative from
27 EPA is here today to assist in answering
28 questions.

29 Staff suggest leaving the comment
30 period open until June 23, after which

11

1 staff will revise and re-propose the rule
2 based on staff suggestions discussed today
3 and comments received from the public and
4 council. Staff recommends the hearing be
5 continued to the next Council Meeting
6 August 18, 1998.

7 MR. DYKE: Any questions of Ms.
8 Buttram from the Council?

9 MS. MYERS: I've got one on the
10 Appendix. Under 3.9 of the Appendix, it's
11 talking about alternative procedures and
12 requirements. There are several examples
13 listed. Could we include some wording --
14 some examples that are followed but not
15 limited to these particular examples, so
16 that we have a little bit more flexibility
17 for considering other alternatives?

18 MS. BUTTRAM: I'm not sure I
19 understand your question, but these are
20 just examples that are given as saying
21 these are some examples.

22 MS. MYERS: Right. I would
23 suggest some language that says but not
24 limited to these specific examples. There
25 may be other alternatives that come up that
26 need to be considered and just not have it
27 limited to these examples. I don't know
28 what they might be. I think for
29 clarification it might not hurt to include,
30 but not limited to.

12

6857

1 MS. BUTTRAM at about the
2 language that we have already written for
3 252:100-25-5(d) where it talks about
4 alternative monitoring requirements. Then it
5 talks about getting approved by DEQ and
6 EPA. Would that satisfy your concerns?

7 MS. MYERS: It probably would. I
8 just want to be careful we don't get boxed
9 in with being limited to just those
10 examples that are given in that particular
11 part of the Appendix.

12 MS. BUTTRAM: This talks about on
13 a case-by-case basis, so it would give us
14 an opportunity to look at this. I believe
15 any changes in alternative monitoring
16 requirements that the State was to consider
17 would have to be approved by EPA, is that
18 not correct? Mr. Diggs?

19 MR. DIGGS: Yes. If like, the
20 Council approves an alternative monitoring
21 requirement then after your approval it, it
22 would be submitted down to EPA for approval
23 by EPA.

24 MR. DYKE: Please identify
25 yourself.

26 MR. DIGGS: Tom Diggs with EPA
27 Region 6.

28 MR. DYKE: Additional questions
29 of Ms. Buttram from the council? Questions
30 of Ms. Buttram from the audience? I have

13

1 n. Be here of oral comment from Tom Diggs,
2 US EPA, Region 6. Tom. No more questions
3 of Ms. Buttram from the Council?

4 MR. DIGGS: Mr. Chairman, Members
5 of the Council, members of the public, my
6 name is Tom Diggs, D-I-G-G-S. I'm with the
7 EPA Region 6 office in Dallas. And I very
8 much appreciate the opportunity of coming
9 before the Council to provide comments on
10 the proposal to incorporate into the
11 Oklahoma Regulations the Appendix F
12 Requirements for the opacity monitoring.
13 Appendix F identifies the minimum
14 requirements for Continuous Emission
15 Monitoring that the State Implementation
16 Plan doesn't contain. EPA Region 6, had
17 sent forth a letter of April 20, 1998, and
18 I would like share a copy of that for the
19 record. I should inform the Council, that
20 a copy of that was available in Council's
21 briefing package, as part of the Council
22 package. And I am here to say that EPA is
23 very pleased that the State is taken these
24 steps necessary to meet the Appendix F
25 requirements for opacity. The State has
26 moved forward in the past to meet the
27 Appendix F requirements, sulfur dioxide was
28 also a requirement in the past and that has
29 been satisfied. And with the adoption of
30 the opacity requirements that will probably

14

1 meet the requirements of Appendix F.

2 Several questions have come up to
3 the EPA Region 6 offices attention
4 regarding this rule, and these are being
5 addressed in the redraft that was
6 discussed. One is, can Alternative
7 Monitoring provisions apply, for example,
8 utility boilers that use natural gas and
9 fuel oil and fuel oil is only used on an
10 emergency basis, could an Alternative
11 Monitoring provision apply? And the answer
12 to that is, yes. The Section 6 of the
13 Appendix F, does allow for the State to
14 provide approval for Alternative Monitoring
15 requirements on a case-by-case basis. I
16 realize that this has been addressed in the
17 new language that has been added in, that
18 has been discussed as part of this public
19 hearing under 252:100-25-5-(d). We will
20 certainly be looking at this language
21 further at EPA Region 6. I feel the
22 approach being taken or identifying that it
23 would be the Alternative Procedure would be
24 approved by the Council and by EPA as an
25 acceptable approach. I do need to go back
26 talk with the legal counsel and the
27 representatives of the EPA. I appreciate
28 the Oklahoma Department of Environmental
29 Quality addressing that comment and
30 factoring it into the suggestions for the

15

1 redraft.

2 There was also a question that had
3 come up as to whether Appendix F in the
4 Compliance Assurance Monitoring rule are
5 compatible. And from our understanding our
6 compliance assurance monitoring rule does
7 not consent to Appendix F requirements, but
8 rather it is a gap-filling procedure to
9 cover where Appendix F does not. And in
10 the past EPA Region 6, has approved the
11 opacity requirements into our other State
12 Implementation Plans for the Region 6
13 States, and are very encouraged by the
14 approach that Oklahoma is putting forth to
15 adopt this, and I want to thank you for the
16 opportunity for providing comments. I am
17 open, if anyone has questions.

18 MR. DYKE: Questions from the
19 Council? Questions from the public of Mr.
20 Diggs? No questions from the Council? I
21 do not have a record of anyone else wishing
22 to make a comment on this matter. Is there
23 anyone in the audience who wishes to
24 comment on this particular rule making
25 today? Hearing none. I will have a motion
26 to continue this item to the August 18th
27 Meeting.

28 MR. BRANECKY: So move.

29 MS. MYERS: Seconded.

30 MR. BREISCH: We have a motion

16

1 and second to continue this hearing until
2 the August 18th Meeting. Any further
3 questions, comments? If not, Myrna call
4 the roll:

5 MS. BRUCE: Mr. Wilson.

6 MR. WILSON: Aye.

7 MS. BRUCE: Mr. Branecky.

8 MR. BRANECKY: Aye.

9 MS. BRUCE: Ms. Slagell.

10 MS. SLAGELL: Aye.

11 MS. BRUCE: Mr. Kilpatrick.

12 MR. KILPATRICK: Aye.

13 MS. BRUCE: Mr. Gross.

14 MR. GROSS: Aye.

15 MS. BRUCE: Ms. Myers.

16 MS. MYERS: Aye.

17 MS. BRUCE: Mr. Breisch.

18 MR. BREISCH: Aye.

PROCEEDINGS

MR. DYER: Moving on to the next item on the Hearing Agenda, Item Number 9. This hearing is convened by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act, Title 40 of the Code of Federal Regulations, as well as the Authority of Title 37A of the Oklahoma Statutes.

This hearing was advertised in the Oklahoma Register for the purpose of receiving comments pertaining to the proposed new rule OAC 252:100-25, Smoke, Visible Emissions and Particulates. If you wish to make a statement, please complete the form at the registration table and you will be called upon at the appropriate time.

At this time I will call upon Ms. Jeanette Buttram to give the staff position on this rule.

MS. BUTTRAM: Previously, proposed changes to Subchapter 25 were presented at the June 16, 1998 Council meeting. The proposed changes to Subchapter 25 were originally made in order to simplify and clarify the rule, and fulfill an EPA State Implementation Plan requirement concerning Continuous Emission

Monitoring.

Specifically, the department proposes to incorporate by reference the Federal opacity monitoring requirements for existing Catalytic Cracking Unit Catalyst Regenerators at Petroleum Refineries and Fossil Fuel-Fired Steam Generators, as specified in 40 CFR 51, Appendix P. According to EPA, this is necessary so that the State CEM requirements are compatible with Federal Standards and SIP requirements.

During the last Council meeting, proposed changes to the May 15, 1998 draft rules were presented. Many of those changes are incorporated in the July 15, 1998 draft rule.

Regarding changes made to Section 252:100-25-3, section 252:100-25-3(b)(1) was renumbered 252:100-25-3(a)(1). Staff deleted the original language in 252:100-25-3(b)(1) and replaced it with the provision that visible emissions cannot exceed 20 percent opacity except for: short term occurrences, which may consist of one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours during which the average opacity of emissions may not exceed 60 percent.

6861

1 A new subsection for compliance
2 purposes, Section 252:100-25(b), was added
3 to the rules, which reads as follows: To
4 determine compliance with this Section,
5 opacity shall be read by either: (1) A
6 Certified Visible Emission Evaluator using
7 Test Method 9 (40 CFR Part 60, Appendix A)
8 or (2) A continuous opacity monitor
9 installed, calibrated, operated and
10 maintained in accordance with Performance
11 Specification 1 (40 CFR Part 60, Appendix
12 B).

13 In Section 252:100-25-4(a)(5), staff
14 inserted PM-10 to clarify the type of
15 particulates to which this criteria
16 applies.

17 In Section 252:100-25-5(b)(2), the
18 date January 1, 2001, was included in the
19 rule to specify the compliance date of the
20 new section. This would be in line with
21 the rewrite dewrong initiative and assist
22 the regulated community.

23 Comments were received and staff's
24 responses to the rule changes made, and the
25 comments and responses are attached to the
26 Subchapter 25 that we have on the table.

27 Comments were received from OG&E
28 requesting clarification of the proposed
29 new language in Section 252:100-25-5(d).
30 Staff agreed with the comments and made the

5

1 proposed changes.

2 Comments were received from Fort
3 James regarding proposed changes to
4 252:100-25-3(a) and (b). Fort James
5 believes the rule should be written to be
6 consistent with NSPS promulgated by the
7 EPA, specifically for sources subject to a
8 20 percent opacity standard, and proposed
9 language to that effect.

10 Staff reviewed the proposed wording
11 and determined it would not address
12 facilities that have NSPS opacity
13 requirements other than 20 percent, or
14 those that are not even affected by a NSPS.
15 The original language in the rule was
16 clarified and amended to allow the opacity
17 to be based on a six-minute average. Also,
18 Staff included a new subsection (252:100-
19 25-3(b)), which outlines the methods for
20 determining compliance with the opacity
21 limits. These methods are consistent with
22 those outlined in NSPS requirements.

23 Last Thursday, August 13, 1998, a
24 second set of comments was received from
25 Fort James. Again, Fort James suggest we
26 add language to the rule which allows
27 sources subject to a 20 percent equivalent
28 opacity standard, provided in an applicable
29 NSPS in 40 CFR Part 60, to determine
30 compliance with the 20 percent equivalent

6

1 opacity provided in Section 252:100-25-
2 3(a), using the method or manner provided
3 in such NSPS. Currently Fort James feels
4 the opacity limits in permits will be a
5 hybrid made from the most stringent
6 portions of each standard. They also feel
7 this would create confusion among permit
8 writers and source owners.

9 Staff reviewed the proposed wording
10 and does not recommend that it be
11 incorporated into the rule. The general
12 policy followed by the permit writers is to
13 identify both the opacity requirements in
14 the permit if that facility is subject to
15 NSPS, as well as the state rule. The
16 permit writer would not choose permit
17 conditions from each and shape it into one
18 permit condition. The most stringent rule
19 would be identified as the permit condition
20 to follow, and in most cases that would be
21 the NSPS.

22 MR. WILSON: I have a question.
23 Did the staff determine that compliance
24 with NSPS or 40 CFR Part 60 specification
25 (1) would meet the intent of compliance
26 with the state's opacity regulations?

27 MS. BUTTRAM: Well, they added
28 that as a compliance -- for compliance
29 purposes. Is that -- that's the new
30 section that we added, (b). If I

7

1 understand your question correctly, we
2 added the new section to determine
3 compliance with this section.

4 MR. WILSON: Yeah. I'm not sure
5 how to word my question. I have a
6 question, I'm not sure how to word it.

7 MR. KILPATRICK: If I understood
8 your question, you are asking if you follow
9 specification (1) and how that says to do
10 continuous opacity monitoring, would that
11 be consistent with the requirement under A
12 1, the 60 minutes and all that?

13 MR. WILSON: That's correct, yes.
14 Maybe another way would be to say if you
15 complied with the NSPS requirement for
16 installing, calibrating, operating and
17 maintaining, and opacity SIMS, would you
18 also then be in compliance with state
19 regulations listed in 252:100-25-3(a)(1)?

20 MR. BRANECKY: No. Because
21 Appendix B of 40 CFR Part 60 does not have
22 any opacity limits in it. That's in the
23 applicable subpart, Subpart D. Appendix B
24 just has to do with the operation and
25 maintenance and the calibration of the
26 monitoring.

27 MR. KILPATRICK: What is the
28 method? Not the opacity, what is the
29 method?

30 MR. WILSON: What I'm saying is

8

1 if you comply with your NSPS and this
2 particular requirement here found in
3 252:100-25-3(a), excuse me, (b) (2), would
4 you meet the state requirements for --
5 would that satisfy compliance with the
6 state requirements found in the first part
7 under --

8 MR. BRAMECKY: If you complied
9 with your applicable subpart (d), or
10 whatever subpart where the opacity limit is
11 contained, in addition to the Appendix D
12 where the monitoring method is contained.
13 Those two combined, will that meet this
14 section.

15 MR. WILSON: Yeah.

16 MS. HOFFMAN: Excuse me, I'm
17 Barbara Hoffman, Staff Attorney. It seems
18 to me we put that in there so you would
19 know how to determine compliance with the
20 opacity standard. You can use either
21 method 9 or COM based on the CFR Part 60.
22 Do you understand what I'm saying?

23 MR. WILSON: Yes.

24 MS. HOFFMAN: You use one of
25 those methods to determine compliance.

26 MR. WILSON: Right. If I had a
27 source subject difference, an NSPS which
28 had an opacity requirement, of course, I
29 would have to comply with 40 CFR 60,
30 Appendix B, specification 1. But I would

9

1 also have to comply with the language which
2 refers to the six minute period in any
3 consecutive 60 minutes, and three such
4 periods in any consecutive 24 hours, which
5 is state regulations. Okay. And in
6 review, the comments that Fort James had
7 submitted, the staff, if I understood you
8 right, recommended that there was no
9 overlap in that -- in the regulations.

10 MS. BUTTRAM: I should probably
11 clarify that to say that -- not as an
12 excuse, but the letter came in late and it
13 did not give us adequate time to really
14 check with everybody that we needed to
15 check with. And I think some of the
16 information that we got may not have been
17 complete. And so, in order to come up with
18 -- we took what we had and came up with the
19 recommendation to keep the rule as is,
20 because we didn't see a problem with the
21 rule. And so, we can only go by the amount
22 of time we had to gather the information we
23 got, and that's -- so the responses I have
24 is what I was able to get during that
25 limited time.

26 MR. WILSON: And the comments
27 that Fort James submitted suggested that
28 they felt that they were being subjected to
29 a hybrid opacity standard, which included
30 the most stringent parts of the NSPS and

10

1 the state regulations.

2 MS. BUTTRAM: True.

3 MR. WILSON: Is that true?

4 MS. BUTTRAM: Well, again, to my
5 understanding I have heard it both ways,
6 but I have heard that that could be
7 possible, also.

8 MS. SHREDDY: I'm Joyce Shedy
9 with the Air Quality Division. They would
10 be subject to both rules. And in theory,
11 it's not a hybridized rule. But in
12 practice, what would happen is that indeed
13 they could have one excursion of up to 27
14 percent, if they were going to comply with
15 both rules.

16 MR. WILSON: So, you are
17 recognizing that the sources subject to
18 NSPS are facing two sets of opacity
19 regulations to comply with?

20 MS. SHREDDY: In some cases.
21 Well, they all will. In many cases, the
22 differences are such that complying with
23 one will comply with the -- the more
24 stringent will comply with both. In this
25 particular case, it just doesn't work out
26 because of the difference in the number of
27 excursions you can have.

28 MR. WILSON: And from what I've
29 heard, the staff feels like the NSPS
30 requirement is the more stringent of the

11

1 two standards?

2 MS. SHREDDY: Well, it is insofar
3 as you can only go up to 27 percent. But
4 it isn't insofar as you can have three
5 excursions there, but only one -- so it's a
6 trade-off. You can have one 60 percent or
7 three 27 percents. Which is the most
8 stringent?

9 MR. WILSON: Who will determine
10 that?

11 MS. BUTTRAM: I'm not sure.
12 Larry, did you have a comment?

13 MR. DYER: Larry, identify
14 yourself, please.

15 MR. BYRUM: Larry Byrum,
16 concerned citizen. Did you not say earlier
17 that you were going to ask that this be
18 continued, this particular portion of this
19 regulation?

20 MS. BUTTRAM: Yes. During the --
21 during the briefing I did say that.

22 MR. BYRUM: I guess my
23 observation would be that this is probably
24 something that needs to be looked at in
25 more detail, worked out during the interim
26 between the two. I would think that would
27 be the solution that you are looking for.
28 I didn't -- I have not seen the letters of
29 comment, but I'm sure there is a common
30 ground that can be worked out. And I know

12

6863

1 how difficult it is to sit here today and
2 try to come up with all the particular
3 MSFS's and try to apply all of those. My
4 suggestion would be that you continue the
5 hearing and review the particular cases.
6 There may be two or three that have to be
7 handled, and if you try to do it on the
8 fly, we'll only get one or two of those
9 corrected. That would be my suggestion to
10 you.

11 MS. MYERS: This rule doesn't
12 have any kind of immediate implication, it
13 just has to be passed; is that correct?

14 MS. BUTTRAM: That's correct.

15 MR. DYKE: Mr. Chairman, if I
16 could, I do have notice from Fort James
17 that they would like to make a comment.
18 And before we dismiss Ms. Buttram, all
19 together, if I could call on Mr. Landers to
20 make his comments and then we'll see if
21 there is any other questions after that.
22 Is that, okay? Mr. Landers?

23 MR. LANDERS: I am Steve Landers
24 with Fort James Operating Company in
25 Muskogee. I thank the Council for this
26 opportunity to comment. Fort James has
27 submitted comments on two separate
28 occasions. I would just like to emphasize
29 and clarify a couple of items concerning
30 the comments. And some of that has been

13

1 seen already the confusion that will come
2 out of not only being subject to two
3 different standards, but having to comply
4 with two different limits concurrently.
5 It's a bit confusing to permit writers,
6 inspectors, attorney/clients, not to
7 mention our own operations policy.

8 Secondly, I would like to say that
9 Fort James -- to clarify, we're not
10 opposing a higher opacity limit. We're
11 suggesting that compliance with an
12 applicable MSFS that has the same 20
13 percent opacity limit would be compliance
14 with the subsection. And those that are
15 not subject to an MSFS would therefore be
16 subject to 252:100-25-3(a)(1). Likewise,
17 those that have an opacity limit in their
18 MSFS is higher than 20 percent.

19 MR. DYKE: Any questions of Mr.
20 Landers from the Council? Any questions of
21 Mr. Landers from the public?

22 MR. FISHBACK: My name is Bill
23 Fishback. I sympathize completely with the
24 situation that this industry finds
25 themselves in with what may be conflicting
26 or overlapping regulations. What I would
27 do -- what I would recommend to the Council
28 is that they request the staff to take this
29 opportunity between now and the next
30 Council meeting, to see if there are

14

1 revisions to the state opacity rule that
2 could be changed, that would eliminate
3 these inconsistencies. I am kind of like
4 Larry, I'm not sure we can sit here today
5 and do that, and make sure we cover all the
6 bases. I think that should be the goal,
7 one consistent set of regulations;

8 As Dr. Sheedy said earlier, the
9 issue here really is that there is no way
10 to say that one rule is more stringent than
11 the other, because both rules have two
12 conditions. They don't just have one
13 condition. If the only condition in a rule
14 was opacity, it would be real easy to say
15 one is 20 and one is 30, therefore one is
16 more stringent. But because there are two
17 conditions in the rule, you have this gray
18 area where in certain cases one is more
19 stringent based on one of the requirements,
20 and the other one is more stringent based
21 on the other. So, I think the continuance
22 is an ideal opportunity. And if this rule
23 is able to be revised so that it can
24 eliminate the inconsistencies with the
25 federal rule, that would be great.

26 I believe in Oklahoma we have, if
27 not a statute, like is present in Texas,
28 but I believe we have a directive that says
29 that in general we don't want to have
30 regulations that are more stringent than

15

1 federal regulations because of the idea of
2 discouraging industry from relocating here
3 and all of that. I see Barbara shaking her
4 head, maybe it's not a statute, but at
5 least that's the sense of how regulations
6 are prepared. Would you not agree?

7 MS. HOFFMAN: I would not agree.

8 MR. FISHBACK: Okay.

9 MS. HOFFMAN: The statute says
10 that if our rule -- if we're going to
11 propose a rule more stringent than the
12 federal rule, then we have to explain why
13 in our rule impact statement. But they are
14 not really economically -- what's it
15 called, an economic benefit?

16 MR. FISHBACK: Yeah, there needs
17 to be a justification.

18 MS. HOFFMAN: But only with
19 respect to hazardous air pollutants does it
20 say that we're supposed to adopt the
21 national standard rather than our own.

22 But if I could speak just a little
23 more on this, Bill. What I'm curious about
24 is, you know, I've talked to some of our
25 folks who have been in the Air Quality
26 Division for some time, and they have never
27 had a problem in enforcing the two
28 standards that we're talking about. Our
29 own hazardous standard and this particular
30 MSFS. And so what I'm curious about before

16

1 we actually delve into changing our rules,
2 as I understand this rule is a part of our
3 state implementation plan. If we're going
4 to change it in that respect, then we're
5 going to have to get EPA's approval. So,
6 we want to be very careful if we're really
7 going to mess with the substantive part of
8 this rule. So, I'm curious if industry can
9 tell us if there have ever been any actual
10 conflicts in trying to comply with both
11 rules?

12 MR. LANDERS: I would say you are
13 right. There hasn't been a conflict in the
14 past because the state rule, as it exists
15 now, is if an aggregate amount of 300
16 seconds in an hour, over 20 percent, you're
17 in violation. That will come true before a
18 six minute average exceedance would come
19 true. The same thing with the 20 minute
20 average versus the recurrences in a 24
21 hour -- in a 24 hour period based on a six
22 minute average. The aggregates will always
23 come through before the average. And
24 therefore, in the rule there, would be no
25 question as to which one is more strict.
26 In the state rule, the aggregate will come
27 through before the average has.

28 MS. BUTTRAM: For clarification
29 purposes, is the deletion of aggregate in
30 the rule the problem? If that was to go

17

1 back in, would that --

2 MR. LANDERS: No, six minute
3 average is great. We like that part. That
4 is much more consistent with NSPS. And
5 again, the issue is the going back and
6 forth as to which is more stringent, given
7 a certain situation. I would like to
8 apologize if our comments were late.

9 MR. DYER: Any additional
10 questions of Ms. Buttram or Mr. Landers
11 from the Council?

12 MR. CHAIRMAN: Yeah, I've got a
13 question. How is the staff going to
14 approach the solution in that you are not
15 going to change the NSPS?

16 MS. BUTTRAM: Would you like me
17 to answer that?

18 MS. HOFFMAN: Sure.

19 MS. BUTTRAM: Staff has -- we've
20 talked about how we need to talk with
21 industry and look at our rule as far as
22 whether it needs to be modified to be maybe
23 more in -- together with the NSPS
24 requirements when it does come to that
25 opacity, those opacity requirements. But
26 other than that, I don't -- we haven't
27 really discussed it in further detail.

28 MR. BRANCKCY: You might want --
29 if you have an NSPS that takes care of the
30 concern, then let the NSPS do it. But if

18

1 there is a gap that some people may fall
2 through, then maybe the state rule can fill
3 in that gap and not overlap, but just have
4 it as a means of catching those people that
5 may fall under an NSPS and need some type
6 of control.

7 MR. CHAIRMAN: Well, you could
8 create that language right now. In fact, I
9 think you did in our briefing session this
10 morning.

11 MR. BRANCKCY: In lieu of the
12 NSPS, then this applies. But if there is
13 an NSPS that applies to you, then that's
14 what you've got to meet.

15 MR. CHAIRMAN: But, that's why I
16 asked --

17 MR. BRANCKCY: There is maybe
18 more to it than that.

19 DR. SHEDDY: This is Joyce Shеды
20 again. What about in the few cases -- I
21 think there are only a few, where the NSPS
22 has an opacity that is higher than the 20
23 percent. Like they are 30 -- was it 30
24 percent?

25 MS. BUTTRAM: Right. Fossil Fuel
26 Fire and Cracking Unit at 30 percent.

27 DR. SHEDDY: Would we go to the
28 30 percent because it's an NSPS, or would
29 we hold them to our 20 percent. Would that
30 be a problem with the relaxation of the

19

1 SIP?

2 MR. CHAIRMAN: Well, you would go
3 to NSPS. Right?

4 MR. BRANCKCY: What are we trying
5 to do with this regulation?

6 MR. DOUGHTY: Mr. Chairman, if I
7 may. If I may make a comment. My name is
8 Dennis Doughty. The staff started out with
9 the intent of clarifying what we had.
10 There was no intent of relaxing or changing
11 any standards that have been in existence
12 now for 25 or 30 years. And it's not fair
13 to shoot at the staff on something that
14 came up rather late.

15 So, if there is conflicts with
16 industry on NSPS, I suggest that they make
17 them clear to staff, that we put them
18 together, and come back next time and see
19 if we can't resolve them. I don't think we
20 can do it here, unless you want to pass it
21 like it's been proposed.

22 If there are some real issues and
23 real conflicts and problems, it would
24 probably be best if industry could tell us
25 exactly what they are so the staff can work
26 on them.

27 MR. BRANCKCY: Well, it's not my
28 intent and I didn't think I was shooting at
29 the staff, hopefully we're trying to work
30 through this. I think -- I'm with O&E.

20

10865

1 and I would be more than willing to sit
2 down and discuss it with you guys and help
3 you guys work through it.

4 MR. KILPATRICK: I would make the
5 comment that I'm not sure that in the short
6 time we're allowed, if our purpose is to
7 try to go ahead and get this body of
8 regulations revised, and realizing that
9 this language is going to pass through two
10 or three of the regulations, that we may
11 have to go ahead and revise them for the
12 purpose of clarity. And then if we want to
13 consider whether we're going to change the
14 fundamental principles of opacity
15 regulation, that may have to be done as a
16 second regulatory matter. Not try to mix
17 these two issues together and try to solve
18 them all at one time.

19 MS. BUTTRAM: I better not
20 comment on that one. I just -- in fairness
21 to Fort James, we did receive their first
22 comments, but the second letter is pretty
23 much what, I think, showed their true
24 concern about a mixture having both rules
25 applying. So, we really weren't able to
26 address that issue for this Council
27 meeting.

28 MR. CHAIRMAN: I think we should
29 continue this until October and give you a
30 chance to look at it.

21

1 I have no problem with continuing
2 it. And my -- my question was simply that
3 the solution in my mind was with what David
4 Branecky said this morning. If it's NSPS,
5 it's NSPS. If it's not, we've got a
6 regulation to cover it. That's why I asked
7 the staff how were they going to solve
8 this. It seems to me they are going to
9 come back and solve it just like that.
10 But, you know, again I have no problem with
11 continuing it. I wasn't, Dennis, coming
12 down on the staff.

13 MR. DOUGHTY: I wasn't saying you
14 were.

15 MR. BYRUM: This is Larry Byrum
16 again. I guess, looking at it from
17 experience, that I would say what is being
18 proposed here is an additional substantive
19 change that you need to get commented on.
20 I'm sure EPA would have comment if you take
21 the opacity rule and say that if you -- if
22 NSPS -- if you meet the NSPS requirement,
23 meet the opacity for Oklahoma, I'm sure EPA
24 would have comments on that as to whether
25 or not we are relaxing an existing rule. I
26 think we need to give that an opportunity
27 to get that all out into the system. I
28 agree with what David said, that that may
29 very well be the solution that you come up
30 with. But again, trying to do it all --

22

1 trying to remember all the NSPS
2 requirements off the top of our head in
3 this setting is -- I don't know anyone here
4 that can remember all of it. It might be
5 best if we sit down with the industry and
6 the staff and work through this.

7 MR. DYER: Any other questions or
8 comments of Ms. Buttram from the Council?
9 From the public? Thank you.

10 MS. BUTTRAM: Do you want to hear
11 the staff's recommendation?

12 MR. DYER: Sure.

13 MS. BUTTRAM: Staff recommends
14 that the comment period be left open until
15 August 24th. Staff recommends the rule be
16 considered again at the next Council
17 meeting on October 20th, 1998.

18 MR. DYER: Any additional
19 comments?

20 MR. BYRUM: Just one. August
21 24th is a fairly close time frame that you
22 are asking people to get together. When is
23 the latest date that you would be able to
24 close your comment period to be able for
25 this to be worked on?

26 MS. BUTTRAM: Well, the problem
27 is the notice has to be turned in on August
28 26th. Any substantive change has to be
29 listed in the notice. We could come up
30 with -- we can override that in if we meet

23

1 and come up with something that we think
2 we're going to be changing and putting in
3 the notice, but it's going to affect that
4 section. And then we can continue to meet
5 after the notice is turned in, because it's
6 not going to be published for a while after
7 that. And after it's published, then
8 that's when no more changes can be made,
9 pending, made to the rule.

10 MR. BYRUM: So, what you are
11 saying is the first meeting needs to occur
12 very quickly?

13 MS. BUTTRAM: Yes.

14 MR. DYER: Yes, sir?

15 MR. LEW: Gill Lew, Fort James.

16 Did I understand that you are going to
17 leave the comment period open until next
18 Monday?

19 MS. BUTTRAM: Like I just
20 explained, we have to follow procedures.
21 And so we have to turn in a notice by
22 August 26th. In that notice we have to
23 list any change that we have made to the
24 rule. So, we have to meet before then in
25 order to determine -- to get an idea of
26 what we're going to put in the notice. But
27 then we can meet after that again to make
28 the actual changes. We just have to be
29 able to meet and say this is what we're
30 looking at. After the meeting, we might

24

1 decide not to change the rule, or we may
 2 decide to change the rule. So, those are
 3 things we have to look at before the notice
 4 is turned in.
 5 MR. LEW: I would just like to
 6 say that we would be more than happy to
 7 work with you.
 8 MS. BUTTRAM: Okay.
 9 MR. DYKE: Anything else of Ms.
 10 Buttram on this matter?
 11 MR. CHAIRMAN: I'll entertain a
 12 motion we continue this hearing.
 13 MR. WILSON: So moved.
 14 MS. SLAGELL: Second.
 15 MR. CHAIRMAN: I've got a motion
 16 and a second. Any other comments or
 17 questions?
 18 MR. BRANECKY: Do we want to,
 19 with the understanding that in the interim
 20 that these meetings will be held. Is that
 21 necessary?
 22 MR. CHAIRMAN: That's the
 23 understanding. I don't know that it needs
 24 to be in the motion.
 25 MR. BRANECKY: Okay, that's fine.
 26 MR. CHAIRMAN: Myrna, call the
 27 roll.
 28 MS. BRUCE: Ms. Myers?
 29 MS. MYERS: Aye.
 30 MS. BRUCE: Dr. Gross?

25

1 DR. GROSS: Aye.
 2 MS. BRUCE: Mr. Kilpatrick?
 3 MR. KILPATRICK: Aye.
 4 MS. BRUCE: Mr. Wilson?
 5 MR. WILSON: Aye.
 6 MS. BRUCE: Mr. Branecky?
 7 MR. BRANECKY: Aye.
 8 MS. BRUCE: Ms. Slagell?
 9 MS. SLAGELL: Aye.
 10 MS. BRUCE: Mr. Breisch?
 11 MR. BREISCH: Aye.

STATE OF OKLAHOMA

TRANSCRIPT OF PROCEEDINGS
OF PUBLIC HEARING OAC 252:100-25
SMOKE, VISIBLE EMISSIONS AND PARTICULATES
HELD ON OCTOBER 20, 1998, AT 1:00 P.M.
AT TULSA CITY-COUNTY
HEALTH DEPARTMENT AUDITORIUM
IN TULSA, OKLAHOMA

REPORTED BY: Christy A. Myers, CSR

MYERS REPORTING SERVICE

(405) 721-2882

MEMBERS OF THE COUNCIL

1. MR. KILPATRICK - MEMBER
2. MS. SLAGELL - MEMBER
3. MR. WILSON - MEMBER
4. MS. MYERS - MEMBER
5. MR. BRANECKY - MEMBER
6. DR. CANTER - VICE CHAIRMAN
7. DR. GROSZ - MEMBER
8. MR. BRETSCH - CHAIRMAN
9. MR. DYKE - PROTOCOL OFFICER
10. MS. BRUCE - SECRETARY

PROCEEDINGS

MR. DYKE: Now the next item on the agenda, Item Number 7, OAC 252:100-25.

I am David Dyke, the Assistant Director of the Air Quality Division. I will act as the Protocol Officer on this hearing.

The hearing was convened by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act, applicable State Statutes and Title 46 of the Code of Federal Regulations.

This hearing was advertised in the Oklahoma Register for the purpose of receiving comments pertaining to the proposed new rule, OAC 252:100-25, Smoke, Visible Emissions and Particulates.

If you wish to make a comment or statement, please complete the form at the registration table and you will be called upon.

At this time, I will call upon Ms. Jeanette Buttram, to give the staff position.

MS. BUTTRAM: Members of the Council, ladies and gentlemen, previously proposed changes to Subchapter 25 were presented at the June 16th and August 18th, 1998, Council meetings. The proposed changes to Subchapter 25 were made in order to simplify and clarify the rule, fulfill an EPA State Implementation Plan requirement by incorporating by reference the Federal opacity monitoring requirements, as specified in 40

Christy A. Myers
Certified shorthand reporter

CFR 51, Appendix P, for existing Catalytic Cracking Unit Catalyst Regenerators at Petroleum Refineries and Fossil Fuel-Fired Steam Generators.

During the Council meeting held August 18th, 1998, comments regarding the proposed change to 252:100-25-3, were discussed and it was decided to further address these concerns brought up by Fort James, concerning conflicting federal standards.

As a result, the following changes have been proposed: Page 2, Section 252:100-25-2.1, add a new definitions section. Page 2, Section 252:100-25-3(a), exempt sources subject to opacity standards promulgated under Section 111 of the Federal Clean Air Act. Page 3, Section 252:100-25-3(a)(1), clarify how the opacity standard will be determined at sources with Continuous Opacity Monitors operated and maintained in accordance with Performance Specification 1 (40 CFR Part 60, Appendix B). Page 3, Section 252:100-25-3(a)(1), clarify how the opacity standard will be determined at sources without Continuous Opacity Monitors. Page 3, Section 252:100-25-3(c), provide methods for determining compliance with the opacity limits.

Staff recommends two additional changes not shown on the draft rule. On page 4, under Section 252:100-25-5(a), staff recommends the date July 1st, 1997, be changed to July 1st, 1998. On page 3 and 4, for simplification purposes,

Christy A. Myers
Certified shorthand reporter

6869

change Air Quality Division to Division.

Comments were received from Fort James, along with EPA, supporting these proposed changes to Subchapter 25, which I will enter into the record.

Staff suggests that the proposed rule be recommended to the Environmental Quality Board for permanent adoption.

MR. DYKE: Questions and discussion from the Council?

MS. MYERS: Jeanette, on the very first part under the general prohibition, where it says no owner or operator of any air contaminant source shall allow emissions. Should that be excess emissions? You have permitted limits on your emissions. Should it be excess emissions?

MS. BUTTRAM: No. Because if you refer to the definition for air pollution, then that will explain what the - what air pollution is and it talks about insufficient quantities and of such characteristics that tend to be a remaining interest and so that takes care of that.

MS. MYERS: Okay, thank you.

MR. DYKE: Additional questions from the Council? Questions or discussion from the public? Does anyone wish to speak?

MS. MEDLEY: I have a question or comment. On 252:100-25-4, Alternative for Particulates, it says in the first paragraph -- basically it says that there can be an

Christy A. Myers
Certified Shorthand Reporter

increase for particulates, only provided that the owner/operator demonstrates to the satisfaction of the Air Quality Council at public meeting. Then it lists these three items, four items, there may be five here. Anyway, number 1 and 2, I comprehend with a, b, c. And number 3, it says, quote, possibly owner/operator gets an increase in particulates if they had been stopped appropriately, does not control opacity to the limit required. And I have a problem with that. If their control equipment doesn't do it to the limit as required, and the equipment doesn't, then why should we allow them to get an exceedance from our Council? Just so they continue operating?

MS. BUTTRAM: I'd have to refer that to someone who is involved with permit sources.

MR. DYKE: Barbara Hoffman.

MS. HOFFMAN: My name is Barbara Hoffman, I'm the staff attorney.

MR. DYKE: Could you come up, Barbara.

MS. HOFFMAN: What?

MR. DYKE: Please, could you come forward for the court reporter? Thanks.

THE REPORTER: I'm sorry. Thanks.

MS. HOFFMAN: First of all, let me tell you that we have not made any substantive changes to this rule, okay.

So, the changes in 25-4 are merely just some wording changes

Christy A. Myers
Certified Shorthand Reporter

that hopefully will streamline it a little bit, but the actual rule does not change. And the reason why it says that the installed control equipment does not control opacity to the limit required, if their controlled equipment could control opacity to the limit required, we wouldn't need the alternative limit. So, we have to make them --

MS. MEDLEY: Where do you get the other alternative? Up here, whether they actually get control if they still want additional particulates in 1, 2, 3. In 1 and 2, but in 3, you are actually stating the installed control equipment does not. And yes, this may already have been a rule, but the reason I bring it up, anytime you don't see these rules (inaudible) changes are made (inaudible) we don't have all the rules to go and read from this in our office, so, you know, this sometime is our only time to comment on any rule, whether it's been changed or not.

MS. HOFFMAN: The owner/operator that wants an alternative for opacity has to meet all of those listed items.

First of all, they have to show they attempted to control the opacity, that their equipment is in good working order, and then third is, but it still doesn't meet the limit. And if it still doesn't meet the limit after that, plus a few more and 5, but if they get to that point, then they can prove to us that they meet the alternative opacity limit.

MS. MEDLEY: Thank you.

Christy A. Myers
Certified Shorthand Reporter

MR. DYKE: Additional comments or questions from the public? Additional comments or questions from the Council? Mr. Breisch?

MR. BREISCH: I'll entertain a motion that we recommend this for permanent passage by the DEQ Board.

DR. GROSZ: So moved.

MR. BRANECKY: Second.

MR. BREISCH: Motion has been made and seconded that we pass this on to the DEQ Board for adoption. Myrna.

MS. BRUCE: Mr. Branecky.

MR. BRANECKY: Aye.

MS. BRUCE: Ms. Myers.

MS. MYERS: Aye.

MS. BRUCE: Mr. Wilson.

MR. WILSON: Aye.

MS. BRUCE: Dr. Gross.

DR. GROSZ: Aye.

MS. BRUCE: Mr. Breisch.

MR. BREISCH: Aye.

OAC 252:100-29 SIP Revision

CHAPTER 100: AIR POLLUTION CONTROL

SUBCHAPTER 29. CONTROL OF FUGITIVE DUST

Section

252:100-29-2. ~~Prohibitions~~ General provisions [AMENDED]

252:100-29-3. Precautions required in maintenance or nonattainment areas [AMENDED]

252:100-29-5. Variance [REVOKED]

252:100-29-2. ~~Prohibitions~~ General provisions

~~(a) General provisions. No person shall cause or permit the handling, transporting, or disposition of any substance or material which is likely to be scattered by the air or wind, or is susceptible to being air-borne, or wind-borne or to operate or maintain or cause to be operated or maintained, any premise, open area, right-of-way, storage pile of materials, vehicle, or construction, alteration, demolition or wrecking operation, or any other enterprise, which involves any material or substance likely to be scattered by the wind or air, or susceptible to being wind-borne or air-borne that would be classified as air pollution without taking reasonable precautions or measures to minimize atmospheric pollution.~~

~~(a) Prohibitions. No person shall cause or allow any fugitive dust source to be operated, or any substances to be handled, transported or stored, or any structure constructed, altered, or demolished to the extent that such operation or activity may enable fugitive dust to become airborne and result in air pollution, without taking reasonable precautions to minimize or prevent pollution.~~

~~(b) Emission boundaries. No person shall cause or permit the discharge of any visible fugitive dust emissions beyond the property line on which the emissions originate in such a manner as to damage or to interfere with the use of adjacent properties, or cause air quality standards to be exceeded, or interfere with the maintenance of air quality standards.~~

~~(b) Reasonable precautions. Reasonable precautions include, but are not limited to, those actions set forth below at 252:100-29-3(1) through (6).~~

~~(c) Emission boundaries.~~

~~(1) No person shall cause or allow the discharge of any visible fugitive dust emissions beyond the property line of the property on which the emissions originate in such a manner as to damage or to interfere with the use of adjacent properties. If the DEQ determines that this rule has been violated, the owner or operator of the fugitive dust emissions source or sources shall implement controls, subject to economic and technological feasibility, to prevent future violations.~~

~~(2) No persons shall cause or allow the discharge of any visible fugitive dust emissions beyond the property line of the property on which the emissions originate in such a manner as to cause air quality standards to be exceeded or interfere with the maintenance of air quality standards.~~

252:100-29-3. Precautions required in maintenance or nonattainment areas

As of the adoption of this Subchapter, in areas designated as Air Quality Maintenance Areas or Nonattainment Areas for ~~particulates~~ particulate matter, the ~~Executive~~ Director shall require specific reasonable precautions ~~and that~~ may include, but shall not be limited to, the following:

- (1) The use, where possible, of water or chemicals for control of dust in the demolition of existing buildings or structures, construction operations, the grading of roads, driveways and parking lots or the clearing of land for commercial, industrial, or residential development;
- (2) The application of water or suitable chemicals or some other covering on materials stockpiles, and other surfaces ~~which that~~ can create air-borne dusts under normal conditions;
- (3) The installation and use of hoods, fans and dust collectors to enclose and vent the handling of dusty materials or the use of water sprays or other acceptable measures to suppress the dust emission during handling. Adequate containment methods shall be employed during sandblasting or other similar operations;
- (4) The covering or wetting ~~when in motion,~~ of open-bodied trucks, trailers, or railroad ~~ear cars when~~ transporting dusty materials in areas where the general public must have access ~~which can create air-borne particulate matter;~~
- (5) The removal as necessary from paved street and parking surfaces of ~~earth or other material which~~ materials that have a tendency to become airborne; ~~and/or.~~
- (6) ~~the~~ The planting and maintenance of vegetative ground cover as necessary.

252:100-29-5. Variance [REVOKED]

~~Uses of potential variance from this Subchapter are subject to review, approval, and/or denial of the requested variance by the Air Quality Council.~~

Oklahoma Register

Notices of Rulemaking Intent

exception for activities that are subject to an applicable requirement. The amendments to section 4(a)(1) clarify that de minimis emissions increases do not require construction permits, but that additions of equipment that are subject to NSPS or NESHAP would. The changes in section 5(d)(1)(A) clarify that BACT is not required for modifications that result in emissions increases of less than 100 tons per year, unless the Prevention of Significant Deterioration rules in Part 7 would require it. The reporting time in section 6(a)(3)(C) for excess emissions caused by emergencies or upsets would be changed from 24 hours to the end of the next working day to make it consistent with Subchapter 9 reporting requirements. A substantive change is proposed for the definition of "major stationary source" in section 31, where paragraph (xiv) would be changed to read "municipal incinerators capable of charging more than 50 tons of refuse per day." This change is required by the 1990 amendment to section 169(1) of the federal Clean Air Act. The changes to section 52 were adopted in 1989 but were accidentally excluded during codification of the rules.

AUTHORITY:

Environmental Quality Board powers and duties, 27A O.S.Supp. 1999, § 2-2-101; and Oklahoma Clean Air Act §§ 2-5-101, *et seq.*

REQUEST FOR COMMENTS:

The DEQ requests that business entities or any other members of the public affected by these rules provide the DEQ, within the comment period, in dollar amounts if possible, the increase in the level of direct costs such as fees, and the indirect costs such as reporting, recordkeeping, equipment, construction, labor, professional services, revenue loss, or other costs expected to be incurred by a particular entity due to compliance with the proposed rules.

COMMENT PERIOD:

Written comments will be accepted prior to and at the hearing on June 14, 2000. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by June 7, 2000. Oral comments may be made at the June 14, 2000 hearing and at the Environmental Quality Board hearing on August 29, 2000, in Durant, Oklahoma.

PUBLIC HEARINGS:

Wednesday, June 14, 2000 - 9:00 a.m. hearing, 707 North Greenwood, Room 150, OSU at Tulsa, Tulsa, OK.

Scheduled before the Environmental Quality Board at 9:30 a.m. on August 29, 2000, Durant, OK, (exact location to be announced).

COPIES OF PROPOSED RULES:

The proposed rules are available for review at the Air Quality Division office at 707 North Robinson, Suite 4100,

Oklahoma City, Oklahoma, 73102, and on the DEQ website (www.deq.state.ok.us), Air Quality Division Current Events and Issues, or copies may be obtained from Myrna Bruce by calling (405) 702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statement may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Joyce Sheedy, Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #00-793; filed 4-25-00]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #00-794]

RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

PROPOSED RULES:

✓ Subchapter 29. Control of Fugitive Dust [AMENDED]
SUMMARY:

The proposed changes to Subchapter 29 will simplify and clarify the Subchapter as a part of the agency-wide re-right/de-wrong initiative. A substantive change is included which would make the rule more enforceable by deleting the qualification that the fugitive dust be emitted to such an extent as to be classified as air pollution, before precautions are required. The proposed revocation of 252:100-29-5, Variance, is due to its redundancy with the Clean Air Act at 27A O.S.Supp. § 2-5-109.

AUTHORITY:

Environmental Quality Board powers and duties, 27A O.S.Supp. 1999, § 2-2-101; and Oklahoma Clean Air Act §§ 2-5-101, *et seq.*

REQUEST FOR COMMENTS:

The DEQ requests that business entities or any other members of the public affected by these rules provide the DEQ, within the comment period, in dollar amounts if possible, the increase in the level of direct costs such as fees, and the indirect costs such as reporting, recordkeeping, equipment, construction, labor, professional services,

revenue loss, or other costs expected to be incurred by a particular entity due to compliance with the proposed rules.

COMMENT PERIOD:

Written comments will be accepted prior to and at the hearing on June 14, 2000. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by June 7, 2000. Oral comments may be made at the June 14, 2000 hearing and at the Environmental Quality Board hearing on August 29, 2000, in Durant, Oklahoma.

PUBLIC HEARINGS:

Wednesday, June 14, 2000 - 9:00 a.m. hearing, 707 North Greenwood, Room 150, OSU at Tulsa, Tulsa, OK.

Scheduled before the Environmental Quality Board at 9:30 a.m. on August 29, 2000, Durant, OK, (exact location to be announced).

COPIES OF PROPOSED RULES:

The proposed rules are available for review at the Air Quality Division office at 707 North Robinson, Suite 4100, Oklahoma City, Oklahoma, 73102, and on the DEQ website (www.deq.state.ok.us), Air Quality Division Current Events and Issues, or copies may be obtained from Myrna Bruce by calling (405) 702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statement may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Leon Ashford, Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #00-794; filed 4-25-00]

Notices of Rulemaking Intent

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must publish a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides other information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained. For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #00-2181]

RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

PROPOSED RULES:

Subchapter 6. Permitting [REVOKED]

Subchapter 8. Permits for Part 70 Sources [AMENDED]

Subchapter 29. Control of Fugitive Dust [AMENDED]

Subchapter 31. Control of Emission of Sulfur Compounds [AMENDED]

SUMMARY:

It is proposed that Subchapter 6 be revoked in its entirety. This action fulfills the Department's goal of eliminating redundant or unnecessary language through the re-right/de-wrong process. The rule is for the most part a summary of the permit programs contained in Subchapters 7 and 8, and a restatement of Oklahoma statutes on permitting. Only a few portions of the rule contain substantive language that will be placed into Subchapter 8. Revocation of the rule will have no effect on permit actions.

The proposed changes to Subchapter 8 would amend sections 1-1, 1-4, 1-5, 1-7, 2, 3, 4, 5, 6, 7, 8, 31, 33, 51, and 52. The changes correct errors, clarify language, add paragraphs that had previously been adopted but not codified, and add fee categories for construction permit authorizations and modifications. Substantive changes include amending the definition of "trivial activities" in section 2 by deleting the exception for activities that are subject to an applicable requirement. The amendments to section 4(a)(1) clarify that de minimis emissions increases do not require construction permits, but that additions of equipment that are subject to NESHAP would. The changes in section 5(d)(1)(A) clarify that BACT is not required for modifications that result in emissions increases of less than 100 tons per year, unless the Prevention of Significant Deterioration rules in Part 7 would require it. The reporting time in section 6(a)(3)(C) for excess emissions caused by emergencies or upsets would be changed from 24 hours to the end of the next working day to make it consistent with Subchapter 9 reporting

requirements. A substantive change is proposed for the definition of "major stationary source" in section 31, where paragraph (xiv) would be changed to read "municipal incinerators capable of charging more than 50 tons of refuse per day." This change is required by the 1990 amendment to section 169(1) of the federal Clean Air Act. The definitions of "reconstruction" and "resource recovery facility" in section 51 would be deleted since those terms are not used in Part 9. The changes to section 52 were adopted in 1989 but were accidentally excluded during codification of the rules.

The proposed changes to Subchapter 29 will simplify and clarify the Subchapter as a part of the agency-wide re-right/de-wrong initiative. The provisions 252:100-29-2(a) and (b) will be combined to require reasonable precautions to control any visible fugitive dust emissions beyond the property line on which the emissions originate if such emissions interfere with the use of adjacent properties, cause air quality standards to be exceeded, or interfere with the maintenance of air quality standards. The proposed revocation of 252:100-29-5, Variance, is due to its redundancy with the Clean Air Act at 27A O.S.Supp. 1999 § 2-5-109.

The proposed changes to Subchapter 31 are primarily to simplify language, clarify requirements, and remove redundant requirements or language as part of the agency-wide re-right/de-wrong initiative. New definitions of the terms "existing source" or "existing equipment" and "new source" or "new equipment" clearly identify the effective date for each industry affected by the rule. Section 252:100-31-3 regarding performance testing is revoked, since performance testing is covered in Subchapter 43. In section 252:100-31-12(a) the use of an annual arithmetic mean is revoked. Section 252:100-31-25(c)(3) regarding emission monitoring is revoked, since emission monitoring is covered in Subchapter 45. Section 252:100-31-15(b) and those portions of 252:100-31-12(b) and 252:100-31-13(b) which identify the requirements to prove a violation are recommended for deletion, since 252:100-45-5 allows the use of any credible evidence to determine a violation. Sections, subsections, and paragraphs will also be moved to facilitate use of the rule. Six substantive revisions are also proposed. (1) Revoke 252:100-31-14(c) regarding the testing procedures for ambient hydrogen sulfide, as the listed procedures are out of date and will be replaced with

Notices of Rulemaking Intent

sampling and test methods in Subchapter 43. (2) Delete 252:100-31-25(a) pertaining to new sulfuric acid plants since it is identical to the NSPS, 40 CFR 60 Subpart H, except for the opacity limit and the averaging time. The differences between the federal and state standards are minimal, and the state rule was intended to reflect the federal standard. (3) The averaging time for ambient hydrogen sulfide concentration from existing equipment in 252:100-31-14(a) is changed from 30 minutes to one hour to match the averaging time for ambient hydrogen sulfide concentrations from new equipment. (4) Section 252:100-31-25(c) covering new gas sweetening and sulfur recovery plants, and Section 252:100-31-26 covering hydrogen sulfide from petroleum and natural gas processes will be combined and rewritten to make clear which sources are subject to the standard. The sources subject to the hydrogen sulfide standard are more narrowly drawn to cover only sweetening plants and sulfur recovery units. Other processes referenced in the sulfur dioxide standard are limited to petroleum refinery processes, consistent with the intent of the rule. (5) Section 252:100-31-26(a), the hydrogen sulfide standard for new petroleum and natural gas processes contains several changes: (a) the standard has been changed from a combination equipment and emission standard to a more straightforward emission standard; (b) the exception for pipeline quality sweetened gas was moved to 252:100-31-26(b)(1) and changed to an emission based exception; and (c) an exception to the required exhaust stack is provided based on modeling. (6) Several subsections of the rule require a maximum average testing period. Because it is unclear what is a maximum average, all subsections will be changed to a time-based average.

AUTHORITY:

Environmental Quality Board powers and duties, 27A O.S.Supp. 1999, § 2-2-101; and Oklahoma Clean Air Act §§ 2-5-101, *et seq.*

REQUEST FOR COMMENTS:

The DEQ requests that business entities or any other members of the public affected by these rules provide the DEQ, within the comment period, in dollar amounts if possible, the increase in the level of direct costs such as fees, and the indirect costs such as reporting, recordkeeping, equipment; construction, labor, professional services, revenue loss, or other costs expected to be incurred by a particular entity due to compliance with the proposed rules.

COMMENT PERIOD:

Written comments will be accepted prior to and at the hearing on August 16, 2000. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by August 9, 2000. Oral comments may be made at the August 16, 2000 hearing and at the Environmental Quality Board hearing on November 14, 2000, in Hooker, Oklahoma.

PUBLIC HEARINGS:

Wednesday, August 16, 2000 - 9:00 a.m. hearing, Pioneer Technology Center, Education Business Center, 2101 North Ash Street, Ponca City, OK.

Scheduled before the Environmental Quality Board at 9:30 a.m. on November 14, 2000, Hooker, OK, (exact location to be announced).

COPIES OF PROPOSED RULES:

The proposed rules are available for review at the Air Quality Division office at 707 North Robinson, Suite 4100, Oklahoma City, Oklahoma, 73102; and on the DEQ website (www.deq.state.ok.us), Air Quality Division Current Events and Issues, or copies may be obtained from Myrna Bruce by calling (405) 702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statement may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Jeanette Buttram (SC 6), Joyce Sheedy (SC 8 and SC 31), and Cheryl Bradley (SC 29), Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #00-2181; filed 6-23-00]

TITLE 325. OKLAHOMA HORSE RACING COMMISSION CHAPTER 25. ENTRIES AND DECLARATIONS

[OAR Docket #00-2183]

RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking
PROPOSED RULES:

325:25-1-30.1. Naming/engaging of riders [NEW]

SUMMARY:

The new rule proposed to Chapter 25 is being proposed to prevent problems of rider changes on races programs, and the adoption of this proposed new rule would be consistent with rules of other racing jurisdictions.

AUTHORITY:

Title 3A O.S. §204(A); Oklahoma Horse Racing Commission

COMMENT PERIOD:

Persons wishing to present their views in writing may do so before 4:30 p.m., Monday August 7, 2000, at the following

Notices of Rulemaking Intent

The proposed changes to Subchapter 7 consist of the addition of Sections 60.3, 60.4, and 60.5. Proposed Section 60.3 references the permit by rule for VOC storage and loading facilities which is located in OAC 252:100-37-41 and 42, and proposed Section 60.4 references the permit by rule for particulate matter facilities, which is located in OAC 252:100-19-13. The addition of these two sections to Subchapter 7 is not a substantive change. Section 60.5 is the proposed permit by rule for natural gas compression facilities. This Section contains eligibility requirements, standards, testing and monitoring requirements, and recordkeeping requirements for natural gas compression facilities that qualify for permit by rule. The Oklahoma Clean Air Act, at 27A O.S.Supp. § 2-5-112, requires the Department to implement a comprehensive permitting program covering all emission sources. The proposed permit by rule reduces obstacles which have kept natural gas compression facilities from entering the permit program by providing additional flexibility and lower fees than would otherwise be required for these sources under Subchapter 7 permit requirements.

Changes are being proposed for Sections 15 and 16 of Subchapter 41. The proposed amendment to OAC 252:100-41-15 would incorporate by reference the Maximum Achievable Control Technology (MACT) standards for hazardous air pollutants in 40 CFR 63 that have been promulgated by the EPA from July 1, 1999, through July 1, 2000. These are Subparts EEE, OOO, RRR and VVV. The DEQ is also proposing to update to July 1, 2000, the incorporation by reference in OAC 252:100-41-16 of the National Emission Standards for Hazardous Air Pollutants (NESHAP) found in 40 CFR 61.

AUTHORITY:

Environmental Quality Board powers and duties, 27A O.S.Supp. 1999, § 2-2-101; and Oklahoma Clean Air Act §§ 2-5-101, *et seq.*

REQUEST FOR COMMENTS:

The DEQ requests that business entities or any other members of the public affected by these rules provide the DEQ, within the comment period, in dollar amounts if possible, the increase in the level of direct costs such as fees, and the indirect costs such as reporting, recordkeeping, equipment, construction, labor, professional services, revenue loss, or other costs expected to be incurred by a particular entity due to compliance with the proposed rules.

COMMENT PERIOD:

Written comments will be accepted prior to and at the hearing on October 18, 2000. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by October 11, 2000. Oral comments may be made at the October 18, 2000 hearing and the Environmental Quality Board hearing on November 14, 2000, in Hooker, Oklahoma.

PUBLIC HEARINGS:

Wednesday, October 18, 2000 - 9:00 a.m. hearing, at the Department of Environmental Quality, Room 101, 707 North Robinson, Oklahoma City, Oklahoma.

Scheduled before the Environmental Quality Board at 9:30 a.m. on November 14, 2000, Hooker, OK, (exact location to be announced).

COPIES OF PROPOSED RULES:

The proposed rules are available for review at the Air Quality Division of DEQ and on the DEQ website (www.deq.state.ok.us), Air Quality Division Current Events and Issues, or copies may be obtained from Myrna Bruce by calling (405) 702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statement may be obtained from the contact person.

CONTACT PERSON:

Please send written comments to Michelle Martinez (SC 4), Joyce Sheedy (SC 7), and Cheryl Bradley (SC 41), Department of Environmental Quality, Air Quality Division, 707 N. Robinson, Oklahoma City, OK 73102. Mailing address is P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

252:100-31-26 [AMENDED]
252:100-31-27 [NEW]
252:100-31-28 [NEW]

SUMMARY:

The proposed changes to Subchapter 7, Section 252:100-7-2, are primarily to satisfy the agency-wide re-right/de-wrong initiative. As part of this initiative Subchapter 6, Permitting, is recommended for revocation. Three substantive provisions of Subchapter 6: Sections 252:100-6-50(b), 252:100-6-50(b)(2) and 252:100-6-50(e), will be moved into Subchapter 7, at Section 252:100-7-2. These three provisions require that: all applications be signed by the applicant; the signature on the application constitutes an implied agreement that the applicant shall be responsible for assuring construction or operation, as applicable, in accordance with the application and OAC 252:100; and, it is the applicant's duty to supplement or correct the application after becoming aware of such failure or incorrect submittal.

The proposed changes to Subchapter 29 will simplify and clarify the Subchapter as a part of the agency-wide re-right/de-wrong initiative. The provisions of OAC 252:100-29-2 would be divided into Paragraphs (a), (b) and (c) instead of (a) and (b). The examples of reasonable precautions in Paragraph (a) would be deleted, and a new Paragraph (b), Reasonable precautions, added. The existing Subparagraph (b), Emission boundaries, would be renumbered OAC 252:100-29-2(c) and divided into Subparagraphs (c)(1) and (2). The word "visible" would be deleted from the phrase "visible fugitive dust emissions", wherever it appears, in Paragraph (2)(c). Subparagraph (c)(1) would include requirements for fugitive dust emissions that damage or interfere with the use of adjacent properties, and Subparagraph (c)(2) would include the requirements for fugitive dust emissions that cause air quality standards to be exceeded or interfere with the maintenance of air quality standards. The provision for the DEQ to require the owner or operator of a fugitive dust emissions source to implement economically and technologically feasible controls, when those emissions damage or interfere with the use of adjacent property, would be added to Subparagraph (c)(1). The proposed revocation of OAC 252:100-29-5, Variance, is due to its redundancy with the Clean Air Act at 27A O.S. Supp. 1999 § 2-5-109.

The proposed changes to Subchapter 31 are primarily to simplify language, clarify requirements, and remove redundant requirements or language as part of the agency-wide re-right/de-wrong initiative. New definitions of the terms "existing source" or "existing equipment" and

"new source" or "new equipment" clearly identify effective date for each industry affected by the rule. Section 252:100-31-3 regarding performance testing is revoked, since performance testing is covered in Subchapter 43. In section 252:100-31-12(a) the use of an annual arithmetic mean is revoked. Section 252:100-31-25(c)(3) regarding emission monitoring is revoked, since emission monitoring is covered in Subchapter 45. Section 252:100-31-15(b) and those portions of 252:100-31-12(b) and 252:100-31-13(b) which identify the requirements to prove a violation are recommended for deletion, since 252:100-45-5 allows the use of any credible evidence to determine a violation. Other recommended changes are to move and combine Section, subsections, and paragraphs to facilitate use of the rule. Five substantive revisions are also proposed. (1) Revoke 252:100-31-14(c) regarding the testing procedures for ambient hydrogen sulfide, as the listed procedures are out of date and will be replaced with sampling and test methods in Subchapter 43. (2) Delete 252:100-31-25(a) pertaining to new sulfuric acid plants since it is identical to the NSPS, 40 CFR 60 Subpart H, except for the opacity limit and the averaging time. The differences between the federal and state standards are minimal, and the state rule was intended to reflect the federal standard. (3) The averaging time for ambient hydrogen sulfide concentration from existing equipment in 252:100-31-14(a) is changed from 30 min to one hour to match the averaging time for ambient hydrogen sulfide concentrations from new equipment. (4) Section 252:100-31-26(a), the hydrogen sulfide standard for new petroleum and natural gas processes contains several changes: (a) the standard has been changed from a combination equipment and emission standard to a more straightforward emission standard; (b) the exception for pipeline quality sweetened gas was moved to 252:100-31-26(b)(1) and changed to an emission based exception; and (c) an exception to the required exhaust stack is provided based on modeling. (5) Several subsections of the rule require a maximum average testing period. Because it is unclear what is a maximum average, all subsections will be changed to a time-based average.

AUTHORITY:

PURSUANT TO THE ACTIONS DESCRIBED HEREIN, THE FOLLOWING RULES ARE CONSIDERED FINALLY ADOPTED AS SET FORTH IN 75 O.S., SECTION 308.1(A), WITH AN EFFECTIVE DATE OF JUNE 1, 2001:

SUBCHAPTER 17. INCINERATORS

PART 3. INCINERATORS

~~252:100-17-2. Effective date; applicability Applicability
This Part became effective on July 21, 1971 and applies to incinerators not subject to New Source Performance Standards (NSPS) or any other Parts in this Subchapter.~~

~~252:100-17-5. Incinerator design requirements
An incinerator ~~under subject to~~ this Part must have:
(1) A primary burner that maintains a temperature of at least 800°F in the primary combustion chamber.
(2) A secondary burner that shall be used when necessary to eliminate smoke.
(3) ~~A design that can be demonstrated to the DEQ to be effective in accordance with the provisions of this Subchapter. The burden of proof shall rest upon the owner of the proposed incinerator.~~~~

252:100-17-5.1. Alternative incinerator design requirements

The Director may approve an incinerator design that does not meet the design requirements in 252:100-17-5 if the owner of the proposed incinerator demonstrates to the DEQ that the incinerator can comply with all other applicable requirements.

SUPERSEDED EMERGENCY ACTIONS:

None

INCORPORATIONS BY REFERENCE:

None

ANALYSIS:

The proposed amendments to Subchapter 29, Control of Fugitive Dust, will clarify and simplify the language as part of the agency-wide re-right/de-wrong initiative. The existing provisions of OAC 252:100-29-2 would be divided into Paragraphs (a), (b) and (c) instead of (a) and (b). A new Paragraphs (b) sets forth examples of reasonable precautions to minimize pollution from fugitive dust. The existing Paragraph (b), Emission boundaries, is renumbered OAC 252:100-29-2(c) and divided into Subparagraphs (c)(1) and (2). Subparagraph (c)(1) sets forth requirements and identifies remedies for fugitive dust emissions that damage or interfere with the use of adjacent properties, and Subparagraph (c)(2) sets forth requirements for fugitive dust emissions that cause air quality standards to be exceeded or interfere with maintenance of air quality standards. Remedies for violation of Subparagraph (c)(1) are limited to requiring the owner or operator to implement economically and technologically feasible controls. Remedies for violation of Subparagraph (c)(2) are not so limited. The proposed revocation of OAC 252:100-29-5, Variance, is due to its redundancy with the Clean Air Act at 27A O.S.Supp. 1999 § 2-5-109.

SUMMARY OF DIFFERENCES FROM ANALOGOUS FEDERAL RULES:

PURSUANT TO THE ACTIONS DESCRIBED HEREIN, THE FOLLOWING RULES ARE CONSIDERED FINALLY ADOPTED AS SET FORTH IN 75 O.S., SECTION 308.1(A), WITH AN EFFECTIVE DATE OF JUNE 1, 2001:

SUBCHAPTER 29. CONTROL OF FUGITIVE DUST

252:100-29-2. Prohibitions-General provisions

~~(a) General provisions. No person shall cause or permit the handling, transporting, or disposition of any substance or material which is likely to be scattered by the air or wind, or is susceptible to being air borne, or wind borne or to operate or maintain or cause to be operated or maintained, any premise, open area, right-of-way, storage pile of materials, vehicle, or construction, alteration, demolition or wrecking operation, or any other enterprise, which involves any material or substance likely to be scattered by the wind or air, or susceptible to being wind borne or air borne that would be classified as air pollution without taking reasonable precautions or measures to minimize atmospheric pollution.~~
Prohibitions. No person shall cause or allow any fugitive dust source to be operated, or any substances to be handled, transported or stored, or any structure constructed, altered, or demolished to the extent that such operation or activity may enable fugitive dust to become airborne and result in air pollution, without taking reasonable precautions to minimize or prevent pollution.

~~(b) Emission boundaries. No person shall cause or permit the discharge of any visible fugitive dust emissions beyond the property line on which the emissions originate in such a manner as to damage or to interfere with the use of adjacent properties, or cause air quality standards to be exceeded, or interfere with the maintenance of air quality standards.~~

(b) Reasonable precautions. Reasonable precautions include, but are not limited to, those actions set forth below at OAC 252:100-29-3(1) through (6).

(c) Emission boundaries.

(1) No person shall cause or allow the discharge of any visible fugitive dust emissions beyond the property line of the property on which the emissions originate in such a manner as to damage or to interfere with the use of adjacent properties. If the DEQ determines that this rule has been violated, the owner or operator of the fugitive dust emissions source or sources shall implement controls, subject to economic and technological feasibility, to prevent future violations.

(2) No persons shall cause or allow the discharge of any visible fugitive dust emissions beyond the property line of the property on which the emissions originate in such a manner as to cause air quality standards to be exceeded or interfere with the maintenance of air quality standards.

252:100-29-3. Precautions required in maintenance or nonattainment areas

As of the adoption of this Subchapter, in areas designated as Air Quality Maintenance Areas or Nonattainment Areas for particulates-particulate matter the Executive Director shall require specific reasonable precautions and that may include, but shall not be limited to, the following:

Permanent Final Adoptions

- (1) ~~The~~ use, where possible, of water or chemicals for control of dust in the demolition of existing buildings or structures, construction operations, the grading of roads, driveways and parking lots or the clearing of land for commercial, industrial, or residential development;
- (2) ~~The~~ application of water or suitable chemicals or some other covering on materials stockpiles, and other surfaces ~~which that~~ can create air-borne dusts under normal conditions;
- (3) ~~The~~ installation and use of hoods, fans and dust collectors to enclose and vent the handling of dusty materials or the use of water sprays or other acceptable measures to suppress ~~the~~ dust emission during handling. Adequate containment methods shall be employed during sandblasting or other similar operations;
- (4) ~~The~~ covering or wetting ~~when in motion, of~~ open-bodied trucks, trailers, or railroad ~~car cars~~ when transporting dusty materials in areas where the general public must have access which can create air-borne particulate matter;
- (5) ~~The~~ removal as necessary from paved street and parking surfaces of ~~earth or other material which materials that~~ have a tendency to become airborne; ~~and/or.~~
- (6) ~~the~~ ~~The~~ planting and maintenance of vegetative ground cover as necessary.

252:100-29-5. Variance [REVOKED]

~~Uses of potential variance from this Subchapter are subject to review, approval, and/or denial of the requested variance by the Air Quality Council.~~

C. OAC 252:100-8 Permits for Part 70 Sources [AMENDED]

The proposed changes to SC 8 would amend sections 1.1, 1.4, 1.5, 1.7, 2, 3, 4, 5, 6, 7, 8, 31, 33, and 52. The changes correct errors, clarify language, and add fee categories for construction permit authorizations and modifications. Substantive changes include amending the definition of "trivial activities" in section 2 by deleting the exception for activities that are subject to an applicable requirement. A substantive change is also proposed for the definition of "major stationary source" in section 31.

1. Presentation – Barbara Hoffman
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent and emergency adoption

D. OAC 252:100-29 Control of Fugitive Dust [AMENDED]

The proposed changes would simplify and clarify the Subchapter as a part of the agency-wide re-right/de-wrong initiative. A substantive change is included which would make the rule more enforceable by deleting the qualification that the fugitive dust be emitted to such an extent as to be classified as air pollution, before precautions are required.

1. Presentation – Cheryl Bradley
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent adoption

5. Division Director's Report – David Dyke

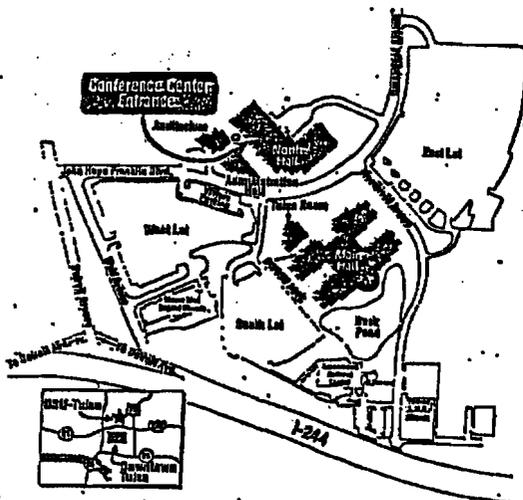

6. New Business – Any matter not known about, or which could not have been reasonably foreseen, prior to the time of posting the agenda.

7. Adjournment – Next Regular Meeting

Date and Time: August 16, 2000 @ 9:00 a.m.

**Place: Pioneer Technology Center
Education Business Center
2101 North Ash Street
Ponca City, OK 74601.**

Lunch Break, if necessary

How to get to OSU-Tulsa

700 North Greenwood Ave. • Tulsa, Oklahoma 74106 • (918) 584-8000

Welcome to OSU-Tulsa. If this is your first visit, simply look for the highway you will be using and follow the corresponding instructions.

Turner Turnpike from Oklahoma City and west
From I-44, exit 73 North (Bartlesville). When you reach the downtown area, stay in the center lane and follow the signs for I-244 East (Joplin). Exit Cincinnati/Detroit Avenue. Go to the second light, turn left onto Detroit Avenue. Move into the right lane. Watch for the campus on the right. Turn right on John Hope Franklin Boulevard.

SH-64/51 (Broken Arrow Expressway)
From the EA Expressway, exit at 73 North (Bartlesville). Move to the far left lane. Take the I-244 West exit. Then take the next exit, Cincinnati/Detroit Avenue. Turn right on Detroit Avenue. Move into the right lane. Watch for the campus on the right. Turn right on John Hope Franklin Boulevard.

I-244 (Crawtown Expressway from the east)
Follow I-244 West to downtown Tulsa. When the highway splits, stay in the lane marked I-244 West (OKC). Take the next exit, Cincinnati/Detroit Avenue. Turn right on Detroit Avenue. Move into the right lane. Watch for the campus on the right. Turn right on John Hope Franklin Boulevard.

US-75 (Cross the north)
Follow US-75 South to I-244 West (OKC). Take the next exit, Cincinnati/Detroit Avenue. Turn right on Detroit Avenue. Move into the right lane. Watch for the campus on the right. Turn right on John Hope Franklin Boulevard.

MEMORANDUM

TO: Air Quality Council

FROM: Eddie Terrill, Director ^{ET}
Air Quality Division _{10/2}

Re: Modifications to Subchapter 29

Enclosed is a copy of the proposed amendments to OAC 252:100-29, Control of Fugitive Dust. The changes simplify and clarify Subchapter 29 as part of the agency-wide re-right/de-wrong initiative. One substantive change is proposed that would make the rule more enforceable by deleting the qualification that the fugitive dust be emitted to such an extent as to be classified as air pollution, before precautions are required. Also, OAC 252:100-29-5, Variance, would be revoked due to its redundancy with the Clean Air Act at 27A O.S. Supp. 1999 § 2-5-109.

If no comments are received during the comment period or at the hearing, staff will ask the Council to recommend the proposed rule to the Environmental Quality Board for permanent adoption.

Enclosures: 2

SUBCHAPTER 29. CONTROL OF FUGITIVE DUST

252:100-29-1. Purpose

The purpose of this Subchapter is to control the release of fugitive dust into the air by any operation or action.

252:100-29-2. Prohibitions

(a) General provisions. No person shall cause or ~~permit~~ allow the emission of fugitive dust into the ambient air without taking reasonable precautions. Reasonable precautions shall include wetting, oiling, covering, applying chemicals, shielding, vacuuming, or any other appropriate measures. ~~the handling, transporting or disposition of any substance or material which is likely to be scattered by the air or wind, or is susceptible to being air borne, or wind borne or to operate or maintain or cause to be operated or maintained, any premise, open area, right of way, storage pile of materials, vehicle, or construction, alteration, demolition or wrecking operation, or any other enterprise, which involves any material or substance likely to be scattered by the wind or air, or susceptible to being wind borne or air borne that would be classified as air pollution without taking reasonable precautions or measures to minimize atmospheric pollution.~~

(b) Emission boundaries. No person shall cause or ~~permit~~ allow the discharge of any visible fugitive dust emissions beyond the property line on which the emissions originate in such a manner as to damage or to interfere with the use of adjacent properties, or cause air quality standards to be exceeded, or interfere with the maintenance of air quality standards.

252:100-29-3. Precautions required in maintenance or nonattainment areas

As of the adoption of this Subchapter, in areas designated as Air Quality Maintenance Areas or Nonattainment Areas for particulate matter, the ~~Executive~~ Director shall require specific reasonable precautions ~~and that~~ may include, but shall not be limited to, the following:

(1) The use, where possible, of water or chemicals for control of dust in the demolition of existing buildings or structures, construction operations, the grading of roads, driveways and parking lots or, the clearing of land for commercial, industrial, or residential development.

(2) The application of water or suitable chemicals or some other covering on materials stockpiles, and other surfaces ~~which that~~ can create air-borne dusts under normal conditions.

(3) The installation and use of hoods, fans and dust collectors to enclose and vent the handling of dusty materials or the use of water sprays or other acceptable measures to suppress ~~the~~ dust emission during handling. Adequate containment methods shall be employed during sandblasting or other similar operations.

(4) The covering or wetting ~~when in motion,~~ of open-bodied trucks, trailers, or railroad ~~ear~~cars when transporting dusty

materials in areas where the general public must have access ~~which can create air borne particulate matter,~~

(5) ~~The~~ removal as necessary from paved street and parking surfaces of earth or other material ~~materials~~ ~~which~~ ~~that~~ have a tendency to become airborne, and/or.

(6) ~~The~~ planting and maintenance of vegetative ground cover as necessary.

252:100-29-4. Exception for agricultural purposes

Section 252:100-29-3 shall not apply to the clearing or preparation of land used solely for agricultural purposes. For the purpose of this Subchapter "agricultural purposes" shall be limited to the raising of livestock or crops for food or fiber.

252:100-29-5. Variance [REVOKED]

~~Uses of potential variance from this Subchapter are subject to review, approval, and/or denial of the requested variance by the Air Quality Council.~~

Myrna Bruce

Notice of Public Meeting for April 19, 2000 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance doors to the OSU Tulsa Auditorium entrance and on the entrance doors of the DEQ Central Office in Oklahoma City.

Call to Order - Mr. Branecky, Chairman, called the meeting to order and roll call was taken as follows: Mr. Kilpatrick - aye; Mr. Wilson - aye; Dr. Grosz - aye; Mr. Treeman - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye. Mr. Fallon, Ms. Myers, and Dr. Canter did not attend.

Approval of Minutes - Mr. Branecky entertained a motion to approve the Minutes of the April 19, 2000 Public Meeting/Hearings. Motion was made by Dr. Grosz to approve the Minutes as presented and second was made by Mr. Wilson. Roll call: Mr. Wilson - aye; Mr. Treeman - abstain; Mr. Breisch - aye; Mr. Kilpatrick - aye; Dr. Grosz - aye; Mr. Branecky - aye.

Protocol Statement — As protocol officer, Mr. Dyke convened the hearings by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-201 through 2-5-101 - 2-5-118. Mr. Dyke entered the Agenda and the Oklahoma Register Notice into the record.

PUBLIC HEARING

OAC 252:100-3-5

Air Quality Advisory Council Hearings

Appendix B Style of Request for Hearing

Ms. Bradley advised that the proposal established procedures for individual proceedings on enforcement matters and requests for variances. Ms. Bradley pointed out minor changes that staff recommended and advised that there had been no written comments on the proposal.

Ms. Bradley stated that staff recommended emergency adoption of the rule. Following discussion, Mr. Branecky called for a motion to recommend the proposal dated June 12 to the Environmental Quality Board for emergency and permanent approval. Mr. Kilpatrick made the motion and Dr. Grosz made the second. Roll call: Mr. Wilson – aye; Mr. Treeman - abstain; Mr. Breisch – aye; Mr. Kilpatrick - aye; Dr. Grosz - aye; Mr. Branecky – aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100- 7

Permits for Minor Facilities

Ms. Barbara Hoffman was called upon to provide staff's recommendation of proposed rule. Ms. Hoffman stated that this rule was brought before the Council the first time on April 19 and that a workgroup had met on May 24. She then advised Council of the changes suggested by staff. She stated that no written comments had been received but it was anticipated that there would be comments from the industry group forthcoming; therefore, it was recommended that this rule be continued to the August Council meeting. Ms. Hoffman called for comments and advised that the industry contact for comments was Joel Howard who could be reached at 405 720 5500 or joelhoward@marathonoil.com. With no comments or questions, Mr. Branecky called for motion to continue the rule to the August meeting. Mr. Breisch made the motion and second was made by Dr. Grosz. Roll call: Mr. Wilson – aye; Mr. Treeman - abstain; Mr. Breisch – aye; Mr. Kilpatrick - aye; Dr. Grosz - aye; Mr. Branecky – aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100- 8

Permits for Part 70 Sources

Ms. Barbara Hoffman was called upon to provide staff's recommendations for this proposed rule. Ms. Hoffman pointed out all changes proposed in the Agenda Packet and a June 13, 2000 draft that was a handout. She advised that no comments had been received and suggested that the rule be recommended to the Board for emergency and permanent adoption.

Following a considerable amount of discussion and comments, it was decided that the rule should be continued to the August meeting. Mr. Branecky called for a motion. Mr. Wilson made motion to continue and second was made by Mr. Kilpatrick. Roll call: Mr. Wilson – aye; Mr. Treeman - abstain; Mr. Breisch – aye; Mr. Kilpatrick - aye; Dr. Grosz - aye; Mr. Branecky – aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING
OAC 252:100-29
Control of Fugitive Dust

Ms. Cheryl Bradley was called upon for staff recommendations. She stated that proposed changes were to simplify and clarify language according to the agency-wide re-right/de-wrong initiative and pointed out the changes proposed. She entered into the record written comments received from Fort James Corporation and from EPA Region 6 Air Planning Section. Ms. Bradley then referred to a handout of a new draft dated June 13, 2000. She discussed the changes made in that proposal. Ms. Bradley stated that since comments had been received which would result in recommended changes to the rule, it was staff's recommendation to continue the rule to the August Council meeting.

Comments and suggestions for changes were taken from Council and audience. Mr. Branecky then called for a motion to continue until August. Dr. Grosz made the motion and Mr. Kilpatrick made the second. Roll call: Mr. Wilson - aye; Mr. Treeman - abstain; Mr. Breisch - aye; Mr. Kilpatrick - aye; Dr. Grosz - aye; Mr. Branecky - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

DIVISION DIRECTOR'S REPORT - Mr. Dyke made several announcements including the fact that this had been Barbara Hoffman's final meeting and that we would be moving to New Hampshire.

NEW BUSINESS - None

ADJOURNMENT With no further business, meeting was adjourned with announcement that the next regularly scheduled meeting would be August 16 at 9:00 a.m. at the Pioneer Technology Center in Ponca City, OK.

NOTE: The sign-in sheet is attached as an official part of these Minutes.

AGENDA
AIR QUALITY COUNCIL
DEPARTMENT OF ENVIRONMENTAL QUALITY
HEARING/MEETING
9:00 A.M.
Wednesday, August 16, 2000
Pioneer Technology Center
Education Business Center
2101 North Ash Street Ponca City, OK 74601

1. Call to Order – David Branecky
2. Roll Call – Myrna Bruce
3. Approval of Minutes of the June 14, 2000 Regular Meeting
4. **PUBLIC RULEMAKING HEARINGS**

A. OAC 252:100-6 Permitting [REVOKED]

It is proposed that SC 6 be revoked in its entirety. This action fulfills the Department's goal of eliminating redundant or unnecessary language through the re-right/de-wrong process. The rule is for the most part a summary of the permit programs contained in SC 7 and SC 8 and a restatement of Oklahoma statutes on permitting. Only a few portions of the rule contain substantive language that will be placed into SC 8. Revocation of the rule will have no effect on permit actions.

1. Presentation – Jeanette Buttram
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent adoption

B. OAC 252:100-7 PERMITS FOR MINOR FACILITIES [AMENDED]

The proposed changes to SC7 consist of the addition of sections 60.3, 60.4, and 60.5. Proposed sections 60.3 and 60.4 reference the existing permits by rule for VOC storage and loading facilities and particulate matter facilities, respectively. Section 60.5 is the proposed permit by rule for natural gas compression facilities. This section contains eligibility requirements, standards, testing and monitoring requirements, and recordkeeping requirements for natural gas compression facilities that qualify for permit by rule.

1. Presentation – Joyce Sheedy
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent and emergency adoption

C. OAC 252:100-8 Permits for Part 70 Sources [AMENDED]

The proposed changes to SC 8 would amend sections 1.1, 1.4, 1.5, 1.7, 2, 3, 4, 5, 6, 7, 8, 31, 33, 51 and 52. The changes correct errors, clarify language, add and delete definitions, and add fee categories for construction permit authorizations and modifications. Substantive changes include amending the definition of "trivial activities" in section 2 by deleting the exception for activities that are subject to an applicable requirement. The amendments to section 4(a)(1) make clear which modifications to Part 70 sources require construction permits. A substantive change is proposed for the definition of "major stationary source" in section 31.

1. Presentation – Pam Dizikes
2. Questions and discussion by Council / Public

3. Possible action by Council
4. Roll call vote(s) for permanent and emergency adoption

D. OAC 252:100-29 Control of Fugitive Dust [AMENDED]

The proposed changes would simplify and clarify the Subchapter as a part of the agency-wide re-right/de-wrong initiative. The modifying word 'visible' is deleted from the term fugitive dust. Substantive changes are proposed to clarify when and what precautions are required to minimize or prevent pollution and to clarify what corrective measures are required in the event that fugitive dust is discharged beyond the property line.

1. Presentation – Cheryl Bradley
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent adoption

E. OAC 252:100-31 Control of Emission of Sulfur Compounds [AMENDED]

The proposed changes to SC 31 are primarily to simplify language, clarify requirements, and remove redundant requirements, or language as part of the agency-wide re-right/de-wrong initiative. New definitions of the terms "existing source" or "existing equipment" and "new source" or "new equipment" clearly identify the effective date for each industry affected by the rule. Proposed substantive changes are: to revoke 31-14(c) regarding the testing procedures for ambient hydrogen sulfide; to delete 31-25(a) pertaining to new sulfuric acid plants; to change the averaging time for ambient hydrogen sulfide concentration from existing equipment in 31-14(a); to combine 31-25(c) and 31-26 to make clear which sources are subject to the standard; to make several changes in 26(a) such as to change the standard from a combination equipment and emission standard to a more straightforward emission standard; the exception for pipeline quality sweetened gas was moved to 226(b)(1) and changed to an emission based exception; and exception to the required exhaust stack is provided based on modeling; and all subsections will be changed to a time-based average because it is unclear what is a maximum average.

1. Presentation – Joyce Sheedy
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent adoption

5. Division Director's Report – Eddie Terrill

- 6. New Business --** Any matter not known about, or which could not have been reasonably foreseen, prior to the time of posting the agenda.

7. Adjournment – Next Regular Meeting

Date and Time: October 18, 2000 @ 9:00 a.m.

Place: Department of Environmental Quality Multi-Purpose Room, First Floor
707 North Robinson, Oklahoma City, OK

Lunch Break, if necessary

Should you desire to attend but have a disability and need an accommodation, please notify our Department three days in advance at (405) 702-4100.

August 2, 2000

MEMORANDUM

TO: Air Quality Council

FROM: Eddie Terrill, Director ^{CT}
Air Quality Division

Re: Modifications to Subchapter 29

Enclosed is a copy of the proposed amendments to OAC 252:100-29, Control of Fugitive Dust. The changes simplify and clarify Subchapter 29 as part of the agency-wide re-right/de-wrong initiative. Most of the proposed changes affect OAC 252:100-29-2. The existing provisions of Section 2 would be divided into Paragraphs (a), (b) and (c) instead of (a) and (b). The examples of reasonable precautions in Paragraph (a) would be deleted, and a new Paragraph (b), Reasonable precautions, added. The existing Subparagraph (b), Emission boundaries, would be renumbered OAC 252:100-29-2(c) and divided into Subparagraphs (c)(1) and (2). The word "visible" would be deleted from the phrase "visible fugitive dust emissions", wherever it appears, in Paragraph 2(c). Subparagraph (c)(1) would include requirements for fugitive dust emissions that damage or interfere with the use of adjacent properties, and Subparagraph (c)(2) would include the requirements for fugitive dust emissions that cause air quality standards to be exceeded or interfere with the maintenance of air quality standards. The provision for the DEQ to require the owner or operator of a fugitive dust emissions source to implement economically and technologically feasible controls, when those emissions damage or interfere with the use of adjacent property, would be added to Subparagraph (c)(1). In addition, OAC 252:100-29-5, Variance, would be revoked due to its redundancy with the Clean Air Act at 27A O. S. Supp. 1999 § 2-5-109.

The Air Quality Council first considered changes to this Subchapter at its June 14, 2000, hearing in Tulsa, Oklahoma. During that hearing, Howard "Bud" Ground, Central and Southwest Services, Inc., and Perry Friedrich, Grand River Dam Authority, commented on the June 13, 2000 draft of the proposed rules. Staff has received no additional written comments.

Since most fugitive dust violations are identified as the result of investigating environmental complaints, staff from DEQ's Air Quality Division, Environmental Complaints and Local Services, and Regional Office at Tulsa collaborated in preparing these revised draft rules.

All commentators pointed out the potential subjectivity in determining what constitutes "reasonable precautions". Staff has added a new Paragraph (b), Reasonable precautions, to Section 2 to better define them. Also, Subparagraph (c)(1) states that reasonable cautions to control fugitive dust emissions, that damage or interfere with the use of adjacent properties, are subject to economic and technological feasibility.

Both industry representatives objected to the phrase "or will be violated", in the second sentence of Section 2. This phrase was removed from Subparagraph 2(c)(1).

Also, the word "visible" was removed from the phrase "visible fugitive dust emissions" because it presents a hindrance to the DEQ when working cases involving fugitive dust that is emitted at night or is not visible using Method 22.

The notice of rulemaking intent, that was filed with Office of Administrative Rules on June 23, 2000, and published in the *Oklahoma Register* on July 17, 2000, did not cover all the recommended changes; therefore, staff suggests that the Council continue the hearing on the proposed rule until its next meeting on October 18, 2000.

Enclosures: 2

SUBCHAPTER 29. CONTROL OF FUGITIVE DUST

Section

- 252:100-29-1. Purpose
- 252:100-29-2. Prohibitions [AMENDED]
- 252:100-29-3. Precautions required in maintenance or nonattainment areas [AMENDED]
- 252:100-29-4. Exception for agricultural purposes
- 252:100-29-5. Variance [REVOKED]

SUBCHAPTER 29. CONTROL OF FUGITIVE DUST

252:100-29-1. Purpose

The purpose of this Subchapter is to control the release of fugitive dust into the air by any operation or action.

252:100-29-2.—Prohibitions General provisions

~~(a) General provisions. No person shall cause or permit the handling, transporting, or disposition of any substance or material which is likely to be scattered by the air or wind, or is susceptible to being air borne, or wind borne or to operate or maintain or cause to be operated or maintained, any premise, open area, right of way, storage pile of materials, vehicle, or construction, alteration, demolition or wrecking operation, or any other enterprise, which involves any material or substance likely to be scattered by the wind or air, or susceptible to being wind borne or air borne that would be classified as air pollution without taking reasonable precautions or measures to minimize atmospheric pollution.~~

(a) Prohibitions. No person shall cause or allow any fugitive dust source to be operated, or any substances to be handled, transported or stored, or any structure constructed, altered, or demolished to the extent that such operation or activity may enable fugitive dust to become airborne and result in air pollution, without taking reasonable precautions to minimize or prevent pollution.

(b) Reasonable precautions. Reasonable precautions include, but are not limited to, those actions set forth below at 252:100-29-3(1) through (6).

~~(b) Emission boundaries. No person shall cause or permit the discharge of any visible fugitive dust emissions beyond the property line on which the emissions originate in such a manner as to damage or to interfere with the use of adjacent properties, or cause air quality standards to be exceeded, or interfere with the maintenance of air quality standards.~~

(c) Emission boundaries.

- (1) No person shall cause or allow the discharge of any fugitive dust emissions beyond the property line on which the emissions originate in such a manner as to damage or to interfere with the use of adjacent properties. If the DEQ determines that this rule has been violated, the owner or operator of the fugitive dust emissions source or sources shall implement controls, subject to economic and technical feasibility, to prevent future violations.

(2) No persons shall cause or allow the discharge of any fugitive dust emissions beyond the property line on which the emissions originate in such a manner as to cause air quality standards to be exceeded or interfere with the maintenance of air quality standards.

252:100-29-3. Precautions required in maintenance or nonattainment areas

As of the adoption of this Subchapter, in areas designated as Air Quality Maintenance Areas or Nonattainment Areas for particulate matter, the ~~Executive~~ Director shall require specific reasonable precautions ~~and that~~ may include, but shall not be limited to, the following:

- (1) The use, where possible, of water or chemicals for control of dust in the demolition of existing buildings or structures, construction operations, the grading of roads, driveways and parking lots or the clearing of land for commercial, industrial, or residential development~~;~~
- (2) The application of water or suitable chemicals or some other covering on materials stockpiles~~;~~ and other surfaces ~~which that~~ can create air-borne dusts under normal conditions~~;~~
- (3) The installation and use of hoods, fans and dust collectors to enclose and vent the handling of dusty materials or the use of water sprays or other acceptable measures to suppress ~~the~~ dust emission during handling. Adequate containment methods shall be employed during sandblasting or other similar operations~~;~~
- (4) The covering or wetting ~~when in motion,~~ of open-bodied trucks, trailers, or railroad ~~cars~~ cars when transporting dusty materials in areas where the general public must have access ~~which can create air borne particulate matter;~~
- (5) The removal as necessary from paved street and parking surfaces of ~~earth or other material~~ materials ~~which that~~ have a tendency to become airborne~~;~~ ~~and/or~~
- (6) ~~The~~ the planting and maintenance of vegetative ground cover as necessary.

252:100-29-4. Exception for agricultural purposes

Section 252:100-29-3 shall not apply to the clearing or preparation of land used solely for agricultural purposes. For the purpose of this Subchapter "agricultural purposes" shall be limited to the raising of livestock or crops for food or fiber.

252:100-29-5. Variance [REVOKED]

~~Uses of potential variance from this Subchapter are subject to review, approval, and/or denial of the requested variance by the Air Quality Council.~~

Myrna Bruce
Beverly Botchlet-Smith

Notice of Public Meeting for August 17, 2000 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted on the entrance doors at Pioneer Technology Center and on the entrance doors of the DEQ Central Office in Oklahoma City.

Call to Order - Mr. Branecky, Chairman, called the meeting to order and roll call was taken as follows: Mr. Wilson - aye; Dr. Grosz - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye; Ms. Myers - aye; Mr. Branecky - aye.

Approval of Minutes - Mr. Branecky entertained a motion to approve the Minutes of the June 14, 2000 Public Meeting/Hearings. Motion was made by Dr. Grosz to approve the Minutes as presented and second was made by Mr. Wilson. Roll call: Mr. Wilson - aye; Dr. Grosz - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye; Ms. Myers - aye; Mr. Branecky - aye.

Protocol Statement — As protocol officer, Mr. Dyke convened the hearings by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-201 through 2-5-101 - 2-5-118. Mr. Dyke entered the Agenda and the Oklahoma Register Notice into the record.

PUBLIC HEARING

OAC 252:100-6

PERMITTING

Ms. Jeanette Buttram advised Council that staff's request for revocation of Subchapter (SC) 6 contributed to the Department's goal of eliminating redundant or unnecessary language through the re-right/de-wrong process. She stated that SC 6 mostly summarizes the permit program in SC 7 and SC 8 and restates Oklahoma statutes on permitting. She pointed out the substantive language that would be placed into SCs 7 and 8. These portions that would be moved are: Section 252:100-6-50(b), 252:100-6-50(b)(2), and 252:100-6-50(e) to SC 7

under Section 252:100-7-2, requirement for permits for minor facilities. Also, in SC 6, the language in Section 252:100-6-50(e), was moved to 252:100-8-5(b). Currently 252:100-8-5(b) references the language in 252:100-6-50(e). Ms. Buttram related that the revocation of SC 6 would have no effect on permit actions and asked that Council recommend it for revocation to the Environmental Quality Board.

In response to a question from Council, Ms. Buttram advised that staff felt that for future clarity it would be better to revoke the rule in its entirety and move the substantive sections. She added that both SC 6 and SC 7 would be presented to the Board at the same time for approval. Ms. Myers asked for clarification that the revocation of this rule would not leave any exposure until the changes had been made to SC 7 or SC 8 to which Ms. Buttram advised that the rule would not become effective until next year. Mr. Branecky then called for a motion to recommend the proposal for revocation to the Environmental Quality Board (EQB). Mr. Breisch made the motion and Mr. Wilson made the second. Roll call: Mr. Wilson - aye; Dr. Grosz - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye; Ms. Myers - aye; Mr. Branecky - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-7

Permits for Minor Facilities

Dr. Joyce Sheedy was called upon to provide staff's recommendation of proposed rule. Dr. Sheedy stated that this rule had been before the Council on April 19 and June 14 and that a workgroup had met on May 24. Dr. Sheedy stated that the main purpose for the revision is to add Section 60-5 to SC 7 to provide a permit by rule covering natural gas compression facilities with actual emissions of less than 40 tons per year. She stated that it was decided to take the opportunity, while the rule was open, to reference the permit by rule (PBR) for volatile organic liquid storage and loading facilities in Section 40 and 42 of SC 37 and the PBR for particulate matter facilities in Section 13 of SC 29.

Dr. Sheedy entered into the record a letter from EPA Region 6 dated August 14; and a letter and comments dated August 4, 2000 from Michael H. Bernard, Mid-Continent Oil and Gas Association representing the industry members of the work group. Dr. Sheedy added that there would be further meetings with staff and industry; therefore, staff's recommendation was that the Council continue the hearing to the October meeting. Mr. Branecky called for that motion which was made by Ms. Myers and the second was made by Mr. Kilpatrick. Roll call: Mr. Wilson - aye; Dr. Grosz - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye; Ms. Myers - aye; Mr. Branecky - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING
OAC 252:100- 8
Permits for Part 70 Sources

Ms. Pam Dizikes was called upon to provide staff's recommendations for this proposed rule. Ms. Dizikes pointed out that SC 8 covering permits for Part 70 sources had already been through the re-right/de-wrong process; but that since that time errors and inconsistencies needed to be resolved. Those were mainly in respect as to when construction permits are required for Part 70 sources. Ms. Dizikes pointed out the substantive changes that would be discussed. She advised that no comments had been received and suggested that the rule be recommended to the EQB for emergency and permanent adoption.

Mr. Tom Blachley requested that the rule be revisited because he stated that there had never been a resolution to the issue as to how/when a well becomes a major source stating that there are times when they would not know until after the well was perforated. Mr. Terrill stated that these issues would be discussed with a group of the effected people at which time this rule could be re-opened for hearing. Mr. Branecky then called for a motion. Mr. Kilpatrick moved that Council recommend this rule as amended to the EQB for emergency and permanent approval. Dr. Grosz made the second. Roll call: Mr. Wilson - aye; Dr. Grosz - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye; Ms. Myers - aye; Mr. Branecky - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING
OAC 252:100-29
Control of Fugitive Dust

Ms. Cheryl Bradley was called upon for staff recommendations. She stated that proposed changes were to simplify and clarify language according to the agency-wide re-right/de-wrong initiative noting that the rule had been before the Council on June 14. She entered into the record written comments received from EPA Region 6 Air Planning Section dated August 11, 2000. Ms. Bradley stated that since comments had been received which would result in recommended changes to the rule, it was staff's recommendation to continue the rule to the October meeting.

Mr. Terrill asked for feedback regarding removing the word "visible" from the term "visible fugitive dust emissions". After hearing the comments from Council and audience, Mr. Branecky asked that any further comments be sent to DEQ prior to Council's next meeting. Ms. Myers made a motion to continue the hearing until October. Mr. Wilson made the second. Roll call: Mr. Wilson - aye; Dr. Grosz - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye; Ms. Myers - aye; Mr. Branecky - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-31

Control Of Emissions of Sulfur Compounds

Dr. Joyce Sheedy advised Council that revisions to this subchapter were proposed to simplify and clarify language according to the agency-wide re-right/de-wrong initiative. She hoped that that staff's intention to rearrange the material might make the rule to be in a more logical order. She pointed out the substantive changes proposed. Dr. Sheedy entered into the record comments received from Michael Graves of Hall, Estill, Hardwick, Gable, Golden & Nelson dated March 24, 2000; comments from Stephen E. Landers of Fort James dated August 11, 2000; and comments from Tom Diggs of EPA Region VI dated August 11, 2000. Dr. Sheedy then advised that the staff recommended that the hearing be continued to October and advised that a workgroup session would be set up to discuss the revisions.

Mr. Wilson stated that there would be a workgroup meeting on September 8 at the McKinney-Stringer Office. Mr. Terrill pointed out that the rule would not be revised just to meet the re-right/de-wrong legislative mandate, but that meaningful changes would be made to make the rule easier to interpret and apply.

Ms. Myers moved to continue the hearing to the October meeting and Dr. Grosz seconded that motion. Roll call: Mr. Wilson - aye; Dr. Grosz - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye; Ms. Myers - aye; Mr. Branecky - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

DIVISION DIRECTOR'S REPORT Mr. Terrill gave an update on activities and called upon Ms. Beverly Botchlet-Smith who gave a report of Central States Air Resource Agencies (CenSARA) activities. Mr. Dawson Lasseter, Program Manager Permits Section, also provided an update. Mr. Scott Thomas, Program Manager Rules and Planning Section, provided an update on recent ozone values experienced in Oklahoma.

NEW BUSINESS None

ADJOURNMENT With no further business, meeting was adjourned with announcement that the next regularly scheduled meeting would be on October 18 at the DEQ offices in Oklahoma City.

NOTE: The sign-in sheet is attached as an official part of these Minutes.

AGENDA
AIR QUALITY COUNCIL
DEPARTMENT OF ENVIRONMENTAL QUALITY
HEARING/MEETING
9:00 A.M.
Wednesday, October 18, 2000
DEQ Multi-Purpose Room – 1st Floor
707 North Robinson
Oklahoma City, OK 73102

1. **Call to Order – David Branecky**
2. **Roll Call – Myrna Bruce**
3. **Approval of Minutes of the August 16, 2000 Regular Meeting**
4. **CY 2001 Meeting Schedule**
 - A. **Discussion by Council**
5. **PUBLIC RULEMAKING HEARINGS**
 - A. **OAC 252:100-4 NEW SOURCE PERFORMANCE STANDARDS [AMENDED]**

The proposed changes to SC 4 will update the incorporations by reference of the federal NSPS from July 1, 1999 to July 1, 2000 per agreement with EPA. Previously incorporated NSPS that have been amended by the EPA since July 1, 1999 are Subpart Db, Standards of Performance for Industrial-Commercial-Institutional Steam Generating Units and Subpart WWW, Standards of Performance for Municipal Solid Waste Landfills. Changes were also made to Appendix A, Part 60 Test Methods including corrections to test methods 2F, 2G, and 2H, and a new method 5I was added.

 1. Presentation –Michelle Martinez
 2. Questions and discussion by Council / Public
 3. Possible action by Council
 4. Roll call vote for emergency and permanent adoption
 - B. **OAC 252:100-7-2 PERMITS FOR MINOR FACILITIES [AMENDED]**

The proposed changes to Section 252:100-7 are primarily to satisfy the agency-wide re-right/de-wrong initiative. As part of this initiative Subchapter 6, Permitting, is recommended for revocation. Three substantive provisions of SC 6 will be moved to SC 7 at Section 2. These three provisions require that: all applications be signed by the applicant; the signature on the application constitutes an implied agreement that the applicant shall be responsible for assuring construction or operation, as applicable, in accordance with the application; and it is the applicant's duty to supplement or correct the application after becoming aware of such failure or incorrect submittal.

 1. Presentation –Jeanette Buttram
 2. Questions and discussion by Council / Public
 3. Possible action by Council
 4. Roll call vote for permanent adoption

C. OAC 252:100-7 PERMITS FOR MINOR FACILITIES [AMENDED]

Part 9, Sections 60-3-60.5 Permits by Rule [NEW]

The proposed changes to SC 7 consist of the addition of sections 60.3, 60.4, and 60.5. Proposed sections 60.3 and 60.4 reference the existing permits by rule for VOC storage and loading facilities and particulate matter facilities, respectively. Section 60.5 is the proposed permit by rule for natural gas compression facilities. This section contains eligibility requirements, standards, testing and monitoring requirements, and recordkeeping requirements for natural gas compression facilities that qualify for permit by rule. The proposed permit by rule reduces obstacles which have kept natural gas compression facilities from entering the permit program by providing additional flexibility and lower fees than would otherwise be required for these sources under SC 7 permit requirements.

1. Presentation – Joyce Sheedy
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote for permanent adoption

D. OAC 252:100-29 Control of Fugitive Dust [AMENDED]

The proposed changes would simplify and clarify the Subchapter as a part of the agency-wide re-right/de-wrong initiative. The modifying word ‘visible’ is deleted from the term “visible fugitive dust emissions”. Substantive changes are proposed to clarify when and what precautions are required to minimize or prevent pollution and to clarify what corrective measures are required in the event that fugitive dust is discharged beyond the property line.

1. Presentation – Cheryl Bradley
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote for permanent adoption

E. OAC 252:100-31 Control of Emission of Sulfur Compounds [AMENDED]

The proposed changes to SC 31 are primarily to simplify language, clarify requirements, and remove redundant requirements or language as part of the agency-wide re-right/de-wrong initiative. New definitions of the terms “existing source” or “existing equipment” and “new source” or “new equipment” clearly identify the effective date for each industry affected by the rule. Proposed substantive changes are: to revoke 31-14(c) regarding the testing procedures for ambient hydrogen sulfide; to delete 31-25(a) pertaining to new sulfuric acid plants; to change the averaging time for ambient hydrogen sulfide concentration from existing equipment in 31-14(a); to combine 31-25(c) and 31-26 to make clear which sources are subject to the standard; to make several changes in 26(a) such as to change the standard from a combination equipment and emission standard to a more straightforward emission standard; the exception for pipeline quality sweetened gas was moved to 226(b)(1) and changed to an emission based exception; an exception to the required exhaust stack is provided based on modeling; and all subsections will be changed to a time-based average because it is unclear what is a maximum average.

1. Presentation – Joyce Sheedy
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote for permanent adoption

F. OAC 252:100-41 Control of Emission of Hazardous Air Pollutants and Toxic Air Contaminants [AMENDED]

The proposed amendment to SC 41-15 would incorporate by reference the Maximum Achievable Control Technology (MACT) standards for hazardous air pollutants in 40 CFR 63 that have been promulgated by the EPA from July 1 1999 through July 1, 2000. These are Subparts EEE, OOO, RRR and VVV. The DEQ is also proposing to update to July 1, 2000 the incorporation by reference in 252:100-41-16 of the National Emissions Standards for Hazardous Air Pollutants (NESHAP) found in 40 CFR 61.

1. Presentation –Cheryl Bradley
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote for emergency and permanent adoption

Division Director's Report – Eddie Terrill

New Business – Any matter not known about, or which could not have been reasonably foreseen, prior to the time of posting the agenda.

Adjournment Next Regular Meeting December 13, 2000 @ 9:00 a.m.

Place: Department of Environmental Quality

Multi-Purpose Room, First Floor 707 North Robinson, Oklahoma City, OK

NEW ON OUR WEB Council action taken at this meeting will be posted on our website.

OPEN FORUM Following these hearings, the Air Quality Division will host an open forum for the regulated community and the general public to answer any questions that might be of interest. Depending on the regular Council meeting agenda, the forum will likely begin after lunch at 1:00 p.m. in the Multi-Purpose room on the 1st floor of the DEQ building. The forum panel will consist of staff members from all of the sections within the Division, including compliance/enforcement, permits, monitoring, technical resources, and administration. Come prepared to ask anything and everything you might have wanted to know about how we do business.

October 3, 2000

MEMORANDUM

TO: Air Quality Council
FROM: Eddie Terrill, Director ^{CA}
Air Quality Division
Re: Modifications to Subchapter 29

Enclosed is a copy of the proposed amendments to OAC 252:100-29, Control of Fugitive Dust. The changes simplify and clarify Subchapter 29 as part of the agency-wide re-right/de-wrong initiative. Most of the proposed changes affect OAC 252:100-29-2. The existing provisions of Section 2 would be divided into Paragraphs (a), (b) and (c) instead of (a) and (b). The examples of reasonable precautions in Paragraph (a) would be deleted, and a new Paragraph (b), Reasonable precautions, added. The existing Subparagraph (b), Emission boundaries, would be renumbered OAC 252:100-29-2(c) and divided into Subparagraphs (c)(1) and (2). The word "visible" would be deleted from the phrase "visible fugitive dust emissions", wherever it appears, in Paragraph 2(c). Subparagraph (c)(1) would include requirements for fugitive dust emissions that damage or interfere with the use of adjacent properties, and Subparagraph (c)(2) would include the requirements for fugitive dust emissions that cause air quality standards to be exceeded or interfere with the maintenance of air quality standards. The provision for the DEQ to require the owner or operator of a fugitive dust emissions source to implement economically and technologically feasible controls, when those emissions damage or interfere with the use of adjacent property, would be added to Subparagraph (c)(1). In addition, OAC 252:100-29-5, Variance, would be revoked due to its redundancy with the Clean Air Act at 27A O. S. Supp. 1999 § 2-5-109.

The Air Quality Council considered changes to this Subchapter at its June 14 and August 16 meetings. At hearing in August, most comments addressed the proposed deletion of the word "visible" from the phrase "visible fugitive dust emissions". The Council heard comments supporting and opposing the change. In order to continue the discussion on this proposed change, the notice of rulemaking intent, published in the *Oklahoma Register* on September 15, included the proposed deletion. Staff has received no additional comments since the August hearing.

If no compelling reasons arise before or during the upcoming Air Quality Council hearing, staff will propose that the word "visible" be retained in the phrase "visible fugitive dust emissions" and suggest that the proposed rules be recommended to the Environmental Quality Board for emergency and permanent adoption.

Enclosures: 2

SUBCHAPTER 29. CONTROL OF FUGITIVE DUST

Section

- 252:100-29-1. Purpose
- 252:100-29-2. Prohibitions [AMENDED]
- 252:100-29-3. Precautions required in maintenance or nonattainment areas [AMENDED]
- 252:100-29-4. Exception for agricultural purposes
- 252:100-29-5. Variance [REVOKED]

SUBCHAPTER 29. CONTROL OF FUGITIVE DUST

252:100-29-1. Purpose

The purpose of this Subchapter is to control the release of fugitive dust into the air by any operation or action.

252:100-29-2.—~~Prohibitions~~ General provisions

~~(a) General provisions. No person shall cause or permit the handling, transporting, or disposition of any substance or material which is likely to be scattered by the air or wind, or is susceptible to being air borne, or wind borne or to operate or maintain or cause to be operated or maintained, any premise, open area, right of way, storage pile of materials, vehicle, or construction, alteration, demolition or wrecking operation, or any other enterprise, which involves any material or substance likely to be scattered by the wind or air, or susceptible to being wind borne or air borne that would be classified as air pollution without taking reasonable precautions or measures to minimize atmospheric pollution.~~

(a) Prohibitions. No person shall cause or allow any fugitive dust source to be operated, or any substances to be handled, transported or stored, or any structure constructed, altered, or demolished to the extent that such operation or activity may enable fugitive dust to become airborne and result in air pollution, without taking reasonable precautions to minimize or prevent pollution.

(b) Reasonable precautions. Reasonable precautions include, but are not limited to, those actions set forth below at 252:100-29-3(1) through (6).

~~(b) Emission boundaries. No person shall cause or permit the discharge of any visible fugitive dust emissions beyond the property line on which the emissions originate in such a manner as to damage or to interfere with the use of adjacent properties, or cause air quality standards to be exceeded, or interfere with the maintenance of air quality standards.~~

(c) Emission boundaries.

(1) No person shall cause or allow the discharge of any fugitive dust emissions beyond the property line on which the emissions originate in such a manner as to damage or to interfere with the use of adjacent properties. If the DEQ determines that this rule has been violated, the owner or operator of the fugitive dust emissions source or sources shall implement controls, subject to economic and technological feasibility, to prevent future violations.

(2) No persons shall cause or allow the discharge of any fugitive dust emissions beyond the property line on which the emissions originate in such a manner as to cause air quality standards to be exceeded or interfere with the maintenance of air quality standards.

252:100-29-3. Precautions required in maintenance or nonattainment areas

As of the adoption of this Subchapter, in areas designated as Air Quality Maintenance Areas or Nonattainment Areas for particulate matter, the ~~Executive Director~~ shall require specific reasonable precautions ~~and that~~ may include, but shall not be limited to, the following:

- (1) The use, where possible, of water or chemicals for control of dust in the demolition of existing buildings or structures, construction operations, the grading of roads, driveways and parking lots or the clearing of land for commercial, industrial, or residential development.
- (2) The application of water or suitable chemicals or some other covering on materials stockpiles, and other surfaces ~~which that~~ can create air-borne dusts under normal conditions.
- (3) The installation and use of hoods, fans and dust collectors to enclose and vent the handling of dusty materials or the use of water sprays or other acceptable measures to suppress ~~the~~ dust emission during handling. Adequate containment methods shall be employed during sandblasting or other similar operations.
- (4) The covering or wetting ~~when in motion,~~ of open-bodied trucks, trailers, or railroad ~~earcars~~ when transporting dusty materials in areas where the general public must have access ~~which can create air borne particulate matter.~~
- (5) The removal as necessary from paved street and parking surfaces of ~~earth or other material~~ materials ~~which that~~ have a tendency to become airborne, ~~and/or.~~
- (6) ~~The~~ the planting and maintenance of vegetative ground cover as necessary.

252:100-29-4. Exception for agricultural purposes

Section 252:100-29-3 shall not apply to the clearing or preparation of land used solely for agricultural purposes. For the purpose of this Subchapter "agricultural purposes" shall be limited to the raising of livestock or crops for food or fiber.

252:100-29-5. Variance [REVOKED]

~~Uses of potential variance from this Subchapter are subject to review, approval, and/or denial of the requested variance by the Air Quality Council.~~

Staff Present

Cheryl Bradley
Jeanette Buttram
Joyce Sheedy
Michelle Martinez
Myrna Bruce

Notice of Public Meeting for October 18, 2000 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted on the entrance doors at of the DEQ Central Office in Oklahoma City at least twenty-four hours prior to the meeting.

Call to Order - Chairman Branecky, called the meeting to order at 9:00 a.m. and roll call was taken by Ms. Bruce as follows: Dr. Grosz - aye; Mr. Fallon - aye; Mr. Breisch - aye; Ms. Myers - aye; Mr. Wilson - aye; Mr. Treeman - aye; Mr. Branecky - aye. Mr. Kilpatrick was not in attendance.

Approval of Minutes - Mr. Branecky entertained a motion to approve the Minutes of the August 16, 2000 Public Meeting/Hearings. Motion was made by Dr. Grosz to approve the Minutes as presented and second was made by Ms. Myers. Roll call: Dr. Grosz - aye; Mr. Fallon - aye; Mr. Breisch - aye; Ms. Myers - aye; Mr. Wilson - aye; Mr. Treeman - abstain; Mr. Branecky - aye.

CY 2001 Meeting Schedule - Mr. Terrill listed staff's recommended dates for next year's meetings on February 21, April 18, June 20, August 15, October 17, and December 19. He pointed out that his preference was to keep the February meeting in Oklahoma City due to the Legislative session and the December meeting in-house as a matter of convenience for the staff. Ms. Myers asked that the April meeting be held in Ada so that the Environmental Science Department at East Central University could participate; and for the October meeting to be held in Broken Bow due to area interests in the Weyerhaeuser facilities. Mr. Breisch wanted at least two meetings in Tulsa due to the nonattainment issues and Mr. Fallon suggested returning to Lawton in 2002.

Dr. Grosz moved to hold meetings on the dates recommended with February and December in Oklahoma City, April in Ada, June and August in Tulsa and Broken Bow in October. The second was made by Ms. Myers. Roll call: Dr. Grosz - aye; Mr. Fallon - aye; Mr. Breisch - aye; Ms. Myers - aye; Mr. Wilson - aye; Mr. Treeman - abstain; Mr. Branecky - aye.

Protocol Statement — As protocol officer, Mr. Dyke convened the hearings by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-201 through 2-5-101 - 2-5-118. Mr. Dyke entered the Agenda and the Oklahoma Register Notice into the record.

PUBLIC HEARING

OAC 252:100-4 NEW SOURCE PERFORMANCE STANDARDS

Ms. Michelle Martinez advised Council of the agreement with the EPA for DEQ to incorporate by reference annually any new or amended New Source Performance Standards (NSPS) in Subchapter (SC) 4. Staff's proposal would update the federal NSPS from July 1, 1999 to July 1, 2000. She added that adoption as an emergency rule would allow the amended rules to take effect earlier than June 1, 2001 and enable persons subject to the NSPS to work with the state rather than the EPA. She requested that Council recommend the rule to the Environmental Quality Board for both emergency and permanent adoption.

Mr. Breisch made that motion and the second was made by Dr. Grosz. Roll call: Dr. Grosz - aye; Mr. Fallon - aye; Mr. Breisch - aye; Ms. Myers - aye; Mr. Wilson - aye; Mr. Treeman - abstain; Mr. Branecky - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100- 7-2 Permits for Minor Facilities

Ms. Jeanette Buttram pointed out that during the August 16th meeting, Council voted to recommend Subchapter (SC) 6 to the Environmental Quality Board for revocation. Ms. Buttram added that SC 6 was a summary of the permitting process in SC 7 and SC 8 and a restatement of Oklahoma Statutes on permitting. She pointed out that a few portions of the rule contained substantive language that was placed into SC 8 and approved at the August 16th Council meeting. She advised that SC 6 contained permit application information that needed to be placed into SC 7; therefore Sections 252:100-6-50(b), -50-(b)(2), and -6-50(e), was moved to 272:100-7-2. She indicated that language was added to SC 7 that would clarify the rule. She asked that the proposed rule be recommended for permanent adoption to the Environmental Quality Board at its November 14 meeting. She reminded Council that SC 6 would go to the Board at the same time.

Ms. Myers made motion to recommend this proposal to the Board for permanent adoption. Second was made by Mr. Fallon. Roll Call --- Dr. Grosz - aye; Mr. Fallon - aye; Mr. Breisch - aye; Ms. Myers - aye; Mr. Wilson - aye; Mr. Treeman - abstain; Mr. Branecky - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-7 Permits for Minor Facilities Part 9, Sections 60-3.5 - 60.5 Permits by Rule

Dr. Joyce Sheedy, representing staff, stated that proposed revisions to Part 9 of SC 7 add a permit by rule for natural gas compression facilities. Proposals were brought before the Council the first time on April 19, 2000; continued to June 14 and August 16th and then to October 18. She advised that comments had been received from Mid-Continent Oil and Gas Association representing the industry. These comments, dated August 4 and received on August 7, were too late to be addressed at the August Council meeting. She advised that the industry workgroup met on September 1, 8, and 18. Dr. Sheedy detailed the issues deriving from these meetings. She advised that there were still unresolved issues, thus staff's recommendation was that Council continue this hearing to its December 13 meeting.

Mr. Eddie Terrill asked for discussion regarding the possibility of raising the de minimus level in order to better get a handle on the regulation of this specific industry. He advised that staff would provide additional information and a proposal for the de minimus level at Council's December meeting.

Mr. Breisch made motion to continue the hearing to December 13. Mr. Wilson made the second. Roll Call -- Dr. Grosz - aye; Mr. Fallon - aye; Mr. Breisch - aye; Ms. Myers - aye; Mr. Wilson - aye; Mr. Treeman - abstain; Mr. Branecky - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-29 Control of Fugitive Dust

Ms. Cheryl Bradley was called upon to present staff recommendations. She stated that proposed changes were to simplify and clarify language according to the agency-wide re-right/de-wrong initiative. She advised that this rule had previously been before the Council in June and in August and that no additional written comments had been received. After pointing out the proposed revisions, Ms. Bradley said that staff was requesting that Council recommend the rule to the Environmental Quality Board for permanent adoption.

Following discussion, Mr. Wilson recommended that the rule as proposed be forwarded to the Board for adoption. Mr. Fallon made the second. Roll Call -- Dr. Grosz - aye; Mr. Fallon - aye; Mr. Breisch - aye; Ms. Myers - aye; Mr. Wilson - aye; Mr. Treeman - abstain; Mr. Branecky - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-31 Control Of Emissions of Sulfur Compounds

Dr. Joyce Sheedy advised Council that revisions to this subchapter were to simplify and clarify language according to the agency-wide re-right/de-wrong initiative and had been brought before the Council the first time in August. She pointed out that the workgroup had met several times but that no official comments had been received. Dr. Sheedy then suggested that Council continue the hearing to the December meeting.

Mr. Wilson provided an update on the workgroup meetings, which were held on September 8, and another on October 3. Speaking for the workgroup, he added that he supported the continuance of the hearing to December.

Ms. Myers moved to continue the hearing to the December meeting and Dr. Grosz seconded that motion. Roll Call -- Dr. Grosz - aye; Mr. Fallon - aye; Mr. Breisch - aye; Ms. Myers - aye; Mr. Wilson - aye; Mr. Treeman - abstain; Mr. Branecky - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-41

Control Of Emissions of Hazardous Air Pollutants and Toxic Air Contaminants

Ms. Cheryl Bradley was again called upon. She advised that staff's proposed changes were part of the continuing process of keeping DEQ's Title III and Title V program current with EPA's evolving program. She pointed out that the incorporation by reference of Part 61 National Emission Standards for Hazardous Air Pollutants in Section 15(a) would be updated to July 1, 2000. She added that proposed amendments to Section 15(b) would incorporate by reference specific new and amended Maximum Achievable Control Technology (MACT) standards for hazardous air pollutants promulgated by EPA between July 1, 1999 and July 1, 2000. The new MACT standards to be added were OOO, RRR, and VVV. Ms. Bradley advised that no comments had been received and it was staff's suggestion that Council recommend the rule to the Environmental Quality Board for both emergency and permanent adoption.

Mr. Wilson moved to pass the rule to the Environmental Quality Board with the second made by Ms. Myers. Roll Call --- Dr. Grosz - aye; Mr. Fallon - aye; Mr. Breisch - aye; Ms. Myers - aye; Mr. Wilson - aye; Mr. Treeman - abstain; Mr. Branecky - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

DIVISION DIRECTOR'S REPORT - Mr. Terrill updated Council and audience on the ozone attainment status in Tulsa advising that there would be an upcoming Senate Committee meeting in Oklahoma City to discuss the usage of an exceptional events clause to and their effects on Air Quality. He commented that he and Mr. Dyke had attended a meeting with CenSARA states and EPA Region VI where Mr. John Seitz was a speaker.

Mr. Terrill invited everyone to attend the open forum in the afternoon where staff would be available to answer any questions. He also bid farewell to Mr. Dennis Doughty who would be retiring after 18 years of service.

Mr. Dyke advised that the Council's Finance Committee would be meeting in November and advised that the current CPI for fees is \$18.10 for Title V and \$17.12 for non-Title V sources.

NEW BUSINESS None

ADJOURNMENT With no further business, meeting was adjourned with announcement that the next regularly scheduled meeting would be on December 13 at the DEQ offices in Oklahoma City.

NOTE: The sign-in sheet is attached as an official part of these Minutes.

THE AIR QUALITY COUNCIL
RULEMAKING RECOMMENDATION
TO THE ENVIRONMENTAL QUALITY BOARD

Identification of Proposed Rulemaking:

Chapter Number and Title: OAC: 252:100-29
Control of Fugitive Dust [AMENDED]

On October 18, 2000 the members of this Council, by authority vested in them by the Oklahoma Environmental Quality Code (27 O.S. Sec. 2-2-201), by roll call vote, recommended to the Environmental Quality Board that the rulemaking described above be adopted as:

X permanent [take effect after legislative review]
 emergency [temporary, to take effect upon approval by the Governor because of time]

This Council has considered the proposed rulemaking and comments about it and determined, to the best of its knowledge, that all applicable requirements of the Oklahoma Administrative Procedures Act have been followed.

This council authorizes the Department to prepare this recommended rulemaking for the Board, making any changes approved by the Council, correcting typographical, grammatical and reference errors, and formatting them as required by the Office of Administrative Rules. This is to be done with the understanding that such changes shall neither alter the sense of what this Council recommends nor invalidate this recommendation.

Respectfully,

Chair or Designee:

REGULAR MEETING AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
OKLAHOMA ENVIRONMENTAL QUALITY BOARD

A Public Meeting: 9:30 a.m., Tuesday, November 14, 2000
American Legion Hall
113 North Swem
Hooker, Oklahoma

1. Call to Order – Lee Paden, Chair
2. Roll Call - Lynda Finch
3. Approval of Minutes of the August 29, 2000 Regular Meeting
4. **Rulemaking -- OAC 252:205 Hazardous Waste Management**
Two sets of changes are proposed:
 - The proposed amendments to 252:205-3-2 are clarifying and corrective. First, they delineate those non-delegable hazardous waste regulatory duties that remain with the U.S. Environmental Protection Agency, rather than being administered by the DEQ hazardous waste management program. Second, they correct errors and clarify requirements found in the adopted-by-reference portions of the July 1, 1999, version of Title 40 of the Code of Federal Regulations.
 - The purpose of the proposed amendments to 252:205-7-1, 7-3 and 21-3 is to revoke superseded hazardous waste transporter rules. The rules were superseded by legislation passed during the 2000 legislative session that transferred transporter registration responsibility from the DEQ to the Oklahoma Corporation Commission.
 - A. Presentation – Jody Reinhart, Hazardous Waste Council Chair
 - B. Questions and discussion by the Board
 - C. Questions, comments and discussion by the public
 - D. Discussion by the Board
 - E. Roll call vote(s) on emergency* adoption of amendments to 252:205-3-2, and on permanent and emergency* adoption of amendments to 252:205-7-1, 7-3 and 21-3
5. **Rulemaking -- OAC 252:001, 002, 003 and 004 Rules of Practice and Procedure**
The proposed new Chapter 4 (Rules of Practice and Procedure) is a product of DEQ's re-right/de-wrong process. It represents a comprehensive and integrated rewrite of existing Chapter 1 (Procedures of the Environmental Quality Board), Chapter 2 (Procedures of the DEQ) and Chapter 3 (Procedures of the Environmental Quality Councils), in an effort to make the procedures easier to follow. Among the changes are: reorganization into more logical arrangements; language simplification; elimination of duplicative rules; updating of statutory citations; and deletion of statutory language. Chapter 4 also includes rules recommended by the Air Quality Council, which address hearings before that council. Chapters 1, 2 and 3 are proposed for revocation, subject to the adoption of proposed Chapter 4.
 - A. Presentation – Jimmy Givens, DEQ General Counsel
 - B. Questions and discussion by the Board
 - C. Questions, comments and discussion by the public
 - D. Discussion by the Board
 - E. Roll call vote(s) on permanent adoption of Chapter 4 and permanent revocation of Chapters 1, 2 and 3

6. **Rulemaking— OAC 252:100 Air Pollution Control**

Six sets of changes are proposed:

- The amendments to Subchapter 4, New Source Performance Standards, update the incorporations by reference of the federal NSPS from July 1, 1999, to July 1, 2000.
- The proposed revocation of Subchapter 6, Permitting, is part of DEQ's effort to eliminate redundant or unnecessary language through its re-right/de-wrong process. Subchapter 6 is largely a summary of the permit programs contained in Subchapters 7 and 8, and a restatement of Oklahoma statutes on permitting. Only a few portions of the rule contain substantive language, and those portions will be placed into Subchapters 7 and 8.
- The proposed changes to Subchapter 7, Permits for Minor Facilities, also derive from the re-right/de-wrong initiative. In connection with the proposed revocation of Subchapter 6 (see above), three substantive provisions of Subchapter 6, relating to the requirement for and the implications of the signing of a permit application, are moved into Section 252:100-7-2.
- The proposed revisions to Subchapter 8, Permits for Part 70 Sources, generally correct errors or omissions, clarify language, and specify fee categories for construction permit authorizations and modifications. Other amendments include clarification of construction permit and best available control technology (BACT) requirements, slight modification of the reporting time for excess emissions caused by emergencies or upsets, and modification of the definition of "major stationary source" as it relates to charge rates of municipal incinerators. The incorporation by reference of 40 CFR 63.41, 63.43, and 63.44 is updated to July 1, 2000.
- Proposed amendments to Subchapter 29, Control of Fugitive Dust, clarify and simplify language as part of the re-right/de-wrong initiative. Substantive changes are proposed to clarify the precautions required to minimize or prevent pollution and the corrective measures required if fugitive dust is discharged beyond the property line.
- The proposed revisions to Subchapter 41, Control of Emission of Hazardous Air Pollutants and Toxic Air Contaminants, update the adoption by reference of specific National Emission Standards for Hazardous Air Pollutants (NESHAP) in 40 CFR Part 61, and the Maximum Achievable Control Technology (MACT) standards for hazardous air pollutants in 40 CFR Part 63. The new adoption-by-reference date would be July 1, 2000.
 - A. Presentation— David Branecky, Air Quality Council Chair
 - B. Questions and discussion by the Board
 - C. Questions, comments and discussion by the public
 - D. Discussion by the Board
 - E. Roll call vote(s) on permanent adoption of amendments to Subchapters 6, 7, and 8, on permanent and emergency* adoption of amendments to Subchapters 4 and 41, and on emergency* adoption of amendments to Sections 252:100-8-1.7 and 252:100-8-4

7. **Rulemaking— OAC 252:622 and 623 Pretreatment for Central Treatment Trusts**

This rulemaking is part of the re-right/de-wrong process to eliminate outdated and unenforceable rules and simplify existing language. The changes are extensive enough that it is proposed that Chapter 622 be revoked and replaced by new Chapter 623.

- A. Presentation— Robert Johnston, Water Quality Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote(s) on permanent adoption and revocation

8. **Rulemaking -- OAC 252:625 and 626 Public Water Supply Construction Standards**

This rule making is part of the re-right/de-wrong process to eliminate outdated and unenforceable rules and simplify existing language. The changes are extensive enough that it is proposed that Chapter 625 be revoked and replaced by new Chapter 626. The new chapter includes construction standards for technology that has been developed since the last revision of the rules.

- A. Presentation – Robert Johnston, Water Quality Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote(s) on permanent adoption and revocation

9. **Rulemaking -- OAC 252:645 Septage Tank Cleaners**

The majority of the changes in this rulemaking were done to reorganize, simplify and clarify the rules as part of DEQ's re-right/de-wrong process. However, there are a few substantive changes. These include specifying the amount of lime that must be added per volume of septage before application, designating phosphorus as a limiting factor in the amount of septage that may be applied, and increasing the minimum distance of a land application site from a public water supply well. The rulemaking also requires that applicants for a permit to land apply septage be licensed to pump and haul septage.

- A. Presentation – Robert Johnston, Water Quality Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote on permanent adoption of amendments

10. **Rulemaking -- OAC 252:652 Underground Injection Control**

The purpose of the proposed amendments is to make the underground injection control rules correspond with recent statutory changes which clarify jurisdictional responsibilities between the DEQ and other state agencies, and to update the incorporation by reference of new federal underground injection well regulations to allow the state program to retain its "primacy" status with the U.S. Environmental Protection Agency.

- A. Presentation – Robert Johnston, Water Quality Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote on emergency* adoption of amendments

11. **Consideration of the Environmental Quality Report**

The Oklahoma Environmental Quality Code requires the DEQ to prepare an "Oklahoma Environmental Quality Report" and to submit it to the Governor, Speaker of the House and Senate President Pro Tem by January 1st of each year. The statutorily prescribed purposes of this report are to outline the DEQ's two-year needs for providing environmental services within its jurisdiction, reflect any new federal mandates, and recommended statutory changes. The Environmental Quality Board is to review, amend (as necessary) and approve the report.

- A. Presentation – Steve Thompson, DEQ Deputy Executive Director
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote on approval

12. New Business (any matter not known about, or which could not have been reasonably foreseen prior to the time of posting of agenda)
13. Executive Director's Report
14. Adjournment

Public Forum: The Board meets four times a year at different locations across the State to hear the views and concerns of all Oklahomans about environmental issues. This opportunity is informal, and we invite you to sign the register to speak.

Should you have a disability and need an accommodation, please notify the DEQ three days in advance at 702-7100.

* Specification of proposed adoption by emergency rulemaking, by permanent rulemaking, or by both, is based on the recommendations of the respective advisory councils. Adoption or amendment of rules as emergency rulemaking requires a finding by the Board that a compelling extraordinary circumstance warrants the seeking of emergency certification, so that the rules will take effect immediately upon the Governor's signature. Absent a finding and certification of emergency, rules adopted today will not become effective until June of 2001.

SUBCHAPTER 29. CONTROL OF FUGITIVE DUST

252:100-29-2. Prohibitions-General provisions

~~(a) General provisions. No person shall cause or permit the handling, transporting, or disposition of any substance or material which is likely to be scattered by the air or wind, or is susceptible to being air borne, or wind borne or to operate or maintain or cause to be operated or maintained, any premise, open area, right of way, storage pile of materials, vehicle, or construction, alteration, demolition or wrecking operation, or any other enterprise, which involves any material or substance likely to be scattered by the wind or air, or susceptible to being wind-borne or air borne that would be classified as air pollution without taking reasonable precautions or measures to minimize atmospheric pollution.~~ Prohibitions. No person shall cause or allow any fugitive dust source to be operated, or any substances to be handled, transported or stored, or any structure constructed, altered, or demolished to the extent that such operation or activity may enable fugitive dust to become airborne and result in air pollution, without taking reasonable precautions to minimize or prevent pollution.

~~(b) Emission boundaries. No person shall cause or permit the discharge of any visible fugitive dust emissions beyond the property line on which the emissions originate in such a manner as to damage or to interfere with the use of adjacent properties, or cause air quality standards to be exceeded, or interfere with the maintenance of air quality standards.~~

(b) Reasonable precautions. Reasonable precautions include, but are not limited to, those actions set forth below at OAC 252:100-29-3(1) through (6).

(c) Emission boundaries.

(1) No person shall cause or allow the discharge of any visible fugitive dust emissions beyond the property line of the property on which the emissions originate in such a manner as to damage or to interfere with the use of adjacent properties. If the DEQ determines that this rule has been violated, the owner or operator of the fugitive dust emissions source or sources shall implement controls, subject to economic and technological feasibility, to prevent future violations.

(2) No persons shall cause or allow the discharge of any visible fugitive dust emissions beyond the property line of the property on which the emissions originate in such a manner as to cause air quality standards to be exceeded or interfere with the maintenance of air quality standards.

252:100-29-3. Precautions required in maintenance or nonattainment areas

As of the adoption of this Subchapter, in areas designated as Air Quality Maintenance Areas or Nonattainment Areas for particulate matter, the Executive Director shall require specific reasonable precautions and that may include, but shall not be limited to, the following:

(1) The use, where possible, of water or chemicals for control of dust in the demolition of existing buildings or structures, construction operations, the grading of roads, driveways and parking lots or the clearing of land for commercial, industrial, or residential development;—.

(2) The application of water or suitable chemicals or some other covering on materials stockpiles, and other surfaces ~~which~~ that can create air-borne dusts under normal conditions;—.

(3) The installation and use of hoods, fans and dust collectors to enclose and vent the handling of dusty materials or the use of water sprays or other acceptable measures to suppress the dust emission during handling. Adequate containment methods shall be employed during sandblasting or other similar operations;—.

(4) The covering or wetting ~~when in motion,~~ of open-bodied trucks, trailers, or railroad ~~car~~ cars ~~when~~ transporting dusty materials in areas where the general public must have access ~~which can create air borne particulate matter;~~—.

(5) The removal as necessary from paved street and parking surfaces of ~~earth or other material which~~ materials that have a tendency to become airborne; ~~and/or~~—.

(6) ~~the~~ The planting and maintenance of vegetative ground cover as necessary.

252:100-29-5. Variance [REVOKED]

~~Uses of potential variance from this Subchapter are subject to review, approval, and/or denial of the requested variance by the Air Quality Council.~~

Additional Comments

TITLE 252. OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL
SUBCHAPTER 29. CONTROL OF FUGITIVE DUST

EXECUTIVE SUMMARY:

The proposed amendments to Subchapter 29, Control of Fugitive Dust, will clarify and simplify the language as part of the agency-wide re-right/de-wrong initiative. The existing provisions of OAC 252:100-29-2 would be divided into Paragraphs (a), (b) and (c) instead of (a) and (b). A new Paragraphs (b) sets forth examples of reasonable precautions to minimize pollution from fugitive dust. The existing Paragraph (b), Emission boundaries, is renumbered OAC 252:100-29-2(c) and divided into Subparagraphs (c)(1) and (2). Subparagraph (c)(1) sets forth requirements and identifies remedies for fugitive dust emissions that damage or interfere with the use of adjacent properties, and Subparagraph (c)(2) sets forth requirements for fugitive dust emissions that cause air quality standards to be exceeded or interfere with maintenance of air quality standards. Remedies for violation of Subparagraph (c)(1) are limited to requiring the owner or operator to implement economically and technologically feasible controls. Remedies for violation of Subparagraph (c)(2) are not so limited. The proposed revocation of OAC 252:100-29-5, Variance, is due to its redundancy with the Clean Air Act at 27A O.S.Supp. 1999 § 2-5-109.

DIFFERENCES FROM ANALOGOUS FEDERAL RULES:

None.

ENVIRONMENTAL BENEFIT STATEMENT:

Not required because these rules are not more stringent than corresponding federal rules.

SUMMARY OF COMMENTS AND RESPONSES:

See attached.

OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL
SUBCHAPTER 29. CONTROL OF FUGITIVE DUST

Response to comments of Mr. Stephen E. Landers, Fort James Corporation, dated June 5, 2000

1. 252:100-29-2(a)

Comment: The proposed amendment to OAC 252:100-29-2(a) would require precautions for any source of fugitive dust, no matter how small. Routine grounds maintenance such as mowing may require precautions; whereas, the current rule requires precautions only for fugitive dust "classified as air pollution".

Response: Subsection 2(a) was rewritten to require reasonable precautions to control fugitive dust that results in air pollution.

Response to comments of Mr. Howard Ground, Central and Southwest Services, and Mr. Perry Friedrich, Grand River Dam Authority, stated on June 14, 2000

2. 252:100-29-2 (June 13, 2000 draft)

Comment: The phrase "or will be violated" in the second sentence of this section makes the requirement too subjective.

Response: This provision was removed.

Response to comment of Mr. Don Shandy, McKinney, Stringer, and Webster, stated on August 16, 2000

3. 252:100-29-2(c)(1) and (2)

Comment: Disagreed with the proposed deletion of the word "visible" from the phrase "visible fugitive dust emissions" because it would result in the removal of an objective standard. The change is unnecessary because the DEQ has authority under the statutes to address any issue related to air pollution.

Response: The word "visible" has been retained so there is no change in the existing language.

Response to comment of Sylvia Pratt stated on August 16, 2000

4. 252:100-29-2(c)(1) and (2)

Comment: Removal of the word "visible" from the phrase "visible fugitive dust emissions" might give DEQ the authority to enforce this rule when fugitive dust emissions are not seen during a DEQ inspection.

Response: The word "visible" has been retained. While this may limit the DEQ's ability to base enforcement actions on this rule, the DEQ has much broader authority to control air pollution. The Oklahoma Clean Air Act empowers the DEQ with the legal authority to take such action as may be necessary to abate air pollution. Removal of the word "visible" does not affect this authority.

25

Page 4

1 2-5-109.

2 Notice of the proposed permanent

3 rulemaking was published in the Oklahoma

4 Register on May 15th, 2000. This is the

5 first hearing on the proposed amendments.

6 Staff received written comments from

7 Stephen E. Landers, Senior Process

8 Engineer, Fort James Corporation and Thomas

9 H. Diggs, Chief Analysis and the Air

10 Planning Section, USEPA Region 6, regarding

11 the proposed substantive change to OAC

12 252:100-29-2(a). I would like to enter

13 both letters into the hearing record. As

14 requested by the Council, copies of these

15 letters were faxed to each of you on

16 Friday. I hope you received the fax.

17 Mr. Diggs' letter was dated June

18 7th, 2000, and was received by the Air

19 Quality Division on June 9th, 2000, and

20 supports the proposed change to Section

21 2(a) because it removes the qualification

22 that dust must be classified as air

23 pollution before precautions are taken and

24 actually strengthens the State

25 Implementation Plan.

Page 3

1

2

3

4

5

6 PROCEEDINGS

7 MR. DYKE: The next item on the

8 agenda today is Item 4D, OAC 252:100-29,

9 Control of Fugitive Dust. I call on Cheryl

10 Bradley.

11 MS. BRADLEY: Mr. Chairman,

12 Members of the Council, ladies and

13 gentlemen, the proposed changes to

14 Subchapter 29 will simplify and clarify the

15 subchapter as part of the agency-wide re-

16 right/de-wrong initiative. A substantive

17 change is included which would make the

18 rule more enforceable by deleting the

19 qualifications that the fugitive dust be

20 emitted to such an extent as to be

21 classified as air pollution, before

22 precautions are required. The proposed

23 revocation of OAC 252:100-29-5, Variance,

24 is due to its redundancy with the Oklahoma

25 Clean Air Act at 27A O.S. Supplement 1999

Page 5

1 Mr. Landers', however, speaking for

2 his company and industry, in a letter that

3 was dated June 5th, 2000, and received by

4 the Air Quality Division on June 8th,

5 states, as proposed, however, 252:100-29-

6 2(a), would require precautions for any

7 source of fugitive dust, no matter how

8 small. For instance, routine grounds

9 maintenance such as mowing may require

10 precautions, whereas the current rule,

11 albeit vague, requires precautions only for

12 fugitive dust classified as air pollution.

13 Not every source of fugitive dust is, nor

14 should it be, subject to regulation or

15 enforcement. There needs to be a

16 triggering mechanism that trips regulations

17 and/or enforcement.

18 Staff agrees that the section as

19 proposed is unclear regarding when

20 reasonable precautions are necessary.

21 Therefore, we are proposing the revision, a

22 copy of which was provided to the Council

23 and is available on the table at the back

24 of the room, the date on that is June 13th.

25 In that proposal, staff combines the

Page 6

1 provisions in paragraphs 2(a) and 2(b) and
 2 requires reasonable precautions to control
 3 fugitive dust emissions if those emissions
 4 cause specific adverse effects beyond the
 5 property line of a facility. As revised,
 6 Section 2 would read as follows: 252:100-
 7 29-2, Prohibitions. No person shall cause
 8 or allow the discharge of any visible
 9 fugitive dust emissions beyond the property
 10 line on which emissions originate in such a
 11 manner as to damage or to interfere with
 12 the use of adjacent properties, cause air
 13 quality standards to be exceeded, or
 14 interfere with the maintenance of air
 15 quality standards. If the DEQ determines
 16 that this rule has been or will be
 17 violated, the owner or operator of the
 18 facility shall take reasonable precautions
 19 to prevent future violations. Reasonable
 20 precautions include wetting, oiling,
 21 covering, applying chemicals, shielding,
 22 vacuuming, or any other appropriate
 23 measures.
 24 Ft. James worked with us on the
 25 revisions in this language and they were

Page 8

1 those examples out altogether and just take
 2 reasonable precautions to prevent future
 3 violations. I certainly don't want to
 4 encourage a practice that would be in
 5 conflict with some other rule within the
 6 agency.
 7 MR. TREEMAN: I guess one other
 8 thing I would add, though, is this is
 9 looking at more than just road dust.
 10 Fugitives could be from storage piles and
 11 stock piles and there are certain things
 12 you do to the oil and that you put in the
 13 piles that aren't subject to the inclement
 14 -- you know, the outside weather.
 15 MS. BRADLEY: This is Cheryl
 16 Bradley again. Within the language of the
 17 next section, that refers to the
 18 application of suitable chemicals and that
 19 might, if in fact we kept the language,
 20 could be used as opposed to oiling or
 21 applying -- it would be suitable applying
 22 of chemicals, then there would be a
 23 qualification, in a sense that it needed to
 24 fit the application.
 25 MR. KILPATRICK: But Cheryl,

Page 7

1 provided a copy of the revision and support
 2 the recommended changes.
 3 After the discussions on the
 4 revisions, it has come to my attention
 5 there may be a question as to whether or
 6 not the statement about the reasonable
 7 precautions is clear. In the last sentence
 8 are still appropriate. They originally
 9 passed that in the early '70s and the
 10 specific one in question is oiling. Staff
 11 would encourage of whether those should be
 12 revised or corrected in some way or just
 13 language added.
 14 Since comments were received that
 15 resulted in recommended changes to the
 16 proposed rules, staff suggests that the
 17 Council continue the hearing on these
 18 proposed amendments until the next Air
 19 Quality Council meeting.
 20 MR. DYKE: Questions from the
 21 Council?
 22 MR. BRANECKY: Well, I would
 23 certainly be concerned about oiling, as far
 24 as any runoff concerns, stormwater runoff.
 25 I don't see any problem with just leaving

Page 9

1 those precautions listed there apply only
 2 to certain areas?
 3 MS. BRADLEY: Those precautions
 4 would only apply to sources of fugitive
 5 dust. Stock piles, coal piles, other
 6 material piles could actually be sources of
 7 fugitive dust.
 8 MR. DYKE: Is there anyone
 9 wishing to speak on this rule today?
 10 MR. GROUND: My name is Howard
 11 Brown with Central and Southwest. The new
 12 language that was added, if the DEQ
 13 determines that this rule has been or will
 14 be violated, how is the DEQ going to
 15 determine if this has been violated in the
 16 past or will be violated in the future?
 17 MS. BRADLEY: The HazMat has been
 18 primarily handled on the basis of complaint
 19 and investigation. We would use modeling
 20 and permit application information. There
 21 may be other circumstances that I'm not
 22 aware of.
 23 MR. GROUND: So if we have a
 24 complainant, that you go out there and they
 25 have dust on their vehicle or in their

1 house, are you going to take that as a
2 violation that we violated this?

3 MS. BRADLEY: We would do a
4 thorough investigation as to the source of
5 the potential fugitive dust. In some
6 cases, it will be obvious that the source
7 would have been from the facility because
8 the material is not available for -- or at
9 least not found anywhere else. In other
10 cases, it's not quite as clear and there is
11 still an element of subjectivity here. It
12 is hard to remove from this particular
13 rule.

14 MR. GROUND: And that's my point,
15 is it's extremely subjective when you are
16 going to go out and evaluate in the past
17 based on fugitive dust that maybe -- that
18 may come somewhere other than from
19 hindsight that could or may or may not have
20 been caused from that facility. I've been
21 in situations like this where a person has
22 tried to claim that it's caused from the
23 facility when it actually wasn't. In that
24 case, you actually determined that it
25 wasn't, but I can't say in either case

1 way or the other. So the sentence being
2 talked about, if the DEQ determines that's
3 it's been violated in the past, it's just
4 kind of stating the obvious fact that the
5 law says you shall not create dust. If
6 someone complains, an investigation is
7 going to be done and a determination is
8 going to be made whether or not they think
9 the complaint was right or not. Am I
10 misunderstanding something? I mean, it
11 will be in the past. I mean, it may not --
12 if it's not ongoing, still I think the DEQ
13 will have to -- or the agency will have to
14 go out and look at it and make some
15 determination, do we think the complainant
16 is right or not right?

17 MR. GROUND: I'll respond if
18 you're wanting a response.

19 MR. KILPATRICK: I'm trying to
20 understand where --

21 MR. GROUND: My response is that
22 DEQ going out and looking at dust on
23 someone's car does not necessarily mean
24 that that dust came from my facility.

25 MR. KILPATRICK: I agree with

1 they're going to go back and say in the
2 past that this would be in the past without
3 actually observing the violation.

4 MS. BRADLEY: Well, I'm not --
5 this particular rule is part of the State
6 Implementation Plan. It is the primary
7 (inaudible) specific application for
8 control of particulates. It would be
9 difficulty to eliminate all such activity
10 because we're not specifically identifying
11 processes and sources, and I don't have, at
12 present, a suggestion to remove and answer
13 -- answer your question and assure you that
14 we won't have to investigate each case.
15 But we try to be conscientious and diligent
16 and try to do a fair evaluation in the
17 investigation and determination of a
18 complaint.

19 MR. KILPATRICK: I think, if I
20 read this right, the rule says and the old
21 rule said, too, no person shall cause or
22 discharge, and full stop. Now, obviously
23 if somebody complains that dust has been
24 raised, an investigation is going to be
25 done and the agency is going to decide one

1 that.

2 MR. GROUND: If it's not observed
3 as a visible emissions leaving the property
4 line of my facility, then dust on someone
5 else's car at another location does not
6 mean it came from me, even though this
7 person may say it came from me.

8 MR. KILPATRICK: I would agree
9 with that. I don't know the investigation
10 procedures and the law that the agency
11 uses, but if I had a lot of witnesses that
12 said I saw this pile sitting on your
13 property and they all swore that during
14 this storm it was blowing over onto these
15 houses and yes, maybe the agency didn't
16 actually see it happen, I would assume that
17 that would be evidence that could be used
18 to support the finding, yes, that dust, we
19 believe, came from the property and would
20 make a determination and say you violated
21 the rule.

22 MR. GROUND: I guess part of the
23 question is, it has to cause damage,
24 interfere with the use of, or interfere
25 with the maintenance of the National

Page 14

1 Ambient Air Quality Standards?
2 MR. KILPATRICK: That would --
3 MR. GROUND: It's not dust. It
4 has to actually -- the violation actually
5 has to prove it does those things. And in
6 most cases I've ever seen it's a nuisance
7 complaint because to prove it's damaged
8 because you have dust on your vehicle,
9 (inaudible) and the interference with the
10 National Ambient Air Quality Standards and
11 that's done beforehand, not as an instance
12 of high wind or whatever it might be.
13 MS. BRADLEY: That is true, but
14 it would still be applicable to de minimis
15 facilities which are not subject to
16 permitting review.
17 MR. GROUND: I would state that
18 if you are going to look at this as a has
19 been or will be, it's going to be extremely
20 subjective and I don't see how you can
21 prove that.
22 MR. KILPATRICK: I guess the
23 point I'm making is that if you strike out
24 that sentence that you're talking about,
25 strike out the predicate, if the DEQ

Page 15

1 determines that this rule has been or will
2 be violated, drop that out, nothing
3 changes.
4 MR. GROUND: I agree with that.
5 MR. KILPATRICK: That is the
6 process. If you have the rule, it says,
7 thou shall not create dust, if somebody
8 complains you've created dust, they will do
9 an investigation and they will make a
10 determination. This is stating nothing
11 more than fact.
12 MR. GROUND: I completely agree
13 with that, it shouldn't be in there, --
14 it's giving the DEQ something to look at
15 that they're not going to be able to prove.
16 MS. BRADLEY: Well, I think Mr.
17 Kilpatrick was saying that's a restatement
18 of the first premise that there is a
19 prohibition of creating fugitive dust that
20 goes beyond the property line and does
21 those three things, interferes with the use
22 of adjacent properties, violates the
23 Ambient Air Quality Standards, or threatens
24 maintenance of an air quality maintenance
25 area. So I think what Mr. Kilpatrick is

Page 16

1 saying is it's superfluous and if you
2 strike it, it would not -- he's saying the
3 intent of that particular section would not
4 be changed at all.
5 MR. KILPATRICK: I guess what I'm
6 saying is I don't understand what you're
7 suggesting be changed. Like I say, if you
8 took that out, nothing has changed.
9 MR. GROUND: Well, I would agree
10 to strike the entire -- those two
11 sentences.
12 MR. KILPATRICK: So you want to
13 take out that you have to take reasonable
14 precautions?
15 MR. GROUND: It's already
16 included. Well, in the next section it's
17 included. That's included in my permit.
18 MR. KILPATRICK: But that
19 wouldn't apply to a lot of people that
20 don't have permits. This is, I assume, was
21 written basically as a nuisance regulation?
22 I mean, it's not intended necessarily for
23 people who have permits. It's intended to
24 protect all of us from our neighbors
25 creating a nuisance on our property.

Page 17

1 MS. WARRAM: I have a question.
2 Kim Warram with OG&E. My question pertains
3 to 29-4, I'm curious as to why they're
4 exempted and what's the basis for that
5 exemption (inaudible, several people
6 talking at the same time).
7 MS. BRADLEY: The exemption for
8 that particular section went through the
9 hearing process in the early 1970s and
10 (inaudible). So it was a special category
11 for the Council at the time being needed to
12 grant (inaudible).
13 MR. DYKE: We're not making any
14 recommended changes to that section?
15 MS. BRADLEY: No, we are not.
16 And this is part of the plan, the state
17 plan for control of particulates, that was
18 approved under SIPs and this exception was
19 satisfactory to EPA.
20 MR. DYKE: Harry.
21 MR. FREDERICK: I'm Harry
22 Frederick with Grand River Dam Authority
23 and I share some of Mr. Ground's concerns
24 about the statement you were just talking
25 about and I would -- especially the part

1 with the rule being violated. There seems
2 to a lot of subjectivity. The possibility
3 exists there that a field person could have
4 the leeway to cause a great deal of money
5 to be spent based on that subjective
6 evaluation. I would even go one step
7 further and say that that being in there,
8 (inaudible) what we said a while ago if we
9 struck that it wouldn't change it, and the
10 determination that it will be violated even
11 after the what the agency has determined
12 were reasonable precautions and we're
13 getting into a whole new area there beyond
14 what's considered reasonable precautions by
15 DEQ may not be considered -- or vice-versa
16 -- has taken reasonable precautions to
17 prevent dust, dust has not yet occurred but
18 the inspector says yes, based on my
19 observation, based on my experience, and
20 based on something, it will occur at some
21 point. So I think his concern about that.

22 MR. KILPATRICK: Well, I guess I
23 have a different thought. When I first
24 read that clause, I assumed that it was in
25 there to provide some protection to

1 him a grace period. It said reasonable
2 precautions don't happen until after DEQ
3 has made a determination.

4 MR. DYKE: Let me put Rhonda on
5 the spot. Rhonda, do you see that this
6 wording is going to change the way you go
7 about investigating the fugitive dust or
8 proving your case, when you have a dust
9 violation?

10 MS. JEFFRIES: Rhonda Jeffries
11 with the Regional Office in Tulsa. In the
12 past, fugitive dust complaints has been
13 investigated based on the basis of whether
14 or not the inspector themselves have
15 actually seen a violation. Normally, at a
16 facility you have one incidence, whether
17 it's a dust problem, it's going to happen
18 again and again and again, so these things
19 are actually based more on the inspector
20 and it is a field person that will make the
21 determination. Unfortunately, it does say
22 reasonable and that does make it difficult
23 for me as an enforcement person, what's
24 reasonable. What's reasonable to me is not
25 going to be reasonable to the facility.

1 industry or the violator in that he
2 couldn't be fined or cited until the DEQ
3 had determined he had actually done
4 something. So his past sins were basically
5 forgiven and he was only being determined
6 that in the future if you continue to have
7 that activity that caused the dust, he had
8 to take reasonable precautions. Maybe I'm
9 wrong in my assumption, I assumed that was
10 the purpose of putting that in there, is
11 that it gave some grace. You have a
12 complainant that basically says well, so
13 what, what you did in the past, you've got
14 this now that allows you that DEQ has to
15 make a determination first, before you have
16 to implement reasonable precautions. You
17 could write the rule to say that you must
18 have reasonable precautions at all times
19 and then if there is a complaint, the
20 agency can come out and fine you for that
21 past sin, because you haven't implemented
22 reasonable precautions at the very
23 beginning. So I view this language as
24 being a protection, not something the other
25 way. It will protect the violator, it gave

1 It's probably going to have another opinion
2 as far as the complainant is concerned. So
3 I do think this rule is very difficult for
4 me to enforce from my standpoint.

5 MR. DYKE: Just as it is today?

6 MR. KILPATRICK: Well, explain to
7 me, what rights does the agency have to --
8 if you go out there and someone is
9 obviously creating dust and you don't think
10 they are doing reasonable things to correct
11 it, can you issue a fine? What are the
12 bounds of what can be done to try to bring
13 that person into compliance with the law?

14 MS. JEFFRIES: In actuality, you
15 would have to be listed as a high priority
16 violator before this agency will actually
17 issue a fine or a (inaudible) violator,
18 someone who completely will not cooperate
19 towards compliance, this rule doesn't say
20 there won't be dust, all it says is that
21 the facility will take reasonable
22 precaution. There is always going to be
23 dust from certain types of operations, and
24 quarries would be one type of that kind of
25 operation. It doesn't say that there won't

1 be any dust, it says you will do something
 2 to prevent dust.
 3 MR. DYKE: Excuse me. We do
 4 issue notices of violations.
 5 MR. KILPATRICK: But do we end up
 6 actually collecting anything?
 7 MR. DYKE: I don't think we --
 8 most of them, no.
 9 MS. JEFFRIES: To my knowledge,
 10 we have not.
 11 MR. DYKE: But we have reasonable
 12 success at getting something changed or
 13 some kind of control, watering of things
 14 and control equipment installed. Nadine?
 15 MS. BARTON: Nadine Barton with
 16 CASE, and I just have to say one thing on
 17 behalf of the citizens of adjacent property
 18 owners that would be impacted by this, that
 19 this is important that they have something
 20 for those that live near kilns or landfills
 21 or quarries where in their normal process
 22 that dust is generated, to at least have
 23 some avenue to where they could complain if
 24 they are not using proper controls. And
 25 also, I would have to address the Superfund

1 to be a violation. Okay, so based on that,
 2 the will be violated part of -- DEQ will
 3 determine that it will be violated? So if
 4 they determine that there could be damage
 5 or it could interfere with the use of
 6 adjacent properties, but even if it's not,
 7 it looks like it could be a violation that
 8 in the past it wouldn't have been
 9 necessarily, based on a field person's
 10 interpretation. And I don't know how
 11 that's carried out? How do you determine
 12 if there's actually an interference with
 13 use of adjacent properties? It's almost
 14 like if there is potential damage, these
 15 things could be built in here.
 16 MS. JEFFRIES: That's where the
 17 rule directly goes back to nuisance law.
 18 We have a real difficult time enforcing
 19 that.
 20 MS. HOFFMAN: The point is, we
 21 can't do anything we can't prove. So if we
 22 can't prove that it's going to interfere
 23 with them, that won't apply. Really the
 24 reason it was written that way "will be
 25 violated" is if we have a particular

1 site up in Pitcher where they have the chat
 2 piles and they are moving that stuff around
 3 where dust is created, and that is a
 4 violation of the Clean Air Act, because of
 5 the lead and the contaminants in there.
 6 And I know of instances where they are
 7 moving that stuff around and putting it on
 8 county roads and complaints have been made,
 9 not to be disrespectful to this body of
 10 DEQ, but that has been overlooked. So it's
 11 important that we have something in place
 12 here.
 13 MR. DYKE: Debbie Perry.
 14 MS. PERRY: I have one thing for
 15 clarification. On these, there are these
 16 three criteria, a violation exists when
 17 (inaudible) originate in such a manner as
 18 to damage or interfere, those three
 19 criteria. Do they have to all three exist
 20 or is it a violation for any one of those?
 21 MS. BRADLEY: For any one of
 22 those.
 23 MS. PERRY: That was my
 24 understanding in the past, but I've been
 25 hearing that all three had to occur for it

1 (inaudible) and it shows that it's being --
 2 that the standards are being violated or
 3 it's very close to being violated, we've
 4 got a source right next to it so we know
 5 who to go to. Or let's say a source comes
 6 in with a permit application and we have
 7 them do modeling and the modeling shows
 8 that's going to happen, then we're saying
 9 that this standard will be violated, you
 10 can see, we have some sort of proof of
 11 that.
 12 Folks, we have to have proof to do
 13 things. We don't just, you know, we can't
 14 just pull these things out of thin air, you
 15 know. If we don't and you appeal it, then
 16 we lose, okay. So we have to keep in mind
 17 that even though some of this sounds
 18 subjective, that's true, but if -- but we
 19 have to have some basis for the finding of
 20 a violation and then the Court would have
 21 to agree with us. So please don't --
 22 please don't think we're out there doing
 23 things willy-nilly and that we don't have
 24 any kind of standard that we don't have to
 25 meet.

1 Also, I would just like to say that
 2 the language that's not underlined there,
 3 that already exists, okay? And I think
 4 that's very difficult language to meet. I
 5 think it's very difficult for us to prove
 6 that dust is damaging or interfering with
 7 the use of adjacent properties, I think
 8 it's very difficult for us to prove that
 9 particular sources are violating air
 10 quality standards. I'm not sure what the
 11 problem is here, because I think that this
 12 particular rule is very difficult for us to
 13 enforce the way it's written, and we
 14 haven't changed that. All we've said is if
 15 we do indeed find that there could be these
 16 violations, then we will take reasonable
 17 precautions and I don't see a problem.
 18 MR. BRANECKY: I would encourage,
 19 since we're not going to act on this today,
 20 we're going to continue this, we've got
 21 until the next meeting in August to work
 22 some of these things out, I would encourage
 23 industry to get with Cheryl and work
 24 something out that would be agreeable
 25 before the next meeting.

1 DR. GROSZ: I move that we
 2 postpone this until the August meeting?
 3 MR. BRANECKY: I have a motion.
 4 Do I have a second?
 5 MR. KILPATRICK: Second.
 6 MR. BRANECKY: A motion and a
 7 second. Any other discussion? Myrna,
 8 please call the roll.
 9 MS. BRUCE: Mr. Wilson.
 10 MR. WILSON: Aye.
 11 MS. BRUCE: Mr. Treeman.
 12 MR. TREEMAN: I abstain.
 13 MS. BRUCE: Mr. Breisch.
 14 MR. BREISCH: Yes.
 15 MS. BRUCE: Mr. Kilpatrick.
 16 MR. KILPATRICK: Aye.
 17 MS. BRUCE: Dr. Grosz.
 18 DR. GROSZ: Yes.
 19 MS. BRUCE: Mr. Branecky.
 20 MR. BRANECKY: Yes.

(PROCEEDINGS CONCLUDED)

1 MR. DYKE: Any additional
 2 comments on this particular rule at this
 3 time?
 4 MS. BARTON: Are you getting
 5 ready to adjourn?
 6 MR. DYKE: The hearing portion.
 7 MS. BARTON: I think this needs
 8 to be in the hearing portion.
 9 MR. BRANECKY: Pertaining to this
 10 rule?
 11 MS. BARTON: Pertaining to the
 12 whole thing. I would just like to thank
 13 Barbara Hoffman and I would like it to be
 14 in the hearing, since this is her last
 15 official work on all of these procedures,
 16 thank you, Barbara, for all of your work,
 17 for all the preparation of these rules and
 18 regulations, you couldn't pay me to have
 19 your job. Thank you.
 20 MS. HOFFMAN: Thank you.
 21 MR. DYKE: Thank you, Nadine.
 22 MR. BRANECKY: We have a
 23 recommendation from staff that this rule be
 24 continued until the August meeting, so I'm
 25 ready to entertain a motion.

- 1 COUNCIL MEMBERS
- 2
- 3 David Branecky, Chairman
- 4 Sharon Myers, Vice-Chair
- 5 Rick Treeman, Member
- 6 Joel Wilson, Member
- 7 Fred Grosz, Member
- 8 Gary Kilpatrick, Member
- 9 Leo Fallon, Member
- 10 Bill Breisch, Member
- 11 Eddie Terrill, Director
- 12 David Dyke, Protocol Officer
- 13 Myrna Bruce, Secretary

1 into the record.
 2 All comments pointed out the
 3 potential subjectivity in determining what
 4 constitutes reasonable precautions. Staff
 5 added a new paragraph (b), reasonable
 6 precautions, to Section 2 to better define
 7 them. Also, Subparagraph (c)(1) states
 8 that reasonable precautions to control
 9 fugitive dust emissions, that damage or
 10 interfere with the use of adjacent
 11 properties, are subject to economic and
 12 technological feasibility.

13 Two commentors objected to the
 14 phrase "or will be violated" in the second
 15 sentence of Section 2 of the June 13th
 16 draft rule. The phrase was removed from
 17 subparagraph 2(c)(1).

18 Also, staff proposes removal of the
 19 word "visible" from the phrase "visible
 20 fugitive dust emissions" because of the
 21 inherent limitations in detection methods.

22 The notice of rulemaking intent
 23 filed in June did not cover all the
 24 recommended substantive changes; therefore
 25 staff suggests that the Council continue

1 PROCEEDINGS
 2 MR. DYKE: The next item on the
 3 hearing agenda today is Item Number 4D, OAC
 4 252:100-29, Control of Fugitive Dust. Item
 5 4D, Subchapter 29, Control of Fugitive
 6 Dust. I'll call on staff member, Cheryl
 7 Bradley.
 8 MS. BRADLEY: Good morning, Mr.
 9 Chairman, Members of the Council, ladies
 10 and gentlemen. The proposed changes to
 11 Subchapter 29 will simplify and clarify the
 12 subchapter as part of the agency-wide re-
 13 wright/de-wrong initiative. Notice of the
 14 proposed rulemaking was published in the
 15 Oklahoma Register on July 17th. The Air
 16 Quality Council first considered changes to
 17 Subchapter 29 at its June 14th meeting in
 18 Tulsa. Comments were received during the
 19 hearing. Only EPA's Analysis and Inventory
 20 Section submitted comments since the last
 21 hearing, in a letter dated August 11th,
 22 2000, and received August 14th. Mr. Thomas
 23 Diggs of EPA, Chief of the Air Planning
 24 Section, stated EPA supports the proposed
 25 changes. I would like to enter this letter

1 the hearing on the proposed rule until its
 2 next meeting in October.

3 MR. BRANECKY: What you are
 4 saying, Ms. Bradley, is we cannot pass
 5 this?

6 MS. BRADLEY: I don't believe it
 7 would be in our best interest, yes.

8 MR. DYKE: Questions from the
 9 Council?

10 MS. MYERS: I think there is some
 11 confusion in some of the language under
 12 Section 2(c) (1) and (2), when it's talking
 13 about emissions beyond the property line on
 14 which the emissions originate. Are they
 15 originating on that property line or are
 16 they originating on the property itself, or
 17 are they coming across the street from
 18 somebody else and blowing back across it?
 19 It's confusing to me to read it.

20 MS. BRADLEY: So a double
 21 dependent clause situation. It was our
 22 intent that we are dealing with fugitive
 23 dust emissions that cross the property
 24 line.

25 MS. MYERS: I think I understand

1 the intent.

2 MS. BRADLEY: Right.

3 MS. MYERS: But it's very
4 confusing to try to read it to make heads
5 or tails out of it on what you're going to
6 do and why.

7 MS. BRADLEY: Did you have any
8 suggestion here?

9 MS. MYERS: No, but I will.

10 MS. BRADLEY: I propose that we
11 continue working on it.

12 MS. MYERS: That was my thought
13 on it, Cheryl.

14 MS. BRADLEY: Okay.

15 MS. MYERS: One of the other
16 questions I have under 3(2), what is
17 normal? It's talking about airborne dust
18 under normal conditions. I challenge that
19 in Oklahoma. Normal is the wind blowing,
20 and you are going to have dust generated,

21 whether it's off of dirt roads that runs
22 beside the facility or whether it's on the
23 facility. That one is real ambiguous to
24 me.

25 MR. DYKE: Is there anyone

1 wishing to speak on this rule? Questions
2 at this point? Any further questions or
3 comments from the Council?

4 MS. MYERS: I make a motion that
5 we continue this until the October hearing.

6 MR. TERRILL: Could I ask a
7 question first?

8 MR. MYERS: Sure.

9 MR. TERRILL: Did anybody have a
10 problem with us taking out visible? Is
11 nobody going to comment on that? I would
12 like to get some feedback about that. It's
13 a fairly substantial change and we've
14 kicked that around in-house, and I'm not
15 sure which is better. We don't have -- if
16 you haven't really noticed that, you need
17 to think about it before we come back next
18 time and pass this rule. But I don't know
19 what's better, to have visible in there or
20 not. We're struggling with that in-house.
21 So if there is anyone out there that's
22 going to be affected by this rule, you
23 better look at it because it's somewhat
24 different than we've done in the past.

25 MR. WILSON: Eddie, I'll register

1 my concern about the word "visible" being
2 taken out, for the record.

3 MS. BRADLEY: Since I didn't
4 include our logic on this, I anticipated we
5 would have some discussion and I really
6 didn't want to slant it one way or the
7 other. We had a meeting in-house of our
8 enforcement staff, as well as,
9 environmental complaints and local services
10 unit. There are limitations in the method
11 that we've currently used, Method 25.
12 Specifically, certain very finely divided
13 particles that are non-reflective in
14 nature, are not visible, using that method.
15 So it has created a problem in trying to
16 pursue an enforcement action or actually --
17 there was a controversy, is there fugitive
18 dust or not. You can see it on surfaces,
19 but yet we could not see it leaving the
20 property.

21 Also, we have a circumstance, what
22 if those emissions originate at night? For
23 one thing, it's difficult to get an
24 inspector there. And I was given a
25 scenario that maybe they can shine the

1 carlights in a certain way. It's just not
2 possible to see it if the problem is
3 occurring at night. So that was the logic
4 that staff presented to me in having the
5 word "visible". So those were the
6 circumstances where it created a problem
7 for us and as Mr. Terrill mentioned, we
8 certainly would like to know what's the
9 other side of the issue. I would like to
10 get some feedback on that.

11 MS. MYERS: From my understanding
12 of all your visible emissions observations,
13 whether it be method 22 or method 9, it
14 certainly involves a positioning of the sun
15 that we would have to be able to see.

16 MR. TERRILL: You can get
17 certified to do visible emissions at night.
18 The problem with it is it's very expensive
19 and there is only certain places in the
20 United States that you can get that. We
21 just never have been able to justify doing
22 it. We've had a couple of people in the
23 past that's certified to read VEs at night,
24 they've left, and because of the expense
25 we've just never had them recertified. So

1 we try to deal with it where we don't have
2 to get ourselves in a situation where we
3 don't have to deal with those emissions at
4 night.

5 My concern about this rule is we
6 need to be able to address situations that
7 are definite public health problems that
8 are going to affect people living around a
9 site that's creating a problem. I don't
10 want to get in a position where we have to
11 referee neighbor disputes or we have to
12 referee business disputes. Because there
13 are certain nuisance dust issues -- if a
14 facility is doing all they can do, there
15 may be zoning problems we can't do anything
16 about, and I don't want to get ourselves in
17 a position where we can't -- if we've got a
18 rule, we need to be able to understand it,
19 the regulated communities to understand it,
20 and we're going to enforce it. So that's
21 the reason I want to make sure we're clear
22 about visible or not, how are we going to
23 enforce that, what everything means so when
24 we come out and finally pass this rule,
25 everybody understands what it means,

1 because we're going to enforce it.

2 MR. SHANDY: If I could make a
3 comment. My name is Don Shandy. I'm a
4 little concerned with the omission of that
5 language because it (inaudible) objective
6 standard. And I think the Department has
7 the authority under the statutes to address
8 any issue related to air pollution. So I
9 think the authority is still there, even if
10 you don't go out and observe, for example,
11 at night and you can't see it. You go out
12 there the next day and you see somebody is
13 being dusted, even if you can't do a VE, or
14 it happened at night, you could still
15 address the problem. I mean, the authority
16 is there. I agree with what Eddie is
17 saying. If you omit that language, I think
18 you are really throwing that door open to
19 see the agency get pulled into more of a
20 refereeing role that you are referring to,
21 between neighbors that for whatever reason
22 cannot get along. So I'm very hesitant to
23 remove, what I see now, as an objective
24 standard that people can look at.

25 MS. BRADLEY: Staff also added

1 some additional language, because we did
2 foresee getting caught in the middle and
3 really not having any means to reach a
4 compromise. If you'll notice, we did add
5 that controls would be required under those
6 circumstances but they would be subject to
7 economic and technical feasibility, which
8 we do not have a test now. But that's not
9 a perfect solution because there is no
10 definitive test for visibility. But I just
11 wanted to make the statement, that's what
12 our thinking was in recommending that
13 language.

14 MS. PRATT: Sylvia Pratt, again.
15 On this issue, I am acquainted with a woman
16 that lives somewhere south of the Norman
17 area, there's either a perlite or
18 vermiculite factory down there that that
19 neighbors have had problems with for years,
20 and years and years. They've had problems
21 with this -- they think they've had
22 problems with fugitive emissions for years
23 and every time they've come to the DEQ
24 about what they perceived as a problem, DEQ
25 has told them that they don't have any

1 visual emissions at night, and since they
2 can't see them actually coming out of
3 there, they can't do anything about them.
4 So I'm wondering if the removal of the word
5 "visible" might give the DEQ the authority
6 to help these people out in this situation.
7 I figure if there is one situation like
8 that, there are probably more. So the
9 question is, are we here to protect the
10 corporations or are we here to protect air
11 quality. And which way, the language in or
12 the language out, which would better serve
13 air quality? And, you know, just looking
14 at it on the surface, it looks like
15 removing the word "visible" might help some
16 of these people who are having -- have been
17 having problems for years.

18 MR. KILPATRICK: I would ask the
19 question, Eddie, are you aware of this
20 situation?

21 MR. TERRILL: Very much so.

22 MR. KILPATRICK: Has our response
23 been that we don't have --

24 MR. TERRILL: No. Our response
25 has been we've done portable sampling,

1 we've done fixed sampling with our high-
 2 volume samplers. The problem with this is
 3 a zoning issue, pure and simple. It's too
 4 close to the neighborhood and a little bit
 5 of this stuff goes a long ways. I think we
 6 can address -- I'm not sure if "visible"
 7 was out, we could address this any better
 8 one way or the other. Because the way
 9 their permit is written, they can't have
 10 any emissions leave the building. If a
 11 fugitive -- if you can see it, that's a
 12 violation, whether it's day or night, it
 13 doesn't make any difference. And we know
 14 because of where this is, periodically if
 15 they have an upset or a malfunction, it's
 16 going to dust that neighborhood. And we've
 17 struggled with that. I don't know what we
 18 can do differently, even if it was visible
 19 out of the regulation, to help these
 20 people. The facility, for the most part --
 21 it was a bad facility when we first got
 22 involved. They just weren't doing good
 23 housekeeping. The housekeeping, with this
 24 facility, is the major issue, anyway.
 25 They've got to be conscious of what they're

1 doing and how they handle the material,
 2 because it's just like talcum powder. I
 3 mean, it just goes everywhere if it spills.
 4 And it's a minor source. I think it's got
 5 10 or 15 tons a year of emissions and we
 6 probably spend more time with that minor
 7 source than we do with some of our major
 8 sources. We do keep an eye on them. But
 9 she does bring up a good point, we don't
 10 lose that. I don't want to lose anything
 11 that would allow us to do our job, which is
 12 to protect the public health. I'm glad you
 13 brought that point up because those are the
 14 kind of things we need to think about as we
 15 look at this rule.
 16 MR. WILSON: Eddie, does removal
 17 of the word "visible" enable the DEQ to
 18 treat this matter any differently?
 19 MR. TERRILL: The matter at hand?
 20 MR. WILSON: Yes.
 21 MR. TERRILL: We've kicked that
 22 around in-house whether or not it would
 23 provide us a better tool to handle it and
 24 we're about at a 50-50 split. I mean, if
 25 that wasn't in there -- we know -- you can

1 go out there and look and you can tell
 2 where they've had a problem. The question
 3 is, how can you address that or can you
 4 address it in the rules to fix it to where
 5 it doesn't happen. The proximity of this
 6 industry or this business to the
 7 neighborhood as such, they can have any
 8 kind of a slight problem that would still
 9 be within their permit limits and any other
 10 limits that's going to affect people in the
 11 backside of this neighborhood. And it kind
 12 of comes and goes. We haven't had a lot of
 13 complaints relative to this situation
 14 except for one or two people who don't even
 15 live in the neighborhood. But we've met
 16 with the city council on this. I mean,
 17 this is -- we met with them just about a
 18 month and a half ago, two months ago, three
 19 months ago, and they've hired an outside
 20 consultant to take a look at what we've
 21 done to see if we've missed anything. I
 22 don't know that we would get anything one
 23 way or the other if "visible" is in there
 24 or not, because we would still treat the
 25 facility in the same manner that we have in

1 the past.
 2 MR. WILSON: Well, it seems to me
 3 that at some point in time, this dust has
 4 to be visible. And if it's deposition on a
 5 car surface or windows that sooner or
 6 later, it's visible. And my problem with
 7 the word visible is that if you don't have
 8 it in there, then it includes what is
 9 invisible. To tell you the truth, I don't
 10 know how to deal with that.
 11 MR. DOUGHTY: Eddie, let me
 12 address -- I think his question was, would
 13 this help us at this facility? I've been
 14 involved with the enforcement on this
 15 facility since, I don't know, five, six,
 16 seven, eight years. We've been after them
 17 under two or three different orders,
 18 consent orders, and we fined them something
 19 like \$3,500.00 one time and \$1,500.00
 20 another time, there is a NSPS standard that
 21 applies to that facility, they have a
 22 visible emission of seven percent. EPA has
 23 allowed them to crank it down to three
 24 percent in lieu of doing a stack test. We
 25 have required them to do everything that I

1 know of that is reasonable to get that
2 facility into compliance. Under our
3 consent order, we require them to go in and
4 do house cleaning, they cleaned all the
5 rafters. There are no visibles allowed
6 from that building except from the stack,
7 three percent. They sweep down and wash
8 down their driveways, they put on bag
9 houses. If we would shut them down, then
10 we would have no emissions. But short of
11 that, I don't know what else we could
12 require them to do that they could
13 economically do.

14 Now, granted, I'm not an engineer, I
15 don't know everything they can do, but I do
16 know that they have done a tremendous
17 amount out there. You can go out there and
18 look at the facility, we don't see anything
19 when we go out. Granted, they also bring
20 trucks in that load and unload there.
21 Occasionally they'll have a spill or a hose
22 will come off. Short of not -- of
23 prohibiting any kind of upsets or any kind
24 of emissions or anything, I'm not aware and
25 I don't know if the staff is aware of

1 anything else that we can do.
2 MR. SHANDY: If I could make a
3 comment, Don Shandy again. I agree that
4 this is a valid comment back here. Again,
5 I'm very hesitant to get away from some
6 objective standard that people could look
7 at. Getting back to the fact that the
8 Department already has the authority -- in
9 the Department's defense, I've had to deal
10 with an issue like this where I literally
11 had an inspector who couldn't see any
12 visible emissions but brought a piece of
13 tape and said are these fibers coming from
14 this plant? And if they are, this is a
15 condition of air pollution, even though
16 they couldn't see them. And I've had to
17 bang heads with Dennis and consent orders
18 so, again, the authority is there. I think
19 we're getting on a slippery slope if you
20 move away from that objective standard
21 because, again, the statutory authority is
22 with the Department and I know for a fact
23 that the Department has used that authority
24 in the past, even though I may raise my
25 hand and say no VEs, no VEs, you can't do

1 this. And it was Mr. Doughty that pointed
2 me right square to the statute and said, do
3 you want to argue about it now? And I
4 shouted and said, no. So there is the
5 authority to address the question.

6 MR. BREISCH: Dennis?

7 MR. DOUGHTY: Yes.

8 MR. BREISCH: Are there laws or
9 is there law outside our rules that might
10 take over in a case like this? A nuisance
11 law or something?

12 MR. DOUGHTY: Certainly. We have
13 a nuisance law in the State of Oklahoma
14 that any, I believe, any public official or
15 public officer has the ability to pursue,
16 such as your attorney general, all of the
17 cities, to my knowledge, have the ability
18 and the authority to enforce nuisance,
19 particularly, public nuisance statutes.
20 Part of the problem you get into is to get
21 a city to spend the money and the time that
22 it takes to prove and prosecute a nuisance.
23 I mean, that's a legal decision they have
24 to make with their attorney. If it's
25 feasible for them to pursue something like

1 this. I wouldn't, you know, I wouldn't
2 propose to make that determination for
3 them, that's something they have to make.
4 But yes, the answer is there is a state
5 statute that allows pursuing a public
6 nuisance.

7 Public nuisance, of course, affects
8 more than just one individual. If you only
9 have one individual, then that's probably
10 not a public nuisance. It would be a
11 private nuisance and then they have a
12 private right to do that.

13 But it's been my experience that
14 private individuals don't want to spend
15 their money to file these lawsuits, they
16 want somebody in the state to do it for
17 them. So I guess that answers your
18 question.

19 And what Mr. Shandy was talking
20 about is under one of our other rules, we
21 have a rule that says something to the
22 effect that you shall not allow any
23 material to be admitted that would cause a
24 nuisance or, basically, would accomplish
25 the same thing that we're proposing here.

1 So there is the authority in one of the
2 other rules and that's what we've pursued
3 against his client. In the case of his
4 client, the proof that the material came
5 from that facility is not particularly
6 difficult. In some instances, proving that
7 the material is causing the problem came
8 directly and 100 percent from that
9 particular facility, may be another matter.

10 MS. PRATT: I did have one
11 question, just for my own clarity. When
12 we're talking visible emissions, are we
13 talking visible airborne emissions or are
14 you talking about when there is powder on
15 top of a car or something like that?

16 MS. BRADLEY: Therein lies the
17 problem. Although the rule doesn't
18 specifically state that, I believe I
19 misspoke in referencing Method 25.
20 Actually Method 22, it was our practice to
21 use the best available method for
22 determining if it was fugitive dust. And
23 it required an inspector to see dust
24 leaving the property, so it had to be seen.
25 If there are other methods that might be

1 employed, which we have, if the material is
2 unique to the facility, then there should
3 be a direct link between the material that
4 left the property and that facility.

5 However, let's say it's a quarry and you
6 have similar material on the road or on
7 another surface, that material would not
8 necessarily be as unique and it would be
9 much more difficult for us to say it
10 originated from practices at the facility
11 and it was truly impacting the continuous
12 properties.

13 MS. MYERS: And you are
14 absolutely correct on that. I work in a
15 cement plant. We have a block plant next
16 to us that makes concrete blocks. They
17 don't have dust collectors on their silo,
18 they blow material out. They've got an
19 unpaved parking area that the trucks go in
20 and out, but if there is a complaint from
21 the neighborhood, it's always our fault.
22 We have a stack. They know what our
23 production is when, truly, it's our
24 neighbor. So it gets into a problem of
25 trying to say, what dust came from that

1 facility. And even the dirt roads in the
2 Ada area around our facility stir up more
3 dust than we do most of the time. But if
4 there is any dust that's airborne in the
5 Ada area, even if it's east of Ada, and
6 we're on the west side, then it becomes a
7 problem.

8 MR. WILSON: So it sounds to me
9 like we're talking about the definition of
10 visible being as determined when the dust
11 is airborne?

12 MS. BRADLEY: That is correct.

13 MS. MYERS: Well, if that
14 standard stays in there, then you have some
15 directional guidance as well. If you're
16 seeing the dust blow from that property to
17 that neighborhood, then you have some kind
18 of conclusion using that standard.

19 MS. BRADLEY: Yes, and not by
20 eliminating -- we don't want to get into a
21 position of doing particle analysis. It
22 has to say that these are your particles
23 because they are like other materials that
24 you are using. We don't -- it's very
25 expensive and to my knowledge, we may not

1 be capable of doing it in-house. We don't
2 want to go that far, when there is a
3 question of a source.

4 MR. DYKE: I think what Dennis
5 said is this is not the only rule that we
6 can apply to this situation, but that's the
7 way we have applied this particular rule.

8 MS. PRATT: One last comment.
9 After speaking with people that live in
10 this area, they've written me for some
11 strange reason. Time after time, you know,
12 they have felt nobody will take the trouble
13 to complain anymore because they're not
14 getting any -- they don't feel like they're
15 getting any resolutions on their
16 complaints, they feel like they're wasting
17 their time. So that may be why your
18 complaints are going down.

19 MR. DYKE: Anything further from
20 the public on this particular rule? From
21 Council?

22 MR. BRANECKY: Well, it sounds to
23 me like we've got plenty of thought from
24 the discussion we've had today, things to
25 be thinking about. If you have comments,

1 please get those to DEQ prior to our next
 2 meeting or come to our next meeting for
 3 further discussion. From what I
 4 understand, we're really unable to pass
 5 this today. And I think before this
 6 discussion got started, Ms. Myers made a
 7 motion to continue and we got a little
 8 sidetracked. So we do have a motion to
 9 continue. I'm looking for a second to that
 10 motion.

11 MR. WILSON: I'll second.
 12 MR. BRANECKY: I've got a motion
 13 to continue this to the next meeting and a
 14 second. Is there any further discussion by
 15 the Council?

16 MS. BRUCE: Mr. Wilson.
 17 MR. WILSON: Yes.
 18 MS. BRUCE: Dr. Grosz.
 19 DR. GROSZ: Yes.
 20 MS. BRUCE: Mr. Kilpatrick.
 21 MR. KILPATRICK: Yes.
 22 MS. BRUCE: Mr. Breisch.
 23 MR. BREISCH: Aye.
 24 MS. BRUCE: Ms. Myers.
 25 MS. MYERS: Yes.

Page 4

1 (c)(1) would include requirements
 2 for fugitive dust emissions that damage or
 3 interfere with the use of adjacent
 4 properties and Subparagraph (c)(2) would
 5 include the requirements for fugitive dust
 6 emissions that cause air quality standards
 7 to be exceeded or interfere with the
 8 maintenance of air quality standards. The
 9 provision for the DEQ to require the owner
 10 or operator of a fugitive dust emissions
 11 source to implement economically and
 12 technologically feasible controls, when
 13 those emissions damage or interfere with
 14 the use of adjacent property, would be
 15 added to Subparagraph (c)(1). The proposed
 16 revocation of OAC 252:100-29-5, Variance,
 17 is due to its redundancy with the Clean Air
 18 Act at 27A O.S. Supplement 1999 Section 2-
 19 5-109.
 20 Notice for today's hearing was
 21 published in the Oklahoma Register on
 22 September 15th. This is the third hearing
 23 on amendments to Subchapter 29.
 24 Staff has received no additional
 25 comments on the proposed rules since the

Page 3

1 PROCEEDINGS
 2 MR. DYKE: The next item on the
 3 agenda is 5D, OAC 252:100-29, Control of
 4 Fugitive Dust. I'll call on staff member,
 5 Cheryl Bradley.
 6 MS. BRADLEY: Good morning. Mr.
 7 Chairman, Members of the Council, ladies
 8 and gentlemen, the proposed amendments to
 9 Subchapter 29, Control of Fugitive Dust,
 10 will clarify and simplify the language as
 11 part of the agency-wide re-right/de-wrong
 12 initiative. The existing provisions of OAC
 13 252:100-29-2 would be divided into
 14 Paragraphs (a) (b) and (c) instead of (a)
 15 and (b). The examples of reasonable
 16 precautions in Paragraph (a) would be
 17 deleted and a new Paragraph (b), Reasonable
 18 Precautions, added. The existing
 19 Subparagraph (b), Emissions Boundaries,
 20 would be renumbered OAC 252:100-29-2(c) and
 21 divided into Subparagraphs (c)(1) and (2).
 22 It has been proposed that the word
 23 "visible" would be deleted from the phrase
 24 "visible fugitive dust emissions", wherever
 25 it appears in Paragraph 2(c). Subparagraph

Page 5

1 last hearing, but will suggest changes
 2 to the September 15th, 2000, draft of the
 3 rule. These changes are included in the
 4 draft dated October 13th, 2000. Copies
 5 have been distributed to the Council and
 6 additional copies are available on the
 7 sign-in table.
 8 After careful consideration of the
 9 comments received at the last Council
 10 meeting and the absence of any compelling
 11 reasons to proceed with the deletion of the
 12 word "visible" from the phrase "visible
 13 fugitive dust emissions" in Paragraphs OAC
 14 252:100-29-2(c)(1) and (c)(2), staff
 15 suggests that the word visible be retained.
 16 Also, staff proposes two additional changes
 17 to Paragraphs (c)(1) and (c)(2) to make
 18 them more understandable. The phrase "of
 19 the property" should be added after the
 20 words "beyond the property line".
 21 Staff suggests that the proposed
 22 rules be recommended to the Environmental
 23 Quality Board for permanent adoption.
 24 MR. DYKE: Questions and
 25 discussion from the Council?

Page 6

1 MR. BRANECKY: In the packet I've
 2 got, that was given to me, the last
 3 sentence says for emergency and permanent.
 4 Are we just permanent or emergency?
 5 MS. BRADLEY: Only permanent.
 6 MR. DYKE: Any questions or
 7 comments from the public? Bob?
 8 MR. KELLOGG: My name is Bob
 9 Kellogg. I just have a question. I
 10 apologize for being so late into this
 11 particular rule, but as I read the
 12 prohibitions in Paragraph (a) and the
 13 prohibitions in Paragraph (c), I'm trying
 14 to understand how they apply. By reading
 15 Paragraph (a), it seems to say, "No air
 16 pollution will be created anywhere". And
 17 then Paragraph (c)(1) indicates that
 18 neither can it go off-site, but if it does
 19 go off-site, controls can be implemented
 20 subject to economic and technological
 21 feasibility. But if it violates an air
 22 quality standard, there is no limitation on
 23 the amount of expenditure that's needed to
 24 constitute a reasonable benefit. So I'm
 25 not sure I understand the difference

Page 7

1 between (c)(1) and (2) and how it pertains
 2 to Paragraph (a).
 3 My other question is in regard to
 4 Rule 29-3. This proposes to strike the
 5 word "executive". I'm wondering if this
 6 then would refer to the Director of the Air
 7 Quality Division -- to you, Eddie, or if
 8 this still would require something by Mark
 9 Coleman, the Executive Director. Thanks.
 10 I'll wait to hear your response.
 11 MS. BRADLEY: I'll begin with
 12 your last comment, Mr. Kellogg. It would,
 13 in fact, refer to the Air Quality Division
 14 Director, who at this time is Eddie
 15 Terrill, as opposed to the Executive
 16 Director. This is to make it consistent
 17 with the overall re-write/de-wrong actions
 18 that we have taken so far in the other
 19 subchapters.
 20 With regards to 100-29-2(c), I
 21 believe your understanding is correct. If,
 22 in fact, a person -- well, I'll begin with
 23 (a), the prohibitions, the intent is to
 24 require all sources of fugitive dust to be
 25 handled in a proper manner to prevent

Page 8

1 fugitive dust or air pollution. We do not
 2 require controls until it crosses the
 3 emission boundary -- the property boundary.
 4 And then (c)(1), if it creates a
 5 nuisance, then there is an economic and
 6 technological feasibility test for those
 7 controls. If, however, it violates an air
 8 quality standard, these fugitive dust
 9 emissions result in an air quality standard
 10 violation, we are not allowed to put that
 11 same economic and technological feasibility
 12 control check. That is consistent with
 13 federal standards.
 14 MR. BRANECKY: So, Ms. Bradley,
 15 you're saying if I have an operation on my
 16 facility that creates some dust and the
 17 dust stays on my facility, if I don't do
 18 anything to prohibit that dust from
 19 becoming airborne, I'm in violation of this
 20 rule?
 21 MS. BRADLEY: As to -- you're in
 22 violation, potentially in violation of
 23 Section (a). Whether we would take any
 24 action, since it's not crossing the
 25 boundary -- and typically our inspections

Page 9

1 - our investigators determine if the
 2 emissions cross the boundary to initiate a
 3 complaint, then I don't think that there
 4 would be any action taken by our agency,
 5 unless such fugitive dust resulted in water
 6 pollution. So there could be an action
 7 where the dust would then be carried off
 8 with surface water runoff. That would be a
 9 different type of complaint, entirely.
 10 MR. BRANECKY: But technically I
 11 would be in violation of this rule?
 12 MS. BRADLEY: Yes, technically,
 13 you would be violation. After speaking
 14 with our counsel, she pointed out that our
 15 agency's role is to minimize pollution
 16 wherever possible. And the original rule
 17 did include a prohibition requiring some
 18 control of fugitive dust or just to
 19 minimize the amount of pollution that would
 20 be potentially in the atmosphere. But as a
 21 means for enforcing it, we have implemented
 22 the Paragraph (c), and that would truly be
 23 the means that I think we would see any
 24 enforcement actions taken.
 25 MR. BRANECKY: Is there a

6971

1 definition of air pollution?
2 MS. BRADLEY: Yes, there is in
3 the Clean Air Act and it's very broad, I
4 believe.

5 MS. DIZIKES: May I read it for
6 you from the Clean Air Act?

7 MR. DYKE: Please identify
8 yourself.

9 MS. DIZIKES: I'm Pam Dizikes,
10 and I'm counsel. This is in section --
11 27A, Section 2-5-104(3).

12 MS. MYERS: Pam, could you speak
13 up, please?

14 MS. DIZIKES: I'll try.

15 MS. MYERS: Microphone,
16 microphone.

17 MR. TERRILL: Thank you, Sharon.

18 MS. DIZIKES: Let me designate
19 the section again. It is 27A of the
20 Oklahoma Statutes, Section 2-5-104, and
21 it's number 3, and the definition of air
22 pollution. "Air pollution means the
23 presence in the outdoor atmosphere of one
24 or more air contaminants in sufficient
25 quantities and of such characteristics and

1 but I think we would have difficulty
2 getting EPA to approve that, because
3 they're going to say that's probably a
4 relaxation of the SIP. And as a practical
5 matter, I would prefer just to leave it as
6 it is, because we're not going to enforce
7 it anyway unless it leaves the property
8 line. But your point is well taken.

9 MR. DYKE: Howard, do you have
10 comments?

11 MR. GROUND: My name is Howard
12 Ground. I'm speaking on behalf of the
13 Public Service Company -- company of
14 American Electric and Power. I just want
15 to say, I appreciate the work you've done.
16 I think it's come a long way to clarify
17 from my comments that were presented in
18 June or July -- June meeting. I think
19 you've done a very good job. I know it's
20 hard to make them completely clear to
21 everyone, but I think this has gone a long
22 way. I really appreciate the work you have
23 done.

24 MR. DYKE: Thank you.

25 MR. BREISCH: David, are we

1 duration as tend to be or may be injurious
2 to human, plant, or animal life or to
3 property or which interfere with the
4 comfortable enjoyment of life and property,
5 excluding, however, all conditions
6 pertaining to employer/employee relations.

7 MR. TERRILL: And as a practical
8 matter, I'm not aware of us in any instance
9 enforcing this rule on any situation that
10 leaves the property line. That's just a
11 practical matter.

12 MR. BRANECKY: Well, I guess I
13 can understand that, but we're all going to
14 be gone one day and somebody may pick this
15 up and start enforcing it to the letter of
16 the law and then what's going to happen?

17 MR. TERRILL: You know, truly
18 what's going to happen?

19 MR. BRANECKY: You and I won't
20 care.

21 MR. TERRILL: They'll go the
22 Legislature and complain and we'll change
23 it. I mean, that would be stupid for us to
24 do that. I mean, that's just not common
25 sense. I understand what you're saying,

1 saying that fugitive dust if it becomes
2 airborne, and be a pollutant within the
3 site, would not be regulated?

4 MR. BRANECKY: If I have a
5 facility that has fugitive dust that stayed
6 on my property, I would be in violation of
7 this rule.

8 MR. BREISCH: I'm sorry, you
9 might be right, I just didn't read it like
10 that.

11 MR. BRANECKY: It says, "No
12 person shall cause or allow any fugitive
13 dust -- source to be operated or any
14 substances to be handled, transported, or
15 stored, or any structure constructed,
16 altered, with the knowledge (Reading from
17 the rules) to the extent that such
18 operation or activity may enable fugitive
19 dust to become airborne and result in air
20 pollution without taking reasonable
21 precautions to minimize or prevent
22 pollution".

23 It doesn't say anything about
24 visible, it doesn't say anything about
25 where, it doesn't have to go off the

1 property, it doesn't say that. So anywhere
 2 you can do that, whether it's visible or
 3 not, if it causes fugitive dust or air
 4 pollution, then you're in violation.
 5 MR. WILSON: What would we lose
 6 if we just took out (a)?
 7 MR. TERRILL: I don't know. But
 8 if we're going to take it out, we're going
 9 to have to continue it, because I don't
 10 want to risk losing something we haven't
 11 thought through.
 12 MS. BEAVERS: I'm Julia Beavers
 13 with OG&E. I'm an industrial hygienist, so
 14 my question is on this, on the property and
 15 air pollution, it sounds like, for
 16 employees on a property -- which are not
 17 covered or they're excluded from air
 18 pollution definition, but they are covered
 19 under OSHA rules -- DEQ levels are lower
 20 than employee exposure levels, so relative
 21 to the employer, you might not be exceeding
 22 the hazard but then an employee could feel
 23 like you are over the environmental level
 24 and still have a complaint. Am I making
 25 sense?

1 MS. BRADLEY: It is my
 2 understanding that the intent is to
 3 encourage best management practices for any
 4 potential fugitive dust source, hence we
 5 had the prohibitions in (a). The
 6 determination, if we have a violation and
 7 it presents a public nuisance or a
 8 potential violation of the air quality
 9 standards, are addressed in (c). I would
 10 like to see a retention in some manner of a
 11 requirement or encouragement, if nothing
 12 less, for best management practices for the
 13 control of fugitive dust, on property or
 14 off property. I think that was the
 15 original intent of the rule. If the
 16 Council feels that it is not feasible, we
 17 can certainly rewrite that. But I do
 18 believe that was the intent.
 19 MR. TERRILL: I would also say I
 20 would be a little bit cautious about
 21 changing this until we know for sure what's
 22 going to happen with our PM fine situation.
 23 We think we'll be okay relative to that,
 24 but it's still out and the data is a little
 25 bit sketchy. We may have a PM problem, as

1 Because they complain then to DEQ
 2 and (inaudible) maintaining the OSHA
 3 limits.
 4 MR. BRANECKY: So you're saying
 5 you could be in compliance with OSHA but be
 6 in violation of this rule?
 7 MS. BEAVERS: Right. They
 8 wouldn't be employees then, would they be
 9 public?
 10 DR. SHEEDY: Excuse me, Joyce
 11 Sheedy. The definition does exclude all
 12 conditions pertaining to employer/employee
 13 relations. So if you worked for OG&E, for
 14 instance, then this would exclude any
 15 problems you might have with OG&E about the
 16 Federal --
 17 MS. BEAVERS: Okay. Probably
 18 during a work day they would be considered
 19 employees.
 20 DR. SHEEDY: Yes. And I think
 21 we're assuming that the public isn't
 22 generally just running rampant over your
 23 property.
 24 MR. DYKE: Cheryl, you might need
 25 to come to the microphone. Sorry.

1 well. If we do, that's going to create a
 2 whole new ballgame relative to fugitive
 3 dust. So you might want to think about
 4 that, as well.
 5 MR. DYKE: Bob Kellogg.
 6 MR. KELLOGG: Thank you, David.
 7 Cheryl, your comment raised another
 8 question in my mind, and Eddie's, too. If
 9 Paragraph (a) is not going to be enforced,
 10 why would you want to adopt a rule that you
 11 don't intend to enforce?
 12 And second, the distinction in
 13 Paragraph (c) about off-site air
 14 contaminants. Paragraph 1 deals with --
 15 and you called it, Cheryl, a public
 16 nuisance? And Paragraph 2 deals with
 17 violation of an air quality standard. I
 18 always thought that the DEQ regulated
 19 violations of the Air Quality Standard and
 20 follows the Air Quality Standards. And
 21 Paragraph 1 would suggest that you're
 22 getting involved with nuisance matters, not
 23 just air quality standard violations.
 24 And furthermore, it wouldn't be a
 25 public nuisance, necessarily, put a private

6973

1 nuisance. And so the way I read the words
2 is that anything that interferes with the
3 use adjacent properties. And how would
4 that be determined? And it seems to me --
5 I wonder as a private litigator, if I would
6 first have to go the DEQ and get a finding
7 that it was a violation of this rule to
8 determine it was a private nuisance before
9 I went to the courthouse.

10 So it's a little bit confusing to me
11 from that perspective. I would be more
12 than happy to work with the staff and the
13 Council in future action on this rule, if
14 that was your desire.

15 But I'm a little confused about
16 getting involved in the nuisance arena,
17 that is not necessarily a violation of an
18 air quality standard. Thank you.

19 MR. DYKE: Pam, we're going to
20 need you at the microphone.

21 MS. DIZIKES: Bob, we're trying
22 to use this particular Subchapter 29 as
23 somewhat of a continuum. Your questions
24 about nuisance, first of all, I believe
25 that the remedies we have are additional to

1 nuisance laws, they are not a limitation on
2 nuisance laws.

3 In Subsection (a), what we're
4 calling the Best Management Practices
5 Section, you might note that the
6 prohibitions that are established, unlike a
7 nuisance standard, do not include any type
8 of injunctive relief, any kind of stopping
9 the activity itself, but are merely an
10 enabler so that the Department can require
11 certain reasonable precautions to be taken.
12 We can't tell people to stop, but to try to
13 minimize operations at their site that will
14 cause dust.

15 It's been mentioned to me, as well,
16 that the current rules do not provide any
17 specific regulation for particles of
18 greater than 10 micron size. Anything
19 larger than PM10 is not specifically
20 addressed. So this is the one way that the
21 Department can address those types of
22 problems at a site. I believe that our
23 inspectors feel that it's fairly important
24 if they see a dusting condition at a
25 property, to be able to require that

1 precautions are taken to minimize the dust,
2 and that's all that is enabled through
3 Subparagraph (a). It is through
4 Subparagraph (b) where we're talking about
5 the actual standards and the violation of
6 Air Quality Rules where we move into our
7 ability to actually stop the condition, and
8 there, we're talking about crossing a
9 property line.

10 MS. MYERS: Pam, excuse me, I
11 think you mentioned in the first part of
12 your response to Mr. Kellogg, minimizing
13 operations. I think you actually meant
14 minimize generation of dust.

15 MS. DIZIKES: Minimize generation
16 of dust. You are right.

17 MS. MYERS: Thank you.

18 MS. DIZIKES: Bob, is that a
19 sufficient explanation?

20 MR. KELLOGG: Well, I understand
21 what you're saying but I'm still concerned
22 that DEQ would be getting involved in
23 nuisance actions that are not violations of
24 the air pollution standards. And I don't
25 know if that is a change from the existing

1 rule. I can't really tell.

2 MS. DIZIKES: Bob, this is not a
3 change from the existing rule.

4 MR. TERRILL: No. Let me address
5 that. I'm a little bit surprised that Mr.
6 Kellogg doesn't know this. We've been
7 doing this for 25 years, and I can tell you
8 that we're going to be very resistant in
9 changing this portion of the rule because
10 we do -- just because you don't bust the
11 NAAQS doesn't mean you're not creating a
12 public health problem. We get a lot of
13 complaints that are justifiable that we
14 need to address under this rule. I think
15 the environmental community would need to
16 know that we're looking at doing away with
17 this before we relax that. So I would be
18 very opposed to changing this portion of
19 the rule, since we've been doing it, as far
20 as I know, for 25 years or longer.

21 DR. SHEEDY: This is Joyce
22 Sheedy. I do believe, as you said, Eddie,
23 we use Section (a). I can think of one or
24 two companies where we have used that to
25 require some housekeeping that would keep

1 their dust off of other peoples' property,
 2 although, you might not see it leave.
 3 MR. DYKE: Yes, ma'am.
 4 MS. PERRY: Debra Perry,
 5 (inaudible) Environmental. I have a
 6 concern, too, that Mr. Branecky raised
 7 about if you have a source of fugitive dust
 8 on your site and you don't take precautions
 9 to control them, that could be considered a
 10 violation. And then when I heard Eddie say
 11 -- and Cheryl, that we're not going to
 12 enforce on that unless it is an off-
 13 property problem, or there is a nuisance
 14 off-property. My concern is, facilities
 15 who are now having to certify compliance
 16 that are Title V, and they're in compliance
 17 with all applicable requirements, they
 18 don't have -- there's nothing in there that
 19 says what the state is not going to enforce
 20 on it. So if that's a violation, anytime
 21 they generate fugitive dust on site, if
 22 they don't control it, it's a violation.
 23 They would have to certify on Title V that
 24 they are not in compliance with that rule
 25 to really be fully certifying accurately.

1 (a) there, first of all, the rule says that
 2 this dust may cause pollution. So one of
 3 the things we're going to have to show is
 4 that whatever source of dust we have here
 5 may be a source of air pollution. I
 6 visualize this as a situation perhaps in
 7 the middle of a city, like, Lawton or close
 8 to Lawton, or someplace that may be close
 9 to a NAAQS violation, where without
 10 actually getting a violation of the NAAQS
 11 we could allege that there was a problem
 12 with your dust and we need you to take
 13 these reasonable precautions.
 14 The second kicker here is reasonable
 15 precautions, and that we can't just require
 16 anything to be done to abate this
 17 pollution, seeing as how there is no actual
 18 violation of the NAAQS. I've seen
 19 facilities way out in the middle of nowhere
 20 that had a big plume of dust coming up, and
 21 it's not leaving the property line, there
 22 is no NAAQS violation or even potential
 23 violation off of the property line. So
 24 whether we could even require reasonable
 25 precautions in that situation I think is

1 So, I guess that's my concern.
 2 DR. SHEEDY: Perhaps reasonable
 3 precaution in some cases would be nothing.
 4 Because it's not causing any damage, it's
 5 not hurting people off-property, or
 6 property off-property, or other property.
 7 So perhaps reasonable precaution in those
 8 cases would be virtually, no action.
 9 MR. DYKE: Yes, ma'am, go ahead.
 10 MS. PERRY: I guess that's not
 11 one of the options listed -- not limited to
 12 those.
 13 DR. SHEEDY: Yeah, I think that's
 14 correct. You would say what's reasonable
 15 based on cost and based on damage, and
 16 whether it's getting off-property, being a
 17 nuisance or some other thing, I would
 18 assume.
 19 MR. DYKE: Dennis.
 20 MR. DOUGHTY: Would you like for
 21 me to address this from another
 22 perspective? My name is Dennis Doughty,
 23 legal counsel for the Air Quality Division.
 24 Let me tell you how I think this would be
 25 interpreted and enforced. Under Section

1 certainly in doubt. So I don't think that
 2 you can assume that you're going to be in
 3 violation simply because you're creating
 4 some fugitive dust.
 5 On the emission boundaries here, to
 6 me this says that -- and I'm not sure I
 7 want to use the word nuisance, although
 8 that's fairly descriptive, I'm not sure the
 9 elements of a public or private nuisance
 10 would require the same proof that this
 11 (c)(1) would require. But we have to be
 12 able to see these visible emissions and we
 13 have to be able to prove that they are
 14 interfering with the neighbors. And then
 15 we can only require those controls that are
 16 economically feasible. So it doesn't mean
 17 that we're going to shut somebody down,
 18 simply because they're creating some dust.
 19 The (c)(2) to me says that if you're a
 20 facility that's causing a violation of the
 21 NAAQS, we can stop it. And I think that's
 22 important because if you can't go against a
 23 facility that you know is violating the
 24 NAAQS, the next step is that you have to
 25 deal with EPA and then that you have a

6975

1 NAAQS violation. EPA then requires you to
 2 go in and put controls on all of the
 3 sources in that particular area. So this
 4 would, in effect, allow us to sort of nip
 5 this thing in the bud without having to
 6 implement the nonattainment provisions,
 7 going against all the people who create the
 8 fugitive dust in that particular area.
 9 That's the way I see this thing operating.
 10 MR. DYKE: Thanks, Dennis. Kim.
 11 MS. WARRAM: I have a comment.
 12 Kim Warram with OG&E. I totally agree with
 13 Dennis in his analysis of the
 14 interpretation. But there is one
 15 precaution that facilities should be aware
 16 of, and that is, that if you are in a
 17 situation where you have to show that you
 18 are in compliance with the NAAQS, it
 19 typically begins at the property boundary,
 20 when you do modeling, it's the off-site
 21 impact. Unless, or until a facility has a
 22 road that allows public access through
 23 their property, and then the modeling
 24 begins at that road, on your property. So
 25 that's just a precaution for facilities.

1 MS. BRUCE: Mr. Branecky.
 2 MR. BRANECKY: Yes.

1 MR. DYKE: Thank you. Anything
 2 further from the public? Discussion, or
 3 questions from the Council?
 4 MR. BRANECKY: Now, it's time to
 5 decide what we want to do. I'll entertain
 6 a motion.
 7 MR. WILSON: David, I'll make a
 8 motion that we pass this thing as per the
 9 October 13th, 2000 draft.
 10 MR. FALLON: I'll second that.
 11 MR. BRANECKY: I have a motion
 12 and a second. Any further discussion by
 13 the Council? Myrna.
 14 MS. BRUCE: Dr. Grosz.
 15 DR. GROSZ: Aye.
 16 MS. BRUCE: Mr. Fallon.
 17 MR. FALLON: Yes.
 18 MS. BRUCE: Mr. Breisch.
 19 MR. BREISCH: Yes.
 20 MS. BRUCE: Ms. Myers.
 21 MS. MYERS: Aye.
 22 MS. BRUCE: Mr. Wilson.
 23 MR. WILSON: Aye.
 24 MS. BRUCE: Mr. Treeman.
 25 MR. TREEMAN: Abstain.

1
 2 CERTIFICATE
 3 STATE OF OKLAHOMA)
 4 COUNTY OF OKLAHOMA) ss:
 5 I, CHRISTY A. MYERS, Certified
 6 Shorthand Reporter in and for the State of
 7 Oklahoma, do hereby certify that the above
 8 proceedings is the truth, the whole truth,
 9 and nothing but the truth; that the
 10 foregoing proceedings were taken by me in
 11 shorthand and thereafter transcribed under
 12 my direction; that said proceedings were
 13 taken on the 18th day of October, 2000, at
 14 Oklahoma City, Oklahoma; and that I am
 15 neither attorney for nor relative of any of
 16 said parties, nor otherwise interested in
 17 said action.
 18 IN WITNESS WHEREOF, I have hereunto
 19 set my hand and official seal on this, the
 20 30th day of October, 2000.

OAC 252:100-31 SIP Revision

CHAPTER 100: AIR POLLUTION CONTROL

SUBCHAPTER 31. CONTROL OF EMISSION OF SULFUR COMPOUNDS

Section

252:100-31-25. Sulfur oxides [AMENDED]

PART 5. NEW EQUIPMENT STANDARDS

252:100-31-25. Sulfur oxides

(a) Sulfuric acid plants.

(1) Emission limit.

(A) A person operating a new sulfuric acid plant shall not cause, suffer, or allow the discharge into the atmosphere of:

(i) sulfur dioxide in the effluent in excess of four (4) pounds per ton of 100 percent sulfuric acid produced (2 kg per metric ton), maximum two-hour average;

(ii) sulfuric acid mist which is in excess of 0.15 pound per ton of 100 percent sulfuric acid produced (75 grams per metric ton), maximum two-hour average, expressed in H_2SO_4 ; or

(iii) a visible emission equivalent to an opacity of five (5) percent.

(B) These emission limits shall apply to only those sulfuric acid plants producing sulfuric acid by the contact process by burning elemental sulfur, alkylation acid, hydrogen sulfide, organic sulfides and mercaptans or acid sludge.

(2) Emission monitoring.

(A) All sulfuric acid plants regulated under this subsection shall have installed, calibrated, maintained and operated, an instrument for continuously monitoring and recording emissions of sulfur dioxide. The instrument installed and used pursuant to this subsection shall be calibrated following the Oklahoma test procedure requirements using the performance specifications 2 and 3 of 40 CFR Part 60, Appendix B.

(B) The owner or operator of any sulfuric acid plant subject to provisions of this paragraph shall maintain a file of all measurements required including compliance status records and excess emissions measurements. These records and measurements shall be retained for at least two years following the date of such measurement, and made available for inspection by the Air Quality Division or its representative during normal business hours.

(b) Fuel-burning equipment.

(1) Emission limit.

(A) No person shall cause, suffer or allow the discharge into the atmosphere of sulfur oxides measured as sulfur dioxide from new gas fuel-burning equipment in excess of 0.2 pound per million BTU heat input (0.36 gram per million gram-calories), maximum three-hour average.

(B) No person shall cause, suffer or allow the discharge into the atmosphere of sulfur oxides measured as sulfur dioxide from new liquid fuel-burning equipment

in excess of 0.8 pound per million BTU heat input (1.4 grams per million gram-calories), maximum three-hour average.

(C) No person shall cause, suffer or allow the discharge into the atmosphere of sulfur oxides measured as sulfur dioxide from new solid fuel-burning equipment in excess of 1.2 pounds per million BTU heat input (2.20 grams per million gram-calories), maximum three-hour average.

(D) If a solid fuel sampling and analysis method is used to determine emission compliance, averaging time will be determined on a 24 hour basis.

(E) Where different fuels are burned simultaneously in any combination, the applicable standard shall be determined by proration unless a secondary fuel is used in de minimis quantities (less than 5% of total BTU input annually).

Compliance shall be determined using the formula (effective July 1, 1972),

$$(y(.80) + z(1.2)) / y + z$$

where y is the percent of total heat input derived from liquid fuel and z is the percent of total heat input derived from solid fuel.

(2) Emission and fuel monitoring.

(A) There shall be installed, calibrated, maintained, and operated, in any new fuel-burning equipment with a rated heat input of 250 million BTU/hr. or more emission monitoring instruments as follows:

(i) a photoelectric or other type smoke detector and recorder, except where gaseous fuel is the only fuel burned; and,

(ii) an instrument for continuously monitoring and recording sulfur dioxide emissions, except where gaseous fuel containing less than 0.1 percent sulfur is the only fuel burned or a solid fuel sampling and analysis method is used to determine emission compliance.

(B) Instruments installed and used for monitoring shall be calibrated following performance specifications 2 and 3 of 40 CFR Part 60, Appendix B.

(C) The sulfur content of solid fuels as burned shall be determined in accordance with previous methods as approved by the Executive Director or in accordance with Method 19 of 40 CFR Part 60, Appendix A.

(D) The owner or operator of any fuel-burning equipment with a rated heat input of 250 million BTU/hr. or over shall maintain a file of all measurements required in subparagraphs (A), (B), or (C) of this paragraph, including compliance status records and excess emissions measurements. These records and measurements shall be retained for at least two (2) years following the date of such measurements, and made available for inspection by the Air Quality Division or its representatives during normal business hours.

(c) Gas sweetening and sulfur recovery plants.

(1) Natural gas processing.

(A) As specified in 252:100-31-26(a)(1)(B), a new gas sweetening plant is allowed direct oxidation of hydrogen sulfide to sulfur dioxide without a prior sulfur removal step when the exhaust gas contains no more than 100 pounds per hour of sulfur dioxide. When the sulfur content of an acid-gas stream from a new gas sweetening unit is greater than this allowed emission but less than or equal to

5.0 long tons per day (LT/D) of sulfur, a sulfur dioxide emission reduction efficiency of at least 75.0 percent shall be achieved by means of a sulfur recovery facility prior to the discharge of gases from the system.

(B) When the sulfur content of an acid-gas stream from a new gas sweetening unit is greater than 5.0 LT/D but less than or equal to 150 LT/D, a sulfur dioxide emission reduction efficiency shall be achieved by means of a sulfur recovery facility such that

$$Z = 92.34 (X^{0.00774})$$

where Z is the minimum emission reduction efficiency required at all times and X is the sulfur feed rate, i.e., the hydrogen sulfide in the acid gas from the sweetening unit, expressed as long tons per day of sulfur rounded to one decimal place.

(C) When the sulfur content of an acid-gas stream from a new gas sweetening unit is greater than 150 LT/D but less than or equal to 1500 LT/D, a sulfur dioxide emission reduction efficiency shall be achieved by means of a sulfur recovery facility such that

$$Z = 88.78 (X^{0.0156})$$

where Z and X are defined as in (B) of this subsection.

(D) When the sulfur content of an acid-gas stream from a new gas sweetening unit is greater than 1500 LT/D, a minimum sulfur dioxide reduction efficiency of 99.5 percent shall be required.

(2) **Other processes.** The emission of sulfur oxides, calculated as sulfur dioxide, from a new sulfur recovery plant operating in conjunction with other processes is limited to 20 pounds per ton of sulfur processed, maximum two-hour average rates consistent with the emission reduction efficiencies calculated based on equivalent sulfur feed rate in long tons per day (LT/D) in the same manner as for natural gas processing in (c) (1) of this section.

(3) **Emission monitoring.** For facilities regulated under this subsection emission monitoring may be required as determined by the Executive Director in accordance with Subchapter 45 of this Chapter.

(d) **Nonferrous smelters.**

(1) **Emission limit.** The emission of sulfur oxides, calculated as sulfur dioxide, from new nonferrous smelters is restricted according to the following equations as a maximum two-hour average, where X equals total sulfur fed to smelter (lb/hr) and Y equals sulfur dioxide emissions (lb/hr):

(A) Copper Smelters: $Y = 0.2 (X)$

(B) Zinc Smelters: $Y = 0.564 (X^{0.85})$

(C) Lead Smelters: $Y = 0.98 (X^{0.77})$

(2) **Emission monitoring.**

(A) All new nonferrous smelters regulated under this subsection shall have installed, calibrated, maintained and operated an instrument for continuously monitoring and recording emissions of sulfur dioxide following performance

specifications 2 and 3 of 40 CFR Part 60, Appendix B and following the quality assurance procedure in 40 CFR Part 60, Appendix F.

(B) The owner or operator of any new nonferrous smelter subject to provisions of this subparagraph shall maintain a file of all measurements required, including compliance status records and excess emissions measurements. These records and measurements shall be retained for at least two years following the date of such measurements, and made available for inspection by the Air Quality Division or its representative during normal business hours.

(e) **Paper pulp mill.**

(1) **Emission limit.** The emission of sulfur oxides, calculated as sulfur dioxide, from the blow pits, washer vents, storage tanks, digester relief, and recovery furnace of any new paper pulp mill shall not exceed eighteen pounds per air-dried ton of pulp produced, maximum two-hour average.

(2) **Emission monitoring.**

(A) All new paper pulp mills shall have installed, calibrated, maintained and operated instruments for continuously monitoring and recording emissions of sulfur dioxide from the recovery system gas-cleaning equipment and other locations as required by the Executive Director. The instruments installed and used pursuant to this Section shall have a confidence level of at least 95 percent and be accurate within +20 percent and shall be calibrated following performance specifications 2 and 3 of 40 CFR Part 60, Appendix B and following the quality assurance procedure in 40 CFR Part 60, Appendix F.

(B) The owner or operator of any new paper pulp mill subject to provisions of this subparagraph shall maintain files of all measurements required, including compliance status records and excess emissions measurements. These records and measurements shall be retained for at least two years following the date of such measurements, and made available for inspection by the Air Quality Division or its representative during normal business hours.

Oklahoma Register

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking.

Proposed Rules: OAC 252:100-24, Control of Emissions from Grain Elevators [NEW]; OAC 252:100-31, Control of Emissions of Sulfur Compounds [AMENDED].

Summary: Subchapter 252:100-24 would subject all new and existing grain facilities to state permitting requirements, and establish industry-specific emission and control standards. Industry proposals would include seed, feed, and milling operations.

The intent of the revision in 252:100-31 is to resolve any discrepancies and inequities as applied to all sulfur recovery units in the state, and to provide that emissions standards are consistent with, and not more stringent than the New Source Performance Standards.

AUTHORITY: Environmental Quality Board; 27A O.S.Supp. 1993, § 2-5-106 (Laws 1993, c. 145, § 43).

COMMENT PERIOD: Written comments will be accepted prior to and during the regularly scheduled meeting of the Oklahoma Air Quality Council. The meeting will be held Tuesday, June 14, 1994, in the Brown Room, Lincoln Plaza Office Complex, 4545 N. Lincoln Blvd, Oklahoma City 73105. Briefing at 9:30 AM; meeting and hearing at 1:00 PM. Oral comments will be accepted during the hearing; written comments on the permit provisions may be mailed to the contact person listed below.

PUBLIC HEARINGS: Tuesday, June 14, in the Brown Room of the Lincoln Plaza Office Complex, as above.

COPIES OF PROPOSED RULES: Copies of the proposed rules may be obtained from the Department of Environmental Quality, Air Quality Division, Suite 250 of the Lincoln Plaza Office Complex, 4545 N. Lincoln Blvd., Oklahoma City, OK 73105.

RULE IMPACT STATEMENT: A rule impact statement will be prepared, prior to the final action by the Environmental Quality Board. The rule impact statement may be obtained from the Air Quality Division, at the above address.

CONTACT PERSON: (405) 271-5220, Lincoln Plaza Office Complex, 4545 N. Lincoln Blvd, Oklahoma City 73105.

Contact person for Subchapter 252:100-24 - Mr. Doyle McWhirter.

Contact person for Subchapter 252:100-31 - Dr. Joyce Sheedy.

[Okla. Reg. 94-601; filed April 8, 1994]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT and EMERGENCY rulemaking.
Proposed Rules: OAC 252:100-31, Control of Emissions of Sulfur Compounds; and OAC 252:100-8, Operating Permits (Part 70) [AMENDED].

Summary: The intent of the revision to Subchapter 31 is to resolve any discrepancies and inequities as applied to all sulfur recovery units in the state, and to provide that emissions standards are consistent with, and not more stringent than the New Source Performance Standards. The result would be a relaxation of standards applicable to new sulfur recovery plants operated in conjunction with processes other than natural gas processing.

The revision to Subchapter 8 has two parts. The first incorporates by reference 40 CFR Part 72, the Federal rules regarding acid rain permits. The second revision is to adjust the fees for Part 70 sources. Part 70 sources are proposed to be subject to these new fee requirements on January 1, 1995. The owners or operator of a Part 70 source will be required to pay annual fees that are sufficient to cover the Part 70 program costs.

AUTHORITY: Environmental Quality Board; 27A O.S. Supp. 1993, § 2-5-106.

COMMENT PERIOD: Written comments will be accepted prior to and during the regularly scheduled meeting of the Oklahoma Air Quality Council. The meeting will be held Tuesday, August 9, 1994, in the Auditorium, Tulsa City-County Health Department, 4616 E. 15th St., Tulsa, 74112. Briefing at 9:30 AM; meeting and hearing at 1:00 PM. Oral comments will be accepted during the hearing; written comments on the proposed change may be mailed to Air Quality Division, 4545 N. Lincoln Blvd., Suite 250, Oklahoma City, OK 73105, c/o Dr. Joyce Sheedy for on Subchapter 31, or c/o Mr. Scott Thomas for Subchapter 8.

PUBLIC HEARINGS: Tuesday, August 9, in the Tulsa City-County Health Department Auditorium, as above.

COPIES OF PROPOSED RULES: Copies of the proposed rules may be obtained from the Department of Environmental Quality, Air Quality Division, Suite 250 of the Lincoln Plaza Office Complex, 4545 N. Lincoln Blvd., Oklahoma City, OK 73105.

RULE IMPACT STATEMENT: A rule impact statement will be prepared, prior to the final action by the Environmental Quality Board. The rule impact statement may be obtained from the Air Quality Division, at the above address.

CONTACT PERSON: Subchapter 31: Dr. Joyce Sheedy (405) 271-5220.
Subchapter 8: Mr. Scott Thomas (405) 271-5220.

{Okla. Reg. 94-1103; filed June 9, 1994}

6991

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT and EMERGENCY rulemaking.

Proposed Rules: OAC 252:100-31, Control of Emissions of Sulfur Compounds [AMENDED]

Summary: The intent of the revision is to resolve any discrepancies and inequities as applied to all new sulfur recovery units in the State. The result would be a relaxation of standards applicable to new sulfur recovery plants operated in conjunction with processes other than natural gas processing.

AUTHORITY: Environmental Quality Board; 27A O.S. Supp. 1993, §§ 2-2-101; 2-5-1-1 et seq.

COMMENT PERIOD: Interested persons may informally discuss the proposed rules with the Air Quality Program or may, before November 30, 1994, submit written comments to the Department of Environmental Quality, c/o Robert Kellogg, 1000 N.E. 10th Street, Oklahoma City, OK 73117-1212. Comments will be accepted during the Environmental Quality Board meeting scheduled for 9:30 a.m., Wednesday, November 30, 1994, Council and Court Room, City of Stroud, Administration Building, 220 W. Second Street, Stroud, OK.

PUBLIC HEARINGS: Wednesday, November 30, 1994, at 9:30 a.m., in Stroud, Oklahoma, as noted above.

COPIES OF PROPOSED RULES: Copies of the proposed rules may be obtained from the Department of Environmental Quality, Air Quality Program, 4545 North Lincoln, Suite 250, Oklahoma City, OK 73105-3483.

RULE IMPACT STATEMENT: A rule impact statement will be prepared prior to the final action by the Environmental Quality Board. The rule impact statement may be obtained from the Air Quality Service at the above address.

CONTACT PERSON: Mr. Scott Thomas, (405) 271-5220.

ADDITIONAL INFORMATION: These rules were recommended by the Air Quality Council pursuant to public hearings on June 14, and August 9, 1994.

[Okla. Reg. 94-1401; filed October 6, 1994]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL

RULE MAKING ACTION: PERMANENT final adoption.

RULES: OAC 252:100-31, Control of Emissions of Sulfur Compounds
252:100-31-25. Sulfur oxides [AMENDED]

AUTHORITY: Environmental Quality Board; 27A O.S. Supp. 1993,
§§ 2-2-101, 2-5-101 et seq.

DATES:

Comment period: October 6, 1994 through November 30, 1994.

Public hearing: November 30, 1994.

Adoption: November 30, 1994.

Submitted to Governor: December 9, 1994.

Submitted to House: December 9, 1994.

Submitted Senate: December 9, 1994.

Gubernatorial approval: January 5, 1995.

Legislative approval: Failure of the Legislature to disapprove
the rules resulted in approval on March 29, 1995.

Final adoption: March 29, 1995.

Effective: July 1, 1995.

SUPERSEDED EMERGENCY ACTIONS:

Superseded rules: OAC 252:100-31, Control of Emissions of Sulfur
Compounds, 252:100-31-25. Sulfur oxides [AMENDED].

Gubernatorial approval: January 5, 1995.

Register publication: 12 Ok Reg 739.

Docket number: 95-4.

INCORPORATIONS BY REFERENCE: None

ANALYSIS: The intent of this revision is to resolve any
discrepancies and inequities as applied to all new sulfur recovery
units in the State. The result would be a relaxation of standards
applicable to new sulfur recovery plants operated in conjunction
with other processing.

SUMMARY OF DIFFERENCES FROM ANALOGOUS FEDERAL RULES:

The revision to Subchapter 31 provides for the emissions standards
to be consistent with, and not more stringent than the Federal
Standards. The Air Quality Council recommended the permanent
adoption of this revision at their meeting on August 9, 1994. The
Air Quality Council began receiving comments on this new rule on
June 9, 1994, and also considered this rule in a public meeting on
June 14, 1994. CONTACT PERSON: Mr. Scott Thomas, DEQ Air Quality
Division, Suite 250, Lincoln Plaza Office Complex, 4545 N. Lincoln
Blvd. Oklahoma City, Oklahoma 73105. (405) 271-5220

PURSUANT TO THE ACTIONS DESCRIBED HEREIN, THE FOLLOWING RULES ARE
CONSIDERED FINALLY ADOPTED AS SET FORTH IN 75 O.S., SECTION
308.1(A), WITH AN EFFECTIVE DATE OF JULY 1, 1995.

CHAPTER 100. AIR POLLUTION CONTROL
SUBCHAPTER 31. CONTROL OF EMISSION OF SULFUR COMPOUNDS
PART 5. NEW EQUIPMENT STANDARDS

252:100-31-25. Sulfur oxides

(a) Sulfuric acid plants.

(1) Emission limit.

(A) A person operating a new sulfuric acid plant shall not
cause, suffer, or allow the discharge into the atmosphere of:

(i) sulfur dioxide in the effluent in excess of four (4)
pounds per ton of 100 percent sulfuric acid produced (2 kg
per metric ton), maximum two-hour average;

(ii) sulfuric acid mist which is in excess of 0.15 pound
per ton of 100 percent sulfuric acid produced (75 grams
per metric ton), maximum two-hour average, expressed as
H₂SO₄; or

(iii) a visible emission equivalent to an opacity of five
(5) percent.

(B) These emission limits shall apply to only those sulfuric
acid plants producing sulfuric acid by the contact process by
burning elemental sulfur, alkylation acid, hydrogen sulfide,
organic sulfides and mercaptans or acid sludge.

(2) Emission monitoring.

(A) All sulfuric acid plants regulated under this subsection
shall have installed, calibrated, maintained and operated, an
instrument for continuously monitoring and recording emissions
of sulfur dioxide. The instrument installed and used pursuant
to this subsection shall be calibrated following the Oklahoma
test procedure requirements using the performance
specifications 2 and 3 of 40 CFR Part 60, Appendix B.

(B) The owner or operator of any sulfuric acid plant subject
to provisions of this paragraph shall maintain a file of all
measurements required including compliance status records and
excess emissions measurements. These records and measurements
shall be retained for at least two years following the date of
such measurement, and made available for inspection by the Air
Quality Division or its representative during normal
business hours.

(b) Fuel-burning equipment.

(1) Emission limit.

(A) No person shall cause, suffer or allow the discharge into
the atmosphere of sulfur oxides measured as sulfur dioxide
from new gas fuel-burning equipment in excess of 0.2 pound per
million BTU heat input (0.36 gram per million gram-calories),
maximum three-hour average.

(B) No person shall cause, suffer or allow the discharge into
the atmosphere of sulfur oxides measured as sulfur dioxide
from new liquid fuel-burning equipment in excess of 0.8 pound
per million BTU heat input (1.4 grams per million
gram-calories), maximum three-hour average.

(C) No person shall cause, suffer or allow the discharge into
the atmosphere of sulfur oxides measured as sulfur dioxide
from new solid fuel-burning equipment in excess of 1.2 pounds

per million BTU heat input (2.20 grams per million gram-calories), maximum three-hour average.

(D) If a solid fuel sampling and analysis method is used to determine emission compliance, averaging time will be determined on a 24 hour basis.

(E) Where different fuels are burned simultaneously in any combination, the applicable standard shall be determined by proration unless a secondary fuel is used in de minimis quantities (less than 5% of total BTU input annually). Compliance shall be determined using the formula (effective July 1, 1972),

$$(y(.80) + z(1.2)) / y + z$$

where y is the percent of total heat input derived from liquid fuel and z is the percent of total heat input derived from solid fuel.

(2) Emission and fuel monitoring.

(A) There shall be installed, calibrated, maintained, and operated, in any new fuel-burning equipment with a rated heat input of 250 million BTU/hr. or more emission monitoring instruments as follows:

(i) a photoelectric or other type smoke detector and recorder, except where gaseous fuel is the only fuel burned; and,

(ii) an instrument for continuously monitoring and recording sulfur dioxide emissions, except where gaseous fuel containing less than 0.1 percent sulfur is the only fuel burned or a solid fuel sampling and analysis method is used to determine emission compliance.

(B) Instruments installed and used for monitoring shall be calibrated following performance specifications 2 and 3 of 40 CFR Part 60, Appendix B.

(C) The sulfur content of solid fuels as burned shall be determined in accordance with previous methods as approved by the Executive Director or in accordance with Method 19 of 40 CFR Part 60, Appendix A.

(D) The owner or operator of any fuel-burning equipment with a rated heat input of 250 million BTU/hr. or over shall maintain a file of all measurements required in subparagraphs (A), (B), or (C) of this paragraph, including compliance status records and excess emissions measurements. These records and measurements shall be retained for at least two

(2) years following the date of such measurements, and made available for inspection by the Air Quality Division or its representatives during normal business hours.

(c) Gas sweetening and sulfur recovery plants.

(1) Natural gas processing.

(A) As specified in 252:100-31-26(a)(1)(B), a new gas sweetening plant is allowed direct oxidation of hydrogen sulfide to sulfur dioxide without a prior sulfur removal step when the exhaust gas contains no more than 100 pounds per hour of sulfur dioxide. When the sulfur content of an acid-gas stream from a new gas sweetening unit is greater than this

allowed emission but less than or equal to 5.0 long tons per day (LT/D) of sulfur, a sulfur dioxide emission reduction efficiency of at least 75.0 percent shall be achieved by means of a sulfur recovery facility prior to the discharge of gases from the system.

(B) When the sulfur content of an acid-gas stream from a new gas sweetening unit is greater than 5.0 LT/D but less than or equal to 150 LT/D, a sulfur dioxide emission reduction efficiency shall be achieved by means of a sulfur recovery facility such that

$$Z = 92.34 (X^{0.00774})$$

where Z is the minimum emission reduction efficiency required at all times and X is the sulfur feed rate, i.e., the hydrogen sulfide in the acid gas from the sweetening unit, expressed as long tons per day of sulfur rounded to one decimal place.

(C) When the sulfur content of an acid-gas stream from a new gas sweetening unit is greater than 150 LT/D but less than or equal to 1500 LT/D, a sulfur dioxide emission reduction efficiency shall be achieved by means of a sulfur recovery facility such that

$$Z = 88.78 (X^{0.0134})$$

where Z and X are defined as in (B) of this subsection.

(D) When the sulfur content of an acid-gas stream from a new gas sweetening unit is greater than 1500 LT/D, a minimum sulfur dioxide reduction efficiency of 99.5 percent shall be required.

(2) Other processes. The emission of sulfur oxides, calculated as sulfur dioxide, from a new sulfur recovery plant operating in conjunction with other processes is limited to ~~20 pounds per ton of sulfur processed, maximum two-hour averages consistent with the emission reduction efficiencies calculated based on equivalent sulfur feed rate in long tons per day (LT/D) in the same manner as for natural gas processing in (c) (1) of this section.~~

(3) Emission monitoring. For facilities regulated under this subsection emission monitoring may be required as determined by the Executive Director in accordance with Subchapter 45 of this Chapter.

(d) Nonferrous smelters.

(1) Emission limit. The emission of sulfur oxides, calculated as sulfur dioxide, from new nonferrous smelters is restricted according to the following equations as a maximum two-hour average, where X equals total sulfur fed to smelter (lb/hr) and Y equals sulfur dioxide emissions (lb/hr):

- (A) Copper Smelters: $Y = 0.2 (X)$
- (B) Zinc Smelters: $Y = 0.564 (X^{0.05})$
- (C) Lead Smelters: $Y = 0.98 (X^{0.17})$

(2) Emission monitoring.

(A) All new nonferrous smelters regulated under this subsection shall have installed, calibrated, maintained and

6997

operated an instrument for continuously monitoring and recording emissions of sulfur dioxide following performance specifications 2 and 3 of 40 CFR Part 60, Appendix B and following the quality assurance procedure in 40 CFR Part 60, Appendix F.

(B) The owner or operator of any new nonferrous smelter subject to provisions of this subparagraph shall maintain a file of all measurements required, including compliance status records and excess emissions measurements. These records and measurements shall be retained for at least two years following the date of such measurements, and made available for inspection by the Air Quality Division or its representative during normal business hours.

(e) Paper pulp mill.

(1) Emission limit. The emission of sulfur oxides, calculated as sulfur dioxide, from the blow pits, washer vents, storage tanks, digester relief, and recovery furnace of any new paper pulp mill shall not exceed eighteen pounds per air-dried ton of pulp produced, maximum two-hour average.

(2) Emission monitoring.

(A) All new paper pulp mills shall have installed, calibrated, maintained and operated instruments for continuously monitoring and recording emissions of sulfur dioxide from the recovery system gas-cleaning equipment and other locations as required by the Executive Director. The instruments installed and used pursuant to this Section shall have a confidence level of at least 95 percent and be accurate within +20 percent and shall be calibrated following performance specifications 2 and 3 of 40 CFR Part 60, Appendix B and following the quality assurance procedure in 40 CFR Part 60, Appendix F.

(B) The owner or operator of any new paper pulp mill subject to provisions of this subparagraph shall maintain files of all measurements required, including compliance status records and excess emissions measurements. These records and measurements shall be retained for at least two years following the date of such measurements, and made available for inspection by the Air Quality Division or its representative during normal business hours.

[Okla. Reg. 95-614; filed April 26, 1995]

Air Quality Council

AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
REGULAR MEETING
AIR QUALITY COUNCIL

A Public Meeting: June 14, 1994, 9:30 A.M.
Lincoln Plaza Office Complex
BROWN ROOM
4545 N. Lincoln Boulevard
Oklahoma City, OK

BRIEFING

1. **Call to Order** **Chairman**

2. **Division Director's Report** **Director**
 Informational - An update of current events
 and AQS activities
 - A. **Title V status - Contractor -**
 Legislation - Staffing - Other
 1. **Discussion by Council/Public**

3. **Public Rulemaking Hearings - (Briefing)**
 - A. **OAC 252:100-24** **McWhirter**
 Control of Emissions From Grain Elevators
 1. **Discussion by Council/Public**

 - B. **OAC 252:100-31** **Thomas/Sheedy**
 Control of Emissions of Sulfur Compounds
 1. **Discussion by Council/Public**

4. **Adjournment**
 The meeting reconvenes at 1:00 P.M.

Should you desire to attend but have a disability and need an accommodation, please notify our Department three days in advance at (405) 271-5226.

MEMORANDUM

DATE: June 3, 1994

TO: AIR QUALITY COUNCIL

FROM: Scott Thomas, Program Director
Analysis and Inventory Section
AIR QUALITY DIVISION *ST*

SUBJECT: SUGGESTED REVISIONS TO OAC 252:100-31
CONTROL OF EMISSIONS OF SULFUR COMPOUNDS

Please find enclosed the staff's suggested revisions to Oklahoma Air Pollution Control Rule, "Control of Emissions of Sulfur Compounds". The proposed changes are being made to Section 25(c)(2) of the rule (see page 3) and are indicated by underlining new language and striking out existing language.

Also enclosed is a memo from Dr. Joyce Sheedy to Larry Byrum briefly explaining the rationale for the proposed change. This revision has been advertised to be brought to the public hearing before the Council at its June 14 meeting.

OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY

AIR QUALITY DIVISION

MEMORANDUM DATE: March 24, 1994

TO: Larry D. Byrum, Director
 Air Quality Division

FROM: Joyce D. Sheedy, Ph. D.
 Acting Director
 Permits and Compliance Section

SUBJ: OAC 252:100-31, Control of Emission of Sulfur Compounds

It has been pointed out that facilities have been unable to comply with OAC 252:100-31-25(c) (2) which sets limit for sulfur dioxide from a new sulfur recovery plant operating in conjunction with other processes. At least two companies have gone through the onerous process of obtaining the alternative emissions reductions permits provided for in Subchapter 11.

It is possible that this problem could be solved if section (c) (2) were changed to read as follows:

(2) Other processes. The emission of sulfur oxides, calculated as sulfur dioxide, from a new sulfur recovery plant operating in conjunction with other processes is limited to rates consistent with the emission reduction efficiencies calculated based on equivalent sulfur feed rate in long tons per day (LT/D) in the same manner as for natural gas processing in section (c) (1) above.

In reality this may not represent a significant relaxation of the rule, since most sulfur recovery plants operating in conjunction with other processes must be permitted by the alternative emissions standard which results in essentially equivalent emissions limits.

Please let me know if you think the suggested language has any merit.

**SUBCHAPTER 31. CONTROL OF EMISSION OF SULFUR COMPOUNDS
PART 1. GENERAL PROVISIONS**

252:100-31-1. Purpose

The purpose of this Subchapter is to control emissions of sulfur compounds from stationary sources in order to prevent the Oklahoma Air Quality Standard from being exceeded and insure that degradation of the present level of air quality in Oklahoma does not occur.

252:100-31-2. Definitions

The following words or terms, when used in this subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Black liquor solids" means the dry weight of the solids which enter the recovery furnace in the black liquor.

"Digester system" means each continuous digester or each batch digester used for the cooking of wood in white liquor, and associated flash tank(s), below tank(s), chip steamer(s), and condenser(s).

"Existing source" means an air contaminant source which is in being on the effective date of the applicable section.

"Lime kiln" means a unit used to calcine lime mud, which consists primarily of calcium carbonate, into quicklime, which is calcium oxide.

"Multiple-effect evaporator system" means the multiple-effect evaporators and associated condenser(s) and hotwell(s) used to concentrate the spent cooking liquid that is separated from the pulp(black liquor).

"New installation (source or equipment)" means an air contaminant source which is not in being on the effective date of the applicable section and any existing source which is altered, replaced, or rebuilt after the effective date of the rules such that the amount of air contaminant emissions is increased.

"Recovery furnace" means either a straight kraft recovery furnace or a cross recovery furnace, and includes the direct-contact evaporator for a direct contact furnace.

"Smelt dissolving tank" means a vessel used for dissolving the smelt collected from the recovery furnace.

"Total reduced sulfur" is the sum of the compounds hydrogen sulfide, methyl mercaptan, dimethyl sulfide, and dimethyl disulfide.

252:100-31-3. Performance testing

Testing to determine whether emission standards set in this Subchapter are met shall be conducted by the source following 40 CFR Part 60, Appendix A, Test Methods.

PART 3. EXISTING EQUIPMENT STANDARDS

252:100-31-12. Sulfur oxides

(a) **Standard.** No person shall cause, let, suffer or allow any emission of sulfur dioxide from existing equipment which results in an ambient air concentration of sulfur dioxide at any given point in excess of 1300 $\mu\text{g}/\text{m}^3$ (0.50 ppm) in a five (5) minute period of any hour, a one (1) hour average exposure of 1200 $\mu\text{g}/\text{m}^3$ (0.46 ppm), a three (3) hour average exposure of 650 $\mu\text{g}/\text{m}^3$ (0.25 ppm), or a 24-hour average exposure of 130 $\mu\text{g}/\text{m}^3$ (0.05 ppm) of sulfur dioxide contributed from any one source or an annual arithmetic mean of 80 $\mu\text{g}/\text{m}^3$ (0.03 ppm). These limitations shall not apply to ambient air concentrations occurring on the property from which such emission occurs, providing such property, from the emission point to the point of any such concentration is controlled by the person responsible for such emission.

(b) **Determination of violation.** Violations of 252:100-31-12(a) may be determined by the Executive Director by use of appropriate material balances and/or emission factors, and on the basis of the ambient air concentration by the use of appropriate atmospheric dispersion models approved by EPA. Determinations made by the Executive Director using these procedures indicating that the limits set in 252:100-31-12(a) have been exceeded shall constitute prime evidence that the standard has been violated. Source operators may use these same procedures in lieu of ambient air monitoring as proof of compliance with limits set in 252:100-31-12(a).

252:100-31-13. Sulfuric acid mist

After January 10, 1979, no person shall cause, let, or allow emissions of sulfuric acid mist from any existing sulfuric acid plant in an amount greater than 0.5 pound of sulfuric acid mist per ton of acid produced (250 grams per metric ton) the production being expressed as 100 percent sulfuric acid (H_2SO_4).

252:100-31-14. Hydrogen sulfide

(a) **Standard.** No person shall cause, let, suffer, or allow any emission of hydrogen sulfide from any source which results in an ambient air concentration of hydrogen sulfide at any given point of 0.1 ppm for a 30-minute period. This standard shall not apply to ambient air concentrations occurring on the property from which such emission occurs, providing such property, from the point of any such concentration is controlled by the person responsible for such emission.

(b) **Determination of violation.** Violation of 252:100-31-14(a) may be determined by the Executive Director by use of appropriate material balances and/or emission factors, and on the basis of the ambient air concentration by the use of appropriate atmospheric dispersion models approved by EPA. Determinations made by the Executive Director using these procedures indicating that the limits set in 252:100-31-14(a) have been exceeded shall constitute prime evidence that the standard has been violated. Source operators may use these same procedures in lieu of ambient air monitoring as proof of compliance with limits set in 252:100-31-14(a).

(c) **Testing procedures.** Testing procedures for ambient air concentration of hydrogen sulfide shall use either of the following:

- (1) Paper Tape Method, American Iron and Steel Institute (A.I.S.I.) type sampler with lead acetate impregnated paper tape;
- (2) Methylene Blue Colorimetric Method; or,
- (3) other methods acceptable to the Executive Director.

252:100-31-15. Total reduced sulfur

(a) **Standard.** After November 15, 1985, all affected facilities shall limit emissions of total reduced sulfur released during the Kraft pulping operation, to those listed in this Section or have an approved plan which is to be submitted to the Director by May 15, 1984. Approval of all such plans shall reside with the Air Quality Council and in no case shall the time frame for compliance exceed May 9, 1989.

(1) The applicable limits are:

(A) Forty (40) parts per million (ppm) of total reduced sulfur measured as hydrogen sulfide on a dry basis and on a 12-hour average, converted to eight (8) volume percent oxygen from any recovery furnace;

(B) Forty (40) parts per million of total reduced sulfur measured as hydrogen sulfide on a dry basis and on a 12-hour average, corrected to ten (10) volume percent oxygen from any lime kiln; and,

(C) 0.016 gram of total reduced sulfur measured as hydrogen sulfide per kilogram of black liquor solids for a 12-hour average from any smelt dissolving tank.

(2) Non-condensable gases from all evaporators and digesters shall be efficiently incinerated or otherwise treated to limit emissions to less than five (5) ppm by volume on a dry basis.

(b) **Determination of violation.** Violation of 252:100-31-15(a) may be determined by the Executive Director by use of appropriate material balances, continuous emission monitoring data, and/or emission factors. Stack sampling conducted by the source will be required to demonstrate compliance, following 40 CFR Part 60, Appendix A, Test Methods.

(c) **Continuous emission monitoring.**

(1) Existing sources listed below are required to monitor emissions as described.

(A) **Fossil fuel-fired steam generators.** Continuous monitoring of sulfur dioxide emissions is required for fossil fuel-fired steam generators where the source utilizes an air pollution abatement operation to make a significant reduction in the emissions of sulfur dioxide. Continuous monitoring of oxygen or carbon dioxide is required where it is necessary to convert sulfur dioxide monitoring results.

(B) **Sulfuric acid plants.** Continuous monitoring of sulfur dioxide is required for sulfuric acid plants required to limit emissions by the applicable requirements of this Subchapter where the production capacity is greater than 300 tons per day expressed as 100% acid except where the conversion of sulfuric acid is utilized as a means of preventing emissions to the atmosphere of sulfur dioxide or other sulfur compounds.

(2) Required monitoring systems will be installed, calibrated, maintained, and operated in accordance with 40 CFR 60, Appendix B.

(3) Required monitoring systems will be installed, calibrated, maintained, and operated in accordance with 40 CFR 51, Appendix P, hereby incorporated by reference.

PART 5. NEW EQUIPMENT STANDARDS

252:100-31-25. Sulfur oxides

(a) **Sulfuric acid plants.**

(1) **Emission limit.**

(A) A person operating a new sulfuric acid plant shall not cause, suffer, or allow the discharge into the atmosphere of:

(i) Sulfur dioxide in the effluent in excess of four (4) pounds per ton of 100 percent sulfuric acid produced (2 kg per metric ton), maximum two-hour average;

(ii) Sulfuric acid mist which is in excess of 0.15 pound per ton of 100 percent sulfuric acid produced (75 grams per metric ton), maximum two-hour average, expressed in H₂SO₄; or

(iii) A visible emission equivalent to an opacity of five (5) percent.

(B) These emission limits shall apply to only those sulfuric acid plants producing sulfuric acid by the contact process by burning elemental sulfur, alkylation acid, hydrogen sulfide, organic sulfides and mercaptans or acid sludge.

(2) **Emission monitoring.**

(A) All sulfuric acid plants regulated under this subsection shall have installed, calibrated, maintained and operated, an instrument for continuously monitoring and recording emissions of sulfur dioxide. The instrument installed and used pursuant to this subsection shall be calibrated following the Oklahoma test procedure requirements using the performance specifications 2 and 3 of 40 CFR Part 60, Appendix B.

(B) The owner or operator of any sulfuric acid plant subject to provisions of this paragraph shall maintain a file of all measurements required including compliance status records and excess emissions measurements. These records and measurements shall be retained for at least two years following the date of such measurement, and made available for inspection by the Air Quality Division or its representative during normal business hours.

(b) Fuel-burning equipment.

(1) Emission limit.

(A) No person shall cause, suffer or allow the discharge into the atmosphere of sulfur oxides measured as sulfur dioxide from new gas fuel-burning equipment in excess of 0.2 pound per million BTU heat input (0.36 gram per million gram-calories), maximum three-hour average.

(B) No person shall cause, suffer or allow the discharge into the atmosphere of sulfur oxides measured as sulfur dioxide from new liquid fuel-burning equipment in excess of 0.8 pound per million BTU heat input (1.4 grams per million gram-calories), maximum three-hour average.

(C) No person shall cause, suffer or allow the discharge into the atmosphere of sulfur oxides measured as sulfur dioxide from new solid fuel-burning equipment in excess of 1.2 pounds per million BTU heat input (2.20 grams per million gram-calories), maximum three-hour average.

(D) If a solid fuel sampling and analysis method is used to determine emission compliance, averaging time will be determined on a 24 hour basis.

(E) Where different fuels are burned simultaneously in any combination, the applicable standard shall be determined by proration unless a secondary fuel is used in de minimis quantities (less than 5% of total BTU input annually). Compliance shall be determined using the formula (effective July 1, 1972),

$$(y(.80) + z(1.2)) / y + z$$

where y is the percent of total heat input derived from liquid fuel and z is the percent of total heat input derived from solid fuel.

(2) Emission and fuel monitoring.

(A) There shall be installed, calibrated, maintained, and operated, in any new fuel-burning equipment with a rated heat input of 250 million BTU/hr. or more emission monitoring instruments as follows:

(i) a photoelectric or other type smoke detector and recorder, except where gaseous fuel is the only fuel burned; and,

(ii) an instrument for continuously monitoring and recording sulfur dioxide emissions, except where gaseous fuel containing less than 0.1 percent sulfur is the only fuel burned or a solid fuel sampling and analysis method is used to determine emission compliance.

(B) Instruments installed and used for monitoring shall be calibrated following performance specifications 2 and 3 of 40 CFR Part 60, Appendix B.

(C) The sulfur content of solid fuels as burned shall be determined in accordance with previous methods as approved by the Executive Director or in accordance with Method 19 of 40 CFR Part 60, Appendix A.

(D) The owner or operator of any fuel-burning equipment with a rated heat input of 250 million BTU/hr. or over shall maintain a file of all measurements required in subparagraphs (A), (B), or (C) of this paragraph, including compliance status records and excess emissions measurements. These records and measurements shall be retained for at least two (2) years following the date of such measurements, and made available for inspection by the Air Quality Division or its representatives during normal business hours.

(c) Gas sweetening and sulfur recovery plants.

(1) Natural gas processing.

(A) As specified in 252:100-31-26(a)(1)(B), a new gas sweetening plant is allowed direct oxidation of hydrogen sulfide to sulfur dioxide without a prior sulfur removal step when the exhaust gas contains no more than 100 pounds per hour of sulfur dioxide. When the sulfur content of an acid-gas stream from a new gas sweetening unit is greater than this allowed emission but less than or equal to 5.0 long tons per day (LT/D) of sulfur, a sulfur dioxide emission reduction efficiency of at least 75.0 percent shall be achieved by means of a sulfur recovery facility prior to the discharge of gases from the system.

(B) When the sulfur content of an acid-gas stream from a new gas sweetening unit is greater than 5.0 LT/D but less than or equal to 150 LT/D, a sulfur dioxide emission reduction efficiency shall be achieved by means of a sulfur recovery facility such that

$$Z = 92.34 (X^{0.00774})$$

where Z is the minimum emission reduction efficiency required at all times and X is the sulfur feed rate, i.e., the hydrogen sulfide in the acid gas from the sweetening unit, expressed as long tons per day of sulfur rounded to one decimal place.

(C) When the sulfur content of an acid-gas stream from a new gas sweetening unit is greater than 150 LT/D but less than or equal to 1500 LT/D, a sulfur dioxide emission reduction efficiency shall be achieved by means of a sulfur recovery facility such that

$$Z = 88.78 (X^{0.0156})$$

where Z and X are defined as in (B) of this subsection.

(D) When the sulfur content of an acid-gas stream from a new gas sweetening unit is greater than 1500 LT/D, a minimum sulfur dioxide reduction efficiency of 99.5 percent shall be required.

(2) Other processes. The emission of sulfur oxides, calculated as sulfur dioxide, from a new sulfur recovery plant operating in conjunction with other processes is limited to 20 pounds per ton of sulfur processed, maximum two-hour average rates consistent with the emission reduction efficiencies calculated based on equivalent sulfur feed rate in long tons per day (LT/D) in the same manner as for natural gas processing in section (c)(1) above.

(3) Emission monitoring. For facilities regulated under this subsection emission monitoring may be required as determined by the Executive Director in accordance with Subchapter 45 of this Chapter.

(d) Nonferrous smelters.

(1) Emission limit. The emission of sulfur oxides, calculated as sulfur dioxide, from new nonferrous smelters is restricted according to the following equations as a maximum two-hour average, where X equals

total sulfur fed to smelter (lb/hr) and Y equals sulfur dioxide emissions (lb/hr):

- (A) Copper Smelters: $Y = 0.2 (X)$
- (B) Zinc Smelters: $Y = 0.564 (X^{0.86})$
- (C) Lead Smelters: $Y = 0.98 (X^{0.77})$

(2) **Emission monitoring.**

(A) All new nonferrous smelters regulated under this subsection shall have installed, calibrated, maintained and operated an instrument for continuously monitoring and recording emissions of sulfur dioxide following performance specifications 2 and 3 of 40 CFR Part 60, Appendix B and following the quality assurance procedure in 40 CFR Part 60, Appendix F.

(B) The owner or operator of any new nonferrous smelter subject to provisions of this subparagraph shall maintain a file of all measurements required, including compliance status records and excess emissions measurements. These records and measurements shall be retained for at least two years following the date of such measurements, and made available for inspection by the Air Quality Division or its representative during normal business hours.

(e) **Paper pulp mill.**

(1) **Emission limit.** The emission of sulfur oxides, calculated as sulfur dioxide, from the blow pits, washer vents, storage tanks, digester relief, and recovery furnace of any new paper pulp mill shall not exceed eighteen pounds per air-dried ton of pulp produced, maximum two-hour average.

(2) **Emission monitoring.**

(A) All new paper pulp mills shall have installed, calibrated, maintained and operated instruments for continuously monitoring and recording emissions of sulfur dioxide from the recovery system gas-cleaning equipment and other locations as required by the Executive Director. The instruments installed and used pursuant to this Section shall have a confidence level of at least 95 percent and be accurate within +20 percent and shall be calibrated following performance specifications 2 and 3 of 40 CFR Part 60, Appendix B and following the quality assurance procedure in 40 CFR Part 60, Appendix F.

(B) The owner or operator of any new paper pulp mill subject to provisions of this subparagraph shall maintain files of all measurements required, including compliance status records and excess emissions measurements. These records and measurements shall be retained for at least two years following the date of such measurements, and made available for inspection by the Air Quality Division or its representative during normal business hours.

252:100-31-26. Hydrogen sulfide

(a) **Petroleum and natural gas processes.**

(1) **Emission limit.**

(A) No person shall cause, suffer, or allow the discharge into the atmosphere of hydrogen sulfide from any new petroleum or natural gas process equipment without removal of the hydrogen sulfide from the exhaust gas or oxidizing it to sulfur dioxide in a system which insures at all times complete combustion of the hydrogen sulfide, with the exhaust gas then being emitted from a stack at least 50 feet in height. Efficiency of these removal or oxidation systems shall not allow to be emitted more than 0.3 pound per hour of hydrogen sulfide as a two-hour maximum, with a maximum efficiency required of 95 percent of the hydrogen sulfide in the exhaust gas. This subparagraph does not apply to pipeline quality sweetened gas.

(B) Direct oxidation of hydrogen sulfide to sulfur oxides without a prior removal step meeting emission limits of 252:100-31-25(c)(1) is not allowed for any system which would allow discharge of more than 100 pounds per hour of sulfur oxides expressed as sulfur dioxide, maximum two-hour average.

(2) **Emission monitoring.**

(A) All new petroleum and natural gas processing facilities regulated under this subsection shall have installed, calibrated, maintained and operated an alarm system which will signal noncombustion of the gas.

(B) All new petroleum and natural gas processing facilities regulated under this section shall demonstrate compliance with the ambient air limits of 252:100-31-12(a) using either dispersion modeling or ambient air measurements.

(b) **Other processes.**

(1) **Standard.** No person shall cause, let, suffer, or allow any emission of hydrogen sulfide from any source which results in an ambient air concentration of hydrogen sulfide at any given point of 0.1 ppm for a one-hour period. This standard shall not apply to ambient air concentrations occurring on the property from which such emission occurs, providing such property, from the emission point to the point of any such concentration is controlled by the person responsible for such emission.

(2) **Determination of violation.** Violations of this Section may be determined by the Executive Director by use of appropriate material balances and/or emission factors, and on the basis of the ambient air concentration, or use of appropriate atmospheric dispersion models approved by EPA. Determinations made by the Executive Director using these procedures indicating that the limits set in 252:100-31-26(b)(1) have been exceeded shall constitute prime evidence that the standard has been violated. Source operators may use these procedures in lieu of ambient air monitoring as proof of compliance with limits set in 252:100-31-26(b)(1).

AIR QUALITY COUNCIL

Minutes

June 14, 1994

1:00 p.m.

OKLAHOMA STATE DEPARTMENT OF ENVIRONMENTAL QUALITY

Kathryn Hinkle

Guests Present

(See attached list)

PUBLIC MEETING

Notice of Public Meeting was forwarded to the Secretary of State's Office giving the time, date, and place of the meeting. Agendas were posted at the basement entrance, first floor entrance at the Oklahoma State Department of Health building, the entrance door of the meeting room at the Lincoln Plaza location, and the entrance to the Air Quality Division.

Call to Order - Mr. Breisch called the meeting to order and roll call was taken. Members not in attendance were Ms. Slagell, Ms. Hinkle, and Mayor Taron. Mr. Breisch turned the meeting over to Mr. Byrum, who acted as protocol officer for Public Rulemaking Hearing OAC 252:100-24 Control of Emissions From Grain Elevators.

Mr. Doyle McWhirter presented the staff comments concerning this rule entitled "Particulate Matter Emissions from Grain, Feed, or Seed Operations." Mr. McWhirter advised that a committee made up of Air Quality Division staff members, Air Quality Council members, and Oklahoma grain and feed representatives reached an agreement after having met on three occasions to discuss and draft proposed subchapter 24.

Mr. McWhirter suggested that certain changes discussed in the briefing be added to the rule. The recommended changes are shown as underlined and deleted language in the copy of the rule attached as part of these Minutes. The recommended changes are denoted on pages 2, 5 and 6. With the inclusion of these changes, Mr.

McWhirter recommended the Council forward this rule to the Department of Environmental Quality Board for adoption.

Mr. Breisch entertained a motion to recommend adoption of this rule to the Department of Environmental Quality Board. Mr. Fishback made the motion as stated by Mr. Breisch with second by Ms. Tillman. Roll call as follows: Dr. Canter - aye; Mr. Fishback - aye; Ms. Hinkle - absent; Dr. Hughes - aye; Mr. Kilpatrick - aye; Ms. Slagell - absent; Mayor Taron - absent; Ms. Tillman - aye; Mr. Breisch - aye.

Mr. Gary Kilpatrick asked to place in the record a thank you to the industry, to the staff, and to the Council members, particularly Bill Fishback who chaired the committee, for the hard work done to resolve this issue. Dr. Hughes added an appreciation to Doyle McWhirter and Debbie Perry for the amount of emphasis and time devoted to this issue and to all the members of industry who participated and endured Council questioning and for allowing Council members to see the grain operations.

On behalf of the industry, Mr. Joe Hampton, Oklahoma Grain and Feed Association, gave a special thank you to the members of the Council who served on the committee, especially Mr. Fishback, and to members of the staff, especially Doyle and Debbie, for all the work put into this effort.

The next item on the agenda was public rulemaking hearing for OAC 252:100-31 Control of Emissions of Sulfur Compounds. Mr. Byrum acted as protocol officer and called up Mr. Scott Thomas and Dr. Joyce Sheedy to give the staff proposal on a suggested revision to this rule. Mr. Thomas recommended that the hearing be continued to the Council's August 9, 1994 meeting in Tulsa for the purpose of receiving as many comments as possible from all interested parties and from EPA. Dr. Sheedy provided technical information and answered questions from the audience and Council.

Chairman Breisch entertained a motion to continue the hearing until the next regular Council meeting as per the recommendation from staff. Mr. Kilpatrick made the motion as stated with second by Dr. Hughes. Roll call as follows: Dr. Canter - aye; Mr. Fishback - abstain; Ms. Hinkle - absent; Dr. Hughes - aye; Mr. Kilpatrick - aye; Ms. Slagell - absent; Mayor Taron - absent; Ms. Tillman - aye; Mr. Breisch - aye.

Approval of Minutes - Chairman Breisch reconvened the meeting and requested a motion for the approval of the Minutes of the April 12 meeting. In discussion, it was found on page 3, the words "of fugitive dust" needed to be added; and on page 2 change 'Dr.' Kilpatrick to "Mr." Ms. Tillman made the motion to approve the minutes as corrected with second by Dr. Hughes. Roll call as follows: Dr. Canter - aye; Mr. Fishback - aye; Ms. Hinkle - absent; Dr. Hughes - aye; Mr. Kilpatrick - aye; Ms. Slagell - absent; Mayor Taron - absent; Ms. Tillman - aye; Mr. Breisch - aye.

Other Business - No new business from staff. Mr. Tom Lay from audience discussed his interest in the TB&A contract stating that he was making an appearance on behalf of the Environmental Federation of Oklahoma in support of the draft study and pointed out that it was evidenced that the staff put a lot of hard work into the report.

Next Meeting - The next regular meeting will be held August 9, 1994 at the Auditorium, City-County Health Department, Tulsa, OK.

Meeting adjourned with a unanimous roll call vote.

William B. Breisch, Chairman
Air Quality Council

Larry D. Byrum, Director
Air Quality Division

MEMORANDUM

DATE: July 27, 1994

TO: AIR QUALITY COUNCIL

FROM:  Joyce Sheedy
Air Permits and Compliance Section

Scott Thomas *ST*
Analysis and Inventory Section

SUBJECT: REVISIONS TO OAC 252:100-31
CONTROL OF EMISSIONS OF SULFUR COMPOUNDS

Please find enclosed the staff's suggested revision to Oklahoma Air Pollution Control Rule OAC 252:100-31 "Control of Emissions of Sulfur Compounds". As you are aware, the June 14, 1994 hearing on this matter is to be continued at the Council's August 9th meeting.

Also enclosed is a copy of the testimony presented at the June 14 hearing as well as a copy of written comments from interested parties received as of the date of this memo. It is our understanding that EPA is preparing comments on this matter which will be presented at the hearing.

Informal discussions with their staff indicate no major problem areas.

**SUBCHAPTER 31. CONTROL OF EMISSION OF SULFUR COMPOUNDS
PART 1. GENERAL PROVISIONS****252:100-31-1. Purpose**

The purpose of this Subchapter is to control emissions of sulfur compounds from stationary sources in order to prevent the Oklahoma Air Quality Standard from being exceeded and insure that degradation of the present level of air quality in Oklahoma does not occur.

252:100-31-2. Definitions

The following words or terms, when used in this subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Black liquor solids" means the dry weight of the solids which enter the recovery furnace in the black liquor.

"Digester system" means each continuous digester or each batch digester used for the cooking of wood in white liquor, and associated flash tank(s), below tank(s), chip steamer(s), and condenser(s).

"Existing source" means an air contaminant source which is in being on the effective date of the applicable section.

"Lime kiln" means a unit used to calcine lime mud, which consists primarily of calcium carbonate, into quicklime, which is calcium oxide.

"Multiple-effect evaporator system" means the multiple-effect evaporators and associated condenser(s) and hotwell(s) used to concentrate the spent cooking liquid that is separated from the pulp(black liquor).

"New installation (source or equipment)" means an air contaminant source which is not in being on the effective date of the applicable section and any existing source which is altered, replaced, or rebuilt after the effective date of the rules such that the amount of air contaminant emissions is increased.

"Recovery furnace" means either a straight kraft recovery furnace or a cross recovery furnace, and includes the direct-contact evaporator for a direct contact furnace.

"Smelt dissolving tank" means a vessel used for dissolving the smelt collected from the recovery furnace.

"Total reduced sulfur" is the sum of the compounds hydrogen sulfide, methyl mercaptan, dimethyl sulfide, and dimethyl disulfide.

252:100-31-3. Performance testing

Testing to determine whether emission standards set in this Subchapter are met shall be conducted by the source following 40 CFR Part 60, Appendix A, Test Methods.

PART 3. EXISTING EQUIPMENT STANDARDS**252:100-31-12. Sulfur oxides**

(a) **Standard.** No person shall cause, let, suffer or allow any emission of sulfur dioxide from existing equipment which results in an ambient air concentration of sulfur dioxide at any given point in excess of 1300 $\mu\text{g}/\text{m}^3$ (0.50 ppm) in a five (5) minute period of any hour, a one (1) hour average exposure of 1200 $\mu\text{g}/\text{m}^3$ (0.46 ppm), a three (3) hour average exposure of 650 $\mu\text{g}/\text{m}^3$ (0.25 ppm), or a 24-hour average exposure of 130 $\mu\text{g}/\text{m}^3$ (0.05 ppm) of sulfur dioxide contributed from any one source or an annual arithmetic mean of 80 $\mu\text{g}/\text{m}^3$ (0.03 ppm). These limitations shall not apply to ambient air concentrations occurring on the property from which such emission occurs, providing such property, from the emission point to the point of any such concentration is controlled by the person responsible for such emission.

(b) **Determination of violation.** Violations of 252:100-31-12(a) may be determined by the Executive Director by use of appropriate material balances and/or emission factors, and on the basis of the ambient air concentration by the use of appropriate atmospheric dispersion models approved by EPA. Determinations made by the Executive Director using these procedures indicating that the limits set in 252:100-31-12(a) have been exceeded shall constitute prime evidence that the standard has been violated. Source operators may use these same procedures in lieu of ambient air monitoring as proof of compliance with limits set in 252:100-31-12(a).

252:100-31-13. Sulfuric acid mist

After January 10, 1979, no person shall cause, let, or allow emissions of sulfuric acid mist from any existing sulfuric acid plant in an amount greater than 0.5 pound of sulfuric acid mist per ton of acid produced (250 grams per metric ton) the production being expressed as 100 percent sulfuric acid (H_2SO_4).

252:100-31-14. Hydrogen sulfide

(a) **Standard.** No person shall cause, let, suffer, or allow any emission of hydrogen sulfide from any source which results in an ambient air concentration of hydrogen sulfide at any given point of 0.1 ppm for a 30-minute period. This standard shall not apply to ambient air concentrations occurring on the property from which such emission occurs, providing such property, from the point of any such concentration is controlled by the person responsible for such emission.

(b) **Determination of violation.** Violation of 252:100-31-14(a) may be determined by the Executive Director by use of appropriate material balances and/or emission factors, and on the basis of the ambient air concentration by the use of appropriate atmospheric dispersion models approved by EPA. Determinations made by the Executive Director using these procedures indicating that the limits set in 252:100-31-14(a) have been exceeded shall constitute prime evidence that the standard has been violated. Source operators may use these same procedures in lieu of ambient air monitoring as proof of compliance with limits set in 252:100-31-14(a).

(c) **Testing procedures.** Testing procedures for ambient air concentration of hydrogen sulfide shall use either of the following:

- (1) Paper Tape Method, American Iron and Steel Institute (A.I.S.I.) type sampler with lead acetate impregnated paper tape;
- (2) Methylene Blue Colorimetric Method; or,
- (3) other methods acceptable to the Executive Director.

252:100-31-15. Total reduced sulfur

(a) **Standard.** After November 15, 1985, all affected facilities shall limit emissions of total reduced sulfur released during the Kraft pulping operation, to those listed in this Section or have an approved plan which is to be submitted to the Director by May 15, 1984. Approval of all such plans shall reside with the Air Quality Council and in no case shall the time frame for compliance exceed May 9, 1989.

(1) The applicable limits are:

(A) Forty (40) parts per million (ppm) of total reduced sulfur measured as hydrogen sulfide on a dry basis and on a 12-hour average, converted to eight (8) volume percent oxygen from any recovery furnace;

(B) Forty (40) parts per million of total reduced sulfur measured as hydrogen sulfide on a dry basis and on a 12-hour average, corrected to ten (10) volume percent oxygen from any lime kiln; and,

(C) 0.016 gram of total reduced sulfur measured as hydrogen sulfide per kilogram of black liquor solids for a 12-hour average from any smelt dissolving tank.

(2) Non-condensable gases from all evaporators and digesters shall be efficiently incinerated or otherwise treated to limit emissions to less than five (5) ppm by volume on a dry basis.

(b) **Determination of violation.** Violation of 252:100-31-15(a) may be determined by the Executive Director by use of appropriate material balances, continuous emission monitoring data, and/or emission factors. Stack sampling conducted by the source will be required to demonstrate compliance, following 40 CFR Part 60, Appendix A, Test Methods.

(c) **Continuous emission monitoring.**

(1) Existing sources listed below are required to monitor emissions as described.

(A) **Fossil fuel-fired steam generators.** Continuous monitoring of sulfur dioxide emissions is required for fossil fuel-fired steam generators where the source utilizes an air pollution abatement operation to make a significant reduction in the emissions of sulfur dioxide. Continuous monitoring of oxygen or carbon dioxide is required where it is necessary to convert sulfur dioxide monitoring results.

(B) **Sulfuric acid plants.** Continuous monitoring of sulfur dioxide is required for sulfuric acid plants required to limit emissions by the applicable requirements of this Subchapter where the production capacity is greater than 300 tons per day expressed as 100% acid except where the conversion of sulfuric acid is utilized as a means of preventing emissions to the atmosphere of sulfur dioxide or other sulfur compounds.

(2) Required monitoring systems will be installed, calibrated, maintained, and operated in accordance with 40 CFR 60, Appendix B.

(3) Required monitoring systems will be installed, calibrated, maintained, and operated in accordance with 40 CFR 51, Appendix P, hereby incorporated by reference.

PART 5. NEW EQUIPMENT STANDARDS

252:100-31-25. Sulfur oxides

(a) **Sulfuric acid plants.**

(1) **Emission limit.**

(A) A person operating a new sulfuric acid plant shall not cause, suffer, or allow the discharge into the atmosphere of:

(i) Sulfur dioxide in the effluent in excess of four (4) pounds per ton of 100 percent sulfuric acid produced (2 kg per metric ton), maximum two-hour average;

(ii) Sulfuric acid mist which is in excess of 0.15 pound per ton of 100 percent sulfuric acid produced (75 grams per metric ton), maximum two-hour average, expressed in H_2SO_4 ; or

(iii) A visible emission equivalent to an opacity of five (5) percent.

(B) These emission limits shall apply to only those sulfuric acid plants producing sulfuric acid by the contact process by burning elemental sulfur, alkylation acid, hydrogen sulfide, organic sulfides and mercaptans or acid sludge.

(2) **Emission monitoring.**

(A) All sulfuric acid plants regulated under this subsection shall have installed, calibrated, maintained and operated, an instrument for continuously monitoring and recording emissions of sulfur dioxide. The instrument installed and used pursuant to this subsection shall be calibrated following the Oklahoma test procedure requirements using the performance specifications 2 and 3 of 40 CFR Part 60, Appendix B.

(B) The owner or operator of any sulfuric acid plant subject to provisions of this paragraph shall maintain a file of all measurements required including compliance status records and excess emissions measurements. These records and measurements shall be retained for at least two years following the date of such measurement, and made available for inspection by the Air Quality Division or its representative during normal business hours.

(b) Fuel-burning equipment.

(1) Emission limit.

(A) No person shall cause, suffer or allow the discharge into the atmosphere of sulfur oxides measured as sulfur dioxide from new gas fuel-burning equipment in excess of 0.2 pound per million BTU heat input (0.36 gram per million gram-calories), maximum three-hour average.

(B) No person shall cause, suffer or allow the discharge into the atmosphere of sulfur oxides measured as sulfur dioxide from new liquid fuel-burning equipment in excess of 0.8 pound per million BTU heat input (1.4 grams per million gram-calories), maximum three-hour average.

(C) No person shall cause, suffer or allow the discharge into the atmosphere of sulfur oxides measured as sulfur dioxide from new solid fuel-burning equipment in excess of 1.2 pounds per million BTU heat input (2.20 grams per million gram-calories), maximum three-hour average.

(D) If a solid fuel sampling and analysis method is used to determine emission compliance, averaging time will be determined on a 24 hour basis.

(E) Where different fuels are burned simultaneously in any combination, the applicable standard shall be determined by proration unless a secondary fuel is used in de minimis quantities (less than 5% of total BTU input annually). Compliance shall be determined using the formula (effective July 1, 1972),

$$(y(.80) + z(1.2)) / y + z$$

where y is the percent of total heat input derived from liquid fuel and z is the percent of total heat input derived from solid fuel.

(2) Emission and fuel monitoring.

(A) There shall be installed, calibrated, maintained, and operated, in any new fuel-burning equipment with a rated heat input of 250 million BTU/hr. or more emission monitoring instruments as follows:

(i) a photoelectric or other type smoke detector and recorder, except where gaseous fuel is the only fuel burned; and,

(ii) an instrument for continuously monitoring and recording sulfur dioxide emissions, except where gaseous fuel containing less than 0.1 percent sulfur is the only fuel burned or a solid fuel sampling and analysis method is used to determine emission compliance.

(B) Instruments installed and used for monitoring shall be calibrated following performance specifications 2 and 3 of 40 CFR Part 60, Appendix B.

(C) The sulfur content of solid fuels as burned shall be determined in accordance with previous methods as approved by the Executive Director or in accordance with Method 19 of 40 CFR Part 60, Appendix A.

(D) The owner or operator of any fuel-burning equipment with a rated heat input of 250 million BTU/hr. or over shall maintain a file of all measurements required in subparagraphs (A), (B), or (C) of this paragraph, including compliance status records and excess emissions measurements. These records and measurements shall be retained for at least two (2) years following the date of such measurements, and made available for inspection by the Air Quality Division or its representatives during normal business hours.

(c) Gas sweetening and sulfur recovery plants.

(1) Natural gas processing.

(A) As specified in 252:100-31-26(a)(1)(B), a new gas sweetening plant is allowed direct oxidation of hydrogen sulfide to sulfur dioxide without a prior sulfur removal step when the exhaust gas contains no more than 100 pounds per hour of sulfur dioxide. When the sulfur content of an acid-gas stream from a new gas sweetening unit is greater than this allowed emission but less than or equal to 5.0 long tons per day (LT/D) of sulfur, a sulfur dioxide emission reduction efficiency of at least 75.0 percent shall be achieved by means of a sulfur recovery facility prior to the discharge of gases from the system.

(B) When the sulfur content of an acid-gas stream from a new gas sweetening unit is greater than 5.0 LT/D but less than or equal to 150 LT/D, a sulfur dioxide emission reduction efficiency shall be achieved by means of a sulfur recovery facility such that

$$Z = 92.34 (X^{0.00774})$$

where Z is the minimum emission reduction efficiency required at all times and X is the sulfur feed rate, i.e., the hydrogen sulfide in the acid gas from the sweetening unit, expressed as long tons per day of sulfur rounded to one decimal place.

(C) When the sulfur content of an acid-gas stream from a new gas sweetening unit is greater than 150 LT/D but less than or equal to 1500 LT/D, a sulfur dioxide emission reduction efficiency shall be achieved by means of a sulfur recovery facility such that

$$Z = 88.78 (X^{0.0158})$$

where Z and X are defined as in (B) of this subsection.

(D) When the sulfur content of an acid-gas stream from a new gas sweetening unit is greater than 1500 LT/D, a minimum sulfur dioxide reduction efficiency of 99.5 percent shall be required.

(2) Other processes. The emission of sulfur oxides, calculated as sulfur dioxide, from a new sulfur recovery plant operating in conjunction with other processes is limited to 20 pounds per ton of sulfur processed, maximum two-hour average rates consistent with the emission reduction efficiencies calculated based on equivalent sulfur feed rate in long tons per day (LT/D) in the same manner as for natural gas processing in section (c)(1) above.

(3) Emission monitoring. For facilities regulated under this subsection emission monitoring may be required as determined by the Executive Director in accordance with Subchapter 45 of this Chapter.

(d) Nonferrous smelters.

(1) Emission limit. The emission of sulfur oxides, calculated as sulfur dioxide, from new nonferrous smelters is restricted according to the following equations as a maximum two-hour average, where X equals

total sulfur fed to smelter (lb/hr) and Y equals sulfur dioxide emissions (lb/hr).:

- (A) Copper Smelters: $Y = 0.2 (X)$
 (B) Zinc Smelters: $Y = 0.564 (X^{0.86})$
 (C) Lead Smelters: $Y = 0.98 (X^{0.77})$

(2) Emission monitoring.

(A) All new nonferrous smelters regulated under this subsection shall have installed, calibrated, maintained and operated an instrument for continuously monitoring and recording emissions of sulfur dioxide following performance specifications 2 and 3 of 40 CFR Part 60, Appendix B and following the quality assurance procedure in 40 CFR Part 60, Appendix F.

(B) The owner or operator of any new nonferrous smelter subject to provisions of this subparagraph shall maintain a file of all measurements required, including compliance status records and excess emissions measurements. These records and measurements shall be retained for at least two years following the date of such measurements, and made available for inspection by the Air Quality Division or its representative during normal business hours.

(e) Paper pulp mill.

(1) Emission limit. The emission of sulfur oxides, calculated as sulfur dioxide, from the blow pits, washer vents, storage tanks, digester relief, and recovery furnace of any new paper pulp mill shall not exceed eighteen pounds per air-dried ton of pulp produced, maximum two-hour average.

(2) Emission monitoring.

(A) All new paper pulp mills shall have installed, calibrated, maintained and operated instruments for continuously monitoring and recording emissions of sulfur dioxide from the recovery system gas-cleaning equipment and other locations as required by the Executive Director. The instruments installed and used pursuant to this Section shall have a confidence level of at least 95 percent and be accurate within +20 percent and shall be calibrated following performance specifications 2 and 3 of 40 CFR Part 60, Appendix B and following the quality assurance procedure in 40 CFR Part 60, Appendix F.

(B) The owner or operator of any new paper pulp mill subject to provisions of this subparagraph shall maintain files of all measurements required, including compliance status records and excess emissions measurements. These records and measurements shall be retained for at least two years following the date of such measurements, and made available for inspection by the Air Quality Division or its representative during normal business hours.

252:100-31-26. Hydrogen sulfide

(a) Petroleum and natural gas processes.

(1) Emission limit.

(A) No person shall cause, suffer, or allow the discharge into the atmosphere of hydrogen sulfide from any new petroleum or natural gas process equipment without removal of the hydrogen sulfide from the exhaust gas or oxidizing it to sulfur dioxide in a system which insures at all times complete combustion of the hydrogen sulfide, with the exhaust gas then being emitted from a stack at least 50 feet in height. Efficiency of these removal or oxidation systems shall not allow to be emitted more than 0.3 pound per hour of hydrogen sulfide as a two-hour maximum, with a maximum efficiency required of 95 percent of the hydrogen sulfide in the exhaust gas. This subparagraph does not apply to pipeline quality sweetened gas.

(B) Direct oxidation of hydrogen sulfide to sulfur oxides without a prior removal step meeting emission limits of 252:100-31-25(c)(1) is not allowed for any system which would allow discharge of more than 100 pounds per hour of sulfur oxides expressed as sulfur dioxide, maximum two-hour average.

(2) Emission monitoring.

(A) All new petroleum and natural gas processing facilities regulated under this subsection shall have installed, calibrated, maintained and operated an alarm system which will signal noncombustion of the gas.

(B) All new petroleum and natural gas processing facilities regulated under this Section shall demonstrate compliance with the ambient air limits of 252:100-31-12(a) using either dispersion modeling or ambient air measurements.

(b) Other processes.

(1) Standard. No person shall cause, let, suffer, or allow any emission of hydrogen sulfide from any source which results in an ambient air concentration of hydrogen sulfide at any given point of 0.1 ppm for a one-hour period. This standard shall not apply to ambient air concentrations occurring on the property from which such emission occurs, providing such property, from the emission point to the point of any such concentration is controlled by the person responsible for such emission.

(2) Determination of violation. Violations of this Section may be determined by the Executive Director by use of appropriate material balances and/or emission factors, and on the basis of the ambient air concentration, or use of appropriate atmospheric dispersion models approved by EPA. Determinations made by the Executive Director using these procedures indicating that the limits set in 252:100-31-26(b)(1) have been exceeded shall constitute prime evidence that the standard has been violated. Source operators may use these procedures in lieu of ambient air monitoring as proof of compliance with limits set in 252:100-31-26(b)(1).

PUBLIC MEETING

Notice of Public Meeting was forwarded to the Secretary of State's Office giving the time, date, and place of the meeting. Agendas were posted at the Fairgrounds Cafeteria as well as the City County Health Department Auditorium and at the Air Quality Division in Oklahoma City.

Call to Order - Mr. Breisch called the meeting to order and roll call was taken. Members not in attendance were Dr. Canter and Mayor Taron.

Mr. Byrum, as protocol officer convened the Public Rulemaking Hearing OAC 252:100-31 Control of Emissions From Sulfur Compounds.

Dr. Joyce Sheedy, Acting Program Director of Permits and Compliance Section entered the rule into the record and presented staff comments stating proposed changes to OAC 252:100-31-25(C)(2) regarding Sulfur Dioxide emissions from refinery sulfur recovery

units. In briefing the Council, Dr. Sheedy pointed out that the requirements of refineries to meet standards set out in the rule is unduly burdensome and the procedures are complicated, therefore, it is prudent to amend the rule to avoid the necessity for an alternative emission reduction permit.

Dr. Sheedy presented two letters of comment for the record: one from Kerr-McGee supporting the proposed change and one from EPA Region VI expressing concerns regarding possible effects of this change on the State Implementation Plan.

Staff recommended that Council submit the proposed revision to the Department of Environmental Quality Board as an Emergency and Permanent Rule.

Mr. Breisch entertained a motion to recommend adoption of this rule to the Department of Environmental Quality (DEQ) Board. Mr. Kilpatrick made the motion to recommend this rule to the DEQ Board as Permanent and Emergency with second by Dr. Hughes. Roll call as follows: Mr. Fishback - abstain; Ms. Hinkle - aye; Dr. Hughes - aye; Mr. Kilpatrick - aye; Ms. Slagell - aye; Ms. Tillman - aye; Mr. Breisch - aye.

As protocol officer, Mr. Byrum convened the Public Rulemaking Hearing for OAC 252:100-8 Operating Permits Part 72 Acid Rain.

Mr. Scott Thomas, Program Director, Analysis and Inventory Section, presented staff comments and entered into the record a letter from Mr. Gerald Fontenot, Branch Chief of the Air Programs Branch, Region VI EPA. The letter included comments from the Acid Rain Division of EPA headquarters. In briefing, Mr. Thomas pointed out that in order to retain its approval status for the submittal, Oklahoma must provide adequate legal authority through incorporation by reference to the Code of Federal Regulations Part 72 of the Federal Acid Rain Regulations or adopt its own regulations based on EPA's model. If Oklahoma does not submit these elements, it will be subject to sanctions and the Plan would be subject to disapproval. According to Mr. Thomas, EPA has indicated no problems with the proposed language. The staff entered a copy of the proposed changes to the rule and recommended (1) that this provision be presented to the Oklahoma Department of Environmental Quality Board for adoption as an Emergency and Permanent Rule or (2) continue this Hearing to the next meeting.

Mr. Don Whitney, Engineering Staff, Air Quality Division answered questions of Council and explained the permitting process, the reporting processes, and the enhanced monitoring processes.

Mr. Howard Ground, Environmental Manager of Public Service Company of Oklahoma, commented that PSO had no opposition to incorporating the federal rules into the Oklahoma regulations.

Mr. Breisch reiterated that the staff recommended these proposed

changes be forwarded to the Department of Environmental Quality Board as a permanent and emergency rule. The motion was made by Mr. Bill Fishback with second by Gary Kilpatrick. Roll call as follows: Mr. Fishback - aye; Ms. Hinkle - aye; Dr. Hughes - aye; Mr. Kilpatrick - aye; Ms. Slagell - aye; Ms. Tillman - aye; Mr. Breisch - aye.

As protocol officer, Mr. Byrum convened a Public Rulemaking Hearing regarding OAC 252:100-8 Operating Permits Part 70 Fee Requirements.

Mr. Scott Thomas presented staff position proposing that the fee be effective January 1, 1995 for Part 70 sources; that these sources no longer be subject to the current \$10/ton fee specified in subchapter 7; and that the fee be adjusted each year by the Consumer Price Index using calendar year 1994 as the base line. The staff also recommended that this Hearing be continued to the next meeting to allow for public participation and comments and to receive comments from EPA Region VI.

Mr. Kilpatrick questioned the intent of using the \$15.19 amount as recommended by Theodore Barry & Associates (TB&A). Mr. Thomas advised that staff recommended Council use the TB&A study figure of \$15.19 but the proposal sent to EPA Region VI would show that the total fee was representative of a higher number because of additional fees and charges required by the permit rule.

Mr. Kilpatrick suggested that the word "recognized" in the next to the last line of the proposed change be dropped as legislation authorized that a management study by a recognized consultant be done.

Mr. Kilpatrick also suggested that the word "presumptive" be dropped from (b)(iii) and from the definitions because the real fee is being calculated, not the presumptive fee.

Mr. David Branecky, Regulatory Coordinator for OG&E, commented that OG&E supports a good air quality program in Oklahoma, but wanted the Council to consider the fact that the TB&A Report is just a study showing a fee determination of \$15.19, and was not a set amount that could not be changed.

There was further discussion between Mr. Branecky, Council, and staff regarding accounting procedures for carryover amounts and accounting procedures for the Title V program.

The Chairman stated that the staff recommended continuing this meeting to the regular October meeting and asked the Council to continue their consultant committee to talk with the staff concerning accounting issues, etc.

Ms. Tillman moved to continue this hearing with the understanding that Council would continue the committee discussions with staff to answer questions regarding the TB&A report.

Mr. Kilpatrick made the second with roll call as follows: Mr. Fishback - aye; Ms. Hinkle - aye; Dr. Hughes - aye; Mr. Kilpatrick - aye; Ms. Slagell - aye; Ms. Tillman - aye; Mr. Breisch - aye.

Approval of Minutes - Chairman Breisch reconvened the regular meeting and requested a motion for the approval of Minutes of the June 14 meeting. Ms. Tillman moved to accept the Minutes with second by Dr. Kilpatrick. Roll call as follows: Mr. Fishback - aye; Ms. Hinkle - aye; Dr. Hughes - aye; Mr. Kilpatrick - aye; Ms. Slagell - abstain; Ms. Tillman - aye; Mr. Breisch - aye.

Other Business - Mr. Byrum pointed out that in reviewing the Minutes and tape recording of the last meeting, it was found that the Feed and Grain rule was not adopted as an Emergency Rule in addition to a Permanent Rule which was the intention of the committee, staff and industry. The implication being that if it is adopted as an Emergency Rule it can go into effect almost immediately. Otherwise, it will have to wait until the Legislature is back in session and the rule will go into effect after the Legislative Session. If not adopted as an emergency, the rule would be effective approximately 30 days before the expiration date that was included in the rule. Mr. Byrum recommended to the Council that this rule be adopted as Permanent and Emergency.

Mr. Fishback added that in working with the staff on this issue, he believed it was everyone's consensus that this rule should go into effect as soon as possible to allow industry to develop their Title V strategy. Mr. Fishback made the motion to recommend that the DEQ Board adopt OAC 252:100-24 as an Emergency Rule as well as a Permanent Rule.

Mr. Kilpatrick stated that he also participated in the meetings and it was discussed that the rule should go into effect immediately, agreed with Mr. Fishback, and made a second to the motion.

With the motion made and seconded with verification by committee, roll call was taken as follows: Mr. Fishback - aye; Ms. Hinkle - aye; Dr. Hughes - aye; Mr. Kilpatrick - aye; Ms. Slagell - abstain; Ms. Tillman - aye; Mr. Breisch - aye.

With no further business, the next meeting was discussed. Mr. Byrum projected sufficient business for a two-day meeting in October, adjourning on Tuesday, October 11 and continuing on Wednesday, October 12. He added that a significant amount of time would be taken on the Title V fee rule and other items to be brought before the Council, therefore, with the Council's concurrence, the staff would like to move forward with plans for a two-day meeting. Because the Oklahoma Register advertising deadline was August 8, the rule was advertised for these dates, but that in no way binds the Council to that action. Mr. Byrum stated that the most efficient way to handle a two-day meeting would be to have the regular Briefing on Tuesday and follow with the Hearings

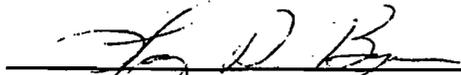

and Meetings with no other Briefing.

Next Meeting - The next regular meeting will be held October 11 and 12 as discussed in the Brown Room at Lincoln Plaza Office Complex in Oklahoma City, OK.

Meeting adjourned with a unanimous roll call vote.

 10/11/94

William B. Breisch, Chairman
Air Quality Council

RECOMMENDATION
TO THE
ENVIRONMENTAL QUALITY BOARD
FROM THE
AIR QUALITY COUNCIL

The members of this Council, acting pursuant to the authority vested in them by the Oklahoma Environmental Quality Code (27 O.S.Supp. 1993, Section 2-2-201, by roll call vote, make formal recommendation to the Environmental Quality Board that the rules specified below be adopted as permanent rules.

OAC 252:100-31-25 (c) (2)
CONTROL OF EMISSIONS OF SULFUR COMPOUNDS

Prior to making this recommendation, this Council considered the rules and comments received thereon and determined, to the best of its knowledge, that all requirements of the Oklahoma Administrative Procedures Act applicable to this rulemaking have been followed.

With the understanding that such changes shall not invalidate this recommendation, this Council authorizes the Department staff to make any amendments approved by the Council, appropriate corrections of typographical errors, additions and deletions indicated by strikeout/underline, and formatting as required by the Office of Administrative Rules.

Respectfully,

W B Pruitt

Chair or Designee

Signed this 9th day of AUGUST, 1994.

REGULAR MEETING AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
OKLAHOMA ENVIRONMENTAL QUALITY BOARD

A Public Meeting: November 30, 1994 Stroud, Oklahoma
Council and Court Room, Administration Building

1. **Call to Order - Roger Miner**
2. **Roll Call - Lynda Finch**
3. **Approval of Minutes of the September 28, 1994 Regular Meeting**
4. **Consideration of Amendments to Procedures of the DEQ 252:002 subchapter 17, relating to complaint processing**
 - A. **Presentation of Proposed Rules - Larry McKee**
 - B. **Questions and Discussion by Board**
 - C. **Questions and Discussion by Public**
 - D. **Discussion by Board**
 - E. **Roll Call Vote**
5. **Consideration of Amendments to Air Pollution Rules 252:100 subchapter 8, relating to acid rain**
 - A. **Presentation of Proposed Rules - Larry Byrum**
 - B. **Questions and Discussion by Board**
 - C. **Questions and Discussion by Public**
 - D. **Discussion by Board**
 - E. **Roll Call Vote**
6. **Consideration of Amendments to Air Pollution Rules 252:100 subchapter 8, relating to operating permits**
 - A. **Presentation of Proposed Rules - Larry Byrum**
 - B. **Questions and Discussion by Board**
 - C. **Questions and Discussion by Public**
 - D. **Discussion by Board**
 - E. **Roll Call Vote**
7. **Consideration of Amendments to Air Pollution Rules 252:100 subchapter 31, relating to control of emission of sulfur compounds**
 - A. **Presentation of Proposed Rules - Larry Byrum**
 - B. **Questions and Discussion by Board**
 - C. **Questions and Discussion by Public**
 - D. **Discussion by Board**
 - E. **Roll Call Vote**
8. **Consideration of Amendments to Air Pollution Rules 252:100 subchapter 45, relating to monitoring of emissions**
 - A. **Presentation of Proposed Rules - Larry Byrum**
 - B. **Questions and Discussion by Board**
 - C. **Questions and Discussion by Public**
 - D. **Discussion by Board**
 - E. **Roll Call Vote**
9. **Consideration of Amendments to Industrial Wastewater Systems Rules Rule 252:615-3-4, relating to permit fees**
 - A. **Presentation of Proposed Rules - Lowell Hobbs**
 - B. **Questions and Discussion by Board**
 - C. **Questions and Discussion by Public**
 - D. **Discussion by Board**
 - E. **Roll Call Vote**

10. **Consideration of Amendments to Non-Industrial Impoundment Rules
Rule 252:620-1-5, relating to fees**
 - A. **Presentation of Proposed Rules - Lowell Hobbs**
 - B. **Questions and Discussion by Board**
 - C. **Questions and Discussion by Public**
 - D. **Discussion by Board**
 - E. **Roll Call Vote**

11. **Consideration of Amendments to Sludge & Land Application of Wastewater Rules
Chapter 252:647, relating to incorporating EPA rules, permit filing, fees,
prohibitions and exclusions**
 - A. **Presentation of Proposed Rules - Lowell Hobbs**
 - B. **Questions and Discussion by Board**
 - C. **Questions and Discussion by Public**
 - D. **Discussion by Board**
 - E. **Roll Call Vote**

12. **Consideration of Amendments to Discharges - OPDES (NPDES) Rules
Chapter 252:605, relating to definitions, Appendices E & F (stormwater permit
dates) and Appendix G (fees)**
 - A. **Presentation of Proposed Rules - Lowell Hobbs**
 - B. **Questions and Discussion by Board**
 - C. **Questions and Discussion by Public**
 - D. **Discussion by Board**
 - E. **Roll Call Vote**

13. **Consideration of Finding of Emergency for Agenda Items ⁵⁻ 4-12**
 - A. **Presentation - Mark Coleman**
 - B. **Questions and Discussion by Board**
 - C. **Questions and Discussion by Public**
 - D. **Discussion by Board**
 - E. **Roll Call Vote**

CHAPTER 100. AIR POLLUTION CONTROL
SUBCHAPTER 31. CONTROL OF EMISSION OF SULFUR COMPOUNDS
PART 5. NEW EQUIPMENT STANDARDS

252:100-31-25. Sulfur oxides

(a) Sulfuric acid plants.

(1) Emission limit.

(A) A person operating a new sulfuric acid plant shall not cause, suffer, or allow the discharge into the atmosphere of:

(i) sulfur dioxide in the effluent in excess of four (4) pounds per ton of 100 percent sulfuric acid produced (2 kg per metric ton), maximum two-hour average;

(ii) sulfuric acid mist which is in excess of 0.15 pound per ton of 100 percent sulfuric acid produced (75 grams per metric ton), maximum two-hour average, expressed in H_2SO_4 ; or

(iii) a visible emission equivalent to an opacity of five (5) percent.

(B) These emission limits shall apply to only those sulfuric acid plants producing sulfuric acid by the contact process by burning elemental sulfur, alkylation acid, hydrogen sulfide, organic sulfides and mercaptans or acid sludge.

(2) Emission monitoring.

(A) All sulfuric acid plants regulated under this subsection shall have installed, calibrated, maintained and operated, an instrument for continuously monitoring and recording emissions of sulfur dioxide. The instrument installed and used pursuant to this subsection shall be calibrated following the Oklahoma test procedure requirements using the performance specifications 2 and 3 of 40 CFR Part 60, Appendix B.

(B) The owner or operator of any sulfuric acid plant subject to provisions of this paragraph shall maintain a file of all measurements required including compliance status records and excess emissions measurements. These records and measurements shall be retained for at least two years following the date of such measurement, and made available for inspection by the Air Quality Division or its representative during normal business hours.

(b) Fuel-burning equipment.

(1) Emission limit.

(A) No person shall cause, suffer or allow the discharge into the atmosphere of sulfur oxides measured as sulfur dioxide from new gas fuel-burning equipment in excess of 0.2 pound per million BTU heat input (0.36 gram per million gram-calories), maximum three-hour average.

(B) No person shall cause, suffer or allow the discharge into the atmosphere of sulfur oxides measured as sulfur dioxide from new liquid fuel-burning equipment in excess of 0.8 pound per million BTU heat input (1.4 grams per million gram-calories), maximum three-hour average.

(C) No person shall cause, suffer or allow the discharge into the atmosphere of sulfur oxides measured as sulfur dioxide from new solid fuel-burning equipment in excess of 1.2 pounds

per million BTU heat input (2.20 grams per million gram-calories), maximum three-hour average.

(D) If a solid fuel sampling and analysis method is used to determine emission compliance, averaging time will be determined on a 24 hour basis.

(E) Where different fuels are burned simultaneously in any combination, the applicable standard shall be determined by proration unless a secondary fuel is used in de minimis quantities (less than 5% of total BTU input annually). Compliance shall be determined using the formula (effective July 1, 1972),

$$(y(.80) + z(1.2)) / y + z$$

where y is the percent of total heat input derived from liquid fuel and z is the percent of total heat input derived from solid fuel.

(2) **Emission and fuel monitoring.**

(A) There shall be installed, calibrated, maintained, and operated, in any new fuel-burning equipment with a rated heat input of 250 million BTU/hr. or more emission monitoring instruments as follows:

(i) a photoelectric or other type smoke detector and recorder, except where gaseous fuel is the only fuel burned; and,

(ii) an instrument for continuously monitoring and recording sulfur dioxide emissions, except where gaseous fuel containing less than 0.1 percent sulfur is the only fuel burned or a solid fuel sampling and analysis method is used to determine emission compliance.

(B) Instruments installed and used for monitoring shall be calibrated following performance specifications 2 and 3 of 40 CFR Part 60, Appendix B.

(C) The sulfur content of solid fuels as burned shall be determined in accordance with previous methods as approved by the Executive Director or in accordance with Method 19 of 40 CFR Part 60, Appendix A.

(D) The owner or operator of any fuel-burning equipment with a rated heat input of 250 million BTU/hr. or over shall maintain a file of all measurements required in subparagraphs (A), (B), or (C) of this paragraph, including compliance status records and excess emissions measurements. These records and measurements shall be retained for at least two (2) years following the date of such measurements, and made available for inspection by the Air Quality Division or its representatives during normal business hours.

(c) **Gas sweetening and sulfur recovery plants.**

(1) **Natural gas processing.**

(A) As specified in 252:100-31-26(a)(1)(B), a new gas sweetening plant is allowed direct oxidation of hydrogen sulfide to sulfur dioxide without a prior sulfur removal step when the exhaust gas contains no more than 100 pounds per hour of sulfur dioxide. When the sulfur content of an acid-gas stream from a new gas sweetening unit is greater than this

allowed emission but less than or equal to 5.0 long tons per day (LT/D) of sulfur, a sulfur dioxide emission reduction efficiency of at least 75.0 percent shall be achieved by means of a sulfur recovery facility prior to the discharge of gases from the system.

(B) When the sulfur content of an acid-gas stream from a new gas sweetening unit is greater than 5.0 LT/D but less than or equal to 150 LT/D, a sulfur dioxide emission reduction efficiency shall be achieved by means of a sulfur recovery facility such that

$$Z = 92.34 (X^{0.00774})$$

where Z is the minimum emission reduction efficiency required at all times and X is the sulfur feed rate, i.e., the hydrogen sulfide in the acid gas from the sweetening unit, expressed as long tons per day of sulfur rounded to one decimal place.

(C) When the sulfur content of an acid-gas stream from a new gas sweetening unit is greater than 150 LT/D but less than or equal to 1500 LT/D, a sulfur dioxide emission reduction efficiency shall be achieved by means of a sulfur recovery facility such that

$$Z = 88.78 (X^{0.0156})$$

where Z and X are defined as in (B) of this subsection.

(D) When the sulfur content of an acid-gas stream from a new gas sweetening unit is greater than 1500 LT/D, a minimum sulfur dioxide reduction efficiency of 99.5 percent shall be required.

(2) **Other processes.** The emission of sulfur oxides, calculated as sulfur dioxide, from a new sulfur recovery plant operating in conjunction with other processes is limited to ~~20 pounds per ton of sulfur processed, maximum two hour average rates consistent with the emission reduction efficiencies calculated based on equivalent sulfur feed rate in long tons per day (LT/D) in the same manner as for natural gas processing in (c) (1) of this section.~~

(3) **Emission monitoring.** For facilities regulated under this subsection emission monitoring may be required as determined by the Executive Director in accordance with Subchapter 45 of this Chapter.

(d) **Nonferrous smelters.**

(1) **Emission limit.** The emission of sulfur oxides, calculated as sulfur dioxide, from new nonferrous smelters is restricted according to the following equations as a maximum two-hour average, where X equals total sulfur fed to smelter (lb/hr) and Y equals sulfur dioxide emissions (lb/hr):

(A) Copper Smelters: $Y = 0.2 (X)$

(B) Zinc Smelters: $Y = 0.564 (X^{0.85})$

(C) Lead Smelters: $Y = 0.98 (X^{0.77})$

(2) **Emission monitoring.**

(A) All new nonferrous smelters regulated under this subsection shall have installed, calibrated, maintained and

operated an instrument for continuously monitoring and recording emissions of sulfur dioxide following performance specifications 2 and 3 of 40 CFR Part 60, Appendix B and following the quality assurance procedure in 40 CFR Part 60, Appendix F.

(B) The owner or operator of any new nonferrous smelter subject to provisions of this subparagraph shall maintain a file of all measurements required, including compliance status records and excess emissions measurements. These records and measurements shall be retained for at least two years following the date of such measurements, and made available for inspection by the Air Quality Division or its representative during normal business hours.

(e) **Paper pulp mill.**

(1) **Emission limit.** The emission of sulfur oxides, calculated as sulfur dioxide, from the blow pits, washer vents, storage tanks, digester relief, and recovery furnace of any new paper pulp mill shall not exceed eighteen pounds per air-dried ton of pulp produced, maximum two-hour average.

(2) **Emission monitoring.**

(A) All new paper pulp mills shall have installed, calibrated, maintained and operated instruments for continuously monitoring and recording emissions of sulfur dioxide from the recovery system gas-cleaning equipment and other locations as required by the Executive Director. The instruments installed and used pursuant to this Section shall have a confidence level of at least 95 percent and be accurate within +20 percent and shall be calibrated following performance specifications 2 and 3 of 40 CFR Part 60, Appendix B and following the quality assurance procedure in 40 CFR Part 60, Appendix F.

(B) The owner or operator of any new paper pulp mill subject to provisions of this subparagraph shall maintain files of all measurements required, including compliance status records and excess emissions measurements. These records and measurements shall be retained for at least two years following the date of such measurements, and made available for inspection by the Air Quality Division or its representative during normal business hours.

Additional Comments

*Rules as presented to 10 EQ Board
12/30/94*

SUBCHAPTER 31. CONTROL OF EMISSION OF SULFUR COMPOUNDS

EXECUTIVE SUMMARY:

The intent of the revision to OAC 252:100-31-25 (c) (2) is to resolve any discrepancies and inequities as applied to all new sulfur recovery units in the state, and to provide that emissions standards are consistent with, and not more stringent than the New Source Performance Standards. The result would be a relaxation of standards applicable to new sulfur recovery plants operated in conjunction with processes other than natural gas processing.

SUMMARY OF DIFFERENCES FROM ANALOGOUS FEDERAL RULES:

The revision to Subchapter 31 provides for the emissions standards to be consistent with, and not more stringent than the Federal Standards.

COMMENTS AND RESPONSES:

Comment: A letter received from EPA expressed concern regarding possible effects of the change to the State Implementation Plan, (SIP). They commented that it was their understanding that the regulation revision might be interpreted to cause a relaxation of the requirements of the State Implementation Plan, but that existing operating permits or newly issued permits would require the source to demonstrate that it would not cause a violation of the National Ambient Air Quality Standards (NAAQS). The concern was for the potential violation of the sulfur NAAQS. If their understanding was correct, they wanted the information stated in the hearing narrative that the standard would not be jeopardized.

Response: In accordance with EPA's concerns, the staff entered into the hearing record that any permit for a source subject to 31-25 (c) (2) or the modification of an existing permit to allow a source to comply with the new requirements would require the source to demonstrate compliance with the National Ambient Air Quality Standards (NAAQS), which is a normal part of the permit review process. No source is allowed to cause or contribute to exceeding the NAAQS. Sources may be required to demonstrate this by appropriate means, such as dispersion modeling.

Comment: A letter from a petroleum refiner was submitted that supported the proposed changes.

Re: Comments on the Draft Copy to
Oklahoma Air Pollution Control Rule
OAC 252:100-31

Dear Mr. Byrum;

Per your July 1, 1994 letter requesting comments to the proposed revisions to Oklahoma Air Pollution Control Rule OAC 252:100-31 "Control of Emissions of Sulfur Compounds", please be advised that Kerr-McGee Refining Corporation supports the proposed change as underlined in paragraph C2 in the draft copy sent to us. We appreciate you sending a copy of the proposed rule change to KMRC and giving us the opportunity to comment on it.

If we can be of any further assistance on this issue, please contact me at (405)665-6600.

Sincerely,

Kerr-McGee Refining Corporation

Mr. Larry D. Byrum
Chief
Air Quality Program
Oklahoma Department of
Environmental Quality
4545 North Lincoln Boulevard, Suite 250
Oklahoma City, OK 73105-3483

RE: Air Pollution Control Rule OAC 252:100-31, "Control of Emissions of Sulfur Compounds"

Dear Mr. Byrum:

Thank you for your recent letter requesting our comments on proposed revisions to Oklahoma Air Pollution Control Rule OAC 252:100-31, "Control of Emissions of Sulfur Compounds." This revision is scheduled to be discussed at the Oklahoma Air Quality Control Council on August 9, 1994, and is a continuation of the discussion on this issue from a previous Council meeting.

On July 27, 1994, Mr. James Davis and I participated in a conference call with Dr. Joyce Sheedy and Mr. Scott Thomas of your staff regarding this issue. As a result of this conference call, it is our understanding that the regulation revision may cause a relaxation of the requirements in the State Implementation Plan (SIP), but that existing operating permits or newly issued permits would require that the source demonstrate that it would not cause a violation of the National Ambient Air Quality Standards (NAAQS). In this case, the concern would be a potential violation of the sulfur NAAQS. If our understanding is correct, we would like this information stated for the record in the SIP narrative or other documentation included in the SIP.

We appreciate the opportunity to give you our comments. If you have any questions, please call me or James Davis of my staff at (214) 655-7214.

Sincerely yours,

A handwritten signature in cursive script that reads "Thomas H. Diggs".

THE CHAIRMAN: Next item, Item B: Control of Emissions of Sulfur Compounds. Larry, you're still acting as protocol officer.

MR. BYRUM: For the record, I will read my statement again. Ladies and gentlemen, my name is Larry Byrum. I'm director of the air quality division. As such, I will act as protocol officer for this hearing. This hearing is convened by the air quality council in compliance with the Oklahoma Administrative Procedures Act and Title 40 of the Code of Federal Regulations part 51 as well as authority of Title 63 of the Oklahoma Statutes, section 1-1801 and following. This hearing was advertised in the Oklahoma Register for the purposes of receiving comments pertaining to the proposed revisions of the sulfur rule. It's Rule 252:100-31. If you wish to make a statement concerning this rule, please complete the form at the registration table, and at the appropriate time, I will call upon you.

At this time, I will call upon Mr. Scott Thomas and Dr. Joyce Sheedy to give the staff proposals on these proposed changes. Mr. Thomas.

MR. THOMAS: Ladies and gentlemen, Mr. Chairman,

1 members of the council, my name is Scott Thomas. I'm
2 representing the staff of the air quality division of the
3 Oklahoma Department of Environmental Quality. I'm presently
4 serving as program director of analysis and inventory section of
5 the division.

6 The staff today is currently proposing a suggested
7 revision to Oklahoma Air Pollution Control Rule 252:100-31
8 entitled, "Control of Emission of Sulfur Compounds." The
9 proposed changes are being made to section 25 (c) (2) of the rule
10 and are indicated by underlining and striking out notations.
11 Notice of today's hearing was advertised in the May 2, 1994,
12 issue of the Oklahoma Register. Copies of the proposed rule are
13 available for the audience and public today and are a part of
14 the council packets. The proposed changes are shown on page 3
15 of the existing rule.

16 The suggested new language for 25 (c) (2) is as follows:
17 "Other processes. The emission of sulfur oxides, calculated as
18 sulfur dioxide, from a new sulfur recovery plant operating in
19 conjunction with other processes is limited to rates consistent
20 with the emission reduction efficiencies calculated based on
21 equivalent sulfur feed rates in long tons per day in the same
22 manner as for natural gas processing in section (c) (1) above."

23 It has come to our attention that it has been in many
24 cases economically unfeasible for the facilities to comply with
25 the emission limitations specified in this section. And in

1 order to more readily comply with our rules, the facilities
2 could opt to seek an alternative emission reduction permit under
3 subchapter 11 of our rules, and then this permit would have to
4 be submitted to EPA as a source specific state implementation
5 plan revision.

6 As many of the council will remember, the Conoco
7 Refinery in Ponca City went through this process a few years
8 ago. This is a time-consuming and fairly complicated process
9 for all those involved, including the staff, the company, the
10 EPA, and the council. It resulted in Conoco basically meeting
11 the emission limitations associated with the natural gas
12 requirements in the existing rule. We would hope that this
13 proposed revision would allow for simplification in the
14 processing of such new permits or new units in the future.

15 We are also recommending that the hearing today be
16 continued on to the council's August 9th meeting in Tulsa. We
17 feel this is necessary so we can receive as many comments as
18 possible, allow time for us to gain additional information so
19 that the staff and the council can make the appropriate
20 decisions, and we intend to make a special effort to notify the
21 facilities involved. We are especially interested in receiving
22 comments from EPA as to the proposal's approvability as this may
23 appear as a relaxation in an omission limitation. We earnestly
24 solicit comments from all interested parties.

25 At this time, I would like to turn the podium over to

1 Dr. Joyce Sheedy. She is acting head of our permit and
2 compliance section, so she can address some of the other aspects
3 of this proposal. Joyce.

4 MS. SHEEDY: Thank you, Scott. The main differences we
5 expect to find in sulfur reduction between petroleum refineries
6 and natural gas facilities is a greater concentration of
7 hydrogen sulfide in the gas streams at a refinery and that
8 sulfur reduction units may need to have a larger capacity at a
9 refinery. However, in our experience, most refinery SRUs have
10 been designed to be less than 20 long tons per day to avoid
11 applicability to the Federal New Source Performance Standards 40
12 CFR 60, subpart J. Currently, there are sweetening units in the
13 state at natural gas facilities that have capacities of 14 or 15
14 long tons per day, so size is not -- probably not going to be
15 that much of an issue.

16 The additional capital cost required to meet 31.25
17 (c)(2) seems an unfair economic burden to place on refineries
18 and may discourage the installation of SRUs. Our current rule
19 is somewhat more stringent than the Federal NSPS subpart J
20 standards. The utilization of SRUs does result in a reduction
21 of SO2 that can be quite significant, and it will continue to do
22 so if they are allowed to meet the same limits required for
23 natural gas facilities.

24 Scott and I are now ready to -- available to answer any
25 questions you may have regarding this proposed amendment.

1 MR. BYRUM: Questions from the council?

2 (No response.)

3 MR. BYRUM: Questions from the audience?

4 (No response.)

5 MR. BYRUM: Mr. Chairman, I hear no questions.

6 THE CHAIRMAN: It's been recommended that we continue
7 this hearing until our next regular meeting. If that's the
8 desire of the council, I need a motion.

9 MR. KILPATRICK: I so move.

10 DR. HUGHES: Second.

11 THE CHAIRMAN: I got a motion and a second that this
12 item be continued until our next regular meeting. If there is
13 no further discussion, call the roll.

14 MS. BRUCE: Dr. Hughes.

15 DR. HUGHES: Yes.

16 MS. BRUCE: Ms. Tillman.

17 MS. TILLMAN: Yes.

18 MS. BRUCE: Dr. Canter.

19 DR. CANTER: Yes.

20 MS. BRUCE: Mr. Kilpatrick.

21 MR. KILPATRICK: Yes.

22 MS. BRUCE: Mr. Fishback.

23 MR. FISHBACK: Abstain.

24 MS. BRUCE: Mr. Breisch.

25 MR. BREISCH: Yes.

1 THE CHAIRMAN: This concludes the public hearings. We
2 will take a short break while the court reporter gets her
3 equipment together, and then we will continue our hearings.

4 (The meeting concluded at 2:00 o'clock p.m.)

1:00 o'clock p.m.

* * * * *

1 THE CHAIRMAN: Let's call this session of the
2 meeting to order.

3 Myrna, will you call the roll.

4 THE SECRETARY: Mr. Fishback.

5 MR. FISHBACK: Here.

6 THE SECRETARY: Ms. Hinkle.

7 MR. HINKLE: Here.

8 THE SECRETARY: Dr. Hughes.

9 DR. HUGHES: Here.

10 THE SECRETARY: Ms. Tillman.

11 MS. TILLMAN: Here.

12 THE SECRETARY: Mr. Kilpatrick.

13 MR. KILPATRICK: Here.

14 THE SECRETARY: Ms. Slagell.

15 MS. SLAGELL: Here.

16 THE SECRETARY: Mr. Breisch.

17 MR. BREISCH: Here.

18 THE CHAIRMAN: Next is the public rule making
19 part of the session. Larry Byrum will act as protocol
20 officer. Larry?

21 MR. BYRUM: Ladies and gentlemen: My name is

1 Larry Byrum. I am the Director of the Air Quality
2 Division. As such I will act as protocol officer for
3 this hearing. I will inform you this hearing is
4 convened by the Air Quantity Council in compliance with
5 the Oklahoma Administrative Procedures Act and Title 40
6 of the Code of Federal Regulations Part 51, as well as
7 the authority of Title 63 of the Oklahoma Statutes,
8 Section 5-1801 et al. This hearing was advertised in
9 the Oklahoma Register for purposes of receiving comments
10 for the proposed revision of Oklahoma Administrative
11 Code 252:100-31, Control of Emissions of Sulfur
12 Compounds.

13 If you wish to make a statement in regards to
14 this issue, there are forms at the sign-in table at the
15 back of the room. If you will please fill out one of
16 these forms, we'll call on you at the appropriate time.

17 At this time we would like to call upon
18 Dr. Joyce Sheedy to give the staff position on the
19 proposed change.

20 Dr. Sheedy?

21 DR. SHEEDY: Mr. Chairman, members of the
22 Council, ladies and gentlemen: My name is Joyce Sheedy.
23 I am presently serving as acting program director of
24 permits and compliance Section of the Air Quality
25 Service, Air Quality Division.

1 We are proposing changes as shown on page 3 of
2 the Oklahoma Air Pollution Control Rule
3 252:100-31.25(c)(2), regarding sulfur dioxide emissions
4 from refineries, sulfur recovery units. I'm not going
5 to read the rule to you, but I am going to ask that it
6 be made part of the record.

7 Essentially, the change limits sulfur dioxide
8 emissions from new sulfur recovery plants at refineries
9 to rates consistent with the emission reductions
10 efficiencies required for the natural gas processing in
11 Section (c)(1) of the same rule.

12 In the past, companies proposing to add sulfur
13 recovery units at refineries have opted to seek an
14 alternative emission permit under subchapter 11 of our
15 rules, citing the additional capital cost required to
16 meet the rule as unduly burdensome.

17 As many of the Council may recall, a few years
18 ago Conoco chose to apply for an alternative emission
19 reduction permit for the installation of a SRU unit at
20 their Ponca City plant. This procedure is complicated
21 and time-consuming for all of those involved: the
22 Council, the air quality staff, the company, and EPA.

23 Conoco was allowed to comply with essentially
24 the emission limits set in subchapter 31 for natural gas
25 sweetening processes. Since the result of this exercise

1 has been essentially to allow refineries that are used
2 to meet the limits set for natural gas units, it seem
3 prudent to amend the rule and thus avoid the necessity
4 for an alternative emission reduction permit.

5 The main difference we expect to see in sulfur
6 reduction limits between petroleum refineries and
7 natural gas facilities is a greater concentration of
8 hydrogen sulfide perhaps in the refinery process stream
9 and possibly for one-year path (sic) in the extra SRUs
10 in refineries.

11 However, in our experience, most refinery SRUs
12 are designed to be less than 20 long tons per day,
13 basically to avoid becoming subject to NSPS subpart J
14 for refineries. There are natural gas facilities in the
15 state that have sweetening units 14 to 15 long tons per
16 day, so the capacity of the units may not be that
17 different after all.

18 The additional capital costs required to meet
19 31.25(c)(2) seems an unfair economical burden to place
20 on refineries and may actually discourage the
21 installation of SRUs. Our existing rule is more
22 stringent than the federal NSPS subpart J. It should be
23 noted that the utilization of SRUs result in a reduction
24 of sulfur dioxide that can be quite significant, and
25 this reduction would occur if the refinery SRUs are

1 allowed to meet the same standards required for natural
2 gas facilities. That would still be a considerable
3 reduction in sulfur dioxide.

4 Since the Council meeting in June, the Air
5 Quality Division has received two letters of comment
6 regarding the proposed change to 31.25(c)(2), which I
7 wish to make part of the record.

8 The Council has been provided copies of these
9 letters. One letter was from Kerr-McGee, supporting the
10 proposed change, and one was from region 6 of the USEPA
11 expressing concerns regarding possible effects of this
12 change on this state implementation plan. And I've been
13 asked to read this letter into the record, and I will do
14 that as quickly as I can.

15 The letter is to Mr. Larry D. Byrum, Chief, Air
16 Quality Progam, Oklahoma Department of Environmental
17 Quality, 4545 North Lincoln Boulevard, Suite 250,
18 Oklahoma City, Oklahoma, 73105-3483.

19 RE: Air Pollution Control Rule OAC 252:100-31,
20 Control of Emissions of Sulfur Compounds.

21 "Dear Mr. Byrum: Thank you for your recent
22 letter requesting our comments on proposed revisions to
23 the Oklahoma Air Pollution Control Rule, OAC 252:100-31,
24 Control of Emissions of Sulfur Compounds. This revision
25 is scheduled to be discussed at the Oklahoma Air Quality

1 Council on August 9, 1994, and it is a continuation of
2 the discussion on this issue from a previously Council
3 meeting.

4 "On July 27, 1994, Mr. James Davis and I
5 participated in a conference call with Dr. Joyce Sheedy
6 and Mr. Scott Thomas of your staff, regarding this
7 issue. As a result of this conference call, it is our
8 understanding the regulation revision may cause a
9 relaxation of the requirements in the State
10 Implementation Plan, parenthesis, S-I-P, close
11 parenthesis, but that existing operating permits or
12 newly issued permits would require that the source
13 demonstrate that it would not cause a violation of the
14 national Ambient Air Quality Standards (NAAQS). In this
15 case, the concern would be a potential violation of the
16 sulfur NAAQS. If our understanding is correct, we would
17 like this information stated for the record in the SIP
18 narrative or other documentation included in the SIP.

19 "We appreciate the opportunity to give you our
20 comments. If you have any questions, please call me or
21 James Davis of my staff at 214-655-7214.

22 "Sincerely yours, Thomas H. Diggs, Chief,
23 Planning Section 6T-AP."

24 It was not our intention that any existing --
25 one of their concerns in our telephone conversation was

1 that we might be relaxing an existing permit condition
2 on an existing unit. I don't believe that we have a
3 unit that has this permit condition placed on it because
4 of this rule, but it would not be our intention to do
5 that. If a company wanted to change an existing permit
6 condition, they would have to go through our normal
7 process, and that would include that we would be looking
8 at NAAQS OR any other standards to see that we would not
9 be violating it.

10 So in response to EPA's comments, any permit
11 for source subject to 31.25(c)(2) are the modification
12 of an existing permit to allow a source to comply with
13 the new requirements. The proposed requirements would
14 be required to demonstrate compliance with the National
15 Ambient Air Quality Standards. This is a normal part of
16 our permit review process.

17 No source is allowed to cause or contribute to
18 the exceeding The National Ambient Air Quality Standard.
19 Sources may be required to demonstrate this by
20 appropriate means, such as disbursing modeling.

21 The staff recommends that the proposed
22 revision -- the staff recommends the proposed
23 revision -- let me try that again.

24 The staff recommends that the Air Quality
25 Council submit the proposed revision to the DEQ Board

1 and for approval as both an emergency and permanent
2 rule.

3 If there are any questions I would be glad to
4 try to answer them now.

5 MR. BYRUM: Questions for Joyce?

6 MR. KILPATRICK: Joyce, have you all done --
7 we may have asked this at the last meeting; I can't
8 remember. At, say, for instance, 20 tons, just an
9 assumed plan, what's the difference in efficiency
10 between using the formula which we are approving and the
11 old regulation?

12 MS. SHEEDY: David, I believe you've done that,
13 haven't you? Yes. Let me have David answer that. He's
14 going to be more fluent than I am.

15 MR. BYRUM: State your name and who you are,
16 for the record.

17 MR. SCHUTZ: Yes, I am David Schutz, Senior
18 Environmental Engineer for Air Quality Division.

19 Question was at a 20 ton --

20 MR. KILPATRICK: I just picked 20.

21 MR. SCHUTZ: Okay. At a 20-long-ton-per-day
22 process capacity, the new regulation would require
23 approximately a 95 percent recovery. The existing
24 regulation would require a flat 99.5 percent recovery
25 regardless of size.

1 MR. BYRUM: Other questions for Dr. Sheedy?

2 (No response.)

3 MR. BYRUM: I have no slips with anyone wishing
4 to speak to this subject.

5 Any other questions for Joyce?

6 Thank you, Dr. Sheedy.

7 MS. SHEEDY: Thank you.

8 THE CHAIRMAN: I need a motion from the Council
9 to recommend this to the DEQ Board, I guess with
10 emergency permit.

11 MR. KILPATRICK: I'll so move.

12 DR. HUGHES: Second.

13 THE CHAIRMAN: I've got a motion and a second
14 to recommend this to the DEQ Board. Any further
15 questions, comments?

16 Call roll.

17 THE SECRETARY: Mr. Fishback.

18 MR. FISHBACK: Abstain.

19 THE SECRETARY: Ms. Hinkle.

20 MR. HINKLE: Aye.

21 THE SECRETARY: Dr. Hughes.

22 DR. HUGHES: Aye.

23 THE SECRETARY: Miss Tillman?

24 MS. TILLMAN: Aye.

25 THE SECRETARY: Mr. Kilpatrick.

OAC 252:100-33 SIP Revision

CHAPTER 100: AIR POLLUTION CONTROL

SUBCHAPTER 33. CONTROL OF EMISSION OF NITROGEN OXIDES

Section

252:100-33-1. Purpose

252:100-33-1.1. Definitions [NEW]

252:100-33-1.2. Applicability [NEW]

252:100-33-2. Emission limits [AMENDED]

252:100-33-3. Performance testing [REVOKED]

252:100-33-1. Purpose

The purpose of this Subchapter is to control the emission of nitrogen oxides from stationary sources to prevent the Oklahoma air quality standards from being exceeded and insure that the present level of air quality in Oklahoma is not degraded.

252:100-33-1.1. Definitions [NEW]

The following terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

“New fuel-burning equipment” means any fuel-burning equipment, with the exception of gas turbines, that was not in being on February 14, 1972, or any existing fuel-burning equipment that was altered, replaced, or rebuilt after February 14, 1972, resulting in an increase in nitrogen oxide emissions, and any gas turbine that was not in being on July 1, 1977, or any existing gas turbine that was altered, replaced, or rebuilt after July 1, 1977, resulting in an increase in nitrogen oxide emissions.

“Three-hour average” means the arithmetic average of sampling results or continuous emission monitoring data from three contiguous one-hour periods.

252:100-33-1.2. Applicability [NEW]

This Subchapter applies to new fuel-burning equipment that meets both of the following criteria.

- (1) The fuel-burning equipment has a rated heat input of 50 million (MM) Btu/hr or greater.
- (2) The equipment burns solid fossil, gas, or liquid fuel.

252:100-33-2. Emission limits

(a) Fuel combustion.

~~(1) No person shall cause, suffer or allow emissions of nitrogen oxides calculated as nitrogen dioxide from any new gas-fired fuel-burning equipment with a rated heat input of 50 million BTUs per hour or more, in excess of 0.20 pound per million BTUs (0.36 gram per million gram-calorie) heat input, two hour maximum.~~

~~(2) No person shall cause, suffer or allow emissions of nitrogen oxides calculated as nitrogen dioxide from any new liquid-fired fuel-burning equipment with a rated heat input of 50 million~~

BTUs per hour or more, in excess of 0.30 pound per million BTUs (0.54 gram per million gram calorie) heat input, two-hour maximum.

~~(3) No person shall cause, suffer or allow emissions of nitrogen oxides calculated as nitrogen dioxide from any new solid fossil fuel burning equipment with a rated heat input of 50 million BTUs per hour or more, in excess of 0.70 pound per million BTUs (1.26 gram per million gram calorie) heat input, two-hour maximum.~~

(a) **Gas-fired fuel burning equipment.** Nitrogen oxide emissions (calculated as nitrogen dioxide) from any new gas-fired fuel-burning equipment shall not exceed 0.20 lb/MMBtu (0.86 ng/J) heat input, three-hour average.

(b) **Nitric acid plant.**

~~(1) No person shall cause, suffer or allow emissions of nitrogen oxides, calculated as nitrogen dioxide, from new nitric acid plants, in excess of 3.0 pounds per ton (1.5 kg/metric ton) of 100 percent acid produced, two-hour maximum.~~

~~(2) No person shall cause, suffer or allow to be discharged into the atmosphere from new nitric acid plants any visible emissions which exhibit 10 percent opacity, or greater.~~

(b) **Liquid-fired fuel-burning equipment.** Nitrogen oxide emissions (calculated as nitrogen dioxide) from any new liquid-fired fuel-burning equipment shall not exceed 0.30 lb/MMBtu (129 ng/J) heat input, three-hour average.

(c) **Solid fossil fuel-burning equipment.** Nitrogen oxide emissions (calculated as nitrogen dioxide) from any new solid fossil fuel-burning equipment shall not exceed 0.70 lb/MMBtu (300 ng/J) heat input, three-hour average.

252:100-33-3. Performance testing [REVOKED]

~~—Testing of equipment to determine if emission standards set in this Subchapter are met shall be performed by procedures as accepted by the Executive Director. Promulgated federal testing procedures for similar processes will be considered in making the determination of procedures to be used.~~

Oklahoma Register

Notices of Rulemaking Intent

COMMENT PERIOD:

The comment period for the proposed amendments to Subchapter 15 was November 15 through December 14, 1999.

PUBLIC HEARINGS:

Previously held before the Air Quality Council on December 14, 1999. However, additional oral comments may be made at the meeting of the Environmental Quality Board, Friday, February 25, 2000 - 9:30 a.m., at the Department of Environmental Quality, Room 101, 707 North Robinson, Oklahoma City, Oklahoma.

Contact Myrna Bruce at (405) 702-4177 for exact location.

COPIES OF PROPOSED RULES:

The proposed rules are available for review at the Air Quality Division office at 707 North Robinson, Suite 4100, Oklahoma City, Oklahoma, 73102, and on the DEQ website (www.deq.state.ok.us), Air Quality Division Current Events and Issues, or copies may be obtained from Myrna Bruce by calling (405) 702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statement may be obtained from the Air Quality Division.

CONTACT PERSON:

Cheryl Bradley, Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

ADDITIONAL INFORMATION:

On December 14, 1999, the Air Quality Council recommended the proposed amendments to Subchapter 15 be recommended for adoption by the Environmental Quality Board at their meeting on February 25, 2000.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #99-1640; filed 12-30-99]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #99-1631]

RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

PROPOSED RULES:

Subchapter 9. Excess Emission and Malfunction Reporting Requirements [AMENDED]
Subchapter 33. Control of Emission of Nitrogen Oxides [AMENDED]

SUMMARY:

The proposed changes to Subchapter 9 include substantive changes such as requiring that any written report or notice submitted for excess emissions contain a certification of truth, accuracy and completeness. Additional demonstration requirements for malfunctions, and startup/shutdown were added under proposed section 252:100-9-3-2, Demonstration of cause. These requirements, which owners and operators must meet to be exempt from compliance with applicable standards, include placing the burden on the owner or operator of proving that excess emissions occurring more than 1.5 percent of a process's operation time in a calendar quarter are not indicative of inadequate design, operation, or maintenance. Language was added to explain that compliance with this subchapter will not exempt sources from complying with any applicable federal requirement.

The proposed changes to Subchapter 33 are to simplify and clarify requirements and to remove redundant requirements. This is part of the agency-wide re-right/de-wrong initiative. No substantive changes are proposed.

AUTHORITY:

Environmental Quality Board, 27A O.S.Supp. 1999, §§ 2-2-101 and 2-5-101, *et seq.*

REQUEST FOR COMMENTS:

The DEQ requests that business entities or any other members of the public affected by these rules provide the DEQ, within the comment period, in dollar amounts if possible, the increase in the level of direct costs such as fees, and the indirect costs such as reporting, recordkeeping, equipment, construction, labor, professional services, revenue loss, or other costs expected to be incurred by a particular entity due to compliance with the proposed rules.

COMMENT PERIOD:

Written comments will be accepted prior to and at the hearing on February 16, 2000. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by February 9, 2000. Oral comments may be made at the February 16, 2000 hearing and at the February 25, 2000 hearing.

PUBLIC HEARINGS:

Wednesday, February 16, 2000 - 9:00 a.m. hearing, in Tulsa, Oklahoma (exact location to be announced).

Scheduled before the Environmental Quality Board February 25, 2000, at 9:30 a.m. at the Department of Environmental Quality, Multi-purpose room, 707 N. Robinson, Oklahoma City, OK.

Contact Myrna Bruce at (405) 702-4177 for exact location.

COPIES OF PROPOSED RULES:

The proposed rules are available for review at the Air Quality Division office at 707 North Robinson, Suite 4100, Oklahoma City, Oklahoma, 73102, and on the DEQ website (www.deq.state.ok.us), Air Quality Division Current

Events and Issues, or copies may be obtained from Myrna Bruce by calling (405) 702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statement may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Jeanette Buttram (252:100-9) and Joyce Sheedy (252:100-33), Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

ADDITIONAL INFORMATION:

Subchapter 9 was brought to public hearing on June 15, August 24, October 19 and December 14, 1999.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #99-1631; filed 12-27-99]

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

[OAR Docket #99-1638]

RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

PROPOSED RULES:

Subchapter 5. Registration, Emission Inventory and Annual Operating Fees [AMENDED]

Subchapter 13. Prohibition of Open Burning [AMENDED]

SUMMARY:

The proposed changes to Subchapter 5 are designed to allow the agency to bill annual operating fees on a flexible schedule. The changes should also allow the fees to be based on the most recent emission data possible. The proposed rule language clarifies that an owner/operator of a facility must report quantifiable excess emissions on their annual emission inventory. Substantive changes include requiring all inventories to be submitted prior to March 1 and providing up to a 60-day extension upon request and good cause shown. It allows fee payers five years after payment is made to notify the DEQ that they overpaid and receive credit for such overpayment, and reduces to six months after inventories are due or submitted the period of time in which either the facility owner/operator or the DEQ, respectively, can challenge the method used to calculate the facility's emissions for fee calculation purposes.

The proposed changes to Subchapter 13 will simplify and clarify the Subchapter as a part of the agency-wide re-right/de-wrong initiative. Such changes include consolidating the general conditions and requirements for

allowed open burning into a new section. A few substantial changes were made, such as adding definitions "domestic refuse" and "land clearing operation," along with a section on disaster relief procedures. In some instances, the requirement to notify the DEQ or other appropriate official for authorization to burn was added. New language was added under "land management and land clearing operations" requiring those who clear land in areas that are or have been designated nonattainment to burn their vegetation in open-pit incinerators. Existing language on open-pit incinerators was expanded and now prohibits accepting any material owned by other persons and from transporting any material to the property where the open-pit incinerator is located in order to burn the material.

AUTHORITY:

Environmental Quality Board powers and duties, 27A O.S.Supp. 1999, Section 2-2-101; and Oklahoma Clean Air Act Section 2-5-101, *et. seq.*

REQUEST FOR COMMENTS:

The DEQ requests that business entities or any other members of the public affected by these rules provide the DEQ, within the comment period, in dollar amounts if possible, the increase in the level of direct costs such as fees, and the indirect costs such as reporting, recordkeeping, equipment, construction, labor, professional service revenue loss, or other costs expected to be incurred by particular entity due to compliance with the proposed rules.

COMMENT PERIOD:

The comment period for the proposed amendments to Subchapters 5 and 13 were September 15 through October 19, 1999, and November 15 through December 14, 1999.

PUBLIC HEARINGS:

Previously held before the Air Quality Council on October 19 and December 14, 1999. However, additional oral comments may be made at the meeting of the Environmental Quality Board, Friday, February 25, 2000 - 9:30 a.m., at the Department of Environmental Quality, Room 101, 707 North Robinson, Oklahoma City, Oklahoma.

Contact Myrna Bruce at (405) 702-4177 for additional information.

COPIES OF PROPOSED RULES:

The proposed rules are available for review at the Air Quality Division office at 707 North Robinson, Suite 4100, Oklahoma City, Oklahoma, 73102, and on the DEQ website (www.deq.state.ok.us), Air Quality Division Current Events and Issues, or copies may be obtained from Myrna Bruce by calling (405) 702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statement may be obtained from the Air Quality Division.

Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #00-340; filed 2-24-00]

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

[OAR Docket #00-341]

RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

PROPOSED RULES:

Subchapter 9. Excess Emission and Malfunction Reporting Requirements [AMENDED]

Subchapter 11. Alternative Emissions Reductions Permits [AMENDED]

Subchapter 33. Control of Emission of Nitrogen Oxides [AMENDED]

SUMMARY:

The proposed amendments to Subchapter 9 include substantive changes such as adding definitions for "bypass," "regulated air pollutant," "technological limitation," and "working day," and requiring that a certification of truth, accuracy and completeness be submitted with any written report. Additional demonstration requirements for malfunctions and startups/shutdowns were added under proposed section 252:100-9-3.3, Demonstration of cause. Owners and operators must meet these requirements in order to be exempt from compliance with air emission limitations established in permits, rules, and orders of the DEQ. Language has been proposed to allow sources in an industry to request exemption from the applicable rules and regulations when air emissions from the industry cannot meet the applicable rules and regulations due to a technological limitation. Also, language has been proposed to explain that compliance with this Subchapter will not exempt sources from complying with any applicable federal requirement. In addition, it has been proposed that excess emissions occurring more than 1.5 percent of a process's operation time in a calendar quarter may be indicative of inadequate design, operation, or maintenance, and the DEQ may initiate further investigation to determine if that is so. Prior notice to the DEQ by facilities of maintenance activities has been proposed to be deleted from the rule. Finally, proposed language would clarify that even if a facility has made a demonstration of cause so as to be exempt from compliance from an applicable requirement, the DEQ still has the authority to order corrective action or

to require a cessation of activities if the emissions would cause a condition of air pollution.

The proposed amendments to Subchapter 11 will clarify and simplify the language as a part of the agency-wide re-right/de-wrong initiative. No substantive changes are being made to the Subchapter.

The proposed changes to Subchapter 33 are to primarily to simplify and clarify requirements and to remove redundant requirements as part of the agency-wide re-right/de-wrong initiative. Staff is also considering the following revisions: addition of language to make clear whether the rule applies to municipal waste incinerators subject to Subchapter 17; clarification or deletion of the term "two-hour maximum" in 252:100-33-2; and exemption of sources that are subject to nitrogen oxide standards contained in 40 CFR 60 Subparts D, Da, Db, or Dc, if the standards in these Subparts are as stringent as those contained in Subchapter 33. Some of the additional revisions being considered by staff may be substantive in nature.

AUTHORITY:

Environmental Quality Board powers and duties, 27A O.S. Supp. 1999, §§ 2-2-101; and Oklahoma Clean Air Act §§ 2-5-101, et seq.

REQUEST FOR COMMENTS:

The DEQ requests that business entities or any other members of the public affected by these rules provide the DEQ, within the comment period, in dollar amounts if possible, the increase in the level of direct costs such as fees, and the indirect costs such as reporting, recordkeeping, equipment, construction, labor, professional services, revenue loss, or other costs expected to be incurred by a particular entity due to compliance with the proposed rules.

COMMENT PERIOD:

Written comments will be accepted prior to and at the hearing on April 19, 2000. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by April 12, 2000. Oral comments may be made at the April 19, 2000 hearing and at the Environmental Quality Board hearing on June 20, 2000, in Tulsa, Oklahoma.

PUBLIC HEARINGS:

Wednesday, April 19, 2000 - 9:00 a.m. hearing, 4500 W. Lee Blvd, Room 301, Lawton Great Plains Technology Center, Lawton, OK.

Scheduled before the Environmental Quality Board at 9:30 a.m. on June 20, 2000 at the University Center at Tulsa, 700 N. Greenwood Ave., Tulsa, OK 74106.

COPIES OF PROPOSED RULES:

The proposed rules are available for review at the Air Quality Division office at 707 North Robinson, Suite 4100, Oklahoma City, Oklahoma, 73102, and on the DEQ website (www.deq.state.ok.us), Air Quality Division Current Events and Issues, or copies may be obtained from Myrna Bruce by calling (405) 702-4177.

7089

Notices of Rulemaking Intent

RULE IMPACT STATEMENT:

Copies of the rule impact statement may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Jeanette Buttram (Subchapter 9), Michelle Martinez (Subchapter 11), Joyce Sheedy (Subchapter 33), Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

ADDITIONAL INFORMATION:

Subchapter 9 was brought to public hearing on June 15, 1999, August 24, 1999, October 19, 1999, December 14, 1999 and February 16, 2000.

Subchapter 33 was brought to public hearing on February 16, 2000.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #00-341; filed 2-24-00]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 510. MUNICIPAL SOLID WASTE LANDFILLS

[OAR Docket #00-331]

RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

PROPOSED RULES:

Chapter 510. Municipal Solid Waste Landfills
[AMENDED]

SUMMARY:

The revisions to Chapter 510 are the result of the DEQ's re-right/de-wrong process to eliminate unneeded or outdated rules, to implement new rules based on statutory requirements, and to make other minor modifications for clarification and standardization.

AUTHORITY:

Environmental Quality Board powers and duties, 27A O.S.Supp. 1999, § 2-2-101; and the Oklahoma Solid Waste Management Act, 27A O.S.Supp. 1999, § 2-10-101 et seq.

REQUEST FOR COMMENTS:

The DEQ requests that business entities affected by these rules provide the DEQ, within the comment period, in dollar amounts if possible, the increase in the level of direct costs such as fees, and the indirect costs such as reporting, recordkeeping, equipment, construction, labor, professional services, revenue loss, or other costs expected to be incurred by a particular entity due to compliance with the proposed rules.

COMMENT PERIOD:

Deliver or mail written comments to the contact person from March 16, 2000 through April 5, 2000.

PUBLIC HEARINGS:

Before the Solid Waste Management Advisory Council at 9:00 a.m. on April 13, 2000 at the Norman Public Library, 225 N. Webster Ave., Norman, OK, 73069. Before the Environmental Quality Board at 9:30 a.m. on June 20, 2000 at the University Center of Tulsa, 700 N. Greenwood Ave., Tulsa, OK 74106.

COPY OF PROPOSED RULE:

The proposed rules, a copy of the proposed modifications and a table summarizing the changes for Chapter 510 may be obtained from the contact person or at the DEQ website at www.deq.state.ok.us/waste/index.html.

RULE IMPACT STATEMENT:

The rule impact statement for the proposed rules may be obtained from the contact person, or at the DEQ website at www.deq.state.ok.us/waste/index.html.

CONTACT PERSONS:

Contact Jon Roberts at jon.roberts@deqmail.state.ok.us or (405) 702-5100 (phone) or 702-5101 (fax). The DEQ is located at 707 N. Robinson, Oklahoma City, Oklahoma 73102. The mailing address is P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677.

ADDITIONAL INFORMATION:

Persons with disabilities who desire to attend the rulemaking hearing and need an accommodation should notify the contact person three days in advance of the hearing, TDD Relay Number 1-800-522-8506.

[OAR Docket #00-331; filed 2-24-00]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 520. SOLID WASTE MANAGEMENT

[OAR Docket #00-332]

RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

PROPOSED RULES:

Chapter 520. Solid Waste Management [AMENDED]

SUMMARY:

The revisions to Chapter 520 are the result of the DEQ's re-right/de-wrong process to eliminate unneeded or outdated rules, to implement new rules based on statutory requirements, and to make other minor modifications for clarification and standardization.

AUTHORITY:

Environmental Quality Board powers and duties, 27A O.S.Supp. 1999, § 2-2-101; and the Oklahoma Solid Waste Management Act, 27A O.S.Supp. 1999, § 2-10-101 et seq.

Permanent Final Adoptions

- (1) The use, where possible, of water or chemicals for control of dust in the demolition of existing buildings or structures, construction operations, the grading of roads, driveways and parking lots or the clearing of land for commercial, industrial, or residential development;
- (2) The application of water or suitable chemicals or some other covering on materials stockpiles, and other surfaces which ~~that~~ can create air-borne dusts under normal conditions;
- (3) The installation and use of hoods, fans and dust collectors to enclose and vent the handling of dusty materials or the use of water sprays or other acceptable measures to suppress the dust emission during handling. Adequate containment methods shall be employed during sandblasting or other similar operations;
- (4) The covering or wetting when in motion, of open-bodied trucks, trailers, or railroad ear cars when transporting dusty materials in areas where the general public must have access which can create air-borne particulate matter;
- (5) The removal as necessary from paved street and parking surfaces of earth or other material which materials that have a tendency to become airborne; and/or,
- (6) ~~the~~ The planting and maintenance of vegetative ground cover as necessary.

252:100-29-5. Variance [REVOKED]

~~Uses of potential variance from this Subchapter are subject to review, approval, and/or denial of the requested variance by the Air Quality Council.~~

[OAR Docket #01-747; filed 4-23-01]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

ANALYSIS:

The proposed revisions are to simplify and clarify requirements and to remove redundant requirements as part of the agency-wide re-right/de-wrong initiative. No substantive changes are proposed.

SUMMARY OF DIFFERENCES FROM ANALOGOUS FEDERAL RULES:

No substantive changes were made to this rule.

CONTACT PERSON:

Joyce D. Sheedy, Ph.D., Department of Environmental Quality, Air Quality Division, 707 North Robinson, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677, (405) 794-6800

PURSUANT TO THE ACTIONS DESCRIBED HEREIN, THE FOLLOWING RULES ARE CONSIDERED FINALLY ADOPTED AS SET FORTH IN 75 O.S., SECTION 308.1(A), WITH AN EFFECTIVE DATE OF JUNE 1, 2001:

SUBCHAPTER 33. CONTROL OF EMISSION OF NITROGEN OXIDES

252:100-33-1.1. Definitions

The following terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"New fuel-burning equipment" means any fuel-burning equipment, with the exception of gas turbines, that was not in being on February 14, 1972, or any existing fuel-burning equipment that was altered, replaced, or rebuilt after February 14, 1972, resulting in an increase in nitrogen oxide emissions, and any gas turbine that was not in being on July 1, 1977, or any existing gas turbine that was altered, replaced, or rebuilt after July 1, 1977, resulting in an increase in nitrogen oxide emissions.

"Three-hour average" means the arithmetic average of

sampling results or continuous emission monitoring data from three contiguous one-hour periods.

252:100-33-1.2. Applicability

This Subchapter applies to new fuel-burning equipment that meets both of the following criteria.

- (1) The fuel-burning equipment has a rated heat input of 50 million (MM) Btu/hr or greater.
- (2) The equipment burns solid fossil gas or liquid fuel.

252:100-33-2. Emission limits

(a) Fuel combustion.

- (1) No person shall cause, suffer or allow emissions of nitrogen oxides calculated as nitrogen dioxide from any new gas-fired fuel-burning equipment with a rated heat input of 50 million BTUs per hour or more, in excess of 0.20 pound per million BTUs (0.36 gram per million gram-calorie) heat input, two-hour maximum.
- (2) No person shall cause, suffer or allow emissions of nitrogen oxides calculated as nitrogen dioxide from any new liquid-fired fuel-burning equipment with a rated heat input of 50 million BTUs per hour or more, in excess of 0.30 pound per million BTUs (0.54 gram per million gram-calorie) heat input, two-hour maximum.
- (3) No person shall cause, suffer or allow emissions of nitrogen oxides calculated as nitrogen dioxide from any new solid fossil fuel-burning equipment with a rated heat input of 50 million BTUs per hour or more, in excess of 0.70 pound per million BTUs (1.26 gram per million gram-calorie) heat input, two-hour maximum.

(a) Gas-fired fuel-burning equipment. Nitrogen oxide emissions (calculated as nitrogen dioxide) from any new gas-fired fuel-burning equipment shall not exceed 0.20 lb/MMBtu (86 ng/l) heat input, three-hour average.

(b) Nitric acid plant.

- (1) No person shall cause, suffer or allow emissions of nitrogen oxides, calculated as nitrogen dioxide, from new nitric acid plants, in excess of 3.0 pounds per ton (1.5 kg/metric ton) of 100 percent acid produced, two-hour maximum.
- (2) No person shall cause, suffer or allow to be discharged into the atmosphere from new nitric acid plants any visible emissions which exhibit 10 percent opacity, or greater.

(b) Liquid-fired fuel-burning equipment. Nitrogen oxide emissions (calculated as nitrogen dioxide) from any new liquid-fired fuel-burning equipment shall not exceed 0.30 lb/MMBtu (129 ng/l) heat input, three-hour average.

(c) Solid fossil fuel-burning equipment. Nitrogen oxide emissions (calculated as nitrogen dioxide) from any new solid fossil fuel-burning equipment shall not exceed 0.70 lb/MMBtu (300 ng/l) heat input, three-hour average.

252:100-33-3. Performance testing [REVOKED]

Testing of equipment to determine if emission standards set in this Subchapter are met shall be performed by

procedures as accepted by the Executive Director. Promulgated federal testing procedures for similar processes will be considered in making the determination of procedures to be used.

Air Quality Council

AGENDA
AIR QUALITY COUNCIL
DEPARTMENT OF ENVIRONMENTAL QUALITY
HEARING/MEETING
9:00 A.M.
Wednesday, February 16, 2000
OSU at Tulsa Conference Center Auditorium
700 N. Greenwood
Tulsa, Oklahoma 74106

1. Call to Order – Bill Breisch
2. Roll Call – Myrna Bruce
3. CY 2000 Election of Officers
 - A. Discussion by Council
 - B. Roll call vote
4. Approval of Minutes of the December 14, 1999 Regular Meeting.
5. Public Rulemaking Hearings

A. OAC 252:100-9 Excess Emission and Malfunction Reporting [AMENDED]

Proposal would simplify the language under the agency-wide re-right/de-wrong initiative, including correction of typographical and grammatical errors and deletion of redundant language. Substantive changes include the requirement that any written report or notice submitted for excess emissions contain a certification of truth, accuracy and completeness. Additional demonstration requirements for malfunctions, and startup/shutdown were added under proposed section 252:100-9-3-2, Demonstration of cause. These requirements, which owners and operators must meet to be exempt from compliance with applicable standards, include placing the burden on the owner or operator of proving that excess emissions occurring more than 1.5 percent of a process's operation time in a calendar quarter are not indicative of inadequate design, operation, or maintenance. Language was added to explain that compliance with this subchapter will not exempt sources from complying with any applicable federal requirement. Language was also added to require reasonable steps be taken to minimize the impact of excess emissions without requiring the use or installation of additional stand-by or redundant pollution control equipment not otherwise required.

1. Presentation – Jeanette Buttram
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent adoption

B. OAC 252:100-33 Control of Emission of Nitrogen Oxides [AMENDED]

Proposal would simplify and clarify requirements and remove redundant requirements under the agency-wide re-right/de-wrong initiative. The language in 252:100-33-2(a)(1), (2), and (3) was simplified. OAC 252:100-33-2(b) which sets standards for nitric acid plants was deleted. NSPS 40 CFR 60, Subpart G, sets federal standards of performance for nitric acid plants. The federal standards apply to each nitric acid production unit in nitric acid plants that commenced construction or modification after August 17, 1971. The federal standards are as stringent as those contained in 252:100-33-2(b). Since 252:100-33-2(b) became effective after

August 17, 1971 and applies only to new sources, the federal standards cover the same facilities. The NSPS standard for nitric acid plants has been incorporated by reference in 252:100-4 making 252:100-33-2(b) redundant. OAC 252:100-33-3 which provides for performance testing of the equipment covered by Subchapter 33 was revoked. Performance testing requirements are contained in 252:100-43 making this section redundant. No substantive changes were proposed.

1. Presentation – Joyce Sheedy
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent adoption

6. Division Director's Report – Eddie Terrill

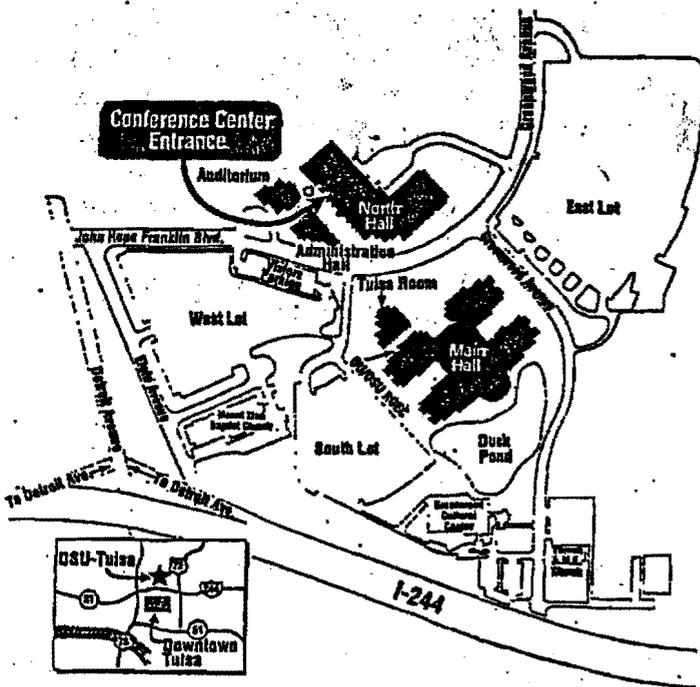

7. New Business – Any matter not known about, or which could not have been reasonably foreseen, prior to the time of posting the agenda.

8. Adjournment – Next Regular Meeting

Date and Time: April 19, 2000 @ 9:00 a.m.

Place: Lawton Great Plains Technology Center
4500 West Lee Blvd., Room 301
Lawton, Oklahoma

Lunch Break, if necessary

How to get to OSU-Tulsa

706 North Greenwood Ave. • Tulsa, Oklahoma 74106 • (918) 594-8000

Welcome to OSU-Tulsa. If this is your first visit, simply look for the highway you will be using and follow the corresponding instructions.

Turner Turnpike from Oklahoma City and west

From I-44, exit 75 North (Bartlesville). When you reach the downtown area, stay in the center lane and follow the signs for I-244 East (Joplin). Exit Cincinnati/Detroit Avenue. Go to the second light, turn left onto Detroit Avenue. Move into the right lane. Watch for the campus on the right. Turn right on John Hope Franklin Boulevard.

SH-64/31 (Broken Arrow Expressway)

From the BA Expressway, exit at 75 North (Bartlesville). Move to the far left lane. Take the I-244 West exit. Then take the next exit, Cincinnati/Detroit Avenue. Turn right on Detroit Avenue. Move into the right lane. Watch for the campus on the right. Turn right on John Hope Franklin Boulevard.

I-244 (Crosstown Expressway from the east)

Follow I-244 West to downtown Tulsa. When the highway splits, stay in the lane marked I-244 West (OKC). Take the next exit, Cincinnati/Detroit Avenue. Turn right on Detroit Avenue. Move into the right lane. Watch for the campus on the right. Turn right on John Hope Franklin Boulevard.

US-75 (from the north)

Follow US-75 South to I-244 West (OKC). Take the next exit, Cincinnati/Detroit Avenue. Turn right on Detroit Avenue. Move into the right lane. Watch for the campus on the right. Turn right on John Hope Franklin Boulevard.

OSU
TULSA

Should you desire to attend but have a disability and need an accommodation, please notify our Department three days in advance at (405) 720-4100.

February 3, 2000

MEMORANDUM

TO: Air Quality Council CT
FROM: Eddie Terrill, Director
AIR QUALITY DIVISION
SUBJECT: Modifications to Subchapter 33

Enclosed is a copy of the proposed draft modifications to OAC 252:100-33 CONTROL OF EMISSION OF NITROGEN OXIDES that will be brought to public hearing on February 16, 2000. The proposed revisions to OAC 252:100-41-15 are for the purpose of clarification, simplification and the removal of redundant language as required by the agency-wide re-right/de-wrong initiative. The language in 252:100-33-2(a)(1), (2), and (3) was simplified. 252:100-33-2(b), which sets standards for nitric acid plants, was deleted. NSPS 40 CFR 60, Subpart G, sets federal standards of performance for nitric acid plants. The federal standards apply to each nitric acid production unit in nitric acid plants that commenced construction or modification after August 17, 1971. The federal standards are as stringent as those contained in 252:100-33-2(b). Since 252:100-33-2(b) became effective after August 17, 1971 and applies only to new sources, the federal standards cover the same facilities. The NSPS standard for nitric acid plants has been incorporated by reference in 252:100-4 making 252:100-33-2(b) redundant. 252:100-33-3, which provides for performance testing of the equipment covered by Subchapter 33, was revoked. Performance testing requirements are contained in 252:100-43 making this Subsection redundant. No substantive changes are proposed.

Since the proposed revision to Subchapter 33 contains no substantive changes and no comments have been received from the public to date, staff will suggest that the proposed rule be recommended to the Environmental Quality Board for permanent adoption.

Enclosure: 2

SUBCHAPTER 33. CONTROL OF EMISSION OF NITROGEN OXIDES

Section

252:100-33-1. Purpose

252:100-33-1.1. Applicability

252:100-33-2. Emission limits

252:100-33-3. Performance testing [REVOKED]

252:100-33-1. Purpose

~~— The purpose of this Subchapter is to control the emission of nitrogen oxides from stationary sources to prevent the Oklahoma air quality standards from being exceeded and insure that the present level of air quality in Oklahoma is not degraded. This Subchapter establishes limits to control the emissions of nitrogen oxides to the atmosphere from stationary sources.~~

252:100-33-1.1. Applicability

This Subchapter applies to new fuel-burning equipment with a rated heat input of 50×10^6 BTU/hr or greater.

252:100-33-2. Emission limits

~~(a) Fuel combustion Gas-fired fuel-burning equipment. —~~

~~(1) No person shall cause, suffer or allow emissions of nitrogen oxides calculated as nitrogen dioxide from any new gas fired fuel burning equipment with a rated heat input of 50 million BTUs per hour or more, in excess of 0.20 pound per million BTUs (0.36 gram per million gram calorie) heat input, two hour maximum Nitrogen oxide emissions (calculated as nitrogen dioxide) from any new gas-fired fuel-burning equipment shall not exceed $0.20 \text{ lb}/10^6 \text{ BTU}$ ($0.36 \text{ g}/10^6 \text{ g-cal}$) heat input, two-hour maximum.~~

~~(2) (b) Liquid-fired fuel-burning equipment. — No person shall cause, suffer or allow emissions of nitrogen oxides calculated as nitrogen dioxide from any new liquid fired fuel burning equipment with a rated heat input of 50 million BTUs per hour or more, in excess of 0.30 pound per million BTUs (0.54 gram per million gram calorie) heat input, two hour maximum Nitrogen oxide emissions (calculated as nitrogen dioxide) from any new liquid-fired fuel-burning equipment shall not exceed $0.30 \text{ lb}/10^6 \text{ BTU}$ ($0.54 \text{ g}/10^6 \text{ g-cal}$) heat input, two-hour maximum.~~

~~(3) (c) Solid fossil fuel-burning equipment. — No person shall cause, suffer or allow emissions of nitrogen oxides calculated as nitrogen dioxide from any new solid fossil fuel burning equipment with a rated heat input of 50 million BTUs per hour or more, in excess of 0.70 pound per million BTUs (1.26 gram per million gram calorie) heat input, two hour maximum Nitrogen oxide emissions (calculated as nitrogen dioxide) from any new solid fossil fuel-burning~~

equipment shall not exceed 0.70 lb/10⁶ BTU (1.26 g/10⁶ g-cal) heat input, two-hour maximum.

~~(b) Nitric acid plant.~~

~~(1) No person shall cause, suffer or allow emissions of nitrogen oxides, calculated as nitrogen dioxide, from new nitric acid plants, in excess of 3.0 pounds per ton (1.5 kg/metric ton) of 100 percent acid produced, two hour maximum.~~

~~(2) No person shall cause, suffer or allow to be discharged into the atmosphere from new nitric acid plants any visible emissions which exhibit 10 percent opacity, or greater.~~

252:100-33-3. Performance testing [REVOKED]

~~Testing of equipment to determine if emission standards set in this Subchapter are met shall be performed by procedures as accepted by the Executive Director. Promulgated federal testing procedures for similar processes will be considered in making the determination of procedures to be used.~~

Notice of Public Meeting for February 16, 2000 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance doors to the OSU @ Tulsa Auditorium and at the Tulsa City-County Health Department.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Mr. Kilpatrick - aye; Mr. Fallon - aye; Mr. Treeman - aye; Mr. Wilson - aye; Mr. Branecky - aye; Ms. Myers - aye; Mr. Breisch - aye. Dr. Canter and Dr. Grosz did not attend.

Election of Officers - Nominations were opened for the election of new officers for Calendar Year 2000. Mr. Wilson made motion to nominate David Branecky for Chair and Sharon Myers for Vice-Chair. Second was made by Mr. Kilpatrick. Roll call: Mr. Kilpatrick - aye; Mr. Fallon - aye; Mr. Treeman - aye; Mr. Wilson - aye; Mr. Branecky - aye; Ms. Myers - aye; Mr. Breisch - aye. Mr. Breisch passed the gavel to Mr. Branecky who thanked Mr. Breisch for the many years that he had served as Chair and for leading the Council through many long and difficult discussions.

Approval of Minutes - Mr. Branecky entertained a motion to approve the Minutes of the December 14, 1999 Public Meeting/Hearings. Motion was made by Mr. Wilson to approve the Minutes as presented and second was made by Mr. Fallon. Roll call as follows: Mr. Kilpatrick - aye; Mr. Fallon - aye; Mr. Treeman - aye; Mr. Wilson - aye; Mr. Branecky - aye; Ms. Myers - aye; Mr. Breisch - aye.

Protocol Statement - As protocol officer, Mr. Dyke convened the hearings by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-201 through 2-5-101 - 2-5-118.. Mr. Dyke entered the Agenda and the Oklahoma Register Notice into the record.

PUBLIC HEARING

OAC 252:100-9

Excess Emission And Malfunction Reporting [AMENDED]

Mr. Terrill advised that at the December 14 Council meeting, it was decided that there would be a committee formed to look at this rule because of all of the comments that had been received. Mr. Terrill stated that the committee had met twice to develop language that would be satisfactory to both industry and the state. Mr. Terrill then asked Mr. Wilson, who chaired the committee, to give an update. Mr. Wilson said that the committee had met twice with the state and once with the stakeholders; and that it was in the interest of all to have a regulation that is very clear to understand. He announced that another meeting was planned on February 22 for the purpose of gathering as many comments as possible so that all interests could be satisfied.

Ms. Jeanette Buttram was then asked to brief the Council. Ms. Buttram stated that staff is continuing to revise the rule based on comments received. She advised that comments had been received from Power Smith Cogeneration, EPA, and Weyerhaeuser and entered those into the record.

Mr. Branecky interjected that Council would like to be able to approve this rule at the April meeting and asked that additional comments be sent in a timely manner. He continued that the rule, however, would not be passed until issues were resolved and Council was happy with it; but pointed out that the rule will have been before the Council for a year this April.

Ms. Sandra Rennie, Air Planning Section, EPA Region 6, stated that EPA found the January 2000 draft acceptable and advised that EPA staff would be available to work with the committee as they continue their discussions. Mr. Howard Ground, Central and Southwest, entered their "redlined version" of the draft into the record and advised that this version was also endorsed by Mid-Continent Oil and Gas Association. Mr. Wilson stated that the committee did not make changes to the existing SC 9, but instead revised the most recent version that mirrored the EPA guidance by taking the unattainable language and adding some reasonableness to it.

There was considerable discussion about when upcoming rule revisions would be announced to the public, when they would go before the Council, and the fact that, in future, there would be possible committees and workgroups for input.

Mr. Branecky called for a motion to continue this rule to the April meeting. Ms. Myers made the motion and second was made by Mr. Wilson. Roll call as follows: Mr. Kilpatrick - aye; Mr. Fallon - aye; Mr. Treeman - aye; Mr. Wilson - aye; Mr. Branecky - aye; Ms. Myers - aye; and Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-33

Control of Emission of Nitrogen Oxides [AMENDED]

Dr. Joyce Sheedy was called upon to give staff's recommendation of this rule. She stated that the revisions brought before the Council were non-substantive with the intent to be for clarification, simplification, and removal of redundant language to satisfy the Agency's re-right/de-wrong initiative. Dr. Sheedy then pointed out these changes.

Mr. Branecky had concerns that he felt should be clarified. These included adding a definition of "new" in 33-1.1; clarifying the term "two-hour maximum" in 33-2; and requiring compliance with the two-hour limits when NSPS requirement is a 3-hour rolling average. Following discussion about these changes, it was decided to continue this rule to the April meeting and Mr. Branecky called for a motion. Motion was made by Mr. Kilpatrick and second was by Mr. Fallon. Roll call as follows: Mr. Kilpatrick -aye; Mr. Fallon - aye; Mr. Treeman - aye; Mr. Wilson - aye; Mr. Branecky - aye; Ms. Myers - aye; and Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

DIVISION DIRECTOR'S REPORT - Mr. Scott Thomas gave a presentation on the Texas Plan for Control of Nitrous Oxides. Mr. Dawson Lasseter gave a presentation on the status of the Air Quality Permits Section.

NEW BUSINESS - None

ADJOURNMENT With no further business, meeting was adjourned with announcement that the next regularly scheduled meeting would be April 19, 2000 at 9:00 a.m. in the Great Plains Technology Center Seminar Room (Room 301), 4500 West Lee Boulevard.

AGENDA
AIR QUALITY COUNCIL
DEPARTMENT OF ENVIRONMENTAL QUALITY
HEARING/MEETING
9:00 A.M.
Wednesday, April 19, 2000
Lawton Great Plains Technology Center
4500 West Lee Blvd., Room 301
Lawton, Oklahoma

1. Call to Order— David Branecky
2. Roll Call – Myrna Bruce
3. Approval of Minutes of the February 16, 2000 Regular Meeting
4. PUBLIC RULEMAKING HEARINGS

A. OAC 252:100-7 PERMITS FOR MINOR FACILITIES [AMENDED]

The proposed changes to SC7 consist of the addition of sections 60.3, 60.4, and 60.5. Proposed sections 60.3 and 60.4 reference the existing permits by rule for VOC storage and loading facilities and particulate matter facilities, respectively. Section 60.5 is the proposed permit by rule for natural gas compression facilities. This section contains eligibility requirements, standards, testing and monitoring requirements, and recordkeeping requirements for natural gas compression facilities that qualify for permit by rule.

1. Presentation – Dr. Joyce Sheedy
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent and emergency adoption

B. OAC 252:100-9 EXCESS EMISSION AND MALFUNCTION REPORTING [AMENDED]

The proposed amendments to SC 9 include substantive changes such as adding new and amending existing definitions and requiring that a certification of truth, accuracy and completeness be submitted with any written report. Additional demonstration requirements for malfunctions and startups/shutdowns were added under proposed section 252:100-9-3.3, Demonstration of cause. New language sets forth the Division's interpretation that excess emissions occurring more than 1.5 percent of the time that a process operated in a calendar quarter may be indicative of inadequate design, operation, or maintenance, and the DEQ may initiate further investigation to determine if that is so. Prior notice to the DEQ by facilities of maintenance activities has been proposed to be deleted from the rule.

1. Presentation – Jeanette Buttram
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent adoption

C. OAC 252:100-11 ALTERNATIVE EMISSIONS REDUCTIONS PERMITS [AMENDED]

The proposed amendments to SC 11 will clarify and simplify the language as a part of the agency-wide re-right/de-wrong initiative. No substantive changes are being made to the Subchapter. This subchapter allows sources an alternative means for reducing the total burden of pollutants released into the atmosphere.

1. Presentation – Michelle Martinez
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent adoption

D. OAC 252:100-17 INCINERATORS [AMENDED]

The Department is proposing amendments to 252:100-17, Part 3, Incinerators. Section 2 of the Part would be amended to remove references to an effective date, and Section 5(3) would be deleted. A new Section 5.1, Alternative incinerator design requirements, would be added to clarify that the Division Director may approve incinerator designs that do not meet the requirements specified in 252:100-17-5.

1. Presentation - Cheryl Bradley
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent and emergency adoption

E. OAC 252:100-33 CONTROL OF EMISSION OF NITROGEN OXIDES [AMENDED]

The proposed changes to Subchapter 33 are to primarily simplify and clarify requirements and to remove redundant requirements as part of the agency-wide re-right/de-wrong initiative.

1. Presentation - Dr. Joyce Sheedy
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent adoption

5. Division Director's Report - Eddie Terrill

6. New Business - Any matter not known about, or which could not have been reasonably foreseen, prior to the time of posting the agenda.

7. Adjournment - Next Regular Meeting

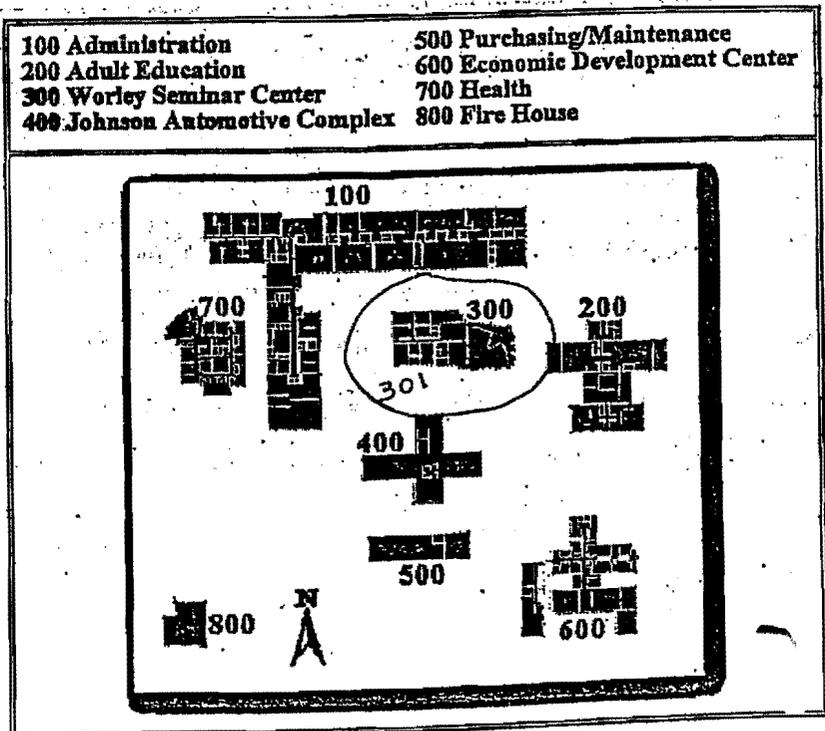

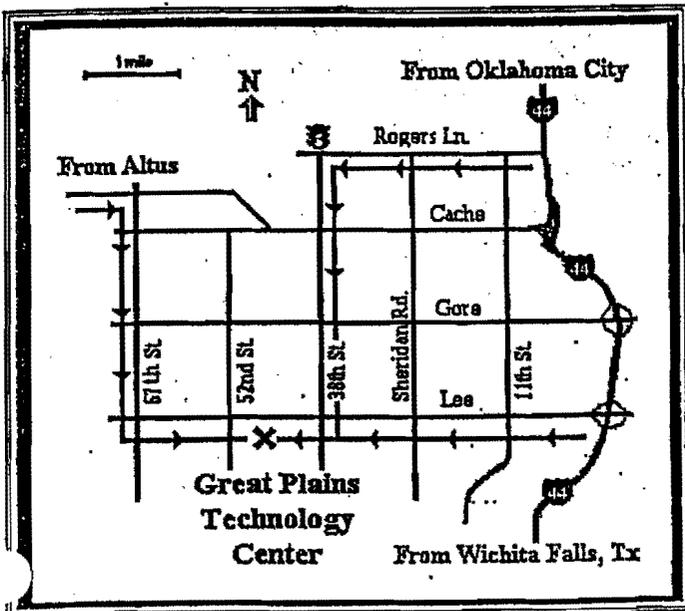

Date and Time: June 14, 2000 @ 9:00 a.m.

Place: OSU @ Tulsa North Hall Room 150

700 North Greenwood, Tulsa, OK

Lunch Break, if necessary

MAP TO GREAT PLAINS

Should you desire to attend but have a disability and need an accommodation, please notify our Department three days in advance at (405) 702-4100.

April 3, 2000

MEMORANDUM

TO: Air Quality Council

FROM: Eddie Terrill, Director *ET for*
AIR QUALITY DIVISION

SUBJECT: Modifications to Subchapter 33

Enclosed is a copy of the proposed draft modifications to OAC 252:100-33 CONTROL OF EMISSION OF NITROGEN OXIDES. The proposed modifications were first brought to public hearing on February 16, 2000. The proposed revisions to OAC 252:100-33 are for the purpose of clarification, simplification and the removal of redundant language as required by the agency-wide re-right/de-wrong initiative. 252:100-1.1. Applicability was added to make it easier to determine which sources are subject to the rule. The language in 252:100-33-2(a)(1), (2), and (3) was simplified. 252:100-33-2(b), which sets standards for nitric acid plants, was deleted. NSPS 40 CFR 60, Subpart G, sets federal standards of performance for nitric acid plants. The federal standards apply to each nitric acid production unit in nitric acid plants that commenced construction or modification after August 17, 1971. The federal standards are as stringent as those contained in 252:100-33-2(b). Since 252:100-33-2(b) became effective after August 17, 1971, and applies only to new sources, the federal standards cover the same facilities. The NSPS standard for nitric acid plants has been incorporated by reference in 252:100-4 making 252:100-33-2(b) redundant. 252:100-33-3, which provides for performance testing of the equipment covered by Subchapter 33, was revoked. Performance testing requirements are contained in 252:100-43 making this Subsection redundant. No substantive changes are proposed. Comments made at the February 16, 2000 Air Quality Council meeting were given consideration in this proposed revision. Comments were received from Michael D. Graves of Hall, Estill, Hardwick, Gable, Golden & Nelson on March 27, 2000. A summary of those comments and staff responses is attached.

Since the proposed revision to Subchapter 33 contains no substantive changes and no written comments have been received from the public to date, Staff will suggest that the proposed rule be recommended to the Board for permanent adoption.

Enclosure: 3

SUBCHAPTER 33. CONTROL OF EMISSION OF NITROGEN OXIDES

Section

- 252:100-33-1. Purpose
- 252:100-33-1.1 Applicability
- 252:100-33-2. ~~Emission limits~~
- 252:100-33-3. Performance testing

252:100-33-1. Purpose

The purpose of this Subchapter is to control the emission of nitrogen oxides from stationary sources to prevent the Oklahoma air quality standards from being exceeded and insure that the present level of air quality in Oklahoma is not degraded.

252:100-33-1.1. Applicability

This Subchapter applies to new solid fossil, gas, and liquid fuel-burning equipment that meet both of the following criteria.

- (1) The fuel-burning equipment has a rated heat input of 50 million (MM) Btu/hr or greater.
- (2) The fuel-burning equipment is new equipment that was not in being on February 14, 1972, or it is existing equipment that was altered, replaced, or rebuilt after February 14, 1972, resulting in an increase in air pollutant emissions.

252:100-33-2. ~~Emission limits~~

~~(a) Fuel combustion.~~

- ~~(1) No person shall cause, suffer or allow emissions of nitrogen oxides calculated as nitrogen dioxide from any new gas fired fuel burning equipment with a rated heat input of 50 million BTUs per hour or more, in excess of 0.20 pound per million BTUs (0.36 gram per million gram calorie) heat input, two hour maximum.~~

(a) Gas-fired fuel burning equipment. Nitrogen oxide emissions (calculated as nitrogen dioxide) from any new gas-fired fuel-burning equipment shall not exceed 0.20 lb/MMBtu (0.36 g/MMg-cal) heat input, maximum two-hour average.

- ~~(2) No person shall cause, suffer or allow emissions of nitrogen oxides calculated as nitrogen dioxide from any new liquid fired fuel burning equipment with a rated heat input of 50 million BTUs per hour or more, in excess of~~

~~0.30 pound per million BTUs (0.54 gram per million gram caloric) heat input, two hour maximum.~~

(b) Liquid-fired fuel-burning equipment. Nitrogen oxide emissions (calculated as nitrogen dioxide) from any new liquid-fired fuel-burning equipment shall not exceed 0.30 lb/MMBtu (0.54 g/MMq-cal) heat input, maximum two-hour average.

~~(3) No person shall cause, suffer or allow emissions of nitrogen oxides calculated as nitrogen dioxide from any new solid fossil fuel burning equipment with a rated heat input of 50 million BTUs per hour or more, in excess of 0.70 pound per million BTUs (1.26 gram per million gram caloric) heat input, two hour maximum.~~

(c) Solid fossil fuel-burning equipment. Nitrogen oxide emissions (calculated as nitrogen dioxide) from any new solid fossil fuel-burning equipment shall not exceed 0.70 lb/MMBtu (1.26 g/MMq-cal) heat input, maximum two-hour average.

~~(b) Nitric acid plant.~~

~~(1) No person shall cause, suffer or allow emissions of nitrogen oxides, calculated as nitrogen dioxide, from new nitric acid plants, in excess of 3.0 pounds per ton (1.5 kg/metric ton) of 100 percent acid produced, two hour maximum.~~

~~(2) No person shall cause, suffer or allow to be discharged into the atmosphere from new nitric acid plants any visible emissions which exhibit 10 percent opacity, or greater.~~

252:100-33-3. Performance testing [REVOKED]

~~Testing of equipment to determine if emission standards set in this Subchapter are met shall be performed by procedures as accepted by the Executive Director. Promulgated federal testing procedures for similar processes will be considered in making the determination of procedures to be used.~~

Notice of Public Meeting for April 19, 2000 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance doors to the Great Plains Technical Center and on the entrance doors of the DEQ Central Office in Oklahoma City.

Call to Order - Mr. Branecky, Chairman, called the meeting to order and roll call was taken as follows: Mr. Kilpatrick - aye; Mr. Wilson - aye; Dr. Grosz - aye; Mr. Treeman - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye. Mr. Breisch and Dr. Canter did not attend.

Approval of Minutes - Mr. Branecky entertained a motion to approve the Minutes of the February 16, 2000 Public Meeting/Hearings. Motion was made by Mr. Fallon to approve the Minutes as presented and second was made by Dr. Grosz. Roll call: Mr. Kilpatrick - aye; Mr. Wilson - aye; Dr. Grosz - aye; Mr. Treeman - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye.

Protocol Statement — As protocol officer, Mr. Dyke convened the hearings by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-201 through 2-5-101 - 2-5-118. Mr. Dyke entered the Agenda and the Oklahoma Register Notice into the record.

PUBLIC HEARING

OAC 252:100- 7

Permits for Minor Facilities

Mr. Terrill advised that it had been agreed to form workgroups for rules that would be modified extensively or that would affect a large group of industrial sources so as to allow input into the process from those effected sources. He added that there seemed to be a misunderstanding regarding how and when workgroups would be formed. Mr. Terrill stated that it was never intended to form these workgroups without first having a formal public hearing. He invited

those who wanted to participate in the workgroup process to contact our office and watch our website for meeting information.

Dr. Joyce Sheedy stated that the proposed changes consist of the addition of sections 60.3 and 60.4, which are not substantive changes. Additionally, section 60.5 is the proposed permit by rule for natural gas compression facilities. This section contains eligibility requirements, standards, testing and monitoring requirements, and recordkeeping requirements for natural gas compression facilities that qualify for permit by rule.

Dr. Sheedy advised that comments had been received from Tom Blachley which she entered into the record. She stated that the staff recommended that this rule be continued to the next regular meeting.

Following discussion, Mr. Branecky asked for volunteers from the Council to participate in the workgroup sessions. Mr. Wilson and Mr. Kilpatrick volunteered. Then Mr. Branecky entertained a motion to continue the hearing on this rule to the next regular meeting. Ms. Myers made the motion and the second was made by Mr. Fallon. Roll call: Mr. Kilpatrick - aye; Mr. Wilson - aye; Dr. Grosz - aye; Mr. Treeman - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-9

Excess Emission And Malfunction Reporting [AMENDED]

Ms. Jeanette Buttram presented the staff recommendation advising that earlier versions of SC 9 were brought before the Council on June 15, August 24, October 19, December 14, 1999 and on February 16, 2000. She stated that there had been several meetings between staff and regulated community which produced the current version. She entered into the record comments received from Michael Graves of Hall, Estill, Hardwick, Gable, Golden & Nelson; Michael Bernard, President of Mid Continent Oil & Gas Association of Oklahoma; Tom Blachley; and from EPA Region VI. After describing proposed changes that had been made in response to the comments received, Ms. Buttram advised that it was staff's recommendation that this rule be forwarded to the Environmental Quality Board for permanent adoption.

Mr. Branecky called for motion for approval as discussed. Mr. Fallon make the motion with Mr. Kilpatrick seconding. Roll call: Mr. Kilpatrick - aye; Mr. Wilson - aye; Dr. Grosz - aye; Mr. Treeman - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-11

Alternative Emissions Reductions Permits

Ms. Michelle Martinez was called to make the staff presentation for Subchapter 11. Ms. Martinez stated that the proposed changes followed the agency-wide re-right/de-wrong initiative to simplify and clarify the language with no substantive changes proposed. She pointed out the changes and related that comments had been received from EPA and from Mr. Tom Blachley which she entered into the record.

Following discussion, Mr. Branecky called for a motion to approve the rule with the changes as discussed and forward to the Environmental Quality Board for permanent adoption. Ms. Myers made the motion and second was made by Dr. Grosz. Roll call: Mr. Kilpatrick - aye; Mr. Wilson - aye; Dr. Grosz - aye; Mr. Treeman - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-17

Incinerators

Ms. Cheryl Bradley advised that proposed modifications to Part 3 would allow the Air Quality Division to issue permits for the construction and operation of incinerators that meet all applicable requirements except multiple chamber design; and to remove the references to an effective date per the Administrative Rules on Rulemaking. Ms. Bradley further advised that proposal would clarify that the Division Director may approve incinerator designs that do not meet the requirements specified in Part 5.

Ms. Bradley entered a letter of comment from EPA Region VI into the record and recommended that the rule go forward to the Environmental Quality Board for permanent and emergency adoption.

Following discussion, Mr. Branecky called for a motion to forward the rule to the Board. Mr. Kilpatrick made the motion and Mr. Treeman made the second. Roll call: Mr. Kilpatrick - aye; Mr. Wilson - aye; Dr. Grosz - aye; Mr. Treeman - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-33

Control of Emission of Nitrogen Oxides

Dr. Joyce Sheedy provided Council with staff recommendations pointing out revisions made since the February meeting. She remarked that written comments had been received from Michael Graves of Hall, Estill, Hardwick, Gable, Golden & Nelson; Tom Blachley; Gary Collins of Terra Nitrogen; and EPA Region VI. She entered these comments into the record. Dr. Sheedy advised that staff's suggestion was for Council to forward this rule to the Environmental Quality Board for permanent adoption.

Mr. Branecky called for a motion to forward this rule to the Environmental Quality Board with the changes suggested with the understanding that the DEQ would address the turbine issue not later than June, 2001 Council meeting. Mr. Fallon made the motion and the second was made by Dr. Grosz. Roll call: Mr. Kilpatrick - aye; Mr. Wilson - aye; Dr. Grosz - aye; Mr. Treeman - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

DIVISION DIRECTOR'S REPORT - Scott Thomas discussed the TexAQS 2000 air pollution research project stating that the study is being designed to improve understanding of the chemical and physical processes that control air pollutant formation in the greater Houston area and transport along the Gulf Coast of southeastern Texas and perhaps into neighboring states as well. He noted that measurements of gaseous, particulate and hazardous air pollutants will be made this summer throughout the eastern half of Texas and possibly portions of Oklahoma using both ground stations and aircraft. He stated that the Air Quality Division plans to participate in this study by sharing air quality data with the Texas Natural Resource Conservation Commission, and by supporting aircraft sampling activities in our State. Mr. Terrill added that \$50,000 has been set aside for collection of Oklahoma air quality data and remarked that the results of this study could prove to be invaluable in allowing us to better understand how ozone is formed and transported as well as what control strategies may be effective in the future.

Additionally, Mr. Terrill provided a brief summary of EPA's efforts to reinstate the 8-hour ozone standard by filing a petition with the U.S. Supreme Court over the D.C Circuit decision. He stated that while the enforceability of the standard is in question, EPA is going forward with the designation of areas that have not attained compliance with the 8-hour standard. He noted that Oklahoma may not submit to EPA any designations for our state as the final decision has yet to be made.

Ms. Myers presented the financial committee's update stating that she was pleased to report that the DEQ can now provide current financial information for planning activities.

NEW BUSINESS - None

ADJOURNMENT With no further business, meeting was adjourned with announcement that the next regularly scheduled meeting would be June 14, 2000 at 9:00 a.m. in Room 150 of the OSU Tulsa Campus located at 700 North Greenwood.

NOTE: The sign-in sheet is attached as an official part of these Minutes.

David Branecky, Chairman
Air Quality Council

J. Eddie Terrill, Director
Air Quality Division

THE AIR QUALITY COUNCIL
RULEMAKING RECOMMENDATION
TO THE ENVIRONMENTAL QUALITY BOARD

Identification of Proposed Rulemaking:

Chapter Number and Title:
OAC: 252:100-33
CONTROL OF EMISSIONS OF NITROGEN OXIDES [AMENDED]

On April 19, 2000 the members of this Council, by authority vested in them by the Oklahoma Environmental Quality Code (27 O.S. Sec. 2-2-201), by roll call vote, recommended to the Environmental Quality Board that the rulemaking described above be adopted as:

X permanent [take effect after legislative review]
_____ emergency [temporary, to take effect upon approval by the Governor because of time]

This Council has considered the proposed rulemaking and comments about it and determined, to the best of its knowledge, that all applicable requirements of the Oklahoma Administrative Procedures Act have been followed.

This council authorizes the Department to prepare this recommended rulemaking for the Board, making any changes approved by the Council, correcting typographical, grammatical and reference errors, and formatting them as required by the Office of Administrative Rules. This is to be done with the understanding that such changes shall neither alter the sense of what this Council recommends nor invalidate this recommendation.

Respectfully,

David Branecky
Chair or Designee:

Date Signed: 4/19/00

VOTING TO APPROVE:

Gary Kilpatrick Sharon Myers
Joel Wilson David Branecky
Fred Grosz
Rick Treeman
Leo Fallon

ABSTAINING:

VOTING AGAINST:

None

ABSENT:

William Breisch
Larry Canter

Environmental Quality Board

REGULAR MEETING AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
OKLAHOMA ENVIRONMENTAL QUALITY BOARD

A Public Meeting: 9:30 a.m., Tuesday, June 20, 2000
Oklahoma State University at Tulsa
700 N Greenwood
Oklahoma City, Oklahoma 73102

1. Call to Order – Cheryl Cohenour, Vice-Chair

2. Roll Call - Lynda Finch

3. Approval of Minutes of the February 25, 2000 Regular Meeting

4. Rulemaking – OAC 252:100 Air Pollution Control

Four sets of changes are proposed:

- Proposed amendments to Subchapter 9 (Excess Emission and Malfunction Reporting Requirements) include changes made as part of the DEQ's "re-right/de-wrong" effort to simplify its rules. The subchapter has been reorganized, typographical and grammatical errors have been corrected, and redundant language has been deleted. Additionally, some substantive changes were made. Among these are amendments relating to: definitions of *malfunction*, *bypass*, *regulated air pollutant*, *technological limitation* and *working day*; report certifications; demonstration requirements for emission limit exemptions; timing of excess emission reports; indicators of possible inadequate design, operation, or maintenance; and notice of maintenance activities.
- Proposed amendments to Subchapter 11 (Alternative Emissions Plans and Authorizations) are intended to clarify and simplify the language as part of the DEQ's "re-right/de-wrong" initiative.
- Proposed amendments to Subchapter 17 (Incinerators) include deletion of an outdated reference to an effective date. Language on design requirements is revised to authorize the Division Director to approve an incinerator design that does not meet the specific temperature and secondary burner requirements if the incinerator can meet all other applicable requirements. ϵ
- Proposed amendments to Subchapter 33 (Control of Emission of Nitrogen Oxides) are intended to clarify and simplify the language as part of the DEQ's "re-right/de-wrong" initiative.

A. Presentation – David Branecky, Air Quality Council Chair

B. Questions and discussion by the Board

C. Questions, comments and discussion by the public

D. Discussion by the Board

E. Roll call vote(s) on emergency and permanent adoption of amendments to Subchapter 17, and on permanent adoption of amendments to Subchapters 9, 11 and 33

5. Rulemaking – OAC 252:610 and 611 General Water Quality

Chapter 610 has been reviewed as part of the DEQ's "re-right/de-wrong" process of simplifying its rules. Language has been simplified and clarified, and rules deemed unenforceable have been removed. Because so many changes were identified, it is proposed that Chapter 610 be revoked and a new Chapter 611 created to replace it.

- A. Presentation-- Robert Johnston, Water Quality Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote(s) on permanent adoption/revocation

6. Rulemaking-- OAC 252:620 and 621 Non-Industrial Impoundments and Land Application

Chapter 620 has been reviewed as part of the DEQ's "re-right/de-wrong" process of simplifying its rules. Language has been simplified and clarified, and rules deemed unenforceable have been removed. Because so many changes were identified, it is proposed that Chapter 620 be revoked and a new Chapter 621 created to replace it. Also, the requirements for the land application of non-industrial wastewater are moved from Chapter 647 to Chapter 621 because that activity is more closely related to impoundments than to biosolids.

- A. Presentation-- Robert Johnston, Water Quality Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote(s) on permanent adoption/revocation

7. Rulemaking-- OAC 252:635 Reservoir Sanitation

Chapter 635 has been reviewed as part of the DEQ's "re-right/de-wrong" process of simplifying its rules. The DEQ has determined that all provisions contained in Chapter 635 appear in state statutes or other DEQ rules, so the DEQ is proposing that the chapter be revoked.

- A. Presentation-- Robert Johnston, Water Quality Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote(s) on permanent revocation

8. Rulemaking-- OAC 252:641 Individual and Small Public On-Site Sewage Disposal Systems

The proposed amendments authorize general permits for on-site sewage disposal systems, except for alternative systems, which will require individual permits subject to the Tier I permitting process. Certification for septic system installers will be a permit-by-rule process. Minor typographical corrections are also made.

- A. Presentation-- Robert Johnston, Water Quality Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote on permanent adoption

9. Rulemaking-- OAC 252:002 Procedures of the DEQ

This proposed rulemaking removes on-site sewage disposal systems, except for alternative systems, from Tier I permitting requirements. This corresponds to changes concurrently proposed for Chapter 641, Individual and Small Public On-Site Sewage Disposal Systems, to establish permits for on-site sewage disposal systems as general permits.

- A. Presentation – Robert Johnston, Water Quality Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote on permanent adoption

10. **Rulemaking -- OAC 252:647 and 648 Sludge and Land Application of Wastewater (Chapter 647), Land Application of Biosolids (Chapter 648)**

Chapter 647 has been reviewed as part of the DEQ's "re-right/de-wrong" process of simplifying its rules. Proposed changes include the deletion from Chapter 647 of rules for the land application of industrial wastewater and sludge because they were incorporated into Chapter 616 (Industrial Impoundments and Land Application) by Board action in February, and the deletion from Chapter 647 of rules for the land application of non-industrial wastewater because they are proposed for incorporation into Chapter 621 (Non-Industrial Impoundments and Land Application) (see agenda item 6). For the remaining rules on biosolids, Chapter 647 is revoked and replaced by Chapter 648.

- A. Presentation – Robert Johnston, Water Quality Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote(s) on permanent adoption/revocation

11. **New Business (any matter not known about and which could not reasonably have been foreseen prior to the time of posting of agenda)**

12. **Executive Director's Report (including disclosure of employee financial interests as required by statute, and notification to the Board that no capital budget needs have been identified for State Fiscal Year 2002)**

13. **Adjournment**

Public Forum: The Board meets four times a year at different locations across the State to hear the views and concerns of all Oklahomans about environmental issues. This opportunity is informal, and we invite you to sign the register to speak. The forum will also include a short presentation from Judy Duncan, giving an overview of the DEQ's State Environmental Laboratory.

Should you have a disability and need an accommodation, please notify the DEQ three days in advance at 702-7100.

* Specification of proposed adoption by emergency rulemaking, by permanent rulemaking, or by both, is based on the recommendations of the respective advisory councils. Adoption or amendment of rules as emergency rulemaking requires a finding by the Board that a compelling extraordinary circumstance warrants the seeking of emergency certification, so that the rules will take effect immediately upon the Governor's signature. Absent a finding and certification of emergency, rules adopted today will not become effective until May or June of 2001.

SUBCHAPTER 33. CONTROL OF EMISSION OF NITROGEN OXIDES

252:100-33-1.1. Definitions

The following terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"New fuel-burning equipment" means any fuel-burning equipment, with the exception of gas turbines, that was not in being on February 14, 1972, or any existing fuel-burning equipment that was altered, replaced, or rebuilt after February 14, 1972, resulting in an increase in nitrogen oxide emissions, and any gas turbine that was not in being on July 1, 1977, or any existing gas turbine that was altered, replaced, or rebuilt after July 1, 1977, resulting in an increase in nitrogen oxide emissions.

"Three-hour average" means the arithmetic average of sampling results or continuous emission monitoring data from three contiguous one-hour periods.

252:100-33-1.2. Applicability

This Subchapter applies to new fuel-burning equipment that meets both of the following criteria.

- (1) The fuel-burning equipment has a rated heat input of 50 million (MM) Btu/hr or greater.
- (2) The equipment burns solid fossil, gas, or liquid fuel.

252:100-33-2. Emission limits

(a) Fuel combustion.

~~(1) No person shall cause, suffer or allow emissions of nitrogen oxides calculated as nitrogen dioxide from any new gas fired fuel burning equipment with a rated heat input of 50 million BTUs per hour or more, in excess of 0.20 pound per million BTUs (0.36 gram per million gram calorie) heat input, two hour maximum.~~

~~(2) No person shall cause, suffer or allow emissions of nitrogen oxides calculated as nitrogen dioxide from any new liquid fired fuel burning equipment with a rated heat input of 50 million BTUs per hour or more, in excess of 0.30 pound per million BTUs (0.54 gram per million gram calorie) heat input, two hour maximum.~~

~~(3) No person shall cause, suffer or allow emissions of nitrogen oxides calculated as nitrogen dioxide from any new solid fossil fuel burning equipment with a rated heat input of 50 million BTUs per hour or more, in excess of 0.70 pound per million BTUs (1.26 gram per million gram calorie) heat input, two hour maximum.~~

(a) Gas-fired fuel-burning equipment. Nitrogen oxide emissions (calculated as nitrogen dioxide) from any new gas-fired fuel-burning equipment shall not exceed 0.20 lb/MMBtu (86 ng/J) heat input, three-hour average.

(b) Nitric acid plant.

~~(1) No person shall cause, suffer or allow emissions of nitrogen oxides, calculated as nitrogen dioxide, from new nitric acid plants, in excess of 3.0 pounds per ton (1.5 kg/metric ton) of 100 percent acid produced, two hour maximum.~~

~~(2) No person shall cause, suffer or allow to be discharged into the atmosphere from new nitric acid plants any visible~~

~~emissions which exhibit 10 percent opacity, or greater.~~

(b) Liquid-fired fuel-burning equipment. Nitrogen oxide emissions (calculated as nitrogen dioxide) from any new liquid-fired fuel-burning equipment shall not exceed 0.30 lb/MMBtu (129 ng/J) heat input, three-hour average.

(c) Solid fossil fuel-burning equipment. Nitrogen oxide emissions (calculated as nitrogen dioxide) from any new solid fossil fuel-burning equipment shall not exceed 0.70 lb/MMBtu (300 ng/J) heat input, three-hour average.

252:100-33-3. Performance testing [REVOKED]

~~Testing of equipment to determine if emission standards set in this Subchapter are met shall be performed by procedures as accepted by the Executive Director. Promulgated federal testing procedures for similar processes will be considered in making the determination of procedures to be used.~~

Additional Comments

CHAPTER 100. AIR POLLUTION CONTROL
SUBCHAPTER 33. CONTROL OF EMISSION OF NITROGEN OXIDES

EXECUTIVE SUMMARY:

The proposed revisions to Subchapter 33 are to simplify and clarify requirements and to remove redundant requirements as part of the agency-wide re-right/de-wrong initiative. No substantive changes are proposed.

DIFFERENCES FROM ANALOGOUS FEDERAL RULES:

None of the changes that were made to this rule creates a difference from analogous federal rules.

ENVIRONMENTAL BENEFIT STATEMENT:

Not required since no substantive changes are proposed.

SUMMARY OF COMMENTS AND RESPONSES:

Attached.

WRITTEN COMMENTS WITH STAFF RESPONSES

Hall, Estill, Hardwick, Gable, Golden & Nelson - letter dated March 24, 2000, signed by Michael D. Graves received on April 27, 2000

1. **COMMENT:** This Subchapter is more stringent with much broader applicability than the comparable federal standards. However, there has not been any justification for these broader, stricter standards.

RESPONSE: Since the purpose of the re-right/de-wrong program is to clarify, simplify and correct errors, no substantive changes to standards were proposed. The issue of broader applicability and more stringent standards was discussed and justified at public hearings in 1971 and 1972 prior to the original promulgation of the standards contained in Subchapter 33.

2. **COMMENT:** DEQ should simply adopt the federal NSPS Subparts for fuel-burning equipment. DEQ recommended deleting 252:100-33-2(b) containing standards for nitric acid plants because there is now a federal NSPS for this type of source and the same action should be taken with fuel-burning equipment.

RESPONSE: Staff proposed to delete 252:100-33-2(b) because the federal NSPS Subpart G covers the same sources covered by the State rule and is as stringent as the State rule, making the State rule unnecessary since the State has incorporated NSPS Subpart G by reference in 252:100-4. The NSPS standards that apply to fuel-burning equipment (such as Subparts D, Da, Db and GG) do not apply to all the sources that are covered by Subchapter 33 and in some instances the standards are not as stringent as those contained in Subchapter 33. As stated previously, these standards were justified at public meetings prior to promulgation in 1972. Also Staff questions the wisdom of relaxing nitrogen oxide standards at a time when some areas of the state are perilously close to exceeding the National Ambient Air Quality Standards for nitrogen oxides.

3. **COMMENT:** If there is a need for regulating sources that are not covered by the federal NSPS, the standards should be the same as those contained in the federal NSPS. For example if DEQ justifies regulating nitrogen oxides from fossil fuel-fired steam generators for units with heat input rates less than 250 million Btu/hr (the federal base for applicability) then the emission limits and averaging periods should conform with Subpart D.

RESPONSE: Staff believes that the need for covering sources not regulated by the federal NSPS and for setting standards that are more stringent than those in the NSPS was justified when the standards were originally promulgated and the proposed revisions have not changed those standards. Subchapter 33 applies to fuel-burning equipment with heat

input capacities greater than 50 million Btu/hr. Although NSPS Subpart D applies to sources that have heat input capacities greater than 250 million Btu/hr, Subpart Db sets standards for industrial-commercial-institutional steam generating units with heat input greater than 100 million Btu/hr and Subpart Dc sets standards for small industrial-commercial-institutional steam generating units that have maximum design heat input capacities of 10 million Btu/hr to 100 million Btu/hr. The standards for fuel-burning equipment set in Subchapter 33 are identical to those in Subpart D, except for sources fueled by certain types of coal. Part of the clarification of Subchapter 33 consists of changing the maximum-two hour average to a three-hour average. This is not considered to be substantive since in actual practice, due to the constraints of the performance tests for nitrogen oxides, the three hour average has been in use from the time the standards were promulgated.

4. **COMMENT:** Of particular concern is the apparent conflict between Subchapter 33 and the federal NSPS Subpart GG for gas turbines. Subchapter 33 applies to gas turbines, but the emission limitations and standards formats are not compatible. Since Subpart GG is designed specifically for stationary gas turbines and was developed after the State's standards which were designed for fossil fuel-fired steam generators, the DEQ should adopt Subpart GG in lieu of including stationary gas turbines in Subchapter 33.

RESPONSE: Subchapter 33 was not originally intended to apply to stationary gas turbines. However, when the definition of fuel-burning equipment was revised in 1977, gas turbines became subject to this rule. It is difficult to compare the standards contained in Subpart GG with those in Subchapter 33 except on a case by case basis. However, it appears that the standards in Subpart GG, at least for some turbines, are less stringent. Although some older turbines may have difficulty meeting the standards in Subchapter 33, it appears that modern turbines are capable of meeting these standards. Staff feels that the question of excluding turbines from Subchapter 33 or setting specific standards for turbines is beyond the scope of re-right/de-wrong and should be considered separately. Much more information and study needs to be done before any changes are made especially considering the potential ozone problems facing the State. This issue will be considered again in June, 2001. Staff would like to point out that the philosophy of those who originally set the standards for nitrogen oxides emissions was one of non-degradation. They believed that this principle was specifically set forth in the Federal Clean Air Act and that federal standards represented a minimum level, not a ceiling. EPA continues to maintain that NSPS represents minimum requirements. Staff is directed by the Oklahoma Clean Air Act to make recommendations to the Council with respect to rules and air pollution prevention and abatement. Staff would not be doing its duty if it recommended a relaxation of standards without sufficient justification for such action.

Comments from Tom Blachley received on April 7, 2000.

5. **COMMENT:** Mr. Blachley's comments consisted primarily of pointing out errors and suggesting format and language changes.

RESPONSE: The errors that were pointed out have been corrected and the language and formatting changes were given consideration in the final proposed revisions to the rule.

EPA Region 6 - letter from Tom Diggs dated April 13, 2000, received April 17, 2000.

6. **COMMENT:** EPA was in agreement with the proposed revisions to Subchapter 33 dated March 15, 2000, since the rule remains the same as the New Source Performance Standards.

Terra Nitrogen Corporation - letter dated April 18, 2000, signed by Gary Collins, received April 18, 2000, with attachment.

7. **COMMENT:** Terra Nitrogen Corporation requested that the Air Quality Council delay taking final action on the proposed revision until the question of applicability to gas turbines can be considered. If turbines continue to be subject to Subchapter 33, they requested a separate emission rate be promulgated in units of ppm by volume corrected to 15 percent oxygen and to ISO conditions as required by NSPS Subpart GG.

RESPONSE: As stated in response to comments contained in the letter from Hall, Estill, Hardwick, Gable, Golden & Nelson, Staff feels that this question is beyond the scope of re-right/de-wrong and should be considered as a separate issue. The time constraints placed on the completion of the re-right/de-wrong program do not allow for the type of research and evaluation that is necessary before any weakening of the nitrogen oxide standards can be proposed, especially in light of the potential ozone problems now facing the State. The Air Quality Council has instructed the Staff to bring this question before it again in June 2001.

8. **COMMENT:** Terra requested that the definition of new source be revised so that turbines in existence prior to July 1, 1977 are not subject to the rule.

RESPONSE: Staff agreed and this change has been made to the rule.

VERBAL COMMENTS RECEIVED AT THE FEBRUARY 16, 2000 HEARING

9. **COMMENT:** Ms. Nadine Barton with Citizens Action for a Safe Environment (CASE), was concerned that if the standards in Subchapter 33 for fuel-burning equipment applied to municipal waste combustors (incinerators) it might somehow result in less stringent NOx standards for these units than is now in place in Part 5 of Subchapter 17. Ms. Barton suggested that

language be added to the applicability section exempting municipal waste combustors from Subchapter 33.

RESPONSE: Municipal waste combustors (MWC) that supply steam or useable heat are by definition fuel-burning equipment. If such a source meets the applicability criteria for Subchapter 33, it would be subject to the Subchapter. In order to be subject to Subchapter 33, the MWC would have to have a heat input capacity of 50 MMBtu or greater and be fired by gas fuel, liquid fuel, or solid fossil fuel. Since MWC are fueled by solid waste, it is not necessary to specifically exclude MWCs from Subchapter 33. In a rule that addresses sources as varied as fuel-burning equipment, it is not possible to list everything that is subject to the rule or to list everything that isn't subject to the rule. Therefore, staff proposed at the next hearing applicability criteria in Section 1.1 for determining whether or not a source is subject to the rule.

10. **COMMENT:** Howard Ground with Central and South West felt that the two-hour maximum contained in 252:100-33-2(a)(1), (2), and (3) is a compliance determination of a two-hour maximum of emission rates and is not an average of anything. It is a one time test showing compliance with the standard.

RESPONSE: Council records make clear that the two-hour maximum was not intended to be a one time test showing compliance with the standard. In researching Council records after the hearing, staff discovered that this same subject was brought up at the March 17, 1987, Council meeting regarding sulfur limits for fuel-burning equipment in Subchapter 31. At that meeting, and in a memo dated December 19, 1986 to the Council, Air Quality staff recommended that the change from a two-hour averaging time to a three-hour averaging time be made for practical reasons, since a stack test to determine compliance consists of three one-hour runs, so that a three hour average is already in effect. The same is true for the averaging time in Subchapter 33, and at the next Council meeting staff recommended and the Council agreed that the two-hour maximum be changed to a three-hour average.

11. **COMMENT:** Don Whitney with Trinity Consultants pointed out that Subchapter 33 sets standards for NOx emissions from gas-fired fuel burning equipment, liquid-fired fuel burning equipment, and solid fossil fuel burning equipment, which would seem to exclude wood or other types of solid fuel from the standards, and questioned whether the word "fossil" should be left in the rule.

RESPONSE: Since it was not our intention to make substantive changes to the rule, this subject goes beyond the scope of the intended revisions. At the time the rule was first promulgated, coal was probably the only solid fuel considered. Staff feels that it requires further study and should be taken up at another time.

VERBAL COMMENTS RECEIVED AT THE APRIL 19, 2000 HEARING

12. **COMMENT:** Mike Peters with the law firm of McKinney and Stringer pointed out that when Subchapter 33 was promulgated in 1972, Subchapter 33 was intended for fuel-burning equipment and turbines by definition, at that time, were not fuel-burning equipment. When the definition of fuel-burning equipment was revised in 1977, it included turbines. There was public comment at that time, questioning the ability of turbines to meet the standards. The only remedy for such turbines at this time is to obtain an alternative standard under Subchapter 11. The federal NSPS Subpart GG sets standards for gas turbines. Due to the differences in units, it is difficult to compare the standards in Subchapter 33 with those in Subpart GG, but for one particular turbine, the State standards were three times as stringent as the federal NSPS. The State should consider exempting turbines from Subchapter 33.

RESPONSE: The Council record from the time when the definition of fuel-burning equipment was changed in 1977 makes it clear that gas turbines were included as fuel-burning equipment and would be subject to the rules that regulated such equipment. Although it is difficult to compare the State standards with those in NSPS Subpart GG, staff feels that those in the subpart are in many cases much less stringent than the Standards in Subchapter 33 and to exempt turbines from this rule would be weakening the standard. Staff is reluctant to propose a relaxation of those standards at a time when the possibility of ozone nonattainment looms in the not too distant future. This subject is beyond the scope of the re-right/de-wrong program, and staff proposes that it be studied at a later date. More hard data is needed concerning the ability of turbines built after July 1, 1977, to meet the standards contained in Subchapter 33. The gathering of such data will require more time than is available for the completion of the re-right/de-wrong program. This subject will be brought before the Council again by June 2001.

13. **COMMENT:** Mike Peters proposed that all turbines in existence before July 1, 1977, not just simple cycle turbines, be exempt from Subchapter 33.

RESPONSE: Staff agrees and the rule was changed at the hearing to exclude gas turbines in existence on or before July 1, 1977, from the requirements of Subchapter 33.

RE: Comments on proposed OAC 252:100, Subchapter 33, NOx.

Dear Barbara:

Thank you for the opportunity to submit comments on the proposed revision to Subchapter 31 of the Oklahoma Air Quality regulations. It is obvious that a great deal of work has gone into the proposal and we commend the effort to improve Oklahoma regulations. During our review, we noted several items which we believe could be improved and have prepared comments on those items. We ask that these comments be included in the formal rule-making record.

Please distribute these comments to the appropriate staff people for their input. I will be calling you next week to arrange a meeting with you and appropriate DEQ staff to review our comments.

As a part of its air "re-write" project, DEQ has republished Subchapter 33, Control of Emission of Nitrogen Oxides. This Subchapter is more stringent with much broader applicability than the comparable federal standards. However, we have not seen any justification from DEQ to substantiate the need for these broader and stricter standards. For this subchapter, in particular, the fact that the Oklahoma regulations incorporate by reference the federal NSPS standards is meaningless. It appears to us that Oklahoma looked at the 1974 federal Subpart D, decided to apply it to much smaller sources and has since declined to acknowledge the standards devised by the federal program in Subpart Db or Subpart GG.

Barbara Hoffman, Esq.
March 24, 2000
Page 2

As a threshold issue, we propose that DEQ revise its proposal by simply adopting the federal NSPS. In its Subchapter 33 proposal, DEQ recommends deleting the previous OAC 252:100-33-2(b) Nitric acid plants because there is now a federal NSPS for this type of source. We believe that this is the correct course for DEQ to follow in all instances. Oklahoma businesses are experienced in complying with federal standards, and DEQ has not submitted for public comment any justification for stricter standards.

In the event that DEQ substantiates the need for regulating sources which are not covered by the federal NSPS rules, then DEQ should at least make its rules consistent with the federal standards rather than different or more stringent than those standards. For example, if DEQ justifies regulating NOx from fossil-fuel fired steam generators for units with heat input rate less than 250 MMBTU/hour (the federal base for applicability) then the emission limitations and averaging periods should conform with Subpart D.

Of particular concern is the apparent conflict between the Oklahoma Subchapter 33 and the federal NSPS Subpart GG. By its terms, Subchapter 33 appears to apply to those sources which are covered by the federal Subpart GG. However, the emission limitation and standards formats are not compatible. Federal Subpart GG is specifically designed for Stationary Gas Turbines, and was developed after the State's standards, which were designed for Fossil-Fuel fired steam generators. A later specific regulatory program should prevail over an earlier general one, and DEQ should specifically adopt Subpart GG in lieu of including stationary gas turbines in Subchapter 33.

Finally, should DEQ justify the need for regulating sources not subject to federal NSPS, we see no reason for the "maximum two-hour average" emission limitation in OAC 252:100-33-2. This averaging period differs, for no known reason, from comparable portions of the federal NSPS, such as Subpart Db's 30 day rolling average. Even nonattainment areas (and Oklahoma has no nonattainment areas), such as Beaumont, Texas, use a 24-hour average. Therefore, we recommend conforming the Oklahoma standards to the federal NSPS.

Again, thank you for the opportunity to submit these comments for the record. I look forward to going over these items with you. If you have any question, please feel free to call.

Sincerely,

Michael D. Graves

**RESPONSE TO WRITTEN COMMENTS FROM THE PUBLIC AND
INDUSTRY SUBCHAPTER 33**

Below is a summation of written comments along with staff responses regarding the proposed revisions to Subchapter 33. This includes only those comments that were received prior to the mailing of the Air Quality Council packets for the April 19, 2000, meeting.

HALL, ESTILL, HARDWICK, GABLE, GOLDEN & NELSON LETTER (dated 3/24/00, signed by Michael D. Graves):

1. **COMMENT:** This Subchapter is more stringent with much broader applicability than the comparable federal standards. However, we have not seen any justification from DEQ to substantiate the need for these broader and stricter standards.
RESPONSE: The purpose of the "re-right/de-wrong" program is to clarify, simplify and correct errors, not to make substantive changes to the standards. Thus, we have not proposed any substantive changes to the existing standards in Subchapter 33. The concern that the State rule would cover more sources than the federal standards was expressed in a letter from the Mid Continent Oil & Gas Association dated October 30, 1971. The Association proposed that the regulation be changed to include only units above 250 MMBtu/hr. heat input and provided a correlation of NOx emissions versus gross heat input. This correlation was referenced from Mills, J. L. et al., "Emissions of Oxides of Nitrogen from Stationary Sources in Los Angeles County," Reports No. 3 and No. 4, 1961. The staff of the DEQ's predecessor agency compared the Mills correlation to the proposed state regulations and concluded that smaller units could meet the regulations easier than larger units. In a letter dated August 10, 1972, to Mr. Ronald Barbaro, P.E., staff wrote that ". . . Regulation No. 18 is similar to the nitrogen oxide standard set in the Federal "New Source Performance Criteria." However, the lower limit is set at 50 million BTU/hr. input rather than the 250 million BTU/hr. value of the federal criteria. This is based on the information obtained that the smaller units are already very close to meeting this limit." It is evident that staff felt that, based on the data submitted, there was no reason to exclude smaller units from the rule or to increase the emission limits for such units. The records cited are available to the public in the Air Quality Division office.

2. **COMMENT:** We propose that DEQ revise its proposal by simply adopting the federal NSPS. In its Subchapter 33 proposal, DEQ recommends deleting the previous OAC 252:100-33-2(b) Nitric acid plants because there is now a federal NSPS for this type of source. We believe that this is the correct course for DEQ to follow in all instances. Oklahoma businesses are experienced in complying with federal standards, and DEQ has not submitted for public comment any justification for stricter standards.

RESPONSE: Staff proposed to revoke OAC 252:100-33-2(b) because the federal NSPS for nitric acid plants covers the same sources covered by the State

rule and is as stringent as the State rule, making the State rule unnecessary. This revocation does not change the standard that new nitric acid plants must meet. Revoking the rest of the rule would make the standards for new fuel-burning equipment less stringent in some cases than they are now. Given the advances in technology since 1971 and our State's potential problems in meeting the ozone standards, relaxing our emission limits does not appear to be justifiable at this time. If such justification exists, it has not been presented to staff.

- 3. COMMENT:** If DEQ substantiates the need for regulating sources which are not covered by the federal NSPS rules, then DEQ should at least make its rules consistent with the federal standards rather than different or more stringent than those standards. For example, if DEQ justifies regulating NOx from fossil fuel-fired steam generators for units with heat input rates less than 250 MMBtu/hour (the federal base for applicability) then the emission limitations and averaging periods should conform with Subpart D.

RESPONSE: See the response to Comment 1. This rule is part of the State Implementation Plan (SIP); therefore, relaxing it would require justification, especially in light of the State's potential problems in meeting the ozone standards. Achieving consistency with federal rules is not by itself sufficient justification.

- 4. COMMENT:** Of particular concern is the apparent conflict between Subchapter 33 and the federal NSPS Subpart GG. By its terms, Subchapter 33 appears to apply to those sources which are covered by the federal Subpart GG. However, the emission limitation and standards formats are not compatible. Federal Subpart GG is specifically designed for Stationary Gas Turbines, and was developed after the State's standards, which were designed for the fossil fuel-fired steam generators. A later specific regulatory program should prevail over an earlier general one, and DEQ should specifically adopt Subpart GG in lieu of including stationary gas turbines in Subchapter 33.

RESPONSE: Subchapter 33 was not originally intended to apply to simple cycle gas turbines. The rule applied to fuel-burning equipment, and the definition of fuel-burning equipment in effect at that time excluded these turbines. However, combined gas turbine-steam turbine units and conventional steam turbine-generating units were covered. (Letter from John H. Stallings dated February 23, 1972, to Louis S. Gea, P.E., Tippet & Gee) Staff believes that any change to the NOx standards for fuel-burning equipment would require more study and is beyond the scope of the "re-right/de-wrong" program. If such a change is desired, the necessary research could be undertaken and a work group formed, with the objective of determining whether a change needs to be made and, if so, what that change should be.

- 5. COMMENT:** Should DEQ justify the need for regulating sources not subject to federal NSPS, we see no reason for the "maximum two-hour average" emission limitation in OAC 252:100-33-2. This averaging period differs for no known reason, from comparable portions of the federal NSPS, such as Subpart Db's 30-day rolling

average. Even nonattainment (and Oklahoma has no nonattainment areas), areas such as Beaumont, Texas, use a 24-hour average. Therefore, we recommend conforming the Oklahoma standards to the federal NSPS.

RESPONSE: Although Subpart Db has a 30-day rolling average, Subpart D still retains a 3-hour average. This issue was brought up in 1987 regarding Subchapter 31, which regulates the emissions of sulfur compounds. At the March 17, 1987, Council meeting, a request was made that plants built after September 1978 be allowed a 30-day rolling average instead of a two or three-hour average. Grant Marburger responded for staff by stating that "... changing from a short term to a long term is a fairly major consideration that we are not prepared to recommend at this time" A request was also made to change the two-hour averaging time to a three-hour averaging time. Mr. Marburger recommended that this change be made "... for practical reasons. A stack test to determine compliance takes three hours, so three hours is in effect anyway" In a memorandum to the Council dated December 19, 1986, Mr. Marburger stated, "It was suggested this should be changed to conform with federal NSPS standards which allow a longer period for certain categories. Plants built after September 1978 (Subpart Da) are allowed a 30-day rolling average but these plants are also required to install SO₂ abatement equipment." Although the rule in question was Subchapter 31, staff believes the reasoning holds true for Subchapter 33 as well. At the April 19, 2000 Council meeting, staff will recommend that the two-hour averaging time be changed to three hours.

As an overall comment, staff would like to point out that the philosophy of those who originally wrote the NO_x rule and set the limitations was one of non-degradation. They believed that this principle was specifically set forth in the Federal Clean Air Act and that it had particularly strong support from Congress and the citizens of Oklahoma. They believed that the federal standards represented a minimum level, not a ceiling. EPA today asserts that the NSPS represents minimum requirements. Staff is directed by the Oklahoma Clean Air Act to make recommendations to the Council with respect to rules and air pollution *prevention and abatement*. Staff would not be doing its duty if it recommended a relaxation of standards without sufficient justification for such action.

TRANSCRIPT OF PROCEEDINGS
OF 252:100-33, CONTROL OF EMISSION OF
NITROGEN OXIDES
HELD ON FEBRUARY 16, 2000, AT 9:00 A.M.
IN TULSA, OKLAHOMA

* * * * *

REPORTED BY: CHRISTY A. MYERS, C.S.R.

<p style="text-align: right;">Page 2</p> <p>1</p> <p>2</p> <p>3 COUNCIL MEMBERS</p> <p>4</p> <p>5</p> <p>6 Joel Wilson - Member</p> <p>7 David Branecky - Chairman</p> <p>8 Sharon Myers - Vice-Chairman</p> <p>9 Rick Treeman - Member</p> <p>10 Leo Fallon - Member</p> <p>11 Gary Kilpatrick - Member</p> <p>12 Bill Breisch - Member</p> <p>13 David Dyke - Protocol Officer</p> <p>14 Eddie Terrill - Director</p> <p>15 Myrna Bruce - Secretary</p> <p>16</p> <p>17</p> <p>18</p> <p>19</p> <p>20</p> <p>21</p> <p>22</p> <p>23</p> <p>24</p> <p>25</p>	<p style="text-align: right;">Page 4</p> <p>1 primarily just to state up front that this</p> <p>2 is applicable to sources, fuel burning</p> <p>3 equipment that have a rated heat input of</p> <p>4 50 million BTU or more.</p> <p>5 Then on page 1, as well, 252:100-33-</p> <p>6 2(a)(1)(2) and (3), the emission limits</p> <p>7 section was revised to simplify the</p> <p>8 language and to remove redundant language.</p> <p>9 On page 2, Section 2(b), the staff</p> <p>10 proposes to delete this subsection covering</p> <p>11 nitric acid plants. The NSPS 40 CFR 60</p> <p>12 Subpart G sets federal standards and</p> <p>13 performance for nitric acid plants. The</p> <p>14 federal standards applies to each nitric</p> <p>15 acid production unit in a nitric acid plant</p> <p>16 that commenced construction on modification</p> <p>17 after August 17, 1971. The federal</p> <p>18 standards are as stringent as those</p> <p>19 contained in the state rule. I believe</p> <p>20 they are pretty much identical. Since the</p> <p>21 state rule, Subchapter 33 became effective</p> <p>22 after August 17, 1971, and applies only to</p> <p>23 new sources, the federal rule covers the</p> <p>24 same facilities that the state rule</p> <p>25 covered. So we think that this section of</p>
<p style="text-align: right;">Page 3</p> <p>1 PROCEEDINGS</p> <p>2 MR. DYKE: The next item on the</p> <p>3 agenda is the item listed as Item 5B, OAC</p> <p>4 252:100-33, Control of Emission of Nitrogen</p> <p>5 Oxides. At this time, I would like to call</p> <p>6 on staff member, Joyce Sheedy.</p> <p>7 DR. SHEEDY: Mr. Chairman,</p> <p>8 Members of the Council, ladies and</p> <p>9 gentlemen, the proposed revisions to</p> <p>10 Subchapter 33, Control of Emissions of</p> <p>11 Nitrogen Oxides, are for clarification,</p> <p>12 simplification, and removal of redundant</p> <p>13 language as required by the agency-wide</p> <p>14 rewrite/dewrong program. We have not</p> <p>15 proposed any substantive change in this</p> <p>16 modification.</p> <p>17 Staff proposes the following</p> <p>18 nonsubstantive changes. On page 1,</p> <p>19 252:100-33-1, the purpose statement was</p> <p>20 written for simplification and</p> <p>21 clarification and removal of redundant</p> <p>22 language.</p> <p>23 Also on page 1, we've added a new</p> <p>24 Section, 1.1, Applicability. And this is</p> <p>25</p>	<p style="text-align: right;">Page 5</p> <p>1 our rule is redundant and we deleted it.</p> <p>2 On page 2, 252:100-33-3, the staff</p> <p>3 proposes to revoke this section which sets</p> <p>4 forth requirements for performance testing.</p> <p>5 Performance testing requirements are</p> <p>6 contained in Subchapter 43, making this</p> <p>7 section redundant. Since the proposed</p> <p>8 revisions to Subchapter 33 contains no</p> <p>9 substantive changes, staff had planned to</p> <p>10 propose to -- to suggest that this rule be</p> <p>11 recommended to the Board for permanent</p> <p>12 adoption. However, we have had a verbal</p> <p>13 comment from OG&E. Would you like to -- is</p> <p>14 this the appropriate time?</p> <p>15 MR. BRANECKY: Yes, I have three</p> <p>16 concerns and I apologize for getting these</p> <p>17 concerns to you guys so late. In 33-1.1,</p> <p>18 Applicability, my question was, what is</p> <p>19 new? I think we need some language in</p> <p>20 there defining "new". What facility</p> <p>21 constructed after such-and-such a date</p> <p>22 should be applicable to this -- this</p> <p>23 chapter should apply to it. The way it's</p> <p>24 written now I don't know if I'm a new</p> <p>25 source or not.</p>

Page 6

1 DR. SHEEDY: Right.
 2 MR. BRANECKY: I think that would
 3 be helpful. The second question is in 33-
 4 2, both (a), (b), and (c), we've got at the
 5 last part of the paragraph that says 2-hour
 6 maximum. What is a 2-hour maximum? I had
 7 a real hard time understanding what a 2-
 8 hour maximum is. So I think that needs to
 9 be further clarified and defined.
 10 And finally -- and this applies to,
 11 at least, to OG&E and the coal fired
 12 boilers that we have are subject to NSPS
 13 Subpart (d). In Subpart (d), the limits
 14 are identical to what are listed here in
 15 Section 2, as far as the numerical numbers,
 16 of .2, .3 and .7 pounds per million BTU.
 17 But the averaging time of compliance
 18 demonstration in NSPS is a 3-hour rolling
 19 average. So I guess my concern is I'm
 20 going to have to -- even though the numbers
 21 are the same, I'm going to have to track a
 22 3-hour average to show compliance with NSPS
 23 and then turn around and do the same thing
 24 with a 2-hour maximum, whatever it is, to
 25 show compliance. Is that necessary? Can

Page 8

1 replaced or rebuilt after February 14,
 2 1972, resulting in the increase in
 3 emissions of nitrogen oxides.
 4 MR. WILSON: Is it possible to
 5 have a statement in there that says
 6 compliance with NSPS Subpart (d), is
 7 compliance with Subchapter 33?
 8 DR. SHEEDY: We've looked into
 9 that. The other comment about the 2-hour
 10 maximum and what it meant, I talked to the
 11 engineers, the permit engineers. And they
 12 say that historically and currently they
 13 consider that 2-hour maximum to be a 2-hour
 14 maximum average. So it is an average. Now
 15 the problem comes up that a 3-hour rolling
 16 average is less stringent than a 2-hour
 17 maximum average.
 18 MR. WILSON: So you would be
 19 lessening the stringency?
 20 DR. SHEEDY: Lessening the
 21 stringency of the rule. I'm not sure if
 22 it's possible that the NSPS could be
 23 satisfied by the 2-hour average limit.
 24 MS. MYERS: How do you determine
 25 the 2-hour maximum average?

Page 7

1 we combine the two or say if you are
 2 subject to NSPS, this rule doesn't apply?
 3 I guess I'm trying to simplify it, and I
 4 don't know if it applies to anybody else or
 5 if anybody else in this room has the same
 6 concerns about trying to show compliance
 7 with the same number, but two different
 8 ways. Those are my questions.
 9 DR. SHEEDY: We have looked into
 10 this some since we spoke to you last week.
 11 And we agree that an effective date,
 12 although we can't call it an effective
 13 date, would be helpful in this regulation.
 14 And we have put together some language that
 15 we think will meet that purpose. If you
 16 would like, I can read that to you.
 17 The Applicability Section, 33-1.1
 18 would say, this subchapter applies to fuel-
 19 burning equipment that meets both of the
 20 following criteria: 1) the fuel-burning
 21 equipment has a rated heat input of 50
 22 million BTU per hour or greater. 2) Fuel-
 23 burning equipment is new equipment that was
 24 not in being on February 14, 1972, or it is
 25 existing equipment that was altered,

Page 9

1 MR. BRANECKY: What's a maximum
 2 average?
 3 DR. SHEEDY: I asked them how
 4 they were doing it. I think they've been
 5 looking at it as a rolling average, but I -
 6 -
 7 MR. BRANECKY: Just an average?
 8 DR. SHEEDY: Just an average.
 9 But that may need some more discussion. I
 10 suppose it could be a block average, and
 11 then the next 2 hours, and the next 2
 12 hours, instead of these 2 hours and then
 13 shift over one in those 2 hours,
 14 MR. BRANECKY: Well, I guess I'm
 15 confused between a maximum average and an
 16 average.
 17 DR. SHEEDY: I can't see that
 18 there is a difference.
 19 MR. WILSON: The real question
 20 here is how you do that average. Are you
 21 talking about a 2-hour period of time,
 22 whereby that 2-hour period would be maxed
 23 after the last, you know, after the one-
 24 hundredth twentieth minute --
 25 DR. SHEEDY: Yes.

Page 10

1 MR. WILSON: -- then it starts
2 again? Or do you roll that average -- how
3 many 2-hour periods are there in 24 hours?
4 DR. SHEEDY: 12.
5 MR. WILSON: You would think
6 there would be 12.
7 DR. SHEEDY: You would.
8 MR. WILSON: It could be a lot
9 more than 12.
10 DR. SHEEDY: Well, if you rolled
11 the average, yes.
12 MR. WILSON: Correct.
13 DR. SHEEDY: Yes.
14 MR. WILSON: Which one is this
15 regulation?
16 DR. SHEEDY: This regulation does
17 not -- the permit staff indicated to me
18 that they were thinking of it as a 2-hour
19 rolling average.
20 MR. WILSON: But is there --
21 DR. SHEEDY: But it does not say
22 and it didn't say --
23 MR. WILSON: My suggestion there
24 is to make it very clear. Whatever is
25 intended, make it clear so there is no

Page 11

1 question about it.
2 DR. SHEEDY: Whether or not it's
3 rolling or block?
4 MR. WILSON: Whichever one,
5 right.
6 MR. BRANECKY: I guess I would
7 still like to know, are you firm that if we
8 change this to a 3-hour, as stated here,
9 subject to the NSPS, that it's not
10 applicable?
11 DR. SHEEDY: Well, if we're
12 talking a 2-hour rolling average versus a
13 3-hour rolling average, then I think is a
14 relaxation. If we're talking a 2-hour
15 block versus 3-hour rolling, I'm not sure.
16 And I don't know when we say -- when we're
17 comparing a 2-hour rolling and a 3-hour
18 rolling, just how much real impact it has.
19 MR. BRANECKY: What are we
20 gaining?
21 DR. SHEEDY: I haven't, to this
22 point --
23 MR. BRANECKY: I'm just trying to
24 think --
25 DR. SHEEDY: I don't have numbers

Page 12

1 to say if you had -- if your emissions were
2 this over a day, what's the difference in
3 your 3-hour rolling average and a 2-hour
4 rolling, or a 2-hour block.
5 MR. BRANECKY: We have continuous
6 monitors on our stacks, monitoring
7 continuously the NOx and calculating a 3-
8 hour average, rolling average, to show
9 compliance with NSPS. And we've had to go
10 back in and reprogram that software to look
11 at that 2-hour rolling average. Unless
12 there is some good advantage to doing that,
13 I would really rather not do that.
14 DR. SHEEDY: That's -- it looks
15 to me if we want to relax the rule, which
16 that apparently may be, then we need to
17 look at what this relaxation would do
18 against some accurate numbers of showing
19 the 2-hour and 3-hour.
20 MR. WILSON: How is compliance
21 demonstrated with these limits, currently?
22 What would the state require? A one time
23 stack test, an annual stack test?
24 DR. SHEEDY: Let's see, on these
25 big power plants they have -- of course,

Page 13

1 there is a one time stack test. But now
2 with the acid rain, they have -- what do
3 you call those?
4 MR. BRANECKY: Continuous
5 emission monitoring?
6 DR. SHEEDY: Yes. And then,
7 isn't there some kind of rad --
8 MR. BRANECKY: Rad test.
9 DR. SHEEDY: That's just a
10 verification if the monitoring is operating
11 properly.
12 MR. WILSON: Yes.
13 DR. SHEEDY: And, of course, they
14 have continuous emission monitors and keep
15 those records. Do you send those to us or
16 just have them on-site?
17 MR. BRANECKY: We upload our data
18 to EPA.
19 DR. SHEEDY: And as the concerns,
20 making the statement that if you're subject
21 to NSPS Subpart (d), you wouldn't be
22 subject to this rule, it's not quite as
23 simple as that. The standards are the
24 same, but (d) has some written (INAUDIBLE)
25 that the state doesn't have. So it

Page 14

1 wouldn't be as straightforward as that.
2 MR. WILSON: Is it the state's
3 intent to be more stringent than Subpart
4 (d)?
5 DR. SHEEDY: Well, Subpart (d) in
6 some places will say it's .7 pounds per
7 million BTU unless it's coal that came from
8 North Dakota, South Dakota or Montana, you
9 know, that kind of exception throughout.
10 Which none are as straightforward as one
11 would hope.
12 MR. BRANECKY: Did this predate
13 the NSPS Rules?
14 DR. SHEEDY: No. I think the
15 NSPS rule was just before this in '71, yes.
16 I don't think this one was done until '72.
17 MR. WILSON: If the source is in
18 excess of these limits, how many possible
19 violations would there be in a 24-hour
20 period?,
21 DR. SHEEDY: You are going to
22 need to ask someone who specializes in this
23 because I don't really know. Anybody?
24 MR. BRANECKY: If it's a block
25 average, you would have 12.

Page 15

1 DR. SHEEDY: You would have 12.
2 If it's a rolling average, it's 24.
3 MR. BRANECKY: But if it's a
4 rolling, you've got 24.
5 MR. WILSON: So under NSPS, how
6 many would there be?
7 MR. BRANECKY: It would be 24.
8 MR. DYKE: Just a moment. If you
9 are going to speak, we need your name.
10 MR. COLLINS: Gary Collins.
11 MR. DYKE: You need to come up to
12 the microphone, also.
13 MR. COLLINS: Gary Collins with
14 Terra. It depends on what subpart, whether
15 it's (d) -- (d) (a), (d)(b), (d)(c), (c),
16 also. Because Subpart (d) is different
17 then Subpart (d)(b), as far as a rolling
18 average.
19 DR. SHEEDY: Yes.
20 MR. COLLINS: And (d)(b) has a 30
21 day rolling average.
22 DR. SHEEDY: Exactly.
23 MR. COLLINS: And there is quite
24 a bit of difference between (d) and say
25 (d)(b). This is not a new regulation, this

Page 16

1 is a state rule. So whatever we've been
2 doing previous I would think would
3 continue.
4 DR. SHEEDY: This rule doesn't
5 make any change in that.
6 MR. COLLINS: Right.
7 DR. SHEEDY: The modifications
8 that we suggested don't make any changes in
9 the status quo, really. Whatever was a
10 violation before would still be a violation
11 under this rule.
12 MR. COLLINS: The way we've
13 always looked at it, we've always kept our
14 subpart or NSPS records like in NSPS says
15 to keep those in the rolling average basis.
16 But we look at the state rule as any 2
17 hours. It's not a rolling 2 hours, it's
18 not kicking off, it's not a 30 day rolling
19 average, it's not kicking off the
20 (INAUDIBLE). It's any -- you pick 2 hours,
21 any 2 hours, the maximum emissions from
22 those 2 hours have to be below the
23 standard.
24 DR. SHEEDY: Isn't that a rolling
25 2 hours?

Page 17

1 MR. WILSON: Any continuous 2
2 hours?
3 MR. COLLINS: Right. A rolling
4 average actually tells you how many data
5 points you can use within that period, like
6 you were saying.
7 MR. WILSON: So this -- does this
8 add a burden to you to comply with both 33
9 and Subchapter (d)?
10 MR. COLLINS: It does for Subpart
11 (d)(b) boilers, definitely, yes. If you
12 have to comply with this regulation, it's
13 more stringent than the 30 day rolling
14 average.
15 DR. SHEEDY: Yes, it is. I
16 particularly look at (d) because OG&E's
17 coal fired power plants, were all (d). But
18 as you say, (d)(a), (d)(b), and (d)(c) are
19 all different and have a different filings
20 on averaging time.
21 MR. WILSON: Subpart (d) are also
22 in most other testing requirements like the
23 Appendix F requirements. So you couldn't
24 just say compliance with (d) meets
25 compliance with this or vice-versa.

1 DR. SHEEDY: It's not quite as
2 simple as that.
3 MR. WILSON: My thought here is
4 if the state does not intend for this to be
5 more stringent than Subpart (d), let's make
6 that change. And let's get EPA involved in
7 discussions if that's at all possible. If
8 it is intended to be more stringent, then
9 so be it.
10 DR. SHEEDY: It's somewhat
11 difficult to determine exactly what the
12 intent was at that time. I know when this
13 was written, apparently, the people working
14 on it weren't aware of the federal
15 standards and I'm not sure why the
16 difference in the averaging time came
17 about. But if EPA considers it a
18 relaxation, then we would need them to buy
19 in on a change.
20 MR. DYKE: Any other comments?
21 Thank you. Any other questions? We have
22 some people wishing to comment on this
23 rule. Would you like to move to that at
24 this point?
25 MR. BRANECKY: Yes.

1 MR. DYKE: Nadine Barton.
2 Nadine, do you want to go first? Nadine
3 Barton.
4 MS. BARTON: I have a question of
5 Joyce before she leaves. Nadine Barton
6 with CASE, Citizens Action for a Safe
7 Environment. Does this rule also apply to,
8 like, Ogden Martin with their stacks?
9 DR. SHEEDY: It applies to --
10 well, Ogden Martin is an incinerator,
11 right?
12 MS. BARTON: Correct.
13 DR. SHEEDY: Not all incinerators
14 are considered to be fuel-burning
15 equipment. I think for an incinerator to
16 be fuel-burning, it would have to be using
17 the heat for some practical purpose, like
18 generation of electricity or whatever. So
19 if it's not fuel-burning, then this would
20 not apply to them. It applies only to
21 fuel-burning equipment that has a heat
22 input of 50 million BTU's per hour or
23 greater.
24 MS. BARTON: I don't know what
25 their BTU output is.

1 DR. SHEEDY: I'm not sure what it
2 is, either.
3 MS. BARTON: I just wondered if
4 that would affect them, because of their
5 steam generation for Sun.
6 DR. SHEEDY: It's my
7 understanding that if you're an incinerator
8 but you're making steam and you are selling
9 it, that it can probably be considered as
10 fuel-burning equipment. Now, I don't know
11 the size of their units, if they're 50
12 million BTU and above.
13 MS. BARTON: I would just caution
14 staff here because, you know, we have this
15 concern, as the citizens with them over
16 there, that a less stringent of stack
17 testing does not manifest and they can come
18 under this. So you need to be really
19 careful about that. Because I think -- do
20 you remember last year when we went through
21 this and EPA was here and we talked about
22 the averaging of their stacking and their
23 stack testing and all that? Please be
24 careful with that.
25 My other question has to deal with,

1 is that for each stack, if they have two
2 stacks, or is that an average of the two
3 that we're talking about here?
4 DR. SHEEDY: I believe it's for
5 each unit.
6 MS. BARTON: Thank you.
7 MR. BRANECKY: Let me say that
8 I'm not advocating anything less stringent,
9 but if a 2-hour average, rolling average,
10 is the same as a 3-hour, it just doesn't
11 make sense to have to report it two
12 different ways. And that's what I would
13 like to get clarified. If we can simplify
14 this by just having one reporting process
15 for averaging time, that would be helpful.
16 MR. GROUND: I'm Howard Ground
17 with Central and South West and I have a
18 few comments regarding this. I would like
19 to say, first of all, I think this is --
20 our Subpart (d) is much more stringent than
21 what this is. My interpretation of this is
22 this is a compliance determination of a 2-
23 hour maximum of your emission rates. It's
24 not an average of anything. It's not a 2-
25 hour rolling, it's not a 2-hour block, it's

Page 22

1 not a 12 times per day, this is a 2-hour
2 maximum compliance determination. And we
3 can determine this, and we're showing one
4 time. And that's how you can show -- this
5 doesn't have -- excuse me?
6 DR. SHEEDY: What does that mean,
7 a 2-hour maximum?
8 MR. GROUND: You run and you show
9 that for 2 hours you can be below your .7
10 pounds. So what we're doing right now is
11 on a 3-hour rolling average, which is much
12 more stringent than what this is under
13 Subpart (d).
14 DR. SHEEDY: So --
15 MR. GROUND: This doesn't give
16 any kind of averaging, any kind of a per
17 day, per month, per year, any time. So I
18 think any talk about making this anything
19 else is making it more stringent. But I
20 think what we have under NSPS is much more
21 stringent.
22 MR. BRANECKY: So what you are
23 saying is when we build a unit we do a
24 performance test to show compliance.
25 MR. GROUND: To show compliance.

Page 23

1 MR. BRANECKY: And that one time
2 test shows compliance with this?
3 MR. GROUND: That's right. And I
4 think if you look at it, if you go back to
5 1970 or whatever when they were building,
6 that's how they show compliance in this
7 subchapter. Just in light of that, I think
8 any talk of any kind of an average is just
9 adding into this what has never been in
10 there. I've never really had any inspector
11 question it, so I can't tell you what they
12 think. They've never questioned whether we
13 comply with this, because we complied with
14 NSPS.
15 MR. WILSON: But you don't see
16 any chances, I guess mathematically, that
17 you could be in violation under this 2 hour
18 maximum, and not in violation with NSPS?
19 MR. GROUND: For our company, no.
20 We're much lower than this, as far as our
21 compliance determination.
22 MR. WILSON: So mathematically it
23 would be impossible to be in violation of
24 this.
25 MR. GROUND: If you ran up to

Page 24

1 this limit, .7, then that could be true.
2 But we're almost half of that for our
3 determination.
4 MR. BRANECKY: But theoretically,
5 you could exceed the 2-hour and still meet
6 the 3-hour, is that what you're saying? Is
7 that what you're asking?
8 MR. WILSON: I think it's
9 mathematically possible.
10 MR. KILPATRICK: But even -- the
11 question I hear him saying is that you --
12 once you satisfy -- his understanding of
13 this is, once you satisfy this one time,
14 it's a one time determination, it's not an
15 ongoing requirement.
16 MR. BRANECKY: I guess maybe
17 that's what we need to get clarified.
18 MR. KILPATRICK: It's not clear
19 from reading this what the intent is.
20 MR. GROUND: It is not. And if
21 you'll look at NSPS as written in Subpart
22 (d), which if they could prove that they
23 are below the .7, they don't have to
24 monitor. So that's the original compliance
25 determination that they can meet the

Page 25

1 standard -- actually a certain amount below
2 the standard, then they didn't have to
3 monitor for NOx. So that's one comment.
4 The other comment, as far as the --
5 I had a lot of, I guess, exactly the same
6 comments or questions that David had -- Mr.
7 Branecky. First of all, being considered
8 new fuel-burning equipment. I guess I
9 agree it's for anything after that date,
10 and I didn't know what that date was until
11 I read in the description this morning.
12 But in your description of the change, I
13 think there is -- or I can see one problem
14 in your number 2. You said units that are
15 in being at the time of -- well, that's not
16 the standard language.
17 DR. SHEEDY: There is a
18 definition of in being in Subchapter 1.
19 MR. GROUND: In Subchapter 1,
20 well, I believe in this subchapter they
21 actually talk about commence construction.
22 DR. SHEEDY: Yes. But in this
23 subchapter originally, let's see, it said -
24 - they just talk about new -- previously it
25 said any new, for instance, gas fired fuel-

Page 26

1 burning equipment. So if you go over into
2 Subchapter 1 and look up new equipment or
3 new source, that will say that it is new
4 installation, source, or equipment means
5 that air contaminant source which is not in
6 being on the effective date of these
7 regulations. And any existing source,
8 which was altered, replaced or rebuilt
9 after the effective date of regulation,
10 substantive amount of air contaminant
11 emissions is increased.

12 So again, you go to the definition
13 of in being, in order to understand what
14 new source installation means. And in
15 being is also in Subchapter 1, and it means
16 as used in the definitions of new
17 installation and existing source that an
18 owner or operator has undertaken a
19 continuous program, construction or
20 modification or the owner/operator has
21 entered into a binding agreement or
22 contractual obligation to undertake and
23 complete within a reasonable time a
24 continuous program, construction or
25 modification prior to the compliance date

Page 27

1 for installation of the applicable
2 regulation. So we do define, in being.

3 MR. GROUND: Okay. I'll withdraw
4 that. That's all I have.

5 MR. WILSON: I wanted to respond
6 to Nadine's question. The definition of
7 fuel-burning equipment in Subchapter 1,
8 means any one or more boilers, furnaces,
9 gas turbines or other combustion devices
10 and all pertinent thereto used to convert
11 fuel or waste to use for heat or power.

12 MS. BARTON: Thank you.

13 MR. WILSON: You're welcome.

14 DR. SHEEDY: So an incinerator
15 could be fuel-burning equipment if it's
16 converting usable waste to --

17 MS. MYERS: If it meets the
18 criteria for heat input per hour.

19 DR. SHEEDY: Yes. The heat input
20 criteria also has to come into play for
21 Subchapter 33.

22 MR. WILSON: It would appear to
23 be applicable under the new applicability
24 language. However, underneath the emission
25 limit language, it is not included.

Page 28

1 Because it's not gas fired, it's not liquid
2 fired, it's not solid fossil fuel fired.

3 So there doesn't appear to be any emission
4 limits in this subchapter applicable to
5 waste incinerator. And if that's what's
6 intended, then perhaps the applicability
7 section needs to spell out which fuel-
8 burning equipment is subject to these
9 limitations. If it is intended to apply to
10 waste incinerators, then I feel like there
11 needs to be an emission -- an individual
12 emission limit paragraph that would apply
13 to that facility. I'm sure that facility
14 could probably comment on that.

15 MR. DYKE: Barbara. I'm sorry,
16 Sharon, go ahead.

17 MS. HOFFMAN: Let me just say
18 something real quickly. I'm Barbara
19 Hoffman, staff attorney for DEQ. We have
20 an entire subchapter that deals with
21 municipal waste combustors, so they have
22 NOx requirements in Subchapter 17. So they
23 are fully covered.

24 MR. WILSON: It's not the state's
25 intention to include them in this

Page 29

1 subchapter?

2 MS. HOFFMAN: Exactly.

3 MR. WILSON: I still think that
4 clarification might need to exist.

5 DR. SHEEDY: Well, yes.

6 MR. WILSON: Unless you read this
7 thing and you say well, okay, I don't fall
8 under (a), I don't fall under (b), I don't
9 fall under (c), so if I don't fall under
10 (a) (b) or (c), then I'm in good shape on
11 this one.

12 DR. SHEEDY: The fuel-burning
13 equipment was rewritten in 1977, which is a
14 number of years after 33 was written, and
15 33 has really only had one change since
16 it's inception.

17 MS. MYERS: I've got a question
18 based on what Howard said. Is this
19 subchapter primarily to demonstrate
20 compliance -- a one time compliance
21 demonstration on this 2-hour maximum, or is
22 this something that's supposed to apply on
23 a regular compliance basis? It's not
24 clear.

25 DR. SHEEDY: It's supposed to --

Page 30

1 if it's just for a 2-hour maximum at the
2 beginning of the plant's operation. No,
3 I'm sure it was meant to -- that you were
4 meant to comply with these limits
5 throughout the operation of the plant.
6 MR. BRANECKY: Well, under NSPS,
7 as far as I understand, compliance
8 demonstration for NSPS is the one time
9 performance test.
10 DR. SHEEDY: Yes, compliance
11 demonstration, yes.
12 MR. BRANECKY: Excess emissions
13 are determined by the 3-hour rolling
14 average. Compliance is not determined by
15 the 3-hour rolling average, it's determined
16 by the one time stack test. So I think in
17 looking at it now, I tend to agree with Mr.
18 Ground, that this was intended to be a one
19 time compliance test to show that you met
20 the standard.
21 DR. SHEEDY: You mean then after
22 that you don't have to comply with .2
23 pounds per hour --
24 MR. BRANECKY: Well, the intent
25 is if you show compliance and when you do,

Page 31

1 your test is running as high as you can on
2 heat input, you go flat out, and if you
3 meet your standard at that point, then at
4 any other time you operate, you're going to
5 meet the standard. If you're showing
6 compliance at maximum load, if you do that,
7 you're okay.
8 DR. SHEEDY: Hasn't EPA changed
9 the rules so that continuous emission
10 monitoring results can be used to show
11 excess or violations?
12 MS. MYERS: We're talking about
13 two different things. We're talking about
14 compliance tests and we're talking about
15 performance tests, and talking about
16 emissions compliance.
17 DR. SHEEDY: I can see what
18 you're saying, but I think that plants
19 don't always operate as efficiently all the
20 time as they do during testing, sometimes.
21 So I find it difficult to believe that we
22 only intended that they have to meet .2
23 pounds per hour for gas fuel-fired
24 equipment during compliance testing.
25 MR. BRANECKY: Is there any way

Page 32

1 you can go back and search your records to
2 find the intent?
3 DR. SHEEDY: I've looked at the
4 records I could find, and I'll look at them
5 again. But I didn't see anything that I
6 could tell that it's over it's compliance
7 or not.
8 MR. WILSON: I guess with all the
9 uncertainty around how compliance is going
10 to be demonstrated and how this 2-hour
11 maximum is going to be interpreted, that
12 there be -- I'm suggesting there be some
13 clarity written in the rule around this.
14 It's one of those rules where 25 years ago
15 people just thought well, 2-hour maximum,
16 that means whatever it means to me is
17 right.
18 DR. SHEEDY: Yes.
19 MR. WILSON: And it's not the
20 case, anymore.
21 MS. MYERS: We certainly want to
22 get a rule that's understood by the
23 regulated community as well as the
24 communities around us, as far as our
25 regulators.

Page 33

1 DR. SHEEDY: Well, that is the
2 purpose of this rewrite/dewrong.
3 MR. DYKE: Don.
4 MR. WHITNEY: I'm Don Whitney
5 from Trinity Consultants. Another point of
6 clarification that perhaps should be looked
7 for is on solid fossil fuels. This might
8 be a land mine for future interpretations,
9 but fossil fuel is in there but it's not
10 directed to gases or liquid fuels. And I
11 wonder if that is intentional to be
12 referring to coal only or would that, in
13 other words, just excuse wood or fire chips
14 or some other kind of solid fuel. Do we
15 really need the word fossil in there.
16 DR. SHEEDY: Good question.
17 Historically it said fossil, but whether
18 that still should be the case -- and then
19 we wouldn't consider wood chips or any
20 other solid fuels, I don't know. At that
21 point, coal is probably the only solid fuel
22 that is routinely used (inaudible).
23 MR. DYKE: Joyce, do you have any
24 other areas that you wish to cover before
25 we make a recommendation to continue? Just

Page 34

1 a moment. Nadine?
2 MS. BARTON: I would just like to
3 make one more comment, if I could, before
4 you close this. Nadine Barton, Citizens
5 Action for a Safe Environment. I would
6 like to recommend -- I have to go back to
7 my concern of a pending loophole and what
8 we talked about, Mr. Wilson, earlier.
9 Maybe a simple sentence that this does not
10 apply to municipal waste, solid waste
11 incinerators be inserted in that so there
12 is no way that that can be misinterpreted,
13 since we do have that whole long section
14 that does apply to that. I just don't want
15 to have any loophole found by any attorney
16 that could be used to that benefit. And
17 the other thing is when you are considering
18 the 2 or the 3-hour averaging, please, I
19 know that EPA -- I've made a formal comment
20 on your new standards. And our concern
21 here in Tulsa is our combined new NOx
22 emissions that is going to be coming into
23 our air shed. And I would like to request
24 that when you are formulating this formula,
25 that you just take the new standards, the

Page 35

1 new sources that are coming within the
2 Tulsa air shed, add them together, and see
3 if by your testing whether the 2 or the 3-
4 hour is more stringent or less stringent,
5 because this is just the beginning. I
6 would like to recommend that you have the
7 more stringent because the more we are
8 going to be loaded, the worse our air is
9 going to become. Thank you.
10 MR. BRANECKY: Nadine, I would
11 like to point out something that I think
12 mostly of the new sources coming in are
13 well below this standard, their PSD
14 sources, going through PSD review, they
15 have to put on the best control technology
16 which brings in much less than even the .2
17 MS. BARTON: I understand that
18 and respect that. However, when you look
19 at the combined NOx that's being added to
20 what we have, right now it doesn't matter
21 whether they have the best technology
22 available or not, it's still going to push
23 us up to approximately 3,700 new tons
24 annually from them and we can't afford
25 another drop in our bucket. So I would

Page 36

1 just like to have staff look at that and
2 just take our sources here in our air shed
3 and look at it and see what you come up
4 with. Thank you.
5 MR. DYKE: Joyce, in light of the
6 comments today, would recommend this be
7 continued to the next Council meeting?
8 DR. SHEEDY: Yes.
9 MR. DYKE: Is there anyone else
10 wishing to speak on this rule this morning?
11 Additional questions or comments from the
12 Council? I didn't mean to cut anybody off.
13 Mr. Chairman.
14 MR. BRANECKY: We have a
15 recommendation from staff that this Rule
16 Subchapter 33 be carried over to the April
17 Council Meeting. Do I have a motion?
18 MR. KILPATRICK: So moved.
19 MR. FALLON: Second.
20 MR. BRANECKY: We have a motion
21 and a second that Subchapter 33 be carried
22 over to the April Council Meeting. Myrna,
23 call the roll, please.
24 MS. BRUCE: Mr. Kilpatrick.
25 MR. KILPATRICK: Aye.

Page 37

1 MS. BRUCE: Mr. Fallon.
2 MR. FALLON: Yes.
3 MS. BRUCE: Mr. Treeman.
4 MR. TREEMAN: Yes.
5 MS. BRUCE: Mr. Wilson.
6 MR. WILSON: Yes.
7 MS. BRUCE: Mr. Branecky.
8 MR. BRANECKY: Yes.
9 MS. BRUCE: Ms. Myers.
10 MS. MYERS: Yes.
11 MS. BRUCE: Mr. Breisch.
12 MR. BREISCH: Yes.
13 MR. DYKE: I believe that closes
14 the hearing portion of our meeting this
15 morning.

1 everything that is subject or to list
2 everything that isn't subject. Therefore,
3 applicability criteria are being proposed
4 in Section 1.1 for determining whether or
5 not a source is subject to the rule. If
6 the source is subject to more than one rule
7 that regulates the same pollutant, then the
8 source must comply with the most stringent
9 requirements.

10 Staff has made the following changes
11 to the rule since the February meeting.

12 Staff proposes to return the
13 proposed statement in Section 1 on page 1
14 to its original language, which on further
15 consideration seems to express the purpose
16 more clearly than the revised language.

17 Staff has revised the applicability
18 Section 252:100-33-1.1, on page 1, to make
19 it easier to determine if a source is
20 subject to the rule. Since staff has
21 proposed to delete the subsection on nitric
22 acid plants, the only sources covered by
23 the rule will be fuel-burning equipment.

24 We have received written comments
25 from Michael Graves of Hall, Estill,

1 Hardwick, Gable, Golden and Wilson, from
2 Tom Blachley, from Gary Collins of Terra,
3 and from EPA.

4 Written comments were received on
5 March 27th from Hall, Estill, Hardwick,
6 Gable, Golden & Nelson, dated March 24th
7 and signed by Michael Graves. A copy of
8 that letter, as well as the summary of the
9 comments and the staff's responses, are
10 included in the Council packet and are
11 available at this meeting and we want them
12 to be part of the record.

13 One of their primary concerns
14 appears to be that the subchapter is more
15 stringent and has a much broader
16 applicability than comparable federal
17 standards such as NSPS Subparts D, Db, and
18 GG, and that the DEQ has offered no
19 justification to substantiate the need for
20 broader and stricter standards.

21 The proposed revisions before us
22 today are results of the re-right/de-wrong
23 program. The purpose of that program is to
24 clarify, simplify and correct errors.
25 Staff proposed no substantive changes to

1 the standards and, therefore, did not
2 include justifications for the standards
3 that were already in place. Such
4 justifications were presented when these
5 standards went through the rulemaking
6 process before they were promulgated and
7 these records are available at the Air
8 Quality Division office.

9 The commentor was also particularly
10 concerned with the apparent conflict
11 between Subchapter 33 and the federal NSPS
12 Subpart GG that set standards for turbines.
13 They proposed that Subpart GG, which is
14 specifically designed for stationary gas
15 turbines and was developed by the federal
16 government after the state's standards, be
17 used to regulate turbines in lieu of
18 Subchapter 33.

19 Staff believes that any change to
20 the rule that would exempt turbines or
21 revise the standards for turbines is beyond
22 the scope of the re-right/de-wrong program
23 and requires additional research that needs
24 more time than is available if we are to
25 meet the re-right/de-wrong deadline.

1 The commentor also recommended that
2 the maximum two-hour average emission
3 limitation in Section 2 conform to the
4 federal NSPS.

5 Since preparing the proposed revised
6 Subchapter 33 that is in the Council
7 packet, staff has discovered that this same
8 subject was brought up in the March 17,
9 1987, Council Meeting regarding sulfur
10 limits for fuel-burning equipment in
11 Subchapter 31. At that meeting and in a
12 memo dated December 19, 1986, to the
13 Council, Air Quality staff recommended that
14 the change from the two-hour averaging time
15 to a three-hour averaging time be made for
16 practical reasons, since a stack test to
17 determine compliance consists of three one-
18 hour runs, a three-hour average is already
19 essentially in effect. Staff feels that
20 the same is true for the averaging time in
21 Subchapter 33 and recommends that the two-
22 hour maximum be changed to a three-hour
23 average.

24 We also had written comments from
25 Tom Blachley. His comments were received

1 on April the 7th, so they are not included
2 in the Council packet, but they are
3 available here this morning and we would
4 like to, as I said earlier, make that part
5 of the record. In general, Mr. Blachley's
6 comments were nonsubstantive wording
7 changes and corrections. Staff has made
8 the corrections and some of the changes.

9 We have a comment that we received
10 yesterday, April the 18th, from Gary
11 Collins of Terra, and staff hasn't had an
12 opportunity to evaluate these comments or
13 respond to them, however, they are
14 concerned with the appropriateness of
15 covering turbines in Subchapter 33. We
16 would like that to be made a part of the
17 record.

18 I believe we also have comments from
19 EPA. I'm not certain what date we received
20 those. At that time, they were in support
21 of the changes in the subchapter as they
22 were when we sent them, to them.

23 Due to the comments and the
24 additional information that we received,
25 since the rule that was contained in the

1 Council packet was prepared, the staff
2 wishes to propose the following changes to
3 the rule.

4 We propose to add a new section, it
5 will be 252:100-33-1.1, Definitions. And
6 it would read: The following terms, when
7 used in this Subchapter, shall have the
8 following meaning, unless the context
9 clearly indicates otherwise.

10 New fuel-burning equipment means any
11 fuel-burning equipment, with the exception
12 of simple cycle gas turbines, that was not
13 in being on February 14th, 1972, or any
14 existing fuel-burning equipment that was
15 altered, replaced, or rebuilt after
16 February 14, 1972, resulting in an increase
17 in air pollutant emissions, and any simple
18 cycle gas turbine that was not in being on
19 July 1, 1977, or any existing simple cycle
20 gas turbine that was altered, replaced, or
21 rebuilt after July 1, 1977, resulting in an
22 increase in air pollutant emissions.

23 Three-hour average means the
24 arithmetic average of sampling results or
25 continuous emission monitoring data from

1 three continuous one-hour periods.

2 Then the applicability section we
3 would renumber 33-1.2, and what we would do
4 in the applicability section would be
5 changed to read, the equipment burns solid
6 fossil, gas or liquid fuel.

7 In Section 2, Emission Limits,
8 Subsection (a) under that section, we would
9 delete maximum and substitute three, for
10 two, on heat input three-hour average. We
11 would do the same thing in (b), which is
12 liquid-fired fuel-burning equipment, we
13 delete maximum, and substitute three, for
14 two, and again in (c) for solid fossil
15 fired fuel equipment.

16 We also had a request to change the
17 limit in parenthesis that is now in million
18 gram-calories to nanograms/per jewels,
19 since that is the units that's used in the
20 NSPS Subparts D, Da, Db, and Dc. So in
21 Subsection (a), we would change 0.36 gram
22 per million gram-calories to 86 nanograms
23 per jewels, which would be ng/J.

24 In (b), we would change 0.54 g/MMg-
25 cal to 129 ng/J, and in (c), we would

1 change that to 300 ng/J.

2 MR. DYKE: Joyce, would you go
3 through those again, please?

4 DR. SHEEDY: Yes. In (a), for
5 gas-fired fuel-burning equipment, the units
6 in parenthesis would be changed to 86 ng/J.
7 In (b), for liquid-fire fuel-burning
8 equipment, that would be changed to 129
9 ng/J. And in (c), it would be changed to
10 300 ng/J. I believe I got those correct if
11 no one disagrees.

12 That would be all the changes we
13 would suggest there. Other than perhaps
14 the two-hour average change to the three-
15 hour average, they are not substantive
16 changes.

17 The staff would suggest that the
18 proposed rule as we ask be amended, be
19 recommended to the Board for permanent
20 adoption. Staff feels that any exclusion
21 of turbines from Subchapter 33 or setting
22 special standards for turbines is beyond
23 the scope of the re-right/de-wrong program
24 and I think if the Council desires, should
25 be considered separately. As stated

1 before, more information is necessary on
2 the numbers of turbines involved and the
3 performance of modern turbines before a
4 decision can be made to relax NOx
5 standards, considering the potential
6 problems the state may have with ozone.
7 I'm sure we would want to set up a work
8 group to investigate that. Are there any
9 questions or comments?

10 MR. WILSON: I have a question.
11 I recall Terra Nitrogen coming before the
12 Council wanting an alternate reduction, and
13 I believe their arguments at the time were
14 that this turbine should not be subject to
15 Subchapter 33. Do you recall whether or
16 not there was statements made there by
17 staff or by Don Shandy, who I believe
18 testified on behalf of Terra Nitrogen, did
19 staff agree?

20 DR. SHEEDY: I wasn't at that
21 particular meeting. I have a letter from
22 John Stallings, which was a member of staff
23 back in 1972 or '74, in which he was
24 responding to an engineer. He said that
25 Subchapter 33, as written, was not intended

1 to apply to simple cycle gas turbines, but
2 did apply to combine cycles, you know,
3 where they combined with steam generators
4 or that sort of thing. And what has
5 happened in 1977, when the definition of
6 fuel-burning equipment was revised, that
7 revision brought turbines under the fuel-
8 burning equipment definition and therefore
9 made it subject to this rule. Now, it's
10 our understanding that the modern day
11 turbines can meet these standards, and I
12 know we are certainly -- we have been
13 writing permits for a number of power
14 generator turbines and they indicated that
15 they can meet this standard. Now whether
16 there's a generation of turbines that,
17 before the modern day turbines and after
18 they became subject, that have had problems
19 as Terra has, I don't know. We may need to
20 look into that to give them some relief. I
21 understand that they were very close to
22 meeting the standard. I believe I was told
23 the standard was .20 and they were at .22.
24 So I don't know that we would want to relax
25 our standard considerably to what EPA's

Christy A. Myers
Certified Shorthand Reporter

7167

1 standard is when they are very close.

2 MR. DYKE: I have noticed Mike
3 Peters is here and I think he has some
4 comments on this. It might be beneficial
5 to hear his comments now, then come back to
6 questions and to vote, if that's okay.

7 MR. PETERS: My name is Mike
8 Peters, I'm with the law firm of McKinney
9 and Stringer. I'm here on behalf of Terra
10 in support of the comments that were
11 submitted on April 18th, 2000. I apologize
12 for the lateness of those comments being
13 submitted, however, I wanted to address
14 some of the statements that Joyce has made.
15 There is some revisions to 252:100-33-1.1.
16 I don't have a copy of what you have. She
17 indicated that there is an applicability
18 date specified for simple cycle gas
19 turbines and it's July 1st, 1977. One of
20 the comments I would have, as Joyce
21 indicated, in 1972, Subchapter 33 became
22 initially effective. At that time, it was
23 only applicable to fuel-burning equipment
24 that was used for indirect heating
25 purposes. I don't believe that is limited

1 to simple cycle gas turbines. I don't know
2 if that would be inclusive of any turbine.

3 DR.. SHEEDY: Well, I think what
4 the letter may have indicated is that
5 combined cycle gas turbines are subject,
6 but I'm not certain if what they meant when
7 they went beyond that was the part that was
8 subject, was the other part. You know, not
9 the turbine but the steam generator or
10 something.

11 MR. PETERS: Okay. So based on
12 the definition in regulation number 3, now
13 Subchapter 1?

14 DR. SHEEDY: Yes.

15 MR. PETERS: Of fuel-burning
16 equipment in 1972, it was only combustion
17 equipment that was used for purposes of
18 indirect heating. I would argue that
19 excludes all turbines, not only simple
20 cycle turbines. That's my comment
21 regarding this new language that is
22 proposed here, and I think it ought not be
23 limited to simple cycle gas turbines but to
24 all gas turbines.

25 And I won't go through all of our

1 comments, but I think Mr. Wilson has asked
2 a question about the statements that were
3 made in 1999 when Terra did come before the
4 Air Quality Council and asked for an
5 alternate emissions reductions plan, and we
6 did, and it was granted. We weren't asking
7 for an exemption or exclusion from
8 Subchapter 33 or from the NSPS. The Terra
9 turbine is not subject to the NSPS. It is
10 excluded from NSPS. However, what we were
11 trying to indicate to the Council is that
12 the turbine -- the emission limit in
13 Subchapter 33 is over three times more
14 stringent as applied to this turbine than
15 Subchapter 33. And one of the things, if
16 you look back in the rulemaking, it appears
17 to me that when 33 was initially adopted in
18 1972, it was primarily applicable to
19 boilers. And the purpose for the rule is
20 to install that and preserve the National
21 Ambient Air Quality Standards and to -- or
22 have new sources installed as best new
23 sources available for control technology.

24 Then they go into a discussion --
25 there are currently available control

1 technology for existing equipment, but
2 there is no discussion about turbines.

3 At the Council Meetings prior to the
4 definitional change that occurred in 1977,
5 there was a comment submitted by the public
6 that said turbines cannot meet this
7 standard. And then later on there was a
8 comment submitted at the second Air Quality
9 Council Meeting in February of 1977, I
10 believe, and there was a comment submitted
11 by the Oklahoma City County Health
12 Department that requested the Council not
13 take action on the change in the
14 definitions because they were unaware of
15 the impacts that all the change in fuel-
16 burning equipment would have in regard to
17 all the regulations, one of those being
18 regulation number 18 which is now
19 Subchapter 33.

20 As far as I can tell, after
21 reviewing DEQ's rulemaking development
22 package, I cannot find whether there has
23 been a response to the comments or concerns
24 previously by the Council or the Air
25 Quality Division as it regards the

1 application of Subchapter 33 to turbines.
2 And the reason why Terra did come to the
3 Air Quality Council was that their turbine,
4 existing turbine, although it generally
5 meets the Subchapter 33 NOx requirement,
6 there are certain occasions where they are
7 a little over or very close to exceeding
8 the limit, and that is the reason why we
9 requested an alternative emission reduction
10 plan. If it has not already been done, I
11 would like to enter it into the record, the
12 comments.

13 DR. SHEEDY: What we wanted to
14 say about this is that there may be a
15 problem that certain periods of time the
16 best technology for turbines may not have
17 allowed those turbines to consistently meet
18 the standard. But if turbines -- if modern
19 turbines now can meet those standards, I
20 don't know that we would really want to
21 relax those standards, and thereby allow
22 new turbines to come in, which are dirtier
23 when we could have cleaner ones. But if we
24 have existing turbines, that have a problem
25 because the best technology that was

1 available when they were built and put in
2 can't meet this standard, then we need to
3 look into that and maybe make a special
4 (inaudible) standard for them that they can
5 meet. But I don't know that we want to
6 relax our standard to the point of the NSPS
7 standard, if that isn't really necessary.
8 The NSPS standard, as EPA has told us many
9 times, represents a minimal requirement and
10 not necessarily the maximum that should or
11 can be done.

12 MR. WILSON: The gas turbines got
13 included because of the definition of fuel-
14 burning equipment; is that correct?

15 DR. SHEEDY: Because that
16 definition was changed, yes.

17 MR. WILSON: Has the state done
18 any historical examination to determine
19 whether or not they intended gas turbines
20 to be regulated by Subchapter 33?

21 DR. SHEEDY: When Subchapter 33
22 was first put in place, I don't believe
23 that turbines in general were considered to
24 be fuel-burning equipment. As I said,
25 there was one letter from John Stallings on

1 the subject in which he said definitely,
2 that simple cycle gas turbines were not
3 meant to be included, that certain combined
4 cycles, combined with steam generation -- I
5 can get the letter, but I don't have it in
6 my package right here, were included. But
7 as I recall, the NOx standard only applies
8 to the steam generating. Does that make
9 sense? I've gone beyond my technical
10 knowledge.

11 MR. WILSON: Maybe a better way
12 to put this would be that there is an
13 oversight that occurred some time ago,
14 apparently, where gas turbines got included
15 in this regulation and they were never
16 intended to be included in this regulation;
17 is that not true?

18 DR. SHEEDY: I don't think that's
19 totally true. Yes, go ahead, Barbara. I
20 agree, I don't think that's the case.

21 MS. HOFFMAN: The record from
22 when they changed the definition, makes it
23 very clear -- in fact, the definition
24 actually specifically includes gas
25 turbines.

1 DR. SHEEDY: Yes.

2 MS. HOFFMAN: So they knew they
3 were going to be including gas turbines in
4 Subchapter 31, which has that term of
5 sulfuric oxide and also it's in Subchapter
6 33, nitrous oxide. So they knew they were
7 doing that and they understood all the
8 ramifications. They knew that they were
9 including gas turbines.

10 MR. WILSON: And that was written
11 in when, Barbara, what time?

12 MS. HOFFMAN: That took effect
13 July 1st, 1977.

14 MR. WILSON: And it impacted
15 existing gas turbines?

16 MS. HOFFMAN: No, because --

17 (Loud sound)

18 MR. WILSON: Barbara, that sound
19 meant that your answer was wrong.

20 DR. SHEEDY: Subchapter 33 is for
21 new equipment only, because it doesn't have
22 any sections for existing equipment.

23 MR. WILSON: Okay.

24 DR. SHEEDY: It would be new
25 equipment.

1 MR. TERRILL: Let me interject
2 something here, if I could. I think that
3 part of the reason that we're on the record
4 this morning goes back to when Terra made
5 their original request for this alternate
6 compliance scenario, because when we went
7 back and looked at the records, we found
8 out that a lot of the discussions went on
9 in the morning, when they weren't taped and
10 didn't have good records, and that's part
11 of the reason why we're doing this format
12 like we are today.

13 Let me address the situation of how
14 we're going to get to this issue of gas
15 turbines. I think that Joyce is probably
16 right, we do need to do a work group on
17 this, but I don't think now is the time to
18 do it. Because what this will probably
19 mean, since it's my understanding that this
20 rule is part of our EPA approved SIP, and
21 this is very likely to be looked upon as a
22 relaxation of that, I don't think they are
23 going to approve it and I don't think we
24 want to take this down there as a SIP
25 change until we know for sure what's going

1 to happen with the eight-hour ozone
2 standard. Because I think all that needs
3 to be -- let's assume that the eight-hour
4 ozone standard is approved or the decision
5 is overturned at the Supreme Court level
6 and we end up with a .08 standard, and we
7 have nonattainment areas in Tulsa and
8 Oklahoma City, at that time we'll be
9 looking at all of our rules and all of our
10 attainment strategies and this would be
11 part of it. I don't think we want to have
12 something down there that's going to relax
13 it when we may have to make up those
14 somewhere else. I do think we need to look
15 at it, but I don't think now is the time to
16 do it until -- I think we need to treat
17 this issue with the gas turbines as a
18 separate issue from our re-right/de-wrong
19 process. Because I don't want to commit
20 the staff for an extra work group right now
21 since I've got the PBR for natural gas
22 compressors plus 41 is going to be one that
23 we need to address, plus we're going to
24 have to look at possible staff for
25 attainment demonstrations, and we just

1 don't have enough to have three or four
2 work groups plus that going on. We will
3 look at it. I think you bring up a good
4 point, and we will convene a work group. I
5 just would prefer to wait until we know
6 what the standard is going to be and then
7 address that, at that time, as possibly an
8 overall attainment strategy or a separate
9 issue if we're able to stay in attainment.

10 MR. WILSON: So it's my
11 understanding that we've got many, many gas
12 turbines in this state that are meeting .2?

13 DR. SHEEDY: I didn't say that.
14 I think what I -- I don't know. What I do
15 know is that we are writing permits and
16 this is for -- these only cover gas
17 turbines that are 50 million BTU and
18 greater.

19 MR. BAUKHAM: To put that in
20 perspective, I need a little help.

21 MR. DYKE: Excuse me. Identify
22 yourself, please.

23 MR. BAUKHAM: I'm Tom Baukham
24 from Reliant Energy. I just have a basic
25 question. I'm trying to get that size in

1 perspective there and I am struggling to
2 relate to what 50 million BTU per hour is.
3 How about in terms of even a power plant in
4 megawatts, can you relate that to anything?
5 I don't know.

6 DR. SHEEDY: I don't know what 50
7 million is in megawatts. I'm sorry.

8 MR. PETERS: But that brings up
9 an important point. If it was meant for
10 boilers originally and it hasn't been
11 changed, the standard is written in pounds
12 per MMBTUs, as applied to turbines, that's
13 a little bit unwieldy. Pounds per BTUs, at
14 weight, we would prefer Subpart GG in the
15 New Source Performance Standard based on
16 parts per million, which is on volume basis
17 for turbines, specifically.

18 DR. SHEEDY: I think it's really
19 hard to make an across the board
20 conversion. I think you almost might have
21 to go turbine-by-turbine to compare. And
22 I've been told in some cases that certainly
23 the NSPS is much more generous than our .2.

24 MR. PETERS: But to answer your
25 question, Mr. Wilson, we are aware that

1 there is at least one turbine that has
2 issues with Subchapter 33. There are
3 numerous turbines located in the State of
4 Oklahoma.

5 DR. SHEEDY: That we just don't
6 know about. And what I did say -- what I
7 understand from our permit section is that
8 we are -- we permitted several new turbine
9 power generators and these, of course, are
10 new modern turbines and they indicate that
11 they can meet these standards and can even
12 do better, I believe, than these standards.
13 Of course, it looks like the technology --
14 modern technology may be able to meet these
15 standards. I don't know if we tested any,
16 they hadn't been built yet, but that's what
17 their applications indicated.

18 MR. WILSON: So the only avenue
19 of relief would be for those folks that
20 couldn't, is to apply for the alternative
21 emission reduction plan or get a new gas
22 turbine?

23 DR. SHEEDY: At this point, yes,
24 I guess so.

25 MR. WILSON: Where else in the

1 regulations, in the state regulations, do
2 we see the state intending to create
3 standards three times below the NSPS limit?

4 DR. SHEEDY: I believe we have
5 standards perhaps in the federal regs that
6 -- in Subchapter 31 there are standards, I
7 don't know that they're NSPS Standards, but
8 there are certainly Ambient Air Standards
9 that are about half of what the NAAQS is.
10 And at the time, the philosophy of people
11 who wrote these rules in the first place
12 was, that the Clean Air Act more or less
13 required them to keep areas of pure air,
14 clean and therefore they -- instead of
15 using NAAQS, since our air was much
16 cleaner, in that case they used a number
17 that was closer to what our air really was,
18 because they felt that was the philosophy
19 under the requirement of the federal Clean
20 Air Act.

21 So Joel, I'm not sure that right now
22 I can quote that we were lower on the
23 NSPS, I will have to do some checking to
24 see. We are lower on some of the NOx
25 standards for fuel-burning, we are lower in

1 some cases than D. Subpart D is where they
2 allow more -- a larger standard for certain
3 types of fuel. I believe they allow -- for
4 solid fuel, I believe they allow a greater
5 standard for lignite mined in North Dakota,
6 South Dakota, or Montana.

7 So there are places where our rule
8 is and has always been more stringent than
9 the NSPS, in that case.

10 MR. BRANECKY: Any other
11 comments? Joel, are you still thinking?

12 MR. WILSON: The Subchapter 33
13 language in 1977 -- that came about in
14 1977, impacted turbines built before that
15 date. That is not --

16 DR. SHEEDY: Actually, I don't
17 think the language was in Subchapter 33.

18 MR. PETERS: There was no change
19 to Subchapter 33 -- there was no change to
20 the definition and comments filed that said
21 we need to determine the impact of the
22 definitional change and I can't find where
23 that concern has ever been addressed.
24 There was a statement by the Council at
25 that time, if problems did occur in the

1 future, we would address those problems at
2 that time.

3 DR. SHEEDY: Thank you, very
4 much.

5 MR. PETERS: Yes, ma'am.

6 (Discussion between Council Members.)

7 MR. BRANECKY: Any other
8 comments on this issue at this point? I've
9 got a couple of other comments.

10 MR. WILSON: David, I guess I'm
11 confused. I mean, I hate to pass this
12 thing being confused. I'm not -- I don't
13 guess I've got a thorough understanding of
14 what the issue is all about here. I
15 understand that our state's regulations are
16 very stringent as they apply apparently to
17 gas turbines. I understand that the state
18 feels that new turbines can meet this
19 standard, this strict -- that modern
20 turbines can meet this old standard. Isn't
21 that correct?

22 DR. SHEEDY: Yes, that's our
23 understanding from the permits we've been
24 getting in. Now, the old standard was not
25 set for turbines. But yes, we've been told

1 that modern turbines can meet it. That's
2 why we need to separate this issue from the
3 re-right/de-wrong and get into this in more
4 depth on the technical aspect of can they
5 meet it, when were they able to meet it,
6 was there a time period after they became
7 subject that it was not possible for them
8 to meet it, and do we need to give them
9 some relief for the turbines that were
10 installed during that time period? That's
11 going to take some study.

12 MR. WILSON: That's the
13 question, isn't it? There is a period of
14 time whereby turbines were installed that
15 did not have the ability to meet this
16 stringent standard?

17 DR. SHEEDY: There may be a time
18 period when even with the best technology
19 they had at that time, they might not have
20 been able to meet this. And that's what we
21 need to investigate in the case and what
22 that time period is, and what they can
23 meet. Because as Eddie pointed out, if
24 we're going to go into a nonattainment
25 problem with ozone, if this happens, then

1 we don't want to relax requirements beyond
2 what's necessary.

3 MR. WILSON: What kind of
4 performance testing do you require here?

5 DR. SHEEDY: Let's see.
6 Performance testing is suppose to require
7 generally the -- which subchapter is it
8 that's performance testing? 43, 45?

9 MR. WILSON: You don't require
10 any CEMs? I guess on the turbines subject
11 to NSPS, GG, D, and Db, there is a
12 requirement to install CEMs?

13 DR. SHEEDY: I believe so.
14 Certainly on D, Da and Db.

15 MR. WILSON: And to monitor NOx
16 emissions based upon a BTU per hour?

17 DR. SHEEDY: I believe that's
18 correct for D, Da, Db. I believe Dc
19 doesn't have a NOx limit.

20 MR. WILSON: Okay.

21 DR. SHEEDY: But the other three,
22 I believe, yes, you're correct, they call
23 it nanograms pounds per million BTU.

24 MR. WILSON: So a large new
25 turbine would also install CEMs?

1 DR. SHEEDY: I think that's
2 required by GG, isn't it?

3 MR. PETERS: Let me correct
4 something.

5 DR. SHEEDY: Okay. Go ahead.

6 MR. PETERS: GG is turbines Da,
7 Db, Dc --

8 DR. SHEEDY: Right.

9 MR. PETERS: -- are getting into
10 boilers. The question is about turbines,
11 and that's not measured on a pounds per
12 MMBTU basis.

13 DR. SHEEDY: Right. Da, Db, they
14 are, but turbines are not, as Mike pointed
15 out, they are not controlled by NSPS.
16 Turbines under GG, I think -- are they
17 parts per million?

18 MR. PETERS: Parts per million.

19 MR. DYKE: We have someone from
20 EPA here.

21 MR. SHAR: My name is Alan Shar,
22 I work with the Air Quality Planning
23 Section with EPA Region 6 in Dallas. As a
24 former permit writer, 40 Subpart 6, and
25 Subpart GG has NO2 emission standards and

1 parts per million -- and based on your
2 stack emission, we can simply convert that
3 to pounds per hour, tons per year, and
4 pounds per million BTU. So the conversion
5 is irrelevant. It's manual calculations.

6 DR. SHEEDY: Yes, but it's by
7 turbine-by-turbine.

8 MR. SHAR: Yes, it would be each
9 turbine. NSPS is technology based.

10 DR. SHEEDY: Yes. It's hard to
11 compare across the board, and make an
12 across the board pounds per million BTU for
13 turbines; isn't it?

14 MR. SHAR: That's the dilemma
15 your work group has to look at.

16 DR. SHEEDY: Exactly.

17 MR. WILSON: Does NSPS Subpart GG
18 require the installation of a CEMs?

19 MR. SHAR: For the larger units,
20 yes.

21 MR. WILSON: For larger units?

22 MR. SHAR: NSPS goes by date of
23 installation, date of manufacture,
24 modification date and the size of the unit.

25 MR. WILSON: Okay.

1 MR. PETERS: NSPS Subpart GG,
2 your performance testing is under ISO for
3 every 15 percent oxygen; is that correct?

4 MR. SHAR: 40 CFR Subpart Dc also
5 requires testing on their -- test number 7
6 which is ISO (inaudible).

7 MR. PETERS: Right, but I'm
8 talking about specifically for turbines as
9 applied under Subchapter 33, there is no
10 correlation or no correction in ISO
11 conditions for 15 percent oxygen which
12 would result in a more stringent emission
13 standard for turbines. And under the
14 federal standards they allow you to correct
15 your ISO conditions with 15 percent of
16 oxygen.

17 MR. SHAR: There are two
18 (inaudible) under Subpart GG.

19 MR. PETERS: Correction. It's
20 based on ISO conditions and (inaudible).

21 MR. SHAR: It's based on the
22 nitrogen content of the fuel, that's why
23 they allow you to (inaudible).

24 MR. BRANECKY: I guess I'm almost
25 to the point where we could probably be

1 here all day arguing this. I think I'd
2 like to maybe get a sense on where we want
3 to go with this thing. It seems to be a
4 big issue that needs to be resolved and my
5 understanding from DEQ, Air Quality, they
6 agree that this issue needs to be
7 addressed, but their concern is that we get
8 this rule through the re-right/de-wrong
9 process and then maybe come back and
10 address this issue at a later date.

11 MR. TERRILL: That's right
12 because, again, if we're going to address
13 the larger issue of the turbines, and
14 that's probably going to be -- if we grant
15 the relief that it looks like is being
16 requested, then that's going to be looked
17 at as a relaxation of our existing rule and
18 that's probably going to require set offs -
19 - offsets somewhere else, if we send it
20 down as a SIP revision. And until we know
21 what's going to happen with our attainment
22 status, I don't think we want to do that.
23 I don't think they'll approve it. I think
24 we need to look at this in the context of
25 whatever the attainment situation is in six

1 months, a year, whenever that's addressed.
2 We'll commit to look at it as soon as we've
3 got clarification as to what the ozone
4 standard is going to be. But I'm just not
5 willing to do that right now because I
6 think we'll be wasting our time and the
7 staff's time by looking at it before we
8 know what our standard is going to be.

9 DR. SHEEDY: I think we're going
10 to have to have some hard justification
11 changes.

12 MR. TERRILL: I agree. So I
13 guess the question becomes, do you want to
14 re-right/de-wrong the rule or do you want
15 to wait and not do anything until we can
16 address the rule as a whole?

17 MR. KILPATRICK: I think we ought
18 to re-right/de-wrong somehow with the
19 Council stating that the rule will be
20 addressed again as soon as the ozone
21 attainment is resolved or else say, brought
22 back to the Council at least within a year,
23 just for discussion on what we should do,
24 if we haven't had any resolution.

25 MR. TERRILL: Yes, and I think

1 that's clearly stated in the record. I
2 mean, that's our commitment and we will do
3 that.

4 MR. PETERS: With regard to the
5 proposed rule, then I would restate my
6 comment that under 252:100-33-1.1,
7 definition of fuel-burning equipment, it
8 talks about any simple cycle gas turbine
9 that was not in being on July 1st, 1977. I
10 don't think that should be limited to
11 simple cycle, I think that should be any
12 gas turbine because they were not
13 previously regulated before 1977 and I
14 don't know -- the letter that Joyce has
15 referred to previously, I don't think that
16 was an effective rule, but I'm going by the
17 definition of fuel-burning equipment that
18 was modified in 1972.

19 So I would suggest that the term
20 simple cycle be stricken from that
21 language.

22 MR. BRANECKY: There is two
23 places -- it's mentioned in both instance.

24 MR. PETERS: Yes, in both
25 instances.

1 DR. SHEEDY: They're both in the
2 definition section. That's the only place
3 where we mention simple cycle; isn't it?

4 MR. PETERS: Yes, ma'am.

5 MR. BRANECKY: Is that agreeable
6 with staff?

7 DR. SHEEDY: I think that's
8 agreeable.

9 MR. BRANECKY: Okay.

10 DR. SHEEDY: Its intent was not
11 absolutely crystal clear. It did say
12 simple cycle definitely not included,
13 combined cycle was included, but the
14 meaning beyond that may not have been for
15 turbines but what is combined with --
16 emissions that are combined with may be
17 what's included. It was fuzzy to me. So I
18 don't have a problem with that if the
19 Council doesn't.

20 MR. BRANECKY: Okay. I had
21 another question and it's on the re-
22 right/de-wrong, on 33-2 on page 2, you go
23 (a)(1), and this is the way it's numbered,
24 and then you go (a)(2), and then you go
25 (b)(3). Should that not be (b)(1)?

1 (a)(1), (a)(2), (b)(3). Then a little
2 further down, you go (c) and then you go
3 back to (b) in my version.

4 DR. SHEEDY: Down at the bottom
5 of page 1 --

6 MR. BRANECKY: In 33-2. You've
7 got (a)(1).

8 DR. SHEEDY: In the new section,
9 33-2, and then we have (a). We don't have
10 (a)(1), actually.

11 MR. BRANECKY: So you've got a
12 different one than I've got? 4/17 is the
13 date on mine. Am I looking at the wrong
14 one?

15 DR. SHEEDY: That doesn't look
16 quit the same. We took out fuel
17 combustion, (a), the original (a), fuel
18 combustion, we took that out because it's
19 all fuel combustion. And then under that
20 there should be (a), gas fired fuel-
21 burning, (b), liquid fire fuel-burning
22 equipment and (c), solid fossil fuel-
23 burning equipment.

24 MR. BRANECKY: Then you go back
25 to (b) in mine.

1 MR. KILPATRICK: The markouts
2 didn't get made on the handout we got?

3 DR. SHEEDY: We have a printer
4 that for some reason doesn't recognize the
5 markouts, so they must have printed it on
6 that. I'm sorry.

7 MR. BRANECKY: The 4/17 version
8 that I'm looking at, is that not a good
9 version?

10 MR. KILPATRICK: That's not a
11 good version. You have to compare to what
12 was in the book. You can see the markouts
13 there of what gets marked out.

14 DR. SHEEDY: I'm sorry, David, I
15 didn't get a chance to look at those. It
16 ought to look like is this. See, it didn't
17 have (a). I am so sorry, as I said, it
18 confused me. One of the printers, for some
19 reason, doesn't recognize the markouts.

20 MS. MYERS: It makes a
21 difference.

22 DR. SHEEDY: I'm really sorry, I
23 didn't realize -- most people don't know to
24 look for that, because I didn't.

25 (Discussion between Council Members)

1 MR. BRANECKY: Do we have this
2 one at all?

3 DR. SHEEDY: You had it, but you
4 don't have the appropriate markouts. I did
5 not realize that you did not have the
6 markouts. No wonder it was a problem.

7 (Discussion between Council Members)

8 MR. BRANECKY: I think we're back
9 on track. One other question I had, Joyce,
10 under the definition of new fuel-burning
11 equipment, if I had replaced a burner or
12 something that increased my CO2 or CO but
13 didn't increase my NOx, that would subject
14 me to this? You don't specify NOx
15 emissions, you say air pollutant emissions.
16 So any increase in any pollutant emissions
17 --

18 DR. SHEEDY: I think you'd need
19 to have a NOx emission increase --

20 MS. MYERS: That's not clear.

21 MR. BRANECKY: It says in air
22 pollutant emissions, which is anything.

23 DR. SHEEDY: We may want to put
24 nitrogen oxide, or NOx emission because I
25 can't see -- I believe that's the way we

1 would word it. NSPS (inaudible) can't do
2 it another way.

3 MR. BRANECKY: That probably
4 needs to be added in there, I would think.
5 An increase in --

6 DR. SHEEDY: Did you write that
7 on -- you've got the copy.

8 MR. BRANECKY: That's right. You
9 can have it back.

10 DR. SHEEDY: Thank you. I do
11 apologize for that error. Let me see if
12 our computer geniuses can't fix that
13 printer. They can probably change some
14 little thing on it and it will be okay. So
15 David, that would be new fuel-burning
16 equipment where it says --

17 MR. BRANECKY: Resulting in an
18 increase in air pollutant emissions will
19 result in an increase in nitrogen oxide
20 emissions.

21 DR. SHEEDY: Yes, okay. Any
22 others?

23 MR. BRANECKY: That's all I have.

24 DR. SHEEDY: We have an agreement
25 on the changes, I hope.

1 MS. MYERS: Joyce, have the
2 limits that were included when you changed
3 to nanograms per jewel, were those NSPS
4 limits?

5 DR. SHEEDY: Yes. Those NSPS
6 limits you can find them in Subpart D.
7 That's where I found them. If anyone wants
8 to double check to make sure I got the
9 right ones -- I tried to be very careful on
10 that. I didn't convert them myself, I
11 copied them.

12 MR. DYKE: Is there anyone else
13 wishing to speak on this rule? Additional
14 questions or comments from the Council?

15 MR. TREEMAN: So you are wanting
16 to pass this the way it is with the
17 commitment on the record to revisit it
18 within a year to address some of the
19 comments on the turbines; is that correct?

20 MR. TERRILL: We'll bring it back
21 within a year to either ask that we be
22 given additional time because the standard
23 hadn't been resolved or to announce that
24 we're going to form a committee to look at
25 it. One or the other will happen. I just

1 don't have a sense -- we'll talk about it
2 after the hearing as to what the status of
3 the standard and the appeal and all that.
4 But, yes, until we know what the standard
5 is, I really don't want to address that
6 issue, but once that's resolved, we will
7 definitely address the turbine issue.

8 MR. BRANECKY: I guess it's our
9 turn now, whether we would like to pass
10 this regulation with the changes that were
11 suggested today, understanding that DEQ
12 will address the turbine issue at a later
13 date or we can continue this to the next
14 meeting, if you would like.

15 MR. FALLON: The later date being
16 not later than the June meeting of the year
17 2001? Can you put sort of a limit on it?

18 MR. BRANECKY: We can put that on
19 the record.

20 MR. FALLON: I think that would
21 be preferable.

22 THE REPORTER: No later than June
23 of 2000?

24 MR. FALLON: The June meeting of
25 2001.

1 THE REPORTER: Thank you.

2 MR. BRANECKY: Are you putting
3 that in the form of a motion?

4 MR. FALLON: I would be happy to.

5 MR. BRANECKY: That we would pass
6 this with the changes we made today --

7 MR. FALLON: With the
8 recommended changes addressing the turbine
9 issue once there is a court decision, but
10 to address it not later than the June
11 meeting of 2001.

12 MR. BRANECKY: I have a motion.
13 Do I have a second?

14 DR. GROSZ: Second.

15 MR. BRANECKY: I've got a motion
16 and a second. Any further discussion by
17 the Council? Myrna.

18 MS. BRUCE: Mr. Kilpatrick.

19 MR. KILPATRICK: Aye.

20 MS. BRUCE: Mr. Wilson.

21 MR. WILSON: Nay.

22 MS. BRUCE: Dr. Grosz.

23 DR. GROSZ: Aye.

24 MS. BRUCE: Mr. Treeman.

25 MR. TREEMAN: Yes.

1 MS. BRUCE: Mr. Fallon.
2 MR. FALLON: Yes.
3 MS. BRUCE: Ms. Myers.
4 MS. MYERS: Yes.
5 MS. BRUCE: Mr. Branecky.
6 MR. BRANECKY: Aye.

OAC 252:100-35 SIP Revision

CHAPTER 100. AIR POLLUTION CONTROL

SUBCHAPTER 35. CONTROL OF EMISSION OF CARBON MONOXIDE

Section

- 252:100-35-1. Purpose [AMENDED]
252:100-35-1.1 Definitions [NEW]
252:100-35-2. Emission limits [AMENDED]
252:100-35-3 Performance Testing [REVOKED]

252:100-35-1. Purpose

The purpose of this Subchapter is to control emissions of carbon monoxide from stationary sources to prevent the Oklahoma Air Quality Standard from being exceeded and ~~insure~~ensure that the present level of air quality in Oklahoma is not degraded.

252:100-35-1.1. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

“Existing source” means any gray iron cupola, blast furnace, basic oxygen furnace, petroleum catalytic cracking unit or petroleum catalytic reforming unit, in being on July 1, 1972, and not modified thereafter so as to increase the emission of carbon monoxide.

“New source” means any gray iron cupola, blast furnace, basic oxygen furnace, petroleum catalytic cracking unit or petroleum catalytic reforming unit, in being after July 1, 1972.

252:100-35-2. Emission limits

(a) **Existing sources.** ~~The emission of carbon monoxide from any existing foundry cupola, blast furnace, basic oxygen furnace, catalytic cracking unit, or other petroleum or natural gas process except stationary engines source located in, or significantly impacting~~ (i.e., 500 ug/m³ on an 8 hour average) on a nonattainment area for carbon monoxide shall be reduced by use of complete secondary combustion of the waste gas generated. Removal of 93 percent or more of the carbon monoxide generated shall be considered equivalent to complete secondary combustion. Existing equipment subject to this Subchapter must meet the emission limitations as expeditiously as practicable, but no later than ~~December 31, 1982.~~3 years after nonattainment designation by the Administrator.

(b) **New sources.** ~~The emission of carbon monoxide from any new foundry cupola, blast furnace, basic oxygen furnace, catalytic cracking unit, or other petroleum or natural gas process except stationary engines source shall be reduced by use of complete secondary combustion of the waste gas generated. Removal of 93 percent or more of the carbon monoxide generated shall be considered equivalent to secondary combustion.~~

252:100-35-3. Performance testing [REVOKED]

~~Testing of equipment to determine if emission standards set in this Subchapter are met shall be performed by procedures as accepted by the Executive Director. Promulgated~~

~~federal testing procedures for similar processes will be considered in making the determination of procedures to be used.~~

Oklahoma Register

Notices of Rulemaking Intent

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must publish a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides other information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained. For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #99-1259]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

PROPOSED RULES:

- Subchapter 9. Excess Emission and Malfunction Reporting Requirements [AMENDED]
- Subchapter 19. Particulate Matter Emissions from Fuel-Burning Equipment [AMENDED]
- Subchapter 21. Particulate Matter Emissions from Wood-Waste Burning Equipment [REVOKED]
- Subchapter 27. Particulate Matter Emissions from Industrial and Other Processes and Operations [AMENDED]
- ✓ Subchapter 35. Control of Emission of Carbon Monoxide [AMENDED]
- Appendix C. Particulate Matter Emissions Limits for Fuel-Burning Equipment [REVOKED]
- Appendix C. Particulate Matter Emissions Limits for Fuel-Burning Equipment [NEW]
- Appendix D. Particulate Matter Emission Limits for Wood-Waste Burning Equipment [REVOKED]
- Appendix D. Particulate Matter Emission Limits for Wood-Waste Fuel-Burning Equipment [NEW]

SUMMARY:

The proposed changes to Subchapter 9 include correction of typographical and grammatical errors and deletion of redundant language. Also, the rule was simplified and clarified according to the agency-wide re-right/de-wrong initiative. Substantive changes to the rule include narrowing the scope of the rule to minor facilities only. New language is proposed for 252:100-9-4(b) to insure that any excess emissions occurring during maintenance procedures which were not accounted for in the report submitted pursuant to 252:100-9-4(a) will be reported according to the provisions of 252:100-9-5. A new condition was added to explain when excess emissions from a process are due to a malfunction and when they are due to negligent, marginal, or unsafe operation. The new language establishes a rebuttable presumption that the combined time of all excess emissions from a process due to a malfunction does not exceed eight hours or 1.5 percent of the process's operation time, whichever is greater, in a

rolling quarter. The burden of proving that excess emissions occurring more often are due to a malfunction rather than negligent, marginal, or unsafe operation is on the owner or operator of the process.

Subchapters 19, 21, and 27 are being revised at the same time because they are interrelated and deal with Particulate Matter (PM) emissions. 252:100-19, Particulate Matter Emissions From Fuel-Burning Equipment, complements Subchapter 27, Particulate Matter Emissions from Industrial and Other Processes, and both are being revised as part of the re-right/de-wrong process. In addition, a Permit by Rule for particulate matter sources is being proposed for Subchapter 27. The proposed changes will also merge the requirements of Subchapter 21, Particulate Matter Emissions from Wood-Waste Burning Equipment, into Subchapter 19 and revoke Subchapter 21. It is also being proposed that both Appendix C, Particulate Matter Emission Limits for Fuel-Burning Equipment, and Appendix D, Particulate Matter Emission Limits for Wood-Waste Burning Equipment, be revoked in favor of two new non-graphical appendices.

The proposed changes to Subchapter 35 will simplify and clarify the Subchapter as a part of the agency-wide re-right/de-wrong initiative. The scope of the Subchapter was narrowed to specific sources that are the primary contributors of carbon monoxide emissions. It is often impossible for small sources to achieve a 93% reduction in carbon monoxide emissions as required by the rule without increasing other emissions. Specific changes include the addition of the definitions "existing source" and "new source," along with the addition of the effective date of the rule. Also, Section 35-3, Performance Testing, was revoked because the Air Quality Division is given the authority to request this testing in the Oklahoma Clean Air Act and performance testing requirements are already provided for in Subchapters 8 and 43.

AUTHORITY:

Environmental Quality Board, 27A O.S.Supp. 1998, §§ 2-2-101 and 2-5-101, *et seq.*

COMMENT PERIOD:

Written comments will be accepted prior to and at the hearing on August 24, 1999. Oral comments may be made at the August 24, 1999, hearing, and at the September 28, 1999 hearing.

PUBLIC HEARINGS:

Notices of Rulemaking Intent

Tuesday, August 24, 1999 - 9:30 a.m. hearing, at the Department of Environmental Quality, Room 101, 707 North Robinson, Oklahoma City, Oklahoma.

Scheduled before the Environmental Quality Board on Tuesday, September 28, 1999, 9:30 a.m., Braman, Oklahoma.

Contact Myrna Bruce at (405) 702-4177 for exact location.

COPIES OF PROPOSED RULES:

The proposed rules are available for review at the Air Quality Division office at 707 North Robinson, Suite 4100, Oklahoma City, Oklahoma, 73102, and on the DEQ website (www.deq.state.ok.us), Air Quality Division Current Events and Issues, or copies may be obtained from Myrna Bruce by calling (405) 702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statement may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Jeanette Buttram (252:100-9), Max Price (252:100-19, 252:100-21, 252:100-27, and Appendices C and D), Michelle Martinez (252:100-35), Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

ADDITIONAL INFORMATION:

Subchapter 9 was heard for the first time at the June 15, 1999, Council meeting.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #99-1259; filed 7-20-99]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #99-1260]

RULEMAKING ACTION:

Notice of proposed EMERGENCY and PERMANENT rulemaking

PROPOSED RULES:

- Subchapter 17. Incinerators
- Part 7. Hospital, Medical and Infectious Waste Incinerators [NEW]
- Appendix M. Emission Limits for Hospital, Medical and Infectious Waste Incinerators [NEW]

SUMMARY:

The addition of 252:100-17, Part 7, Hospital, Medical and Infectious Waste Incinerators (HMIWI), is proposed to establish state emission standards and other enforceable requirements for existing HMIWI. Also, a new Appendix M is proposed which contains emission limits for HMIWI. These rules, together with an emission inventory, schedule of compliance, emission data, record of public hearings and legal analysis, will comprise Oklahoma's State 111(d)/129 Plan, which is also available for public inspection and comment. An HMIWI is defined as any device that combusts any amount of medical/infectious waste or hospital waste. Any HMIWI for which construction commenced on or before June 20, 1996, will be subject to the new rule. These proposed rules will be the enforceable mechanism for implementing the provisions of the Emission Guidelines (EG) for HMIWI (40 CFR 60 Subpart Ce). The new Part 7 incorporates by reference sections of the New Source Performance Standards for HMIWI (40 CFR 60 Subpart Ec). In addition to establishing emission standards for certain regulated pollutants, the new rule will establish requirements for HMIWI operator training and qualifications, waste management plans, and testing and monitoring of pollutants and operating parameters.

AUTHORITY:

Environmental Quality Board, 27A O.S.Supp. 1998, §§ 2-2-101 and 2-5-101, *et seq.*

COMMENT PERIOD:

Written comments on the proposed rules and State 111(d)/129 Plan will be accepted prior to and at the hearing on August 24, 1999. Oral comments may be made at the August 24, 1999, hearing and at the September 28, 1999, hearing.

PUBLIC HEARINGS:

Tuesday, August 24, 1999 - 9:30 a.m. hearing, at the Department of Environmental Quality, Room 101, 707 North Robinson, Oklahoma City, Oklahoma.

Also scheduled before the Environmental Quality Board on Tuesday, September 28, 1999, 9:30 a.m., Braman, Oklahoma.

Contact Myrna Bruce at (405) 702-4177 for exact location.

COPIES OF PROPOSED RULES:

Copies of the rules and the State 111(d)/129 Plan for HMIWI are available for review at the Air Quality Division office at 707 North Robinson, Suite 4100, Oklahoma City, Oklahoma, 73102, or may be obtained from Myrna Bruce by calling (405) 702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statements may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Cheryl Bradley, Department of Environmental Quality, Air Quality

Notices of Rulemaking Intent

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must publish a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides other information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained. For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #99-1302]

RULEMAKING ACTION:

Notice of proposed EMERGENCY and PERMANENT rulemaking

PROPOSED RULES:

Subchapter 4. New Source Performance Standards [AMENDED]

Subchapter 35. Control of Emission of Carbon Monoxide [AMENDED]

Subchapter 41. Control of Emission of Hazardous and Toxic Air Contaminants [AMENDED]

Subchapter 47. Control of Emissions from Existing Municipal Solid Waste Landfills [AMENDED]

SUMMARY:

The Department is proposing to amend Subchapter 4 to update the incorporations by reference of the federal NSPS from July 1, 1997, to July 1, 1999. Previously incorporated NSPS subparts that have been amended by the U.S. Environmental Protection Agency (EPA) since July 1, 1997 are: AA, AAa, Da, Db, Eb, and WWW. In addition, a new Subpart Ec has been added to the NSPS. Also, Subpart Ce was added to 252:100-4-5 as an exception.

The proposed changes to Subchapter 35 will simplify and clarify the Subchapter as a part of the agency-wide re-right/de-wrong initiative. The scope of the Subchapter would be narrowed to specific sources that are the primary contributors of carbon monoxide emissions. Other changes include the addition of the definitions "existing source" and "new source" and the replacement of "foundry cupola" with "gray iron cupola". Also, Section 35-3, Performance Testing, would be revoked because performance testing requirements are already provided for in Subchapters 8 and 43.

Changes are being proposed for sections 15 and 16 of Subchapter 41. The proposed amendments to 252:100-41-15 would incorporate by reference the Maximum Achievable Control Technology (MACT) standards for hazardous air pollutants in 40 CFR 63 that have been promulgated by the EPA from July 1, 1998, through July 1, 1999. These are Subparts HH, SS, TT, UU, WW, YY, CCC, DDD, EEE, GGG, HHH, III, LLL, MMM,

NNN, PPP, TTT, and XXX. The DEQ is also proposing to update to July 1, 1999, the incorporation by reference in 252:100-41-16 of the National Emission Standards for Hazardous Air Pollutants (NESHAP) found in 40 CFR 61. Other minor revisions are proposed to Sections 15 and 16 to clarify, simplify and correct these sections as required by statute.

The Department is proposing to amend Subchapter 47 to update the incorporation by reference of 40 CFR 60.751 through 60.759 to July 1, 1999.

AUTHORITY:

Environmental Quality Board, 27A O.S.Supp. 1998, §§ 2-2-101 and 2-5-101, *et seq.*

REQUEST FOR COMMENTS:

The DEQ requests that business entities affected by these rules provide the DEQ, within the comment period, in dollar amounts if possible, the increase in the level of direct costs such as fees, and the indirect costs such as reporting, recordkeeping, equipment, construction, labor, professional services, revenue loss, or other costs expected to be incurred by a particular entity due to compliance with the proposed rules.

COMMENT PERIOD:

Written comments will be accepted prior to and at the hearing on October 19, 1999. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by October 12, 1999. Oral comments may be made at the October 19, 1999, hearing and at the November 16, 1999, hearing.

PUBLIC HEARINGS:

Tuesday, October 19, 1999 - 9:00 a.m. hearing, at the Tulsa City-County Health Department, 5051 South 129th East (Northeast corner of 51st and 129th), Tulsa, Oklahoma.

Scheduled before the Environmental Quality Board on Tuesday, November 16, 1999, 9:30 a.m., McAlester, Oklahoma.

Contact Myrna Bruce at (405) 702-4177 for exact location.

COPIES OF PROPOSED RULES:

The proposed rules are available for review at the Air Quality Division office at 707 North Robinson, Suite 4100, Oklahoma City, Oklahoma, 73102, and on the DEQ website (www.deq.state.ok.us), Air Quality Division Current

Notices of Rulemaking Intent

Events and Issues, or copies may be obtained from Myrna [unclear] by calling (405) 702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statement may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Michelle Martinez (252:100-4, 252:100-35), Joyce Sheedy (252:100-41), Cheryl Bradley (252:100-47). Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

ADDITIONAL INFORMATION:

Subchapter 35 was brought to public hearing on August 24, 1999.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #99-1302; filed 8-26-99]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #99-1303]

RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

PROPOSED RULES:

Subchapter 5. Registration, Emission Inventory and Annual Operating Fees [AMENDED]

Subchapter 9. Excess Emission and Malfunction Reporting Requirements [AMENDED]

Subchapter 13. Prohibition of Open Burning [AMENDED]

Subchapter 19. Particulate Matter Emissions from Fuel-Burning Equipment [AMENDED]

Subchapter 21. Particulate Matter Emissions from Wood-Waste Burning Equipment [REVOKED]

Subchapter 27. Particulate Matter Emissions from Industrial and Other Processes and Operations [REVOKED]

Appendix C. Particulate Matter Emission Limits for Fuel-Burning Equipment [REVOKED]

Appendix C. Particulate Matter Emission Limits for Fuel-Burning Equipment [NEW]

Appendix D. Particulate Matter Emission Limits for Wood-Waste Burning Equipment [REVOKED]

Appendix D. Particulate Matter Emission Limits for Wood-Waste Fuel-Burning Equipment [NEW]

JMMARY:

The proposed changes to Subchapter 5 are designed to allow the agency to bill annual operating fees on a flexible

schedule. The changes should also allow the fees to be based on the most recent emission data possible. The proposed rule language also requires an owner or operator of a facility to report excess emissions on their annual emission inventory. Substantive changes include requiring inventories to be submitted one month earlier than presently required, allowing fee payers five years after payment is made to notify the DEQ that they overpaid and to receive credit for such overpayment, and reducing the period of time to six months in which either the DEQ or the facility owner or operator can challenge the data or methods used to calculate the facility's emissions.

The proposed changes to Subchapter 9 include correction of typographical and grammatical errors and deletion of redundant language. Also, the rule was simplified and clarified according to the agency-wide re-right/de-wrong initiative. Substantive changes to the rule include narrowing the scope of the rule to minor facilities only. A new condition was added to explain when excess emissions from a process are due to a malfunction and when they are due to negligent, marginal, or unsafe operation. The new language establishes a rebuttable presumption that the combined time of all excess emissions from a process due to a malfunction does not exceed eight hours or 1.5 percent of the process's operation time, whichever is greater, in a 3 month period. The burden of proving that excess emissions occurring more often are due to a malfunction rather than negligent, marginal, or unsafe operation is on the owner or operator of the process.

The proposed changes to Subchapter 13 will simplify and clarify the Subchapter as a part of the agency-wide re-right/de-wrong initiative. Such changes include consolidating the general conditions and requirements for allowed open burning into a new section. A few substantive changes were made such as adding definitions for "domestic refuse" and "landclearing operation" and a section on disaster relief procedures. In some instances, the requirement to notify the DEQ or other appropriate official for authorization to burn was added. In addition, the open-pit incinerator requirements were moved to a new section. The rule is proposed to be amended to require owners or operators to register with their local DEQ office; however, if the owner or operator anticipates operating an open-pit incinerator in the same pit for more than 90 days in a 365-day period, they would be required to obtain a permit and pay the required permit fee. Also, hazardous materials may not be burned in an open-pit incinerator unless prior written approval has been obtained from both the local fire chief and the DEQ.

Subchapters 19, 21 and 27 all deal with particulate matter (PM) emissions. The proposed changes will merge the requirements of Subchapter 21 and Subchapter 27 into Subchapter 19. Subchapters 21 and 27 will then be revoked.

Permanent Final Adoptions

PURSUANT TO THE ACTIONS DESCRIBED HEREIN, THE FOLLOWING RULES ARE CONSIDERED FINALLY ADOPTED AS SET FORTH IN 75 O.S., SECTION 308.1(A), WITH AN EFFECTIVE DATE OF JUNE 1, 2000.

SUBCHAPTER 35. CONTROL OF EMISSION OF CARBON MONOXIDE

252:100-35-1. Purpose

The purpose of this Subchapter is to control emissions of carbon monoxide from stationary sources to prevent the Oklahoma Air Quality Standard from being exceeded and ~~insure~~ ensure that the present level of air quality in Oklahoma is not degraded.

252:100-35-1.1. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Existing source" means any gray iron cupola, blast furnace, basic oxygen furnace, petroleum catalytic cracking unit or petroleum catalytic reforming unit, in being on July 1, 1972, and not modified thereafter so as to increase the emission of carbon monoxide.

"New source" means any gray iron cupola, blast furnace, basic oxygen furnace, petroleum catalytic cracking unit or petroleum catalytic reforming unit, in being after July 1, 1972.

252:100-35-2. Emission limits

(a) Existing sources. The emission of carbon monoxide from any existing foundry cupola, blast furnace, basic oxygen furnace, catalytic cracking unit, or other petroleum or natural gas process except, stationary engines, source located in, or significantly impacting (i.e., 500 ug/m³ on an 8-hour average) on a nonattainment area for carbon monoxide shall be reduced by use of complete secondary combustion of the waste gas generated. Removal of 93 percent or more of the carbon monoxide generated shall be

7215
May 1 2000

considered equivalent to complete secondary combustion. Existing equipment subject to this Subchapter must meet the emission limitations as expeditiously as practicable, but no later than ~~December 31, 1982, 3 years after nonattainment designation by the Administrator.~~

(b) ~~New sources.~~ The emission of carbon monoxide from any new ~~foundry cupola, blast furnace, basic oxygen furnace, catalytic cracking unit, or other petroleum or natural gas process except stationary engines source~~ shall be reduced by use of complete secondary combustion of the waste gas generated. Removal of 93 percent or more of the carbon monoxide generated shall be considered equivalent to secondary combustion.

252:100-35-3. Performance testing [REVOKED]

~~Testing of equipment to determine if emission standards set in this Subchapter are met shall be performed by procedures as accepted by the Executive Director. Promulgated federal testing procedures for similar processes will be considered in making the determination of procedures to be used.~~

August 9, 1999

MEMORANDUM

To: Air Quality Council

FROM: Eddie Terrill, Division Director *ET*
Air Quality Division

SUBJECT: Proposed modifications to Subchapter 35

Enclosed is a copy of the proposed draft of Subchapter 35, Control of Emission of Carbon Monoxide. The proposed revisions will simplify and clarify the Subchapter as a part of the agency-wide re-right/de-wrong initiative.

Also, after receiving staff comments, it was decided to narrow the scope of the Subchapter to specific sources that are the primary contributors of carbon monoxide emissions. It is often impossible for small sources to achieve a 93 % reduction in carbon monoxide emissions as required by the rule without increasing other emissions.

Specific changes include the addition of the definitions "existing source" and "new source", along with the addition of the effective date of the rule. Also, Section 35-3, Performance Testing, was revoked because the Air Quality Division is given the authority to request this testing in the Oklahoma Clean Air Act and performance testing requirements are already provided for in Subchapters 8 and 43.

Enclosures: 1

SUBCHAPTER 35. CONTROL OF EMISSION OF CARBON MONOXIDE

Section

252:100-35-1. Purpose

252:100-35-1.1 Definitions

252:100-35-2. Emission limits

252:100-35-3. Performance testing [REVOKED]

252:100-35-1. Purpose

The purpose of this Subchapter is to control emissions of carbon monoxide from stationary sources to prevent the Oklahoma Air Quality Standard from being exceeded and insure that the present level of air quality in Oklahoma is not degraded.

252:100-35-1.1 Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Existing source" means any foundry cupola, blast furnace, basic oxygen furnace, catalytic cracking unit, catalytic reforming unit or petroleum coking unit, in being on July 1, 1972, and not modified thereafter so as to increase the emission of carbon monoxide.

"New source" means any foundry cupola, blast furnace, basic oxygen furnace, catalytic cracking unit, catalytic reforming unit or petroleum coking unit, which commenced construction after July 1, 1972.

252:100-35-2. Emission limits

(a) Existing sources. The emission of carbon monoxide from any existing ~~foundry cupola, blast furnace, basic oxygen furnace, catalytic cracking unit, or other petroleum or natural gas process except, stationary engines,~~ source located in, or significantly impacting (i.e., 500 ug/m³ on an 8 hour average) on a nonattainment area for carbon monoxide shall be reduced by use of complete secondary combustion of the waste gas generated. Removal of 93 percent or more of the carbon monoxide generated shall be considered equivalent to complete secondary combustion. Existing equipment subject to this Subchapter must meet the emission limitations as expeditiously as practicable, but no later than ~~December 31, 1982.~~ 3 years after nonattainment designation by the Administrator.

(b) New sources. The emission of carbon monoxide from any new ~~foundry cupola, blast furnace, basic oxygen furnace, catalytic cracking unit, or other petroleum or natural gas process except stationary engines~~ source shall be reduced by use of complete secondary combustion of the waste gas generated. Removal of 93 percent or more of the carbon monoxide generated shall be considered equivalent to secondary combustion.

252:100-35-3. Performance testing [REVOKED]

~~Testing of equipment to determine if emission standards set in~~

~~this Subchapter are met shall be performed by procedures as accepted by the Executive Director. Promulgated federal testing procedures for similar processes will be considered in making the determination of procedures to be used.~~

Notice of Public Meeting for August 17, 1999 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. An error was made in publication of our Notice in the July 15 Oklahoma Register. This error necessitated the rescheduling of the meeting to August 24, 1999 in order to stay on track in getting rules to the Environmental Quality Board.

Agendas were posted at the entrance doors at DEQ.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Mr. Wilson - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Fallon - aye; Mr. Kilpatrick - aye; Dr. Grosz - aye; Mr. Breisch - aye. Dr. Canter, and Ms. Slagell did not attend.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the June 15, 1999 Public Meeting/Hearings. Motion was made by Mr. Branecky to approve the Minutes as presented and second was made by Mr. Fallon. Roll call as follows: Mr. Wilson - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Fallon - aye; Mr. Kilpatrick - aye; Dr. Grosz - aye; Mr. Breisch - aye.

Protocol Statement - As protocol officer, Mr. Dyke convened the hearings by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke entered into the hearing record the Hearing Agenda and the Oklahoma Register Notice.

PUBLIC HEARING

OAC 252:100-9

Excess Emission And Malfunction Reporting [AMENDED]

Mr. Dyke called upon Ms. Jeanette Buttram who advised that this rule had been presented to Council on June 15, 1999. She stated that additional clarification of the rule was suggested due to verbal comments received from the public. Also, section 252:100-9-4 was amended and renumbered to 252:100-9-3.2. Section 252:100-9-5 was amended and renumbered to 252:100-9-3.1; and 252:100-9-6 was amended and renumbered to 252:100-0-3.2.

Written comments were received the day before the Council meeting from Mid-continent Oil and Gas Association of Oklahoma. Due to the time frame, staff did not have adequate time to review the comments in depth but some appeared to be directed towards changes proposed in the draft rule presented to the June Council meeting. After accepting comments and concerns from Council and audience, Ms. Buttram advised that it was staff's suggestion that Council recommend this rule as amended to the Environmental Quality Board as a permanent rule.

Due to discussion and further amendments to be made, Mr. Breisch entertained motion to continue the hearing to Council's October 19 meeting. Ms. Myers made that motion and the second was made by Mr. Wilson. Roll call as follows: Mr. Wilson - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Fallon - aye; Mr. Kilpatrick - aye; Dr. Grosz - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-17, Part 7

**Hospital, Medical and Infectious Waste Incinerators
Appendix M Emission Limits for HMIWI [NEW]**

Mr. Dyke called upon Ms. Cheryl Bradley who stated that the proposed rule had been presented to Council at its April 20 and June 15, 1999 meetings. She advised that staff was proposing an addition of a new Part 7 to the existing SC 17 which would establish state emission standards and other enforceable requirements for existing HMIWI; and a new Appendix M which contains emission limits for HMIWI. Ms. Bradley defined HMIWI as any device that combusts any amount of medical/infectious/hospital waste. She stated that any HMIWI for which construction commenced on or before June 20, 1996, would be subject to the new rule. Ms. Bradley added that these proposed rules would be included in Oklahoma's State 111(d)/129 Plan and would be the enforceable mechanism for implementing the provisions of the Emission Guidelines (EG) for HMIWI (40 CFR 60 Subpart Ce). She further stated that the new Part 7 incorporates by reference sections of the New Source Performance Standards for HMIWI (40 CFR 60 Subpart Ec). She noted that in addition to establishing emission standards for certain regulated pollutants, the new rule would establish requirements for HMIWI operator training and qualifications, waste management plans, and testing and monitoring of pollutants and operating parameters.

Mr. Wilson made a motion that Council continue the hearing until after lunch in order to incorporate some changes in wording to 252:100-17-48. Mr. Branecky seconded that motion and all members agreed. Following the recess, Ms. Bradley proposed the addition of a new paragraph (c) and (d) in 252:100-17-48, and set forth the proposed language. With no further comments from Council or audience on the proposed language, Ms. Bradley advised that it was staff's suggestion that Council recommend adoption of this rule to the Environmental Quality Board at its September 28, 1999 meeting as both emergency and permanent rule. That motion was made by Mr. Wilson and the second by Ms. Myers. Roll call as follows: Mr. Wilson - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Fallon - aye; Mr. Kilpatrick - aye; Dr. Grosz - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

State 111(d)/129 Plan For Hospital/Medical/Infectious Waste Incinerators (HMIWI)

Mr. Dyke called upon Ms. Cheryl Bradley for staff presentation regarding the State Plan. Ms. Bradley advised that although Council approval of the Plan was not required because it is not a rulemaking action in

and of itself, staff wanted to hear comments that the Council or public might have on the proposal. Ms. Bradley advised that the State Plan would be the mechanism to implement the Emission Guidelines for hospital/medical/infectious waste incinerators. She pointed out the necessary steps that were required to develop the State Plan.

Due to the fact that the hearing on Subchapter 17 was continued to after lunch, Council moved to continue the hearing on the Plan also. Mr. Kilpatrick made the motion to continue the hearing until after the hearing on SC 17 and the second was made by Mr. Branecky. All members agreed. After reconvening, Council voted to forward the proposed State Plan to EPA Region 6. Roll call as follows: Mr. Wilson - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Fallon - aye; Mr. Kilpatrick - aye; Dr. Grosz - aye; Mr. Breisch - aye.

PUBLIC HEARING (COMBINED HEARINGS ON SC 19 AND SC 21)

OAC 252:100-19

Particulate Matter Emissions From Fuel-Burning Equipment [AMENDED]

Appendix C Particulate Matter Emissions Limits For Fuel Burning Equipment [REVOKED]

Appendix C Particulate Matter Emissions Limits For Fuel Burning Equipment [NEW]

OAC 252:100-21

Particulate Matter Emissions From Wood-Waste Burning Equipment [REVOKED]

Appendix D Particulate Matter Emission Limits For Wood-Waste Burning Equipment [REVOKED]

Appendix D Particulate Matter Emission Limits For Wood-Waste Burning Equipment [NEW]

Mr. Dyke opened the hearing advising that both SC 19 and SC 21 would be heard together as they are related items and called upon Mr. Max Price for the staff presentation. Mr. Price stated that these revisions would satisfy the Agency's re-right/de-wrong initiative and clarify and simplify the language of SC 19 and incorporate the requirements of SC 21. Mr. Price explained that staff would ask that SC 21 be revoked and that the graphical Appendices C and D be revoked in favor of two new tabular appendices. Mr. Price pointed out that comments had been received and that it was staff's recommendation that these proposals be continued until Council's next meeting in October. After further discussion by Council and members of the audience, Mr. Breisch entertained a motion to continue this item to the next regular meeting on October 19. Dr. Grosz made the motion and the second was made by Mr. Branecky. Roll call as follows: Mr. Wilson - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Fallon - aye; Mr. Kilpatrick - aye; Dr. Grosz - aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-27

Particulate Matter Emissions From Industrial And Other Processes And Operations [AMENDED]

Mr. Dyke opened the next item and called upon Mr. Max Price to make staff presentation. Mr. Price advised that SC 27 compliments SC 19 and SC 21 and that these proposed changes would clarify and simplify language according to the Agency's re-right/de-wrong initiative. He reminded that Council had originally voted to send this subchapter to the Environmental Quality Board on April 20, 1999, however, some late comments prompted the withdrawal by the staff to make further refinements. He then pointed out the latest proposed changes.

Due to additional questions and comments from Council and members of the audience regarding the definition of wood-waste fuel, Mr. Breisch called for a motion to continue the hearing to the Council's October 19 meeting. Mr. Fallon made the motion and the second was made by Mr. Kilpatrick. Roll call

was taken as follows: Mr. Wilson - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Fallon - aye; Mr. Kilpatrick - aye; Dr. Grosz - aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-35

Control Of Emission Of Carbon Monoxide [AMENDED]

Mr. Dyke opened this item for consideration and called upon Ms. Michelle Martinez to make the staff presentation. Ms. Martinez discussed the proposed revisions stating that they would simplify and clarify the rule as a part of the agency-wide re-right/de-wrong initiative. Ms. Martinez added that the scope of the Subchapter was narrowed to specific sources that are the primary contributors of carbon monoxide emissions. She related that it is often impossible for small sources to achieve a 93% reduction in carbon monoxide emissions as required by the rule without increasing other emissions. She pointed out that specific changes include the addition of the definitions "existing source" and "new source" along with the addition of the effective date of the rule. Ms. Martinez added that Section 35-3, Performance Testing, was revoked because the Air Quality Division has been given the authority to request this testing in the Oklahoma Clean Air Act and performance testing requirements have already been provided for in SC 8 and in SC43. Ms. Martinez advised of comments that had been received stating that staff had not had sufficient time to consider these comments; and suggested that Council continue the hearing to its October meeting to allow further time. Ms. Myers made the motion to continue and Mr. Branecky made the second with roll call as follows: Mr. Wilson - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Fallon - aye; Mr. Kilpatrick - aye; Dr. Grosz - aye; Mr. Breisch - aye.

NEW BUSINESS - It was decided that the October 19 regular meeting would begin at 9:00 a.m. due to the number of agenda items and would follow the same format of eliminating the briefing session and would start immediately with the hearings on record.

ADJOURNMENT With no further business, meeting was adjourned with announcement that the next regularly scheduled meeting would be October 19, 1999 in the Auditorium of the Tulsa City-County Health Department at 9:00 a.m.

AGENDA
AIR QUALITY COUNCIL
DEPARTMENT OF ENVIRONMENTAL QUALITY
HEARING/MEETING
* 9:00 A.M.
Tuesday, October 19, 1999
Tulsa City-County Auditorium
5051 South 129 Street East Avenue
Tulsa, Oklahoma

1. Call to Order – Bill Breisch
 2. Roll Call – Myrna Bruce
 3. CY 2000 Meeting Schedule
 4. A. Discussion by Council
 4. Approval of Minutes of the August 24, 1999 Regular Meeting
 5. Public Rulemaking Hearings
- A. **OAC 252:100-4 New Source Performance Standards**
Proposal would update the incorporations by reference of the federal NSPS from 7-1-97 to 7-1-99. Previously, incorporated NSPS subparts that have been amended by the USEPA since 7-1-97 are: AA, AAa, Da, Db, Eb, and WW. A new Subpart Ec has been added to the NSPS. Subpart Ce was added to 252:100-4-5 as an exception.
1. Presentation – Michelle Martinez
 2. Questions and discussion by Council / Public
 3. Possible action by Council
 4. Roll call vote(s) for emergency and permanent adoption
- B. **OAC 252:100- 5 Registration, Emission Inventory and Annual Operating Fees**
Proposal is designed to allow the Agency to bill annual operating fees on a flexible schedule; to allow the fees to be based on the most recent emission data possible; requires an owner or operator of a facility to report excess emissions on their annual emission inventory; requires inventories to be submitted one month earlier than presently required allowing fee payers five years after payment is made to notify the DEQ that they overpaid and to receive credit for such overpayment; and reducing the period of time to six months in which either the DEQ or the facility owner or operator can challenge the data or methods used to calculate the facility's emissions.
1. Presentation – Jeanette Buttram
 2. Questions and discussion by Council / Public
 3. Possible action by Council
 4. Roll call vote(s) for permanent adoption
- C. **OAC 252:100-9 Excess Emission and Malfunction Reporting [AMENDED]**
Proposal would simplify the language under the agency-wide re-right/de-wrong initiative including correction of typographical and grammatical errors and deletion of redundant language. Substantive changes include narrowing the scope of the rule to minor facilities only. A new condition was added to explain when excess emissions from a process are due to a malfunction and when they are due to negligent, marginal, or unsafe operation. The new language establishes a rebuttable presumption that the combined time of all excess emissions from a process due to a malfunction does not exceed eight hours or 1.5% of the process's operation time, whichever is greater, in a 3-month period. The burden of proving that excess emissions occurring more often are due to a malfunction rather than negligent, marginal, or unsafe operation is on the owner or operator of the process.
1. Presentation – Jeanette Buttram
 2. Questions and discussion by Council / Public
 3. Possible action by Council
 4. Roll call vote(s) for permanent adoption
- D. **OAC 252:100-13. Prohibition of Open Burning**
Proposal would simplify the language under the agency-wide re-right/de-wrong initiative including consolidating the general conditions and requirements for allowed open burning into a new section. Substantive changes would add certain definitions and notification requirements.
1. Presentation – Jeanette Buttram
 2. Questions and discussion by Council / Public
 3. Possible action by Council
 4. Roll call vote(s) for permanent adoption

- E. COMBINED**
OAC 252:100-19 Particulate Matter Emissions from Fuel-burning Equipment [AMENDED]
OAC 252:100-21 Particulate Matter Emissions from Wood-Waste Burning Equipment [REVOKED]
OAC 252:100-27 Particulate Matter Emissions from Industrial and Other Processes and Operation [REVOKED]
Appendix C Particulate Matter Emissions Limits for Fuel Burning Equipment [REVOKED]
Appendix D Particulate Matter Emission Limits for Wood-Waste Burning Equipment [REVOKED]
Appendix C Particulate Matter Emissions Limits for Fuel Burning Equipment [NEW]
Appendix D Particulate Matter Emission Limits for Wood-Waste Burning Equipment [NEW]
 Proposal would merge requirements into SC 19 and revoke SC 21 and SC 27. SC 19, as proposed, would simplify the language under the agency-wide re-right/de-wrong initiative. Also a Permit by Rule for particulate matter facilities is being proposed for SC 19. The graphics in Appendices C and D would be replaced by two new tabular appendices.
1. Presentation – Max Price
 2. Questions and discussion by Council / Public
 3. Possible action by Council
 4. Roll call vote(s) for permanent adoption
- F. OAC 252:100-35 Control of Emission of Carbon Monoxide [AMENDED]**
 Proposal would simplify and clarify the language under the agency-wide re-right/de-wrong initiative; and narrow the scope to specific sources that are the primary emitters of carbon monoxide. Other changes include addition of definitions "existing source" and "new source" and the replacement of "foundry cupola" with "gray iron cupola". Also, Section 35-3 would be revoked because performance testing requirements are already provided for in SC 8 and SC 43.
1. Presentation – Michelle Martinez
 2. Questions and discussion by Council / Public
 3. Possible action by Council
 4. Roll call vote(s) for emergency and permanent adoption
- H. OAC 252:100-41 Sections 15 and 16, Control of Emission of Hazardous and Toxic Air Contaminants [AMENDED]**
 Proposal would simplify and clarify the language under the agency-wide re-right/de-wrong initiative. The proposed changes to section 15 would incorporate by reference the MACT standards for hazardous air pollutants in 40 CFR 63 promulgated by EPA from 7-1-98 through 7-1-99. The proposed changes to section 16 would update to 7-1-99 the NESHAP found in 40 CFR 61.
1. Presentation – Cheryl Bradley
 2. Questions and discussion by Council / Public
 3. Possible action by Council
 4. Roll call vote(s) for emergency and permanent adoption
- I. OAC 252:100-47 Control of Emission from Existing Municipal Solid Waste Landfills [AMENDED]**
 Proposal would amend to update the incorporation by reference of 40 CFR 60.751 through 60.759 to 7-1-99.
1. Presentation – Cheryl Bradley
 2. Questions and discussion by Council / Public
 3. Possible action by Council
 4. Roll call vote(s) for emergency and permanent adoption
6. **Division Director's Report – Eddie Terrill**
 7. **New Business – Any matter not known about, or which could not have been reasonably foreseen, prior to the time of posting the agenda.**
 8. **Adjournment – Next Regular Meeting**
 Tuesday, December 14, 1999 DEQ Multi-Purpose Room

* Council decided at its August 24 meeting to begin early due to the number of agenda items

Lunch Break, if necessary

October 1, 1999

MEMORANDUM

TO: Air Quality Council

FROM: Eddie Terrill, Director
Air Quality Division

SUBJECT: Proposed modifications to Subchapter 35

Enclosed is a copy of the proposed draft of Subchapter 35, Control of Emission of Carbon Monoxide. The proposed revisions will simplify and clarify the Subchapter as a part of the agency-wide re-right/de-wrong initiative.

Also, after receiving staff comments, it was decided to narrow the scope of the Subchapter to specific sources that are the primary contributors of carbon monoxide emissions. It is often impossible for small sources to achieve a 93% reduction in carbon monoxide emissions as required by the rule without increasing other emissions.

Specific changes include the addition of the definitions "existing source" and "new source" and the replacement of "foundry cupola" with "gray iron cupola". Also, Section 35-3, Performance Testing, would be revoked because performance testing requirements are already provided for in Subchapters 8 and 43.

Staff will suggest that the proposed rule be recommended to the Board for emergency and permanent adoption.

Enclosures: 6

SUBCHAPTER 35. CONTROL OF EMISSION OF CARBON MONOXIDE

Section

252:100-35-1. Purpose

252:100-35-1.1 Definitions

252:100-35-2. Emission limits

252:100-35-3. Performance testing [REVOKED]

252:100-35-1. Purpose

The purpose of this Subchapter is to control emissions of carbon monoxide from stationary sources to prevent the Oklahoma Air Quality Standard from being exceeded and ~~insure~~ensure that the present level of air quality in Oklahoma is not degraded.

252:100-35-1.1 Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"existing source" means any gray iron cupola, blast furnace, basic oxygen furnace, petroleum catalytic cracking unit or petroleum catalytic reforming unit, in being on July 1, 1972, and not modified thereafter so as to increase the emission of carbon monoxide.

"new source" means any gray iron cupola, blast furnace, basic oxygen furnace, petroleum catalytic cracking unit or petroleum catalytic reforming unit, in being after July 1, 1972.

252:100-35-2. Emission limits

(a) **Existing sources.** The emission of carbon monoxide from any ~~existing foundry cupola, blast furnace, basic oxygen furnace, catalytic cracking unit, or other petroleum or natural gas process except, stationary engines, source~~ located in, or significantly impacting (i.e., 500 ug/m³ on an 8-hour average) on a nonattainment area for carbon monoxide shall be reduced by use of complete secondary combustion of the waste gas generated. Removal of 93 percent or more of the carbon monoxide generated shall be considered equivalent to complete secondary combustion. Existing equipment subject to this Subchapter must meet the emission limitations as expeditiously as practicable, but no later than ~~December 31, 1982. 3 years after nonattainment designation by the Administrator.~~

(b) **New sources.** The emission of carbon monoxide from any new ~~foundry cupola, blast furnace, basic oxygen furnace, catalytic cracking unit, or other petroleum or natural gas process except stationary engines source~~ shall be reduced by use of complete secondary combustion of the waste gas generated. Removal of 93 percent or more of the carbon monoxide generated shall be considered equivalent to secondary combustion.

252:100-35-3. Performance testing [REVOKED]

~~Testing of equipment to determine if emission standards set in this Subchapter are met shall be performed by procedures as accepted by the Executive Director. Promulgated federal testing procedures for similar processes will be considered in making the determination of procedures to be used.~~

Notice of Public Meeting for October 19, 1999 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance doors at the Tulsa City-County Health Department.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye. Dr. Canter, and Dr. Grosz did not attend. Mr. Breisch announced that Ms. Slagell had offered her resignation to the Governor.

CY 2000 Meeting Schedule - Council was presented with dates emulating the past years of the third Tuesday in February, April, June, August, October, and December. There was discussion to change the day of week to Wednesday of these months which would accommodate both staff and Council. Council voted to continue this item to the December 14 meeting. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the August 24, 1999 Public Meeting/Hearings. Motion was made by Mr. Branecky to approve the Minutes as presented and second was made by Mr. Kilpatrick. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

Protocol Statement — As protocol officer, Mr. Dyke convened the hearings by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke entered the Agenda and the Oklahoma Register Notice into the record.

PUBLIC HEARING

OAC 252:100-4

New Source Performance Standards [AMENDED]

Ms. Michelle Martinez made staff presentation advising Council that the proposed amendments to Subchapter 4 would update the incorporations by reference of the federal NSPS from July 1, 1997 to July 1, 1999. She pointed out that previously incorporated NSPS subparts that had been amended by the EPA since July 1, 1997 were: AA, AAa, Da, Db, Eb, and WWW. She advised that a new Subpart Ec had been added to the NSPS and that Subpart Ce was added to 252:100-4-5. She advised that this was the first time for the proposal to be considered, but staff's recommendation would be to request that the rule be sent to the Environmental Quality Board for permanent and emergency adoption. She pointed out that since the amendments update the incorporation by reference of new federal rules, adoption as an emergency would allow the amended rule to take effect earlier than June 1, 2000 and make state rules consistent with federal rules.

Mr. Breisch entertained motion to forward this rule to the Environmental Quality Board for both emergency and permanent adoption. Motion was made by Mr. Kilpatrick and second to the motion was by Ms. Myers. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-5

Registration, Emission Inventory and Annual Operating Fees [AMENDED]

Ms. Jeanette Buttram made the staff presentation advising that the proposed changes to Subchapter 5 were designed to allow the agency to bill annual operating fees on a flexible schedule, and that the changes should also allow the fees to be based on the most recent emission data possible. Ms. Buttram advised that the proposed rule language would also require an owner or operator of a facility to report excess emissions on their annual emission inventory. Ms. Buttram pointed out that substantive changes included the requirement that inventories were to be submitted one month earlier than presently required which would allow fee payers five years after payment is made to notify the DEQ that they overpaid and to receive credit for such overpayment. That change would also reduce the period of time to six months in which either the DEQ or the facility owner or operator could challenge the data or methods used to calculate the facility's emissions.

Ms. Buttram advised that comments had been received from Fort James and EPA which were included in this proposal and that comments from Weyerhaeuser received the day before would be considered in the next draft of the rule; therefore, staff recommended that the rule be continued to the December meeting.

Comments and questions were discussed from Council members and the audience. Comments were heard from Stephen Landers of Ft. James; Mike Wood, Weyerhaeuser; Howard Ground, Central and Southwest; Bill Fishback; Mid-Continent Oil and Gas; Tom Bauckham, Reliant Energy; Gary Collins, Terra. Following discussion, Mr. Breisch entertained motion to continue

the rule to Council's December 14 meeting per staff recommendation. Motion to continue was made by Ms. Myers with the second made by Mr. Wilson. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-9

Excess Emission And Malfunction Reporting [AMENDED]

Ms. Jeanette Buttram gave the staff presentation advising that the proposed changes to Subchapter 9 included correction of typographical and grammatical errors and deletion of redundant language and was simplified and clarified according to the agency-wide re-right/de-wrong initiative. Ms. Buttram pointed out substantive changes to the rule which included narrowing the scope of the rule to minor facilities only. She advised that a new condition was added to explain when excess emissions from a process are due to a malfunction and when they are due to negligent, marginal, or unsafe operation advising that the new language would establish a rebuttable presumption that the combined time of all excess emissions from a process due to a malfunction does not exceed eight hours or 1.5 % of the process's operation time, whichever is greater, in a three-month period. Ms. Buttram added that the burden of proving that excess emissions occurring more often are due to a malfunction rather than negligent, marginal, or unsafe operation is on the owner or operator of the process.

Ms. Buttram entered into the record comments received from Mid-Continent Oil and Gas Association and from EPA. She further advised that the EPA comments indicated that further changes might need to be made to the rule due to their recent review of Oklahoma's SIP. Ms. Buttram advised that due to these comments, staff recommendation would be to continue this rule to the December meeting to allow staff more time to review the EPA guidance document. Mr. Tom Diggs, EPA, was asked to explain that document in detail and accepted comments regarding same. Additional comments were made by Bill Fishback.

Mr. Breisch entertained motion to continue this rule to the December meeting. Motion was made by Mr. Branecky with the second by Mr. Fallon. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-13

Prohibition of Open Burning [AMENDED]

Mr. Dyke again called upon Ms. Jeanette Buttram who advised that the proposed changes to Subchapter 13 would simplify and clarify the Subchapter as a part of the agency-wide re-right/de-wrong initiative. She pointed out that such changes include consolidating the general conditions and requirements for allowed open burning into a new section; and that a few substantive changes were made such as adding definitions for "domestic refuse" and "land clearing operation" and a section on disaster relief procedures. Ms. Buttram continued stating

that in some instances, the requirement to notify the DEQ or other appropriate official for authorization to burn was added and that the open-pit incinerator requirements were moved to a new section. She pointed out the proposal would require owners or operators to register with their local DEQ office; however, if the owner or operator anticipates operating an open-pit incinerator in the same pit for more than 90 days in a 365-day period, they would be required to obtain a permit and pay the required permit fee adding that hazardous materials may not be burned in an open-pit incinerator unless prior written approval has been obtained from both the local fire chief and the DEQ.

Ms. Buttram entered written comments from EPA and a letter from the City of Hobart into the record.

Following questions and discussion by Council, Mr. Breisch entertained motion to continue this rule to the December meeting. Motion was made by Ms. Myers with the second by Mr. Fallon. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARINGS (COMBINED HEARINGS ON SC 19, SC 21, and SC 27)

OAC 252:100-19 Particulate Matter Emissions from Fuel-burning Equipment [AMENDED]

OAC 252:100-21 Particulate Matter Emissions from Wood-Waste Burning Equipment [REVOKED]

OAC 252:100-27 Matter Emissions from Industrial and Other Processes and Operation [REVOKED]

APPENDIX C Particulate Matter Emissions Limits for Fuel Burning Equipment [REVOKED]

APPENDIX D Particulate Matter Emission Limits for Wood-Waste Burning Equipment [REVOKED]

APPENDIX C Particulate Matter Emissions Limits for Fuel Burning Equipment [NEW]

APPENDIX D Particulate Matter Emission Limits for Wood-Waste Burning Equipment [NEW]

Mr. Dyke called upon Mr. Max Price to make the staff presentation regarding these combined rules. Mr. Price advised that Subchapters 19, 21, and 27 all deal with particulate matter (PM) emissions and that the proposed changes merged the requirements of Subchapter 21 and Subchapter 27 into Subchapter 19; then Subchapters 21 and 27 would be revoked. Mr. Price pointed out that Subchapter 19 as proposed would be simplified and clarified according to the agency-wide re-right/de-wrong initiative. He advised that a permit by rule for particulate matter facilities is being proposed for Subchapter 19. Mr. Price also advised that the proposal included that Appendix C and Appendix D would be revoked in favor of two new tabular appendices.

Mr. Mike Wood, Weyerhaeuser, commented regarding the definition of "wood fuel". After much discussion, motion was made to by Mr. Wilson to amend Subchapter 19 to include the wording "for any wood derived fuel as approved by the Division"; to revoke subchapters 21 and 27; to revoke both Appendix C and Appendix D in favor of tabular appendices; and to send the rules to the Environmental Quality Board in one package for adoption as a permanent rule. Mr. Kilpatrick seconded that motion. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-35

Control Of Emission Of Carbon Monoxide [AMENDED]

Mr. Dyke called upon Ms. Michelle Martinez to make staff presentation. Ms. Martinez stated that the proposed changes to Subchapter 35 would simplify and clarify the Subchapter as a part of the agency-wide re-right/de-wrong initiative; and that the scope of the Subchapter would be narrowed to specific sources that are the primary contributors of carbon monoxide emissions. Ms. Martinez added that other changes included the addition of the definitions "existing source" and "new source" and the replacement of "foundry cupola" with "gray iron cupola". She further advised that Section 35-3, Performance Testing, would be revoked because performance testing requirements are already provided for in Subchapters 8 and 43.

Ms. Martinez advised that staff's recommendation was to send the rule to the Environmental Quality Board for adoption as permanent and emergency. Mr. Breisch entertained motion which was made by Mr. Fallon. The second was made by Ms. Myers. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-41 Sections 15 and 16

Control Of Emission Of Hazardous and Toxic Air Contaminants [AMENDED]

Mr. Dyke called upon Ms. Cheryl Bradley who advised that changes are being proposed for section 15 would incorporate by reference the Maximum Achievable Control Technology (MACT) standards for hazardous air pollutants in 40 CFR 63 that have been promulgated by the EPA from July 1, 1998, through July 1, 1999. These are subparts HH, SS, TT, UU, WW, YY, CCC, DDD, EEE, GGG, HHH, III, LLL, MMM, NNN, PPP, TTT, and XXX. Ms. Bradley continued that the DEQ is also proposing to update to July 1, 1999 the incorporation by reference in 252:100-41-16 of the National Emission Standards for Hazardous Air Pollutants (NESHAP) found in 40 CFR 61. She added that other minor revisions are proposed to Section 15 and 16 to clarify, simplify and correct these sections as required by statute.

Ms. Bradley advised that staff's recommendation would be to send to the rule to the Environmental Quality Board for adoption as permanent and emergency rule. She advised that since the amendments update the incorporation by reference of new federal rules, adoption as an emergency rule would allow the amended rules to take effect earlier and minimize the lag time in making the state program consistent with the federal program. Mr. Breisch entertained motion which was made by Mr. Kilpatrick. The second was made by Mr. Wilson. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-47

Control of Emissions from Existing Municipal Solid Waste Landfills [AMENDED]

Mr. Dyke again called upon Ms. Cheryl Bradley who advised that the modifications to Subchapter 47 would update the incorporation by reference of 40 CFR 60.751 through 60.759 to July 1, 1999. She advised that one comment had been received from the EPA in support of the proposed amendments. She continued that it would be staff's recommendation to send to the rule to the Environmental Quality Board for permanent and emergency adoption as adoption as an emergency rule would allow the amended rule to take effect earlier than June 1, 2000 and thereby minimize confusion for regulated landfills. Mr. Breisch entertained motion which was made by Mr. Fallon. The second was made by Ms. Myers. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes

DIVISION DIRECTOR'S REPORT

Mr. Dyke announced that the Council representative for agriculture, Meribeth Slagell, had turned in her letter of resignation from the Council. Also, Scott Thomas stated that due to a recent remand of the revised ozone, PM-2.5 and PM-10, staff plans on bringing this matter to public hearing at the December Council.

NEW BUSINESS - It was decided that the next meeting would again begin at 9:00 a.m. due to the number of agenda items and would follow the same format.

ADJOURNMENT With no further business, meeting was adjourned with announcement that the next regularly scheduled meeting would be December 14, 1999 in the Multipurpose Room of the DEQ in Oklahoma City beginning at 9:00 a.m.

NOTE: The sign-in sheet is attached as an official part of these Minutes.

AIR QUALITY COUNCIL
RULEMAKING RECOMMENDATION TO THE ENVIRONMENTAL QUALITY BOARD

Identification of Proposed Rulemaking:

Chapter Number and Title – OAC 252:100-35

Subchapters or Sections Involved – [new, amended or revoked]

OAC 252:100-35 Control of Emission of Carbon Monoxide [AMENDED]

On October 19, 1999 the members of this Council, by authority vested in them by the Oklahoma Environmental Quality Code (27 O.S.Supp. 1993, § 2-2-201), by roll call vote, recommended to the Environmental Quality Board that the rulemaking described above be adopted as:

permanent [take effect after legislative review]

emergency [temporary, to take effect upon approval by the Governor because of time; and/or special reason: _____]

This Council has considered the proposed rulemaking and comments about it and determined, to the best of its knowledge, that all applicable requirements of the Oklahoma Administrative Procedures Act have been followed.

This Council authorizes the Department to prepare this recommended rulemaking for the Board, making any changes approved by the Council, correcting typographical, grammatical and reference errors, and formatting them as required by the Office of Administrative Rules. This is to be done with the understanding that such changes shall neither alter the sense of what this Council recommends nor invalidate this recommendation.

Respectfully,

Date signed: October 19, 1999

Chair or Designee

REGULAR MEETING AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
OKLAHOMA ENVIRONMENTAL QUALITY BOARD

A Public Meeting:

9:30 a.m., Tuesday, November 16, 1998
Southeast Oklahoma Expo Complex
4500 West Highway 270
McAlester, Oklahoma

Should be 1999

1. Call to Order – Lee Paden, Chair
2. Roll Call - Lynda Finch
3. Approval of Minutes of the September 28, 1999 Regular Meeting
4. **Rulemaking – OAC 252:100 Air Pollution Control:**

Several sets of changes are proposed:

- Subchapter 4 (New Source Performance Standards) is amended to update the incorporation by reference of the federal NSPS to July 1, 1999.
- Subchapters 19, 21 and 27 all deal with particulate matter (PM) emissions. The changes merge the requirements of Subchapter 21 and Subchapter 27 into Subchapter 19. Subchapters 21 and 27 will be revoked. Subchapter 19 as proposed is simplified and clarified according to the agency-wide “re-right/de-wrong” initiative. Also, a Permit by Rule for particulate matter facilities is being proposed for Subchapter 19. Both Appendix C and Appendix D are revoked in favor of two new tabular appendices.
- The changes to Subchapter 35 (Control of Emission of Carbon Monoxide) simplify and clarify the subchapter as a part of the agency-wide “re-right/de-wrong” initiative. The scope of the subchapter is narrowed to specific sources that are the primary contributors of carbon monoxide emissions. Other changes include definitional revisions and the revocation of redundant performance testing requirements.
- The revisions to Subchapter 41 (Control of Emission of Hazardous and Toxic Air Contaminants) update the adoption by reference of federal rules to include Maximum Achievable Control Technology (MACT) standards promulgated or amended between July 1, 1998 and July 1, 1999. The revisions also update the adoption by reference of the federal National Emission Standards for Hazardous Air Pollutants (NESHAP) to July 1, 1999, with certain exceptions. Minor revisions are proposed to Sections 15 and 16 to clarify, simplify and correct those sections as required by statute.
- Subchapter 47 (Control of Emission from Existing Municipal Solid Waste Landfills) is amended to update the incorporation by reference of 40 CFR 60.751 through 60.759 to July 1, 1999.

- A. Presentation – David Branecky, Vice Chair, Air Quality Council
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote(s) on permanent adoption of all proposed amendments and on emergency adoption* of amendments to Subchapters 4, 35, 41 and 47

5. **Rulemaking – OAC 252:400 and 410 Radiation Management:**

This rulemaking proposal is part of the DEQ's “re-right/de-wrong” simplification and clarification of its existing rules. The changes are extensive enough that the DEQ believes it is simpler and more straightforward to revoke existing Chapter 400 and replace it with a new Chapter 410 than to amend Chapter 400. The rulemaking also supports Oklahoma's application to the Nuclear Regulatory Commission (NRC) for “State Agreement” status to shift regulation of source, byproduct and special nuclear material from the NRC to the DEQ. Additionally, the proposed rules include National Emission Standards for Hazardous Air Pollutants (NESHAP) for radionuclides.

- A. Presentation – Dr. David Gooden, Chair, Radiation Management Advisory Council
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote on permanent adoption

6. **Rulemaking -- OAC 252:002 Procedures of the Department of Environmental Quality:**

This rulemaking proposal supports Oklahoma's application to the Nuclear Regulatory Commission (NRC) for State Agreement status. It adds State Agreement licenses to DEQ tier classifications for radiation management permit applications and reflects changes corresponding to those made in connection with the DEQ's review and revision of Chapters 400/410, Radiation Management (see Item 7 above).

- A. Presentation-- Dr. David Gooden, Chair, Radiation Management Advisory Council
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote on permanent adoption

7. **Consideration of the Environmental Quality Report:**

The Oklahoma Environmental Quality Code requires the DEQ to prepare an "Oklahoma Environmental Quality Report" and to submit it to the Governor, Speaker of the House and Senate President Pro Tem by January 1st of each year. Despite the statutory title, the statutorily designated purpose of this report is to outline the DEQ's two-year needs for providing environmental services within its jurisdiction, reflect any new federal mandates, and recommended statutory changes. The Environmental Quality Board is to review, amend (as necessary) and approve the report.

- A. Presentation-- Steve Thompson, DEQ Deputy Executive Director
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote on approval

- 8. New Business (any matter not known about and which could not reasonably have been foreseen prior to the time of posting of agenda).
- 9. Executive Director's Report, including response to request from the Board at their last meeting for additional DEQ budget information
- 10. Discussion of and vote on 2000 Environmental Quality Board regular meeting dates
- 11. Adjournment

Public Forum: The Board meets four times a year at different locations across the State to hear the views and concerns of all Oklahomans about environmental issues. This opportunity is informal, and we invite you to sign the register to speak. The forum will also include a short presentation from the DEQ Water Quality Division about State Water Quality Standards implementation, the State "303(d)" (impaired waters) list, and related issues.

Should you have a disability and need an accommodation, please notify the DEQ three days in advance at 702-7100.

* Specification of proposed adoption by emergency rulemaking, by permanent rulemaking, or by both, is based on the recommendations of the respective advisory councils. Adoption or amendment of rules as emergency rulemaking requires a finding by the Board that a compelling extraordinary circumstance warrants the seeking of emergency certification, so that the rules will take effect immediately upon the Governor's signature. Absent a finding and certification of emergency, rules adopted today will not become effective until May or June of 2000.

SUBCHAPTER 35. CONTROL OF EMISSION OF CARBON MONOXIDE

252:100-35-1. Purpose

The purpose of this Subchapter is to control emissions of carbon monoxide from stationary sources to prevent the Oklahoma Air Quality Standard from being exceeded and ~~insure~~ ensure that the present level of air quality in Oklahoma is not degraded.

252:100-35-1.1 Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Existing source" means any gray iron cupola, blast furnace, basic oxygen furnace, petroleum catalytic cracking unit or petroleum catalytic reforming unit, in being on July 1, 1972, and not modified thereafter so as to increase the emission of carbon monoxide.

"New source" means any gray iron cupola, blast furnace, basic oxygen furnace, petroleum catalytic cracking unit or petroleum catalytic reforming unit, in being after July 1, 1972.

252:100-35-2. Emission limits

(a) Existing sources. The emission of carbon monoxide from any existing ~~foundry cupola, blast furnace, basic oxygen furnace, catalytic cracking unit, or other petroleum or natural gas process except, stationary engines, source~~ located in, or significantly impacting (i.e., 500 ug/m³ on an 8-hour average) on a nonattainment area for carbon monoxide shall be reduced by use of complete secondary combustion of the waste gas generated. Removal of 93 percent or more of the carbon monoxide generated shall be considered equivalent to complete secondary combustion. Existing equipment subject to this Subchapter must meet the emission limitations as expeditiously as practicable, but no later than ~~December 31, 1982.~~ 3 years after nonattainment designation by the Administrator.

(b) New sources. The emission of carbon monoxide from any new ~~foundry cupola, blast furnace, basic oxygen furnace, catalytic cracking unit, or other petroleum or natural gas process except stationary engines source~~ shall be reduced by use of complete secondary combustion of the waste gas generated. Removal of 93 percent or more of the carbon monoxide generated shall be considered equivalent to secondary combustion.

252:100-35-3. Performance testing [REVOKED]

~~Testing of equipment to determine if emission standards set in this Subchapter are met shall be performed by procedures as accepted by the Executive Director. Promulgated federal testing procedures for similar processes will be considered in making the determination of procedures to be used.~~

Additional Comments

CHAPTER 100. AIR POLLUTION CONTROL
SUBCHAPTER 35. CONTROL OF EMISSION OF CARBON MONOXIDE

EXECUTIVE SUMMARY:

The proposed changes to Subchapter 35 will simplify and clarify the Subchapter as a part of the agency-wide re-right/de-wrong initiative. The scope of the Subchapter would be narrowed to specific sources that are the primary contributors of carbon monoxide emissions. Other changes include the addition of the definitions "existing source" and "new source" and the replacement of "foundry cupola" with "gray iron cupola". Also, Section 35-3, Performance Testing, would be revoked because performance testing requirements are already provided for in Subchapters 8 and 43.

DIFFERENCES FROM ANALOGOUS FEDERAL RULES:

None.

ENVIRONMENTAL BENEFIT STATEMENT:

Not required because these rules are not more stringent than corresponding federal rules.

SUMMARY OF COMMENTS AND RESPONSES:

See attached.

MCKINNEY & STRINGER LETTER

COMMENT: As previously promulgated, it is believed Subchapter 35 was intended to apply to petroleum or natural gas plant/processes and not plants/processes that use natural gas as a raw material. Please confirm whether Subchapter 35, as proposed to be amended, will apply to plants/processes that utilize natural gas as a raw material.

RESPONSE: As previously promulgated, "petroleum and natural gas processes" applied to process used in the processing of crude petroleum and/or natural gas into refined products, not to plants/processes that utilize natural gas as a raw material. As amended, Subchapter 35 would only apply to any foundry cupola, blast furnace, basic oxygen furnace, catalytic cracking unit, catalytic reforming unit or petroleum coking unit.

COMMENT: Please confirm whether or not the applicability of OAC 252:100-35-2(a) is limited to those sources which meet the definition of an "existing source" and are located in or significantly impacting on a nonattainment area for carbon monoxide. Further, please confirm whether or not the provisions of OAC 252:100-35-2(b) are applicable only to those sources which meet the definition of a "new source" and are located in or significantly impacting on a nonattainment area for carbon monoxide.

RESPONSE: OAC 252:100-35-2(a) only applies to those sources which meet the definition of an "existing source" and are located in or significantly impacting on a nonattainment area for carbon monoxide. OAC 252:100-35-2(b) applies to any "new source" as defined in OAC 252:100-35-1.1. The nonattainment area limitations in OAC 252:100-35-2(a) only apply to "existing sources."

CROWE & DUNLEVY LETTER

COMMENT: The proposed amended Subchapter 35 should clarify that this Subchapter is not intended to apply to secondary copper facilities. This revision is justified for several reasons. First, the revision recognizes the unique nature of secondary copper facilities. Second, the revision is consistent with the ODEQ's (and predecessor agencies') historic interpretation and application of Subchapter 35 recognizing that this Subchapter does not apply to secondary copper facilities. Third, the revision is consistent with the application of carbon monoxide ("CO") emissions standards promulgated by other states. Fourth, the revision maintains the status quo as to air quality and application of Subchapter 35. Fifth, the revision carries out the purposes of Subchapter 35.

RESPONSE: Staff concurs and is proposing to change "foundry cupola" to "gray iron cupola."

COMMENT: In Section 35-1.1 Definitions, we recommend that you make the definitions of existing source and new source consistent with each other by changing the definition of existing source to read, "...means any....constructed or in construction on July 1, 1972...."

RESPONSE: Staff agreed the definitions needed to be consistent and used the phrase "in being" in both existing and new source definitions. "In being" is defined in 252:100-1.

COMMENT: We are of the opinion that the revocation of Section 35-3, Performance Testing, will weaken the State Implementation Plan. Although performance testing is addressed in Subchapters 8 and 43, Subchapter 8 is not yet approved into the SIP and Chapter 43 only discusses the requirements for test procedures and who may conduct the tests. With the revocation of Section 35-3, testing of equipment that has emission standards set in Subchapter 35 would no longer be required. Therefore, we oppose revoking Section 35-3.

RESPONSE: The Oklahoma Clean Air Act gives DEQ the authority to require performance testing so staff doesn't feel that revoking Section 35-3 would weaken the SIP. Pursuant to the statutory authority, both Subchapter 7 and 8 authorize the DEQ to require performance testing before issuance of an operating permit.

AQC MEETING

COMMENT: A comment was made during the public hearing regarding what was meant by "modification" in the definition of "existing source." A clarification was requested on the definition of "modification" in Subchapter 1.

RESPONSE: Staff deferred to the definition of "modification" in Subchapter 1. It was also discussed that the definition could not be changed at this public hearing, but only after proper notice, which will be sometime next year.

Re: Submittal of Written Comments
Proposed Revisions to OAC 252:100-35,
Control of Emission of Carbon Monoxide
Our File No. 30502-002

Dear Ms. Martinez:

Based upon the Notice of Proposed Rulemaking published in the Oklahoma Register, Volume 16-No. 19, dated August 2, 1999, regarding revisions to the above-referenced regulation as a part of the Department of Environmental Quality's ("DEQ") "re-right/de-wrong" process, the law firm of McKinney & Stringer, P.C., on behalf of Terra Nitrogen Corporation, respectfully submits the following written comments regarding such revisions and requests that such comments be considered prior to final promulgation of the referenced rule. Further, we respectfully request the DEQ provide a written response to such comments.

OAC 252:100-35 ("Subchapter 35"):

Pursuant to the revisions to OAC 252:100-35-2(a), reference to "or other petroleum or natural gas process, except stationary engines," as the same regards the applicability of Subchapter 35 to "existing sources," is proposed to be deleted.

COMMENT:

As previously promulgated, it is believed Subchapter 35 was intended to apply to petroleum or natural gas plants/processes and not plants/processes that use natural gas as a raw material. Please confirm whether Subchapter 35, as proposed to be amended, will apply to plants/processes that utilize natural gas as a raw material.

As further specified in OAC 252:100-35-2(a), Subchapter 35 is applicable only to those existing sources "... located in, or significantly impacting (*i.e.*, 500 ug/m³ on an 8-hour average) on a nonattainment area for carbon monoxide..." As

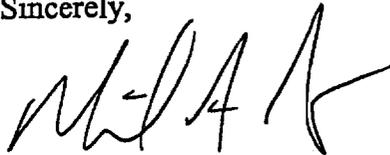

specified in OAC 252:100-35-2(b) the above limitation as to the applicability is not specified for new sources.

COMMENT:

Please confirm whether or not the applicability of OAC 252:100-35-2(a) is limited to those sources which meet the definition of an "existing source" and are located in or significantly impacting on a nonattainment area for carbon monoxide. Further, please confirm whether or not the provisions of OAC 252:100-35-2(b) are applicable only to those sources which meet the definition of a "new source" and are located in or significantly impacting on a nonattainment area for carbon monoxide.

Upon your receipt and review, please contact me should you have any question or need any further information regarding the above comments. Your assistance in this matter is greatly appreciated.

Sincerely,

MICHAEL A. PETERS

RE: Proposed Amendments to OAC 252:100-35 ("Subchapter 35")

Dear Ms. Martinez,

Wolverine Tube, Inc. ("Wolverine") provides its comments to the proposed amended Subchapter 35. Wolverine also provides proposed language revisions to the Oklahoma Department of Environmental Quality's ("ODEQ") proposed amended Subchapter 35, consistent with Wolverine's comments. The revisions we propose are indicated in bold italics on the enclosure.

The proposed amended Subchapter 35 should clarify that this Subchapter is not intended to apply to secondary copper facilities. This revision is justified for several reasons. First, the revision recognizes the unique nature of secondary copper facilities. Second, the revision is consistent with the ODEQ's (and predecessor agencies') historic interpretation and application of Subchapter 35 recognizing that this Subchapter does not apply to secondary copper facilities. Third, the revision is consistent with the application of carbon monoxide ("CO") emissions standards promulgated by other states. Fourth, the revision maintains the status quo as to air quality and application of Subchapter 35. Fifth, the revision carries out the purposes of Subchapter 35.

I. The revision recognizes the unique nature of secondary copper facilities.

Wolverine is the only secondary copper facility in the State of Oklahoma. Wolverine is a copper tubing operation. Scrap copper, as opposed to metallic ore used in primary facilities, is melted in a furnace, cast into round copper billet, and then extruded into a base tube using a hydraulic press. The facility first started operations in 1974 pursuant to a construction permit issued by the Air Quality Service ("AQS") of the Oklahoma State Department of Health ("OSDH"). AQS issued an operating permit upon completion of plant construction (permit #74-117-O). All equipment located at the plant was installed under the original permits. Currently, the facility

7263

consists of one Asarco melt furnace and three annealing furnaces with atmospheric generators. The furnaces are all fired by natural gas.

Although the Asarco furnace and the annealing furnaces serve different purposes in the manufacturing process, they all use a reducing atmosphere. The melting furnace operates in oxygen deficient atmosphere in which oxygen is scavenged to prevent oxidation of the product. The annealing furnaces operate with gases generated by an Exogas generator to create a reducing atmosphere in which oxygen on the surface of copper tubing is removed prior to product shipment. Basically, both types of furnaces operate in a reducing atmosphere of carbon monoxide and hydrogen generated by the sub-stoichiometric combustion of natural gas. The combustion process typically generates a reducing atmosphere which consists of approximately 2% CO and 2% hydrogen with the balance being carbon dioxide and nitrogen. The whole point to using reducing atmospheres in the secondary copper processes is to remove oxygen which would either oxidize on the surface of the metal or be incorporated in the metal as oxides and degrade the product, whereas primary smelting processes inject oxygen to burn out the degrading constituents in the metal ores.

Secondary copper processing has always been different from other metal processing. Other metal processing, including primary copper processing and other secondary metal processing such as aluminum, do not have the operational constraints imposed by the oxidizing character of secondary copper. As a result, such facilities can operate at higher temperatures and in oxygen-rich environments which allow for higher levels of natural secondary combustion of CO in their stacks. Thus, the 93% CO secondary combustion level established by Subchapter 35 probably did not require these other metal processing facilities to reduce any CO emissions at their facilities. Such facilities merely continued operations as before the rule and easily satisfied the 93% requirement.

The 93% limit established by Subchapter 35 is not based upon any air standards and appears to be arbitrary. Wolverine has found no rules of other states that impose this 93% requirement. In fact, current ODEQ staff cannot identify the origin of the 93% or tie it to any particular concern. Instead, it appears that it was set at a time when the only metals processing in Oklahoma was primary metals, and as explained above, the 93% limit was merely a limit that the then existing industries could easily accomplish through normal operations.

When Subchapter 35 came into existence, no secondary copper facility existed in the State. Once Wolverine was built, no AQS or ODEQ permit writer or inspector over the 25 years since, until very recently, considered the secondary copper industry to be subject to the rule. The historical non-applicability was based on the design of the melting furnace compared to the definition of foundry cupola in OAC 252:100-1-3.

Wolverine's proposed revision takes the unique nature of the secondary copper industry into account, whereas the ODEQ's proposed amendment by itself does not. After discussions with

Oklahoma Department of Environmental Quality
Air Quality Service
August 19, 1999
Page 3

ODEQ, Wolverine understands that ODEQ agrees that Subchapter 35 does not apply to secondary copper facilities, and that ODEQ intends to propose a subsequent amendment to Subchapter 35 that clarifies that position.

II. The revision is consistent with the Department of Environmental Quality's historic interpretation and application of Subchapter 35 to secondary copper facilities.

The major pollutant of significance emitted from Wolverine are emissions of carbon monoxide. Wolverine is considered a major source of CO since emissions exceed 100 tons per year ("TPY"). Yet, over the twenty-five years of its operations, the ODEQ and its predecessor agencies have not considered secondary copper facilities to be subject to Subchapter 35.

A February 10, 1988 memo to the file from Glenn R. Diel, Environmental Specialist for the Oklahoma State Department of Health Air Quality Service stated that: "... the facility is in compliance with all applicable Oklahoma Clean Air Act regulations." On March 5, 1993, David Schutz, Environmental Engineer for the Oklahoma State Department of Health Air Quality Service wrote in a memorandum to the file:

The furnace is subject to NSPS and the following rules from OAC 310:300:

- Subchapter 7: permits
- Subchapter 19: fuel-burning equipment
- Subchapter 25: smoke, visible emissions, and particulates
- Subchapter 27: PM emissions from industrial and other processes
- Subchapter 31: sulfur compounds
- Subchapter 41: hazardous and toxic air pollutants

Mr. Schutz considered and rejected the applicability of Subchapter 35 for carbon monoxide:

Subchapter 35 for carbon monoxide is not applicable. The rule affects cupola, blast, and basic oxygen furnaces. The secondary copper furnace is not among the metallurgical processes regulated by Subchapter 35.

Again, on April 5, 1993, Mr. Schutz did not include Subchapter 35 in his list of air quality rules that applied to Wolverine, concluding that: "The facility is in compliance with the opacity limitation of OAC 310:200-25, the PM emissions limitation of Permit No. 74-117-0, and with the MAAC for copper."

7265

Oklahoma Department of Environmental Quality
Air Quality Service
August 19, 1999
Page 4

Regulators were quite aware that CO emitted from the secondary copper facility. On August 10, 1993, Ann Jayne, Supervisor of the Enforcement Section of the Department of Environmental Quality wrote in a letter to Wolverine that: "... the Air Quality Program requests that Wolverine Tube, Inc. submit a complete copy of all of the stack test reports, specifically carbon monoxide, performed during the week of March 1st, 1993, within 30 days of receipt of this letter."

Chuck Cornell, Compliance Unit Inspector for the Oklahoma Department of Environmental Quality Air Quality Division memorialized his August 30, 1995 air quality compliance inspection of Wolverine in a September 5, 1995 memo to the file. He concludes:

The facility is subject to OAC Subchapters 7, 19, 25, 27, 31 and 41.
No violations were noted at the time of the inspection.

Once again, a regulator acknowledged that Subchapter 35 did not apply to secondary copper facilities, when on November 26, 1996, Jeffrey A. Dye, of the Compliance Unit, wrote in a memo about his air quality compliance inspection of Wolverine Tube:

The major pollutant of significance emitted from Wolverine Tube, Inc. are emissions of carbon monoxide (CO). This source is considered a major source of CO since emissions exceeded 100 TPY for 1995. The facility is not subject to *New Source Performance Standards (NSPS)*. NSPS Subpart P, Standards of Performance for Primary Copper Smelters does not apply because operations at Wolverine Tube are secondary copper activities. There are no *NSPS Subparts* that apply to secondary copper processing. This facility is not subject to *NESHAPS* because no pollutants subject to regulations under *40 CFR 61* are emitted at this facility. This facility is considered an existing *PSD* major source for CO since emissions of CO exceed the *250 TPY* significance level. The emission points were installed before the date of the first *PSD* regulations. The facility is also subject to OAC Subchapters 7, 19, 25, 27, 31, and 41.

No visible emissions were noted from any of the points at this facility. The facility was in compliance with OAC 252:100-25, Smoke, Visible Emissions and Particulates. During the inspection, no fugitive dust was present on the roads around the facility or from the scrap copper storage area. This is in compliance with OAC 252:100-29, Control of Fugitive Dust.

At the time of the inspection, the facility appears to be in compliance.

Only recently has the ODEQ taken a different view of the applicability of Subchapter 35 to secondary copper facilities. In the last year the ODEQ took the position that the direct fired vertical shaft rotary furnace is subject to Subchapter 35. ODEQ referred Wolverine to the definition of "foundry cupola" found in OAC 252:100-1-3:

[A] shaft-type furnace used for the melting of metals usually consisting of, but not limited to, the furnace proper, tuyeres, fans or blowers, tapping spout, charging equipment, gas-cleaning devices and other auxiliaries. Shaft furnaces used for processing non-metallic materials are not included under this definition but are included in the definition of process equipment.

However, it is significant to note that shaft furnaces commonly refer to furnaces used in primary processes, and that "tuyeres" are oxygen lances used to mix molten material with oxygen by injecting oxygen in the molten ore to assist in burning off extraneous substances and purifying the ore. It appears obvious that the original drafters of Subchapter 35 were intending to regulate primary and some secondary metal operations other than secondary copper processes. The way regulators have historically viewed and used Subchapter 35 is consistent with the words used in the definitions.

Moreover, in their proposed amendment, ODEQ has specifically removed the term "or other petroleum or natural gas process except stationary engines" to be consistent with the intent and historical application of Subchapter 35. The ODEQ has realized that the 93% CO reduction does not make sense for all operations. Because this Subchapter is now being rewritten to address these issues, Wolverine believes that secondary copper facilities should be considered as well.

Similarly, Wolverine's proposed revision to the amended Subchapter 35 recognizes the historical view of the non-applicability of the regulation to the secondary copper industry. Wolverine believes that the historic view is the accurate view and should be incorporated into the Subchapter 35 amendment.

III. The revision is consistent with the application of CO emissions standards promulgated by other states.

OAC 252:100-35 (formerly Regulation 17) was adopted by the Oklahoma State Board of Health ("OSBH") on February 14, 1972 and implemented by the Oklahoma State Department of Health Air Quality Service. Regulation 17 was renumbered in 1981 to Regulation 3.6, and in 1991 the air quality rules were codified by the State. The OSDH code was "310" and the Air Pollution Control Regulations were assigned Chapter 200 (i.e., OAC Air Pollution Control, Title 310, Chapter 200-35). The Legislature reorganized the State's environmental programs by consolidating most of

these programs under a new agency referred to as the Oklahoma Department of Environmental Quality. As a result of this reorganization, the Air Pollution Control regulation for CO was recodified and referred to as OAC 252:100-35.

Subchapter 35 was adopted in Oklahoma as a part of the original State Implementation Plan ("SIP") to maintain attainment with the National Ambient Air quality Standards ("NAAQS"). Stationary sources regulated by this standard include foundry cupola, blast furnace, basic oxygen furnace, catalytic cracking unit, or other petroleum or natural gas processes except stationary engines. See previous discussion of the definition of "Foundry Cupola" from OAC 252:100-1-3.

There are multiple definitions for regulated equipment. This is true for a cupola furnace. The accepted industry definition is:

Cupola furnace is used for reduction of copper-base alloy slag and residues. The residues charged have a recoverable metallic content of 25% to 30%. The balance of recoverable material consists of nonvolatile gangue, mainly silicates. In addition to the residues, coke and flux are charged into the furnace. The slag produced in the cupola is eliminated through a slag tap located slightly above the metal tap.

A thorough comparison of the definition of foundry cupola in the OAC to the process descriptions reveals a notable distinction between a typical cupola furnace intended to be regulated and a secondary copper melting furnace. Specifically, the OAC definition states that a cupola consists of several items including tuyeres, the lances used to blow air into the bottom of the furnace with the specific intent of oxygenating contaminant in the molten metal to form slag for removal. In the secondary copper process, tuyeres are not used and excess oxygen is intentionally kept out of the furnace. Thus, Wolverine believes that furnaces used for secondary copper processing are not the type intended to be regulated as "foundry cupolas."

Other states' regulation of CO emissions is consistent with this view. States such as Texas, Louisiana, and Kansas, among others, specifically recognize that the foundry cupolas regulated for CO emissions are gray iron foundry cupolas.

Texas

30 TAC § 119.3 Control Requirements for Iron Cupolas

No person shall emit a vent gas stream from any iron cupola into the atmosphere unless the vent gas stream is properly burned at a temperature equal to or greater than 1,300 degrees F (704 degrees C)

in an afterburner having a retention time of at least 1/4 of a second and having a steady flame that is not affected by the cupola charge and relights automatically if extinguished.

Louisiana

Title 33

Chapter 17. Control of Emissions of Carbon Monoxide (New Sources)

Subchapter B. Ferrous Metal Emissions

§ 1703. Ferrous Metal Emissions

No person shall emit the carbon monoxide gases generated during the operation of a gray iron cupola, blast furnace or basic oxygen steel furnace unless they are burned in a direct-flame afterburner or are controlled by other means as may be approved by the administrative authority.

Kansas

K.A.R. 28-19-24 Control of Carbon Monoxide Emissions

(A) No person shall cause or permit the emission of carbon monoxide gases generated during the operation of a grey iron cupola unless they are burned at 1300 degrees F for 0.3 seconds or greater in a direct-flame after burner or equivalent device as approved by the director.

(B) No person shall emit carbon monoxide waste gas stream from any catalyst regeneration of a petroleum cracking system, petroleum fluid coker, or other petroleum process into the atmosphere, unless the waste gas stream is burned at 1300 degrees F for 0.3 seconds or greater in a direct-flame afterburner or equivalent device as approved by the director.

(C) Installations and equipment existing on January 1, 1972, shall be exempt from the provisions of this regulation.

Wolverine's proposed revision to the proposed amendments to Subchapter 35 is consistent with the view taken by other states. By approving State Implementation Plans ("SIPs") which include the referenced regulations, Region 6 of the Environmental Protection Agency has implicitly accepted this view.

Oklahoma Department of Environmental Quality
Air Quality Service
August 19, 1999
Page 8

IV. The revision maintains the status quo and carries out the purposes of Subchapter 35.

Wolverine's CO emissions result in modeled ambient CO concentrations that satisfy and do not exceed the National Ambient Air Quality Standards for CO set in 1979. Wolverine's proposed revision would not change the model or the processes Wolverine uses.

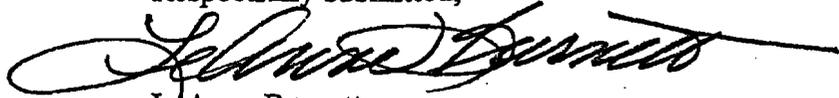

Wolverine's proposed revision would not cause the Oklahoma Air Quality Standard to be exceeded and would not degrade the present level of air quality in Oklahoma. Wolverine's proposed revision would maintain the status quo while carrying out the purposes of Subchapter 35:

. . . to prevent the Oklahoma Air Quality Standard from being exceeded and insure that the present level of air quality in Oklahoma is not degraded.

Conclusion

Wolverine understand that after reviewing the history of Subchapter 35 and like regulations from other states, ODEQ intends to propose a subsequent amendment to Subchapter 35 consistent with Wolverine's proposed revision. Wolverine urges the Department of Environmental Quality and the Air Quality Council to recommend the adoption of ODEQ's proposed amendment as revised by Wolverine's proposed revision.

Respectfully submitted,

LeAnne Burnett
For the Firm

Enclosure

**PROPOSED CHANGES¹ TO
AMENDMENTS TO SUBCHAPTER 35
PROPOSED BY THE OKLAHOMA
DEPARTMENT OF ENVIRONMENTAL QUALITY**

SUBCHAPTER 35. CONTROL OF EMISSION OF CARBON MONOXIDE

Section

252:100-35-1.	Purpose
<u>252:100-35-1.1</u>	<u>Definitions</u>
252:100-35-2.	Emission limits
252:100-35-3.	Performance testing [REVOKED]

252:100-35-1. Purpose

The purpose of this Subchapter is to control emissions of carbon monoxide from stationary sources to prevent the Oklahoma Air Quality Standard from being exceeded and insure that the present level of air quality in Oklahoma is not degraded.

252:100-35-1.1 Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Existing source" means any *gray iron foundry cupola, blast furnace, basic oxygen furnace, catalytic cracking unit, catalytic reforming unit or petroleum coking unit, in being on July 1, 1972 and not modified thereafter so as to increase the emission of carbon monoxide.*

"New source" means any *gray iron foundry cupola, blast furnace, basic oxygen furnace, catalytic cracking unit, catalytic reforming unit or petroleum coking unit, which commenced construction after July 1, 1972.*

252:100-35-2. Emission limits

(a) **Existing sources.** ~~The emission of carbon monoxide from any existing foundry cupola, blast furnace, basic oxygen furnace, catalytic cracking unit, catalytic reforming unit or petroleum coking unit, or other petroleum or natural gas process except, stationary engines, source located in, or significantly impacting (i.e., 500 ug/m³ on an 8 hour average) on a nonattainment area for carbon monoxide shall be reduced by use of complete secondary combustion of the waste gas generated. Removal of 93 percent or more of the carbon monoxide generated shall be considered equivalent to complete secondary combustion. Existing equipment subject to this Subchapter must meet the emission limitations as expeditiously as practicable, but no later than December 31, 1982. 3 years after nonattainment designation by the Administrator.~~

(b) **New sources.** ~~The emission of carbon monoxide from any new foundry cupola, blast furnace, basic oxygen furnace, catalytic cracking unit, catalytic reforming unit or petroleum coking~~

¹ Changes are proposed by Wolverine Tube, Inc., 500 Wolverine Road, Shawnee, OK 74801. Wolverine Tube's proposed changes appear in bold italics.

~~unit, or other petroleum or natural gas process except, stationary engines source shall be reduced by use of complete secondary combustion of the waste gas generated. Removal of 93 percent or more of the carbon monoxide generated shall be considered equivalent to secondary combustion.~~

252:100-35-3. Performance testing [REVOKED]

~~Testing of equipment to determine if emission standards set in this Subchapter are met shall be performed by procedures as accepted by the Executive Director. Promulgated federal testing procedures for similar processes will be considered in making the determination of procedures to be used.~~

**UNITED STATES ENVIRONMENTAL PROTECTION AGENCY**

REGION 6

1445 ROSS AVENUE, SUITE 1200

DALLAS, TX 75202-2733

AUG 20 1999

Mr. Scott Thomas, Program Director
Analysis and Inventory Section
Air Quality Division
Oklahoma Department of Environmental Quality
707 North Robinson
Oklahoma City, OK 73101-1677

Dear Mr. Thomas:

Thank you for the opportunity to comment on rules proposed for Oklahoma Air Pollution Control rules as listed below.

Subchapter 9 Excess Emission and Malfunction Reporting Requirements
Subchapter 19 Particulate Matter Emissions from Fuel-Burning Equipment
Appendix C Particulate Matter Emission Limits for Fuel-Burning Equipment
Subchapter 21 Particulate Matter Emissions from Wood-Waste Burning Equipment
Appendix D Particulate Matter Emission Limits for Wood-Waste Burning Equipment
Subchapter 27 Particulate Matter Emissions from Industrial and Other Processes and Operations
Subchapter 17, Part 7 Hospital, Medical and Infectious Waste Incinerators (HMIWI)
Appendix M Emission Limits for HMIWI
Subchapter 35 Control of Emission of Carbon Dioxide

The Agency previously commented on Subchapter 17, Part 7 in a letter dated April 15, 1999, and on Subchapter 9 in a letter dated June 11, 1999. More specific comments regarding Subchapter 9, Subchapter 19, Subchapter 27, and Subchapter 35 are included in the enclosure to this letter. The Permit by Rule provisions in Subchapter 27 are being reviewed by the Air Permitting Section, and comments, as appropriate, will be submitted under a separate cover letter.

We appreciate the opportunity to comment on the proposed rules prior to the public hearing on August 24, 1999. If you have any questions regarding EPA's comments, please feel free to contact me or Sandra Rennie at (214) 665-7367.

Sincerely yours,

A handwritten signature in black ink that reads "Thomas H. Diggs".

Thomas H. Diggs, Chief
Air Planning Section

Enclosure

cc: Ms. Joyce Sheedy
Oklahoma Department of Environmental Quality

Comments for August 24, 1999
Air Quality Council Meeting

Subchapter 9:

We have provided our comments on this subchapter before. In addition, we recommend the following clarifying change: Section 3.2(a) the phrase "not be considered a violation..." be changed to read "not be subject to penalty..." This change will make the proposed rule language consistent with the EPA's policy on excess emissions.

Subchapter 19:

We are of the opinion that Section 19-4 needs to specifically state, "Particulate emission limits in this Subchapter are not intended to replace any limit established under a federal program."

Subchapter 27

We are of the opinion that Section 27-1 needs to specifically state, "Particulate emission limits in this Subchapter are not intended to replace any limit established under a federal program." Furthermore, in Section 27-10(b)(2) substitute the term haul roads with the term unpaved roads.

Subchapter 35

In Section 35-1.1 Definitions, we recommend that you make the definitions of *existing source* and *new source* consistent with each other by changing the definition of *existing source* to read, "...means any....constructed or in construction on July 1, 1972...."

We are of the opinion that the revocation of Section 35-3, Performance Testing, will weaken the State Implementation Plan. Although performance testing is addressed in Subchapters 8 and 43, Subchapter 8 is not yet approved into the SIP, and Chapter 43 only discusses the requirements for test procedures and who may conduct the tests. With the revocation of Section 35-3, testing of equipment that has emission standards set in Subchapter 35 would no longer be required. Therefore, we oppose revoking Section 35-3.

DEPARTMENT OF ENVIRONMENTAL QUALITY
AIR QUALITY DIVISION
STATE OF OKLAHOMA

1 dates for those sources.
2 And in Section 35-2(a), under
3 Existing Sources, the date of December 31,
4 1982 was replaced with "three years after
5 nonattainment designation by the
6 Administrator" so that it will apply
7 anytime an area is designated nonattainment
8 for carbon monoxide.
9 Finally, Section 35-3, Performance
10 Testing, was revoked because the Air
11 Quality Division is given the authority to
12 request this testing in the Oklahoma Clean
13 Air Act, and performance testing
14 requirements are already provided for in
15 Subchapters 8 and 43.
16 Staff has received the following
17 written comments which I would like to
18 enter into the hearing record. A letter
19 was received on August 16, 1999 from
20 McKinney and Stringer on behalf of Terra
21 Nitrogen Corporation. In short, these
22 comments wanted the DEQ to determine if
23 Subchapter 35 applies to plants and
24 processes that utilize natural gas as a raw
25 material. Also, they requested whether

Page 3

1 PROCEEDINGS
2 MR. DYKE: The next item up for
3 public hearing this afternoon is Item G,
4 OAC 252:100-35, Control of Emission of
5 Carbon Monoxide. I'll call on staff member
6 Michelle Martinez for the presentation.
7 MS. MARTINEZ: Members of the
8 Council, ladies and gentlemen, my name is
9 Michelle Martinez. I work in the Rules and
10 Planning Unit of the Air Quality Division.
11 Today I will discuss the proposed revisions
12 of Subchapter 35, Control of Emission of
13 Carbon Monoxide. The proposed revisions
14 will simplify and clarify Subchapter 35 and
15 are as follows: It was decided to narrow
16 the scope of the subchapter to specific
17 sources that are primary emitters of carbon
18 monoxide, because it is often impossible
19 for small sources to achieve a ninety-three
20 percent reduction in carbon monoxide
21 emissions as required by the rule without
22 increasing other emissions.
23 Also, a new Section 35-1.1 was added
24 for the definitions "existing source" and
25 "new source", which include the compliance

Page 5

1 Section 35-2(a) and (b) applied to those
2 sources which meet the definitions of
3 "existing source" and "new source" located
4 in or significantly impacting on a
5 nonattainment area for CO.
6 Staff is in the process of preparing
7 written response to those comments as
8 requested by McKinney and Stringer, and
9 they will be addressed at the October 19
10 Council Meeting.
11 Comments from the EPA were received
12 on Friday, August 20 and a letter including
13 comments from Crowe and Dunlevy on Behalf
14 of Wolverine Tube, Inc were received on
15 Monday, August 23, 1999. Staff has not had
16 sufficient time to prepare a response to
17 these comments, so they will be addressed
18 during the October 19 meeting.
19 Staff asks that the Council continue
20 the hearing until the October 19 Council
21 Meeting to allow further consideration of
22 comments.
23 MR. DYKE: Any questions from the
24 Council of Ms. Martinez? I have notice
25 here that Mark Walker wishes to make some

Page 6

1 comments. Let's go ahead and do that now.
 2 MR. WALKER: Good afternoon,
 3 Members of the Council. I'm Mark Walker
 4 and I'm with Crowe and Dunlevy, appearing
 5 on behalf of Wolverine Tube, Inc which is a
 6 secondary copper facility in Shawnee. And
 7 we did file written comments on behalf of
 8 Wolverine and I think that they speak for
 9 themselves. I'm not going to add anything
 10 to that.
 11 It is our understanding though, that
 12 the Rules, staff has done their own
 13 independent investigation and intends to
 14 propose an Amended Subchapter 35 that
 15 should be published soon and would be under
 16 consideration at the October meeting. And
 17 based on our understanding of what those
 18 latest revisions will contain, we're in
 19 agreement and support of the staff's
 20 position under those latest revisions.
 21 We'll be back in October and be happy to
 22 discuss it further with you at that time.
 23 Thank you.
 24 MR. DYKE: Any questions of Mr.
 25 Walker? Questions?

Page 7

1 MR. BRANECKY: Under the
 2 definition of "existing source", the words
 3 "in being", I think that may need to be a
 4 little more clear. I'm not sure that
 5 construction has commenced and operation --
 6 or what does "in being" mean? I noticed in
 7 the definition of "new source" you state
 8 "which can commence construction after July
 9 1. So, what is meant by "in being"?
 10 MS. MARTINEZ: There is a
 11 definition in Subchapter 1 of "in being".
 12 MR. BRANECKY: Is there?
 13 MS. MARTINEZ: Would you like me
 14 to read it?
 15 MR. BRANECKY: Sure.
 16 MS. MARTINEZ: "In being" means
 17 as used in the definitions of new
 18 installation and existing source, means
 19 that an owner/operator has undertaken a
 20 continuous program of construction or
 21 modification or the owner/operator has
 22 entered into a binding agreement or
 23 contractual obligation to undertake and
 24 complete within a reasonable time a
 25 continuous program of construction or

Page 8

1 modification prior to the compliance state
 2 of installation application regulation. It
 3 should say applicable, yes.
 4 MR. BRANECKY: Okay. All right.
 5 MS. MARTINEZ: We probably --
 6 what we decided to do after your comment is
 7 use "in being" on both existing and new
 8 source where they will be consistent.
 9 MR. BRANECKY: Okay.
 10 MR. DYKE: Any additional
 11 questions from the Council? Any additional
 12 questions or comments from the audience?
 13 MR. BREISCH: If there is no more
 14 questions or comments, I'll entertain a
 15 motion to continue this item until the
 16 October 19 regular meeting.
 17 MS. MYERS: I so move.
 18 MR. BRANECKY: Second.
 19 MR. BREISCH: I've got a motion
 20 and a second to continue this item.
 21 Questions, comments? If not, Myrna, call
 22 the roll.
 23 MS. BRUCE: Mr. Wilson.
 24 MR. WILSON: Yes.
 25 MS. BRUCE: Ms. Myers.

Page 9

1 MS. MYERS: Aye.
 2 MS. BRUCE: Mr. Branecky.
 3 MR. BRANECKY: Yes.
 4 MS. BRUCE: Mr. Fallon.
 5 MR. FALLON: Aye.
 6 MS. BRUCE: Mr. Kilpatrick.
 7 MR. KILPATRICK: Aye.
 8 MS. BRUCE: Dr. Grosz.
 9 DR. GROSZ: Yes.
 10 MS. BRUCE: Mr. Breisch.
 11 MR. BREISCH: Aye.
 12 That finishes our rulemaking
 13 hearing.

1 replaced with "petroleum catalytic cracking
2 unit" and "petroleum catalytic reforming
3 unit" to maintain consistency with the
4 existing rule.
5 The term "foundry cupola" was
6 replaced with "gray iron cupola".
7 And in Section 35-2(a), under
8 Existing Sources, the date of December 31,
9 1982, was replaced with "3 years after
10 nonattainment designation by the
11 Administrator" so that it will apply
12 anytime an area is designated nonattainment
13 for carbon monoxide.
14 Finally, Section 35-3, Performance
15 Testing, was revoked because performance
16 testing requirements are already provided
17 for in Subchapters 8 and 43.
18 Comments were received on Monday,
19 October 18, 1999, from the EPA supporting
20 the amendments to Subchapter 35, which I
21 would like to enter into the record at this
22 time.
23 Comments were previously received
24 from McKinney & Stringer on behalf of Terra
25 Nitrogen. Crowe & Dunlevy, on behalf of

Page 3

1 PROCEEDINGS
2 MR. DYKE: The next item on the
3 agenda, Item 5F, OAC 252:100-35, Control of
4 Emission of Carbon Monoxide, Amended. I'll
5 call on staff member, Michelle Martinez.
6 MS. MARTINEZ: Members of the
7 Council, ladies and gentlemen, today staff
8 is proposing to amend Subchapter 35,
9 Control of Emission of Carbon Monoxide.
10 The proposed revisions will simplify and
11 clarify Subchapter 35 and are as follows:
12 It was decided to narrow the scope
13 of the subchapter to specific sources that
14 are the primary emitters of carbon
15 monoxide, because it is often impossible
16 for small sources to achieve a 93 percent
17 reduction in carbon monoxide emissions as
18 required by the rule, without increasing
19 other emissions.
20 Also, a new Section 35-1.1, was
21 added for the definitions "existing source"
22 and "new source", which include the
23 compliance dates for those sources.
24 The terms "catalytic cracking unit"
25 and "catalytic reforming unit" were

Page

1 Wolverine Tube and the EPA. Those comments
2 and staff's response have been included in
3 your council packet and copies are on the
4 table.
5 The notice for today's hearing was
6 published in the Oklahoma Register on
7 September 15, 1999. Subchapter 35 was also
8 brought to the Council for consideration on
9 October 19, 1999. There is a compelling
10 public interest in adopting this rule as an
11 emergency rule, which is that it will
12 directly impact the state's Title V
13 permitting process. Oklahoma is in the
14 midst of preparing and issuing its first
15 draft of Title V permits. To keep this
16 process moving forward and to aid both
17 permit writers and the effected companies
18 in interpreting and implementing this rule,
19 staff recommends that the changes to
20 Subchapter 35 be adopted as an emergency
21 rule as well as a permanent rule.
22 MR. DYKE: We have someone from
23 Wolverine Tube who wishes to comment.
24 Would you like to hear her comments before
25 your questions? Ms. Burnett.

1 MS. BURNETT: Thank you. I'm
2 LeAnne Burnett and I'm here today
3 representing Wolverine Tube. Wolverine
4 Tube is the only secondary copper facility
5 in Oklahoma. So I guess I'm speaking for
6 the secondary copper industry in Oklahoma,
7 because that's it.

8 We support the staff's revision to
9 Subchapter 35, in particular the change
10 from "foundry cupola" to "gray iron
11 cupola". We believe that that is a
12 clarification to the rule and nothing more.
13 And I believe that if you all have had a
14 chance to review the written comments that
15 we prepared on behalf of Wolverine, that
16 explains why we believe that the change is
17 merely a clarification. It is consistent
18 with the DEQ's historic application of this
19 rule in that it's never applied to the
20 secondary copper facility. It is also
21 consistent with the application for carbon
22 monoxide standards in other states. Other
23 states such as Texas and Louisiana have and
24 others have similar rules that all apply to
25 gray iron foundry cupolas or gray iron

1 cupolas.

2 And finally, I suppose that it
3 maintains the status quo because it is
4 simply a clarification. We would urge that
5 this rule be adopted as an emergency
6 measure because it does impact directly
7 Wolverine Tube's Title V Permitting
8 Application.

9 MR. DYKE: Any questions of Ms.
10 Martinez or Ms. Burnett from the Council?
11 Anyone else wishing to make comment on this
12 rule? Bill.

13 MR. FISHBACK: The question I
14 have is in the definition of "existing
15 source". It lists the units to which the
16 rule applies, and if they are in existence
17 or in being on July 1 of '72, and not
18 modified thereafter, so as to increase the
19 emissions of carbon monoxide.

20 There is an ongoing debate with New
21 Source Performance Standards as to what is
22 and what is not modification. And it is
23 certainly possible for units built prior to
24 '72 to have an increase in carbon monoxide
25 emissions without a physical change in the

1 method of operation or a modification in
2 the NSPS sense.
3 So I wanted to make sure that we
4 clarified, since it's not in this rule,
5 it's obviously going to have to be
6 defaulted to another rule what we mean by
7 modification there. Because, for example,
8 in fluid cat-crackers at petroleum
9 refineries, you can have an increase in
10 carbon monoxide just from a change in the
11 carbon content of the feed stock. No other
12 physical change, no change in the method of
13 operation, just a feed stock that has a
14 little more carbon in it, so it lays a
15 little more carbon down on the catalyst, so
16 when you burn it off you get a little more
17 carbon monoxide. Now, is that or is that
18 not -- is a change in feed stock quality,
19 is that or is that not a modification that
20 would trip this regulation? And that's
21 debated forever in New Source Performance
22 Standards.

23 EPA has taken the position, for
24 example, that SO2 emission increases from
25 refineries are modifications of the

1 equipment, even if the only reason for
2 those SO2 emission increases is because
3 there is more sulphur in the crude.
4 So this is a very important point
5 here and I don't believe there is any
6 intent in this rule one way or the other,
7 but I wanted to ask the staff and go on the
8 record as what do we mean in that
9 definition by the word modified? What are
10 we defaulting to there?

11 MS. MARTINEZ: We have a
12 definition in Subchapter 1 of modification
13 which we fall back on.

14 MR. FISHBACK: And what does it
15 say specifically -- right there?

16 MS. MARTINEZ: Uh-huh. ///

17 MR. FISHBACK: A physical change
18 or change in the method of operation. So
19 that's basically the NSPS definition, which
20 results in the emission of any air
21 pollutant not previously emitted or an
22 increase, right? Okay.

23 Now, we would be going down the same
24 path there because physical change or
25 change in the method of operation has been

Page 10

1 construed in some context by EPA change in
2 method of operation is change in the
3 quality of feed stock. So what does the
4 DEQ staff -- do they consider changing feed
5 stock quality a change in the method of
6 operation or not? That definition is clear
7 to me, but how is it being applied? You
8 don't know? Okay. There is a real risk in
9 that, and it's occurred over and over
10 again. I would love some clarity in the
11 definition of what modification is, I mean
12 I understand the words. And I may
13 interpret those words differently than
14 someone who is bringing an enforcement
15 action because I had an increase in carbon
16 monoxide because my cat-cracker feed got a
17 little bit heavier and had a little more
18 carbon in it. And I didn't spend a dime, I
19 just ran a different feed stock.
20 MR. WILSON: Bill, I share that
21 desire to have that definition of
22 modification. I don't think you are going
23 to get there during this Council meeting.
24 MR. FISHBACK: I would agree with
25 you on that.

Page 11

1 MS. MARTINEZ: Subchapter 1 is
2 due for rewrite/dewrong and it's one of the
3 last subchapters, so it will be sometime
4 next year.
5 MR. WILSON: I believe that this
6 definition does need some help because it
7 really tries to redefine what modification
8 is by saying, so as to increase the
9 emission of carbon monoxide. And so really
10 the definition that's offered here is
11 somewhat in conflict with the definition of
12 modification. And I would recommend that a
13 period be put after the word "thereafter"
14 and we will leave off the rest of that
15 sentence which reads, "so as to increase
16 the emission of carbon monoxide".
17 MS. HOFFMAN: Excuse me, Joel. I
18 believe that's -- what's in the definition
19 of modification is that there has to be an
20 increase in the emissions. Therefore, I
21 don't see any inconsistency between that
22 wording in Subchapter 35 and the definition
23 of modification in Subchapter 1.
24 MR. WILSON: Well, an existing
25 source under this definition would be any

Page

1 source that is modified after a certain
2 date, so as to increase the emission of
3 carbon monoxide. But I agree with what
4 you're saying.
5 MS. HOFFMAN: That was not
6 modified after July 1, 1972.
7 MR. WILSON: I'm sorry. Okay,
8 you are excluding modification?
9 MS. HOFFMAN: It would become a
10 new source.
11 MR. WILSON: Okay. I see what
12 you are saying. If the source was modified
13 after 1972, and its emissions of carbon
14 monoxide increased, it would no longer meet
15 the definition of existing source?
16 MS. HOFFMAN: Right.
17 MR. WILSON: But Mr. Fishback's
18 comments were accurate in that you are able
19 to increase carbon monoxide emissions
20 without a modification, as modifications
21 are defined in NSPS.
22 MR. KILPATRICK: How are you
23 interpreting the definition of
24 modification.
25 MR. WILSON: But I don't think --

Page 1

1 MR. KILPATRICK: Changing the
2 modification is to change to improve the
3 content or change the operating
4 modification. That's the problem. How do
5 you interpret that? EPA --
6
7
8
9 MR. FISHBACK: There is some --
10 this issue that we're discussing is
11 addressed in the definition of modification
12 in Subchapter 1, but it still has not
13 worked in all cases. It says the following
14 shall not be considered a change in method
15 of operation. And one of those things
16 that's not a change in method of operation
17 is change in fuel or raw material if the
18 unit was designed to handle it to begin
19 with. Now that would seem to protect you
20 from this issue of change in feed stock
21 quality.
22 But in their national refinery
23 enforcement initiative, EPA has targeted
24 refineries on the very issue of increased
25 SO2 emissions when the only reason is

7283

Page 14

1 increase in sulphur content accrued. And
 2 you would think that this language would
 3 protect you against that. You didn't spend
 4 a dime on equipment, all you did was buy
 5 different quality crude. With the issue at
 6 hand here in Subchapter 35, you didn't
 7 spend a dime on your cat-cracker, you just
 8 fed it a feed stock with a little more
 9 carbon. You would think that would protect
 10 you, but I would really like to see the
 11 definition of modification expanded to say
 12 -- see it doesn't say. It says alternate
 13 fuels or raw materials that are different
 14 are okay, and maybe we ought to change that
 15 if we have the opportunity next year to say
 16 including changes in feed stock quality.
 17 MS. MYERS: I'm a little bit
 18 confused, Bill. This looks like Subchapter
 19 35 and you are trying to rewrite Subchapter
 20 1.
 21 MR. FISHBACK: That's the issue
 22 that she raised. We have the definition of
 23 modification in Subchapter 1 which
 24 Subchapter 35 relies on, but it doesn't
 25 offer the protection that we're seeking.

Page 15

1 So you are right, ultimately we've got to
 2 address this in Subchapter 1 apparently.
 3 MS. MYERS: We can't do that
 4 today.
 5 MR. FISHBACK: Can't do it today.
 6 But I just wanted to bring that up, that
 7 modification is a real tricky issue.
 8 MR. DYKE: Any other questions or
 9 comments?
 10 MR. KILPATRICK: I have a
 11 question on the definition of "existing
 12 source". The fifth line down, example
 13 (...reading from booklet...), is that the
 14 current standard -- carbon monoxide
 15 standard?
 16 MS. MARTINEZ: That language was
 17 not changed at all.
 18 MR. KILPATRICK: So that's the
 19 old standard?
 20 MS. MARTINEZ: Yes.
 21 MR. DYKE: Additional questions
 22 or comments from the Council?
 23 MR. BREISCH: I'll entertain a
 24 motion to recommend this to the Board for
 25 emergency permanent adoption.

Page 16

1 MR. BRANECKY: So moved.
 2 MR. FALLON: Second.
 3 MR. BREISCH: I've got motion and
 4 a second. Any further comments? Myrna,
 5 call the roll.
 6 MS. BRUCE: Mr. Wilson.
 7 MR. WILSON: Aye.
 8 MS. BRUCE: Mr. Fallon.
 9 MR. FALLON: Yes.
 10 MS. BRUCE: Ms. Myers.
 11 MS. MYERS: Aye.
 12 MS. BRUCE: Mr. Branecky.
 13 MR. BRANECKY: Yes.
 14 MS. BRUCE: Mr. Kilpatrick.
 15 MR. KILPATRICK: Aye.
 16 MS. BRUCE: Mr. Breisch.
 17 MR. BREISCH: Yes.

OAC 252:100-37 SIP Revision

SUBCHAPTER 37. CONTROL OF EMISSIONS OF ORGANIC MATERIALS

PART 1. GENERAL PROVISIONS

252:100-37-1. Purpose

~~The purpose of this Subchapter is to control the emission of organic materials from stationary sources to protect and enhance the air quality to insure that the Oklahoma air quality standard is not exceeded and significant deterioration prevented.~~ The purpose of this Subchapter is to reduce the formation of ozone by controlling the emissions of volatile organic compounds (VOCs) from stationary sources.

252:100-37-2. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"**Acrylic**" means a chemical coating containing polymers or co-polymers of acrylic or substitute acrylic acid in combination with ~~suitable resinous modifiers and its~~. The primary mode of cure is solvent evaporation.

"**Alkyd primer**" means a chemical coating composed primarily of alkyd applied to a surface to provide a firm bond between the substrate and any additional paint coating.

"**Custom product finishes**~~finish~~" means a proprietary chemical coating designed for a specific customer and ~~end-use~~.

~~"Cutback asphalt" means a basic asphalt or asphaltic concrete containing a petroleum distillate.~~

"Drilling or production facility" means all drilling and servicing equipment, wells, flow lines, separators, equipment, gathering lines, and auxiliary non-transportation-related equipment used in the production of petroleum but does not include natural gasoline plants.

~~"Effluent water separator" means any tank, box, sump, or other container in which any material compound VOC floating on, or entrained in, or contained in water entering such tank, box, sump or other the container is physically separated and removed from such the water prior to outfall, drainage, or recovery of such~~ discharge of the water from the container.

"**Epoxy**" means a chemical coating containing epoxy groups and suitable chemical cross-linking agents. ~~Epoxies prime~~ The primary mode of cure involves a chemical reaction between the epoxy and the cross-linking agent.

"Lease custody transfer" means the transfer of produced crude oil and/or condensate, after processing and/or treating in the producing operations, from storage vessels or automatic transfer facilities to pipelines or any other form of transportation.

~~"Maintenance finishes~~ finish" means a chemical coating ~~formulated to form a protection of that protects~~ a given substrate to adverse chemical or physical ~~condition~~ conditions.

"**Nitrocellulose lacquers**~~lacquer (NC lacquer)~~" means a chemical coating containing nitrocellulose and suitable resinous modifiers, ~~and whose~~. The primary mode of cure is solvent evaporation.

~~"Organic materials" means chemical compounds of carbon excluding carbon monoxides, carbon dioxide, carbonic acid, metallic carbides, metal carbonates and ammonium carbonates.~~

~~"Refinery" means any facility engaged in producing gasoline, kerosene, fuel oils or other products through distillation of crude oil or through redistillation, cracking or reforming of unfinished hydrocarbon derivatives.~~

~~"Submerged fill pipe" means any fill pipe or discharge nozzle which that meets any one of the following conditions:~~

~~(A) The bottom of the discharge pipe or nozzle is below the surface of the liquid in the receiving vessel for at least 95 percent of the volume filled;~~

~~(B) The bottom of the discharge pipe or nozzle is less than 6 inches from the bottom of the receiving vessel;~~

~~(C) The bottom of the discharge pipe or nozzle is less than 2 pipe or nozzle diameters from the bottom of the receiving vessel; or,~~

~~(D) other equivalent methods acceptable to the Executive Director.~~

~~"Vinyl" means a chemical coating containing plasterized plasticized or unplasticized un~~plasticized~~ polymers and co-polymers of vinyl acetate, vinyl chloride, polyvinyl alcohols or their condensation products and the. The primary mode of cure is solvent evaporation.~~

~~"Volatile organic compound (VOC)" means any compound containing carbon and hydrogen or containing carbon and hydrogen in combination with any other element which has a vapor pressure of 1.5 pounds per square inch absolute or greater under actual storage conditions of carbon, excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate, which participates in atmospheric photochemical reactions. Any organic compound listed in 40 CFR 51.100 (s) (1) will be presumed to have negligible photochemical reactivity and will not be considered to be a VOC.~~

~~"Volatile organic solvent (VOS)" means any organic compound which participates in atmospheric photochemical reactions; that is, any organic compound other than those which the EPA Administrator designates as having negligible photochemical reactivity. VOS may be measured by the EPA VOC reference method.~~

252:100-37-3. Applicability and compliance

~~(a) New sources. Any new source calculated to emit an organic material to the atmosphere either as a solvent or a reactant will be subject to permitting under OAC 252:100-7, and with the application of Best Available Control Technology.~~

~~(b) Compliance schedule.~~

~~(1) All equipment and process previously regulated under OAC 252:100-37 and 252:100-39 and its effective dates of July 1, 1972 and December 8, 1974 must still abide by those dates.~~

~~(2) (a) New sources. In all areas except AQMA's, this This Subchapter shall apply to all new installations of any equipment or processes described in this Subchapter, after the effective date of December 28, 1974.~~

~~(3) (b) Existing sources. Provisions Sections 15, 16, 35, 36, 37, and 38 of this Subchapter relating to control of VOC shall apply to all new and existing installations of any equipment or processes in use and described in this Subchapter that are located~~

~~in Air Quality Maintenance Areas (AQMA's) as classified by the Environmental Protection Agency with regard to hydrocarbons and photochemical oxidants Tulsa County or Oklahoma County, and become after the effective on June 8, 1979; provided, however, that existing installations shall have twenty-four (24) months from the effective date within which to comply with this Subchapter date of June 9, 1981. Except that the The retrofit requirements for crude petroleum storage tanks will be limited vessels apply only to to tanks vessels of greater than 10,000 barrel 420,000 gal (1,590 m³) capacity.~~

~~(c) Permit-by-rule facilities. This Subchapter does not apply to facilities registered under the VOC storage and loading facility permit-by-rule except as provided for in Part 9.~~

~~(4) Provisions of this Subchapter relating to the control of organic solvent shall be as specified in the applicable Section.~~

252:100-37-4. Exemptions

~~(a) Organic materials as used VOCs with vapor pressures less than 1.5 pounds per square inch absolute (psia) under actual storage conditions are exempt from in 252:100-37-15 through 252:100-37-18 252:100-37-16 and , and 252:100-37-27 and 252:100-37-28, 252:100-37-35 through 252:100-37-38 will not include: Methane (CH₄) or any material otherwise included which has vapor pressure of less than 1.5 pounds per square inch absolute under actual storage conditions.~~

~~(b) Petroleum or condensate stored, processed, treated, loaded, and/or treated transferred at a drilling or production facility prior to lease custody transfer is exempt from this Subchapter. This exemption also includes transfer and loading operations Methanol stored at a drilling or production facility for use on site is also exempt from this Subchapter.~~

~~(a) (c) The storage, loading, processing, manufacturing or burning of organic materials VOCs on a farm or ranch, when such VOCs are used for agricultural purposes on farms and ranches said farm or ranch, is exempted from all provisions of 252:100-37-15 through 252:100-37-18, and 252:100-37-27 and 252:100-37-28, 252:100-37-16, 252:100-37-35 through 252:100-37-38, 252:100:39-41, and 252:100-39-42.~~

252:100-37-5. Operation and maintenance

~~Any vapor-loss control devices, packing glands and mechanical seals required by this Subchapter shall be properly installed, maintained, and operated.~~

PART 3. CONTROL OF VOLATILE ORGANIC COMPOUNDS **VOCs IN STORAGE AND LOADING OPERATIONS**

252:100-37-15. Storage of volatile organic compounds VOCs

~~(a) Storage capabilities greater than 40,000 gallons. No person shall build, sell, or install or permit the building or installation of any new stationary tank, reservoir or other container Each VOC storage vessel with a capacity of more than 40,000 gallons (150,000 liters) capacity which will be used for storage of any organic materials, unless such tank, reservoir or other container is to gal (151 m³) shall be a pressure tank vessel capable of~~

maintaining working pressures sufficient at all times to ~~that~~ prevent organic vapor or gas the loss of VOC to the atmosphere or is designed, and will be built and shall be equipped with one of the following vapor-loss control devices:

- (1) ~~A~~ An external floating roof, consisting of that consists of a pontoon type, internal floating cover or double-deck type roof, which will cover, or a fixed roof with an internal-floating cover. The cover shall rest on the surface of the liquid contents and at all times (i.e., off the leg supports), except during initial fill when the storage vessel is completely emptied, or during refilling. When the cover is resting on the leg supports, the process of filling, emptying, or refilling shall be continuous and shall be accomplished as rapidly as possible. The floating roof shall be equipped with a closure seal, or seals, to close the space between the roof cover edge and tank vessel wall. Such floating ~~Floating roofs are not appropriate control devices if the organic materials~~ VOCs have a vapor pressure of 11-11.1 pounds per square inch absolute psia (568 mm Hg) (76.6kPa) or greater under actual conditions. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place.
- (2) ~~A vapor-recovery system consisting that consists of a vapor-gathering system capable of collecting 85 percent or more of the uncontrolled organic material~~ VOCs that would otherwise be emitted to the atmosphere; and a vapor-disposal system capable of processing such organic material so as these VOCs to prevent their emission to the atmosphere and with all tank. All vessel gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place.
- (3) ~~Other equipment or means methods that are of equal efficiency for purposes of air pollution control as may be used when approved by the Executive Division Director prior to installation.~~

(b) **Storage Capacities of 400 gallons and greater.** ~~No person shall build, sell, or install or permit the building or installation of a new stationary organic material~~ Each VOC storage tank vessel with a capacity of 400 gallons (1520 liters) gal (1.5 m³) of m³ or more unless such tank is shall be equipped with a permanent submerged fill pipe or is equipped with an organic material a vapor-recovery system as required in 252:100-37-15(a)252:100-37-15 (a) (2).

Exemptions. VOC storage vessels that are subject to equipment standards (e.g., a fixed roof in combination with an internal floating cover, an external floating roof, or a closed vent system and control device) in 40 CFR 60 Subparts K, Ka, or Kb are exempt from the requirements of 252:100-37-15 (a) and (b).

252:100-37-16. Loading of volatile organic compounds VOCs

(a) **Loading facilities with throughput greater than 40,000 gallons/day.**

(1) ~~No person shall build or install or permit the building or installation of a stationary organic material~~ Each VOC loading facility having with a throughput greater than 40,000 gallons per day gal/d (151,416 l/d) from its aggregate loading pipes unless such loading facility is shall be equipped with a vapor-collection and disposal system or unless all tank trucks or trailers are bottom loading loaded with closed hatches closed, properly installed, in good working order and in operation.

(2) **(1) Vapor-collection and disposal system.** When loading in a vapor-collection and disposal system is effected through the hatches of a tank truck or trailer with a loading arm equipped with a vapor-collecting adaptor; pneumatic, hydraulic or other

~~mechanical means shall be provided to force a vapor-tight seal between the adaptor and the hatch.~~

(A) Vapor-collection portion of the system.

(i) When loading VOCs through the hatches of a tank truck or trailer, using a loading arm equipped with a vapor collecting adaptor, a pneumatic, hydraulic, or mechanical means shall be provided to ensure a vapor-tight seal between the adaptor and the hatch.

~~(3) A means shall be provided in either system to prevent organic material drainage from the loading device when it is removed from any tank truck or trailer, or to accomplish complete drainage before removal.~~

(4)(ii) When loading is effected through means other than hatches, all loading and vapor lines shall be equipped with fittings which that make vapor-tight connections and which must be closed when disconnected or which close automatically when disconnected.

~~(5)(B) Vapor-disposal portion of he system.~~ The vapor-disposal portion of the system shall consist of ~~one of the following:~~

(A)(i) a vapor-liquid absorber system with a minimum recovery efficiency of 90 percent by weight of all the organic material-VOC vapors and gases entering such disposal system; or,

(B)(ii) a variable-vapor space tank, compressor, and fuel-gas system of sufficient capacity to receive all organic material-VOC vapors and gases displaced from the tank trucks and trailers being loaded.

(2) Prevention of VOC drainage. A means shall be provided in either loading system specified in subsection (a) to prevent VOC drainage from he loading device when it is removed from any tank truck or trailer, or to accomplish complete drainage before removal.

(b) Loading facilities with throughput equal to or less than 40,000 gallons per day.

~~(1) No person shall build or install or permit the building or installation of a stationary organic material. Each loading pipe at a VOC loading facility having a with an aggregate throughput of 40,000 gallons (150,000 liters) per day gal/d (151,416 l/d) or less from its aggregate loading pipes unless each is shall be equipped with a system for submerged filling of tank trucks or trailers properly installed, in good working order and operating in such a manner that which is installed and operated to maintain a 97 percent submergence factor is maintained.~~

~~(2)(2) Paragraph 252:100-37-16(b)(1) apply-applies to any facility which that loads organic materials-VOCs into any tank truck or trailer with a capacity greater than 200 gal (757 l) which is designed for transporting organic materials and having a capacity in excess of 200 gallons (760 liters)VOCs.~~

(c) Exemptions. Loading facilities subject to the requirements of 40 CFR Subpart XX or 40 CFR 63 Subpart R are exempt from the requirements of 252:100-37-16 (a) and (b).

252:100-37-17. Effluent water separators [AMENDED AND RENUMBERED TO 252:100-37-37]

~~No person shall build or install or permit the building or installation of a single or multiple compartment organic material water separator which receives effluent water containing 200 gallons (760 liters) a day or more or any organic material from any equipment processing, refining, treating, storing or handling organic materials unless the compartment receiving said effluent water is equipped with one of the following vapor loss control devices, properly installed, in good working order and in operation:~~

- ~~(1) A container having all openings sealed and totally enclosing the liquid contents. All gauging and sampling devices shall be gas tight except when gauging or sampling is taking place. The oil removal devices shall be gas tight except when manual skimming, inspection and/or repair is in progress;~~
- ~~(2) A container equipped with a floating roof, consisting of a pontoon type, double-deck type roof, or internal floating cover, which will rest on the surface of the contents and is equipped with a closure seal, or seals, to close the space between the roof edge and container wall. All gauging and sampling devices shall be gas tight except when gauging or sampling is taking place. The oil removal devices shall be gas tight except when manual skimming, inspection and/or repair is in progress;~~
- ~~(3) A container equipped with a vapor recovery system, consisting of a vapor gathering system capable of collecting the organic material vapors and gases discharged and a vapor disposal system capable of processing such organic material vapors and gases so as to prevent their emission to the atmosphere and with all tank gauging and sampling devices gas tight except when gauging or sampling is taking place. The organic material removal devices shall be gas tight except when manual skimming, inspection and/or repair is in progress; or,~~
- ~~(4) Containers equipped with controls of equal efficiency provided such equipment is submitted to and approved by the Executive Director.~~

252:100-37-18. Pumps and compressors [AMENDED AND RENUMBERED TO 252:100-37-38]

~~No person shall build or install or permit the building or installation of any pump or compressor handling organic material compounds unless rotating type pumps and compressors are equipped with mechanical seals or other equipment of equal efficiency; or reciprocating type pumps and compressors are equipped with packing glands properly installed and in good working order such that the emissions from the drain recovery system are limited to two cubic inches of liquid organic material in any 15 minute period at standard conditions per pump or compressor.~~

**PART 5. CONTROL OF ORGANIC SOLVENTS
VOCs IN COATING OPERATIONS**

252:100-37-25. Coating of parts and products

~~(a) Standards. No owner or operator subject to the provision of this Section shall discharge or cause the discharge into the atmosphere from an existing coating line or individual coating operation any organic solvent in excess of the amounts, listed in the following table, per gallon of coating, excluding water, delivered to the coating applicator. No owner or operator of any coating line or coating operation with VOC emissions shall use coatings that as applied contain VOCs in excess of the amounts listed~~

below. (Limits are expressed in pounds of VOC per gallon of coating, excluding the volume of any water and exempt organic compounds.)[applicator in SIP]

Type of coating	Pounds of organic solvent per gallon of paint (less water)		
	Jan. 79 limit	Jan. 81 limit	Jan. 82 limit
Alkyd primer	5.6	5.2	4.8
Vinyls	6.4	6.4	6.0
NC lacquers	6.8	6.6	6.4
Acrylics	6.4	6.4	6.0
Epoxies	5.6	5.2	4.8
Maintenance finishes	5.6	5.2	4.8
Custom products finishes	6.8	6.6	6.5
(1) Alkyd primer-	4.8		
(2) Vinyls -	6.0		
(3) NC lacquers -	6.4		
(4) Acrylics -	6.0		
(5) Epoxies -	4.8		
(6) Maintenance finishes -	4.8		
Custom products finishes -	6.5		

(b) **Plant-wide emission plan.** ~~An owner/operator may develop a plant-wide emission plan instead of having each coating line comply with the emission limitations prescribed in the table in (a) of this section, provided:~~

(1) ~~(1)~~ **Development of a plant-wide emission plan.** An owner or operator may develop a plant-wide emission plan instead of having each coating line comply with the VOC content limitations in 252:100-37-25 (a). If the following conditions are met.

~~(A) the~~ The owner or operator demonstrates, by means of approved material balance or manual emission test methods, by the methods in 252:100-5-2.1 (d) that sufficient reductions in organic solvents emissions of VOCs may be obtained by controlling other facilities/sources within the plant to the extent necessary to compensate for all excess emissions which that result from one or more coating lines not achieving the prescribed limitation. Such demonstration shall be described made in writing and shall include:

~~(A)(i) A~~ a complete description of the coating line or lines which that will not cannot comply with the emission VOC content limitation in 252:100-37-25(a);

~~(B)(ii) Quantification~~ quantification of emissions, in terms of pounds per day of organic solvents VOCs, which are in excess of the prescribed emission VOC content limitation for each coating line described under 252:100-37-25(b)(1)(A) 252:100-37-25 (b) (1) (A) (i);

~~(C)(iii) A~~ a complete description of each facility and the related control system, if any, for those facilities within the plant where how emissions will be decreased at specific sources to compensate for excess emissions from each coating line described under 252:100-37-25(b)(1)(A) 252:100-37-25 (b) (1) (A) (i) and the date on which such reductions will be achieved;

~~(D)(iv) Quantification~~ quantification of emissions, in terms of pounds per day of ~~organic solvents~~ VOCs, for each ~~facility~~ source described under ~~252:100-37-25(b)(1)(C)~~ 252:100-37-25 (b) (1) (A) (iii), both before and after the improvement or installation of any applicable control system, or operational changes to such a facility or facilities to reduce emissions ~~and the date on which such reductions will be achieved~~; and,

~~(E)(v) A~~ a description of the procedures and methods used to determine the emissions of ~~organic solvents~~ VOCs.

~~(2)(B) the~~ The plant-wide emission reduction plan does not include decreases in emissions resulting from requirements of other applicable air pollution rules. ~~The plant-wide emission reduction plan may include decreases in emissions accomplished through installation or improvement of a control system or through physical or operational changes to facilities, including permanently reduced production or closing a facility, located on the premises of a surface-coating operation.~~

~~(3)(2) Compliance with a plant-wide emission plan.~~ The implementation of a plant-wide emission reduction plan instead of compliance with the ~~emissions~~ VOC content limitation prescribed in 252:100-37-25(a) ~~has been expressly~~ must be approved in writing by the ~~Executive Division~~ Director. Upon approval, any emissions in excess of those established for each facility under the plan shall be a violation of this Subchapter.

~~(c) Emission limitation.~~ No person shall discharge into the atmosphere more than 3,000 pounds of organic materials in any one day nor more than 450 pounds in any one hour from any article, machine, equipment or other contrivance in which any organic solvent or any material containing such solvent is employed or applied, unless such discharge has been reduced by at least 85 percent or has applied BACT or better as determined by the Executive Director.

~~(d)(c) Exemption.~~ Owners or operators of sources that are computed to emit less than 100 pounds of organic solvent VOC per 24 hr./day 24-hour day are exempt from the requirements of this Section.

~~(e)(d) Alternate standard.~~ Emissions ~~The use of coating with VOC contents in excess of those permitted by 252:100-37-25(a) through 252:100-37-25(d) are or 252:100-37-25 (b) is allowable if both of the following conditions are met:~~

(1) VOC emissions are reduced to the quantity that would result in the absence of control are reduced occur if the coating used complied with the VOC content allowed in 252:100-37-25 (a) by:

(A) 90 percent, by incineration; or,

(B) 85 percent, by absorption or any other process of equivalent reliability and effectiveness; and, absorption/adsorption; or,

(C) any other process of equivalent reliability and effectiveness.

(2) No air pollution, as defined by the Clean Air Act, results.

252:100-37-26. Clean up with organic solvents

~~Emissions of organic materials to the atmosphere from the clean up with organic solvents, as defined in 252:100-37-2, VOCs of any article, machine, or equipment or other contrivance used in applying coatings controlled in 252:100-37-25(a) through 252:100-37-25(d) 252:100-37-25 (d) shall be included with the other emissions of~~

~~organic solvents from the coating line or operation counted~~ in determining compliance with those rules.

PART 7. CONTROL OF SPECIFIC PROCESSES

252:100-37-35. Waste gas disposal

(a) **Ethylene manufacturing emissions.** ~~No person owner or operator shall build or install or permit the building or installation of any ethylene manufacturing plant unless~~ the waste-gas stream under normal operating conditions is properly burned at 1,300°F. for 0.3 seconds or greater in a direct-flame afterburner equipped with an indicating pyrometer ~~which that~~ is positioned in the working area for the operator's ready monitoring or an equally effective catalytic vapor incinerator also with pyrometer. Proper burning of the waste-gas stream is defined as reduction by 98 percent of the ethylene emissions originally present in the waste-gas stream.

(b) **Vapor blowdown.** Except where inconsistent with the "Minimum Federal Safety Standards for the Transportation of Natural and Other Gas by Pipeline," or any State of Oklahoma regulatory agency, ~~no person shall emit organic gases to the atmosphere owner or operator shall allow VOC gases to be emitted~~ from a vapor recovery blowdown system unless these gases are burned by smokeless flares, or an equally effective control device as approved by the ~~Executive Division~~ Director.

252:100-37-36. Fuel-burning and refuse-burning equipment

~~No person shall cause or allow the emission of hydrocarbons or other organic materials from any fuel-burning or refuse-burning equipment. All such fuel-burning or refuse-burning equipment shall be operated as to minimize such emissions of VOC.~~ Among other things, such operation shall assure, based on manufacturer's data and good engineering practice, that the equipment is not overloaded; that it is properly cleaned, operated, and maintained; and that temperature and available air are sufficient to provide essentially complete combustion.

252:100-37-37. Effluent water separators

A single-compartment or multiple-compartment VOC/water separator that receives effluent water containing 200 gal/d (760 l/d) or more of any VOC from any equipment processing, refining, treating, storing or handling VOCs shall comply with one of the following sets of conditions.

- (1) ~~0~~— The container totally encloses the liquid contents and all openings are sealed. All gauging and sampling devices shall be gas-tight except when gauging or sampling is place. The oil removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.
- (2) The container is equipped with an external floating roof that consists of a pontoon type or double-deck type cover, or a fixed roof with an internal-floating cover. The cover shall rest on the surface of the contents and be equipped with a closure seal, or seals, to close the space between the cover edge and container wall. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The oil removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.

- (3) The container is equipped with a vapor-recovery system that consists of a vapor-gathering system capable of collecting the VOC vapors and gases discharged and a vapor-disposal system capable of processing such vapors and gases to prevent their emission to the atmosphere. All tank gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The VOC removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.
- (4) The container is approved prior to use by the Division Director and is equipped with controls that have efficiencies equal to the controls listed in 252:100-37-37 (1) through (3).

252:100-37-38. Pumps and compressors

- (a) Any pump or compressor handling VOCs shall meet the following conditions.
 - (1) Rotating type pumps and compressors are equipped with mechanical seals or other equipment of equal efficiency.
 - (2) Reciprocating type pumps and compressors are equipped with packing glands.
 - (3) Emissions from the drain recovery system do not exceed 2 in.³ of liquid VOC in any 15-minute period per pump or compressor at standard conditions.
- (b) Pumps and compressors subject to the standards for pumps and compressors contained in 40 CFR 60 Subparts VV, GGG, or KKK are exempt from 252:100-37-38.

PART 9. PERMIT BY RULE FOR VOC STORAGE AND LOADING FACILITIES

252:100-37-41. Applicability

Any new VOC storage and/or loading facility may be constructed and any existing VOC storage and/or loading facility may be operated under this Part if the following conditions are met.

- (1) The facility is located in an area designated as unknown or attainment for ozone.
- (2) Each storage vessel located at the facility meets one of the following criteria.
 - (A) The storage capacity is 19,813 gal (75 m³) or less.
 - (B) The storage capacity is greater than 19,813 gal (75 m³) but less than 39,889 gal (151 m³) and the liquid stored has a maximum true vapor pressure less than 0.51 psia (3.5 kPa).
- (3) The facility is designed to have a throughput of 19,998 gal/d (75,700 l/d) or less from the aggregate loading pipes.
- (4) The facility meets the requirements of 252:100-7-60 (a), (b), and (c).

252:100-37-42. Permit-by-rule requirements

- (a) An owner or operator shall submit annual emission inventory reports and meet the requirements of 252:100-37-5, regarding operation and maintenance, and 252:100-37-38, regarding pumps and compressors.
- (b) No owner or operator shall build or install a new stationary VOC storage vessel with a capacity of 400 gal (1.5 m³) or greater unless it is equipped with a permanent submerged fill pipe as defined in 252:100-37-2.

- (c) No owner or operator shall build or install a stationary VOC loading facility unless each loading pipe is equipped with a system for submerged filling of tank trucks or trailers which is installed and operated to maintain a 97 percent submergence factor.
- (d) The owner or operator of a vessel with a storage capacity greater than 10,567 gal (40 m³) shall maintain records on site of the dimensions of the storage vessel and an analysis showing the capacity.

Oklahoma Register

Notices of Rulemaking Intent

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must publish a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides other information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained. For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-1216]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking.

Proposed rules:

252:100. Air Pollution Control

Appendix E. Primary Ambient Air Quality Standards [AMENDED]

Appendix F. Secondary Ambient Air Quality Standards [AMENDED]

Subchapter 7. Permits for Minor Sources [AMENDED]

Subchapter 23. Control of Emissions from Cotton Gins [AMENDED]

Subchapter 24. Control of Emissions from Grain Elevators [AMENDED]

Appendix L. PM-10 Emission Factors for Permit by Rule for Grain Elevators [NEW]

Subchapter 25. Smoke. Visible Emissions and Particulates [AMENDED]

Subchapter 37. Control of Emissions of Organic Materials [AMENDED]

Subchapter 39. Emission of Organic Materials in Nonattainment Areas [AMENDED]

Summary:

The proposed revisions to Appendices E and F will mirror the revised federal national ambient air quality standards for particulate matter (PM) and ozone announced by EPA in the July 18, 1997, Federal Register. The EPA revised the primary (health-based) PM standards by adding a new annual PM-2.5 standard set at 15 micrograms per cubic meter (ug/m^3) and a new 24-hr PM-2.5 standard set at $65 \text{ ug}/\text{m}^3$. EPA is retaining the current annual PM-10 standard of $50 \text{ ug}/\text{m}^3$ and changing the form of the PM-10 24-hr standard. The secondary (welfare-based) standards are also being adjusted to make them identical to the primary standards. Also, the previous 1-hr primary ozone standard is being phased out and replaced with a new 8-hr "concentration-based" standard of 0.08 ppm. The 3-yr average of the 4th highest daily maximum 8-hr ozone concentrations is used to determine compliance with the standard. The EPA also replaced the previous secondary standards with a standard identical to the new primary standard. The proposed revisions to Subchapter 7 will delete the lower limit of 5 tons per year for

Permit by Rule (PBR) facilities. This will allow those facilities with less than 5 tons per year emissions, which are subject to new source performance standards (NSPS) and national emissions standards for hazardous air pollutants (NESHAP), to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each Subchapter containing a PBR for specific facilities will be referenced under this new Part also. The proposed revisions to Subchapters 23 and 24 would simplify the language under the agency-wide re-write/de-wrong initiative. It is also proposed to add a new PBR section to both subchapters. The PBR will streamline the permitting process by creating a mechanism that will eliminate the necessity for some cotton gins and elevators to obtain an individual air quality permit. Also, a new Appendix L is proposed which contains PM-10 emission factors for PBR grain elevators. The proposed amendments to Subchapter 25 would fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the Department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P. Additionally, the Department proposes to exempt from Appendix P requirements those sources already subject to a new source performance standard and sources scheduled for retirement within 5 years after the amended rule takes effect. The amended rule would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include changing the time allowed for visible emissions during short-term occurrences to exceed the opacity standard to one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. A new subsection would contain methods for determining compliance with the opacity limits. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule. The proposed changes to Subchapters 37 and 39 are primarily intended to clarify, simplify and correct the rule and to respond to requests to exclude acetone and methylated siloxanes from the definition of volatile organic compound (VOC). The proposed changes to Subchapters 37 and 39 include clarification of language, correction of typographical errors, deletion of redundant language, and reformatting. Two substantive changes are proposed for

Notices of Rulemaking Intent

Subchapter 37 and one for Subchapter 39. One of those substantive changes affects both Subchapter 37 and 39. The definition of volatile organic compounds (VOC) in 252:100-37-2 and 252:100-39-2 has been revised in response to the Air Quality Council's direction to the staff to review the petition from the Chemical Manufacturers Association dated October 25, 1995, to exclude acetone from the definition of Volatile Organic Compounds (VOC); the request from American Airlines, Boeing, and Nordam, dated January 19, 1998, that acetone be excluded from the definition of VOC; and a request that methylated siloxanes be excluded from the definition of VOC. The definition of volatile organic compounds (VOC) has been modified to be consistent with the Environmental Protection Agency definition. The second substantive change for Subchapter 37 deals with the first sentence in 252:100-37-36 regarding fuel-burning and refuse-burning equipment, which has been deleted to resolve the contradiction between the first and second sentences. The Department is requesting comments on these proposed changes.

AUTHORITY:

Environmental Quality Board, 27A O.S. Supp. 1997, §§ 2-2-101 and 2-5-101 *et seq.*

COMMENT PERIOD:

Wednesday, July 15, 1998, through Tuesday, August 18, 1998. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by Tuesday, August 11, 1998. Also scheduled before the Environmental Quality Board at their meeting on Tuesday, September 15, 1998 - 9:30 a.m. in Alva (Location to be determined. See contact person.)

PUBLIC HEARINGS:

Tuesday, August 18, 1998 - 9:30 a.m. briefing and 1:00 p.m. hearing, Department of Environmental Quality, Air Quality Division, 707 N. Robinson, Room 101, Oklahoma City, Oklahoma.

COPIES OF PROPOSED RULES:

Copies of the rules will be available July 15, 1998, for review at the Air Quality Division office at the address listed above or may be obtained from Myrna Bruce at 405-702-4177.

RULE IMPACT STATEMENT:

A copy of the rule impact statements may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Michelle Martinez (Appendices E, F, L and Subchapter 24), Jeanette Buttram (Subchapters 7 and 25), Becky Mainord (Subchapter 23), Joyce Sheedy, Ph.D. (Subchapters 37 and 39). Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

ADDITIONAL INFORMATION:

Additional proposed revisions have been made to the version of Subchapter 25 that was the subject of a public hearing on June 16, 1998.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #98-1216; filed 6-25-98]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-1217]

INTENDED RULEMAKING ACTION:

Notice of proposed EMERGENCY and PERMANENT rulemaking.

Proposed rules:

252:100, Air Pollution Control: Subchapter 47, Control of Emissions from Existing Municipal Solid Waste Landfills [NEW]

Summary:

A new Subchapter 47 is proposed to establish state standards to control emissions from municipal solid waste (MSW) landfills that commenced construction, modification, or reconstruction before May 30, 1991, and accepted waste after November 8, 1987. These proposed rules will be included in Oklahoma's State 111(d) Plan and will provide the enforceable mechanism for implementing the provisions of the Emission Guidelines (EG) for MSW landfills (40 CFR 60 Subpart Cc). Subchapter 47 incorporates by reference sections of the New Source Performance Standards for MSW landfills (40 CFR 60 Subpart WWW). The proposed rules would affect privately and publicly owned MSW landfills that are actively accepting or are capable of accepting municipal solid waste as well as those that are closed. Landfill gas collection and control systems will be required for landfills that have design capacities greater than or equal to 2.5 million megagrams and 2.5 million cubic meters and have estimated emissions of at least 50 megagrams per year of non-methane organic compounds. The Department is requesting comments on this proposed rule.

AUTHORITY:

Environmental Quality Board, 27A O.S. Supp. 1997, §§ 2-2-101 and 2-5-101 *et seq.*

COMMENT PERIOD:

Wednesday, July 15, 1998, through Tuesday, August 18, 1998. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by Tuesday, August 11, 1998. Also scheduled

Notices of Rulemaking Intent

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must put a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides other information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained. For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-1259]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking.

PROPOSED RULES:

252:100. Air Pollution Control

Subchapter 7. Permits for Minor Sources [AMENDED]

Subchapter 23. Control of Emissions from Cotton Gins [AMENDED]

Subchapter 24. Control of Emissions from Grain Elevators [AMENDED]

Subchapter 25. Smoke, Visible Emissions and Particulates [AMENDED]

Subchapter 37. Control of Emissions of Organic Materials [AMENDED]

Subchapter 39. Emission of Organic Materials in Nonattainment Areas [AMENDED]

Appendix E. Primary Ambient Air Quality Standards [AMENDED]

Appendix F. Secondary Ambient Air Quality Standards [AMENDED]

Appendix L. PM-10 Emission Factors for Permit by Rule for Grain Elevators [NEW]

SUMMARY:

The proposed revisions to Appendices E and F will mirror the revised federal national ambient air quality standards for particulate matter (PM) and ozone announced by EPA in the July 18, 1997, Federal Register. The EPA revised the primary (health-based) PM standards by adding a new annual PM-2.5 standard set at 15 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) and a new 24-hr PM-2.5 standard set at $65 \mu\text{g}/\text{m}^3$. EPA is retaining the current annual PM-10 standard of $50 \mu\text{g}/\text{m}^3$ and changing the form of the PM-10 24-hr standard. The secondary (welfare-based) standards are also being adjusted to make them identical to the primary standards. Also, the previous 1-hr primary ozone standard is being phased out and replaced with a new 8-hr "concentration-based" standard of 0.08 ppm. The 3-yr average of the 4th highest daily maximum 8-hr ozone concentrations is used to determine compliance with the standard. The EPA also replaced the previous secondary standards with a standard identical to the new primary standard. The proposed revisions to

Subchapter 7 will delete the lower limit of 5 tons per year Permit by Rule (PBR) facilities. This will allow the facilities with less than 5 tons per year emissions, which are subject to new source performance standards (NSPS) and national emissions standards for hazardous air pollutants (NESHAP), to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each Subchapter containing a PBR for specific facilities will be referenced under this new Part also. The proposed revisions to Subchapters 23 and 24 would simplify the language under the agency-wide re-write/delete initiative. It is also proposed to add a new PBR section to both subchapters. The PBR will streamline the permitting process by creating a mechanism that will eliminate the necessity for some cotton gins and elevators to obtain an individual air quality permit. Also, a new Appendix L is proposed which contains PM-10 emission factors for PBR grain elevators. The proposed amendments to Subchapter 25 would fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the Department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P. Additionally, the Department proposes to exempt from Appendix L requirements those sources already subject to a new source performance standard and sources scheduled for retirement within 5 years after the amended rule takes effect. The amended rule would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include changing the time allowed for visible emissions during short-term occurrences to exceed the opacity standard to one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. A new subsection would contain methods for determining compliance with the opacity limits. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule. The proposed changes to Subchapters 37 and 39 are primarily intended to clarify, simplify and correct the rule and to respond to requests to exclude acetone and methylated siloxanes from the definition of volatile organic compound (VOC). The proposed changes to Subchapters 37 and 39 include clarification of language, correction of typographical errors, deletion of redundant language, and

Notices of Rulemaking Intent

reformatting. Two substantive changes are proposed for Subchapter 37 and one for Subchapter 39. One of those substantive changes affects both Subchapter 37 and 39. The definition of volatile organic compounds (VOC) in 252:100-37-2 and 252:100-39-2 has been revised in response to the Air Quality Council's direction to the staff to review the petition from the Chemical Manufacturers Association dated October 25, 1995, to exclude acetone from the definition of Volatile Organic Compounds (VOC); the request from American Airlines, Boeing, and Nordam, dated January 19, 1998, that acetone be excluded from the definition of VOC; and a request that methylated siloxanes be excluded from the definition of VOC. The definition of volatile organic compounds (VOC) has been modified to be consistent with the Environmental Protection Agency definition. The second substantive change for Subchapter 37 deals with the first sentence in 252:100-37-36 regarding fuel-burning and refuse-burning equipment, which has been deleted to resolve the contradiction between the first and second sentences. The Department is requesting comments on these proposed changes.

AUTHORITY:

Environmental Quality Board, 27A O.S.Supp. 1997, §§ 2-2-101 and 2-5-101 *et seq.*

COMMENT PERIOD:

Wednesday, July 15, 1998, through Tuesday, August 18, 1998. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by Tuesday, August 11, 1998. Also scheduled before the Environmental Quality Board at their meeting on Tuesday, September 15, 1998 - 9:30 a.m. in Alva (Location to be determined. See contact person.)

PUBLIC HEARINGS:

Tuesday, August 18, 1998 - 9:30 a.m. briefing and 1:00 p.m. hearing, Lincoln Plaza, 4545 N. Lincoln Blvd., Burgundy Room, Oklahoma City, Oklahoma.

COPIES OF PROPOSED RULES:

Copies of the rules will be available July 15, 1998, for review at the Air Quality Division office at the address listed above or may be obtained from Myrna Bruce at 405-702-4177.

RULE IMPACT STATEMENT:

A copy of the rule impact statements may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Michelle Martinez (Appendices E, F, L and Subchapter 24), Jeanette Buttram (Subchapters 7 and 25), Becky Mainord (Subchapter 23), Joyce Sheedy, Ph.D. (Subchapters 37 and 39). Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

ADDITIONAL INFORMATION:

Additional proposed revisions have been made to a version of Subchapter 25 that was the subject of a public hearing on June 16, 1998.

AN IDENTICAL NOTICE WAS PUBLISHED IN THE OKLAHOMA REGISTER ON JULY 15, 1998. AFTER PUBLICATION, THE COUNCIL MEETING LOCATION WAS CHANGED TO 4545 N. LINCOLN BLVD., BURGUNDY ROOM, OKLAHOMA CITY, OKLAHOMA. NO OTHER CHANGES WERE MADE TO THIS NOTICE.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-1358]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

PROPOSED RULES:

Subchapter 5. Registration, Emission Inventory and Annual Operating Fees [AMENDED]

Subchapter 7. Permits for Minor Sources [AMENDED]

Subchapter 8. Permits for Part 70 Sources [AMENDED]

Subchapter 23. Control of Emissions from Cotton Gins [AMENDED]

Subchapter 24. Control of Emissions from Grain Elevators [AMENDED]

Appendix L. PM-10 Emission Factors for Permit by Rule for Grain Elevators [NEW]

Subchapter 25. Smoke, Visible Emissions and Particulates [AMENDED]

Subchapter 37. Control of Emission of Organic Materials [AMENDED]

Subchapter 39. Emission of Organic Materials in Nonattainment Areas [AMENDED]

Subchapter 41. Control of Emission of Hazardous and Toxic Air Contaminants [AMENDED]

SUMMARY:

In Subchapter 5, the Department is considering possible increases in annual operating fees for both minor facilities and Part 70 sources.

The proposed revisions to Subchapter 7 will modify language applicable to de minimis facilities, Permit by Rule (PBR), and general permits. First, actual emissions of Total Suspended Particulates (TSP) will no longer be counted in determining whether a facility meets the definition of "de minimis facility." Second, the proposed revisions will delete the lower limit of 5 tons per year for PBR facilities. This will allow those facilities with less than 5 tons per year emissions, which are subject to New Source Performance Standards (NSPS) or National Emissions Standards for Hazardous Air Pollutants (NESHAP), to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a

PBR for specific facilities will be referenced under this new Part also. Third, the proposed revisions will delete the lower limit for general permits. This will allow facilities that may have less than 40 tons per year of emissions, but for which no PBR has been written, the opportunity to apply for coverage under an applicable general permit. The Department also proposes to delete the definition for "Volatile Organic Solvents (VOS)," because the proposed changes to Subchapters 37 and 39 would exclude that term from the rules.

The Department is considering increases in the permit application fees in both Subchapters 7 and 8.

The proposed revisions to Subchapters 23 and 24 would simplify the language under the agency-wide re-write/de-wrong initiative. It is also proposed to add a new PBR section to both subchapters. The PBR will streamline the permitting process by creating a mechanism that will eliminate the necessity for some cotton gins and elevators to obtain an individual air quality permit. Also, a new Appendix L is proposed which contains PM-10 emission factors for PBR grain elevators. Additional changes to both subchapters follow a proposed amendment of Subchapter 25 concerning short-term exceedances of the opacity standard. The revised rules would allow such exceedances during one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours.

The proposed amendments to Subchapter 25 would fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the Department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P. Additionally, the Department proposes to exempt from Appendix P requirements those sources already subject to a new source performance standard and sources scheduled for retirement within 5 years after the amended rule takes effect. The amended rule would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include exempting sources subject to opacity standards promulgated under Section 111 of the Federal Clean Air Act, along with a clarification of how the opacity standard will be determined at sources that have CEMs and how it will be determined at sources without CEMs. Other

Notices of Rulemaking Intent

proposed amendments to Subchapter 25 are designed to simplify and clarify the rule.

The proposed changes to Subchapters 37 and 39 include clarification of language, correction of typographical errors, deletion of redundant language, and reformatting. Three substantive changes are proposed for each Subchapter. One of those substantive changes affects both Subchapter 37 and 39. The definition of "volatile organic compounds (VOC)" in 252:100-37-2 and 252:100-39-2 has been revised in response to the Air Quality Council's direction to the staff to review the petition from the Chemical Manufacturers Association dated October 25, 1995, to exclude acetone from the definition of VOC; the request from American Airlines, Boeing, and Nordam, dated January 19, 1998, that acetone be excluded from the definition of VOC; a request dated April 21, 1997, from the Halogenated Solvents Industry Alliance, requesting that perchloroethylene be excluded from the definition of VOC; a request from Dow Corning that methylated siloxanes be excluded from the definition of VOC; and a request on behalf of the Eastman Chemical Company dated August 18, 1998, that methyl acetate be excluded from the definition of VOC. The definition of VOC has been modified to be consistent with the EPA definition. The second substantive change to Subchapter 37 is the removal of the requirement for permits and best available control technology (BACT) for new sources of VOC contained in 252:100-37-3(a). The third substantive change for Subchapter 37 deals with the first sentence in 252:100-37-36 regarding fuel-burning and refuse-burning equipment, which has been deleted to resolve the contradiction between the first and second sentences. The second substantive change to Subchapter 39 is the correction of the placement of "prior to lease custody transfer" in 252:100-39-30(b)(2). The third substantive change is the addition of a minimum annual throughput of 120,000 gallons and a minimum storage capacity of 2,000 gallons to 252:100-39-41(c) to determine applicability of subsection (c). In addition, the Department is requesting comments on 252:100-39-47, Control of VOS Emissions from Aerospace Industries Coatings Operations. Options include (1) retain the present (ARACT) rule and enforce the emissions reduction plan specified therein; (2) repeal the present rule and promulgate new rules regulating specialty coatings; or (3) retain the present plan, promulgate new rules for specialty coatings, and allow the facility to choose which of the two they prefer. These options recognize that the new NESHAP for the aerospace industry controls VOC emissions except for specialty coatings. The proposed amendments to Subchapter 41 include adopting by reference the Maximum Available Control Technology (MACT) standards for hazardous air pollutants that have been promulgated in 40 CFR 63 from July 1, 1997, through July 1, 1998. These are Subparts S and LL. The Department is also updating in Subchapter 41 the incorporation by reference of the NESHAP found in 40

CFR 61 to July 1, 1998. The Department is requesting comments on these proposed changes.

Notices of Rulemaking Intent

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must publish a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides other information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained. For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-1473]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

PROPOSED RULES:

Subchapter 5. Registration, Emission Inventory and Annual Operating Fees

252:100-5-2.2 [AMENDED]

Subchapter 7. Permits for Minor Facilities [AMENDED]

Subchapter 8. Permits for Part 70 Sources

252:100-8-1.7 [AMENDED]

252:100-8-4 [AMENDED]

Subchapter 37. Control of Emission of Organic Materials [AMENDED]

Subchapter 39. Emission of Organic Materials in Nonattainment Areas [AMENDED]

SUMMARY:

The Department is proposing to amend 252:100-5-2.2 to increase annual operating fees for minor facilities and to include a provision for state appropriations and federal grants to be used to offset annual operating fees assessed to minor facilities. The Department is also proposing to increase the base annual operating fee for Part 70 sources.

The proposed revisions to Subchapter 7 will modify language applicable to de minimis facilities, Permit by Rule (PBR), and general permits. First, actual emissions of Total Suspended Particulates (TSP) will no longer be counted in determining whether a facility meets the definition of "de minimis facility." Second, the proposed revisions will delete the lower limit of 5 tons per year for PBR facilities. This will allow those facilities with less than 5 tons per year emissions, which are subject to New Source Performance Standards (NSPS) or National Emissions Standards for Hazardous Air Pollutants (NESHAP), to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a PBR for specific facilities will be referenced under this new Part also. Third, the proposed revisions will delete the lower limit for general permits. This will allow facilities that may have less than 40 tons per year of emissions, but for which no

PBR has been written, the opportunity to apply for coverage under an applicable general permit.

The Department is also proposing to amend 252:100-7-3 to increase fees for minor facilities for applicability determinations, relocation permits, and applications for individual permits.

The Department is proposing amendments to 252:100-8-1.7 to increase applicability determination fees for Part 70 Sources. In addition, it is proposed that 252:100-8-4(a)(2) be amended to update the incorporation by reference of 40 CFR 63.41, 63.43, and 63.44 to July 1, 1998.

The proposed changes to Subchapters 37 and 39 include clarification of language, correction of typographical errors, deletion of redundant language, and reformatting. Substantive changes are proposed for each subchapter. One of those substantive changes affects both Subchapter 37 and 39. The definition of "volatile organic compounds (VOC)" in 252:100-37-2 and 252:100-39-2 has been revised in response to the Air Quality Council's direction to the staff to review the petition from the Chemical Manufacturers Association dated October 25, 1995, to exclude acetone from the definition of VOC; a request from American Airlines, Boeing, and Nordam, dated January 19, 1998; to exclude acetone from the definition of VOC; a request from the Halogenated Solvents Industry Alliance dated April 21, 1997, to exclude perchloroethylene from the definition of VOC; a request from Dow Corning to exclude methylated siloxanes from the definition of VOC; and a request on behalf of the Eastman Chemical Company dated August 18, 1998, to exclude methyl acetate from the definition of VOC. The definition of VOC has been modified to be consistent with the EPA definition. The second substantive change to Subchapter 37 is the removal of the requirement for permits and best available control technology (BACT) for new sources of VOC contained in 252:100-37-3(a). The third substantive change for Subchapter 37 deals with the first sentence in 252:100-37-36 regarding fuel-burning and refuse-burning equipment, which has been deleted to resolve the contradiction between the first and second sentences. The fourth substantive change to Subchapter 37 will be the addition of a new Part 9, Permit by Rule for Volatile Organic Compound Storage and Loading Facilities. The second substantive change to Subchapter 39 is the correction of the placement of "prior to lease custody transfer" in 252:100-39-30(b)(2). The third substantive

change is the addition of a minimum annual throughput of 120,000 gallons and a minimum storage capacity of 10,000 gallons to 252:100-39-41(c) to determine the applicability of subsection (c).

AUTHORITY:

330:55-7-1 through 330:55-7-5 [NEW]

SUMMARY:

The Board of Trustees of the Oklahoma Housing Finance Agency (OHFA) a public trust, have in compliance with Title II of the Cranston-Gonzalez National Affordable Housing Act, as amended and codified at 42 U.S.C. 12701-12839; and 24 CFR Part 92, Section 92.1, *et seq.* (Title II) adopted OHFA's Chapter 55 HOME Investments Partnership Program Rules (the 'Rules') for use in the allocation and issuance of HOME Program funds throughout the state of Oklahoma.

The Rules provide guidelines which OHFA follows in allocating HOME funds pursuant to Title II and are intended to provide a description of the procedures to be followed by applicants for evaluating and prioritizing applications. The Rules also provide an overview of Title II and other federal regulations which govern the administration of the HOME Program.

AUTHORITY:

These Chapter 55 rules are authorized by the Trustees of The Oklahoma Housing Finance Agency (OHFA), the Amended Trust Indenture of OHFA and the Bylaws of OHFA.

COMMENT PERIOD:

Written comments will be accepted November 16, 1998 through December 16, 1998. Comments should reference the section of the rules addressed and be sent to Oklahoma Housing Finance Agency, P. O, Box 26720, Oklahoma City, Oklahoma 73126-0720, Attn: Byron Debruler.

PUBLIC HEARING:

The following public hearing will be held: December 8, 1998, at 10:00 a.m. at the offices of OHFA, 1140 N. W. 63rd Oklahoma City, OK in the 4th floor conference room. All interested persons are invited to attend and present their views.

COPIES OF PROPOSED RULES:

Copies of the proposed Rules may be obtained by contacting Byron Debruler, at OHFA, 1140 Northwest 63rd, P. O. Box 26720, Oklahoma City, Oklahoma 73126-0720, 405-848-1144 Ext. 314. There will be a \$5.00 per copy charge.

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

[OAR Docket #98-1722]

RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

RULES:

- 252:100. Air Pollution Control
- Subchapter 37. Control of Emission of Organic Materials [AMENDED]
- Subchapter 39. Emission of Organic Materials in Nonattainment Areas [AMENDED]

SUMMARY:

The proposed changes to Subchapters 37 and 39 include clarification of language, correction of typographical and grammatical errors, deletion of redundant language, and reformatting. Substantive changes are proposed for each subchapter. One of these changes affects both Subchapters. The definition of Volatile Organic Compound (VOC) has been modified in both subchapters to be consistent with the definition used by the Environmental Protection Agency. The substantive changes to Subchapter 37 are: the removal of the requirement for Best Available Control Technology (BACT) for all new sources of VOC in 252:100-37-3(a); the addition of 252:100-37-16(c), exempting loading facilities that are subject to 40 CFR 60, Subparts K, Ka and Kb; the addition of 252:100-37-25(c), exempting loading facilities that are subject to 40 CFR 60, Subpart XX, and 40 CFR 63, Subpart R; the deletion of 252:100-37-36, regarding fuel-burning and refuse-burning equipment, to resolve the contradiction between the first and second sentences; the addition of 252:100-37-38(b), exempting pumps and compressors that are subject to the equipment leak standards in 40 CFR 60, Subparts VV, GGG and KKK; and the addition of a new Part 9, Permit by Rule for Volatile Organic Compound Storage and Loading Facilities. The substantive changes to Subchapter 39 are: the correction of the placement of the phrase "prior to lease custody transfer" in 252:100-39-30(b)(2), the deletion of requirements in Part 3 regarding petroleum refinery operations which were made redundant by new federal requirements, and the addition of a minimum annual throughput of 120,000 gallons and a minimum storage capacity of 10,000 gallons to 252:100-39-41(c) for the determination of applicability of subsection (c).

AUTHORITY:

Environmental Quality Board; 27A O.S. Supp. 1998, §§ 2-2-101 and 2-5-101, *et seq.*

COMMENT PERIOD:

Written comments on the proposed amendments to 252:100-37 and 252:100-39 will be accepted until February 10, 1999. Oral comments may be made at the Air Quality Advisory Council hearing, February 17, 1999.

PUBLIC HEARINGS:

Air Quality Advisory Council meeting will be held Wednesday, February 17, 1999 - 9:30 a.m. briefing and 1:30 p.m. hearing, at the Department of Environmental Quality, Room 101, 707 North Robinson, Oklahoma City, Oklahoma

Subchapter 252:100-37 and 252:100-39 are also scheduled to be heard by the Environmental Quality Board on Friday, March 5, 1999, 9:30 a.m., at the Association of County Commissioners of Oklahoma, 429 NE 50th Street, Oklahoma City, Oklahoma.

COPIES OF PROPOSED RULES:

Copies of the rules will be available January 15, 1999, for review at the Air Quality Division office at 707 North Robinson, Suite 4100, Oklahoma City, Oklahoma, 73102, or may be obtained from Myrna Bruce at (405) 702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statements may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Joyce Sheedy, Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100

ADDITIONAL INFORMATION:

Additional proposed revisions have been made to the versions of Subchapters 37 and 39 that were the subject of the public hearing on December 15, 1998.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

ANALYSIS:

The proposed revisions to Oklahoma Administrative Code 252:100-37, Control of Emission of Organic Materials, will simplify the language under the agency-wide re-right/de-wrong initiative. The revisions also include the following substantive changes: 1) the redefinition of the term "volatile organic compound (VOC)" and the substitution of this term for "organic materials", "organic solvents", and "hydrocarbons"; 2) the deletion of 252:100-37-3(a), which is a redundant requirement except to the extent that it requires new minor sources to apply best available control technology (BACT); 3) the exemption of methanol storage vessels at a drilling or production facility for use on site in 252:100-37-4(c); 4) the addition of 252:100-37-15(c), exempting VOC storage vessels that are subject to the equipment standards in 40 CFR 60 Subparts K, Ka, or Kb from the requirements of 252:100-37-15(a) and (b); 5) the addition of 252:100-37-16(c), exempting VOC loading facilities subject to the requirements of 40 CFR 60 Subpart XX or 40 CFR 63 Subpart R from the requirements of 252:100-37-15(a) and (b); 6) the deletion of 252:100-37-25(c), which allows the emission of 3,000 pounds per day or 450 pounds per hour of organic materials before controls are required; 7) the revision of the alternate standard for coatings in 252:100-37-25(d); 8) the correction of the impossible requirement in 252:100-37-36 that no emission of hydrocarbons or organic material is allowed from fuel-burning or refuse-burning equipment; 9) the addition of 252:37-38(b), exempting pumps and compressors subject to the standards for pumps and compressors contained in 40 CFR 60 Subparts VV, GGG, or KKK from 252:100-37-38; and 10) the addition of Part 9, which contains the permit by rule for VOC storage and loading facilities.

PURSUANT TO THE ACTIONS DESCRIBED HEREIN, THE FOLLOWING RULES ARE CONSIDERED FINALLY ADOPTED AS SET FORTH IN 75 O.S., SECTION 308.1(A), WITH AN EFFECTIVE DATE OF JUNE 11, 1999.

7321

Permanent Final Adoptions

SUBCHAPTER 37. CONTROL OF EMISSION OF ORGANIC MATERIALS

PART 1. GENERAL PROVISIONS

252:100-37-1. Purpose

The purpose of this Subchapter is to control the emission of organic materials from stationary sources to protect and enhance the air quality to insure that the Oklahoma air quality standard is not exceeded and significant deterioration prevented. The purpose of this Subchapter is to reduce the formation of ozone by controlling the emissions of volatile organic compounds (VOCs) from stationary sources.

252:100-37-2. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Acrylic" means a chemical coating containing polymers or co-polymers of acrylic or substitute acrylic acid in combination with suitable resinous modifiers and its. The primary mode of cure is solvent evaporation.

"Alkyd primer" means a chemical coating composed primarily of alkyd applied to a surface to provide a firm bond between the substrate and any additional paint coating.

"Custom product finishes/finish" means a proprietary chemical coating designed for a specific customer and end use.

"Cutback asphalt" means a basic asphalt or asphaltic concrete containing a petroleum distillate.

"Drilling or production facility" means all drilling and servicing equipment, wells, flow lines, separators, equipment, gathering lines, and auxiliary non-transportation-related equipment used in the production of petroleum but does not include natural gasoline plants.

"Effluent water separator" means any tank, box, sump, or other container in which any material compound VOC floating on, or entrained in, or contained in water entering such tank, box, sump or other the container is physically separated and removed from such the water prior to outfall, drainage, or recovery of such discharge of the water from the container.

"Epoxy" means a chemical coating containing epoxy groups and suitable chemical cross-linking agents. Epoxies prime The primary mode of cure involves a chemical reaction between the epoxy and the cross-linking agent.

"Lease custody transfer" means the transfer of produced crude oil and/or condensate, after processing and/or treating in the producing operations, from storage vessels or automatic transfer facilities to pipelines or any other form of transportation.

"Maintenance finishes/finish" means a chemical coating formulated to form a protection of that protects a given

substrate to from adverse chemical or physical conditions.

"Nitrocellulose lacquers/lacquer (NC lacquer)" means a chemical coating containing nitrocellulose and suitable resinous modifiers, and whose. The primary mode of cure is solvent evaporation.

"Organic materials" means chemical compounds of carbon excluding carbon monoxides, carbon dioxide, carbonic acid, metallic carbides, metal carbonates and ammonium carbonates.

"Refinery" means any facility engaged in producing gasoline, kerosene, fuel oils or other products through distillation of crude oil or through redistillation, cracking or reforming of unfinished hydrocarbon derivatives.

"Submerged fill pipe" means any fill pipe or discharge nozzle which that meets any one of the following conditions:

(A) the The bottom of the discharge pipe or nozzle is below the surface of the liquid in the receiving vessel for at least 95 percent of the volume filled;

(B) the The bottom of the discharge pipe or nozzle is less than 6 inches from the bottom of the receiving vessel;

(C) the The bottom of the discharge pipe or nozzle is less than 2 pipe or nozzle diameters from the bottom of the receiving vessel; or,

(D) other equivalent methods acceptable to the Executive Director.

"Vinyl" means a chemical coating containing plasterized plasticized or unplasterized unplasticized polymers and co-polymers of vinyl acetate, vinyl chloride, polyvinyl alcohols or their condensation products and the. The primary mode of cure is solvent evaporation.

"Volatile organic compound (VOC)" means any compound containing carbon and hydrogen or containing carbon and hydrogen in combination with any other element which has a vapor pressure of 1.5 pounds per square inch absolute or greater under actual storage conditions of carbon, excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate, which participates in atmospheric photochemical reactions. Any organic compound listed in 40 CFR 51.100(s)(1) will be presumed to have negligible photochemical reactivity and will not be considered to be a VOC.

"Volatile organic solvent (VOS)" means any organic compound which participates in atmospheric photochemical reactions; that is, any organic compound other than those which the EPA Administrator designates as having negligible photochemical reactivity. VOS may be measured by the EPA VOC reference method.

252:100-37-3. Applicability and compliance

(a) **New sources.** Any new source calculated to emit an organic material to the atmosphere either as a solvent or a reactant will be subject to permitting under OAC 252:100-7,

and with the application of Best Available Control Technology.

(b) Compliance schedule.

(1) All equipment and process previously regulated under OAC 252:100-37 and 252:100-39 and its effective dates of July 1, 1972 and December 8, 1974 must still abide by those dates.

(2)(a) New sources. In all areas except AQMA's, this Subchapter shall apply to all new installations of any equipment or processes described in this Subchapter, after the effective date of December 28, 1974.

(3)(b) Existing sources. Provisions Sections 15, 16, 35, 36, 37, and 38 of this Subchapter relating to control of VOC shall apply to all new and existing installations of any equipment or processes in use and described in this Subchapter that are located in Air Quality Maintenance Areas (AQMA's) as classified by the Environmental Protection Agency with regard to hydrocarbons and photochemical oxidants Tulsa County or Oklahoma County, and become after the effective on June 8, 1979; provided, however, that existing installations shall have twenty-four (24) months from the effective date within which to comply with this Subchapter date of June 9, 1981. Except that the The retrofit requirements for crude petroleum storage tanks will be limited vessels apply only to tanks vessels of greater than 10,000 barrel 420,000 gal (1,590 m³) capacity.

(c) Permit-by-rule facilities. This Subchapter does not apply to facilities registered under the VOC storage and loading facility permit-by-rule except as provided in Part 9.

(4) Provisions of this Subchapter relating to the control of organic solvent shall be as specified in the applicable Section.

252:100-37-4. Exemptions

(a) Organic materials as used in VOCs with vapor pressures less than 1.5 pounds per square inch absolute (psia) under actual storage conditions are exempt from 252:100-37-15 through 252:100-37-18, 252:100-37-16 and 252:100-37-27 and 252:100-37-28, 252:100-37-35 through 252:100-37-38 will not include: Methane (CH₄) or any material otherwise included which has vapor pressure of less than 1.5 pounds per square inch absolute under actual storage conditions.

(b) Petroleum or condensate stored, processed, treated, loaded, and/or treated transferred at a drilling or production facility prior to lease custody transfer is exempt from this Subchapter. This exemption also includes transfer and loading operations Methanol stored at a drilling or production facility for use on site is also exempt from this Subchapter.

(c) The storage, loading, processing, manufacturing or burning of organic materials VOCs on a farm or ranch, when such VOCs are used for agricultural purposes on farms and ranches said farm or ranch, is exempted from all provisions of 252:100-37-15 through 252:100-37-18 and 252:100-37-27 and

252:100-37-28, 252:100-37-16, 252:100-37-35 through 252:100-37-38, 252:100-39-41, and 252:100-39-42.

252:100-37-5. Operation and maintenance

Any vapor-loss control devices, packing glands and mechanical seals required by this Subchapter shall be properly installed, maintained, and operated.

PART 3. CONTROL OF VOLATILE ORGANIC COMPOUNDS VOCs IN STORAGE AND LOADING OPERATIONS

252:100-37-15. Storage of volatile organic compounds VOCs

(a) Storage capacities greater than 40,000 gallons. No person shall build, sell, or install or permit the building or installation of any new stationary tank, reservoir or other container Each VOC storage vessel with a capacity of more than 40,000 gallons (150,000 liters) capacity which will be used for storage of any organic materials, unless such tank, reservoir or other container is total (151 m³) shall be a pressure tank vessel capable of maintaining working pressures sufficient at all times to that prevent organic vapor or gas the loss of VOC to the atmosphere or is designed, and will be built and shall be equipped with one of the following vapor-loss control devices:

(1) An external floating roof, consisting of that consists of a pontoon type, internal floating cover roof, or double-deck type which will cover, or a fixed roof with an internal floating cover. The cover shall rest on the surface of the liquid contents and at all times (i.e., off the leg supports), except during initial fill, when the storage vessel is completely emptied, or during refilling. When the cover is resting on the leg supports, the process of filling, emptying, or refilling shall be continuous and shall be accomplished as rapidly as possible. The floating roof shall be equipped with a closure seal, or seals, to close the space between the roof cover edge and tank vessel wall. Such floating Floating roofs are not appropriate control devices if the organic materials VOCs have a vapor pressure of 1111.1 pounds per square inch absolute psia (568 mm Hg) (76.6 kPa) or greater under actual conditions. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place.

(2) A vapor-recovery system consisting that consists of a vapor-gathering system capable of collecting 85 percent or more of the uncontrolled organic material VOCs that would otherwise be emitted to the atmosphere; and a vapor-disposal system capable of processing such organic material so as these VOCs to prevent their emission to the atmosphere and with all tank. All vessel gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place.

Permanent Final Adoption

(3) Other equipment or means ~~methods that are~~ of equal efficiency for purposes of air pollution control as may be used when approved by the Executive Division Director prior to installation.

(b) Storage capacities of 400 gallons and greater. No person shall build, sell, or install or permit the building or installation of a new stationary organic material ~~Each VOC storage tank vessel~~ with a capacity of 400 gallons (1520 liters) ~~gal (1.5 m³)~~ or more unless such tank ~~is~~ shall be equipped with a permanent submerged fill pipe or is equipped with an organic material ~~a~~ vapor-recovery system as required in ~~252:100-37-5(a)~~ 252:100-37-15(a)(2).

(c) Exemptions. VOC storage vessels that are subject to equipment standards (e.g., a fixed roof in combination with an internal floating cover, an external floating roof, or a closed vent system and control device) in 40 CFR 60 Subparts K, Ka, or Kb are exempt from the requirements of 252:100-37-15(a) and (b).

252:100-37-16. Loading of volatile organic compounds VOCs

(a) Loading facilities with throughput greater than 40,000 gallons/day.

(1) ~~No person shall build or install or permit the building or installation of a stationary organic material~~ Each VOC loading facility having with a throughput greater than 40,000 gallons per day gal/d (151,416 l/d) from its aggregate loading pipes unless such loading facility is shall be equipped with a vapor-collection and disposal system ~~or unless all tank trucks or trailers are bottom loading~~ loaded with closed hatches closed, properly installed, in good working order and in operation.

(2) (1) Vapor-collection and disposal system. When loading in a vapor-collection and disposal system is effected through the hatches of a tank truck or trailer with a loading arm equipped with a vapor-collecting adaptor, pneumatic, hydraulic or other mechanical means shall be provided to force a vapor-tight seal between the adaptor and the hatch.

(A) Vapor-collection portion of the system.

(i) When loading VOCs through the hatches of a tank truck or trailer, using a loading arm equipped with a vapor collecting adaptor, a pneumatic, hydraulic, or mechanical means shall be provided to ensure a vapor-tight seal between the adaptor and the hatch.

(3) A means shall be provided in either system to prevent organic material drainage from the loading device when it is removed from any tank truck or trailer, or to accomplish complete drainage before removal.

(4) (ii) When loading is effected through means other than hatches, all loading and vapor lines shall be equipped with fittings which that make vapor-tight connections and which must be closed when

disconnected or which close automatically when disconnected.

(5) (B) Vapor-disposal portion of the system. The vapor-disposal portion of the system shall consist of one of the following:

(A) (i) a vapor-liquid absorber system with a minimum recovery efficiency of 90 percent by weight of all the organic material VOC vapors and gases entering such disposal system; or,

(B) (ii) a variable-vapor space tank, compressor, and fuel-gas system of sufficient capacity to receive all organic material VOC vapors and gases displaced from the tank trucks and trailers being loaded.

(2) Prevention of VOC drainage. A means shall be provided in either loading system specified in subsection (a) to prevent VOC drainage from the loading device when it is removed from any tank truck or trailer, or to accomplish complete drainage before removal.

(b) Loading facilities with throughput equal to or less than 40,000 gallons per day.

(1) ~~No person shall build or install or permit the building or installation of a stationary organic material~~ Each loading pipe at a VOC loading facility having a with an aggregate throughput of 40,000 gallons (150,000 liters) per day gal/d (151,416 l/d) or less from its aggregate loading pipes unless each is shall be equipped with a system for submerged filling of tank trucks or trailers properly installed, in good working order and operating in such a manner that which is installed and operated to maintain a 97 percent submergence factor is maintained.

(2) Paragraph 252:100-37-16(b)(1) ~~apply~~ applies to any facility which that loads organic materials VOCs into any tank truck or trailer with a capacity greater than 200 gal (757 l) which is designed for transporting organic materials and having a capacity in excess of 200 gallons (760 liters) VOCs.

(c) Exemptions. Loading facilities subject to the requirements of 40 CFR 60 Subpart XX or 40 CFR 63 Subpart R are exempt from the requirements of 252:100-37-16(a) and (b).

252:100-37-17. Effluent water separators [AMENDED AND RENUMBERED TO 252:100-37-37]

~~No person shall build or install or permit the building or installation of a single or multiple compartment organic material water separator which receives effluent water containing 200 gallons (760 liters) a day or more or any organic material from any equipment processing, refining, treating, storing or handling organic materials unless the compartment receiving said effluent water is equipped with one of the following vapor-loss control devices, properly installed, in good working order and in operation:~~

(1) ~~A container having all openings sealed and totally enclosing the liquid contents. All gauging and sampling~~

devices shall be gas-tight except when gauging or sampling is taking place. The oil removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress;

(2) A container equipped with a floating roof, consisting of a pontoon type, double-deck type roof, or internal floating cover, which will rest on the surface of the contents and is equipped with a closure seal, or seals, to close the space between the roof edge and container wall. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The oil removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress;

(3) A container equipped with a vapor recovery system, consisting of a vapor-gathering system capable of collecting the organic material vapors and gases discharged and a vapor disposal system capable of processing such organic material vapors and gases so as to prevent their emission to the atmosphere and with all tank gauging and sampling devices gas-tight except when gauging or sampling is taking place. The organic material removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress; or,

(4) Containers equipped with controls of equal efficiency provided such equipment is submitted to and approved by the Executive Director.

252:100-37-18. Pumps and compressors [AMENDED AND RENUMBERED TO 252:100-37-38]

No person shall build or install or permit the building or installation of any pump or compressor handling organic material compounds unless rotating type pumps and compressors are equipped with mechanical seals or other equipment of equal efficiency; or reciprocating type pumps and compressors are equipped with packing glands properly installed and in good working order such that the emissions from the drain recovery system are limited to two cubic inches of liquid organic material in any 15-minute period at standard conditions per pump or compressor.

PART 5. CONTROL OF ORGANIC SOLVENTS/VOCs IN COATING OPERATIONS

252:100-37-25. Coating of parts and products

(a) Standards. No owner or operator subject to the provision of this Section shall discharge or cause the discharge into the atmosphere from an existing coating line or individual coating operation any organic solvent in excess of the amounts, listed in the following table, per gallon of coating, excluding water, delivered to the coating applicator. No owner or operator of any coating line or coating operation with VOC emissions shall use coatings that as applied contain VOCs in excess of the amounts listed below. (Limits are expressed in pounds of VOC per gallon of coating, excluding the volume of any water and exempt organic compounds.)

Type of coating	Pounds of organic solvent per gallon of paint (less water)		
	Jan. 79 limit	Jan. 81 limit	Jan. 82 limit
Alkyd primer	5.6	5.2	4.8
Vinyls	6.4	6.4	6.0
NC lacquers	6.8	6.6	6.4
Acrylics	6.4	6.4	6.0
Epoxies	5.6	5.2	4.8
Maintenance finishes	5.6	5.2	4.8
Custom products finishes	6.8	6.6	6.5

- (1) Alkyd primer - 4.8
- (2) Vinyls - 6.0
- (3) NC lacquers - 6.4
- (4) Acrylics - 6.0
- (5) Epoxies - 4.8
- (6) Maintenance finishes - 4.8
- (7) Custom products finishes - 6.5

(b) Plant-wide emission plan. An owner/operator may develop a plant-wide emission plan instead of having each

coating line comply with the emission limitations prescribed in the table in (a) of this section, provided:

(1) Development of a plant-wide emission plan. An owner or operator may develop a plant-wide emission plan instead of having each coating line comply with the VOC content limitations in 252:100-37-25(a), if the following conditions are met.

(A) The owner or operator demonstrates, by means of approved material balance or manual

7325

Permanent Final Adoptions

emission test methods, by the methods in 252:100-5-2.1(d) that sufficient reductions in organic solvents emissions of VOCs may be obtained by controlling other facilities sources within the plant to the extent necessary to compensate for all excess emissions which that result from one or more coating lines not achieving the prescribed limitation. Such demonstration shall be described made in writing and shall include:

(A)(i) A complete description of the coating line or lines which that will not cannot comply with the emission VOC content limitation in 252:100-37-25(a);

(B)(ii) Quantification quantification of emissions, in terms of pounds per day of organic solvents VOCs, which are in excess of the prescribed emission VOC content limitation for each coating line described under 252:100-37-25(b)(1)(A) 252:100-37-25(b)(1)(A)(i);

(C)(iii) A complete description of each facility and the related control system, if any, for those facilities within the plant where how emissions will be decreased at specific sources to compensate for excess emissions from each coating line described under 252:100-37-25(b)(1)(A) 252:100-37-25(b)(1)(A)(i) and the date on which such reductions will be achieved;

(D)(iv) Quantification quantification of emissions, in terms of pounds per day of organic solvents VOCs, for each facility source described under 252:100-37-25(b)(1)(C) 252:100-37-25(b)(1)(A)(iii), both before and after the improvement or installation of any applicable control system, or operational changes to such a facility or facilities to reduce emissions and the date on which such reductions will be achieved; and,

(E)(v) A description of the procedures and methods used to determine the emissions of organic solvents VOCs.

(2)(B) The plant-wide emission reduction plan does not include decreases in emissions resulting from requirements of other applicable air pollution rules. The plant-wide emission reduction plan may include decreases in emissions accomplished through installation or improvement of a control system or through physical or operational changes to facilities, including permanently reduced production or closing a facility, located on the premises of a surface coating operation.

(3)(2) Compliance with a plant-wide emission plan. The implementation of a plant-wide emission reduction plan instead of compliance with the emissions VOC content limitation prescribed in 252:100-37-25(a) has been expressly must be approved in writing by the Executive Division Director. Upon approval, any emissions in excess of those established

for each facility under the plan shall be a violation of Subchapter.

(e) Emission limitation. No person shall discharge into the atmosphere more than 3,000 pounds of organic materials in any one day nor more than 450 pounds in any one hour from any article, machine, equipment or other contrivance in which any organic solvent or any material containing such solvent is employed or applied, unless such discharge has been reduced by at least 85 percent or has applied BACT or better as determined by the Executive Director.

(d)(c) Exemption. Owners or operators of sources that are computed to emit less than 100 pounds of organic solvent VOC per 24 hr./day 24-hour day are exempt from the requirements of this Section.

(e)(d) Alternate standard. Emissions The use of coatings with VOC contents in excess of those permitted by 252:100-37-25(a) through 252:100-37-25(d) are or 252:100-37-25(b) is allowable if both of the following conditions are met:

(1) VOC emissions are reduced to the quantity that would result in the absence of control are reduced occur if the coating used complied with the VOC content allowed in 252:100-37-25(a) by:

(A) 90 percent, by incineration; or,

(B) 85 percent, by absorption or any other process of equivalent reliability and effectiveness and, absorption/adsorption; or,

(C) any other process of equivalent reliability and effectiveness.

(2) no No air pollution, as defined by the Clean Air Act, results.

252:100-37-26. Clean up with organic solvents VOCs

Emissions of organic materials to the atmosphere from the clean up with organic solvents, as defined in 252:100-37-2, VOCs of any article, machine, or equipment or other contrivance used in applying coatings controlled in 252:100-37-25(a) through 252:100-37-25(d) 252:100-37-25(d) shall be included with the other emissions of organic solvents from the coating line or operation counted in determining compliance with those rules.

PART 7. CONTROL OF SPECIFIC PROCESSES

252:100-37-35. Waste gas disposal

(a) Ethylene manufacturing emissions. No person owner or operator shall build or install or permit the building or installation of any ethylene manufacturing plant unless the waste-gas stream under normal operating conditions is properly burned at 1,300° F. for 0.3 seconds or greater in a direct-flame afterburner equipped with an indicating pyrometer which that is positioned in the working area for the operator's ready monitoring or an equally effective catalytic vapor incinerator also with pyrometer. Proper burning of the waste-gas stream is defined as reduction by 98

percent of the ethylene emissions originally present in the waste-gas stream.

(b) Vapor blowdown. Except where inconsistent with the "Minimum Federal Safety Standards for the Transportation of Natural and Other Gas by Pipeline," or any State of Oklahoma regulatory agency, no person shall emit organic gases to the atmosphere. owner or operator shall allow VOC gases to be emitted from a vapor recovery blowdown system unless these gases are burned by smokeless flares, or an equally effective control device as approved by the Executive Division Director.

252:100-37-36. Fuel-burning and refuse-burning equipment

No person shall cause or allow the emission of hydrocarbons or other organic materials from any fuel-burning or refuse-burning equipment. All such fuel-burning or refuse-burning equipment shall be operated as to minimize such emissions of VOC. Among other things, such operation shall assure, based on manufacturer's data and good engineering practice, that the equipment is not overloaded; that it is properly cleaned, operated, and maintained; and that temperature and available air are sufficient to provide essentially complete combustion.

252:100-37-37. Effluent water separators

A single-compartment or multiple-compartment VOC/water separator that receives effluent water containing 200 gal/d (760 l/d) or more of any VOC from any equipment processing, refining, treating, storing or handling VOCs shall comply with one of the following sets of conditions.

- (1) The container totally encloses the liquid contents and all openings are sealed. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The oil removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.
- (2) The container is equipped with an external floating roof that consists of a pontoon type or double-deck type cover, or a fixed roof with an internal-floating cover. The cover shall rest on the surface of the contents and be equipped with a closure seal, or seals, to close the space between the cover edge and container wall. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The oil removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.
- (3) The container is equipped with a vapor-recovery system that consists of a vapor-gathering system capable of collecting the VOC vapors and gases discharged and a vapor-disposal system capable of processing such vapors and gases to prevent their emission to the atmosphere. All tank gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The VOC removal devices shall be

gas-tight except when manual skimming, inspection and/or repair is in progress.

(4) The container is approved prior to use by the Division Director and is equipped with controls that have efficiencies equal to the controls listed in 252:100-37-37(1) through (3).

252:100-37-38. Pumps and compressors

(a) Any pump or compressor handling VOCs shall meet the following conditions.

- (1) Rotating type pumps and compressors are equipped with mechanical seals or other equipment of equal efficiency.
- (2) Reciprocating type pumps and compressors are equipped with packing glands.
- (3) Emissions from the drain recovery system do not exceed 2 in.³ of liquid VOC in any 15-minute period per pump or compressor at standard conditions.

(b) Pumps and compressors subject to the standards for pumps and compressors contained in 40 CFR 60 Subparts VV, GGG, or KKK are exempt from 252:100-37-38.

PART 9. PERMIT BY RULE FOR VOC STORAGE AND LOADING FACILITIES

252:100-37-41. Applicability

Any new VOC storage and/or loading facility may be constructed and any existing VOC storage and/or loading facility may be operated under this Part if the following conditions are met.

- (1) The facility is located in an area designated as unknown or attainment for ozone.
- (2) Each storage vessel located at the facility meets one of the following criteria.
 - (A) The storage capacity is 19,813 gal (75 m³) or less.
 - (B) The storage capacity is greater than 19,813 gal (75 m³) but less than 39,889 gal (151 m³) and the liquid stored has a maximum true vapor pressure less than 2.18 psia (15.0 kPa).
 - (C) The storage capacity is greater than or equal to 39,889 gal (151 m³) and the liquid stored has a maximum true vapor pressure less than 0.51 psia (3.5 kPa).
- (3) The facility is designed to have a throughput of 19,998 gal/d (75,700 l/d) or less from the aggregate loading pipes.
- (4) The facility meets the requirements of 252:100-7-60(a), (b), and (c).

252:100-37-42. Permit-by-rule requirements

- (a) An owner or operator shall submit annual emission inventory reports and meet the requirements of 252:100-37-5, regarding operation and maintenance, and 252:100-37-38, regarding pumps and compressors.
- (b) No owner or operator shall build or install a new

Permanent Final Adoption

stationary VOC storage vessel with a capacity of 400 gal (1.5 m³) or greater unless it is equipped with a permanent submerged fill pipe as defined in 252:100-37-2.

(c) No owner or operator shall build or install a stationary VOC loading facility unless each loading pipe is equipped with a system for submerged filling of tank trucks or trailers which is installed and operated to maintain a 97 percent submergence factor.

(d) The owner or operator of a vessel with a storage capacity greater than 10,567 gal (40 m³) shall maintain records on site of the dimensions of the storage vessel and an analysis showing the capacity.

INCORPORATIONS BY REFERENCE:

No additional incorporations by reference were added by the proposed revision.

ANALYSIS:

The proposed revisions to Oklahoma Administrative Code 252:100-39, Emission of Organic Materials in Nonattainment Areas, will simplify the language under the agency-wide re-write/de-wrong initiative. The proposed revisions also include the following substantive changes: 1) the redefinition of the term "volatile organic compound (VOC)" and the substitution of this term for "organic materials", "organic solvents", "volatile organic solvent (VOS)" and in some instances "hydrocarbons"; 2) the correction of the placement of "prior to lease custody transfer" in 252:100-39-30(b); 3) the addition of 252:100-39-30(b)(3) and (4), exempting storage vessels subject to the equipment standards in 40 CFR 60 Subparts Ka or Kb and/or the equipment standards in 40 CFR 63 Subparts CC or G from the requirements of 252:100-39-30; 4) the addition of a minimum annual throughput of 120,000 gallons and a minimum storage capacity of 10,000 gallons for determining applicability of 252:100-39-41(c); and 5) the clarification of the definition of "aerospace" in 252:100-39-47(b)(1), adding the words "rework or repair".

PURSUANT TO THE ACTIONS DESCRIBED HEREIN, THE FOLLOWING RULES ARE CONSIDERED FINALLY ADOPTED AS SET FORTH IN 75 O.S., SECTION 308.1(A), WITH AN EFFECTIVE DATE OF JUNE 11, 1999.

SUBCHAPTER 39. EMISSION OF ORGANIC MATERIALS IN NONATTAINMENT AREAS

PART 1. GENERAL PROVISIONS

252:100-39-1. Purpose

The purpose of this Subchapter is to control the emission of organic materials from stationary sources located in nonattainment areas and to specify the additional control measures required to protect and enhance the air quality to insure that the Oklahoma air quality standard is

Air Quality Council

BRIEFING AGENDA
Department of Environmental Quality
AIR QUALITY COUNCIL REGULAR MEETING
TUESDAY, AUGUST 18, 1998, 9:30 A.M.
4545 NORTH LINCOLN BOULEVARD
BURGUNDY ROOM
Oklahoma City, Oklahoma

1. **Call to Order** Chairman
2. **Division Director's Report** Dyke
Informational update of current events and AQD activities

PUBLIC HEARINGS

3. **OAC 252:100-47 Control of Emissions from Existing Municipal Solid Waste Landfills [NEW]** Bradley
Proposes to establish state standards to control emissions from certain existing municipal solid waste landfills that commenced construction, modification, or reconstruction before May 30, 1991 and accepted waste after November 8, 1987. The proposed rules to be included in Oklahoma's State 111(d) Plan provide the enforceable mechanism for implementing the federal emission guidelines (40 CFR 60 subpart Cc.)
Discussion by Council/Public
4. **State 111(d) Plan for Municipal Solid Waste Landfills** Bradley
The proposed State 111(d) Plan outlines Oklahoma's program to implement the emission guidelines for municipal solid waste landfills. Federal regulations (40 CFR 60 Subparts B and Cc) require that a public hearing be held to receive comments from the Council and public on the proposed plan.
Discussion by Council/Public; Council approval is not required.
5. **OAC 252:100 Air Pollution Control:** Martinez
Appendix E, Primary Ambient Air Quality Standards [AMENDED]
Appendix F, Secondary Ambient Air Quality Standards [AMENDED]
Proposed revisions to Appendices E and F will mirror the revised federal national ambient air quality standards for particulate matter and ozone announced by EPA in the July 18, 1997, *Federal Register*.
Discussion by Council/Public
6. **OAC 272:100-7 Permits [AMENDED]** Buttram
Proposed revisions will delete the lower limit of 5 tons per year for Permit by rule (PBR) facilities allowing those facilities with less than 5 tons per year emissions which are subject to new source performance standards and national emissions standards for hazardous air pollutants to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a PBR for specific facilities will be referenced under this new Part also.
Discussion by Council/Public

7. **OAC 252:100-25 Smoke, Visible Emissions and Particulates [AMENDED]** **Buttram**
 The proposed amendments to Subchapter 25 are needed to fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P. and would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include changing the time allowed for visible emissions during short-term occurrences to exceed the opacity standard to one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. A new subsection would contain methods for determining compliance with the opacity limits. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule.
 Discussion by Council/Public

8. **OAC 252:100-23 Control of Emissions from Cotton Gins [AMENDED]** **Mainord**
 Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and add a new PBR section.
 Discussion by Council/Public

9. **OAC 252:100-24 Control of Emissions from Grain Elevators [AMENDED]** **Martinez**
 Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and add a new PBR section.
 Discussion by Council/Public

10. **OAC 252:100-37 Control of Emissions of Organic Materials [AMENDED]** **Sheedy**
 Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. A substantive change deletes a sentence regarding fuel-burning and refuse-burning equipment resolving a contradiction.
 Discussion by Council/Public

11. **OAC 252:100-39 Emissions of Organic Materials in Nonattainment Areas [AMENDED]** **Sheedy**
 Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC.
 Discussion by Council/Public

MEMORANDUM

TO: Air Quality Council

FROM: David R. Dyke, Interim Director
AIR QUALITY DIVISION

SUBJECT: Modifications to Subchapter 37

Enclosed is a copy of the proposed draft modifications to OAC 252:100-37 CONTROL OF EMISSION OF ORGANIC MATERIALS to be brought to public hearing on August 18, 1998. The proposed revisions are the result of the DEQ program to simplify, clarify and correct all its existing rules. The proposed revisions primarily simplify and clarify language, correct grammar, and impose consistency in format without involving substantive changes. However, in the process of simplifying and clarifying the rule, it was necessary to make a few substantive changes.

For simplicity the term "volatile organic compound" in 252:100-37-2 has been redefined to be consistent with the EPA definition.. The new definition includes the incorporation by reference of 40 CFR 52.100(s)(1) which lists the organic compounds that EPA has determined to have negligible photochemical reactivity. Presently Chapter 100 divides what EPA classifies as "volatile organic compound (VOC)" into "volatile organic compound (VOC)," "organic solvents," and "volatile organic solvent (VOS)." The Chapter contains two definitions of volatile organic compound neither of which is consistent with the EPA definition; a definition of volatile organic solvent which is almost exactly the same as the EPA definition of volatile organic compound, and two definitions of organic solvents. As part of the simplification process the staff propose to have only one definition of volatile organic compound which will be consistent with the EPA definition and to replace the terms "volatile organic solvent (VOS)" and "organic solvents" with "volatile organic compound (VOC)." The redefinition of volatile organic compound will also serve as a response to requests to exempt acetone, methylated siloxanes, and perchloroethylene from being considered VOCs. The proposed definition excludes substances with negligible photochemical reactivity and EPA has determined that these three substances have negligible photochemical reactivity and, therefore, are not considered to be VOCs .

The staff proposes deleting 252:100-37-3(a), which requires any new source that emits organic material as a solvent or reactant to obtain a permit and apply best available control technology (BACT). As originally proposed by the staff to the Air Quality Council, this subsection applied only to organic solvents and only to major sources. When approved by the Council, the major source requirement was omitted. The Council records from that time contain no explanation for this change. To require each new source of VOC to apply BACT, regardless of the size of the source, expends more time, effort and expense than can be justified by the Department considering the subsequent reductions in VOC emissions.

This is especially true for new sources in areas that are in attainment and have always been in attainment.. To require BACT for new major sources of VOC in Subchapter 37 is redundant. That requirement already exists in 252:100-8-5(d)(1)(A). Therefore, it is proposed to delete this subsection.

The staff proposes deleting the first sentence in 252:100-37-36 (fuel-burning and refuse-burning equipment), thereby eliminating the impossible requirement that no emission of hydrocarbons or organic materials is allowed from fuel-burning or refuse-burning equipment. This revision will also resolve the contradiction with the second sentence which requires such equipment to be operated to minimize these emissions.

An informational meeting to discuss revisions to Subchapter 37 for the purpose of simplification, clarification, and correction of the rule was held on Tuesday, July 7, 1998, at the DEQ office. This meeting was open to the public. Comments made at the meeting were given consideration in the proposed draft enclosed with this memorandum.

In the process of revising Subchapter 37, definitions were changed, moved, and/or deleted. The staff intends to revise 252:100-1-3, Definitions, later in the process of the "Re-write De-wrong" project. It is our intention to include in Subchapter 1 only those definitions that apply to all or practically all of the subchapters in Chapter 100. Definitions that apply to only one or two subchapters will be placed in those subchapters and definitions that are general to the entire Chapter 100 will be deleted from individual subchapters.

Staff will recommend the rule be considered again at the next Air Quality Council meeting on October 20, 1998.

In addition to the proposed draft revisions to Subchapter 37, a copy of 40 CFR 51.100(s)(1), and a summation of the proposed revisions with explanations are also included in the packet.

Enclosures: 3

SUBCHAPTER 37. CONTROL OF EMISSION OF VOLATILE ORGANIC MATERIALS COMPOUNDS (VOCs)

PART 1. GENERAL PROVISIONS

252:100-37-1.	Purpose	1
252:100-37-2.	Definitions	1
252:100-37-3.	Applicability and compliance	2
252:100-37-4.	Exemptions	3
252:100-37-5.	Operation and maintenance	4

PART 3. CONTROL OF VOLATILE ORGANIC COMPOUNDS VOCs IN STORAGE AND LOADING OPERATIONS

252:100-37-15.	Storage of volatile organic <u>compounds VOCs</u>	4
252:100-37-16.	Loading of volatile organic <u>compounds VOCs</u>	5
252:100-37-17.	Effluent water separators [NOTE: Moved and Renumbered]	6
252:100-37-18.	Pumps and compressors [NOTE: Moved and renumbered.]	7

PART 5. CONTROL OF ORGANIC SOLVENTS VOCs IN COATING OPERATIONS

252:100-37-25.	Coating of parts and products	7
252:100-37-26.	Clean up with organic solvents <u>VOCs</u>	9

PART 7. CONTROL OF SPECIFIC PROCESSES

PART 1. GENERAL PROVISIONS

252:100-37-1. Purpose

~~The purpose of this Subchapter is to control the emission of organic materials from stationary sources to protect and enhance the air quality to insure that the Oklahoma air quality standard is not exceeded and significant deterioration prevented. The purpose of this Subchapter is to prevent the formation of ozone by controlling the emissions of volatile organic compounds (VOCs). This Subchapter contains the requirements for control of the emissions of VOCs from stationary sources.~~

252:100-37-2. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise.

"Acrylic" means a chemical coating containing polymers or co-polymers of acrylic or substitute acrylic acid in combination with suitable resinous modifiers, ~~and its~~ The primary mode of cure is solvent evaporation.

"Alkyd primer" means a chemical coating composed primarily of alkyd applied to a surface to provide a firm bond between the substrate and any additional ~~paint coating~~. [NOTE: Coating is the term used in Section 25 of this Subchapter.]

"Custom product finishes" means a proprietary chemical coating designed for a specific customer and end use.

~~"Cutback asphalt" means a basic asphalt or asphaltic concrete containing a petroleum distillate. [NOTE: This term is not used in subchapter 37.]~~

"Effluent water separator" means any tank, box, sump, or other container in which any material ~~compound~~ VOC floating on, or entrained in, or contained in water entering such tank, box, sump or ~~other~~ the container is physically separated and removed from such the water prior to outfall, drainage, or recovery of such discharge of the water from the container.

"Epoxy" means a chemical coating containing epoxy groups and suitable chemical cross-linking agents. ~~Epoxy~~ The prime mode of cure involves a chemical reaction between the epoxy and the cross-linking agent.

"Maintenance finishes" means a chemical coating ~~formulated to form a protection of that protects~~ a given substrate ~~to~~ from adverse chemical or physical condition.

"Nitrocellulose lacquers (NC lacquers)" means a chemical coating containing nitrocellulose and suitable resinous modifiers, ~~and whose~~. The primary mode of cure is solvent evaporation.

~~"Organic materials" means chemical compounds of carbon excluding carbon monoxides, carbon dioxide, carbonic acid, metallic carbides, metal carbonates and ammonium carbonates. [NOTE: This term is no longer used in this Subchapter as a result of the proposed revisions.]~~

~~"Refinery" means any facility engaged in producing gasoline, kerosene, fuel oils or other products through distillation of crude oil or through redistillation, cracking or reforming of unfinished hydrocarbon derivatives. [NOTE: This term is not used in SC-37.]~~

~~"Submerged fill pipe" means any fill pipe or discharge nozzle which~~that meets any one of the following conditions:

(A) ~~the~~The bottom of the discharge pipe or nozzle is below the surface of liquid in the receiving vessel for at least 95 percent of the volume filled.

(B) ~~the~~The bottom of the discharge pipe or nozzle is less than 6 inches from the bottom of the receiving vessel.

(C) ~~the~~The bottom of the discharge pipe or nozzle is less than 2 pipe or nozzle diameters from the bottom of the receiving vessel.

(D) ~~either~~It is an equivalent method ~~method~~ acceptable to that ~~has been approved by the Executive Division Director.~~

~~"Vinyl" means a chemical coating containing plasterized or unplasterized polymers and co-polymers of vinyl acetate, vinyl chloride, polyvinyl alcohols or their condensation products. and~~The primary mode of cure is solvent evaporation.

~~"Volatile organic compound (VOC)" means any compound containing carbon and hydrogen or containing carbon and hydrogen in combination with any other element which has a vapor pressure of 1.5 pounds per square inch absolute or greater under actual storage conditions.~~of carbon, excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate, which participates in atmospheric photochemical reactions. This includes any organic compound except those designated as having negligible photochemical reactivity as listed in 40 CFR 51.100(s)(1), which is hereby incorporated by reference as it existed on July 1, 1998. [NOTE: This revision makes the AQD definition of VOC consistent with the EPA definition in 40 CFR 51.100(s). The proposed revision also complies with requests to exempt acetone, methylated siloxanes, and perchloroethylene from being considered VOCs (EPA's definition exempts these substances). It also brings AQD definition into agreement with the EPA reactivity policy as expressed in the memorandum dated July 21, 1987, from G. T. Helms, Chief, Control Programs Operations Branch, U.S. EPA, OAQPS and the comments contained in Attachment B of the June 9, 1988, letter from William B. Hathaway, EPA Region 6. This change will result in only one definition of VOC being used throughout the Chapter, thus simplifying the rules.]

~~"Volatile organic solvent (VOS)" means any organic compound which participates in atmospheric photochemical reactions, that is, any organic compound other than those which the EPA Administrator designates as having negligible photochemical reactivity. VOS may be measured by the EPA VOC reference method. [NOTE: This term is not used in Subchapter 37.]~~

252:100-37-3. Applicability and compliance

~~(a) New sources. Any new source calculated to emit an organic material to the atmosphere either as a solvent or a reactant will~~

~~be subject to permitting under OAC 252:100-7, and with the application of Best Available Control Technology. [NOTE: This subsection has been difficult to interpret and consequently has been interpreted in various ways over the years. As originally proposed it applied only to major sources of organic solvents. When adopted, the 100 tpy trigger level was missing and there appears to be no explanation for this change in the records. When applied to all new sources regardless of size, this subsection requires more time, effort, and expense than can be justified by the reduction in VOCs. If applied only to major sources, it is redundant since 252:100-8-5(b)(A) requires new major sources to obtain permits and to apply BACT.]~~

~~(b) Compliance schedule.~~

~~(1) All equipment and process previously regulated under OAC 252:100-37 and 252:100-39 and its effective dates of July 1, 1972 and December 8, 1974 must still abide by those dates.~~

~~(2)(a) In all areas except AQMA's, this~~ This Subchapter shall apply to all new installations of any equipment or processes described in this Subchapter, after the effective date of December 28, 1974.

~~(3)(b) Provisions~~ Sections 15, 16, 35, 36, 37, and 38 of this Subchapter relating to control of VOC shall apply to all new and existing installations of any equipment or processes in use and described in this Subchapter located in Air Quality Maintenance Areas (AQMA's) as classified by the Environmental Protection Agency EPA with regard to hydrocarbons VOCs and photochemical oxidants ozone (which in 1998 consists of Tulsa County and Oklahoma County), and become effective on June 8, 1979, provided, however, that existing installations shall have twenty four (24) months from the effective date within which to comply with this Subchapter June 9, 1981. ~~Except that the~~ The retrofit requirements for crude petroleum storage tanks vessels will be limited to tanks vessels of greater than 420,000 gallon (10,000 barrel) capacity. [NOTE: Only the sections listed in (a) previously applied to sources of VOC which was defined to exclude substances with vapor pressures less than 1.5 psia. The changes to this subsection were made so that such substances with vapor pressures less than 1.5 psia would remain exempt from the listed sections.]

~~(4) Provisions of this Subchapter relating to the control of organic solvent shall be as specified in the applicable Section.~~

252:100-37-4. Exemptions

(a) Organic materials as used in VOCs with vapor pressures less than 1.5 pounds per square inch (psia) under actual storage conditions are exempt from 252:100-37-15 through 252:100-37-18, 252:100-37-16 and 252:100-37-27 and 252:100-37-28, 252:100-37-35 through 252:100-37-38 will not include: Methane (CH₄) or any material otherwise included which has vapor pressure of less than 1.5 pounds per square inch absolute under actual storage conditions. [NOTE: The Sections listed in this subsection have applied only to VOCs with vapor pressures less than 1.5 psia. VOCs

with vapor pressures less than 1.5 psia as stored are exempt from the listed Sections to avoid a substantive change.]

(b) Petroleum or condensate stored, processed, treated, loaded, and/or ~~treated~~ transferred at a drilling or production facility prior to custody transfer is exempt from this Subchapter. This exemption also includes transfer and loading operations.

(c) The storage, loading, processing, manufacturing or burning of ~~organic materials~~ VOCs on a farm or ranch, when such VOCs are used for agricultural purposes on ~~farms and ranches~~ said farm or ranch, is exempted from all provisions of 252:100-37-15, ~~through 252:100-37-18~~ 252:100-37-16, and 252:100-37-27 and 252:100-37-28 252:100-37-35 through 252:100-37-38.

252:100-37-5. Operation and maintenance

Any required vapor-loss control devices, packing glands and mechanical seals shall be properly installed, maintained, and operated. [NOTE: This Section was added as part of the simplification and streamlining processes. This requirement appeared in several places in the rule. It has been added as a section and appears only once.]

PART 3. CONTROL OF VOLATILE ORGANIC COMPOUNDS VOCs IN STORAGE AND LOADING OPERATIONS

252:100-37-15. Storage of volatile organic compounds VOCs

(a) Storage capacities greater than 40,000 gallons. N o person owner or operator shall build, sell, or install or permit the building or installation of any new stationary tank, reservoir or other container storage vessel of more than 40,000 gallons (150,000 liters) capacity which will be used for storage of any organic materials VOCs, unless such tank, reservoir or other container it is to be a pressure tank vessel capable of maintaining working pressures sufficient at all times to that prevent organic vapor or gas the loss of VOC to the atmosphere or is designed, and will be built and equipped with one of the following vapor-loss control devices:

(1) A floating roof, consisting of pontoon type, internal floating cover, or double-deck type roof, ~~which that~~ will rest on the surface of the liquid contents. ~~and~~ The floating roof shall be equipped with a closure seal, or seals, to close the space between the roof edge and tank vessel wall. Such floating roofs are not appropriate control devices if the organic materials VOCs have a vapor pressure of 11 pounds per square inch absolute psia (568 mm Hg 75.8 kPa) or greater under actual conditions. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place.

(2) A vapor-recovery system consisting of a vapor-gathering system capable of collecting 85 percent or more of the uncontrolled organic material VOC that would otherwise be emitted to the atmosphere, and a vapor-disposal system capable of processing such organic material VOC so as to prevent their emission to the atmosphere, ~~and with all~~ All tank vessel

gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place.

(3) Other equipment or ~~means~~methods of equal efficiency for purposes of air pollution control ~~as may be when~~ approved by the ~~Executive~~Division Director prior to installation.

(b) Storage capacities of 400 gallons and greater. N O
~~person~~owner or operator shall build, ~~sell,~~ or install ~~or permit the building or installation of~~ a new stationary organic ~~material~~VOC storage ~~tank~~vessel with a capacity of 400 gallons (1520 liters) or more unless ~~such tank~~it is equipped with a permanent submerged fill pipe or is equipped with ~~an organic material~~a vapor-recovery system as required in ~~252:100-37-5(a)~~252:100-37-15(a).

252:100-37-16. Loading of ~~volatile organic compounds~~VOCs

(a) Loading facilities with throughput greater than 40,000 gallons/day.

(1) No ~~person~~owner or operator shall build or install ~~or permit the building or installation of~~ a stationary organic ~~material~~VOC loading facility having~~designed to have~~ a throughput greater than 40,000 gallons per day from its aggregate loading pipes unless ~~such loading facility~~it ~~is~~will be equipped with a vapor-collection and disposal system or unless loading is accomplished by bottom loading with closed hatches closed, properly installed, in good working order and in operation.

(2) ~~When loading in a vapor collection and disposal system is effected through the hatches of a tank truck or trailer with a loading arm equipped with a vapor collecting adaptor, pneumatic, hydraulic or other mechanical means shall be provided to force a vapor tight seal between the adaptor and the hatch.~~When loading VOCs (at a loading facility equipped with a vapor collection and disposal system) through the hatches of a tank truck or trailer, using a loading arm equipped with a vapor collecting adaptor, a pneumatic, hydraulic, or mechanical means shall be provided to ensure a vapor-tight seal between the adaptor and the hatch.

(3) A means shall be provided in either system to prevent ~~organic material~~VOC drainage from the loading device when it is removed from any tank truck or trailer, or to accomplish complete drainage before removal.

(4) When loading is effected through means other than hatches, all loading and vapor lines shall be equipped with fittings ~~which~~that make vapor-tight connections and which must be closed when disconnected or which close automatically when disconnected.

(5) The vapor-disposal portion of the system shall consist of ~~one of the following:~~

(A) a vapor-liquid absorber system with a minimum recovery efficiency of 90 percent by weight of all the ~~organic material~~VOC vapors and gases entering such disposal system; or,

(B) a variable-vapor space tank, compressor, and

fuel-gas system of sufficient capacity to receive all ~~organic material~~VOC vapors and gases displaced from the tank trucks and trailers being loaded.

(b) Loading facilities with throughput equal to or less than 40,000 gallons per day.

(1) ~~No person owner or operator shall build or install or permit the building or installation of a stationary organic material~~VOC loading facility ~~having~~designed to have a throughput of 40,000 gallons (150,000 liters) per day or less from its aggregate loading pipes unless each ~~is~~loading pipe will be equipped with a system for submerged filling of tank trucks or trailers properly installed, in good working order and operating in such a manner that ~~which will be installed and operated to maintain~~ a 97 percent submergence factor ~~is maintained~~.

(2) Paragraph 252:100-37-16(b)(1) ~~apply~~applies to any facility ~~which~~that loads organic materialsVOCs into any tank truck or trailer ~~with a capacity in excess of 200 gallons (760 liters) that is designed for transporting organic materialsVOCs and having a capacity in excess of 200 gallons (760 liters)~~.

252:100-37-17. Effluent water separators [NOTE: Moved and Renumbered]

~~No person shall build or install or permit the building or installation of a single or multiple compartment organic material water separator which receives effluent water containing 200 gallons (760 liters) a day or more or any organic material from any equipment processing, refining, treating, storing or handling organic materials unless the compartment receiving said effluent water is equipped with one of the following vapor loss control devices, properly installed, in good working order and in operation:~~

~~(1) A container having all openings sealed and totally enclosing the liquid contents. All gauging and sampling devices shall be gas tight except when gauging or sampling is taking place. The oil removal devices shall be gas tight except when manual skimming, inspection and/or repair is in progress;~~

~~(2) A container equipped with a floating roof, consisting of a pontoon type, double deck type roof, or internal floating cover, which will rest on the surface of the contents and is equipped with a closure seal, or seals, to close the space between the roof edge and container wall. All gauging and sampling devices shall be gas tight except when gauging or sampling is taking place. The oil removal devices shall be gas tight except when manual skimming, inspection and/or repair is in progress;~~

~~(3) A container equipped with a vapor recovery system, consisting of a vapor gathering system capable of collecting the organic material vapors and gases discharged and a vapor disposal system capable of processing such organic material vapors and gases so as to prevent their emission to~~

~~the atmosphere and with all tank gauging and sampling devices gas tight except when gauging or sampling is taking place. The organic material removal devices shall be gas tight except when manual skimming, inspection and/or repair is in progress, or,~~

~~(4) Containers equipped with controls of equal efficiency provided such equipment is submitted to and approved by the Executive Director. [NOTE: Renumbered as 252:100-37-37.]~~

252:100-37-18. Pumps and compressors [NOTE: Moved and renumbered.]

~~No person shall build or install or permit the building or installation of any pump or compressor handling organic material compounds unless rotating type pumps and compressors are equipped with mechanical seals or other equipment of equal efficiency, or reciprocating type pumps and compressors are equipped with packing glands properly installed and in good working order such that the emissions from the drain recovery system are limited to two cubic inches of liquid organic material in any 15 minute period at standard conditions per pump or compressor. [NOTE: Renumbered 252:100-37-38.]~~

PART 5. CONTROL OF ORGANIC SOLVENTS/VOCs IN COATING OPERATIONS

252:100-37-25. Coating of parts and products

(a) Standards. ~~No owner or operator subject to the provision of this Section shall discharge or cause the discharge into the atmosphere from an existing coating line or individual coating operation any organic solvent in excess of the amounts, listed in the following table, per gallon of coating, excluding water, delivered to the coating applicator. No owner or operator of any coating line or coating operation shall allow VOC emissions from coatings that contain VOCs in excess of the amounts listed in the following table.~~

Type of coating	Pounds of organic solvent/VOC per gallon of paint/coating (less water and exempted organic compounds)		
	Jan. 79 limit	Jan. 81 limit	Jan. 82 limit
Alkyd primer	5.6	5.2	4.8
Vinyls	6.4	6.4	6.0
NC lacquers	6.8	6.6	6.4
Acrylics	6.4	6.4	6.0
Epoxies	5.6	5.2	4.8
Maintenance finishes	5.6	5.2	4.8
Custom products finishes	6.8	6.6	6.5

(b) Plant-wide emission plan. ~~An owner/operator may develop a plant wide emission plan instead of having each coating line comply with the emission limitations prescribed in the table in (a) of~~

~~this section, provided:~~

(1) Development of a plant-wide emission plan. ~~An owner or operator may develop a plant-wide emission plan instead of having each coating line comply with the VOC content limitations in 252:100-37-25(a), if the following conditions are met.~~

~~(A) The owner or operator demonstrates, by means of approved material balance or manual emission test methods, by the methods in 252:100-5-2.1(d) that sufficient reductions in organic solvents VOCs emissions may be obtained by controlling other facilities sources within the plant to the extent necessary to compensate for all excess emissions which that result from one or more coating lines not achieving the prescribed limitation. Such demonstration shall be described made in writing and shall include:~~

~~(A)(i) A complete description of the coating line or lines which that will not comply with the emission VOC content limitation in 252:100-37-25(a);~~

~~(B)(ii) Quantification of emissions, in terms of pounds per day of organic solvents VOCs, which are in excess of the prescribed emission VOC content limitation for each coating line described under 252:100-37-25(b)(1)(A) 252:100-37-25(b)(1)(A)(i);~~

~~(C)(iii) A complete description of each facility and the related control system, if any, for those facilities within the plant where how emissions will be decreased at specific sources to compensate for excess emissions from each coating line described under 252:100-37-25(b)(1)(A) 252:100-37-25(b)(1)(A)(i) and the date on which such reductions will be achieved;~~

~~(D)(iv) Quantification of emissions, in terms of pounds per day of organic solvents VOCs, for each facility source described under 252:100-37-25(b)(1)(C) 252:100-37-25(b)(1)(A)(iii), both before and after the improvement or installation of any applicable control system, or operational changes to such a facility or facilities to reduce emissions and the date on which such reductions will be achieved; and,~~

~~(E)(v) A description of the procedures and methods used to determine the emissions of organic solvents VOCs.~~

~~(2)(B) The plant-wide emission reduction plan does not include decreases in emissions resulting from requirements of other applicable air pollution rules. The plant wide emission reduction plan may include decreases in emissions accomplished through installation or improvement of a control system or through physical or~~

~~operational changes to facilities, including permanently reduced production or closing a facility, located on the premises of a surface coating operation.~~

~~(3)~~ (2) **Compliance with a plant-wide emission plan.** ~~the~~The implementation of a plant-wide emission reduction plan instead of compliance with the ~~emissions~~VOC content limitation prescribed in 252:100-37-25(a) has been expressly approved by the Executive Director. Upon approval, any emissions in excess of those established for each facility under the plan shall be a violation of this Subchapter.

(c) ~~Emission limitation~~Control equipment required. ~~No person shall discharge into the atmosphere more than 3,000 pounds of organic materials in any one day nor more than 450 pounds in any one hour from any article, machine, equipment or other contrivance in which any organic solvent or any material containing such solvent is employed.~~No owner or operator shall allow the emissions into the atmosphere of more than 3,000 pounds of VOCs in any one day nor more than 450 pounds in any one hour from any machine or equipment in which VOC or VOC containing material is used or applied, unless such discharge~~emission~~ has been reduced by at least 85 percent or has applied~~unless~~ BACT or better, as determined by the ~~Executive~~Division Director has been applied to the coating machine or equipment.

(d) **Exemption.** Owners or operators of sources that are computed to emit less than 100 pounds of ~~organic solvent~~VOC per 24 ~~hr./day~~24-hour day are exempt from the requirements of this Section.

(e) **Alternate standard.** ~~Emissions~~The use of coatings with VOC contents in excess of those permitted by 252:100-37-25(a) or with emissions in excess of those permitted by ~~through 252:100-37-25(d)~~252:100-37-25(c) are allowable if both of the following conditions are met:

(1) VOC emissions that would result in the absence of control occur if no controls were used, are reduced by:

(A) 90 percent, by incineration; ~~or,~~

(B) 85 percent, by ~~absorption~~adsorption; or, any other process of equivalent reliability and effectiveness; and,

(C) 85 percent by any other process of equivalent reliability and effectiveness.

(2) ~~no~~No air pollution, as defined by the Clean Air Act, results.

252:100-37-26. Clean up with ~~organic solvents~~VOCs

Emissions of ~~organic materials to the atmosphere from the clean up with organic solvents, as defined in 252:100-37-2,~~VOCs of any article, machine, or equipment or other contrivance used in applying coatings controlled in 252:100-37-25(a) through 252:100-37-25(d)~~252:100-37-25(e)~~ shall be included with the other emissions of ~~organic solvents from the coating line or operation~~counted in determining compliance with those rules.

PART 7. CONTROL OF SPECIFIC PROCESSES

252:100-37-35. Waste gas disposal

(a) Ethylene manufacturing emissions. ~~No person owner or operator shall build or install or permit the building or installation of any ethylene manufacturing plant unless the waste-gas stream under normal operating conditions is properly burned at 1,300°F. for 0.3 seconds or greater in a direct-flame afterburner equipped with an indicating pyrometer which is positioned in the working area for the operator's ready monitoring or an equally effective catalytic vapor incinerator also with pyrometer. Proper burning of the waste-gas stream is defined as reduction by 98 percent of the ethylene emissions originally present in the waste-gas stream.~~

(b) Vapor blowdown. Except where inconsistent with the "Minimum Federal Safety Standards for the Transportation of Natural and Other Gas by Pipeline," or any State of Oklahoma regulatory agency, no person owner or operator shall allow emit organic VOC gases to be emitted to the atmosphere from a vapor recovery blowdown system unless these gases are burned by smokeless flares or an equally effective control device as approved by the Executive Division Director.

252:100-37-36. Fuel-burning and refuse-burning equipment

~~No person shall cause or allow the emission of hydrocarbons or other organic materials from any fuel burning or refuse burning equipment. All such fuel-burning or refuse-burning equipment shall be operated as to minimize such emissions of VOC. Among other things, such operation shall assure that the equipment is not overloaded, that it is properly cleaned and maintained, and that temperature and available air are sufficient to provide essentially complete combustion.~~

252:100-37-37. Effluent water separators [NOTE: Was 252:100-37-17.]

~~No person owner or operator shall build or install or permit the building or installation of a single-compartment or multiple-compartment organic material water VOC/water separator which that will receives receive effluent water containing 200 gallons (760 liters) a day or more or of any organic material VOC from any equipment processing, refining, treating, storing or handling organic materials VOCs unless the compartment receiving said the effluent water is will be equipped comply with one of the following vapor less control devices, properly installed, in good working order and in operations sets of conditions.~~

(1) The container totally encloses the liquid contents and having all openings are sealed and totally enclosing the liquid contents. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The oil removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.

(2) The container is equipped with a floating roof, consisting of a pontoon type, internal floating cover, or double-deck type roof, or internal floating cover, which will

rest on the surface of the contents and is equipped with a closure seal, or seals, to close the space between the roof edge and container wall. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The oil removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.

(3) The container is equipped with a vapor-recovery system, consisting of a vapor-gathering system capable of collecting the organic material VOC vapors and gases discharged and a vapor-disposal system capable of processing such organic material vapors and gases so as to prevent their emission to the atmosphere, and with all tank gauging and sampling devices gas-tight except when gauging or sampling is taking place. The organic material VOC removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress; or.

(4) The Containers container is equipped with controls of equal efficiency provided such equipment is submitted to and if approved by the Executive Division Director. [NOTE: New language in this section is double underlined to facilitate comparison.]

252:100-37-38. Pumps and compressors [NOTE: Was 252:100-37-18.]

No person owner or operator shall build or install or permit the building or installation of any pump or compressor handling organic material compounds VOCs unless the following conditions are met. rotating type pumps and compressors are equipped with mechanical seals or other equipment of equal efficiency; or reciprocating type pumps and compressors are equipped with packing glands properly installed and in good working order such that the emissions from the drain recovery system are limited to two cubic inches of liquid organic material in any 15 minute period at standard conditions per pump or compressor.

(1) Rotating type pumps and compressors are equipped with mechanical seals or other equipment of equal efficiency.

(2) Reciprocating type pumps and compressors are equipped with packing glands.

(3) Emissions from the drain recovery system do not exceed two cubic inches of liquid VOC in any 15 minute period per pump or compressor at standard conditions.

[NOTE: New language in this Section is double underlined to facilitate comparison.]

LIST OF ORGANIC COMPOUNDS WITH NEGLIGIBLE
PHOTOCHEMICAL REACTIVITY

40 CFR 51.100(s)(1) as it existed on July 1, 1998
From the Federal Register dated 4/9/98

Sec. 51.100 Definitions.

(s) Volatile organic compounds (VOC)

(1) This includes any such organic compound other than the following, which have been determined to have negligible photochemical reactivity:

methane;
ethane;
methylene chloride (dichloromethane);
1,1,1-trichloroethane (methyl chloroform);
1,1,2-trichloro-1,2,2-trifluoroethane (CFC-113);
trichlorofluoromethane (CFC-11);
dichlorodifluoromethane (CFC-12);
chlorodifluoromethane (HCFC-22);
trifluoromethane (HFC-23);
1,2-dichloro 1,1,2,2-tetrafluoroethane (CFC-114);
chloropentafluoroethane (CFC-115);
1,1,1-trifluoro 2,2-dichloroethane (HCFC-123);
1,1,1,2-tetrafluoroethane (HFC-134a);
1,1-dichloro 1-fluoroethane (HCFC-141b);
1-chloro 1,1-difluoroethane (HCFC-142b);
2-chloro-1,1,1,2-tetrafluoroethane (HCFC-124);
pentafluoroethane (HFC-125);
1,1,2,2-tetrafluoroethane (HFC-134);
1,1,1-trifluoroethane (HFC-143a);
1,1-difluoroethane (HFC-152a);
parachlorobenzotrifluoride (PCBTF);
cyclic, branched, or linear completely methylated siloxanes;
acetone;
perchloroethylene (tetrachloroethylene);
3,3-dichloro-1,1,1,2,2-pentafluoropropane (HCFC-225ca);
1,3-dichloro-1,1,2,2,3-pentafluoropropane (HCFC-225cb);
1,1,1,2,3,4,4,5,5,5-decafluoropentane (HFC 43-10mee);
difluoromethane (HFC-32);
ethylfluoride (HFC-161);
1,1,1,3,3,3-hexafluoropropane (HFC-236fa);
1,1,2,2,3-pentafluoropropane (HFC-245ca);
1,1,2,3,3-pentafluoropropane (HFC-245ea);
1,1,1,2,3-pentafluoropropane (HFC-245eb);
1,1,1,3,3-pentafluoropropane (HFC-245fa);
1,1,1,2,3,3-hexafluoropropane (HFC-236ea);
1,1,1,3,3-pentafluorobutane (HFC-365mfc);

chlorofluoromethane (HCFC-31);
1 chloro-1-fluoroethane (HCFC-151a);
1,2-dichloro-1,1,2-trifluoroethane (HCFC-123a);
1,1,1,2,2,3,3,4,4-nonafluoro-4-methoxy-butane ($C_4F_9OCH_3$);
2-(difluoromethoxymethyl)-1,1,1,2,3,3,3-heptafluoropropane
($(CF_3)_2CFCF_2OCH_3$);
1-ethoxy-1,1,2,2,3,3,4,4,4-nonafluorobutane ($C_4F_9OC_2H_5$);
2-(ethoxydifluoromethyl)-1,1,1,2,3,3,3-heptafluoropropane
($(CF_3)_2CFCF_2OC_2H_5$);
methyl acetate

and perfluorocarbon compounds which fall into these classes:

- (i) Cyclic, branched, or linear, completely fluorinated alkanes;
- (ii) Cyclic, branched, or linear, completely fluorinated ethers with no unsaturations;
- (iii) Cyclic, branched, or linear, completely fluorinated tertiary amines with no unsaturations; and
- (iv) Sulfur containing perfluorocarbons with no unsaturations and with sulfur bonds only to carbon and fluorine.

SUMMATION AND EXPLANATION OF THE PROPOSED REVISIONS TO SUBCHAPTER 37

The proposed revisions to Subchapter 37 are the result of the DEQ program to simplify, clarify and correct all its rules. Unless otherwise noted, no substantive changes were intended in the following proposed revisions. *The substantive revisions are summarized in Section II of this document.*

- I. Revisions made throughout the Subchapter
 - A. Revisions in Terminology
 1. Environmental Protection Agency has been replaced by EPA - simplification
 2. Executive Director has been replaced, in most cases, by Division Director - clarification
 3. Organic material has been replaced by VOC - simplification
 4. Organic solvent has been replaced by VOC - simplification
 5. Hydrocarbon has been replaced by VOC - simplification
 6. Volatile organic compound(s) has been replaced by VOC(s) - simplification
 7. photochemical oxidants has been replaced by ozone - clarification
 8. Tank has been replaced by vessel - consistency in terminology
 9. Person has been replaced by owner or operator - clarification
 - B. Revised or deleted language
 1. "or permit the building or installation of" has been deleted throughout the rule - simplification and clarification
 2. Unless otherwise noted herein, changes to language were for simplification, clarification, correction of grammar, or consistency of format.
- II. SUBSTANTIVE CHANGES. Only three of the revisions proposed by the staff are intended to be substantive. These are:
 - A. the revision of the definition of volatile organic compound (VOC) in 252:100-37-2;
 - B. the deletion of the requirement for BACT for new sources of VOC in 252:100-37-3(a); and
 - C. the correction of 252:100-37-36 regarding fuel-burning and refuse-burning equipment.
- III. Revisions to PART 1. GENERAL PROVISIONS
 - A. **252:100-37-1. Purpose.** The proposed revisions are to set forth as clearly as possible the purpose of the rule.
 - B. **252:100-37-2. Definitions.** The following revisions are proposed for this section.
 1. The staff proposes to delete the definitions OF CUTBACK ASPHALT, REFINERY and VOLATILE ORGANIC SOLVENT (VOS) since these terms are not used in Subchapter 37.
 2. The staff proposes to revise the definition OF VOLATILE ORGANIC COMPOUND (VOC) be consistent with the EPA definition and to incorporate 40 CFR

51.100(s)(1) by reference. 40 CFR 51.100 contains the list of organic compounds that EPA has designated as having negligible photochemical reactivity and therefore excluded from the definition of VOC.

- ◆ This is part of the simplification process. What EPA classifies as VOC has been classified as organic material in Chapter 100 and divided into VOC, organic solvents, and volatile organic solvents. The Chapter contains two definitions of VOC and two definitions of organic solvents. The staff feels having one definition of VOC that is consistent with the EPA definition will simplify the Chapter as well as Subchapter 37.
- ◆ Ozone is the NAAQS pollutant of concern in Subchapter 37. The rule provides for control of ozone by controlling the emissions of ozone precursors - photochemically reactive organic compounds. The proposed revision of the definition of VOC reflects this purpose.
- ◆ A petition from the Chemical Manufacturers Association to exclude acetone from the definition of VOC was presented to the Air Quality Council at the meeting of December 19, 1995. The Council directed the staff to give consideration to this petition. Subsequent to this event, other requests have been received requesting that perchloroethylene and methylated siloxanes also be excluded from the definition of VOC. The proposed revision of VOC excludes these three compounds since they have been designated by EPA as having negligible photochemical reactivity.
- ◆ **THIS REVISION MAY RESULT IN SOME SUBSTANTIVE CHANGES,** although care has been taken throughout the rest of the Subchapter to minimize any such substantive changes that may result from the revised definition of VOC.

C. 252:100-37-3. Applicability and compliance

1. **(a) New sources.** Staff recommends that this subsection be deleted. As originally proposed it applied only to organic solvents and only to major sources. The major source restriction was dropped without explanation when the subsection was adopted, but it applied only to organic solvents (what is now Part 5 and consists of Section 25, Coating of parts and products and Section 26, Clean up with organic solvents). In the course of several recodifications the subsection was moved to General Provisions and became applicable to the entire rule. Staff does not believe this was the original intent. To require BACT for all new minor sources of VOC, especially those located in areas that have always been in attainment for ozone, requires more time, effort, and resources than can be justified by the subsequent reduction in VOC emissions. There is no need to require BACT for new major sources of BACT since that requirement already exists in 252:100-8-5(d)(1)(A). **THIS IS A SUBSTANTIVE CHANGE.**
2. **(b) Compliance schedule.**
 - ◆ Staff recommends that (b)(1) be deleted. The requirement is redundant.

- ◆ Staff proposes to renumber (b)(2) as (a) and proposes revisions to make clear that the Subchapter as modified effective December 28, 1974, applies to all new sources or modifications after that date.
- ◆ Staff proposes to renumber (b)(3) as (b) and lists the sections (as revised) that will apply to all existing sources in AQMAs. This was done to prevent a substantive change due to the use of the term VOC instead of organic solvents or organic material. In the existing rule only Sections 15, 16, 17, 18, 35 and 36 pertained to VOCs. In the proposed revision Sections 17 and 18 have been renumbered Sections 35 and 36 respectively. Language has also been added to make clear that AQMAs as classified by the EPA with regard to VOCs and ozone consists of Tulsa and Oklahoma Counties. The proposed revisions are for clarification.
- ◆ Staff proposes to delete (b)(4). This paragraph is redundant.

D. 252:100-37-4. Exemptions

1. Revisions to paragraph (a) insure that those sections which previously applied only to VOCs with vapor pressure of 1.5 psia or greater continue to apply only to VOCs with vapor pressure of 1.5 psia or greater. Changes in citations reflect renumbering proposed in other sections of the rule. Two citations (252:100-37-27 and 28) which did not exist in the present rule were corrected and renumbered to 252:100-37-35 and 36.
2. Revisions to paragraph (b) make it clear that the exemption of transfer and loading operations is limited to those located at drilling production facilities.
3. Revisions to paragraph (c) make it clear that VOCs produced, stored, or used on a farm or ranch are exempt from portions of Subchapter 37 if they are used for agricultural purposes on the same farm or ranch.

E. 252:100-37-5. Operation and maintenance This proposed new section is part of the simplification and streamlining project. This requirement appears in several places in the existing rule. It has been added as a section and appear only once in the proposed revision.

IV. PART 3. CONTROL OF VOLATILE ORGANIC COMPOUNDS Staff proposes to rename this Part "CONTROL OF VOCs IN STORAGE AND LOADING OPERATIONS" to better reflect its contents. 252:100-37-17 (Effluent water separators) and 252:100-37-18 (Pumps and compressors) have been renumbered and moved to Part 7.

A. 252:100-15. Storage of VOCs Staff proposes to add taglines to subsections (a) and (b) for clarification.

1. **(b) Storage capacities of 400 gallons and greater.** Proposed revisions to this subsection is for the correction of a citation (252:100-37-5(a) should have been 252:100-37-15(a)).

B. 252:100-37-17. Effluent water separators has been renumbered 252:100-37-37 and moved to Part 7, Control of Specific Processes.

C. **252:100-37-18. Pumps and compressors** has been renumbered 252:100-37-38 and moved to Part 7, Control of Specific Processes.

V. PART 5. CONTROL OF ORGANIC SOLVENTS Staff proposes to rename Part 5 CONTROL OF VOCs IN COATING OPERATIONS to better reflect its contents..

A. 252:100-37-25. Coating of parts and products.

1. (a) Standards. Staff proposes to delete the limits on VOC content per gallon of coating that were set for January, 1979 and January 1980. These deadlines have passed and sources are now required to comply with the limits that became effective January, 1982.
2. (c) Emission limitation. Staff proposes to change the title of this subsection to "Control equipment required" to better reflect its contents.
3. (e) Alternate standard. The proposed revisions to this subsection are for clarification and to correct citations.

VI. PART 7. CONTROL OF SPECIFIC PROCESSES

- A. 252:100-37-36. Fuel-burning and refuse-burning equipment. The staff proposes to delete the impossible requirement that there can be no emission of hydrocarbons or other organic material from fuel-burning or refuse-burning equipment by deleting the first sentence of this section. This also resolves the conflict with the requirement that all such equipment be operated to minimize such emissions that was contained in the second sentence of this section. **THIS IS A SUBSTANTIVE CHANGE.**

MINUTES

AIR QUALITY COUNCIL

AUGUST 18, 1998

Burgundy Room

4545 North Lincoln Boulevard

Oklahoma City, OK

Council Members Present

William B. Breisch, Chairman

Larry Canter

PUBLIC MEETING

Notice of Public Meeting for August 18, 1998 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance door of the meeting room and also at the DEQ Tower.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Ms. Myers - aye; Dr. Grosz - aye; Mr. Kilpatrick - aye; Mr. Wilson - aye; Mr. Branecky - aye; Ms. Slagell - aye. Dr. Canter did not attend.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the June 16, 1998 Public Meeting/Hearings. Motion was made by Mr. Kilpatrick to approve the Minutes as presented and second to the motion was made by Mr. Branecky. Roll call as follows: Ms. Myers - aye; Dr. Grosz - aye; Mr. Kilpatrick - aye; Mr. Wilson - aye; Mr. Branecky - aye; Ms. Slagell - aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-47 Control of Emissions from Existing Municipal Solid Waste Landfills [NEW]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Cheryl Bradley to give staff recommendations on this rule. Ms. Bradley advised that the rule was first considered by the Council on June 16, 1998 at which time the hearing was continued because EPA was in the process of amending the federal standards that are the basis for the draft rule. These amendments became effective August 17, 1998. Ms. Bradley stated that staff had made the revisions consistent with the amended federal regulations and addressed all comments received.

After discussion, Chairman Breisch entertained a motion to recommend adoption of this rule as emergency and permanent to the Environmental Quality Board at its September 15, 1998 meeting. Dr. Grosz made that motion with second made by Mr. Branecky. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

State 111(d) Plan for Municipal Solid Waste Landfills

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Cheryl Bradley for staff position regarding this State Plan. Ms. Bradley pointed out the criteria for approval of a state plan and advised that Oklahoma's mechanism to implement this Plan is OAC252:100-47. Ms. Bradley related that although no Council action was necessary, the staff requests to hear comments from the Council members and the public regarding the State Plan.

See attached transcript.

PUBLIC HEARING

OAC 252:100 Air Pollution Control:

Appendix E, Primary Ambient Air Quality Standards [AMENDED]

Appendix F, Secondary Ambient Air Quality Standards [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Michelle Martinez who stated that the revisions to these appendices would be identical to the revised federal National Ambient Air Quality Standards (NAAQS) for particulate matter and ozone

announced by EPA in the July 18, 1997 *Federal Register*. Ms. Martinez pointed out that according to the Secretary of State's Rules on Rulemaking, an appendix cannot be amended; therefore, staff recommended that Council vote to revoke the old appendices and pass the new appendices as permanent.

After discussion, Chairman Breisch entertained a motion to recommend this rule to the Environmental Quality Board as a permanent rule at its September 15, 1998 meeting. Mr. Kilpatrick moved that Council revoke the existing rule and replace them with the new rules as presented. Second to the motion was made by Mr. Branecky. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-7 Permits [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Jeanette Buttram for staff position regarding this rule. Ms. Buttram pointed out revisions made to date and advised that staff was recommending that the comment period be left open until August 24 after which staff would revise the rule based upon comments received from Council and public; and would bring again to the Council's October 20 meeting.

Following discussion and comments, Chairman Breisch entertained a motion to continue this rule to the Council's October 20, 1998 meeting. Ms. Myers made that motion with second made by Ms. Slagell. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-25 Smoke, Visible Emissions and Particulates [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Jeanette Buttram to give staff's position on this rule. Ms. Buttram advised that the rule was presented to Council's June 16 meeting where changes to simplify and clarify the rule and to fulfill an EPA State Implementation Plan (SIP) requirement concerning Continuous Emission Monitoring (CEM) were proposed. Ms. Buttram advised that comments received have been addressed and incorporated into the current draft rule. Following discussion with new comments, staff

recommended that the hearing be continued on this rule to the October 20 meeting to allow time for further comments.

Mr. Breisch asked for a motion to continue the hearing. Mr. Wilson made the motion and Ms. Slagell made the second. Roll call was as follows: Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Kilpatrick – aye; Dr. Grosz – aye; Ms. Myers – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-23 Control of Emissions from Cotton Gins [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Becky Mainord who related that the draft rule included simplification of language according to the Agency's re-write/de-wrong initiative and the addition of a Permit by Rule section. She then pointed out the changes made and stated that it was staff's recommendation to continue the hearing until Council's next meeting.

Following discussion, Mr. Breisch entertained a motion to continue this rule. Dr. Grosz made that motion with second made by Mr. Wilson. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-24 Control of Emissions from Grain Elevators [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Michelle Martinez who related that revisions were made to simplify the language according to the Agency's re-write/de-wrong initiative, the addition of a Permit By Rule section, and to add a new Appendix L which would include PM₁₀ emission factors for the Permit By Rule. Ms. Martinez pointed out that comments had been received and considered, and that staff's recommendation was to continue the hearing to the next meeting.

After discussion, Mr. Breisch entertained a motion to continue this rule to the Council's October 20, 1998 meeting. Ms. Myers made that motion with second made by Mr. Branecky. Roll call

as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-37 Control of Emissions of Organic Materials (AMENDED)

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy who stated that the revisions are part of the Agency's re-write/de-wrong initiative and respond to industry requests to exempt acetone, perchloroethylene, and methylated siloxanes from being considered VOCs. She advised that staff held a workshop on July 7 requesting public input and comments. She said there are numerous changes to be made in language, format and with the three substantive changes, staff recommended that the rule be continued to the next meeting.

Mr. Breisch entertained a motion to continue this rule. Mr. Branecky made motion with second made by Mr. Kilpatrick. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-39 Control of Organic Materials in Nonattainment Areas [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy who stated that there were numerous revisions as part of the Agency's re-write/de-wrong initiative and also five substantive changes to be considered; therefore, staff would recommend that the hearing be continued.

Mr. Breisch entertained a motion to continue this rule to the Council's October 20 meeting. Dr. Grosz made that motion with second made by Mr. Branecky. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

NEW BUSINESS – None

ADJOURNMENT With no further business, meeting was adjourned and next regularly scheduled meeting being October 20, 1998 at Tulsa City-County Health Department Auditorium, 5051 South 129th East, Tulsa, Oklahoma.

NOTE: The sign-in sheet and the hearing records are attached as an official part of these Minutes.

AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
REGULAR MEETING/HEARING
AIR QUALITY COUNCIL

Tuesday October 20, 1998 1:00 p.m.
Tulsa City-County Health Department Auditorium
5051 South 129 East — Tulsa, Oklahoma

1. **Call to Order – Bill Breisch**
2. **Roll Call – Myrna Bruce**

3. **Approval of Minutes of the August 18, 1998 Regular Meeting**

4. **CY99 Meeting Schedule**
 - A. Discussion by Council
 - B. Possible action by Council
 - C. Roll call vote

5. **OAC 252:100-5 Registration, Emission Inventory and Annual Operating Fees [AMENDED]**
OAC 252:100-7 Permits [AMENDED]
OAC 252:100-8 Permits for Part 70 Sources [AMENDED]

In Subchapter 5, the Department is considering possible increases in annual operating fees for both minor facilities and Part 70 sources with possible increases of permit application fees in Subchapters 7 and 8.

 - A. Presentation – Shawna McWaters-Khalousi
 - B. Questions and discussion by Council / Public
 - C. Roll call vote

6. **OAC 272:100-7 Permits [AMENDED]**

Proposed revisions will delete the lower limit of 5 tons per year for Permit by rule (PBR) facilities allowing those facilities with less than 5 tons per year emissions which are subject to new source performance standards and national emissions standards for hazardous air pollutants to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a PBR for specific facilities will be referenced under this new Part also. Continued from August 18, 1998 Air Quality Council meeting.

 - A. Presentation – Jeanette Buttram
 - B. Questions and discussion by Council / Public
 - C. Possible action by Council
 - D. Roll call vote

7. **OAC 252:100-25 Smoke, Visible Emissions and Particulates [AMENDED]**

Proposed amendments to Subchapter 25 are needed to fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P, and would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include exempting sources subject to opacity standards promulgated under Section 111 of the Federal Clean Air Act, along with a clarification of how the opacity standard will be determined at sources that have CEMs and how it will be determined at sources without CEMs. A new subsection would contain methods for determining compliance with the opacity limits. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule. Continued from August 18, 1998 Air Quality Council meeting.

 - A. Presentation – Jeanette Buttram
 - B. Questions and discussion by Council / Public
 - C. Possible action by Council
 - D. Roll call vote

8. **OAC 252:100-23 Control of Emissions from Cotton Gins [AMENDED]**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and add a new PBR section. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Becky Mainord
 - B. Questions and discussion by Council / Public
 - C. Possible action by Council
 - D. Roll call vote

9. **OAC 252:100-24 Control of Emissions from Grain Elevators [AMENDED]**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and add a new PBR section. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Michelle Martinez
 - B. Questions and discussion by Council / Public
 - C. Possible action by Council
 - D. Roll call vote

10. **OAC 252:100-37 Control of Emissions of Organic Materials [AMENDED]**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. A substantive change deletes a sentence regarding fuel-burning and refuse-burning equipment resolving a contradiction. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public
 - C. Possible action by Council
 - D. Roll call vote

11. **OAC 252:100-39 Emissions of Organic Materials in Nonattainment Areas [AMENDED]**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public
 - C. Possible action by Council
 - D. Roll call vote

12. **OAC 252:100-41 Control of Emission of Hazardous and Toxic Air Contaminants [AMENDED]**
The proposed amendments to Subchapter 41 include adopting by reference the Maximum Available Control Technology (MACT) standards for hazardous air pollutants that have been promulgated in 40 CFR 63 from July 1, 1997, through July 1, 1998. These are Subparts S and LL. The Department is also updating in Subchapter 41 the incorporation by reference of the NESHAP found in 40 CFR 61 to July 1, 1998. The Department is requesting comments on these proposed changes.
 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public
 - C. Possible action by Council
 - D. Roll call vote

13. **NEW BUSINESS**
 - A. Discussion/consideration of subjects / business arising within the past 24 hours
 - B. Possible action by Council

14. **ADJOURNMENT – Next Regular Meeting** **TUESDAY, DECEMBER 15, 1998**
Lincoln Plaza Office Park - Burgundy Room 4545 North Lincoln Boulevard, Oklahoma City, Oklahoma

Should you desire to attend but have a disability and need an accommodation,
please notify our Department three days in advance at (405) 702-4100.

**BRIEFING AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
REGULAR MEETING
AIR QUALITY COUNCIL**

**Tuesday October 20, 1998 9:30 A.M.
Tulsa City-County Health Department Auditorium
5051 South 129 East — Tulsa, Oklahoma**

- 1. Call to Order – Bill Breisch**
- 2. Division Director's Report**
Informational update of current events and AQD activities
 - A. Discussion by Council / Public**
- 3. CY99 Meeting Schedule**
 - A. Discussion by Council**
- 4. OAC 252:100-5 Registration, Emission Inventory and Annual Operating Fees [AMENDED]**
OAC 252:100-7 Permits [AMENDED]
OAC 252:100-8 Permits for Part 70 Sources [AMENDED]
In Subchapter 5, the Department is considering possible increases in annual operating fees for both minor facilities and Part 70 sources with possible increases of permit application fees in Subchapters 7 and 8.
 - A. Presentation – Shawna McWaters-Khalousi**
 - B. Questions and discussion by Council / Public**
- 5. OAC 272:100-7 Permits [AMENDED]**
Proposed revisions will delete the lower limit of 5 tons per year for Permit by rule (PBR) facilities allowing those facilities with less than 5 tons per year emissions which are subject to new source performance standards and national emissions standards for hazardous air pollutants to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a PBR for specific facilities will be referenced under this new Part also. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Jeanette Buttram**
 - B. Questions and discussion by Council / Public**
- 6. OAC 252:100-25 Smoke, Visible Emissions and Particulates [AMENDED]**
Proposed amendments to Subchapter 25 are needed to fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P, and would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include exempting sources subject to opacity standards promulgated under Section 111 of the Federal Clean Air Act, along with a clarification of how the opacity standard will be determined at sources that have CEMs and how it will be determined at sources without CEMs. A new subsection would contain methods for determining compliance with the opacity limits. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Jeanette Buttram**
 - B. Questions and discussion by Council / Public**

7. **OAC 252:100-23 Control of Emissions from Cotton Gins [AMENDED]**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and add a new PBR section. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Becky Mainord
 - B. Questions and discussion by Council / Public

8. **OAC 252:100-24 Control of Emissions from Grain Elevators [AMENDED]**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and add a new PBR section. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Michelle Martinez
 - B. Questions and discussion by Council / Public

9. **OAC 252:100-37 Control of Emissions of Organic Materials [AMENDED]**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. A substantive change deletes a sentence regarding fuel-burning and refuse-burning equipment resolving a contradiction. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public

10. **OAC 252:100-39 Emissions of Organic Materials in Nonattainment Areas [AMENDED]**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public

11. **OAC 252:100-41 Control of Emission of Hazardous and Toxic Air Contaminants [AMENDED]**
The proposed amendments to Subchapter 41 include adopting by reference the Maximum Available Control Technology (MACT) standards for hazardous air pollutants that have been promulgated in 40 CFR 63 from July 1, 1997, through July 1, 1998. These are Subparts S and LL. The Department is also updating in Subchapter 41 the incorporation by reference of the NESHAP found in 40 CFR 61 to July 1, 1998. The Department is requesting comments on these proposed changes.
 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public

October 5, 1998

MEMORANDUM

TO: Air Quality Council
FROM: Eddie Terrill, Director ^{ET.}
AIR QUALITY DIVISION
SUBJECT: Modifications to Subchapter 37

Enclosed is a copy of the proposed draft modifications to OAC 252:100-37 CONTROL OF EMISSION OF ORGANIC MATERIALS. These revisions were brought to the Air Quality Council for the first time on August 18, 1998. At that time the staff recommended that the rule be considered again at the October 20, 1998 Council meeting.

The proposed revisions primarily simplify and clarify language, correct grammar, and impose consistency of format on the rule without involving substantive changes. A number of small changes were made to the rule following the August 18, 1998 Council meeting. None of these additional changes are intended to be substantive in nature. The following substantive revisions to the rule are proposed.

1. The definition of "volatile organic compound (VOC)" in 252:100-37-2 has been revised. The new definition provides that any organic compound listed in 40 CFR 51.100(s)(1) shall be presumed to have negligible photochemical reactivity and will not be considered to be a VOC. Presently Chapter 100 divides what EPA classifies as "volatile organic compound (VOC)" into "volatile organic compound (VOC)," "organic solvents," and "volatile organic solvent (VOS)." The Chapter contains two definitions of volatile organic compound neither of which is consistent with the EPA definition; a definition of volatile organic solvent which is almost exactly the same as the EPA definition of volatile organic compound, and two definitions of organic solvents. As part of the simplification process the staff propose to have only one definition of volatile organic compound which will be consistent with the EPA definition and to replace the terms "volatile organic solvent (VOS)" and "organic solvents" with "volatile organic compound (VOC)." This revision will also serve as a response to requests to exempt acetone, methylated siloxanes, perchloroethylene, and methyl acetate from being considered VOCs. These four substances are on the list in 40 CFR 51.100(s)(1) and, therefore, will not be considered to be VOCs.
2. The staff proposes deleting 252:100-37-3(a), which requires any new source that emits organic material as a solvent or reactant to obtain a permit and apply best available control technology (BACT). As originally proposed by the staff to the Air Quality Council, this subsection applied only to organic solvents and only to major

sources. When approved by the Council, the major source requirement was omitted. The Council records from that time contain no explanation for this change. To require each new source of VOC to apply BACT, regardless of the size of the source, expends more time, effort, and expense than can be justified by the Department considering the subsequent reductions in VOC emissions. This is especially true for new sources in areas that are in attainment and have always been in attainment. To require BACT for new major sources of VOC in Subchapter 37 is redundant. That requirement already exists in 252:100-8-5(d)(1)(A). Therefore, it is proposed to delete this subsection.

3. The staff proposes deleting the first sentence in 252:100-37-36 (fuel-burning and refuse-burning equipment), thereby eliminating the impossible requirement that no emission of hydrocarbons or organic materials is allowed from fuel-burning or refuse-burning equipment. This revision will also resolve the contradiction with the second sentence which requires such equipment to be operated to minimize these emissions.

An informational meeting to discuss revisions to Subchapter 37 for the purpose of simplification, clarification, and correction of the rule was held on Tuesday, July 7, 1998 at the DEQ office. This meeting was open to the public. Comments made at the meeting were given consideration in the proposed draft enclosed with this memorandum. At that time it became apparent that problems existed in the coating sections of the rule that were beyond the scope of the "re-write/de-wrong" process. A workgroup has been formed to study these problems. A meeting was held on September 11, 1998. The staff intends to propose revisions to the coating sections in 1999.

In the process of revising Subchapter 37, definitions were changed, moved, and/or deleted. The staff intends to revise 252:100-1-3, Definitions, later in the process of the "re-write/de-wrong" project. It is our intention to include in Subchapter 1 only those definitions that apply to all or practically all of the subchapters in Chapter 100. Definitions that apply to only one or two subchapters will be placed in those subchapters and definitions that are general to the entire Chapter 100 will be deleted from individual subchapters.

Staff will suggest that the proposed rule be recommended to the Board for permanent adoption.

In addition to the proposed draft revisions to Subchapter 37, a copy of 40 CFR 51.100(s)(1), a summation of the proposed revisions with explanations, and a list of the revisions that were made to the rule after the August 18, 1998 Air Quality Council meeting are also included in the packet.

Enclosures: 4

**SUBCHAPTER 37. CONTROL OF EMISSION OF VOLATILE ORGANIC MATERIALS
COMPOUNDS (VOCs)**

PART 1. GENERAL PROVISIONS

252:100-37-1.	Purpose	1
252:100-37-2.	Definitions	1
252:100-37-3.	Applicability and compliance	3
252:100-37-4.	Exemptions	3
252:100-37-5.	Operation and maintenance	4

**PART 3. CONTROL OF ~~VOLATILE ORGANIC COMPOUNDS~~VOCs IN STORAGE AND
LOADING OPERATIONS**

252:100-37-15.	Storage of volatile organic compounds VOCs	4
252:100-37-16.	Loading of volatile organic compounds VOCs	5
252:100-37-17.	Effluent water separators [NOTE: Moved and Renumbered]	6
252:100-37-18.	Pumps and compressors [NOTE: Moved and renumbered.]	7

PART 5. CONTROL OF ~~ORGANIC SOLVENTS~~VOCs IN COATING OPERATIONS

252:100-37-25.	Coating of parts and products	7
252:100-37-26.	Clean up with organic solvents VOCs	10

PART 7. CONTROL OF SPECIFIC PROCESSES

252:100-37-35.	Waste gas disposal	10
252:100-37-36.	Fuel-burning and refuse-burning equipment	10
252:100-37-37.	Effluent water separators	10
252:100-37-38.	Pumps and compressors	11

[NOTE: The italicized notes in brackets are for information only and are not part of the rule.]

PART 1. GENERAL PROVISIONS

252:100-37-1. Purpose

~~The purpose of this Subchapter is to control the emission of organic materials from stationary sources to protect and enhance the air quality to insure that the Oklahoma air quality standard is not exceeded and significant deterioration prevented. The purpose of this Subchapter is to prevent the formation of ozone by controlling the emissions of volatile organic compounds (VOCs). This Subchapter contains the requirements for control of the emissions of VOCs from stationary sources.~~

252:100-37-2. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise.

"**Acrylic**" means a chemical coating containing polymers or co-polymers of acrylic or substitute acrylic acid in combination with suitable resinous modifiers, ~~and its~~ The primary mode of cure is solvent evaporation.

"**Alkyd primer**" means a chemical coating composed primarily of alkyd applied to a surface to provide a firm bond between the substrate and any additional paint coating.

"**Custom product finishes**finish" means a proprietary chemical coating designed for a specific customer and end use.

~~"Cutback asphalt" means a basic asphalt or asphaltic concrete containing a petroleum distillate. [NOTE: Not used in SC-37.]~~

"**Effluent water separator**" means any ~~tank, box, sump, or other~~ container in which any ~~material compound~~ VOC floating on, or entrained in, or contained in water entering ~~such tank, box, sump or other~~ the container is physically separated and removed from ~~such~~ the water prior to ~~outfall, drainage, or recovery of~~ such discharge of the water from the container.

"**Epoxy**" means a chemical coating containing epoxy groups and suitable chemical cross-linking agents. ~~Epoxies~~ The prime mode of cure involves a chemical reaction between the epoxy and the cross-linking agent.

"**Maintenance finishes**finish" means a chemical coating ~~formulated to form a protection of that protects~~ a given substrate ~~tefrom~~ from adverse chemical or physical ~~condition~~ conditions.

"**Nitrocellulose lacquers**lacquer (NC lacquer)" means a chemical coating containing nitrocellulose and suitable resinous modifiers, ~~and whose~~ The primary mode of cure is solvent evaporation.

~~"Organic materials" means chemical compounds of carbon excluding carbon monoxides, carbon dioxide, carbonic acid, metallic carbides, metal carbonates and ammonium carbonates. [NOTE: This term is no longer used in SC-37 as a result of the proposed revisions.]~~

~~"Refinery" means any facility engaged in producing gasoline,~~

~~kerosene, fuel oils or other products through distillation of crude oil or through redistillation, cracking or reforming of unfinished hydrocarbon derivatives. [NOTE: This term is not used in SC-37.]~~

"Submerged fill pipe" means any fill pipe or discharge nozzle ~~which~~that meets any one of the following conditions:

(A) ~~the~~The bottom of the discharge pipe or nozzle is below the surface of liquid in the receiving vessel for at least 95 percent of the volume filled.

(B) ~~the~~The bottom of the discharge pipe or nozzle is less than 6 inches from the bottom of the receiving vessel.

(C) ~~the~~The bottom of the discharge pipe or nozzle is less than 2 pipe or nozzle diameters from the bottom of the receiving vessel.

~~(D) other equivalent methods acceptable to the Executive Director. [NOTE: This is not part of the definition. It is covered in 252:100-37-15(a) and (b).]~~

"Vinyl" means a chemical coating containing ~~plasterized~~plasticized or ~~unplasterized~~unplasticized polymers and co-polymers of vinyl acetate, vinyl chloride, polyvinyl alcohols or their condensation products. ~~and the~~The primary mode of cure is solvent evaporation.

"Volatile organic compound (VOC)" means any compound ~~containing carbon and hydrogen or containing carbon and hydrogen in combination with any other element which has a vapor pressure of 1.5 pounds per square inch absolute or greater under actual storage conditions of carbon, excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate, which participates in atmospheric photochemical reactions. Any organic compound listed in 40 CFR 51.100(s) (1) shall be presumed to have negligible photochemical reactivity.~~

[NOTE: This revision makes the AQD definition of VOC consistent with the EPA definition in 40 CFR 51.100(s). The proposed revision also complies with requests to exempt acetone, methylated siloxanes, perchloroethylene, and methyl acetate from being considered VOCs (EPA's definition exempts these substances). It also brings AQD definition into agreement with the EPA reactivity policy as expressed in the memorandum dated July 21, 1987, from G. T. Helms, Chief, Control Programs Operations Branch, U.S. EPA, OAQPS and the comments contained in Attachment B of the June 9, 1988, letter from William B. Hathaway, EPA Region 6. This change will result in only one definition of VOC being used throughout the Chapter, thus simplifying the rules.]

~~"Volatile organic solvent (VOS)" means any organic compound which participates in atmospheric photochemical reactions, that is, any organic compound other than those which the EPA Administrator designates as having negligible photochemical reactivity. VOS may be measured by the EPA VOC reference method. [NOTE: This term is not used in SC-37.]~~

252:100-37-3. Applicability and compliance

~~(a) New sources. Any new source calculated to emit an organic material to the atmosphere either as a solvent or a reactant will~~

~~be subject to permitting under OAC 252:100-7, and with the application of Best Available Control Technology. [NOTE: This subsection has been difficult to interpret and consequently has been interpreted in various ways over the years. As originally proposed it applied only to major sources of organic solvents. When adopted, the 100 tpy trigger level was missing and there appears to be no explanation for this change in the records. When applied to all new sources regardless of size, this subsection requires more time, effort, and expense than can be justified by the reduction in VOCs. If applied only to major sources, it is redundant since 252:100-8-5(b)(A) requires new major sources to obtain permits and to apply BACT.]~~

~~(b) Compliance schedule.~~

~~(1) All equipment and process previously regulated under OAC 252:100-37 and 252:100-39 and its effective dates of July 1, 1972 and December 8, 1974 must still abide by those dates.~~

~~(2)(a) In all areas except AQMA's, this~~ This Subchapter shall apply to all new installations of any equipment or processes described in this Subchapter, after the effective date of December 28, 1974.

~~(3)(b) Provisions~~ Sections 15, 16, 35, 36, 37, and 38 of this Subchapter relating to control of VOC shall apply to all new and existing installations of any equipment or processes in use and described in this Subchapter located in Air Quality Maintenance Areas (AQMA's) as classified by the Environmental Protection Agency EPA with regard to hydrocarbons VOCs and photochemical oxidants ozone (which in 1998 consists of Tulsa County and Oklahoma County), and become effective on June 8, 1979, provided, however, that existing installations shall have twenty four (24) months from the effective date within which to comply with this Subchapter June 9, 1981. Except that the The retrofit requirements for crude petroleum storage tanks vessels will be limited to tanks vessels of greater than 420,000 gallon (10,000 barrel) capacity. [NOTE: Only the sections listed in (b) previously applied to sources of VOC which was defined to exclude substances with vapor pressures less than 1.5 psia. The changes to this subsection were made so that such substances with vapor pressures less than 1.5 psia would remain exempt from the listed sections.]

~~(4) Provisions of this Subchapter relating to the control of organic solvent shall be as specified in the applicable Section.~~

252:100-37-4. Exemptions

(a) Organic materials as used in VOCs with vapor pressures less than 1.5 pounds per square inch (psia) under actual storage conditions are exempt from 252:100-37-15 through 252:100-37-18, 252:100-37-16 and 252:100-37-27 and 252:100-37-28, 252:100-37-35 through 252:100-37-38 will not include: Methane (CH₄) or any material otherwise included which has vapor pressure of less than 1.5 pounds per square inch absolute under actual storage conditions. [NOTE: The Sections listed in this subsection have applied only to VOCs with vapor pressures equal to or greater than

1.5 psia. VOCs with vapor pressures less than 1.5 psia as stored are exempt from the listed Sections to avoid a substantive change.]

(b) Petroleum or condensate stored, processed, treated, loaded, and/or ~~treated~~ transferred at a drilling or production facility prior to lease custody transfer is exempt from this Subchapter. ~~This exemption also includes transfer and loading operations.~~

(c) The storage, loading, processing, manufacturing or burning of ~~organic materials~~ VOCs on a farm or ranch, when such VOCs are used for agricultural purposes on ~~farms and ranches~~ said farm or ranch, is exempted from all provisions of 252:100-37-15, ~~through 252:100-37-18~~ 252:100-37-16, and ~~252:100-37-27 and 252:100-37-28~~ 252:100-37-35 through 252:100-37-38.

252:100-37-5. Operation and maintenance [NEW]

Any required vapor-loss control devices, packing glands and mechanical seals shall be properly installed, maintained, and operated.

PART 3. CONTROL OF VOLATILE ORGANIC COMPOUNDS VOCs IN STORAGE AND LOADING OPERATIONS

252:100-37-15. Storage of volatile organic compounds VOCs

(a) Storage capacities greater than 40,000 gallons. N o person owner or operator shall build, sell, or install or permit the building or installation of any new stationary tank, reservoir or other container storage vessel of more than 40,000 gallons (150,000 liters) capacity which will be used for storage of any organic materials VOCs, unless such tank, reservoir or other container it is to be a pressure tank vessel capable of maintaining working pressures sufficient at all times to that prevent organic vapor or gas the loss of VOC to the atmosphere or is designed, and will be built and equipped with one of the following vapor-loss control devices:

(1) An external floating roof, consisting of penton type, pontoon-type internal floating cover or double-deck type reef cover, or a fixed roof with an internal-floating cover. ~~which~~ The cover will rest on the surface of the liquid contents at all times (i.e. off the leg supports), except during initial fill, when the storage vessel is completely emptied, or during refilling. When the cover is resting on the leg supports, the process of filling, emptying, or refilling shall be continuous and shall be accomplished as rapidly as possible. ~~and~~ The floating roof shall be equipped with a closure seal, or seals, to close the space between the reef cover edge and tank vessel wall. Such floating roofs are not appropriate control devices if the organic materials VOCs have a vapor pressure of ~~11.1~~ 1.1 pounds per square inch absolute psia (568 mm Hg 76.6 kPa) or greater under actual conditions. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place.

(2) A vapor-recovery system consisting of a vapor-gathering system capable of collecting 85 percent or more of the

uncontrolled ~~organic material~~VOCs that would otherwise be emitted to the atmosphere, and a vapor-disposal system capable of processing ~~such these~~ organic material VOCs so as to prevent their emission to the atmosphere. ~~and with all~~All tank vessel gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place.

(3) Other equipment or ~~means~~methods of equal efficiency for purposes of air pollution control ~~as may be when~~ approved by the ~~Executive Division~~ Director prior to installation.

(b) Storage capacities of 400 gallons and greater. N O
~~person~~owner or operator shall build, sell, or install ~~or permit the building or installation of~~ a new stationary organic material VOC storage tank vessel with a capacity of 400 gallons (1520 liters) or more unless ~~such tank~~it is equipped with a permanent submerged fill pipe or is equipped with an ~~organic material~~a vapor-recovery system as required in ~~252:100-37-5(a)~~252:100-37-15(a).

252:100-37-16. Loading of ~~volatile organic compounds~~VOCs

(a) Loading facilities with throughput greater than 40,000 gallons/day.

(1) No ~~person~~owner or operator shall build or install ~~or permit the building or installation of~~ a stationary organic material VOC loading facility ~~having~~designed to have a throughput greater than 40,000 gallons per day from its aggregate loading pipes unless ~~such loading facility~~it ~~is~~will be equipped with a vapor-collection and disposal system or ~~unless loading is accomplished by bottom loading with closed hatches closed,~~ properly installed, in good working order and in operation.

(2) ~~When loading in a vapor collection and disposal system is effected through the hatches of a tank truck or trailer with a loading arm equipped with a vapor collecting adaptor, pneumatic, hydraulic or other mechanical means shall be provided to force a vapor tight seal between the adaptor and the hatch.~~When loading VOCs (at a loading facility equipped with a vapor collection and disposal system) through the hatches of a tank truck or trailer, using a loading arm equipped with a vapor collecting adaptor, a pneumatic, hydraulic, or mechanical means shall be provided to ensure a vapor-tight seal between the adaptor and the hatch.

(3) A means shall be provided in either system to prevent organic material VOC drainage from the loading device when it is removed from any tank truck or trailer, or to accomplish complete drainage before removal.

(4) When loading is effected through means other than hatches, all loading and vapor lines shall be equipped with fittings ~~which that~~ make vapor-tight connections and which must be closed when disconnected or which close automatically when disconnected.

(5) The vapor-disposal portion of the system shall consist of ~~one of the following:~~

(A) a vapor-liquid absorber system with a minimum

recovery efficiency of 90 percent by weight of all the ~~organic material~~VOC vapors and gases entering such disposal system; or,

(B) a variable-vapor space tank, compressor, and fuel-gas system of sufficient capacity to receive all ~~organic material~~VOC vapors and gases displaced from the tank trucks and trailers being loaded.

(b) Loading facilities with throughput equal to or less than 40,000 gallons per day.

(1) No ~~person~~owner or operator shall build or install ~~or permit the building or installation of~~ a stationary ~~organic material~~VOC loading facility ~~having~~designed to have a throughput of 40,000 gallons (150,000 liters) per day or less from its aggregate loading pipes unless each ~~is~~loading pipe will be equipped with a system for submerged filling of tank trucks or trailers ~~properly installed, in good working order and operating in such a manner that~~which will be installed and operated to maintain a 97 percent submergence factor ~~is maintained.~~

(2) Paragraph 252:100-37-16(b)(1) ~~apply~~applies to any facility ~~which~~that loads ~~organic materials~~VOCs into any tank truck or trailer with a capacity in excess of 200 gallons (760 liters) that is designed for transporting ~~organic materials~~VOCs and ~~having a capacity in excess of 200 gallons (760 liters).~~

252:100-37-17. Effluent water separators [NOTE: Moved and Renumbered 252:100-37-37.]

~~No person shall build or install or permit the building or installation of a single or multiple compartment organic material water separator which receives effluent water containing 200 gallons (760 liters) a day or more or any organic material from any equipment processing, refining, treating, storing or handling organic materials unless the compartment receiving said effluent water is equipped with one of the following vapor loss control devices, properly installed, in good working order and in operation:~~

~~(1) A container having all openings sealed and totally enclosing the liquid contents. All gauging and sampling devices shall be gas tight except when gauging or sampling is taking place. The oil removal devices shall be gas tight except when manual skimming, inspection and/or repair is in progress;~~

~~(2) A container equipped with a floating roof, consisting of a pontoon type, double deck type roof, or internal floating cover, which will rest on the surface of the contents and is equipped with a closure seal, or seals, to close the space between the roof edge and container wall. All gauging and sampling devices shall be gas tight except when gauging or sampling is taking place. The oil removal devices shall be gas tight except when manual skimming, inspection and/or repair is in progress;~~

~~(3) A container equipped with a vapor recovery system;~~

~~consisting of a vapor gathering system capable of collecting the organic material vapors and gases discharged and a vapor disposal system capable of processing such organic material vapors and gases so as to prevent their emission to the atmosphere and with all tank gauging and sampling devices gas tight except when gauging or sampling is taking place. The organic material removal devices shall be gas tight except when manual skimming, inspection and/or repair is in progress, or,~~

~~(4) Containers equipped with controls of equal efficiency provided such equipment is submitted to and approved by the Executive Director.~~

252:100-37-18. Pumps and compressors [NOTE: Moved and renumbered 252:100-37-38.]

~~No person shall build or install or permit the building or installation of any pump or compressor handling organic material compounds unless rotating type pumps and compressors are equipped with mechanical seals or other equipment of equal efficiency; or reciprocating type pumps and compressors are equipped with packing glands properly installed and in good working order such that the emissions from the drain recovery system are limited to two cubic inches of liquid organic material in any 15 minute period at standard conditions per pump or compressor.~~

PART 5. CONTROL OF ORGANIC SOLVENTS/VOCs IN COATING OPERATIONS

252:100-37-25. Coating of parts and products

(a) Standards. ~~No owner or operator subject to the provision of this Section shall discharge or cause the discharge into the atmosphere from an existing coating line or individual coating operation any organic solvent in excess of the amounts, listed in the following table, per gallon of coating, excluding water, delivered to the coating applicator. No owner or operator of any coating line or coating operation with VOC emissions shall use coatings that as applied contain VOCs in excess of the amounts listed in the following table.~~

Type of coating	Pounds of organic solvent/VOC per gallon of paint/coating (less water and exempted organic compounds)		
	Jan. 79 limit	Jan. 81 limit	Jan. 82 limit
Alkyd primer	5.6	5.2	4.8
Vinyls	6.4	6.4	6.0
NC lacquers	6.8	6.6	6.4
Acrylics	6.4	6.4	6.0
Epoxies	5.6	5.2	4.8
Maintenance finishes	5.6	5.2	4.8
Custom products finishes	6.8	6.6	6.5

(b) Plant-wide emission plan. ~~An owner/operator may develop a plant wide emission plan instead of having each coating line comply with the emission limitations prescribed in the table in (a) of this section, provided:~~

(1) Development of a plant-wide emission plan. An owner or operator may develop a plant-wide emission plan instead of having each coating line comply with the VOC content limitations in 252:100-37-25(a), if the following conditions are met.

(A) ~~the~~The owner or operator demonstrates, by means of approved material balance or manual emission test methods, by the methods in 252:100-5-2.1(d) that sufficient reductions in organic solvents emissions of VOCs may be obtained by controlling other facilitiesources within the plant to the extent necessary to compensate for all excess emissions whichthat result from one or more coating lines not achieving the prescribed limitation. Such demonstration shall be describedmade in writing and shall include:

~~(A)(i)~~ Aa complete description of the coating line or lines whichthat will not comply with the emissionVOC content limitation in 252:100-37-25(a);

~~(B)(ii)~~ Quantificationquantification of emissions, in terms of pounds per day of organic solventsVOCs, which are in excess of the prescribed emissionVOC content limitation for each coating line described under 252:100-37-25(b)(1)(A)252:100-37-25(b)(1)(A)(i);

~~(C)(iii)~~ Aa complete description of each facility and the related control system, if any, for those facilities within the plant wherehow emissions will be decreased at specific sources to compensate for excess emissions from each coating line described under 252:100-37-25(b)(1)(A)252:100-37-25(b)(1)(A)(i) and the date on which such reductions will be achieved;

~~(D)(iv)~~ Quantificationquantification of emissions, in terms of pounds per day of organic solventsVOCs, for each facilitysource described under 252:100-37-25(b)(1)(C)252:100-37-25(b)(1)(A)(iii), both before and after the improvement or installation of any applicable control system, or operational changes to such a facility or facilities to reduce emissions and the date on which such reductions will be achieved;

~~(E)(v)~~ Aa description of the procedures and methods used to determine the emissions of organic solventsVOCs.

~~(2)(B)~~ theThe plant-wide emission reduction plan does not include decreases in emissions resulting from requirements of other applicable air pollution rules.

~~The plant wide emission reduction plan may include decreases in emissions accomplished through installation or improvement of a control system or through physical or operational changes to facilities, including permanently reduced production or closing a facility, located on the premises of a surface coating operation.~~

~~(3)~~ (2) **Compliance with a plant-wide emission plan.** ~~the~~The implementation of a plant-wide emission reduction plan instead of compliance with the ~~emissions~~VOC content limitation prescribed in 252:100-37-25(a) has been expressly approved by the Executive Director. Upon approval, any emissions in excess of those established for each facility under the plan shall be a violation of this Subchapter.

(c) **Emission limitation**Control equipment required. ~~No person shall discharge into the atmosphere more than 3,000 pounds of organic materials in any one day nor more than 450 pounds in any one hour from any article, machine, equipment or other contrivance in which any organic solvent or any material containing such solvent is employed.~~No owner or operator shall allow the emissions into the atmosphere of more than 3,000 pounds of VOCs in any one day nor more than 450 pounds in any one hour from any machine or equipment in which VOC or VOC containing material is used or applied, unless such dischargeemission has been reduced by at least 85 percent or ~~has applied~~unless BACT or better, as determined by the ~~Executive~~Division Director, has been applied to the coating machine or equipment.

(d) **Exemption.** Owners or operators of sources that are computed to emit less than 100 pounds of ~~organic solvent~~VOC per ~~24 hr./day~~24-hour day are exempt from the requirements of this Section.

(e) **Alternate standard.** ~~Emissions~~The use of coatings with VOC contents in excess of those permitted by 252:100-37-25(a) or with emissions in excess of those permitted by ~~through 252:100-37-25(d)~~252:100-37-25(c) are allowable if both of the following conditions are met:

(1) VOC emissions that would result in the absence of control occur if no controls were used, are reduced by:

(A) 90 percent, by incineration; ~~or,~~

(B) 85 percent, by ~~absorption~~adsorption; or, any other process of equivalent reliability and effectiveness; and,

(C) 85 percent by any other process of equivalent reliability and effectiveness.

(2) ~~no~~No air pollution, as defined by the Clean Air Act, results.

252:100-37-26. Clean up with ~~organic solvents~~VOCs

Emissions ~~of organic materials to the atmosphere from the clean up with organic solvents, as defined in 252:100-37-2,~~VOCs of any article, machine, or equipment or other contrivance used in applying coatings controlled in 252:100-37-25(a) through ~~252:100-37-25(d)~~252:100-37-25(e) shall be included with the other emissions

~~of organic solvents from the coating line or operation counted in determining compliance with those rules.~~

PART 7. CONTROL OF SPECIFIC PROCESSES

252:100-37-35. Waste gas disposal

(a) ~~Ethylene manufacturing emissions.~~ ~~No personowner or operator shall build or install or permit the building or installation of any ethylene manufacturing plant unless the waste-gas stream under normal operating conditions is properly burned at 1,300°F- for 0.3 seconds or greater in a direct-flame afterburner equipped with an indicating pyrometer which is positioned in the working area for the operator's ready monitoring or an equally effective catalytic vapor incinerator also with pyrometer. Proper burning of the waste-gas stream is defined as reduction by 98 percent of the ethylene emissions originally present in the waste-gas stream.~~

(b) ~~Vapor blowdown.~~ Except where inconsistent with the "Minimum Federal Safety Standards for the Transportation of Natural and Other Gas by Pipeline," or any State of Oklahoma regulatory agency, ~~no personowner or operator shall allow emit organicVOC gases to be emitted to the atmosphere from a vapor recovery blowdown system unless these gases are burned by smokeless flares, or an equally effective control device as approved by the ExecutiveDivision Director.~~

252:100-37-36. Fuel-burning and refuse-burning equipment

~~No person shall cause or allow the emission of hydrocarbons or other organic materials from any fuel burning or refuse burning equipment. All suchfuel-burning or refuse-burning equipment shall be operated as to minimize such emissions of VOC. Among other things, such operation shall assure that the equipment is not overloaded, that it is properly cleaned, operated, and maintained, and that temperature and available air are sufficient to provide essentially complete combustion.~~

252:100-37-37. Effluent water separators [NOTE: Was 252:100-37-17.]

~~No personowner or operator shall build or install or permit the building or installation of a single-single-compartment or multiple-compartment organic material waterVOC/water separator whichthat will receivesreceive effluent water containing 200 gallons (760 liters) a day or more orof any organic materialVOC from any equipment processing, refining, treating, storing or handling organic materialsVOCs unless the compartment receiving saidthe effluent water iswill equippedcomply with one of the following vapor loss control devices, properly installed, in good working order and in operationsets of conditions-.~~

~~(1) The container totally encloses the liquid contents and having all openings are sealed and totally enclosing the liquid contents. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The oil removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.~~

(2) The container is equipped with a floating roof, consisting of a pontoon type, internal floating cover, or double-deck type roof, or internal floating cover, which will rest on the surface of the contents and is equipped with a closure seal, or seals, to close the space between the roof edge and container wall. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The oil removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.

(3) The container is equipped with a vapor-recovery system, consisting of a vapor-gathering system capable of collecting the organic material VOC vapors and gases discharged and a vapor-disposal system capable of processing such organic material vapors and gases so as to prevent their emission to the atmosphere, and with all tank gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The organic material VOC removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress, or.

(4) The Containers container is equipped with controls of equal efficiency provided such equipment is submitted to and if approved by the Executive Division Director. [NOTE: New language in this section is double underlined to facilitate comparison.]

252:100-37-38. Pumps and compressors [NOTE: Was 252:100-37-18.]

No person owner or operator shall build or install or permit the building or installation of any pump or compressor handling organic material compounds VOCs unless the following conditions are met. rotating type pumps and compressors are equipped with mechanical seals or other equipment of equal efficiency; or reciprocating type pumps and compressors are equipped with packing glands properly installed and in good working order such that the emissions from the drain recovery system are limited to two cubic inches of liquid organic material in any 15 minute period at standard conditions per pump or compressor.

(1) Rotating type pumps and compressors are equipped with mechanical seals or other equipment of equal efficiency.

(2) Reciprocating type pumps and compressors are equipped with packing glands.

(3) Emissions from the drain recovery system do not exceed two cubic inches of liquid VOC in any 15 minute period per pump or compressor at standard conditions.

[NOTE: New language in this Section is double underlined to facilitate comparison.]

LIST OF ORGANIC COMPOUNDS WITH NEGLIGIBLE
PHOTOCHEMICAL REACTIVITY

40 CFR 51.100(s)(1) as it existed on July 1, 1998

From the Federal Register dated 4/9/98

Sec. 51.100 Definitions.

(s) Volatile organic compounds (VOC)

(1) This includes any such organic compound other than the following, which have been determined to have negligible photochemical reactivity:

methane;
ethane;
methylene chloride (dichloromethane);
1,1,1-trichloroethane (methyl chloroform);
1,1,2-trichloro-1,2,2-trifluoroethane (CFC-113);
trichlorofluoromethane (CFC-11);
dichlorodifluoromethane (CFC-12);
chlorodifluoromethane (HCFC-22);
trifluoromethane (HFC-23);
1,2-dichloro 1,1,2,2-tetrafluoroethane (CFC-114);
chloropentafluoroethane (CFC-115);
1,1,1-trifluoro 2,2-dichloroethane (HCFC-123);
1,1,1,2-tetrafluoroethane (HFC-134a);
1,1-dichloro 1-fluoroethane (HCFC-141b);
1-chloro 1,1-difluoroethane (HCFC-142b);
2-chloro-1,1,1,2-tetrafluoroethane (HCFC-124);
pentafluoroethane (HFC-125);
1,1,2,2-tetrafluoroethane (HFC-134);
1,1,1-trifluoroethane (HFC-143a);
1,1-difluoroethane (HFC-152a);
parachlorobenzotrifluoride (PCBTF);
cyclic, branched, or linear completely methylated siloxanes;
acetone;
perchloroethylene (tetrachloroethylene);
3,3-dichloro-1,1,1,2,2-pentafluoropropane (HCFC-225ca);
1,3-dichloro-1,1,2,2,3-pentafluoropropane (HCFC-225cb);
1,1,1,2,3,4,4,5,5,5-decafluoropentane (HFC 43-10mee);
difluoromethane (HFC-32);
ethylfluoride (HFC-161);
1,1,1,3,3,3-hexafluoropropane (HFC-236fa);
1,1,2,2,3-pentafluoropropane (HFC-245ca);
1,1,2,3,3-pentafluoropropane (HFC-245ea);
1,1,1,2,3-pentafluoropropane (HFC-245eb);
1,1,1,3,3-pentafluoropropane (HFC-245fa);
1,1,1,2,3,3-hexafluoropropane (HFC-236ea);
1,1,1,3,3-pentafluorobutane (HFC-365mfc);

chlorofluoromethane (HCFC-31);
1 chloro-1-fluoroethane (HCFC-151a);
1,2-dichloro-1,1,2-trifluoroethane (HCFC-123a);
1,1,1,2,2,3,3,4,4-nonafluoro-4-methoxy-butane ($C_4F_9OCH_3$);
2-(difluoromethoxymethyl)-1,1,1,2,3,3,3-heptafluoropropane
($(CF_3)_2CFCF_2OCH_3$);
1-ethoxy-1,1,2,2,3,3,4,4,4-nonafluorobutane ($C_4F_9OC_2H_5$);
2-(ethoxydifluoromethyl)-1,1,1,2,3,3,3-heptafluoropropane
($(CF_3)_2CFCF_2OC_2H_5$);
methyl acetate

and perfluorocarbon compounds which fall into these classes:

- (i) Cyclic, branched, or linear, completely fluorinated alkanes;
- (ii) Cyclic, branched, or linear, completely fluorinated ethers with no unsaturations;
- (iii) Cyclic, branched, or linear, completely fluorinated tertiary amines with no unsaturations; and
- (iv) Sulfur containing perfluorocarbons with no unsaturations and with sulfur bonds only to carbon and fluorine.

SUMMATION AND EXPLANATION OF THE PROPOSED REVISIONS TO SUBCHAPTER 37

The proposed revisions to Subchapter 37 are the result of the DEQ program to simplify, clarify and correct all its rules. Unless otherwise noted, no substantive changes were intended in the following proposed revisions. *The substantive revisions are summarized in Section II of this document.* This summation has been updated to reflect the substantive changes proposed after the August 18, 1998, Air Quality Council meeting. The only changes to this document are to III.B.2. and IV.A.1. The document entitled "Revisions to the Proposed Modification of Subchapter 37 for the October 20, 1998, Air Quality Council Meeting" lists all proposed revisions to the draft presented at the August 18, 1998, meeting.

I. Revisions made throughout the Subchapter

A. Revisions in Terminology

1. Environmental Protection Agency has been replaced by EPA - simplification
2. Executive Director has been replaced, in most cases, by Division Director - clarification
3. Organic material has been replaced by VOC - simplification
4. Organic solvent has been replaced by VOC - simplification
5. Hydrocarbon has been replaced by VOC - simplification
6. Volatile organic compound(s) has been replaced by VOC(s) - simplification
7. photochemical oxidants has been replaced by ozone - clarification
8. Tank has been replaced by vessel - consistency in terminology
9. Person has been replaced by owner or operator - clarification

B. Revised or deleted language

1. "or permit the building or installation of" has been deleted throughout the rule - simplification and clarification
2. Unless otherwise noted herein, changes to language were for simplification, clarification, correction of grammar, or consistency of format.

II. SUBSTANTIVE CHANGES. Only three of the revisions proposed by the staff are intended to be substantive. These are:

- A. the revision of the definition of volatile organic compound (VOC) in 252:100-37-2;
- B. the deletion of the requirement for BACT for new sources of VOC in 252:100-37-3(a); and
- C. the correction of 252:100-37-36 regarding fuel-burning and refuse-burning equipment.

III. Revisions to PART 1. GENERAL PROVISIONS

- A. **252:100-37-1. Purpose.** The proposed revisions are to set forth as clearly as possible the purpose of the rule.
- B. **252:100-37-2. Definitions.** The following revisions are proposed for this section.
 1. The staff proposes to delete the definitions OF CUTBACK ASPHALT, REFINERY and VOLATILE ORGANIC SOLVENT (VOS) since these terms are not used in Subchapter 37.
 2. The staff proposes to revise the definition of VOLATILE ORGANIC COMPOUND (VOC) be consistent with the EPA definition. 40 CFR 51.100(s)(1) contains the list of organic compounds that EPA has designated as having negligible

photochemical reactivity and therefore excluded from the definition of VOC. Staff has added language that states if an organic compound is listed in 40 CFR 51.100(s)(1) it will be presumed to have negligible photochemical reactivity and will not be considered a VOC.

- ◆ This is part of the simplification process. What EPA classifies as VOC has been classified as organic material in Chapter 100 and divided into VOC, organic solvents, and volatile organic solvents. The Chapter contains two definitions of VOC and two definitions of organic solvents. The staff feels having one definition of VOC that is consistent with the EPA definition will simplify the Chapter as well as Subchapter 37.
- ◆ Ozone is the NAAQS pollutant of concern in Subchapter 37. The rule provides for control of ozone by controlling the emissions of ozone precursors - photochemically reactive organic compounds. The proposed revision of the definition of VOC reflects this purpose.
- ◆ A petition from the Chemical Manufacturers Association to exclude acetone from the definition of VOC was presented to the Air Quality Council at the meeting of December 19, 1995. The Council directed the staff to give consideration to this petition. Subsequent to this event, other requests have been received requesting that perchloroethylene and methylated siloxanes also be excluded from the definition of VOC. The proposed revision of VOC excludes these three compounds since they have been designated by EPA as having negligible photochemical reactivity.
- ◆ **THIS REVISION MAY RESULT IN SOME SUBSTANTIVE CHANGES**, although care has been taken throughout the rest of the Subchapter to minimize any such substantive changes that may result from the revised definition of VOC.

C. 252:100-37-3. Applicability and compliance

1. **(a) New sources.** Staff recommends that this subsection be deleted. As originally proposed it applied only to organic solvents and only to major sources. The major source restriction was dropped without explanation when the subsection was adopted, but it applied only to organic solvents (what is now Part 5 and consists of Section 25, Coating of parts and products and Section 26, Clean up with organic solvents). In the course of several recodifications the subsection was moved to General Provisions and became applicable to the entire rule. Staff does not believe this was the original intent. To require BACT for all new minor sources of VOC, especially those located in areas that have always been in attainment for ozone, requires more time, effort, and resources than can be justified by the subsequent reduction in VOC emissions. There is no need to require BACT for new major sources of BACT since that requirement already exists in 252:100-8-5(d)(1)(A). **THIS IS A SUBSTANTIVE CHANGE.**
2. **(b) Compliance schedule.**
 - ◆ Staff recommends that (b)(1) be deleted. The requirement is redundant.

- ◆ Staff proposes to renumber (b)(2) as (a) and proposes revisions to make clear that the Subchapter as modified effective December 28, 1974, applies to all new sources or modifications after that date.
- ◆ Staff proposes to renumber (b)(3) as (b) and lists the sections (as revised) that will apply to all existing sources in AQMAs. This was done to prevent a substantive change due to the use of the term VOC instead of organic solvents or organic material. In the existing rule only Sections 15, 16, 17, 18, 35 and 36 pertained to VOCs. In the proposed revision Sections 17 and 18 have been renumbered Sections 35 and 36 respectively. Language has also been added to make clear that AQMAs as classified by the EPA with regard to VOCs and ozone consists of Tulsa and Oklahoma Counties. The proposed revisions are for clarification.
- ◆ Staff proposes to delete (b)(4). This paragraph is redundant.

D. 252:100-37-4. Exemptions

1. Revisions to paragraph (a) insure that those sections which previously applied only to VOCs with vapor pressure of 1.5 psia or greater continue to apply only to VOCs with vapor pressure of 1.5 psia or greater. Changes in citations reflect renumbering proposed in other sections of the rule. Two citations (252:100-37-27 and 28) which did not exist in the present rule were corrected and renumbered to 252:100-37-35 and 36.
2. Revisions to paragraph (b) make it clear that the exemption of transfer and loading operations is limited to those located at drilling production facilities.
3. Revisions to paragraph (c) make it clear that VOCs produced, stored, or used on a farm or ranch are exempt from portions of Subchapter 37 if they are used for agricultural purposes on the same farm or ranch.

E. 252:100-37-5. Operation and maintenance This proposed new section is part of the simplification and streamlining project. This requirement appears in several places in the existing rule. It has been added as a section and appear only once in the proposed revision.

IV. PART 3. CONTROL OF VOLATILE ORGANIC COMPOUNDS Staff proposes to rename this Part "CONTROL OF VOCs IN STORAGE AND LOADING OPERATIONS" to better reflect its contents. 252:100-37-17 (Effluent water separators) and 252:100-37-18 (Pumps and compressors) have been renumbered and moved to Part 7.

A. 252:100-15. Storage of VOCs Staff proposes to add taglines to subsections (a) and (b) for clarification.

1. **(a) Storage capacities greater than 40,000 gallons.**
 - ◆ (1). Staff has proposed language to make clear that the cover of an external floating roof vessel may rest on the leg supports during filling, emptying, or refilling. Staff proposes to replace "11 psia" with "11.1 psia", and "75.8 kPa" with "76.6 kPa".
2. **(b) Storage capacities of 400 gallons and greater.** Proposed revision to this subsection is for the correction of a citation (252:100-37-5(a) should have been 252:100-37-15(a)).

B. 252:100-37-17. Effluent water separators has been renumbered 252:100-37-37 and moved to Part 7, Control of Specific Processes.

C. **252:100-37-18. Pumps and compressors** has been renumbered 252:100-37-38 and moved to Part 7, Control of Specific Processes.

V. **PART 5. CONTROL OF ORGANIC SOLVENTS** Staff proposes to rename Part 5 **CONTROL OF VOCs IN COATING OPERATIONS** to better reflect its contents..

A. **252:100-37-25. Coating of parts and products.**

1. (a) **Standards.** Staff proposes to delete the limits on VOC content per gallon of coating that were set for January, 1979 and January 1980. These deadlines have passed and sources are now required to comply with the limits that became effective January, 1982.
2. (c) **Emission limitation.** Staff proposes to change the title of this subsection to "Control equipment required" to better reflect its contents.
3. (e) **Alternate standard.** The proposed revisions to this subsection are for clarification and to correct citations.

VI. **PART 7. CONTROL OF SPECIFIC PROCESSES**

A. **252:100-37-36. Fuel-burning and refuse-burning equipment.** The staff proposes to delete the impossible requirement that there can be no emission of hydrocarbons or other organic material from fuel-burning or refuse-burning equipment by deleting the first sentence of this section. This also resolves the conflict with the requirement that all such equipment be operated to minimize such emissions that was contained in the second sentence of this section. **THIS IS A SUBSTANTIVE CHANGE.**

REVISIONS TO THE PROPOSED MODIFICATION OF SUBCHAPTER 37 FOR THE
OCTOBER 20, 1998 AIR QUALITY COUNCIL MEETING

Below is a list of the revisions that will be proposed to the proposed modification of Subchapter 37 that was presented at the August 18, 1998, AQC meeting. This list is furnished to facilitate review of the modification for the October 20, 1998 AQC meeting

1. 252:100-37-2. Deleted NOTE following definition of "Alkyd primer"
2. 252:100-37-2. Changed "Custom product finishes" to "Custom product finish"
3. 252:100-37-2. Changed "Maintenance finishes" to "Maintenance finish" and replaced "condition" with "conditions"
4. 252:100-37-2. Changed "Nitrocellulose lacquers (NC lacquers)" to "Nitrocellulose lacquer (NC lacquer)"
5. 252:100-37-2. Deleted (D) under "Submerged fill pipe" and added a NOTE.
6. 252:100-37-2. "Vinyl" Corrected spelling by deleting "plasterized" and "unplasterized" and replacing them with "plasticized" and "unplasticized" respectively.
7. 252:100-37-2. "Volatile organic compound (VOC)" Removed language incorporating 40 CFR 51.100(s)(1) by reference. Added language that states if an organic compound is listed in 40 CFR 51.100(s)(1) we will presume it has negligible photochemical reactivity and it will not be considered a VOC. Revised the NOTE to include methyl acetate
8. 252:100-37-3(b) Changed "vesse;s" to "vessels"
9. 252:100-37-3(b) Replaced (a) with (b) in the NOTE
10. 252:100-37-4(a). Changed "with vapor pressure less than 1.5 psia" in the first sentence of the NOTE to "with vapor pressures equal to or greater than 1.5 psia".
11. 252:100-37-4(b). Inserted "lease" prior to "custody transfer" for consistency and because "lease custody transfer" is defined in 252:100-1.
12. 252:100-37-5. Deleted the NOTE
13. 252:100-37-15(a)(1). In the first sentence replaced "A" with "An external"; inserted a hyphen between "pontoon" and "type"; deleted "internal floating cover,"; after "double-deck type" replaced "roof" with "cover"; inserted "or a fixed roof with an internal-floating cover." after "double-deck type cover"; and deleted "that". Began the second sentence by inserting "The cover" prior to "will rest", deleted the period after "liquid contents" and added "at all times (i.e. off the leg supports), except during initial fill, when the storage vessel is completely empty, or during refilling. When the cover is resting on the leg supports, the process of filling, emptying, or refilling shall be continuous and shall be accomplished as rapidly as possible." Replaced "roof edge" with "cover edge", "11 psia" with "11.1 psia", and "75.8 kPa" with "76.6 kPa"
14. 252:100-37-15(a)(2). Changed both uses of "VOC" in the first sentence to "VOCs" and added "these" prior to the second "VOCs"

15. 252:100-37-25(a). Reworded the sentence preceding the table for simplification and clarification
16. 252:100-37-25(a). Inserted "as applied" between "coatings that" and "contain VOCs"
17. 252:100-37-25(a). Deleted "Jan. 82 limit" from the table heading.
18. 252:100-37-25(b)(1)(A). Deleted "VOCs" prior to "emissions" and inserted "of VOCs" after "emissions"
19. 252:100-37-25(c). Inserted a comma after "Division Director"
20. 252:100-37-35(A). Deleted the period after "1,300F"
21. 252:100-37-36. Changed the following sentence as indicated. ".Among other things, such operation shall assure that the equipment is not overloaded that it is properly cleaned operated, and maintained; and that temperature and available air are sufficient to provide essentially complete combustion." This change was suggested by EPA in their comment letter.
22. 252:100-37-37. Deleted "be" in the following sentence. No person owner or operator shall build or installer permit the building or installation of single single-compartment or multiple-compartment organic material waterVOC/water separator which that will receivesreceive effluent water containing 200 gallons (760 liters) a day or more of any organic materialVOC from any equipment processing, refining, treating, storing or handling organic materialsVOCs unless the compartment receivesaidthe effluent water iswill be equipped comply with one of the following vapor less control devices, properly installed, in good working order and in operationacts of conditions.
23. 252:100-37-37(3) Inserted "shall be" before "gas-tight" in the second sentence.

**RESPONSE TO WRITTEN COMMENTS FROM THE PUBLIC AND INDUSTRY
SUBCHAPTER 37**

Below is a summation of written comments along with staff responses regarding the proposed revisions to Subchapter 37. This includes only those comments that were received prior to the mail-out of the Air Quality Council packets for the October 20, 1998 meeting.

FORT JAMES LETTER (dated 8/6/98, received 8/13/98, signed by Mark S. Reimer):

1. COMMENT: The commentor found it unclear if the control requirements in Part 3 apply to new installations located only in Tulsa or Oklahoma Counties or any new installation located in the State when 252:100-37-3(b) is read in conjunction with Part 3.

RESPONSE: 252:100-37-3(b) does not address new sources. It requires existing sources located in an AQMA to comply with Sections 15, 16, 35, 36, 37 and 38. On the other hand 252:100-37-3(a) requires all new installations regardless of where they are located to comply with this Subchapter after the effective date of the Subchapter. Staff feels that keeping both 252:100-37-3(a) and (b) in mind, it is clear that Sections 15, 16 17 and 18 found in Part 3 apply to all new sources in the State after 12/28/74 and to all existing sources in Tulsa and Oklahoma Counties as of 6/9/81.

EPA LETTER (received by FAX on 8/14/98, signed by Thomas H. Diggs, Region 6)

2. COMMENT: The word vesse;s in 252:100-37-3(b) should be vessels (typographical error).

RESPONSE: The staff concurs and this correction has been made..

3. COMMENT: The word "operated," should be added to the last sentence after "properly cleaned" in 252:100-37-36 Fuel-burning and refuse-burning equipment (on page 10).

RESPONSE: Staff concurs and this changed has been made

DOW CORNING LETTER (dated 8/14/98, received 8/14/98, signed by Michael E. Thelen)

4. COMMENT; Dow Corning Corporation supports the proposed revisions to the definition of VOC to exempt methylated siloxanes due to its low photochemical reactivity. This allows the use of methylated siloxanes as replacement for VOCs in manufacturing operations.

RESPONSE: The Staff appreciates Dow Corning Corporations support.

KILPATRICK STOCKTON LLP LETTER (dated August 13, 1998, received august 18, 1998, written on behalf of Eastman chemical Company and signed by W. Clark Jordan.)

5 COMMENT: A letter supporting the revision of the definition of VOC which results in methyl acetate not being considered a VOC.

RESPONSE: Staff appreciates the support.

Gary Kilpatrick
Meribeth Slagell

Guests Present

**see attached list

PUBLIC MEETING

Notice of Public Meeting for October 20, 1998 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance door of the meeting room.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Mr. Branecky - aye; Ms. Myers - aye; Mr. Wilson - aye; Dr. Grosz - aye. Mr. Kilpatrick, Ms. Slagell and Dr. Canter did not attend.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the August 18, 1998 Public Meeting/Hearings. Motion was made by Mr. Wilson to approve the Minutes as presented and second to the motion was made by Dr. Grosz. Roll call as follows: Mr. Branecky - aye; Ms. Myers - aye; Mr. Wilson - aye; Dr. Grosz - aye; Mr. Breisch - aye.

1999 Meeting Schedule - Mr. Dyke presented Council with proposed scheduled for 1999 meetings with the suggestion that the December 21 date mentioned in the packet memo be changed to December 14. Ms. Myers made motion to accept the schedule as proposed: Wednesday, February 17, Tuesday, April 20, Tuesday, August 17, and Tuesday, December 14 at OKC, DEQ Multi-Purpose Room; with Tuesday, June 15 and October 19 at Tulsa, TCCHD Auditorium. Second to motion was made by David Branecky. Roll call as follows: Mr. Branecky - aye; Ms. Myers - aye; Mr. Wilson - aye; Dr. Grosz - aye; Mr. Breisch - aye.

Auditorium. Second to motion was made by David Branecky. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-7 Permits [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Jeanette Buttram for staff position regarding this rule. Ms. Buttram pointed out proposed revisions would modify language applicable to de minimis facilities, Permit by Rule (PBR), and general permits stating that actual emissions of Total Suspended Particulates (TSP) will no longer be counted in determining whether a facility meets the definition of “de minimis facility.” Also, she stated that proposed revision would delete the lower limit of five tons per year for PBR facilities allowing those facilities with less than five tons per year emissions which are subject to NSPS or NESHAP to apply for a PBR instead of having to obtain an individual permit. Ms. Buttram advised that staff proposed that a new Part 9 be added that would outline the requirements necessary for a facility to qualify for a PBR. A third point she brought out was the proposed revision to delete the lower limit for general permits allowing facilities that may have less than 40 tons per year of emissions, but for which no PBR had been written, the opportunity to apply for coverage under an applicable general permit. Lastly, she added that the Department proposed to amend 252-7-3 to increase fees for minor facilities for applicability determinations, relocation permits, and applications for individual permits.

Following discussion and comments, Chairman Breisch entertained a motion to continue this rule to the Council’s October 20, 1998 meeting. Ms. Myers made that motion with second made by Dr. Grosz. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-25 Smoke, Visible Emissions and Particulates [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Jeanette Buttram to give staff’s position on this rule. Ms. Buttram pointed out that the proposed amendments would fulfill an EPA requirement concerning Continuous Emissions Monitoring proposing to incorporate by reference the Federal opacity monitoring requirements for fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries and fossil fuel-fired steam generators as specified in 40 CFR 51, Appendix P. She noted that the Department proposed to exempt from Appendix P requirements for those sources already subject to a new source performance standard and for sources scheduled for retirement within five years after the

amended rule takes effect. Ms. Buttram added that the amended rule would also provide criteria for approval of alternative monitoring requirements with additional changes that would clarify how the opacity standard is determined.

Mr. Breisch asked for a motion to recommend the rule as proposed to the Environmental Quality Board for permanent adoption. Mr. Wilson made the motion with David Branecky making the second. Roll call was as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-23 Control of Emissions from Cotton Gins [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Michelle Martinez who related that the draft rule included simplification of language according to the Agency's re-write/de-wrong initiative and the addition of a Permit by Rule section. She then pointed out that the proposed revisions add a new Permit by Rule section that would streamline the permitting process by creating a mechanism that eliminates the necessity for some cotton gins to obtain an individual air quality permit. Ms. Martinez added that additional changes would allow exceedances of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours.

Following discussion, Mr. Breisch entertained a motion to recommend this rule to the Environmental Quality Board for permanent adoption. Ms. Myers made the motion with second made by Mr. Branecky. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-24 Control of Emissions from Grain Elevators [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Michelle Martinez who advised that the proposed revisions would simplify the language under the agency-wide re-right/de-wrong initiative and would add a new Permit by Rule section to streamline the permitting process by creating a mechanism that would eliminate the necessity for some grain elevators to obtain an individual air quality permit. Ms. Martinez added that a new Appendix L proposed would contain PM-10 emission factors for PBR grain elevators. Additional changes follow a proposed amendment of Subchapter 25 concerning short-term exceedances of the

opacity standard allowing exceedances of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours.

Mr. Breisch entertained a motion to recommend the rule to the Environmental Quality Board for permanent adoption at its November 10 meeting. Mr. Wilson made that motion with second made by Ms. Myers. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-37 Control of Emissions of Organic Materials (AMENDED)

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy who advised that proposed changes included language consistent with the re-right/de-wrong initiative. She then pointed out four substantive changes that were proposed for Subchapter 37 as well as Subchapter 39:

- 1) to change the definition of “volatile organic compounds (VOC)” per Council’s direction and requests from industry to exclude acetone, perchloroethylene, methylated siloxanes, methyl acetate from the definition of VOC and to modify the definition of VOC to be consistent with the EPA definition;
- 2) to remove of the requirement for permits and best available control technology (BACT) for new sources of VOC contained in 252:100-37-3(a);
- 3) a change regarding fuel-burning and refuse-burning equipment, which has been deleted to resolve the contradiction between the first and second sentences; and
- 4) to add a new Part 9, Permit by Rule for Volatile Organic Liquid Storage and Loading Facilities.

Mr. Breisch entertained a motion to continue this rule to Council’s December meeting. Ms. Myers made motion with second made by Dr. Grosz. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-39 Control of Organic Materials in Nonattainment Areas [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy who advised that proposed changes included language consistent with the re-right/de-wrong initiative. She stated that one substantive change affects both Subchapters 39 and 37

which is to change the definition of "volatile organic compounds" per Council's direction and requests from industry to exclude acetone, perchloroethylene, methylated siloxanes, methyl acetate from the definition of VOC and to modify the definition of VOC to be consistent with the EPA definition;

In Subchapter 39, Dr. Sheedy pointed out the need for correction of the placement of "prior to lease custody transfer" in 252:100-39-30(b)(2) which would be a substantive change along with the addition of a minimum annual throughput of 120,000 gallons and a minimum storage capacity of 2,000 gallons to 252:100-39-41(c) to determine applicability of subsection (c).

Following discussion, Mr. Breisch entertained a motion to continue this rule to the Council's December 15 meeting. Mr. Branecky made that motion with the second made by Mr. Wilson. Roll call as follows: Mr. Branecky - aye; Ms. Myers - aye; Mr. Wilson - aye; Dr. Grosz - aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-41 Control of Emission of Hazardous and Toxic Air Contaminants [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy who stated that the proposed revisions would update the adoption by reference of 40 CFR Part 63 to include Maximum Achievable Control Technology (MACT) standards promulgated or amended between July 1, 1997 and July 1, 1998. She pointed out that the new standards are Subpart S - NESHAP for Pulp and Paper Production and Subpart LL - NESHAP for Aluminum Production Plants. The proposed revisions will also update the adoption by reference of the NESHAP as found in 40 CFR Part 61 (with the exception of Subparts B, H, I, K, Q, R, T, and W. and Appendices D and E which address radionuclides) to July 1, 1998. Dr. Sheedy advised the Council that these modifications were necessary to obtain EPA's delegation of authority to implement the federal hazardous air pollutant program in Oklahoma.

Mr. Breisch entertained a motion to recommend this rule to the Environmental Quality Board for permanent adoption. Mr. Wilson made that motion with the second made by Mr. Branecky. Roll call as follows: Mr. Branecky - aye; Ms. Myers - aye; Mr. Wilson - aye; Dr. Grosz - aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

**OAC 252:100-5 Registration, Emission Inventory and Annual Operating Fees
[AMENDED]**

OAC 252:100-7 Permits [AMENDED]

OAC 252:100-8 Permits for Part 70 Sources [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Shawna McWaters-Khalousi for staff recommendation. Ms. Khalousi advised that the Department is proposing to amend 252:100-5-2.2 to increase annual operating fees assessed to minor facilities; amend 252:100-7-3 to increase fees for minor facilities for applicability determinations, relocation permits, and applications for individual permits; and amend 252:100-8-1.7 to increase applicability determination fees for Part 70 Sources. Ms. Khalousi stated that it was staff's recommendation that this rule be continued to Council's December 15 meeting.

Mr. Breisch entertained motion to continue these rules to the December meeting. Ms. Myers made the motion and second was made by Mr. Branecky. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes.

NEW BUSINESS – None

ADJOURNMENT With no further business, meeting was adjourned and next regularly scheduled meeting being December 15, 1998 at Lincoln Plaza Office Complex Burgundy Room, 4545 North Lincoln, Oklahoma City, Oklahoma.

NOTE: The sign-in sheet and the hearing records are attached as an official part of these Minutes.

BRIEFING AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
REGULAR MEETING
AIR QUALITY COUNCIL

Tuesday- December 15, 1998 9:30 A.M.
4545 North Lincoln Boulevard
Burgundy Room
Oklahoma City, OK

1. **Call to Order – Bill Breisch**
2. **Division Director's Report - Staff**
 - A. Update of current events and AQD activities
 - B. Discussion by Council / Public
3. **OAC 252:100-7 Permits for Minor Facilities [AMENDED]**

Proposed revisions will delete the lower limit of 5 tons per year for Permit by Rule (PBR) facilities allowing those facilities with less than 5 tons per year emissions which are subject to new source performance standards and national emissions standards for hazardous air pollutants to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a PBR for specific facilities will also be referenced under this new Part. Continued from August 18 and October 20, 1998 Air Quality Council meeting.

 - A. Presentation – Jeanette Buttram
 - B. Questions and discussion by Council / Public
4. **OAC 252:100-8-4(a)(2) Permits for Part 70 Sources [AMENDED]**

The Department proposes to update the incorporation by reference of the case-by-case MACT rules in 40 CFR 63.41, 63.43, and 63.44 to July 1, 1998.

 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public
5. **OAC 252:100-37 Control of Emissions of Organic Materials [AMENDED]**

Proposal would simplify the language under the agency-wide re-right/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. A substantive change deletes a sentence regarding fuel-burning and refuse-burning equipment resolving a contradiction. Continued from August 18, 1998 Air Quality Council meeting.

 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public

6. **OAC 252:100-39 Emissions of Organic Materials in Nonattainment Areas [AMENDED]**

Proposal would simplify the language under the agency-wide re-right/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. Continued from August 18 and October 20, 1998 Air Quality Council meeting.

- A. Presentation – Joyce Sheedy
- B. Questions and discussion by Council / Public

7. **OAC 252:100-5-2.2 Registration, Emission Inventory and Annual Operating Fees [AMENDED]**

OAC 252:100-7-3 Permits for Minor Facilities [AMENDED]

OAC 252:100-8-1.7 Permits for Part 70 Sources [AMENDED]

In Subchapter 5, the Department is proposing increases in annual operating fees for both minor facilities and Part 70 sources, with increases of specific permit application fees in Subchapters 7 and 8.

- A. Presentation – Shawna McWaters-Khalousi
- B. Questions and discussion by Council / Public

HEARING/MEETING AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
REGULAR MEETING
AIR QUALITY COUNCIL

Tuesday December 15, 1998 1:00 P.M.
4545 North Lincoln Boulevard
Burgundy Room
Oklahoma City, OK

1. **Call to Order – Bill Breisch**
2. **Roll Call – Myrna Bruce**
3. **Approval of Minutes of the October 20, 1998 Regular Meeting**
4. **OAC 252:100-7 Permits for Minor Facilities [AMENDED]**
Proposed revisions will delete the lower limit of 5 tons per year for Permit by Rule (PBR) facilities allowing those facilities with less than 5 tons per year emissions which are subject to new source performance standards and national emissions standards for hazardous air pollutants to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a PBR for specific facilities will also be referenced under this new Part. Continued from August 18 and October 20, 1998 Air Quality Council meeting.
 - A. Presentation – Jeanette Buttram
 - B. Questions and discussion by Council / Public
 - C. Possible action by Council
 - D. Roll call vote
5. **OAC 252:100-8-4(a)(2) Permits for Part 70 Sources [AMENDED]**
The Department proposes to update the incorporation by reference of the case-by-case MACT rules in 40 CFR 63.41, 63.43, and 63.44 to July 1, 1998.
 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public
 - C. Possible action by Council
 - D. Roll call vote

6. **OAC 252:100-37 Control of Emissions of Organic Materials [AMENDED]**
Proposal would simplify the language under the agency-wide re-right/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. A substantive change deletes a sentence regarding fuel-burning and refuse-burning equipment resolving a contradiction. Continued from August 18 and October 20, 1998 Air Quality Council meetings.
 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public
 - C. Possible action by Council
 - D. Roll call vote

7. **OAC 252:100-39 Emissions of Organic Materials in Nonattainment Areas [AMENDED]**
Proposal would simplify the language under the agency-wide re-right/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. Continued from August 18 and October 20, 1998 Air Quality Council meetings.
 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public
 - C. Possible action by Council
 - D. Roll call vote

8. **OAC 252:100-5-2.2 Registration, Emission Inventory and Annual Operating Fees [AMENDED]**
OAC 252:100-7 Permits for Minor Facilities [AMENDED]
OAC 252:100-8-1.7 Permits for Part 70 Sources [AMENDED]
In Subchapter 5, the Department is proposing increases in annual operating fees for both minor facilities and Part 70 sources, with increases of specific permit application fees in Subchapters 7 and 8.
 - A. Presentation – Shawna McWaters-Khalousi
 - B. Questions and discussion by Council / Public
 - C. Possible action by Council
 - D. Roll call vote

9. **NEW BUSINESS**
 - A. Discussion/consideration of subjects / business arising within past 24 hours
 - B. Possible action by Council

10. **ADJOURNMENT – Next Regular Meeting**
WEDNESDAY, FEBRUARY 17, 1999
DEQ Multi-Purpose Room, First Floor
707 North Robinson, Oklahoma City, Oklahoma

December 1, 1998

MEMORANDUM

TO: Air Quality Council

FROM: Eddie Terrill, Director ^{ET.}
AIR QUALITY DIVISION

SUBJECT: Modifications to Subchapter 37
CONTROL OF EMISSION OF ORGANIC MATERIALS

Enclosed is a copy of the proposed modifications to OAC 252:100-37. These revisions were brought to the Air Quality Council for the first time on August 18, 1998 and again on October 20, 1998. At the October meeting the staff recommended that the rule be considered again at the December 15, 1998 Council meeting.

The proposed revisions primarily simplify and clarify language, correct grammar, and impose consistency of format on the rule without involving substantive changes. A number of changes have been made to the rule following the October 20, 1998 Council meeting. Most of these additional changes are not intended to be substantive in nature. Substantive changes numbers 3 and 5 listed below have been made since the October meeting. The following substantive revisions to the rule are proposed.

1. The definition of "volatile organic compound (VOC)" in 252:100-37-2 has been revised. As part of the simplification process the staff propose to have only one definition of volatile organic compound which will be consistent with the EPA definition and replace the terms "volatile organic solvent (VOS)" and "organic solvents." The new definition provides that any organic compound listed in 40 CFR 51.100(s)(1) shall be presumed to have negligible photochemical reactivity and will not be considered to be a VOC. This revision will also serve as a response to requests to exempt acetone, methylated siloxanes, perchloroethylene, and methyl acetate from being considered VOCs. These four substances are on the list in 40 CFR 51.100(s)(1) and, therefore, will not be considered to be VOCs.
2. The staff proposes deleting 252:100-37-3(a), which requires any new source that emits organic material as a solvent or reactant to obtain a permit and apply best available control technology (BACT). As originally proposed by the staff to the Air Quality Council, this subsection applied only to organic solvents and only to major sources. When approved by the Council, the major source requirement was omitted. The Council records from that time contain no explanation for this change. To require each new source of VOC to apply BACT, regardless of the size of the source, expends more time, effort, and expense than can be justified by the Department considering the subsequent reductions in VOC emissions. This is especially true for new sources in areas that are in attainment and have always been

- in attainment.. To require BACT for new major sources of VOC in Subchapter 37 is redundant. That requirement already exists in 252:100-8-5(d)(1)(A). Therefore, it is proposed to delete this subsection.
3. Staff proposes to add 252:100-37-15(c) to exempt storage tanks subject to the standards contained in 40 CFR 60, Subparts K, Ka, and Kb from the requirements of that section.. The equipment standards contained in K, Ka, and Kb are as stringent as the requirements of Section 15.
 4. Staff proposes to add 252:100-37-16(c) to exempt loading facilities that are subject to 40 CFR 60, subpart XX and 40 CFR 63, Subpart R from the requirements of this section. The requirements of XX and R are as stringent as those in Section 16.
 5. Staff proposes to add 252:100-38(b) to exempt pumps and compressors that are subject to the equipment leak standards contained in 40 CFR 60 Subparts VV, GGG, or KKK from the requirements of Subsection 38. The requirements of VV, GGG, or KKK are as stringent as those in Subsection 38.
 6. The staff proposes to delete 252:100-37-25(c) Emission limitations. Research in the Air Quality Council records indicate that this subsection was originally meant to control emissions of organic material from the use of nonphotochemically reactive solvents. These substances would not be considered VOC by the proposed revised definition of VOC. If these limits are applied to VOCs, the emission of 3,000 pounds of VOC per day for 365 days per year would result in an annual emission of 547 tons. The subsection can be interpreted to allow each machine or piece of equipment at a site to emit 3,000 pounds per day before controls are required. This is meaningless for substances considered to be VOC. Subchapter 8 contains requirements for BACT for both major sources and for PSD sources.
 7. The staff proposes deleting the first sentence in 252:100-37-36 (fuel-burning and refuse-burning equipment), thereby eliminating the impossible requirement that no emission of hydrocarbons or organic materials is allowed from fuel-burning or refuse-burning equipment. This revision will also resolve the contradiction with the second sentence which requires such equipment to be operated to minimize these emissions.
 8. Subpart 9, Permit By Rule for VOC Storage and Loading Facilities, has been added to provide for permit by rule for facilities that meet the applicability requirements contained therein.

Comments made at an informational meeting held July 7, 1998, were given consideration in the proposed draft enclosed with this memorandum. Stemming from that meeting, a workgroup was formed to address problems existed in the coating section of the rule (252:100-37-25) that were beyond the scope of the "Re-right/De-wrong" process. At the October 30, 1998 meeting of this workgroup it was decided to delay work on this section of the rule until upcoming federal rulemaking was completed in EPA's combined coating rulemaking initiative..

In the process of revising Subchapter 37, definitions were changed, moved, and/or deleted. The staff intends to revise 252:100-1-3, Definitions, later in the process of the "Re-right/De-wrong" project. It is our intention to include in Subchapter 1 only those definitions that apply to all or practically all of the subchapters in Chapter 100. Definitions that apply to only one or two subchapters will be placed in those subchapters and definitions that are general to the entire Chapter 100 will be deleted from individual subchapters.

Because some unresolved issues have been brought to our attention regarding alternative standards for coating operations (252:100-37-25(d)), staff will recommend the rule be considered again at the next Air Quality Council meeting on February 17, 1999.

In addition to the proposed draft revisions to Subchapter 37, a copy of 40 CFR 51.100(s)(1), a rule impact statement, a summary of comments and staff responses, and a list of the revisions that were made to the rule after the October 20, 1998 Air Quality Council meeting are also included in the packet.

Enclosures: 5

**SUBCHAPTER 37. CONTROL OF EMISSION OF VOLATILE ORGANIC MATERIALS
COMPOUNDS (VOCs)**

PART 1. GENERAL PROVISIONS

252:100-37-1.	Purpose	1
252:100-37-2.	Definitions	1
252:100-37-3.	Applicability and compliance	2
252:100-37-4.	Exemptions	3
252:100-37-5.	Operation and maintenance	3

**PART 3. CONTROL OF ~~VOLATILE ORGANIC COMPOUNDS~~VOCs IN STORAGE AND
LOADING OPERATIONS**

252:100-37-15.	Storage of volatile organic compounds VOCs	3
252:100-37-16.	Loading of volatile organic compounds VOCs	4
252:100-37-17.	Effluent water separators [AMENDED AND RENUMBERED TO 252:100-37-37]	6
252:100-37-18.	Pumps and compressors [AMENDED AND RENUMBERED TO 252:100-37-38]	6

PART 5. CONTROL OF ~~ORGANIC SOLVENTS~~VOCs IN COATING OPERATIONS

252:100-37-25.	Coating of parts and products	7
252:100-37-26.	Clean up with organic solvents VOCs	9

PART 7. CONTROL OF SPECIFIC PROCESSES

252:100-37-35.	Waste gas disposal	9
252:100-37-36.	Fuel-burning and refuse-burning equipment	9
252:100-37-37.	Effluent water separators	10
252:100-37-38.	Pumps and compressors	10

PART 9. PERMIT BY RULE FOR VOC STORAGE AND LOADING FACILITIES

252:100-37-41.	Applicability	11
252:100-37-42.	Permit requirements	11

PART 1. GENERAL PROVISIONS

252:100-37-1. Purpose

~~The purpose of this Subchapter is to control the emission of organic materials from stationary sources to protect and enhance the air quality to insure that the Oklahoma air quality standard is not exceeded and significant deterioration prevented.~~ The purpose of this Subchapter is to prevent the formation of ozone by controlling the emissions of volatile organic compounds (VOCs) from stationary sources.

252:100-37-2. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise.

"Acrylic" means a chemical coating containing polymers or co-polymers of acrylic or substitute acrylic acid in combination with ~~suitable~~ resinous modifiers, ~~and its~~ The primary mode of cure is solvent evaporation.

"Alkyd primer" means a chemical coating composed primarily of alkyd applied to a surface to provide a firm bond between the substrate and any additional ~~paint~~ coating.

"Custom product ~~finishes~~ finish" means a proprietary chemical coating designed for a specific customer and end use.

~~"Cutback asphalt" means a basic asphalt or asphaltic concrete containing a petroleum distillate.~~

"Effluent water separator" means any ~~tank, box, sump, or other~~ container in which any ~~material compound~~ VOC floating on, or entrained in, or contained in water entering ~~such tank, box, sump or ether~~ the container is physically separated and removed from ~~such~~ the water prior to ~~outfall, drainage, or recovery of~~ such discharge of the water from the container.

"Epoxy" means a chemical coating containing epoxy groups and suitable chemical cross-linking agents. ~~Epoxies~~ The prime mode of cure involves a chemical reaction between the epoxy and the cross-linking agent.

"Maintenance ~~finishes~~ finish" means a chemical coating ~~formulated to form a protection of that~~ protects a given substrate ~~to~~ from adverse chemical or physical ~~condition~~ conditions.

"Nitrocellulose ~~lacquers~~ lacquer (NC lacquer)" means a chemical coating containing nitrocellulose and suitable resinous modifiers, ~~and whose~~. The primary mode of cure is solvent evaporation.

~~"Organic materials" means chemical compounds of carbon excluding carbon monoxides, carbon dioxide, carbonic acid, metallic carbides, metal carbonates and ammonium carbonates.~~

~~"Refinery" means any facility engaged in producing gasoline, kerosene, fuel oils or other products through distillation of crude oil or through redistillation, cracking or reforming of unfinished hydrocarbon derivatives.~~

"Submerged fill pipe" means any fill pipe or discharge nozzle ~~which~~ that meets any one of the following conditions.

(A) ~~the~~The bottom of the discharge pipe or nozzle is below the surface of liquid in the receiving vessel for at least 95 percent of the volume filled.

(B) ~~the~~The bottom of the discharge pipe or nozzle is less than 6 inches from the bottom of the receiving vessel.

(C) ~~the~~The bottom of the discharge pipe or nozzle is less than 2 pipe or nozzle diameters from the bottom of the receiving vessel, ~~or~~.

~~(D) other equivalent methods acceptable to the Executive Director.~~

"Vinyl" means a chemical coating containing ~~plasterized~~plasticized or ~~unplasterized~~unplasticized polymers and co-polymers of vinyl acetate, vinyl chloride, polyvinyl alcohols or their condensation products. ~~and the~~The primary mode of cure is solvent evaporation.

"Volatile organic compound (VOC)" means any compound ~~containing carbon and hydrogen or containing carbon and hydrogen in combination with any other element which has a vapor pressure of 1.5 pounds per square inch absolute or greater under actual storage conditions of carbon, excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate, which participates in atmospheric photochemical reactions.~~ Any organic compound listed in 40 CFR 51.100(s)(1) shall be presumed to have negligible photochemical reactivity and will not be considered to be a VOC.

~~"Volatile organic solvent (VOS)" means any organic compound which participates in atmospheric photochemical reactions, that is, any organic compound other than those which the EPA Administrator designates as having negligible photochemical reactivity. VOS may be measured by the EPA VOC reference method.~~

252:100-37-3. Applicability and compliance

~~(a) New sources. Any new source calculated to emit an organic material to the atmosphere either as a solvent or a reactant will be subject to permitting under OAC 252:100-7, and with the application of Best Available Control Technology.~~

~~(b) Compliance schedule.~~

~~(1) All equipment and process previously regulated under OAC 252:100-37 and 252:100-39 and its effective dates of July 1, 1972 and December 8, 1974 must still abide by those dates.~~

~~(2)(a) In all areas except AQMA's, this~~This Subchapter shall apply to all new installations of any equipment or processes described in this Subchapter, after the effective date of December 28, 1974.

~~(3)(b) Provisions~~Sections 15, 16, 35, 36, 37, and 38 of this Subchapter ~~relating to control of VOC shall apply to all new and existing installations of any equipment or processes in use and described in this Subchapter that are located in Air Quality Maintenance Areas (AQMA's) as classified by the Environmental Protection Agency with regard to hydrocarbons and photochemical oxidants~~Tulsa County or Oklahoma County, and become ~~after the effective on June 8, 1979; provided, however, that existing~~

~~installations shall have twenty four (24) months from the effective date within which to comply with this Subchapter date of June 9, 1981. Except that the~~The retrofit requirements for crude petroleum storage tanksvessels will be limited to tanksvessels of greater than 420,000 gallon 10,000 barrel (1,590 m³) capacity.

~~(4) Provisions of this Subchapter relating to the control of organic solvent shall be as specified in the applicable Section.~~

252:100-37-4. Exemptions

(a) ~~Organic materials as used in~~VOCs with vapor pressures less than 1.5 pounds per square inch absolute (psia) under actual storage conditions are exempt from 252:100-37-15 through 252:100-37-18, 252:100-37-16 and 252:100-37-27 and 252:100-37-28, 252:100-37-35 through 252:100-37-38 will not include: Methane (CH₄) or any material otherwise included which has vapor pressure of less than 1.5 pounds per square inch absolute under actual storage conditions.

(b) Petroleum or condensate stored, processed, treated, loaded, and/or ~~treated~~transferred at a drilling or production facility prior to lease custody transfer is exempt from this Subchapter. This exemption also includes transfer and loading operations.

(c) The storage, loading, processing, manufacturing or burning of organic materialsVOCs on a farm or ranch, when such VOCs are used for agricultural purposes on farms and ranchessaid farm or ranch, is exempted from all provisions of 252:100-37-15, through 252:100-37-18252:100-37-16, 252:100-37-35 through 252:100-37-38, 252:100-39-41, and 252:100-37-27 and 252:100-37-28 252:100-39-42.

252:100-37-5. Operation and maintenance

Any vapor-loss control devices, packing glands and mechanical seals required by this Subchapter shall be properly installed, maintained, and operated.

PART 3. CONTROL OF VOLATILE ORGANIC COMPOUNDSVOCs IN STORAGE AND LOADING OPERATIONS

252:100-37-15. Storage of volatile organic compoundsVOCs

(a) Storage capacities greater than 40,000 gallons. No personowner or operator shall build, sell, or install or permit the building or installation of any new stationary tank, reservoir or other containerstorage vessel of more than 40,000 gallons (150,000 liters151 M³) capacity, which will be used for storage of any organic materialsVOCs, unless such tank, reservoir or other containerit is to be a pressure tankvessel capable of maintaining working pressures sufficient at all times tothat prevent organic vapor or gas~~the~~ loss of VOC to the atmosphere or is designed, and will be built and equipped, with one of the following vapor-loss control devices+.

(1) An external floating roof, consisting of pontoon type, internal floating cover or double-deck type reefcover, or a fixed roof with an internal-floating cover. whichThe cover

will rest on the surface of the liquid contents, at all times (i.e., off the leg supports), except during initial fill, when the storage vessel is completely emptied, or during refilling. When the cover is resting on the leg supports, the process of filling, emptying, or refilling shall be continuous and shall be accomplished as rapidly as possible. andThe floating roof shall be equipped with a closure seal, or seals, to close the space between the ~~roofcover~~ edge and ~~tankvessel~~ wall. Such ~~floating~~Floating roofs are not appropriate control devices if the ~~organic materials~~VOCs have a vapor pressure of ~~11.1 pounds per square inch absolute~~psia (568 mm Hg76.6 kPa) or greater under actual conditions. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place.

(2) A vapor-recovery system consisting of a vapor-gathering system capable of collecting 85 percent or more of the uncontrolled ~~organic material~~VOCs that would otherwise be emitted to the atmosphere, and a vapor-disposal system capable of processing ~~such these~~ ~~organic material~~VOCs so as to prevent their emission to the atmosphere, ~~and with all~~All ~~tankvessel~~ gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place.

(3) Other equipment or ~~means~~methods of equal efficiency for purposes of air pollution control ~~as may be when~~ approved by the ~~Executive~~Division Director prior to installation.

(b) Storage capacities of 400 gallons and greater. No ~~person~~owner or operator shall build, sell, or install ~~or permit the building or installation of~~ a new stationary ~~organic material~~VOC storage ~~tankvessel~~ with a capacity of 400 gallons (~~1520 liters~~1.5 m³) or more unless ~~such tank~~it is equipped with a permanent submerged fill pipe or is equipped with an ~~organic material~~a vapor-recovery system as required in ~~252:100-37-5(a)~~252:100-37-15(a) (2).

(c) Exemptions. VOC storage vessels that are subject to equipment standards (e.g., a fixed roof in combination with an internal floating cover, an external floating roof, or a closed vent system and control device) in 40 CFR 60 Subparts K, Ka, or Kb are exempt from the requirements of 252:100-37-15(a) and (b).

252:100-37-16. Loading of ~~volatile organic compounds~~VOCs

(a) Loading facilities with throughput greater than 40,000 gallons/day.

~~(1)~~ No ~~person~~owner or operator shall build or install ~~or permit the building or installation of~~ a stationary ~~organic material~~VOC loading facility ~~having~~designed to have a throughput greater than 40,000 gallons (~~151,416 liters~~) per day from its aggregate loading pipes unless ~~such loading facility~~it ~~is~~will be equipped with a vapor-collection and disposal system or ~~unless loading is accomplished by bottom loading with closed hatches closed, properly installed, in good working order and in operation.~~

~~(2)~~ Vapor-collection and disposal system. ~~When loading in a vapor collection and disposal system is effected through the~~

~~hatches of a tank truck or trailer with a loading arm equipped with a vapor collecting adaptor, pneumatic, hydraulic or other mechanical means shall be provided to force a vapor tight seal between the adaptor and the hatch.~~

(A) Vapor-collection portion of the system.

(i) When loading VOCs through the hatches of a tank truck or trailer, using a loading arm equipped with a vapor collecting adaptor, a pneumatic, hydraulic, or mechanical means shall be provided to ensure a vapor-tight seal between the adaptor and the hatch.

~~(3) A means shall be provided in either system to prevent organic material drainage from the loading device when it is removed from any tank truck or trailer, or to accomplish complete drainage before removal.~~

(4ii) When loading is effected through means other than hatches, all loading and vapor lines shall be equipped with fittings which that make vapor-tight connections and which must be closed when disconnected or which close automatically when disconnected.

(5B) Vapor-disposal portion of the system. The vapor-disposal portion of the system shall consist of ~~one of the following:~~

(Ai) a vapor-liquid absorber system with a minimum recovery efficiency of 90 percent by weight of all the organic material VOC vapors and gases entering such disposal system; or

(Bii) a variable-vapor space tank, compressor, and fuel-gas system of sufficient capacity to receive all organic material VOC vapors and gases displaced from the tank trucks and trailers being loaded.

(2) Prevention of VOC drainage. A means shall be provided in either system to prevent VOC drainage from the loading device when it is removed from any tank truck or trailer, or to accomplish complete drainage before removal.

(b) Loading facilities with throughput equal to or less than 40,000 gallons per day.

~~(1) No person owner or operator shall build or install or permit the building or installation of a stationary organic material VOC loading facility having designed to have a throughput of 40,000 gallons (151,416 liters) per day or less from its aggregate loading pipes unless each loading pipe will be equipped with a system for submerged filling of tank trucks or trailers properly installed, in good working order and operating in such a manner that which will be installed and operated to maintain a 97 percent submergence factor is maintained.~~

(2) Paragraph 252:100-37-16(b)(1) apply applies to any facility which that loads organic materials VOCs into any tank truck or trailer with a capacity greater than 200 gallons (757

liters) that is designed for transporting organic materials VOCs and having a capacity in excess of 200 gallons (760 liters).

(c) Exemptions. Loading facilities subject to the requirements of 40 CFR 60 Subpart XX or 40 CFR 63 Subpart R are exempt from the requirements of 252:100-37-16(a) and (b).

252:100-37-17. Effluent water separators [AMENDED AND RENUMBERED TO 252:100-37-37]

~~No person shall build or install or permit the building or installation of a single or multiple compartment organic material water separator which receives effluent water containing 200 gallons (760 liters) a day or more or any organic material from any equipment processing, refining, treating, storing or handling organic materials unless the compartment receiving said effluent water is equipped with one of the following vapor loss control devices, properly installed, in good working order and in operation:~~

~~(1) A container having all openings sealed and totally enclosing the liquid contents. All gauging and sampling devices shall be gas tight except when gauging or sampling is taking place. The oil removal devices shall be gas tight except when manual skimming, inspection and/or repair is in progress;~~

~~(2) A container equipped with a floating roof, consisting of a pontoon type, double deck type roof, or internal floating cover, which will rest on the surface of the contents and is equipped with a closure seal, or seals, to close the space between the roof edge and container wall. All gauging and sampling devices shall be gas tight except when gauging or sampling is taking place. The oil removal devices shall be gas tight except when manual skimming, inspection and/or repair is in progress;~~

~~(3) A container equipped with a vapor recovery system, consisting of a vapor gathering system capable of collecting the organic material vapors and gases discharged and a vapor disposal system capable of processing such organic material vapors and gases so as to prevent their emission to the atmosphere and with all tank gauging and sampling devices gas tight except when gauging or sampling is taking place. The organic material removal devices shall be gas tight except when manual skimming, inspection and/or repair is in progress;~~

~~or,
(4) Containers equipped with controls of equal efficiency provided such equipment is submitted to and approved by the Executive Director.~~

252:100-37-18. Pumps and compressors [AMENDED AND RENUMBERED TO 252:100-37-38]

~~No person shall build or install or permit the building or installation of any pump or compressor handling organic material compounds unless rotating type pumps and compressors are equipped~~

~~with mechanical seals or other equipment of equal efficiency, or reciprocating type pumps and compressors are equipped with packing glands properly installed and in good working order such that the emissions from the drain recovery system are limited to two cubic inches of liquid organic material in any 15 minute period at standard conditions per pump or compressor.~~

PART 5. CONTROL OF ORGANIC SOLVENTS/VOCs IN COATING OPERATIONS

252:100-37-25. Coating of parts and products

(a) ~~Standards. No owner or operator subject to the provision of this Section shall discharge or cause the discharge into the atmosphere from an existing coating line or individual coating operation any organic solvent in excess of the amounts, listed in the following table, per gallon of coating, excluding water, delivered to the coating applicator. No owner or operator of any coating line or coating operation with VOC emissions shall use coatings that as applied contain VOCs in excess of the amounts listed in the following table.~~

Type of coating	Pounds of organic solvent/VOC per gallon of paint/coating (less water and exempted organic compounds)		
	Jan. 79 limit	Jan. 81 limit	Jan. 82 limit
Alkyd primer	5.6	5.2	4.8
Vinyls	6.4	6.4	6.0
NC lacquers	6.8	6.6	6.4
Acrylics	6.4	6.4	6.0
Epoxies	5.6	5.2	4.8
Maintenance finishes	5.6	5.2	4.8
Custom products finishes	6.8	6.6	6.5

(b) ~~Plant-wide emission plan. An owner/operator may develop a plant wide emission plan instead of having each coating line comply with the emission limitations prescribed in the table in (a) of this section, provided:~~

(1) Development of a plant-wide emission plan. An owner or operator may develop a plant-wide emission plan instead of having each coating line comply with the VOC content limitations in 252:100-37-25(a), if the following conditions are met.

(A) The owner or operator demonstrates, by means of approved material balance or manual emission test methods, by the methods in 252:100-5-2.1(d) that sufficient reductions in organic solvents emissions of VOCs may be obtained by controlling other facilities/sources within the plant to the extent necessary to compensate for all excess emissions which that result from one or more coating lines not achieving the prescribed limitation. Such demonstration

shall be described ~~made~~ in writing and shall include:

~~(A)(i)~~ Aa complete description of the coating line or lines ~~which~~that will not comply with the ~~emission~~VOC content limitation in 252:100-37-25(a);

~~(B)(ii)~~ Quantification of emissions, in terms of pounds per day of ~~organic solvents~~VOCs, which are in excess of the ~~prescribed emission~~VOC content limitation for each coating line described under ~~252:100-37-25(b)(1)(A)~~252:100-37-25(b)(1)(A)(i);

~~(C)(iii)~~ Aa complete description of each ~~facility and the related control system, if any, for those facilities within the plant where~~how emissions will be decreased at specific sources to compensate for excess emissions from each coating line described under ~~252:100-37-25(b)(1)(A)~~252:100-37-25(b)(1)(A)(i) and the date on which such reductions will be achieved;

~~(D)(iv)~~ Quantification of emissions, in terms of pounds per day of ~~organic solvents~~VOCs, for each ~~facility~~source described under ~~252:100-37-25(b)(1)(C)~~252:100-37-25(b)(1)(A)(iii), both before and after the improvement or installation of any applicable control system, or operational changes to such a facility or facilities to reduce emissions ~~and the date on which such reductions will be achieved~~; and,

~~(E)(v)~~ Aa description of the procedures and methods used to determine the emissions of ~~organic solvents~~VOCs.

~~(2)(B)~~ The plant-wide emission reduction plan does not include decreases in emissions resulting from requirements of other applicable air pollution rules. ~~The plant wide emission reduction plan may include decreases in emissions accomplished through installation or improvement of a control system or through physical or operational changes to facilities, including permanently reduced production or closing a facility, located on the premises of a surface coating operation.~~

~~(3)(2)~~ Compliance with a plant-wide emission plan. ~~the~~The implementation of a plant-wide emission reduction plan instead of compliance with the ~~emissions~~VOC content limitation prescribed in 252:100-37-25(a) ~~has been~~must be expressly approved by the ~~Executive~~Division Director. Upon approval, any emissions in excess of those established for each facility under the plan shall be a violation of this Subchapter.

~~(c) Emission limitation.~~ No person shall discharge into the atmosphere more than 3,000 pounds of organic materials in any one day nor more than 450 pounds in any one hour from any article, machine, equipment or other contrivance in which any organic solvent or any material containing such solvent is employed or

~~applied, unless such discharge has been reduced by at least 85 percent or has applied BACT or better as determined by the Executive Director.~~

(dc) Exemption. Owners or operators of sources that are computed to emit less than 100 pounds of ~~organic solvent~~VOC per 24 hr./~~day~~24-hour day are exempt from the requirements of this Section.

(ed) Alternate standard. ~~Emissions~~The use of coatings with VOC contents in excess of those permitted by 252:100-37-25(a) through ~~252:100-37-25(d) or 252:100-37-25(b)~~ are allowable if both of the following conditions are met:.

(1) VOC emissions that would result in the absence of control occur if no controls were used are reduced by:

(A) 90 percent, by incineration; ~~or,~~

(B) 85 percent, by ~~absorption~~absorption/adsorption; or, any other process of equivalent reliability and effectiveness; and,

(C) 85 percent by any other process of equivalent reliability and effectiveness.

(2) ~~no~~No air pollution, as defined by the Clean Air Act, results.

252:100-37-26. ~~Clean up with organic solvents~~VOCs

~~Emissions of organic materials to the atmosphere from the clean up with organic solvents, as defined in 252:100-37-2, VOCs of any article, machine, or equipment or other contrivance used in applying coatings controlled in 252:100-37-25(a) through 252:100-37-25(d)~~252:100-37-25(d) shall be included with the other emissions of ~~organic solvents from the coating line or operation~~counted in determining compliance with those rules.

PART 7. CONTROL OF SPECIFIC PROCESSES

252:100-37-35. Waste gas disposal

(a) Ethylene manufacturing emissions. ~~No person~~owner or operator shall build or install ~~or permit the building or installation of~~ any ethylene manufacturing plant unless the waste-gas stream under normal operating conditions is properly burned at 1,300°F. for 0.3 seconds or greater in a direct-flame afterburner equipped with an indicating pyrometer ~~which~~that is positioned in the working area for the operator's ready monitoring or an equally effective catalytic vapor incinerator also with pyrometer. Proper burning of the waste-gas stream is defined as reduction by 98 percent of the ethylene emissions originally present in the waste-gas stream.

(b) Vapor blowdown. Except where inconsistent with the "Minimum Federal Safety Standards for the Transportation of Natural and Other Gas by Pipeline," or any State of Oklahoma regulatory agency, ~~no person~~owner or operator shall allow ~~emit~~organicVOC gases to be emitted to the atmosphere from a vapor recovery blowdown system unless these gases are burned by smokeless flares, or an equally effective control device as approved by the ExecutiveDivision Director.

252:100-37-36. Fuel-burning and refuse-burning equipment

~~No person shall cause or allow the emission of hydrocarbons or other organic materials from any fuel burning or refuse burning equipment. All such fuel-burning or refuse-burning equipment shall be operated as to minimize such emissions of VOC. Among other things, such operation shall assure, based on manufacturer's data and good engineering practice, that the equipment is not overloaded; that it is properly cleaned, operated, and maintained; and that temperature and available air are sufficient to provide essentially complete combustion.~~

252:100-37-37. Effluent water separators

No owner or operator shall build or install a single-compartment or multiple-compartment VOC/water separator that will receive effluent water containing 200 gallons (760 liters) a day or more of any VOC from any equipment processing, refining, treating, storing or handling VOCs unless the compartment receiving the effluent water will comply with one of the following sets of conditions.

(1) The container totally encloses the liquid contents and all openings are sealed. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The oil removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.

(2) The container is equipped with an external floating roof, consisting of a pontoon type or double-deck type cover, or a fixed roof with an internal-floating cover. The cover will rest on the surface of the contents and be equipped with a closure seal, or seals, to close the space between the cover edge and container wall. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The oil removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.

(3) The container is equipped with a vapor-recovery system, consisting of a vapor-gathering system capable of collecting the VOC vapors and gases discharged and a vapor-disposal system capable of processing such vapors and gases to prevent their emission to the atmosphere. All tank gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The VOC removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.

(4) The container is equipped with controls of equal efficiency if approved by the Division Director.

252:100-37-38. Pumps and compressors

(a) No owner or operator shall build or install any pump or compressor handling VOCs unless the following conditions are met.

(1) Rotating type pumps and compressors are equipped with mechanical seals or other equipment of equal efficiency.

(2) Reciprocating type pumps and compressors are equipped with packing glands.

- (3) Emissions from the drain recovery system do not exceed two cubic inches of liquid VOC in any 15-minute period per pump or compressor at standard conditions.
- (b) Pumps and compressors subject to the standards for pumps and compressors contained in 40 CFR 60 Subparts VV, GGG, or KKK are exempt from 252:100-37-38.

PART 9. PERMIT BY RULE FOR VOC STORAGE AND LOADING FACILITIES

252:100-37-41. Applicability

Any new VOC storage and loading facility may be constructed and any existing VOC storage and loading facility may be operated under this Part if:

- (1) the facility is located in an area designated as unknown or attainment for ozone;
- (2) each storage vessel located at the facility has a storage capacity of 19,813 gallons (75 m³) or less;
- (3) the facility is designed to have a throughput of 19,998 gallons (75,700 liters) per day or less from the aggregate loading pipes; and
- (4) the facility meets the requirements of 252:100-7-60(a), (b), and (c).

252:100-37-42. Permit requirements

- (a) An owner or operator shall submit annual emission inventory reports and meet the requirements of 252:100-37-5, regarding operation and maintenance, and 252:100-37-38, regarding pumps and compressors.
- (b) No owner or operator shall build or install a new stationary VOC storage vessel with a capacity of 400 gallons (1.5 m³) or greater unless it is equipped with a permanent submerged fill pipe as defined in 252:100-37-2.
- (c) No owner or operator shall build or install a stationary VOC loading facility unless each loading pipe is equipped with a system for submerged filling of tank trucks or trailers which is installed and operated to maintain a 97 percent submergence factor.
- (d) The owner or operator of a vessel with a storage capacity greater than 10,567 gallons (40 m³) shall maintain records on site of the dimensions of the storage vessel and an analysis showing the capacity.

LIST OF ORGANIC COMPOUNDS WITH NEGLIGIBLE
PHOTOCHEMICAL REACTIVITY

40 CFR 51.100(s)(1) as it existed on July 1, 1998
From the Federal Register dated 4/9/98

Sec. 51.100 Definitions.

(s) Volatile organic compounds (VOC)

(1) This includes any such organic compound other than the following, which have been determined to have negligible photochemical reactivity:

methane;
ethane;
methylene chloride (dichloromethane);
1,1,1-trichloroethane (methyl chloroform);
1,1,2-trichloro-1,2,2-trifluoroethane (CFC-113);
trichlorofluoromethane (CFC-11);
dichlorodifluoromethane (CFC-12);
chlorodifluoromethane (HCFC-22);
trifluoromethane (HFC-23);
1,2-dichloro 1,1,2,2-tetrafluoroethane (CFC-114);
chloropentafluoroethane (CFC-115);
1,1,1-trifluoro 2,2-dichloroethane (HCFC-123);
1,1,1,2-tetrafluoroethane (HFC-134a);
1,1-dichloro 1-fluoroethane (HCFC-141b);
1-chloro 1,1-difluoroethane (HCFC-142b);
2-chloro-1,1,1,2-tetrafluoroethane (HCFC-124);
pentafluoroethane (HFC-125);
1,1,2,2-tetrafluoroethane (HFC-134);
1,1,1-trifluoroethane (HFC-143a);
1,1-difluoroethane (HFC-152a);
parachlorobenzotrifluoride (PCBTF);
cyclic, branched, or linear completely methylated siloxanes;
acetone;
perchloroethylene (tetrachloroethylene);
3,3-dichloro-1,1,1,2,2-pentafluoropropane (HCFC-225ca);
1,3-dichloro-1,1,2,2,3-pentafluoropropane (HCFC-225cb);
1,1,1,2,3,4,4,5,5,5-decafluoropentane (HFC 43-10mee);
difluoromethane (HFC-32);
ethylfluoride (HFC-161);
1,1,1,3,3,3-hexafluoropropane (HFC-236fa);
1,1,2,2,3-pentafluoropropane (HFC-245ca);
1,1,2,3,3-pentafluoropropane (HFC-245ea);
1,1,1,2,3-pentafluoropropane (HFC-245eb);
1,1,1,3,3-pentafluoropropane (HFC-245fa);
1,1,1,2,3,3-hexafluoropropane (HFC-236ea);
1,1,1,3,3-pentafluorobutane (HFC-365mfc);

chlorofluoromethane (HCFC-31);

1 chloro-1-fluoroethane (HCFC-151a);

1,2-dichloro-1,1,2-trifluoroethane (HCFC-123a);

1,1,1,2,2,3,3,4,4-nonafluoro-4-methoxy-butane ($C_4F_9OCH_3$);

2-(difluoromethoxymethyl)-1,1,1,2,3,3,3-heptafluoropropane ($(CF_3)_2CFCH_2OCH_3$);

1-ethoxy-1,1,2,2,3,3,4,4,4-nonafluorobutane ($C_4F_9OC_2H_5$);

2-(ethoxydifluoromethyl)-1,1,1,2,3,3,3-heptafluoropropane ($(CF_3)_2CFCH_2OC_2H_5$);

methyl acetate

and perfluorocarbon compounds which fall into these classes:

- (i) Cyclic, branched, or linear, completely fluorinated alkanes;
- (ii) Cyclic, branched, or linear, completely fluorinated ethers with no unsaturations;
- (iii) Cyclic, branched, or linear, completely fluorinated tertiary amines with no unsaturations; and
- (iv) Sulfur containing perfluorocarbons with no unsaturations and with sulfur bonds only to carbon and fluorine.

PUBLIC MEETING

Notice of Public Meeting for December 15, 1998 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance door of the meeting room.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Dr. Canter - aye; Ms. Myers - aye; Dr. Grosz - aye; Mr. Branecky - aye; Mr. Wilson - aye; Mr. Breisch - aye; Mr. Kilpatrick and Ms. Slagell did not attend.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the October 20, 1998 Public Meeting/Hearings. Motion was made by Dr. Grosz to approve the Minutes as presented and second was made by Mr. Branecky. Roll call as follows: Dr. Canter - aye; Ms. Myers - aye; Dr. Grosz - aye; Mr. Branecky - aye; Mr. Wilson - aye; Mr. Breisch - aye.

PUBLIC HEARINGS

Protocol Statement - As protocol officer, Mr. Dyke convened the hearings by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke entered into the hearing records the Hearing Agenda and Oklahoma Register Notice.

OAC 252:100-7 Permits [AMENDED]

Mr. Dyke called upon Ms. Jeanette Buttram for staff recommendation to Council. Ms. Buttram advised that proposed revisions delete the lower limit of 5 tons per year for Permit by Rule (PBR) facilities allowing those facilities with less than 5 tons per year emissions which are subject to new source performance standards and national emission standards for hazardous air pollutants to apply for a PBR instead of having to obtain an individual permit.

Also a new Part 9 is proposed which will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a PBR for specific facilities would also be referenced under this new Part. Within Part 9, Section 252:100-7-60.3 was written due to the proposed PBR section for VOC storage and loading facilities in Subchapter (SC) 37. Staff recommendation for SC 37 will be to continue the rule until the February AQC meeting. Therefore, staff suggests the proposed new section be deleted from the rule and added once the PBR in SC 37 is approved. Mr. Branecky requested clarification of which part of the rule was being deleted. Ms. Buttram confirmed the suggestion to recommend the proposed rule, excluding Section 252:100-7-60.3, to the Environmental Quality Board for permanent adoption.

Following discussion and comments, Chairman Breisch entertained a motion to recommend this rule to the Environmental Quality board at the next meeting. Dr. Grosz made that motion with second made by Ms. Myers. Roll call as follows: Dr. Canter – aye; Ms. Myers – aye; Dr. Grosz – aye; Mr. Branecky – aye; Mr. Wilson – aye; Mr. Breisch – aye.

Copy of hearing transcript attached and made an official part of these minutes.

OAC 252:100:8-4(a)(2) Permits for Part 70 Sources [AMENDED]

Mr. Dyke called upon Ms. Joyce Sheedy for staff recommendation regarding this rule. Dr. Sheedy advised that these amendments update the incorporation by reference of the case-by-case MACT determinations for Part 70 sources in 252:100-8-4 (a)(2)(C) by adopting 40 CFR 63.41, 63.43, and 63.44 as they exist on July 1, 1998. Dr. Sheedy advised that this update would be made annually.

Mr. Breisch entertained motion recommending adoption as permanent rule by the Environmental Quality Board. Mr. Branecky made the motion with the second being made by Mr. Wilson. Roll call as follows: Dr. Canter – aye; Ms. Myers – aye; Dr. Grosz – aye; Mr. Branecky – aye; Mr. Wilson – aye; Mr. Breisch – aye.

Copy of hearing transcript attached and made an official part of these minutes.

OAC 252:100-37 Control of Emissions of Organic Materials (AMENDED)

Mr. Dyke called upon Dr. Joyce Sheedy who advised that proposed changes primarily simplify language and correct grammar and format but also include various substantive changes. Dr. Sheedy explained that one substantive change alters the definition of volatile organic compound (VOC) to make it reflect EPA's definition of VOC. Dr. Sheedy then stated the staff's recommendation to continue this rule until the February Council meeting because of remaining controversy.

Council discussion followed. Mr. Wilson expressed concern about SC 37 being open for so long with no action taken. During public discussion, Mr. Bradshaw from Boeing reiterated Mr. Wilson's concern. Mr. Bradshaw further explained that the specific point of concern for Boeing and American Airlines is the definition of VOC. He said the members of his industry would like to see the definition amended as soon as possible. Ms. Hoffman responded by explaining that it is the intent of the staff to have all remaining issues with SC 37 resolved and to recommend approval of the rule by the Council. She further explained that if the rule is

approved by the Council in February, there would be time to get the packet of information to the Environmental Quality Board before the March 5, 1999 meeting.

Mr. Breisch entertained a motion to continue this rule to Council's February meeting. Ms. Myers made motion with second made by Dr. Grosz. Roll call as follows: Dr. Canter – aye; Ms. Myers – aye; Dr. Grosz – aye; Mr. Branecky – aye; Mr. Wilson – aye; Mr. Breisch – aye.

Copy of hearing transcript attached and made an official part of these minutes.

OAC 252:100-39 Control of Organic Materials in Nonattainment Areas [AMENDED]

Mr. Dyke called upon Dr. Joyce Sheedy for staff recommendation. Dr. Sheedy pointed out that the proposed changes primarily simplify language and correct grammar and format but also include some substantive changes. Dr. Sheedy explained that written comments, staff responses and details of the substantive changes were summarized in the Council packet. Dr. Sheedy submitted the written letters from EPA and EFO for hearing record.

There were no questions or comments from the Council or from the public.

Following discussion, Mr. Breisch entertained a motion to continue this rule to the Council's February 17, 1999 meeting. Mr. Branecky made that motion with the second made by Ms. Myers. Roll call as follows: Dr. Canter – aye; Ms. Myers – aye; Dr. Grosz – aye; Mr. Branecky – aye; Mr. Wilson – aye; Mr. Breisch – aye.

Copy of hearing transcript attached and made an official part of these minutes

OAC 252:100-5 Registration, Emission Inventory and Annual Operating Fees [AMENDED]

OAC 252:100-7 Permits [AMENDED]

OAC 252:100-8-1.7 Permits for Part 70 Sources [AMENDED]

This subject was first brought before the Council on October 20, 1998 at which time the Council voted to continue the hearing until the December 15, 1998 Council meeting. The presentation for this public hearing consisted of several staff members. Mr. David Dyke began by informing those present that written comments have been received from the Environmental Federation of Oklahoma, Mid-Continent Oil and Gas Association, and the Small Business Advisory Panel. These comments and staff responses were submitted for official record. Mr. Dyke continued to explain the Division's anticipated increase in workload and discussed other factors contributing to the request for fee increases.

Mr. Dyke called upon Mr. Scott Thomas to describe the upcoming rulemaking activities. Mr. Thomas explained that the Division's rulemaking goals were designed according to proposed rules received from the EPA, instruction from the State Legislature to review all of our rules by December 2000, and efforts to go forward with the agencies directive and goals of the permit continuum. Mr. Thomas also stated that in order to accomplish these goals, additional staff would be required or the rulemaking priorities would have to be refined. Mr. Ray Bishop came forward to elaborate upon the need for additional permitting staff. He stated that even though the Permit program has instituted a number of time-saving and efficiency efforts, the Division does not anticipate meeting the impending Title V time frames and deadlines with the current staff. He also reviewed the non-Title V activities required of the permitting

staff. Mr. Terrill commented regarding potential actions that could occur at the federal level and consequently affect the Division.

Finally, Mr. Dyke called upon Ms. Shawna McWaters-Khalousi to explain the proposed increases and how they were derived. Staff recommended approval by the Council. Mr. Dyke summarized staff's position by stating that even though services and spending levels are reduced from previous years, the current level of services and management of oncoming issues cannot be maintained without additional staff. Mr. Dyke assured that the Division would not compromise the environmental protection, but be forced to shift and prioritize resources ultimately resulting in reduced services provided.

After extensive comment and discussion from the Council, the public and members of industry, Mr. Breisch entertained, and Mr. Branecky made the motion that: In SC 5, annual operating fees for minor facilities and for Part 70 sources be increased to \$17.12 per ton; In SC 7, the fee for minor source applicability determinations be increased to \$250 and the fees for all types of individual minor source permits be doubled; and In SC 8, the fee for major source applicability determinations be increased to \$250. Ms. Myers made the second to Mr. Branecky's motion with roll call as follows: Dr. Canter - aye; Ms. Myers - aye; Dr. Grosz - aye; Mr. Branecky - aye; Mr. Wilson - aye; Mr. Breisch - aye.

Copy of hearing transcript attached and made an official part of these minutes.

NEW BUSINESS The Council requested a monthly financial statement from Mr. Coleman's office. This information would enable the Finance Committee to monitor the cash flow of the AQD and work toward avoiding future budgetary shortfalls. Additionally, the Council requested that a comprehensive and detailed list of tasks that would be billed to Title V expenditures be created. This list would be a guideline for staff to follow when accounting time and effort. Finally, a request was made for additional state appropriations for a workload study that will determine staffing priorities.

ADJOURNMENT With no further business, meeting was adjourned with announcement that the next regularly scheduled meeting would be February 17, 1999 at the Department of Environmental Quality Multi-Purpose Room, First Floor, 707 North Robinson, Oklahoma City, Oklahoma.

NOTE: The sign-in sheet and the copies of hearing records are attached as an official part of these Minutes.

MEMORANDUM

TO: Air Quality Council

FROM: Eddie Terrill, Director
AIR QUALITY DIVISION

SUBJECT: Modifications to Subchapter 37

Enclosed is a copy of the proposed modifications to OAC 252:100-37 CONTROL OF EMISSION OF ORGANIC MATERIALS. These revisions were brought to the Air Quality Council for the first time on August 18, 1998 and again on October 20, 1998, and December 15, 1998. At the December meeting the staff recommended that the rule be considered again at the February 17, 1999, Council meeting.

The proposed revisions primarily simplify and clarify language, correct grammar, and impose consistency of format on the rule without involving substantive changes. A number of changes have been made to the rule following the December 15, 1998, Council meeting which are not intended to be substantive in nature. Staff is also proposing the six additional substantive changes listed in numbers 1, 2, 5, 6, 10, and 14 below. The following substantive revisions to the rule are proposed.

1. Staff proposes to add a definition of "drilling or production facility" that is identical to that found in 40 CFR 60, Subpart K, to 252:100-37-2.
2. Staff proposes to add a definition of "lease custody transfer" based on the definition of "custody transfer" found in 40 CFR 60, subpart K, to 252:100-37-2.
3. The definition of "volatile organic compound (VOC)" in 252:100-37-2 has been revised. As part of the simplification process, the staff proposes to have only one definition of volatile organic compound which will be consistent with the EPA definition and replace the terms "volatile organic solvent (VOS)" and "organic solvents." The new definition provides that any organic compound listed in 40 CFR 51.100(s)(1) shall be presumed to have negligible photochemical reactivity and will not be considered to be a VOC. This revision will also serve as a response to requests to exempt acetone, methylated siloxanes, perchloroethylene, and methyl acetate from being considered VOCs. These four substances are on the list in 40 CFR 51.100(s)(1) and, therefore, will not be considered to be VOCs.
4. Staff proposes deleting 252:100-37-3(a), which requires any new source that emits organic material as a solvent or reactant to obtain a permit and apply best available control technology (BACT). As originally proposed by the staff to the Air Quality Council, this subsection applied only to organic solvents and only to major sources. When approved by the Council, the major source requirement was omitted. The Council records from that time contain no explanation for this change. To require each new source of VOC to apply BACT, regardless of the size of the source,

expends more time, effort, and expense than can be justified by the Department considering the subsequent reductions in VOC emissions. This is especially true for new sources in areas that are in attainment and have always been in attainment. To require BACT for new major sources of VOC in Subchapter 37 is redundant. That requirement already exists in 252:100-8-5(d)(1)(A). Therefore, it is proposed to delete this subsection.

5. Staff proposes to add new subsection (c), Permit-by-rule facilities, to 252:100-37-3 to make clear that the only requirements in Subchapter 37 that apply to facilities registered under the VOC storage and loading facility permit-by-rule are those in Part 9.
6. Staff proposes to add subsection (b), which exempts methanol storage vessels at drilling or production facilities when used on site, to 252:100-39-4.
7. Staff proposes to add 252:100-37-15(c) to exempt storage tanks subject to the standards contained in 40 CFR 60, Subparts K, Ka, and Kb from the requirements of that section. The equipment standards contained in Subparts K, Ka, and Kb are as stringent as the requirements of Section 15.
8. Staff proposes to add 252:100-37-16(c) to exempt loading facilities that are subject to 40 CFR 60, Subpart XX and 40 CFR 63, Subpart R from the requirements of this section. The requirements of Subparts XX and R are as stringent as those in Section 16.
9. Staff proposes to delete 252:100-37-25(c), Emission limitations. Research in the Air Quality Council records indicate that this subsection was originally meant to control emissions of organic material from the use of nonphotochemically reactive solvents. These substances would not be considered VOC by the proposed revised definition of VOC. If these limits are applied to VOCs, the emission of 3,000 pounds of VOC per day for 365 days per year would result in an annual emission of 547 tons. The subsection can be interpreted to allow each machine or piece of equipment at a site to emit 3,000 pounds per day before controls are required. This is meaningless for substances considered to be VOC. Subchapter 8 contains requirements for BACT for both major sources and for PSD sources.
10. Staff has revised the alternate standard in 252:100-37-25(d) to require that VOC emissions from noncompliant coatings be reduced to the level they would have been had the coatings complied with the VOC content limits in 252:100-37-25(a).
11. Staff proposes deleting the first sentence in 252:100-37-36, Fuel-burning and refuse-burning equipment, thereby eliminating the impossible requirement that no emission of hydrocarbons or organic materials is allowed from fuel-burning or refuse-burning equipment. This revision will also resolve the contradiction with the second sentence which requires such equipment to be operated to minimize these emissions.
12. Staff proposes to add 252:100-37-38(b) to exempt pumps and compressors that are subject to the equipment leak standards contained in 40 CFR 60 Subparts VV,

GGG, or KKK from the requirements of Subsection 38. The requirements of VV, GGG, or KKK are as stringent as those in Subsection 38.

13. Staff proposes the addition of Subpart 9, Permit By Rule for VOC Storage and Loading Facilities, to provide for permit by rule for facilities that meet the applicability requirements contained therein.
14. Staff proposes the addition of new subparagraphs (A), (B), and (C) to 252:100-37-41(2) which will allow tanks that have storage capacities greater than 19,813 gallons and which are subject to NSPS Subpart Kb to qualify for the permit-by-rule for VOC storage and loading facilities since the only requirements in Subpart Kb are to maintain on site records of the dimensions of the vessel and an analysis of the capacity of the storage vessel.

Staff will suggest that the proposed rule be recommended to the Board for permanent adoption.

In addition to the proposed draft revisions to Subchapter 37, a copy of 40 CFR 51.100(s)(1), a rule impact statement, two summaries of comments and staff responses, and a list of the revisions that were made to the rule after the December 15, 1998, Air Quality Council meeting are also included in the packet.

Enclosures: 6

SUBCHAPTER 37. CONTROL OF EMISSION OF VOLATILE ORGANIC MATERIALS COMPOUNDS (VOCs)

PART 1. GENERAL PROVISIONS

252:100-37-1.	Purpose	1
252:100-37-2.	Definitions	1
252:100-37-3.	Applicability and compliance	2
252:100-37-4.	Exemptions	3
252:100-37-5.	Operation and maintenance	3

PART 3. CONTROL OF ~~VOLATILE ORGANIC COMPOUNDS~~VOCs IN STORAGE AND LOADING OPERATIONS

252:100-37-15.	Storage of volatile organic compounds VOCs	4
252:100-37-16.	Loading of volatile organic compounds VOCs	5
252:100-37-17.	Effluent water separators [AMENDED AND RENUMBERED TO 252:100-37-37]	6
252:100-37-18.	Pumps and compressors [AMENDED AND RENUMBERED TO 252:100-37-38]	7

PART 5. CONTROL OF ~~ORGANIC SOLVENTS~~VOCs IN COATING OPERATIONS

252:100-37-25.	Coating of parts and products	7
252:100-37-26.	Clean up with organic solvents VOCs	9

PART 7. CONTROL OF SPECIFIC PROCESSES

252:100-37-35.	Waste gas disposal	10
252:100-37-36.	Fuel-burning and refuse-burning equipment	10
252:100-37-37.	Effluent water separators	10
252:100-37-38.	Pumps and compressors	11

PART 9. PERMIT BY RULE FOR VOC STORAGE AND LOADING FACILITIES

252:100-37-41.	Applicability	11
252:100-37-42.	Permit-by-rule requirements	11

PART 1. GENERAL PROVISIONS

252:100-37-1. Purpose

~~The purpose of this Subchapter is to control the emission of organic materials from stationary sources to protect and enhance the air quality to insure that the Oklahoma air quality standard is not exceeded and significant deterioration prevented. The purpose of this Subchapter is to prevent the formation of ozone by controlling the emissions of volatile organic compounds (VOCs) from stationary sources.~~

252:100-37-2. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise.

"Acrylic" means a chemical coating containing polymers or co-polymers of acrylic or substitute acrylic acid in combination with suitable resinous modifiers, ~~and its~~ The primary mode of cure is solvent evaporation.

"Alkyd primer" means a chemical coating composed primarily of alkyd applied to a surface to provide a firm bond between the substrate and any additional ~~paint~~ coating.

"Custom product ~~finishes~~ finish" means a proprietary chemical coating designed for a specific customer and end use.

~~"Cutback asphalt" means a basic asphalt or asphaltic concrete containing a petroleum distillate.~~

"Drilling or production facility" means all drilling and servicing equipment, wells, flow lines, separators, equipment, gathering lines, and auxiliary non-transportation-related equipment used in the production of petroleum but does not include natural gasoline plants.

"Effluent water separator" means any tank, box, sump, or other container in which any material ~~compound~~ VOC floating on, or entrained in, or contained in water entering such tank, box, sump or other ~~the~~ container is physically separated and removed from ~~such~~ the water prior to outfall, drainage, or recovery of ~~such~~ discharge of the water from the container.

"Epoxy" means a chemical coating containing epoxy groups and suitable chemical cross-linking agents. ~~Epoxies~~ The prime mode of cure involves a chemical reaction between the epoxy and the cross-linking agent.

"Lease custody transfer" means the transfer of produced crude oil and/or condensate, after processing and/or treating in the producing operations, from storage vessels or automatic transfer facilities to pipelines or any other form of transportation.

~~"Maintenance finishes~~ finish" means a chemical coating ~~formulated to form a protection of that protects~~ a given substrate ~~tefrom~~ adverse chemical or physical ~~condition~~ conditions.

"Nitrocellulose lacquers lacquer (NC lacquer)" means a chemical coating containing nitrocellulose and suitable resinous modifiers, ~~and whose~~. The primary mode of cure is solvent evaporation.

~~"Organic materials" means chemical compounds of carbon excluding carbon monoxides, carbon dioxide, carbonic acid, metallic carbides, metal carbonates and ammonium carbonates.~~

~~"Refinery" means any facility engaged in producing gasoline, kerosene, fuel oils or other products through distillation of crude oil or through redistillation, cracking or reforming of unfinished hydrocarbon derivatives.~~

~~"Submerged fill pipe" means any fill pipe or discharge nozzle which that meets any one of the following conditions:~~

~~(A) theThe bottom of the discharge pipe or nozzle is below the surface of the liquid in the receiving vessel for at least 95 percent of the volume filled.~~

~~(B) theThe bottom of the discharge pipe or nozzle is less than 6 inches from the bottom of the receiving vessel.~~

~~(C) theThe bottom of the discharge pipe or nozzle is less than 2 pipe or nozzle diameters from the bottom of the receiving vessel, or,~~

~~(D) other equivalent methods acceptable to the Executive Director.~~

~~"Vinyl" means a chemical coating containing plasterizedplasticized or unplasterizedunplasticized polymers and co-polymers of vinyl acetate, vinyl chloride, polyvinyl alcohols or their condensation products. and theThe primary mode of cure is solvent evaporation.~~

~~"Volatile organic compound (VOC)" means any compound containing carbon and hydrogen or containing carbon and hydrogen in combination with any other element which has a vapor pressure of 1.5 pounds per square inch absolute or greater under actual storage conditions of carbon, excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate, which participates in atmospheric photochemical reactions. Any organic compound listed in 40 CFR 51.100(s)(1) will be presumed to have negligible photochemical reactivity and will not be considered to be a VOC.~~

~~"Volatile organic solvent (VOS)" means any organic compound which participates in atmospheric photochemical reactions; that is, any organic compound other than those which the EPA Administrator designates as having negligible photochemical reactivity. VOS may be measured by the EPA VOC reference method.~~

252:100-37-3. Applicability and compliance

~~(a) New sources. Any new source calculated to emit an organic material to the atmosphere either as a solvent or a reactant will be subject to permitting under OAC 252:100-7, and with the application of Best Available Control Technology.~~

~~(b) Compliance schedule.~~

~~(1) All equipment and process previously regulated under OAC 252:100-37 and 252:100-39 and its effective dates of July 1, 1972 and December 8, 1974 must still abide by those dates.~~

~~(2)(a) New sources. In all areas except AQMA's, thisThis Subchapter shall apply to all new installations of any equipment or processes described in this Subchapter, after the effective date of~~

December 28, 1974.

~~(3)(b) Existing sources. Provisions Sections 15, 16, 35, 36, 37, and 38 of this Subchapter relating to control of VOC shall apply to all new and existing installations of any equipment or processes in use and described in this Subchapter that are located in Air Quality Maintenance Areas (AQMA's) as classified by the Environmental Protection Agency with regard to hydrocarbons and photochemical oxidants Tulsa County or Oklahoma County, and become after the effective on June 8, 1979, provided, however, that existing installations shall have twenty four (24) months from the effective date within which to comply with this Subchapter date of June 9, 1981. Except that the The retrofit requirements for crude petroleum storage tanks vessels will be limited apply only to tanks vessels of greater than 420,000 gal 10,000 barrel (1,590 m³) capacity.~~

~~(c) Permit-by-rule facilities. This Subchapter does not apply to facilities registered under the VOC storage and loading facility permit-by-rule except as provided in Part 9.~~

~~(4) Provisions of this Subchapter relating to the control of organic solvent shall be as specified in the applicable Section.~~

252:100-37-4. Exemptions

~~(a) Organic materials as used in VOCs with vapor pressures less than 1.5 pounds per square inch absolute (psia) under actual storage conditions are exempt from 252:100-37-15 through 252:100-37-18, 252:100-37-16 and 252:100-37-27 and 252:100-37-28, 252:100-37-35 through 252:100-37-38 will not include: Methane (CH₄) or any material otherwise included which has vapor pressure of less than 1.5 pounds per square inch absolute under actual storage conditions.~~

~~(b) Petroleum or condensate stored, processed, treated, loaded, and/or treated transferred at a drilling or production facility prior to lease custody transfer is exempt from this Subchapter. Methanol stored at a drilling or production facility for use on site is also exempt from this Subchapter. This exemption also includes transfer and loading operations.~~

~~(c) The storage, loading, processing, manufacturing or burning of organic materials VOCs on a farm or ranch, when such VOCs are used for agricultural purposes on farms and ranches said farm or ranch, is exempted from all provisions of 252:100-37-15, through 252:100-37-18 252:100-37-16, 252:100-37-35 through 252:100-37-38, 252:100-39-41, and 252:100-37-27 and 252:100-37-28 252:100-39-42.~~

252:100-37-5. Operation and maintenance

Any vapor-loss control devices, packing glands and mechanical seals required by this Subchapter shall be properly installed, maintained, and operated.

PART 3. CONTROL OF VOLATILE ORGANIC COMPOUNDS VOCs IN STORAGE AND LOADING OPERATIONS

252:100-37-15. Storage of volatile organic compounds VOCs

(a) Storage capacities greater than 40,000 gallons. No person shall build, sell, or install or permit the building or installation of any new stationary tank, reservoir or other container. Each VOC storage vessel with a capacity of more than 40,000 gallons (150,000 liters) 151 m^3 capacity which will be used for storage of any organic materials, unless such tank, reservoir or other container is to ~~shall~~ be a pressure tank ~~vessel~~ capable of maintaining working pressures sufficient at all times ~~to that~~ prevent organic vapor or gas ~~the~~ loss of VOC to the atmosphere or is designed, and will be built and shall be equipped with one of the following vapor-loss control devices:

(1) An external floating roof, consisting that consists of a pontoon type, internal floating cover or double-deck type roof cover, or a fixed roof with an internal-floating cover. ~~which~~ The cover will ~~shall~~ rest on the surface of the liquid contents at all times (i.e., off the leg supports), except during initial fill, when the storage vessel is completely emptied, or during refilling. When the cover is resting on the leg supports, the process of filling, emptying, or refilling shall be continuous and shall be accomplished as rapidly as possible. ~~and~~ The floating roof shall be equipped with a closure seal, or seals, to close the space between the ~~roof cover~~ edge and ~~tank vessel~~ wall. Such ~~floating~~ Floating roofs are not appropriate control devices if the organic materials VOCs have a vapor pressure of ~~11.1~~ 11.1 pounds per square inch absolute (psia) (568 mm Hg) ~~76.6~~ 76.6 kPa or greater under actual conditions. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place.

(2) A vapor-recovery system ~~consisting that~~ consists of a vapor-gathering system capable of collecting 85 percent or more of the uncontrolled organic material VOCs that would otherwise be emitted to the atmosphere; and a vapor-disposal system capable of processing ~~such these~~ organic material VOCs so as to prevent their emission to the atmosphere. ~~and with all~~ All ~~tank vessel~~ gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place.

(3) Other equipment or ~~means~~ methods that are of equal efficiency for purposes of air pollution control as may be used when approved by the Executive Division Director prior to installation.

(b) Storage capacities of 400 gallons and greater. No person shall build, sell, or install or permit the building or installation of a new stationary organic material. Each VOC storage ~~tank vessel~~ with a capacity of 400 gallons (1520 liters) 1.5 m^3 or more unless such tank is ~~shall~~ be equipped with a permanent submerged fill pipe or is equipped with an organic material a vapor-recovery system as required in 252:100-37-5(a) 252:100-37-15(a) (2).

(c) Exemptions. VOC storage vessels that are subject to equipment standards (e.g., a fixed roof in combination with an internal floating cover, an external floating roof, or a closed

vent system and control device) in 40 CFR 60 Subparts K, Ka, or Kb are exempt from the requirements of 252:100-37-15(a) and (b).

252:100-37-16. Loading of volatile organic compounds VOCs

(a) Loading facilities with throughput greater than 40,000 gallons/day.

~~(1) No person shall build or install or permit the building or installation of a stationary organic material. Each VOC loading facility having with a throughput greater than 40,000 gallons/d (151,416 l/d) per day from its aggregate loading pipes unless such loading facility is shall be equipped with a vapor-collection and disposal system or unless all tank trucks or trailers are bottom loading loaded with closed hatches closed, properly installed, in good working order and in operation.~~

~~(2)(1) Vapor-collection and disposal system. When loading in a vapor collection and disposal system is effected through the hatches of a tank truck or trailer with a loading arm equipped with a vapor collecting adaptor, pneumatic, hydraulic or other mechanical means shall be provided to force a vapor tight seal between the adaptor and the hatch.~~

(A) Vapor-collection portion of the system.

(i) When loading VOCs through the hatches of a tank truck or trailer, using a loading arm equipped with a vapor collecting adaptor, a pneumatic, hydraulic, or mechanical means shall be provided to ensure a vapor-tight seal between the adaptor and the hatch.

~~(3) A means shall be provided in either system to prevent organic material drainage from the loading device when it is removed from any tank truck or trailer, or to accomplish complete drainage before removal.~~

~~(4)(ii) When loading is effected through means other than hatches, all loading and vapor lines shall be equipped with fittings which that make vapor-tight connections and which must be closed when disconnected or which close automatically when disconnected.~~

~~(5)(B) Vapor-disposal portion of the system. The vapor-disposal portion of the system shall consist of one of the following:~~

~~(A)(i) a vapor-liquid absorber system with a minimum recovery efficiency of 90 percent by weight of all the organic material VOC vapors and gases entering such disposal system; or~~

~~(B)(ii) a variable-vapor space tank, compressor, and fuel-gas system of sufficient capacity to receive all organic material VOC vapors and gases displaced from the tank trucks and trailers being loaded.~~

(2) Prevention of VOC drainage. A means shall be provided in either system to prevent VOC drainage from the loading

device when it is removed from any tank truck or trailer, or to accomplish complete drainage before removal.
(b) Loading facilities with throughput equal to or less than 40,000 gallons per day.

(1) ~~No person shall build or install or permit the building or installation of a stationary organic material~~Each loading pipe at a VOC loading facility having a with an aggregate throughput of 40,000 gallonsgal/d (150,000151,416 litersl/d) per day or less from its aggregate loading pipes unless each is shall be equipped with a system for submerged filling of tank trucks or trailers properly installed, in good working order and operating in such a manner thatwhich is installed and operated to maintain a 97 percent submergence factor-is maintained.

(2) Paragraph 252:100-37-16(b)(1) ~~apply~~applies to any facility ~~whichthat~~ loads organic materialsVOCs into any tank truck or trailer with a capacity greater than 200 gal (757 l) which is designed for transporting organic materialsVOCs and having a capacity in excess of 200 gallons (760 liters).

(c) Exemptions. Loading facilities subject to the requirements of 40 CFR 60 Subpart XX or 40 CFR 63 Subpart R are exempt from the requirements of 252:100-37-16(a) and (b).

252:100-37-17. Effluent water separators [AMENDED AND RENUMBERED TO 252:100-37-37]

~~No person shall build or install or permit the building or installation of a single or multiple compartment organic material water separator which receives effluent water containing 200 gallons (760 liters) a day or more or any organic material from any equipment processing, refining, treating, storing or handling organic materials unless the compartment receiving said effluent water is equipped with one of the following vapor loss control devices, properly installed, in good working order and in operation:~~

~~(1) A container having all openings sealed and totally enclosing the liquid contents. All gauging and sampling devices shall be gas tight except when gauging or sampling is taking place. The oil removal devices shall be gas tight except when manual skimming, inspection and/or repair is in progress;~~

~~(2) A container equipped with a floating roof, consisting of a pontoon type, double deck type roof, or internal floating cover, which will rest on the surface of the contents and is equipped with a closure seal, or seals, to close the space between the roof edge and container wall. All gauging and sampling devices shall be gas tight except when gauging or sampling is taking place. The oil removal devices shall be gas tight except when manual skimming, inspection and/or repair is in progress;~~

~~(3) A container equipped with a vapor recovery system, consisting of a vapor gathering system capable of collecting the organic material vapors and gases discharged and a~~

~~vapor disposal system capable of processing such organic material vapors and gases so as to prevent their emission to the atmosphere and with all tank gauging and sampling devices gas tight except when gauging or sampling is taking place. The organic material removal devices shall be gas tight except when manual skimming, inspection and/or repair is in progress, or,~~

~~(4) Containers equipped with controls of equal efficiency provided such equipment is submitted to and approved by the Executive Director.~~

252:100-37-18. Pumps and compressors [AMENDED AND RENUMBERED TO 252:100-37-38]

~~No person shall build or install or permit the building or installation of any pump or compressor handling organic material compounds unless rotating type pumps and compressors are equipped with mechanical seals or other equipment of equal efficiency, or reciprocating type pumps and compressors are equipped with packing glands properly installed and in good working order such that the emissions from the drain recovery system are limited to two cubic inches of liquid organic material in any 15 minute period at standard conditions per pump or compressor.~~

PART 5. CONTROL OF ORGANIC SOLVENTS/VOCs IN COATING OPERATIONS

252:100-37-25. Coating of parts and products

(a) ~~Standards. No owner or operator subject to the provision of this Section shall discharge or cause the discharge into the atmosphere from an existing coating line or individual coating operation any organic solvent in excess of the amounts, listed in the following table, per gallon of coating, excluding water, delivered to the coating applicator. No owner or operator of any coating line or coating operation with VOC emissions shall use coatings that as applied contain VOCs in excess of the amounts listed in the following table.~~

Type of coating	Pounds of organic solvent/VOC per gallon of paint/coating (less water and exempted organic compounds)		
	Jan. 79 limit	Jan. 81 limit	Jan. 82 limit
Alkyd primer	5.6	5.2	4.8
Vinyls	6.4	6.4	6.0
NC lacquers	6.8	6.6	6.4
Acrylics	6.4	6.4	6.0
Epoxies	5.6	5.2	4.8
Maintenance finishes	5.6	5.2	4.8
Custom products finishes	6.8	6.6	6.5

(b) ~~Plant-wide emission plan. An owner/operator may develop a plant wide emission plan instead of having each coating line comply~~

with the emission limitations prescribed in the table in (a) of this section, provided:

(1) Development of a plant-wide emission plan. An owner or operator may develop a plant-wide emission plan instead of having each coating line comply with the VOC content limitations in 252:100-37-25(a), if the following conditions are met.

(A) ~~the~~The owner or operator demonstrates, by means of approved material balance or manual emission test methods, by the methods in 252:100-5-2.1(d) that sufficient reductions in organic solvents emissions of VOCs may be obtained by controlling other facilitiesources within the plant to the extent necessary to compensate for all excess emissions whichthat result from one or more coating lines not achieving the prescribed limitation. Such demonstration shall be ~~described~~made in writing and shall include:

~~(A)(i)~~ Aa complete description of the coating line or lines whichthat will not comply with the emissionVOC content limitation in 252:100-37-25(a);

~~(B)(ii)~~ Quantificationquantification of emissions, in terms of pounds per day of organic solventsVOCs, which are in excess of the prescribed emissionVOC content limitation for each coating line described under 252:100-37-25(b)(1)(A)252:100-37-25(b)(1)(A)(i);

~~(C)(iii)~~ Aa complete description of each facility and the related control system, if any, for those facilities within the plant wherehow emissions will be decreased at specific sources to compensate for excess emissions from each coating line described under 252:100-37-25(b)(1)(A)252:100-37-25(b)(1)(A)(i) and the date on which such reductions will be achieved;

~~(D)(iv)~~ Quantificationquantification of emissions, in terms of pounds per day of organic solventsVOCs, for each facilitysource described under 252:100-37-25(b)(1)(C)252:100-37-25(b)(1)(A)(iii), both before and after the improvement or installation of any applicable control system, or operational changes to such a facility or facilities to reduce emissions and the date on which such reductions will be achieved; and,

~~(E)(v)~~ Aa description of the procedures and methods used to determine the emissions of organic solventsVOCs.

~~(2)(B)~~ theThe plant-wide emission reduction plan does not include decreases in emissions resulting from requirements of other applicable air pollution rules. ~~The plant wide emission reduction plan may include decreases in emissions accomplished through installation~~

~~or improvement of a control system or through physical or operational changes to facilities, including permanently reduced production or closing a facility, located on the premises of a surface coating operation.~~

~~(3)~~ (2) Compliance with a plant-wide emission plan. ~~the~~The implementation of a plant-wide emission reduction plan instead of compliance with the emissions VOC content limitation prescribed in 252:100-37-25(a) ~~has been~~ must be expressly approved by the Executive Division Director. Upon approval, any emissions in excess of those established for each facility under the plan shall be a violation of this Subchapter.

~~(e) Emission limitation.~~ No person shall discharge into the atmosphere more than 3,000 pounds of organic materials in any one day nor more than 450 pounds in any one hour from any article, machine, equipment or other contrivance in which any organic solvent or any material containing such solvent is employed or applied, unless such discharge has been reduced by at least 85 percent or has applied DACT or better as determined by the Executive Director.

~~(d)~~ (c) Exemption. Owners or operators of sources that are computed to emit less than 100 pounds of organic solvent VOC per 24 hr./day 24-hour day are exempt from the requirements of this Section.

~~(e)~~ (d) Alternate standard. Emissions The use of coatings with VOC contents in excess of those permitted by 252:100-37-25(a) through ~~252:100-37-25(d)~~ or 252:100-37-25(b) are allowable if both of the following conditions are met:.

(1) VOC emissions are reduced to the quantity that would result in the absence of control occur if the coating used complied with the VOC content allowed in 252:100-37-25(a) are reduced by:

(A) 90 percent, by incineration; or,

(B) 85 percent, by absorption/adsorption; or, any other process of equivalent reliability and effectiveness; and,

(C) any other process of equivalent reliability and effectiveness.

(2) ~~no~~ No air pollution, as defined by the Clean Air Act, results.

252:100-37-26. Clean up with organic solvents VOCs

Emissions of ~~organic materials to the atmosphere from the clean up with organic solvents, as defined in 252:100-37-2,~~ VOCs of any article, machine, or equipment or other contrivance used in applying coatings controlled in 252:100-37-25(a) through ~~252:100-37-25(d)~~ 252:100-37-25(d) shall be included with the other emissions of ~~organic solvents from the coating line or operation~~ counted in determining compliance with those rules.

PART 7. CONTROL OF SPECIFIC PROCESSES

252:100-37-35. Waste gas disposal

(a) Ethylene manufacturing emissions. No ~~person~~owner or operator shall build or install ~~or permit the building or installation of~~ any ethylene manufacturing plant unless the waste-gas stream under normal operating conditions is properly burned at 1,300°F- for 0.3 seconds or greater in a direct-flame afterburner equipped with an indicating pyrometer ~~which~~that is positioned in the working area for the operator's ready monitoring or an equally effective catalytic vapor incinerator also with pyrometer. Proper burning of the waste-gas stream is defined as reduction by 98 percent of the ethylene emissions originally present in the waste-gas stream.

(b) Vapor blowdown. Except where inconsistent with the "Minimum Federal Safety Standards for the Transportation of Natural and Other Gas by Pipeline," or any State of Oklahoma regulatory agency, no ~~person~~owner or operator shall allow ~~emit~~ organic VOC gases to be emitted to the atmosphere from a vapor recovery blowdown system unless these gases are burned by smokeless flares, or an equally effective control device as approved by the Executive Division Director.

252:100-37-36. Fuel-burning and refuse-burning equipment

~~No person shall cause or allow the emission of hydrocarbons or other organic materials from any fuel burning or refuse burning equipment.~~ All ~~such~~fuel-burning or refuse-burning equipment shall be operated as to minimize ~~such~~ emissions of VOC. Among other things, such operation shall assure, based on manufacturer's data and good engineering practice, that the equipment is not overloaded, that it is properly cleaned, operated, and maintained, and that temperature and available air are sufficient to provide essentially complete combustion.

252:100-37-37. Effluent water separators

A single-compartment or multiple-compartment VOC/water separator that receives effluent water containing 200 gal/d (760 l/d) or more of any VOC from any equipment processing, refining, treating, storing or handling VOCs shall comply with one of the following sets of conditions.

(1) The container totally encloses the liquid contents and all openings are sealed. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The oil removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.

(2) The container is equipped with an external floating roof that consists of a pontoon type or double-deck type cover, or a fixed roof with an internal-floating cover. The cover shall rest on the surface of the contents and be equipped with a closure seal, or seals, to close the space between the cover edge and container wall. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The oil removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.

(3) The container is equipped with a vapor-recovery system that consists of a vapor-gathering system capable of

collecting the VOC vapors and gases discharged and a vapor-disposal system capable of processing such vapors and gases to prevent their emission to the atmosphere. All tank gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The VOC removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.

(4) The container is approved prior to use by the Division Director and is equipped with controls that have efficiencies equal to the controls listed in 252:100-37-37(1) through (3).

252:100-37-38. Pumps and compressors

(a) Any pump or compressor handling VOCs shall meet the following conditions.

(1) Rotating type pumps and compressors are equipped with mechanical seals or other equipment of equal efficiency.

(2) Reciprocating type pumps and compressors are equipped with packing glands.

(3) Emissions from the drain recovery system do not exceed 2 in.³ of liquid VOC in any 15-minute period per pump or compressor at standard conditions.

(b) Pumps and compressors subject to the standards for pumps and compressors contained in 40 CFR 60 Subparts VV, GGG, or KKK are exempt from 252:100-37-38.

PART 9. PERMIT BY RULE FOR VOC STORAGE AND LOADING FACILITIES

252:100-37-41. Applicability

Any new VOC storage and/or loading facility may be constructed and any existing VOC storage and/or loading facility may be operated under this Part if the following conditions are met.

(1) The facility is located in an area designated as unknown or attainment for ozone.

(2) Each storage vessel located at the facility meets one of the following criteria.

(A) The storage capacity is 19,813 gal (75 m³) or less.

(B) The storage capacity is greater than 19,813 gal (75 m³) but less than 39,889 gal (151 m³) and the liquid stored has a maximum true vapor pressure less than 2.18 psia (15.0 kPa).

(C) The storage capacity is greater than or equal to 39,889 gal (151 m³) and the liquid stored has a maximum true vapor pressure less than 0.51 psia (3.5 kPa).

(3) The facility is designed to have a throughput of 19,998 gal/d (75,700 l/d) or less from the aggregate loading pipes.

(4) The facility meets the requirements of 252:100-7-60(a), (b), and (c).

252:100-37-42. Permit-by-rule requirements

(a) An owner or operator shall submit annual emission inventory reports and meet the requirements of 252:100-37-5, regarding operation and maintenance, and 252:100-37-38, regarding pumps and

compressors.

(b) No owner or operator shall build or install a new stationary VOC storage vessel with a capacity of 400 gal (1.5 m³) or greater unless it is equipped with a permanent submerged fill pipe as defined in 252:100-37-2.

(c) No owner or operator shall build or install a stationary VOC loading facility unless each loading pipe is equipped with a system for submerged filling of tank trucks or trailers which is installed and operated to maintain a 97 percent submergence factor.

(d) The owner or operator of a vessel with a storage capacity greater than 10,567 gal (40 m³) shall maintain records on site of the dimensions of the storage vessel and an analysis showing the capacity.

LIST OF ORGANIC COMPOUNDS WITH NEGLIGIBLE
PHOTOCHEMICAL REACTIVITY
40 CFR 51.100(s)(1) as it existed on July 1, 1998
From the Federal Register dated 4/9/98

Sec. 51.100 Definitions.

(s) Volatile organic compounds (VOC)

(1) This includes any such organic compound other than the following, which have been determined to have negligible photochemical reactivity:

methane;
ethane;
methylene chloride (dichloromethane);
1,1,1-trichloroethane (methyl chloroform);
1,1,2-trichloro-1,2,2-trifluoroethane (CFC-113);
trichlorofluoromethane (CFC-11);
dichlorodifluoromethane (CFC-12);
chlorodifluoromethane (HCFC-22);
trifluoromethane (HFC-23);
1,2-dichloro 1,1,2,2-tetrafluoroethane (CFC-114);
chloropentafluoroethane (CFC-115);
1,1,1-trifluoro 2,2-dichloroethane (HCFC-123);
1,1,1,2-tetrafluoroethane (HFC-134a);
1,1-dichloro 1-fluoroethane (HCFC-141b);
1-chloro 1,1-difluoroethane (HCFC-142b);
2-chloro-1,1,1,2-tetrafluoroethane (HCFC-124);
pentafluoroethane (HFC-125);
1,1,2,2-tetrafluoroethane (HFC-134);
1,1,1-trifluoroethane (HFC-143a);
1,1-difluoroethane (HFC-152a);
parachlorobenzotrifluoride (PCBTf);
cyclic, branched, or linear completely methylated siloxanes;
acetone;
perchloroethylene (tetrachloroethylene);
3,3-dichloro-1,1,1,2,2-pentafluoropropane (HCFC-225ca);
1,3-dichloro-1,1,2,2,3-pentafluoropropane (HCFC-225cb);
1,1,1,2,3,4,4,5,5,5-decafluoropentane (HFC 43-10mee);
difluoromethane (HFC-32);
ethylfluoride (HFC-161);
1,1,1,3,3,3-hexafluoropropane (HFC-236fa);
1,1,2,2,3-pentafluoropropane (HFC-245ca);
1,1,2,3,3-pentafluoropropane (HFC-245ea);
1,1,1,2,3-pentafluoropropane (HFC-245eb);
1,1,1,3,3-pentafluoropropane (HFC-245fa);
1,1,1,2,3,3-hexafluoropropane (HFC-236ea);
1,1,1,3,3-pentafluorobutane (HFC-365mfc);

chlorofluoromethane (HCFC-31);
1-chloro-1-fluoroethane (HCFC-151a);
1,2-dichloro-1,1,2-trifluoroethane (HCFC-123a);
1,1,1,2,2,3,3,4,4-nonafluoro-4-methoxy-butane (C₄F₉OCH₃);
2-(difluoromethoxymethyl)-1,1,1,2,3,3,3-heptafluoropropane
(CF₃)₂CF₂OCH₃);
1-ethoxy-1,1,2,2,3,3,4,4,4-nonafluorobutane (C₄F₉OC₂H₅);
2-(ethoxydifluoromethyl)-1,1,1,2,3,3,3-heptafluoropropane
(CF₃)₂CF₂OC₂H₅);
methyl acetate

and perfluorocarbon compounds which fall into these classes:

- (i) Cyclic, branched, or linear, completely fluorinated alkanes;
- (ii) Cyclic, branched, or linear, completely fluorinated ethers with no unsaturations;
- (iii) Cyclic, branched, or linear, completely fluorinated tertiary amines with no unsaturations; and
- (iv) Sulfur containing perfluorocarbons with no unsaturations and with sulfur bonds only to carbon and fluorine.

PUBLIC MEETING

Notice of Public Meeting for February 17, 1999 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance door of the meeting room.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Mr. Wilson - aye; Dr. Grosz - aye; Dr. Canter - aye; Mr. Kilpatrick - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye. Ms. Slagell did not attend.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the December 15, 1998 Public Meeting/Hearings. Motion was made by Dr. Grosz to approve the Minutes as presented and second was made by Dr. Canter. Roll call as follows: Mr. Wilson - aye; Dr. Grosz - aye; Dr. Canter - aye; Mr. Kilpatrick - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

Election of Officers - Floor was opened for nominations for Chairman for Calendar Year 1999. Dr. Canter nominated Mr. Breisch for Chairman and the second was made by Dr. Grosz. Roll call as follows: Mr. Wilson - aye; Dr. Grosz - aye; Dr. Canter - aye; Mr. Kilpatrick - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - abstain. Nominations were then requested for Vice Chairman. Mr. Kilpatrick nominated Dr. Canter and Dr. Grosz made the second. Roll call as follows: Mr. Wilson - aye; Dr. Grosz - aye; Dr. Canter - abstain; Mr. Kilpatrick - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

PUBLIC HEARINGS

Protocol Statement – As protocol officer, Mr. Terrill convened the hearings by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Terrill entered into the hearing records the Hearing Agenda and Oklahoma Register Notice.

OAC 252:100-37 Control of Emissions of Organic Materials (AMENDED)

Mr. Terrill called upon Dr. Joyce Sheedy who advised that proposed changes primarily simplify language and correct grammar and format but also include fourteen substantive changes. Dr. Sheedy explained that one substantive change alters the definition of volatile organic compound (VOC) to make it reflect EPA's definition of VOC. The other changes include:

1. an added definition of drilling or production facility
2. an added definition of lease custody transfer
3. an added new subsection 252:100-37-3(c)
4. a revised 252:100-37-4(b) to exempt methanol storage vessels at drilling or production sites
5. a revised the alternate standard 252:100-37-25(d)
6. and added new subparagraphs (A), (B) (C) to 252:100-37-41(2)

Dr. Sheedy reiterated eight substantive changes that had been previously proposed.

1. a revision of the definition of Volatile Organic Compound (VOC) 252:100-37-2
2. a deleted 252:100-37-3(a)
3. an added 252:100-37-15(c) to exempt storage tanks subject to NSPS subpart K, Ka, Kb
4. an added 252:100-37-16(c) to exempt loading facilities that are subject to NSPS subpart XX or NESHAP subpart R
5. a deleted 252:100-37-25(c)
6. a deleted first sentence in 252:100-37-36 to eliminate an impossible requirement
7. an added 252:100-37-38(b) to exempt pumps and compressors that are subject to equipment leak standards in NSPS subparts VV, GGG, or KKK from Section 38
8. an added part 9 Permit by Rule for VOC storage and loading facilities

Dr. Sheedy submitted the written letter from EPA dated February 10, 1999 indicating support for the proposed revisions for hearing record.

Dr. Sheedy then stated it was staff's recommendation that Council forward to the Environmental Quality Board at its March 5, 1999 meeting.

Council discussion followed which included question from Ms. Myers regarding the meaning of "expressly" in 252:100-37-25(b)(2). Ms. Hoffman explained the intent of the word to be that the approval must be in writing from the Division Director. Wording was changed.

Ms. Sandra Rennie, EPA, stated that these changes supported the SIP and also complimented EPA's own current program of simplifying language in their rules.

Mr. Breisch entertained a motion to send to this rule to the EQ Board in March. Mr. Wilson made motion with second made by Dr. Grosz. Roll call as follows: Mr. Wilson – aye; Dr. Grosz – aye; Dr. Canter – aye; Mr. Kilpatrick – aye; Ms. Myers – aye; Mr. Branecky – aye; Mr. Breisch – aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-39 Control of Organic Materials in Nonattainment Areas [AMENDED]

Mr. Terrill called upon Dr. Joyce Sheedy who advised that proposed changes primarily simplify language and correct grammar and format but also include substantive changes. Dr. Sheedy explained that one substantive change alters the definition of volatile organic compound (VOC) to make it reflect EPA's definition of VOC. She then submitted, for the record, the written letter from EPA dated February 10, 1999 indicating support for these proposed revisions.

Dr. Sheedy explained that one substantive change alters the definition of volatile organic compound (VOC) to make it reflect EPA's definition of VOC. The other changes include:

1. an added definition of drilling or production facility to 252:100-39-30(a)
2. a revised the definition of aerospace in 252:100-39-47(b) to make clear that it includes rework
3. an added 3252:100-9-30(b)(3) and (4) to exempt storage vessels subject to NSPS Ka and Kb or MACT standards CC or G from Section 30

Previous proposals were:

1. a definition of VOC
2. a correction of the placement of "prior to lease custody transfer" in 252:100-39-30(b)
3. an addition of language to 252:100-39-41(c) that exempts facilities that have an annual throughput less than 120,000 gallons or storage capacity less than 10,000 gallons from Section 41

Sandra Rennie re-stated EPA's support of subchapter 37 also applies to subchapter39.

Following discussion, Mr. Breisch entertained a motion to recommend this rule to the EQBoard at its March 5 meeting. Mr. Kilpatrick made that motion with the second made by Dr. Grosz. Roll call as follows: Mr. Wilson – aye; Dr. Grosz – aye; Dr. Canter – aye; Mr. Kilpatrick – aye; Ms. Myers – aye; Mr. Branecky – aye; Mr. Breisch – aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

NEW BUSINESS

Council discussed the possibility of changing the format of the Council meetings to make the briefing session shorter and less formal and the hearing sessions to include more of the discussions involved in the changes to rules as matter of record through court reporter transcripts. It was decided to make this discussion an agenda item at the next meeting to obtain additional input from audience.

Mr. Terrill advised that the monthly financial information and detailed list of tasks that would be billed to Title V expenditures requested at Council's last meeting is in rough draft form and would be made available to the Council Subcommittee at a meeting in March.

Mr. Breisch suggested that a management efficiency study that would determine staffing priorities should involve Council, staff, and industry to formulate scope and funding.

ADJOURNMENT With no further business, meeting was adjourned with announcement that the next regularly scheduled meeting would be April 20, 1999 at the Department of Environmental Quality Multi-Purpose Room, First Floor, 707 North Robinson, Oklahoma City, Oklahoma.

NOTE: The sign-in sheet is attached as an official part of these Minutes.

AIR QUALITY COUNCIL
RULEMAKING RECOMMENDATION TO THE ENVIRONMENTAL QUALITY BOARD

Identification of Proposed Rulemaking:

Chapter Number and Title – OAC 252:100-37

Subchapters or Sections Involved – [new, amended or revoked]

Control of Emissions of Organic Materials [AMENDED]

On FEBRUARY 17, 1999 the members of this Council, by authority vested in them by the Oklahoma Environmental Quality Code (27 O.S.Supp. 1993, § 2-2-201), by roll call vote, recommended to the Environmental Quality Board that the rulemaking described above be adopted as:

X permanent [take effect after legislative review]

emergency [temporary, to take effect upon approval by the Governor because of time; and/or special reason: _____]

This Council has considered the proposed rulemaking and comments about it and determined, to the best of its knowledge, that all applicable requirements of the Oklahoma Administrative Procedures Act have been followed.

This Council authorizes the Department to prepare this recommended rulemaking for the Board, making any changes approved by the Council, correcting typographical, grammatical and reference errors, and formatting them as required by the Office of Administrative Rules. This is to be done with the understanding that such changes shall neither alter the sense of what this Council recommends nor invalidate this recommendation.

Respectfully,

Date signed: 2-17-99

Chair or Designee

VOTING TO APPROVE:

Environmental Quality Board

REGULAR MEETING AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
OKLAHOMA ENVIRONMENTAL QUALITY BOARD

A Public Meeting: 9:30 a.m., Friday, March 5, 1999
Association of County Commissioners of Oklahoma
429 NE 50th Street, Oklahoma City, Oklahoma

1. Call to Order - Herschel Roberts
2. Roll Call - Lynda Finch
3. Approval of Minutes of the November 10, 1998 Regular Meeting
4. Election of Officers (Chair and Vice-Chair) for 1999

5. **OAC 252:100 Air Pollution Control:**

Changes are proposed to five subchapters. The changes fall into three general groups.

- Proposed revisions to both Subchapters 37 (Control of Emissions of Organic Materials) and 39 (Emission of Organic Materials in Nonattainment Areas) include 1) definitional changes, including most notably the term "volatile organic compound (VOC)" and related terms; 2) exemption of certain types or sizes of VOC loading and storage vessels and facilities and certain pumps and compressors from some state requirements and standards, especially when the equipment or facilities are subject to related federal requirements; 3) deletion of a rule which allows the emission of 3,000 pounds per day or 450 pounds per hour of organic materials before controls are required; 4) revision of an alternate emission standard for coating operations; 5) correction of the impossible requirement that no emission of hydrocarbons or organic material is allowed from fuel-burning or refuse-burning equipment; and 6) addition of provisions for permit by rule for VOC storage and loading facilities.
- Proposed amendments to Subchapter 7 (Permits for Minor Facilities) will modify language applicable to de minimis facilities, Permit by Rule (PBR), and general permits. First, actual emissions of Total Suspended Particulates (TSP) will no longer be counted in determining whether a facility meets the definition of "de minimis facility." Second, the proposed revisions will delete the current lower tonnage limits for PBR and general permits. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Proposed amendments to Subchapter 8 (Permits for Part 70 Sources) will update the adoption by reference of the requirements for case-by-case MACT determinations contained in federal rules to July 1, 1998.
- Proposed amendments to Subchapter 5 would increase the annual operating fees for both Part 70 and minor emission sources. Proposed revisions to Subchapter 7 will increase the applicability determination fee and individual application fees for minor facilities. Subchapter 8 is revised to increase the fee for applicability determinations, consistent with the proposed increase in Subchapter 7.

- A. Presentation— David Branecky, Air Quality Council member
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote for permanent adoption

6. **OAC 252:200 and 205 Hazardous Waste Management:**

The state hazardous waste rules have been revised as part of the DEQ's effort to simplify and streamline its rules. The rewrite is not intended to change the requirements of the rules, but to make them clearer and more concise. Due to extensive reworking of the language and rearrangement of the text, the DEQ believes it is more understandable and straightforward to revoke Chapter 200 in its entirety and replace it with a new chapter, Chapter 205, than to present an underline/strike-out version of Chapter 200. This revocation and replacement was done last year by emergency rulemaking; it is proposed to repeat the action as permanent rulemaking.

Chapter 205 as proposed also contains three categories of substantive changes. The first is update of the adoption by reference of federal hazardous waste regulations to July 1, 1998. The second is to delineate certain hazardous waste regulatory duties which remain with the U.S. Environmental Protection Agency. The third is to clarify that although federal hazardous waste regulations allow conditionally exempt small quantity generators of hazardous waste to dispose of their hazardous waste in certain solid waste landfills, this practice is prohibited by Oklahoma statute.

- A. Presentation— David Bradshaw, Hazardous Waste Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote for permanent adoption

7. **OAC 252:400 Radiation Management:**

The proposed new rules support Oklahoma's pending application to the U.S. Nuclear Regulatory Commission (NRC) for State Agreement status. NRC approval of Oklahoma's application will shift regulation of source, byproduct and special nuclear material from the NRC to the DEQ.

New Subchapter 2 forms the framework for the State Agreement Program and the incorporation by reference of federal NRC regulations from Title 10 of the Code of Federal Regulations. Appendices G through P mirror NRC categories and set fees for Oklahoma's State Agreement Program. All fees in these Appendices are less than the current federal fees. Due to the requirement that fees must be adopted during the time the legislature is in session, these Appendices are presented to the Board before the remainder of Subchapter 2's State Agreement rules. However, these fee schedules will not go into effect until the date the State Agreement program becomes effective.

- A. Presentation— Dr. David Gooden, Radiation Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote for permanent adoption

8. **OAC 252:510 Municipal Solid Waste Landfills:**

The proposed addition of Subchapter 16 addresses new standards for the exclusion of hazardous, PCB, radioactive, or other restricted wastes from disposal in a municipal solid waste landfill (MSWLF). The rules require owners/operators to submit a new or amended Waste Exclusion Plan for approval by January 1, 2000, and sets standards for the plan. The amendment to 252:510-17-5 incorporates the Subchapter 16 provisions in the current rule requiring exclusion of unacceptable wastes.

The proposed amendment to 252:510-17-2(d) would require owners/operators of MSWLFs and nonhazardous industrial waste landfills to establish and maintain vegetative cover, or other

alternatives approved by DEQ, over waste areas that extend above the natural horizon if that area will not be receiving more waste in the upcoming year. The rule is designed to enhance dust control, erosion control and aesthetics at MSWLFs and nonhazardous industrial waste landfills once they begin placing waste above ground.

The amendment to 252:510-21-6 would clarify that the pay-in period under the Trust Fund financial assurance mechanism, which may be used to ensure the costs for closure and post-closure of the landfill, is limited to a maximum of 15 years. This change is consistent with the change in law provided by SB 1025 passed during the 1998 legislative session.

- A. Presentation— Steve Mason, Solid Waste Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote for permanent adoption

9. OAC 252:520 Solid Waste Management:

The proposed amendment to 252:520-9-11 would require owners/operators of landfills to establish and maintain vegetative cover, or other alternatives approved by DEQ, over waste areas that extend above the natural horizon if that area will not be receiving more waste in the upcoming year. The rule is designed to enhance dust control, erosion control and aesthetics at landfills once they begin placing waste above ground.

Changes to Subchapter 21 implement revisions to the waste tire recycling program as required by SB 1218 and SB 986 passed during the 1998 session.

The amendment to 252:510-23-51 would clarify that the pay-in period under the Trust Fund financial assurance mechanism, which may be used to ensure the costs for closure and post-closure of solid waste disposal sites, is limited to a maximum of 15 years. This change is consistent with the change in law provided by SB 1025 passed during the 1998 legislative session.

- A. Presentation— Steve Mason, Solid Waste Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote for permanent adoption

10. OAC 252:640 and 641 Individual and Small Public On-Site Sewage Disposal Systems:

252:640 is being revoked. The rules in Chapter 640 were clarified, substantially rewritten and reorganized through the re-right/de-wrong process and moved to 252:641. Subchapter 11 of Chapter 700 has also been rewritten and moved to new Chapter 641; among the revisions is a recategorization of certified installers. The purpose of these rules is to establish procedures for the construction, installation and operation of individual and small public on-site sewage disposal systems and to establish procedures for persons seeking certification as installers of individual sewage disposal systems.

- A. Presentation— Gary Collins, Director, Environmental Complaints and Local Services Division
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote for permanent adoption

11. **OAC 252:700 Water and Wastewater Works Operator Certification:**
This action is a corresponding action to agenda item 10. This rule change would revoke current Subchapter 11 of Chapter 700 (relating to certification for septic tank system installers), the provisions of which are included in new Chapter 641.
 - A. Presentation— Gary Collins, Director, Environmental Complaints and Local Services Division
 - B. Questions and discussion by the Board
 - C. Questions, comments and discussion by the public
 - D. Discussion by the Board
 - E. Roll call vote for permanent adoption
12. New Business (any matter not known about, or which could not have been reasonably foreseen prior to the time of posting of agenda)
13. Executive Director's Report
14. Adjournment

Public Forum: The Board meets four times a year at different locations across the State to hear the views and concerns of all Oklahomans about environmental issues. This opportunity is informal, and we invite you to sign the register to speak..

Should you have a disability and need an accommodation, please notify the DEQ three days in advance at 702-7100.

**SUBCHAPTER 37. CONTROL OF EMISSION OF VOLATILE ORGANIC
MATERIALS COMPOUNDS (VOCs)**

PART 1. GENERAL PROVISIONS

252:100-37-1.	Purpose	1
252:100-37-2.	Definitions	1
252:100-37-3.	Applicability and compliance	2
252:100-37-4.	Exemptions	3
252:100-37-5.	Operation and maintenance	3

**PART 3. CONTROL OF ~~VOLATILE ORGANIC COMPOUNDS~~VOCs IN STORAGE AND
LOADING OPERATIONS**

252:100-37-15.	Storage of volatile organic compounds VOCs	4
252:100-37-16.	Loading of volatile organic compounds VOCs	5
252:100-37-17.	Effluent water separators [AMENDED AND RENUMBERED TO 252:100-37-37]	6
252:100-37-18.	Pumps and compressors [AMENDED AND RENUMBERED TO 252:100-37-38]	7

PART 5. CONTROL OF ~~ORGANIC SOLVENTS~~VOCs IN COATING OPERATIONS

252:100-37-25.	Coating of parts and products	7
252:100-37-26.	Clean up with organic solvents VOCs	9

PART 7. CONTROL OF SPECIFIC PROCESSES

252:100-37-35.	Waste gas disposal	10
252:100-37-36.	Fuel-burning and refuse-burning equipment	10
252:100-37-37.	Effluent water separators	10
252:100-37-38.	Pumps and compressors	11

PART 9. PERMIT BY RULE FOR VOC STORAGE AND LOADING FACILITIES

252:100-37-41.	Applicability	11
252:100-37-42.	Permit-by-rule requirements	11

PART 1. GENERAL PROVISIONS

252:100-37-1. Purpose

~~The purpose of this Subchapter is to control the emission of organic materials from stationary sources to protect and enhance the air quality to insure that the Oklahoma air quality standard is not exceeded and significant deterioration prevented. The purpose of this Subchapter is to reduce the formation of ozone by controlling the emissions of volatile organic compounds (VOCs) from stationary sources.~~

252:100-37-2. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise.

"Acrylic" means a chemical coating containing polymers or co-polymers of acrylic or substitute acrylic acid in combination with ~~suitable resinous modifiers and its.~~ The primary mode of cure is solvent evaporation.

"Alkyd primer" means a chemical coating composed primarily of alkyd applied to a surface to provide a firm bond between the substrate and any additional ~~paint coating.~~

"Custom product ~~finishes finish~~" means a proprietary chemical coating designed for a specific customer and ~~end use.~~

~~"Cutback asphalt" means a basic asphalt or asphaltic concrete containing a petroleum distillate.~~

"Drilling or production facility" means all drilling and servicing equipment, wells, flow lines, separators, equipment, gathering lines, and auxiliary non-transportation-related equipment used in the production of petroleum but does not include natural gasoline plants.

"Effluent water separator" means any ~~tank, box, sump, or other~~ container in which any ~~material compound~~ VOC floating on, or entrained in, or contained in water entering ~~such tank, box, sump or other~~ the container is physically separated and removed from ~~such the~~ water prior to ~~outfall, drainage, or recovery of such~~ discharge of the water from the container.

"Epoxy" means a chemical coating containing epoxy groups and suitable chemical cross-linking agents. ~~Epoxies prime~~ The primary mode of cure involves a chemical reaction between the epoxy and the cross-linking agent.

"Lease custody transfer" means the transfer of produced crude oil and/or condensate, after processing and/or treating in the producing operations, from storage vessels or automatic transfer facilities to pipelines or any other form of transportation.

~~"Maintenance finishes finish" means a chemical coating formulated to form a protection of that protects a given substrate to from adverse chemical or physical eendition conditions.~~

"Nitrocellulose ~~lacquers lacquer~~ (NC lacquer)" means a chemical coating containing nitrocellulose and suitable resinous modifiers, and whose. The primary mode of cure is solvent evaporation.

~~"Organic materials" means chemical compounds of carbon excluding~~

~~carbon monoxides, carbon dioxide, carbonic acid, metallic carbides, metal carbonates and ammonium carbonates.~~

~~"Refinery" means any facility engaged in producing gasoline, kerosene, fuel oils or other products through distillation of crude oil or through redistillation, cracking or reforming of unfinished hydrocarbon derivatives.~~

~~"Submerged fill pipe" means any fill pipe or discharge nozzle which that meets any one of the following conditions:~~

~~(A) theThe bottom of the discharge pipe or nozzle is below the surface of the liquid in the receiving vessel for at least 95 percent of the volume filled.~~

~~(B) theThe bottom of the discharge pipe or nozzle is less than 6 inches from the bottom of the receiving vessel.~~

~~(C) theThe bottom of the discharge pipe or nozzle is less than 2 pipe or nozzle diameters from the bottom of the receiving vessel, or.~~

~~(D) other equivalent methods acceptable to the Executive Director.~~

~~"Vinyl" means a chemical coating containing plasterizedplasticized or unplasterizedunplasticized polymers and co-polymers of vinyl acetate, vinyl chloride, polyvinyl alcohols or their condensation products and the. The primary mode of cure is solvent evaporation.~~

~~"Volatile organic compound (VOC)" means any compound containing carbon and hydrogen or containing carbon and hydrogen in combination with any other element which has a vapor pressure of 1.5 pounds per square inch absolute or greater under actual storage conditions of carbon, excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate, which participates in atmospheric photochemical reactions. Any organic compound listed in 40 CFR 51.100(s)(1) will be presumed to have negligible photochemical reactivity and will not be considered to be a VOC.~~

~~"Volatile organic solvent (VOS)" means any organic compound which participates in atmospheric photochemical reactions; that is, any organic compound other than those which the EPA Administrator designates as having negligible photochemical reactivity. VOS may be measured by the EPA VOC reference method.~~

252:100-37-3. Applicability and compliance

~~(a) New sources. Any new source calculated to emit an organic material to the atmosphere either as a solvent or a reactant will be subject to permitting under OAC 252:100-7, and with the application of Best Available Control Technology.~~

~~(b) Compliance schedule.~~

~~(1) All equipment and process previously regulated under OAC 252:100-37 and 252:100-39 and its effective dates of July 1, 1972 and December 8, 1974 must still abide by those dates.~~

~~(2)(a) New sources. In all areas except AQMA's, thisThis Subchapter shall apply to all new installations of any equipment or processes described in this Subchapter, after the effective date of December 28, 1974.~~

~~(3)(b) Existing sources. Provisions Sections 15, 16, 35, 36, 37, and 38 of this Subchapter relating to control of VOC shall apply to all new and existing installations of any equipment or processes in use and described in this Subchapter that are located in Air Quality Maintenance Areas (AQMA's) as classified by the Environmental Protection Agency with regard to hydrocarbons and photochemical oxidants Tulsa County or Oklahoma County, and become after the effective on June 8, 1979, provided, however, that existing installations shall have twenty four (24) months from the effective date within which to comply with this Subchapter date of June 9, 1981. Except that the The retrofit requirements for crude petroleum storage tanks will be limited vessels apply only to tanks vessels of greater than 10,000 barrel 420,000 gal (1,590 m³) capacity.~~

(c) Permit-by-rule facilities. This Subchapter does not apply to facilities registered under the VOC storage and loading facility permit-by-rule except as provided in Part 9.

~~(4) Provisions of this Subchapter relating to the control of organic solvent shall be as specified in the applicable Section.~~

252:100-37-4. Exemptions

~~(a) Organic materials as used in VOCs with vapor pressures less than 1.5 pounds per square inch absolute (psia) under actual storage conditions are exempt from 252:100-37-15 through 252:100-37-18, 252:100-37-16 and 252:100-37-27 and 252:100-37-28, 252:100-37-35 through 252:100-37-38 will not include: Methane (CH₄) or any material otherwise included which has vapor pressure of less than 1.5 pounds per square inch absolute under actual storage conditions.~~

~~(b) Petroleum or condensate stored, processed, treated, loaded, and/or treated transferred at a drilling or production facility prior to lease custody transfer is exempt from this Subchapter. This exemption also includes transfer and loading operations Methanol stored at a drilling or production facility for use on site is also exempt from this Subchapter.~~

~~(c) The storage, loading, processing, manufacturing or burning of organic materials VOCs on a farm or ranch, when such VOCs are used for agricultural purposes on farms and ranches said farm or ranch, is exempted from all provisions of 252:100-37-15 through 252:100-37-18 and 252:100-37-27 and 252:100-37-28, 252:100-37-16, 252:100-37-35 through 252:100-37-38, 252:100-39-41, and 252:100-39-42.~~

252:100-37-5. Operation and maintenance

Any vapor-loss control devices, packing glands and mechanical seals required by this Subchapter shall be properly installed, maintained, and operated.

PART 3. CONTROL OF VOLATILE ORGANIC COMPOUNDS VOCs IN STORAGE AND LOADING OPERATIONS

252:100-37-15. Storage of volatile organic compounds VOCs

(a) Storage capacities greater than 40,000 gallons. No person

~~shall build, sell, or install or permit the building or installation of any new stationary tank, reservoir or other container~~ Each VOC storage vessel with a capacity of more than 40,000 gallons (150,000 liters) capacity which will be used for storage of any organic materials, unless such tank, reservoir or other container is total (151 m³) shall be a pressure tank vessel capable of maintaining working pressures sufficient at all times ~~tethat~~ prevent organic vapor or gas the loss of VOC to the atmosphere or is designed, and will be built and shall be equipped with one of the following vapor-loss control devices.

(1) ~~AAn external floating roof, consisting of that consists of a pontoon type, internal floating cover reef, or double-deck type which will cover, or a fixed roof with an internal-floating cover.~~ The cover shall rest on the surface of the liquid contents ~~and at all times (i.e., off the leg supports), except during initial fill, when the storage vessel is completely emptied, or during refilling. When the cover is resting on the leg supports, the process of filling, emptying, or refilling shall be continuous and shall be accomplished as rapidly as possible.~~ The floating roof shall be equipped with a closure seal, or seals, to close the space between the ~~reef cover~~ edge and ~~tank vessel~~ wall. ~~Such floating~~ Floating roofs are not appropriate control devices if the ~~organic materials~~ VOCs have a vapor pressure of ~~111.1 pounds per square inch absolute psia (568 mm Hg) (76.6 kPa)~~ or greater under actual conditions. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place.

(2) A vapor-recovery system ~~consisting that consists of a vapor-gathering system capable of collecting 85 percent or more of the uncontrolled organic material VOCs that would otherwise be emitted to the atmosphere, and a vapor-disposal system capable of processing such organic material so as these VOCs to prevent their emission to the atmosphere and with all tank.~~ All vessel gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place.

(3) Other equipment or ~~means~~ methods that are of equal efficiency for purposes of air pollution control ~~as may be used when approved by the Executive Division Director prior to installation.~~

(b) Storage capacities of 400 gallons and greater. ~~No person shall build, sell, or install or permit the building or installation of a new stationary organic material~~ Each VOC storage tank vessel with a capacity of 400 gallons (1520 liters) gal (1.5 m³) or more unless such tank ~~is~~ shall be equipped with a permanent submerged fill pipe or is equipped with an organic material a vapor-recovery system as required in 252:100-37-5(a) 252:100-37-15(a) (2).

(c) Exemptions. VOC storage vessels that are subject to equipment standards (e.g., a fixed roof in combination with an internal floating cover, an external floating roof, or a closed vent system and control device) in 40 CFR 60 Subparts K, Ka, or Kb are exempt from the requirements of 252:100-37-15(a) and (b).

252:100-37-16. Loading of ~~volatile organic compounds~~ VOCs

(a) Loading facilities with throughput greater than 40,000 gallons/day.

~~(1) No person shall build or install or permit the building or installation of a stationary organic material. Each VOC loading facility having with a throughput greater than 40,000 gallons per daygal/d (151,416 l/d) from its aggregate loading pipes unless such loading facility is shall be equipped with a vapor-collection and disposal system or unless all tank trucks or trailers are bottom loading loaded with closed hatches closed, properly installed, in good working order and in operation.~~

~~(2)(1) Vapor-collection and disposal system. When loading in a vapor collection and disposal system is effected through the hatches of a tank truck or trailer with a loading arm equipped with a vapor collecting adaptor, pneumatic, hydraulic or other mechanical means shall be provided to force a vapor tight seal between the adaptor and the hatch.~~

~~(A) Vapor-collection portion of the system.~~

~~(i) When loading VOCs through the hatches of a tank truck or trailer, using a loading arm equipped with a vapor collecting adaptor, a pneumatic, hydraulic, or mechanical means shall be provided to ensure a vapor-tight seal between the adaptor and the hatch.~~

~~(3) A means shall be provided in either system to prevent organic material drainage from the loading device when it is removed from any tank truck or trailer, or to accomplish complete drainage before removal.~~

~~(4)(ii) When loading is effected through means other than hatches, all loading and vapor lines shall be equipped with fittings which that make vapor-tight connections and which must be closed when disconnected or which close automatically when disconnected.~~

~~(5)(B) Vapor-disposal portion of the system. T h e vapor-disposal portion of the system shall consist of one of the following:~~

~~(A)(i) a vapor-liquid absorber system with a minimum recovery efficiency of 90 percent by weight of all the organic material VOC vapors and gases entering such disposal system; or,~~

~~(B)(ii) a variable-vapor space tank, compressor, and fuel-gas system of sufficient capacity to receive all organic material VOC vapors and gases displaced from the tank trucks and trailers being loaded.~~

~~(2) Prevention of VOC drainage. A means shall be provided in either loading system specified in subsection (a) to prevent VOC drainage from the loading device when it is removed from any tank truck or trailer, or to accomplish complete drainage before removal.~~

(b) Loading facilities with throughput equal to or less than 40,000 gallons per day.

(1) ~~No person shall build or install or permit the building or installation of a stationary organic material. Each loading pipe~~

~~at a VOC loading facility having with an aggregate throughput of 40,000 gallons (150,000 liters) per daygal/d (151,416 l/d) or less from its aggregate loading pipes unless each is shall be equipped with a system for submerged filling of tank trucks or trailers properly installed, in good working order and operating in such a manner that which is installed and operated to maintain a 97 percent submergence factor is maintained.~~

~~(2) Paragraph 252:100-37-16(b) (1) applyapplies to any facility whichthat loads organic materialsVOCs into any tank truck or trailer with a capacity greater than 200 gal (757 l) which is designed for transporting organic materials and having a capacity in excess of 200 gallons (760 liters)VOCs.~~

(c) Exemptions. Loading facilities subject to the requirements of 40 CFR 60 Subpart XX or 40 CFR 63 Subpart R are exempt from the requirements of 252:100-37-16(a) and (b).

252:100-37-17. Effluent water separators [AMENDED AND RENUMBERED TO 252:100-37-37]

~~No person shall build or install or permit the building or installation of a single or multiple compartment organic material water separator which receives effluent water containing 200 gallons (760 liters) a day or more or any organic material from any equipment processing, refining, treating, storing or handling organic materials unless the compartment receiving said effluent water is equipped with one of the following vapor loss control devices, properly installed, in good working order and in operation:~~

~~(1) A container having all openings sealed and totally enclosing the liquid contents. All gauging and sampling devices shall be gas tight except when gauging or sampling is taking place. The oil removal devices shall be gas tight except when manual skimming, inspection and/or repair is in progress;~~

~~(2) A container equipped with a floating roof, consisting of a pontoon type, double deck type roof, or internal floating cover, which will rest on the surface of the contents and is equipped with a closure seal, or seals, to close the space between the roof edge and container wall. All gauging and sampling devices shall be gas tight except when gauging or sampling is taking place. The oil removal devices shall be gas tight except when manual skimming, inspection and/or repair is in progress;~~

~~(3) A container equipped with a vapor recovery system, consisting of a vapor gathering system capable of collecting the organic material vapors and gases discharged and a vapor disposal system capable of processing such organic material vapors and gases so as to prevent their emission to the atmosphere and with all tank gauging and sampling devices gas tight except when gauging or sampling is taking place. The organic material removal devices shall be gas tight except when manual skimming, inspection and/or repair is in progress; or,~~

~~(4) Containers equipped with controls of equal efficiency provided such equipment is submitted to and approved by the Executive Director.~~

252:100-37-18. Pumps and compressors [AMENDED AND RENUMBERED TO 252:100-37-38]

~~No person shall build or install or permit the building or installation of any pump or compressor handling organic material compounds unless rotating type pumps and compressors are equipped with mechanical seals or other equipment of equal efficiency; or reciprocating type pumps and compressors are equipped with packing glands properly installed and in good working order such that the emissions from the drain recovery system are limited to two cubic inches of liquid organic material in any 15 minute period at standard conditions per pump or compressor.~~

PART 5. CONTROL OF ORGANIC SOLVENTS/VOCs IN COATING OPERATIONS

252:100-37-25. Coating of parts and products

~~(a) Standards. No owner or operator subject to the provision of this Section shall discharge or cause the discharge into the atmosphere from an existing coating line or individual coating operation any organic solvent in excess of the amounts, listed in the following table, per gallon of coating, excluding water, delivered to the coating applicator. No owner or operator of any coating line or coating operation with VOC emissions shall use coatings that as applied contain VOCs in excess of the amounts listed below. (Limits are expressed in pounds of VOC per gallon of coating, excluding the volume of any water and exempt organic compounds.)~~

~~Type of coating ————— Pounds of organic solvent per gallon of paint (less water)~~

	Jan. 79	Jan. 81	Jan. 82
	limit	limit	limit
Alkyd primer	5.6	5.2	4.8
Vinyls	6.4	6.4	6.0
NC lacquers	6.8	6.6	6.4
Acrylics	6.4	6.4	6.0
Epoxies	5.6	5.2	4.8
Maintenance finishes	5.6	5.2	4.8
Custom products finishes	6.8	6.6	6.5

- (1) Alkyd primer - 4.8
- (2) Vinyls - 6.0
- (3) NC lacquers - 6.4
- (4) Acrylics - 6.0
- (5) Epoxies - 4.8
- (6) Maintenance finishes - 4.8
- (7) Custom products finishes - 6.5

~~(b) Plant-wide emission plan. — An owner/operator may develop a plant wide emission plan instead of having each coating line comply with the emission limitations prescribed in the table in (a) of this section, provided:~~

- (1) Development of a plant-wide emission plan. An owner or

operator may develop a plant-wide emission plan instead of having each coating line comply with the VOC content limitations in 252:100-37-25(a), if the following conditions are met.

~~(A) the~~The owner or operator demonstrates, ~~by means of approved material balance or manual emission test methods, by the methods in 252:100-5-2.1(d)~~ that sufficient reductions in ~~organic solvents~~ emissions of VOCs may be obtained by controlling other ~~facilities~~sources within the plant to the extent necessary to compensate for all excess emissions ~~which that~~ result from one or more coating lines not achieving the ~~prescribed~~ limitation. Such demonstration shall be ~~described~~made in writing and shall include:

~~(A)(i)~~ Aa complete description of the coating line or lines ~~which that will can~~ not comply with the ~~emission~~VOC content limitation in 252:100-37-25(a);

~~(B)(ii)~~ Quantification of emissions, in terms of pounds per day of ~~organic solvents~~VOCs, which are in excess of the ~~prescribed emission~~VOC content limitation for each coating line described under ~~252:100-37-25(b)(1)(A)~~252:100-37-25(b)(1)(A)(i);

~~(C)(iii)~~ Aa complete description of each ~~facility and the related control system, if any, for those facilities within the plant where~~how emissions will be decreased at specific sources to compensate for excess emissions from each coating line described under ~~252:100-37-25(b)(1)(A)~~252:100-37-25(b)(1)(A)(i) and the date on which such reductions will be achieved;

~~(D)(iv)~~ Quantification of emissions, in terms of pounds per day of ~~organic solvents~~VOCs, for each ~~facility~~source described under ~~252:100-37-25(b)(1)(C)~~252:100-37-25(b)(1)(A)(iii), both before and after the improvement or installation of any applicable control system, or operational changes to such a facility or facilities to reduce emissions ~~and the date on which such reductions will be achieved; and,~~

~~(E)(v)~~ Aa description of the procedures and methods used to determine the emissions of ~~organic solvents~~VOCs.

~~(2)(B) the~~The plant-wide emission reduction plan does not include decreases in emissions resulting from requirements of other applicable air pollution rules. ~~The plant wide emission reduction plan may include decreases in emissions accomplished through installation or improvement of a control system or through physical or operational changes to facilities, including permanently reduced production or closing a facility, located on the premises of a surface coating operation.~~

~~(3)(2)~~ Compliance with a plant-wide emission plan. t h e T h e implementation of a plant-wide emission reduction plan instead of compliance with the ~~emissions~~VOC content limitation prescribed in 252:100-37-25(a) ~~has been expressly~~must be approved in writing by the ~~Executive~~Division Director. Upon approval, any emissions in excess of those established for each

facility under the plan shall be a violation of this Subchapter.
~~(c) Emission limitation. No person shall discharge into the atmosphere more than 3,000 pounds of organic materials in any one day nor more than 450 pounds in any one hour from any article, machine, equipment or other contrivance in which any organic solvent or any material containing such solvent is employed or applied, unless such discharge has been reduced by at least 85 percent or has applied BACT or better as determined by the Executive Director.~~

~~(d)(c) Exemption. Owners or operators of sources that are computed to emit less than 100 pounds of organic solvent VOC per 24 hr./day~~24-hour day are exempt from the requirements of this Section.

~~(e)(d) Alternate standard. Emissions~~The use of coatings with VOC contents in excess of those permitted by 252:100-37-25(a) through 252:100-37-25(d) are or 252:100-37-25(b) is allowable if both of the following conditions are met:.

(1) VOC emissions are reduced to the quantity that would result in the absence of control are reduced occur if the coating used complied with the VOC content allowed in 252:100-37-25(a) by:

(A) 90 percent, by incineration; or,

(B) 85 percent, by absorption or any other process of equivalent reliability and effectiveness; and, absorption/adsorption; or,

(C) any other process of equivalent reliability and effectiveness.

(2) ~~no~~No air pollution, as defined by the Clean Air Act, results.

252:100-37-26. Clean up with ~~organic solvents~~ VOCs

~~Emissions of organic materials to the atmosphere from the clean up with organic solvents, as defined in 252:100-37-2, VOCs of any article, machine, or equipment or other contrivance used in applying coatings controlled in 252:100-37-25(a) through 252:100-37-25(d)~~252:100-37-25(d) shall be included with the other emissions of organic solvents from the coating line or operation counted in determining compliance with those rules.

PART 7. CONTROL OF SPECIFIC PROCESSES

252:100-37-35. Waste gas disposal

(a) **Ethylene manufacturing emissions.** ~~No person~~owner or operator shall build or install ~~or permit the building or installation of~~ any ethylene manufacturing plant unless the waste-gas stream under normal operating conditions is properly burned at 1,300°F- for 0.3 seconds or greater in a direct-flame afterburner equipped with an indicating pyrometer ~~which that~~ is positioned in the working area for the operator's ready monitoring or an equally effective catalytic vapor incinerator also with pyrometer. Proper burning of the waste-gas stream is defined as reduction by 98 percent of the ethylene emissions originally present in the waste-gas stream.

(b) **Vapor blowdown.** Except where inconsistent with the "Minimum

Federal Safety Standards for the Transportation of Natural and Other Gas by Pipeline," or any State of Oklahoma regulatory agency, ~~no person shall emit organic gases to the atmosphere~~ owner or operator shall allow VOC gases to be emitted from a vapor recovery blowdown system unless these gases are burned by smokeless flares, or an equally effective control device as approved by the Executive Division Director.

252:100-37-36. Fuel-burning and refuse-burning equipment

~~No person shall cause or allow the emission of hydrocarbons or other organic materials from any fuel burning or refuse burning equipment.~~ All such fuel-burning or refuse-burning equipment shall be operated as to minimize such emissions of VOC. Among other things, such operation shall assure, based on manufacturer's data and good engineering practice, that the equipment is not overloaded; that it is properly cleaned, operated, and maintained; and that temperature and available air are sufficient to provide essentially complete combustion.

252:100-37-37. Effluent water separators

A single-compartment or multiple-compartment VOC/water separator that receives effluent water containing 200 gal/d (760 l/d) or more of any VOC from any equipment processing, refining, treating, storing or handling VOCs shall comply with one of the following sets of conditions.

(1) The container totally encloses the liquid contents and all openings are sealed. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The oil removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.

(2) The container is equipped with an external floating roof that consists of a pontoon type or double-deck type cover, or a fixed roof with an internal-floating cover. The cover shall rest on the surface of the contents and be equipped with a closure seal, or seals, to close the space between the cover edge and container wall. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The oil removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.

(3) The container is equipped with a vapor-recovery system that consists of a vapor-gathering system capable of collecting the VOC vapors and gases discharged and a vapor-disposal system capable of processing such vapors and gases to prevent their emission to the atmosphere. All tank gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The VOC removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.

(4) The container is approved prior to use by the Division Director and is equipped with controls that have efficiencies equal to the controls listed in 252:100-37-37(1) through (3).

252:100-37-38. Pumps and compressors

(a) Any pump or compressor handling VOCs shall meet the following conditions.

(1) Rotating type pumps and compressors are equipped with mechanical seals or other equipment of equal efficiency.

(2) Reciprocating type pumps and compressors are equipped with packing glands.

(3) Emissions from the drain recovery system do not exceed 2 in.³ of liquid VOC in any 15-minute period per pump or compressor at standard conditions.

(b) Pumps and compressors subject to the standards for pumps and compressors contained in 40 CFR 60 Subparts VV, GGG, or KKK are exempt from 252:100-37-38.

PART 9. PERMIT BY RULE FOR VOC STORAGE AND LOADING FACILITIES

252:100-37-41. Applicability

Any new VOC storage and/or loading facility may be constructed and any existing VOC storage and/or loading facility may be operated under this Part if the following conditions are met.

(1) The facility is located in an area designated as unknown or attainment for ozone.

(2) Each storage vessel located at the facility meets one of the following criteria.

(A) The storage capacity is 19,813 gal (75 m³) or less.

(B) The storage capacity is greater than 19,813 gal (75 m³) but less than 39,889 gal (151 m³) and the liquid stored has a maximum true vapor pressure less than 2.18 psia (15.0 kPa).

(C) The storage capacity is greater than or equal to 39,889 gal (151 m³) and the liquid stored has a maximum true vapor pressure less than 0.51 psia (3.5 kPa).

(3) The facility is designed to have a throughput of 19,998 gal/d (75,700 l/d) or less from the aggregate loading pipes.

(4) The facility meets the requirements of 252:100-7-60(a), (b), and (c).

252:100-37-42. Permit-by-rule requirements

(a) An owner or operator shall submit annual emission inventory reports and meet the requirements of 252:100-37-5, regarding operation and maintenance, and 252:100-37-38, regarding pumps and compressors.

(b) No owner or operator shall build or install a new stationary VOC storage vessel with a capacity of 400 gal (1.5 m³) or greater unless it is equipped with a permanent submerged fill pipe as defined in 252:100-37-2.

(c) No owner or operator shall build or install a stationary VOC loading facility unless each loading pipe is equipped with a system for submerged filling of tank trucks or trailers which is installed and operated to maintain a 97 percent submergence factor.

(d) The owner or operator of a vessel with a storage capacity greater than 10,567 gal (40 m³) shall maintain records on site of the dimensions of the storage vessel and an analysis showing the capacity.

Additional Comments

CHAPTER 100. AIR POLLUTION CONTROL
SUBCHAPTER 37. CONTROL OF EMISSION OF ORGANIC MATERIALS

EXECUTIVE SUMMARY: The proposed revisions to 252:100-37, Control of Emissions of Organic Materials, include the following non-substantive changes: 1) simplification and clarification of language, 2) correction of typographical errors, 3) removal of redundant language, and 4) reformatting. The proposed revisions also include the following substantive changes: 1) the redefinition of the term "volatile organic compound (VOC)" and the substitution of this term for "organic materials", "organic solvents", and "hydrocarbons"; 2) the deletion of 252:100-37-3(a), which is a redundant requirement except to the extent that it requires new minor sources to apply best available control technology (BACT); 3) the exemption of methanol storage vessels at a drilling or production facility for use on site in 252:100-37-4(c); 4) the addition of 252:100-37-15(c), exempting VOC storage vessels that are subject to the equipment standards in 40 CFR 60 Subparts K, Ka, or Kb from the requirements of 252:100-37-15(a) and (b); 5) the addition of 252:100-37-16(c), exempting VOC loading facilities subject to the requirements of 40 CFR 60 Subpart XX or 40 CFR 63 Subpart R from the requirements of 252:100-37-15(a) and (b); 6) the deletion of 252:100-37-25(c), which allows the emission of 3,000 pounds per day or 450 pounds per hour of organic materials before controls are required; 7) the revision of the alternate standard for coatings in 252:100-37-25(d); 8) the correction of the impossible requirement in 252:100-37-36 that no emission of hydrocarbons or organic material is allowed from fuel-burning or refuse-burning equipment; 9) the addition of 252:37-38(b), exempting pumps and compressors subject to the standards for pumps and compressors contained in 40 CFR 60 Subparts VV, GGG, or KKK from 252:100-37-38; and 10) the addition of Part 9, which contains the permit by rule for VOC storage and loading facilities.

DIFFERENCES FROM ANALOGOUS FEDERAL RULES: None.

ENVIRONMENTAL BENEFIT STATEMENT: Not required because these rules are not more stringent than corresponding federal rules.

SUMMARY OF COMMENTS AND RESPONSES:

Comment: A letter from Dow Corning supports the proposed revisions to the definition of VOC that will exempt methylated siloxanes from being considered a VOC. EPA has determined that methylated siloxanes have negligible photochemical reactivity. This allows the use of methylated siloxanes as replacement for VOCs in manufacturing operations.

Comment: A letter written on behalf of Eastman Chemical Company supports the revision of the definition of VOC which results in methyl acetate, a substance with negligible photochemical reactivity, not being considered a VOC.

Comment: In 252:100-37-1 "prevent the formation of ozone" should be changed to "reduce the formation of ozone".

Response: Staff agrees and this change has been made.

Comment: In 252:100-37-2 in the definition of "epoxy" the word "prime" in the second sentence should be change to "primary" for consistency with other parts of the rule.

Response: Staff agrees and this change has been made.

Comment: When 252:100-37-3(b) is read in conjunction with Part 3, it is unclear whether the control requirements in Part 3 apply to new installations located only in Tulsa or Oklahoma Counties or to any new installation in the State.

Response: 252:100-37-3(b) does not address new sources. It requires existing sources located in Tulsa County or Oklahoma County to comply with Sections 15, 16, 35, 36, 37 and 38. 252:100-37-3(a) requires all new installations, regardless of where they are located, to comply with Subchapter 37 after the effective date of the Subchapter. Staff believes, keeping both 252:100-37-3(a) and (b) in mind, that it is clear that Sections 15, 16, 35, 36, 37, and 38 apply to all new sources in the state after December 28, 1974, and to all existing sources in Tulsa and Oklahoma Counties as of June 9, 1981.

Comment: EPA pointed out that the word "vesse;s" in 252:100-37-3(b) should be "vessels".

Response: Staff agrees and this correction has been made.

Comment: 252:100-37-5 should be removed because it is redundant and vague and the requirement to properly install, maintain, and operate any seals required by other regulations would probably be contained in those regulations.

Response: Staff does not agree that this section should be deleted. 252:100-37-5 was intended to require proper installation, maintenance, and operation of the equipment required by Subchapter 37. These requirements were deleted from several other sections of the Subchapter and placed in Section 5 to simplify the rule. Revisions have been made to the section to make clear that it covers only the equipment required by Subchapter 37.

Comment: The separation in the letters in the word "no" in 252:100-37-15(a) and (b) should be corrected.

Response: This has been corrected.

Comment: NSPS 40 CFR 60, Subpart Kb covers all VOL storage tanks built or modified since 1984 and has slightly more restrictive controls than 252:100-37-15(a). It is true that NSPS 40 CFR 60, Subpart Kb covers tanks which store liquids whose vapor pressure is greater than 0.5 psia while this subsection covers all tanks. However, the universe of significant emission points is covered if all new tanks storing above 0.5 psia VOCs are subject. This subsection is redundant and should be deleted.

Response: Staff does not agree. 252:100-37-15(a) covers tanks that store VOCs with vapor pressures of 1.5 psia or greater. Subsection (a) became effective February 14, 1972. 40 CFR 60, Subpart K applies to petroleum liquid storage tanks with capacities greater than 40,000 gallons that commenced construction after June 11, 1973, and prior to May 19, 1978. NSPS Ka, like K, only covers storage of petroleum liquids. It wasn't until Kb was promulgated that VOC storage tanks (those that commenced construction, modification, or reconstruction after July 23, 1984) were covered by NSPS. Therefore, tanks with storage capacities greater than 40,000 gallons used to store VOCs built after February 14, 1972, but before July 23, 1984, are subject to 252:100-37-15(a), but are not subject to NSPS unless they store petroleum liquids. A new subsection, 252:100-37-15(c), has been proposed which would exempt VOC storage tanks that are required by K, Ka, or Kb to be equipped with 1) a fixed roof with an internal floating cover, 2) an external floating roof, or 3) a closed vent system and control device, from the requirements of 252:100-37-15(a) and(b).

Comment: 252:100-37-15(b) covers tanks not subject to NSPS Kb and is, therefore, not redundant. It should apply only to tanks smaller than those subject to NSPS Kb. The environmental benefit of having a regulation for those small tanks is most likely small.

Response: 252:100-37-15(b) applies to tanks that were constructed after February 14, 1972, with storage capacities of 400 gallons or greater, and which store VOCs with vapor pressures of 1.5 psia or greater. NSPS K and Ka apply to storage tanks with capacities of 40,000 gallons or greater used to store petroleum liquids. It is only with the promulgation of NSPS Kb which covers tanks with capacities of 10,567 gallons or greater that commenced construction after July 23, 1984, that VOC storage tanks were covered by NSPS. Even so, for tanks with storage capacities less than 19,813 gallons or that store VOLs with vapor pressure less than 0.51 psia, the only requirement is to keep a record of the tank dimensions and a calculation of the storage capacity. Staff feels that the NSPS leaves gaps in the coverage of VOC storage tanks with capacities less than 40,000 gallons. There are a large number of tanks with capacities of 400 gallons to 40,000 gallons that store VOCs, and the environmental impact of these tanks is important. 252:100-37-15(b) requires that such tanks be equipped with submerged fill pipes or vapor recovery systems. This is not an onerous requirement. Staff is proposing the addition of 252:100-37-15(c), which would exempt VOC storage tanks required by NSPS subparts K, Ka, or Kb to be equipped with control devices from the requirements

of 252:100-37-15(a) and (b).

Comment: 252:100-37-16 covers VOC loading of 40,000 gallons per day. NSPS Subpart XX covers gasoline loading of new terminals when over 10,000 gallons per day of gasoline is loaded. Further the new gasoline distribution MACT rule for major sources of HAPs that load gasoline controls sources also covered by this section. However Section 16 covers more than gasoline loading so it is not redundant in all cases. EPA is currently working on an organic liquid distribution MACT rule which will probably overlap this section. It is recommended that a new subsection be added that states that sources subject to NSPS XX or the gasoline distribution MACT 40 CFR Part 63, Subpart R are exempt from 252:100-37-15 and add sources subject to the organic liquids distribution MACT to this exemption when it becomes final.

Response: This section was effective February 14, 1972, and is not limited to gasoline. Staff does not feel that this section is redundant since it covers facilities constructed after February 14, 1972 and NSPS Subpart XX applies to sources that commenced construction after December 17, 1980. The MACT standard in Subpart R applies to bulk gasoline terminals only. Staff is proposing the addition of 252:100-37-16(c), which would exempt facilities subject to NSPS 40 CFR 60, Subpart XX or NESHAP 40 CFR 63, Subpart R from the requirements of 252:100-37-16.

Comment: In 252:100-37-16(a) (2) which systems are meant by "either system"?

Response: Staff has changed "either system" to "either loading system specified in subsection (a)" to make clear that the two systems involved are described in 252:100-37-16(a).

Comment: How were the limits in 252:100-37-25 determined?

Response: Council records indicate that the limits, as well as the coating classifications and definitions, were agreed upon in a meeting between the Air Quality Staff and the Oklahoma Chemical Coating Manufacturers Association.

Comment: In 252:100-37-25(b) (1) (A) (i) "that will not comply" should be changed to "that can not comply".

Response: Staff agrees and has made this change.

Comment: In 252:100-37-25(b) (2) "expressly approved by the Division Director" should be changed to "approved in writing by the Division Director" since it is not clear what is meant by "expressly".

Response: Staff agrees and this change has been made.

Comment: 252:100-37-25(c) refers to hourly emissions of VOC. Should there be an annual limitation on total emissions of VOC?

Response: This subsection has never contained an annual limitation. It was originally written in the early 1970s to control emissions of organic materials from the use of non-photochemically reactive solvents. The limit of 3,000 pounds per day would result in the emission of 547.5 tons per year, assuming 365 days of operation per year. At this level of emissions, BACT would be required by Subchapter 8 both as a major source and as a PSD source. In this case it is not appropriate to equate "organic material" with "VOC" since the organic material was clearly intended as originally adopted to be from non-photochemically reactive solvents. Since non-photochemically reactive solvents would not be considered "VOCs" under the new definition of VOC, this subsection no longer serves any purpose and staff recommends that it be deleted.

Comment: The word "operated" should be added to the last sentence after "properly cleaned" in 252:100-37-36, Fuel-burning and refuse-burning equipment.

Response: Staff agrees and this change has been made.

Comment: The provision of 252:100-37-36 regarding fuel-burning and refuse-burning equipment is vague and open to misinterpretation by sources, the public, and individual DEQ staffers. The regulation does not provide any method for showing compliance, therefore, compliance methods will not be consistent across sources. Further it seems unlikely that any significant amount of VOCs are being released by combustion devices, but that rather they are significant sources of NOx and CO. Regulations on significant combustion devices exist (e.g., NSPS Da, 252:100-33-2), therefore, Section 36 is not warranted by the environmental benefit it provides, if any.

Response: Since this section covers a wide variety of fuel-burning equipment and refuse-burning equipment, it is not possible to list compliance methods for each type. Staff feels that not all fuel-burning equipment is covered at this time by NSPS or NESHAP. Staff agrees that the section is somewhat vague regarding requirements, but feels that this cannot be completely eliminated without losing the flexibility necessary to cover such a wide variety of sources. Staff has added language that manufacturer's data and good engineering practice is to be used to assure compliance and envisions that specific conditions for new sources tailored to fit the particular equipment will be included in the permit, if one is required.

Comment: 252:100-37-37 covers effluent water separators which are

also covered by federal regulations, e.g. NSPS Subpart QQQ or NESHAP Subpart FF. In those regulations all fugitive sources are reviewed and those that are significant are controlled. Section 37 looks at a single fugitive source of emissions and requires controls that overlap for those with significant VOC emissions, i.e., refineries and chemical plants. It is unlikely that Section 37's benefit will exceed costs when those sources already covered by other regulations and, therefore, well controlled are not counted.

Response: Staff does not agree. NSPS 40 CFR 60, Subpart QQQ applies only to equipment leaks from petroleum refinery wastewater systems that commenced construction after May 5, 1987, and 40 CFR 61 Subpart FF covers oil/water separators at chemical manufacturing plants, coke by-product recovery plants, and petroleum refineries that process hazardous waste streams containing benzene. 252:100-37-37 applies to organic materials/water separators (now VOC/water separators) that were constructed after February 14, 1972.

Comment: 252:100-37-38 covers a small subset of fugitive sources, pumps and compressors, which are covered extensively by federal fugitive regulations, e.g., NSPS 40 CFR 60, Subpart VV. The benefits of covering those few pumps and compressors that are not already covered will undoubtedly be low and the costs will be high since only the pumps and compressors will require controls instead of all fugitive sources at a site. Therefore, Section 38 is not cost effective and should be removed. At the very least an exemption for sources subject to other federal regulations should be provided.

Response: This section became effective February 14, 1972, and the requirement for packing glands for reciprocating pumps was added in 1974. The federal NSPS for equipment leaks that cover pumps and compressors include Subpart VV, which covers equipment constructed after January 5, 1981, located at SOCFI sources; Subpart GGG, which covers equipment constructed after January 4, 1983, located at petroleum refineries; and Subpart KKK, which covers equipment constructed after January 20, 1984, located at onshore natural gas processing plants. There is a gap in the coverage offered by the NSPS. Staff is proposing the addition of Subsection (b), which would exempt pumps and compressors subject to the standards for pumps and compressors contained in 40 CFR 60 Subparts VV, GGG, or KKK from the requirements of 252:100-37-38.

REVISIONS TO THE PROPOSED MODIFICATION OF SUBCHAPTER 37 FOR THE
FEBRUARY 17, 1999, AIR QUALITY COUNCIL MEETING

Following is a list of the substantive revisions that have been made to the modification of Subchapter 37 that was presented at the December 15, 1998, AQC meeting. Most of the nonsubstantive changes are minor, consisting of replacements such as "will" with "shall", "gallons" with "gal", and "liter" with "l". However, the following proposed revisions are more substantive.

1. 252:100-37-2 (page 1) Added the definition of "Drilling and production facility". This definition is identical to that found in 40 CFR 60.111, an NSPS for petroleum liquid storage vessels.
2. 252:100-37-2 (page 2) Added the definition of "Lease custody transfer", which is based on the definition of "custody transfer" found in 40 CFR 60.111.
3. 252:100-37-3(c) (page 3) Added new subsection "Permit-by-rule facilities." to make clear that the only requirements in Subchapter 37 that apply to facilities registered under the VOC storage and loading facility permit-by-rule are those in Part 9.
4. 252:100-37-4(b) (page 3) Added "Methanol stored at a drilling or production facility for use on site is also exempt from this Subchapter". We learned that drilling and production facilities often store methanol on-site for cleaning purposes, and it did not make sense to exempt produced petroleum and condensate stored on-site and not methanol.
5. 252:100-37-25(d)(1) (page 9) Added "are reduced to the quantity" after "emissions" in the first line. Added "the coating used complied with the VOC content allowed in 252:100-37-25(a)" after "occur if". Deleted "no controls were used" and "are reduced". Rather than requiring operators who use non-compliant coatings to achieve an arbitrary percentage of emission reduction, the proposed revision would simply require the resulting emissions to equal those that would have been emitted had the operator used compliant coatings.
6. 252:100-37-41(2)(A),(B), and (C) (page 11) Added new subparagraphs (A), (B), and (C). These substantive changes allow tanks that have storage capacities greater than 19,813 gallons and which are subject to NSPS Subpart Kb to qualify for the permit by rule for VOC storage and loading facilities. NSPS Subpart Kb only requires the operator of such a tank to maintain records of the dimensions of the vessel and an analysis of the capacity of the storage vessel on site. These simple requirements are appropriate for a permit-by-rule facility.

**CHAPTER 100. AIR POLLUTION CONTROL
SUBCHAPTER 37. CONTROL OF EMISSION OF ORGANIC MATERIALS**

SUMMARY OF COMMENTS AND RESPONSES

Air Quality Council Meeting: August 18, 1998

Comment Period: July 15, 1998 - August 18, 1998

Comment:

When 252:100-37-3(b) is read in conjunction with Part 3, it is unclear whether the control requirements in Part 3 apply to new installations located only in Tulsa or Oklahoma Counties or any new installation located in the State.

Response:

252:100-37-3(b) does not address new sources. It requires existing sources located in Oklahoma County or Tulsa County to comply with Sections 15, 16, 35, 36, 37 and 38. 252:100-37-3(a) requires all new installations regardless of where they are located to comply with Subchapter 37 after the effective date of the Subchapter. Staff feels, keeping both 252:100-37-3(a) and (b) in mind, that it is clear that Sections 15, 16, 35, 36, 37 and 38 apply to all new sources in the State after 12/28/74 and to all existing sources in Tulsa and Oklahoma Counties as of 6/9/81.

Comment:

EPA pointed out that the word "vesse;s" in 252:100-37-3(b) should be "vessels" and that the word "operated," should be added to the last sentence after "properly cleaned" in 252:100-37-36, Fuel-burning and refuse-burning equipment.

Response:

The staff concurs with these two comments and the revisions have been made.

Comment:

The Dow Corning Corporation supports the proposed revisions to the definition of VOC to exempt methylated siloxanes due to its low photochemical reactivity. This allows the use of methylated siloxanes as replacement for VOCs in manufacturing operations.

Comment:

A letter written on behalf of Eastman Chemical Company supports the revision of the definition of VOC which results in methyl acetate not being considered a VOC.

Air Quality Council Meeting: October 20, 1998

Comment Period: September 15, 1998 - October 20, 1998

Comment:

A comment letter from EPA, Region 6 supported the adoption of the proposed changes to Subchapter 37.

Comment:

The separation of the letters in the word "no" in 252:100-37-15(a) & (b) should be corrected.

Response:

This has been done.

Comment:

How were the limits in 252:100-37-25 determined?

Response:

Council records indicate that the limits, as well as the coating classification and definitions, were agreed upon in a meeting between Air Quality staff and the Oklahoma Chemical Coating Manufacturers Association.

Comment:

Is there an annual limitation on total emissions in 252:100-37-25(c)?

Response:

This subsection has never contained an annual limitation. It was originally written in the early 1970s to control emissions of organic materials from the use of non-photochemically reactive solvents. The limit of 3,000 pounds per day from any machine or equipment would result in the emission of 547.5 tons per year assuming 365 days of operation per year. At this level of emissions, BACT would be required by Subchapter 8 both as a major source and as a PSD source. In this case, it is not appropriate to equate "organic material" with "VOC," since the organic material was clearly intended as originally adopted to be from non-photochemically reactive solvents. Since non-photochemically reactive solvents would not be considered "VOCs" under the new definition of VOC, this subsection no longer serves any purpose and staff recommends that it be deleted.

Air Quality Council Meeting: December 15, 1998

Comment Period: October 16, 1998 - December 15, 1998

Comment:

252:100-37-5 should be removed because it is redundant and vague and the requirement to properly install, maintain, and operate any seals required by other regulations would probably be contained in those regulations.

Response:

Staff does not agree that this section should be deleted. 252:100-37-5 was intended to require proper installation, maintenance, and operation of the equipment that is required by Subchapter 37. These requirements were deleted from several other sections of the Subchapter and placed in Section 5 to simplify the rule. Revisions have been made to this section to make clear that it covers only the equipment required by Subchapter 37.

Comment:

NSPS Subpart Kb covers all VOL storage tanks built or modified since 1984 and has slightly more restrictive controls than 252:100-37-15(a). It is true that NSPS Kb covers tanks which store liquids whose vapor pressure is greater than 0.5 psia while this subsection covers all tanks. However, the universe of significant emission points is covered if all new tanks storing over 0.5 psia VOCs are subject. This subsection is redundant and should be deleted.

Response:

Staff does not agree. 252:100-37-15(a) covers tanks that store VOCs with vapor pressures of 1.5 psia or greater. 252:100-37-15(a) became effective February 14, 1972. 40 CFR 60, Subpart K applies to petroleum liquid storage tanks with capacities greater than 40,000 gallons that commenced construction after June 11, 1973, and prior to May 19, 1978. NSPS Ka, like K, only covers storage of petroleum liquid. It wasn't until Kb was promulgated that VOC storage tanks (those that commenced construction, modification or reconstruction after July 23, 1984) were covered by the NSPS. Therefore, tanks with storage capacities greater than 40,000 gallons used to store VOCs built after February 14, 1972, but before July 23, 1984, are subject to 252:100-37-15(a), but are not subject to NSPS unless they store petroleum liquids. A new subsection, 252:100-37-15(c), has been proposed, which would exempt VOC storage tanks that are required by K, Ka, or Kb to be equipped with a fixed roof with an internal floating cover, an external floating roof, or a closed vent system and control device from 252:100-37-15(a) and (b).

Comment:

252:100-37-15(b) covers tanks not subject to NSPS Kb and is, therefore, not redundant. It should apply only to tanks smaller than those subject to NSPS Kb. The environmental benefit of having a regulation for those small tanks is most likely small.

Response:

252:100-37-15(b) applies to tanks that were constructed after February 14, 1972, with storage capacities of 400 gallons or greater, and which store VOCs with vapor pressures of 1.5 psia or greater. NSPS Subparts K and Ka apply to storage tanks with capacities of 40,000 gallons or greater used to store petroleum liquids. It is only with the promulgation of NSPS Subpart Kb, which covers tanks with capacities of 10,567 gallons or greater that commenced construction after July 23, 1984, that VOC storage tanks were covered by NSPS. Even so, for tanks with storage capacities less than 19,813 gallons or that store VOLs with vapor pressures less than 0.51 psia, the only requirement is to keep a record of the tank dimensions and a calculation of the storage capacity. Staff feels that the NSPS leaves gaps in the coverage of VOC storage tanks with capacities less than 40,000 gallons. There are a large number of tanks with capacities of 400 gallons to 40,000 gallons that store VOCs, and the environmental impact of these tanks is important. 252:100-37-15(b) requires that such tanks be equipped with submerged fill pipes or vapor recovery systems. This is not an onerous requirement. Staff is proposing the addition of 252:100-37-15(c), which would exempt VOC storage tanks required by NSPS Subparts K, Ka, or Kb to be equipped with control devices from the requirements of 252:100-37-15(a) and (b).

Comment:

252:100-37-16 covers VOC loading of 40,000 gallons per day. NSPS Subpart XX covers gasoline loading of new terminals when over 10,000 gallons per day of gasoline is loaded. Further the new gasoline distribution MACT rule for major sources of HAPs that load gasoline controls sources also covered by this section. However Section 16 covers more than gasoline loading so it is not redundant in all cases. EPA is currently working on an organic liquid distribution MACT rule which will probably overlap with this section. It is recommended that a new subsection be added that states that sources subject to NSPS XX or the gasoline distribution MACT 40 CFR Part 63 Subpart R are exempt from 252:100-37-15 and add sources subject to the organic liquids distribution MACT to this exemption when it becomes final.

Response:

This section was effective 2/14/72 and is not limited to gasoline. Staff does not feel that this section is redundant since it covers facilities constructed after 2/14/72 and NSPS Subpart XX applies to sources that commenced construction after 12/17/80. The MACT standard in Subpart R applies to bulk gasoline terminals only. Staff is proposing the addition of 252:100-37-16(c), which would exempt facilities subject to NSPS 40 CFR 60, Subpart XX or NESHAP 40 CFR 63, Subpart R from the requirements of 252:100-37-16.

Comment:

The provisions of 252:100-37-36 regarding fuel-burning and refuse-burning equipment is vague and open to misinterpretation by sources, the public, and individual DEQ staffers. The regulation does not provide any method for showing compliance, therefore, compliance methods will not be consistent across sources. Further, it seems unlikely that any significant amount of VOCs are being released by combustion devices, but that rather they are significant sources of NO_x and CO. Regulations on significant combustion devices exist (e.g., NSPS Da, 252:100-33-2), therefore, Section 36 is not warranted by the environmental benefit it provides, if any.

Response:

Since this section covers a wide variety of fuel-burning equipment and refuse-burning equipment, it is not possible to list compliance methods for each type. Staff feels that not all fuel-burning equipment is covered at this time by NSPS or NESHAP. Staff agrees that the section is somewhat vague regarding requirements, but feels that this cannot be completely eliminated without losing the flexibility necessary to cover such a wide variety of sources. Staff has added language that manufacturer's data and good engineering practice is to be used to assure compliance and envisions that specific conditions for new sources tailored to fit the particular equipment will be included in the permit, if one is required.

Comment:

252:100-37-37 covers effluent water separators which are also covered by federal regulations, e.g. NSPS Subpart QQQ or NESHAP Subpart FF. In those regulations all fugitive sources are reviewed and those that are significant are controlled. Section 37

looks at a single fugitive source of emissions and requires controls that overlap for those with significant VOC emissions, i.e., refineries and chemical plants. It is unlikely that Section 37's benefits will exceed cost when those sources already covered by other regulations and therefore well controlled are not counted.

Response:

Staff does not agree. NSPS 40 CFR 60, Subpart QQQ applies only to equipment leaks from petroleum refinery wastewater systems that commenced construction after May 5, 1987, and 40 CFR 61 Subpart FF covers oil/water separators at chemical manufacturing plants, coke by-product recovery plants, and petroleum refineries that process hazardous waste streams containing benzene. 252:100-37-37 applies to organic materials/water separators (now VOC/water separators) that were constructed after February 14, 1972.

Comment:

252:100-37-38 covers a small subset of fugitive sources, pumps and compressors, which are covered extensively by federal fugitive regulations, e.g., NSPS 40 CFR 60 Subpart VV. The benefits of covering those few pumps and compressors that are not already covered will undoubtedly be low and the costs will be high since only the pumps and compressors will require controls instead of all fugitive sources at a site. Therefore, Section 38 is not cost effective and should be removed. At the very least an exemption for sources subject to other federal regulations should be provided.

Response:

This section became effective February 14, 1972, and the requirement for packing glands for reciprocating pumps was added in 1974. The federal NSPS for equipment leaks that cover pumps and compressors include Subpart VV, which covers equipment constructed after January 5, 1981, located at SOCFMI sources; Subpart GGG, which covers equipment constructed after January 4, 1983, located at petroleum refineries; and Subpart KKK, which covers equipment constructed after January 20, 1984, located at onshore natural gas processing plants. There is a gap in the coverage offered by the NSPS. Staff is proposing the addition of Subsection (b), which would exempt pumps and compressors subject to the standards for pumps and compressors contained in 40 CFR 60 Subparts VV, GGG, or KKK. from the requirements of 252:100-37-38.

**COMMENTS ON SUBCHAPTER 37 COPIED FROM THE COUNCIL PACKETS
OF MS. MYERS AND DR. GROSZ AT THE
DECEMBER 15, 1998 AIR QUALITY COUNCIL MEETING**

1. **COMMENT:** 252:100-37-15(b) (page 4) The 400 gal capacity seems pretty small .

RESPONSE: That's true, but vessels of that size are only required to have a submerged fill pipe. This prevents releases of VOCs, which is necessary in order for Oklahoma to maintain compliance with the ambient air quality standard for ozone.

2. **COMMENT:** 252:100-37-15(b) and 252:100-37-16(a) (pages 4 and 5) Why the difference in units [In 15(b) "gallons" is converted to "m³" and in 16(a) "gallons" is converted to "liters"]?

RESPONSE: English units have been used throughout this rule. The metric units in parentheses have been chosen to correspond with the units used in federal rules and standards such as the NSPS or NESHAP.

3. **COMMENT:** 252:100-37-41(2) and (3) (page 12) Why is gallons converted to m³ in (2) and to liters in (3)?

RESPONSE: See 2 above.

**CHAPTER 100. AIR POLLUTION CONTROL
SUBCHAPTER 37. CONTROL OF EMISSION OF ORGANIC MATERIALS**

SUMMARY OF COMMENTS AND RESPONSES

Air Quality Council Meeting: August 18, 1998

Comment Period: July 15, 1998 - August 18, 1998

Comment::

When 252:100-37-3(b) is read in conjunction with Part 3, it is unclear whether the control requirements in Part 3 apply to new installations located only in Tulsa or Oklahoma Counties or any new installation located in the State.

Response::

252:100-37-3(b) does not address new sources. It requires existing sources located in an AQMA to comply with Sections 15, 16, 35, 36, 37 and 38. On the other hand 252:100-37-3(a) requires all new installations regardless of where they are located to comply with this Subchapter after the effective date of the Subchapter. Staff feels that keeping both 252:100-37-3(a) and (b) in mind, it is clear that Sections 15, 16 17 and 18 found in Part 3 apply to all new sources in the State after 12/28/74 and to all existing sources in Tulsa and Oklahoma Counties as of 6/9/81.

Comment:

A comment letter from EPA pointed out that the word "vesse;s" in 252:100-37-3(b) should be "vessels" and that the word "operated," should be added to the last sentence after "properly cleaned" in 252:100-37-36 Fuel-burning and refuse-burning equipment.

Response:

The staff concurs with these two comments and the revisions have been made.

Comment:

The Dow Corning Corporation supports the proposed revisions to the definition of VOC to exempt methylated siloxanes due to its low photochemical reactivity. This allows the use of methylated siloxanes as replacement for VOCs in manufacturing operations.

Comment:

A letter written on behalf of Eastman Chemical Company supports the revision of the definition of VOC which results in methyl acetate not being considered a VOC.

Air Quality Council Meeting: October 20, 1998

Comment Period: September 15, 1998 - October 20, 1998

Comment:

A comment letter from EPA, Region 6 supported the adoption of the proposed changes to Subchapter 37.

Comment:

A commenter suggested a "cosmetic cleanup" of the separation of the word "no" in 252:100-37-15(a) & (b).

Response:

Staff has checked this out and finds that the format can be altered to take care of this problem. This has been done.

Comment:

How were the limits in 252:100-37-25 determined?

Response:

Council records indicate that the limits, as well as the coating classification and definitions, were agreed upon in a meeting between Air Quality staff and the Oklahoma Chemical Coating Manufacturers Association. This information was from a summary of comments for the revisions that were adopted May 19, 1979.

Comment:

Is there an annual limitation on total emissions in 252:100-37-25(c)?

Response:

This subsection has never contained an annual limitation. It was originally written to control emissions of organic materials from the use of non-photochemically reactive solvents. The limit of 450 pounds per hour and 3,000 pounds per day from any machine or equipment would result in the emission of 547.5 tons per year assuming 365 days of operation per year. At this level of emissions, BACT would be required by Subchapter 8 both as a major source and as a PSD source. In this case, it is not appropriate to equate "organic material" with "VOC," since the organic material was clearly intended in earlier versions of the rule to be from non-photochemically reactive solvents. Since non-photochemically reactive solvents would not be considered "VOCs" under the new definition of VOC, this subsection no longer serves any purpose and staff recommends that it be deleted.

Air Quality Council Meeting: December 15, 1998

Comment Period: October 16, 1998 - December 15, 1998

Comment:

A commenter recommended the removal of 252:100-37-5 since it is redundant and vague and the requirement to properly install, maintain, and operate any seals required by other regulations would probably be contained in those regulations.

Response:

Staff does not agree that this section should be deleted. 252:100-37-5 was intended to require proper installation, maintenance, and operation of the equipment that is required by Subchapter 37. These requirements were deleted from several other sections of the Subchapter and placed in Section 5 to simplify the rule. Revisions have been made to this section to make clear that it covers only the equipment required by Subchapter 37.

Comment:

NSPS Subpart Kb covers all VOL storage tanks built or modified since 1984 and has slightly more restrictive controls than this subsection 252:100-37-15(a). It is true that NSPS Kb covers tanks which store liquids whose vapor pressure is greater than 0.5 psia while this subsection covers all tanks. However, the universe of significant emission points is covered if all new tanks storing over 0.5 psia VOCs are subject. This section is redundant and serves no significant purpose for environmental protection.

Response:

Staff does not agree. 252:100-37-15(a) covers tanks that store VOCs with vapor pressures of 1.5 psia or greater. 252:100-37-15(a) became effective 2/14/72. 40 CFR 60 Subpart K applies to petroleum liquid storage vessels with capacities greater than 40,000 gallons that commenced construction after June 11, 1973 and prior to May 19, 1978. NSPS Ka, like K, only covers storage of petroleum liquid. It wasn't until Kb was promulgated that VOC storage vessels (that commenced construction, etc., after July 23, 1984) were covered by the NSPS. Therefore, tanks with storage capacities greater than 40,000 gallons used to store VOCs built after February 14, 1972, but before July 23, 1984, are subject to 252:100-37-15(a), but are not subject to NSPS. Based on this, staff does not feel that 252:100-37-15(a) is redundant. A new subsection, 252:100-37-15(c), has been proposed which would exempt VOC storage vessels that are required by K, Ka, or Kb to be equipped with a fixed roof with an internal floating cover, an external floating roof, or a closed vent system and control device from 252:100-37-15(a) and (b).

Comment:

252:100-37-15(b) covers tanks not subject to NSPS Kb and is therefore not redundant. It should apply only to tanks smaller than those subject to NSPS Kb. The environmental benefit of having a regulation for those small tanks is most likely small.

Response:

252:100-37-15(b) applies to tanks that were constructed after February 14, 1972, with storage capacities of 400 gallons or greater, and which store VOCs with vapor pressures of 1.5 psia or greater. NSPS K and Ka apply to storage tanks with capacities of 40,000 gallons or greater used to store petroleum liquids. It is only with the promulgation of NSPS Kb which covers vessels with capacities of 10,567 gallons that commenced construction after July 23, 1984, that VOC storage was covered by NSPS. Even so, for tanks with storage capacities less than 19,813 gallons or that store VOLs with vapor pressures less than 0.51 psia, the only requirement is to keep a record of the tank dimensions and a calculation of the storage capacity. Staff feels that the NSPS leaves gaps in the coverage of VOC storage tanks with capacities less than 40,000 gallons. Staff feels there are a large number of tanks with capacities 400 gallons to 40,000 gallons that store VOCs and that the environmental impact of these tanks is important. 252:100-37-15(b) requires that such tanks be equipped with submerged fill pipes or vapor recovery systems. This is not an onerous requirement. Staff is proposing the addition of 252:100-37-15(c), which would exempt VOC storage vessels required by NSPS subparts K, Ka, or Kb to be equipped with control devices from 252:100-37-15(a) and (b).

Comment:

252:100-37-16 covers VOC loading of 40,000 gallons per day. NSPS Subpart XX covers gasoline loading of new terminals when over 10,000 gallons per day of gasoline is loaded. Further the new gasoline distribution MACT rule for major sources of HAPs that load gasoline controls sources also covered by this section. However 37-16 covers more than gasoline loading so it is not redundant in all cases. EPA is currently working on an organic liquid distribution MACT rule which will probably overlap with this section. It is recommended that a new subsection (252:100-37-16(c)) be added that states that sources subject to NSPS XX or the gasoline distribution MACT 40 CFR Part 63 Subpart R are exempt from 252:100-37-15 and add sources subject to the organic liquids distribution MACT to this exemption when it becomes final.

Response:

This section was effective 2/14/72 and is not limited to gasoline. Staff does not feel that this section is redundant since it covers facilities constructed after 2/14/72 and NSPS Subpart XX applies to sources that commenced construction after 12/17/80. The MACT standard in Subpart R applies to bulk gasoline terminals only. Staff is proposing the addition of 252:100-37-16(c), which would exempt facilities subject to NSPS Subpart XX or NESHAP Subpart R from the requirements of 252:100-37-16.

Comment:

252:100-37-36, fuel burning and refuse burning equipment. This provision of 252:100-37-36 is vague and open to misinterpretation by sources, the public, and individual DEQ staffers. The regulation does not itself provide any method for showing compliance with the regulation, therefore, compliance methods will not be consistent across sources. Further, it seems unlikely that any significant amount of VOCs are being released by combustion devices, but that rather they are significant sources of NOx and CO. Regulations on significant combustion devices exist (e.g., NSPS Da, 252:100-33-2), therefore, 37-36 is not warranted by the environmental benefit it provides, if any.

Response:

Since this section covers a wide variety of fuel-burning equipment and refuse-burning equipment, it is not possible to list compliance methods for each type. Staff feels that not all fuel-burning equipment is covered at this time by NSPS or NESHAP. Staff agrees that the section is somewhat vague regarding requirements, but feels that this cannot be completely eliminated without losing the flexibility necessary to cover such a wide variety of sources. Staff has added language that manufacturer's data and good engineering practice is to be used to assure compliance and envisions that specific conditions for new sources tailored to fit the particular equipment will be included in the permit, if one is required.

Comment:

252:100-37-37 covers effluent water separators which are also covered by other federal regulations, e.g. NSPS Subpart QQQ or NESHAP Subpart FF. In those regulations all fugitive sources are reviewed and those that are significant controlled. 37-37 looks at a single fugitive source of emissions and requires controls that overlap on those with significant VOC emissions, i.e., refineries and chemical plants. It is unlikely

that regulation 37-37's benefits will exceed their cost when those sources already covered by other regulations and therefore well controlled are not counted.

Response:

Staff does not agree. NSPS Subpart QQQ applies only to equipment leaks from petroleum refinery wastewater systems that commenced construction after May 5, 1987, and 40 CFR 61 Subpart FF covers oil water separators at chemical manufacturing plants, coke by-product recovery plants, and petroleum refineries that process hazardous waste streams containing benzene. 252:100-37-37 applies to organic materials/water separators (now VOC/water separators) that were constructed after February 14, 1972.

Comment:

252:100-37-38 covers a small subset of fugitive sources, pumps and compressors which are covered extensively by federal fugitive regulations, e.g., Subpart VV. The benefits by covering those few pumps and compressors that are not already covered will undoubtedly be low and the costs will be high since only the pumps and compressors will require controls instead of all fugitive sources at a site. Therefore, 37-38 is not cost effective and should be removed, at the very least an exemption for sources subject to other federal regulations should be provided.

Response:

This section became effective February 14, 1972 and the requirement for packing glands for reciprocating pumps was added in 1974. The federal NSPS for equipment leaks that cover pumps and compressors include Subpart VV, which covers equipment constructed after 1/5/81 located at SOCOMI sources; and Subpart GGG, which covers equipment constructed after 1/4/83 located at petroleum refineries; and Subpart KKK, which covers equipment constructed after 1/20/84 located at onshore natural gas processing plants. Here again there is a gap in the coverage offered by the NSPS. Staff is proposing the addition of subsection (b), which would exempt pumps and compressors subject to the standards for pumps and compressors contained in 40 CFR 60 Subparts VV, GGG, or KKK. from the requirements of 252:100-37-38.

REVISIONS TO THE PROPOSED MODIFICATION OF SUBCHAPTER 37 FOR THE
DECEMBER 15, 1998, AIR QUALITY COUNCIL MEETING

Following is a list of the revisions that have been made to the modification of Subchapter 37 that was presented at the October 20, 1998, AQC meeting. In addition to these changes, the Notes which are not part of the rule have been deleted and the "underlined strikeouts" and double underlines have been deleted from Sections 37 and 38.

- 1 252:100-37-1. Purpose (page 1) Deleted the last sentence that had been previously added to this section and added "from stationary sources." after "(VOCs)".
- 2 252:100-37-3(b). (pages 2 & 3) Rewrote deleting references to AQMAs. Replaced "10,000 barrels" with "1,590 m³".
- 3 252:100-37-4(c). (page 3) Deleted "and" after "252:100-37-16", added ", and 252:100-37-41, and 252:100-37-42" after "252:100-37-38".
- 4 252:100-37-5. (page 3) Added "required by this Subchapter" after "seals".
- 5 252:100-37-15(a) Storage capacities greater than 40,000 gallons (page 3) Replaced 150,000 liters with 151 m³, added a comma after "capacity" and a comma after "equipped".
- 6 252:100-37-15(a)(1) (pages 3 & 4) Undeleted the commas after "roof" in the first line and "cover" in the second line. In the fifth line added a comma after "i.e." Deleted "Such" in line 11 at the beginning of the forth sentence and capitalized "Floating" in line 12.
- 7 252:100-37-15(b) Storage capacities of 400 gallons and greater (page 4) Replaced "1520 liters" with "1.5 m³", changed "252:100-37-15(a)" to "252:100-37-15(a)(2)", and added subsection (c)..
- 8 252:100-37-16(a)(1) (pages 4 & 5) Reformatted subsection (a) and Inserted "(151,416 liters)" after "40,000 gallons".
- 9 252:100-37-16(b)(1) (page 5) Replaced "150,000" with "151,416".
- 10 252:100-37-16(b)(2) (page 6) Replaced "760" with "757". Replace "in excess of" with "greater than" in line 3.
- 11 252:100-37-16(c) {page 6} Added this new subsection regarding exemptions.
- 12 252:100-37-25((b)(1)(A) (pages 7 & 8) Corrected "(v_" to "(v)".
- 13 252:100-37-25(b)(2) (page 8) replaced "has been" following "252:100-37-25(a)" with "must be". Replaced "Executive Director" with "Division Director".
- 14 252:100-37-25(c). (pages 8 & 9) Deleted this subsection.
- 15 252:100-37-25(d). (page 9) Replaced (d) with (c).
- 16 252:100-37-25(e). (page 9) Replaced (e) with (d) and replaced "252:100-37-25(c)" with "252:100-37-25(b)"..

- 17 252:100-37-25(d)(1) formerly 252:100-37-25(e)(1) . (page 9) Deleted the comma after "used".
- 18 252:100-37-26. Clean up with VOCs. (page 9) Replaced "252:100-37-25(e)" with "252:100-37-25(d)".
- 19 252:100-37-35(a) Ethylene manufacturing emissions. (page 9) Replaced "that" with "which" after "pyrometer" in the first sentence.
- 20 252:100-37-36. Fuel-burning and refuse-burning equipment. (page 10) Added ", based on manufacturer's data and good engineering practice," after "assure" in the second sentence.
- 21 252:100-37-37(2). Effluent water separators. (page 10) Rewrote this paragraph for clarity.
- 22 252:100-37-38. Pumps and compressors. (pages 10 & 11) Added (a) at the beginning of the first paragraph making it subsection (a) and added new subsection (b).
- 23 Added new Part 5 with Sections 252:100-37-41 and 252:100-37-42 containing the requirements for permit by rule for VOC storage and loading facilities.

27 PROCEEDINGS

28 MR. DIXIE: The next item, Item
29 Number 12. This hearing is convened by the
30 Air Quality Council in compliance with the
31 Oklahoma Administrative Procedures Act,
32 title 40 of the Code of Federal

1 Regulations, as well as the authority of
2 Title 27A of the Oklahoma statutes.
3 This hearing was advertised in the
4 Oklahoma Register for the purpose of
5 receiving comments pertaining to the
6 proposed new rule OAC 252:100-37, Control
7 of Emissions of Organic Materials. If you
8 wish to make a statement, please complete
9 the form at the registration table.

10 At this time, I will call upon Dr.
11 Joyce Shedy to give the staff position on
12 this proposed rule. Dr. Shedy?

13 DR. SHEDY: Mr. Chairman,
14 members of the Council, ladies and
15 gentlemen, I am Joyce Shedy of the Rules
16 and Planning Unit. The proposed revisions
17 to Subchapter 37 are part of the rewrite
18 wrong project that the DEQ has
19 undertaken. There are also in response to
20 a directive from the Air Quality Council at
21 their December 19th, 1995 meeting, that the
22 staff respond to a petition from the
23 Chemical Manufacturer's Association,
24 requesting that consideration be given to
25 exempting acetone from being considered a
26 VOC.

27 The Division also received a request
28 dated April 21st, 1997, from the
29 Halogenated Solvents Industry Alliance to
30 exempt perchloroethylene from being
31 considered a VOC and a request from Dow
32 Corning to exclude methylated siloxanes

1 from being considered a VOC.

2 The staff held a workshop on July 7,
3 requesting public input regarding problems
4 inconsistencies, or errors with Subchapter
5 37. The comments from that meeting were
6 considered in the proposal that you have
7 before you.

8 The DEQ is required to evaluate all
9 its rules and to simplify, clarify and
10 streamline them by December 31st, 2000.
11 Since that is the main reason for the
12 current revision, we haven't had enough
13 time to consider some of the substantive
14 changes that have been suggested. We are
15 in the process of forming a workgroup made
16 up of members of the public, regulated
17 community, and coating manufacturers to
18 participate in updating the coating section
19 of our rules.

20 We are proposing numerous changes in
21 language, format, spelling, as well as
22 correction of errors. There are parts --
23 these are part of the clarification,
24 simplification and correction process and
25 are summarized in the "Summary and
26 Explanation of Proposed Revisions to
27 Subchapter 37," contained in the Council
28 packets and available at this meeting.

29 The majority of these changes are
30 not intended to be substantive. However,
31 three of the proposed revisions are
32 substantive. These are the revision of the

7505

1 definition of the volatile organic compound
2 (VOC) in 252:100-37-2, on page 1 of the
3 rule. The removal of the requirement for
4 permits and BACT (best available control
5 technology) for new sources of VOC in
6 252:100-37-3(a), on page 2; and the
7 correction of 252:100-37-36 regarding fuel-
8 burning and refuse-burning equipment on
9 page 10.

10 It's our intention to include in
11 Subchapter 1, all definitions that are
12 general and used throughout the rules or
13 they're used in several rules. However,
14 when definitions pertain only to one or two
15 rules, those definitions will be included
16 in those rules and not included in
17 Subchapter 1. We've had some inquiries as
18 to how we plan to handle that.

19 Because the revisions of most of the
20 subchapters we have made to date have
21 included changes in the definitions, we
22 plan to make the revision to Subchapter 1
23 towards the end of the rewrite devrong
24 process.

25 The first substantive change was the
26 definition of "volatile organic compound."
27 The staff proposes to revise the definition
28 of "VOC" contained in 252:100-37-2 to be
29 consistent with the EPA definition found in
30 40 CFR 52.100(s). As part of our
31 definition the staff proposes to
32 incorporate by reference 40 CFR

5

1 52.100(s)(1), which is a list of organic
2 compounds that EPA has designated as having
3 negligible photochemical reactivity and
4 are, therefore, not considered to be VOCs.

5 This proposed revision greatly
6 simplifies the rule by using only one
7 definition for volatile organic compounds.
8 Staff has replaced the terms "organic
9 materials" and "organic solvent", and
10 "volatile organic solvent" with the term
11 "VOC" throughout this rule in Subchapter
12 19.

13 The revisions also respond to the
14 request for exemptions of the 3 substances
15 mentioned earlier. These substances are
16 considered by the EPA definition to have
17 negligible photochemical reactivity and
18 are, therefore, not considered to be VOCs.

19 The second substantive change was to
20 252:100-37-3(a), New Sources. The staff
21 proposes to delete this subsection. This
22 subsection has been difficult to interpret
23 and consequently has been interpreted in
24 various ways over the years. As originally
25 proposed it applied only to major sources
26 of organic solvents. When adopted, the 100
27 tons per year trigger level was missing and
28 no explanation of this change could be
29 found in the records.

30 When applied to all new sources
31 regardless of size, this subsection
32 requires more time, effort and expense than

6

1 can be justified by the reduction of VOCs,
2 since in most cases when you balance the
3 cost of controls versus the reduction of
4 emissions in minor sources, BACT is to add
5 no controls. This is especially true in
6 areas that are attainment and have always
7 been attainment. If applied to only major
8 sources, it is redundant since 252:100-8-
9 5(b)(a) requires new major sources to
10 obtain permits and to apply BACT.

11 The third substantive change is to
12 252:100-37-36. Fuel burning and refuse
13 burning equipment. Staff recommends
14 deleting the first sentence of 252:100-37-
15 36. This corrects a contradiction between
16 the first and second sentences of this
17 section.

18 The first sentence prohibits release
19 of hydrocarbons or other organic materials
20 from fuel or refuse burning equipment.
21 This requirement is impossible to meet.

22 The second sentence requires such
23 equipment to minimize emissions of
24 hydrocarbons and other organic material
25 from this equipment. The second sentence
26 will remain in place.

27 We have three letters of comments
28 since the Council packet was mailed. A
29 letter from Fort James was received
30 Thursday, August 13, 1990. And a letter
31 from EPA Region 6 was received by FAI on
32 Friday, August 14. And a letter was

7

1 received from Dow Corning on Monday, August
2 17th. I would like to enter those into the
3 hearing record. I understand also there
4 will probably be additional comments from
5 EPA on this rule at a later date.

6 The staff's recommendation is that
7 the rule be considered again at the next
8 Air Quality Council meeting on October 20,
9 1990.

10 MR. DYER: Questions of Dr.
11 Shedy from the Council? Any questions of
12 Dr. Shedy from the public? Anybody
13 wishing to speak on this matter today?
14 Thank you, Dr. Shedy.

15 MR. CHAIRMAN: Is it your
16 recommendation to continue this?

17 MR. DYER: Yes.

18 MR. CHAIRMAN: I will entertain a
19 motion to continue this hearing until the
20 next regular meeting on October 20.

21 MR. BRANCKY: So moved.

22 DR. GROSS: Seconded.

23 MR. CHAIRMAN: I've got a motion
24 and a second. Any more questions or
25 comments? If not, Myra, call the roll.

26 MS. BROCK: Ms. Myers?

27 MS. MYERS: Aye.

28 MS. BROCK: Dr. Gross?

29 DR. GROSS: Aye.

30 MS. BROCK: Mr. Kilpatrick?

31 MR. KILPATRICK: Aye.

32 MS. BROCK: Mr. Wilson?

PROCEEDINGS

MR. DYKE: The next item is Item Number 10, OAC 252:100-37. This hearing was advertised in the Oklahoma Register for the purpose of receiving comments pertaining to the proposed new Rule, OAC 252:100-37, Control of Emissions of Organic Materials.

At this time, I will call upon Dr. Joyce Sheedy to give the staff position.

DR. SHEEDY: Mr. Chairman, Members of the Council, ladies and gentlemen, I am Joyce Sheedy of the Rules and Planning Unit. The proposed revisions to Subchapter 37 of the Air Quality Rules were presented first to the Air Quality Council on August 18th, 1998. The proposed revisions are part of the Rewrite/Dewrong project that the DEQ has undertaken, and in response to a directive from the Air Quality Council that the staff respond to a petition requesting that consideration be given to exempting acetone from being a VOC. The Division also received a request that perchloroethylene, methylated siloxanes and methyl acetate be exempted from being VOCs.

A number of changes have been made to the proposed rule that was presented in the August Council meeting. The majority of these changes are insignificant and are not intended to be substantive in nature. It is not my intention to go over these rules at this time. A complete list of the -- I mean, not rules, these changes at this time -- a complete

list of the changes are in the Council packet and, I think, available at this meeting.

We have 3 -- there are 3 substantive changes to the rule, the Redefinition to "Volatile Organic Compound" to be the same as EPA's definition contained in 252:100-37-2, which is on page 2 of the rule. And this revision also responds to the requests for exemptions of the four substances mentioned earlier. These are substances considered by the EPA -- by the EPA definition to have negligible photochemical reactivity and are, therefore, not VOCs.

The second substantive change, the staff proposes to delete 252:100-37-3(a), New Sources, on page 2, which requires BACT and permits for any emission of organic material emitted as a reactant or a solvent. This section is redundant since 252:100-6-5(b) requires the new major sources to obtain permits and to apply BACT. In Subchapter 7 contains the requirements for a minor source permit.

The third substantive change the staff recommends deleting the first sentence in 252:100-37-36, Fuel burning and refuse burning equipment. This corrects a contradiction between the first and second sentences of this Section, and to remove a standard that can't be met.

We have no letters of comment since the August Air Quality Council meeting, or at least we received none.

The staff had intended to recommend that the rule be

Christy A. Myers
Certified shorthand reporter

7509

recommended to the Environmental Quality 1 for permanent
adoption. However, after the Council packets were mailed,
staff determined that the most appropriate place to put the
Permit by Rule for VOC storage vessels, was in Subchapter 17,
as a new Part.

Since this PBR is ready and the Department desires to
have it promulgated as soon as possible for the timely
implementation of the permit continuum, staff requests that
this rule return to the December meeting so that the new Part
can be added.

MR. DYKE: Questions from the Council?
Questions, comments from the public? Anyone wishing to speak
on this matter?

MS. MEDLEY: You did say that this rule -- even
though my understanding is it's being held over to December, is
that correct?

DR. SHEEDY: That's correct.

MR. DYKE: Do you wish to speak?

MS. MEDLEY: Okay, regarding the fuel burning
and refuse burning equipment, obviously my main concern. My
main concern regarding this is our trash to energy plant in
Tulsa, Oklahoma, where we've been dealing with considerably
lately. It says here that what you changed and took out, and
what you've now got in there, actually makes it looser than, I
think, more so than tighter. My question is, why was this

Carley A. Hynn
Certified shorthand Reporter

change made, t. no person shall cause or allow the emission
of hydrocarbons or other organic materials from fuel burning
and refuse burning equipment -- you took that out and you now
say all substances, and you left the rest of it. Well, they do
burn hydrocarbons, they burn benzene. There's a lot of things
that are being burned over there that we at first didn't know
were being burned over there, but now we have actual proof of
them. So, my concern is by you taking that out of the rule, am
I missing something, or --

DR. SHEEDY: Well, the purpose is for fuel
burning as well as refuse burning, that would be anything that
burns natural gas, or burns diesel or anything like that. And
this states that they cannot emit hydrocarbons. I don't think
anything is 100 percent efficient anymore and will always burn
hydrocarbons and everything else (inaudible). That leads
possibly to do that. So, that is not a standard --

MS. MEDLEY: But now you have -- now you have
nothing. You're going from they can't do it to no -- to no
requirement at all. Am I correct?

DR. SHEEDY: Well, no, if they had the same
requirement they had before probably in actuality before,
otherwise, we would have to shut --

MS. MEDLEY: Our trash to energy plant has no
permit. Their limits are 1980 permitting that was done in a 30
day period. The point is, this could be beneficial to us. I'm

Carley A. Hynn
Certified shorthand Reporter

not sure if I feel comfortable with this being totally left
out, based on at least our refuse burning equipment, I'm not
dealing with fuel burning right now, but I do have a problem
with this being just taken out. Am I to assume they are
allowed then to emit emissions of hydrocarbon and other
organics? And we know they do and they're supposed to have a
permit that has limits to it but unfortunately trash to energy
plants doesn't have that strict of a limit.

DR. SHEEDY: I don't think it's possible to burn
refuse completely to the point where that you're not going to
have emissions.

MS. MEDLEY: So, is that why you took it out?

DR. SHEEDY: Yeah, I think it would be strictly
enforcing everything that burns fuel.

MS. MEDLEY: I have another question. At the
bottom of this, in the same paragraph, where it says among
other things (inaudible) operations (inaudible) equipment is
not overloaded there is a little T1 or T2 down there, what is
that on my copy?

DR. SHEEDY: I think that's a semicolon that's
underlined.

MS. MEDLEY: Okay, I just thought maybe that had
some significance. That is properly cleaned, operated,
maintained at that temperature above air sufficient. Is there
anything in any reg that tells you what that temperature must

Carley A. Hynn
Certified shorthand Reporter

be now?

DR. SHEEDY: When we're talking about municipal
waste incinerations, I think we do have. The federal
government has regulations in which require certain
temperatures and certain retention time and after burns. So,
yeah, we do lose something. We have had policies for years in
DBQ to use for medical waste incineration and large
incinerators of 2,000 degrees per second requirement on the
chamber -- on the secondary chamber which we base it on the
intensity.

MS. MEDLEY: What do you require on refuse
burning?

DR. SHEEDY: I'm not sure what the burning
intensity is.

MS. MEDLEY: (Inaudible):

DR. SHEEDY: Now, I am talking about secondary
burn.

MS. MEDLEY: Oh, secondary burn.

DR. SHEEDY: That's where you can complete the
combustion that started in the primary chamber.

MS. MEDLEY: When, anyway, there's just nothing
in here -- I mean, we're deleting a bunch and then you've left
-- I don't see the point.

DR. SHEEDY: There are, I'm sure, other people
who have more experience regarding equipment and various other

Carley A. Hynn
Certified shorthand Reporter

1 things than I do. I am not sure it's possible to set these
2 numbers for total ranges that's covered.

3 MR. DYKE: Nadine.

4 MS. BARTON: On page 3, starting with paragraph
5 b, that's been crossed out, compliance schedule. This doesn't
6 make sense to me. It starts with, this Subchapter shall apply
7 to all new installations of any equipment or processes
8 described in this Subchapter, after the effective date of
9 December 28, 1974. Now, B, it says Sections 15, 16, 35, 36, 37
10 and 38 of this Subchapter shall apply to all existing
11 installations of any equipment or processes in use and
12 described in this Subchapter located in Air Quality Maintenance
13 Areas as classified by the EPA with regard to VOCs and ozone,
14 which is 1988, which consists of Tulsa County and Oklahoma
15 County. What does that mean?

16 DR. SHEEDY: Okay. The A, means that at new
17 installations anywhere in the state were subject to this rule
18 after the effective date, December 28, 1974. B, means that
19 existing sources -- existing installations in Tulsa and
20 Oklahoma Counties which are the only (inaudible) at this time
21 are also subject to Sections 15, 16, 35, 36, 37 and 38 with
22 regard to VOC -- sorry, and 38 after the effective date --
23 let's see, there's a date in here somewhere.

24 MS. BARTON: It just says which in --

25 DR. SHEEDY: Okay. Maybe that's not in the best

*Christy A. Myers
Certified Shorthand Reporter*

1 place. But what we're saying here is that AQMA's in 1988,
2 consists of Tulsa County and Oklahoma County. In the future,
3 if (inaudible) AQMA's (inaudible) then any new towns might be
4 (inaudible). Right now, these are the only two that are
5 subject to new sources.

6 MS. BARTON: I get the new sources.

7 DR. SHEEDY: Yeah. The existing sources are in
8 Tulsa and Oklahoma County only.

9 MS. BARTON: It's only, period, right?

10 DR. SHEEDY: That's right.

11 MS. BARTON: So, if somebody else goes into
12 nonattainment, then we'll have to come back and revisit that,
13 is that correct?

14 DR. SHEEDY: The rules take care of it in
15 Subchapter 19. This is really kind of a safe clause, I think,
16 for the rules as they used to be.

17 MS. BARTON: All of these chapters, 15, 16, 35
18 and all of that, what does that deal with basically? What do
19 those chapters in the Sections 15, 16, 35, 38, what do they
20 relate to?

21 DR. SHEEDY: Basically, those are the things
22 that were -- as I said previously about the control of B and C.
23 At the time that this emission was written, VOC was the only
24 control in those chapters. The rest of the chapters controls
25 only solvents. So we had at that time extension to VOCs and

*Christy A. Myers
Certified Shorthand Reporter*

1 solvents. So to keep that exactly as it had been, instead of
2 just saying related to the control of VOC, we had to list
3 those Sections that we had at that time for VOCs. And we were
4 trying to make substantive changes in this Section -- rule. We
5 were just trying to reword it.

6 MR. DYKE: Any additional comments from the
7 public? From the Council?

8 MR. BREISCH: I'll entertain a motion that this
9 item be continued to the next regular meeting.

10 MS. MYERS: I'll make a motion to continue it.

11 DR. GROSZ: Second.

12 MR. BREISCH: Got a motion and a second to
13 continue this item to the next meeting. Questions or comments?

14 Myrna, call roll.

15 MS. BRUCE: Mr. Braneky.

16 MR. BRANECKY: Aye.

17 MS. BRUCE: Ms. Myers.

18 MS. MYERS: Aye.

19 MS. BRUCE: Mr. Wilson.

20 MR. WILSON: Aye.

21 MS. BRUCE: Dr. Gross.

22 DR. GROSZ: Aye.

23 MS. BRUCE: Mr. Breisch.

24 MR. BREISCH: Aye.

1 proceedings are the truth, the whole truth nothing but the
 2 truth, in the proceedings aforesaid; that the foregoing
 3 proceeding was taken by me in shorthand and thereafter
 4 transcribed under my direction; that said proceedings was taken
 5 on the 20th day of October, 1998, at Tulsa, Oklahoma; and that
 6 I am neither attorney for nor relative of any of said parties,
 7 nor otherwise interested in said proceedings.

8 IN WITNESS WHEREOF, I have hereunto set my hand and
 9 official seal on this, the 4th day of November, 1998.

MR. DYKE: The next item on the agenda is Item Number 6, OAC 252:100-37, Control of Emissions of Organic Materials Amended. I'll call on Dr. Shеды.

DR. SHEEDY: Mr. Chairman, Members of the Council, ladies and gentlemen, my name is Joyce Shеды, I work in the Rules and Planning Unit.

The proposed revisions to Subchapter 37, Control of Emission of Organic Materials, were brought to the Council for the first time on August 18th, and again at the meeting on October the 20th.

The proposed revisions primarily simplify and clarify language and correct grammar and format without involving substantive changes. However, there are 8 substantive changes proposed, 2 of which have been added since the October Council meeting.

Those two were added in consideration of comments received after the October meeting. Staff proposes to add to 252:100-37-15(c), which is on page 6, to exempt storage tanks that are subject to standards in 40 CFR 60, Subparts K, Ka, or Kb from the requirements of Section 15. Staff also proposes to add 252:100-37-18(b), on page 11, to exempt pumps and compressors that are subject to equipment leak standards in 40 CFR 60 Subparts BB, GGG, or XXX from the requirements of Section 18. That's G-G-G, K-K-K.

DR. SHEEDY: We feel that the MSFS subparts mentioned here are as stringent as the state rules, or more stringent.

A number of other small changes have been proposed to the rule since the October Council meeting, none of which is intended to be substantive. The Council packet, as well as the materials here on the table, includes a list of revisions that have been made to the rule after the October 20th meeting, as well as a summary of written comments received and staff responses to those comments.

We received letters of comments from EPO and from EPA Region 6 since the October Council meeting. The EPO comments and staff responses, as I said, are part of the Council packet. The EPA letter dated December 10, 1998, is not included in that summarization and mainly it supports the proposed changes to Subchapter 37. And we would -- I'd like to make these letters part of the record, the EPO letter and the EPA letter.

Due to unresolved issues regarding alternative standards for coating operations in 252:100-37-25(d) on page 9, staff recommends that the rule be considered again at the next Air Quality Council meeting on February 17th.

MR. DYKE: Questions and discussion by the Council?

Christy A. Myers
Certified shorthand reporter

7513

1 MR. WILSON: I have a question. You know, this
2 thing has been open now for several months. And you know, if
3 it goes in the future like it's gone in the past, there will be
4 unresolved issues in February. And when do we stop -- I'm
5 sorry, when do we stop trying to resolve every issue here and
6 just get on with it?

7 MS. SHEEHY: I think we plan to do that in
8 February. It seems like it's been going on longer than it has,
9 simply because we didn't get any comments, you know, before the
10 August meeting. I think a lot of people were -- we had so many
11 things on the agenda that people hadn't had adequate time to
12 address 37 and 39, and we began to get comments after the first
13 meeting -- after the second meeting, as people had time to look
14 at it. Now, hopefully, they will have had time to look at
15 these and will come up with a final product for this time in
16 February. Of course, next year it'll probably change again.

17 MR. DYKE: Further questions? Comments by the
18 Council? Is there anyone from the public wishing to make a
19 statement? Yes?

20 MR. BRADSHAW: Just one more time on this,
21 David.

22 MR. DYKE: Please identify yourself, please.

23 MR. BRADSHAW: David Bradshaw from Boeing. Like
24 the gentleman on the Council, remarked that this has been going
25 on for a heck of a long time, we're holding it up here for one

*Christy A. Myers
Certified Shorthand Reporter*

1 issue. Another large package. The part that really concerns
2 me is if we do get to the February meeting and the Council does
3 pass it, it sounds to me like we're not going to be able to
4 make the Board, their meeting which is about ten days later,
5 and there is a Board meeting after that, which they will
6 hopefully approve it, but then it won't become effective until
7 you know, in the year 2000. I mean, that's kind of what we're
8 up against, and you know, I think we ought to find some way to
9 get past that, an emergency meeting, or something.

10 DR. SHEEHY: Dave, I believe one of the main
11 concerns was with the new definition of VOC.

12 MR. BRADSHAW: That's my particular concern,
13 yes.

14 DR. SHEEHY: And Barbara and I have discussed
15 some possible ways of addressing that issue, to try and get it
16 done in a more timely fashion. Barbara, do you want to --

17 MS. HOFFMAN: My name is Barbara Hoffman, I'm
18 the staff attorney for DEQ. And I think probably the best way
19 to handle it would be when we put this out for public notice
20 and for public comment -- that will be published in January.
21 We'll notice it both as an emergency rule and as a permanent
22 rule. And for the emergency rule, we'll stick to just a couple
23 of substantive changes that dealt with the VOC definition. In
24 that way, when we -- after we have our Council meeting, it
25 won't be very much time, but I believe that it can be done,

*Christy A. Myers
Certified Shorthand Reporter*

1 that we can get the package to the Board in time for them to
2 look at it. And if they think they need the entire package,
3 with the permit rules and everything, more than they can handle
4 in one meeting, I think they should still have sufficient time
5 to look at the emergency rule that would deal with the
6 definition of VOC. And in that case, once -- I would hope that
7 they would pass that and then with the Governor's signature,
8 that would take effect immediately.

9 MR. BRADSHAW: That would be very acceptable.
10 And I'd just point out that this request was not from just
11 Boeing but from American Airlines. So we are talking about at
12 least a population base of 12,000 employees, and I'm sure
13 Tinker would support that issue, or I strongly expect support
14 from them, as well.

15 MR. DYKE: Thank you for your comments, that
16 also helps us with the emergency issue before the Board, your
17 comments. Anyone else? Any further comments from the Council?

18 MR. BREISCH: What's the Council's wish?

19 MS. MYERS: I'll make a motion that we continue
20 this until February.

21 DR. GROSS: Second.

22 MR. BREISCH: I've got a motion and a second to
23 continue this item to our regular February meeting. Any
24 additions to that? If not, Myrna, call the roll.

25 MS. BRUCE: Dr. Canter.

TRANSCRIPT OF PROCEEDINGS
OF THE PUBLIC HEARING ON THE OAC 252:100-37
CONTROL OF EMISSIONS OF ORGANIC MATERIALS

[AMENDED]

HELD ON FEBRUARY 17, 1999

AT 1:00 P.M.

AT 707 NORTH ROBINSON

IN OKLAHOMA CITY, OKLAHOMA

* * * * *

REPORTED BY: Christy A. Myers, CSR,

MEMBERS OF THE COUNCIL

1. DR. FRED GROSZ - MEMBER
2. MR. GARY KILPATRICK - MEMBER
3. MS. MERIBETH SLAGELL - MEMBER
4. MR. JOEL WILSON - MEMBER
5. MS. SHARON MYERS - MEMBER
6. MR. DAVID BRANECKY - MEMBER
7. DR. LARRY CANTER - VICE CHAIRMAN
8. MR. BILL BREISCH - CHAIRMAN
9. MS. MYRNA BRUCE - SECRETARY
10. MR. EDDIE TERRILL - DIRECTOR

DR. CANTER: Second.
 MR. BREISCH: I have a motion and
 a second. Any corrections, additions,
 comments? If not, Myrna, call the roll.
 MS. BRUCE: Mr. Wilson.
 MR. WILSON: Aye.
 MS. BRUCE: Dr. Grosz.
 DR. GROSZ: Yes.
 MS. BRUCE: Dr. Canter.
 DR. CANTER: Aye.
 MS. BRUCE: Mr. Kilpatrick.
 MR. KILPATRICK: Aye.
 MS. BRUCE: Ms. Myers.
 MS. MYERS: Aye.
 MS. BRUCE: Mr. Branecky.
 MR. BRANECKY: Aye.
 MS. BRUCE: Mr. Breisch.
 MR. BREISCH: Aye. Next item,
 election of officers for calendar year '99.
 Here's your chance. What are your
 pleasures?
 DR. CANTER: Is the Chair ready
 for a motion? I would like to nominate
 Bill Breisch for Chairman of the Air
 Quality Council for this year.

PROCEEDINGS

MR. BREISCH: All right. We'll
 call this meeting to order. Again, this is
 a regular meeting and a hearing. We'll
 start out with the roll call. Myrna.
 MS. BRUCE: Mr. Wilson.
 MR. WILSON: Here.
 MS. BRUCE: Dr. Grosz.
 DR. GROSZ: Here.
 MS. BRUCE: Dr. Canter.
 DR. CANTER: Here.
 MS. BRUCE: Mr. Kilpatrick.
 MR. KILPATRICK: Here.
 MS. BRUCE: Ms. Myers.
 MS. MYERS: Present.
 MS. BRUCE: Mr. Branecky.
 MR. BRANECKY: Here.
 MS. BRUCE: Mr. Breisch.
 MR. BREISCH: Here.
 MS. BRUCE: For the record,
 absent is Ms. Slagell.
 MR. BREISCH: Okay. I need
 approval of the Minutes of the December
 15th meeting.
 DR. GROSZ: So moved.

DR. GROSZ: Second.
 MR. BREISCH: Do we have to --
 MR. BRANECKY: Do them separate,
 or --
 MR. BREISCH: Can we do them
 together, if we want to go ahead and elect
 a Vice-Chairman at the same time, or do we
 have to do them separately, Barbara?
 MS. HOFFMAN: I would suggest you
 do them separately.
 MR. BREISCH: Okay. Did we have
 a second?
 DR. GROSZ: Yes.
 MR. BREISCH: Okay. Any other
 nominations?
 DR. GROSZ: Move the nominations
 cease.
 MR. KILPATRICK: Second.
 MR. BREISCH: What did he say?
 MR. BRANECKY: He moved the
 nomination cease and he seconded.
 MR. BREISCH: Okay. We have a
 motion and a second to cease.
 MR. BRANECKY: So, what are we
 voting on?

1 MR. BRIESCH: We're on the voting
 2 on the Chairman.
 3 MR. BRANECKY: Okay.
 4 MR. BREISCH: Okay. Myrna, call
 5 the roll.
 6 MS. BRUCE: Mr. Wilson.
 7 MR. WILSON: Aye.
 8 MS. BRUCE: Dr. Grosz.
 9 DR. GROSZ: Aye.
 10 MS. BRUCE: Dr. Canter.
 11 DR. CANTER: Aye.
 12 MS. BRUCE: Mr. Kilpatrick.
 13 MR. KILPATRICK: Aye.
 14 MS. BRUCE: Ms. Myers.
 15 MS. MYERS: Aye.
 16 MS. BRUCE: Mr. Branecky.
 17 MR. BRANECKY: Aye.
 18 MS. BRUCE: Mr. Breisch.
 19 MR. BREISCH: Abstain. Now, I
 20 don't want to put myself in a compromising
 21 position. Okay. Now, we want to elect a
 22 Vice-Chairman. And remember, this Vice-
 23 Chairman would take over in case the
 24 Chairman gets out of this.
 25 MR. KILPATRICK: Mr. Chairman, I

1 Director of the Air Quality Division. As
 2 such, I will act as the Protocol Officer
 3 for today's hearing.
 4 These hearings will be convened by
 5 the Air Quality Council in compliance with
 6 the Oklahoma Administrative Procedures Act
 7 and Title 40 of the Code of Federal
 8 Regulations, Part 51, as well as the
 9 authority of Title 2790 of the Oklahoma
 10 Statute, Section 2-201 through 2-5118.
 11 These hearings were advertised in
 12 the Oklahoma Register for the purpose of
 13 receiving comments pertaining to the
 14 proposed OAC Title 252 Chapter, 100 Rules,
 15 as listed in the hearing agenda, which will
 16 be entered into each record along with the
 17 Oklahoma Register filing.
 18 If you wish to make a statement, it
 19 is very important that you complete the
 20 form at the registration table and you will
 21 be called upon at the appropriate time.
 22 At this time, we will proceed with
 23 what is marked as Agenda Item Number 5 on
 24 the hearing agenda, OAC 252:100-37, Control
 25 of Emissions of Organic Materials. And

1 would like to move that Dr. Canter be the
 2 Vice-Chairman.
 3 DR. GROSZ: Second.
 4 MR. BREISCH: Okay. I've got a
 5 motion and a second. Any further
 6 nominations? Okay. Hearing none, Myrna,
 7 call the roll.
 8 MS. BRUCE: Mr. Wilson.
 9 MR. WILSON: Aye.
 10 MS. BRUCE: Dr. Grosz.
 11 DR. GROSZ: Aye.
 12 MS. BRUCE: Dr. Canter.
 13 DR. CANTER: Abstain.
 14 MS. BRUCE: Mr. Kilpatrick.
 15 MR. KILPATRICK: Aye.
 16 MS. BRUCE: Ms. Myers.
 17 MS. MYERS: Aye.
 18 MS. BRUCE: Mr. Branecky.
 19 MR. BRANECKY: Aye.
 20 MS. BRUCE: Mr. Breisch.
 21 MR. BREISCH: Aye. Next item.
 22 Eddie Terrill will act as Protocol Officer
 23 for Items 5 and 6.
 24 MR. TERRILL: Ladies and
 25 gentlemen, my name is Eddie Terrill, I am

1 I'll call on Dr. Joyce Sheedy, who will
 2 give the staff position on the proposed
 3 rule.
 4 DR. SHEEDY: Mr. Chairman,
 5 Members of the Council, ladies and
 6 gentlemen, I'm Joyce Sheedy and I work in
 7 the Rules and Planning Unit of the Air
 8 Quality Division of the Department of
 9 Environmental Quality.
 10 The proposed revisions to Subchapter
 11 37, Control of Emissions of Organic
 12 Materials, were brought to the Council for
 13 the first time on August 18, 1998, and
 14 again on October 20, 1998 and December 15,
 15 1998. At the December Council meeting,
 16 staff requested that the rule be considered
 17 again at the February Council meeting, due
 18 to unresolved issues regarding alternate
 19 standards for coating operations continued
 20 in 252:100-37-25(d). These issues have now
 21 been resolved.
 22 However, some questions came up in
 23 this morning's briefing, two of which can't
 24 be resolved today. These two are -- there
 25 was a feeling among the Council that the

1 requirements in 252:100-37-15(a)(2) on page
 2 4, as written, may be impossible to meet.
 3 We have had no comments from the regulated
 4 community or the Air Quality staff
 5 indicating that this is a problem.
 6 However, we believe it merits an in-depth
 7 look and it will be considered in future
 8 rulemaking so that any changes we might
 9 propose will be subject to public comment.

10 The other question was in 252:100-
 11 37-16(b)(1) and 252:100-37-42(c) on pages 6
 12 and 12 respectively, the term "submergence
 13 factor" appears. Its meaning is unclear
 14 since the term isn't defined in the rule.
 15 Staff will look into providing a definition
 16 or changing the wording in these two
 17 portions of the rule.

18 Based on this morning's briefing,
 19 five nonsubstantive changes are
 20 recommended. These are in 252:100-37-1 on
 21 page 1, that we change "prevent" to
 22 "reduce". On 252:100-37-2 on page 1, that
 23 we change primary -- I'm sorry, that we
 24 change "prime" to "primary" in the
 25 definition of Epoxy. And that on page 8,

1 have been made since the December meeting
 2 are, one, the addition to 252:100-37-2 on
 3 page 1, of a definition of "drilling or
 4 production facility" that is essentially
 5 identical to that found in 40 CFR 60,
 6 Subpart K.

7 Two, the addition to 252:100-37-2 on
 8 page 1, of the definition of "lease custody
 9 transfer" based on the definition of
 10 "custody transfer" found in 40 CFR 60,
 11 Subpart K and identical to the definition
 12 that already exists in 252:100-39-30(a).

13 Three, the addition of new
 14 Subsection C, Permit-By-Rule Facilities, to
 15 252:100-37-3 on page 3, to make clear that
 16 the only requirements in Subchapter 37 that
 17 apply to facilities registered under the
 18 VOC storage and loading facility permit-by-
 19 rule are those in Part 9.

20 The fourth one, the addition of
 21 language to Subchapter (b) of 252:100-39-4
 22 on page 3, to exempt from the requirements
 23 of Subchapter 37, methanol storage vessels
 24 at drilling or production facilities when
 25 the methanol is used on-site. It is our

1 in 252:100-37-25(b)(1)(a)(1), we change
 2 "will" to "can".

3 There was a question as to what is
 4 meant by "either system" in 252:100-37-
 5 16(a)(2) on page 5. Staff recommends
 6 changing "either system" to "either loading
 7 system specified in subsection (a)." It
 8 was suggested that "computed to" in
 9 252:100-37-25(c) be deleted, and the staff
 10 agrees that this can be deleted without
 11 changing the meaning of that section.

12 The majority of the proposed
 13 revisions to Subchapter 37 simplify and
 14 clarify the language and correct grammar
 15 and format, without involving substantive
 16 changes. However, fourteen substantive
 17 changes are proposed, six of which have
 18 been added since the December Council
 19 meeting. A number of nonsubstantive
 20 changes have also been made since the
 21 December meeting, most of which are minor
 22 and consist of replacements, such as "will"
 23 with "shall", "gallons" with "g-a-l", and
 24 "liter" with "l".

25 The six substantive changes that

1 understanding that drilling and production
 2 facilities often store methanol for various
 3 on-site uses, and it does not make sense to
 4 exempt produced petroleum and condensate
 5 stored on-site and not methanol.

6 The fifth addition was a revision to
 7 the alternate standard in 252:100-37-25(d)
 8 on page 9, to require that VOC emissions
 9 from noncompliant coatings be reduced to
 10 the level that they would have been had the
 11 coatings complied with the VOC content
 12 limits in 252:100-37-25(a).

13 The sixth new substantive change is
 14 for the addition of new subparagraphs (a),
 15 (b), and (c) to 252:100-37-41(2) on page
 16 11, which will allow tanks that have
 17 storage capacities greater than 19,813
 18 gallons and which are subject to NSPS
 19 Subpart Kb, to qualify for the permit-by-
 20 rule for VOC storage and loading
 21 facilities, since the only applicable
 22 requirement in Subpart Kb are those to
 23 maintain on-site records of the dimensions
 24 of the vessel and an analysis of the
 25 capacity of the vessel. These simple

1 requirements are appropriate for a permit-
 2 by-rule facility.

3 The eighth substantive changes that
 4 were previously proposed are the revision
 5 of the definition of "volatile organic
 6 compound (VOC)" in 252:100-37-2 on page 2,
 7 to make that definition consistent with the
 8 EPA definition. The deletion of 252:100-
 9 37-3(a) on page 2. This is the subsection
 10 that requires any new source that emits
 11 organic material as a solvent or reactant
 12 to obtain a permit and apply BACT. Staff
 13 feels that this is not justified for minor
 14 sources, based on the amount of effort and
 15 time and expense that it requires in
 16 comparison to the subsequent reduction of
 17 VOC emissions. Especially that's true in
 18 new sources in areas that are in attainment
 19 for ozone and have always been in
 20 attainment for ozone, and to require BACT
 21 for new major sources is redundant since
 22 that's already required in Subchapter 8.

23 The third substantive change that
 24 was previously proposed is the addition of
 25 252:100-37-15(c) on pages 4 and 5, to

1 547 tons per year. This is meaningless
 2 since Subchapter 8 contains requirements
 3 for BACT to be applied to major sources
 4 which emit 100 tons per year of VOCs and
 5 for new PSD sources that emit 100 tons per
 6 year of VOCs and for modifications to
 7 existing PSD sources that result in an
 8 increase in VOC emissions of 40 tons per
 9 year or more. Now, the deletion of
 10 the first sentence in 252:100-37-36, fuel-
 11 burning and refuse-burning equipment on
 12 page 10, thereby eliminating the impossible
 13 requirement that no emission of hydrocarbon
 14 or organic materials is allowed from fuel-
 15 burning or refuse-burning equipment.

16 The addition of 252:100-37-38(b) on
 17 page 11, which exempts pumps and
 18 compressors that are subject to the
 19 equipment leak standards in 40 CFR 60,
 20 Subparts VV, triple G (GGG) or triple K
 21 (KKK), from the requirements of Section 38,
 22 since the requirements of those subparts
 23 are as stringent as the ones in Section 38.

24
 25 And the addition of Subpart 9,

1 exempt storage tanks subject to the
 2 standards contained in 40 CFR 60, Subparts
 3 K, Ka, or Kb, from the requirements of that
 4 section, since these standards are as
 5 stringent as the requirements in Section
 6 15.

7 The addition of 252:100-37-16(c) on
 8 page 6, to exempt loading facilities that
 9 are subject to 40 CFR 60, Subpart XX or 40
 10 CFR 63, Subpart R, from the requirements of
 11 Section 16, since the requirements of
 12 Subparts XX and R are as stringent as those
 13 contained in Section 16.

14 The deletion of 252:100-25(c),
 15 Emissions Limitations on page 9. Research
 16 in the Air Quality Council records indicate
 17 that this subsection was originally meant
 18 to control emissions of organic materials
 19 from the use of nonphotochemically reactive
 20 solvents. These substances would not be
 21 considered VOC by the proposed revision of
 22 definition of VOC. If the limits contained
 23 in subsection (c) are applied to VOCs, the
 24 emission limit of 3,000 pounds of VOC per
 25 day for 365 days per year would result in

1 Permit-By-Rule for VOC Storage and Loading
 2 facilities on pages 11 and 12, provide for
 3 permit-by-rule for facilities that meet the
 4 applicability requirements contained
 5 herein.

6 The Council packet includes a list
 7 of substantive revisions that have been
 8 made to the rule after December 15th, as
 9 well as a summary of written comments
 10 received and staff's responses. Only one
 11 letter of comment has been received since
 12 the December Council meeting. This was a
 13 letter dated February 10, 1999, from Tom
 14 Diggs, EPA Region 6, supporting the
 15 proposed changes to Subchapter 37. I would
 16 like to make that letter a part of the
 17 permanent record.

18 Staff recommends that the proposed
 19 rule be recommended to the Environmental
 20 Quality Board for permanent adoption. Any
 21 questions or comments?

22 MR. TERRILL: Questions or
 23 comments from the Council?

24 MR. KILPATRICK: I have one.

25 MR. WILSON: I'm sorry, go ahead.

1 MR. KILPATRICK: Okay. Maybe
 2 we're going to ask the same question. This
 3 is for clarification to be sure we
 4 understood. The change on page 5 on the --
 5 in either system that was Section A, that
 6 was a capital "A", not a little "A"?

7 DR. SHEEDY: No, it was the
 8 little "A". When we went back and re-read
 9 this carefully, up here on 37-16, little
 10 "A", we say that each loading facility with
 11 a throughput greater than 40,000 gallons
 12 per day from its aggregate loading pipes
 13 shall be equipped with a vapor-collection
 14 and disposal system unless all tanks will -
 15 - I'm sorry. I'm having trouble reading
 16 along the edges here. Unless all tanks,
 17 trucks or trailers are bottom loaded with
 18 hatches closed. So, what we have up here,
 19 and I'll admit it may not be very clear, is
 20 we have two things. You can either have a
 21 system that's bottom loaded with closed
 22 hatches, or you can have a system with
 23 vapor control and with vapor collection
 24 disposal. And those are the two systems
 25 referred to in 2. So, if you have a system

1 get into place for the simplification
 2 program and for various industries. We
 3 think that two of the issues that came up
 4 this morning need to be looked at in
 5 greater depth, before we make changes, so
 6 we can be sure, consider all the impacts it
 7 may make and to give industry and the
 8 public a chance to comment on it. And that
 9 was the 252:100-37-15(a)(2) on page 4.
 10 About 85 percent control efficiency.

11 MS. MYERS: Right.
 12 DR. SHEEDY: And we want to do
 13 some further -- see if we can come up with
 14 a definition of "submergence factor"
 15 anywhere. We looked in several places, not
 16 only in our own rules, but we've checked
 17 some of EPA's current stuff. It might be
 18 that it came out of some older CTG. If we
 19 cannot come up with a definition, then we
 20 will have to change the wording.

21 MS. MYERS: Okay. On page 9,
 22 compliance with a plant-wide emission plan.
 23 About halfway through that paragraph it
 24 refers to VOC content limitation described
 25 in 252:100-37-25(a), must be expressly

1 that is bottom loading with closed hatches,
 2 then you have to provide a means to prevent
 3 VOC drainage from the loading device when
 4 it's removed from any tank, truck or
 5 trailer. If, on the other hand, you have a
 6 system that is equipped with the vapor
 7 collection and disposal system, you must
 8 also provide a means to prevent VOC
 9 drainage from the loading device when
 10 removed from any tank, truck or trailer.

11 MR. KILPATRICK: Okay.
 12 MR. TERRILL: Any further
 13 questions?

14 MS. MYERS: Joyce, I had a
 15 question. You said at the start of your
 16 presentation that there were a couple of
 17 issues that staff needed to go back and
 18 resolve before this rule -- explain to me
 19 the timing on this thing. There were some
 20 issues that needed to be resolved, but you
 21 are still asking for us to go ahead and
 22 pass it?

23 DR. SHEEDY: Yes. We are asking
 24 that we pass the rule as it is, because
 25 there are parts of it that really need to

1 approved. Can we take the word "expressly"
 2 out? It has to be approved by the
 3 Director. I don't see what expressly adds
 4 to it, other than confusion.

5 DR. SHEEDY: I don't want to
 6 comment on that. Maybe legal. Okay,
 7 Barbara -- Sharon, it's on page 9. Exactly
 8 where, now?

9 MS. MYERS: Under paragraph 2,
 10 compliance with the plant-wide emission
 11 plan.

12 DR. SHEEDY: It's a rule we're
 13 actually looking at -- 39?

14 MS. MYERS: We're looking at page
 15 37 -- at Rule Number 37.

16 DR. SHEEDY: Let me get back to
 17 37 on page 9.

18 MS. MYERS: Paragraph 2. If it
 19 has to be approved by the Director, why
 20 does it have to be expressly approved.
 21 What does that add to it? What is the
 22 definition that's going to clarify that for
 23 anybody?

24 MS. HOFFMAN: My name is Barb.
 25 Hoffman and I help with these rules. I

1 think that what was intended there was that
2 what we particularly want is that there not
3 be any -- someone not say, yeah, he told me
4 over the phone that it was okay. In other
5 words, probably what we really mean there
6 is that we want something in writing. That
7 we want written approval, is probably what
8 we want.

9 MS. MYERS: Perhaps it needs to
10 be, must have written approval by the
11 Division Director, would simplify that.
12 That confused me when I read it, but I'm
13 easily confused. I mean, if the intent has
14 to be in writing, then I think it needs to
15 be said that it's got to be in writing,
16 rather than expressly approved because that
17 leaves it kind of wide open, in my opinion.

18 MS. HOFFMAN: Okay. So, we could
19 delete expressly, and then after approved
20 add the words "in writing".

21 DR. SHEEDY: Okay.

22 MS. MYERS: Thank you.

23 MR. TERRILL: Any further
24 comments from the Council? I've got one
25 request for comment from Sandra Rennie of

1 factoring them into the redress of the
2 subchapters. I would also like to add that
3 EPA is very pleased that the state has
4 taken steps to revise their regulations
5 under the Rewrite-Dewrong Program. This
6 effort goes into the program within the
7 federal government to use plain English in
8 writing federal regulations and other
9 documents. We are very encouraged by the
10 approach that you are taking and the effort
11 put forth to revise your Air Regulations.
12 Thank you for the opportunity to provide
13 comments.

14 MR. TERRILL: Are there any
15 further questions from the audience, or
16 comments? Any further questions from
17 Council? Being none, I guess we're ready
18 for a vote.

19 MR. BREISCH: I'll entertain a
20 motion to send this to the DEQ with a
21 request to approve it.

22 MR. WILSON: So moved.

23 DR. GROSZ: Second.

24 MR. BREISCH: I've got a motion
25 and a second.

1 EPA Region 6.

2 MS. RENNIE: Mr. Chairman,
3 Members of the Council, members of the
4 public, my name is Sandra Rennie. That's
5 R-e-n-n-i-e. I'm with the EPA Region 6
6 Office in Dallas. I appreciate the
7 opportunity to come before the Council to
8 provide comments on the proposals to amend
9 Subchapters 37 and 39 of the Oklahoma Air
10 Regulations.

11 The proposed changes clarify the
12 regulations and make them more user-
13 friendly. EPA Region 6 has reviewed all of
14 the proposed changes and have determined
15 that the changes support the State
16 Implementation Plan. The State has chosen
17 to use many federal regulations to create
18 consistency between state and federal
19 regulations. This is not only expedient,
20 but it removes confusion from facilities.

21 EPA Region 6 sent a letter dated
22 February 10, 1999, supporting these
23 amendments. We appreciate the Oklahoma DEQ
24 addressing our comments made on these
25 regulations at previous hearings, and

1 MR. KILPATRICK: Does -- that
2 motion include the five suggested changes
3 that were made by staff; is that correct?

4 MR. BREISCH: With all changes.

5 MR. WILSON: I thought we added
6 one more. It was six adjusted changes.

7 MR. BREISCH: Okay. And that's
8 DEQ Board that we're sending it to for
9 approval, and it is for a permanent rule.

10 DR. SHEEDY: Yes.

11 MR. BREISCH: Okay. Is the
12 motion in order?

13 MR. WILSON: Motion stands, yes.

14 MR. BREISCH: Any further
15 questions or comments? Myrna, call the
16 roll.

17 MS. BRUCE: Mr. Wilson.

18 MR. WILSON: Aye.

19 MS. BRUCE: Dr. Grosz.

20 DR. GROSZ: Aye.

21 MS. BRUCE: Dr. Canter.

22 DR. CANTER: Aye.

23 MS. BRUCE: Mr. Kilpatrick.

24 MR. KILPATRICK: Aye.

25 MS. BRUCE: Ms. Myers.

1 MS. MYERS: Yes.
 2 MS. BRUCE: Mr. Branecky.
 3 MR. BRANECKY: Aye.
 4 MS. BRUCE: Mr. Breisch.
 5 MR. BREISCH: Aye.

1 CERTIFICATE

2 STATE OF OKLAHOMA)
 3 COUNTY OF OKLAHOMA) ss:

4 I, CHRISTY A. MYERS, Certified

5 Shorthand Reporter in and for the State of
 6 Oklahoma, do hereby certify that the above
 7 proceedings are the truth, the whole truth,
 8 and nothing but the truth, in the
 9 proceedings aforesaid; that the foregoing
 10 proceeding was taken by me in shorthand and
 11 thereafter transcribed under my direction;
 12 that said proceedings was taken on the 17th
 13 day of February, 1999, at Oklahoma City,
 14 Oklahoma; and that I am neither attorney
 15 for nor relative of any of said parties,
 16 nor otherwise interested in said
 17 proceedings.

18 IN WITNESS WHEREOF, I have hereunto
 19 set my hand and official seal on this, the
 20 28th day of February, 1999.

OAC 252:100-39 SIP Revision

SUBCHAPTER 39. EMISSION OF ORGANIC MATERIALS IN NONATTAINMENT AREAS

PART 1. GENERAL PROVISIONS

Section

- 252:100-39-1. Purpose [AMENDED]
- 252:100-39-2. Definitions [AMENDED]
- 252:100-39-3. General Applicability [AMENDED]
- 252:100-39-4. Exemptions [NEW]

PART 3. PETROLEUM REFINERY OPERATIONS

- 252:100-39-15. Petroleum refinery equipment leaks [AMENDED]
- 252:100-39-16. ~~Refinery~~ Petroleum refinery process unit turnaround [AMENDED]
- 252:100-39-17. ~~Refinery~~ Petroleum refinery vacuum producing system [AMENDED]
- 252:100-39-18. ~~Refinery~~ Petroleum refinery effluent water separators [AMENDED]

PART 5. PETROLEUM PROCESSING AND STORAGE

- 252:100-39-30. Petroleum liquid storage in vessels with external floating roof tanks roofs [AMENDED]

PART 7. SPECIFIC OPERATIONS

- 252:100-39-40. Cutback asphalt (paving) [AMENDED]
- 252:100-39-41. ~~Vapor recovery systems~~ Storage, loading and transport/delivery or VOCs [AMENDED]
- 252:100-39-42. Metal cleaning [AMENDED]
- 252:100-39-43. Graphic arts systems [AMENDED]
- 252:100-39-44. Manufacture of pneumatic rubber tires [AMENDED]
- 252:100-39-45. Petroleum (solvent) dry cleaning [AMENDED]
- 252:100-39-46. Coating of parts and products [AMENDED]
- 252:100-39-47. Control of VOS VOC emissions from aerospace industries coatings operations [AMENDED]
- 252:100-39-48. Vapor recovery systems [REVOKED]
- 252:100-39-49. Manufacturing of fiberglass reinforced plastic products [AMENDED]

PART 1. GENERAL PROVISIONS

252:100-39-1. Purpose

~~The purpose of this Subchapter is to control the emission of organic materials from stationary sources located in nonattainment areas and to specify the additional control measures required to protect and enhance the air quality to insure that the Oklahoma air quality standard is not exceeded and significant deterioration is prevented.~~ The purpose of this Subchapter is to reduce the formation of ozone by controlling the emissions of volatile organic compounds (VOCs). This Subchapter contains requirements for the control of emissions of VOCs from stationary sources located in areas that are nonattainment or were formerly nonattainment for ozone.

252:100-39-2. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Cutback asphalt" means a basic asphalt or asphaltic concrete containing a petroleum distillate.

"Effluent water separator" means any tank, box, sump, or other container in which any material compound floating on or entrained or contained in water entering such tank, box, sump or other container is physically separated and removed from such water prior to outfall, drainage, or recovery of such water.

"Organic materials" means any chemical compounds of carbon excluding carbon monoxides, carbon dioxide, carbonic acid, metallic carbides, metal carbonates and ammonium carbonates.

"Petroleum refinery" means any facility engaged in producing gasoline, aromatics, kerosene, distillate fuel oils, residual fuel of crude oils, lubricants, asphalt, or other products through distillation of crude oil or other hydrocarbons or through redistillation, cracking, rearrangement or reforming or unfinished petroleum derivatives.

"Refinery" means any facility engaged in producing gasoline, kerosene, fuel oils or other products through distillation of crude oil or through redistillation, cracking or reforming of unfinished hydrocarbon derivatives.

"Refinery unit" means a set of components which are a part of a basic process operation, such as distillation, hydrotreating, cracking or reforming of hydrocarbons.

"Submerged fill pipe" means any fill pipe or discharge nozzle which that meets any one of the following conditions:

(A) ~~the~~ The bottom of the discharge pipe or nozzle is below the surface of the liquid in the receiving vessel for at least 95 percent of the volume filled;

(B) ~~the~~ The bottom of the discharge pipe or nozzle is less than 6 inches from the bottom of the receiving vessel;

(C) ~~the~~ The bottom of the discharge pipe or nozzle is less than 2 pipe or nozzle diameters from the bottom of the receiving vessel; or,

(D) other equivalent methods acceptable to the Executive Director.

"Volatile organic compound (VOC)" means any compound ~~containing carbon and hydrogen or containing carbon and hydrogen in combination with any other element which has a vapor pressure of 1.5 pounds per square inch absolute or greater under actual storage conditions of carbon, excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate, which participates in atmospheric photochemical reactions. Any organic compound listed in 40 CFR 51.100 (s) (1) will be presumed to have negligible photochemical reactivity and will not be considered to be a VOC.~~

"Volatile organic solvent (VOS)" means any organic compound which participates in atmospheric photochemical reactions; that is, any organic compound other than those which the EPA Administrator designates as having negligible photochemical reactivity. VOS may be measured by the EPA VOC reference method.

252:100-39-3. General applicability

In addition to any application of the requirements contained in OAC 252:100-37, the additional ~~control/prohibitions~~ requirements contained in this Subchapter shall be required ~~on~~ of existing and new facilities located in Tulsa and Oklahoma Counties.

252:100-39-4. Exemptions

VOCs with vapor pressure less than 1.5 pounds per square inch absolute (psia) under actual storage conditions are exempt from 252:100-39-16 through 252:100-39-18, 252:100-39-30, 252:100-39-41, and 252:100-48.

PART 3. PETROLEUM REFINERY OPERATIONS

252:100-39-15. Petroleum refinery equipment leaks

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

(1) **"Component"** means any piece of equipment which has the potential to leak ~~volatile organic compounds~~ VOCs when tested in the manner described in EPA Test Method 21 of 40 CFR Part 60. These sources include, but are not limited to, pumping seals, compressor seals, seal oil degassing vents, pipeline valves, flanges and other connections, pressure relief devices, process drains, and open ended pipes. Excluded from these sources are valves which are not externally regulated.

(2) **"Gas service"** means any equipment which processes, transfers or contains a ~~volatile organic compound~~ VOC or mixture of ~~volatile organic compounds~~ VOCs in the gaseous phase.

(3) **"Leaking component"** means a component which has a VOC concentration exceeding 10,000 ppmv when tested according to the provisions in 252:100-39-15 (e).

~~(3)~~ (4) **"Liquid service"** means any equipment which processes, transfers or contains a ~~volatile organic compound~~ VOC or mixture of ~~volatile organic compounds~~ VOCs in the liquid phase.

~~(4)~~ **"Petroleum refinery"** means ~~any facility engaged in producing gasoline, aromatics, kerosene, distillate fuel oils, residual fuel oils, lubricants, asphalt, or other products through distillation of crude oil or other hydrocarbons or through redistillation, cracking, rearrangement or reforming or unfinished petroleum derivatives.~~

(5) **"Refinery unit"** means a set of components which are a part of a basic process operation, such as distillation, hydrotreating, cracking or reforming of hydrocarbons.

~~(6)~~ (5) **"Valves not externally regulated"** means valves that have no external controls, such as in-line check valves.

(7) **"Volatile organic compounds"** means any compound containing carbon and hydrogen or containing carbon and hydrogen in combination with any other element which has a vapor pressure of 0.3 kilopascals (0.0435 pounds per square inch absolute) or greater under actual storage conditions. (Effective 2-12-90)

(b) **Applicability.** ~~This Section applies to all source facility petroleum refineries located in the following counties: Tulsa and Oklahoma.~~

(1) This Section applies to all petroleum refineries located in Tulsa County and Oklahoma County.

(2) VOCs with vapor pressure less than 0.0435 psia (0.3 kilopascals (kPa)) under actual storage conditions are exempt from 252:100-39-15. (Effective 2-12-90.)

(c) **Provisions for specific processes. Standards and operating requirements**

(1) The owner or operator of a petroleum refinery ~~complex~~ subject to this Section shall:

(A) develop and conduct a monitoring program consistent with the provisions in 252:100-39-15(d) and 252:100-39-15 (f);

~~(B) — conduct a monitoring program consistent with the provisions in 252:100-39-15(f);~~

~~(C) record all leaking components which have a VOC concentration exceeding 10,000 ppm when tested according to the provisions in 252:100-39-15(e) and place an identifying tag on each component consistent with the provisions in 252:100-39-15(f)(3);~~

~~(D)(C) repair and retest the leaking components, as defined in 252:100-39-15(c)(1)(C), as soon as possible but no later than 15 days after the leak is found; and,~~

~~(E)(D) identify all leaking components, as defined in 252:100-39-15(c)(1)(C), which cannot be repaired until the unit is shutdown for turnaround. Assure all lines or pipes terminating with a valve are sealed with a second valve, a blind flange, a plug or a cap; and,~~

(E) assure all lines or pipes terminating with a valve are sealed with a second valve, a blind flange, a plug or a cap.

(2) The ~~Executive Division Director,~~ may, at his/her discretion, take require the owner or operator to take appropriate remedial action, including early unit turnaround, based on the number and severity of tagged leaks awaiting repair.

(3) Pipeline valves and pressure relief valves in ~~gaseous volatile organic compound gas~~ service shall be marked in some manner that will be readily obvious to both petroleum refinery or contract personnel performing monitoring and the Executive Director DEQ.

(d) ~~Compliance schedule~~ schedule. The owner or operator of a petroleum refinery, ~~in order to comply with 252:100-39-15,~~ shall adhere to the increments of progress contained in the following schedule:

(1) ~~Submit~~ submit to the ~~Executive Division Director~~ a monitoring program by July 30, 1981. This program shall contain, at a minimum, a list of the refinery units ~~only~~ and the quarter in which they will be monitored, a copy of the log book format, and the make and model of the monitoring equipment to be used. In no case shall a monitoring contract relieve the owner or operator of a petroleum refinery of the responsibility for compliance with this Section.

~~(2) Submit quarterly monitoring report to the Executive Director.~~

(e) **Testing and monitoring procedures.** Testing and calibration procedures to determine compliance with this Section must be consistent with EPA Test Method 21 of 40 CFR Part 60.

(f) **Monitoring.**

(1) The owner or operator of a petroleum refinery ~~subject to this Section~~ shall conduct a monitoring program consistent with the following provisions: The owner or operator shall:

(A) ~~monitor yearly by the methods referenced in Test Method 21 of 40 CFR Part 60~~ 252:100-39-15 (e) all:

~~(i) pump seals;~~

~~(ii) pipeline valves in liquid service;~~ and

~~(iii) process drains;~~

(B) ~~monitor quarterly by the methods referenced in 252:100-39-15(d), 252:100-39-15 (e)~~ all:

~~(i) compressor seals;~~

~~(ii) pipeline valves in gaseous gas service;~~ and

~~(iii) pressure relief valves in gaseous gas service;~~

(C) monitor weekly by visual methods all pump seals;

(D) monitor ~~immediately~~ within 24 hours any pump seal from which VOC liquids are observed dripping;

(E) monitor any relief valve within 24 hours after it has vented to the atmosphere; and,

(F) monitor immediately after repair any component that was found leaking.

(2) Pressure relief devices ~~which that~~ are connected to an operating flare header, vapor recovery ~~device~~ devices, inaccessible valves, storage tank valves, and valves that are not externally regulated are exempt from the monitoring requirements in paragraph (1) of this subsection; ~~Provided~~ provided, however, such inaccessible valves will be monitored during annual shutdown.

(3) The owner or operator of a petroleum refinery, upon the detection of a leaking component, ~~as defined in 252:100-39-15(e)(1)(C), which that~~ is not repaired on discovery, shall affix a weatherproof and readily visible tag, bearing an identification number and the date the leak is located, to the leaking component. This tag shall remain in place until the leaking component is repaired.

(g) Recordkeeping.

(1) The owner or operator of a petroleum refinery shall maintain a leaking components monitoring log ~~as specified in 252:100-39-15(e)(1)(C)~~ which shall contain, at a minimum, ~~the following data:~~

(A) the name of the process unit where the component is located;

(B) the type of component (e.g., valve, seal);

(C) the tag number of the component, if not repaired immediately on discovery;

(D) the date on which a leaking component is discovered;

(E) the date on which a leaking component is repaired;

(F) the date and instrument reading of the recheck procedure after a leaking component is repaired;

(G) the date of the calibration of the monitoring instrument. ~~The record of calibration~~ which shall be made available for inspection on request;

(H) those leaks that cannot be repaired until turnaround; and,

(I) the total number of components checked and the total number of components found leaking.

(2) ~~Copies of the~~ The monitoring log shall be retained on site by the owner or operator for at least two years after the date on which the record was made or the report prepared.

(3) ~~Copies of the~~ The monitoring log shall be made available for inspection at any reasonable time and copies of the log shall be provided to the Executive Division Director, upon written request, at any reasonable time of the AQD.

(h) Reporting. The owner or operator of a petroleum refinery, ~~upon the completion of each monitoring procedure,~~ shall:

(1) submit a report to the ~~Executive Division~~ Director by the 30th day following the end of each calendar quarter that lists all leaking components that were located during the previous quarter but not repaired within 15 days, all leaking components awaiting unit turnaround, and the total number of components found leaking; and,

(2) submit a signed statement with the report attesting to the fact that all monitoring and, with the exception of those leaking components listed in 252:100-39-15(h)(1), ~~all monitoring and repairs~~ were performed as stipulated in the monitoring program.

252:100-39-16. ~~Refinery~~ Petroleum refinery process unit turnaround

(a) **Definition.** ~~"Turn around"~~ **"Turnaround"** means the planned procedure of shutting down a unit, inspecting and repairing it, and restarting it.

(b) **Procedures required.** For the shutdown, purging and blowdown operation of any ~~processing~~ petroleum refinery processing unit the following procedures are required:

(1) Recovery of ~~volatile organic compounds (VOC)~~ VOCs shall be accomplished during the shutdown or turnaround to a process unit pressure compatible with the flare or vapor system pressure. The unit ~~will~~ shall then be purged or flushed ~~with~~ to a flare or vapor recovery system using a suitable material such as steam, water or nitrogen ~~to a flare or vapor recovery system~~. The unit shall not be vented to the atmosphere until pressure is reduced to less than 5 psig through control devices.

(2) Except where inconsistent with the "Minimum Federal Safety Standards for the Transportation of Natural and Other Gas by Pipeline," or any State of Oklahoma regulatory agency, no person shall emit ~~organic~~ VOC gases to the atmosphere from a vapor recovery blowdown system unless these gases are burned by smokeless flares, or an equally effective control device as approved by the ~~Executive Division~~ Director.

(3) At least fifteen days prior to a scheduled turnaround, a written notification shall be submitted to the ~~Executive Division~~ Director. As a minimum, the notification shall indicate the unit to be shutdown, the date of shutdown, and the approximate quantity of ~~hydrocarbons~~ VOCs to be emitted to the atmosphere.

(4) Scheduled refinery unit turnaround may be accomplished without the controls specified in 252:100-39-16(b)(1) and 252:100-39-16(b)(2) during non-oxidant seasons provided the notification to the ~~Executive Division~~ Director as required in 252:100-39-16(b)(3), specifically contains such a request for such an exemption. ~~Non-oxidant~~ The non-oxidant season is ~~understood to be between the months of October and April~~ from November 1 through March 31.

252:100-39-17. ~~Refinery~~ Petroleum refinery vacuum producing system

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

(1) **"Accumulator"** means the vessel in the overhead stream of any fractionating tower, after the overhead condenses and separates noncondensable gases, liquid ~~hydrocarbons~~ VOCs and water.

(2) **"Hotwell"** means the tank at the bottom of the barometer leg in a barometric condenser system to receive the water, condensate and entrained ~~hydrocarbons~~ VOCs generated by the barometric condenser.

(b) **Requirements.** Noncondensable ~~volatile organic compounds from the following equipment~~ VOCs emitted from any of the vacuum producing systems listed in paragraphs (1) through (3) of this subsection shall be incinerated or reduced by 90 percent of what would be emitted ~~from the following vacuum producing system without controls~~.

(1) ~~steam~~ Steam ejectors with barometric condensers;

(2) ~~steam~~ Steam ejectors with surface condensers;

(3) ~~mechanical~~ Mechanical vacuum pumps.

(c) **Hotwells and accumulators.**

(1) Hot wells and accumulators shall be covered and the noncondensable vapors shall be vented to a fire-box or incinerator.

(2) The presence of a pilot flame shall be monitored using a thermocouple or any other equivalent device to detect the presence of a flame. (Effective February 12, 1990)

(d) **Compliance.** Compliance shall be determined in accordance with the provision of the CTG document ("Control of Refinery Vacuum Producing systems, Wastewater Separators and Process Unit Turnarounds," (EPA 450/2-77-025, October, 1977)). Test reports and maintenance records ~~will~~ shall be maintained for at least two years. If emission testing is required, the appropriate test method(s) selected from EPA Reference Methods 1 through 4, 21, and/or 25, ~~will~~ shall be utilized.

252:100-39-18. Refinery Petroleum refinery effluent water separators

(a) **Definition.** "Effluent water separator" means any container in which any VOC floating on, entrained in, or contained in water entering the container is physically separated and removed from the water prior to discharge of the water from the container.

(b) **Requirements.** ~~No person owner or operator shall operate, or install or permit the operation or installation of a single single-compartment or multiple-compartment volatile organic compound water effluent water separator from any equipment processing, refining, treating, storing or handling volatile organic compound unless the compartment receiving said the effluent water is equipped with one of the following vapor control devices, properly installed, in good working order and in operation; to control emissions in one of the following ways.~~

(1) ~~A~~ The container having totally encloses the liquid contents and all openings are sealed and totally enclosing the liquid contents. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The oil removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.

(2) ~~A~~ The container is equipped with a vapor-recovery system, consisting of a vapor-gathering system capable of collecting the organic material VOC vapors and gases discharged and a vapor- disposal system capable of processing such organic material VOC vapors and gases so as to prevent their emission to the atmosphere and with all. All tank gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The ~~organic material VOC~~ removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.

(3) ~~Containers~~ A container that is equipped with controls of equal efficiency, provided the plans and specifications of such equipment are submitted and are approved by the Executive Division Director prior to their use.

PART 5. PETROLEUM PROCESSING AND STORAGE

252:100-39-30. Petroleum liquid storage in vessels with external floating roof tanks-roofs

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

(1) "**Condensate**" means hydrocarbon liquid separated from natural gas which condenses due to changes in the temperature and/or pressure and remains liquid at ~~normal operating~~ standard conditions.

(2) "**Crude oil**" means a naturally occurring hydrocarbon mixture which is a liquid at standard conditions. It may contain sulfur, nitrogen and/or oxygen derivatives of hydrocarbon.

(3) "**Drilling or production facility**" means all drilling and servicing equipment, wells, flow lines, separators, equipment, gathering lines, and auxiliary non-transportation-related equipment used in the production of petroleum but does not include natural gasoline plants.

(3)(4) "**Externally External floating roof**" means a storage vessel cover in an open top tank consisting of a double deck or pontoon single deck which rests upon and is supported by the petroleum liquid being contained and is equipped with a closure seal or seals to close the space between the roof edge and tank wall.

(4)(5) "**Lease custody transfer**" means the transfer of produced crude oil and/or condensate, after processing and/or treating in the producing operations, from storage tanks vessels or automatic transfer facilities to pipelines or any other forms of transportation.

(5)(6) "**Liquid-mounted seal**" means primary seal mounted in continuous contact with the liquid between the ~~tank vessel~~ wall and the floating roof.

(6)(7) "**Petroleum liquid**" means crude oil, condensate, and any finished or intermediate liquid products manufactured or extracted in a petroleum refinery.

(7)(8) "**Vapor-mounted seal**" means a primary seal mounted so there is an annular vapor space underneath the seal. The annular vapor space is bounded by the bottom of the primary seal, the ~~tank vessel~~ wall, the liquid surface, and the floating roof.

(8)(9) "**Waxy, high pour point crude oil**" means a crude oil with a pour point of 50°F. or higher as determined by the American Society of Testing and Materials Standard D97-66, "Test for Pour Point of Petroleum Oils."

(b) **Applicability.**

(1) This Section applies to ~~all source facilities with petroleum liquid storage vessels equipped with external floating roofs, having capacities greater than 150,000 liters (40,000 gallons), that are located in Tulsa and Oklahoma Counties~~ 40,000 gal (150,000l).

(2) This Section does not apply to petroleum liquid storage vessels ~~which prior to custody transfer~~ that:

(A) are used to store waxy, high pour point crude oil;

(B) have capacities less than ~~1,600,000 liters 422,675 gal(420,000 gallons) (1,600 m³)~~ and are used to store produced crude oil and condensate prior to lease custody transfer;

(C) contain a petroleum liquid with a true vapor pressure less than 1.5 psia (10.5 kPa) ~~(1.5 psia);~~

(D) ~~contain a petroleum liquid with a true vapor pressure less than 27.6 Kpa (4.0 psia);~~ and,

(i) ~~are of welded construction; and,~~

(ii) presently possess a metallic-type shoe seal, a liquid-mounted foam seal, a liquid-mounted liquid filled type seal, or other closure device of demonstrated equivalence approved by the Executive Director; or, contain a petroleum liquid with a true vapor pressure less than 4.0 psia (27.6 kPa) if the vessels are of welded construction and have a metallic-type shoe seal, a liquid-mounted foam seal, a liquid-mounted liquid filled type seal, or other closure device of demonstrated equivalence approved by the Division Director; or,

(E) are of welded construction, are equipped with a metallic-type shoe primary seal and ~~has~~ have a secondary seal from the top of the shoe seal to the ~~tank~~ vessel wall (shoe-mounted secondary seal).

(3) Storage vessels that are subject to the equipment standards for external floating roofs in 40 CFR 60 Subparts Ka or Kb are exempt from the requirements of 252:100-37-30.

(4) Storage vessels that are subject to the equipment standards for external floating roofs in 40 CFR 63 Subparts CC (63.646) or G shall be exempt from the requirements of 252:100-39-30 upon the date compliance with the standards in Subparts CC and G is required.

(c) **Provisions for specific processes** ~~Equipment and operating requirements.~~

(1) **Standards.** ~~No owner of a petroleum liquid~~ Each storage vessel subject to this Section shall used to store a petroleum liquid in that vessel unless; shall meet the following conditions.

(A) The vessel has been fitted with;

(i) a continuous secondary seal extending from the floating roof to the ~~tank~~ vessel wall (rim-mounted secondary seal); or,

(ii) a closure device or other device which controls VOC emissions with an effectiveness equal to or greater than a seal required ~~above~~ under ~~in~~ 252:100-39-30(c)(1)(A)(i) and approved by the ~~Executive Division~~ Director.

(B) All seal closure devices meet the following requirements;

(i) ~~there~~ There are no visible holes, tears, or other openings in the seal(s) or seal fabric ;

(ii) ~~the~~ The seal(s) are intact and uniformly in place around the circumference of the floating roof between the floating roof and the ~~tank~~ vessel wall ; and ;

(iii) ~~for vapor mounted primary seals, the~~ The accumulated area of gaps exceeding ~~0.32 cm (1/8 in.)~~ 1/8 in. (0.32 cm) in width between the secondary seal and the ~~tank~~ vessel wall when the secondary seal is used in combination with a vapor mounted primary seal shall not exceed 21.2 cm² per meter-1.0 in.² /ft of tank-vessel diameter (1.0 in.² per foot 21.2 cm²/m of tank-vessel diameter), as This shall be determined by physically measuring the length and width of all gaps around the entire circumference of the secondary seal in each place where a ~~0.32 cm-1/8 in. (0.32 cm)~~ uniform diameter probe passes freely between the seal and the ~~tank~~ vessel wall ; and summing the ~~area~~ areas of the individual gaps.

(C) All openings in the external floating roof, except for automatic bleeder vents, rim space vents, and leg sleeves, are ;

(i) equipped with covers, seals, or lids in the closed position except when the openings are in actual use; and,

(ii) equipped with projections into the ~~tank~~ vessel which remain below the liquid surface at all times;

(D) Automatic bleeder vents are closed at all times except when the roof is floated off or landed on the roof leg supports ;

(E) Rim vents are set to open when the roof is being floated off the leg supports or at the manufacturer's recommended settings ; and ;

(F) Emergency roof drains are provided with slotted membrane fabric covers or equivalent covers which cover at least 90 percent of the area of the opening.

(2) **Monitoring.** The owner or operator of a petroleum liquid storage vessel with an external floating roof subject to this Section shall:

(A) perform routine inspections semi-annually in order to ensure compliance with 252:100-39-30(c)(1)(B)(i), i.e., no visible holes, tears, or other openings in the seals or seal fabric;

(B) measure the secondary seal gap annually in accordance with 252:100-39-30(c)(1)(B)(iii), when the floating roof is equipped with a vapor-mounted primary seal; and,

(C) maintain records of the types of volatile petroleum liquids stored, the true vapor pressure of the liquid as stored, and the results of the inspections performed in 252:100-39-30(c)(2)(A) and 252:100-39-30(c)(2)(B).

(3) Recordkeeping.

~~(3)(A)~~ Copies of all records under 252:100-39-30(c)(2) shall be retained by the owner or operator for a minimum of two years after the date on which the record was made.

~~(4)(B)~~ Copies of all records under this Section shall be made available to the ~~Executive Division~~ Director, upon ~~verbal or written~~ request, at any reasonable time.

(d) **Compliance schedule.** Compliance with this Section ~~will~~ shall be accomplished by affected facilities ~~within two years of approval of this Section by the Oklahoma Environmental Quality Board~~ by May 23, 1982.

PART 7. SPECIFIC OPERATIONS

252:100-39-40. Cutback asphalt (paving)

(a) **Definitions.** "Cutback asphalt" means a basic asphalt or asphaltic concrete containing a petroleum distillate.

(b) **Requirements.** No owner, operator and/or contractor shall prepare or apply cutback ~~liquified~~ liquefied asphalt without the prior written consent of the ~~Executive Division~~ Director or the ~~Executive Director's~~ designee. Such consent may be granted during Oklahoma's non-oxidant season, i.e., ~~October through April~~ November 1 through March 31.

252:100-39-41. ~~Vapor recovery systems~~ Storage, loading and transport/delivery or VOCs

(a) **Storage of ~~volatile organic compounds~~ — VOCs in vessels with storage capacities greater than 40,000 gallons (953 bbls).** ~~No person shall store or permit the storage of gasoline or any volatile organic compound in tanks or vessels having~~ Each vessel with a storage capacity greater than 40,000 gallons (953 bbls) unless such tank, reservoir or other container is to gal (151 m³ which stores gasoline or any VOC shall be a pressure tank-vessel capable of maintaining working pressures sufficient at all times to that prevent organic the loss of VOC vapor or gas loss to the atmosphere, or is shall be equipped with one or more of the following vapor control devices:

(1) aAn external floating roof, consisting that consists of pontoon type, internal floating cover a pontoon-type or double-deck type roof, which will cover or a fixed roof with an internal-floating cover. The cover shall rest on the surface of the liquid contents at all times (i.e. off the leg supports), except during initial fill, when the storage vessels is completely empty, or during refilling. When the cover is resting on the leg supports, the process of filling, emptying, or refilling shall be continuous and shall be accomplished as rapidly as possible. The floating roof shall be equipped with a closure seal, or seals, to close the space

between the ~~roof cover edge and tank vessel wall~~. Such ~~floating~~ Floating roofs are not appropriate control devices if the ~~organic compounds~~ VOCs have a vapor pressure of ~~11.0 pounds per square inch absolute (568 mm Hg)~~ 11.1 psia (76.6 kPa) or greater under actual conditions. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. Closure seals ~~will for fixed roof vessels with an internal-floating cover shall~~ meet the requirements of ~~252:100-39-30(c)(1)(B); 252:100-39-30(c)(1)(B)(i) and (ii)~~. Closure seals for vessels with external floating roofs shall meet the requirements of ~~252:100-39-30(c)(1)(B)(i), (ii), and (iii)~~.

(2) ~~a~~ A vapor-recovery system ~~consisting that consists~~ of a vapor-gathering system capable of collecting 90 percent by weight or more of the uncontrolled ~~volatile organic compounds~~ VOCs that would otherwise be emitted to the atmosphere and vapor-disposal system capable of processing such ~~organic compounds so as~~ VOCs to prevent emissions in excess of ~~80 mg/liter of gasoline~~ 6.68×10^{-4} lb/gal (80 mg/l) of VOCs transferred to the atmosphere. All ~~tank vessel~~ gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place; ~~or,~~

(3) ~~other~~ Other equipment or methods that are of equal efficiency for purposes of air pollution control as ~~may be used when approved by the Executive Division Director and are~~ in concert with federal guidelines.

(b) Storage of ~~volatile organic compounds~~ — VOCs in vessels with storage capacities of 400-40,000 gallons (~~9.5-953~~ bbls).

(1) No person shall store or permit the storage of ~~Each~~ gasoline or other ~~volatile organic compounds in any stationary VOC storage container vessel~~ with a nominal capacity greater than 400 gallons (~~9.5 bbls~~) gal (1.5 m^3) and less than 40,000 gallons (~~953 bbls~~) unless such container is gal (1.5 m^3) shall be equipped with a submerged fill pipe or is ~~be~~ bottom filled. No person shall store or permit the storage of gasoline or other volatile organic compound in any stationary storage container with an average daily throughput of 30,000 gallons or greater unless the displaced vapors from the storage container are processed by a system that has a total collection efficiency no less than 90 percent by weight of total hydrocarbon compounds in said vapors.

(2) The displaced vapors from each storage vessel with an average daily throughput of 30,000 gal (113,562 l) or greater which stores gasoline or other VOCs shall be processed by a system that has a total collection efficiency no less than 90 percent by weight of total VOCs in the vapors.

(2) (A) The vapor recovery system shall include ~~one or more of the following~~:

(A) (i) a vapor-tight return line from the storage ~~container vessel~~ to the delivery vessel and a system that will ensure that the vapor return line is connected before gasoline or ~~volatile organic compounds~~ VOCs can be transferred into the ~~container storage vessel~~;

or,

(B) (ii) other equipment that has a total collection efficiency no less than 90 percent by weight of the total ~~hydrocarbon compounds~~ VOCs in the displaced vapor provided that ~~if approval of the proposed design installation, and operation is obtained from the Executive Division Director prior to start of construction.~~

(3) (B) Provided, however, that ~~the~~ The requirements for vapor collection of displaced vapors shall not apply to operations that are not major sources.

(c) Loading of ~~volatile organic compounds~~ VOCs.

~~(1) No person shall operate, install or permit the building, operation or installation of a stationary volatile organic compound. Each VOC loading facility unless such loading facility is with an annual throughput of 120,000 gal (454,429 l) or greater or storage capacity greater than 10,000 gal (38 m³) shall be equipped with a vapor-collection and/or disposal system properly installed, in good working order and in operation.~~

~~(2) When volatile organic compounds. While VOCs are loaded through the hatches of a transport vessel, a pneumatic, hydraulic or mechanical means shall be provided to ensure a vapor-tight seal at the hatch.~~

~~(3) A means shall be provided to prevent organic material. VOC drainage from the loading device when it is removed from the transport vessel, or to accomplish complete drainage before removal.~~

~~(4) When loading is effected through by means other than hatches, all loading and vapor lines shall be equipped with fittings which that make vapor-tight connections and which close automatically when disconnected.~~

~~(5) The vapor collection and/or disposal portion of the system shall consist of one or more of the following elements listed in 252:100-39-41(c)(5)(A) through 252:100-39-42(c)(5)(C) in addition to bottom loading or submerged fill of transport vessels: Storage vessels at service stations and bulk plants may be used for intermediate storage prior to recovery/disposal of vapors as specified in 252:100-39-41(c)(5)(A) through 252:100-39-41(c)(5)(C) if they are designed to prevent the release of vapors during use.~~

~~(A) an An absorption/adsorption system or condensation system with that has a minimum recovery efficiency of 90 percent by weight of all the volatile organic compound. VOC vapors and gases entering such disposal system ;~~

~~(B) a A vapor handling system which directs all vapors to a fuel gas incineration system with a minimum disposal efficiency of 95 percent ; or,~~

~~(C) other. Other equipment of that has at least a 90 percent efficiency, provided plans for such equipment are submitted to and approved by the Executive Division Director. Storage vessels at service stations and bulk plants may be used for intermediate storage prior to recovery/disposal of vapors as per 252:100-39-41(c)(5)(A) through 252:100-39-41(c)(5)(C) if they are designed to prevent the release of vapors during use.~~

~~(6) Subsection 252:100-39-41(c) shall apply to any facility which that loads volatile organic compounds. VOCs into any transport vessel designed for transporting volatile organic compounds. VOCs.~~

(d) Transport/delivery.

~~(1) The vapor-laden delivery vessel shall meet one of the following requirements:~~

~~(A) the The delivery vessel must be so designated and operated as to be vapor tight except when sampling, gauging, or inspecting ; or,~~

~~(B) the The delivery vessel must be equipped and operated so that to deliver the volatile organic compound. VOC vapors are delivered to a vapor recovery/disposal system.~~

~~(2) No owner/operator will owner or operator shall allow a delivery vessel to be filled at a facility unable to receive displaced organic. VOC vapors nor service tanks vessels unable to deliver displaced vapors except for tanks/facilities vessels and facilities exempted in 252:100-39-41(b) and 252:100-39-41(c).~~

~~(3) Testing of the tank trucks for compliance with the vapor tightness requirements must be consistent with Appendix "B" EPA Guideline Series Document, "Control of Volatile Organic~~

Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems," EPA 450/2-78-051, or an equivalent method as determined by the ~~Executive Division~~ Director.

(e) **Additional requirements for Tulsa County.** ~~Also see 252:100-39-48 for additional requirements pertaining to Tulsa County.~~

(1) **Applicability.** This Subsection applies only in Tulsa County.

(2) **Storage of VOCs.**

(A) **2,000-40,000 gallons capacity.** Each storage vessel with a nominal capacity greater than 2,000 gal (7.6 m³) and less than 40,000gal (151 m³) that stores gasoline or other VOCs or each storage vessel located at a facility that dispenses more than 120,000 gal/yr of gasoline or other VOCs in addition to being equipped with a submerged fill pipe or being bottom loading, shall be equipped with a vapor control system. The vapor control system shall have an efficiency of no less than 90 percent by weight of the VOCs contained in the displaced vapors and shall be equipped with a pressure relief valve in the atmospheric vent system which maintains a pressure of 16 oz/in.² and ½ oz/in.² vacuum. The vapor recovery system shall include one or more of the following.

(i) A vapor-tight return line from the storage vessel to the delivery vessel and a system that will ensure that the vapor return line is connected before gasoline or VOCs can be transferred into the storage vessel (i.e., popped connectors from the storage vessel to the delivery vessel.).

(ii) A float vent valve assembly installed in the vapor return/vent line on new and existing dual point installations; however, for coaxial installations on existing stations, a vent sleeve extending 6 in. (15 cm) below the top of the vessel will be allowed. Sleeves may be equipped with a 1/16 in. (0.16 cm) air bleed hole.

(iii) A vapor recovery line with a cross-sectional area that is at least half of the cross-sectional area of the liquid delivery line.

(iv) Other equipment that has a total collection efficiency no less than 90 percent by weight of the total VOCs in the displaced vapor if approved by Division Director prior to start of construction.

(B) **Applicability.**

(i) Any vessel with a capacity greater than 2,000 gal (7.6 m³) or any vessel located at a facility that dispenses more than 120,000 gal/yr (454,249 l/yr) shall be and will always remain subject to 252:100-39-41(e)(2). (effective February 12, 1990)

(ii) Exemptions to 252:100-39-41(e)(2) may be granted if the owner or operator shows to the satisfaction of the Division Director that the vessel is used exclusively for agricultural purposes.

(C) **Emission testing.** If emission testing is conducted, the appropriate test methods selected from EPA Methods 1 through 4, 18, 21, 25, 25A and 25B shall be utilized.

(D) **Compliance.** Compliance with 252:100-39-41(e)(2) shall be accomplished by the owner or operator of affected facilities by December 31, 1986.

(E) **Certification.** The owner or operator of a facility shall obtain, by whatever means practicable, certification from the owner or operator of the transport/delivery vessels that all deliveries of gasoline or other VOCs made to their 400-gallon to 40,000-gallon storage facility located in Tulsa County shall be made by transport/delivery vessels that comply with the requirements contained in 252:100-39-41(e)(4). Compliance with 252:100-39-41(e)(2) shall be accomplished by owners or operators of affected facilities no later than December 31, 1990. (Effective February 12, 1990)

(3) Loading of VOCs. In addition to those requirements contained in 252:100-39-41 (c), stationary loading facilities shall be checked annually in accordance with EPA Test Method 21, Leak Test. Leaks greater than 5,000 ppmv shall be repaired within 15 days. Facilities shall retain inspection and repair records for at least two years.

(4) Transport/delivery vessel requirements. In addition to the requirements contained in 252:1000-39-41(d), facilities located in Tulsa County must meet the following requirements.

(A) Maintenance.

(i) The delivery vessel must be maintained so that it is vapor tight except when sampling, gauging, or inspecting. These activities shall not occur while the vehicle is loading or unloading or is in a pressurized state.

(ii) The delivery vessel must be equipped, maintained, and operated to receive vapors from sources identified in 252:100-39-41(b)(1) and 252:100-39-41(b)(2) and retain these and all other vapors until they are delivered into an authorized vapor recovery/disposal system.

(iii) Vessels with defective equipment such as boots, seals, and hoses, or with other deficiencies that would impair the vessels' ability to retain vapors or liquid shall be repaired within 5 days.

(iv) The certified testing facility must certify to the approving agency that the proper testing and repairs have occurred in accordance with 252:100-39-41(e)(4)(B)(i). The vessel must also display on the rear panel a tag showing the date of the pressure test.

(v) No owner or operator shall allow a delivery vessel to be filled at a facility unable to receive displaced VOCs nor service vessels unable to deliver displaced vapors except for vessels/facilities exempted in 252:100-39-41(b). Terminal owners shall not fill vessels that do not display a current tag.

(vi) Delivery vessels may be inspected by representatives of the DEQ in order to determine their state of repair. Such a test may consist of a visual inspection or a vapor test with vapors not to exceed 5,000 ppmv. Failure of a vapor test shall require the owner or operator to make the necessary repairs within 10 days. Failure to certify within 10 days of a vapor test that the necessary repairs have made shall subject the owner or operator to sanctions. Upon certification of repairs, the vessel will be allowed to resume normal operation.

(B) Testing requirements.

(i) Pressure test.

(I) Delivery vessels, delivering or receiving gasoline must be tested one time per year for vapor tightness. The vapor tightness must be consistent with Appendix "A" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems", EPA 450/2-78-051. Tests shall be performed by the owner or a transport service company. Test methods used to test these vessels by owners or testing companies must be approved for use by the Division Director.

(II) The vessel shall be considered to pass the test prescribed in 252:100-39-41(e)(4)(B)(i)(I) when the test results show that the vessel and its vapor collection systems do not sustain a pressure change of more than 3 in. H₂O. There shall be no avoidable visible liquid leaks.

(ii) Vapor test. Testing of the tank trucks for compliance with vapor tightness requirements as required under 252:100-39-41(e)(4)(A)(iv) must be consistent with Appendix "B" EPA Guideline Series Document, "Control of Volatile Organic Compound

Leaks from Gasoline Tank Trucks and Vapor Collection Systems”, EPA 405/2-78-051, as modified for this purpose and contained in 252:100-43-15. The requirements of 252:100-39-41(e) took effect December 15, 1988.

252:100-39-42. Metal cleaning

(a) Cold cleaning facility requirements.

(1) Equipment requirements. ~~No person~~ An owner or operator shall allow the construction or operation of any cold cleaning unit for metal degreasing using an organic solvent unless the following requirements are met ~~which uses a VOC shall:~~

(A) install a cover or door ~~shall be installed~~ on the facility that can be easily operated with one hand;

(B) provide an internal drain board ~~will be provided in such a manner that will allow lid closure if practical;~~ if not practical, ~~the drainage facility may be provide~~ an external drainage facility; and,

(C) attach a permanent, conspicuous label summarizing the operating requirements ~~will be permanently attached~~ specified in 252:100-39-42(a)(2) to the facility.

(2) Operating requirements. ~~The operating requirements specified in 252:100-39-42(a)(1)(C) shall as a minimum specify~~ Owners or operators shall at a minimum:

(A) drain clean parts at least 15 seconds or until dripping ceases before removal;

(B) close degreaser cover when not handling parts in cleaner; ~~and;~~

(C) store waste solvent-VOC in covered containers. Do not dispose or allow disposition in such a manner that more than 20 percent by weight can evaporate into the atmosphere;

(D) not dispose or allow disposition of waste VOC in such a manner that more than 20 percent by weight can evaporate into the atmosphere.

(3) ~~(E) If used, a solvent spray will be of a solid fluid stream (not atomized or spray)~~ use a solid fluid stream, not an atomized spray, when VOC is sprayed.

(4) ~~(3) Requirements for controls.~~ If the solvent volatility vapor pressure of the VOC is greater than 33 mm Hg (0.6 psi)-0.6 psi (4.1 kPa) measured at 38°C (100°F)-100°F (38°C) or if solvent-VOC is heated to 120 degrees C-248°F (120°C), the owner or operator shall apply one or more of the following control devices will be required: ~~devices/techniques.~~

(A) ~~freeboard~~ Freeboard that gives a ~~free board freeboard~~ ratio greater than or equal to 0.7;

(B) ~~water~~ Water cover and where the solvent-VOC is insoluble in and heavier ~~denser~~ than water or such equivalent; ~~or;~~

(C) ~~other~~ Another system of equivalent control as approved by the ~~Executive Division~~ Director.

(5) ~~(4) Compliance and recordkeeping.~~ Compliance will shall be determined in accordance with EPA guidance document “Control of Volatile Organic Emissions from Solvent Metal Cleaning.” 450/2-77-022. Test reports and maintenance and repair records of control equipment will shall be maintained by the source for at least two years.

(b) Vapor-type metal degreasing requirements.

(1) Equipment requirements. ~~No person shall allow the construction or operation~~ An owner or operator of any vapor-type metal degreasing unit using an organic solvent unless a VOC shall ensure that the following requirements are met:

(A) ~~the~~ The unit ~~has shall have~~ a cover or door that can easily be opened and closed without disturbing the vapor zone;

(B) ~~the~~ The unit will shall have the following safety switches:

(i) ~~condenser~~ Condenser flow switch and thermostat or equivalent capable of shutting off the sump heat if condenser coolant is not circulating or coolant exceeds solvent VOC manufacturer's recommended level; ~~and~~;

(ii) ~~spray~~ Spray safety switch capable of shutting off spray pumps if the vapor level drops in excess of ~~four inches~~ 4 in. (10 cm).

(C) ~~the~~ The unit will shall have one or more of the following control devices/techniques:

(i) ~~freeboard~~ Freeboard ratio not less than 0.75, i.e., the ratio of the freeboard to the width of the degreaser wherein the term freeboard is defined as the distance from the top of the vapor zone to the top of the degreaser tank; ~~;~~

(ii) ~~refrigerated~~ Refrigerated chiller, i.e., condenser coils in the upper limit of the vapor zone; ~~;~~

(iii) ~~enclosed~~ Enclosed design, i.e., cover or door is opened only when a part is actually entering or exiting the facility; ~~or~~;

(iv) ~~a~~ A carbon adsorption system with ventilation greater than 50 ~~cfm/ft.~~ 2 cfm/ft² of air/vapor area when cover is open ~~and exhausting~~. The system shall exhaust less than 25 ppm solvent-ppmv VOC average over one adsorption cycle; ~~or~~;

(v) ~~a~~ A control system demonstrated to have a control efficiency equal to or greater than any of the systems in ~~(C) of this paragraph~~ 252:100-39-42(b)(1)(C).

(D) ~~a~~ A permanent conspicuous label summarizing operating ~~procedures will~~ requirements in 252:100-39-42(b)(2) shall be attached to the facility ~~unit~~.

(2) Operating requirements. ~~The operating requirements referred to in 252:100-39-42(b)(1)(D) shall as a minimum specify:~~ An owner or operator of a vapor type metal degreasing unit using VOC shall ensure that the following requirements are met.

(A) As a minimum operators shall:

(i) keep the cover closed at all times except when processing work degreasing parts;

(B) minimize solvent carry-out by the following measures:

(i) ~~(ii)~~ rack parts to allow full drainage;

(ii) ~~(iii)~~ move parts in and out of the degreaser at less than 3.3 m/sec. (11 ft/min.) 11 ft/min (3.4 m/min);

(iii) ~~(iv)~~ degrease the workload in the vapor zone at least 30 sec. seconds or until condensation ceases;

(iv) ~~(v)~~ tip out any pools of solvent VOC on the cleaned parts before removal;

(v) ~~(vi)~~ allow parts to dry within the degreaser for at least 15 sec. seconds or until visually dry;

(vi) assure that VOC leaks are immediately repaired or the degreaser is shut down;
and

(viii) store waste VOC only in closed containers.

(B) As a minimum operators shall not:

(C) ~~do not~~ (i) degrease porous or absorbent materials, such as cloth, leather, wood or rope;

(D) (ii) workloads should not allow workloads to occupy more than half of the degreaser's open top area;

(E) (iii) never spray above the vapor level;

(F) assure solvent leaks immediately repaired or the degreaser is shut down;

~~(G)(iv) do not dispose of waste solvent or transfer it to another party in such a manner that allow greater than 20 percent of the VOC waste (by weight) will to evaporate into the atmosphere. Store waste solvent only in closed containers when disposing of the waste or transferring the waste to another party;~~

~~(H)(v) allow exhaust ventilation should not to exceed $20\text{m}^3/\text{min}$. per m^2 (65 cfm per ft^2) $65\text{ cfm}/\text{ft}^2$ ($20\text{ m}^3/\text{min}/\text{m}^2$) of degreaser open area, unless necessary to meet OSHA requirements. Ventilation fans should not be used near the degreaser opening; and,~~

~~(vi) use ventilation fans near the degreaser opening; or,~~

~~(I)(vii) allow water should not to be visually detectable in solvent VOC exiting the water separator.~~

(3) **Compliance and recordkeeping.** Compliance ~~will~~ shall be determined in accordance with EPA document 450/2-77-022 and all test and maintenance records ~~will~~ shall be retained by the source for at least two years.

(c) **Conveyorized degreasing unit requirements.**

(1) **Operating requirements.** ~~No person shall operate~~ An owner or operator of a conveyorized degreasing unit using VOC shall ensure that ~~unless the following requirements are met:~~

~~(A) exhaust~~ Exhaust ventilation should ~~shall~~ not exceed $20\text{m}^3/\text{min}$. per m^2 (65 cfm per ft^2) $65\text{ cfm}/\text{ft}^2$ ($20\text{ m}^3/\text{min}/\text{m}^2$) of degreaser opening, unless necessary to meet OSHA requirements. Work place fans should not be used near the degreaser opening;

~~(B) Work place fans shall not be used near the degreaser opening.~~

~~(B)(C) — minimize carry-out~~ Carry-out emissions shall be minimized by:

(i) racking parts for best drainage; and,

(ii) maintaining vertical conveyor speed at less than $3.3\text{ m}/\text{min}$. ($11\text{ ft.}/\text{min.}$); $11\text{ ft}/\text{min}$ ($3.4\text{ m}/\text{min}$).

~~(C)(D) do~~ Evaporation of waste VOC into the atmosphere shall not dispose of waste solvent or transfer it to another party in such a manner that be greater than 20 percent of the waste (by weight) can evaporate into the atmosphere. Store waste solvent only in covered containers; when disposing of the waste or transferring the waste to another party.

~~(E) Waste VOC shall be stored only in covered containers.~~

~~(D)(F) repair solvent VOC leaks must be repaired immediately, or shut down the degreaser ; must be shut down.~~

~~(E)(G) water should~~ Water shall not be visibly detectable in the solvent VOC exiting the water separator ; and,

~~(F)(H) a~~ A permanent conspicuous label will be attached to the facility summarizing the operating requirements listed in 252:100-39-42(b) and 252:100-39-42(c) shall be attached to the unit.

(2) **Control requirements.** In addition to the requirements in 252:100-39-42(c)(1), any unit that has an air/vapor interface of more than ~~2.0m^2~~ 21.5 ft^2 (2.0 m^2) shall be subject to the following control requirements:

(A) **Major control devices.** The degreaser must be controlled by either:

(i) a refrigerated chiller ;

(ii) a carbon adsorption system, with that exhausts less than 25 ppmv of VOC averaged over a complete adsorption cycle and has ventilation equal to or greater than $15\text{ m}^2/\text{min}$ per m^2 ($50\text{ cfm}/\text{ft}^2$) $50\text{ cfm}/\text{ft}^2$ ($15\text{ m}^3/\text{min}/\text{m}^2$) of air/vapor area (when

down-time covers are open), and exhausting less than 25 ppm of solvent by volume averaged over a complete adsorption cycle; or,

(iii) a system demonstrated to have control efficiency equivalent to or better than either of the above.

(B) **Carryover prevention.** Either a drying tunnel, or another means such as rotating (tumbling) basket, sufficient to prevent cleaned parts from carrying out solvent-VOC liquid or vapor subject to space limitations must be installed.

(C) **Safety switches.** The following safety switches must be installed and be operational:

(i) Condenser flow switch and thermostat that (shuts off sump heat if coolant is either not circulating or too warm).

(ii) Spray safety switch that (shuts off spray pump or conveyor if the vapor level drops excessively, e.g. more than ~~10 cm (4 in.)~~ 4 in (10 cm)).

(iii) Vapor level control thermostat that (shuts off sump heat when vapor level rises too high).

(D) **Minimized openings.** Entrances and exits ~~should~~ shall silhouette work loads so that the average clearance (between parts and the edge of the degreaser opening) is either less than ~~10 cm (4 in.)~~ 4 in (10 cm) or less than 10 percent of the width of the opening.

(E) **Covers.** Down-time ~~cover covers~~ must be placed over entrances and exits of conveyorized degreasers immediately after the conveyor and exhaust are shutdown and removed just before they are started up.

(3) Compliance ~~will~~ shall be determined in accordance with EPA document 450/2-77-022 and all. All test and maintenance records ~~will~~ shall be retained by the source for at least two years.

(d) **Alternative control methods.** As an alternative to the requirements of 252:100-39-42(a) through 252:100-39-42(c), and subject to EPA approval, an operator may request the approval by the Division Director of other methods of control may be approved by, subject to EPA approval, the Executive Director upon application by a source; provided, the The applicant can must demonstrate that the proposed method will preclude no less than prevent at least 80 percent of the emissions from each source from being emitted to the atmosphere, as determined by the appropriate test methods selected from EPA Methods 1 through 4, 18, 25, 25A and 25B.

252:100-39-43. Graphic arts systems

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

(1) **"Flexographic printing"** means the application of words, designs and pictures to a substrate by means of a roll printing technique in which the pattern to be applied is raised above the printing roll and the image carrier is made of rubber or other elastomeric materials.

(2) **"Packaging rotogravure printing"** means rotogravure printing upon paper, paper board, metal foil, plastic film, and other substrates, ~~which that~~ are, in subsequent operations, formed into packaging products and labels for articles to be sold.

(3) **"Publication rotogravure printing"** means rotogravure printing upon paper which is subsequently formed into books, magazines, catalogues, brochures, directories, newspaper supplements, and other types of printed materials.

(4) **"Roll printing"** means the application of words, designs and pictures to a substrate usually by means of a series of hard rubber or steel rolls each with only partial coverage.

(5) "Rotogravure printing" means the application of works, designs and pictures to a substrate by means of a roll printing technique ~~which~~ that involves an intaglio or recessed image areas in the form of cells.

(b) **Applicability.**

~~(1) This Section applies to all packaging rotogravure, publication rotogravure, and flexographic printing facilities located in Tulsa and Oklahoma counties.~~

~~(2) This Section applies only to only packaging rotogravure, publication rotogravure, and flexographic printing facilities whose potential emission emissions of organic solvent VOC are is equal to or more than 90 megagrams (106 grams) per year (100 tons/yr.) 100 tons/yr (90 Mg/yr). Potential emissions are to shall be calculated based on historical records of actual consumption of solvent VOC and ink.~~

(c) **Provisions for specific processes.**

~~(1) No An owner or operator of a packaging rotogravure, publication rotogravure or flexographic printing facility subject to this Section and employing solvent which uses VOC containing ink may operate, cause, allow or permit the operation of the facility unless shall ensure that one of the following conditions is met.~~

~~(A) the The volatile fraction of ink, as it is applied to the substrate, contains 25.0 percent by volume or less of organic solvent VOC and 75.0 percent by volume or more of water;~~

~~(B) the The ink as it is applied to the substrate, less water, contains 60.0 percent by volume or more of nonvolatile material ; or ;~~

~~(C) the The owner or operator installs and operates:~~

~~(i) a carbon adsorption system which that reduces the organic solvent VOC emissions from the capture system by at least 90.0 percent by weight;~~

~~(ii) an incineration system which that oxidizes at least 90.0 percent of the nonmethane volatile organic solvent VOC measured as total combustible carbon to carbon dioxide and water; or,~~

~~(iii) an alternative organic solvent VOC emission reduction system demonstrated to have at least 90.0 percent reduction efficiency, measured across the control system, and which has been approved by the Executive Division Director.~~

~~(2) A capture system must be used in conjunction with the emission control systems in 252:100-39-43(c)(1)(C). The design and operation of the capture system must be consistent with good engineering practice, and shall be required to provide for an overall reduction in volatile organic compound VOC emissions of at least:~~

~~(A) 75.0 percent where a publication rotogravure process is employed;~~

~~(B) 65.0 percent where a packaging rotogravure process is employed ; or ;~~

~~(C) 60.0 percent where a flexographic printing process is employed.~~

~~(d) **Compliance schedule.** Compliance with this Section will shall be accomplished by affected facilities within two (2) years of approval of this Subchapter by the Oklahoma Environmental Quality Board by May 23, 1982.~~

~~(e) **Testing.** Test procedures to determine compliance with this Subchapter must be consistent with EPA Reference Method 24 or equivalent ASTM Methods.~~

252:100-39-44. Manufacture of pneumatic rubber tires

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

(1) "Automatic tread end cementing" means the application of a ~~solvent~~-VOC based cement to the tire tread ends by automated devices.

(2) "Bead dipping" means the dipping of an assembled tire bead into a ~~solvent~~-VOC based cement.

(3) "Green tires" means assembled tires before molding and curing have occurred.

(4) "Green tire spraying" means the spraying of green tires, both inside and outside, with release compounds ~~which~~-that help remove air from the tire during molding and prevent the tire from sticking to the mold after curing.

(5) "Manual tread end cementing" means the application of a ~~solvent~~VOC based cement to the tire tread ends by manufacturers.

(6) "Passenger type tire" means agricultural, airplane, industrial, mobile home, light and medium duty truck, and passenger vehicle tires with a bead diameter up to but not including 20.0 inches and cross section dimension up to 12.8 inches.

(7) "Pneumatic rubber tire manufacture" means the production of pneumatic rubber, passenger type tires on a mass production basis.

(8) "Undertread cementing" means the application of a ~~solvent~~-VOC based cement to the underside of a tire tread.

(9) "Water based sprays" means release compounds, sprayed on the inside and outside of green tires, in which solids, water and emulsifiers have been substituted for ~~organic solvents~~VOCs. These sprays may contain an average of up to five percent ~~organic solvent~~VOC.

(b) **Applicability.**

(1) This Section applies to VOC emissions ~~from the following operations in~~ from all major source pneumatic rubber tire manufacturing facilities located in Oklahoma County ~~from~~:

- (A) undertread cementing;
- (B) automatic tread end cementing; and,
- (C) green tire spraying.

(2) The provisions of this Section do not apply to the ~~productions~~production of specialty tires for antique or other vehicles when produced on an irregular basis or with short production runs. This exemption applies only to tires produced on equipment separate from normal production lines for passenger type tires.

(3) Manual tread end cementing operations are exempt from the provisions of this Section.

(c) **~~Provisions for specific processes~~Control requirements.**

(1) Undertread cementing or automatic tread end cementing. The owner or operator of an undertread cementing, or automatic tread end cementing, operation subject to this Section shall: install and operate the following.

(A) ~~install and operate a~~ A capture system, designed to achieve maximum reasonable capture from all undertread cementing, and automatic tread end cementing operations. Maximum reasonable capture would require that hood enclosures be designed ~~in such a manner~~ to minimize open areas and enclose as much of the emission source as practical while maintaining a minimum in-draft velocity of 200 ~~feet per minute~~ ft/min (61 m/min) except during times when the enclosure must be opened to allow work inside or for the inspections of the product in progress. Maximum reasonable capture shall be consistent with ~~the following documents~~:

- (i) Industrial Ventilation, A Manual of Recommended Practices, 14th Edition, American Federation of Industrial Hygienists ~~;~~ and,

(ii) Recommended Industrial Ventilation guidelines, U.S. Department of Health Education and Welfare, National Institute of Occupational Safety and Health.

(B) ~~install and operate a~~ A control device that meets the requirements of one of the following ~~systems~~.

(i) A carbon adsorption system designed and operated ~~in a manner such so~~ that there is at least an initial 95.0 percent removal of VOC by weight from the gases ducted to the control device with at least a 90 percent 3 year removal average ~~;~~ or,

(ii) An incineration system that oxidizes at least 90.0 percent of the ~~nonmethane volatile organic compounds (VOC VOCs~~ (measured as total combustible carbon) which enter the incinerator to carbon dioxide and water.

(iii) ~~An alternative volatile organic compound VOC~~ emission reduction system certified by the owner or operator to have at least a 90.0 percent reduction efficiency, measured across the control system, and that has been approved by the ~~Executive Division~~ Director.

(2) **Green tire spraying.** The owner or operator of a green tire spraying operation subject to this Section shall implement one of the following means of reducing ~~volatile organic compound VOC~~ emissions:

(A) ~~substitute~~ Substitute water-based sprays for the normal ~~solvent-based VOC-based~~ mold release compound ~~;~~ or,

(B) ~~install~~ Install a capture system designed and operated ~~in a manner that will to~~ capture and transfer at least 90.0 percent of the VOC emitted by the green tire spraying operation to a control device, and install and operate a control device that meets the requirements of one of the following ~~systems~~.

(i) ~~a~~ A carbon adsorption system designed and operated ~~in a manner such so~~ that there is at least 95.0 percent removal of VOC by weight from the gases ducted to the control device ~~;~~ or,

(ii) ~~an~~ An incineration system that oxidizes at least 90.0 percent of the ~~nonmethane volatile organic compounds (VOC VOCs~~ (measured as total combustible carbon) to carbon dioxide and water ~~;~~ or,

(iii) ~~an~~ An alternative ~~volatile organic compound VOC~~ emission reduction system approved by the Division Director and certified by the owner or operator to have at least a 90.0 percent reduction efficiency, measured across the control system, ~~that has been approved by the Executive Director.~~

(3) **Exemption.** If the total ~~volatile organic compound VOC~~ emissions from all undertread cementing, tread-end cementing, bead dipping, and green tire spraying operations at a pneumatic rubber tire manufacturing facility do not exceed 57 ~~grams per tire/tire~~, 252:100-39-44(c)(1) and 252:100-39-44(c)(2) shall not apply.

~~(4) An owner or operator of an undertread cementing, tread-end cementing, bead dipping or green tire spraying operation subject to this Section may, instead of implementing measures required by 252:100-39-44(c)(1) and 252:100-39-44(c)(2), submit to the Executive Director a petition for alternative controls. The petition must be submitted in writing before September 15, 1981 and must contain:~~

~~(A) the name and address of the company and the name and telephone number of a responsible company representative over whose signature the petition is submitted;~~

~~(B) a description of all operations conducted at the location to which the petition applies and the purpose the volatile organic compound emitting equipment serves within the operations;~~

~~(C) reference to the specific emission limits, operational and/or equipment controls for which alternative emission limits, operational and/or equipment controls are proposed;~~

~~(D) a detailed description of the proposed alternative emission limits, operational and/or equipment controls, the magnitude of volatile organic compound emission reduction which will be achieved, and the quantity and composition of volatile organic compounds which will be emitted if the alternative emission limits, operational and/or equipment controls are instituted;~~

~~(E) a schedule for the installation and/or institution of the alternative operational and/or equipment controls in conformance with the appropriate compliance schedule section; and,~~

~~(F) a demonstration that the alternative control program constitutes reasonably available control technology for the petitioned facility. The factors to be presented in this demonstration include but are not limited to:~~

~~(i) the capital expenditure necessary to achieve the petitioned level of control;~~

~~(ii) the impact of these costs on the firm;~~

~~(iii) the energy requirements of the petitioned level of control;~~

~~(iv) the impact on the environment in terms of any increase in air, water and solid waste effluent discharge of the petitioned level of control;~~

~~(v) any adverse worker or product safety implications of the petitioned level of control; and,~~

~~(vi) an analysis for each of the factors in 252:100-39-44(c)(4)(F)(i) through 252:100-39-44(c)(4)(F)(v) for the control levels specified in 252:100-39-44(c)(1) and 252:100-39-44(c)(2).~~

~~(5) The Executive Director may approve a Petition for Alternative Control if:~~

~~(A) the petition is submitted in accordance with 252:100-39-44(c);~~

~~(B) the petition demonstrates that the alternative controls represent reasonable available control technology; or,~~

~~(C) the petition contains a compliance schedule for achieving and maintaining a reduction of volatile organic compound emissions as expeditiously as practicable, but no later than the photochemical oxidant attainment date.~~

(d) Compliance schedule. Compliance with this Section will be accomplished by affected facilities on or before December 31, 1982.

(e) Testing and monitoring.

(1) Test procedures to determine compliance with this Section must be approved by the Executive Division Director and be consistent with:

(A) EPA Guideline Series Document "Measurement of Volatile Organic Compounds," EPA-450/2-78-041; and,

(B) Appendix A of "Control of Volatile Organic Emissions from Existing Stationary Sources - Volume II: Surface coating of Cans, Coils, Paper, Fabrics, Automobiles, and Light-Duty Trucks," EPA-450/2-77-008.

(2) The Executive Division Director may accept, instead of green tire spray analysis, a certification by the manufacturer of the composition of the green tire spray, if supported by actual batch formulation records.

(3) If add-on control equipment is used, continuous monitors of the following parameters shall be installed, periodically calibrated, and operated at all times that the associated control equipment is operating: These monitors shall measure:

- (A) ~~exhaust gas temperatures~~ temperature of incinerators ~~an incinerator~~;
- (B) temperature rise across a catalytic incinerator bed;
- (C) breakthrough of VOC on a carbon adsorption unit; and,
- (D) any other parameter for which a continuous monitoring or recording device is required by the ~~Executive Division~~ Director.

252:100-39-45. Petroleum (solvent) dry cleaning

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

- (1) **"Cartridge filters"** means perforated canisters containing filtration paper and/or activated carbon that are used in a pressurized system to remove solid particles and fugitive dyes from soil-laden petroleum solvent.
- (2) **"Containers and conveyors ~~and of petroleum solvent~~"** means piping, ductwork, pumps, storage tanks, and other ancillary equipment that are associated with the installation and operation of washers, dryers, filters, stills, and settling tanks.
- (3) **"Dry cleaning"** means a process of the cleaning of textiles and fabric products in which articles are washed in a non-aqueous solution (petroleum solvent) and then dried by exposure to a heated air stream.
- (4) **"Housekeeping"** means those measures and precautions necessary to minimize the release of petroleum solvent to the atmosphere.
- (5) **"Operations parameters"** means the activities required to insure that the equipment is operated in a manner to preclude the loss of petroleum solvents to the atmosphere.
- (6) **"Perceptible leaks"** means any petroleum solvent vapor or liquid leaks that are conspicuous from visual observation, such as pools or droplets of liquid, or buckets or barrels of petroleum solvent or petroleum solvent-laden waste standing open to the atmosphere.
- (7) **"Petroleum solvent"** means organic material produced by petroleum distillation comprising a hydrocarbon range of 8 to 12 carbon atoms per organic molecule that exists as a liquid under standard conditions.

(b) **Applicability.** This Section applies to petroleum solvent washers, dryers, ~~solvent~~-filters, settling tanks, vacuum stills, and other containers and conveyors of petroleum solvent that are used in petroleum solvent dry cleaning facilities in Tulsa County only.

(c) **~~Provisions for specific processes~~ Operating requirements.**

- (1) The owner or operator of a petroleum solvent dry cleaning facility shall not operate any dry cleaning equipment using petroleum solvents unless:
 - (A) there are no perceptible liquid or vapor leaks from any portion of the equipment;
 - (B) all washer lint traps, button traps, access doors and other parts of the equipment where petroleum solvent may be exposed to the atmosphere are kept closed at all times except when required for proper operation or maintenance;
 - (C) the still residue is stored in sealed containers. ~~The and the~~ used filtering material is to be placed into a sealed container suitable for use with petroleum solvents, immediately after removal from the filter and ~~be~~-disposed of in the prescribed manner; or,

(D) cartridge filters containing paper or carbon or a combination thereof, which are used in the dry cleaning process are to be drained in the filter housing for at least 24 hours prior to removal.

(2) The owner or operator of a petroleum solvent dry cleaning facility shall not operate any drying tumblers and cabinets that use petroleum solvents unless tumblers and cabinets are operated in such a manner as to control petroleum solvent vapor leaks by reducing the number of sources where petroleum solvent is exposed to the atmosphere. Under no circumstances should there be any open containers (can, buckets, barrels) of petroleum solvent or petroleum solvent-containing material. Equipment containing solvent (washers, dryers, extractors, and filters) should remain closed at all times other than during maintenance or load transfer. Lint filter and button trap covers should remain closed except when petroleum solvent-laden lint and debris are removed. Gaskets and seals should be inspected and replaced when found worn or defective. Solvent-laden-Petroleum solvent-laden clothes should never be allowed to sit remain exposed to the atmosphere for longer periods than are necessary for load transfers. Finally, vents on petroleum solvent-containing waste and new petroleum solvent storage tanks should be constructed and maintained in a manner that limits petroleum solvent vapor emissions to the maximum possible extent.

(3) The owner or operator shall repair all petroleum solvent vapor and liquid leaks within 3 working days after identifying the sources of the leaks. If necessary repair parts are not on hand, the owner or operator shall order these parts within 3 working days, and repair the leaks no later than 3 working days following the arrival of the necessary parts.

(d) **Disposal of filters.** Filters from the petroleum dry cleaning facility shall be disposed of by:

- (1) incineration at a facility approved by the fire marshall's office for such disposal;
- (2) by recycling through an approved vendor of this service; or,
- (3) by any other method approved by the ~~Executive Division~~ Director.

(e) **Compliance schedule.** Compliance with 252:100-39-45(c)(1) through 252:100-39-45(c)(3), will shall be accomplished by affected facilities on or before October 1, 1986.

252:100-39-46. Coating of parts and products

(a) **Applicability.** This Section shall apply only to ~~these~~ industries located in Tulsa County which manufacture and/or coat metal parts and products. ~~This Section is applicable to, such as~~ large farm machinery, small farm machinery, small appliances, commercial machinery, industrial machinery and fabricated metal products. Architectural coating, aerospace coating, and automobile refinishing are not included.

(b) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

- (1) **"Air or forced air dry coatings"** means coatings ~~which~~ that are dried by the use of air or forced warm air at temperatures up to 194°F.
- (2) **"Clear coat"** means a coating ~~which~~ that lacks color and opacity or is transparent and uses the undercoat as a reflectant base.
- (3) **"Extreme performance coatings"** mean coatings designed for harsh exposure or extreme environmental conditions (~~i.e.,~~ e.g., exposure to the weather, all of the time, temperature above 200°F, detergents, abrasive and scouring agents, solvents, corrosive atmosphere or similar conditions).

(4) "**Facility**" means all emission sources located on ~~a contiguous property~~ properties under common control which are affected by the surface coating provisions of OAC 252:100-37 and 252:100-39.

(5) "**Powder**" means a coating ~~which~~ that is applied in a finely divided (~~powder~~) state by various methods, and becomes a continuous, solid film when the metal part or product is moved to an oven for curing.

(6) "**Transfer efficiency**" means the weight (or volume) of coating solids adhering to the surface being coated divided by the total weight (or volume) of coating solids delivered to the applicator.

(c) **Existing source requirement.** No owner or operator ~~subject to the provisions of this Section~~ shall discharge or cause the discharge into the atmosphere from an existing coating line or individual coating operation any ~~organic solvent~~ VOC in excess of the amounts listed in 252:100-39-46(d) as calculated by EPA method 24, 40 CFR Part 60.

(d) **Standards.** The following table enumerates the limitations for surface coatings in pounds of ~~solvent~~ VOC per gallon of coating as applied (~~less water/exempt solvent~~): (water and exempt compounds). If more than one limit listed in the table is applicable to a specific coating, then the least stringent limitation shall be applied.

Coating type	Limitations	
	lbs/gal	kg/liter
Air or Forced Air Dry	3.5	<u>.420.42</u>
Clear Coat	4.3	<u>.520.52</u>
Extreme Performance	3.5	<u>.420.42</u>
Powder	0.4	<u>.050.05</u>
Other	3.0	<u>.360.36</u>

(e) **Emission factor.** For the purposes of calculating an emission factor (EF) in pounds ~~VOS~~ VOC per gallon of coating solids for use in the development of a plant-wide emission plan as described in 252:100-39-46(j)(1), the following formula will be utilized:

$$EF = V D / 1-(V+W) = V D / S$$

where:

- (1) V = volume fraction of ~~solvent~~ VOC in coating;
- (2) D = density of ~~solvent~~ VOC in the coating;
- (3) W = volume fraction of water in coating, and
- (4) S = 1-(V+W) = volume fraction of solids in coating.

(f) **Emission limit Compliance.** ~~If more than one emission limit as listed in 252:100-39-46(d) is applicable to a specific coating, then the least stringent emission limitation shall be applied.~~ Compliance with the coating limits listed in 252:100-39-46(d) is to be calculated on a daily weighted average basis.

(g) **Solvent-containing VOC-containing materials.** ~~Solvent-containing~~ VOC-containing materials used for clean up shall be considered in the ~~emissions~~ VOC content limits listed in 252:100-39-46(d) unless:

- (1) the solvent-VOC containing materials are maintained in a closed container when not in use;
- (2) closed containers are used for the disposal of cloth or paper or other materials used for surface preparation and cleanup;
- (3) the spray equipment is disassembled and cleaned in a solvent-VOC vat and the vat is closed when not in use; or,
- (4) the solvent-VOC containing materials used for the clean up of spray equipment are sprayed directly into closed containers.

(h) **Exemptions.** ~~Exemptions to this Section shall be permitted for combined emissions at one site/facility, which do not exceed a 10 tons/year emissions cutoff based on the facility's Facilities with a potential to emit VOCs 10 tons/year or less of VOC from coating operations are exempt from this Section. Once this limit is exceeded, the source facility will always be subject to the limits of this Section.~~

(i) **Alternate standard.** ~~Emissions-Coatings with VOC contents in excess of those permitted allowed by 252:100-39-46(d) are allowable may be used if both of the following conditions are met:~~

(1) ~~emissions that would result in the absence of control Emissions are reduced to levels equivalent to those permitted by that would occur if the VOC content of the coatings met the limits contained in 252:100-39-46(d) and meet there is an overall control efficiency of at least:~~

- (A) 85 percent, by incineration; or,
- (B) 85 percent, by absorption; or ~~any other equipment of equivalent reliability and effectiveness; and,~~
- (C) 85 percent by any other equipment of equivalent reliability and effectiveness.

(2) ~~no~~ No air pollution, as defined by the Clean Air Act, results.

(j) **Emission plan.**

(1) **Development of a plant-wide emission plan.** ~~An owner/operator owner or operator may develop a plant-wide emission plan consistent with EPA's Emission Trading Policy as published in the December 4, 1986 Federal Register instead of having each coating line comply with the emission VOC content limitations prescribed contained in subsection (d) of this Section, provided:252:100-39-46(d), if the following conditions are met.~~

~~(1)-(A)~~ The owner or operator demonstrates, ~~by means of approved material balance or manual emission test methods,~~ by the methods prescribed in 252:100-5-2.1(d) that sufficient reductions in organic solvent-VOC emissions may be obtained by controlling other facilities-sources within the plant to the extent necessary to compensate for all excess emissions which result from one or more coating lines not achieving the prescribed limitation. Such demonstration shall be described in writing and shall include:

- (A)(i) a complete description of the coating line or lines ~~which will that can~~ not comply with the ~~emission VOC content~~ limitation in 252:100-39-46(d);
- (B)(ii) quantification of emissions, in terms of pounds per day of ~~organic solvents~~VOCs, which are in excess of the prescribed ~~emission-VOC content~~ limitation for each coating line described in ~~252:100-39-46(d)~~252:100-39-46(j)(A)(i);
- (C)(iii) a complete description of ~~each facility and the related control system,~~ if any, for those facilities within the plant where ~~how~~ emissions will be decreased at specific sources to compensate for excess emissions from each coating line described

~~in 252:100-39-46(d)~~252:100-39-46(j)(A)(i) and the date on which such reduction will be achieved;

~~(D)~~(iv) a transfer efficiency based on a 60 percent baseline with emissions expressed in pounds of VOC per gallon of solids when transfer efficiency is used to compensate for excess emissions from spray painting operations, ~~the transfer efficiency shall be based on a 60 percent baseline, with emissions expressed in pounds of solvent per gallon of solids. Credits for improvements in transfer efficiency shall be demonstrated with in-plant testing which complies with approved EPA methods;~~

(v) a demonstration of credits for improvements in transfer efficiency with in plant testing that complies with EPA methods.

~~(E)~~(vi) quantification of emissions, in terms of pounds per day of ~~organic solvents~~VOCs, for each source both before and after the improvement or installation of any applicable control system, or any physical or operational changes to such a facility or facilities to reduce emissions and the date on which such reductions will be achieved; and,

~~(F)~~(vii) a description of the procedures and methods used to determine the emissions of ~~organic solvents~~VOCs.

(2)(B) The plant-wide emission reduction plan does not include decreases in emissions resulting from requirements of other applicable air pollution rules. The plant-wide emission reduction plan as described in the Emissions Trading Policy may include voluntary decreases in emissions accomplished through installation or improvement of a control system or through physical or operational changes to ~~facilities~~emission units, including permanently reduced production or closing a facility, located on the premises of a surface-coating operation.

(3)(2) **Compliance with a plant-wide emission plan.** The implementation of a plant-wide emission reduction plan instead of compliance with the ~~emissions~~ VOC content limitation prescribed in 252:100-39-46(d) has been expressly approved by the Executive Director and the EPA Administrator. Upon approval of a plan, any emissions in excess of those established for each facility under the plan shall be a violation of these rules.

(k) **Compliance, testing, and monitoring requirements.**

(1) The ~~Executive Division~~ Director may require ~~the owner/operator~~ at the expense of the owner or operator a demonstration of a source to demonstrate at his expense, compliance with the emission limits using EPA Methods 24, 24A, 1-4, 25, 25A, 25B in 40 CFR 60.444 or EPA Document 450/3-84-019. At a minimum, such test must show that the overall capture efficiency and destruction efficiency are equal to 85 percent; (e.g., 90 percent capture efficiency multiplied by 95 percent destruction efficiency equals 85.5 percent system efficiency). The one hour bake option in Method 24 is required when doing compliance testing.)

(2) Testing for plant-wide emission plans shall be conducted ~~by the owner/operator at his expense~~ at the expense of the owner or operator to demonstrate compliance with the emission VOC content limits contained in 252:100-39-46(d).

(3) Monitoring shall be required of any ~~owner/operator~~ owner or operator subject to this Section who uses add-on control equipment for compliance. Such monitoring shall include:

~~(A)~~ installation and maintenance of monitors to accurately measure and record operational parameters of all required control devices to ensure the proper functioning of those devices in accordance with design specifications, including:

- ~~(i)(A) the exhaust temperature of direct flame incinerators and/or gas temperature immediately upstream and downstream of any catalyst bed;~~
- ~~(ii)(B) the total amount of volatile organic substances—VOCs recovered by carbon adsorption or other solvent VOC recovery system during a calendar month; and,~~
- ~~(iii)(C) the dates and reasons for any maintenance and repair of the required control devices and the estimated quantity and duration of volatile organic substance emissions during such activities;~~
- ~~(B) maintenance of records of any testing conducted at an affected facility in accordance with the provisions specified in 252:100-39-46(k)(3)(A)(i); and,~~
- ~~(C) maintenance of all records at the affected facility for at least two years and make such records available to representative of the State or local air pollution control agency upon request.~~

~~(l) Reporting and recordkeeping. The owner/operator of a facility subject to this Section shall submit to the Executive Director upon written request, reports detailing specific VOS sources; the quantity of coatings used for a specific time period, VOS content of each coating; capture and control efficiencies; and any other information pertinent to the calculation of VOS emissions. The data necessary to supply the requested information shall be retained by the owner/operator for a minimum of two years.~~

~~(1) The owner or operator of a facility subject to this Section shall submit to the Division Director upon written request reports detailing specific VOC sources; the quantity of coatings used for a specific time period, VOC content of each coating; capture and control efficiencies; and any other information pertinent to the calculation of VOC emissions. The data necessary to supply the requested information shall be retained by the owner or operator for a minimum of two years.~~

~~(2) The owner or operator of a facility subject to this Section shall maintain records of any testing conducted at an affected facility in accordance with the provisions specified in 252:100-39-46(k), as well as all other records, for at least two years. These records shall be available to representatives of the DEQ upon request.~~

~~(m) Compliance date. The date of compliance with the requirements of this Section will be is December 31, 1990.~~

252:100-39-47. Control of ~~VOS~~VOC emissions from aerospace industries coatings operations

(a) Applicability.

~~(1) This Section applies to all aerospace facilities located in Tulsa County. Sources once subject to this Section are always subject.~~

~~(2) This Section does not apply to individual coating formulations—which that, when aggregated, do not exceed fifty-five (55) gallons per year 55 gal/yr for the facility.~~

~~(3) New and modified sources and coating applications not included in the plan are subject to the permit requirements set forth in OAC 252:100-7 and will be submitted to EPA as source-specific SIP revision, unless:~~

~~(A) the new coatings meet the presumption norm (3.5 pound VOS per gallon less water and exempt solvents limit); or,~~

~~(B) the total usage of the new coating does not exceed fifty-five (55) gallons per year of each coating formulation.~~

~~(4)(3) Exemptions to this Section shall be permitted for combined emissions at one site/facility which do not exceed a ten ton per year emission cut-off based on the Facilities with a potential of the facility to emit VOS-10 tons/year or less of VOC from coatings operations are exempt from this Section.~~

(b) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

(1) "**Aerospace**" means the industries, air bases and depots that ~~design and manufacture, rework, or repair~~ aircraft or military equipment components for either commercial or military customers.

(2) "**Aircraft**" means any machine designed to travel through the earth's atmosphere. This group includes but is not limited to: airplanes, balloons, dirigibles, drones, helicopters, missiles, and rockets.

(3) "**Alternate ~~reasonable~~ reasonably available control technology (ARACT)**" means the lowest emission limit that a particular source is capable of meeting by the application of control technology that is reasonably available considering technological and economic feasibility as determined on a case-by-case basis.

(4) "**Coating**" means a material which covers a surface which alters the surface characteristics and from which ~~Volatile Organic Solvents-VOCs~~ can be emitted during the application and/or curing process.

(5) "**CTG**" means the Control Techniques Guidance Document "Control of Volatile Organic Emissions From Existing Stationary Sources, Volume VI: Surface Coating of Miscellaneous Metal Parts and Products," EPA No. 450/2-78-015.

(6) "**Facility**" means all of the pollutant-emitting activities ~~which~~ that belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person or persons under common control.

(7) "**Low ~~organic solvent~~ VOC coating (LOSC)(LVOCC)**" means a coating which ~~contain~~ that contains less ~~organic solvent~~ VOC than the conventional coatings used by the industry. Low ~~organic solvent~~ VOC coatings include waterborne, higher solids, electrodeposition, and powder coatings.

(8) "**Reasonable ~~Reasonably~~ available control technology (RACT)**" means the ~~lowest emission limit that a particular source is capable of meeting by the application of control technology that is reasonably available considering technological and economic feasibility and the need to impose such controls to attain and maintain a National Ambient Air Quality Standard.~~

(c) **General requirements.** ~~All affected facilities shall develop an emissions reduction plan as set forth in 252:100-39-47(d). Said plan, upon approval, shall constitute the determination of ARACT for that particular facility. ARACT must be installed and operating as approved in the plan no later than January 1, 1991 for existing facilities, unless additional phased compliance dates are otherwise approved in the plan. Provided, however, that in the case that Tulsa County is still nonattainment for ozone within five (5) years of approval of ARACT, the Emission Reductions Plan and the ARACT determination shall be subject to review and modification.~~

(1) All affected facilities shall develop an emissions reduction plan as set forth in 252:100-39-47(d). This plan, upon approval, shall constitute ARACT for that particular facility.

(2) ARACT must be installed and operating as provided in the approved plan no later than January 1, 1991 for existing facilities, unless additional phased compliance dates are approved in the plan.

(3) New and modified sources and coating applications not included in the plan are subject to the permit requirements set forth in 252:100-7 or 252:100-8, and will be submitted to EPA as source-specific SIP revisions, unless one of the following applies.

(A) The new coatings meet the presumptive norm of 3.5 pounds of VOC per gallon less water and exempt compounds.

(B) The total usage of the new coating does not exceed 55 gal/yr of each coating formulation.

(d) **Emissions reduction plan.**

(1) ~~Plan development. Each owner/operator shall develop an emissions reduction plan for all affected facilities. Each plan shall include the following:~~

~~(A) a detailed, reasoned and exhaustive review of:~~

~~(i) each source of emissions within the facility and~~

~~(ii) (2) the entire plant collectively;~~

(A) a detailed, reasoned and exhaustive review of each source of emissions within the facility and the entire plant collectively;

(B) identification and quantification of emissions, in terms of pounds per day, of all organic solvents VOC both before and after the application of ARACT;

(C) a detailed, innovative engineering effort directed toward finding alternative air management schemes that can be incorporated in order to abate emissions at costs which are reasonable;

(D) a consideration of the level of control that is achievable using available alternative coatings, to include LVOCC for every application, low organic solvent coatings (LOSC);

~~(E) a consideration of the level of control achievable using available add-on control devices. This demonstration shall include, at a minimum, a demonstration of the feasibility/infeasibility of the following control options:~~

~~(i) carbon absorption;~~

~~(ii) incineration/flaring;~~

~~(iii) condensation; and,~~

~~(iv) a combination of 252:100-39-47(d)(1)(E)(i) and 252:100-39-47(d)(1)(E)(ii).~~

(E) a demonstration of the level of control achievable using available add-on control devices which shall include, at a minimum, the feasibility/infeasibility of carbon adsorption, incineration/flaring, condensation, and a combination of carbon adsorption and incineration/flaring;

~~(F) a consideration of facility redesign, including the following:~~

~~(i) recirculation;~~

~~(ii) reduced air flows;~~

~~(iii) consolidation of spray operations; and,~~

~~(iv) installation of common control devices for two or more separate coatings operations.~~

(F) a consideration of facility redesign, including recirculation, reduced air flows, consolidation of spray operations, and installation of common control devices for two or more separate coating operations;

~~(G) a consideration of alternative applications, to improve transfer efficiency, including:~~

~~(i) high volume low pressure spray equipment;~~

~~(ii) heated spray guns; and,~~

(iii) electrostatic spray equipment/powder coatings.

(G) a consideration of alternative applications, to improve transfer efficiency, including high-volume-low-pressure spray equipment, heated spray guns, and electrostatic spray equipment/powder coatings;

(H) an explanation why each source is not a typical coating source covered by the CTG as defined in 252:100-39-47(b);

(I) a cost/benefit analysis for all control technology considered; and,

(J) a detailed compliance schedule which that includes the emission limit and/or control techniques for each emission source. This schedule, which together with other relevant considerations, shall be set forth in a separate section of the plan which that summarizes and outlines ARACT for the referenced facility.

(2) **Submission of emission reduction plans.** ~~Upon completion, the Three copies of the emissions reduction plan shall be submitted in triplicate to the Air Quality Division and one shall be submitted to EPA, Region VI. The preparer shall also submit a copy of the plan to Region VI Environmental Protection Agency (EPA), Region VI.~~

(3) **Action on Plan.** ~~Within 30 days of submittal, or of the effective date of this Section May 25, 1990, whichever is later, the Air Quality Division shall, considering any comments submitted by EPA, either approve, modify or disapprove the plan.~~

(4) **Public hearing.** ~~The Division shall, at the first meeting of the Air Quality Council following the approval, modification, or disapproval of the plan, present at public hearing, the staff's findings and ARACT determination. Upon consideration of comments and recommendations from the Council, the owner/operator of the affected facility, the public and EPA, the Department shall, within ten (10) days after the public hearing, issue a final ARACT approval. Final approval shall constitute ARACT for the affected facility. The owner/operator shall be responsible for installation and operational provisions of the approved ARACT, including any specific provisions set forth therein. Any violation of the plan or of its provisions shall constitute a violation of this Section.~~

(5) **Final approval.** ~~Upon consideration of comments and recommendations from the Council, the owner or operator of the affected facility, the public, and EPA, the DEQ shall, within ten (10) days after the public hearing, issue a final ARACT approval. Final approval shall constitute ARACT for the affected facility.~~

(6) **Compliance.** ~~The owner or operator shall be responsible for installation and operational provisions of the approved ARACT. Any violation of the plan or of its provisions shall constitute a violation of this Section.~~

~~(5)(7)~~ **Submission of SIP revision.** ~~Upon approval by the Department DEQ, the ARACT determination shall be submitted to EPA as a SIP revision.~~

(e) **Reporting and recordkeeping.**

(1) **Recordkeeping requirements.** ~~The owner/operator~~ owner or operator shall maintain the following:

(A) a material safety data sheet which documents the volatile organic solvent-VOC content, composition, solids content, solvent-VOC density and other relevant information regarding each coating and solvent-VOC available for use in the affected surface coating processes and information detailing the operational parameters of the coating process sufficient to determine continuous compliance with the applicable control limits. Information as to the amounts of each type coating used and the amounts of solvents used for dilution in each coating type shall be maintained for each coating operation. Daily

~~usage records will be kept for all coatings used that do not comply with the applicable control limits specified in the plan;~~

~~(B) information detailing the operational parameters of the coating process sufficient to determine continuous compliance with the applicable control limits;~~

~~(C) information as to the amounts of each type coating used and the amounts of VOC used for dilution in each coating type for each coating operation;~~

~~(D) daily usage records for all coatings used that do not comply with the applicable control limits specified in the plan; and,~~

~~(B)(E) records shall be maintained of any monitoring and testing conducted at an affected facility in accordance with the provisions specified in 252:100-39-47(f);~~

~~(C)(2) Methods of calculating VOC content in coatings. records—Records required by 252:100-39-47(e)(1)(A) and 252:100-39-47(e)(1)(B) through 252:100-37-47(e)(1)(E) detailing VOC in pounds per gallon of coating (less water and exempt compounds) shall be calculated as follows: $\text{VOC in lbs/gal of coating} = \frac{(W_v - W_x - W_x) - W_v - W_w - W_x}{V_m - V_w - V_x}$ where:~~

~~(A) W_v = weight of all volatiles;~~

~~(B) W_w = weight of water;~~

~~(C) W_x = weight of exempt solvent compounds;~~

~~$V_m = 1$ (one);~~

~~(D) V_w = volume fraction of water; and,~~

~~(E) V_x = volume fraction of exempt solvent compounds.~~

~~(D)(3) Maintenance of records. records—Records required by 252:100-39-47(e)(1)(A) and 252:100-39-47(e)(1)(B) through 252:100-39-47(e)(1)(E) shall be maintained for at least two years and shall be made available upon written request by representatives of the Air Quality Division, U.S. Environmental Protection Agency or the Tulsa City-County Health Department AQD or EPA.~~

~~(2)(4) Alternative recordkeeping provision. Alternatively to 252:100-39-47(e)(1) through 252:100-39-47(e)(3), an equivalent recordkeeping provision which that satisfies the substantive requirements of 252:100-39-47(e)(1) through 252:100-39-47(e)(3) may be approved under the plan.~~

(f) Testing and monitoring.

~~(1) Testing. Each owner/operator—The Division may require testing at the expense of the owner or operator shall, upon a determination by the Air Quality Division that testing is required to establish emission from any particular source or sources, conduct such tests at his own expense. Test methods may include 1-4, 18, 24, 24A, 25A, 25B found in the Appendix A of 40 CFR Part 60, including the procedures found at 40 CFR 60.444.~~

~~(2) Monitoring. Monitoring shall be required of any owner/operator subject to this section owner or operator who uses add-on control equipment for compliance. Such monitoring shall include: accurately measure and record operational parameters of all required control devices to ensure the proper functioning of those devices in accordance with design specifications, including:~~

~~(A) installation and maintenance of monitors to accurately measure and record operational parameters of all required control devices to ensure the proper functioning of those devices in accordance with design specifications, including:~~

~~(i) (A) the exhaust temperature of direct flame incinerators and/or gas temperature immediately upstream and downstream of any catalyst bed;~~

~~(ii) (B) the total amount of volatile organic substances (VOCs) recovered by carbon adsorption or other solvent VOC recovery system during a calendar month; and,~~
~~(iii) (C) the dates and reasons for any maintenance and repair of the required control devices and the estimated quantity and duration of volatile organic substance (VOC) emissions during such activities.~~

~~(B) maintenance of records of any testing conducted at an affected facility in accordance with the provisions specified in 252:100-39-47(f)(2)(A)(i); and,~~

~~(C) maintenance of all records at the affected facility for at least two years and make such records available to representatives of the State or local air pollution control agencies upon request. (252:100-39-47 Effective May 25, 1990)~~

252:100-39-48. Vapor recovery systems [REVOKED]

~~(a) Applicability. This Section applies only in Tulsa County.~~

~~(b) Storage of volatile organic compounds - 400-40,000 gallons (9.5-953 bbls).~~

~~(1) No person shall store or permit the storage of gasoline or other volatile organic compounds in any stationary storage container with a nominal capacity greater than 400 gallons (9.5 bbls) and less than 40,000 gallons (952.4 bbls) unless such container is equipped with a submerged fill pipe or is bottom filled. No person shall store or permit the storage of gasoline or other volatile organic compounds in any stationary storage container with a nominal capacity greater than 2,000 gallons (47.5 bbls) and less than 40,000 gallons (952.4 bbls) unless such container is equipped with a vapor control system that has an efficiency of no less than 90 percent by weight of the volatile organic compounds contained in the displaced vapors and is equipped with a pressure relief valve in the atmospheric vent system which maintains a pressure of 16 ounces per square inch and 1/2 ounce per square inch vacuum.~~

~~(2) The vapor recovery system shall include one or more of the following:~~

~~(A) a vapor-tight return line from the storage container to the delivery vessel and a system that will ensure that the vapor return line is connected before gasoline or volatile organic compounds can be transferred into the container (i.e., popped connectors from the storage container to the delivery vessel.);~~

~~(B) a float vent valve assembly must be installed in the vapor return/vent line on new and existing dual point installations; however, for coaxial installations on existing stations, a vent sleeve extending six inches below the top of the tank will be allowed. Sleeves may be equipped with a 1/16 inch air bleed hole;~~

~~(C) the cross-sectional area of the vapor recovery line must be at least half of the cross-sectional area of the liquid delivery line, or;~~

~~(D) instead 252:100-39-48(b)(2)(A) through 252:100-39-48(b)(2)(C), other equipment that has a total collection efficiency no less than 90 percent by weight of the total hydrocarbon compounds in the displaced vapor provided that approval of the proposed design, installation, and operation is obtained from the Executive Director prior to start of construction.~~

~~(3) Exemptions to this Section may be granted provided the owner/operator shows to the satisfaction of the appropriate authority that the container is used exclusively for agricultural purposes or that the facility, based on the most current 12 month's data, dispenses 120,000 gallons per year or less.~~

~~(4) The applicability of this Section shall be determined by the most restrictive of the 2,000 gallon tank size as specified in 252:100-39-48(b)(1) or the 120,000 gallon annual throughput described in 252:100-39-48(b)(3). However, once a facility places a 2,000 gallon tank in service or exceeds the 120,000 gallon annual throughput described in 252:100-39-48(b)(3), that facility shall always be subject to the provisions of this Section. (effective February 12, 1990)~~

~~(5) If emission testing is conducted, the appropriate test methods selected from EPA Methods 1 through 4, 18, 21, 25, 25A and 25B will be utilized.~~

~~(6) Compliance with this subsection will be accomplished by affected owner/operator by December 31, 1986.~~

~~(7) The owner/operator of a facility or facilities shall obtain, by whatever means practicable, certification from the owner/operator of the transport/delivery vessels that all deliveries of gasoline or other volatile organic compounds made to their facility or facilities located in Tulsa County, shall be made by vessels which comply with the requirements contained in 252:100-39-48(d). Compliance with this Section shall be accomplished by affected owner/operators no later than December 31, 1990. (Effective February 12, 1990)~~

~~(c) Loading of volatile organic compounds.~~

~~(1) No person shall operate, install or permit the building, operation or installation of a stationary volatile organic compound loading facility unless such loading facility is equipped with a vapor collection and/or disposal system properly installed, in good working order and in operation.~~

~~(2) When volatile organic compounds are loaded through the hatches of a transport vessel, a pneumatic, hydraulic or mechanical means shall be provided to ensure a vapor-tight seal at the hatch.~~

~~(3) A means shall be provided to prevent organic material drainage from the loading device when it is removed from the transport vessel, or to accomplish complete drainage before removal.~~

~~(4) When loading is effected through means other than hatches, all loading and vapor lines shall be equipped with fittings which make vapor-tight connections and which close automatically when disconnected.~~

~~(5) The vapor collection and/or disposal portion of the system shall consist of one or more of the following in addition to bottom loading or submerged fill of transport vessels:~~

~~(A) an absorption/adsorption system or condensation system with a minimum recovery efficiency of 90 percent by weight of all the volatile organic compound vapors and gases entering such disposal system;~~

~~(B) a vapor handling system which directs all vapors to a fuel gas incineration system with a minimum disposal efficiency of 95 percent; or,~~

~~(C) other equipment of at least 90 percent efficiency, provided plans for such equipment are submitted to and approved by the Executive Director. Storage vessels at service stations and bulk plants may be used for intermediate storage prior to recovery/disposal of vapors as per 252:100-39-48(c)(5)(A) through 252:100-39-48(c)(5)(C) if they are designed to prevent the release of vapors during use.~~

~~(6) Subsection 252:100-39-48(c) shall apply to any facility which loads volatile organic compounds into any transport vessel designed for transporting volatile organic compounds.~~

~~(7) Facilities will be checked annually in accordance with EPA Test Method 21, Leak Test. Leaks greater than 5000 ppm will be repaired within 15 days. Facilities will retain inspection and repair records for two years.~~

~~(d) Transport/delivery vessel requirements.~~

~~(1) Maintenance.~~

~~(A) The delivery vessel must be maintained so as to be vapor tight except when sampling, gauging, or inspecting. These activities shall not occur while the vehicle is loading or unloading or is in a pressurized state.~~

~~(B) The delivery vessel must be equipped, maintained and operated to receive vapors from sources identified in 252:100-39-41(b)(1) and retain these and all other vapors until they are delivered into an authorized vapor recovery/disposal system.~~

~~(C) Vessels with defective equipment such as boots, seals, and hoses, or with other deficiencies which would impair the vessels ability to retain vapors or liquid shall be repaired within 5 days.~~

~~(D) The certified testing facility must certify to the approving agency that the proper testing and repairs have occurred in accordance with 252:100-39-48(d)(2)(A)(i). The vessel must also display on the rear panel a tag showing the date of the pressure test.~~

~~(E) No owner/operator will allow a delivery vessel to be filled at a facility unable to receive displaced organic vapors nor service tanks unable to deliver displaced vapors except for tanks/facilities exempted in 252:100-39-41(b). Terminal owners shall not fill vessels which do not display a current tag.~~

~~(F) Delivery vessels may be inspected by representatives of the appropriate health agency in order to determine their state of repair. Such a test may consist of a visual inspection, a vapor test with vapors not to exceed 5000 ppm. Failure of a vapor test will require the owner/operator to effect the necessary repairs within 10 days. Unless certification is made to the appropriate health agency within 5 days the vessel will be removed from service by the owner/operator. Failure to certify that the cited repairs have been effected will subject the vessel to sanctions. Upon certification of repairs the vessel will be allowed to operate in a normal manner.~~

~~(2) Testing requirements.~~

~~(A) Pressure test.~~

~~(i) Delivery vessels, delivering or receiving gasoline must be tested one time per year for vapor tightness. The vapor tightness test must be consistent with Appendix "A" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems", EPA 450/2-78-051. Tests shall be performed by the owner or a reputable transport service company. Test methods used to test these vessels by owners or testing companies must be approved for use by the Executive Director.~~

~~(ii) The vessel will be considered to pass the test prescribed in 252:100-39-48(d)(2)(A)(i) when the test results show that the vessel and its vapor collection systems do not sustain a pressure change of more than 3 inches of H₂O in addition there shall be no avoidable visible liquid leaks.~~

~~(B) Vapor test. Testing of the tank trucks for compliance with vapor tightness requirements as required under 252:100-39-41(d)(1)(F) must be consistent with Appendix "B" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems", EPA 405/2-78-051, as~~

modified for this purpose and contained in 252:100-43-15. The requirements of 252:100-39-48 will become effective December 15, 1988.

252:100-39-49. Manufacturing of fiberglass reinforced plastic products

~~(a) **General provisions.** Within 12 months after promulgation of this Section all affected facilities shall limit emissions of VOS from fiberglass manufacturing to those listed in 252:100-39-49(a)(1), or have an approved plan for the reduction of such emissions. The plan must be submitted to the Executive Director within 6 months after promulgation of this Section, and shall detail those emissions which will be controlled, the means by which control will be achieved and will demonstrate that compliance will be achieved within two years from the date of promulgation of this Section. The approval authority for such plans shall reside with the Air Quality Council. All approved plans shall be submitted as SIP revisions.~~

~~(1) Compliance with 252:100-39-49(a) shall be accomplished by use of control equipment which can demonstrate an 85 percent reduction in the VOS released from each process gas stream, e.g. 90 percent capture efficiency multiplied by 95 percent destruction efficiency equals 85.5 percent system efficiency.~~

~~(2) Exemptions to the limits listed in 252:100-39-49(a)(1) may be allowed for any process gas stream which does not exceed six tons per year actual emissions based on 6240 hours per year. However, once this limit is exceeded, controls must be put in place and maintained at any operating level.~~

~~(b) **Demonstration of compliance.** The Executive Director may require the owner/operator of a source to demonstrate at his expense, compliance with the prescribed emissions limits. The testing shall be accomplished using the appropriate EPA test method or methods, these include methods 14, 18-25, 25A, 25B and 40 CFR 60.444. Initial compliance testing shall be accomplished within 180 days of the applicable compliance date.~~

~~(c) **Testing.** Testing for the alternate emissions plan shall be conducted by the owner/operator at his expense and shall demonstrate compliance with the emission limits contained in the approved plan.~~

~~(d) **Recordkeeping.** The owner/operator of a facility subject to this Section shall submit to the Executive Director upon written request reports detailing specific VOS sources, the quantity of solvents used during specific months, a description of the solvent used, control equipment efficiencies, equipment downtime and any other information pertinent to the calculation of VOS emissions from the facility. The owner/operator must also maintain records which detail the maintenance performed on all control equipment as well as a record of the downtime with the reason for each occurrence. Such records shall be maintained by the source for a minimum of two years. (252:100-39-49, Effective February 12, 1990)~~

(a) Applicability.

(1) This Section applies to any process gas stream with actual VOC emissions that exceed six tons per year based on 6,240 hours of operation per year.

(2) Once the limit in 252:100-39-49(a)(1) is exceeded, the controls required in 252:100-39-49(b) must be put in place and maintained and used at any operating level.

(b) Standards. Affected facilities shall limit emissions of VOC from fiberglass manufacturing by use of control equipment which can demonstrate an 85 percent reduction in the VOC released from each process stream (e.g., 90 percent capture efficiency multiplied by 95 percent destruction efficiency equals 85.5 percent system efficiency).

(c) Compliance. All affected facilities must comply with one of the following.

(1) Meet the requirements of 252:100-39-49(b) by February 13, 1991.

(2) Have an approved plan for the reduction of VOC emissions as required by 252:100-39-49(b) by February 13, 1991.

(A) The plan shall be submitted by August 13, 1990, and shall:

(i) detail those emissions which will be controlled;

(ii) detail the means by which control will be achieved; and,

(iii) demonstrate that compliance will be achieved by February 13, 1992.

(B) The Air Quality Council shall have approval authority for the plans.

(C) All approved plans shall be submitted to the EPA as SIP revisions.

(d) Demonstration of compliance.

(1) The Division Director may require at the expense of the owner or operator a demonstration of compliance with the requirements of 252:100-39-49(b).

(2) The testing shall be accomplished using the appropriate EPA test method or methods. These include methods 1-4, 18-25, 25A, 25B and 40 CFR 60.444.

(3) Initial compliance testing shall be accomplished within 180 days of the applicable compliance date.

(4) Testing for the emissions plan described in 252:100-39-49(c)(2) shall be conducted at the expense of the owner or operator at his expense and shall demonstrate compliance with the emission limits contained in the approved plan.

(e) Recordkeeping.

(1) The owner or operator of a facility subject to this Section shall submit to the Division Director upon written request, reports that include:

(A) details of specific VOC sources;

(B) the quantity of VOC used during specific months;

(C) a description of the VOC used;

(D) control equipment efficiencies;

(E) details of maintenance performed on all control equipment;

(F) equipment downtime; and,

(G) any other information pertinent to the calculation of VOC emissions from the facility.

(2) The records required in 252:100-39-49(e)(1) shall be maintained by the source for at least two years. [252:100-39-49, Effective February 12, 1990]

Oklahoma Register

Notices of Rulemaking Intent

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must publish a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides other information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained. For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-1216]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking.

Proposed rules:

252:100. Air Pollution Control

Appendix E. Primary Ambient Air Quality Standards [AMENDED]

Appendix F. Secondary Ambient Air Quality Standards [AMENDED]

Subchapter 7. Permits for Minor Sources [AMENDED]

Subchapter 23. Control of Emissions from Cotton Gins [AMENDED]

Subchapter 24. Control of Emissions from Grain Elevators [AMENDED]

Appendix L. PM-10 Emission Factors for Permit by Rule for Grain Elevators [NEW]

Subchapter 25. Smoke. Visible Emissions and Particulates [AMENDED]

Subchapter 37. Control of Emissions of Organic Materials [AMENDED]

Subchapter 39. Emission of Organic Materials in Nonattainment Areas [AMENDED]

Summary:

The proposed revisions to Appendices E and F will mirror the revised federal national ambient air quality standards for particulate matter (PM) and ozone announced by EPA in the July 18, 1997, Federal Register. The EPA revised the primary (health-based) PM standards by adding a new annual PM-2.5 standard set at 15 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) and a new 24-hr PM-2.5 standard set at $65 \mu\text{g}/\text{m}^3$. EPA is retaining the current annual PM-10 standard of $50 \mu\text{g}/\text{m}^3$ and changing the form of the PM-10 24-hr standard. The secondary (welfare-based) standards are also being adjusted to make them identical to the primary standards. Also, the previous 1-hr primary ozone standard is being phased out and replaced with a new 8-hr "concentration-based" standard of 0.08 ppm. The 3-yr average of the 4th highest daily maximum 8-hr ozone concentrations is used to determine compliance with the standard. The EPA also replaced the previous secondary standards with a standard identical to the new primary standard. The proposed revisions to Subchapter 7 will delete the lower limit of 5 tons per year for

Permit by Rule (PBR) facilities. This will allow those facilities with less than 5 tons per year emissions, which are subject to new source performance standards (NSPS) and national emissions standards for hazardous air pollutants (NESHAP), to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each Subchapter containing a PBR for specific facilities will be referenced under this new Part also. The proposed revisions to Subchapters 23 and 24 would simplify the language under the agency-wide re-write/de-wrong initiative. It is also proposed to add a new PBR section to both subchapters. The PBR will streamline the permitting process by creating a mechanism that will eliminate the necessity for some cotton gins and elevators to obtain an individual air quality permit. Also, a new Appendix L is proposed which contains PM-10 emission factors for PBR grain elevators. The proposed amendments to Subchapter 25 would fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the Department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P. Additionally, the Department proposes to exempt from Appendix P requirements those sources already subject to a new source performance standard and sources scheduled for retirement within 5 years after the amended rule takes effect. The amended rule would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include changing the time allowed for visible emissions during short-term occurrences to exceed the opacity standard to one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. A new subsection would contain methods for determining compliance with the opacity limits. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule. The proposed changes to Subchapters 37 and 39 are primarily intended to clarify, simplify and correct the rule and to respond to requests to exclude acetone and methylated siloxanes from the definition of volatile organic compound (VOC). The proposed changes to Subchapters 37 and 39 include clarification of language, correction of typographical errors, deletion of redundant language, and reformatting. Two substantive changes are proposed for

Notices of Rulemaking Tent

Subchapter 37 and one for Subchapter 39. One of those substantive changes affects both Subchapter 37 and 39. The definition of volatile organic compounds (VOC) in 252:100-37-2 and 252:100-39-2 has been revised in response to the Air Quality Council's direction to the staff to review the petition from the Chemical Manufacturers Association dated October 25, 1995, to exclude acetone from the definition of Volatile Organic Compounds (VOC); the request from American Airlines, Boeing, and Nordam, dated January 19, 1998, that acetone be excluded from the definition of VOC; and a request that methylated siloxanes be excluded from the definition of VOC. The definition of volatile organic compounds (VOC) has been modified to be consistent with the Environmental Protection Agency definition. The second substantive change for Subchapter 37 deals with the first sentence in 252:100-37-36 regarding fuel-burning and refuse-burning equipment, which has been deleted to resolve the contradiction between the first and second sentences. The Department is requesting comments on these proposed changes.

AUTHORITY:

Environmental Quality Board, 27A O.S. Supp. 1997, §§ 2-2-101 and 2-5-101 *et seq.*

COMMENT PERIOD:

Wednesday, July 15, 1998, through Tuesday, August 18, 1998. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by Tuesday, August 11, 1998. Also scheduled before the Environmental Quality Board at their meeting on Tuesday, September 15, 1998 - 9:30 a.m. in Alva (Location to be determined. See contact person.)

PUBLIC HEARINGS:

Tuesday, August 18, 1998 - 9:30 a.m. briefing and 1:00 p.m. hearing, Department of Environmental Quality, Air Quality Division, 707 N. Robinson, Room 101, Oklahoma City, Oklahoma.

COPIES OF PROPOSED RULES:

Copies of the rules will be available July 15, 1998, for review at the Air Quality Division office at the address listed above or may be obtained from Myrna Bruce at 405-702-4177.

RULE IMPACT STATEMENT:

A copy of the rule impact statements may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Michelle Martinez (Appendices E, F, L and Subchapter 24), Jeanette Buttram (Subchapters 7 and 25), Becky Mainord (Subchapter 23), Joyce Sheedy, Ph.D. (Subchapters 37 and 39). Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

ADDITIONAL INFORMATION:

Additional proposed revisions have been made to the version of Subchapter 25 that was the subject of a public hearing on June 16, 1998.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #98-1216; filed 6-25-98]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-1217]

INTENDED RULEMAKING ACTION:

Notice of proposed EMERGENCY and PERMANENT rulemaking.

Proposed rules:

252:100, Air Pollution Control: Subchapter 47, Control of Emissions from Existing Municipal Solid Waste Landfills [NEW]

Summary:

A new Subchapter 47 is proposed to establish state standards to control emissions from municipal solid waste (MSW) landfills that commenced construction, modification, or reconstruction before May 30, 1991, and accepted waste after November 8, 1987. These proposed rules will be included in Oklahoma's State 111(d) Plan and will provide the enforceable mechanism for implementing the provisions of the Emission Guidelines (EG) for MSW landfills (40 CFR 60 Subpart Cc). Subchapter 47 incorporates by reference sections of the New Source Performance Standards for MSW landfills (40 CFR 60 Subpart WWW). The proposed rules would affect privately and publicly owned MSW landfills that are actively accepting or are capable of accepting municipal solid waste as well as those that are closed. Landfill gas collection and control systems will be required for landfills that have design capacities greater than or equal to 2.5 million megagrams and 2.5 million cubic meters and have estimated emissions of at least 50 megagrams per year of non-methane organic compounds. The Department is requesting comments on this proposed rule.

AUTHORITY:

Environmental Quality Board, 27A O.S. Supp. 1997, §§ 2-2-101 and 2-5-101 *et seq.*

COMMENT PERIOD:

Wednesday, July 15, 1998, through Tuesday, August 18, 1998. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by Tuesday, August 11, 1998. Also scheduled

Notices of Rulemaking Intent

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must publish a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained. For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-1259]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking.

PROPOSED RULES:

252:100. Air Pollution Control

Subchapter 7. Permits for Minor Sources [AMENDED]

Subchapter 23. Control of Emissions from Cotton Gins [AMENDED]

Subchapter 24. Control of Emissions from Grain Elevators [AMENDED]

Subchapter 25. Smoke, Visible Emissions and Particulates [AMENDED]

Subchapter 37. Control of Emissions of Organic Materials [AMENDED]

Subchapter 39. Emission of Organic Materials in Nonattainment Areas [AMENDED].

Appendix E. Primary Ambient Air Quality Standards [AMENDED]

Appendix F. Secondary Ambient Air Quality Standards [AMENDED]

Appendix L. PM-10 Emission Factors for Permit by Rule for Grain Elevators [NEW]

SUMMARY:

The proposed revisions to Appendices E and F will mirror the revised federal national ambient air quality standards for particulate matter (PM) and ozone announced by EPA in the July 18, 1997, Federal Register. The EPA revised the primary (health-based) PM standards by adding a new annual PM-2.5 standard set at 15 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) and a new 24-hr PM-2.5 standard set at $65 \mu\text{g}/\text{m}^3$. EPA is retaining the current annual PM-10 standard of $50 \mu\text{g}/\text{m}^3$ and changing the form of the PM-10 24-hr standard. The secondary (welfare-based) standards are also being adjusted to make them identical to the primary standards. Also, the previous 1-hr primary ozone standard is being phased out and replaced with a new 8-hr "concentration-based" standard of 0.08 ppm. The 3-yr average of the 4th highest daily maximum 8-hr ozone concentrations is used to determine compliance with the standard. The EPA also replaced the previous secondary standards with a standard identical to the new primary standard. The proposed revisions to

Subchapter 7 will delete the lower limit of 5 tons per year Permit by Rule (PBR) facilities. This will allow the facilities with less than 5 tons per year emissions, which are subject to new source performance standards (NSPS) and national emissions standards for hazardous air pollutants (NESHAP), to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each Subchapter containing a PBR for specific facilities will be referenced under this new Part also. The proposed revisions to Subchapters 23 and 24 would simplify the language under the agency-wide re-write/de-write initiative. It is also proposed to add a new PBR section to both subchapters. The PBR will streamline the permitting process by creating a mechanism that will eliminate the necessity for some cotton gins and elevators to obtain an individual air quality permit. Also, a new Appendix L is proposed which contains PM-10 emission factors for PE grain elevators. The proposed amendments to Subchapter 25 would fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the Department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries specified in 40 CFR 51, Appendix P. Additionally, the Department proposes to exempt from Appendix L requirements those sources already subject to a new source performance standard and sources scheduled for retirement within 5 years after the amended rule takes effect. The amended rule would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include changing the time allowed for visible emissions during short-term occurrences to exceed the opacity standard to not exceed six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. A new subsection would contain methods for determining compliance with the opacity limits. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule. The proposed changes to Subchapters 37 and 39 are primarily intended to clarify, simplify and correct the rule and to respond to requests to exclude acetone and methylated siloxanes from the definition of volatile organic compound (VOC). The proposed changes to Subchapters 37 and 39 include clarification of language, correction of typographical errors, deletion of redundant language, and

Notices of Rulemaking Intent

reformatting. Two substantive changes are proposed for Subchapter 37 and one for Subchapter 39. One of those substantive changes affects both Subchapter 37 and 39. The definition of volatile organic compounds (VOC) in 252:100-37-2 and 252:100-39-2 has been revised in response to the Air Quality Council's direction to the staff to review the petition from the Chemical Manufacturers Association dated October 25, 1995, to exclude acetone from the definition of Volatile Organic Compounds (VOC); the request from American Airlines, Boeing, and Nordam, dated January 19, 1998, that acetone be excluded from the definition of VOC; and a request that methylated siloxanes be excluded from the definition of VOC. The definition of volatile organic compounds (VOC) has been modified to be consistent with the Environmental Protection Agency definition. The second substantive change for Subchapter 37 deals with the first sentence in 252:100-37-36 regarding fuel-burning and refuse-burning equipment, which has been deleted to resolve the contradiction between the first and second sentences. The Department is requesting comments on these proposed changes.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #98-1259; filed 7-9-98]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-1260]

INTENDED RULEMAKING ACTION:

Notice of proposed EMERGENCY and PERMANENT rulemaking.

PROPOSED RULES:

252:100. Air Pollution Control

Subchapter 47. Control of Emissions from Existing Municipal Solid Waste Landfills [NEW]

SUMMARY:

A new Subchapter 47 is proposed to establish state standards to control emissions from municipal solid waste (MSW) landfills that commenced construction, modification, or reconstruction before May 30, 1991, and accepted waste after November 8, 1987. These proposed rules will be included in Oklahoma's State 111(d) Plan and will provide the enforceable mechanism for implementing the provisions of the Emission Guidelines (EG) for MSW landfills (40 CFR 60 Subpart Cc). Subchapter 47 incorporates by reference sections of the New Source Performance Standards for MSW landfills (40 CFR 60 Subpart WWW). The proposed rules would affect privately and publicly owned MSW landfills that are actively accepting or are capable of accepting municipal solid waste as well as those that are closed. Landfill gas collection and control systems will be required for landfills that have design capacities greater than or equal to 2.5 million megagrams and 2.5 million cubic meters and have estimated emissions of at least 50 megagrams per year of non-methane organic compounds. The Department is requesting comments on this proposed rule.

Notices of Rulemaking Intent

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must publish a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides other information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained.

For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-1358]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

PROPOSED RULES:

Subchapter 5. Registration, Emission Inventory and Annual Operating Fees [AMENDED]

Subchapter 7. Permits for Minor Sources [AMENDED]

Subchapter 8. Permits for Part 70 Sources [AMENDED]

Subchapter 23. Control of Emissions from Cotton Gins [AMENDED]

Subchapter 24. Control of Emissions from Grain Elevators [AMENDED]

Appendix L. PM-10 Emission Factors for Permit by Rule for Grain Elevators [NEW]

Subchapter 25. Smoke, Visible Emissions and Particulates [AMENDED]

Subchapter 37. Control of Emission of Organic Materials [AMENDED]

Subchapter 39. Emission of Organic Materials in Nonattainment Areas [AMENDED]

Subchapter 41. Control of Emission of Hazardous and Toxic Air Contaminants [AMENDED]

SUMMARY:

In Subchapter 5, the Department is considering possible increases in annual operating fees for both minor facilities and Part 70 sources.

The proposed revisions to Subchapter 7 will modify language applicable to de minimis facilities, Permit by Rule (PBR), and general permits. First, actual emissions of Total Suspended Particulates (TSP) will no longer be counted in determining whether a facility meets the definition of "de minimis facility." Second, the proposed revisions will delete the lower limit of 5 tons per year for PBR facilities. This will allow those facilities with less than 5 tons per year emissions, which are subject to New Source Performance Standards (NSPS) or National Emissions Standards for Hazardous Air Pollutants (NESHAP), to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a

PBR for specific facilities will be referenced under this new Part also. Third, the proposed revisions will delete the lower limit for general permits. This will allow facilities that may have less than 40 tons per year of emissions, but for which no PBR has been written, the opportunity to apply for coverage under an applicable general permit. The Department also proposes to delete the definition for "Volatile Organic Solvents (VOS)," because the proposed changes to Subchapters 37 and 39 would exclude that term from the rules.

The Department is considering increases in the permit application fees in both Subchapters 7 and 8.

The proposed revisions to Subchapters 23 and 24 would simplify the language under the agency-wide re-write/de-wrong initiative. It is also proposed to add a new PBR section to both subchapters. The PBR will streamline the permitting process by creating a mechanism that will eliminate the necessity for some cotton gins and elevators to obtain an individual air quality permit. Also, a new Appendix L is proposed which contains PM-10 emission factors for PBR grain elevators. Additional changes to both subchapters follow a proposed amendment of Subchapter 25 concerning short-term exceedances of the opacity standard. The revised rules would allow such exceedances during one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours.

The proposed amendments to Subchapter 25 would fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the Department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P. Additionally, the Department proposes to exempt from Appendix P requirements those sources already subject to a new source performance standard and sources scheduled for retirement within 5 years after the amended rule takes effect. The amended rule would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include exempting sources subject to opacity standards promulgated under Section 111 of the Federal Clean Air Act, along with a clarification of how the opacity standard will be determined at sources that have CEMs and how it will be determined at sources without CEMs. Other

Notices of Rulemaking Intent

proposed amendments to Subchapter 25 are designed to simplify and clarify the rule.

The proposed changes to Subchapters 37 and 39 include clarification of language, correction of typographical errors, deletion of redundant language, and reformatting. Three substantive changes are proposed for each Subchapter. One of those substantive changes affects both Subchapter 37 and 39. The definition of "volatile organic compounds (VOC)" in 252:100-37-2 and 252:100-39-2 has been revised in response to the Air Quality Council's direction to the staff to review the petition from the Chemical Manufacturers Association dated October 25, 1995, to exclude acetone from the definition of VOC; the request from American Airlines, Boeing, and Nordam, dated January 19, 1998, that acetone be excluded from the definition of VOC; a request dated April 21, 1997, from the Halogenated Solvents Industry Alliance, requesting that perchloroethylene be excluded from the definition of VOC; a request from Dow Corning that methylated siloxanes be excluded from the definition of VOC; and a request on behalf of the Eastman Chemical Company dated August 18, 1998, that methyl acetate be excluded from the definition of VOC. The definition of VOC has been modified to be consistent with the EPA definition. The second substantive change to Subchapter 37 is the removal of the requirement for permits and best available control technology (BACT) for new sources of VOC contained in 252:100-37-3(a). The third substantive change for Subchapter 37 deals with the first sentence in 252:100-37-36 regarding fuel-burning and refuse-burning equipment, which has been deleted to resolve the contradiction between the first and second sentences. The second substantive change to Subchapter 39 is the correction of the placement of "prior to lease custody transfer" in 252:100-39-30(b)(2). The third substantive change is the addition of a minimum annual throughput of 120,000 gallons and a minimum storage capacity of 2,000 gallons to 252:100-39-41(c) to determine applicability of subsection (c). In addition, the Department is requesting comments on 252:100-39-47, Control of VOS Emissions from Aerospace Industries Coatings Operations. Options include (1) retain the present (ARACT) rule and enforce the emissions reduction plan specified therein; (2) repeal the present rule and promulgate new rules regulating specialty coatings; or (3) retain the present plan, promulgate new rules for specialty coatings, and allow the facility to choose which of the two they prefer. These options recognize that the new NESHAP for the aerospace industry controls VOC emissions except for specialty coatings. The proposed amendments to Subchapter 41 include adopting by reference the Maximum Available Control Technology (MACT) standards for hazardous air pollutants that have been promulgated in 40 CFR 63 from July 1, 1997, through July 1, 1998. These are Subparts S and LL. The Department is also updating in Subchapter 41 the incorporation by reference of the NESHAP found in 40

CFR 61 to July 1, 1998. The Department is requesting comments on these proposed changes.

Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

ADDITIONAL INFORMATION:

Additional proposed revisions have been made to the versions of Subchapters 7, 23, 24, 25, 37 and 39 that were the subject of a public hearing on August 18, 1998.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #98-1358; filed 8-26-98]

Notices of Rulemaking Intent

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must publish a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides other information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained. For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-1473]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

PROPOSED RULES:

Subchapter 5. Registration, Emission Inventory and Annual Operating Fees

252:100-5-2.2 [AMENDED]

Subchapter 7. Permits for Minor Facilities [AMENDED]

Subchapter 8. Permits for Part 70 Sources

252:100-8-1.7 [AMENDED]

252:100-8-4 [AMENDED]

Subchapter 37. Control of Emission of Organic Materials [AMENDED]

Subchapter 39. Emission of Organic Materials in Nonattainment Areas [AMENDED]

SUMMARY:

The Department is proposing to amend 252:100-5-2.2 to increase annual operating fees for minor facilities and to include a provision for state appropriations and federal grants to be used to offset annual operating fees assessed to minor facilities. The Department is also proposing to increase the base annual operating fee for Part 70 sources.

The proposed revisions to Subchapter 7 will modify language applicable to de minimis facilities, Permit by Rule (PBR), and general permits. First, actual emissions of Total Suspended Particulates (TSP) will no longer be counted in determining whether a facility meets the definition of "de minimis facility." Second, the proposed revisions will delete the lower limit of 5 tons per year for PBR facilities. This will allow those facilities with less than 5 tons per year emissions, which are subject to New Source Performance Standards (NSPS) or National Emissions Standards for Hazardous Air Pollutants (NESHAP), to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a PBR for specific facilities will be referenced under this new Part also. Third, the proposed revisions will delete the lower limit for general permits. This will allow facilities that may have less than 40 tons per year of emissions, but for which no

PBR has been written, the opportunity to apply for coverage under an applicable general permit.

The Department is also proposing to amend 252:100-7-3 to increase fees for minor facilities for applicability determinations, relocation permits, and applications for individual permits.

The Department is proposing amendments to 252:100-8-1.7 to increase applicability determination fees for Part 70 Sources. In addition, it is proposed that 252:100-8-4(a)(2) be amended to update the incorporation by reference of 40 CFR 63.41, 63.43, and 63.44 to July 1, 1998.

The proposed changes to Subchapters 37 and 39 include clarification of language, correction of typographical errors, deletion of redundant language, and reformatting. Substantive changes are proposed for each subchapter. One of those substantive changes affects both Subchapter 37 and 39. The definition of "volatile organic compounds (VOC)" in 252:100-37-2 and 252:100-39-2 has been revised in response to the Air Quality Council's direction to the staff to review the petition from the Chemical Manufacturers Association dated October 25, 1995, to exclude acetone from the definition of VOC; a request from American Airlines, Boeing, and Nordam, dated January 19, 1998, to exclude acetone from the definition of VOC; a request from the Halogenated Solvents Industry Alliance dated April 21, 1997, to exclude perchloroethylene from the definition of VOC; a request from Dow Corning to exclude methylated siloxanes from the definition of VOC; and a request on behalf of the Eastman Chemical Company dated August 18, 1998, to exclude methyl acetate from the definition of VOC. The definition of VOC has been modified to be consistent with the EPA definition. The second substantive change to Subchapter 37 is the removal of the requirement for permits and best available control technology (BACT) for new sources of VOC contained in 252:100-37-3(a). The third substantive change for Subchapter 37 deals with the first sentence in 252:100-37-36 regarding fuel-burning and refuse-burning equipment, which has been deleted to resolve the contradiction between the first and second sentences. The fourth substantive change to Subchapter 37 will be the addition of a new Part 9, Permit by Rule for Volatile Organic Compound Storage and Loading Facilities. The second substantive change to Subchapter 39 is the correction of the placement of "prior to lease custody transfer" in 252:100-39-30(b)(2). The third substantive

7609

change is the addition of a minimum annual throughput of 120,000 gallons and a minimum storage capacity of 10,000 gallons to 252:100-39-41(c) to determine the applicability of subsection (c).

AUTHORITY:

Environmental Quality Board; 27A O.S.Supp. 1997, §§ 2-2-101 and 2-5-101, et seq.

COMMENT PERIOD:

Written comments on proposed amendments to 252:100-5-2.2, 252:100-7-3, and 252:100-8-1.7 will be accepted until December 8, 1998. Oral comments may be made at the December 15, 1998 hearing.

Comments on all other proposed amendments and new rules included in this notice will be accepted beginning Monday, November 16, 1998, through Tuesday, December 15, 1998. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by Tuesday, December 8, 1998.

Also scheduled before the Environmental Quality Board (Date and location to be determined. See contact person.)

PUBLIC HEARINGS:

Tuesday, December 15, 1998 - 9:30 a.m. briefing and 1:00 p.m. hearing, at the Lincoln Plaza, 4545 N. Lincoln Blvd., Burgundy Room, Oklahoma City, Oklahoma

COPIES OF PROPOSED RULES:

Copies of the rules will be available November 16, 1998, for review at the Air Quality Division office at 707 North Robinson, Suite 4100, Oklahoma City, Oklahoma, 73102, or may be obtained from Myrna Bruce at 405-702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statements may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Shawna McWaters-Khalousi (252:100-5-2.2, 252:100-7-3, and 252:100-8-1.7), Jeanette Buttram (Subchapter 7 except 252:100-7-3), and Joyce Sheedy (252:100-8-4 and Subchapters 37 and 39), Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

ADDITIONAL INFORMATION:

None

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #98-1473; filed 10-23-98]

**TITLE 330. OKLAHOMA HOUSING FINANCE AGENCY
CHAPTER 55. HOME INVESTMENTS
PARTNERSHIP PROGRAM RULES**

[OAR Docket #98-1472]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

PROPOSED RULES:

330:55-1-1 through 330:55-1-7 [NEW]

330:55-3-1 through 330:55-3-6 [NEW]

330:55-5-1 through 330:55-5-2 [NEW]

330:55-7-1 through 330:55-7-5 [NEW]

SUMMARY:

The Board of Trustees of the Oklahoma Housing Finance Agency (OHFA) a public trust, have in compliance with Title II of the Cranston-Gonzalez National Affordable Housing Act, as amended and codified at 42 U.S.C. 12701-12839; and 24 CFR Part 92, Section 92.1, et seq (Title II) adopted OHFA's Chapter 55. HOME Investments Partnership Program Rules (the 'Rules) for use in the allocation and issuance of HOME Program funds throughout the state of Oklahoma.

The Rules provide guidelines which OHFA follows in allocating HOME funds pursuant to Title II and are intended to provide a description of the procedures to be followed by applicants for evaluating and prioritizing applications. The Rules also provide an overview of Title II and other federal regulations which govern the administration of the HOME Program.

AUTHORITY:

These Chapter 55 rules are authorized by the Trustees of The Oklahoma Housing Finance Agency (OHFA), the Amended Trust Indenture of OHFA, and the Bylaws of OHFA.

COMMENT PERIOD:

Written comments will be accepted November 16, 1998 through December 16, 1998. Comments should reference the section of the rules addressed and be sent to Oklahoma Housing Finance Agency, P. O. Box 26720, Oklahoma City, Oklahoma 73126-0720, Attn: Byron Debruler.

PUBLIC HEARING:

The following public hearing will be held: December 8, 1998, at 10:00 a.m. at the offices of OHFA, 1140 N. W. 63rd Oklahoma City, OK in the 4th floor conference room. All interested persons are invited to attend and present their views.

COPIES OF PROPOSED RULES:

Copies of the proposed Rules may be obtained by contacting Byron Debruler, at OHFA, 1140 Northwest 63rd, P. O. Box 26720, Oklahoma City, Oklahoma 73126-0720, 405-848-1144 Ext. 314. There will be a \$5.00 per copy charge.

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

[OAR Docket #98-1722]

RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

RULES:

252:100. Air Pollution Control

Subchapter 37. Control of Emission of Organic Materials [AMENDED]

Subchapter 39. Emission of Organic Materials in Nonattainment Areas [AMENDED]

SUMMARY:

The proposed changes to Subchapters 37 and 39 include clarification of language, correction of typographical and grammatical errors, deletion of redundant language, and reformatting. Substantive changes are proposed for each subchapter. One of these changes affects both Subchapters. The definition of Volatile Organic Compound (VOC) has been modified in both subchapters to be consistent with the definition used by the Environmental Protection Agency. The substantive changes to Subchapter 37 are: the removal of the requirement for Best Available Control Technology (BACT) for all new sources of VOC in 252:100-37-3(a); the addition of 252:100-37-16(c), exempting loading facilities that are subject to 40 CFR 60, Subparts K, Ka and Kb; the addition of 252:100-37-25(c), exempting loading facilities that are subject to 40 CFR 60, Subpart XX, and 40 CFR 63, Subpart R; the deletion of 252:100-37-36, regarding fuel-burning and refuse-burning equipment, to resolve the contradiction between the first and second sentences; the addition of 252:100-37-38(b), exempting pumps and compressors that are subject to the equipment leak standards in 40 CFR 60, Subparts VV, GGG and KKK; and the addition of a new Part 9, Permit by Rule for Volatile Organic Compound Storage and Loading Facilities. The substantive changes to Subchapter 39 are: the correction of the placement of the phrase "prior to lease custody transfer" in 252:100-39-30(b)(2), the deletion of requirements in Part 3 regarding petroleum refinery operations which were made redundant by new federal requirements, and the addition of a minimum annual throughput of 120,000 gallons and a minimum storage capacity of 10,000 gallons to 252:100-39-41(c) for the determination of applicability of subsection (c).

AUTHORITY:

Environmental Quality Board; 27A O.S. Supp. 1998, §§ 2-2-101 and 2-5-101, *et seq.*

COMMENT PERIOD:

Written comments on the proposed amendments to 252:100-37 and 252:100-39 will be accepted until February 10, 1999. Oral comments may be made at the Air Quality Advisory Council hearing, February 17, 1999.

PUBLIC HEARINGS:

Air Quality Advisory Council meeting will be held Wednesday, February 17, 1999 - 9:30 a.m. briefing and p.m. hearing, at the Department of Environmental Quality, Room 101, 707 North Robinson, Oklahoma City, Oklahoma

Subchapter 252:100-37 and 252:100-39 are also scheduled to be heard by the Environmental Quality Board on Friday, March 5, 1999, 9:30 a.m., at the Association of County Commissioners of Oklahoma, 429 NE 50th Street, Oklahoma City, Oklahoma.

COPIES OF PROPOSED RULES:

Copies of the rules will be available January 15, 1999, for review at the Air Quality Division office at 707 North Robinson, Suite 4100, Oklahoma City, Oklahoma, 73102, or may be obtained from Myrna Bruce at (405) 702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statements may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Joyce Sheedy, Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100

ADDITIONAL INFORMATION:

Additional proposed revisions have been made to the versions of Subchapters 37 and 39 that were the subject of the public hearing on December 15, 1998.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

INCORPORATIONS BY REFERENCE:

No additional incorporations by reference were added by the proposed revision.

ANALYSIS:

The proposed revisions to Oklahoma Administrative Code 252:100-39, Emission of Organic Materials in Nonattainment Areas, will simplify the language under the agency-wide re-write/de-wrong initiative. The proposed revisions also include the following substantive changes: 1) the redefinition of the term "volatile organic compound (VOC)" and the substitution of this term for "organic materials", "organic solvents", "volatile organic solvent (VOS)" and in some instances "hydrocarbons"; 2) the correction of the placement of "prior to lease custody transfer" in 252:100-39-30(b); 3) the addition of 252:100-39-30(b)(3) and (4), exempting storage vessels subject to the equipment standards in 40 CFR 60 Subparts Ka or Kb and/or the equipment standards in 40 CFR 63 Subparts CC or G from the requirements of 252:100-39-30; 4) the addition of a minimum annual throughput of 120,000 gallons and a minimum storage capacity of 10,000 gallons for determining applicability of 252:100-39-41(c); and 5) the clarification of the definition of "aerospace" in 252:100-39-47(b)(1), adding the words "rework or repair".

SUMMARY OF DIFFERENCES FROM ANALOGOUS FEDERAL RULES:

None

CONTACT PERSON:

Joyce D. Sheedy, Ph.D., Department of Environmental Quality, Air Quality Division, 707 North Robinson, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677, (405) 702-4100

PURSUANT TO THE ACTIONS DESCRIBED HEREIN, THE FOLLOWING RULES ARE CONSIDERED FINALLY ADOPTED AS SET FORTH IN 75 O.S., SECTION 308.1(A), WITH AN EFFECTIVE DATE OF JUNE 11, 1999.

SUBCHAPTER 39. EMISSION OF ORGANIC MATERIALS IN NONATTAINMENT AREAS

PART 1. GENERAL PROVISIONS

252:100-39-1. Purpose

The purpose of this Subchapter is to control the emission of organic materials from stationary sources located in nonattainment areas and to specify the additional control measures required to protect and enhance the air quality to insure that the Oklahoma air quality standard is

7613

not exceeded and significant deterioration is prevented. The purpose of this Subchapter is to reduce the formation of ozone by controlling the emissions of volatile organic compounds (VOCs). This Subchapter contains requirements for the control of emissions of VOCs from stationary sources located in areas that are nonattainment or were formerly nonattainment for ozone.

252:100-39-2. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Cutback asphalt" means a basic asphalt or asphaltic concrete containing a petroleum distillate.

"Effluent water separator" means any tank, box, sump, or other container in which any material compound floating on or entrained or contained in water entering such tank, box, sump or other container is physically separated and removed from such water prior to outfall, drainage, or recovery of such water.

"Organic materials" means any chemical compounds of carbon excluding carbon monoxides, carbon dioxide, carbonic acid, metallic carbides, metal carbonates and ammonium carbonates.

"Petroleum refinery" means any facility engaged in producing gasoline, aromatics, kerosene, distillate fuel oils, residual fuel oils, lubricants, asphalt, or other products through distillation of crude oil or other hydrocarbons or through redistillation, cracking, rearrangement or reforming or unfinished petroleum derivatives.

"Refinery" means any facility engaged in producing gasoline, kerosene, fuel oils or other products through distillation of crude oil or through redistillation, cracking or reforming of unfinished hydrocarbon derivatives.

"Refinery unit" means a set of components which are a part of a basic process operation, such as distillation, hydrotreating, cracking or reforming of hydrocarbons.

"Submerged fill pipe" means any fill pipe or discharge nozzle which that meets any one of the following conditions:

- (A) the bottom of the discharge pipe or nozzle is below the surface of the liquid in the receiving vessel for at least 95 percent of the volume filled;
- (B) the bottom of the discharge pipe or nozzle is less than 6 inches from the bottom of the receiving vessel;
- (C) the bottom of the discharge pipe or nozzle is less than 2 pipe or nozzle diameters from the bottom of the receiving vessel; or,
- (D) other equivalent methods acceptable to the Executive Director.

"Volatile organic compound (VOC)" means any compound containing carbon and hydrogen or containing carbon and hydrogen in combination with any other element which has a vapor pressure of 1.5 pounds per square inch absolute or greater under actual storage conditions of carbon, excluding carbon monoxide, carbon dioxide,

carbonic acid, metallic carbides or carbonate and ammonium carbonate, which participates in atmospheric photochemical reactions. Any organic compound listed in 40 CFR 51.100(s)(1) will be presumed to have negligible photochemical reactivity and will not be considered to be a VOC.

"Volatile organic solvent (VOS)" means any organic compound which participates in atmospheric photochemical reactions; that is, any organic compound other than those which the EPA Administrator designates as having negligible photochemical reactivity. VOS may be measured by the EPA VOC reference method.

252:100-39-3. General applicability

In addition to any application of the requirements contained in OAC 252:100-37, the additional control/prohibitions requirements contained in this Subchapter shall be required of existing and new facilities located in Tulsa and Oklahoma Counties.

252:100-39-4. Exemptions

VOCs with vapor pressures less than 1.5 pounds per square inch absolute (psia) under actual storage conditions are exempt from 252:100-39-16 through 252:100-39-18, 252:100-39-30, 252:100-39-41, and 252:100-48.

PART 3. PETROLEUM REFINERY OPERATION

252:100-39-15. Petroleum refinery equipment leaks

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

- (1) "Component" means any piece of equipment which has the potential to leak volatile organic compounds VOCs when tested in the manner described in EPA Test Method 21 of 40 CFR Part 60. These sources include, but are not limited to, pumping seals, compressor seals, seal oil degassing vents, pipeline valves, flanges and other connections, pressure relief devices, process drains, and open ended pipes. Excluded from these sources are valves which are not externally regulated.
- (2) "Gas service" means any equipment which processes, transfers or contains a volatile organic compound VOC or mixture of volatile organic compounds VOCs in the gaseous phase.
- (3) "Leaking component" means a component which has a VOC concentration exceeding 10,000 ppmv when tested according to the provisions in 252:100-39-15(e).
- (3)(4) "Liquid service" means any equipment which processes, transfers or contains a volatile organic compound VOC or mixture of volatile organic compounds VOCs in the liquid phase.
- (4) "Petroleum refinery" means any facility engaged in producing gasoline, aromatics, kerosene, distillate fuel oils, residual fuel oils, lubricants, asphalt, or other

~~products through distillation of crude oil or other hydrocarbons or through redistillation, cracking, rearrangement or reforming of unfinished petroleum derivatives.~~

~~(5) "Refinery unit" means a set of components which are a part of a basic process operation, such as distillation, hydrotreating, cracking or reforming of hydrocarbons.~~

~~(6)(5) "Valves not externally regulated" means valves that have no external controls, such as in-line check valves.~~

~~(7) "Volatile organic compounds" means any compound containing carbon and hydrogen or containing carbon and hydrogen in combination with any other element which has a vapor pressure of 0.3 kilopascals (0.0435 pounds per square inch absolute) or greater under actual storage conditions. (Effective 2-12-90)~~

~~(b) Applicability. This Section applies to all source facility petroleum refineries located in the following counties: Tulsa and Oklahoma.~~

~~(1) This Section applies to all petroleum refineries located in Tulsa County and Oklahoma County.~~

~~(2) VOCs with vapor pressures less than 0.0435 psia (0.3 kilopascals(kPa)) under actual storage conditions are exempt from 252:100-39-15. (Effective 2-12-90.)~~

~~(c) Provisions for specific processes. Standards and operating requirements~~

~~(1) The owner or operator of a petroleum refinery complex subject to this Section shall:~~

~~(A) develop and conduct a monitoring program consistent with the provisions in 252:100-39-15(d) and 252:100-39-15(f);~~

~~(B) conduct a monitoring program consistent with the provisions in 252:100-39-15(f);~~

~~(C) record all leaking components which have a VOC concentration exceeding 10,000 ppm when tested according to the provisions in 252:100-39-15(e) and place an identifying tag on each component consistent with the provisions in 252:100-39-15(f)(3);~~

~~(D)(C) repair and retest the leaking components, as defined in 252:100-39-15(e)(1)(C), as soon as possible but no later than 15 days after the leak is found; and,~~

~~(E)(D) identify all leaking components, as defined in 252:100-39-15(e)(1)(C), which cannot be repaired until the unit is shutdown for turnaround. Assure all lines or pipes terminating with a valve are sealed with a second valve, a blind flange, a plug or a cap; and,~~

~~(E) assure all lines or pipes terminating with a valve are sealed with a second valve, a blind flange, a plug or a cap.~~

~~(2) The Executive Division Director, may, at his/her discretion, take require the owner or operator to take~~

appropriate remedial action, including early unit turnaround, based on the number and severity of tagged leaks awaiting repair.

(3) Pipeline valves and pressure relief valves in gaseous volatile organic compound gas service shall be marked in some manner that will be readily obvious to both petroleum refinery or contract personnel performing monitoring and the Executive Director DEO.

(d) Compliance ~~schedules~~ schedule. The owner or operator of a petroleum refinery, in order to comply with 252:100-39-15, shall adhere to the increments of progress contained in the following schedule:

(1) ~~Submit~~ submit to the Executive Division Director a monitoring program by July 30, 1981. This program shall contain, at a minimum, a list of the refinery units only and the quarter in which they will be monitored, a copy of the log book format, and the make and model of the monitoring equipment to be used. In no case shall a monitoring contract relieve the owner or operator of a petroleum refinery of the responsibility for compliance with this Section.

(2) ~~Submit~~ submit quarterly monitoring report to the Executive Director.

(e) Testing and monitoring procedures. Testing and calibration procedures to determine compliance with this Section must be consistent with EPA Test Method 21 of 40 CFR Part 60.

(f) Monitoring.

(1) The owner or operator of a petroleum refinery subject to this Section shall conduct a monitoring program consistent with the following provisions. The owner or operator shall:

(A) monitor yearly by the methods referenced in Test Method 21 of 40 CFR Part 60 252:100-39-15(e) all:

- (i) pump seals;
- (ii) pipeline valves in liquid service; and,
- (iii) process drains;

(B) monitor quarterly by the methods referenced in 252:100-39-15(d) 252:100-39-15(e), all:

- (i) compressor seals;
- (ii) pipeline valves in gaseous gas service; and,
- (iii) pressure relief valves in gaseous gas service;

(C) monitor weekly by visual methods all pump seals;

(D) monitor immediately within 24 hours any pump seal from which VOC liquids are observed dripping;

(E) monitor any relief valve within 24 hours after it has vented to the atmosphere; and,

(F) monitor immediately after repair any component that was found leaking.

(2) Pressure relief devices which that are connected to an operating flare header, vapor recovery devices devices,

7615

inaccessible valves, storage tank valves, and valves that are not externally regulated are exempt from the monitoring requirements in paragraph (1) of this subsection. ~~Provided~~ provided, however, such inaccessible valves will be monitored during annual shutdown.

(3) The owner or operator of a petroleum refinery, upon the detection of a leaking component, ~~as defined in 252:100-39-15(e)(1)(C), which~~ that is not repaired on discovery, shall affix a weatherproof and readily visible tag, bearing an identification number and the date the leak is located, to the leaking component. This tag shall remain in place until the leaking component is repaired.

(g) **Recordkeeping.**

(1) The owner or operator of a petroleum refinery shall maintain a leaking components monitoring log as ~~specified in 252:100-39-15(e)(1)(C)~~ which shall contain, at a minimum, ~~the following data:~~

- (A) the name of the process unit where the component is located;
- (B) the type of component (e.g., valve, seal);
- (C) the tag number of the component, if not repaired immediately on discovery;
- (D) the date on which a leaking component is discovered;
- (E) the date on which a leaking component is repaired;
- (F) the date and instrument reading of the recheck procedure after a leaking component is repaired;
- (G) the date of the calibration of the monitoring instrument. ~~The record of calibration which~~ shall be made available for inspection on request;
- (H) those leaks that cannot be repaired until turnaround; and,
- (I) the total number of components checked and the total number of components found leaking.

(2) ~~Copies of the~~ The monitoring log shall be retained on site by the owner or operator for at least two years after the date on which the record was made or the report prepared.

(3) ~~Copies of the~~ The monitoring log shall be made available for inspection at any reasonable time and copies of the log shall be provided to the Executive Division Director, upon written request, at any reasonable time of the AOD.

(h) **Reporting.** The owner or operator of a petroleum refinery, ~~upon the completion of each monitoring procedure,~~ shall:

(1) submit a report to the Executive Division Director by the 30th day following the end of each calendar quarter that lists all leaking components that were located during the previous quarter but not repaired within 15 days, all leaking components awaiting unit turnaround, and the total number of components found leaking; and,

(2) submit a signed statement with the re ~~attesting to the fact that~~ all monitoring and, with exception of those leaking components listed in 252:100-39-15(h)(1), ~~all monitoring and repairs were performed as stipulated in the monitoring program.~~

252:100-39-16. Refinery ~~Petroleum refinery~~ process unit turnaround

(a) **Definition.** ~~“Turn-around”~~ “Turnaround” means the planned procedure of shutting down a unit, inspecting and repairing it, and restarting it.

(b) **Procedures required.** For the shutdown, purging and blowdown operation of any ~~processing~~ petroleum refinery processing unit the following procedures are required:

(1) ~~Recovery of volatile organic compounds (VOC)~~ VOCs shall be accomplished during the shutdown or turnaround to a process unit pressure compatible with the flare or vapor system pressure. The unit ~~will~~ shall then be purged or flushed ~~with to a flare or vapor recovery system using~~ a suitable material such as steam, water or nitrogen ~~to a flare or vapor recovery system~~. The unit shall not be vented to the atmosphere until pressure is reduced to less than 5 psig through control devices.

(2) Except where inconsistent with the “Minimum Federal Safety Standards for the Transportation of Natural and Other Gas by Pipeline,” or any State Oklahoma regulatory agency, no person shall en. organic VOC gases to the atmosphere from a vapor recovery blowdown system unless these gases are burned by smokeless flares, or an equally effective control device as approved by the Executive Division Director.

(3) At least fifteen days prior to a scheduled turnaround, a written notification shall be submitted to the Executive Division Director. As a minimum, the notification shall indicate the unit to be shutdown, the date of shutdown, and the approximate quantity of hydrocarbons VOCs to be emitted to the atmosphere.

(4) Scheduled refinery unit turnaround may be accomplished without the controls specified in 252:100-39-16(b)(1) and 252:100-39-16(b)(2) during non-oxidant seasons provided the notification to the Executive Division Director as required in 252:100-39-16(b)(3), specifically contains such a request for such an exemption. ~~Non-oxidant~~ The non-oxidant season is ~~understood to be between the months of October and April~~ from November 1 through March 31.

252:100-39-17. Refinery ~~Petroleum refinery~~ vacuum producing system

(a) **Definitions.** The following words and terms, ~~wh~~ used in this Section, shall have the following meani. unless the context clearly indicates otherwise:

(1) **“Accumulator”** means the vessel in the overhead stream of any fractionating tower, after the overhead

Permanent Final Adoptions

condenses and separates noncondensable gases, liquid hydrocarbons, VOCs and water.

(2) "Hotwell" means the tank at the bottom of the barometer leg in a barometric condenser system to receive the water, condensate and entrained hydrocarbons, VOCs generated by the barometric condenser.

(b) **Requirements.** Noncondensable volatile organic compounds from the following equipment, VOCs emitted from any of the vacuum producing systems listed in paragraphs (1) through (3) of this subsection shall be incinerated or reduced by 90 percent of what would be emitted from the following vacuum producing system without controls.

- (1) steam ejectors with barometric condensers;
- (2) steam ejectors with surface condensers; or,
- (3) mechanical vacuum pumps.

(c) **Hotwells and accumulators.**

(1) Hot wells and accumulators shall be covered and the noncondensable vapors shall be vented to a fire-box or incinerator.

(2) The presence of a pilot flame shall be monitored using a thermocouple or any other equivalent device to detect the presence of a flame. (Effective February 12, 1990)

(d) **Compliance.** Compliance shall be determined in accordance with the provision of the CTG document ("Control of Refinery Vacuum Producing systems, Wastewater Separators and Process Unit Turnarounds," EPA 450/2-77-025, October, 1977). Test reports and maintenance records will shall be maintained for at least two years. If emission testing is required, the appropriate test method(s) selected from EPA Reference Methods 1 through 4, 21, and/or 25, will shall be utilized.

252:100-39-18. Refinery Petroleum refinery effluent water separators

(a) **Definition.** "Effluent water separator" means any container in which any VOC floating on, entrained in, or contained in water entering the container is physically separated and removed from the water prior to discharge of the water from the container.

(b) **Requirements.** No person owner or operator shall operate, or install or permit the operation or installation of a single-compartment or multiple-compartment volatile organic compound water effluent water separator from any equipment processing, refining, treating, storing or handling volatile organic compound unless the compartment receiving said the effluent water is equipped with one of the following vapor control devices, properly installed, in good working order and in operation: to control emissions in one of the following ways.

(1) The container having totally encloses the liquid contents and all openings are sealed and totally enclosing the liquid contents. All gauging and sampling devices shall be gas-tight except when gauging or

sampling is taking place. The oil removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.

(2) The container is equipped with a vapor-recovery system, consisting of a vapor-gathering system capable of collecting the organic material VOC vapors and gases discharged and a vapor-disposal system capable of processing such organic material VOC vapors and gases so as to prevent their emission to the atmosphere and with all. All tank gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The organic material VOC removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.

(3) Containers A container that is equipped with controls of equal efficiency, provided the plans and specifications of such equipment are submitted and are approved by the Executive Division Director prior to their use.

PART 5. PETROLEUM PROCESSING AND STORAGE

252:100-39-30. Petroleum liquid storage in vessels with external floating roof tanks/roofs

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

(1) "Condensate" means hydrocarbon liquid separated from natural gas which condenses due to changes in the temperature and/or pressure and remains liquid at normal operating standard conditions.

(2) "Crude oil" means a naturally occurring hydrocarbon mixture which is a liquid at standard conditions. It may contain sulfur, nitrogen and/or oxygen derivatives of hydrocarbon.

(3) "Drilling or production facility" means all drilling and servicing equipment, wells, flow lines, separators, equipment, gathering lines, and auxiliary non-transportation-related equipment used in the production of petroleum but does not include natural gasoline plants.

(4) "Externally External floating roof" means a storage vessel cover in an open top tank consisting of a double deck or pontoon single deck which rests upon and is supported by the petroleum liquid being contained and is equipped with a closure seal or seals to close the space between the roof edge and tank wall.

(5) "Lease custody transfer" means the transfer of produced crude oil and/or condensate, after processing and/or treating in the producing operations, from storage tanks/vessels or automatic transfer facilities to pipelines or any other forms of transportation.

(6) "Liquid-mounted seal" means primary seal mounted in continuous contact with the liquid between the tank/vessel wall and the floating roof.

(7) "Petroleum liquid" means crude oil, condensate,

7617

and any finished or intermediate liquid products manufactured or extracted in a petroleum refinery.

(7)(8) "Vapor-mounted seal" means a primary seal mounted so there is an annular vapor space underneath the seal. The annular vapor space is bounded by the bottom of the primary seal, the tankvessel wall, the liquid surface, and the floating roof.

(8)(9) "Waxy, high pour point crude oil" means a crude oil with a pour point of 50° F. or higher as determined by the American Society of Testing and Materials Standard D97-66, "Test for Pour Point of Petroleum Oils."

(b) Applicability.

(1) This Section applies to all source facilities with petroleum liquid storage vessels equipped with external floating roofs, having capacities greater than 150,000 liters (40,000 gallons), that are located in Tulsa and Oklahoma Counties (40,000 gal (150,000l)).

(2) This Section does not apply to petroleum liquid storage vessels which prior to custody transfer that:

(A) are used to store waxy, high pour point crude oil;

(B) have capacities less than 1,600,000 liters (422,675 gal (420,000 gallons 1,600 m³)) and are used to store produced crude oil and condensate prior to lease custody transfer;

(C) contain a petroleum liquid with a true vapor pressure less than 1.5 psia (10.5 kPa) (1.5 psia);

(D) contain a petroleum liquid with a true vapor pressure less than 27.6 Kpa (4.0 psia); and,

(i) are of welded construction;

(ii) presently possess a metallic-type shoe seal, a liquid-mounted foam seal, a liquid-mounted liquid-filled type seal, or other closure device of demonstrated equivalence approved by the Executive Director; or, contain a petroleum liquid with a true vapor pressure less than 4.0 psia (27.6 kPa) if the vessels are of welded construction and have a metallic-type shoe seal, a liquid-mounted foam seal, a liquid-mounted liquid filled type seal, or other closure device of demonstrated equivalence approved by the Division Director; or,

(E) are of welded construction, are equipped with a metallic-type shoe primary seal and have a secondary seal from the top of the shoe seal to the tankvessel wall (shoe-mounted secondary seal).

(3) Storage vessels that are subject to the equipment standards for external floating roofs in 40 CFR 60 Subparts Ka or Kb are exempt from the requirements of 252:100-39-30.

(4) Storage vessels that are subject to the equipment standards for external floating roofs in 40 CFR 63 Subparts CC (63.646) or G shall be exempt from the requirements of 252:100-39-30 upon the date compliance with the standards in Subparts CC and G is required.

(c) Provisions for specific processes Equipment operating requirements.

(1) Standards. No owner of a petroleum liquid storage vessel subject to this Section shall use to store a petroleum liquid in that vessel unless shall meet the following conditions.

(A) The vessel has been fitted with;

(i) a continuous secondary seal extending from the floating roof to the tankvessel wall (rim-mounted secondary seal); or,

(ii) a closure device or other device which controls VOC emissions with an effectiveness equal to or greater than a seal required above under in 252:100-39-30(c)(1)(A)(i) and approved by the Executive Division Director.

(B) All seal closure devices meet the following requirements;

(i) there are no visible holes, tears, or other openings in the seal(s) or seal fabric;

(ii) the seal(s) are intact and uniformly in place around the circumference of the floating roof between the circumference of the floating roof and the tankvessel wall; and,

(iii) for vapor-mounted primary seals, the accumulated area of gaps exceeding 0.32 cm (1/8 in.) 1/8 in. (0.32 cm) in width between secondary seal and the tankvessel wall when secondary seal is used in combination with vapor mounted primary seal shall not exceed 21.2 cm² per meter (1.0 in.²/ft of tankvessel diameter (1.0 in. 2 per foot (21.2 cm²/m of tankvessel diameter), as. This shall be determined by physically measuring the length and width of all gaps around the entire circumference of the secondary seal in each place where a 0.32 cm 1/8 in. (0.32 cm) uniform diameter probe passes freely between the seal and the tankvessel wall; and summing the areas of the individual gaps.

(C) All openings in the external floating roof, except for automatic bleeder vents, rim space vents, and leg sleeves, are;

(i) equipped with covers, seals, or lids in the closed position except when the openings are in actual use; and,

(ii) equipped with projections into the tankvessel which remain below the liquid surface at all times;

(D) Automatic bleeder vents are closed at all times except when the roof is floated off or landed on the roof leg supports;

(E) Rim vents are set to open when the roof being floated off the leg supports or at the manufacturer's recommended settings; and,

(F) Emergency roof drains are provided with slotted membrane fabric covers or equivalent covers

Permanent Final Adoptions

which cover at least 90 percent of the area of the opening.

(2) **Monitoring.** The owner or operator of a petroleum liquid storage vessel with an external floating roof subject to this Section shall:

- (A) perform routine inspections semi-annually in order to ensure compliance with 252:100-39-30(c)(1)(B)(i), i.e., no visible holes, tears, or other openings in the seals or seal fabric;
- (B) measure the secondary seal gap annually in accordance with 252:100-39-30(c)(1)(B)(iii), when the floating roof is equipped with a vapor-mounted primary seal; and,
- (C) maintain records of the types of volatile petroleum liquids stored, the true vapor pressure of the liquid as stored, and the results of the inspections performed in 252:100-39-30(c)(2)(A) and 252:100-39-30(c)(2)(B).

(3) **Recordkeeping.**

(3)(A) Copies of all records under 252:100-39-30(c)(2) shall be retained by the owner or operator for a minimum of two years after the date on which the record was made.

(4)(B) Copies of all records under this Section shall be made available to the Executive Division Director, upon verbal or written request, at any reasonable time.

(d) **Compliance schedule.** Compliance with this Section will shall be accomplished by affected facilities within two years of approval of this Section by the Oklahoma Environmental Quality Board by May 23, 1982.

PART 7. SPECIFIC OPERATIONS

252:100-39-40. **Cutback asphalt (paving)**

(a) **Definitions.** "Cutback asphalt" means a basic asphalt or asphaltic concrete containing a petroleum distillate.

(b) **Requirements.** No owner, operator and/or contractor shall prepare or apply cutback liquefied asphalt without the prior written consent of the Executive Division Director or the Executive Director's designee. Such consent may be granted during Oklahoma's non-oxidant season, i.e., October through April November 1 through March 31.

252:100-39-41. **Vapor recovery systems Storage, loading and transport/delivery of VOCs**

(a) **Storage of volatile organic compounds-VOCs in vessels with storage capacities greater than 40,000 gallons (953 bbls).** No person shall store or permit the storage of gasoline or any volatile organic compound in tanks or vessels having Each vessel with a storage capacity greater than 40,000 gallons (953 bbls) unless such tank, reservoir or other container is total (151 m³) which stores gasoline or any VOC shall be a pressure tank vessel capable of maintaining working pressures sufficient at all times to that prevent organic the loss of VOC vapor or gas less to the atmosphere,

or is shall be equipped with one or more of the following vapor control devices:

(1) ~~a~~ **An external floating roof, consisting that consists of pontoon type, internal floating cover a pontoon-type or double-deck type roof, which will cover or a fixed roof with an internal-floating cover.** The cover shall rest on the surface of the liquid contents at all times (i.e. off the leg supports), except during initial fill, when the storage vessel is completely empty, or during refilling. When the cover is resting on the leg supports, the process of filling, emptying, or refilling shall be continuous and shall be accomplished as rapidly as possible. The floating roof shall be equipped with a closure seal, or seals, to close the space between the roof cover edge and tank vessel wall. Such floating Floating roofs are not appropriate control devices if the organic compounds VOCs have a vapor pressure of 11.0 pounds per square inch absolute (568 mm Hg) 11.1 psia (76.6 kPa) or greater under actual conditions. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. Closure seals will for fixed roof vessels with an internal-floating cover shall meet the requirements of 252:100-39-30(c)(1)(B); 252:100-39-30(c)(1)(B)(i) and (ii). Closure seals for vessels with external floating roofs shall meet the requirements of 252:100-39-30(c)(1)(B)(i), (ii), and (iii).

(2) ~~a~~ **A vapor-recovery system consisting that consists of a vapor-gathering system capable of collecting 90 percent by weight or more of the uncontrolled volatile organic compounds VOCs that would otherwise be emitted to the atmosphere and a vapor-disposal system capable of processing such organic compounds so as VOCs to prevent emissions in excess of 80 mg/liter of gasoline 6.68 x 10⁻⁴ lb/gal (80 mg/l) of VOCs transferred to the atmosphere.** All tank vessel gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place; or,

(3) ~~other~~ **Other equipment or methods that are of equal efficiency for purposes of air pollution control as may be used when approved by the Executive Division Director and are in concert with federal guidelines.**

(b) **Storage of volatile organic compounds-VOCs in vessels with storage capacities of 400-40,000 gallons (9.5-953 bbls).**

(1) ~~No person shall store or permit the storage of~~ Each gasoline or other volatile organic compound in any stationary VOC storage container vessel with a nominal capacity greater than 400 gallons (9.5 bbls) gal (1.5 m³) and less than 40,000 gallons (953 bbls) unless such container is gal (151 m³) shall be equipped with a submerged fill pipe or is be bottom filled. No person shall store or permit the storage of gasoline or other volatile organic compound in any stationary storage container with an average daily throughput of 30,000 gallons or greater unless the displaced vapors from the storage container are processed by a system that has a

7619

total collection efficiency no less than 90 percent by weight of total hydrocarbon compounds in said vapors.

(2) The displaced vapors from each storage vessel with an average daily throughput of 30,000 gal (113,562 l) or greater which stores gasoline or other VOCs shall be processed by a system that has a total collection efficiency no less than 90 percent by weight of total VOCs in the vapors.

(2)(A) The vapor recovery system shall include ~~one or more of the following:~~

(A)(i) a vapor-tight return line from the storage ~~container vessel~~ to the delivery vessel and a system that will ensure that the vapor return line is connected before gasoline or volatile organic compounds ~~VOCs~~ can be transferred into the ~~container storage vessel~~; or,

(B)(ii) other equipment that has a total collection efficiency no less than 90 percent by weight of the total hydrocarbon compounds ~~VOCs~~ in the displaced vapor provided that if approval of the proposed design installation, and operation is obtained from the Executive Division Director prior to start of construction.

(3)(B) ~~Provided, however, that the~~ The requirements for vapor collection of displaced vapors shall not apply to operations that are not major sources.

(c) ~~Loading of volatile organic compounds VOCs.~~

(1) ~~No person shall operate, install or permit the building, operation or installation of a stationary volatile organic compound~~ Each VOC loading facility unless such loading facility is with an annual throughput of 120,000 gal (454,249 l) or greater or storage capacity greater than 10,000 gal (38 m³) shall be equipped with a vapor-collection and/or disposal system properly installed, in good working order and in operation.

(2) ~~When volatile organic compounds~~ While VOCs are loaded through the hatches of a transport vessel, a pneumatic, hydraulic or mechanical means shall be provided to ensure a vapor-tight seal at the hatch.

(3) A means shall be provided to prevent organic material ~~VOC~~ drainage from the loading device when it is removed from the transport vessel, or to accomplish complete drainage before removal.

(4) When loading is effected through by means other than hatches, all loading and vapor lines shall be equipped with fittings which that make vapor-tight connections and which close automatically when disconnected.

(5) The vapor collection and/or disposal portion of the system shall consist of one or more of the following elements listed in 252:100-39-41(c)(5)(A) through 252:100-39-42(c)(5)(C) in addition to bottom loading or submerged fill of transport vessels: Storage vessels at service stations and bulk plants may be used for intermediate storage prior to recovery/disposal of vapors as specified in 252:100-39-41(c)(5)(A) through

252:100-39-41(c)(5)(C) if they are designed to prevent the release of vapors during use.

(A) ~~an~~ An absorption/adsorption system or condensation system with that has a minimum recovery efficiency of 90 percent by weight of all the volatile organic compound ~~VOC~~ vapors and gases entering such disposal system;

(B) ~~a~~ A vapor handling system which directs all vapors to a fuel gas incineration system with a minimum disposal efficiency of 95 percent; or,

(C) ~~other~~ Other equipment of that has at least a 90 percent efficiency, provided plans for such equipment are submitted to and approved by the Executive Division Director. ~~Storage vessels at service stations and bulk plants may be used for intermediate storage prior to recovery/disposal of vapors as per 252:100-39-41(c)(5)(A) through 252:100-39-41(c)(5)(C) if they are designed to prevent the release of vapors during use.~~

(6) Subsection 252:100-39-41(c) shall apply to any facility which that loads volatile organic compounds ~~VOCs~~ into any transport vessel designed for transporting volatile organic compounds ~~VOCs~~.

(d) ~~Transport/delivery.~~

(1) The vapor-laden delivery vessel shall meet one of the following requirements:

(A) ~~the~~ The delivery vessel must be so designa and operated as to be vapor tight except whe.. sampling, gauging, or inspecting; or,

(B) ~~the~~ The delivery vessel must be equipped and operated so that to deliver the volatile organic compound ~~VOC~~ vapors are delivered to a vapor recovery/disposal system.

(2) ~~No owner/operator will owner or operator shall allow a delivery vessel to be filled at a facility unable to receive displaced organic VOC vapors nor service tanks/vessels unable to deliver displaced vapors except for tanks/facilities/vessels and facilities exempted in 252:100-39-41(b) and 252:100-39-41(c).~~

(3) Testing of the tank trucks for compliance with the vapor tightness requirements must be consistent with Appendix "B" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems," EPA 450/2-78-051, or an equivalent method as determined by the Executive Division Director.

(e) ~~Additional requirements for Tulsa County. Also see 252:100-39-48 for additional requirements pertaining to Tulsa County.~~

(1) Applicability. This subsection applies only in Tulsa County.

(2) Storage of VOCs.

(A) 2,000 - 40,000 gallons capacity. Each storage vessel with a nominal capacity greater than 2,000 gal (7.6 m³) and less than 40,000 gal (151 m³) that stores gasoline or other VOCs or each storage vessel

located at a facility that dispenses more than 120,000 gal/yr of gasoline or other VOCs, in addition to being equipped with a submerged fill pipe or being bottom loading, shall be equipped with a vapor control system. The vapor control system shall have an efficiency of no less than 90 percent by weight of the VOCs contained in the displaced vapors and shall be equipped with a pressure relief valve in the atmospheric vent system which maintains a pressure of 16 oz/in.² and 1/2 oz/in.² vacuum. The vapor recovery system shall include one or more of the following.

(i) A vapor-tight return line from the storage vessel to the delivery vessel and a system that will ensure that the vapor return line is connected before gasoline or VOCs can be transferred into the storage vessel (i.e., popped connectors from the storage vessel to the delivery vessel).

(ii) A float vent valve assembly installed in the vapor return/vent line on new and existing dual point installations; however, for coaxial installations on existing stations, a vent sleeve extending 6 in. (15 cm) below the top of the vessel will be allowed. Sleeves may be equipped with a 1/16 in. (0.16 cm) air bleed hole.

(iii) A vapor recovery line with a cross-sectional area that is at least half of the cross-sectional area of the liquid delivery line.

(iv) Other equipment that has a total collection efficiency no less than 90 percent by weight of the total VOCs in the displaced vapor if approved by Division Director prior to start of construction.

(B) Applicability.

(i) Any vessel with a capacity greater than 2,000 gal (7.6 m³) or any vessel located at a facility that dispenses more than 120,000 gal/yr (454,249 l/yr) shall be and will always remain subject to 252:100-39-41(e)(2). (effective February 12, 1990)

(ii) Exemptions to 252:100-39-41(e)(2) may be granted if the owner or operator shows to the satisfaction of the Division Director that the vessel is used exclusively for agricultural purposes.

(C) Emission testing. If emission testing is conducted, the appropriate test methods selected from EPA Methods 1 through 4, 18, 21, 25, 25A and 25B shall be utilized.

(D) Compliance. Compliance with 252:100-39-41(e)(2) shall be accomplished by the owner or operator of affected facilities by December 31, 1986.

(E) Certification. The owner or operator of a facility shall obtain, by whatever means practicable,

certification from the owner or operator of the transport/delivery vessels that all deliveries of gasoline or other VOCs made to their 400-gallon to 40,000-gallon storage facility located in Tulsa County shall be made by transport/delivery vessels that comply with the requirements contained in 252:100-39-41(e)(4). Compliance with 252:100-39-41(e)(2) shall be accomplished by owners or operators of affected facilities no later than December 31, 1990. (Effective February 12, 1990)

(3) Loading of VOCs. In addition to those requirements contained in 252:100-39-41(c), stationary loading facilities shall be checked annually in accordance with EPA Test Method 21, Leak Test. Leaks greater than 5,000 ppmv shall be repaired within 15 days. Facilities shall retain inspection and repair records for at least two years.

(4) Transport/delivery vessel requirements. In addition to the requirements contained in 252:100-39-41(d), facilities located in Tulsa County must meet the following requirements.

(A) Maintenance.

(i) The delivery vessel must be maintained so that it is vapor tight except when sampling, gauging, or inspecting. These activities shall not occur while the vehicle is loading or unloading or is in a pressurized state.

(ii) The delivery vessel must be equipped, maintained, and operated to receive vapors from sources identified in 252:100-39-41(b)(1) and 252:100-39-41(b)(2) and retain these and all other vapors until they are delivered into an authorized vapor recovery/disposal system.

(iii) Vessels with defective equipment such as boots, seals, and hoses, or with other deficiencies that would impair the vessels' ability to retain vapors or liquid shall be repaired within 5 days.

(iv) The certified testing facility must certify to the approving agency that the proper testing and repairs have occurred in accordance with 252:100-39-41(e)(4)(B)(i). The vessel must also display on the rear panel a tag showing the date of the pressure test.

(v) No owner or operator shall allow a delivery vessel to be filled at a facility unable to receive displaced VOCs nor service vessels unable to deliver displaced vapors except for vessels/facilities exempted in 252:100-39-41(b). Terminal owners shall not fill vessels that do not display a current tag.

(vi) Delivery vessels may be inspected by representatives of the DEQ in order to determine their state of repair. Such a test may consist of a visual inspection or a vapor test with

vapors not to exceed 5,000 ppmv. Failure of a vapor test shall require the owner or operator to make the necessary repairs within 10 days. Failure to certify within 10 days of a vapor test that the necessary repairs have been made shall subject the owner or operator to sanctions. Upon certification of repairs, the vessel will be allowed to resume normal operation.

(B) **Testing requirements.**

(i) **Pressure test.**

(I) Delivery vessels, delivering or receiving gasoline must be tested one time per year for vapor tightness. The vapor tightness test must be consistent with Appendix "A" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems", EPA 450/2-78-051. Tests shall be performed by the owner or a transport service company. Test methods used to test these vessels by owners or testing companies must be approved for use by the Division Director.

(II) The vessel shall be considered to pass the test prescribed in 252:100-39-41(e)(4)(B)(i)(I) when the test results show that the vessel and its vapor collection systems do not sustain a pressure change of more than 3 in. H₂O. There shall be no avoidable visible liquid leaks.

(ii) Vapor test. Testing of the tank trucks for compliance with vapor tightness requirements as required under 252:100-39-41(e)(4)(A)(vi) must be consistent with Appendix "B" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems", EPA 405/2-78-051, as modified for this purpose and contained in 252:100-43-15. The requirements of 252:100-39-41(e) took effect December 15, 1988.

252:100-39-42. **Metal cleaning**

(a) **Cold cleaning facility requirements.**

(1) **Equipment requirements.** No personAn owner or operator shall allow the construction or operation of any cold cleaning unit for metal degreasing using an organic solvent unless the following requirements are metwhich uses a VOC shall:

- (A) install a cover or door shall be installed on the facility that can be easily operated with one hand;
- (B) provide an internal drain board will be provided in such a manner that will allow lid closure if practical; if not practical, the drainage facility may be provide an external drainage facility; and,
- (C) attach a permanent, conspicuous label

summarizing the operating requirements w permanently attached specified 252:100-39-42(a)(2) to the facility.

(2) **Operating requirements.** The operating requirements specified in 252:100-39-42(a)(1)(C) shall as a minimum specify Owners or operators shall at a minimum:

- (A) drain clean parts at least 15 seconds or until dripping ceases before removal;
- (B) close degreaser cover when not handling parts in cleaner; and;
- (C) store waste solvent VOC in covered containers. Do not dispose or allow disposition in such a manner that more than 20 percent by weight can evaporate into the atmosphere;
- (D) not dispose or allow disposition of waste VOC in such a manner that more than 20 percent by weight can evaporate into the atmosphere.

(3)(E) If used, a solvent spray will be of a solid fluid stream (not atomized or spray) use a solid fluid stream, not an atomized spray, when VOC is sprayed.

(4)(3) **Requirements for controls.** If the solvent volatility vapor pressure of the VOC is greater than 33 mm Hg (0.6 psi) 0.6 psi (4.1 kPa) measured at 38°C (100°F) 100°F (38°C) or if solvent VOC is heated to 120 degrees C 248°F (120°C), the owner or operator shall apply one or more of the following control devices be required devices/techniques.

- (A) freeboard Freeboard that gives a free board freeboard ratio greater than or equal to 0.7;
- (B) water Water cover and where the solvent VOC is insoluble in and heavier denser than water or such equivalent; or,
- (C) other Another system of equivalent control as approved by the Executive Division Director.

(5)(4) **Compliance and recordkeeping.** Compliance will shall be determined in accordance with EPA guidance document "Control of Volatile Organic Emissions from Solvent Metal Cleaning." 450/2-77-022. Test reports and maintenance and repair records of control equipment will shall be maintained by the source for at least two years.

(b) **Vapor-type metal degreasing requirements.**

(1) **Equipment requirements.** No person shall allow the construction or operation An owner or operator of any vapor-type metal degreasing unit using an organic solvent unless A VOC shall ensure that the following requirements are met;

- (A) the The unit has shall have a cover or door that can easily be opened and closed without disturbing the vapor zone;
- (B) the The unit will shall have the following saf switches;
 - (i) condenser Condenser flow switch and thermostat or equivalent capable of shutting off the sump heat if condenser coolant is not

Permanent Final Adoptions

- circulating or coolant exceeds solvent VOC manufacturer's recommended level; and,
- (ii) ~~spray~~ Spray safety switch capable of shutting off spray pumps if the vapor level drops in excess of ~~four inches~~ 4 in. (10 cm).
- (C) ~~The unit will shall~~ have one or more of the following control devices/techniques:
- (i) ~~freeboard~~ Freeboard ratio not less than 0.75, i.e., the ratio of the freeboard to the width of the degreaser wherein the term freeboard is defined as the distance from the top of the vapor zone to the top of the degreaser tank;
- (ii) ~~refrigerated~~ Refrigerated chiller, i.e., condenser coils in the upper limit of the vapor zone;
- (iii) ~~enclosed~~ Enclosed design, i.e., cover or door is opened only when a part is actually entering or exiting the facility; or,
- (iv) ~~a~~ A carbon adsorption system with ventilation greater than ~~50 cfm/ft.2~~ cfm/ft² of air/vapor area when cover is open and exhausting. The system shall exhaust less than 25 ppm solvent/ppmv VOC average over one adsorption cycle; or,
- (v) ~~a~~ A control system demonstrated to have a control efficiency equal to or greater than any of the systems in ~~(C)~~ of this paragraph 252:100-39-42(b)(1)(C).
- (D) ~~a~~ A permanent conspicuous label summarizing operating ~~procedures~~ requirements in 252:100-39-42(b)(2) shall be attached to the facility unit.
- (2) Operating requirements. The operating requirements referred to in 252:100-39-42(b)(1)(D) shall as a minimum specify: An owner or operator of a vapor type metal degreasing unit using VOC shall ensure that the following requirements are met.
- (A) As a minimum operators shall:
- (i) keep the cover closed at all times except when processing work/degreasing parts;
- (B) minimize solvent carry-out by the following measures:
- (i)(ii) rack parts to allow full drainage;
- (ii)(iii) move parts in and out of the degreaser at less than 3.3 m/sec (11 ft./min.); 11 ft/min (3.4 m/min);
- (iii)(iv) degrease the workload in the vapor zone at least 30 sec. seconds or until condensation ceases;
- (iv)(v) tip out any pools of solvent/VOC on the cleaned parts before removal;
- (v)(vi) allow parts to dry within the degreaser for at least 15 sec. seconds or until visually dry;
- (vii) assure that VOC leaks are immediately repaired or the degreaser is shut down; and,
- (viii) store waste VOC only in closed containers.
- (B) As a minimum operators shall not:
- (C)(i) do not degrease porous or absorbent materials, such as cloth, leather, wood or rope;
- (D)(ii) workloads should not allow workloads to occupy more than half of the degreaser's open top area;
- (E)(iii) never spray above the vapor level;
- (F) assure solvent leaks immediately repaired or the degreaser is shut down;
- (G)(iv) do not dispose of waste solvent or transfer it to another party in such a manner that allow greater than 20 percent of the VOC waste (by weight) will to evaporate into the atmosphere. Store waste solvent only in closed containers when disposing of the waste or transferring the waste to another party;
- (H)(v) allow exhaust ventilation should not to exceed 20m³/min. per m² (65 cfm per ft²) 65 cfm/ft² (20 m³/min/m²) of degreaser open area, unless necessary to meet OSHA requirements. Ventilation fans should not be used near the degreaser opening; and,
- (vi) use ventilation fans near the degreaser opening; or,
- (F)(vii) allow water should not to be visually detectable in solvent/VOC exiting the water separator.
- (3) Compliance and recordkeeping. Compliance will shall be determined in accordance with EPA document 450/2-77-022 and all test and maintenance records will shall be retained by the source for at least two years.
- (c) Conveyorized degreasing unit requirements.
- (1) Operating requirements. No person shall operate An owner or operator of a conveyorized degreasing unit using VOC shall ensure that unless the following requirements are met,
- (A) exhaust/Exhaust ventilation should shall not exceed 20m³/min. per m² (65 cfm per ft²) 65 cfm/ft² (20 m³/min/m²) of degreaser opening, unless necessary to meet OSHA requirements. Work place fans should not be used near the degreaser opening;
- (B) Work place fans shall not be used near the degreaser opening.
- (B)(C) minimize carry-out Carry-out emissions shall be minimized by:
- (i) racking parts for best drainage; and,
- (ii) maintaining vertical conveyor speed at less than 3.3 m/min. (11 ft./min.); 11 ft/min (3.4 m/min).
- (C)(D) do Evaporation of waste VOC into the atmosphere shall not dispose of waste solvent or transfer it to another party in such a manner that be greater than 20 percent of the waste (by weight) can evaporate into the atmosphere. Store waste solvent

~~VOC only in covered containers, when disposing of the waste or transferring the waste to another party.~~

~~(E) Waste VOC shall be stored only in covered containers.~~

~~(D)(F) repair solvent VOC leaks must be repaired immediately, or shut down the degreaser; must be shut down.~~

~~(E)(G) water should Water shall not be visibly detectable in the solvent VOC exiting the water separator; and,~~

~~(F)(H) a permanent conspicuous label will be attached to the facility summarizing the operating requirements listed in 252:100-39-42(b) and 252:100-39-42(c) shall be attached to the unit.~~

(2) **Control requirements.** In addition to the requirements in 252:100-39-42(c)(1), any unit that has an air/vapor interface of more than 2.0 m^2 ~~will~~ 21.5 ft^2 (2.0 m^2) shall be subject to the following control requirements:

(A) **Major control devices.** The degreaser must be controlled by either:

- (i) a refrigerated chiller;
- (ii) a carbon adsorption system, with that exhausts less than 25 ppmv of VOC averaged over a complete adsorption cycle and has ventilation equal to or greater than $15\text{ m}^2/\text{min}$ per m^2 ($50\text{ cfm}/\text{ft}^2$) $50\text{ cfm}/\text{ft}^2$ ($15\text{ m}^3/\text{min}/\text{m}^2$) of air/vapor area (when down-time covers are open), and exhausting less than 25 ppm of solvent by volume averaged over a complete adsorption cycle; or,
- (iii) a system demonstrated to have control efficiency equivalent to or better than either of the above.

(B) **Carryover prevention.** Either a drying tunnel, or another means such as rotating (tumbling) basket, sufficient to prevent cleaned parts from carrying out solvent VOC liquid or vapor subject to space limitations must be installed.

(C) **Safety switches.** The following safety switches must be installed and be operational:

- (i) Condenser flow switch and thermostat -that (shuts off sump heat if coolant is either not circulating or too warm).
- (ii) Spray safety switch -that (shuts off spray pump or conveyor if the vapor level drops excessively, e.g. more than 10 cm (4 in.)) 4 in (10 cm).
- (iii) Vapor level control thermostat -that (shuts off sump heat when vapor level rises too high).

(D) **Minimized openings.** Entrances and exits should shall silhouette work loads so that the average clearance (between parts and the edge of the degreaser opening) is either less than 10 cm (4 in.)

10 cm) or less that 10 percent of the width of opening.

(E) **Covers.** Down-time covers must be placed over entrances and exits of conveyerized degreasers immediately after the conveyor and exhaust are shutdown and removed just before they are started up.

(3) **Compliance and recordkeeping.** Compliance will shall be determined in accordance with EPA document 450/2-77-022 and all. All test and maintenance records will shall be retained by the source for at least two years.

(d) **Alternative control methods.** As an alternative to the requirements of 252:100-39-42(a) through 252:100-39-42(c), and subject to EPA approval, an operator may request the approval by the Division Director of other methods of control may be approved by, subject to EPA approval, the Executive Director upon application by a source; provided, the. The applicant can must demonstrate that the proposed method will preclude no less than prevent at least 80 percent of the emissions from each source from being emitted to the atmosphere, as determined by the appropriate test methods selected from EPA Methods 1 through 4, 18, 25, 25A and 25B.

252:100-39-43. Graphic arts systems

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

- (1) "Flexographic printing" means the application of words, designs and pictures to a substrate by means of a roll printing technique in which the pattern to be applied is raised above the printing roll and the image carrier is made of rubber or other elastomeric materials.
- (2) "Packaging rotogravure printing" means rotogravure printing upon paper, paper board, metal foil, plastic film, and other substrates, which that are, in subsequent operations, formed into packaging products and labels for articles to be sold.
- (3) "Publication rotogravure printing" means rotogravure printing upon paper which is subsequently formed into books, magazines, catalogues, brochures, directories, newspaper supplements, and other types of printed materials.
- (4) "Roll printing" means the application of words, designs and pictures to a substrate usually by means of a series of hard rubber or steel rolls each with only partial coverage.
- (5) "Rotogravure printing" means the application of works, designs and pictures to a substrate by means of a roll printing technique which that involves an intaglio or recessed image areas in the form of cells.

(b) **Applicability.**

- (1) This Section applies to all packaging rotogravure, publication rotogravure, and flexographic printing facilities located in Tulsa and Oklahoma counties.

Permanent Final Adoptions

(2) This Section applies ~~only to only~~ packaging rotogravure, publication rotogravure, and flexographic printing facilities whose potential emissionemissions of organic solvent is VOC are equal to or more than 90 megagrams (106 grams) per year (100 tons/yr.) 100 tons/yr (90 Mg/yr). Potential emissions ~~are to~~ shall be calculated based on historical records of actual consumption of solvent VOC and ink.

(c) Provisions for specific processes.

(1) ~~No An~~ owner or operator of a ~~packaging rotogravure, publication rotogravure or flexographic printing facility subject to this Section and employing solvent which uses VOC containing ink may operate, cause, allow or permit the operation of the facility unless~~ shall ensure that one of the following conditions is met.

(A) ~~the~~ The volatile fraction of ink, as it is applied to the substrate, contains 25.0 percent by volume or less of ~~organic solvent~~ VOC and 75.0 percent by volume or more of water;

(B) ~~the~~ The ink as it is applied to the substrate, less water, contains 60.0 percent by volume or more of nonvolatile material; ~~or,~~

(C) ~~the~~ The owner or operator installs and operates:

(i) a carbon adsorption system ~~which that~~ reduces the organic solvent VOC emissions from the capture system by at least 90.0 percent by weight;

(ii) an incineration system ~~which that~~ oxidizes at least 90.0 percent of the nonmethane volatile organic solvent VOC measured as total combustible carbon to carbon dioxide and water; or,

(iii) an alternative ~~organic solvent VOC~~ emission reduction system demonstrated to have at least 90.0 percent reduction efficiency, measured across the control system, and which has been approved by the Executive Division Director.

(2) A capture system must be used in conjunction with the emission control systems in 252:100-39-43(c)(1)(C). The design and operation of the capture system must be consistent with good engineering practice, and shall be required to provide for an overall reduction in ~~volatile organic compound~~ VOC emissions of at least:

(A) 75.0 percent where a publication rotogravure process is employed;

(B) 65.0 percent where a packaging rotogravure process is employed; ~~or,~~

(C) 60.0 percent where a flexographic printing process is employed.

(d) Compliance schedule. Compliance with this Section ~~will~~ shall be accomplished by affected facilities ~~within two~~ (2)

~~years of approval of this Subchapter by the Oklahoma Environmental Quality Board by May 23, 1982.~~

(e) Testing. Test procedures to determine compliance with this Subchapter must be consistent with EPA Reference Method 24 or equivalent ASTM Methods.

252:100-39-44. Manufacture of pneumatic rubber tires

(a) Definitions. The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

(1) "Automatic tread end cementing" means the application of a ~~solvent~~ VOC based cement to the tire tread ends by automated devices.

(2) "Bead dipping" means the dipping of an assembled tire bead into a ~~solvent~~ VOC based cement.

(3) "Green tires" means assembled tires before molding and curing have occurred.

(4) "Green tire spraying" means the spraying of green tires, both inside and outside, with release compounds ~~which that~~ help remove air from the tire during molding and prevent the tire from sticking to the mold after curing.

(5) "Manual tread end cementing" means the application of a ~~solvent~~ VOC based cement to the tire tread ends by manufacturers.

(6) "Passenger type tire" means agricultural, airplane, industrial, mobile home, light and medium duty truck, and passenger vehicle tires with a bead diameter up to but not including 20.0 inches and cross section dimension up to 12.8 inches.

(7) "Pneumatic rubber tire manufacture" means the production of pneumatic rubber, passenger type tires on a mass production basis.

(8) "Undertread cementing" means the application of a ~~solvent~~ VOC based cement to the underside of a tire tread.

(9) "Water based sprays" means release compounds, sprayed on the inside and outside of green tires, in which solids, water and emulsifiers have been substituted for ~~organic solvents~~ VOCs. These sprays may contain an average of up to five percent ~~organic solvent~~ VOC.

(b) Applicability.

(1) This Section applies to VOC emissions ~~from the following operations in~~ from all major source pneumatic rubber tire manufacturing facilities located in Oklahoma County ~~from:~~

(A) undertread cementing;

(B) automatic tread end cementing; and,

(C) green tire spraying.

(2) The provisions of this Section do not apply to the ~~productions~~ production of specialty tires for antique or other vehicles when produced on an irregular basis or with short production runs. This exemption applies only to tires produced on equipment separate from normal production lines for passenger type tires.

(3) Manual tread end cementing operations are exempt from the provisions of this Section.

(c) Provisions for specific processes Control requirements.

(1) Undertread cementing or automatic tread end cementing. The owner or operator of an undertread cementing, or automatic tread end cementing, operation subject to this Section shall: install and operate the following.

(A) ~~install and operate a~~ capture system, designed to achieve maximum reasonable capture from all undertread cementing, and automatic tread end cementing operations. Maximum reasonable capture would require that hood enclosures be designed ~~in such a manner to minimize open areas and enclose as much of the emission source as practical while maintaining a minimum in-draft velocity of 200 feet per minute~~ (ft/min (61 m/min)) except during times when the enclosure must be opened to allow work inside or for the inspections of the product in progress. Maximum reasonable capture shall be consistent with ~~the following documents:~~

- (i) Industrial Ventilation, A Manual of Recommended Practices, 14th Edition, American Federation of Industrial Hygienists; and.
- (ii) Recommended Industrial Ventilation guidelines, U.S. Department of Health Education and Welfare, National Institute of Occupational Safety and Health.

(B) ~~install and operate a~~ control device that meets the requirements of one of the following: systems.

- (i) A carbon adsorption system designed and operated ~~in a manner such~~ so that there is at least an initial 95.0 percent removal of VOC by weight from the gases ducted to the control device with at least a 90 percent 3 year removal average; ~~or,~~
- (ii) An incineration system that oxidizes at least 90.0 percent of the ~~nonmethane volatile organic compounds (VOC)~~ VOCs (measured as total combustible carbon) which enter the incinerator to carbon dioxide and water.
- (iii) An alternative ~~volatile organic compound~~ VOC emission reduction system certified by the owner or operator to have at least a 90.0 percent reduction efficiency, measured across the control system, and that has been approved by the Executive Division Director.

(2) Green tire spraying. The owner or operator of a green tire spraying operation subject to this Section shall implement one of the following means of reducing ~~volatile organic compound~~ VOC emissions:

(A) substitute Substitute water-based sprays for

the normal solvent-based ~~VOC-based~~ mold ~~compound; or,~~

(B) ~~install~~ Install a capture system designed and operated ~~in a manner that will~~ to capture and transfer at least 90.0 percent of the VOC emitted by the green tire spraying operation to a control device, and install and operate a control device that meets the requirements of one of the following: systems.

- (i) ~~a~~ A carbon adsorption system designed and operated ~~in a manner such~~ so that there is at least 95.0 percent removal of VOC by weight from the gases ducted to the control device; ~~or,~~
- (ii) ~~an~~ An incineration system that oxidizes at least 90.0 percent of the ~~nonmethane volatile organic compounds (VOC)~~ VOCs (measured as total combustible carbon) to carbon dioxide and water; ~~or,~~
- (iii) ~~an~~ An alternative ~~volatile organic compound~~ VOC emission reduction system approved by the Division Director and certified by the owner or operator to have at least a 90.0 percent reduction efficiency, measured across the control system, that has been approved by the Executive Director.

(3) Exemption. If the total ~~volatile organic compound~~ VOC emissions from all undertread cementing, tread-end cementing, bead dipping, green tire spraying operations at a pneumatic rubber tire manufacturing facility do not exceed 57 grams per tire/tire, 252:100-39-44(c)(1) and 252:100-39-44(c)(2) shall not apply.

(4) ~~An owner or operator of an undertread cementing, tread-end cementing, bead dipping or green tire spraying operation subject to this Section may, instead of implementing measures required by 252:100-39-44(c)(1) and 252:100-39-44(c)(2), submit to the Executive Director a petition for alternative controls. The petition must be submitted in writing before September 15, 1981 and must contain:~~

- (A) ~~the name and address of the company and the name and telephone number of a responsible company representative over whose signature the petition is submitted;~~
- (B) ~~a description of all operations conducted at the location to which the petition applies and the purpose the volatile organic compound emitting equipment serves within the operations;~~
- (C) ~~reference to the specific emission limits, operational and/or equipment controls for which alternative emission limits, operational and/or equipment controls are proposed;~~
- (D) ~~a detailed description of the proposed alternative emission limits, operational and/or equipment controls, the magnitude of volatile organic compound emission reduction which will be achieved, and the quantity and composition of~~

Permanent Final Adoption

volatile organic compounds which will be emitted if the alternative emission limits, operational and/or equipment controls are instituted;

(E) a schedule for the installation and/or institution of the alternative operational and/or equipment controls in conformance with the appropriate compliance schedule section; and,

(F) a demonstration that the alternative control program constitutes reasonably available control technology for the petitioned facility. The factors to be presented in this demonstration include but are not limited to:

- (i) the capital expenditure necessary to achieve the petitioned level of control;
- (ii) the impact of these costs on the firm;
- (iii) the energy requirements of the petitioned level of control;
- (iv) the impact on the environment in terms of any increase in air, water and solid waste effluent discharge of the petitioned level of control;
- (v) any adverse worker or product safety implications of the petitioned level of control; and,
- (vi) an analysis for each of the factors in 252:100-39-44(e)(4)(F)(i) through 252:100-39-44(e)(4)(F)(v) for the control levels specified in 252:100-39-44(e)(1) and 252:100-39-44(e)(2).

(5) The Executive Director may approve a Petition for Alternative Control if:

- (A) the petition is submitted in accordance with 252:100-39-44(e);
- (B) the petition demonstrates that the alternative controls represent reasonable available control technology; or,
- (C) the petition contains a compliance schedule for achieving and maintaining a reduction of volatile organic compound emissions as expeditiously as practicable, but no later than the photochemical oxidant attainment date.

(d) **Compliance schedule.** Compliance with this Section will be accomplished by affected facilities on or before December 31, 1982.

(e) **Testing and monitoring.**

(1) Test procedures to determine compliance with this Section must be approved by the Executive Division Director and be consistent with:

- (A) EPA Guideline Series Document "Measurement of Volatile Organic Compounds," EPA-450/2-78-041; and,
- (B) Appendix A of "Control of Volatile Organic Emissions from Existing Stationary Sources - Volume II: Surface coating of Cans, Coils, Paper, Fabrics, Automobiles, and Light-Duty Trucks," EPA-450/2-77-008.

(2) The Executive Division Director may accept, instead of green tire spray analysis, a certification by the manufacturer of the composition of the green tire spray, if supported by actual batch formulation records.

(3) If add-on control equipment is used, continuous monitors of the following parameters shall be installed, periodically calibrated, and operated at all times that the associated control equipment is operating. These monitors shall measure:

- (A) exhaust gas ~~temperature~~ temperature of ~~incinerators~~ an incinerator;
- (B) temperature rise across a catalytic incinerator bed;
- (C) breakthrough of VOC on a carbon adsorption unit; and,
- (D) any other parameter for which a continuous monitoring or recording device is required by the Executive Division Director.

252:100-39-45. Petroleum (solvent) dry cleaning

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

(1) "**Cartridge filters**" means perforated canisters containing filtration paper and/or activated carbon that are used in a pressurized system to remove solid particles and fugitive dyes from soil-laden petroleum solvent.

(2) "**Containers and conveyors and of petroleum solvent**" means piping, ductwork, pumps, storage tanks, and other ancillary equipment that are associated with the installation and operation of washers, dryers, filters, stills, and settling tanks.

(3) "**Dry cleaning**" means a process of the cleaning of textiles and fabric products in which articles are washed in a non-aqueous solution (petroleum solvent) and then dried by exposure to a heated air stream.

(4) "**Housekeeping**" means those measures and precautions necessary to minimize the release of petroleum solvent to the atmosphere.

(5) "**Operations parameters**" means the activities required to insure that the equipment is operated in a manner to preclude the loss of petroleum solvents to the atmosphere.

(6) "**Perceptible leaks**" means any petroleum solvent vapor or liquid leaks that are conspicuous from visual observation, such as pools or droplets of liquid, or buckets or barrels of petroleum solvent or petroleum solvent-laden waste standing open to the atmosphere.

(7) "**Petroleum solvent**" means organic material produced by petroleum distillation comprising a hydrocarbon range of 8 to 12 carbon atoms per organic molecule that exists as a liquid under standard conditions.

(b) **Applicability.** This Section applies to petroleum solvent washers, dryers, solvent filters, settling tanks,

vacuum stills, and other containers and conveyors of petroleum solvent that are used in petroleum solvent dry cleaning facilities in Tulsa County only.

(c) ~~Provisions for specific processes~~ Operating requirements.

(1) The owner or operator of a petroleum solvent dry cleaning facility shall not operate any dry cleaning equipment using petroleum solvents unless:

- (A) there are no perceptible liquid or vapor leaks from any portion of the equipment;
- (B) all washer lint traps, button traps, access doors and other parts of the equipment where petroleum solvent may be exposed to the atmosphere are kept closed at all times except when required for proper operation or maintenance;
- (C) the still residue is stored in sealed containers. ~~The and the~~ used filtering material is to be placed into a sealed container suitable for use with petroleum solvents, immediately after removal from the filter and be disposed of in the prescribed manner; or,
- (D) cartridge filters containing paper or carbon or a combination thereof, which are used in the dry cleaning process are to be drained in the filter housing for at least 24 hours prior to removal.

(2) The owner or operator of a petroleum solvent dry cleaning facility shall not operate any drying tumblers and cabinets that use petroleum solvents unless tumblers and cabinets are operated in such a manner as to control petroleum solvent vapor leaks by reducing the number of sources where petroleum solvent is exposed to the atmosphere. Under no circumstances should there be any open containers (can, buckets, barrels) of petroleum solvent or petroleum solvent-containing material. Equipment containing solvent (washers, dryers, extractors, and filters) should remain closed at all times other than during maintenance or load transfer. Lint filter and button trap covers should remain closed except when petroleum solvent-laden lint and debris are removed. Gaskets and seals should be inspected and replaced when found worn or defective. ~~Solvent-laden~~ Petroleum solvent-laden clothes should never be allowed to sit remain exposed to the atmosphere for longer periods than are necessary for load transfers. Finally, vents on petroleum solvent-containing waste and new petroleum solvent storage tanks should be constructed and maintained in a manner that limits petroleum solvent vapor emissions to the maximum possible extent.

(3) The owner or operator shall repair all petroleum solvent vapor and liquid leaks within 3 working days after identifying the sources of the leaks. If necessary repair parts are not on hand, the owner or operator shall order these parts within 3 working days, and repair the leaks no later than 3 working days following the arrival of the necessary parts.

(d) **Disposal of filters.** Filters from the petroleum cleaning facility shall be disposed of by:

- (1) incineration at a facility approved by the fire marshall's office for such disposal;
- (2) by recycling through an approved vendor of this service; or,
- (3) by any other method approved by the Executive Division Director.

(e) **Compliance schedule.** Compliance with 252:100-39-45(c)(1) through 252:100-39-45(c)(3), ~~will~~ shall be accomplished by affected facilities on or before October 1, 1986.

252:100-39-46. Coating of parts and products

(a) **Applicability.** This Section shall apply only to these industries located in Tulsa County which manufacture and/or coat metal parts and products. ~~This Section is applicable to, such as~~ large farm machinery, small farm machinery, small appliances, commercial machinery, industrial machinery and fabricated metal products. Architectural coating, aerospace coating, and automobile refinishing are not included.

(b) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

- (1) "Air or forced air dry coatings" means coating ~~which that~~ are dried by the use of air or forced warm at temperatures up to 194°F.
- (2) "Clear coat" means a coating ~~which that~~ lacks color and opacity or is transparent and uses the undercoat as a reflectant base.
- (3) "Extreme performance coatings" mean coatings designed for harsh exposure or extreme environmental conditions (~~i.e., (e.g., exposure to the weather,~~ all of the time, temperature above 200°F, detergents, abrasive and scouring agents, solvents, corrosive atmosphere or similar conditions).
- (4) "Facility" means all emission sources located on a contiguous ~~property~~ properties under common control which are affected by the surface coating provisions of OAC 252:100-37 and 252:100-39.
- (5) "Powder" means a coating ~~which that~~ is applied in a finely divided (~~powder~~) state by various methods, and becomes a continuous, solid film when the metal part or product is moved to an oven for curing.
- (6) "Transfer efficiency" means the weight (or volume) of coating solids adhering to the surface being coated divided by the total weight (or volume) of coating solids delivered to the applicator.

(c) **Existing source requirement.** No owner or operator ~~subject to the provisions of this Section shall discharge or cause the discharge into the atmosphere from an existir~~ coating line or individual coating operation any ~~organic~~ solvent VOC in excess of the amounts listed in 252:100-39-46(d) as calculated by EPA method 24, 40 CFR Part 60.

(d) **Standards.** The following table enumerates the limitations for surface coatings in pounds of solvent VOC per gallon of coating as applied (~~less water/exempt solvent~~); (water and exempt compounds). If more than one limit listed in the table is applicable to a specific coating, then the least stringent limitation shall be applied.

Coating type	Limitations	
	lbs/gal	kg/liter
Air or Forced Air Dry	3.5	.42 0.42
Clear Coat	4.3	.52 0.52
Extreme Performance	3.5	.42 0.42
Powder	0.4	.05 0.05
Other	3.0	.36 0.36

(e) **Emission factor.** For the purposes of calculating an emission factor (EF) in pounds VOC per gallon of coating solids for use in the development of a plant-wide emission plan as described in 252:100-39-46(j)(1), the following formula will be utilized: $EF = V D / 1 - (V + W) = V D / S$ where:

- (1) V = volume fraction of solvent VOC in coating,
- (2) D = density of solvent VOC in the coating,
- (3) W = volume fraction of water in coating, and,
- (4) S = 1 - (V + W) = volume fraction of solids in coating.

(f) **Emission limit Compliance.** ~~If more than one emission limit as listed in 252:100-39-46(d) is applicable to a specific coating, then the least stringent emission limitation shall be applied.~~ Compliance with the coating limits listed in 252:100-39-46(d) is to be calculated on a daily weighted average basis.

(g) **Solvent-containing VOC-containing materials.** Solvent-containing VOC-containing materials used for clean up shall be considered in the emissions VOC content limits listed in 252:100-39-46(d) unless:

- (1) the solvent VOC containing materials are maintained in a closed container when not in use;
- (2) closed containers are used for the disposal of cloth or paper or other materials used for surface preparation and cleanup;
- (3) the spray equipment is disassembled and cleaned in a solvent VOC vat and the vat is closed when not in use; or,
- (4) the solvent VOC containing materials used for the clean up of spray equipment are sprayed directly into closed containers.

(h) **Exemptions.** ~~Exemptions to this Section shall be permitted for combined emissions at one site/facility, which do not exceed a 10 tons/year emissions cutoff based on the facility's Facilities with a potential to emit 10 tons/year or less of VOC from coating operations are exempt from this Section.~~ Once this limit is exceeded, the source/facility will always be subject to the limits of this Section.

(i) **Alternate standard.** Emissions Coatings with VOC

contents in excess of those permitted/allowed by 252:100-39-46(d) are allowable/may be used if both of the following conditions are met:

(1) ~~emissions that would result in the absence of control Emissions are reduced to levels equivalent to those permitted by that would occur if the VOC content of the coatings met the limits contained in 252:100-39-46(d) and meet there is an overall control efficiency of at least:~~

- (A) 85 percent, by incineration or;
- (B) 85 percent, by absorption; or any other equipment of equivalent reliability and effectiveness; and,
- (C) 85 percent by any other equipment of equivalent reliability and effectiveness.

(2) ~~no~~ No air pollution, as defined by the Clean Air Act, results.

(j) **Emission plan.**

(1) **Development of a plant-wide emission plan.** An ~~owner/operator~~ owner or operator may develop a plant-wide emission plan consistent with EPA's Emission Trading Policy as published in the December 4, 1986 Federal Register instead of having each coating line comply with the emission VOC content limitations ~~prescribed contained in subsection (d) of this Section, provided: 252:100-39-46(d), if the following conditions are met.~~

(1)(A) The owner or operator demonstrates, ~~by means of approved material balance or manual emission test methods,~~ by the methods prescribed in 252:100-5-2.1(d) that sufficient reductions in organic solvent VOC emissions may be obtained by controlling other ~~facilities~~ sources within the plant to the extent necessary to compensate for all excess emissions which result from one or more coating lines not achieving the prescribed limitation. Such demonstration shall be made ~~described in writing and shall include:~~

- (A)(i) a complete description of the coating line or lines ~~which will that can~~ not comply with the emission VOC content limitation in 252:100-39-46(d);
- (B)(ii) quantification of emissions, in terms of pounds per day of organic solvents VOCs, which are in excess of the prescribed emission VOC content limitation for each coating line described in 252:100-39-46(d) 252:100-39-46(j)(A)(i);
- (C)(iii) a complete description of each facility and the related control system, if any, for those facilities within the plant where how emissions will be decreased at specific sources to compensate for excess emissions from each coating line described in 252:100-39-46(d) 252:100-39-46(j)(A)(i) and the date on which such reduction will be achieved;
- (D)(iv) a transfer efficiency based on a 60 percent baseline with emissions expressed in pounds of VOC per gallon of solids when transfer efficiency is used

7629

to compensate for excess emissions from spray painting operations, ~~the transfer efficiency shall be based on a 60 percent baseline, with emissions expressed in pounds of solvent per gallon of solids. Credits for improvements in transfer efficiency shall be demonstrated with in-plant testing which complies with approved EPA methods;~~

(y) a demonstration of credits for improvements in transfer efficiency with in plant testing that complies with EPA methods.

~~(E)(vi)~~ quantification of emissions, in terms of pounds per day of organic solvents VOCs, for each source both before and after the improvement or installation of any applicable control system, or any physical or operational changes to such a facility or facilities to reduce emissions and the date on which such reductions will be achieved; and,

~~(F)(vii)~~ a description of the procedures and methods used to determine the emissions of organic solvents VOCs.

~~(2)(B)~~ The plant-wide emission reduction plan does not include decreases in emissions resulting from requirements of other applicable air pollution rules. The plant-wide emission reduction plan as described in the Emissions Trading Policy may include voluntary decreases in emissions accomplished through installation or improvement of a control system or through physical or operational changes to facilities emission units, including permanently reduced production or closing a facility, located on the premises of a surface-coating operation.

~~(3)(2)~~ Compliance with a plant-wide emission plan. The implementation of a plant-wide emission reduction plan instead of compliance with the emissions VOC content limitation prescribed in 252:100-39-46(d) has been expressly approved by the Executive Director and the EPA Administrator. Upon approval of a plan, any emissions in excess of those established for each facility under the plan shall be a violation of these rules.

(k) Compliance, testing, and monitoring requirements.

(1) The ~~Executive Division~~ Director may require the owner/operator at the expense of the owner or operator a demonstration of a source to demonstrate at his expense, compliance with the emission limits using EPA Methods 24, 24A, 1-4, 25, 25A, 25B in 40 CFR 60.444 or EPA Document 450/3-84-019. At a minimum, such test must show that the overall capture efficiency and destruction efficiency are equal to 85 percent, (e.g., 90 percent capture efficiency multiplied by 95 percent destruction efficiency equals 85.5 percent system efficiency). The one hour bake option in Method 24 is required when doing compliance testing.)

(2) Testing for plant-wide emission plans shall be conducted by the owner/operator at his expense at the expense of the owner or operator to demonstrate

compliance with the emission VOC content li contained in 252:100-39-46(d).

(3) Monitoring shall be required of any owner/operator owner or operator subject to this Section who uses add-on control equipment for compliance. Such monitoring shall include:

~~(A)~~ installation and maintenance of monitors to accurately measure and record operational parameters of all required control devices to ensure the proper functioning of those devices in accordance with design specifications, including:

~~(i)(A)~~ the exhaust temperature of direct flame incinerators and/or gas temperature immediately upstream and downstream of any catalyst bed;

~~(ii)(B)~~ the total amount of volatile organic substances VOCs recovered by carbon adsorption or other solvent VOC recovery system during a calendar month; and,

~~(iii)(C)~~ the dates and reasons for any maintenance and repair of the required control devices and the estimated quantity and duration of volatile organic substance emissions during such activities;

~~(B)~~ maintenance of records of any testing conducted at an affected facility in accordance with the provisions specified in 252:100-39-46(k)(3)(i); and,

~~(C)~~ maintenance of all records at the affected facility for at least two years and make such records available to representative of the State or local air pollution control agency upon request.

(l) **Reporting and recordkeeping.** The owner/operator of a facility subject to this Section shall submit to the Executive Director upon written request, reports detailing specific VOS sources; the quantity of coatings used for a specific time period, VOS content of each coating; capture and control efficiencies; and any other information pertinent to the calculation of VOS emissions. The data necessary to supply the requested information shall be retained by the owner/operator for a minimum of two years.

(1) The owner or operator of a facility subject to this Section shall submit to the Division Director upon written request reports detailing specific VOC sources; the quantity of coatings used for a specific time period, VOC content of each coating; capture and control efficiencies; and any other information pertinent to the calculation of VOC emissions. The data necessary to supply the requested information shall be retained by the owner or operator for a minimum of two years.

(2) The owner or operator of a facility subject to this Section shall maintain records of any testing conducted at an affected facility in accordance with the provision specified in 252:100-39-46(k), as well as all other records, for at least two years. These records shall be available to representatives of the DEO upon request.

Permanent Final Adoptions

(m) **Compliance date.** The date of compliance with the requirements of this Section will be ~~be~~ December 31, 1990.

252:100-39-47. Control of VOS VOC emissions from aerospace industries coatings operations

(a) Applicability.

(1) This Section applies to all aerospace facilities located in Tulsa County. Sources once subject to this Section are always subject.

(2) This Section does not apply to individual coating formulations ~~which that~~, when aggregated, do not exceed ~~fifty-five (55) gallons per year~~ 55 gal/yr for the facility.

(3) ~~New and modified sources and coating applications not included in the plan are subject to the permit requirements set forth in OAC 252:100-7 and will be submitted to EPA as source-specific SIP revision, unless:~~

(A) ~~the new coatings meet the presumption norm (3.5 pound VOS per gallon less water and exempt solvents limit); or,~~

(B) ~~the total usage of the new coating does not exceed fifty-five (55) gallons per year of each coating formulation.~~

(4) ~~(3) Exemptions to this Section shall be permitted for combined emissions at one site/facility which do not exceed a ten-ton per year emission cut-off based on the Facilities with a potential of the facility to emit VOS 10 tons/year or less of VOC from coatings operations are exempt from this Section.~~

(b) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

(1) "Aerospace" means the industries, air bases and depots that ~~design and manufacture, rework, or repair~~ aircraft or military equipment components for either commercial or military customers.

(2) "Aircraft" means any machine designed to travel through the earth's atmosphere. This group includes but is not limited to: airplanes, balloons, dirigibles, drones, helicopters, missiles, and rockets.

(3) "Alternate ~~reasonable~~ reasonably available control technology (ARACT)" means the lowest emission limit that a particular source is capable of meeting by the application of control technology that is reasonably available considering technological and economic feasibility as determined on a case-by-case basis.

(4) "Coating" means a material which covers a surface which alters the surface characteristics and from which Volatile Organic Solvents VOCs can be emitted during the application and/or curing process.

(5) "CTG" means the Control Techniques Guidance Document "Control of Volatile Organic Emissions From Existing Stationary Sources, Volume VI: Surface Coating of Miscellaneous Metal Parts and Products," EPA No. 450/2-78-015.

(6) "Facility" means all of the pollutant-emitting activities ~~which that~~ belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person or persons under common control.

(7) "~~Low organic solvent~~ VOC coating (LOSC) (LVOCC)" means ~~a coating which contain that~~ contains less organic solvent VOC than the conventional coatings used by the industry. Low organic solvent VOC coatings include waterborne, higher solids, electrodeposition, and powder coatings.

(8) "~~Reasonable~~ Reasonably available control technology (RACT)" means ~~the lowest emission limit that a particular source is capable of meeting by the application of control technology that is reasonably available considering technological and economic feasibility and the need to impose such controls to attain and maintain a National Ambient Air Quality Standard.~~

(c) **General requirements.** ~~All affected facilities shall develop an emissions reduction plan as set forth in 252:100-39-47(d). Said plan, upon approval, shall constitute the determination of ARACT for that particular facility. ARACT must be installed and operating as approved in the plan no later than January 1, 1991 for existing facilities, unless additional phased compliance dates are otherwise approved in the plan. Provided, however, that in the case that Tulsa County is still nonattainment for ozone within five (5) years of approval of ARACT, the Emission Reductions Plan and the ARACT determination shall be subject to review and modification.~~

(1) All affected facilities shall develop an emissions reduction plan as set forth in 252:100-39-47(d). This plan, upon approval, shall constitute ARACT for that particular facility.

(2) ARACT must be installed and operating as provided in the approved plan no later than January 1, 1991 for existing facilities, unless additional phased compliance dates are approved in the plan.

(3) New and modified sources and coating applications not included in the plan are subject to the permit requirements set forth in 252:100-7 or 252:100-8, and will be submitted to EPA as source-specific SIP revisions, unless one of the following applies.

(A) The new coatings meet the presumptive norm of 3.5 pounds of VOC per gallon less water and exempt compounds.

(B) The total usage of the new coating does not exceed 55 gal/yr of each coating formulation.

(d) **Emissions reduction plan.**

(1) **Plan development.** ~~Each owner/operator shall develop an emissions reduction plan for all affected facilities. Each plan shall include the following:~~

- (A) ~~a detailed, reasoned and exhaustive review of:~~
- (i) ~~each source of emissions within the facility and~~
 - (ii) ~~(2) the entire plant collectively;~~

(A) a detailed, reasoned and exhaustive review of each source of emissions within the facility and the entire plant collectively;

(B) identification and quantification of emissions, in terms of pounds per day, of all organic solvents/VOC both before and after the application of ARACT;

(C) a detailed, innovative engineering effort directed toward finding alternative air management schemes that can be incorporated in order to abate emissions at costs which are reasonable;

(D) a consideration of the level of control that is achievable using available alternative coatings, to include LVOCC for every application, low organic solvent coatings (LOSC);

(E) a consideration of the level of control achievable using available add-on control devices. This demonstration shall include, at a minimum, a demonstration of the feasibility/ infeasibility of the following control options:

- (i) carbon adsorption;
- (ii) incineration/flaring;
- (iii) condensation; and
- (iv) a combination of 252:100-39-47(d)(1)(E)(i) and 252:100-39-47(d)(1)(E)(ii).

(E) a demonstration of the level of control achievable using available add-on control devices which shall include, at a minimum, the feasibility/infeasibility of carbon adsorption, incineration/flaring, condensation, and a combination of carbon adsorption and incineration/flaring;

(F) a consideration of facility redesign, including the following:

- (i) recirculation;
- (ii) reduced air flows;
- (iii) consolidation of spray operations; and,
- (iv) installation of common control devices for two or more separate coatings operations.

(F) a consideration of facility redesign, including recirculation, reduced air flows, consolidation of spray operations, and installation of common control devices for two or more separate coating operations;

(G) a consideration of alternative applications, to improve transfer efficiency, including:

- (i) high volume low pressure spray equipment;
- (ii) heated spray guns; and,
- (iii) electrostatic spray equipment/powder coatings.

(G) a consideration of alternative applications, to improve transfer efficiency, including high-volume-low-pressure spray equipment, heated

spray guns, and electrostatic equipment/powder coatings;

(H) an explanation why each source is not a typical coating source covered by the CTG as defined in 252:100-39-47(b);

(I) a cost/benefit analysis for all control technology considered; and,

(J) a detailed compliance schedule which that includes the emission limit and/or control techniques for each emission source. This schedule, which together with other relevant considerations, shall be set forth in a separate section of the plan which that summarizes and outlines ARACT for the referenced facility.

(2) Submission of emission reduction plans. Upon completion, the Three copies of the emissions reduction plan shall be submitted in triplicate to the Air Quality Division and one shall be submitted to EPA, Region VI. The preparer shall also submit a copy of the plan to Region VI Environmental Protection Agency (EPA), Region VI.

(3) Action on plan. Within 30 days of submittal, or of the effective date of this Section May 25, 1990, whichever is later, the Air Quality Division shall, considering any comments submitted by EPA, either approve, modify or disapprove the plan.

(4) Public hearing. The Division shall, at the meeting of the Air Quality Council following the approval, modification, or disapproval of the plan, present at public hearing, the staff's findings and ARACT determination. Upon consideration of comments and recommendations from the Council, the owner/operator of the affected facility, the public and EPA, the Department shall, within ten (10) days after the public hearing, issue a final ARACT approval. Final approval shall constitute ARACT for the affected facility. The owner/operator shall be responsible for installation and operational provisions of the approved ARACT, including any specific provisions set forth therein. Any violation of the plan or of its provisions shall constitute a violation of this Section.

(5) Final approval. Upon consideration of comments and recommendations from the Council, the owner or operator of the affected facility, the public, and EPA, the DEQ shall, within ten (10) days after the public hearing, issue a final ARACT approval. Final approval shall constitute ARACT for the affected facility.

(6) Compliance. The owner or operator shall be responsible for installation and operational provisions of the approved ARACT. Any violation of the plan or of its provisions shall constitute a violation of this Section.

(5)(7) Submission of SIP revision. Upon approval the Department/DEQ, the ARACT determination shall be submitted to EPA as a SIP revision.

(e) Reporting and recordkeeping.

(1) Recordkeeping requirements. The

~~owner/operator~~ owner or operator shall maintain the following:

(A) a material safety data sheet which documents the ~~volatile organic solvent~~ VOC content, composition, solids content, ~~solvent~~ VOC density and other relevant information regarding each coating and ~~solvent~~ VOC available for use in the affected surface coating processes ~~information detailing the operational parameters of the coating process sufficient to determine continuous compliance with the applicable control limits. Information as to the amounts of each type coating used and the amounts of solvents used for dilution in each coating type shall be maintained for each coating operation. Daily usage records will be kept for all coatings used that do not comply with the applicable control limits specified in the plan;~~

(B) information detailing the operational parameters of the coating process sufficient to determine continuous compliance with the applicable control limits;

(C) information as to the amounts of each type coating used and the amounts of VOC used for dilution in each coating type for each coating operation;

(D) daily usage records for all coatings used that do not comply with the applicable control limits specified in the plan; and

(B)(E) ~~records shall be maintained of any monitoring and testing conducted at an affected facility in accordance with the provisions specified in 252:100-39-47(f);~~

(C)(2) Method of calculating VOC content in coatings. ~~Records~~ Records required by 252:100-39-47(e)(1)(A) and ~~252:100-39-47(e)(1)(B) through 252:100-39-47(e)(1)(E)~~ detailing ~~VOS~~ VOC in pounds per gallon of coating (less water and exempt compounds) shall be calculated as follows: $VOS\ VOC \text{ in lbs/gal of coating} = \frac{W_v - W_x - W_x W_v - W_w - W_x}{V_m - V_w - V_x}$ where:

(A) W_v = weight of all volatiles;

(B) W_w = weight of water;

(C) W_x = weight of exempt solvent compounds;
 $V_m = 1$ (one);

(D) V_w = volume fraction of water; and

(E) V_x = volume fraction of exempt solvent compounds.

(D)(3) Maintenance of records. ~~Records~~ Records required by 252:100-39-47(e)(1)(A) and ~~252:100-39-47(e)(1)(B) through 252:100-39-47(e)(1)(E)~~ shall be maintained for at least two years and shall be made available upon written request by representatives of the Air Quality Division, U.S. Environmental Protection Agency or the Tulsa City-County Health Department AOD or EPA.

(2)(4) Alternative recordkeeping provision.

Alternatively to 252:100-39-47(e)(1) through 252:100-39-47(e)(3), an equivalent recordkeeping provision which ~~that~~ satisfies the substantive requirements of 252:100-39-47(e)(1) through 252:100-39-47(e)(3) may be approved under the plan.

(f) Testing and monitoring.

(1) Testing. ~~Each owner/operator~~ The Division may require testing at the expense of the owner or operator ~~shall, upon a determination by the Air Quality Division that testing is required to establish emission from any particular source or sources, conduct such tests at his own expense.~~ Test methods may include 1-4, 18, 24, 24A, 25A, 25B found in the Appendix A of 40 CFR Part 60, including the procedures found at 40 CFR 60.444.

(2) Monitoring. Monitoring shall be required of any ~~owner/operator~~ subject to this section ~~owner or operator~~ who uses add-on control equipment for compliance. Such monitoring shall include: accurately measure and record operational parameters of all required control devices to ensure the proper functioning of those devices in accordance with design specifications, including:

(A) ~~installation and maintenance of monitors to accurately measure and record operational parameters of all required control devices to ensure the proper functioning of those devices in accordance with design specifications, including:~~

(i) (A) the exhaust temperature of direct flame incinerators and/or gas temperature immediately upstream and downstream of any catalyst bed;

(ii) (B) the total amount of volatile organic substances VOCs recovered by carbon adsorption or other ~~solvent~~ VOC recovery system during a calendar month; and,

(iii) (C) the dates and reasons for any maintenance and repair of the required control devices and the estimated quantity and duration of volatile organic substance VOC emissions during such activities.

(B) ~~maintenance of records of any testing conducted at an affected facility in accordance with the provisions specified in 252:100-39-47(f)(2) (A)(i); and,~~

(C) ~~maintenance of all records at the affected facility for at least two years and make such records available to representatives of the State or local air pollution control agencies upon request. (252:100-39-47 Effective May 25, 1990)~~

252:100-39-48. Vapor recovery systems [REVOKED]

(a) Applicability. This Section applies only in Tulsa County.
(b) Storage of volatile organic compounds - 400-40,000 gallons (9, 5-953 bbls).

(1) No person shall store or permit the storage of

7633

gasoline or other volatile organic compounds in any stationary storage container with a nominal capacity greater than 400 gallons (9.5 bbls) and less than 40,000 gallons (952.4 bbls) unless such container is equipped with a submerged fill pipe or is bottom filled. No person shall store or permit the storage of gasoline or other volatile organic compounds in any stationary storage container with a nominal capacity greater than 2,000 gallons (47.5 bbls) and less than 40,000 gallons (952.4 bbls) unless such container is equipped with a vapor control system that has an efficiency of no less than 90 percent by weight of the volatile organic compounds contained in the displaced vapors and is equipped with a pressure relief valve in the atmospheric vent system which maintains a pressure of 16 ounces per square inch and 1/2 ounce per square inch vacuum.

(2) The vapor recovery system shall include one or more of the following:

(A) a vapor-tight return line from the storage container to the delivery vessel and a system that will ensure that the vapor return line is connected before gasoline or volatile organic compounds can be transferred into the container (i.e., popped connectors from the storage container to the delivery vessel.);

(B) a float vent valve assembly must be installed in the vapor return/vent line on new and existing dual point installations; however, for coaxial installations on existing stations, a vent sleeve extending six inches below the top of the tank will be allowed. Sleeves may be equipped with a 1/16 inch air bleed hole;

(C) the cross-sectional area of the vapor recovery line must be at least half of the cross-sectional area of the liquid delivery line, or;

(D) instead 252:100-39-48(b)(2)(A) through 252:100-39-48(b)(2)(C), other equipment that has a total collection efficiency no less than 90 percent by weight of the total hydrocarbon compounds in the displaced vapor provided that approval of the proposed design, installation, and operation is obtained from the Executive Director prior to start of construction.

(3) Exemptions to this Section may be granted provided the owner/operator shows to the satisfaction of the appropriate authority that the container is used exclusively for agricultural purposes or that the facility, based on the most current 12 month's data, dispenses 120,000 gallons per year or less.

(4) The applicability of this Section shall be determined by the most restrictive of the 2,000 gallon tank size as specified in 252:100-39-48(b)(1) or the 120,000 gallon annual throughput described in 252:100-39-48(b)(3). However, once a facility places a 2,000 gallon tank in service or exceeds the 120,000 gallon annual throughput described in

252:100-39-48(b)(3), that facility shall always be subject to the provisions of this Section. (effective February 12, 1990)

(5) If emission testing is conducted, the appropriate test methods selected from EPA Methods 1 through 4, 18, 21, 25, 25A and 25B will be utilized.

(6) Compliance with this subsection will be accomplished by affected owner/operator by December 31, 1986.

(7) The owner/operator of a facility or facilities shall obtain, by whatever means practicable, certification from the owner/operator of the transport/delivery vessels that all deliveries of gasoline or other volatile organic compounds made to their facility or facilities located in Tulsa County, shall be made by vessels which comply with the requirements contained in 252:100-39-48(d). Compliance with this Section shall be accomplished by affected owner/operators no later than December 31, 1990. (Effective February 12, 1990)

(c) Loading of volatile organic compounds.

(1) No person shall operate, install or permit the building, operation or installation of a stationary volatile organic compound loading facility unless such loading facility is equipped with a vapor collection and/or disposal system properly installed, in good working order and in operation.

(2) When volatile organic compounds are loaded through the hatches of a transport vessel, a pneumatic, hydraulic or mechanical means shall be provided to ensure a vapor-tight seal at the hatch.

(3) A means shall be provided to prevent organic material drainage from the loading device when it is removed from the transport vessel, or to accomplish complete drainage before removal.

(4) When loading is effected through means other than hatches, all loading and vapor lines shall be equipped with fittings which make vapor-tight connections and which close automatically when disconnected.

(5) The vapor collection and/or disposal portion of the system shall consist of one or more of the following in addition to bottom loading or submerged fill of transport vessels:

(A) an absorption/adsorption system or condensation system with a minimum recovery efficiency of 90 percent by weight of all the volatile organic compound vapors and gases entering such disposal system;

(B) a vapor handling system which directs all vapors to a fuel gas incineration system with a minimum disposal efficiency of 95 percent; or,

(C) other equipment of at least 90 percent efficiency, provided plans for such equipment submitted to and approved by the Executive Director. Storage vessels at service stations and bulk plants may be used for intermediate storage prior to

recovery/disposal of vapors as per 252:100-39-48(c)(5)(A) through 252:100-39-48(c)(5)(C) if they are designed to prevent the release of vapors during use.

(6) Subsection 252:100-39-48(c) shall apply to any facility which loads volatile organic compounds into any transport vessel designed for transporting volatile organic compounds.

(7) Facilities will be checked annually in accordance with EPA Test Method 21, Leak Test. Leaks greater than 5000 ppm will be repaired within 15 days. Facilities will retain inspection and repair records for two years.

(d) Transport/delivery vessel requirements.

(1) Maintenance.

(A) The delivery vessel must be maintained so as to be vapor tight except when sampling, gauging, or inspecting. These activities shall not occur while the vehicle is loading or unloading or is in a pressurized state.

(B) The delivery vessel must be equipped, maintained and operated to receive vapors from sources identified in 252:100-39-41(b)(1) and retain these and all other vapors until they are delivered into an authorized vapor recovery/disposal system.

(C) Vessels with defective equipment such as boots, seals, and hoses, or with other deficiencies which would impair the vessels ability to retain vapors or liquid shall be repaired within 5 days.

(D) The certified testing facility must certify to the approving agency that the proper testing and repairs have occurred in accordance with 252:100-39-48(d)(2)(A)(i). The vessel must also display on the rear panel a tag showing the date of the pressure test.

(E) No owner/operator will allow a delivery vessel to be filled at a facility unable to receive displaced organic vapors nor service tanks unable to deliver displaced vapors except for tanks/facilities exempted in 252:100-39-41(b). Terminal owners shall not fill vessels which do not display a current tag.

(F) Delivery vessels may be inspected by representatives of the appropriate health agency in order to determine their state of repair. Such a test may consist of a visual inspection, a vapor test with vapors not to exceed 5000 ppm. Failure of a vapor test will require the owner/operator to effect the necessary repairs within 10 days. Unless certification is made to the appropriate health agency within 5 days the vessel will be removed from service by the owner/operator. Failure to certify that the cited repairs have been effected will subject the vessel to sanctions. Upon certification of repairs the vessel will be allowed to operate in a normal manner.

(2) Testing requirements.

(A) Pressure test.

(i) Delivery vessels, delivering or receiving

gasoline must be tested one time per year for vapor tightness. The vapor tightness test must be consistent with Appendix "A" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems", EPA 450/2-78-051. Tests shall be performed by the owner or a reputable transport service company. Test methods used to test these vessels by owners or testing companies must be approved for use by the Executive Director.

(ii) The vessel will be considered to pass the test prescribed in 252:100-39-48(d)(2)(A)(i) when the test results show that the vessel and its vapor collection systems do not sustain a pressure change of more than 3 inches of H₂O in addition there shall be no avoidable visible liquid leaks.

(B) Vapor test. Testing of the tank trucks for compliance with vapor tightness requirements as required under 252:100-39-41(d)(1)(F) must be consistent with Appendix "B" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems", EPA 405/2-78-051, as modified for this purpose and contained in 252:100-43-15. The requirements of 252:100-39-48 will become effective December 15, 1988.

252:100-39-49. Manufacturing of fiberglass reinforced plastic products

(a) General provisions. Within 12 months after promulgation of this Section all affected facilities shall limit emissions of VOS from fiberglass manufacturing to those listed in 252:100-39-49(a)(1), or have an approved plan for the reduction of such emissions. The plan must be submitted to the Executive Director within 6 months after promulgation of this Section, and shall detail those emissions which will be controlled, the means by which control will be achieved and will demonstrate that compliance will be achieved within two years from the date of promulgation of this Section. The approval authority for such plans shall reside with the Air Quality Council. All approved plans shall be submitted as SIP revisions.

(1) Compliance with 252:100-39-49(a) shall be accomplished by use of control equipment which can demonstrate an 85 percent reduction in the VOS released from each process gas stream, e.g. 90 percent capture efficiency multiplied by 95 percent destruction efficiency equals 85.5 percent system efficiency.

(2) Exemptions to the limits listed in 252:100-39-49(a)(1) may be allowed for any process gas stream which does not exceed six tons per year actual emissions based on 6240 hours per year. However, once this limit is exceeded, controls must be put in place and maintained at any operating level.

76 35

(b) Demonstration of compliance. The Executive Director may require the owner/operator of a source to demonstrate at his expense, compliance with the prescribed emissions limits. The testing shall be accomplished using the appropriate EPA test method or methods, these include methods 1-4, 18-25, 25A, 25B and 40 CFR 60.444. Initial compliance testing shall be accomplished within 180 days of the applicable compliance date.

(c) Testing. Testing for the alternate emissions plan shall be conducted by the owner/operator at his expense and shall demonstrate compliance with the emission limits contained in the approved plan.

(d) Recordkeeping. The owner/operator of a facility subject to this Section shall submit to the Executive Director upon written request reports detailing specific VOS sources, the quantity of solvents used during specific months, a description of the solvent used, control equipment efficiencies, equipment downtime and any other information pertinent to the calculation of VOS emissions from the facility. The owner/operator must also maintain records which detail the maintenance performed on all control equipment as well as a record of the downtime with the reason for each occurrence. Such records shall be maintained by the source for a minimum of two years. (252:100-39-49, Effective February 12, 1990).

Applicability.

(1) This Section applies to any process gas stream with actual VOC emissions that exceed six tons per year based on 6,240 hours of operation per year.

(2) Once the limit in 242:100-39-49(a)(1) is exceeded, the controls required in 252:100-39-49(b) must be put in place and maintained and used at any operating level.

(b) Standards. Affected facilities shall limit emissions of VOC from fiberglass manufacturing by use of control equipment which can demonstrate an 85 percent reduction in the VOC released from each process stream (e.g. 90 percent capture efficiency multiplied by 95 percent destruction efficiency equals 85.5 percent system efficiency).

(c) Compliance. All affected facilities must comply with one of the following.

(1) Meet the requirements of 252:100-39-49(b) by February 13, 1991.

(2) Have an approved plan for the reduction of VOC emissions as required by 252:100-39-49(b) by February 13, 1991.

(A) The plan shall be submitted by August 13, 1990, and shall:

(i) detail those emissions which will be controlled;

(ii) detail the means by which control will be achieved; and,

(iii) demonstrate that compliance will be achieved by February 13, 1992.

(B) The Air Quality Council shall have approval authority for the plans.

(C) All approved plans shall be submitted to EPA as SIP revisions.

(d) Demonstration of compliance.

(1) The Division Director may require at the expense of the owner or operator a demonstration of compliance with the requirements of 252:100-39-49(b).

(2) The testing shall be accomplished using the appropriate EPA test method or methods. These include methods 1-4, 18-25, 25A, 25B and 40 CFR 60.444.

(3) Initial compliance testing shall be accomplished within 180 days of the applicable compliance date.

(4) Testing for the emissions plan described in 252:100-39-49(c)(2) shall be conducted at the expense of the owner or operator at his expense and shall demonstrate compliance with the emission limits contained in the approved plan.

(e) Recordkeeping.

(1) The owner or operator of a facility subject to this Section shall submit to the Division Director upon written request reports that include:

(A) details of specific VOC sources;

(B) the quantity of VOC used during specific months;

(C) a description of the VOC used;

(D) control equipment efficiencies;

(E) details of maintenance performed on control equipment;

(F) equipment downtime; and,

(G) any other information pertinent to the calculation of VOC emissions from the facility.

(2) The records required in 252:100-39-49(e)(1) shall be maintained by the source for at least two years. (252:100-39-49, Effective February 12, 1990)

[OAR Docket #99-851; filed 5-7-99]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 200. HAZARDOUS WASTE MANAGEMENT [REVOKED]

[OAR Docket #99-852]

RULEMAKING ACTION:

PERMANENT final adoption

RULES:

252:200. Hazardous Waste Management [REVOKED]

AUTHORITY:

Environmental Quality Board; 27A O.S. §§ 2-2-101, 2-2-201 and 2-7-106

DATES:

Comment period:

July 15, 1998 through August 3, 1998, August 11, 1998 and March 5, 1999

Air Quality Council

BRIEFING AGENDA
Department of Environmental Quality
AIR QUALITY COUNCIL REGULAR MEETING
TUESDAY, AUGUST 18, 1998, 9:30 A.M.
4545 NORTH LINCOLN BOULEVARD
BURGUNDY ROOM
Oklahoma City, Oklahoma

1. **Call to Order** Chairman
2. **Division Director's Report** Dyke
Informational update of current events and AQD activities

PUBLIC HEARINGS

3. **OAC 252:100-47 Control of Emissions from Existing Municipal Solid Waste Landfills [NEW]** Bradley
Proposes to establish state standards to control emissions from certain existing municipal solid waste landfills that commenced construction, modification, or reconstruction before May 30, 1991 and accepted waste after November 8, 1987. The proposed rules to be included in Oklahoma's State 111(d) Plan provide the enforceable mechanism for implementing the federal emission guidelines (40 CFR 60 subpart Cc.)
Discussion by Council/Public
4. **State 111(d) Plan for Municipal Solid Waste Landfills** Bradley
The proposed State 111(d) Plan outlines Oklahoma's program to implement the emission guidelines for municipal solid waste landfills. Federal regulations (40 CFR 60 Subparts B and Cc) require that a public hearing be held to receive comments from the Council and public on the proposed plan.
Discussion by Council/Public; Council approval is not required.
5. **OAC 252:100 Air Pollution Control:** Martinez
Appendix E, Primary Ambient Air Quality Standards [AMENDED]
Appendix F, Secondary Ambient Air Quality Standards [AMENDED]
Proposed revisions to Appendices E and F will mirror the revised federal national ambient air quality standards for particulate matter and ozone announced by EPA in the July 18, 1997, *Federal Register*.
Discussion by Council/Public
6. **OAC 272:100-7 Permits [AMENDED]** Buttram
Proposed revisions will delete the lower limit of 5 tons per year for Permit by rule (PBR) facilities allowing those facilities with less than 5 tons per year emissions which are subject to new source performance standards and national emissions standards for hazardous air pollutants to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a PBR for specific facilities will be referenced under this new Part also.
Discussion by Council/Public

7. **OAC 252:100-25 Smoke, Visible Emissions and Particulates [AMENDED]** **Buttram**
 The proposed amendments to Subchapter 25 are needed to fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P. and would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include changing the time allowed for visible emissions during short-term occurrences to exceed the opacity standard to one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. A new subsection would contain methods for determining compliance with the opacity limits. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule.
 Discussion by Council/Public

8. **OAC 252:100-23 Control of Emissions from Cotton Gins [AMENDED]** **Mainord**
 Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and add a new PBR section.
 Discussion by Council/Public

9. **OAC 252:100-24 Control of Emissions from Grain Elevators [AMENDED]** **Martinez**
 Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and add a new PBR section.
 Discussion by Council/Public

10. **OAC 252:100-37 Control of Emissions of Organic Materials [AMENDED]** **Sheedy**
 Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. A substantive change deletes a sentence regarding fuel-burning and refuse-burning equipment resolving a contradiction.
 Discussion by Council/Public

11. **OAC 252:100-39 Emissions of Organic Materials in Nonattainment Areas [AMENDED]** **Sheedy**
 Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC.
 Discussion by Council/Public

July 24, 1998

MEMORANDUM

TO: Air Quality Council

FROM: David R. Dyke, Interim Director
AIR QUALITY DIVISION

SUBJECT: Modifications to Subchapter 39

Enclosed is a copy of the proposed draft modifications to OAC 252:100-39 EMISSIONS OF ORGANIC MATERIALS IN NONATTAINMENT AREAS to be brought to public hearing on August 18, 1998. The proposed revisions are the result of the DEQ program to simplify, clarify and correct all its existing rules. The proposed revisions primarily simplify and clarify language, correct grammar, and impose consistency in format without involving substantive changes. However, in the process of simplifying and clarifying the rule, it was necessary to make a few substantive changes.

For simplicity the definitions of "volatile organic compound" in 252:100-39-2 and 252:100-39-15(a)(7) have been revised to be consistent with the EPA definition. The new definition includes the incorporation by reference of 40 CFR 52.100(s)(1) which lists the organic compounds that EPA has determined to have negligible photochemical reactivity. Presently Chapter 100 divides what EPA classifies as "volatile organic compound (VOC)" into "volatile organic compound (VOC)," "organic solvents," and "volatile organic solvent (VOS)." The Chapter contains two definitions of volatile organic compound neither of which is consistent with the EPA definition; a definition of volatile organic solvent which is almost exactly the same as the EPA definition of volatile organic compound, and two definitions of organic solvents. As part of the simplification process the staff propose to have only one definition of volatile organic compound which will be consistent with the EPA definition and to replace the terms "volatile organic solvent (VOS)" and "organic solvents" with "volatile organic compound (VOC)." The redefinition of volatile organic compound will also serve as a response to requests to exempt acetone, methylated siloxanes, and perchloroethylene from being considered VOCs. The proposed definition excludes substances with negligible photochemical reactivity and EPA has determined that these three substances have negligible photochemical reactivity; therefore, they are not considered to be VOCs.

The staff proposes to add language to 252:100-39-3, General applicability, and 252:100-39-15(d), Compliance schedule, in an effort to insure that Subchapter 39 will apply to any new ozone nonattainment areas if necessary.

The staff proposes to correct the placement of "prior to lease custody transfer" in 252:100-39-30(b). This phrase was located in paragraph (2) and was, therefore, applicable to all the exemptions listed in that paragraph. Research in the Air Quality Council records and in the

Control Technology Guideline, Control of Volatile Organic Emissions from Petroleum Liquid Storage in External Floating Roof Tanks, EPA-450/2-78-047, indicates that this phrase should apply only to 252:100-39-30(b)(2)(B). Staff recommends moving this phrase to 252:100-39-30(b)(2)(B).

Loading of volatile organic compounds, 252:100-39-41(c), currently has no provisions to exclude small loading facilities. The staff proposes to add language that will limit the requirements of this subsection to facilities that have a minimum annual throughput of 120,000 gallons or storage capacity greater than 2,000 gallons.

An informational meeting to discuss revisions to Subchapter 39 for the purpose of simplification, clarification, and correction of the rule was held on Tuesday, July 7, 1998 at the DEQ office. This meeting was open to the public. Comments made at the meeting were given consideration in the proposed draft enclosed with this memorandum.

In the process of revising Subchapter 39, definitions were changed, moved, and/or deleted. The staff intends to revise 252:100-1-3, Definitions, later in the process of the "Re-write De-wrong" project. It is our intention to include in Subchapter 1 only those definitions that apply to all or practically all of the subchapters in Chapter 100. Definitions that apply to only one or two subchapters will be placed in those subchapters and definitions that are general to the entire Chapter 100 will be deleted from individual subchapters.

Staff will recommend the rule be considered again at the next Air Quality Council meeting on October 20, 1998.

In addition to the proposed draft revisions to Subchapter 39, a copy of 40 CFR 51.100(s)(1), and a summation of the proposed revisions with explanations are also included in the packet.

Enclosures: 3

SUBCHAPTER 39. EMISSION OF VOLATILE ORGANIC MATERIALS COMPOUNDS (VOC) IN NONATTAINMENT AREAS AND FORMER NON-ATTAINMENT AREAS

PART 1. GENERAL PROVISIONS

252:100-39-1.	Purpose	1
252:100-39-2.	Definitions	1
252:100-39-3.	General applicability	2
252:100-39-4.	Exemptions	2

PART 3. PETROLEUM REFINERY OPERATIONS

252:100-39-15.	Petroleum refinery equipment leaks	3
252:100-39-16.	<u>Petroleum Refinery</u> refinery process unit turnaround	6
252:100-39-17.	<u>Petroleum Refinery</u> refinery vacuum producing system	7
252:100-39-18.	<u>Petroleum Refinery</u> refinery effluent water separators	7

PART 5. PETROLEUM PROCESSING AND STORAGE

252:100-39-30.	Petroleum liquid storage in <u>vessels with</u> <u>external floating reef tanks</u> <u>roofs</u>	8
----------------	--	---

PART 7. SPECIFIC OPERATIONS

252:100-39-40.	Cutback asphalt (paving)	11
252:100-39-41.	Vapor recovery systems <u>Storage, loading and</u> <u>transport/delivery of VOCs</u>	11
252:100-39-42.	Metal cleaning	17
252:100-39-43.	Graphic arts systems	21
252:100-39-44.	Manufacture of pneumatic rubber tires	23
252:100-39-45.	Petroleum (solvent) dry cleaning	27
252:100-39-46.	Coating of parts and products	28
252:100-39-47.	Control of <u>VOSVOC</u> emissions from aerospace industries coatings operations	33
252:100-39-48.	Vapor recovery systems	39
252:100-39-49.	Manufacturing of fiberglass reinforced plastic products	42

[NOTE: Bracketed, italicized NOTES are for information only and are not part of the rule.]

PART 1. GENERAL PROVISIONS

252:100-39-1. Purpose

~~The purpose of this Subchapter is to control the emission of organic materials from stationary sources located in nonattainment areas and to specify the additional control measures required to protect and enhance the air quality to insure that the Oklahoma air quality standard is not exceeded and significant deterioration is prevented.~~ The purpose of this Subchapter is to prevent the formation of ozone by controlling the emissions of volatile organic compounds (VOCs). This Subchapter contains requirements for the control of emissions of VOC from stationary sources located in areas that are nonattainment or were formerly nonattainment for ozone and carbon monoxide.

252:100-39-2. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise.

~~"Cutback asphalt" means a basic asphalt or asphaltic concrete containing a petroleum distillate.~~ [NOTE: This definition was moved to 252:100-39-40(a) for consistency.]

~~"Effluent water separator" means any tank, box, sump, or other container in which any material compound floating on or entrained or contained in water entering such tank, box, sump or other container is physically separated and removed from such water prior to outfall, drainage, or recovery of such water.~~ [NOTE: Moved to 252:100-39-18(a).]

~~"Organic materials" means any chemical compounds of carbon excluding carbon monoxides, carbon dioxide, carbonic acid, metallic carbides, metal carbonates and ammonium carbonates.~~

"Petroleum refinery" means any facility engaged in producing gasoline, aromatics, kerosene, distillate fuel oils, residual fuel oils, lubricants, asphalt, or other products through distillation of crude oil or other hydrocarbons or through redistillation, cracking, rearrangement or reforming or unfinished petroleum derivatives. [NOTE: Moved from 252:100-39-15(a) (4) since this term is used in other sections of Subchapter 39.]

~~"Refinery" means any facility engaged in producing gasoline, kerosene, fuel oils or other products through distillation of crude oil or through redistillation, cracking or reforming of unfinished hydrocarbon derivatives.~~ [NOTE: This term is not used in Subchapter 39. "Petroleum refinery" is the term used in Subchapter 39.]

"Refinery unit" means a set of components which are a part of a basic process operation, such as distillation, hydrotreating, cracking or reforming of hydrocarbons. [NOTE: Moved from 252:100-39-15(a) (5) since this term is used in other sections of Subchapter 39.]

"Submerged fill pipe" means any fill pipe or discharge nozzle ~~which that~~ meets any one of the following conditions:

(A) ~~the~~The bottom of the discharge pipe or nozzle is below the surface of liquid in the receiving vessel for at least 95 percent of the volume filled.

(B) ~~the~~The bottom of the discharge pipe or nozzle is less than 6 inches from the bottom of the receiving vessel.

(C) ~~the~~The bottom of the discharge pipe or nozzle is less than 2 pipe or nozzle diameters from the bottom of the receiving vessel.

(D) ~~other equivalent methods acceptable to~~It is an equivalent method that has been approved by the Executive Division Director.

"Volatile organic compound (VOC)" means any compound containing carbon and hydrogen or containing carbon and hydrogen in combination with any other element which has a vapor pressure of 1.5 pounds per square inch absolute or greater under actual storage conditions of carbon, excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate, which participates in atmospheric photochemical reactions. This includes any organic compound except those designated as having negligible photochemical reactivity as listed in 40 CFR 51.100(s)(1), which is hereby incorporated by reference as it existed on July 1, 1998. [NOTE: This revision makes the AQD definition of VOC consistent with the EPA definition in 40 CFR 51.100(s) and complies with requests to exempt acetone, methylated siloxanes, and perchloroethylene from being considered VOC (EPA's definition exempts these substances). It replaces the term "Volatile organic solvent (VOS)" since the definitions are essentially the same. It brings the AQD definition into agreement with the EPA reactivity policy as expressed in the Memorandum dated July 21, 1987, from G. T. Helms, Chief, Control Programs Operations Branch, U.S. EPA, OAQPS and the comments contained in Attachment B of the June 9, 1988, letter from William B. Hathaway, EPA Region 6. This change will result in only one definition of VOC.]

~~"Volatile organic solvent (VOS)" means any organic compound which participates in atmospheric photochemical reactions; that is, any organic compound other than those which the EPA Administrator designates as having negligible photochemical reactivity. VOS may be measured by the EPA VOC reference method.~~

252:100-39-3. General applicability

In addition to any application of the requirements contained in ~~OAC~~ 252:100-37, the additional ~~control/prohibitions~~ requirements contained in this Subchapter shall be required ~~on~~ of existing and new facilities located in Tulsa and Oklahoma Counties and any areas designated nonattainment for ozone unless clearly indicated otherwise.

252:100-39-4. Exemptions

VOCs with vapor pressures less than 1.5 pounds per square inch (psia) under actual storage conditions are exempt from 252:100-39-

16 through 252:100-39-18, 252:100-39-30, 252:100-39-41, and 252:100-48. [NOTE: This Section is added to avoid substantive changes that would be brought about by the revision of the definition of VOC.]

PART 3. PETROLEUM REFINERY OPERATIONS

252:100-39-15. Petroleum refinery equipment leaks

(a) Definitions. The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

(1) "Component" means any piece of equipment which has the potential to leak ~~volatile organic compounds~~ VOCs when tested in the manner described in EPA Test Method 21 of 40 CFR Part 60. These sources include, but are not limited to, pumping seals, compressor seals, seal oil degassing vents, pipeline valves, flanges and other connections, pressure relief devices, process drains, and open ended pipes. Excluded from these sources are valves which are not externally regulated.

(2) "Gas service" means any equipment which processes, transfers or contains a ~~volatile organic compound~~VOC or mixture of ~~volatile organic compounds~~VOCs in the gaseous phase.

(3) "Leaking component" means a component which has a VOC concentration exceeding 10,000 ppm when tested according to the provisions in 252:100-39-15(e). [NOTE: This was 252:100-39-15(c)(1)(C).]

~~(3)~~(4) "Liquid service" means any equipment which processes, transfers or contains a ~~volatile organic compound~~VOC or mixture of ~~volatile organic compounds~~VOCs in the liquid phase.

~~(4)~~ "Petroleum refinery" means any facility engaged in producing gasoline, aromatics, kerosene, distillate fuel oils, residual fuel oils, lubricants, asphalt, or other products through distillation of crude oil or other hydrocarbons or through redistillation, cracking, rearrangement or reforming or unfinished petroleum derivatives. [NOTE: Moved to 252:100-39-2 since it applies to more than one section in Subchapter 39.]

~~(5)~~ "Refinery unit" means a set of components which are a part of a basic process operation, such as distillation, hydrotreating, cracking or reforming of hydrocarbons. [NOTE: Moved to 252:100-39-2 since it applies to more than one section in Subchapter 39.]

~~(6)~~ (4) "Valves not externally regulated" means valves that have no external controls, such as in-line check valves.

~~(7)~~ "Volatile organic compounds" means any compound containing carbon and hydrogen or containing carbon and hydrogen in combination with any other element which has a vapor pressure of 0.3 kilopascals (0.0435 pounds per square inch absolute) or greater under actual storage conditions. (Effective 2-12-90) [NOTE: The special conditions contained in this definitions have been moved to 252:100-39-15(b)(2).]

(b) Applicability. This Section applies to all source facility petroleum refineries located in the following counties: Tulsa and

Oklahoma.

(1) This Section applies to all petroleum refineries located in Tulsa County and Oklahoma County.

(2) VOCs with vapor pressures less than 0.0435 psia (0.3 kilopascals(kPa)) under actual storage conditions are exempt from 252:100-39-15. (Effective 2-12-90.) [NOTE: Moved from 252:100-39-15(a)(4).]

(c) Provisions for specific processes. Standards and operating requirements

(1) The owner or operator of a petroleum refinery complex subject to this Section shall:

(A) develop and conduct a monitoring program consistent with the provisions in 252:100-39-15(d) and 252:100-39-15(f);

~~(B) conduct a monitoring program consistent with the provisions in 252:100-39-15(f);~~

~~(C) record all leaking components which have a VOC concentration exceeding 10,000 ppm when tested according to the provisions in 252:100-39-15(e) and place an identifying tag on each component consistent with the provisions in 252:100-39-15(f)(3);~~

~~(D) (C) repair and retest the leaking components, as defined in 252:100-39-15(e)(1)(C), as soon as possible but no later than 15 days after the leak is found; and,~~

~~(E) (D) identify all leaking components, as defined in 252:100-39-15(e)(1)(C), which cannot be repaired until the unit is shutdown for turnaround; and, assure all lines or pipes terminating with a valve are sealed with a second valve, a blind flange, a plug or a cap.~~

(E) assure all lines or pipes terminating with a valve are sealed with a second valve, a blind flange, a plug or a cap.

(2) The ~~Executive~~Division Director, may, at his/~~her~~his or her discretion, ~~take~~require the owner or operator to take appropriate remedial action, including early unit turnaround, based on the number and severity of tagged leaks awaiting repair.

(3) Pipeline valves and pressure relief valves in gaseous ~~volatile organic compound~~VOC service shall be marked in some manner that will be readily obvious to both petroleum refinery or contract personnel performing monitoring and the ~~Executive Director~~DEQ.

(d) Compliance ~~schedule~~ schedule. The owner or operator of a petroleum refinery, ~~in order to comply with 252:100-39-15,~~ shall ~~adhere to the increments of progress contained in the following schedule.~~

~~(1) Submit~~submit to the ~~Executive~~Division Director a monitoring program by July 30, 1981, or within 60 days of the date the area where the refinery is located was designated as a nonattainment area. This program shall contain, at a minimum, a list of the refinery units ~~only~~ and the quarter in which they will be monitored, a copy of the log book format, and the make and model of the monitoring equipment to be used. In no case shall a monitoring contract relieve the owner or operator of a petroleum

refinery of the responsibility for compliance with this Section.
~~(2) Submit quarterly monitoring report to the Executive Director. [NOTE: This is covered in 252:100-39-15(h).]~~

(e) **Testing and monitoring procedures.** Testing and calibration procedures to determine compliance with this Section must be consistent with EPA Test Method 21 of 40 CFR Part 60.

(f) **Monitoring.**

(1) The owner or operator of a petroleum refinery ~~subject to this Section~~ shall conduct a monitoring program consistent with the following provisions. The owner or operator shall:

(A) monitor yearly by the methods referenced in ~~Test Method 21 of 40 CFR Part 60~~ 252:100-39-15(e) all:

~~(i) pump seals;~~

~~(ii) pipeline valves in liquid service;~~ and

~~(iii) process drains;~~

(B) monitor quarterly by the methods referenced in ~~252:100-39-15(d)~~ 252:100-39-15(e), all:

~~(i) compressor seals;~~

~~(ii) pipeline valves in gaseous gas service;~~ and

~~(iii) pressure relief valves in gaseous gas service;~~

(C) monitor weekly by visual methods all pump seals;

(D) monitor immediately any pump seal from which VOC liquids are observed dripping;

(E) monitor any relief valve within 24 hours after it has vented to the atmosphere; and,

(F) monitor immediately after repair any component that was found leaking.

(2) Pressure relief devices ~~which~~ that are connected to an operating flare header, vapor recovery ~~device~~ devices, inaccessible valves, storage tank valves, and valves that are not externally regulated are exempt from the monitoring requirements in paragraph (1) of this subsection. ~~Provided~~ provided, however, such inaccessible valves will be monitored during annual shutdown.

(3) The owner or operator of a petroleum refinery, upon the detection of a leaking component, ~~as defined in 252:100-39-15(e)(1)(C)~~, ~~which~~ that is not repaired on discovery, shall affix a weatherproof and readily visible tag, bearing an identification number and the date the leak is located, to the leaking component. This tag shall remain in place until the leaking component is repaired.

(g) **Recordkeeping.**

(1) The owner or operator of a petroleum refinery shall maintain a leaking components monitoring log ~~as specified in 252:100-39-15(e)(1)(C)~~ which shall contain, at a minimum, ~~the following data:~~

(A) the name of the process unit where the component is located;

(B) the type of component (e.g., valve, seal);

(C) the tag number of the component, if not repaired immediately on discovery;

(D) the date on which a leaking component is discovered;

- (E) the date on which a leaking component is repaired;
 - (F) the date and instrument reading of the recheck procedure after a leaking component is repaired;
 - (G) the date of the calibration of the monitoring instrument. ~~The record of calibration~~ which shall be made available for inspection on request;
 - (H) those leaks that cannot be repaired until turnaround; and,
 - (I) the total number of components checked and the total number of components found leaking.
- (2) Copies of the monitoring log shall be retained by the owner or operator for at least two years after the date on which the record was made or the report prepared.
- (3) Copies of the monitoring log shall be made available to the Executive Division Director, upon written request, at any reasonable time.
- (h) **Reporting.** The owner or operator of a petroleum refinery, ~~upon the completion of each monitoring procedure,~~ shall:
- (1) submit a report to the Executive Division Director by the 30th day following the end of each calendar quarter that lists all leaking components that were located during the previous quarter but not repaired within 15 days, all leaking components awaiting unit turnaround, and the total number of components found leaking; and,
 - (2) submit a signed statement with the report attesting to the fact that, all monitoring and, with the exception of those leaking components listed in 252:100-39-15(h)(1), all monitoring and repairs were performed as stipulated in the monitoring program.

252:100-39-16. Petroleum Refinery refinery process unit turnaround

(a) **Definition.** ~~"Turn-around"~~ **"Turnaround"** means the planned procedure of shutting down a unit, inspecting and repairing it, and restarting it.

(b) **Procedures required.** For the shutdown, purging and blowdown operation of any ~~processing~~ petroleum refinery processing unit the following procedures are required:

(1) Recovery of ~~volatile organic compounds (VOC)~~ VOCs shall be accomplished during the shutdown or turnaround to a process unit pressure compatible with the flare or vapor system pressure. The unit will then be purged or flushed to a flare or vapor recovery system with using a suitable material such as steam, water or nitrogen, ~~to a flare or vapor recovery system.~~ The unit shall not be vented to the atmosphere until pressure is reduced to less than 5 psig through control devices.

(2) Except where inconsistent with the "Minimum Federal Safety Standards for the Transportation of Natural and Other Gas by Pipeline," or any State of Oklahoma regulatory agency, no person shall emit ~~organic~~ VOC gases to the atmosphere from a vapor recovery blowdown system unless these gases are burned by smokeless flares, or an equally effective control device as approved by the Executive Division Director.

(3) At least fifteen days prior to a scheduled turnaround, a written notification shall be submitted to the Executive Division Director. As a minimum, the notification shall indicate the unit to be shutdown, the date of shutdown, and the approximate quantity of hydrocarbonsVOCs to be emitted to the atmosphere.

(4) Scheduled refinery unit turnaround may be accomplished without the controls specified in 252:100-39-16(b)(1) and 252:100-39-16(b)(2) during non-oxidant seasons provided the notification to the Executive Division Director as required in 252:100-39-16(b)(3), specifically contains ~~such~~ a request for such an exemption. The Non-oxidantnon-oxidant season is ~~understood to be between the months of October and April from~~ November 1 through March 31.

252:100-39-17. Petroleum Refineryrefinery vacuum producing system

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

(1) "Accumulator" means the vessel in the overhead stream of any fractionating tower, after the overhead condenses and separates noncondensable gases, liquid hydrocarbonsVOCs and water.

(2) "Hotwell" means the tank at the bottom of the barometer leg in a barometric condenser system to receive the water, condensate and entrained hydrocarbonsVOCs generated by the barometric condenser.

(b) **Requirements.** ~~Noncondensable volatile organic compoundsVOCs from the following equipment shall be incinerated or reduced by 90 percent of what would be emitted without controls when emitted from the following vacuum producing system:~~

- (1) steam ejectors with barometric condensers;
- (2) steam ejectors with surface condensers; or,
- (3) mechanical vacuum pumps.

(c) **Hotwells and accumulators.**

(1) Hot wells and accumulators shall be covered and the noncondensable vapors shall be vented to a fire-box or incinerator.

(2) The presence of a pilot flame shall be monitored using a thermocouple or any other equivalent device to detect the presence of a flame. (Effective February 12, 1990)

(d) **Compliance.** Compliance shall be determined in accordance with the provision of the CTG document (EPA 450/2-77-025). Test reports and maintenance records will be maintained for at least two years. If emission testing is required, the appropriate test method(s) selected from EPA Reference Methods 1 through 4, 21, and/or 25, will be utilized.

252:100-39-18. Petroleum Refineryrefinery effluent water separators

(a) **Definition.** "Effluent water separator" means any tank, box, sump, or other container in which any material compoundVOC floating on, or entrained in, or contained in water entering such tank, box,

~~sump or other~~ the container is physically separated and removed from such the water prior to outfall, drainage, or recovery of such discharge of the water from the container. [NOTE: Moved from 252:100-39-2 since the term is only used in this Subchapter. Since this is new to the Section, original language is underlined, deleted language is stricken out, and new language is double underlined to facilitate comparison.]

(b) Requirements. No ~~person~~owner or operator shall operate, or install or permit the operation or installation of a ~~single~~ single-compartment or multiple-compartment ~~volatile organic compound~~ water/VOC/water separator from any equipment processing, refining, treating, storing or handling ~~volatile organic compound~~ VOC unless the compartment receiving said the effluent water is equipped to control emissions in one of the following ways. ~~with one of the following vapor control devices, properly installed, in good working order and in operation.~~

(1) A ~~The~~ container totally encloses the liquid contents and having all openings are sealed, and totally enclosing the liquid contents. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The oil removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.

(2) A ~~The~~ container is equipped with a vapor-recovery system, consisting of a vapor-gathering system capable of collecting the ~~organic material~~ VOC vapors and gases discharged and a vapor-disposal system capable of processing such ~~organic material~~ VOC vapors and gases ~~so as~~ to prevent their emission to the atmosphere, ~~and with all~~ All tank gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The ~~organic material~~ VOC removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.

(3) A ~~Containers~~ container that is equipped with controls of equal efficiency, provided the plans and specifications of such equipment are submitted and are approved by the Executive Division Director prior to their use.

PART 5. PETROLEUM PROCESSING AND STORAGE

252:100-39-30. Petroleum liquid storage in vessels with external floating roof tanks ~~roofs~~

(a) Definitions. The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise.

(1) "Condensate" means hydrocarbon liquid separated from natural gas which condenses due to changes in the temperature and/or pressure and remains liquid at normal operating conditions.

(2) "Crude oil" means a naturally occurring hydrocarbon mixture which is a liquid at standard conditions. It may contain sulfur, nitrogen and/or oxygen derivatives of hydrocarbon.

(3) "Externally External floating roof" means a storage vessel

cover in an open top tank consisting of a double deck or pontoon single deck which rests upon and is supported by the petroleum liquid being contained and is equipped with a closure seal or seals to close the space between the roof edge and tank wall.

(4) "Lease custody transfer" means the transfer of produced crude oil and/or condensate, after processing and/or treating in the producing operations, from storage ~~tanks~~vessels or automatic transfer facilities to pipelines or any other ~~forms~~form of transportation.

(5) "Liquid-mounted seal" means primary seal mounted in continuous contact with the liquid between the tank wall and the floating roof.

(6) "Petroleum liquid" means crude oil, condensate, and any finished or intermediate liquid products manufactured or extracted in a petroleum refinery.

(7) "Vapor-mounted seal" means a primary seal mounted so there is an annular vapor space underneath the seal. The annular vapor space is bounded by the bottom of the primary seal, the ~~tank~~vessel wall, the liquid surface, and the floating roof.

(8) "Waxy, high pour point crude oil" means a crude oil with a pour point of 50°F. or higher as determined by the American Society of Testing and Materials Standard D97-66, "Test for Pour Point of Petroleum Oils."

(b) **Applicability.**

(1) This Section applies to all ~~source facilities with petroleum liquid storage vessels equipped with external floating roofs, having capacities greater than 40,000 gallons (150,000 liters) (40,000 gallons), that are located in Tulsa and Oklahoma Counties.~~

(2) This Section does not apply to petroleum liquid storage vessels ~~which that: prior to custody transfer:~~

(A) are used to store waxy, high pour point crude oil;

(B) have capacities less than 1,600,000 liters (420,000 gallons) and are used to store produced crude oil and condensate prior to lease custody transfer;

(C) contain a petroleum liquid with a true vapor pressure less than 1.5 psia (10.5 kPa) (1.5 psia);

(D) ~~contain a petroleum liquid with a true vapor pressure less than 27.6 Kpa (4.0 psia); and,~~

~~(i) are of welded construction;~~

~~(ii) presently possess a metallic type shoe seal, a liquid-mounted foam seal, a liquid mounted liquid filled type seal, or other closure device of demonstrated equivalence approved by the Executive Director; or, contain a petroleum liquid with a true vapor pressure less than 4.0 psia (27.6 kPa) if the vessels are of welded construction and have a metallic-type shoe seal, a liquid-mounted foam seal, a liquid-mounted liquid filled type seal, or other closure device of demonstrated equivalence approved by the Division Director; or,~~

(E) are of welded construction, equipped with a metallic-type shoe primary seal and has a secondary seal from the top of the

shoe seal to the tankvessel wall (shoe-mounted secondary seal).

[NOTE: Research indicates that "prior to custody transfer" should have been added to 3.7.5-3(a)(2)(B)(ii) which is now 252:100-39-30(b)(2)(B).]

(c) Provisions for specific processes Equipment and operating requirements.

(1) Standards. No owner of a petroleum liquid storage vessel subject to this Section shall store a petroleum liquid in that vessel unless the following conditions are met.

(A) The vessel has been fitted with:

(i) a continuous secondary seal extending from the floating roof to the tankvessel wall (rim-mounted secondary seal); or,

(ii) a closure device or other device which controls VOC emissions with an effectiveness equal to or greater than a seal required ~~above~~ underin 252:100-39-30(c)(1)(A)(i) and approved by the Executive Division Director.

(B) All seal closure devices meet the following requirements:

(i) ~~there~~ There are no visible holes, tears, or other openings in the seal(s) or seal fabric.

(ii) ~~the~~ The seal(s) are intact and uniformly in place around the circumference of the floating roof between the floating roof and the tankvessel wall ~~and~~.

(iii) ~~for~~ For vapor mounted primary seals, the accumulated area of gaps exceeding 0.32 cm (1/8 in.) in width between the secondary seal and the tankvessel wall shall not exceed 21.2 cm² per meter of tankvessel diameter (1.0 ~~in.~~ in.² per foot of tank diameter), as determined by physically measuring the length and width of all gaps around the entire circumference of the secondary seal in each place where a 0.32 cm uniform diameter probe passes freely between the seal and the tankvessel wall; and summing the area of the individual gaps.

(C) All openings in the external floating roof, except for automatic bleeder vents, rim space vents, and leg sleeves, are:

(i) equipped with covers, seals, or lids in the closed position except when the openings are in actual use; and,

(ii) equipped with projections into the tankvessel which remain below the liquid surface at all times.

(D) Automatic bleeder vents are closed at all times except when the roof is floated off or landed on the roof leg supports.

(E) Rim vents are set to open when the roof is being floated off the leg supports or at the manufacturer's recommended settings ~~and~~.

(F) Emergency roof drains are provided with slotted membrane fabric covers or equivalent covers which cover at least 90 percent of the area of the opening.

(2) Monitoring. The owner or operator of a petroleum liquid

storage vessel with an external floating roof subject to this Section shall:

(A) perform routine inspections semi-annually in order to ensure compliance with 252:100-39-30(c)(1)(B)(i), i.e., no visible holes, tears, or other openings in the seals or seal fabric;

(B) measure the secondary seal gap annually in accordance with 252:100-39-30(c)(1)(B)(iii), when the floating roof is equipped with a vapor-mounted primary seal; and,

(C) maintain records of the types of volatile petroleum liquids stored, the true vapor pressure of the liquid as stored, and the results of the inspections performed in 252:100-39-30(c)(2)(A) and 252:100-39-30(c)(2)(B).

(3) Recordkeeping.

~~(3)~~ (A) Copies of all records under 252:100-39-30(c)(2) shall be retained by the owner or operator for a minimum of two years after the date on which the record was made.

~~(4)~~ (B) Copies of all records under this Section shall be made available to the Executive Division Director, upon verbal or written request, at any reasonable time.

(d) Compliance schedule. Compliance with this Section will be accomplished by affected facilities ~~within two years of approval of this Section by the Oklahoma Environmental Quality Board by May 23, 1982.~~

PART 7. SPECIFIC OPERATIONS

252:100-39-40. Cutback asphalt (paving)

(a) Definitions. "Cutback asphalt" means a basic asphalt or asphaltic concrete containing a petroleum distillate.

(b) Requirements. No owner, operator and/or contractor shall prepare or apply cutback liquified asphalt without the prior written consent of the Executive Division Director, ~~or the Executive Director's designee.~~ Such consent may be granted during Oklahoma's non-oxidant season, i.e., ~~October through April~~ November 1 through March 31.

252:100-39-41. ~~Vapor recovery systems~~ Storage, loading and transport/delivery of VOCs

(a) Storage of ~~volatile organic compounds~~ VOCs in vessels with storage capacities — greater than 40,000 gallons — ~~(953 bbls).~~ No person ~~owner or operator~~ shall store or permit the storage of gasoline or any ~~volatile organic compound~~ VOC in tanks or vessels a vessel having with a storage capacity greater than 40,000 gallons ~~(953 bbls)~~ unless such tank, reservoir or other container it is to be a pressure tank vessel capable of maintaining working pressures sufficient at all times ~~to that~~ to prevent organic VOC vapor or gas loss to the atmosphere, or it is equipped with one or more of the following vapor control devices:

(1) ~~a~~ A floating roof, consisting of pontoon type, internal floating cover or double-deck type roof, which will rest on the surface of the liquid contents. The floating roof shall be

equipped with a closure seal, or seals, to close the space between the roof edge and ~~the~~ tank vessel wall. Such floating roofs are not appropriate control devices if the ~~organic compounds~~ VOCs have a vapor pressure of 11.0 ~~pounds per square inch absolute psia (568 mm Hg)~~ (75.8 kPa) or greater under actual conditions. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. Closure seals will meet the requirements of ~~252:100-39-30(e)(1)(B)~~ 252:100-39-30(c)(1)(B)(i) and (ii).

(2) ~~a~~ A vapor-recovery system consisting of a vapor-gathering system capable of collecting 90 percent by weight or more of the uncontrolled ~~volatile organic compounds~~ VOCs that would otherwise be emitted to the atmosphere and a vapor-disposal system capable of processing such ~~organic compounds~~ VOCs so as to prevent emissions in excess of 80 mg/liter of ~~gasoline~~ VOC transferred to the atmosphere. All ~~tank vessel~~ gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place, ~~or~~.

(3) ~~other~~ Other equipment or methods of equal efficiency for purposes of air pollution control ~~as may be when~~ approved by the ~~Executive Division~~ Director and are in concert with federal guidelines.

(b) Storage of ~~volatile organic compounds~~ VOCs in vessels with storage capacities of 400-40,000 gallons (9.5-953 bbls).

(1) ~~No person~~ owner or operator shall store or permit the storage of gasoline or other ~~volatile organic compounds~~ VOCs in any stationary storage ~~container~~ vessel with a nominal capacity greater than 400 gallons (9.5 bbls) and less than 40,000 gallons (953 bbls) unless such ~~container~~ it is equipped with a submerged fill pipe or is bottom filled. ~~No person shall store or permit the storage of gasoline or other volatile organic compound in any stationary storage container with an average daily throughput of 30,000 gallons or greater unless the displaced vapors from the storage container are processed by a system that has a total collection efficiency no less than 90 percent by weight of total hydrocarbon compounds in said vapors.~~

(2) No owner or operator shall store gasoline or other VOCs in any stationary storage vessel with an average daily throughput of 30,000 gallons or greater unless the displaced vapors from the storage vessel are processed by a system that has a total collection efficiency no less than 90 percent by weight of total VOCs in the vapors.

~~(2)(A)~~ The vapor recovery system shall include ~~one or more of the following:~~

~~(A)(i)~~ a vapor-tight return line from the storage ~~container~~ vessel to the delivery vessel and a system that will ensure that the vapor return line is connected before gasoline or ~~volatile organic compounds~~ VOCs can be transferred into the ~~container~~ vessel; or,

~~(B)(ii)~~ other equipment that has a total collection efficiency no less than 90 percent by weight of the total hydrocarbon ~~compounds~~ VOCs in the displaced vapor provided

that if approval of the proposed design installation, and operation is obtained from the Executive Division Director prior to start of construction.

~~(3)~~ (B) Provided, however, that the requirements for vapor collection of displaced vapors shall not apply to operations that are not major sources.

(c) Loading of ~~volatile organic compounds~~ VOCs.

(1) No ~~person~~ owner or operator shall install or operate, ~~install or permit the building, operation or installation of a stationary volatile organic compound~~ VOC loading facility with an annual throughput of 120,000 gallons or greater or storage capacity greater than 2,000 gallons unless such loading facility ~~it is equipped with a vapor-collection and/or disposal system properly installed, in good working order and in operation.~~

(2) ~~When~~ While ~~volatile organic compounds~~ VOCs are loaded through the hatches of a transport vessel, a pneumatic, hydraulic or mechanical means shall be provided to ensure a vapor-tight seal at the hatch.

(3) A means shall be provided to prevent ~~organic material~~ VOC drainage from the loading device when it is removed from the transport vessel, or to accomplish complete drainage before removal.

(4) When loading is effected ~~throughby~~ means other than hatches, all loading and vapor lines shall be equipped with fittings ~~which~~ that make vapor-tight connections and which close automatically when disconnected.

(5) The vapor collection and/or disposal portion of the system shall consist of one or more of the following in addition to bottom loading or submerged fill of transport vessels. Storage vessels at service stations and bulk plants may be used for intermediate storage prior to recovery/disposal of vapors as specified in 252:100-39-41(c)(5)(A) through 252:100-39-41(c)(5)(C) if they are designed to prevent the release of vapors during use.

(A) ~~an~~ An absorption/adsorption system or condensation system ~~with~~ that has a minimum recovery efficiency of 90 percent by weight of all the ~~volatile organic compound~~ VOC vapors and gases entering such disposal system.

(B) ~~a~~ A vapor handling system which directs all vapors to a fuel gas incineration system with a minimum disposal efficiency of 95 percent, ~~or,~~

(C) ~~other~~ Other equipment ~~of~~ that has at least a 90 percent efficiency, provided plans for such equipment are submitted to and approved by the Executive Division Director. ~~Storage vessels at service stations and bulk plants may be used for intermediate storage prior to recovery/disposal of vapors as per 252:100-39-41(c)(5)(A) through 252:100-39-41(c)(5)(C) if they are designed to prevent the release of vapors during use.~~

(6) Subsection 252:100-39-41(c) shall apply to any facility ~~which~~ that loads ~~volatile organic compounds~~ VOCs into any transport vessel designed for transporting ~~volatile organic compounds~~ VOCs.

(d) **Transport/delivery.**

(1) The vapor-laden delivery vessel shall meet one of the following requirements.

(A) ~~the~~The delivery vessel must be ~~so~~ designated and operated ~~as to~~ be vapor tight except when sampling, gauging, or inspecting, ~~or,~~

(B) ~~the~~The delivery vessel must be equipped and operated ~~so that to deliver~~ the ~~volatile organic compound~~VOC vapors are delivered to a vapor recovery/disposal system.

(2) No ~~owner/operator~~ owner or operator will~~shall~~ allow a delivery vessel to be filled at a facility unable to receive displaced ~~organic~~VOC vapors nor service ~~tanks/vessels~~ unable to deliver displaced vapors except for ~~tanks/facilities~~vessels and facilities exempted in 252:100-39-41(b) and 252:100-39-41(c).

(3) Testing of the tank trucks for compliance with the vapor tightness requirements must be consistent with Appendix "B" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems," EPA 450/2-78-051, or an equivalent method as determined by the Executive Division Director.

(e) **Additional requirements for Tulsa County.** ~~Also see 252:100-39-48 for additional requirements pertaining to Tulsa County.~~ [NOTE: The requirements in this subsection were formerly contained in 252:100-39-48. To facilitate comparison, deletions to the original language have been stricken out and additions have been double underlined. Since the material is new to this Section, it is all underlined.]

(1) Applicability. This Section subsection applies only in Tulsa County. In addition to the other requirements for vapor recovery systems that are contained in 252:100-39-41(a) through (d), facilities located in Tulsa County must comply with the requirements of this subsection. [NOTE: This was 252:100-39-48(a).]

(2) Storage of VOCs.

(A) 2,000 - 40,000 gallons capacity. No ~~person~~owner or operator shall store or permit the storage of gasoline or other volatile organic compoundsVOCs in any stationary storage container with a nominal capacity greater than 2,000 gallons (47.5 bbls) and less than 40,000 gallons (952.4 bbls) unless, such container in addition to being equipped with a submerged fill pipe or being bottom loading, it is equipped with a vapor control system that has an efficiency of no less than 90 percent by weight of the volatile organic compoundsVOCs contained in the displaced vapors and is equipped with a pressure relief valve in the atmospheric vent system which maintains a pressure of 16 ounces per square inch and 1/2 ounce per square inch vacuum. The vapor recovery system shall include one or more of the following.

(i) aA vapor-tight return line from the storage container to the delivery vessel and a system that will ensure that the vapor return line is connected before gasoline or ~~volatile organic compounds~~VOCs can be transferred into the

container (i.e., popped connectors from the storage container to the delivery vessel.)

(ii) a float vent valve assembly must be installed in the vapor return/vent line on new and existing dual point installations; however, for coaxial installations on existing stations, a vent sleeve extending six inches below the top of the tank will be allowed. Sleeves may be equipped with a 1/16 inch air bleed hole.

(iii) The cross-sectional area of the vapor recovery line must be at least half of the cross-sectional area of the liquid delivery line.

(iv) Instead of 252:100-39-48(b)(2)(A) through 252:100-39-48(b)(2)(C) of 252:100-39-41(e)(2)(B)(i) through 252:100-39-41(e)(2)(B)(iii), other equipment that has a total collection efficiency no less than 90 percent by weight of the total hydrocarbon compounds/VOCs in the displaced vapor provided that may be used if approved by approval of the proposed design, installation, and operation is obtained from the Executive Division Director prior to start of construction. [NOTE: This was in 252:100-39-48(b)(1) and (2).]

(B) Applicability.

(i) The applicability of this Section 252:100-39-41(e)(2) shall be determined by the most restrictive of the 2,000 gallon tank/vessel size as specified required in 252:100-39-48(b)(1) 252:100-39-41(e)(2)(A) or the 120,000 gallon annual throughput described required in 252:100-39-48(b)(3) 252:100-39-41(e)(2)(B)(ii). However, once a facility places a 2,000 gallon tank/vessel in service or exceeds the 120,000 gallon annual throughput described in 252:100-39-48(b)(3), that facility shall always be subject to the provisions of this Section 252:100-39-41(e)(2). (effective February 12, 1990) [NOTE: This was 252:100-39-48(b)(4).]

(ii) Exemptions to this Section 252:100-39-41(e)(2) may be granted provided if the owner/operator owner or operator shows to the satisfaction of the appropriate authority/Division Director that the container/vessel is used exclusively for agricultural purposes or that the facility, based on the most current 12 month's data, dispenses 120,000 gallons per year or less. [NOTE: This was 252:100-39-48(b)(3).]

(C) Emission testing. If emission testing is conducted, the appropriate test methods selected from EPA Methods 1 through 4, 18, 21, 25, 25A and 25B will be utilized. [NOTE: Was 252:100-39-48(b)(5).]

(D) Compliance. Compliance with this subsection 252:100-39-41(e)(2) will be accomplished by affected owner/operator the owner or operator of affected facilities by December 31, 1986. [NOTE: Was 252:100-39-48(b)(6).]

(E) Certification. The owner/operator owner or operator of a facility or facilities shall obtain, by whatever means practicable, certification from the owner/operator owner or

operator of the transport/delivery vessels that all deliveries of gasoline or other volatile organic compounds VOCs made to their 400-gallon to 40,000-gallon storage facility or facilities located in Tulsa County, shall be made by transport/delivery vessels which that comply with the requirements contained in 252:100-39-48(d)-252:100-39-41(e)(4). Compliance with this Section 252:100-39-41(e)(2) shall be accomplished by affected owner/operators owners or operators of affected facilities no later than December 31, 1990. (Effective February 12, 1990) [NOTE: Was 252:100-39-48(b)(7).]

(3) Loading of VOCs. In addition to those requirements contained in 252:100-39-41(c), stationary loading facilities Facilities will be checked annually in accordance with EPA Test Method 21, Leak Test. Leaks greater than 5000 ppm will be repaired within 15 days. Facilities will retain inspection and repair records for at least two years. [NOTE: This was 252:100-39-48(c)(7).]

(4) Transport/delivery vessel requirements. In addition to the requirements contained in 252:100-39-41(d), facilities located in Tulsa County must meet the following requirements.

(A) Maintenance.

(i) The delivery vessel must be maintained' so as to be that it is vapor tight except when sampling, gauging, or inspecting. These activities shall not occur while the vehicle is loading or unloading or is in a pressurized state.

(ii) The delivery vessel must be equipped, maintained and operated to receive vapors from sources identified in 252:100-39-41(b)(1) and 252:100-39-41(b)(2) and retain these and all other vapors until they are delivered into an authorized vapor recovery/disposal system.

(iii) Vessels with defective equipment such as boots, seals, and hoses, or with other deficiencies which that would impair the vessels' ability to retain vapors or liquid shall be repaired within 5 days.

(iv) The certified testing facility must certify to the approving agency that the proper testing and repairs have occurred in accordance with 252:100-39-48(d)(2)(A)(i)-252:100-39-41(e)(4)(B)(i). The vessel must also display on the rear panel a tag showing the date of the pressure test.

(v) No owner/operator owner or operator will allow a delivery vessel to be filled at a facility unable to receive displaced organic vapors VOCs nor service tanks/vessels unable to deliver displaced vapors except for tanks/facilities/vessels/facilities exempted in 252:100-39-41(b). Terminal owners shall not fill vessels which that do not display a current tag.

(vi) Delivery vessels may be inspected by representatives of the appropriate health agency DEQ in order to determine their state of repair. Such a test may consist of a visual inspection, or a vapor test with vapors not to exceed 5000

ppm. Failure of a vapor test will require the owner/operatorowner or operator to effectmake the necessary repairs within 10 days. Unless certification is made to the appropriate health agency within 5 days, the vessel willshall be removed from service by the owner/ operator. Failure to certify within 10 days of a vapor test that the eitednecessary repairs have been effectedmade will subject the vesselowner or operator to sanctions. Upon certification of repairs, the vessel will be allowed to operate in a normal mannerresume normal operation.

(B) Testing requirements.

(i) Pressure test.

(I) Delivery vessels, delivering or receiving gasoline must be tested one time per year for vapor tightness. The vapor tightness test must be consistent with Appendix "A" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems", EPA 450/2-78-051. Tests shall be performed by the owner or a reputable transport service company. Test methods used to test these vessels by owners or testing companies must be approved for use by the ExecutiveDivision Director.

(II) The vessel will be considered to pass the test prescribed in ~~252:100-39-48(d)(2)(A)(i)~~ 252:100-39-41(e)(4)(B)(i)(I) when the test results show that the vessel and its vapor collection systems do not sustain a pressure change of more than 3 inches of H₂O. in addition thereThere shall be no avoidable visible liquid leaks.

~~(2)(ii)~~ Vapor test. Testing of the tank trucks for compliance with vapor tightness requirements as required under ~~252:100-39-41(d)(1)(F)~~ 252:100-39-41(e)(4)(A)(vi) must be consistent with Appendix "B" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems", EPA 405/2-78-051, as modified for this purpose and contained in 252:100-43-15. The requirements of ~~252:100-39-48~~ 252:100-39-41(e) will become effectivetook effect December 15, 1988. [NOTE: This was 252:100-39-48(d).]

252:100-39-42. Metal cleaning

(a) Cold cleaning facility requirements.

(1) Equipment requirements. No ~~person~~owner or operator shall allow the construction or operation of any cold cleaning unit for metal degreasing using an ~~organic solvent~~VOC unless the following requirements are met~~+~~.

(A) ~~a~~A cover or door shall be installed on the facility that can be easily operated with one hand~~+~~.

(B) ~~an~~An internal drain board will be provided in ~~such a manner~~ that will allow lid closure if practical; ~~+~~ if not practical, the drainage facility may be external~~+~~ and~~+~~.

(C) ~~a~~A permanent, conspicuous label summarizing the operating requirements specified in 252:100-39-42(a)(2) will be

permanently attached to the facility.

(2) Operating requirements. ~~The operating requirements specified in 252:100-39-42(a)(1)(C) shall as a minimum specify~~ Owners or operators shall at a minimum:

(A) drain clean parts at least 15 seconds or until dripping ceases before removal;

(B) close degreaser cover when not handling parts in cleaner and;

(C) store waste solvent VOC in covered containers. ~~Do not dispose or allow disposition in such a manner that more than 20 percent by weight can evaporate into the atmosphere.~~

(D) Do not dispose or allow disposition of waste VOC in such a manner that more than 20 percent by weight can evaporate into the atmosphere.

~~(3)(E) If used, a solvent spray will be of a solid fluid stream (not atomized or spray)~~ Use a solid stream, not an atomized spray, when VOC is sprayed.

~~(4)(3)~~ Requirements for controls. If the solvent volatility vapor pressure of the VOC is greater than ~~33 mm Hg (0.6 psi)~~ 0.6 psi (4.1 kPa) measured at ~~38°C (100°F)~~ (38°C) or if solvent VOC is heated to ~~120 degrees C (248°F)~~ (120°C), one or more of the following control devices will be required:

(A) ~~freeboard~~ Freeboard that gives a ~~free board~~ freeboard ratio greater than or equal to 0.7.

(B) ~~water~~ Water cover and where the solvent VOC is insoluble in and heavier than water or such equivalent ~~or~~.

(C) ~~other~~ Another system of equivalent control as approved by the ~~Executive~~ Division Director.

~~(5)(4)~~ Compliance and recordkeeping. Compliance will be determined in accordance with EPA document 450/2-77-022. Test reports and maintenance and repair records of control equipment will be maintained by the source for at least two years.

(b) Vapor-type metal degreasing requirements.

(1) Equipment requirements. No ~~person~~ owner or operator shall allow the construction or operation of any vapor-type metal degreasing unit using an ~~organic solvent~~ a VOC unless the following requirements are met:

(A) ~~the~~ The unit has a cover or door that can easily be opened and closed without disturbing the vapor zone.

(B) ~~the~~ The unit will have the following safety switches:

(i) ~~condenser~~ Condenser flow switch and thermostat or equivalent capable of shutting off the sump heat if condenser coolant is not circulating or coolant exceeds solvent VOC manufacturer's recommended level and.

(ii) ~~spray~~ Spray safety switch capable of shutting off spray pumps if the vapor level drops in excess of four inches (10 cm).

(C) ~~the~~ The unit will have one or more of the following control devices/techniques:

(i) ~~freeboard~~ Freeboard ratio not less than 0.75, i.e., the ratio of the freeboard to the width of the degreaser wherein the term freeboard is defined as the distance from

the top of the vapor zone to the top of the degreaser tank.

(ii) ~~refrigerated~~Refrigerated chiller, i.e., condenser coils in the upper limit of the vapor zone.

(iii) ~~enclosed~~Enclosed design, i.e., cover or door is opened only when part is actually entering or exiting the facility.

(iv) ~~a~~A carbon adsorption system with ventilation greater than 50 cfm/ft.² of air/vapor area when cover is open and exhausting less than 25 ppm ~~solvent~~VOC average over one adsorption cycle.

(v) ~~a~~A control system demonstrated to have a control efficiency equal to or greater than any of the systems in (C) of this paragraph.

(D) ~~a~~A permanent conspicuous label summarizing operating procedures in 252:100-39-42(b)(2) will be attached to the facility unit.

(2) Operating requirements. ~~The operating requirements referred to in 252:100-39-42(b)(1)(D) As a minimum operators shall do the following as a minimum specify.~~

(A) ~~keep~~Keep cover closed at all times except when processing work.

(B) ~~minimize~~Minimize ~~solvent~~VOC carry-out by the following measures:

(i) ~~rack~~racking parts to allow full drainage;

(ii) ~~move~~moving parts in and out of the degreaser at less than 3.3 m/sec (11 ft/min.) (3.3 m/min.);

(iii) ~~degrease~~degreasing the workload in the vapor zone at least 30 sec. or until condensation ceases;

(iv) ~~tip~~tipping out any pools of ~~solvent~~VOC on the cleaned parts before removal; and,

(v) ~~allow~~allowing parts to dry within the degreaser for at least 15 sec. or until visually dry.

(C) ~~do not~~Not degrease porous or absorbent materials, such as cloth, leather, wood or rope.

(D) ~~workloads should not~~Not allow workloads to occupy more than half of the degreaser's open top area.

(E) ~~never~~Never spray above the vapor level.

(F) ~~assure~~Assure that ~~solvent~~VOC leaks are immediately repaired or the degreaser is shut down.

(G) ~~do not~~Not dispose of waste ~~solvent~~VOC or transfer it to another party in such a manner that greater than 20 percent of the waste (by weight) will evaporate into the atmosphere.

(H) Store waste ~~solvent~~VOC only in closed containers.

~~(H)~~(I) Not allow exhaust ventilation should not exceed 20 m³/min. per m² (65 cfm per ft²) (20 m³/min. per m²) of degreaser open area, unless necessary to meet OSHA requirements. Ventilation fans should not be used near the degreaser opening; and,

~~(I)~~(J) Not allow water should not to be visually detectable in ~~solvent~~VOC exiting the water separator.

(3) Compliance and recordkeeping. Compliance will be determined

in accordance with EPA document 450/2-77-022, which is incorporated by reference, and all test and maintenance records ~~will~~shall be retained by the source for at least two years.

(c) Conveyorized degreasing unit requirements.

(1) Operating requirements. No ~~person~~owner or operator shall operate a conveyorized degreasing unit unless the following requirements are met.

(A) ~~exhaust~~Exhaust ventilation should not exceed ~~20m³/min. per m² 65 cfm per ft² (65 cfm per ft²) (20m³/min. per m²)~~ of degreaser opening, unless necessary to meet OSHA requirements. ~~Work place fans should not be used near the degreaser opening.~~

(B) Work place fans should not be used near the degreaser opening.

~~(B)~~ (C) minimize Minimize carry-out emissions by:

(i) racking parts for best drainage; and,

(ii) maintaining vertical conveyor speed at less than ~~3.3 m/min. 11 ft./min. (11 ft./min.) (3.3 m/min.)~~.

~~(C)~~ (D) do Waste VOC should not be disposed ~~disposed~~ of waste solvent or ~~transfer~~transferred it to another party in such a manner that greater than 20 percent of the waste (by weight) can evaporate into the atmosphere. ~~Store waste solvent VOC only in covered containers.~~

(E) Store waste VOC only in covered containers.

~~(D)~~ (F) repair VOC leaks must be repaired immediately, or ~~shut down the degreaser~~ must be shut down.

~~(E)~~ (G) water Water should not be visibly detectable in the ~~solvent~~VOC exiting the water separator, ~~and~~.

~~(F)~~ (H) a permanent conspicuous label will must be attached to the ~~facility~~unit summarizing the operating requirements listed in 252:100-39-42(b) and 252:100-39-42(c).

(2) Control requirements. In addition to the requirements in 252:100-39-42(c)(1), any unit that has an air/vapor interface of more than ~~2.0m² 2.0 m²~~ will be subject to the following control requirements.

(A) Major control devices. The degreaser must be controlled by either:

(i) a refrigerated chiller;

(ii) a carbon adsorption system, with ventilation equal to or greater than ~~15 m²/min per m² 50 cfm/ft² (50 cfm/ft²) (15 m²/min per m²)~~ of air/vapor area (when down-time covers are open), and exhausting less than 25 ppm of ~~solvent~~VOC by volume averaged over a complete adsorption cycle; or

(iii) a system demonstrated to have control efficiency equivalent to or better than either of the above.

(B) Carryover prevention. Either a drying tunnel, or another means such as rotating (tumbling) basket, sufficient to prevent cleaned parts from carrying out ~~solvent~~VOC liquid or vapor subject to space limitations must be installed.

(C) Safety switches. The following safety switches must be installed and be operational.

(i) Condenser flow switch and thermostat ~~that~~ (shuts off sump heat if coolant is either not circulating or too

warm).

(ii) Spray safety switch ~~that~~ {shuts off spray pump or conveyor if the vapor level drops excessively, e.g. more than ~~10 cm (4 in.)~~ 4 in. (10 cm).

(iii) Vapor level control thermostat ~~that~~ {shuts off sump heat when vapor level rises too high}.

(D) **Minimized openings.** Entrances and exits should silhouette work loads so that the average clearance {between parts and the edge of the degreaser opening} is either less than ~~10 cm (4 in.)~~ 4 in. (10 cm) or less than 10 percent of the width of the opening.

(E) **Covers.** Down-time ~~eover~~covers must be placed over entrances and exits of conveyORIZED degreasers immediately after the conveyor and exhaust are shutdown and removed just before they are started up.

(3) **Compliance and recordkeeping.** Compliance will be determined in accordance with EPA document 450/2-77-022 and all test and maintenance records will be retained by the source for at least two years.

(d) **Alternative control methods.** As an alternative to the requirements of 252:100-39-42(a) through 252:100-39-42(c) and subject to EPA approval, an operator may request the approval by the Division Director of other methods of control. ~~may be approved by, subject to EPA approval, the Executive Director upon application by a source; provided, the~~ The applicant can must demonstrate that the proposed method will preclude no less than prevent at least 80 percent of the emissions from each source from being emitted to the atmosphere, as determined by the appropriate test methods selected from EPA Methods 1 through 4, 18, 25, 25A and 25B.

252:100-39-43. Graphic arts systems

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise.

(1) **"Flexographic printing"** means the application of words, designs and pictures to a substrate by means of a roll printing technique in which the pattern to be applied is raised above the printing roll and the image carrier is made of rubber or other elastomeric materials.

(2) **"Packaging rotogravure printing"** means rotogravure printing upon paper, paper board, metal foil, plastic film, and other substrates, ~~which that~~ are, in subsequent operations, formed into packaging products and labels for articles to be sold.

(3) **"Publication rotogravure printing"** means rotogravure printing upon paper which is subsequently formed into books, magazines, catalogues, brochures, directories, newspaper supplements, and other types of printed materials.

(4) **"Roll printing"** means the application of words, designs and pictures to a substrate usually by means of a series of hard rubber or steel rolls each with only partial coverage.

(5) **"Rotogravure printing"** means the application of works,

designs and pictures to a substrate by means of a roll printing technique ~~which~~that involves an intaglio or recessed image areas in the form of cells.

(b) **Applicability.**

~~(1) This Section applies to all packaging rotogravure, publication rotogravure, and flexographic printing facilities located in Tulsa and Oklahoma counties.~~

~~(2) This Section applies only to enly~~only~~packaging rotogravure, publication rotogravure, and flexographic printing facilities whose potential emission~~emissions of organic solvent VOC is~~are~~ equal to or more than 100 tons/year (90 megagrams/year) (100 grams)~~per year (100 tons/yr.)~~. Potential emissions are to be calculated based on historical records of actual consumption of solvent VOC and ink.

(c) **Provisions for specific processes.**

(1) No owner or operator of a ~~packaging rotogravure, publication rotogravure or flexographic printing facility~~ subject to this Section and employing solvent VOC containing ink may operate, ~~cause, allow or permit the operation of the facility unless one of the following conditions applies.~~

(A) ~~the~~The volatile fraction of ink, as it is applied to the substrate, contains 25.0 percent by volume or less of ~~organic solvent VOC~~ and 75.0 percent by volume or more of water.

(B) ~~the~~The ink as it is applied to the substrate, less water, contains 60.0 percent by volume or more of nonvolatile material, ~~or.~~

(C) ~~the~~The owner or operator installs and operates:

(i) a carbon adsorption system ~~which~~that reduces the ~~organic solvent VOC~~ emissions from the capture system by at least 90.0 percent by weight;

(ii) an incineration system ~~which~~that oxidizes at least 90.0 percent of the ~~nonmethane volatile organic solvent VOC~~ measured as total combustible carbon to carbon dioxide and water; or,

(iii) an alternative ~~organic solvent VOC~~ emission reduction system demonstrated to have at least 90.0 percent reduction efficiency, measured across the control system, ~~and that~~ has been approved by the ~~Executive~~Division Director.

(2) A capture system must be used in conjunction with the emission control systems in 252:100-39-43(c)(1)(C). The design and operation of the capture system must be consistent with good engineering practice, and shall be required to provide for an overall reduction in ~~volatile organic compound~~VOC emissions of at least:

(A) 75.0 percent where a publication rotogravure process is employed;

(B) 65.0 percent where a packaging rotogravure process is employed; ~~or.~~

(C) 60.0 percent where a flexographic printing process is employed.

(d) **Compliance schedule.** Compliance with this Section will be accomplished by affected facilities ~~within two (2) years of~~

~~approval of this Subchapter by the Oklahoma Environmental Quality Board by May 23, 1982.~~

(e) **Testing.** Test procedures to determine compliance with this Subchapter must be consistent with EPA Reference Method 24 or equivalent ASTM Methods.

252:100-39-44. Manufacture of pneumatic rubber tires

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise.

(1) "**Automatic tread end cementing**" means the application of a ~~solvent~~VOC based cement to the tire tread ends by automated devices.

(2) "**Bead dipping**" means the dipping of an assembled tire bead into a ~~solvent~~VOC based cement.

(3) "**Green tires**" means assembled tires before molding and curing have occurred.

(4) "**Green tire spraying**" means the spraying of green tires, both inside and outside, with release compounds ~~which~~that help remove air from the tire during molding and prevent the tire from sticking to the mold after curing.

(5) "**Manual tread end cementing**" means the application of a ~~solvent~~VOC based cement to the tire tread ends by manufacturers.

(6) "**Passenger type tire**" means agricultural, airplane, industrial, mobile home, light and medium duty truck, and passenger vehicle tires with a bead diameter up to but not including 20.0 inches and cross section dimension up to 12.8 inches.

(7) "**Pneumatic rubber tire manufacture**" means the production of pneumatic rubber, passenger type tires on a mass production basis.

(8) "**Undertread cementing**" means the application of a ~~solvent~~VOC based cement to the underside of a tire tread.

(9) "**Water based sprays**" means release compounds, sprayed on the inside and outside of green tires, in which solids, water and emulsifiers have been substituted for ~~organic solvents~~VOCs. These sprays may contain an average of up to five percent ~~organic solvent~~VOC.

(b) **Applicability.**

(1) This Section applies to VOC emissions ~~from the following operations~~ in from all major source pneumatic rubber tire manufacturing facilities located in Oklahoma County from:

- (A) undertread cementing;
- (B) automatic tread end cementing; and,
- (C) green tire spraying.

(2) The provisions of this Section do not apply to the ~~productions~~production of specialty tires for antique or other vehicles when produced on an irregular basis or with short production runs. This exemption applies only to tires produced on equipment separate from normal production lines for passenger type tires.

(3) Manual tread end cementing operations are exempt from the

provisions of this Section.

(c) Provisions for specific processes Control requirements.

(1) Undertread cementing or automatic tread end cementing. The owner or operator of an undertread cementing, or automatic tread end cementing, operation subject to this Section shall install and operate the following.

(A) ~~install and operate a~~ capture system, designed to achieve maximum reasonable capture from all undertread cementing, and automatic tread end cementing operations. Maximum reasonable capture would require that hood enclosures be designed in such a manner to minimize open areas and enclose as much of the emission source as practical while maintaining a minimum in-draft velocity of 200 feet per minute except during times when the enclosure must be opened to allow work inside or for the inspections of the product in progress. Maximum reasonable capture shall be consistent with the following documents:

(i) Industrial Ventilation, A Manual of Recommended Practices, 14th Edition, American Federation of Industrial Hygienists; and,

(ii) Recommended Industrial Ventilation guidelines, U.S. Department of Health Education and Welfare, National Institute of Occupational Safety and Health.

(B) ~~install and operate a~~ control device that meets the requirements of one of the following systems.

(i) A carbon adsorption system designed and operated in a manner ~~such so~~ that there is at least an initial 95.0 percent removal of VOC by weight from the gases ducted to the control device with at least a 90 percent 3 year removal average; ~~or~~.

(ii) An incineration system that oxidizes at least 90.0 percent of the ~~nonmethane volatile organic compounds~~ (VOCs) (measured as total combustible carbon) which enter the incinerator to carbon dioxide and water.

(iii) An alternative ~~volatile organic compound~~ VOC emission reduction system certified by the owner or operator to have at least a 90.0 percent reduction efficiency, measured across the control system, and that has been approved by the Executive Division Director.

(2) Green tire spraying. The owner or operator of a green tire spraying operation subject to this Section shall implement one of the following means of reducing ~~volatile organic compound~~ VOC emissions.

(A) ~~substitute~~ Substitute water-based sprays for the normal ~~solvent-based~~ VOC-based mold release compound; ~~or~~.

(B) ~~install~~ Install a capture system designed and operated in a manner that will capture and transfer at least 90.0 percent of the VOC emitted by the green tire spraying operation to a control device, and install and operate a control device that meets the requirements of one of the following systems.

(i) ~~a~~ carbon adsorption system designed and operated in a manner ~~such so~~ that there is at least 95.0 percent

removal of VOC by weight from the gases ducted to the control device, ~~or,~~

(ii) ~~an~~ An incineration system that oxidizes at least 90.0 percent of the ~~nonmethane volatile organic compounds (VOC~~ VOCs (measured as total combustible carbon) to carbon dioxide and water, ~~or,~~

(iii) ~~an~~ An alternative ~~volatile organic compound~~ VOC emission reduction system approved by the Division Director and certified by the owner or operator to have at least a 90.0 percent reduction efficiency, measured across the control system, that has been approved by the Executive Division Director.

(3) Exemption. If the total ~~volatile organic compound~~ VOC emissions from all undertread cementing, tread-end cementing, bead dipping, and green tire spraying operations at a pneumatic rubber tire manufacturing facility do not exceed 57 grams per tire, 252:100-39-44(c)(1) and 252:100-39-44(c)(2) shall not apply.

~~(4) An owner or operator of an undertread cementing, tread end cementing, bead dipping or green tire spraying operation subject to this Section may, instead of implementing measures required by 252:100-39-44(c)(1) and 252:100-39-44(c)(2), submit to the Executive Director a petition for alternative controls. The petition must be submitted in writing before September 15, 1981 and must contain:~~

~~(A) the name and address of the company and the name and telephone number of a responsible company representative over whose signature the petition is submitted;~~

~~(B) a description of all operations conducted at the location to which the petition applies and the purpose the volatile organic compound emitting equipment serves within the operations;~~

~~(C) reference to the specific emission limits, operational and/or equipment controls for which alternative emission limits, operational and/or equipment controls are proposed;~~

~~(D) a detailed description of the proposed alternative emission limits, operational and/or equipment controls, the magnitude of volatile organic compound emission reduction which will be achieved, and the quantity and composition of volatile organic compounds which will be emitted if the alternative emission limits, operational and/or equipment controls are instituted;~~

~~(E) a schedule for the installation and/or institution of the alternative operational and/or equipment controls in conformance with the appropriate compliance schedule section; and,~~

~~(F) a demonstration that the alternative control program constitutes reasonably available control technology for the petitioned facility. The factors to be presented in this demonstration include but are not limited to:~~

~~(i) the capital expenditure necessary to achieve the petitioned level of control;~~

- ~~(ii) the impact of these costs on the firm;~~
- ~~(iii) the energy requirements of the petitioned level of control;~~
- ~~(iv) the impact on the environment in terms of any increase in air, water and solid waste effluent discharge of the petitioned level of control;~~
- ~~(v) any adverse worker or product safety implications of the petitioned level of control; and,~~
- ~~(vi) an analysis for each of the factors in 252:100 39 44(c) (4) (F) (i) through 252:100 39 44(c) (4) (F) (v) for the control levels specified in 252:100 39 44(c) (1) and 252:100 39 44(c) (2).~~

~~(5) The Executive Director may approve a Petition for Alternative Control if:~~

~~(A) the petition is submitted in accordance with 252:100 39 44(c);~~

~~(B) the petition demonstrates that the alternative controls represent reasonable available control technology; or~~

~~(C) the petition contains a compliance schedule for achieving and maintaining a reduction of volatile organic compound emissions as expeditiously as practicable, but no later than the photochemical oxidant attainment date.~~

~~[NOTE: 252:100-39-44(c) (4) and (5) were deleted since the provisions for alternative controls were not used prior to the deadline.]~~

(d) Compliance schedule. Compliance with this Section will be accomplished by affected facilities on or before December 31, 1982.

(e) Testing and monitoring.

(1) Test procedures to determine compliance with this Section must be approved by the Executive Division Director and be consistent with:

(A) EPA Guideline Series Document "Measurement of Volatile Organic Compounds," EPA-450/2-78-041; and,

(B) Appendix A of "Control of Volatile Organic Emissions from Existing Stationary Sources - Volume II: Surface coating of Cans, Coils, Paper, Fabrics, Automobiles, and Light-Duty Trucks," EPA-450/2-77-008.

(2) The Executive Division Director may accept, instead of green tire spray analysis, a certification by the manufacturer of the composition of the green tire spray, if supported by actual batch formulation records.

(3) If add-on control equipment is used, continuous monitors of the following parameters shall be installed, periodically calibrated, and operated at all times that the associated control equipment is operating to measure:

(A) exhaust gas temperatures of incinerators;

(B) temperature rise across a catalytic incinerator bed;

(C) breakthrough of VOC on a carbon adsorption unit; and,

(D) any other parameter for which a continuous monitoring or recording device is required by the Executive Division Director.

252:100-39-45. Petroleum (solvent) dry cleaning

(a) Definitions. The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise.

(1) "Cartridge filters" means perforated canisters containing filtration paper and/or activated carbon that are used in a pressurized system to remove solid particles and fugitive dyes from soil-laden petroleum solvent.

(2) "Containers and conveyors ~~and of petroleum solvent~~" means piping, ductwork, pumps, storage tanks, and other ancillary equipment that are associated with the installation and operation of washers, dryers, filters, stills, and settling tanks.

(3) "Dry cleaning" means a process of the cleaning of textiles and fabric products in which articles are washed in a non-aqueous solution (petroleum solvent) and then dried by exposure to a heated air stream.

(4) "Housekeeping" means those measures and precautions necessary to minimize the release of petroleum solvent to the atmosphere.

(5) "Operations parameters" means the activities required to insure that the equipment is operated in a manner to preclude the loss of petroleum solvents to the atmosphere.

(6) "Perceptible leaks" means any petroleum solvent vapor or liquid leaks that are conspicuous from visual observation, such as pools or droplets of liquid, or buckets or barrels of petroleum solvent or petroleum solvent-laden waste standing open to the atmosphere.

(7) "Petroleum solvent" means organic material produced by petroleum distillation comprising a hydrocarbon range of 8 to 12 carbon atoms per organic molecule that exists as a liquid under standard conditions.

(b) Applicability. This Section applies to petroleum solvent washers, dryers, ~~solvent~~-filters, settling tanks, vacuum stills, and other containers and conveyors of petroleum solvent that are used in petroleum solvent dry cleaning facilities in Tulsa County only.

(c) ~~Provisions for specific processes~~ Operating requirements.

(1) The owner or operator of a petroleum solvent dry cleaning facility shall not operate any dry cleaning equipment using petroleum solvents unless:

(A) there are no perceptible liquid or vapor leaks from any portion of the equipment;

(B) all washer lint traps, button traps, access doors and other parts of the equipment where petroleum solvent may be exposed to the atmosphere are kept closed at all times except when required for proper operation or maintenance;

(C) the still residue is stored in sealed containers ~~and~~ ~~the~~ ~~the~~ used filtering material is ~~to be~~ placed into a sealed container suitable for use with petroleum solvents, immediately after removal from the filter and ~~be~~ disposed of in the prescribed manner; or,

(D) cartridge filters containing paper or carbon or a combination thereof, which are used in the dry cleaning process are to be drained in the filter housing for at least 24 hours prior to removal.

(2) The owner or operator of a petroleum solvent dry cleaning facility shall not operate any drying tumblers and cabinets that use petroleum solvents unless tumblers and cabinets are operated in such a manner as to control petroleum solvent vapor leaks by reducing the number of sources where petroleum solvent is exposed to the atmosphere. Under no circumstances should there be any open containers (can, buckets, barrels) of petroleum solvent or petroleum solvent-containing material. Equipment containing solvent (washers, dryers, extractors, and filters) should remain closed at all times other than during maintenance or load transfer. Lint filter and button trap covers should remain closed except when petroleum solvent-laden lint and debris are removed. Gaskets and seals should be inspected and replaced when found worn or defective. Petroleum solvent-laden solvent-laden clothes should never be allowed to ~~sit~~ remain exposed to the atmosphere for longer periods than are necessary for load transfers. Finally, vents on petroleum solvent-containing waste and new petroleum solvent storage tanks should be constructed and maintained in a manner that limits petroleum solvent vapor emissions to the maximum possible extent.

(3) The owner or operator shall repair all petroleum solvent vapor and liquid leaks within 3 working days after identifying the sources of the leaks. If necessary repair parts are not on hand, the owner or operator shall order these parts within 3 working days, and repair the leaks no later than 3 working days following the arrival of the necessary parts.

(d) **Disposal of filters.** Filters from the petroleum dry cleaning facility shall be disposed of by:

(1) incineration at a facility approved by the fire marshall's office for such disposal;

(2) by recycling through an approved vendor of this service;
or,

(3) by any other method approved by the Executive Division Director.

(e) **Compliance schedule.** Compliance with 252:100-39-45(c)(1) through 252:100-39-45(c)(3), will be accomplished by affected facilities on or before October 1, 1986.

252:100-39-46. Coating of parts and products

(a) **Applicability.** This Section shall apply only to those industries located in Tulsa County which manufacture and/or coat metal parts and products, such as ~~This Section is applicable to~~ large farm machinery, small farm machinery, small appliances, commercial machinery, industrial machinery and fabricated metal products. Architectural coating, aerospace coating, and automobile refinishing are not included.

(b) **Definitions.** The following words and terms, when used in

this Section, shall have the following meaning, unless the context clearly indicates otherwise+.

(1) "Air or forced air dry coatings" means coatings which that are dried by the use of air or forced warm air at temperatures up to 194°F.

(2) "Clear coat" means a coating which that lacks color and opacity or is transparent and uses the undercoat as a reflectant base.

(3) "Extreme performance coatings" mean coatings designed for harsh exposure or extreme environmental conditions (i.e.e.g., exposure to the weather, all of the time, temperature above 200°F, detergents, abrasive and scouring agents, solvents, corrosive atmosphere or similar conditions).

(4) "Facility" means all emission sources located on a contiguous property properties under common control which are affected by the surface coating provisions of ~~0AC~~ 252:100-37 and 252:100-39.

(5) "Powder" means a coating which that is applied in a finely divided (~~powder~~) state by various methods, and becomes a continuous, solid film when the metal part or product is moved to an oven for curing.

(6) "Transfer efficiency" means the weight (or volume) of coating solids adhering to the surface being coated divided by the total weight (or volume) of coating solids delivered to the applicator.

(c) **Existing source requirement.** No owner or operator ~~subject to the provisions of this Section~~ shall discharge or cause the discharge into the atmosphere from an existing coating line or individual coating operation any ~~organic solvent~~ VOC in excess of the amounts listed in 252:100-39-46(d) as calculated by EPA method 24, 40 CFR Part 60.

(d) **Standards.** The following table enumerates the limitations for surface coatings in pounds of ~~solvent~~ VOC per gallon of coating as applied (less ~~water/exempt solvent water and exempt compounds~~)+. If more than one limit listed in the table is applicable to a specific coating, then the least stringent limitation shall be applied.

Coating type	Limitations	
	lbs/gal	kg/liter
Air or Forced Air Dry	3.5	420.42
Clear Coat	4.3	520.52
Extreme Performance	3.5	420.42
Powder	0.4	050.05
Other	3.0	360.36

(e) **Emission factor.** For the purposes of calculating an emission factor (EF) in pounds ~~VOC~~ VOC per gallon of coating solids, the following formula will be utilized:

$$EF = V D / 1 - (V+W) = V D / S$$

where: V = volume fraction of solvent VOC in coating_T.
D = density of solvent VOC in the coating_T.
W = volume fraction of water in coating_T and.
S = 1-(V+W) = volume fraction of solids in coating.

(f) ~~Emission limit Compliance.~~ ~~If more than one emission limit as listed in 252:100-39-46(d) is applicable to a specific coating, then the least stringent emission limitation shall be applied.~~ Compliance with the coating limits listed in 252:100-39-46(d) is to be calculated on a daily weighted average basis.

(g) ~~Solvent-containing VOC-containing materials.~~ ~~Solvent-containing VOC-containing materials used for clean up shall be considered in the emissions VOC content limits listed in 252:100-39-46(d) unless:~~

(1) the solvent VOC containing materials are maintained in a closed container when not in use;

(2) closed containers are used for the disposal of cloth or paper or other materials used for surface preparation and cleanup;

(3) the spray equipment is disassembled and cleaned in a solvent VOC vat and the vat is closed when not in use; or,

(4) the solvent VOC containing materials used for the clean up of spray equipment are sprayed directly into closed containers.

(h) ~~Exemptions.~~ ~~Exemptions to this Section shall be permitted for combined emissions at one site/facility, which do not exceed a 10 tons/year emissions cutoff based on the facility's Facilities with a potential to emit 10 tons/year or less of VOSVOC from coating operations are exempt from this Section.~~ Once this limit is exceeded, the source facility will always be subject to the limits of this Section.

(i) ~~Alternate standard.~~ Emissions Coatings with VOC contents in excess of those permitted allowed by 252:100-39-46(d) are allowable may be used if both of the following conditions are met.

(1) ~~emissions Emissions that would result in the absence of control are reduced to levels equivalent to those permitted by that would occur if the VOC content of the coatings met the limits contained in 252:100-39-46(d) and meet there is an overall control efficiency of at least:~~

(A) 85 percent_T by incineration; ~~or,~~

(B) 85 percent_T by absorption; ~~or, any other equipment of equivalent reliability and effectiveness; and,~~

(C) 85 percent by any other equipment of equivalent reliability and effectiveness.

(2) ~~no~~ No air pollution, as defined by the Clean Air Act, results.

(j) Emission plan.

(1) Development of a plant-wide emission plan. A n owner/operator may develop a plant-wide emission plan consistent with EPA's Emission Trading Policy as published in the December 4, 1986 Federal Register instead of having each coating line comply with the emission VOC content limitations prescribed contained in subsection (d) of this Section 252:100-39-46(d),

provided if the following conditions are met:

~~(1)~~ (A) The owner or operator demonstrates, ~~by means of approved material balance or manual emission test methods,~~ by the methods prescribed in 252:100-5-2.1(d) that sufficient reductions in ~~organic solvent~~ VOC emissions may be obtained by controlling other ~~facilities~~ sources within the plant to the extent necessary to compensate for all excess emissions which result from one or more coating lines not achieving the prescribed limitation. Such demonstration shall be made ~~described~~ in writing and shall include:

~~(A)~~ (i) a complete description of the coating line or lines ~~which that~~ will not comply with the ~~emission~~ VOC content limitation in 252:100-39-46(d);

~~(B)~~ (ii) quantification of emissions, in terms of pounds per day of ~~organic solvents~~ VOCs, which are in excess of the prescribed ~~emission~~ VOC content limitation for each coating line described in ~~252:100-39-46(d)~~ 252:100-39-46(j)(A)(i);

~~(C)~~ (iii) a complete description of each ~~facility and the related control system, if any, for these facilities within the plant where~~ how emissions will be decreased at specific sources to compensate for excess emissions from each coating line described in ~~252:100-39-46(d)~~ 252:100-39-46(j)(A)(i) and the date on which such reduction will be achieved;

~~(D)~~ (iv) a transfer efficiency based on a 60 percent baseline with emissions expressed in pounds of VOC per gallon of solids when transfer efficiency is used to compensate for excess emissions from spray painting operations, the transfer efficiency shall be based on a 60 percent baseline, with emissions expressed in pounds of solvent per gallon of solids. Credits for improvements in transfer efficiency shall be demonstrated with in plant testing which complies with approved EPA methods.;

(v) a demonstration of credits for improvements in transfer efficiency with in plant testing that complies with EPA methods.

~~(E)~~ (vi) quantification of emissions, in terms of pounds per day of ~~organic solvents~~ VOCs, for each source both before and after the improvement or installation of any applicable control system, or any physical or operational changes to such a facility or facilities to reduce emissions and the date on which such reductions will be achieved; and,

~~(F)~~ (vii) a description of the procedures and methods used to determine the emissions of ~~organic solvents~~ VOCs.

~~(2)~~ (B) The plant-wide emission reduction plan does not include decreases in emissions resulting from requirements of other applicable air pollution rules. The plant-wide emission reduction plan as described in the Emissions Trading Policy may include voluntary decreases in emissions accomplished through installation or improvement of a control system or through physical or operational changes to ~~facilities~~ emission

units, including permanently reduced production or closing a facility, located on the premises of a surface-coating operation.

~~(3)~~(2) Compliance with a plant-wide emission plan. The implementation of a plant-wide emission reduction plan instead of compliance with the emissions VOC content limitation prescribed in 252:100-39-46(d) has been expressly approved by the Executive Director and the EPA Administrator. Upon approval of a plan, any emissions in excess of those established for each facility under the plan shall be a violation of these rules.

(k) Compliance, testing, and monitoring requirements.

(1) The Executive Division Director may require the owner/operator owner or operator of a source to demonstrate at his expense, compliance with the emission limits using EPA Methods 24, 24A, 1-4, 25, 25A, 25B in 40 CFR 60.444 or EPA Document 450/3-84-019. At a minimum, such test must show that the overall capture efficiency and destruction efficiency are equal to 85 percent, (e.g., 90 percent capture efficiency multiplied by 95 percent destruction efficiency equals 85.5 percent system efficiency). The one hour bake option in Method 24 is required when doing compliance testing.

(2) Testing for plant-wide emission plans shall be conducted by the owner/operator owner or operator at his expense to demonstrate compliance with the emission VOC content limits contained in 252:100-39-46(d).

(3) Monitoring shall be required of any owner/operator owner or operator subject to this Section who uses add-on control equipment for compliance. Such monitoring shall include:

~~(A)~~ installation and maintenance of monitors to accurately measure and record operational parameters of all required control devices to ensure the proper functioning of those devices in accordance with design specifications, including:

~~(i)~~(A) the exhaust temperature of direct flame incinerators and/or gas temperature immediately upstream and downstream of any catalyst bed;

~~(ii)~~(B) the total amount of volatile organic substances VOCs recovered by carbon adsorption or other solvent VOC recovery system during a calendar month; and,

~~(iii)~~(C) the dates and reasons for any maintenance and repair of the required control devices and the estimated quantity and duration of volatile organic substance emissions during such activities;

~~(B)~~ maintenance of records of any testing conducted at an affected facility in accordance with the provisions specified in 252:100-39-46(k)(3)(A)(i); and, [NOTE: Moved to 252:100-39-46(1).]

~~(C)~~ maintenance of all records at the affected facility for at least two years and make such records available to representative of the State or local air pollution control agency upon request. [NOTE: Moved to 252:100-39-46(1).]

(1) Reporting and recordkeeping. The owner/operator of a facility subject to this Section shall submit to the Executive Director upon

~~written request, reports detailing specific VOS sources; the quantity of coatings used for a specific time period, VOS content of each coating; capture and control efficiencies; and any other information pertinent to the calculation of VOS emissions. The data necessary to supply the requested information shall be retained by the owner/operator for a minimum of two years.~~

(1) The owner or operator of a facility subject to this Section shall submit to the Division Director upon written request, reports detailing specific VOC sources; the quantity of coatings used for a specific time period, VOC content of each coating; capture and control efficiencies; and any other information pertinent to the calculation of VOC emissions. The data necessary to supply the requested information shall be retained by the owner or operator for a minimum of two years.

(2) The owner or operator of a facility subject to this Sections shall maintain records of any testing conducted at an affected facility in accordance with the provisions specified in 252:100-39-46(k), as well as all other records for at least two years. These records shall be available to representatives of the DEQ upon request.

(m) Compliance date. The date of compliance with the requirements of this Section will be is December 31, 1990.

252:100-39-47. Control of ~~VOS~~VOC emissions from aerospace industries coatings operations

(a) Applicability.

(1) This Section applies to all aerospace facilities located in Tulsa County. Sources once subject to this Section are always subject.

(2) This Section does not apply to individual coating formulations ~~which~~that, when aggregated, do not exceed fifty-five (55) gallons per year for the facility.

~~(3) New and modified sources and coating applications not included in the plan are subject to the permit requirements set forth in OAC 252:100-7 and will be submitted to EPA as source-specific SIP revision, unless:~~

~~(A) the new coatings meet the presumption norm (3.5 pound VOS per gallon less water and exempt solvents limit); or,~~

~~(B) the total usage of the new coating does not exceed fifty-five (55) gallons per year of each coating formulation.~~

[NOTE: Moved to 252:100-39-47(d)(7)(B).]

~~(4)~~(3) Exemptions to this Section shall be permitted for combined emissions at one site/facility which do not exceed a ~~ten~~ten per year emission cut off based on the Facilities with a potential of the facility to emit 10 tons/year or less of VOS VOC from coatings operations are exempt from this Section.

(b) Definitions. The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise-

(1) "Aerospace" means the industries, air bases and depots that design and manufacture aircraft or military equipment components for either commercial or military customers.

(2) "Aircraft" means any machine designed to travel through the earth's atmosphere. This group includes but is not limited to airplanes, balloons, dirigibles, drones, helicopters, missiles, and rockets.

(3) "~~Alternate~~ reasonable ~~reasonably~~ available control technology (ARACT)" means the lowest emission limit that a particular source is capable of meeting by the application of control technology that is reasonably available considering technological and economic feasibility as determined on a case-by-case basis.

(4) "Coating" means a material which covers a surface which alters the surface characteristics and from which ~~Volatile Organic Solvents~~ VOCs can be emitted during the application and/or curing process.

(5) "CTG" means the Control Guidance Document "Control of Volatile Organic Emissions From Existing Stationary Sources, Volume VI: Surface Coating of Miscellaneous Metal Parts and Products," EPA No. 450/2-78-015.

(6) "Facility" means all of the pollutant-emitting activities ~~which~~ that belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person or persons under common control.

(7) "~~Low organic solvent~~ VOC coating (~~LOSE~~) (LVOCC)" means a coating ~~which~~ that ~~contains~~ contains less ~~organic solvent~~ VOC than the conventional coatings used by the industry. Low ~~organic solvent~~ VOC coatings include waterborne, higher solids, electrodeposition, and powder coatings.

(8) "~~Reasonable~~ Reasonably available control technology (RACT)" means ~~the lowest emission limit that a particular source is capable of meeting by the application of control technology that is reasonably available considering technological and economic feasibility~~ and the need to impose such controls to attain and maintain a National Ambient Air Quality Standard.

(c) ~~General requirements. All affected facilities shall develop an emissions reduction plan as set forth in 252:100-39-47(d). Said plan, upon approval, shall constitute the determination of ARACT for that particular facility. ARACT must be installed and operating as approved in the plan no later than January 1, 1991 for existing facilities, unless additional phased compliance dates are otherwise approved in the plan. Provided, however, that in the case that Tulsa County is still nonattainment for ozone within five (5) years of approval of ARACT, the Emission Reductions Plan and the ARACT determination shall be subject to review and modification.~~

(1) All affected facilities shall develop an emissions reduction plan as set forth in 252:100-39-47(d). This plan, upon approval, shall constitute the determination of ARACT for that particular facility.

(2) ARACT must be installed and operating as approved provided in the approved plan no later than January 1, 1991 for existing facilities, unless additional phased compliance dates are otherwise approved in the plan.

~~(3) If Tulsa County is still nonattainment for ozone within five (5) years of approval of ARACT, the Emission Reductions Plan and the ARACT determination shall be subject to review and modification. [NOTE: (3) was deleted because the 5 year period ended 1/1/96 and Tulsa was not and is not in nonattainment.]~~

(d) Emissions reduction plan.

(1) Plan development. Each owner/operator shall develop an emissions reduction plan for all affected facilities. Each plan shall include the following:

~~(A) a detailed, reasoned and exhaustive review of:~~

~~(i) each source of emissions within the facility and~~

~~(ii) (2) the entire plant collectively;~~

(A) a detailed, reasoned and exhaustive review of each source of emissions within the facility and the entire plant collectively;

(B) identification and quantification of emissions, in terms of pounds per day, of all organic solvents/VOC both before and after the application of ARACT;

(C) a detailed, innovative engineering effort directed toward finding alternative air management schemes that can be incorporated in order to abate emissions at costs which are reasonable;

(D) a consideration of the level of control that is achievable using available alternative coatings, to include LVOCC for every application, low organic solvent coatings (LOSC);

~~(E) a consideration of the level of control achievable using available add on control devices. This demonstration shall include, at a minimum, a demonstration of the feasibility/infeasibility of the following control options:~~

~~(i) carbon absorption;~~

~~(ii) incineration/flaring;~~

~~(iii) condensation; and~~

~~(iv) a combination of 252:100 39 47(d) (1) (E) (i) and 252:100 39 47(d) (1) (E) (ii).~~

(E) a demonstration of the level of control achievable using available add-on control devices which shall include, at a minimum, the feasibility/infeasibility of carbon adsorption, incineration/flaring, condensation, and a combination of carbon adsorption and incineration/flaring;

~~(F) a consideration of facility redesign, including the following:~~

~~(i) recirculation;~~

~~(ii) reduced air flows;~~

~~(iii) consolidation of spray operations; and,~~

~~(iv) installation of common control devices for two or more separate coatings operations.~~

(F) a consideration of facility redesign, including recirculation, reduced air flows, consolidation of spray operations, and installation of common control devices for two or more separate coating operations;

~~(G) a consideration of alternative applications, to improve~~

~~transfer efficiency, including:~~

- ~~(i) high volume low pressure spray equipment;~~
- ~~(ii) heated spray guns; and,~~
- ~~(iii) electrostatic spray equipment/powder coatings.~~

(G) a consideration of alternative applications, to improve transfer efficiency, including high-volume-low-pressure spray equipment, heated spray guns, and electrostatic spray equipment/powder coatings;

(H) an explanation why each source is not a typical coating source covered by the CTG as defined in 252:100-39-47(b);

(I) a cost/benefit analysis for all control technology considered; and,

(J) a detailed compliance schedule ~~which~~that includes the emission limit and/or control techniques for each emission source. ~~This schedule, which~~ together with other relevant considerations, shall be set forth in a separate section of the plan ~~which~~that summarizes and outlines ARACT for the referenced facility.

(2) Submission of emission reduction plans. ~~Upon completion,~~ ~~the~~The emissions reduction plan shall be submitted in triplicate to the Air Quality Division. The preparer shall also submit a copy of the plan to ~~Region VI Environmental Protection Agency (EPA)~~EPA, Region VI.

(3) Action on plan. Within 30 days of submittal, or of the ~~effective date of this Section~~ May 25, 1990, whichever is later, the Air Quality Division shall, considering any comments submitted by EPA, either approve, modify or disapprove the plan.

(4) Public hearing. The Division shall, at the first meeting of the Air Quality Council following the approval, modification, or disapproval of the plan, present at public hearing, the staff's findings and ARACT determination. ~~Upon consideration of comments and recommendations from the Council, the owner/operator of the affected facility, the public and EPA, the Department shall, within ten (10) days after the public hearing, issue a final ARACT approval. Final approval shall constitute ARACT for the affected facility. The owner/operator shall be responsible for installation and operational provisions of the approved ARACT, including any specific provisions set forth therein. Any violation of the plan or of its provisions shall constitute a violation of this Section.~~

(5) Final approval. Upon consideration of comments and recommendations from the Council, the owner or operator of the affected facility, the public, and EPA, the DEQ shall, within ten (10) days after the public hearing, issue a final ARACT approval. Final approval shall constitute ARACT for the affected facility.

(6) Compliance. The owner or operator shall be responsible for installation and operational provisions of the approved ARACT. Any violation of the plan or of its provisions shall constitute a violation of this Section.

~~(5)~~(7) Submission of SIP revision.

(A) Upon approval by the ~~Department~~DEQ, the ARACT

determination shall be submitted to EPA as a SIP revision.

(*B)) New and modified sources and coating applications not included in the plan are subject to the permit requirements set forth in 252:100-7 or 252:100-8, and will be submitted to EPA as source-specific SIP revision, unless one of the following applies.

(i) The new coatings meet the presumptive norm of 3.5 pound VOC per gallon less water and exempt compounds.

(ii) The total usage of the new coating does not exceed fifty-five (55) gallons per year of each coating formulation. [NOTE: Was 252:100-39-47(a)(3).]

(e) Reporting and recordkeeping.

(1) Recordkeeping requirements. The ~~owner/operator~~owner or operator shall maintain the following:

(A) a material data sheet which documents the volatile organic solventVOC content, composition, solids content, solventVOC density and other relevant information regarding each coating and solventVOC available for use in the affected surface coating processes; ~~information detailing the operational parameters of the coating process sufficient to determine continuous compliance with the applicable control limits. Information as to the amounts of each type coating used and the amounts of solvents used for dilution in each coating type shall be maintained for each coating operation. Daily usage records will be kept for all coatings used that do not comply with the applicable control limits specified in the plan;~~

(B) information detailing the operational parameters of the coating process sufficient to determine continuous compliance with the applicable control limits;

(C) information as to the amounts of each type coating used and the amounts of VOC used for dilution in each coating type for each coating operation;

(D) daily usage records for all coatings used that do not comply with the applicable control limits specified in the plan; and,

~~(B)(E)~~ records shall be maintained of any monitoring and testing conducted at an affected facility in accordance with the provisions specified in 252:100-39-47(f)_i.

~~(C)(2)~~ Method of calculating VOC content in coatings. ~~records~~ Records required by 252:100-39-47(e)(1)(A) and ~~252:100-39-47(e)(1)(B) through 252:100-39-47(e)(1)(E)~~ detailing ~~VOC~~VOC in pounds per gallon of coating (less water and exempt compounds) shall be calculated as follows:

$$\text{VOC in lbs/gal of coating} = \frac{W_v - W_x - W_e}{V_m - V_w - V_x}$$

where: W_v = weight of all volatiles_i

W_w = weight of water_i

W_x = weight of exempt solvent compounds_i

V_m = 1 (one)_i

V_w = volume fraction of water_i; and,

Vx = volume fraction of exempt solvent compounds.

~~(D)~~ (3) Maintenance of records. ~~records~~ Records required by 252:100-39-47(e)(1)(A) and ~~252:100-39-47(e)(1)(B)~~ through 252:100-39-47(e)(1)(E) shall be maintained for at least two years and shall be made available upon written request by representatives of the ~~Air Quality Division, AOD~~ U.S. Environmental Protection Agency or EPA or the Tulsa City County Health Department.

~~(2)~~ (4) Alternative recordkeeping provision. Alternatively to 252:100-39-47(e)(1) through 252:100-39-47(e)(3), an equivalent recordkeeping provision ~~which~~ that satisfies the substantive requirements of 252:100-39-47(e)(1) through 252:10-39-47(e)(3) may be approved under the plan.

(f) Testing and monitoring.

(1) Testing. Each ~~owner/operator~~ owner or operator shall, upon a determination by the Air Quality Division that testing is required to establish emission from any particular source or sources, conduct such tests at his own expense. Test methods may include 1-4, 18, 24, 24A, 25A, 25B found in the Appendix A of 40 CFR Part 60, including the procedures found at 40 CFR 60.444.

(2) Monitoring. Monitoring shall be required of any ~~owner/operator~~ owner or operator ~~subject to this section~~ who uses add-on control equipment for compliance. Such monitoring shall ~~include~~ accurately measure and record operational parameters of all required control devices to ensure the proper functioning of those devices in accordance with design specifications, including:

~~(A) installation and maintenance of monitors to accurately measure and record operational parameters of all required control devices to ensure the proper functioning of those devices in accordance with design specifications, including:~~

~~(i) (A) the exhaust temperature of direct flame incinerators and/or gas temperature immediately upstream and downstream of any catalyst bed;~~

~~(ii) (B) the total amount of volatile organic substances VOCs recovered by carbon adsorption or other solvent VOC recovery system during a calendar month; and,~~

~~(iii) (C) the dates and reasons for any maintenance and repair of the required control devices and the estimated quantity and duration of volatile organic substance VOC emissions during such activities.~~

~~(B) maintenance of records of any testing conducted at an affected facility in accordance with the provisions specified in 252:100-39-47(f)(2)(A)(i); and,~~

~~(C) maintenance of all records at the affected facility for at least two years and make such records available to representatives of the State or local air pollution control agencies upon request. (252:100-39-47 Effective May 25, 1990)~~

[NOTE: 252:100-39-47(f)(2)(B) and (C) are covered in 252:100-39-47(e)(1)(E) and 252:100-39-47(e)(3).]

~~252:100-39-48. Vapor recovery systems [NOTE: This section has been combined with 252:100-39-41 as 252:100-39-41(e).]~~

~~(a) Applicability. This Section applies only in Tulsa County. [NOTE: Moved to 252:100-39-41(e)(1).]~~

~~(b) Storage of volatile organic compounds — 400-40,000 gallons (9.5-953 bbls).~~

~~(1) No person shall store or permit the storage of gasoline or other volatile organic compounds in any stationary storage container with a nominal capacity greater than 400 gallons (9.5 bbls) and less than 40,000 gallons (952.4 bbls) unless such container is equipped with a submerged fill pipe or is bottom filled. No person shall store or permit the storage of gasoline or other volatile organic compounds in any stationary storage container with a nominal capacity greater than 2,000 gallons (47.5 bbls) and less than 40,000 gallons (952.4 bbls) unless such container is equipped with a vapor control system that has an efficiency of no less than 90 percent by weight of the volatile organic compounds contained in the displaced vapors and is equipped with a pressure relief valve in the atmospheric vent system which maintains a pressure of 16 ounces per square inch and 1/2 ounce per square inch vacuum. [NOTE: The last sentence of 252:100-39-48(b)(1) was moved to 252:100-39-41(e)(2)(A). The rest of 252:100-39-48(b)(1) was deleted since it repeats material already in 252:100-39-41.]~~

~~(2) The vapor recovery system shall include one or more of the following:~~

~~(A) a vapor tight return line from the storage container to the delivery vessel and a system that will ensure that the vapor return line is connected before gasoline or volatile organic compounds can be transferred into the container (i.e., popped connectors from the storage container to the delivery vessel.);~~

~~(B) a float vent valve assembly must be installed in the vapor return/vent line on new and existing dual point installations; however, for coaxial installations on existing stations, a vent sleeve extending six inches below the top of the tank will be allowed. Sleeves may be equipped with a 1/16 inch air bleed hole;~~

~~(C) the cross sectional area of the vapor recovery line must be at least half of the cross sectional area of the liquid delivery line, or;~~

~~(D) instead 252:100-39-48(b)(2)(A) through 252:100-39-48(b)(2)(C), other equipment that has a total collection efficiency no less than 90 percent by weight of the total hydrocarbon compounds in the displaced vapor provided that approval of the proposed design, installation, and operation is obtained from the Executive Director prior to start of construction. [NOTE: 252:100-39-48(b)(2) was moved to 252:100-39-41(e)(2)(A).]~~

~~(3) Exemptions to this Section may be granted provided the owner/operator shows to the satisfaction of the appropriate authority that the container is used exclusively for~~

~~agricultural purposes or that the facility, based on the most current 12 month's data, dispenses 120,000 gallons per year or less. [NOTE: Moved to 252:100-39-41(e)(2)(B)(ii).]~~

~~(4) The applicability of this Section shall be determined by the most restrictive of the 2,000 gallon tank size as specified in 252:100-39-48(b)(1) or the 120,000 gallon annual throughput described in 252:100-39-48(b)(3). However, once a facility places a 2,000 gallon tank in service or exceeds the 120,000 gallon annual throughput described in 252:100-39-48(b)(3), that facility shall always be subject to the provisions of this Section. (effective February 12, 1990) [NOTE: Moved to 252:100-39-41(e)(2)(B)(ii).]~~

~~(5) If emission testing is conducted, the appropriate test methods selected from EPA Methods 1 through 4, 18, 21, 25, 25A and 25B will be utilized. [NOTE: Moved to 252:100-39-41(e)(2)(C).]~~

~~(6) Compliance with this subsection will be accomplished by affected owner/operator by December 31, 1986. [NOTE: Moved to 252:100-39-41(e)(2)(D).]~~

~~(7) The owner/operator of a facility or facilities shall obtain, by whatever means practicable, certification from the owner/operator of the transport/delivery vessels that all deliveries of gasoline or other volatile organic compounds made to their facility or facilities located in Tulsa County, shall be made by vessels which comply with the requirements contained in 252:100-39-48(d). Compliance with this Section shall be accomplished by affected owner/operators no later than December 31, 1990. (Effective February 12, 1990) [NOTE: Moved to 252:100-39-41(e)(2)(E).]~~

~~(c) Loading of volatile organic compounds. [NOTE: This subsection was moved in part to 252:100-39-41(e)(3).]~~

~~(1) No person shall operate, install or permit the building, operation or installation of a stationary volatile organic compound loading facility unless such loading facility is equipped with a vapor collection and/or disposal system properly installed, in good working order and in operation.~~

~~(2) When volatile organic compounds are loaded through the hatches of a transport vessel, a pneumatic, hydraulic or mechanical means shall be provided to ensure a vapor tight seal at the hatch.~~

~~(3) A means shall be provided to prevent organic material drainage from the loading device when it is removed from the transport vessel, or to accomplish complete drainage before removal.~~

~~(4) When loading is effected through means other than hatches, all loading and vapor lines shall be equipped with fittings which make vapor tight connections and which close automatically when disconnected.~~

~~(5) The vapor collection and/or disposal portion of the system shall consist of one or more of the following in addition to bottom loading or submerged fill of transport vessels:~~

~~(A) an absorption/adsorption system or condensation system~~

- ~~with a minimum recovery efficiency of 90 percent by weight of all the volatile organic compound vapors and gases entering such disposal system;~~
- ~~(B) a vapor handling system which directs all vapors to a fuel gas incineration system with a minimum disposal efficiency of 95 percent; or,~~
- ~~(C) other equipment of at least 90 percent efficiency, provided plans for such equipment are submitted to and approved by the Executive Director. Storage vessels at service stations and bulk plants may be used for intermediate storage prior to recovery/disposal of vapors as per 252:100-39 48(e) (5) (A) through 252:100 39 48(e) (5) (C) if they are designed to prevent the release of vapors during use.~~
- ~~(6) Subsection 252:100 39 48(e) shall apply to any facility which loads volatile organic compounds into any transport vessel designed for transporting volatile organic compounds. [NOTE: 252:100-39-48(c) (1) through (6) was deleted since this material is already contained in 252:100-39-41(c).]~~
- ~~(7) Facilities will be checked annually in accordance with EPA Test Method 21, Leak Test. Leaks greater than 5000 ppm will be repaired within 15 days. Facilities will retain inspection and repair records for two years. [NOTE: Moved to 252:100-39-41(e) (3).]~~
- ~~(d) Transport/delivery vessel requirements.~~
- ~~(1) Maintenance.~~
- ~~(A) The delivery vessel must be maintained so as to be vapor tight except when sampling, gauging, or inspecting. These activities shall not occur while the vehicle is loading or unloading or is in a pressurized state.~~
- ~~(B) The delivery vessel must be equipped, maintained and operated to receive vapors from sources identified in 252:100-39 41(b) (1) and retain these and all other vapors until they are delivered into an authorized vapor recovery/disposal system.~~
- ~~(C) Vessels with defective equipment such as boots, seals, and hoses, or with other deficiencies which would impair the vessels ability to retain vapors or liquid shall be repaired within 5 days.~~
- ~~(D) The certified testing facility must certify to the approving agency that the proper testing and repairs have occurred in accordance with 252:100 39 48(d) (2) (A) (i). The vessel must also display on the rear panel a tag showing the date of the pressure test.~~
- ~~(E) No owner/operator will allow a delivery vessel to be filled at a facility unable to receive displaced organic vapors nor service tanks unable to deliver displaced vapors except for tanks/facilities exempted in 252:100 39 41(b). Terminal owners shall not fill vessels which do not display a current tag.~~
- ~~(F) Delivery vessels may be inspected by representatives of the appropriate health agency in order to determine their state of repair. Such a test may consist of a visual~~

~~inspection, a vapor test with vapors not to exceed 5000 ppm. Failure of a vapor test will require the owner/operator to effect the necessary repairs within 10 days. Unless certification is made to the appropriate health agency within 5 days the vessel will be removed from service by the owner/operator. Failure to certify that the cited repairs have been effected will subject the vessel to sanctions. Upon certification of repairs the vessel will be allowed to operate in a normal manner.~~

~~(2) Testing requirements.~~

~~(A) Pressure test.~~

~~(i) Delivery vessels, delivering or receiving gasoline must be tested one time per year for vapor tightness. The vapor tightness test must be consistent with Appendix "A" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems", EPA 450/2-78-051. Tests shall be performed by the owner or a reputable transport service company. Test methods used to test these vessels by owners or testing companies must be approved for use by the Executive Director.~~

~~(ii) The vessel will be considered to pass the test prescribed in 252:100-39-48(d)(2)(A)(i) when the test results show that the vessel and its vapor collection systems do not sustain a pressure change of more than 3 inches of H₂O in addition there shall be no avoidable visible liquid leaks.~~

~~(B) Vapor test. Testing of the tank trucks for compliance with vapor tightness requirements as required under 252:100-39-41(d)(1)(F) must be consistent with Appendix "B" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems", EPA 405/2-78-051, as modified for this purpose and contained in 252:100-43-15. The requirements of 252:100-39-48 will become effective December 15, 1988. [NOTE: 252:100-39-48(d) was moved to 252:100-39-41(e)(4).]~~

252:100-39-49. Manufacturing of fiberglass reinforced plastic products

~~(a) General provisions. Within 12 months after promulgation of this Section all affected facilities shall limit emissions of VOS from fiberglass manufacturing to those listed in 252:100-39-49(a)(1), or have an approved plan for the reduction of such emissions. The plan must be submitted to the Executive Director within 6 months after promulgation of this Section, and shall detail those emissions which will be controlled, the means by which control will be achieved and will demonstrate that compliance will be achieved within two years from the date of promulgation of this Section. The approval authority for such plans shall reside with the Air Quality Council. All approved plans shall be submitted as SIP revisions.~~

~~(1) Compliance with 252:100-39-49(a) shall be accomplished by~~

~~use of control equipment which can demonstrate an 85 percent reduction in the VOS released from each process gas stream, e.g. 90 percent capture efficiency multiplied by 95 percent destruction efficiency equals 85.5 percent system efficiency.~~

~~(2) Exemptions to the limits listed in 252:100-39-49(a)(1) may be allowed for any process gas stream which does not exceed six tons per year actual emissions based on 6240 hours per year. However, once this limit is exceeded, controls must be put in place and maintained at any operating level.~~

~~(b) Demonstration of compliance. The Executive Director may require the owner/operator of a source to demonstrate at his expense, compliance with the prescribed emissions limits. The testing shall be accomplished using the appropriate EPA test method or methods, these include methods 1, 4, 18, 25, 25A, 25B and 40 CFR 60.444. Initial compliance testing shall be accomplished within 180 days of the applicable compliance date.~~

~~(c) Testing. Testing for the alternate emissions plan shall be conducted by the owner/operator at his expense and shall demonstrate compliance with the emission limits contained in the approved plan.~~

~~(d) Recordkeeping. The owner/operator of a facility subject to this Section shall submit to the Executive Director upon written request reports detailing specific VOS sources, the quantity of solvents used during specific months, a description of the solvent used, control equipment efficiencies, equipment downtime and any other information pertinent to the calculation of VOS emissions from the facility. The owner/operator must also maintain records which detail the maintenance performed on all control equipment as well as a record of the downtime with the reason for each occurrence. Such records shall be maintained by the source for a minimum of two years. (252:100-39-49, Effective February 12, 1990)~~

(a) Applicability.

(1) This Section applies to any process gas stream with actual VOC emissions that exceed six tons per year based on 6,240 hours of operation per year.

(2) Once the limit in 242:100-39-49(a)(1) is exceeded, the controls required in 252:100-39-49(b) must be put in place and maintained and used at any operating level. [NOTE: This subsection was 252:100-39-49(a)(2).]

(b) Standards. Affected facilities shall limit emissions of VOC from fiberglass manufacturing by use of control equipment which can demonstrate an 85 percent reduction in the VOC released from each process stream (e.g. 90 percent capture efficiency multiplied by 95 percent destruction efficiency equals 85.5 percent system efficiency). [NOTE: This was 252:100-39-49(a)(1).]

(c) Compliance. All affected facilities must comply with one of the following.

(1) Meet the requirements of 252:100-39-49(b) by February 13, 1991.

(2) Have an approved plan for the reduction of VOC emissions as required by 252:100-39-49(b) by February 13, 1991.

(A) The plan shall be submitted by August 13, 1990, and

shall:

- (i) detail those emissions which will be controlled;
- (ii) detail the means by which control will be achieved;
- and,
- (iii) demonstrate that compliance will be achieved by February 13, 1992.

(B) The Air Quality Council shall have approval authority for the plans.

(C) All approved plans shall be submitted to the EPA as SIP revisions. [NOTE: This was 252:100-39-49(a).] [NOTE: Missing dates will be supplied.]

(d) Demonstration of compliance.

(1) The Division Director may require an owner or operator of a source to demonstrate at his expense, compliance with the requirements of 252:100-39-49(b).

(2) The testing shall be accomplished using the appropriate EPA test method or methods. These include methods 1-4, 18-25, 25A, 25B and 40 CFR 50.444.

(3) Initial compliance testing shall be accomplished within 180 days of the applicable compliance date.

(4) Testing for the emissions plan described in 252:100-39-49(c)(2) shall be conducted by the owner or operator at his expense and shall demonstrate compliance with the emission limits contained in the approved plan. [NOTE: 252:100-39-49(d)(1) through (3) was 252:100-39-49(b) and 252:100-39-49(d)(4) was 252:100-39-49(c).]

(e) Recordkeeping.

(1) The owner or operator of a facility subject to this Section shall submit to the Division Director upon written request, reports that include:

(A) details of specific VOC sources;

(B) the quantity of VOC used during specific months;

(C) a description of the VOC used;

(D) control equipment efficiencies;

(E) details of maintenance performed on all control equipment;

(F) equipment downtime; and,

(G) any other information pertinent to the calculation of VOC emissions from the facility.

(2) The records required in 252:100-39-49(e)(1) shall be maintained by the source for at least two years. [252:100-390-49, Effective February 12, 1990] [NOTE: This was 252:100-39-49(d).]

LIST OF ORGANIC COMPOUNDS WITH NEGLIGIBLE
PHOTOCHEMICAL REACTIVITY

40 CFR 51.100(s)(1) as it existed on July 1, 1998
From the Federal Register dated 4/9/98

Sec. 51.100 Definitions.

(s) Volatile organic compounds (VOC)

(1) This includes any such organic compound other than the following, which have been determined to have negligible photochemical reactivity:

methane;
ethane;
methylene chloride (dichloromethane);
1,1,1-trichloroethane (methyl chloroform);
1,1,2-trichloro-1,2,2-trifluoroethane (CFC-113);
trichlorofluoromethane (CFC-11);
dichlorodifluoromethane (CFC-12);
chlorodifluoromethane (HCFC-22);
trifluoromethane (HFC-23);
1,2-dichloro 1,1,2,2-tetrafluoroethane (CFC-114);
chloropentafluoroethane (CFC-115);
1,1,1-trifluoro 2,2-dichloroethane (HCFC-123);
1,1,1,2-tetrafluoroethane (HFC-134a);
1,1-dichloro 1-fluoroethane (HCFC-141b);
1-chloro 1,1-difluoroethane (HCFC-142b);
2-chloro-1,1,1,2-tetrafluoroethane (HCFC-124);
pentafluoroethane (HFC-125);
1,1,2,2-tetrafluoroethane (HFC-134);
1,1,1-trifluoroethane (HFC-143a);
1,1-difluoroethane (HFC-152a);
parachlorobenzotrifluoride (PCBTF);
cyclic, branched, or linear completely methylated siloxanes;
acetone;
perchloroethylene (tetrachloroethylene);
3,3-dichloro-1,1,1,2,2-pentafluoropropane (HCFC-225ca);
1,3-dichloro-1,1,2,2,3-pentafluoropropane (HCFC-225cb);
1,1,1,2,3,4,4,5,5,5-decafluoropentane (HFC 43-10mee);
difluoromethane (HFC-32);
ethylfluoride (HFC-161);
1,1,1,3,3,3-hexafluoropropane (HFC-236fa);
1,1,2,2,3-pentafluoropropane (HFC-245ca);
1,1,2,3,3-pentafluoropropane (HFC-245ea);
1,1,1,2,3-pentafluoropropane (HFC-245eb);
1,1,1,3,3-pentafluoropropane (HFC-245fa);
1,1,1,2,3,3-hexafluoropropane (HFC-236ea);
1,1,1,3,3-pentafluorobutane (HFC-365mfc);

chlorofluoromethane (HCFC-31);
1 chloro-1-fluoroethane (HCFC-151a);
1,2-dichloro-1,1,2-trifluoroethane (HCFC-123a);
1,1,1,2,2,3,3,4,4-nonafluoro-4-methoxy-butane (C₄F₉OCH₃);
2-(difluoromethoxymethyl)-1,1,1,2,3,3,3-heptafluoropropane
(CF₃)₂CFCH₂OCH₃);
1-ethoxy-1,1,2,2,3,3,4,4,4-nonafluorobutane (C₄F₉OC₂H₅);
2-(ethoxydifluoromethyl)-1,1,1,2,3,3,3-heptafluoropropane
(CF₃)₂CFCH₂OC₂H₅);
methyl acetate

and perfluorocarbon compounds which fall into these classes:

- (i) Cyclic, branched, or linear, completely fluorinated alkanes;
- (ii) Cyclic, branched, or linear, completely fluorinated ethers with no unsaturations;
- (iii) Cyclic, branched, or linear, completely fluorinated tertiary amines with no unsaturations; and
- (iv) Sulfur containing perfluorocarbons with no unsaturations and with sulfur bonds only to carbon and fluorine.

SUMMATION AND EXPLANATION OF THE PROPOSED
REVISIONS TO SUBCHAPTER 39

The proposed revisions to Subchapter 39 are the result of the DEQ program to simplify, clarify and correct all its rules. Unless otherwise noted no substantive changes are intended in the following revisions. *The substantive changes are summarized in Section III of this document.*

- I. Staff proposes to revise the title of the subchapter to make it clear that it applies to sources that are located not only in ozone nonattainment areas, but also in areas that were previously designated as nonattainment for ozone.
- II. Revisions made throughout the Subchapter
 - A. Revisions in terminology
 1. Environmental Protection Agency has been replaced by EPA - simplification
 2. Executive Director has been replaced, in most cases, by Division Director - clarification
 3. Organic material has been replaced by VOC - simplification
 4. Organic solvent has been replaced by VOC - simplification
 5. When appropriate hydrocarbon has been replaced by VOC - simplification
 6. Volatile organic compound (VOC) has been replaced by VOC - simplification
 7. Photochemical oxidants has been replaced by ozone - clarification
 8. Tank has been replaced by vessel - consistency in terminology
 9. Person has been replaced by owner or operator - clarification
 - B. Revised or deleted language
 1. "or permit the building or installation of" has been deleted throughout the rule - simplification and clarification
 2. Unless otherwise noted herein, changes in language were for simplification, clarification, correction of grammar, or consistency of format
- III. Only five of the revisions proposed by the staff are intended to be substantive. These are:
 - A. the revision of the definition of "Volatile organic compound (VOC) in 252:100-39-2;
 - B. the clarification in 252:100-39-3 that Subchapter 39 applies not only to Tulsa and Oklahoma Counties, but to any other areas that may be designated nonattainment for ozone;
 - C. the deadline of 60 days for a refinery located in an area that becomes nonattainment for ozone to submit a written monitoring program required in 252:100-39-15(d);
 - D. the correction of the placement of "prior to lease custody transfer" in 252:100-39-30(b); and
 - E. the addition of a minimum annual throughput of 120,0000 gallons and a minimum storage capacity of 2,000 gallons to 252:100-39-41(c).
- IV. PART 1. GENERAL PROVISIONS
 - A. 252:100-39-1. Purpose. The proposed revisions are to set forth as clearly as possible the purpose of the rule. and to make it clear that the rule also applies to sources located in areas that were previously designated as nonattainment for ozone.

B. 252:100-39-2. Definitions..

1. The staff proposes to delete the definition of REFINERY since this term is not used in Subchapter 39.
2. Staff proposes to move the definition of CUTBACK ASPHALT to 252:100-39-40(a) and the definition of EFFLUENT WATER SEPARATOR to 252:100-39-18(a). These terms appear only in those sections.
3. The staff proposes to revise the definition OF VOLATILE ORGANIC COMPOUND (VOC) to be consistent with the EPA definition and to incorporate 40 CFR 51.100(s)(1) by reference. 40 CFR 51.100 contains the list of organic compounds that EPA has designated as having negligible photochemical reactivity and therefore has excluded from the definition of VOC.
 - ◆ This is part of the simplification process. What EPA classifies as VOC has been classified as organic material in Chapter 100 and divided into VOC, organic solvents, and volatile organic solvents. The Chapter contains two definitions of VOC, two definitions of organic solvents., and a definition of volatile organic solvent (VOS). The staff feels having one definition of VOC that is consistent with the EPA definition will simplify the Chapter as well as Subchapter 39.
 - ◆ Ozone is the NAAQS pollutant of concern in Subchapter 39. The rule provides for control of ozone by controlling the emissions of ozone precursors - photochemically reactive organic compounds. The proposed revision of the definition of VOC reflects this purpose.
 - ◆ A petition from the Chemical Manufacturers Association to exclude acetone from the definition of VOC was presented to the Air Quality Council at the meeting of December 19, 1995. The Council directed the staff to give consideration to this petition. Subsequent to this event, other requests have been received requesting that perchloroethylene and methylated siloxanes also be excluded from the definition of VOC. The proposed revision of VOC excludes these three compounds since they have been designated by EPA as having negligible photochemical reactivity.
 - ◆ **THE REVISION MAY RESULT IN SOME SUBSTANTIVE CHANGES**, although care has been taken throughout the rest of the Subchapter to minimize any such substantive changes that may result from the revised definition of VOC.
4. Staff proposes to delete the definitions of ORGANIC MATERIALS AND VOLATILE ORGANIC SOLVENT (VOS) as part of the simplification process. These terms will no longer be used in Chapter 100.
5. Staff proposes to move the definitions of PETROLEUM REFINERY from 252:100-39-15(a)(4) and REFINERY UNIT from 252:100-39-15(a)(5) to 252:100-39-2 because these terms are used in more than one section in this Subchapter.

- C. 252:100-39-3. General applicability.** Proposed revisions to this section make clear that the requirements of Subchapter 39 apply not only in Tulsa and Oklahoma Counties, but in any other areas that may be designated as nonattainment for ozone. **THIS IS A SUBSTANTIVE CHANGE.**

- D. **252:100-39-4. Exceptions.** The addition of this section prevents substantive changes due to the new definition of VOC and the use of the term VOC in place of VOS. This revision insures that those sections of Subchapter 39 which previously applied only to VOCs with vapor pressure of 1.5 psia or greater continue to apply only to VOCs with vapor pressure of 1.5 psia or greater.

V. PART 3. PETROLEUM REFINERY OPERATIONS

A. **252:100-39-15. Petroleum refinery equipment leaks**

1. (a) **Definitions.** Staff proposes to add a definition for LEAKING COMPONENT. This language was in 252:100-39-15(c)(1)(C).
 2. (b) **Applicability.** Staff proposes to add paragraph (2) to exempt VOCs with vapor pressures less than 0.0435 psia under actual storage conditions from the requirements of Section 15. This exemption prevents a substantive change in this Section due to the revised definition of VOC.
 3. (c) **Provisions for specific processes.** Staff proposes to rename the subsection "Standards and operating requirements" to better reflect its content..
 4. (d) **Compliance schedule.** Staff proposes to add language that will require a refinery located in an area that becomes nonattainment for ozone to submit a written monitoring program within 60 days of the date the area is designated as nonattainment. This is part of the attempt to make Subchapter 39 applicable to new ozone nonattainment areas. **THIS IS A SUBSTANTIVE CHANGE.**
- B. **252:100-39-16. Refinery process unit turnaround,** Staff proposes to change this to "Petroleum refinery process unit turnaround" for clarity. The proposed revision to 252:100-39-16(b)(4) make it clear which months are included in the non-oxidant season.
- C. **252:100-39-17. Refinery vacuum producing system.** Staff proposes to change the title to "Petroleum refinery vacuum producing system" for consistency.
- D. **252:100-39-18. Refinery effluent water separators.** Staff proposes to change this to "Petroleum refinery effluent water separators" for consistency.

VI. PART V. PETROLEUM PROCESSING AND STORAGE

A. **252:100-39-30. Petroleum liquid storage in external floating roof tanks** Staff proposes to change this to "Petroleum liquid storage in vessels with external floating roofs" for consistency in terminology.

1. (a) **Definitions.** The proposed revisions to the definitions OF EXTERNALLY FLOATING ROOF, LEASE CUSTODY TRANSFER, and VAPOR-MOUNTED SEAL are to correct errors and replace the term tanks with vessels for consistency in terminology.
2. (b) **Applicability** Staff proposes to correct the placement of "prior to lease custody transfer" in 252:100-39-30(b). This phrase was located in paragraph (2) and was, therefore, applicable to all the exemptions listed in that paragraph. Research in the Air Quality Council records and in the Control Technology Guideline, Control of Volatile Organic Emissions from Petroleum Liquid Storage in External Floating Roof Tanks, EPA-450/2-78-047, indicates that this phrase should apply only to 252:100-39-30(b)(2)(B). Staff proposes moving this phrase to 252:100-39-30(b)(2)(B). **THIS IS A SUBSTANTIVE CHANGE.**

3. **(c) Provisions for specific processes.** Staff proposes to rename this subsection "Equipment and operating requirements" to better reflect its contents and to add taglines to each paragraph in the subsection.

VII. (d) Compliance schedule. The proposed revision to this subsection replaces the compliance deadline with a date certain.

PART 7. SPECIFIC OPERATIONS

- A. **252:100-39-40. Cutback asphalt (paving).** Staff proposes to add taglines to subsections (a) and (b) and to clarify which months are included in the non-oxidant season.
- B. **252:100-39-41. Vapor recovery systems.** Staff proposes to rename this section "Storage, loading and transport/delivery of VOCs" to better reflect its contents.
1. (a) **Storage of volatile organic compounds - greater than 40,000 gallons (953 bbls).** Staff proposes to rename this subsection "Storage of VOCs in vessels with storage capacities greater than 40,000 gallons."
 2. (b) **Storage of volatile organic compounds - 400-40,000 gallons (9.5-953 bbls).** Staff proposes to rename this subsection "Storage of VOCs in vessels with storage capacities of 400-40,000 gallons."
 3. (c) **Loading of volatile organic compounds.** Staff proposes to rename this subsection **Loading of VOCs.** Staff proposes to add a minimum annual throughput of 120,000 gallons and a minimum storage capacity of 2,000 gallons in paragraph (1) for determining applicability of this subsection. **THIS IS A SUBSTANTIVE CHANGE.**
 4. (e) **Additional requirements for Tulsa County.** Staff proposes to add the requirements in 252:100-39-48 that apply only to Tulsa County and that are not already included in 252:100-39-41 to this subsection and delete 252:100-39-48. This will simplify the rule by putting all the requirements regarding storage, loading, transport/delivery of VOCs in one Section. The proposed revision will also eliminate the necessity for two Sections with the same title in Subchapter 39.
- C. **252:100-39-44. Manufacture of pneumatic rubber tires.** Staff proposes to delete paragraph (4) since the provision for alternative controls was not used prior to the deadline of September 15, 1981, for submitting a petition to the DEQ.
- D. **252:100-39-46. Coating of parts and products.**
1. (f) **Emission limit.** Staff proposes to rename this section "Compliance" to better reflect its contents. Staff proposes to move the first sentence of this subsection to 252:100-39p46(d) for simplification and clarification.
 2. (j) **Emission plan. (1) Development of a plant-wide emission plan.** The term "voluntary" was added to subparagraph (B) in describing the types of decreases that could be included in a plant-wide reduction plan. This is to make clear that even if a reduction is part of a permit, if it was a voluntary reduction and has not been relied on to meet or avoid some other requirement, it can be used in the plant-wide reduction plan.
 3. (k) **Compliance.** Staff proposes to change the title to "Compliance, testing, and monitoring requirements" to better reflect the contents of the subsection. Staff proposes to move 252:100-39-46(k)(3)(B) and (C) regarding maintenance of records to 252:100-39-46(l), Reporting and recordkeeping.
- E. **252:100-39-47. Control of VOS emissions from aerospace industries coating operations.** Proposed revision to the title is for consistency in terminology.
1. (a) **Applicability.** Staff proposes to move paragraph (3) to 252:100-39-46(d)(7)(B) as part of the simplification and clarification process.

2. (c) **General requirements.** Staff proposes to reformat this subsection for clarity and to delete the requirement for review of the Emission Reduction Plan and ARACT determination if Tulsa County is still in nonattainment for ozone within five years of the approval of ARACT. The five year period ended 1/1/96 and Tulsa was not at that time and is not in nonattainment for ozone.
 3. (d) **Emissions reduction plan.** The staff proposes to add taglines to each paragraph of this subsection for clarity.
 - ◆ (3) **Action on plan.** The proposed revision is to include the actual effective date.
 - ◆ (4) **Public hearing.** Staff proposes to divide paragraph (4) into three paragraphs for clarity.
 - ◆ (7) **Submission of SIP revision.** (7)(B) was moved from 252:100-39-47(A)(3) because this appears to be a more logical location for it.
 4. (f) **Testing and monitoring.** Staff proposes to add taglines for clarity. Subparagraphs (B) and (C), except for the effective date, were deleted because the information they contained is included in 252:100-39-47(e)(1)(E) and 252:100-39-47(e)(3).
- F. **252:100-39-48. Vapor recovery systems.** The portions of this section that were in addition to the requirements of 252:100-39-41 were moved to 252:100-39-41(e). Staff proposes to delete the remainder of the section because it is redundant language.

VIII. Manufacturing of fiberglass reinforced plastic products. It is proposed to reformat this section for clarity and consistency in formatting with the rest of the rule. Actual deadline dates have been inserted.

MINUTES

AIR QUALITY COUNCIL

AUGUST 18, 1998

Burgundy Room

4545 North Lincoln Boulevard

Oklahoma City, OK

Council Members Present

William B. Breisch, Chairman

Council Members Absent

Larry Canter

PUBLIC MEETING

Notice of Public Meeting for August 18, 1998 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance door of the meeting room and also at the DEQ Tower.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Ms. Myers - aye; Dr. Grosz - aye; Mr. Kilpatrick - aye; Mr. Wilson - aye; Mr. Branecky - aye; Ms. Slagell - aye. Dr. Canter did not attend.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the June 16, 1998 Public Meeting/Hearings. Motion was made by Mr. Kilpatrick to approve the Minutes as presented and second to the motion was made by Mr. Branecky. Roll call as follows: Ms. Myers - aye; Dr. Grosz - aye; Mr. Kilpatrick - aye; Mr. Wilson - aye; Mr. Branecky - aye; Ms. Slagell - aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-47 Control of Emissions from Existing Municipal Solid Waste Landfills [NEW]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Cheryl Bradley to give staff recommendations on this rule. Ms. Bradley advised that the rule was first considered by the Council on June 16, 1998 at which time the hearing was continued because EPA was in the process of amending the federal standards that are the basis for the draft rule. These amendments became effective August 17, 1998. Ms. Bradley stated that staff had made the revisions consistent with the amended federal regulations and addressed all comments received.

After discussion, Chairman Breisch entertained a motion to recommend adoption of this rule as emergency and permanent to the Environmental Quality Board at its September 15, 1998 meeting. Dr. Grosz made that motion with second made by Mr. Branecky. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

State 111(d) Plan for Municipal Solid Waste Landfills

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Cheryl Bradley for staff position regarding this State Plan. Ms. Bradley pointed out the criteria for approval of a state plan and advised that Oklahoma's mechanism to implement this Plan is OAC252:100-47. Ms. Bradley related that although no Council action was necessary, the staff requests to hear comments from the Council members and the public regarding the State Plan.

See attached transcript.

PUBLIC HEARING

OAC 252:100 Air Pollution Control:

Appendix E, Primary Ambient Air Quality Standards [AMENDED]

Appendix F, Secondary Ambient Air Quality Standards [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Michelle Martinez who stated that the revisions to these appendices would be identical to the revised federal National Ambient Air Quality Standards (NAAQS) for particulate matter and ozone

announced by EPA in the July 18, 1997 *Federal Register*. Ms. Martinez pointed out that according to the Secretary of State's Rules on Rulemaking, an appendix cannot be amended; therefore, staff recommended that Council vote to revoke the old appendices and pass the new appendices as permanent.

After discussion, Chairman Breisch entertained a motion to recommend this rule to the Environmental Quality Board as a permanent rule at its September 15, 1998 meeting. Mr. Kilpatrick moved that Council revoke the existing rule and replace them with the new rules as presented. Second to the motion was made by Mr. Branecky. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-7 Permits [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Jeanette Buttram for staff position regarding this rule. Ms. Buttram pointed out revisions made to date and advised that staff was recommending that the comment period be left open until August 24 after which staff would revise the rule based upon comments received from Council and public; and would bring again to the Council's October 20 meeting.

Following discussion and comments, Chairman Breisch entertained a motion to continue this rule to the Council's October 20, 1998 meeting. Ms. Myers made that motion with second made by Ms. Slagell. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-25 Smoke, Visible Emissions and Particulates [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Jeanette Buttram to give staff's position on this rule. Ms. Buttram advised that the rule was presented to Council's June 16 meeting where changes to simplify and clarify the rule and to fulfill an EPA State Implementation Plan (SIP) requirement concerning Continuous Emission Monitoring (CEM) were proposed. Ms. Buttram advised that comments received have been addressed and incorporated into the current draft rule. Following discussion with new comments, staff

recommended that the hearing be continued on this rule to the October 20 meeting to allow time for further comments.

Mr. Breisch asked for a motion to continue the hearing. Mr. Wilson made the motion and Ms. Slagell made the second. Roll call was as follows: Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Kilpatrick – aye; Dr. Grosz – aye; Ms. Myers – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-23 Control of Emissions from Cotton Gins [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Becky Mainord who related that the draft rule included simplification of language according to the Agency's re-write/de-wrong initiative and the addition of a Permit by Rule section. She then pointed out the changes made and stated that it was staff's recommendation to continue the hearing until Council's next meeting.

Following discussion, Mr. Breisch entertained a motion to continue this rule. Dr. Grosz made that motion with second made by Mr. Wilson. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-24 Control of Emissions from Grain Elevators [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Michelle Martinez who related that revisions were made to simplify the language according to the Agency's re-write/de-wrong initiative, the addition of a Permit By Rule section, and to add a new Appendix L which would include PM₁₀ emission factors for the Permit By Rule. Ms. Martinez pointed out that comments had been received and considered, and that staff's recommendation was to continue the hearing to the next meeting.

After discussion, Mr. Breisch entertained a motion to continue this rule to the Council's October 20, 1998 meeting. Ms. Myers made that motion with second made by Mr. Branecky. Roll call

as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-37 Control of Emissions of Organic Materials (AMENDED)

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy who stated that the revisions are part of the Agency's re-write/de-wrong initiative and respond to industry requests to exempt acetone, perchloroethylene, and methylated siloxanes from being considered VOCs. She advised that staff held a workshop on July 7 requesting public input and comments. She said there are numerous changes to be made in language, format and with the three substantive changes, staff recommended that the rule be continued to the next meeting.

Mr. Breisch entertained a motion to continue this rule. Mr. Branecky made motion with second made by Mr. Kilpatrick. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-39 Control of Organic Materials in Nonattainment Areas [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy who stated that there were numerous revisions as part of the Agency's re-write/de-wrong initiative and also five substantive changes to be considered; therefore, staff would recommend that the hearing be continued.

Mr. Breisch entertained a motion to continue this rule to the Council's October 20 meeting. Dr. Grosz made that motion with second made by Mr. Branecky. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

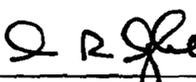

NEW BUSINESS – None

ADJOURNMENT With no further business, meeting was adjourned and next regularly scheduled meeting being October 20, 1998 at Tulsa City-County Health Department Auditorium, 5051 South 129th East, Tulsa, Oklahoma.

NOTE: The sign-in sheet and the hearing records are attached as an official part of these Minutes.

**BRIEFING AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
REGULAR MEETING
AIR QUALITY COUNCIL**

**Tuesday October 20, 1998 9:30 A.M.
Tulsa City-County Health Department Auditorium
5051 South 129 East --- Tulsa, Oklahoma**

1. **Call to Order – Bill Breisch**
2. **Division Director's Report**
Informational update of current events and AQD activities
 - A. Discussion by Council / Public
3. **CY99 Meeting Schedule**
 - A. Discussion by Council
4. **OAC 252:100-5 Registration, Emission Inventory and Annual Operating Fees [AMENDED]**
OAC 252:100-7 Permits [AMENDED]
OAC 252:100-8 Permits for Part 70 Sources [AMENDED]
In Subchapter 5, the Department is considering possible increases in annual operating fees for both minor facilities and Part 70 sources with possible increases of permit application fees in Subchapters 7 and 8.
 - A. Presentation – Shawna McWaters-Khalousi
 - B. Questions and discussion by Council / Public
5. **OAC 272:100-7 Permits [AMENDED]**
Proposed revisions will delete the lower limit of 5 tons per year for Permit by rule (PBR) facilities allowing those facilities with less than 5 tons per year emissions which are subject to new source performance standards and national emissions standards for hazardous air pollutants to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a PBR for specific facilities will be referenced under this new Part also. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Jeanette Buttram
 - B. Questions and discussion by Council / Public
6. **OAC 252:100-25 Smoke, Visible Emissions and Particulates [AMENDED]**
Proposed amendments to Subchapter 25 are needed to fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P, and would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include exempting sources subject to opacity standards promulgated under Section 111 of the Federal Clean Air Act, along with a clarification of how the opacity standard will be determined at sources that have CEMs and how it will be determined at sources without CEMs. A new subsection would contain methods for determining compliance with the opacity limits. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Jeanette Buttram
 - B. Questions and discussion by Council / Public

7. **OAC 252:100-23 Control of Emissions from Cotton Gins [AMENDED]**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and add a new PBR section. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – ~~Becky Mainard~~ *Michelle*
 - B. Questions and discussion by Council / Public

8. **OAC 252:100-24 Control of Emissions from Grain Elevators [AMENDED]**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and add a new PBR section. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Michelle Martinez
 - B. Questions and discussion by Council / Public

9. **OAC 252:100-37 Control of Emissions of Organic Materials [AMENDED]**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. A substantive change deletes a sentence regarding fuel-burning and refuse-burning equipment resolving a contradiction. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public

10. **OAC 252:100-39 Emissions of Organic Materials in Nonattainment Areas [AMENDED]**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public

11. **OAC 252:100-41 Control of Emission of Hazardous and Toxic Air Contaminants [AMENDED]**
The proposed amendments to Subchapter 41 include adopting by reference the Maximum Available Control Technology (MACT) standards for hazardous air pollutants that have been promulgated in 40 CFR 63 from July 1, 1997, through July 1, 1998. These are Subparts S and LL. The Department is also updating in Subchapter 41 the incorporation by reference of the NESHAP found in 40 CFR 61 to July 1, 1998. The Department is requesting comments on these proposed changes.
 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public

October 5, 1998

MEMORANDUM

TO: Air Quality Council

FROM: Eddie Terrill, Director ^{C.T.}
AIR QUALITY DIVISION

SUBJECT: Modifications to Subchapter 39

Enclosed is a copy of the proposed draft modifications to OAC 252:100-39, EMISSIONS OF ORGANIC MATERIALS IN NONATTAINMENT AREAS. These revisions were brought to the Air Quality Council for the first time on August 18, 1998. At that time the staff recommended that the rule be considered again at the October 20, 1998 Council meeting.

The proposed revisions primarily simplify and clarify language, correct grammar, and impose consistency in format on the rule without involving substantive changes. A number of small changes were made to the rule following the August 18, 1998, Council meeting. Only one of these additional changes is intended to be substantive in nature. Two substantive changes previously proposed have been deleted. The following substantive revisions to the rule are proposed.

1. The definition of "volatile organic compound (VOC)" in 252:100-37-2 has been revised. The new definition provides that any organic compound listed in 40 CFR 51.100(s)(1) shall be presumed to have negligible photochemical reactivity and will not be considered to be a VOC. Presently Chapter 100 divides what EPA classifies as "volatile organic compound (VOC)" into "volatile organic compound (VOC)," "organic solvents," and "volatile organic solvent (VOS)." The Chapter contains two definitions of VOC neither of which is consistent with the EPA definition; a definition of VOS that is almost exactly the same as the EPA definition of VOC, and two definitions of organic solvents. As part of the simplification process, the staff propose to have only one definition of VOC which will be consistent with the EPA definition, and to replace the terms "volatile organic solvent (VOS)" and "organic solvents" with "volatile organic compound (VOC)." This revision will also serve as a response to requests to exempt acetone, methylated siloxanes, perchloroethylene, and methyl acetate from being considered VOCs. These four substances are on the list in 40 CFR 51.100(s)(1) and, therefore, will not be considered to be VOCs.
2. The staff proposes to correct the placement of "prior to lease custody transfer" in 252:100-39-30(b). This phrase was located in paragraph (2) and was, therefore,

applicable to all the exemptions listed in that paragraph. Research in the Air Quality Council records and in the Control Technology Guideline, Control of Volatile Organic Emissions from Petroleum Liquid Storage in External Floating Roof Tanks, EPA-450/2-78-047, indicates that this phrase should apply only to 252:100-39-30(b)(2)(B). Staff recommends moving this phrase to 252:100-39-30(b)(2)(B).

3. 252:100-39-41(c), Loading of volatile organic compounds, currently has no provisions to exclude small loading facilities. The staff proposes to add language that will limit the requirements of this subsection to facilities that have a minimum annual throughput of 120,000 gallons or storage capacity greater than 10,000 gallons. Staff previously proposed a 2,000 gallon storage capacity, but further research indicates that a 10,000 gallon exemption should not result in significantly higher VOC emissions.

An informational meeting to discuss revisions to Subchapter 39 for the purpose of simplification, clarification, and correction of the rule was held on Tuesday, July 7, 1998 at the DEQ office. This meeting was open to the public. Comments made at the meeting were given consideration in the proposed draft enclosed with this memorandum.

In the process of revising Subchapter 39, definitions were changed, moved, and/or deleted. The staff intends to revise 252:100-1-3, Definitions, later in the process of the "rewrite/de-wrong" project. It is our intention to include in Subchapter 1 only those definitions that apply to more than one of the subchapters in Chapter 100. Definitions that apply to only one subchapter will be placed in that subchapter.

Staff will suggest that the proposed rule be recommended to the Board for permanent adoption.

In addition to the proposed draft revisions to Subchapter 39, a copy of 40 CFR 51.100(s)(1), a summation of the proposed revisions with explanations, and a list of the revisions that were made to the rule after the August 18, 1998 Air Quality Council meeting are also included in the packet.

Enclosures: 4

SUBCHAPTER 39. EMISSION OF VOLATILE ORGANIC MATERIALS COMPOUNDS (VOCs) IN NONATTAINMENT AREAS AND FORMER NON-ATTAINMENT AREAS

PART 1. GENERAL PROVISIONS	
252:100-39-1.	Purpose 1
252:100-39-2.	Definitions 1
252:100-39-3.	General applicability 2
252:100-39-4.	Exemptions 2
PART 3. PETROLEUM REFINERY OPERATIONS	
252:100-39-15.	Petroleum refinery equipment leaks 3
252:100-39-16.	<u>Petroleum Refinery</u> refinery process unit turnaround 6
252:100-39-17.	<u>Petroleum Refinery</u> refinery vacuum producing system 7
252:100-39-18.	<u>Petroleum Refinery</u> refinery effluent water separators 7
PART 5. PETROLEUM PROCESSING AND STORAGE	
252:100-39-30.	Petroleum liquid storage in <u>vessels with</u> <u>external floating reef tanks</u> roofs 8
PART 7. SPECIFIC OPERATIONS

[NOTE: Bracketed, italicized NOTES are for information only and are not part of the rule.]

PART 1. GENERAL PROVISIONS

252:100-39-1. Purpose

~~The purpose of this Subchapter is to control the emission of organic materials from stationary sources located in nonattainment areas and to specify the additional control measures required to protect and enhance the air quality to insure that the Oklahoma air quality standard is not exceeded and significant deterioration is prevented.~~ The purpose of this Subchapter is to prevent the formation of ozone by controlling the emissions of volatile organic compounds (VOCs). This Subchapter contains requirements for the control of emissions of VOCs from stationary sources located in areas that are nonattainment or were formerly nonattainment for ozone.

252:100-39-2. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise.

~~"Cutback asphalt" means a basic asphalt or asphaltic concrete containing a petroleum distillate.~~ [NOTE: This definition was moved to 252:100-39-40(a) for consistency.]

~~"Effluent water separator" means any tank, box, sump, or other container in which any material compound floating on or entrained or contained in water entering such tank, box, sump or other container is physically separated and removed from such water prior to outfall, drainage, or recovery of such water.~~ [NOTE: Moved to 252:100-39-18(a).]

~~"Organic materials" means any chemical compounds of carbon excluding carbon monoxides, carbon dioxide, carbonic acid, metallic carbides, metal carbonates and ammonium carbonates.~~

"Petroleum refinery" means any facility engaged in producing gasoline, aromatics, kerosene, distillate fuel oils, residual fuel oils, lubricants, asphalt, or other products through distillation of crude oil or other hydrocarbons or through redistillation, cracking, rearrangement or reforming or unfinished petroleum derivatives. [NOTE: Moved from 252:100-39-15(a)(4) since this term is used in other sections of Subchapter 39.]

~~"Refinery" means any facility engaged in producing gasoline, kerosene, fuel oils or other products through distillation of crude oil or through redistillation, cracking or reforming of unfinished hydrocarbon derivatives.~~ [NOTE: This term is not used in Subchapter 39. "Petroleum refinery" is the term used in Subchapter 39.]

"Refinery unit" means a set of components which are a part of a basic process operation, such as distillation, hydrotreating, cracking or reforming of hydrocarbons. [NOTE: Moved from 252:100-39-15(a)(5) since this term is used in other sections of Subchapter 39.]

"Submerged fill pipe" means any fill pipe or discharge nozzle ~~which that~~ meets any one of the following conditions:

(A) ~~the~~The bottom of the discharge pipe or nozzle is below the surface of liquid in the receiving vessel for at least 95 percent of the volume filled.

(B) ~~the~~The bottom of the discharge pipe or nozzle is less than 6 inches from the bottom of the receiving vessel.

(C) ~~the~~The bottom of the discharge pipe or nozzle is less than 2 pipe or nozzle diameters from the bottom of the receiving vessel ~~or~~.

~~(D) other equivalent methods acceptable to the Executive Director.~~ [NOTE: This is not part of the definition.]

"Volatile organic compound (VOC)" means any compound ~~containing carbon and hydrogen or containing carbon and hydrogen in combination with any other element which has a vapor pressure of 1.5 pounds per square inch absolute or greater under actual storage conditions of carbon, excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate, which participates in atmospheric photochemical reactions.~~ Any organic compound listed in 40 CFR 51.100(s)(1) shall be presumed to have negligible photochemical reactivity.

[NOTE: This revision makes the AQD definition of VOC consistent with the EPA definition in 40 CFR 51.100(s) and complies with requests to exempt acetone, methylated siloxanes, perchloroethylene, and methyl acetate from being considered VOC (EPA's definition exempts these substances). It replaces the term "Volatile organic solvent (VOS)" since the definitions are essentially the same. It brings the AQD definition into agreement with the EPA reactivity policy as expressed in the Memorandum dated July 21, 1987, from G. T. Helms, Chief, Control Programs Operations Branch, U.S. EPA, OAQPS and the comments contained in Attachment B of the June 9, 1988, letter from William B. Hathaway, EPA Region 6. This change will result in only one definition of VOC being used throughout the Chapter, thus simplifying the rules.]

~~"Volatile organic solvent (VOS)" means any organic compound which participates in atmospheric photochemical reactions, that is, any organic compound other than those which the EPA Administrator designates as having negligible photochemical reactivity. VOS may be measured by the EPA VOC reference method.~~

252:100-39-3. General applicability

In addition to any application of the requirements contained in OAC 252:100-37, the additional ~~control/prohibitions~~ requirements contained in this Subchapter shall be required ~~enof~~ existing and new facilities located in Tulsa and Oklahoma Counties.

252:100-39-4. Exemptions

VOCs with vapor pressures less than 1.5 pounds per square inch (psia) under actual storage conditions are exempt from 252:100-39-16 through 252:100-39-18, 252:100-39-30, 252:100-39-41, and 252:100-48. [NOTE: This Section is added to avoid substantive changes that would be brought about by the revision of the

definition of VOC.]

PART 3. PETROLEUM REFINERY OPERATIONS

252:100-39-15. Petroleum refinery equipment leaks

(a) Definitions. The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise.

(1) "Component" means any piece of equipment which has the potential to leak ~~volatile organic compounds~~ VOCs when tested in the manner described in EPA Test Method 21 of 40 CFR Part 60. These sources include, but are not limited to, pumping seals, compressor seals, seal oil degassing vents, pipeline valves, flanges and other connections, pressure relief devices, process drains, and open ended pipes. Excluded from these sources are valves which are not externally regulated.

(2) "Gas service" means any equipment which processes, transfers or contains a ~~volatile organic compound~~VOC or mixture of ~~volatile organic compounds~~VOCs in the gaseous phase.

(3) "Leaking component" means a component which has a VOC concentration exceeding 10,000 ppm when tested according to the provisions in 252:100-39-15(e). [NOTE: This was 252:100-39-15(c) (1) (C).]

~~(3)~~(4) "Liquid service" means any equipment which processes, transfers or contains a ~~volatile organic compound~~VOC or mixture of ~~volatile organic compounds~~VOCs in the liquid phase.

~~(4)~~ "Petroleum refinery" means any facility engaged in producing gasoline, aromatics, kerosene, distillate fuel oils, residual fuel oils, lubricants, asphalt, or other products through distillation of crude oil or other hydrocarbons or through redistillation, cracking, rearrangement or reforming or unfinished petroleum derivatives. [NOTE: Moved to 252:100-39-2 since it applies to more than one section in Subchapter 39.]

~~(5)~~ "Refinery unit" means a set of components which are a part of a basic process operation, such as distillation, hydrotreating, cracking or reforming of hydrocarbons. [NOTE: Moved to 252:100-39-2 since it applies to more than one section in Subchapter 39.]

~~(6)~~ (4) "Valves not externally regulated" means valves that have no external controls, such as in-line check valves.

~~(7)~~ "Volatile organic compounds" means any compound containing carbon and hydrogen or containing carbon and hydrogen in combination with any other element which has a vapor pressure of 0.3 kilopascals (0.0435 pounds per square inch absolute) or greater under actual storage conditions. (Effective 2-12-90)
[NOTE: The special conditions contained in this definitions have been moved to 252:100-39-15(b) (2).]

(b) Applicability. This Section applies to all source facility petroleum refineries located in the following counties: Tulsa and Oklahoma.

(1) This Section applies to all petroleum refineries located in Tulsa County and Oklahoma County.

(2) VOCs with vapor pressures less than 0.0435 psia (0.3 kilopascals(kPa)) under actual storage conditions are exempt from 252:100-39-15. (Effective 2-12-90.) [NOTE: Moved from 252:100-39-15(a)(4).]

(c) Provisions for specific processes. Standards and operating requirements

(1) The owner or operator of a petroleum refinery complex subject to this Section shall:

(A) develop and conduct a monitoring program consistent with the provisions in 252:100-39-15(d) and 252:100-39-15(f);

~~(B) conduct a monitoring program consistent with the provisions in 252:100-39-15(f);~~

~~(C) record all leaking components which have a VOC concentration exceeding 10,000 ppm when tested according to the provisions in 252:100-39-15(e) and place an identifying tag on each component consistent with the provisions in 252:100-39-15(f)(3);~~

~~(D)(C) repair and retest the leaking components, as defined in 252:100-39-15(e)(1)(C), as soon as possible but no later than 15 days after the leak is found; and,~~

~~(E)(D) identify all leaking components, as defined in 252:100-39-15(e)(1)(C), which cannot be repaired until the unit is shutdown for turnaround; and, Assure all lines or pipes terminating with a valve are sealed with a second valve, a blind flange, a plug or a cap.~~

(E) assure all lines or pipes terminating with a valve are sealed with a second valve, a blind flange, a plug or a cap.

(2) The Executive Division Director, may, at his/her/his or her discretion, take require the owner or operator to take appropriate remedial action, including early unit turnaround, based on the number and severity of tagged leaks awaiting repair.

(3) Pipeline valves and pressure relief valves in gaseous gas volatile organic compound service shall be marked in some manner that will be readily obvious to both petroleum refinery or contract personnel performing monitoring and the Executive Director DEQ.

(d) Compliance scheduleless schedule. The owner or operator of a petroleum refinery, in order to comply with 252:100-39-15, shall adhere to the increments of progress contained in the following schedule:

~~(1) Submit submit to the Executive Division Director a monitoring program by July 30, 1981. This program shall contain, at a minimum, a list of the refinery units only and the quarter in which they will be monitored, a copy of the log book format, and the make and model of the monitoring equipment to be used. In no case shall a monitoring contract relieve the owner or operator of a petroleum refinery of the responsibility for compliance with this Section.~~

~~(2) Submit quarterly monitoring report to the Executive Director. [NOTE: This is covered in 252:100-39-15(h).]~~

(e) Testing and monitoring procedures. Testing and calibration

procedures to determine compliance with this Section must be consistent with EPA Test Method 21 of 40 CFR Part 60.

(f) **Monitoring.**

(1) The owner or operator of a petroleum refinery ~~subject to this Section~~ shall conduct a monitoring program consistent with the following provisions~~+~~. The owner or operator shall:

(A) monitor yearly by the methods referenced in ~~Test Method 21 of 40 CFR Part 60~~ 252:100-39-15(e) all~~+~~

~~(i)~~ pump seals~~+~~

~~(ii)~~ pipeline valves in liquid service~~+~~ and~~+~~

~~(iii)~~ process drains;

(B) monitor quarterly by the methods referenced in ~~252:100-39-15(d)~~ 252:100-39-15-(e)~~+~~ all~~+~~

~~(i)~~ compressor seals~~+~~

~~(ii)~~ pipeline valves in gaseous gas service~~+~~ and~~+~~

~~(iii)~~ pressure relief valves in gaseous gas service;

(C) monitor weekly by visual methods all pump seals;

(D) monitor ~~immediately~~ within 24 hours any pump seal from which VOC liquids are observed dripping;

(E) monitor any relief valve within 24 hours after it has vented to the atmosphere; and,

(F) monitor immediately after repair any component that was found leaking.

(2) Pressure relief devices ~~which~~ that are connected to an operating flare header, vapor recovery ~~device~~ devices, inaccessible valves, storage tank valves, and valves that are not externally regulated are exempt from the monitoring requirements in paragraph (1) of this subsection~~+~~. Provided provided, however, such inaccessible valves will be monitored during annual shutdown.

(3) The owner or operator of a petroleum refinery, upon the detection of a leaking component, ~~as defined in 252:100-39-15(e)(1)(C)~~, ~~which~~ that is not repaired on discovery~~+~~ shall affix a weatherproof and readily visible tag, bearing an identification number and the date the leak is located, to the leaking component. This tag shall remain in place until the leaking component is repaired.

(g) **Recordkeeping.**

(1) The owner or operator of a petroleum refinery shall maintain a leaking components monitoring log ~~as specified in 252:100-39-15(e)(1)(C)~~ which shall contain, at a minimum~~+~~: ~~the following data:~~

(A) the name of the process unit where the component is located;

(B) the type of component (e.g., valve, seal);

(C) the tag number of the component, if not repaired immediately on discovery;

(D) the date on which a leaking component is discovered;

(E) the date on which a leaking component is repaired;

(F) the date and instrument reading of the recheck procedure after a leaking component is repaired;

(G) the date of the calibration of the monitoring instrument~~+~~

~~The record of calibration~~which shall be made available for inspection on request;

(H) those leaks that cannot be repaired until turnaround; and,

(I) the total number of components checked and the total number of components found leaking.

(2) ~~Copies of the~~The monitoring log shall be retained on site by the owner or operator for at least two years after the date on which the record was made or the report prepared.

(3) ~~Copies of the~~The monitoring log shall be made available for inspection at any reasonable time and copies of the log shall be provided to the Executive Division Director, upon written request, ~~at any reasonable time~~of the AOD.

(h) **Reporting.** The owner or operator of a petroleum refinery, ~~upon the completion of each monitoring procedure,~~ shall:

(1) submit a report to the Executive Division Director by the 30th day following the end of each calendar quarter that lists all leaking components that were located during the previous quarter but not repaired within 15 days, all leaking components awaiting unit turnaround, and the total number of components found leaking; and,

(2) submit a signed statement with the report attesting to the fact that, all monitoring and, with the exception of those leaking components listed in 252:100-39-15(h) (1), ~~all monitoring and repairs were performed as stipulated in the monitoring program.~~

252:100-39-16. Petroleum Refinery refinery process unit turnaround

(a) **Definition.** ~~"Turn-around"~~"Turnaround" means the planned procedure of shutting down a unit, inspecting and repairing it, and restarting it.

(b) **Procedures required.** For the shutdown, purging and blowdown operation of any ~~processing~~ petroleum refinery processing unit the following procedures are required:

(1) Recovery of ~~volatile organic compounds (VOC)~~VOCs shall be accomplished during the shutdown or turnaround to a process unit pressure compatible with the flare or vapor system pressure. The unit will then be purged or flushed to a flare or vapor recovery system with using a suitable material such as steam, water or nitrogen, ~~to a flare or vapor recovery system.~~ The unit shall not be vented to the atmosphere until pressure is reduced to less than 5 psig through control devices.

(2) Except where inconsistent with the "Minimum Federal Safety Standards for the Transportation of Natural and Other Gas by Pipeline," or any State of Oklahoma regulatory agency, no person shall emit ~~organic~~VOC gases to the atmosphere from a vapor recovery blowdown system unless these gases are burned by smokeless flares, or an equally effective control device as approved by the Executive Division Director.

(3) At least fifteen days prior to a scheduled turnaround, a written notification shall be submitted to the Executive Division Director. As a minimum, the notification shall indicate the unit

to be shutdown, the date of shutdown, and the approximate quantity of ~~hydrocarbons~~VOCs to be emitted to the atmosphere.

(4) Scheduled refinery unit turnaround may be accomplished without the controls specified in 252:100-39-16(b)(1) and 252:100-39-16(b)(2) during non-oxidant seasons provided the notification to the Executive Division Director as required in 252:100-39-16(b)(3) ~~specifically contains such a request for such an exemption.~~ The Non-oxidant non-oxidant season is understood to be between the months of October and April from November 1 through March 31.

252:100-39-17. Petroleum Refinery~~refinery~~ vacuum producing system
(a) Definitions. The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise.

(1) "Accumulator" means the vessel in the overhead stream of any fractionating tower, after the overhead condenses and separates noncondensable gases, liquid ~~hydrocarbons~~VOCs and water.

(2) "Hotwell" means the tank at the bottom of the barometer leg in a barometric condenser system to receive the water, condensate and entrained ~~hydrocarbons~~VOCs generated by the barometric condenser.

(b) Requirements. ~~Noncondensable volatile organic compounds~~VOCs ~~from the following equipment shall be incinerated or reduced by 90 percent of what would be emitted without controls when emitted from the following vacuum producing system:~~

- (1) steam ejectors with barometric condensers;
- (2) steam ejectors with surface condensers; or,
- (3) mechanical vacuum pumps.

(c) Hotwells and accumulators.

(1) Hot wells and accumulators shall be covered and the noncondensable vapors shall be vented to a fire-box or incinerator.

(2) The presence of a pilot flame shall be monitored using a thermocouple or any other equivalent device to detect the presence of a flame. (Effective February 12, 1990)

(d) Compliance. Compliance shall be determined in accordance with the provision of the CTG document ("Control of Refinery Vacuum Producing systems, Wastewater Separators and Process Unit Turnarounds," EPA 450/2-77-025, October, 1977). Test reports and maintenance records will be maintained for at least two years. If emission testing is required, the appropriate test method(s) selected from EPA Reference Methods 1 through 4, 21, and/or 25, will be utilized.

252:100-39-18. Petroleum Refinery~~refinery~~ effluent water separators

(a) Definition. "Effluent water separator" means any tank, box, sump, or other container in which any material compoundVOC floating on, or entrained in, or contained in water entering such tank, box, sump or other the container is physically separated and removed

~~from such the water prior to outfall, drainage, or recovery of such discharge of the water from the container.~~ [NOTE: Moved from 252:100-39-2 since the term is only used in this Subchapter. Since this is new to the Section, original language is underlined, deleted language is stricken out, and new language is double underlined to facilitate comparison.]

(b) Requirements. No personowner or operator shall operate, or install or permit the operation or installation of a ~~single~~ single-compartment or multiple-compartment ~~volatile organic compound~~ waterVOC/water separator from any equipment processing, refining, treating, storing or handling ~~volatile organic compound~~ VOC unless the compartment receiving said the effluent water is equipped to control emissions in one of the following ways. ~~with one of the following vapor control devices, properly installed, in good working order and in operation.~~

(1) A ~~The~~ container totally encloses the liquid contents and having all openings are sealed, and totally enclosing the liquid contents. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The oil removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.

(2) A ~~The~~ container is equipped with a vapor-recovery system, consisting of a vapor-gathering system capable of collecting the ~~organic material~~ VOC vapors and gases discharged and a vapor-disposal system capable of processing such ~~organic material~~ VOC vapors and gases ~~so as to prevent their emission to the atmosphere, and with all~~ All tank gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The ~~organic material~~ VOC removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.

(3) A ~~Containers~~ container that is equipped with controls of equal efficiency, provided the plans and specifications of such equipment are submitted and are approved by the Executive Division Director prior to their use.

PART 5. PETROLEUM PROCESSING AND STORAGE

252:100-39-30. Petroleum liquid storage in vessels with external floating roof tanks ~~roofs~~

(a) Definitions. The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise.

(1) "Condensate" means hydrocarbon liquid separated from natural gas which condenses due to changes in the temperature and/or pressure and remains liquid at normal operating conditions.

(2) "Crude oil" means a naturally occurring hydrocarbon mixture which is a liquid at standard conditions. It may contain sulfur, nitrogen and/or oxygen derivatives of hydrocarbon.

(3) "Externally External floating roof" means a storage vessel cover in an open top tank consisting of a double deck or pontoon

single deck which rests upon and is supported by the petroleum liquid being contained and is equipped with a closure seal or seals to close the space between the roof edge and tank wall.

(4) "Lease custody transfer" means the transfer of produced crude oil and/or condensate, after processing and/or treating in the producing operations, from storage ~~tankvessels~~ or automatic transfer facilities to pipelines or any other ~~forms~~form of transportation.

(5) "Liquid-mounted seal" means primary seal mounted in continuous contact with the liquid between the tank wall and the floating roof.

(6) "Petroleum liquid" means crude oil, condensate, and any finished or intermediate liquid products manufactured or extracted in a petroleum refinery.

(7) "Vapor-mounted seal" means a primary seal mounted so there is an annular vapor space underneath the seal. The annular vapor space is bounded by the bottom of the primary seal, the ~~tankvessel~~ wall, the liquid surface, and the floating roof.

(8) "Waxy, high pour point crude oil" means a crude oil with a pour point of 50°F. or higher as determined by the American Society of Testing and Materials Standard D97-66, "Test for Pour Point of Petroleum Oils."

(b) **Applicability.**

(1) This Section applies to ~~all source facilities with~~ petroleum liquid storage vessels equipped with external floating roofs, having capacities greater than 40,000 gallons (150,000 liters) ~~(40,000 gallons), that are located in Tulsa and Oklahoma Counties.~~

(2) This Section does not apply to petroleum liquid storage vessels ~~which that: prior to custody transfer:~~

(A) are used to store waxy, high pour point crude oil;

(B) have capacities less than 1,600,000 liters (420,000 gallons) and are used to store produced crude oil and condensate prior to lease custody transfer;

(C) contain a petroleum liquid with a true vapor pressure less than 1.5 psia (10.5 kPa) ~~(1.5 psia);~~

(D) ~~contain a petroleum liquid with a true vapor pressure less than 27.6 Kpa (4.0 psia); and,~~

~~(i) are of welded construction;~~

~~(ii) presently possess a metallic type shoe seal, a liquid-mounted foam seal, a liquid mounted liquid filled type seal, or other closure device of demonstrated equivalence approved by the Executive Director; or,~~

contain a petroleum liquid with a true vapor pressure less than 4.0 psia (27.6 kPa) if the vessels are of welded construction and have a metallic-type shoe seal, a liquid-mounted foam seal, a liquid-mounted liquid filled type seal, or other closure device of demonstrated equivalence approved by the Division Director; or,

(E) are of welded construction, equipped with a metallic-type shoe primary seal and has a secondary seal from the top of the shoe seal to the ~~tankvessel~~ wall (shoe-mounted secondary

seal).

[NOTE: Research indicates that "prior to custody transfer" should have been added to 3.7.5-3(a)(2)(B)(ii) which is now 252:100-39-30(b)(2)(B).]

(c) ~~Provisions for specific processes~~ Equipment and operating requirements.

(1) Standards. No owner of a petroleum liquid storage vessel subject to this Section shall store a petroleum liquid in that vessel unless the following conditions are met.

(A) The vessel has been fitted with:

(i) a continuous secondary seal extending from the floating roof to the ~~tankvessel~~ wall (rim-mounted secondary seal); or,

(ii) a closure device or other device which controls VOC emissions with an effectiveness equal to or greater than a seal required ~~above~~ under 252:100-39-30(c)(1)(A)(i) and approved by the ~~Executive~~ Division Director.

(B) All seal closure devices meet the following requirements:

(i) ~~there~~ There are no visible holes, tears, or other openings in the seal(s) or seal fabric.

(ii) ~~the~~ The seal(s) are intact and uniformly in place around the circumference of the floating roof between the floating roof and the ~~tankvessel~~ wall ~~and~~.

(iii) ~~for~~ For vapor mounted primary seals, the accumulated area of gaps exceeding 0.32 cm (1/8 in) in width between the secondary seal and the ~~tankvessel~~ wall shall not exceed 21.2 cm² per meter of ~~tankvessel~~ diameter (1.0 ~~in~~ in² per foot of tank diameter), as determined by physically measuring the length and width of all gaps around the entire circumference of the secondary seal in each place where a 0.32 cm uniform diameter probe passes freely between the seal and the ~~tankvessel~~ wall; and summing the area of the individual gaps.

(C) All openings in the external floating roof, except for automatic bleeder vents, rim space vents, and leg sleeves, are:

(i) equipped with covers, seals, or lids in the closed position except when the openings are in actual use; and,

(ii) equipped with projections into the ~~tankvessel~~ which remain below the liquid surface at all times.

(D) Automatic bleeder vents are closed at all times except when the roof is floated off or landed on the roof leg supports.

(E) Rim vents are set to open when the roof is being floated off the leg supports or at the manufacturer's recommended settings ~~and~~.

(F) Emergency roof drains are provided with slotted membrane fabric covers or equivalent covers which cover at least 90 percent of the area of the opening.

(2) Monitoring. The owner or operator of a petroleum liquid storage vessel with an external floating roof subject to this

Section shall:

(A) perform routine inspections semi-annually in order to ensure compliance with 252:100-39-30(c)(1)(B)(i), i.e., no visible holes, tears, or other openings in the seals or seal fabric;

(B) measure the secondary seal gap annually in accordance with 252:100-39-30(c)(1)(B)(iii), when the floating roof is equipped with a vapor-mounted primary seal; and,

(C) maintain records of the types of volatile petroleum liquids stored, the true vapor pressure of the liquid as stored, and the results of the inspections performed in 252:100-39-30(c)(2)(A) and 252:100-39-30(c)(2)(B).

(3) Recordkeeping.

~~(3)~~ (A) Copies of all records under 252:100-39-30(c)(2) shall be retained by the owner or operator for a minimum of two years after the date on which the record was made.

~~(4)~~ (B) Copies of all records under this Section shall be made available to the Executive Division Director, upon ~~verbal or written~~ request, at any reasonable time.

(d) **Compliance schedule.** Compliance with this Section will be accomplished by affected facilities ~~within two years of approval of this Section by the Oklahoma Environmental Quality Board by May 23, 1982.~~

PART 7. SPECIFIC OPERATIONS

252:100-39-40. Cutback asphalt (paving)

(a) Definitions. "Cutback asphalt" means a basic asphalt or asphaltic concrete containing a petroleum distillate.

(b) Requirements. No owner, operator and/or contractor shall prepare or apply cutback ~~liquified~~ liquefied asphalt without the prior written consent of the Executive Division Director, ~~or the Executive Director's designee.~~ Such consent may be granted during Oklahoma's non-oxidant season, i.e., ~~October through April~~ November 1 through March 31.

252:100-39-41. Vapor ~~recovery~~ systems ~~Storage, loading and transport/delivery of VOCs~~

(a) Storage of ~~volatile organic compounds~~ VOCs in vessels with storage capacities — greater than 40,000 gallons ~~(953 bbls)~~. No ~~person~~ owner or operator shall store ~~or permit the storage of~~ gasoline or any ~~volatile organic compound~~ VOC in tanks ~~or vessels~~ a vessel ~~having~~ with a storage capacity greater than 40,000 gallons ~~(953 bbls)~~ unless such tank, reservoir or other container it is to be a pressure tank vessel capable of maintaining working pressures ~~sufficient at all times to that~~ prevent ~~organic~~ VOC vapor or gas loss to the atmosphere, or it is equipped with one or more of the following vapor control devices:

(1) aAn external floating roof, consisting of ~~pontoon type, pontoon-type internal floating cover or double-deck type reef, cover or a fixed roof with an internal-floating cover.~~ which The cover will rest on the surface of the liquid contents

at all times (i.e. off the leg supports), except during initial fill, when the storage vessel is completely empty, or during refilling. When the cover is resting on the leg supports, the process of filling, emptying, or refilling shall be continuous and shall be accomplished as rapidly as possible. The floating roof shall be equipped with a closure seal, or seals, to close the space between the ~~reef~~cover edge and ~~tank~~vessel wall. Such floating roofs are not appropriate control devices if the ~~organic compounds~~VOCs have a vapor pressure of ~~11.0~~11.1 pounds per square inch absolute psia (568 mm Hg) (76.6 kPa) or greater under actual conditions. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. Closure seals for fixed roof vessels with an internal-floating cover will meet the requirements of 252:100-39-30(e)(1)(B), 252:100-39-30(c)(1)(B)(i) and (ii). Closure seals for vessels with external floating roofs will meet the requirements of 252:100-39-30(c)(1)(B)(i), (ii), and (iii).

(2) ~~a~~A vapor-recovery system consisting of a vapor-gathering system capable of collecting 90 percent by weight or more of the uncontrolled ~~volatile organic compounds~~VOCs that would otherwise be emitted to the atmosphere and a vapor-disposal system capable of processing such ~~organic compounds~~VOCs so as to prevent emissions in excess of 80 mg/liter of ~~gasoline~~VOCs transferred to the atmosphere. All ~~tank~~vessel gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place, ~~or,~~

(3) ~~other~~Other equipment or methods of equal efficiency for purposes of air pollution control as ~~may be~~when approved by the ~~Executive~~Division Director and are in concert with federal guidelines.

(b) Storage of ~~volatile organic compounds~~VOCs in vessels with storage capacities of —400-40,000 gallons (9.5-953 bbls).

(1) ~~No person~~owner or operator shall store or permit the storage of gasoline or other ~~volatile organic compounds~~VOCs in any stationary storage ~~container~~vessel with a nominal capacity greater than 400 gallons (9.5 bbls) and less than 40,000 gallons (953 bbls) unless such ~~container~~it is equipped with a submerged fill pipe or is bottom filled. ~~No person shall store or permit the storage of gasoline or other volatile organic compound in any stationary storage container with an average daily throughput of 30,000 gallons or greater unless the displaced vapors from the storage container are processed by a system that has a total collection efficiency no less than 90 percent by weight of total hydrocarbon compounds in said vapors.~~

(2) No owner or operator shall store gasoline or other VOCs in any stationary storage vessel with an average daily throughput of 30,000 gallons or greater unless the displaced vapors from the storage vessel are processed by a system that has a total collection efficiency no less than 90 percent by weight of total VOCs in the vapors.

~~(2)(A) The vapor recovery system shall include one or more of the following:~~

~~(A)(i)~~ a vapor-tight return line from the storage ~~containervessel~~ to the delivery vessel and a system that will ensure that the vapor return line is connected before gasoline or ~~volatile organic compounds~~VOCs can be transferred into the ~~containervessel~~; or,
~~(B)(ii)~~ other equipment that has a total collection efficiency no less than 90 percent by weight of the total ~~hydrocarbon compounds~~VOCs in the displaced vapor ~~provided that if approval of the proposed design installation, and operation is obtained from the Executive Division Director prior to start of construction.~~

~~(3)(B)~~ Provided, however, that theThe requirements for vapor collection of displaced vapors shall not apply to operations that are not major sources.

(c) Loading of ~~volatile organic compounds~~VOCs.

(1) ~~No personowner or operator shall install or operate, install or permit the building, operation or installation of a stationary volatile organic compoundVOC loading facility with an annual throughput of 120,000 gallons or greater or storage capacity greater than 10,000 gallons unless such loading facility it is equipped with a vapor-collection and/or disposal system properly installed, in good working order and in operation.~~

(2) ~~WhenWhile~~ ~~volatile organic compounds~~VOCs are loaded through the hatches of a transport vessel, a pneumatic, hydraulic or mechanical means shall be provided to ensure a vapor-tight seal at the hatch.

(3) A means shall be provided to prevent ~~organic material~~VOC drainage from the loading device when it is removed from the transport vessel, or to accomplish complete drainage before removal.

(4) When loading is ~~effected through~~by means other than hatches, all loading and vapor lines shall be equipped with fittings ~~which that~~ make vapor-tight connections and which close automatically when disconnected.

(5) The vapor collection and/or disposal portion of the system shall consist of one or more of the following in addition to bottom loading or submerged fill of transport vessels~~+~~. Storage vessels at service stations and bulk plants may be used for intermediate storage prior to recovery/disposal of vapors as specified in 252:100-39-41(c)(5)(A) through 252:100-39-41(c)(5)(C) if they are designed to prevent the release of vapors during use.

(A) ~~anAn~~ absorption/adsorption system or condensation system ~~with that~~ has a minimum recovery efficiency of 90 percent by weight of all the ~~volatile organic compound~~VOC vapors and gases entering such disposal system~~+~~.

(B) ~~aA~~ vapor handling system which directs all vapors to a fuel gas incineration system with a minimum disposal efficiency of 95 percent~~+~~, ~~or~~.

(C) ~~etherOther~~ equipment ~~ef that~~ has at least a 90 percent efficiency, provided plans for such equipment are ~~submitted to~~

and approved by the Executive Division Director. Storage vessels at service stations and bulk plants may be used for intermediate storage prior to recovery/disposal of vapors as per ~~252:100-39-41(e)(5)(A) through 252:100-39-41(e)(5)(C)~~ if they are designed to prevent the release of vapors during use.

(6) Subsection 252:100-39-41(c) shall apply to any facility ~~which that~~ loads ~~volatile organic compounds~~ VOCs into any transport vessel designed for transporting ~~volatile organic compounds~~ VOCs.

(d) Transport/delivery.

(1) The vapor-laden delivery vessel shall meet one of the following requirements.

(A) ~~the~~ The delivery vessel must be ~~so~~ designated and operated ~~as to~~ be vapor tight except when sampling, gauging, or inspecting, ~~or,~~

(B) ~~the~~ The delivery vessel must be equipped and operated ~~so~~ that to deliver the ~~volatile organic compound~~ VOC vapors are delivered to a vapor recovery/disposal system.

(2) No ~~owner/operator~~ owner or operator will ~~shall~~ allow a delivery vessel to be filled at a facility unable to receive displaced ~~organic~~ VOC vapors nor service ~~tanks/vessels~~ unable to deliver displaced vapors except for ~~tanks/facilities/vessels and facilities~~ exempted in 252:100-39-41(b) and 252:100-39-41(c).

(3) Testing of the tank trucks for compliance with the vapor tightness requirements must be consistent with Appendix "B" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems," EPA 450/2-78-051, or an equivalent method as determined by the Executive Division Director.

(e) Additional requirements for Tulsa County. Also see ~~252:100-39-48~~ for additional requirements pertaining to Tulsa County. [NOTE: The requirements in this subsection were formerly contained in 252:100-39-48. To facilitate comparison, deletions to the original language have been stricken out and additions have been double underlined. Since the material is new to this Section, it is all underlined.]

(1) Applicability. This Section subsection applies only in Tulsa County. In addition to the other requirements for vapor recovery systems that are contained in 252:100-39-41(a) through (d), facilities located in Tulsa County must comply with the requirements of this subsection. [NOTE: This was 252:100-39-48(a).]

(2) Storage of VOCs.

(A) 2,000 - 40,000 gallons capacity. No person owner or operator shall store or permit the storage of gasoline or other volatile organic compounds VOCs in any stationary storage container with a nominal capacity greater than 2,000 gallons (47.5 bbls) and less than 40,000 gallons (952.4 bbls) unless, such container in addition to being equipped with a submerged fill pipe or being bottom loading, it is equipped with a vapor control system that has an efficiency of no less than 90 percent by weight of the volatile organic compounds VOCs

contained in the displaced vapors and is equipped with a pressure relief valve in the atmospheric vent system which maintains a pressure of 16 ounces per square inch and 1/2 ounce per square inch vacuum. The vapor recovery system shall include one or more of the following:

(i) a vapor-tight return line from the storage container to the delivery vessel and a system that will ensure that the vapor return line is connected before gasoline or volatile organic compounds (VOCs) can be transferred into the container (i.e., popped connectors from the storage container to the delivery vessel.)

(ii) a float vent valve assembly must be installed in the vapor return/vent line on new and existing dual point installations; however, for coaxial installations on existing stations, a vent sleeve extending six inches below the top of the tank will be allowed. Sleeves may be equipped with a 1/16 inch air bleed hole.

(iii) The cross-sectional area of the vapor recovery line must be at least half of the cross-sectional area of the liquid delivery line.

(iv) Instead of 252:100-39-48(b)(2)(A) through 252:100-39-48(b)(2)(C) of 252:100-39-41(e)(2)(B)(i) through 252:100-39-41(e)(2)(B)(iii), other equipment that has a total collection efficiency no less than 90 percent by weight of the total hydrocarbon compounds (VOCs) in the displaced vapor provided that may be used if approved by approval of the proposed design, installation, and operation is obtained from the Executive Division Director prior to start of construction. [NOTE: This was in 252:100-39-48(b)(1) and (2).]

(B) Applicability.

(i) The applicability of this Section 252:100-39-41(e)(2) shall be determined by the most restrictive of the 2,000 gallon tank vessel size as specified required in 252:100-39-48(b)(1) 252:100-39-41(e)(2)(A) or the 120,000 gallon annual throughput described required in 252:100-39-48(b)(3) 252:100-39-41(e)(2)(B)(ii). However, once a facility places a 2,000 gallon tank vessel in service or exceeds the 120,000 gallon annual throughput described in 252:100-39-48(b)(3), that facility shall always be subject to the provisions of this Section 252:100-39-41(e)(2). (effective February 12, 1990) [NOTE: This was 252:100-39-48(b)(4).]

(ii) Exemptions to this Section 252:100-39-41(e)(2) may be granted provided if the owner/operator owner or operator shows to the satisfaction of the appropriate authority Division Director that the container vessel is used exclusively for agricultural purposes or that the facility, based on the most current 12 month's data, dispenses 120,000 gallons per year or less. [NOTE: This was 252:100-39-48(b)(3).]

(C) Emission testing. If emission testing is conducted, the appropriate test methods selected from EPA Methods 1 through

4, 18, 21, 25, 25A and 25B will be utilized. [NOTE: Was 252:100-39-48(b)(5).]

(D) Compliance. Compliance with this subsection 252:100-39-41(e)(2) will be accomplished by affected owner/operator the owner or operator of affected facilities by December 31, 1986.

[NOTE: Was 252:100-39-48(b)(6).]

(E) Certification. The owner/operator owner or operator of a facility or facilities shall obtain, by whatever means practicable, certification from the owner/operator owner or operator of the transport/delivery vessels that all deliveries of gasoline or other volatile organic compounds VOCs made to their 400-gallon to 40,000-gallon storage facility or facilities located in Tulsa County, shall be made by transport/delivery vessels which that comply with the requirements contained in 252:100-39-48(d) 252:100-39-41(e)(4). Compliance with this Section 252:100-39-41(e)(2) shall be accomplished by affected owner/operator owners or operators of affected facilities no later than December 31, 1990.

(Effective February 12, 1990) [NOTE: Was 252:100-39-48(b)(7).]

(3) Loading of VOCs. In addition to those requirements contained in 252:100-39-41(c), stationary loading facilities Facilities will be checked annually in accordance with EPA Test Method 21, Leak Test. Leaks greater than 5000 ppm will be repaired within 15 days. Facilities will retain inspection and repair records for at least two years. [NOTE: This was 252:100-39-48(c)(7).]

(4) Transport/delivery vessel requirements. In addition to the requirements contained in 252:100-39-41(d), facilities located in Tulsa County must meet the following requirements.

(A) Maintenance.

(i) The delivery vessel must be maintained so as to be that it is vapor tight except when sampling, gauging, or inspecting. These activities shall not occur while the vehicle is loading or unloading or is in a pressurized state.

(ii) The delivery vessel must be equipped, maintained and operated to receive vapors from sources identified in 252:100-39-41(b)(1) and 252:100-39-41(b)(2) and retain these and all other vapors until they are delivered into an authorized vapor recovery/disposal system.

(iii) Vessels with defective equipment such as boots, seals, and hoses, or with other deficiencies which that would impair the vessels' ability to retain vapors or liquid shall be repaired within 5 days.

(iv) The certified testing facility must certify to the approving agency that the proper testing and repairs have occurred in accordance with 252:100-39-48(d)(2)(A)(i) 252:100-39-41(e)(4)(B)(i). The vessel must also display on the rear panel a tag showing the date of the pressure test.

(v) No owner/operator owner or operator will allow a delivery vessel to be filled at a facility unable to

receive displaced organic vapors VOCs nor service tanks/vessels unable to deliver displaced vapors except for tanks/facilities/vessels/facilities exempted in 252:100-39-41(b). Terminal owners shall not fill vessels which that do not display a current tag.

(vi) Delivery vessels may be inspected by representatives of the appropriate health agency DEQ in order to determine their state of repair. Such a test may consist of a visual inspection, or a vapor test with vapors not to exceed 5000 ppm. Failure of a vapor test will require the owner/operator owner or operator to effect make the necessary repairs within 10 days. Unless certification is made to the appropriate health agency within 5 days, the vessel will shall be removed from service by the owner/ operator. Failure to certify within 10 days of a vapor test that the cited necessary repairs have been effected made will subject the vessel owner or operator to sanctions. Upon certification of repairs, the vessel will be allowed to operate in a normal manner resume normal operation.

(B) Testing requirements.

(i) Pressure test.

(I) Delivery vessels, delivering or receiving gasoline must be tested one time per year for vapor tightness. The vapor tightness test must be consistent with Appendix "A" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems", EPA 450/2-78-051. Tests shall be performed by the owner or a reputable transport service company. Test methods used to test these vessels by owners or testing companies must be approved for use by the Executive Division Director.

(II) The vessel will be considered to pass the test prescribed in ~~252:100-39-48(d)(2)(A)(i)~~ 252:100-39-41(e)(4)(B)(i)(I) when the test results show that the vessel and its vapor collection systems do not sustain a pressure change of more than 3 inches of H₂O. ~~in addition there~~ There shall be no avoidable visible liquid leaks.

~~(2)(ii)~~ Vapor test. Testing of the tank trucks for compliance with vapor tightness requirements as required under ~~252:100-39-41(d)(1)(F)~~ 252:100-39-41(e)(4)(A)(vi) must be consistent with Appendix "B" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems", EPA 405/2-78-051, as modified for this purpose and contained in 252:100-43-15. The requirements of ~~252:100-39-48~~ 252:100-39-41(e) will become effectivetook effect December 15, 1988. [NOTE: This was 252:100-39-48(d).]

252:100-39-42. Metal cleaning

(a) Cold cleaning facility requirements.

(1) Equipment requirements. No person owner or operator shall allow the construction or operation of any cold cleaning unit

for metal degreasing using an ~~organic solvent~~ a VOC unless the following requirements are met.

(A) ~~a~~ A cover or door shall be installed on the facility that can be easily operated with one hand.

(B) ~~an~~ An internal drain board will be provided in such a manner that will allow lid closure if practical; if not practical, the drainage facility may be external, and.

(C) ~~a~~ A permanent, conspicuous label summarizing the operating requirements specified in 252:100-39-42(a)(2) will be permanently attached to the facility.

(2) Operating requirements. ~~The operating requirements specified in 252:100-39-42(a)(1)(C) shall as a minimum specify~~ Owners or operators shall at a minimum:

(A) drain clean parts at least 15 seconds or until dripping ceases before removal;

(B) close degreaser cover when not handling parts in cleaner and;

(C) store waste ~~solvent~~ VOC in covered containers. ~~Do not dispose or allow disposition in such a manner that more than 20 percent by weight can evaporate into the atmosphere.~~

(D) Do not dispose or allow disposition of waste VOC in such a manner that more than 20 percent by weight can evaporate into the atmosphere.

~~(3)(E) If used, a solvent spray will be of a solid fluid stream (not atomized or spray)~~ Use a solid stream, not an atomized spray, when VOC is sprayed.

~~(4)(3)~~ (3) Requirements for controls. If the ~~solvent~~ volatility vapor pressure of the VOC is greater than ~~33 mm Hg (0.6 psi)~~ 0.6 psi (4.1 kPa) measured at ~~38°C (100°F) (38°C)~~ or if ~~solvent~~ VOC is heated to ~~120 degrees C (248°F) (120°C)~~, one or more of the following control devices will be required.

(A) ~~freeboard~~ Freeboard that gives a ~~free board~~ freeboard ratio greater than or equal to 0.7.

(B) ~~water~~ Water cover and where the ~~solvent~~ VOC is insoluble in and heavier than water or such equivalent, or.

(C) ~~either~~ Another system of equivalent control as approved by the ~~Executive~~ Division Director.

~~(5)(4)~~ (4) Compliance and recordkeeping. Compliance will be determined in accordance with EPA guidance document "Control of Volatile Organic Emissions from Solvent Metal Cleaning," 450/2-77-022. Test reports and maintenance and repair records of control equipment will be maintained by the source for at least two years.

(b) Vapor-type metal degreasing requirements.

(1) Equipment requirements. No ~~person~~ owner or operator shall allow the construction or operation of any vapor-type metal degreasing unit using an ~~organic solvent~~ a VOC unless the following requirements are met.

(A) ~~the~~ The unit has a cover or door that can easily be opened and closed without disturbing the vapor zone.

(B) ~~the~~ The unit will have the following safety switches.

(i) ~~condenser~~ Condenser flow switch and thermostat or

equivalent capable of shutting off the sump heat if condenser coolant is not circulating or coolant exceeds solvent VOC manufacturer's recommended level, and

(ii) ~~spray~~ Spray safety switch capable of shutting off spray pumps if the vapor level drops in excess of four inches (10 cm).

(C) ~~the~~ The unit will have one or more of the following control devices/techniques:

(i) ~~freeboard~~ Freeboard ratio not less than 0.75, i.e., the ratio of the freeboard to the width of the degreaser wherein the term freeboard is defined as the distance from the top of the vapor zone to the top of the degreaser tank.

(ii) ~~refrigerated~~ Refrigerated chiller, i.e., condenser coils in the upper limit of the vapor zone.

(iii) ~~enclosed~~ Enclosed design, i.e., cover or door is opened only when part is actually entering or exiting the facility, or

(iv) ~~a~~ A carbon adsorption system with ventilation greater than 50 ~~cfm/ft²~~ cfm/ft² of air/vapor area when cover is open and exhausting less than 25 ppm solvent VOC average over one adsorption cycle, or

(v) ~~a~~ A control system demonstrated to have a control efficiency equal to or greater than any of the systems in (C) of this paragraph.

(D) ~~a~~ A permanent conspicuous label summarizing operating procedures in 252:100-39-42(b)(2) will be attached to the facility unit.

(2) Operating requirements. ~~The operating requirements referred to in 252:100-39-42(b)(1)(D) As a minimum operators shall do the following as a minimum specify:~~

(A) ~~keep~~ Keep cover closed at all times except when processing work.

(B) ~~minimize~~ Minimize solvent VOC carry-out by the following measures:

(i) ~~rack~~ racking parts to allow full drainage.

(ii) ~~move~~ moving parts in and out of the degreaser at less than ~~3.3 m/sec~~ 11 ft/min (~~11 ft/min~~) (3.3 m/min);

(iii) ~~degrease~~ degreasing the workload in the vapor zone at least 30 sec. or until condensation ceases;

(iv) ~~tip~~ tipping out any pools of solvent VOC on the cleaned parts before removal; and

(v) ~~allow~~ allowing parts to dry within the degreaser for at least 15 sec. or until visually dry.

(C) ~~do not~~ Not degrease porous or absorbent materials, such as cloth, leather, wood or rope.

(D) ~~workloads should not~~ Not allow workloads to occupy more than half of the degreaser's open top area.

(E) ~~never~~ Never spray above the vapor level.

(F) ~~assure~~ Assure that solvent VOC leaks are immediately repaired or the degreaser is shut down.

(G) ~~do not~~ Not dispose of waste solvent VOC or transfer it to

another party in such a manner that greater than 20 percent of the waste (by weight) will evaporate into the atmosphere.

~~(H)~~ Store waste solvent VOC only in closed containers.

~~(H)~~ (I) Not allow exhaust ventilation should not to exceed $20 \text{ m}^3/\text{min}$ per m^2 65 cfm per ft^2 (65 cfm per ft^2) ($20 \text{ m}^3/\text{min per m}^2$) of degreaser open area, unless necessary to meet OSHA requirements. Ventilation fans should not be used near the degreaser opening, and,

~~(I)~~ (J) Not allow water should not to be visually detectable in solvent VOC exiting the water separator.

(3) Compliance and recordkeeping. Compliance will be determined in accordance with EPA document 450/2-77-022 and all test and maintenance records ~~will~~ shall be retained by the source for at least two years.

(c) Conveyorized degreasing unit requirements.

(1) Operating requirements. No ~~person~~ owner or operator shall operate a conveyorized degreasing unit unless the following requirements are met:

(A) ~~exhaust~~ Exhaust ventilation should not exceed $20 \text{ m}^3/\text{min}$ per m^2 65 cfm per ft^2 (65 cfm per ft^2) ($20 \text{ m}^3/\text{min per m}^2$) of degreaser opening, unless necessary to meet OSHA requirements. ~~Work place fans should not be used near the degreaser opening,~~

(B) Work place fans should not be used near the degreaser opening.

~~(B)~~ (C) minimize Minimize carry-out emissions by:

(i) racking parts for best drainage; and,

(ii) maintaining vertical conveyor speed at less than 3.3 m/min 11 ft/min (11 ft./min.) (3.3 m/min).

~~(C)~~ (D) do Waste VOC should not be disposed disposed of waste solvent or ~~transfer~~ transferred it to another party in such a manner that greater than 20 percent of the waste (by weight) can evaporate into the atmosphere. ~~Store waste solvent VOC only in covered containers,~~

(E) Store waste VOC only in covered containers.

~~(D)~~ (F) repair solvent VOC leaks must be repaired immediately, or ~~shut down the degreaser~~ must be shut down.

~~(E)~~ (G) water Water should not be visibly detectable in the solvent VOC exiting the water separator, and,

~~(F)~~ (H) a A permanent conspicuous label ~~will~~ must be attached to the ~~facility~~ unit summarizing the operating requirements listed in 252:100-39-42(b) and 252:100-39-42(c).

(2) Control requirements. In addition to the requirements in 252:100-39-42(c) (1), any unit that has an air/vapor interface of more than 2.0 m^2 2.0 m^2 will be subject to the following control requirements:

(A) Major control devices. The degreaser must be controlled by either:

(i) a refrigerated chiller;

(ii) a carbon adsorption system, with ventilation equal to or greater than $15 \text{ m}^2/\text{min}$ per m^2 50 cfm/ft^2 (50 cfm/ft^2) ($15 \text{ m}^2/\text{min per m}^2$) of air/vapor area (when down-time covers are open), and exhausting less than 25 ppm of solvent VOC by

volume averaged over a complete adsorption cycle, or
(iii) a system demonstrated to have control efficiency equivalent to or better than either of the above.

(B) **Carryover prevention.** Either a drying tunnel, or another means such as rotating (tumbling) basket, sufficient to prevent cleaned parts from carrying out solvent VOC liquid or vapor subject to space limitations must be installed.

(C) **Safety switches.** The following safety switches must be installed and be operational.

(i) Condenser flow switch and thermostat ~~that~~ ~~shuts off~~ sump heat if coolant is either not circulating or too warm.

(ii) Spray safety switch ~~that~~ ~~shuts off~~ spray pump or conveyor if the vapor level drops excessively, e.g. more than ~~10 cm (4 in.)~~ 4 in (10 cm).

(iii) Vapor level control thermostat ~~that~~ ~~shuts off~~ sump heat when vapor level rises too high.

(D) **Minimized openings.** Entrances and exits should silhouette work loads so that the average clearance ~~between parts and the edge of the degreaser opening~~ is either less than ~~10 cm (4 in.)~~ 4 in (10 cm) or less than 10 percent of the width of the opening.

(E) **Covers.** Down-time ~~cover~~ covers must be placed over entrances and exits of conveyorized degreasers immediately after the conveyor and exhaust are shutdown and removed just before they are started up.

(3) **Compliance and recordkeeping.** Compliance will be determined in accordance with EPA document 450/2-77-022 and all test and maintenance records will be retained by the source for at least two years.

(d) **Alternative control methods.** As an alternative to the requirements of 252:100-39-42(a) through 252:100-39-42(c) and subject to EPA approval, an operator may request the approval by the Division Director of other methods of control. ~~may be approved by, subject to EPA approval, the Executive Director upon application by a source; provided, the~~ The applicant can must demonstrate that the proposed method will preclude no less than prevent at least 80 percent of the emissions from each source from being emitted to the atmosphere, as determined by the appropriate test methods selected from EPA Methods 1 through 4, 18, 25, 25A and 25B.

252:100-39-43. Graphic arts systems

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise.

(1) "Flexographic printing" means the application of words, designs and pictures to a substrate by means of a roll printing technique in which the pattern to be applied is raised above the printing roll and the image carrier is made of rubber or other elastomeric materials.

(2) "Packaging rotogravure printing" means rotogravure printing

upon paper, paper board, metal foil, plastic film, and other substrates, ~~which that~~ are, in subsequent operations, formed into packaging products and labels for articles to be sold.

(3) "Publication rotogravure printing" means rotogravure printing upon paper which is subsequently formed into books, magazines, catalogues, brochures, directories, newspaper supplements, and other types of printed materials.

(4) "Roll printing" means the application of words, designs and pictures to a substrate usually by means of a series of hard rubber or steel rolls each with only partial coverage.

(5) "Rotogravure printing" means the application of works, designs and pictures to a substrate by means of a roll printing technique ~~which that~~ involves an intaglio or recessed image areas in the form of cells.

(b) **Applicability.**

~~(1) This Section applies to all packaging rotogravure, publication rotogravure, and flexographic printing facilities located in Tulsa and Oklahoma counties.~~

~~(2) This Section applies only to enlypackaging rotogravure, publication rotogravure, and flexographic printing facilities whose potential ~~emission~~emissions of organic solventVOC ~~is~~are equal to or more than 100 tons/year (90 megagrams/year) (106 grams) per year (100 tons/yr.). Potential emissions are to be calculated based on historical records of actual consumption of solventVOC and ink.~~

(c) **Provisions for specific processes.**

(1) No owner or operator of a ~~packaging rotogravure, publication rotogravure or flexographic printing~~ facility subject to this Section and employing solventVOC containing ink may operate, ~~cause, allow or permit the operation of the facility unless one of the following conditions applies.~~

(A) ~~the~~The volatile fraction of ink, as it is applied to the substrate, contains 25.0 percent by volume or less of organic solventVOC and 75.0 percent by volume or more of water~~;~~

(B) ~~the~~The ink as it is applied to the substrate, less water, contains 60.0 percent by volume or more of nonvolatile material~~;~~ ~~or~~

(C) ~~the~~The owner or operator installs and operates:

(i) a carbon adsorption system ~~which that~~ reduces the organic solventVOC emissions from the capture system by at least 90.0 percent by weight;

(ii) an incineration system ~~which that~~ oxidizes at least 90.0 percent of the ~~nonmethane volatile organic solventVOC~~ measured as total combustible carbon to carbon dioxide and water; or,

(iii) an alternative organic solventVOC emission reduction system demonstrated to have at least 90.0 percent reduction efficiency, measured across the control system, ~~and that~~ has been approved by the Executive Division Director.

(2) A capture system must be used in conjunction with the emission control systems in 252:100-39-43(c) (1) (C). The design and operation of the capture system must be consistent with good

engineering practice, and shall be required to provide for an overall reduction in ~~volatile organic compound~~VOC emissions of at least:

- (A) 75.0 percent where a publication rotogravure process is employed;
- (B) 65.0 percent where a packaging rotogravure process is employed; or,
- (C) 60.0 percent where a flexographic printing process is employed.

(d) **Compliance schedule.** Compliance with this Section will be accomplished by affected facilities ~~within two (2) years of approval of this Subchapter by the Oklahoma Environmental Quality Board by May 23, 1982.~~

(e) **Testing.** Test procedures to determine compliance with this Subchapter must be consistent with EPA Reference Method 24 or equivalent ASTM Methods.

252:100-39-44. Manufacture of pneumatic rubber tires

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

(1) **"Automatic tread end cementing"** means the application of a ~~solvent~~VOC based cement to the tire tread ends by automated devices.

(2) **"Bead dipping"** means the dipping of an assembled tire bead into a ~~solvent~~VOC based cement.

(3) **"Green tires"** means assembled tires before molding and curing have occurred.

(4) **"Green tire spraying"** means the spraying of green tires, both inside and outside, with release compounds ~~which~~that help remove air from the tire during molding and prevent the tire from sticking to the mold after curing.

(5) **"Manual tread end cementing"** means the application of a ~~solvent~~VOC based cement to the tire tread ends by manufacturers.

(6) **"Passenger type tire"** means agricultural, airplane, industrial, mobile home, light and medium duty truck, and passenger vehicle tires with a bead diameter up to but not including 20.0 inches and cross section dimension up to 12.8 inches.

(7) **"Pneumatic rubber tire manufacture"** means the production of pneumatic rubber, passenger type tires on a mass production basis.

(8) **"Undertread cementing"** means the application of a ~~solvent~~VOC based cement to the underside of a tire tread.

(9) **"Water based sprays"** means release compounds, sprayed on the inside and outside of green tires, in which solids, water and emulsifiers have been substituted for ~~organic solvents~~VOCS. These sprays may contain an average of up to five percent ~~organic solvent~~VOC.

(b) **Applicability.**

(1) This Section applies to VOC emissions ~~from the following operations~~ infrom all major source pneumatic rubber tire

manufacturing facilities located in Oklahoma County from:

- (A) undertread cementing;
- (B) automatic tread end cementing; and,
- (C) green tire spraying.

(2) The provisions of this Section do not apply to the ~~productions~~production of specialty tires for antique or other vehicles when produced on an irregular basis or with short production runs. This exemption applies only to tires produced on equipment separate from normal production lines for passenger type tires.

(3) Manual tread end cementing operations are exempt from the provisions of this Section.

(c) Provisions for specific processes Control requirements.

(1) Undertread cementing or automatic tread end cementing. The owner or operator of an undertread cementing, or automatic tread end cementing, operation subject to this Section shall install and operate the following:

(A) ~~install and operate a~~ capture system, designed to achieve maximum reasonable capture from all undertread cementing, and automatic tread end cementing operations. Maximum reasonable capture would require that hood enclosures be designed in such a manner to minimize open areas and enclose as much of the emission source as practical while maintaining a minimum in-draft velocity of 200 feet per minute except during times when the enclosure must be opened to allow work inside or for the inspections of the product in progress. Maximum reasonable capture shall be consistent with the ~~following documents~~:

(i) Industrial Ventilation, A Manual of Recommended Practices, 14th Edition, American Federation of Industrial Hygienists; and,

(ii) Recommended Industrial Ventilation guidelines, U.S. Department of Health Education and Welfare, National Institute of Occupational Safety and Health.

(B) ~~install and operate a~~ control device that meets the requirements of one of the following systems:

(i) A carbon adsorption system designed and operated ~~in a manner such so~~ that there is at least an initial 95.0 percent removal of VOC by weight from the gases ducted to the control device with at least a 90 percent 3 year removal average, ~~or,~~

(ii) An incineration system that oxidizes at least 90.0 percent of the ~~nonmethane volatile organic compounds~~ (VOCs) (measured as total combustible carbon) which enter the incinerator to carbon dioxide and water.

(iii) An alternative ~~volatile organic compound~~ VOC emission reduction system certified by the owner or operator to have at least a 90.0 percent reduction efficiency, measured across the control system, and that has been approved by the ~~Executive~~Division Director.

(2) Green tire spraying. The owner or operator of a green tire spraying operation subject to this Section shall implement one

of the following means of reducing ~~volatile organic compound~~VOC emissions~~;~~.

(A) ~~substitute~~Substitute water-based sprays for the normal ~~solvent-based~~ VOC-based mold release compound~~;~~ ~~or~~.

(B) ~~install~~Install a capture system designed and operated in a manner that will capture and transfer at least 90.0 percent of the VOC emitted by the green tire spraying operation to a control device, and install and operate a control device that meets the requirements of one of the following systems~~;~~.

(i) ~~a~~An carbon adsorption system designed and operated ~~in a manner such so~~ that there is at least 95.0 percent removal of VOC by weight from the gases ducted to the control device~~;~~ ~~or~~.

(ii) ~~an~~An incineration system that oxidizes at least 90.0 percent of the ~~nonmethane volatile organic compounds~~(VOC VOCs (measured as total combustible carbon) to carbon dioxide and water~~;~~ ~~or~~.

(iii) ~~an~~An alternative ~~volatile organic compound~~VOC emission reduction system approved by the Division Director and certified by the owner or operator to have at least a 90.0 percent reduction efficiency, measured across the control system~~,~~ ~~that has been approved by the Executive~~Division Director.

(3) Exemption. If the total ~~volatile organic compound~~VOC emissions from all undertread cementing, tread-end cementing, bead dipping, and green tire spraying operations at a pneumatic rubber tire manufacturing facility do not exceed 57 grams per tire, 252:100-39-44(c)(1) and 252:100-39-44(c)(2) shall not apply.

~~(4) An owner or operator of an undertread cementing, tread end cementing, bead dipping or green tire spraying operation subject to this Section may, instead of implementing measures required by 252:100-39-44(c)(1) and 252:100-39-44(c)(2), submit to the Executive Director a petition for alternative controls. The petition must be submitted in writing before September 15, 1981 and must contain:~~

~~(A) the name and address of the company and the name and telephone number of a responsible company representative over whose signature the petition is submitted;~~

~~(B) a description of all operations conducted at the location to which the petition applies and the purpose the volatile organic compound emitting equipment serves within the operations;~~

~~(C) reference to the specific emission limits, operational and/or equipment controls for which alternative emission limits, operational and/or equipment controls are proposed;~~

~~(D) a detailed description of the proposed alternative emission limits, operational and/or equipment controls, the magnitude of volatile organic compound emission reduction which will be achieved, and the quantity and composition of volatile organic compounds which will be emitted if the alternative emission limits, operational and/or equipment~~

~~controls are instituted,~~

~~(E) a schedule for the installation and/or institution of the alternative operational and/or equipment controls in conformance with the appropriate compliance schedule section, and,~~

~~(F) a demonstration that the alternative control program constitutes reasonably available control technology for the petitioned facility. The factors to be presented in this demonstration include but are not limited to:~~

~~(i) the capital expenditure necessary to achieve the petitioned level of control,~~

~~(ii) the impact of these costs on the firm,~~

~~(iii) the energy requirements of the petitioned level of control,~~

~~(iv) the impact on the environment in terms of any increase in air, water and solid waste effluent discharge of the petitioned level of control,~~

~~(v) any adverse worker or product safety implications of the petitioned level of control, and,~~

~~(vi) an analysis for each of the factors in 252:100-39-44(c)(4)(F)(i) through 252:100-39-44(c)(4)(F)(v) for the control levels specified in 252:100-39-44(c)(1) and 252:100-39-44(c)(2).~~

~~(5) The Executive Director may approve a Petition for Alternative Control if:~~

~~(A) the petition is submitted in accordance with 252:100-39-44(c),~~

~~(B) the petition demonstrates that the alternative controls represent reasonable available control technology, or,~~

~~(C) the petition contains a compliance schedule for achieving and maintaining a reduction of volatile organic compound emissions as expeditiously as practicable, but no later than the photochemical oxidant attainment date.~~

~~[NOTE: 252:100-39-44(c)(4) and (5) were deleted since the provisions for alternative controls were not used prior to the deadline.]~~

(d) **Compliance schedule.** Compliance with this Section will be accomplished by affected facilities on or before December 31, 1982.

(e) **Testing and monitoring.**

(1) Test procedures to determine compliance with this Section must be approved by the Executive Division Director and be consistent with:

(A) EPA Guideline Series Document "Measurement of Volatile Organic Compounds," EPA-450/2-78-041, and,

(B) Appendix A of "Control of Volatile Organic Emissions from Existing Stationary Sources - Volume II: Surface coating of Cans, Coils, Paper, Fabrics, Automobiles, and Light-Duty Trucks," EPA-450/2-77-008.

(2) The Executive Division Director may accept, instead of green tire spray analysis, a certification by the manufacturer of the composition of the green tire spray, if supported by actual

batch formulation records.

(3) If add-on control equipment is used, continuous monitors of ~~the following parameters~~ shall be installed, periodically calibrated, and operated at all times that the associated control equipment is operating to measure:-

- (A) exhaust gas temperatures of incinerators;
- (B) temperature rise across a catalytic incinerator bed;
- (C) breakthrough of VOC on a carbon adsorption unit; and,
- (D) any other parameter for which a continuous monitoring or recording device is required by the Executive Division Director.

252:100-39-45. Petroleum (solvent) dry cleaning

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:-

(1) "**Cartridge filters**" means perforated canisters containing filtration paper and/or activated carbon that are used in a pressurized system to remove solid particles and fugitive dyes from soil-laden petroleum solvent.

(2) "**Containers and conveyors and of petroleum solvent**" means piping, ductwork, pumps, storage tanks, and other ancillary equipment that are associated with the installation and operation of washers, dryers, filters, stills, and settling tanks.

(3) "**Dry cleaning**" means a process of the cleaning of textiles and fabric products in which articles are washed in a non-aqueous solution (petroleum solvent) and then dried by exposure to a heated air stream.

(4) "**Housekeeping**" means those measures and precautions necessary to minimize the release of petroleum solvent to the atmosphere.

(5) "**Operations parameters**" means the activities required to insure that the equipment is operated in a manner to preclude the loss of petroleum solvents to the atmosphere.

(6) "**Perceptible leaks**" means any petroleum solvent vapor or liquid leaks that are conspicuous from visual observation, such as pools or droplets of liquid, or buckets or barrels of petroleum solvent or petroleum solvent-laden waste standing open to the atmosphere.

(7) "**Petroleum solvent**" means organic material produced by petroleum distillation comprising a hydrocarbon range of 8 to 12 carbon atoms per organic molecule that exists as a liquid under standard conditions.

(b) **Applicability.** This Section applies to petroleum solvent washers, dryers, ~~solvent~~-filters, settling tanks, vacuum stills, and other containers and conveyors of petroleum solvent that are used in petroleum solvent dry cleaning facilities in Tulsa County only.

(c) ~~Provisions for specific processes~~ Operating requirements.

(1) The owner or operator of a petroleum solvent dry cleaning facility shall not operate any dry cleaning equipment using

petroleum solvents unless:

(A) there are no perceptible liquid or vapor leaks from any portion of the equipment;

(B) all washer lint traps, button traps, access doors and other parts of the equipment where petroleum solvent may be exposed to the atmosphere are kept closed at all times except when required for proper operation or maintenance;

(C) the still residue is stored in sealed containers and ~~the~~ used filtering material is ~~to be~~ placed into a sealed container suitable for use with petroleum solvents, immediately after removal from the filter and ~~be~~ disposed of in the prescribed manner; or,

(D) cartridge filters containing paper or carbon or a combination thereof, which are used in the dry cleaning process are ~~to be~~ drained in the filter housing for at least 24 hours prior to removal.

(2) The owner or operator of a petroleum solvent dry cleaning facility shall not operate any drying tumblers and cabinets that use petroleum solvents unless tumblers and cabinets are operated in ~~such~~ a manner as to control petroleum solvent vapor leaks by reducing the number of sources where petroleum solvent is exposed to the atmosphere. Under no circumstances should there be any open containers (can, buckets, barrels) of petroleum solvent or petroleum solvent-containing material. Equipment containing solvent (washers, dryers, extractors, and filters) should remain closed at all times other than during maintenance or load transfer. Lint filter and button trap covers should remain closed except when petroleum solvent-laden lint and debris are removed. Gaskets and seals should be inspected and replaced when found worn or defective. ~~Petroleum solvent laden solvent-laden~~ clothes should never be allowed to ~~sit~~ remain exposed to the atmosphere for longer periods than are necessary for load transfers. Finally, vents on petroleum solvent-containing waste and new petroleum solvent storage tanks should be constructed and maintained in a manner that limits petroleum solvent vapor emissions to the maximum possible extent.

(3) The owner or operator shall repair all petroleum solvent vapor and liquid leaks within 3 working days after identifying the sources of the leaks. If necessary repair parts are not on hand, the owner or operator shall order these parts within 3 working days, and repair the leaks no later than 3 working days following the arrival of the necessary parts.

(d) **Disposal of filters.** Filters from the petroleum dry cleaning facility shall be disposed of by:

(1) incineration at a facility approved by the fire marshall's office for such disposal;

(2) by recycling through an approved vendor of this service;
or,

(3) by any other method approved by the Executive Division Director.

(e) **Compliance schedule.** Compliance with 252:100-39-45(c)(1)

through 252:100-39-45(c)(3), will be accomplished by affected facilities on or before October 1, 1986.

252:100-39-46. Coating of parts and products

(a) **Applicability.** This Section shall apply only to those industries located in Tulsa County which manufacture and/or coat metal parts and products, ~~such as This Section is applicable to~~ large farm machinery, small farm machinery, small appliances, commercial machinery, industrial machinery and fabricated metal products. Architectural coating, aerospace coating, and automobile refinishing are not included.

(b) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise.

(1) **"Air or forced air dry coatings"** means coatings ~~which that~~ are dried by the use of air or forced warm air at temperatures up to 194°F.

(2) **"Clear coat"** means a coating ~~which that~~ lacks color and opacity or is transparent and uses the undercoat as a reflectant base.

(3) **"Extreme performance coatings"** mean coatings designed for harsh exposure or extreme environmental conditions (~~i.e.e.g., exposure to the weather,~~ all of the time, temperature above 200°F, detergents, abrasive and scouring agents, solvents, corrosive atmosphere or similar conditions).

(4) **"Facility"** means all emission sources located on a contiguous ~~property~~ properties under common control which are affected by the surface coating provisions of ~~OAC~~ 252:100-37 and 252:100-39.

(5) **"Powder"** means a coating ~~which that~~ is applied in a finely divided ~~(powder)~~ state by various methods, and becomes a continuous, solid film when the metal part or product is moved to an oven for curing.

(6) **"Transfer efficiency"** means the weight (or volume) of coating solids adhering to the surface being coated divided by the total weight (or volume) of coating solids delivered to the applicator.

(c) **Existing source requirement.** No owner or operator ~~subject to the provisions of this Section~~ shall discharge or cause the discharge into the atmosphere from an existing coating line or individual coating operation any ~~organic solvent~~ VOC in excess of the amounts listed in 252:100-39-46(d) as calculated by EPA method 24, 40 CFR Part 60.

(d) **Standards.** The following table enumerates the limitations for surface coatings in pounds of ~~solvent~~ VOC per gallon of coating as applied (less water/~~exempt solvent water and exempt compounds~~) ~~+~~. If more than one limit listed in the table is applicable to a specific coating, then the least stringent limitation shall be applied.

Coating type	Limitations	
	lbs/gal	kg/liter
AQC10-20.39	29	DRAFT 9/15/98

Air or Forced Air Dry	3.5	420.42
Clear Coat	4.3	520.52
Extreme Performance	3.5	420.42
Powder	0.4	050.05
Other	3.0	360.36

(e) **Emission factor.** For the purposes of calculating an emission factor (EF) in pounds ~~VOS~~VOC per gallon of coating solids, the following formula will be utilized:

$$EF = V D / 1 - (V+W) = V D / S$$

where: V = volume fraction of ~~solvent~~VOC in coating₇.
D = density of ~~solvent~~VOC in the coating₇.
W = volume fraction of water in coating₇ and.
S = 1 - (V+W) = volume fraction of solids in coating.

(f) ~~Emission limit Compliance.~~ ~~If more than one emission limit as listed in 252:100-39-46(d) is applicable to a specific coating, then the least stringent emission limitation shall be applied.~~ Compliance with the coating limits listed in 252:100-39-46(d) is to be calculated on a daily weighted average basis.

(g) ~~Solvent containing VOC-containing materials.~~ ~~Solvent containing VOC-containing materials used for clean up shall be considered in the emissions VOC content limits listed in 252:100-39-46(d) unless:~~

- (1) the ~~solvent~~VOC containing materials are maintained in a closed container when not in use;
- (2) closed containers are used for the disposal of cloth or paper or other materials used for surface preparation and cleanup;
- (3) the spray equipment is disassembled and cleaned in a ~~solvent~~VOC vat and the vat is closed when not in use; or,
- (4) the ~~solvent~~VOC containing materials used for the clean up of spray equipment are sprayed directly into closed containers.

(h) ~~Exemptions.~~ ~~Exemptions to this Section shall be permitted for combined emissions at one site/facility, which do not exceed a 10 tons/year emissions cutoff based on the facility's~~ Facilities with a potential to emit 10 tons/year or less of ~~VOS~~VOC from coating operations are exempt from this Section. Once this limit is exceeded, the ~~source~~facility will always be subject to the limits of this Section.

(i) **Alternate standard.** Emissions Coatings with VOC contents in excess of those permitted~~allowed~~ by 252:100-39-46(d) are allowable~~may be used~~ if both of the following conditions are met₇.

(1) ~~emissions~~Emissions that would result in the absence of control are reduced to levels equivalent to those permitted by that would occur if the VOC content of the coatings met the limits contained in 252:100-39-46(d) and ~~meet~~there is an overall control efficiency of at least:

- (A) 85 percent₇ by incineration₇ ~~or~~
- (B) 85 percent₇ by absorption₇ or₇ ~~any other equipment of~~

~~equivalent reliability and effectiveness, and,~~
(C) 85 percent by any other equipment of equivalent reliability and effectiveness.

(2) ~~no~~ air pollution, as defined by the Clean Air Act, results.

(j) **Emission plan.**

(1) Development of a plant-wide emission plan. A n owner/operator may develop a plant-wide emission plan consistent with EPA's Emission Trading Policy as published in the December 4, 1986 Federal Register instead of having each coating line comply with the emission VOC content limitations prescribed contained in subsection (d) of this Section 252:100-39-46(d), provided if the following conditions are met-.

~~(1)(A)~~ The owner or operator demonstrates, ~~by means of approved material balance or manual emission test methods, by the methods prescribed in 252:100-5-2.1(d) that sufficient reductions in organic solvent VOC emissions may be obtained by controlling other facilities~~ sources within the plant to the extent necessary to compensate for all excess emissions which result from one or more coating lines not achieving the prescribed limitation. Such demonstration shall be made ~~described in writing and shall include:~~

~~(A)(i)~~ a complete description of the coating line or lines ~~which that~~ will not comply with the emission VOC content limitation in 252:100-39-46(d);

~~(B)(ii)~~ quantification of emissions, in terms of pounds per day of ~~organic solvents~~ VOCs, which are in excess of the prescribed emission VOC content limitation for each coating line described in ~~252:100-39-46(d)~~ 252:100-39-46(j)(A)(i);

~~(C)(iii)~~ a complete description of each ~~facility and the related control system, if any, for those facilities within the plant where~~ how emissions will be decreased at specific sources to compensate for excess emissions from each coating line described in ~~252:100-39-46(d)~~ 252:100-39-46(j)(A)(i) and the date on which such reduction will be achieved;

~~(D)(iv)~~ a transfer efficiency based on a 60 percent baseline with emissions expressed in pounds of VOC per gallon of solids when transfer efficiency is used to compensate for excess emissions from spray painting operations, the transfer efficiency shall be based on a 60 percent baseline, with emissions expressed in pounds of solvent per gallon of solids. Credits for improvements in transfer efficiency shall be demonstrated with in plant testing which complies with approved EPA methods-;

(v) a demonstration of credits for improvements in transfer efficiency with in plant testing that complies with EPA methods.

~~(E)(vi)~~ quantification of emissions, in terms of pounds per day of ~~organic solvents~~ VOCs, for each source both before and after the improvement or installation of any applicable control system, or any physical or operational

changes to such a facility or facilities to reduce emissions and the date on which such reductions will be achieved; and,

~~(F)~~ (vii) a description of the procedures and methods used to determine the emissions of ~~organic solvents~~ VOCs.

~~(2)~~ (B) The plant-wide emission reduction plan does not include decreases in emissions resulting from requirements of other applicable air pollution rules. The plant-wide emission reduction plan as described in the Emissions Trading Policy may include voluntary decreases in emissions accomplished through installation or improvement of a control system or through physical or operational changes to ~~facilities~~ emission units, including permanently reduced production or closing a facility, located on the premises of a surface-coating operation.

~~(3)~~ (2) Compliance with a plant-wide emission plan. The implementation of a plant-wide emission reduction plan instead of compliance with the ~~emissions~~ VOC content limitation prescribed in 252:100-39-46(d) has been expressly approved by the Executive Director and the EPA Administrator. Upon approval of a plan, any emissions in excess of those established for each facility under the plan shall be a violation of these rules.

(k) Compliance, testing, and monitoring requirements.

(1) The ~~Executive Division~~ Director may require the ~~owner/operator~~ owner or operator of a source to demonstrate at his expense, compliance with the emission limits using EPA Methods 24, 24A, 1-4, 25, 25A, 25B in 40 CFR 60.444 or EPA Document 450/3-84-019. At a minimum, such test must show that the overall capture efficiency and destruction efficiency are equal to 85 percent, (e.g., 90 percent capture efficiency multiplied by 95 percent destruction efficiency equals 85.5 percent system efficiency). The one hour bake option in Method 24 is required when doing compliance testing.

(2) Testing for plant-wide emission plans shall be conducted by the ~~owner/operator~~ owner or operator at his expense to demonstrate compliance with the ~~emission~~ VOC content limits contained in 252:100-39-46(d).

(3) Monitoring shall be required of any ~~owner/operator~~ owner or operator subject to this Section who uses add-on control equipment for compliance. Such monitoring shall include:

~~(A)~~— installation and maintenance of monitors to accurately measure and record operational parameters of all required control devices to ensure the proper functioning of those devices in accordance with design specifications, including:

~~(i)~~ (A) the exhaust temperature of direct flame incinerators and/or gas temperature immediately upstream and downstream of any catalyst bed;

~~(ii)~~ (B) the total amount of ~~volatile organic substances~~ VOCs recovered by carbon adsorption or other ~~solvent~~ VOC recovery system during a calendar month; and,

~~(iii)~~ (C) the dates and reasons for any maintenance and repair of the required control devices and the estimated quantity and

duration of volatile organic substance emissions during such activities;

~~(B) maintenance of records of any testing conducted at an affected facility in accordance with the provisions specified in 252:100-39-46(k)(3)(A)(i); and, [NOTE: Moved to 252:100-39-46(1).]~~

~~(C) maintenance of all records at the affected facility for at least two years and make such records available to representative of the State or local air pollution control agency upon request. [NOTE: Moved to 252:100-39-46(1).]~~

(1) ~~Reporting and recordkeeping. The owner/operator of a facility subject to this Section shall submit to the Executive Director upon written request, reports detailing specific VOS sources, the quantity of coatings used for a specific time period, VOS content of each coating, capture and control efficiencies, and any other information pertinent to the calculation of VOS emissions. The data necessary to supply the requested information shall be retained by the owner/operator for a minimum of two years.~~

(1) The owner or operator of a facility subject to this Section shall submit to the Division Director upon written request, reports detailing specific VOC sources; the quantity of coatings used for a specific time period, VOC content of each coating; capture and control efficiencies; and any other information pertinent to the calculation of VOC emissions. The data necessary to supply the requested information shall be retained by the owner or operator for a minimum of two years.

(2) The owner or operator of a facility subject to this Sections shall maintain records of any testing conducted at an affected facility in accordance with the provisions specified in 252:100-39-46(k), as well as all other records for at least two years. These records shall be available to representatives of the DEQ upon request.

(m) ~~Compliance date. The date of compliance with the requirements of this Section will be is December 31, 1990.~~

252:100-39-47. Control of ~~VOS~~VOC emissions from aerospace industries coatings operations

(a) Applicability.

(1) This Section applies to all aerospace facilities located in Tulsa County. Sources once subject to this Section are always subject.

(2) This Section does not apply to individual coating formulations ~~which that~~, when aggregated, do not exceed fifty-five (55) gallons per year for the facility.

~~(3) New and modified sources and coating applications not included in the plan are subject to the permit requirements set forth in OAC 252:100-7 and will be submitted to EPA as source-specific SIP revision, unless:~~

~~(A) the new coatings meet the presumption norm (3.5 pound VOS per gallon less water and exempt solvents limit); or,~~

~~(B) the total usage of the new coating does not exceed fifty-five (55) gallons per year of each coating formulation.~~

[NOTE: Moved to 252:100-39-47(d)(7)(B).]

~~(4)(3) Exemptions to this Section shall be permitted for combined emissions at one site/facility which do not exceed a ten-ton per year emission cut-off based on the facilities with a potential of the facility to emit 10 tons/year or less of VOC VOC from coatings operations are exempt from this Section.~~

(b) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

(1) **"Aerospace"** means the industries, air bases and depots that design and manufacture aircraft or military equipment components for either commercial or military customers.

(2) **"Aircraft"** means any machine designed to travel through the earth's atmosphere. This group includes but is not limited to airplanes, balloons, dirigibles, drones, helicopters, missiles, and rockets.

(3) **"Alternate ~~reasonable~~ reasonably available control technology (ARACT)"** means the lowest emission limit that a particular source is capable of meeting by the application of control technology that is reasonably available considering technological and economic feasibility as determined on a case-by-case basis.

(4) **"Coating"** means a material which covers a surface which alters the surface characteristics and from which ~~Volatile Organic Solvents~~ VOCs can be emitted during the application and/or curing process.

(5) **"CTG"** means the Control Guidance Document "Control of Volatile Organic Emissions From Existing Stationary Sources, Volume VI: Surface Coating of Miscellaneous Metal Parts and Products," EPA No. 450/2-78-015.

(6) **"Facility"** means all of the pollutant-emitting activities ~~which that~~ belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person or persons under common control.

(7) **"Low ~~organic solvent~~ VOC coating (~~LOSC~~) (LVOCC)"** means a coating ~~which that~~ contains less ~~organic solvent~~ VOC than the conventional coatings used by the industry. Low ~~organic solvent~~ VOC coatings include waterborne, higher solids, electrodeposition, and powder coatings.

(8) **"~~Reasonable~~ Reasonably available control technology (RACT)"** means ~~the lowest emission limit that a particular source is capable of meeting by the application of control technology that is reasonably available considering technological and economic feasibility and the need to impose such controls to attain and maintain a National Ambient Air Quality Standard.~~

(c) **General requirements.** ~~All affected facilities shall develop an emissions reduction plan as set forth in 252:100-39-47(d). Said plan, upon approval, shall constitute the determination of ARACT for that particular facility. ARACT must be installed and operating as approved in the plan no later than January 1, 1991 for existing facilities, unless additional phased compliance dates are otherwise approved in the plan. Provided, however, that in the~~

~~case that Tulsa County is still nonattainment for ozone within five (5) years of approval of ARACT, the Emission Reductions Plan and the ARACT determination shall be subject to review and modification.~~

(1) All affected facilities shall develop an emissions reduction plan as set forth in 252:100-39-47(d). This plan, upon approval, shall constitute the determination of ARACT for that particular facility.

(2) ARACT must be installed and operating as approved provided in the approved plan no later than January 1, 1991 for existing facilities, unless additional phased compliance dates are otherwise approved in the plan.

~~(3) If Tulsa County is still nonattainment for ozone within five (5) years of approval of ARACT, the Emission Reductions Plan and the ARACT determination shall be subject to review and modification. [NOTE: (3) was deleted because the 5 year period ended 1/1/96 and Tulsa was not and is not in nonattainment.]~~

(d) Emissions reduction plan.

~~(1) Plan development. Each owner/operator shall develop an emissions reduction plan for all affected facilities. Each plan shall include the following:~~

~~(A) a detailed, reasoned and exhaustive review of:~~

~~(i) each source of emissions within the facility and~~

~~(ii) (2) the entire plant collectively;~~

(A) a detailed, reasoned and exhaustive review of each source of emissions within the facility and the entire plant collectively;

(B) identification and quantification of emissions, in terms of pounds per day, of all organic solvents VOC both before and after the application of ARACT;

(C) a detailed, innovative engineering effort directed toward finding alternative air management schemes that can be incorporated in order to abate emissions at costs which are reasonable;
