(D) a consideration of the level of control that is achievable using available alternative coatings, to include LVOCC for every application, low organic solvent coatings (LOSEC);

~~(E) a consideration of the level of control achievable using available add on control devices. This demonstration shall include, at a minimum, a demonstration of the feasibility/infeasibility of the following control options:~~

~~(i) carbon absorption;~~

~~(ii) incineration/flaring;~~

~~(iii) condensation; and~~

~~(iv) a combination of 252:100-39-47(d)(1)(E)(i) and 252:100-39-47(d)(1)(E)(ii).~~

(E) a demonstration of the level of control achievable using available add-on control devices which shall include, at a minimum, the feasibility/infeasibility of carbon adsorption, incineration/flaring, condensation, and a combination of carbon adsorption and incineration/flaring;

~~(F) a consideration of facility redesign, including the following:~~

- ~~(i) recirculation;~~
- ~~(ii) reduced air flows;~~
- ~~(iii) consolidation of spray operations; and,~~
- ~~(iv) installation of common control devices for two or more separate coatings operations.~~

(F) a consideration of facility redesign, including recirculation, reduced air flows, consolidation of spray operations, and installation of common control devices for two or more separate coating operations;

~~(G) a consideration of alternative applications, to improve transfer efficiency, including:~~

- ~~(i) high volume low pressure spray equipment;~~
- ~~(ii) heated spray guns; and,~~
- ~~(iii) electrostatic spray equipment/powder coatings.~~

(G) a consideration of alternative applications, to improve transfer efficiency, including high-volume-low-pressure spray equipment, heated spray guns, and electrostatic spray equipment/powder coatings;

(H) an explanation why each source is not a typical coating source covered by the CTG as defined in 252:100-39-47(b);

(I) a cost/benefit analysis for all control technology considered; and,

(J) a detailed compliance schedule ~~which~~that includes the emission limit and/or control techniques for each emission source. ~~This schedule, which~~ together with other relevant considerations, shall be set forth in a separate section of the plan ~~which~~that summarizes and outlines ARACT for the referenced facility.

(2) Submission of emission reduction plans. ~~Upon completion,~~The emissions reduction plan shall be submitted in triplicate to the Air Quality Division. The preparer shall also submit a copy of the plan to Region VI Environmental Protection Agency ~~(EPA)~~EPA, Region VI.

(3) Action on plan. Within 30 days of submittal, or of ~~the effective date of this Section~~ May 25, 1990, whichever is later, the Air Quality Division shall, considering any comments submitted by EPA, either approve, modify or disapprove the plan.

(4) Public hearing. The Division shall, at the first meeting of the Air Quality Council following the approval, modification, or disapproval of the plan, present at public hearing, the staff's findings and ARACT determination. ~~Upon consideration of comments and recommendations from the Council, the owner/operator of the affected facility, the public and EPA, the Department shall, within ten (10) days after the public hearing, issue a final ARACT approval. Final approval shall constitute ARACT for the affected facility. The owner/operator shall be responsible for installation and operational provisions of the approved ARACT, including any specific provisions set forth therein. Any violation of the plan or of its provisions shall constitute a violation of this Section.~~

(5) Final approval. Upon consideration of comments and recommendations from the Council, the owner or operator of the affected facility, the public, and EPA, the DEO shall, within ten (10) days after the public hearing, issue a final ARACT approval. Final approval shall constitute ARACT for the affected facility.

(6) Compliance. The owner or operator shall be responsible for installation and operational provisions of the approved ARACT. Any violation of the plan or of its provisions shall constitute a violation of this Section.

~~(5)~~ (7) Submission of SIP revision.

(A) Upon approval by the Department DEO, the ARACT determination shall be submitted to EPA as a SIP revision.

(B) New and modified sources and coating applications not included in the plan are subject to the permit requirements set forth in 252:100-7 or 252:100-8, and will be submitted to EPA as source-specific SIP revision, unless one of the following applies.

(i) The new coatings meet the presumptive norm of 3.5 pound VOC per gallon less water and exempt compounds.

(ii) The total usage of the new coating does not exceed fifty-five (55) gallons per year of each coating formulation. [NOTE: Was 252:100-39-47(a)(3).]

(e) Reporting and recordkeeping.

(1) Recordkeeping requirements. The ~~owner/operator~~ owner or operator shall maintain the following:

~~(A) a material data sheet which documents the volatile organic solvent VOC content, composition, solids content, solvent VOC density and other relevant information regarding each coating and solvent VOC available for use in the affected surface coating processes; information detailing the operational parameters of the coating process sufficient to determine continuous compliance with the applicable control limits. Information as to the amounts of each type coating used and the amounts of solvents used for dilution in each coating type shall be maintained for each coating operation. Daily usage records will be kept for all coatings used that do not comply with the applicable control limits specified in the plan;~~

(B) information detailing the operational parameters of the coating process sufficient to determine continuous compliance with the applicable control limits;

(C) information as to the amounts of each type coating used and the amounts of VOC used for dilution in each coating type for each coating operation;

(D) daily usage records for all coatings used that do not comply with the applicable control limits specified in the plan; and,

~~(B)~~ (E) records shall be maintained of any monitoring and testing conducted at an affected facility in accordance with the provisions specified in 252:100-39-47(f).

~~(C)~~ (2) Method of calculating VOC content in coatings. records

Records required by 252:100-39-47(e)(1)(A) and ~~252:100-39-47(e)(1)(B)~~ through 252:100-39-47(e)(1)(E) detailing VOC in pounds per gallon of coating (less water and exempt compounds) shall be calculated as follows:

$$\text{VOC in lbs/gal of coating} = \frac{W_v - W_x - W_e}{V_m - V_w - V_x}$$

where: W_v = weight of all volatiles _{τ_i}
 W_w = weight of water _{τ_i}
 W_x = weight of exempt solvent compounds _{τ_i}
 V_m = 1 (one) _{τ_i}
 V_w = volume fraction of water _{τ_i} and
 V_x = volume fraction of exempt solvent compounds.

~~(D)~~ (3) Maintenance of records. Records required by 252:100-39-47(e)(1)(A) and ~~252:100-39-47(e)(1)(B)~~ through 252:100-39-47(e)(1)(E) shall be maintained for at least two years and shall be made available upon written request by representatives of the ~~Air Quality Division, AOD U.S. Environmental Protection Agency~~ or EPA or the ~~Tulsa City County Health Department.~~

~~(2)~~ (4) Alternative recordkeeping provision. Alternatively to 252:100-39-47(e)(1) through 252:100-39-47(e)(3), an equivalent recordkeeping provision which that satisfies the substantive requirements of 252:100-39-47(e)(1) through 252:10-39-47(e)(3) may be approved under the plan.

(f) Testing and monitoring.

(1) Testing. Each ~~owner/operator~~ owner or operator shall, upon a determination by the ~~Air Quality Division~~ that testing is required to establish emission from any particular source or sources, conduct such tests at his own expense. Test methods may include 1-4, 18, 24, 24A, 25A, 25B found in the Appendix A of 40 CFR Part 60, including the procedures found at 40 CFR 60.444.

(2) Monitoring. Monitoring shall be required of any ~~owner/operator~~ owner or operator subject to this section who uses add-on control equipment for compliance. Such monitoring shall include accurately measure and record operational parameters of all required control devices to ensure the proper functioning of those devices in accordance with design specifications, including:

~~(A) installation and maintenance of monitors to accurately measure and record operational parameters of all required control devices to ensure the proper functioning of these devices in accordance with design specifications, including:~~

~~(i) (A) the exhaust temperature of direct flame incinerators and/or gas temperature immediately upstream and downstream of any catalyst bed;~~

~~(ii) (B) the total amount of volatile organic substances VOCs recovered by carbon adsorption or other solvent VOC recovery system during a calendar month; and,~~

~~(iii) (C) the dates and reasons for any maintenance and repair~~

of the required control devices and the estimated quantity and duration of volatile organic substance VOC emissions during such activities.

~~(B) maintenance of records of any testing conducted at an affected facility in accordance with the provisions specified in 252:100-39-47(f)(2)(A)(i); and,~~

~~(C) maintenance of all records at the affected facility for at least two years and make such records available to representatives of the State or local air pollution control agencies upon request. (252:100-39-47 Effective May 25, 1990)~~

~~[NOTE: 252:100-39-47(f)(2)(B) and (C) are covered in 252:100-39-47(e)(1)(E) and 252:100-39-47(e)(3).]~~

~~252:100-39-48. Vapor recovery systems [NOTE: This section has been combined with 252:100-39-41 as 252:100-39-41(e).]~~

~~(a) Applicability. This Section applies only in Tulsa County. [NOTE: Moved to 252:100-39-41(e)(1).]~~

~~(b) Storage of volatile organic compounds 400-40,000 gallons (9.5-953 bbls).~~

~~(1) No person shall store or permit the storage of gasoline or other volatile organic compounds in any stationary storage container with a nominal capacity greater than 400 gallons (9.5 bbls) and less than 40,000 gallons (952.4 bbls) unless such container is equipped with a submerged fill pipe or is bottom filled. No person shall store or permit the storage of gasoline or other volatile organic compounds in any stationary storage container with a nominal capacity greater than 2,000 gallons (47.5 bbls) and less than 40,000 gallons (952.4 bbls) unless such container is equipped with a vapor control system that has an efficiency of no less than 90 percent by weight of the volatile organic compounds contained in the displaced vapors and is equipped with a pressure relief valve in the atmospheric vent system which maintains a pressure of 16 ounces per square inch and 1/2 ounce per square inch vacuum. [NOTE: The last sentence of 252:100-39-48(b)(1) was moved to 252:100-39-41(e)(2)(A). The rest of 252:100-39-48(b)(1) was deleted since it repeats material already in 252:100-39-41.]~~

~~(2) The vapor recovery system shall include one or more of the following:~~

~~(A) a vapor tight return line from the storage container to the delivery vessel and a system that will ensure that the vapor return line is connected before gasoline or volatile organic compounds can be transferred into the container (i.e., popped connectors from the storage container to the delivery vessel.);~~

~~(B) a float vent valve assembly must be installed in the vapor return/vent line on new and existing dual point installations; however, for coaxial installations on existing stations, a vent sleeve extending six inches below the top of the tank will be allowed. Sleeves may be equipped with a 1/16 inch air bleed hole;~~

~~(C) the cross sectional area of the vapor recovery line must~~

~~be at least half of the cross-sectional area of the liquid delivery line, or,~~

~~(D) instead 252:100-39-48(b)(2)(A) through 252:100-39-48(b)(2)(C), other equipment that has a total collection efficiency no less than 90 percent by weight of the total hydrocarbon compounds in the displaced vapor provided that approval of the proposed design, installation, and operation is obtained from the Executive Director prior to start of construction. [NOTE: 252:100-39-48(b)(2) was moved to 252:100-39-41(e)(2)(A).]~~

~~(3) Exemptions to this Section may be granted provided the owner/operator shows to the satisfaction of the appropriate authority that the container is used exclusively for agricultural purposes or that the facility, based on the most current 12 month's data, dispenses 120,000 gallons per year or less. [NOTE: Moved to 252:100-39-41(e)(2)(B)(ii).]~~

~~(4) The applicability of this Section shall be determined by the most restrictive of the 2,000 gallon tank size as specified in 252:100-39-48(b)(1) or the 120,000 gallon annual throughput described in 252:100-39-48(b)(3). However, once a facility places a 2,000 gallon tank in service or exceeds the 120,000 gallon annual throughput described in 252:100-39-48(b)(3), that facility shall always be subject to the provisions of this Section. (effective February 12, 1990) [NOTE: Moved to 252:100-39-41(e)(2)(B)(ii).]~~

~~(5) If emission testing is conducted, the appropriate test methods selected from EPA Methods 1 through 4, 18, 21, 25, 25A and 25B will be utilized. [NOTE: Moved to 252:100-39-41(e)(2)(C).]~~

~~(6) Compliance with this subsection will be accomplished by affected owner/operator by December 31, 1986. [NOTE: Moved to 252:100-39-41(e)(2)(D).]~~

~~(7) The owner/operator of a facility or facilities shall obtain, by whatever means practicable, certification from the owner/operator of the transport/delivery vessels that all deliveries of gasoline or other volatile organic compounds made to their facility or facilities located in Tulsa County, shall be made by vessels which comply with the requirements contained in 252:100-39-48(d). Compliance with this Section shall be accomplished by affected owner/operators no later than December 31, 1990. (Effective February 12, 1990) [NOTE: Moved to 252:100-39-41(e)(2)(E).]~~

~~(e) Loading of volatile organic compounds. [NOTE: This subsection was moved in part to 252:100-39-41(e)(3).]~~

~~(1) No person shall operate, install or permit the building, operation or installation of a stationary volatile organic compound loading facility unless such loading facility is equipped with a vapor collection and/or disposal system properly installed, in good working order and in operation.~~

~~(2) When volatile organic compounds are loaded through the hatches of a transport vessel, a pneumatic, hydraulic or mechanical means shall be provided to ensure a vapor tight seal~~

~~at the hatch.~~

~~(3) A means shall be provided to prevent organic material drainage from the loading device when it is removed from the transport vessel, or to accomplish complete drainage before removal.~~

~~(4) When loading is effected through means other than hatches, all loading and vapor lines shall be equipped with fittings which make vapor tight connections and which close automatically when disconnected.~~

~~(5) The vapor collection and/or disposal portion of the system shall consist of one or more of the following in addition to bottom loading or submerged fill of transport vessels:~~

~~(A) an absorption/adsorption system or condensation system with a minimum recovery efficiency of 90 percent by weight of all the volatile organic compound vapors and gases entering such disposal system;~~

~~(B) a vapor handling system which directs all vapors to a fuel gas incineration system with a minimum disposal efficiency of 95 percent; or,~~

~~(C) other equipment of at least 90 percent efficiency, provided plans for such equipment are submitted to and approved by the Executive Director. Storage vessels at service stations and bulk plants may be used for intermediate storage prior to recovery/disposal of vapors as per 252:100-39-48(e)(5)(A) through 252:100-39-48(e)(5)(C) if they are designed to prevent the release of vapors during use.~~

~~(6) Subsection 252:100-39-48(e) shall apply to any facility which loads volatile organic compounds into any transport vessel designed for transporting volatile organic compounds. [NOTE: 252:100-39-48(c)(1) through (6) was deleted since this material is already contained in 252:100-39-41(c).]~~

~~(7) Facilities will be checked annually in accordance with EPA Test Method 21, Leak Test. Leaks greater than 5000 ppm will be repaired within 15 days. Facilities will retain inspection and repair records for two years. [NOTE: Moved to 252:100-39-41(e)(3).]~~

~~(d) Transport/delivery vessel requirements.~~

~~(1) Maintenance.~~

~~(A) The delivery vessel must be maintained so as to be vapor tight except when sampling, gauging, or inspecting. These activities shall not occur while the vehicle is loading or unloading or is in a pressurized state.~~

~~(B) The delivery vessel must be equipped, maintained and operated to receive vapors from sources identified in 252:100-39-41(b)(1) and retain these and all other vapors until they are delivered into an authorized vapor recovery/disposal system.~~

~~(C) Vessels with defective equipment such as boots, seals, and hoses, or with other deficiencies which would impair the vessels ability to retain vapors or liquid shall be repaired within 5 days.~~

~~(D) The certified testing facility must certify to the~~

~~approving agency that the proper testing and repairs have occurred in accordance with 252:100-39-48(d)(2)(A)(i). The vessel must also display on the rear panel a tag showing the date of the pressure test.~~

~~(E) No owner/operator will allow a delivery vessel to be filled at a facility unable to receive displaced organic vapors nor service tanks unable to deliver displaced vapors except for tanks/facilities exempted in 252:100-39-41(b). Terminal owners shall not fill vessels which do not display a current tag.~~

~~(F) Delivery vessels may be inspected by representatives of the appropriate health agency in order to determine their state of repair. Such a test may consist of a visual inspection, a vapor test with vapors not to exceed 5000 ppm. Failure of a vapor test will require the owner/operator to effect the necessary repairs within 10 days. Unless certification is made to the appropriate health agency within 5 days the vessel will be removed from service by the owner/operator. Failure to certify that the cited repairs have been effected will subject the vessel to sanctions. Upon certification of repairs the vessel will be allowed to operate in a normal manner.~~

~~(2) Testing requirements.~~

~~(A) Pressure test.~~

~~(i) Delivery vessels, delivering or receiving gasoline must be tested one time per year for vapor tightness. The vapor tightness test must be consistent with Appendix "A" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems", EPA 450/2-78-051. Tests shall be performed by the owner or a reputable transport service company. Test methods used to test these vessels by owners or testing companies must be approved for use by the Executive Director.~~

~~(ii) The vessel will be considered to pass the test prescribed in 252:100-39-48(d)(2)(A)(i) when the test results show that the vessel and its vapor collection systems do not sustain a pressure change of more than 3 inches of H₂O in addition there shall be no avoidable visible liquid leaks.~~

~~(B) Vapor test. Testing of the tank trucks for compliance with vapor tightness requirements as required under 252:100-39-41(d)(1)(F) must be consistent with Appendix "B" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems", EPA 405/2-78-051, as modified for this purpose and contained in 252:100-43-15. The requirements of 252:100-39-48 will become effective December 15, 1988. [NOTE: 252:100-39-48(d) was moved to 252:100-39-41(e)(4).]~~

252:100-39-49. Manufacturing of fiberglass reinforced plastic products

~~(a) General provisions. Within 12 months after promulgation of this Section all affected facilities shall limit emissions of VOS from fiberglass manufacturing to those listed in 252:100 39-49(a)(1), or have an approved plan for the reduction of such emissions. The plan must be submitted to the Executive Director within 6 months after promulgation of this Section, and shall detail those emissions which will be controlled, the means by which control will be achieved and will demonstrate that compliance will be achieved within two years from the date of promulgation of this Section. The approval authority for such plans shall reside with the Air Quality Council. All approved plans shall be submitted as SIP revisions.~~

~~(1) Compliance with 252:100 39-49(a) shall be accomplished by use of control equipment which can demonstrate an 85 percent reduction in the VOS released from each process gas stream, e.g. 90 percent capture efficiency multiplied by 95 percent destruction efficiency equals 85.5 percent system efficiency.~~

~~(2) Exemptions to the limits listed in 252:100 39-49(a)(1) may be allowed for any process gas stream which does not exceed six tons per year actual emissions based on 6240 hours per year. However, once this limit is exceeded, controls must be put in place and maintained at any operating level.~~

~~(b) Demonstration of compliance. The Executive Director may require the owner/operator of a source to demonstrate at his expense, compliance with the prescribed emissions limits. The testing shall be accomplished using the appropriate EPA test method or methods, these include methods 1 4, 18 25, 25A, 25B and 40 CFR 60.444. Initial compliance testing shall be accomplished within 180 days of the applicable compliance date.~~

~~(c) Testing. Testing for the alternate emissions plan shall be conducted by the owner/operator at his expense and shall demonstrate compliance with the emission limits contained in the approved plan.~~

~~(d) Recordkeeping. The owner/operator of a facility subject to this Section shall submit to the Executive Director upon written request reports detailing specific VOS sources, the quantity of solvents used during specific months, a description of the solvent used, control equipment efficiencies, equipment downtime and any other information pertinent to the calculation of VOS emissions from the facility. The owner/operator must also maintain records which detail the maintenance performed on all control equipment as well as a record of the downtime with the reason for each occurrence. Such records shall be maintained by the source for a minimum of two years. (252:100 39-49, Effective February 12, 1990)~~

(a) Applicability.

(1) This Section applies to any process gas stream with actual VOC emissions that exceed six tons per year based on 6,240 hours of operation per year.

(2) Once the limit in 242:100-39-49(a)(1) is exceeded, the controls required in 252:100-39-49(b) must be put in place and maintained and used at any operating level. [NOTE: This subsection was 252:100-39-49(a)(2).]

(b) Standards. Affected facilities shall limit emissions of VOC from fiberglass manufacturing by use of control equipment which can demonstrate an 85 percent reduction in the VOC released from each process stream (e.g. 90 percent capture efficiency multiplied by 95 percent destruction efficiency equals 85.5 percent system efficiency). [NOTE: This was 252:100-39-49(a)(1).]

(c) Compliance. All affected facilities must comply with one of the following.

(1) Meet the requirements of 252:100-39-49(b) by February 13, 1991.

(2) Have an approved plan for the reduction of VOC emissions as required by 252:100-39-49(b) by February 13, 1991.

(A) The plan shall be submitted by August 13, 1990, and shall:

(i) detail those emissions which will be controlled;

(ii) detail the means by which control will be achieved; and,

(iii) demonstrate that compliance will be achieved by February 13, 1992.

(B) The Air Quality Council shall have approval authority for the plans.

(C) All approved plans shall be submitted to the EPA as SIP revisions. [NOTE: This was 252:100-39-49(a).] [NOTE: Missing dates will be supplied.]

(d) Demonstration of compliance.

(1) The Division Director may require an owner or operator of a source to demonstrate at his expense, compliance with the requirements of 252:100-39-49(b).

(2) The testing shall be accomplished using the appropriate EPA test method or methods. These include methods 1-4, 18-25, 25A, 25B and 40 CFR 60.444.

(3) Initial compliance testing shall be accomplished within 180 days of the applicable compliance date.

(4) Testing for the emissions plan described in 252:100-39-49(c)(2) shall be conducted by the owner or operator at his expense and shall demonstrate compliance with the emission limits contained in the approved plan. [NOTE: 252:100-39-49(d)(1) through (3) was 252:100-39-49(b) and 252:100-39-49(d)(4) was 252:100-39-49(c).]

(e) Recordkeeping.

(1) The owner or operator of a facility subject to this Section shall submit to the Division Director upon written request, reports that include:

(A) details of specific VOC sources;

(B) the quantity of VOC used during specific months;

(C) a description of the VOC used;

(D) control equipment efficiencies;

(E) details of maintenance performed on all control equipment;

(F) equipment downtime; and,

(G) any other information pertinent to the calculation of VOC emissions from the facility.

(2) The records required in 252:100-39-49(e)(1) shall be maintained by the source for at least two years. [252:100-390-49, Effective February 12, 1990] [NOTE: This was 252:100-39-49(d).]

LIST OF ORGANIC COMPOUNDS WITH NEGLIGIBLE
PHOTOCHEMICAL REACTIVITY

40 CFR 51.100(s)(1) as it existed on July 1, 1998

From the Federal Register dated 4/9/98

Sec. 51.100 Definitions.

(s) Volatile organic compounds (VOC)

(1) This includes any such organic compound other than the following, which have been determined to have negligible photochemical reactivity:

methane;
ethane;
methylene chloride (dichloromethane);
1,1,1-trichloroethane (methyl chloroform);
1,1,2-trichloro-1,2,2-trifluoroethane (CFC-113);
trichlorofluoromethane (CFC-11);
dichlorodifluoromethane (CFC-12);
chlorodifluoromethane (HCFC-22);
trifluoromethane (HFC-23);
1,2-dichloro 1,1,2,2-tetrafluoroethane (CFC-114);
chloropentafluoroethane (CFC-115);
1,1,1-trifluoro 2,2-dichloroethane (HCFC-123);
1,1,1,2-tetrafluoroethane (HFC-134a);
1,1-dichloro 1-fluoroethane (HCFC-141b);
1-chloro 1,1-difluoroethane (HCFC-142b);
2-chloro-1,1,1,2-tetrafluoroethane (HCFC-124);
pentafluoroethane (HFC-125);
1,1,2,2-tetrafluoroethane (HFC-134);
1,1,1-trifluoroethane (HFC-143a);
1,1-difluoroethane (HFC-152a);
parachlorobenzotrifluoride (PCBTF);
cyclic, branched, or linear completely methylated siloxanes;
acetone;
perchloroethylene (tetrachloroethylene);
3,3-dichloro-1,1,1,2,2-pentafluoropropane (HCFC-225ca);
1,3-dichloro-1,1,2,2,3-pentafluoropropane (HCFC-225cb);
1,1,1,2,3,4,4,5,5,5-decafluoropentane (HFC 43-10mee);
difluoromethane (HFC-32);
ethylfluoride (HFC-161);
1,1,1,3,3,3-hexafluoropropane (HFC-236fa);
1,1,2,2,3-pentafluoropropane (HFC-245ca);
1,1,2,3,3-pentafluoropropane (HFC-245ea);
1,1,1,2,3-pentafluoropropane (HFC-245eb);
1,1,1,3,3-pentafluoropropane (HFC-245fa);
1,1,1,2,3,3-hexafluoropropane (HFC-236ea);
1,1,1,3,3-pentafluorobutane (HFC-365mfc);

chlorofluoromethane (HCFC-31);
1 chloro-1-fluoroethane (HCFC-151a);
1,2-dichloro-1,1,2-trifluoroethane (HCFC-123a);
1,1,1,2,2,3,3,4,4-nonafluoro-4-methoxy-butane ($C_4F_9OCH_3$);
2-(difluoromethoxymethyl)-1,1,1,2,3,3,3-heptafluoropropane
($(CF_3)_2CFCH_2OCH_3$);
1-ethoxy-1,1,2,2,3,3,4,4,4-nonafluorobutane ($C_4F_9OC_2H_5$);
2-(ethoxydifluoromethyl)-1,1,1,2,3,3,3-heptafluoropropane
($(CF_3)_2CFCH_2OC_2H_5$);
methyl acetate

and perfluorocarbon compounds which fall into these classes:

- (i) Cyclic, branched, or linear, completely fluorinated alkanes;
- (ii) Cyclic, branched, or linear, completely fluorinated ethers with no unsaturations;
- (iii) Cyclic, branched, or linear, completely fluorinated tertiary amines with no unsaturations; and
- (iv) Sulfur containing perfluorocarbons with no unsaturations and with sulfur bonds only to carbon and fluorine.

REVISIONS TO THE PROPOSED MODIFICATION OF SUBCHAPTER 39 FOR THE
OCTOBER 20, 1998, AIR QUALITY COUNCIL MEETING

Below is a list of the revisions that will be proposed to the proposed modification of Subchapter 39 that was presented at the August 18, 1998, AQC meeting. This list is furnished to facilitate review of the modification for the October 20, 1998 AQC meeting

1. Subchapter title. Changed (VOC) to (VOCs).
2. 252:100-39-1. "and carbon monoxide" was delete from the end of second sentence
3. 252:100-39-1. Changed "emissions of VOC" to "emissions of VOCs"
4. 252:100-39-2. Deleted (D) under the definition of "Submerged fill pipe" and added a NOTE
5. 252:100-39-2. "Volatile organic compound (VOC)" Removed language incorporating 40 CFR 51.100(s)(1) by reference. Added language that states if an organic compound is listed in 40 CFR 51.100(s)(1) we will presume it has negligible photochemical reactivity and it will not be considered a VOC. Revised the NOTE
6. 252:100-39-3. Deleted "and any areas designated nonattainment for ozone unless clearly indicated otherwise" from this Section.
7. 252:100-39-15(c)(3). Replaced "gaseous" with "gas" and deleted "VOC" prior to "service". This was done because "gas service" is defined and "gaseous VOC service" is not.
8. 252:100-39-15(d). Deleted ", or within 60 days of the date the area where the refinery is located was designated as a nonattainment area."
9. 252:100-39-15(f)(1)(D). Replaced "immediately" with "Within 24 hours"
10. 252:100-39-15(g)(2). "Copies of" was deleted from the beginning of this paragraph, "the" at the beginning of the sentence was replaced with "The", and "on site" was inserted after "be retained"
11. 252:100-39-15(g)(3). This paragraph has been rewritten as follows. "Copies of the monitoring log shall be made available for inspection at any reasonable time and copies of the log shall be provided to the Executive Division Director, upon written request, at any reasonable time of the AQD."
12. 252:100-39-17(d). Within the parentheses inserted "Control of Refinery Vacuum Producing systems, Wastewater Separators and Process Unit Turnarounds" prior to "EPA 450/2-77-025" and inserted "October, 1977" afterward.
13. 252:100-39-30(c)(1)(B)(iii). Deleted the period after "in"
14. 252:100-39-40(b). Corrected spelling error by replacing "liquified" with "liquefied"
15. 252:100-39-41(a)(1). In the first sentence replaced "A" with "An external"; inserted a hyphen between "pontoon" and "type"; deleted "internal floating cover," after "double-deck type" replaced "roof" with "cover"; inserted "or a fixed roof with an internal-floating cover." after "double-deck type cover"; and deleted "which". Began the second sentence by inserting "The cover" prior to "will rest", deleted the period after "liquid contents" and added "at all times (i.e. off the leg supports), except during initial fill, when the storage vessel is completely empty, or during refilling. When the cover is resting on the leg supports, the process of filling, emptying, or refilling shall be

continuous and shall be accomplished as rapidly as possible." Replaced "roof edge" with "cover edge", "11 psia" with "11.1 psia", and "75.8 kPa" with "76.6 kPa" In the last sentence in the paragraph inserted between "seals" and "will", "for a fixed roof vessel with an internal floating cover". Added a new sentence "Closure seals for vessels with external floating roofs will meet the requirements of 252:100-39-30(c)(1)(B)(i), (ii), and (iii).

16. 252:100-39-41(a)(2) Changed "VOC" following "80 mg/liter of" to "VOCs"
17. 252:100-39-41(c)(1). Replaced "2,000 gallons" with "10,000 gallons"
18. 252:100-39-42(a)(4). Inserted "guidance" between "EPA" and "document". Added "Control of Volatile Organic Emissions from Solvent Metal Cleaning," before "450/2-77-022."
19. 252:100-39-42(b)(1)(C)(iv). Replaced "cfm/ft.²" with "cfm/ft²"
20. 252:100-39-42(b)(2)(B)(ii) Changed "min." to "min"
21. 252:100-39-42(b)(2)(I). Changed "min." to "min"
22. 252:100-39-42(b)(3). Deleted "which is incorporated by reference,"
23. 252:100-39-42(c)(1)(A). Changed "min." to "min"
24. 252:100-39-42(c)(1)(C)(ii). Changed "ft./min." to "ft/min" and "m/min. to "m/min".
25. 252:100-39-42(c)(2)(C)(ii). Deleted period after "4 in"
26. 252:100-39-42(c)(2)(D). Deleted period after "4 in"
27. 252:100-39-47(d)(7)(B). Changed (*B)) to (B)
28. 252:100-39-47(e)(3). Deleted "written " prior to "request"

SUMMATION AND EXPLANATION OF THE PROPOSED
REVISIONS TO SUBCHAPTER 39

The proposed revisions to Subchapter 39 are the result of the DEQ program to simplify, clarify and correct all its rules. Unless otherwise noted no substantive changes are intended in the following revisions. *The substantive changes are summarized in Section III of this document.* This summation has been updated to reflect the substantive changes proposed after the August 18, 1998, Air Quality Council meeting. The only changes to this document are to III; IV.B.3.; IV.C.; V.A.4.; VII.B.1.; and VII.B.3. The document entitled "Revisions to the Proposed Modification of Subchapter 39 for the October 20, 1998, Air Quality Council Meeting" lists all proposed revisions to the draft presented at the August 18, 1998, meeting.

- I. Staff proposes to revise the title of the subchapter to make it clear that it applies to sources that are located not only in ozone nonattainment areas, but also in areas that were previously designated as nonattainment for ozone.
- II. Revisions made throughout the Subchapter
 - A. Revisions in terminology
 1. Environmental Protection Agency has been replaced by EPA - simplification
 2. Executive Director has been replaced, in most cases, by Division Director - clarification
 3. Organic material has been replaced by VOC - simplification
 4. Organic solvent has been replaced by VOC - simplification
 5. When appropriate hydrocarbon has been replaced by VOC - simplification
 6. Volatile organic compound (VOC) has been replaced by VOC - simplification
 7. Photochemical oxidants has been replaced by ozone - clarification
 8. Tank has been replaced by vessel - consistency in terminology
 9. Person has been replaced by owner or operator - clarification
 - B. Revised or deleted language
 1. "or permit the building or installation of" has been deleted throughout the rule - simplification and clarification
 2. Unless otherwise noted herein, changes in language were for simplification, clarification, correction of grammar, or consistency of format
- III. Only three of the revisions proposed by the staff are intended to be substantive. These are:
 - A. The revision of the definition of "Volatile organic compound (VOC) in 252:100-39-2;
 - B. The correction of the placement of "prior to lease custody transfer" in 252:100-39-30(b); and
 - C. The addition of a minimum annual throughput of 120,000 gallons and a minimum storage capacity of 10,000 gallons to 252:100-39-41(c).
- IV. PART 1. GENERAL PROVISIONS
 - A. 252:100-39-1. Purpose. The proposed revisions are to set forth as clearly as possible the purpose of the rule. and to make it clear that the rule also applies to sources located in areas that were previously designated as nonattainment for ozone.
 - B. 252:100-39-2. Definitions..

1. The staff proposes to delete the definition of REFINERY since this term is not used in Subchapter 39.
 2. Staff proposes to move the definition of CUTBACK ASPHALT to 252:100-39-40(a) and the definition of EFFLUENT WATER SEPARATOR to 252:100-39-18(a). These terms appear only in those sections.
 3. The staff proposes to revise the definition OF VOLATILE ORGANIC COMPOUND (VOC) to be consistent with the EPA definition, 40 CFR 51.100(s)(1) contains the list of organic compounds that EPA has designated as having negligible photochemical reactivity and therefore has excluded from the definition of VOC. Staff has added language that states if an organic compound is listed in 40 CFR 51.100(s)(1) it will be presume to have negligible photochemical reactivity and will not be considered a VOC.
 - ◆ This is part of the simplification process. What EPA classifies as VOC has been classified as organic material in Chapter 100 and divided into VOC, organic solvents, and volatile organic solvents. The Chapter contains two definitions of VOC, two definitions of organic solvents., and a definition of volatile organic solvent (VOS). The staff feels having one definition of VOC that is consistent with the EPA definition will simplify the Chapter as well as Subchapter 39.
 - ◆ Ozone is the NAAQS pollutant of concern in Subchapter 39. The rule provides for control of ozone by controlling the emissions of ozone precursors - photochemically reactive organic compounds. The proposed revision of the definition of VOC reflects this purpose.
 - ◆ A petition from the Chemical Manufacturers Association to exclude acetone from the definition of VOC was presented to the Air Quality Council at the meeting of December 19, 1995. The Council directed the staff to give consideration to this petition. Subsequent to this event, other requests have been received requesting that perchloroethylene, methylated siloxanes, and methyl acetate also be excluded from the definition of VOC. The proposed revision of VOC excludes these three compounds since they have been designated by EPA as having negligible photochemical reactivity.
 - ◆ **THE REVISION MAY RESULT IN SOME SUBSTANTIVE CHANGES**, although care has been taken throughout the rest of the Subchapter to minimize any such substantive changes that may result from the revised definition of VOC.
 4. Staff proposes to delete the definitions of ORGANIC MATERIALS AND VOLATILE ORGANIC SOLVENT (VOS) as part of the simplification process. These terms will no longer be used in Chapter 100.
 5. Staff proposes to move the definitions of PETROLEUM REFINERY from 252:100-39-15(a)(4) and REFINERY UNIT from 252:100-39-15(a)(5) to 252:100-39-2 because these terms are used in more than one section in this Subchapter.
- C. **252:100-39-3. General applicability.** Deleted previously proposed language that made the requirements of Subchapter 39 applicable to any area that may be designated as nonattainment for ozone in the future..

- D. **252:100-39-4. Exceptions.** The addition of this section prevents substantive changes due to the new definition of VOC and the use of the term VOC in place of VOS. This revision insures that those sections of Subchapter 39 which previously applied only to VOCs with vapor pressure of 1.5 psia or greater continue to apply only to VOCs with vapor pressure of 1.5 psia or greater.

V. PART 3. PETROLEUM REFINERY OPERATIONS

A. **252:100-39-15. Petroleum refinery equipment leaks**

1. (a) **Definitions.** Staff proposes to add a definition for LEAKING COMPONENT. This language was in 252:100-39-15(c)(1)(C).
2. (b) **Applicability.** Staff proposes to add paragraph (2) to exempt VOCs with vapor pressures less than 0.0435 psia under actual storage conditions from the requirements of Section 15. This exemption prevents a substantive change in this Section due to the revised definition of VOC.
3. (c) **Provisions for specific processes.** Staff proposes to rename the subsection "Standards and operating requirements" to better reflect its content..
4. (d) **Compliance schedule.** Staff proposes to delete the previously proposed language that would require a refinery located in an area that becomes nonattainment for ozone to submit a written monitoring program within 60 days of the date the area is designated as nonattainment. This language was part of the attempt to make Subchapter 39 applicable to new ozone nonattainment areas.

- B. **252:100-39-16. Refinery process unit turnaround,** Staff proposes to change this to "Petroleum refinery process unit turnaround" for clarity. The proposed revision to 252:100-39-16(b)(4) make it clear which months are included in the non-oxidant season.

- C. **252:100-39-17. Refinery vacuum producing system.** Staff proposes to change the title to "Petroleum refinery vacuum producing system" for consistency.

- D. **252:100-39-18. Refinery effluent water separators.** Staff proposes to change this to "Petroleum refinery effluent water separators" for consistency.

VI. PART V. PETROLEUM PROCESSING AND STORAGE

- A. **252:100-39-30. Petroleum liquid storage in external floating roof tanks** Staff proposes to change this to "Petroleum liquid storage in vessels with external floating roofs" for consistency in terminology.

1. (a) **Definitions.** The proposed revisions to the definitions OF EXTERNALLY FLOATING ROOF, LEASE CUSTODY TRANSFER, and VAPOR-MOUNTED SEAL are to correct errors and replace the term tanks with vessels for consistency in terminology.
2. (b) **Applicability** Staff proposes to correct the placement of "prior to lease custody transfer" in 252:100-39-30(b). This phrase was located in paragraph (2) and was, therefore, applicable to all the exemptions listed in that paragraph. Research in the Air Quality Council records and in the Control Technology Guideline, Control of Volatile Organic Emissions from Petroleum Liquid Storage in External Floating Roof Tanks, EPA-450/2-78-047, indicates that this phrase should apply only to 252:100-39-30(b)(2)(B). Staff proposes moving this phrase to 252:100-39-30(b)(2)(B). **THIS IS A SUBSTANTIVE CHANGE**

3. (c) **Provisions for specific processes.** Staff proposes to rename this subsection "Equipment and operating requirements" to better reflect its contents and to add taglines to each paragraph in the subsection.
4. (d) **Compliance schedule.** The proposed revision to this subsection replaces the compliance deadline with a date certain.

VII. PART 7. SPECIFIC OPERATIONS

- A. **252:100-39-40. Cutback asphalt (paving).** Staff proposes to add taglines to subsections (a) and (b) and to clarify which months are included in the non-oxidant season.
- B. **252:100-39-41. Vapor recovery systems.** Staff proposes to rename this section "Storage, loading and transport/delivery of VOCs" to better reflect its contents.
 1. (a) **Storage of volatile organic compounds - greater than 40,000 gallons (953 bbls).** Staff proposes to rename this subsection "Storage of VOCs in vessels with storage capacities greater than 40,000 gallons."
 - ◆ (1). Staff has proposed language to make clear that the cover of an external floating roof may rest on the leg supports during filling, emptying, or refilling.
 2. (b) **Storage of volatile organic compounds - 400-40,000 gallons (9.5-953 bbls).** Staff proposes to rename this subsection "Storage of VOCs in vessels with storage capacities of 400-40,000 gallons."
 3. (c) **Loading of volatile organic compounds.** Staff proposes to rename this subsection Loading of VOCs. Staff proposes to add a minimum annual throughput of 120,000 gallons and a minimum storage capacity of 10,000 gallons in paragraph (1) for determining applicability of this subsection. **THIS IS A SUBSTANTIVE CHANGE.**
 4. (e) **Additional requirements for Tulsa County.** Staff proposes to add the requirements in 252:100-39-48 that apply only to Tulsa County and that are not already included in 252:100-39-41 to this subsection and delete 252:100-39-48. This will simplify the rule by putting all the requirements regarding storage, loading, transport/delivery of VOCs in one Section. The proposed revision will also eliminate the necessity for two Sections with the same title in Subchapter 39.
- C. **252:100-39-44. Manufacture of pneumatic rubber tires.** Staff proposes to delete paragraph (4) since the provision for alternative controls was not used prior to the deadline of September 15, 1981, for submitting a petition to the DEQ.
- D. **252:100-39-46. Coating of parts and products.**
 1. (f) **Emission limit.** Staff proposes to rename this section "Compliance" to better reflect its contents. Staff proposes to move the first sentence of this subsection to 252:100-39p46(d) for simplification and clarification.
 2. (j) **Emission plan. (1) Development of a plant-wide emission plan.** The term "voluntary" was added to subparagraph (B) in describing the types of decreases that could be included in a plant-wide reduction plan. This is to make clear that even if a reduction is part of a permit, if it was a voluntary reduction and has not been relied on to meet or avoid some other requirement, it can be used in the plant-wide reduction plan.

3. **(k) Compliance.** Staff proposes to change the title to "**Compliance, testing, and monitoring requirements**" to better reflect the contents of the subsection. Staff proposes to move 252:100-39-46(k)(3)(B) and (C) regarding maintenance of records to 252:100-39-46(l), Reporting and recordkeeping.
- E. **252:100-39-47. Control of VOS emissions from aerospace industries coating operations.** Proposed revision to the title is for consistency in terminology.
 1. **(a) Applicability.** Staff proposes to move paragraph (3) to 252:1000-39-46(d)(7)(B) as part of the simplification and clarification process.
 2. **(c) General requirements.** Staff proposes to reformat this subsection for clarity and to delete the requirement for review of the Emission Reduction Plan and ARACT determination if Tulsa County is still in nonattainment for ozone within five years of the approval of ARACT. The five year period ended 1/1/96 and Tulsa was not at that time and is not in nonattainment for ozone.
 3. **(d) Emissions reduction plan.** The staff proposes to add taglines to each paragraph of this subsection for clarity.
 - ◆ **(3) Action on plan.** The proposed revision is to include the actual effective date.
 - ◆ **(4) Public hearing.** Staff proposes to divide paragraph (4) into three paragraphs for clarity.
 - ◆ **(7) Submission of SIP revision.** (7)(B) was moved from 252:100-39-47(A)(3) because this appears to be a more logical location for it.
 4. **(f) Testing and monitoring.** Staff proposes to add taglines for clarity. Subparagraphs (B) and (C), except for the effective date, were deleted because the information they contained is included in 252:100-39-47(e)(1)(E) and 252:100-39-47(e)(3).
- F. **252:100-39-48. Vapor recovery systems.** The portions of this section that were in addition to the requirements of 252:100-39-41 were moved to 252:100-39-41(e). Staff proposes to delete the remainder of the section because it is redundant language.

VIII. Manufacturing of fiberglass reinforced plastic products. It is proposed to reformat this section for clarity and consistency in formatting with the rest of the rule. Actual deadline dates have been inserted.

MINUTES

AIR QUALITY COUNCIL

OCTOBER 20, 1998

Tulsa City-County Health Department Auditorium
5051 South 129th Street East
Tulsa, Oklahoma

Council Members Present

William B. Breisch, Chairman
David Branecky

PUBLIC MEETING

Notice of Public Meeting for October 20, 1998 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance door of the meeting room.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Mr. Branecky - aye; Ms. Myers - aye; Mr. Wilson - aye; Dr. Grosz - aye. Mr. Kilpatrick, Ms. Slagell and Dr. Canter did not attend.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the August 18, 1998 Public Meeting/Hearings. Motion was made by Mr. Wilson to approve the Minutes as presented and second to the motion was made by Dr. Grosz. Roll call as follows: Mr. Branecky - aye; Ms. Myers - aye; Mr. Wilson - aye; Dr. Grosz - aye; Mr. Breisch - aye.

1999 Meeting Schedule - Mr. Dyke presented Council with proposed schedule for 1999 meetings with the suggestion that the December 21 date mentioned in the packet memo be changed to December 14. Ms. Myers made motion to accept the schedule as proposed: Wednesday, February 17, Tuesday, April 20, Tuesday, August 17, and Tuesday, December 14 at OKC, DEQ Multi-Purpose Room; with Tuesday, June 15 and October 19 at Tulsa, TCCHD Auditorium. Second to motion was made by David Branecky. Roll call as follows: Mr. Branecky - aye; Ms. Myers - aye; Mr. Wilson - aye; Dr. Grosz - aye; Mr. Breisch - aye.

Auditorium. Second to motion was made by David Branecky. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-7 Permits [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Jeanette Buttram for staff position regarding this rule. Ms. Buttram pointed out proposed revisions would modify language applicable to de minimis facilities, Permit by Rule (PBR), and general permits stating that actual emissions of Total Suspended Particulates (TSP) will no longer be counted in determining whether a facility meets the definition of “de minimis facility.” Also, she stated that proposed revision would delete the lower limit of five tons per year for PBR facilities allowing those facilities with less than five tons per year emissions which are subject to NSPS or NESHAP to apply for a PBR instead of having to obtain an individual permit. Ms. Buttram advised that staff proposed that a new Part 9 be added that would outline the requirements necessary for a facility to qualify for a PBR. A third point she brought out was the proposed revision to delete the lower limit for general permits allowing facilities that may have less than 40 tons per year of emissions, but for which no PBR had been written, the opportunity to apply for coverage under an applicable general permit. Lastly, she added that the Department proposed to amend 252-7-3 to increase fees for minor facilities for applicability determinations, relocation permits, and applications for individual permits.

Following discussion and comments, Chairman Breisch entertained a motion to continue this rule to the Council’s October 20, 1998 meeting. Ms. Myers made that motion with second made by Dr. Grosz. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-25 Smoke, Visible Emissions and Particulates [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Jeanette Buttram to give staff’s position on this rule. Ms. Buttram pointed out that the proposed amendments would fulfill an EPA requirement concerning Continuous Emissions Monitoring proposing to incorporate by reference the Federal opacity monitoring requirements for fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries and fossil fuel-fired steam generators as specified in 40 CFR 51, Appendix P. She noted that the Department proposed to exempt from Appendix P requirements for those sources already subject to a new source performance standard and for sources scheduled for retirement within five years after the

amended rule takes effect. Ms. Buttram added that the amended rule would also provide criteria for approval of alternative monitoring requirements with additional changes that would clarify how the opacity standard is determined.

Mr. Breisch asked for a motion to recommend the rule as proposed to the Environmental Quality Board for permanent adoption. Mr. Wilson made the motion with David Branecky making the second. Roll call was as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-23 Control of Emissions from Cotton Gins [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Michelle Martinez who related that the draft rule included simplification of language according to the Agency's re-write/de-wrong initiative and the addition of a Permit by Rule section. She then pointed out that the proposed revisions add a new Permit by Rule section that would streamline the permitting process by creating a mechanism that eliminates the necessity for some cotton gins to obtain an individual air quality permit. Ms. Martinez added that additional changes would allow exceedances of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours.

Following discussion, Mr. Breisch entertained a motion to recommend this rule to the Environmental Quality Board for permanent adoption. Ms. Myers made the motion with second made by Mr. Branecky. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-24 Control of Emissions from Grain Elevators [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Michelle Martinez who advised that the proposed revisions would simplify the language under the agency-wide re-right/de-wrong initiative and would add a new Permit by Rule section to streamline the permitting process by creating a mechanism that would eliminate the necessity for some grain elevators to obtain an individual air quality permit. Ms. Martinez added that a new Appendix L proposed would contain PM-10 emission factors for PBR grain elevators. Additional changes follow a proposed amendment of Subchapter 25 concerning short-term exceedances of the

opacity standard allowing exceedances of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours.

Mr. Breisch entertained a motion to recommend the rule to the Environmental Quality Board for permanent adoption at its November 10 meeting. Mr. Wilson made that motion with second made by Ms. Myers. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-37 Control of Emissions of Organic Materials (AMENDED)

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy who advised that proposed changes included language consistent with the re-right/de-wrong initiative. She then pointed out four substantive changes that were proposed for Subchapter 37 as well as Subchapter 39:

- 1) to change the definition of “volatile organic compounds (VOC)” per Council’s direction and requests from industry to exclude acetone, perchloroethylene, methylated siloxanes, methyl acetate from the definition of VOC and to modify the definition of VOC to be consistent with the EPA definition;
- 2) to remove of the requirement for permits and best available control technology (BACT) for new sources of VOC contained in 252:100-37-3(a);
- 3) a change regarding fuel-burning and refuse-burning equipment, which has been deleted to resolve the contradiction between the first and second sentences; and
- 4) to add a new Part 9, Permit by Rule for Volatile Organic Liquid Storage and Loading Facilities.

Mr. Breisch entertained a motion to continue this rule to Council’s December meeting. Ms. Myers made motion with second made by Dr. Grosz. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-39 Control of Organic Materials in Nonattainment Areas [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy who advised that proposed changes included language consistent with the re-right/de-wrong initiative. She stated that one substantive change affects both Subchapters 39 and 37

which is to change the definition of "volatile organic compounds" per Council's direction and requests from industry to exclude acetone, perchloroethylene, methylated siloxanes, methyl acetate from the definition of VOC and to modify the definition of VOC to be consistent with the EPA definition;

In Subchapter 39, Dr. Sheedy pointed out the need for correction of the placement of "prior to lease custody transfer" in 252:100-39-30(b)(2) which would be a substantive change along with the addition of a minimum annual throughput of 120,000 gallons and a minimum storage capacity of 2,000 gallons to 252:100-39-41(c) to determine applicability of subsection (c).

Following discussion, Mr. Breisch entertained a motion to continue this rule to the Council's December 15 meeting. Mr. Branecky made that motion with the second made by Mr. Wilson. Roll call as follows: Mr. Branecky - aye; Ms. Myers - aye; Mr. Wilson - aye; Dr. Grosz - aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-41 Control of Emission of Hazardous and Toxic Air Contaminants [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy who stated that the proposed revisions would update the adoption by reference of 40 CFR Part 63 to include Maximum Achievable Control Technology (MACT) standards promulgated or amended between July 1, 1997 and July 1, 1998. She pointed out that the new standards are Subpart S - NESHAP for Pulp and Paper Production and Subpart LL - NESHAP for Aluminum Production Plants. The proposed revisions will also update the adoption by reference of the NESHAP as found in 40 CFR Part 61 (with the exception of Subparts B, H, I, K, Q, R, T, and W. and Appendices D and E which address radionuclides) to July 1, 1998. Dr. Sheedy advised the Council that these modifications were necessary to obtain EPA's delegation of authority to implement the federal hazardous air pollutant program in Oklahoma.

Mr. Breisch entertained a motion to recommend this rule to the Environmental Quality Board for permanent adoption. Mr. Wilson made that motion with the second made by Mr. Branecky. Roll call as follows: Mr. Branecky - aye; Ms. Myers - aye; Mr. Wilson - aye; Dr. Grosz - aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-5 Registration, Emission Inventory and Annual Operating Fees [AMENDED]

OAC 252:100-7 Permits [AMENDED]

OAC 252:100-8 Permits for Part 70 Sources [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Shawna McWaters-Khalousi for staff recommendation. Ms. Khalousi advised that the Department is proposing to amend 252:100-5-2.2 to increase annual operating fees assessed to minor facilities; amend 252:100-7-3 to increase fees for minor facilities for applicability determinations, relocation permits, and applications for individual permits; and amend 252:100-8-1.7 to increase applicability determination fees for Part 70 Sources. Ms. Khalousi stated that if was staff's recommendation that this rule be continued to Council's December 15 meeting.

Mr. Breisch entertained motion to continue these rules to the December meeting. Ms. Myers made the motion and second was made by Mr. Branecky. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes.

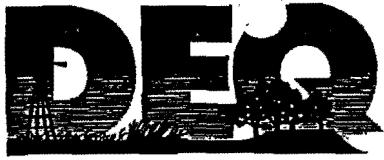

NEW BUSINESS – None

ADJOURNMENT With no further business, meeting was adjourned and next regularly scheduled meeting being December 15, 1998 at Lincoln Plaza Office Complex Burgundy Room, 4545 North Lincoln, Oklahoma City, Oklahoma.

NOTE: The sign-in sheet and the hearing records are attached as an official part of these Minutes.

BRIEFING AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
REGULAR MEETING
AIR QUALITY COUNCIL

Tuesday - December 15, 1998 9:30 A.M.
4545 North Lincoln Boulevard
Burgundy Room
Oklahoma City, OK

1. **Call to Order – Bill Breisch**
2. **Division Director's Report - Staff**
 - A. Update of current events and AQD activities
 - B. Discussion by Council / Public
3. **OAC 252:100-7 Permits for Minor Facilities [AMENDED]**

Proposed revisions will delete the lower limit of 5 tons per year for Permit by Rule (PBR) facilities allowing those facilities with less than 5 tons per year emissions which are subject to new source performance standards and national emissions standards for hazardous air pollutants to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a PBR for specific facilities will also be referenced under this new Part. Continued from August 18 and October 20, 1998 Air Quality Council meeting.

 - A. Presentation – Jeanette Buttram
 - B. Questions and discussion by Council / Public
4. **OAC 252:100-8-4(a)(2) Permits for Part 70 Sources [AMENDED]**

The Department proposes to update the incorporation by reference of the case-by-case MACT rules in 40 CFR 63.41, 63.43, and 63.44 to July 1, 1998.

 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public
5. **OAC 252:100-37 Control of Emissions of Organic Materials [AMENDED]**

Proposal would simplify the language under the agency-wide re-right/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. A substantive change deletes a sentence regarding fuel-burning and refuse-burning equipment resolving a contradiction. Continued from August 18, 1998 Air Quality Council meeting.

 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public

6. **OAC 252:100-39 Emissions of Organic Materials in Nonattainment Areas [AMENDED]**

Proposal would simplify the language under the agency-wide re-right/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. Continued from August 18 and October 20, 1998 Air Quality Council meeting.

- A. Presentation – Joyce Sheedy
- B. Questions and discussion by Council / Public

7. **OAC 252:100-5-2.2 Registration, Emission Inventory and Annual Operating Fees [AMENDED]**

OAC 252:100-7-3 Permits for Minor Facilities [AMENDED]

OAC 252:100-8-1.7 Permits for Part 70 Sources [AMENDED]

In Subchapter 5, the Department is proposing increases in annual operating fees for both minor facilities and Part 70 sources, with increases of specific permit application fees in Subchapters 7 and 8.

- A. Presentation – Shawna McWaters-Khalousi
- B. Questions and discussion by Council / Public

HEARING/MEETING AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
REGULAR MEETING
AIR QUALITY COUNCIL

Tuesday December 15, 1998 1:00 P.M.
4545 North Lincoln Boulevard
Burgundy Room
Oklahoma City, OK

1. **Call to Order – Bill Breisch**
2. **Roll Call – Myrna Bruce**
3. **Approval of Minutes of the October 20, 1998 Regular Meeting**
4. **OAC 252:100-7 Permits for Minor Facilities [AMENDED]**
Proposed revisions will delete the lower limit of 5 tons per year for Permit by Rule (PBR) facilities allowing those facilities with less than 5 tons per year emissions which are subject to new source performance standards and national emissions standards for hazardous air pollutants to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a PBR for specific facilities will also be referenced under this new Part. Continued from August 18 and October 20, 1998 Air Quality Council meeting.
 - A. Presentation – Jeanette Buttram
 - B. Questions and discussion by Council / Public
 - C. Possible action by Council
 - D. Roll call vote
5. **OAC 252:100-8-4(a)(2) Permits for Part 70 Sources [AMENDED]**
The Department proposes to update the incorporation by reference of the case-by-case MACT rules in 40 CFR 63.41, 63.43, and 63.44 to July 1, 1998.
 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public
 - C. Possible action by Council
 - D. Roll call vote

6. **OAC 252:100-37 Control of Emissions of Organic Materials [AMENDED]**
Proposal would simplify the language under the agency-wide re-right/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. A substantive change deletes a sentence regarding fuel-burning and refuse-burning equipment resolving a contradiction. Continued from August 18 and October 20, 1998 Air Quality Council meetings.
 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public
 - C. Possible action by Council
 - D. Roll call vote

7. **OAC 252:100-39 Emissions of Organic Materials in Nonattainment Areas [AMENDED]**
Proposal would simplify the language under the agency-wide re-right/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. Continued from August 18 and October 20, 1998 Air Quality Council meetings.
 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public
 - C. Possible action by Council
 - D. Roll call vote

8. **OAC 252:100-5-2.2 Registration, Emission Inventory and Annual Operating Fees [AMENDED]**
OAC 252:100-7 Permits for Minor Facilities [AMENDED]
OAC 252:100-8-1.7 Permits for Part 70 Sources [AMENDED]
In Subchapter 5, the Department is proposing increases in annual operating fees for both minor facilities and Part 70 sources, with increases of specific permit application fees in Subchapters 7 and 8.
 - A. Presentation – Shawna McWaters-Khalousi
 - B. Questions and discussion by Council / Public
 - C. Possible action by Council
 - D. Roll call vote

9. **NEW BUSINESS**
 - A. Discussion/consideration of subjects / business arising within past 24 hours
 - B. Possible action by Council

10. **ADJOURNMENT -- Next Regular Meeting**
WEDNESDAY, FEBRUARY 17, 1999
DEQ Multi-Purpose Room, First Floor
707 North Robinson, Oklahoma City, Oklahoma

December 1, 1998

MEMORANDUM

TO: Air Quality Council

FROM: Eddie Terrill, Director 
AIR QUALITY DIVISION

SUBJECT: Modifications to Subchapter 39
EMISSIONS OF ORGANIC MATERIALS IN NONATTAINMENT AREAS

Enclosed is a copy of the proposed modifications to OAC 252:100-39. These revisions were brought to the Air Quality Council for the first time on August 18, 1998 and again on October 20, 1998. At the October meeting the staff recommended that the rule be considered again at the December 15, 1998 Council meeting.

The proposed revisions primarily simplify and clarify language, correct grammar, and impose consistency in format on the rule without involving substantive changes. A number of small changes were made to the rule following the October 20, 1998, Council meeting. None of these additional changes is intended to be substantive in nature. The following substantive revisions to the rule are proposed.

1. The definition of "volatile organic compound (VOC)" in 252:100-39-2 has been revised. As part of the simplification process the staff propose to have only one definition of volatile organic compound which will be consistent with the EPA definition and replace the terms "volatile organic solvent (VOS)" and "organic solvents." The new definition provides that any organic compound listed in 40 CFR 51.100(s)(1) shall be presumed to have negligible photochemical reactivity and will not be considered to be a VOC. This revision will also serve as a response to requests to exempt acetone, methylated siloxanes, perchloroethylene, and methyl acetate from being considered VOCs. These four substances are on the list in 40 CFR 51.100(s)(1) and, therefore, will not be considered to be VOCs.
2. The staff proposes to correct the placement of "prior to lease custody transfer" in 252:100-39-30(b). This phrase was located in paragraph (2) and was, therefore, applicable to all the exemptions listed in that paragraph. Research in the Air Quality Council records and in the Control Technology Guideline, Control of Volatile Organic Emissions from Petroleum Liquid Storage in External Floating Roof Tanks, EPA-450/2-78-047, indicates that this phrase should apply only to 252:100-39-30(b)(2)(B). Staff recommends moving this phrase to 252:100-39-30(b)(2)(B).
3. 252:100-39-41(c), Loading of volatile organic compounds, currently has no provisions to exclude small loading facilities. The staff proposes to add language that will limit the requirements of this subsection to facilities that have a minimum annual throughput of 120,000 gallons or storage capacity greater than 10,000 gallons..

7779

Comments from the informational meeting held on July 7, 1998 were given consideration in the proposed draft enclosed with this memorandum.

Because there are still unresolved issues regarding redundancy of certain requirements, staff will recommend the rule be considered again at the next Air Quality Council meeting on February 17, 1999.

In addition to the proposed draft revisions to Subchapter 39, a copy of 40 CFR 51.100(s)(1), a rule impact statement, a summary of comments and staff responses, and a list of the revisions that were made to the rule after the October 20, 1998, Air Quality Council meeting are also included in the packet.

Enclosures 5

**SUBCHAPTER 39. EMISSION OF VOLATILE ORGANIC MATERIALS COMPOUNDS
(VOCs) IN NONATTAINMENT AREAS AND FORMER NONATTAINMENT AREAS**

PART 1. GENERAL PROVISIONS		
252:100-39-1.	Purpose	1
252:100-39-2.	Definitions	1
252:100-39-3.	General applicability	2

252:100-39-46.	Coating of parts and products	27
252:100-39-47.	Control of <u>VOSVOC</u> emissions from aerospace industries coatings operations	32
252:100-39-48.	Vapor recovery systems	37
252:100-39-49.	Manufacturing of fiberglass reinforced plastic products	41

PART 1. GENERAL PROVISIONS

252:100-39-1. Purpose

~~The purpose of this Subchapter is to control the emission of organic materials from stationary sources located in nonattainment areas and to specify the additional control measures required to protect and enhance the air quality to insure that the Oklahoma air quality standard is not exceeded and significant deterioration is prevented.~~ The purpose of this Subchapter is to prevent the formation of ozone by controlling the emissions of volatile organic compounds (VOCs). This Subchapter contains requirements for the control of emissions of VOCs from stationary sources located in areas that are nonattainment or were formerly nonattainment for ozone.

252:100-39-2. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise.

~~"Cutback asphalt" means a basic asphalt or asphaltic concrete containing a petroleum distillate.~~

~~"Effluent water separator" means any tank, box, sump, or other container in which any material compound floating on or entrained or contained in water entering such tank, box, sump or other container is physically separated and removed from such water prior to outfall, drainage, or recovery of such water.~~

~~"Organic materials" means any chemical compounds of carbon excluding carbon monoxides, carbon dioxide, carbonic acid, metallic carbides, metal carbonates and ammonium carbonates.~~

"Petroleum refinery" means any facility engaged in producing gasoline, aromatics, kerosene, distillate fuel oils, residual fuel oils, lubricants, asphalt, or other products through distillation of crude oil or other hydrocarbons or through redistillation, cracking, rearrangement or reforming or unfinished petroleum derivatives.

~~"Refinery" means any facility engaged in producing gasoline, kerosene, fuel oils or other products through distillation of crude oil or through redistillation, cracking or reforming of unfinished hydrocarbon derivatives.~~

"Refinery unit" means a set of components which are a part of a basic process operation, such as distillation, hydrotreating, cracking or reforming of hydrocarbons.

"Submerged fill pipe" means any fill pipe or discharge nozzle which that meets any one of the following conditions:

(A) ~~the~~The bottom of the discharge pipe or nozzle is below the surface of liquid in the receiving vessel for at least 95 percent of the volume filled.

(B) ~~the~~The bottom of the discharge pipe or nozzle is less than 6 inches from the bottom of the receiving vessel.

(C) ~~the~~The bottom of the discharge pipe or nozzle is less than 2 pipe or nozzle diameters from the bottom of the receiving vessel.

~~(D) other equivalent methods acceptable to the Executive Director.~~

~~"Volatile organic compound (VOC)" means any compound containing carbon and hydrogen or containing carbon and hydrogen in combination with any other element which has a vapor pressure of 1.5 pounds per square inch absolute or greater under actual storage conditions of carbon, excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate, which participates in atmospheric photochemical reactions. Any organic compound listed in 40 CFR 51.100(s)(1) shall be presumed to have negligible photochemical reactivity.~~

~~"Volatile organic solvent (VOS)" means any organic compound which participates in atmospheric photochemical reactions; that is, any organic compound other than those which the EPA Administrator designates as having negligible photochemical reactivity. VOS may be measured by the EPA VOC reference method.~~

252:100-39-3. General applicability

In addition to any application of the requirements contained in OAC 252:100-37, the additional ~~control/prohibitions~~ requirements contained in this Subchapter shall be required ~~on~~ of existing and new facilities located in Tulsa and Oklahoma Counties.

252:100-39-4. Exemptions

VOCs with vapor pressures less than 1.5 pounds per square inch (psia) under actual storage conditions are exempt from 252:100-39-16 through 252:100-39-18, 252:100-39-30, 252:100-39-41, and 252:100-48.

PART 3. PETROLEUM REFINERY OPERATIONS

252:100-39-15. Petroleum refinery equipment leaks

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise.

(1) **"Component"** means any piece of equipment which has the potential to leak ~~volatile organic compounds~~ VOCs when tested in the manner described in EPA Test Method 21 of 40 CFR Part 60. These sources include, but are not limited to, pumping seals, compressor seals, seal oil degassing vents, pipeline valves, flanges and other connections, pressure relief devices, process drains, and open ended pipes. Excluded from these sources are valves which are not externally regulated.

(2) **"Gas service"** means any equipment which processes, transfers or contains a ~~volatile organic compound~~ VOC or mixture of ~~volatile organic compounds~~ VOCs in the gaseous phase.

(3) **"Leaking component"** means a component which has a VOC concentration exceeding 10,000 ppm when tested according to the provisions in 252:100-39-15(e).

~~(3)~~(4) **"Liquid service"** means any equipment which processes, transfers or contains a ~~volatile organic compound~~ VOC or mixture of ~~volatile organic compounds~~ VOCs in the liquid phase.

~~(4) "Petroleum refinery" means any facility engaged in producing gasoline, aromatics, kerosene, distillate fuel oils, residual fuel oils, lubricants, asphalt, or other products through distillation of crude oil or other hydrocarbons or through redistillation, cracking, rearrangement or reforming or unfinished petroleum derivatives.~~

~~(5) "Refinery unit" means a set of components which are a part of a basic process operation, such as distillation, hydrotreating, cracking or reforming of hydrocarbons.~~

~~(6) (4) "Valves not externally regulated" means valves that have no external controls, such as in-line check valves.~~

~~(7) "Volatile organic compounds" means any compound containing carbon and hydrogen or containing carbon and hydrogen in combination with any other element which has a vapor pressure of 0.3 kilopascals (0.0435 pounds per square inch absolute) or greater under actual storage conditions. (Effective 2-12-90)~~

~~(b) Applicability. This Section applies to all source facility petroleum refineries located in the following counties: Tulsa and Oklahoma.~~

~~(1) This Section applies to all petroleum refineries located in Tulsa County and Oklahoma County.~~

~~(2) VOCs with vapor pressures less than 0.0435 psia (0.3 kilopascals (kPa)) under actual storage conditions are exempt from 252:100-39-15. (Effective 2-12-90.)~~

~~(c) Provisions for specific processes. Standards and operating requirements~~

~~(1) The owner or operator of a petroleum refinery complex subject to this Section shall:~~

~~(A) develop and conduct a monitoring program consistent with the provisions in 252:100-39-15(d) and 252:100-39-15(f);~~

~~(B) conduct a monitoring program consistent with the provisions in 252:100-39-15(f);~~

~~(C) record all leaking components which have a VOC concentration exceeding 10,000 ppm when tested according to the provisions in 252:100-39-15(e) and place an identifying tag on each component consistent with the provisions in 252:100-39-15(f)(3);~~

~~(D) (C) repair and retest the leaking components, as defined in 252:100-39-15(e)(1)(C), as soon as possible but no later than 15 days after the leak is found; and,~~

~~(E) (D) identify all leaking components, as defined in 252:100-39-15(e)(1)(C), which cannot be repaired until the unit is shutdown for turnaround; and, Assure all lines or pipes terminating with a valve are sealed with a second valve, a blind flange, a plug or a cap.~~

~~(E) assure all lines or pipes terminating with a valve are sealed with a second valve, a blind flange, a plug or a cap.~~

~~(2) The Executive Division Director, may, at his/her/his or her discretion, take require the owner or operator to take appropriate remedial action, including early unit turnaround, based on the number and severity of tagged leaks awaiting repair.~~

(3) Pipeline valves and pressure relief valves in ~~gaseous gas~~ ~~volatile organic compound~~ service shall be marked in some manner that will be readily obvious to both petroleum refinery or contract personnel performing monitoring and the ~~Executive Director~~ DEQ.

(d) ~~Compliance schedule~~ schedule. The owner or operator of a petroleum refinery, ~~in order to comply with 252:100-39-15,~~ shall adhere to the increments of progress contained in the following schedule:

~~(1) Submit~~ submit to the ~~Executive Division~~ Director a monitoring program by July 30, 1981. This program shall contain, at a minimum, a list of the refinery units ~~only~~ and the quarter in which they will be monitored, a copy of the log book format, and the make and model of the monitoring equipment to be used. In no case shall a monitoring contract relieve the owner or operator of a petroleum refinery of the responsibility for compliance with this Section.

~~(2) Submit quarterly monitoring report to the Executive Director.~~

(e) Testing and monitoring procedures. Testing and calibration procedures to determine compliance with this Section must be consistent with EPA Test Method 21 of 40 CFR Part 60.

(f) Monitoring.

(1) The owner or operator of a petroleum refinery ~~subject to this Section~~ shall conduct a monitoring program consistent with the following provisions: The owner or operator shall:

(A) monitor yearly by the methods referenced in ~~Test Method 21 of 40 CFR Part 60~~ 252:100-39-15(e) all:

~~(i) pump seals~~ +

~~(ii) pipeline valves in liquid service~~ + and +

~~(iii) process drains;~~

(B) monitor quarterly by the methods referenced in ~~252:100-39-15(d)~~ 252:100-39-15-(e) + all:

~~(i) compressor seals~~ +

~~(ii) pipeline valves in gaseous gas service~~ + and +

~~(iii) pressure relief valves in gaseous gas service;~~

(C) monitor weekly by visual methods all pump seals;

(D) monitor immediately within 24 hours any pump seal from which VOC liquids are observed dripping;

(E) monitor any relief valve within 24 hours after it has vented to the atmosphere; and,

(F) monitor immediately after repair any component that was found leaking.

(2) Pressure relief devices ~~which that~~ are connected to an operating flare header, vapor recovery ~~device~~ devices, inaccessible valves, storage tank valves, and valves that are not externally regulated are exempt from the monitoring requirements in paragraph (1) of this subsection: Provided provided, however, such inaccessible valves will be monitored during annual shutdown.

(3) The owner or operator of a petroleum refinery, upon the detection of a leaking component, ~~as defined in 252:100-39-~~

~~15(e)(1)(C), which that~~ is not repaired on discovery, shall affix a weatherproof and readily visible tag, bearing an identification number and the date the leak is located, to the leaking component. This tag shall remain in place until the leaking component is repaired.

(g) **Recordkeeping.**

(1) The owner or operator of a petroleum refinery shall maintain a leaking components monitoring log ~~as specified in 252:100-39-15(e)(1)(C) which shall contain, at a minimum, the following data:~~

- (A) the name of the process unit where the component is located;
- (B) the type of component (e.g., valve, seal);
- (C) the tag number of the component, if not repaired immediately on discovery;
- (D) the date on which a leaking component is discovered;
- (E) the date on which a leaking component is repaired;
- (F) the date and instrument reading of the recheck procedure after a leaking component is repaired;
- (G) the date of the calibration of the monitoring instrument. ~~The record of calibration which~~ shall be made available for inspection on request;
- (H) those leaks that cannot be repaired until turnaround; and,
- (I) the total number of components checked and the total number of components found leaking.

(2) ~~Copies of the~~ The monitoring log shall be retained on site by the owner or operator for at least two years after the date on which the record was made or the report prepared.

(3) ~~Copies of the~~ The monitoring log shall be made available for inspection at any reasonable time and copies of the log shall be provided to the Executive Division Director, upon written request, at any reasonable time of the AOD.

(h) **Reporting.** The owner or operator of a petroleum refinery, ~~upon the completion of each monitoring procedure,~~ shall:

(1) submit a report to the Executive Division Director by the 30th day following the end of each calendar quarter that lists all leaking components that were located during the previous quarter but not repaired within 15 days, all leaking components awaiting unit turnaround, and the total number of components found leaking; and,

(2) submit a signed statement with the report attesting to the fact that, all monitoring and, with the exception of those leaking components listed in 252:100-39-15(h)(1), all ~~monitoring and~~ repairs were performed as stipulated in the monitoring program.

252:100-39-16. Petroleum Refinery refinery process unit turnaround

(a) **Definition.** ~~"Turn around"~~ "Turnaround" means the planned procedure of shutting down a unit, inspecting and repairing it, and restarting it.

(b) **Procedures required.** For the shutdown, purging and blowdown

operation of any ~~processing~~ petroleum refinery processing unit the following procedures are required:

(1) Recovery of ~~volatile organic compounds (VOC)~~ VOCs shall be accomplished during the shutdown or turnaround to a process unit pressure compatible with the flare or vapor system pressure. The unit will then be purged or flushed to a flare or vapor recovery system with using a suitable material such as steam, water or nitrogen, ~~to a flare or vapor recovery system.~~ The unit shall not be vented to the atmosphere until pressure is reduced to less than 5 psig through control devices.

(2) Except where inconsistent with the "Minimum Federal Safety Standards for the Transportation of Natural and Other Gas by Pipeline," or any State of Oklahoma regulatory agency, no person shall emit ~~organic~~ VOC gases to the atmosphere from a vapor recovery blowdown system unless these gases are burned by smokeless flares, or an equally effective control device as approved by the ~~Executive~~ Division Director.

(3) At least fifteen days prior to a scheduled turnaround, a written notification shall be submitted to the ~~Executive~~ Division Director. As a minimum, the notification shall indicate the unit to be shutdown, the date of shutdown, and the approximate quantity of ~~hydrocarbons~~ VOCs to be emitted to the atmosphere.

(4) Scheduled refinery unit turnaround may be accomplished without the controls specified in 252:100-39-16(b)(1) and 252:100-39-16(b)(2) during non-oxidant seasons provided the notification to the ~~Executive~~ Division Director as required in 252:100-39-16(b)(3), specifically contains such a request for such an exemption. ~~The Non-oxidant~~ non-oxidant season is ~~understood to be between the months of October and April~~ from November 1 through March 31.

252:100-39-17. Petroleum Refinery refinery vacuum producing system

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise.

(1) "Accumulator" means the vessel in the overhead stream of any fractionating tower, after the overhead condenses and separates noncondensable gases, liquid ~~hydrocarbons~~ VOCs and water.

(2) "Hotwell" means the tank at the bottom of the barometer leg in a barometric condenser system to receive the water, condensate and entrained ~~hydrocarbons~~ VOCs generated by the barometric condenser.

(b) **Requirements.** Noncondensable ~~volatile organic compounds~~ VOCs ~~from the following equipment~~ shall be incinerated or reduced by 90 percent of what would be emitted without controls when emitted from the following vacuum producing system:

- (1) steam ejectors with barometric condensers;
- (2) steam ejectors with surface condensers; or,
- (3) mechanical vacuum pumps.

(c) **Hotwells and accumulators.**

- (1) Hot wells and accumulators shall be covered and the

noncondensable vapors shall be vented to a fire-box or incinerator.

(2) The presence of a pilot flame shall be monitored using a thermocouple or any other equivalent device to detect the presence of a flame. (Effective February 12, 1990)

(d) **Compliance.** Compliance shall be determined in accordance with the provision of the CTG document ("Control of Refinery Vacuum Producing systems, Wastewater Separators and Process Unit Turnarounds," EPA 450/2-77-025, October, 1977). Test reports and maintenance records will be maintained for at least two years. If emission testing is required, the appropriate test method(s) selected from EPA Reference Methods 1 through 4, 21, and/or 25, will be utilized.

252:100-39-18. Petroleum Refinery refinery effluent water separators

(a) **Definition.** "Effluent water separator" means any container in which any VOC floating on, entrained in, or contained in water entering the container is physically separated and removed from the water prior to discharge of the water from the container.

(b) **Requirements.** No ~~person~~owner or operator shall operate, or install or permit the operation or installation of a ~~single~~single-compartment or multiple-compartment ~~volatile organic compound~~water/VOC/water separator from any equipment processing, refining, treating, storing or handling ~~volatile organic compound~~VOC unless the compartment receiving ~~said~~ the effluent water is equipped to control emissions in one of the following ways, ~~with one of the following vapor control devices, properly installed, in good working order and in operation:~~

(1) ~~A~~The container totally encloses the liquid contents and having all openings are sealed, and totally enclosing the liquid contents. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The oil removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.

(2) ~~A~~The container is equipped with a vapor-recovery system, consisting of a vapor-gathering system capable of collecting the ~~organic material~~VOC vapors and gases discharged and a vapor-disposal system capable of processing such ~~organic material~~VOC vapors and gases ~~so as~~ to prevent their emission to the atmosphere, ~~and with all~~All tank gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The ~~organic material~~VOC removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.

(3) ~~A~~ Containerscontainer that is equipped with controls of equal efficiency, provided the plans and specifications ~~of such equipment are submitted and are~~ approved by the ~~Executive~~Division Director prior to their use.

PART 5. PETROLEUM PROCESSING AND STORAGE

252:100-39-30. Petroleum liquid storage in vessels with external floating roof tanks

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise.

(1) "**Condensate**" means hydrocarbon liquid separated from natural gas which condenses due to changes in the temperature and/or pressure and remains liquid at ~~normal operating~~ standard conditions.

(2) "**Crude oil**" means a naturally occurring hydrocarbon mixture which is a liquid at standard conditions. It may contain sulfur, nitrogen and/or oxygen derivatives of hydrocarbon.

(3) "**Externally External floating roof**" means a storage vessel cover in an open top tank consisting of a double deck or pontoon single deck which rests upon and is supported by the petroleum liquid being contained and is equipped with a closure seal or seals to close the space between the roof edge and tank wall.

(4) "**Lease custody transfer**" means the transfer of produced crude oil and/or condensate, after processing and/or treating in the producing operations, from storage ~~tanks~~ vessels or automatic transfer facilities to pipelines or any other ~~forms~~ form of transportation.

(5) "**Liquid-mounted seal**" means primary seal mounted in continuous contact with the liquid between the ~~tank~~ vessel wall and the floating roof.

(6) "**Petroleum liquid**" means crude oil, condensate, and any finished or intermediate liquid products manufactured or extracted in a petroleum refinery.

(7) "**Vapor-mounted seal**" means a primary seal mounted so there is an annular vapor space underneath the seal. The annular vapor space is bounded by the bottom of the primary seal, the ~~tank~~ vessel wall, the liquid surface, and the floating roof.

(8) "**Waxy, high pour point crude oil**" means a crude oil with a pour point of 50°F or higher as determined by the American Society of Testing and Materials Standard D97-66, "Test for Pour Point of Petroleum Oils."

(b) **Applicability.**

(1) This Section applies to ~~all source facilities with petroleum liquid storage vessels equipped with external floating roofs, having capacities greater than 40,000 gallons (150,000 liters) (40,000 gallons), that are located in Tulsa and Oklahoma Counties.~~

(2) This Section does not apply to petroleum liquid storage vessels ~~which that; prior to custody transfer:~~

(A) are used to store waxy, high pour point crude oil;

(B) have capacities less than ~~1,600,000 liters~~ 422,675 gallons (~~420,000 gallons~~ 1,600 m³) and are used to store produced crude oil and condensate prior to lease custody transfer;

(C) contain a petroleum liquid with a true vapor pressure less than 1.5 psia (10.5 kPa) ~~(1.5 psia);~~

(D) ~~contain a petroleum liquid with a true vapor pressure less than 27.6 Kpa (4.0 psia); and,~~

~~(i) are of welded construction;~~
~~(ii) presently possess a metallic type shoe seal, a liquid-mounted foam seal, a liquid-mounted liquid filled type seal, or other closure device of demonstrated equivalence approved by the Executive Director; or, contain a petroleum liquid with a true vapor pressure less than 4.0 psia (27.6 kPa) if the vessels are of welded construction and have a metallic-type shoe seal, a liquid-mounted foam seal, a liquid-mounted liquid filled type seal, or other closure device of demonstrated equivalence approved by the Division Director; or,~~

(E) are of welded construction, are equipped with a metallic-type shoe primary seal and ~~has~~ have a secondary seal from the top of the shoe seal to the tankvessel wall (shoe-mounted secondary seal).

(c) Provisions for specific processes Equipment and operating requirements.

(1) Standards. No owner of a petroleum liquid storage vessel subject to this Section shall store a petroleum liquid in that vessel unless the following conditions are met.

(A) The vessel has been fitted with:

(i) a continuous secondary seal extending from the floating roof to the tankvessel wall (rim-mounted secondary seal); or,

(ii) a closure device or other device which controls VOC emissions with an effectiveness equal to or greater than a seal required ~~above under~~ in 252:100-39-30(c)(1)(A)(i) and approved by the ~~Executive~~ Division Director.

(B) All seal closure devices meet the following requirements:

(i) ~~there~~ There are no visible holes, tears, or other openings in the seal(s) or seal fabric.

(ii) ~~the~~ The seal(s) are intact and uniformly in place around the circumference of the floating roof between the floating roof and the tankvessel wall, ~~and.~~

(iii) ~~for~~ For vapor mounted primary seals, the accumulated area of gaps exceeding ~~0.32 cm~~ 1/8 inch (0.32 cm) in width between the secondary seal and the tankvessel wall shall not exceed ~~21.2 cm²~~ 1.0 square inch per ~~meter~~ foot of tankvessel diameter (~~1.0 in.~~ 21.2 cm² per ~~foot~~ meter of tankvessel diameter), ~~as.~~ This shall be determined by physically measuring the length and width of all gaps around the entire circumference of the secondary seal in each place where a 1/8 inch (0.32 cm) uniform diameter probe passes freely between the seal and the tankvessel wall, and summing the ~~area~~ areas of the individual gaps.

(C) All openings in the external floating roof, except for automatic bleeder vents, rim space vents, and leg sleeves, ~~are:~~

(i) equipped with covers, seals, or lids in the closed position except when the openings are in actual use; and,

(ii) equipped with projections into the tankvessel which

remain below the liquid surface at all times~~7.~~
(D) Automatic bleeder vents are closed at all times except when the roof is floated off or landed on the roof leg supports~~7.~~

(E) Rim vents are set to open when the roof is being floated off the leg supports or at the manufacturer's recommended settings~~7. and 7.~~

(F) Emergency roof drains are provided with slotted membrane fabric covers or equivalent covers which cover at least 90 percent of the area of the opening.

(2) Monitoring. The owner or operator of a petroleum liquid storage vessel with an external floating roof subject to this Section shall:

(A) perform routine inspections semi-annually in order to ensure compliance with 252:100-39-30(c)(1)(B)(i), i.e., no visible holes, tears, or other openings in the seals or seal fabric;

(B) measure the secondary seal gap annually in accordance with 252:100-39-30(c)(1)(B)(iii), when the floating roof is equipped with a vapor-mounted primary seal; and,

(C) maintain records of the types of volatile petroleum liquids stored, the true vapor pressure of the liquid as stored, and the results of the inspections performed in 252:100-39-30(c)(2)(A) and 252:100-39-30(c)(2)(B).

(3) Recordkeeping.

~~(3)~~ (A) Copies of all records under 252:100-39-30(c)(2) shall be retained by the owner or operator for a minimum of two years after the date on which the record was made.

~~(4)~~ (B) Copies of all records under this Section shall be made available to the Executive Division Director, upon verbal ~~or~~ written request, at any reasonable time.

(d) Compliance schedule. Compliance with this Section will be accomplished by affected facilities ~~within two years of approval of this Section by the Oklahoma Environmental Quality Board by May 23, 1982.~~

PART 7. SPECIFIC OPERATIONS

252:100-39-40. Cutback asphalt (paving)

(a) Definitions. "Cutback asphalt" means a basic asphalt or asphaltic concrete containing a petroleum distillate.

(b) Requirements. No owner, operator and/or contractor shall prepare or apply cutback ~~liquified~~ liquefied asphalt without the prior written consent of the Executive Division Director, ~~or the Executive Director's designee.~~ Such consent may be granted during Oklahoma's non-oxidant season, i.e., ~~October through April~~ November 1 through March 31.

252:100-39-41. ~~Vapor recovery systems~~ Storage, loading and transport/delivery of VOCs

(a) Storage of ~~volatile organic compounds~~ VOCs in vessels with storage capacities —greater than 40,000 gallons —~~(953 bbls)~~. No

~~personowner or operator shall store or permit the storage of gasoline or any volatile organic compoundVOC in tanks or vessels a vessel havingwith a storage capacity greater than 40,000 gallons (953 bbls) unless such tank, reservoir or other container it is to be a pressure tankvessel capable of maintaining working pressures sufficient at all times tothat prevent organicVOC vapor or gas loss to the atmosphere, or it is equipped with one or more of the following vapor control devices:~~

(1) ~~aAn external floating roof, consisting of penteen type, pontoon-type internal floating cover or double-deck type reef, cover or a fixed roof with an internal-floating cover. whichThe cover will rest on the surface of the liquid contents at all times (i.e. off the leg supports), except during initial fill, when the storage vessel is completely empty, or during refilling. When the cover is resting on the leg supports, the process of filling, emptying, or refilling shall be continuous and shall be accomplished as rapidly as possible. The floating roof shall be equipped with a closure seal, or seals, to close the space between the reefcover edge and tankvessel wall. Such floating roofs are not appropriate control devices if the organic compoundsVOCs have a vapor pressure of 11.011.1 pounds per square inch absolute psia (568 mm Hg) (76.6 kPa) or greater under actual conditions. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. Closure seals for fixed roof vessels with an internal-floating cover will meet the requirements of 252:100-39-30(e)(1)(B), 252:100-39-30(c)(1)(B)(i) and (ii). Closure seals for vessels with external floating roofs will meet the requirements of 252:100-39-30(c)(1)(B)(i), (ii), and (iii).~~

(2) ~~aA vapor-recovery system consisting of a vapor-gathering system capable of collecting 90 percent by weight or more of the uncontrolled volatile organic compoundsVOCs that would otherwise be emitted to the atmosphere and a vapor-disposal system capable of processing such organic compoundsVOCs so as to prevent emissions in excess of 80 mg/liter of gasolineVOCs transferred to the atmosphere. All tankvessel gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place, or,~~

(3) ~~otherOther equipment or methods of equal efficiency for purposes of air pollution control as may bewhen approved by the ExecutiveDivision Director and are in concert with federal guidelines.~~

(b) ~~Storage of volatile organic compoundsVOCs in vessels with storage capacities of 400-40,000 gallons (9.5-953 bbls).~~

(1) ~~No personowner or operator shall store or permit the storage of gasoline or other volatile organic compoundsVOCs in any stationary storage containervessel with a nominal capacity greater than 400 gallons (9.5 bbls) and less than 40,000 gallons (953 bbls) unless such containerit is equipped with a submerged fill pipe or is bottom filled. No person shall store or permit the storage of gasoline or other volatile organic compound in any stationary storage container with an average daily~~

~~throughput of 30,000 gallons or greater unless the displaced vapors from the storage container are processed by a system that has a total collection efficiency no less than 90 percent by weight of total hydrocarbon compounds in said vapors.~~

(2) No owner or operator shall store gasoline or other VOCs in any stationary storage vessel with an average daily throughput of 30,000 gallons or greater unless the displaced vapors from the storage vessel are processed by a system that has a total collection efficiency no less than 90 percent by weight of total VOCs in the vapors.

~~(2)(A) The vapor recovery system shall include one or more of the following:~~

~~(A)(i) a vapor-tight return line from the storage container vessel to the delivery vessel and a system that will ensure that the vapor return line is connected before gasoline or volatile organic compounds VOCs can be transferred into the container storage vessel; or,~~

~~(B) (ii) other equipment that has a total collection efficiency no less than 90 percent by weight of the total hydrocarbon compounds VOCs in the displaced vapor provided that if approval of the proposed design installation, and operation is obtained from the Executive Division Director prior to start of construction.~~

~~(3)(B) Provided, however, that the The requirements for vapor collection of displaced vapors shall not apply to operations that are not major sources.~~

(c) Loading of volatile organic compounds VOCs.

(1) No person owner or operator shall install or operate, install or permit the building, operation or installation of a stationary volatile organic compound VOC loading facility with an annual throughput of 120,000 gallons or greater or storage capacity greater than 10,000 gallons unless such loading facility it is equipped with a vapor-collection and/or disposal system properly installed, in good working order and in operation.

(2) When While volatile organic compounds VOCs are loaded through the hatches of a transport vessel, a pneumatic, hydraulic or mechanical means shall be provided to ensure a vapor-tight seal at the hatch.

(3) A means shall be provided to prevent organic material VOC drainage from the loading device when it is removed from the transport vessel, or to accomplish complete drainage before removal.

(4) When loading is effected through by means other than hatches, all loading and vapor lines shall be equipped with fittings which that make vapor-tight connections and which close automatically when disconnected.

(5) The vapor collection and/or disposal portion of the system shall consist of one or more of the following in addition to bottom loading or submerged fill of transport vessels: Storage vessels at service stations and bulk plants may be used for intermediate storage prior to recovery/disposal of vapors as

specified in 252:100-39-41(c)(5)(A) through 252:100-39-41(c)(5)(C) if they are designed to prevent the release of vapors during use.

(A) ~~an~~An absorption/adsorption system or condensation system ~~with that~~ has a minimum recovery efficiency of 90 percent by weight of all the ~~volatile organic compound~~VOC vapors and gases entering such disposal system~~+~~.

(B) ~~a~~A vapor handling system which directs all vapors to a fuel gas incineration system with a minimum disposal efficiency of 95 percent~~+~~+.

(C) ~~either~~Other equipment ~~of that~~ has at least a 90 percent efficiency, provided plans for such equipment are ~~submitted to and approved by the Executive Division Director. Storage vessels at service stations and bulk plants may be used for intermediate storage prior to recovery/disposal of vapors as per 252:100-39-41(c)(5)(A) through 252:100-39-41(c)(5)(C) if they are designed to prevent the release of vapors during use.~~

(6) Subsection 252:100-39-41(c) shall apply to any facility ~~which that~~ loads ~~volatile organic compounds~~VOCs into any transport vessel designed for transporting ~~volatile organic compounds~~VOCs.

(d) Transport/delivery.

(1) The vapor-laden delivery vessel shall meet one of the following requirements~~+~~.

(A) ~~the~~The delivery vessel must be ~~so~~ designated and operated ~~as to be~~ vapor tight except when sampling, gauging, or inspecting~~+~~+.

(B) ~~the~~The delivery vessel must be equipped and operated ~~so that to deliver~~ the ~~volatile organic compound~~VOC vapors are ~~delivered to a vapor recovery/disposal system.~~

(2) No ~~owner/operator~~ owner or operator ~~will~~shall allow a delivery vessel to be filled at a facility unable to receive displaced ~~organic~~VOC vapors nor service ~~tanks/vessels~~ unable to deliver displaced vapors except for ~~tanks/facilities/vessels and facilities~~ exempted in 252:100-39-41(b) and 252:100-39-41(c).

(3) Testing of the tank trucks for compliance with the vapor tightness requirements must be consistent with Appendix "B" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems," EPA 450/2-78-051, or an equivalent method as determined by the Executive Division Director.

(e) Additional requirements for Tulsa County. Also see 252:100-39-48 for additional requirements pertaining to Tulsa County.

(1) Applicability. This subsection applies only in Tulsa County.

(2) Storage of VOCs.

(A) 2,000 - 40,000 gallons capacity. No owner or operator shall store gasoline or other VOCs in any stationary storage vessel with a nominal capacity greater than 2,000 gallons and less than 40,000 gallons unless, in addition to being equipped with a submerged fill pipe or being bottom loading, it is equipped with a vapor control system that has an efficiency of

no less than 90 percent by weight of the VOCs contained in the displaced vapors and is equipped with a pressure relief valve in the atmospheric vent system which maintains a pressure of 16 ounces per square inch and 1/2 ounce per square inch vacuum. The vapor recovery system shall include one or more of the following.

(i) A vapor-tight return line from the storage vessel to the delivery vessel and a system that will ensure that the vapor return line is connected before gasoline or VOCs can be transferred into the storage vessel (i.e., popped connectors from the storage vessel to the delivery vessel.).

(ii) A float vent valve assembly must be installed in the vapor return/vent line on new and existing dual point installations; however, for coaxial installations on existing stations, a vent sleeve extending six inches below the top of the vessel will be allowed. Sleeves may be equipped with a 1/16 inch air bleed hole.

(iii) The cross-sectional area of the vapor recovery line must be at least half of the cross-sectional area of the liquid delivery line.

(iv) Instead of 252:100-39-41(e)(2)(B)(i) through 252:100-39-41(e)(2)(B)(iii), other equipment that has a total collection efficiency no less than 90 percent by weight of the total VOCs in the displaced vapor may be used if approved by Division Director prior to start of construction.

(B) Applicability.

(i) The applicability of 252:100-39-41(e)(2) shall be determined by the most restrictive of the 2,000 gallon vessel size as required in 252:100-39-41(e)(2)(A) or the 120,000 gallon annual throughput required in 252:100-39-41(e)(2)(B)(ii). Once a facility places a 2,000 gallon vessel in-service or exceeds the 120,000 gallon annual throughput, that facility shall always be subject to the provisions of 252:100-39-41(e)(2). (effective February 12, 1990)

(ii) Exemptions to 252:100-39-41(e)(2) may be granted if the owner or operator shows to the satisfaction of the Division Director that the vessel is used exclusively for agricultural purposes or that the facility, based on the most current 12 months' data, dispenses 120,000 gallons per year or less.

(C) Emission testing. If emission testing is conducted, the appropriate test methods selected from EPA Methods 1 through 4, 18, 21, 25, 25A and 25B will be utilized.

(D) Compliance. Compliance with 252:100-39-41(e)(2) will be accomplished by the owner or operator of affected facilities by December 31, 1986.

(E) Certification. The owner or operator of a facility shall obtain, by whatever means practicable, certification from the owner or operator of the transport/delivery vessels that all

deliveries of gasoline or other VOCs made to their 400-gallon to 40,000-gallon storage facility located in Tulsa County shall be made by transport/delivery vessels that comply with the requirements contained in 252:100-39-41(e)(4). Compliance with 252:100-39-41(e)(2) shall be accomplished by owners or operators of affected facilities no later than December 31, 1990. (Effective February 12, 1990)

(3) Loading of VOCs. In addition to those requirements contained in 252:100-39-41(c), stationary loading facilities will be checked annually in accordance with EPA Test Method 21, Leak Test. Leaks greater than 5000 ppm will be repaired within 15 days. Facilities will retain inspection and repair records for at least two years.

(4) Transport/delivery vessel requirements. In addition to the requirements contained in 252:100-39-41(d), facilities located in Tulsa County must meet the following requirements.

(A) Maintenance.

(i) The delivery vessel must be maintained so that it is vapor tight except when sampling, gauging, or inspecting. These activities shall not occur while the vehicle is loading or unloading or is in a pressurized state.

(ii) The delivery vessel must be equipped, maintained, and operated to receive vapors from sources identified in 252:100-39-41(b)(1) and 252:100-39-41(b)(2) and retain these and all other vapors until they are delivered into an authorized vapor recovery/disposal system.

(iii) Vessels with defective equipment such as boots, seals, and hoses, or with other deficiencies that would impair the vessels' ability to retain vapors or liquid shall be repaired within 5 days.

(iv) The certified testing facility must certify to the approving agency that the proper testing and repairs have occurred in accordance with 252:100-39-41(e)(4)(B)(i). The vessel must also display on the rear panel a tag showing the date of the pressure test.

(v) No owner or operator will allow a delivery vessel to be filled at a facility unable to receive displaced VOCs nor service vessels unable to deliver displaced vapors except for vessels/facilities exempted in 252:100-39-41(b). Terminal owners shall not fill vessels that do not display a current tag.

(vi) Delivery vessels may be inspected by representatives of the DEQ in order to determine their state of repair. Such a test may consist of a visual inspection or a vapor test with vapors not to exceed 5000 ppm. Failure of a vapor test will require the owner or operator to make the necessary repairs within 10 days. Failure to certify within 10 days of a vapor test that the necessary repairs have been made will subject the owner or operator to sanctions. Upon certification of repairs, the vessel will be allowed to resume normal operation.

(B) Testing requirements.

(i) Pressure test.

(I) Delivery vessels, delivering or receiving gasoline must be tested one time per year for vapor tightness. The vapor tightness test must be consistent with Appendix "A" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems", EPA 450/2-78-051. Tests shall be performed by the owner or a reputable transport service company. Test methods used to test these vessels by owners or testing companies must be approved for use by the Division Director.

(II) The vessel will be considered to pass the test prescribed in 252:100-39-41(e)(4)(B)(i)(I) when the test results show that the vessel and its vapor collection systems do not sustain a pressure change of more than 3 inches of H₂O. There shall be no avoidable visible liquid leaks.

(ii) Vapor test. Testing of the tank trucks for compliance with vapor tightness requirements as required under 252:100-39-41(e)(4)(A)(vi) must be consistent with Appendix "B" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems", EPA 405/2-78-051, as modified for this purpose and contained in 252:100-43-15. The requirements of 252:100-39-41(e) took effect December 15, 1988.

252:100-39-42. Metal cleaning

(a) Cold cleaning facility requirements.

(1) Equipment requirements. No personowner or operator shall allow the construction or operation of any cold cleaning unit for metal degreasing using ~~an organic solvent~~ a VOC unless the following requirements are met:

(A) ~~a~~ cover or door shall be installed on the facility that can be easily operated with one hand.

(B) ~~an~~ internal drain board will be provided in such a manner that will allow lid closure if practical; if not practical, the drainage facility may be external and.

(C) ~~a~~ permanent, conspicuous label summarizing the operating requirements specified in 252:100-39-42(a)(2) will be permanently attached to the facility.

(2) Operating requirements. ~~The operating requirements specified in 252:100-39-42(a)(1)(C) shall as a minimum specify~~ Owners or operators shall at a minimum:

(A) drain clean parts at least 15 seconds or until dripping ceases before removal;

(B) close degreaser cover when not handling parts in cleaner and;

(C) store waste solventVOC in covered containers. ~~Do not dispose or allow disposition in such a manner that more than 20 percent by weight can evaporate into the atmosphere.~~

(D) Do not dispose or allow disposition of waste VOC in such a manner that more than 20 percent by weight can evaporate

into the atmosphere.

~~(3)(E) If used, a solvent spray will be of a solid fluid stream (not atomized or spray) Use a solid stream, not an atomized spray, when VOC is sprayed.~~

~~(4)(3) Requirements for controls. If the solvent volatility vapor pressure of the VOC is greater than 33 mm Hg (0.6 psi) 0.6 psi (4.1 kPa) measured at 38°C (100°F) (100°F) (38°C) or if solvent VOC is heated to 120 degrees C (248°F) (120°C), one or more of the following control devices will be required.~~

~~(A) freeboard Freeboard that gives a free board freeboard ratio greater than or equal to 0.7.~~

~~(B) water Water cover and where the solvent VOC is insoluble in and heavier than water or such equivalent, or.~~

~~(C) ether Another system of equivalent control as approved by the Executive Division Director.~~

~~(5)(4) Compliance and recordkeeping. Compliance will be determined in accordance with EPA guidance document "Control of Volatile Organic Emissions from Solvent Metal Cleaning," 450/2-77-022. Test reports and maintenance and repair records of control equipment will be maintained by the source for at least two years.~~

(b) Vapor-type metal degreasing requirements.

(1) Equipment requirements. No person owner or operator shall allow the construction or operation of any vapor-type metal degreasing unit using an ~~organic solvent~~ a VOC unless the following requirements are met.

(A) ~~the~~ The unit has a cover or door that can easily be opened and closed without disturbing the vapor zone.

(B) ~~the~~ The unit will have the following safety switches.

(i) ~~condenser~~ Condenser flow switch and thermostat or equivalent capable of shutting off the sump heat if condenser coolant is not circulating or coolant exceeds solvent VOC manufacturer's recommended level, and.

(ii) ~~spray~~ Spray safety switch capable of shutting off spray pumps if the vapor level drops in excess of four inches (10 cm).

(C) ~~the~~ The unit will have one or more of the following control devices/techniques.

(i) ~~freeboard~~ Freeboard ratio not less than 0.75, i.e., the ratio of the freeboard to the width of the degreaser wherein the term freeboard is defined as the distance from the top of the vapor zone to the top of the degreaser tank.

(ii) ~~refrigerated~~ Refrigerated chiller, i.e., condenser coils in the upper limit of the vapor zone.

(iii) ~~enclosed~~ Enclosed design, i.e., cover or door is opened only when part is actually entering or exiting the facility, or.

(iv) ~~a~~ A carbon adsorption system with ventilation greater than 50 ~~cfm/ft.²~~ cfm/ft² of air/vapor area when cover is open and exhausting less than 25 ppm solvent VOC average over one adsorption cycle, or.

- (v) ~~a~~A control system demonstrated to have a control efficiency equal to or greater than any of the systems in (C) of this paragraph.
- (D) ~~a~~A permanent conspicuous label summarizing operating procedures in 252:100-39-42(b)(2) will be attached to the ~~facility~~unit.
- (2) Operating requirements. ~~The operating requirements referred to in 252:100-39-42(b)(1)(D) As a minimum operators shall do the following as a minimum specify.~~
- (A) ~~keep~~Keep cover closed at all times except when ~~processing work~~degreasing parts.
- (B) ~~minimize~~Minimize solvent VOC carry-out by the following measures:
- (i) ~~rack~~racking parts to allow full drainage;
- (ii) ~~move~~moving parts in and out of the degreaser at less than ~~3.3 m/sec~~11 ft/min ~~(11 ft/min.)~~ (3.3 m/min);
- (iii) ~~degrease~~degreasing the workload in the vapor zone at least 30 ~~sec.~~seconds or until condensation ceases;
- (iv) ~~tip~~tipping out any pools of solvent VOC on the cleaned parts before removal; and,
- (v) ~~allow~~allowing parts to dry within the degreaser for at least 15 ~~sec.~~seconds or until visually dry.
- (C) ~~do not~~Not degrease porous or absorbent materials, such as cloth, leather, wood or rope.
- (D) ~~workloads should not~~Not allow workloads to occupy more than half of the degreaser's open top area.
- (E) ~~never~~Never spray above the vapor level.
- (F) ~~assure~~Assure that solvent VOC leaks are immediately repaired or the degreaser is shut down.
- (G) ~~do not~~Not dispose of waste solvent VOC or transfer it to another party in such a manner that greater than 20 percent of the waste (by weight) will evaporate into the atmosphere.
- ~~(H)~~ (I) Store waste solvent VOC only in closed containers.
- ~~(H)~~ (I) ~~Not allow exhaust ventilation should not to~~ exceed ~~20 m³/min. per m²~~ 65 cfm per ft² ~~(65 cfm per ft²)~~ (20 m³/min per m²) of degreaser open area, unless necessary to meet OSHA requirements. Ventilation fans should not be used near the degreaser opening; and,
- ~~(I)~~ (J) ~~Not allow water should not to~~ be visually detectable in solvent VOC exiting the water separator.
- (3) Compliance and recordkeeping. Compliance will be determined in accordance with EPA document 450/2-77-022 and all test and maintenance records ~~will~~shall be retained by the source for at least two years.
- (c) Conveyorized degreasing unit requirements.
- (1) Operating requirements. No ~~person~~owner or operator shall operate a conveyorized degreasing unit unless the following requirements are met.
- (A) ~~exhaust~~Exhaust ventilation should not exceed ~~20 m³/min. per m²~~ 65 cfm per ft² ~~(65 cfm per ft²)~~ (20 m³/min per m²) of degreaser opening, unless necessary to meet OSHA requirements. ~~Work place fans should not be used near the degreaser opening;~~

(B) Work place fans should not be used near the degreaser opening.

~~(B)~~ (C) minimize ~~Minimize~~ carry-out emissions by:

- (i) racking parts for best drainage; and,
- (ii) maintaining vertical conveyor speed at less than 3.3 m/min. 11 ft/min ~~(11 ft./min.)~~ (3.3 m/min).

~~(C)~~ (D) Waste VOC should not be disposed of waste solvent or ~~transfer~~ transferred it to another party in such a manner that greater than 20 percent of the waste (by weight) can evaporate into the atmosphere. ~~Store waste solvent VOC only in covered containers.~~

(E) Store waste VOC only in covered containers.

~~(D)~~ (F) repair solvent VOC leaks must be repaired immediately, or ~~shut down the degreaser~~ must be shut down.

~~(E)~~ (G) water ~~Water~~ should not be visibly detectable in the ~~solvent VOC~~ exiting the water separator, ~~and.~~

~~(F)~~ (H) a permanent conspicuous label ~~will~~ must be attached to the ~~facility~~ unit summarizing the operating requirements listed in 252:100-39-42(b) and 252:100-39-42(c).

(2) Control requirements. In addition to the requirements in 252:100-39-42(c) (1), any unit that has an air/vapor interface of more than 21.5 ft² 2.0 m² (2.0 m²) will be subject to the following control requirements.

(A) Major control devices. The degreaser must be controlled by either:

- (i) a refrigerated chiller;
- (ii) a carbon adsorption system, with ventilation equal to or greater than 15 m³/min per m² 50 cfm/ft² ~~(50 cfm/ft²)~~ (15 m³/min per m²) of air/vapor area (when down-time covers are open), and exhausting less than 25 ppm of ~~solvent VOC~~ by volume averaged over a complete adsorption cycle, ~~or.~~
- (iii) a system demonstrated to have control efficiency equivalent to or better than either of the above.

(B) Carryover prevention. Either a drying tunnel, or another means such as rotating (tumbling) basket, sufficient to prevent cleaned parts from carrying out ~~solvent VOC~~ liquid or vapor subject to space limitations must be installed.

(C) Safety switches. The following safety switches must be installed and be operational.

(i) Condenser flow switch and thermostat ~~that~~ ~~(shuts off sump heat if coolant is either not circulating or too warm).~~

(ii) Spray safety switch ~~that~~ ~~(shuts off spray pump or conveyor if the vapor level drops excessively, e.g. more than 10 cm (4 in.))~~ 4 in (10 cm).

(iii) Vapor level control thermostat ~~that~~ ~~(shuts off sump heat when vapor level rises too high).~~

(D) Minimized openings. Entrances and exits should silhouette work loads so that the average clearance ~~(between parts and the edge of the degreaser opening)~~ is either less than 10 cm (4 in.) 4 in (10 cm) or less than 10 percent of the width of the opening.

(E) Covers. Down-time ~~cover~~covers must be placed over entrances and exits of conveyorized degreasers immediately after the conveyor and exhaust are shutdown and removed just before they are started up.

(3) Compliance and recordkeeping. Compliance will be determined in accordance with EPA document 450/2-77-022 and all test and maintenance records will be retained by the source for at least two years.

(d) Alternative control methods. As an alternative to the requirements of 252:100-39-42(a) through 252:100-39-42(c) and subject to EPA approval, an operator may request the approval by the Division Director of other methods of control. ~~may be approved by, subject to EPA approval, the Executive Director upon application by a source, provided, the~~The applicant can must demonstrate that the proposed method will preclude no less than prevent at least 80 percent of the emissions from each source from being emitted to the atmosphere, as determined by the appropriate test methods selected from EPA Methods 1 through 4, 18, 25, 25A and 25B.

252:100-39-43. Graphic arts systems

(a) Definitions. The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise.

(1) "Flexographic printing" means the application of words, designs and pictures to a substrate by means of a roll printing technique in which the pattern to be applied is raised above the printing roll and the image carrier is made of rubber or other elastomeric materials.

(2) "Packaging rotogravure printing" means rotogravure printing upon paper, paper board, metal foil, plastic film, and other substrates, ~~which~~that are, in subsequent operations, formed into packaging products and labels for articles to be sold.

(3) "Publication rotogravure printing" means rotogravure printing upon paper which is subsequently formed into books, magazines, catalogues, brochures, directories, newspaper supplements, and other types of printed materials.

(4) "Roll printing" means the application of words, designs and pictures to a substrate usually by means of a series of hard rubber or steel rolls each with only partial coverage.

(5) "Rotogravure printing" means the application of works, designs and pictures to a substrate by means of a roll printing technique ~~which~~that involves an intaglio or recessed image areas in the form of cells.

(b) Applicability.

~~(1) This Section applies to all packaging rotogravure, publication rotogravure, and flexographic printing facilities located in Tulsa and Oklahoma counties.~~

~~(2) This Section applies only to only packaging rotogravure, publication rotogravure, and flexographic printing facilities whose potential emissionemissions of organic solventVOC isare equal to or more than 100 tons/year (90 megagrams/year) (106~~

grams) per year (100 tons/yr.). Potential emissions are to be calculated based on historical records of actual consumption of solvent VOC and ink.

(c) Provisions for specific processes.

(1) No owner or operator of a ~~packaging rotogravure, publication rotogravure or flexographic printing~~ facility subject to this Section and employing solvent VOC containing ink may operate, ~~cause, allow or permit the operation of the~~ facility unless one of the following conditions applies.

(A) ~~the~~The volatile fraction of ink, as it is applied to the substrate, contains 25.0 percent by volume or less of ~~organic solvent~~VOC and 75.0 percent by volume or more of water.

(B) ~~the~~The ink as it is applied to the substrate, less water, contains 60.0 percent by volume or more of nonvolatile material.

(C) ~~the~~The owner or operator installs and operates:

(i) a carbon adsorption system ~~which~~that reduces the ~~organic solvent~~VOC emissions from the capture system by at least 90.0 percent by weight;

(ii) an incineration system ~~which~~that oxidizes at least 90.0 percent of the ~~nonmethane volatile organic solvent~~VOC measured as total combustible carbon to carbon dioxide and water; or,

(iii) an alternative ~~organic solvent~~VOC emission reduction system demonstrated to have at least 90.0 percent reduction efficiency, measured across the control system, ~~and~~that has been approved by the Executive Division Director.

(2) A capture system must be used in conjunction with the emission control systems in 252:100-39-43(c)(1)(C). The design and operation of the capture system must be consistent with good engineering practice, and shall be required to provide for an overall reduction in ~~volatile organic compound~~VOC emissions of at least:

(A) 75.0 percent where a publication rotogravure process is employed;

(B) 65.0 percent where a packaging rotogravure process is employed; or,

(C) 60.0 percent where a flexographic printing process is employed.

(d) **Compliance schedule.** Compliance with this Section will be accomplished by affected facilities ~~within two (2) years of approval of this Subchapter by the Oklahoma Environmental Quality Board by May 23, 1982.~~

(e) **Testing.** Test procedures to determine compliance with this Subchapter must be consistent with EPA Reference Method 24 or equivalent ASTM Methods.

252:100-39-44. Manufacture of pneumatic rubber tires

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise.

(1) "Automatic tread end cementing" means the application of a

~~solvent~~VOC based cement to the tire tread ends by automated devices.

(2) "Bead dipping" means the dipping of an assembled tire bead into a ~~solvent~~VOC based cement.

(3) "Green tires" means assembled tires before molding and curing have occurred.

(4) "Green tire spraying" means the spraying of green tires, both inside and outside, with release compounds ~~which~~that help remove air from the tire during molding and prevent the tire from sticking to the mold after curing.

(5) "Manual tread end cementing" means the application of a ~~solvent~~VOC based cement to the tire tread ends by manufacturers.

(6) "Passenger type tire" means agricultural, airplane, industrial, mobile home, light and medium duty truck, and passenger vehicle tires with a bead diameter up to but not including 20.0 inches and cross section dimension up to 12.8 inches.

(7) "Pneumatic rubber tire manufacture" means the production of pneumatic rubber, passenger type tires on a mass production basis.

(8) "Undertread cementing" means the application of a ~~solvent~~VOC based cement to the underside of a tire tread.

(9) "Water based sprays" means release compounds, sprayed on the inside and outside of green tires, in which solids, water and emulsifiers have been substituted for ~~organic solvents~~VOCs. These sprays may contain an average of up to five percent ~~organic solvent~~VOC.

(b) **Applicability.**

(1) This Section applies to VOC emissions ~~from the following operations~~ infrom all major source pneumatic rubber tire manufacturing facilities located in Oklahoma County from:

- (A) undertread cementing;
- (B) automatic tread end cementing; and,
- (C) green tire spraying.

(2) The provisions of this Section do not apply to the ~~productions~~production of specialty tires for antique or other vehicles when produced on an irregular basis or with short production runs. This exemption applies only to tires produced on equipment separate from normal production lines for passenger type tires.

(3) Manual tread end cementing operations are exempt from the provisions of this Section.

(c) **Provisions for specific processes Control requirements.**

(1) **Undertread cementing or automatic tread end cementing.** The owner or operator of an undertread cementing, or automatic tread end cementing, operation subject to this Section shall install and operate the following.

- (A) ~~install and operate~~ a capture system, designed to achieve maximum reasonable capture from all undertread cementing, and automatic tread end cementing operations. Maximum reasonable capture would require that hood enclosures be designed in such a manner to minimize open areas and

enclose as much of the emission source as practical while maintaining a minimum in-draft velocity of 200 feet per minute except during times when the enclosure must be opened to allow work inside or for the inspections of the product in progress. Maximum reasonable capture shall be consistent with the following documents:

- (i) Industrial Ventilation, A Manual of Recommended Practices, 14th Edition, American Federation of Industrial Hygienists; and
 - (ii) Recommended Industrial Ventilation guidelines, U.S. Department of Health Education and Welfare, National Institute of Occupational Safety and Health.
- (B) ~~install and operate a~~ control device that meets the requirements of one of the following systems:
- (i) A carbon adsorption system designed and operated ~~in a manner such so~~ that there is at least an initial 95.0 percent removal of VOC by weight from the gases ducted to the control device with at least a 90 percent 3 year removal average; ~~or,~~
 - (ii) An incineration system that oxidizes at least 90.0 percent of the ~~nonmethane volatile organic compounds~~ (VOC VOCs (measured as total combustible carbon) which enter the incinerator to carbon dioxide and water.
 - (iii) An ~~alternative volatile organic compound~~ VOC emission reduction system certified by the owner or operator to have at least a 90.0 percent reduction efficiency, measured across the control system, and that has been approved by the ~~Executive Division~~ Director.
- (2) Green tire spraying. The owner or operator of a green tire spraying operation subject to this Section shall implement one of the following means of reducing ~~volatile organic compound~~ VOC emissions:
- (A) ~~substitute~~ Substitute water-based sprays for the normal ~~solvent based~~ VOC-based mold release compound; ~~or,~~
 - (B) ~~install~~ Install a capture system designed and operated in a manner that will capture and transfer at least 90.0 percent of the VOC emitted by the green tire spraying operation to a control device, and install and operate a control device that meets the requirements of one of the following systems:
- (i) ~~a~~ A carbon adsorption system designed and operated ~~in a manner such so~~ that there is at least 95.0 percent removal of VOC by weight from the gases ducted to the control device; ~~or,~~
 - (ii) ~~an~~ An incineration system that oxidizes at least 90.0 percent of the ~~nonmethane volatile organic compounds~~ (VOC VOCs (measured as total combustible carbon) to carbon dioxide and water; ~~or,~~
 - (iii) ~~an~~ An ~~alternative volatile organic compound~~ VOC emission reduction system approved by the Division Director and certified by the owner or operator to have at least a 90.0 percent reduction efficiency, measured across the control system; ~~that has been approved by the Executive~~

Director.

(3) Exemption. If the total volatile organic compound VOC emissions from all undertread cementing, tread-end cementing, bead dipping, and green tire spraying operations at a pneumatic rubber tire manufacturing facility do not exceed 57 grams per tire, 252:100-39-44(c)(1) and 252:100-39-44(c)(2) shall not apply.

~~(4) An owner or operator of an undertread cementing, tread end cementing, bead dipping or green tire spraying operation subject to this Section may, instead of implementing measures required by 252:100 39 44(c)(1) and 252:100 39 44(c)(2), submit to the Executive Director a petition for alternative controls. The petition must be submitted in writing before September 15, 1981 and must contain:~~

~~(A) the name and address of the company and the name and telephone number of a responsible company representative over whose signature the petition is submitted;~~

~~(B) a description of all operations conducted at the location to which the petition applies and the purpose the volatile organic compound emitting equipment serves within the operations;~~

~~(C) reference to the specific emission limits, operational and/or equipment controls for which alternative emission limits, operational and/or equipment controls are proposed;~~

~~(D) a detailed description of the proposed alternative emission limits, operational and/or equipment controls, the magnitude of volatile organic compound emission reduction which will be achieved, and the quantity and composition of volatile organic compounds which will be emitted if the alternative emission limits, operational and/or equipment controls are instituted;~~

~~(E) a schedule for the installation and/or institution of the alternative operational and/or equipment controls in conformance with the appropriate compliance schedule section; and,~~

~~(F) a demonstration that the alternative control program constitutes reasonably available control technology for the petitioned facility. The factors to be presented in this demonstration include but are not limited to:~~

~~(i) the capital expenditure necessary to achieve the petitioned level of control;~~

~~(ii) the impact of these costs on the firm;~~

~~(iii) the energy requirements of the petitioned level of control;~~

~~(iv) the impact on the environment in terms of any increase in air, water and solid waste effluent discharge of the petitioned level of control;~~

~~(v) any adverse worker or product safety implications of the petitioned level of control; and,~~

~~(vi) an analysis for each of the factors in 252:100 39-44(c)(4)(F)(i) through 252:100 39 44(c)(4)(F)(v) for the control levels specified in 252:100 39 44(c)(1) and~~

~~252:100-39-44(c)(2).~~

~~(5) The Executive Director may approve a Petition for Alternative Control if:~~

~~(A) the petition is submitted in accordance with 252:100-39-44(c);~~

~~(B) the petition demonstrates that the alternative controls represent reasonable available control technology; or,~~

~~(C) the petition contains a compliance schedule for achieving and maintaining a reduction of volatile organic compound emissions as expeditiously as practicable, but no later than the photochemical oxidant attainment date.~~

(d) **Compliance schedule.** Compliance with this Section will be accomplished by affected facilities on or before December 31, 1982.

(e) **Testing and monitoring.**

(1) Test procedures to determine compliance with this Section must be approved by the Executive Division Director and be consistent with:

(A) EPA Guideline Series Document "Measurement of Volatile Organic Compounds," EPA-450/2-78-041, ~~and,~~

(B) Appendix A of "Control of Volatile Organic Emissions from Existing Stationary Sources - Volume II: Surface coating of Cans, Coils, Paper, Fabrics, Automobiles, and Light-Duty Trucks," EPA-450/2-77-008.

(2) The Executive Division Director may accept, instead of green tire spray analysis, a certification by the manufacturer of the composition of the green tire spray, if supported by actual batch formulation records.

(3) If add-on control equipment is used, continuous monitors of ~~the following parameters~~ shall be installed, periodically calibrated, and operated at all times that the associated control equipment is operating to measure:

(A) exhaust gas temperatures of incinerators;

(B) temperature rise across a catalytic incinerator bed;

(C) breakthrough of VOC on a carbon adsorption unit; and,

(D) any other parameter for which a continuous monitoring or recording device is required by the Executive Division Director.

252:100-39-45. Petroleum (solvent) dry cleaning

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

(1) "Cartridge filters" means perforated canisters containing filtration paper and/or activated carbon that are used in a pressurized system to remove solid particles and fugitive dyes from soil-laden petroleum solvent.

(2) "Containers and conveyors ~~and of petroleum~~ solvent" means piping, ductwork, pumps, storage tanks, and other ancillary equipment that are associated with the installation and operation of washers, dryers, filters, stills, and settling tanks.

(3) "Dry cleaning" means a process of the cleaning of textiles and fabric products in which articles are washed in a non-aqueous solution (petroleum solvent) and then dried by exposure to a heated air stream.

(4) "Housekeeping" means those measures and precautions necessary to minimize the release of petroleum solvent to the atmosphere.

(5) "Operations parameters" means the activities required to insure that the equipment is operated in a manner to preclude the loss of petroleum solvents to the atmosphere.

(6) "Perceptible leaks" means any petroleum solvent vapor or liquid leaks that are conspicuous from visual observation, such as pools or droplets of liquid, or buckets or barrels of petroleum solvent or petroleum solvent-laden waste standing open to the atmosphere.

(7) "Petroleum solvent" means organic material produced by petroleum distillation comprising a hydrocarbon range of 8 to 12 carbon atoms per organic molecule that exists as a liquid under standard conditions.

(b) **Applicability.** This Section applies to petroleum solvent washers, dryers, ~~solvent~~-filters, settling tanks, vacuum stills, and other containers and conveyors of petroleum solvent that are used in petroleum solvent dry cleaning facilities in Tulsa County only.

(c) ~~Provisions for specific processes~~ **Operating requirements.**

(1) The owner or operator of a petroleum solvent dry cleaning facility shall not operate any dry cleaning equipment using petroleum solvents unless:

(A) there are no perceptible liquid or vapor leaks from any portion of the equipment;

(B) all washer lint traps, button traps, access doors and other parts of the equipment where petroleum solvent may be exposed to the atmosphere are kept closed at all times except when required for proper operation or maintenance;

(C) the still residue is stored in sealed containers, ~~and~~ ~~The~~ ~~the~~ used filtering material is ~~to be~~ placed into a sealed container suitable for use with petroleum solvents, immediately after removal from the filter and ~~be~~-disposed of in the prescribed manner; or,

(D) cartridge filters containing paper or carbon or a combination thereof, which are used in the dry cleaning process are ~~to be~~ drained in the filter housing for at least 24 hours prior to removal.

(2) The owner or operator of a petroleum solvent dry cleaning facility shall not operate any drying tumblers and cabinets that use petroleum solvents unless tumblers and cabinets are operated in ~~such~~ a manner as to control petroleum solvent vapor leaks by reducing the number of sources where petroleum solvent is exposed to the atmosphere. Under no circumstances should there be any open containers (can, buckets, barrels) of petroleum solvent or petroleum solvent-containing material. Equipment containing solvent (washers, dryers, extractors, and filters)

should remain closed at all times other than during maintenance or load transfer. Lint filter and button trap covers should remain closed except when petroleum solvent-laden lint and debris are removed. Gaskets and seals should be inspected and replaced when found worn or defective. Petroleum solvent-laden solvent-laden clothes should never be allowed to ~~sit~~remain exposed to the atmosphere for longer periods than are necessary for load transfers. Finally, vents on petroleum solvent-containing waste and new petroleum solvent storage tanks should be constructed and maintained in a manner that limits petroleum solvent vapor emissions to the maximum possible extent.

(3) The owner or operator shall repair all petroleum solvent vapor and liquid leaks within 3 working days after identifying the sources of the leaks. If necessary repair parts are not on hand, the owner or operator shall order these parts within 3 working days, and repair the leaks no later than 3 working days following the arrival of the necessary parts.

(d) **Disposal of filters.** Filters from the petroleum dry cleaning facility shall be disposed of by:

- (1) incineration at a facility approved by the fire marshall's office for such disposal;
- (2) by recycling through an approved vendor of this service;
- or,
- (3) by any other method approved by the Executive Division Director.

(e) **Compliance schedule.** Compliance with 252:100-39-45(c)(1) through 252:100-39-45(c)(3), will be accomplished by affected facilities on or before October 1, 1986.

252:100-39-46. Coating of parts and products

(a) **Applicability.** This Section shall apply only to these industries located in Tulsa County which manufacture and/or coat metal parts and products, such as ~~This Section is applicable to~~ large farm machinery, small farm machinery, small appliances, commercial machinery, industrial machinery and fabricated metal products. Architectural coating, aerospace coating, and automobile refinishing are not included.

(b) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

(1) "**Air or forced air dry coatings**" means coatings ~~which~~that are dried by the use of air or forced warm air at temperatures up to 194°F.

(2) "**Clear coat**" means a coating ~~which~~that lacks color and opacity or is transparent and uses the undercoat as a reflectant base.

(3) "**Extreme performance coatings**" mean coatings designed for harsh exposure or extreme environmental conditions (~~i.e.e.g.,~~ exposure to the weather, all of the time, temperature above 200°F, detergents, abrasive and scouring agents, solvents, corrosive atmosphere or similar conditions).

(4) "Facility" means all emission sources located on a contiguous ~~property~~properties under common control which are affected by the surface coating provisions of ~~0AC~~ 252:100-37 and 252:100-39.

(5) "Powder" means a coating ~~which~~that is applied in a finely divided ~~(powder)~~ state by various methods, and becomes a continuous, solid film when the metal part or product is moved to an oven for curing.

(6) "Transfer efficiency" means the weight (or volume) of coating solids adhering to the surface being coated divided by the total weight (or volume) of coating solids delivered to the applicator.

(c) ~~Existing source requirement.~~ No owner or operator ~~subject to the provisions of this Section~~ shall discharge or cause the discharge into the atmosphere from an existing coating line or individual coating operation any ~~organic solvent~~VOC in excess of the amounts listed in 252:100-39-46(d) as calculated by EPA method 24, 40 CFR Part 60.

(d) Standards. The following table enumerates the limitations for surface coatings in pounds of ~~solvent~~VOC per gallon of coating as applied (less water/exempt solvent water and exempt compounds)+. If more than one limit listed in the table is applicable to a specific coating, then the least stringent limitation shall be applied.

Coating type	Limitations	
	lbs/gal	kg/liter
Air or Forced Air Dry	3.5	4 <u>20.42</u>
Clear Coat	4.3	5 <u>20.52</u>
Extreme Performance	3.5	4 <u>20.42</u>
Powder	0.4	0 <u>50.05</u>
Other	3.0	3 <u>60.36</u>

(e) Emission factor. For the purposes of calculating an emission factor (EF) in pounds ~~VOC~~VOC per gallon of coating solids for use in the development of a plant-wide emission plan as described in 252:100-39-46(j)(1), the following formula will be utilized:

$$EF = V D / 1 - (V+W) = V D / S$$

where: V = volume fraction of ~~solvent~~VOC in coating_T
 D = density of ~~solvent~~VOC in the coating_T
 W = volume fraction of water in coating_T ~~and~~
 S = 1 - (V+W) = volume fraction of solids in coating.

(f) ~~Emission limit Compliance.~~ If more than one emission limit as listed in 252:100-39-46(d) is applicable to a specific coating, then the least stringent emission limitation shall be applied. Compliance with the coating limits listed in 252:100-39-46(d) is to be calculated on a daily weighted average basis.

(g) ~~Solvent-containing~~VOC-containing materials.

~~Solvent containing~~VOC-containing materials used for clean up shall be considered in the ~~emissions~~VOC content limits listed in 252:100-39-46(d) unless:

- (1) the ~~solvent~~VOC containing materials are maintained in a closed container when not in use;
- (2) closed containers are used for the disposal of cloth or paper or other materials used for surface preparation and cleanup;
- (3) the spray equipment is disassembled and cleaned in a ~~solvent~~VOC vat and the vat is closed when not in use; or,
- (4) the ~~solvent~~VOC containing materials used for the clean up of spray equipment are sprayed directly into closed containers.

(h) ~~Exemptions. Exemptions to this Section shall be permitted for combined emissions at one site/facility, which do not exceed a 10 tons/year emissions cutoff based on the facility's~~Facilities with a potential to emit 10 tons/year or less of ~~VOC~~VOC from coating operations are exempt from this Section. Once this limit is exceeded, the ~~source~~facility will always be subject to the ~~limits of this Section.~~

(i) ~~Alternate standard. Emissions~~ Coatings with VOC contents in excess of those ~~permitted~~allowed by 252:100-39-46(d) ~~are allowable~~may be used if both of the following conditions are met:

(1) ~~emissions~~Emissions that ~~would result in the absence of control~~ are reduced to levels equivalent to those ~~permitted by that would occur if the VOC content of the coatings met the limits contained in~~ 252:100-39-46(d) and ~~meet~~there is an overall control efficiency of at least:

(A) 85 percent, ~~by incineration, or,~~

(B) 85 percent, ~~by absorption, or, any other equipment of equivalent reliability and effectiveness, and,~~

(C) 85 percent by any other equipment of equivalent reliability and effectiveness.

(2) ~~no~~No air pollution, as defined by the Clean Air Act, results.

(j) Emission plan.

(1) Development of a plant-wide emission plan. An ~~owner/operator~~owner or operator may develop a plant-wide emission plan consistent with EPA's Emission Trading Policy as published in the December 4, 1986 Federal Register instead of having each coating line comply with the ~~emission VOC content limitations prescribed contained in subsection (d) of this Section~~ 252:100-39-46(d), provided if the following conditions are met:

~~(1)(A)~~ (A) The owner or operator demonstrates, ~~by means of approved material balance or manual emission test methods, by the methods prescribed in 252:100-5-2.1(d) that sufficient reductions in organic solvent VOC emissions may be obtained by controlling other~~ facilities ~~sources~~ within the plant to the extent necessary to compensate for all excess emissions which result from one or more coating lines not achieving the prescribed limitation. Such demonstration shall be made ~~described in writing and shall include:~~

~~(A)(i)~~ a complete description of the coating line or lines ~~which that~~ will not comply with the emission VOC content limitation in 252:100-39-46(d);

~~(B)(ii)~~ quantification of emissions, in terms of pounds per day of ~~organic solvents~~ VOCs, which are in excess of the prescribed emission VOC content limitation for each coating line described in ~~252:100-39-46(d)~~ 252:100-39-46(j)(A)(i);

~~(C)(iii)~~ a complete description of each ~~facility~~ and the related control system, if any, for these facilities within the plant wherehow emissions will be decreased at specific sources to compensate for excess emissions from each coating line described in ~~252:100-39-46(d)~~ 252:100-39-46(j)(A)(i) and the date on which such reduction will be achieved;

~~(D)(iv)~~ a transfer efficiency based on a 60 percent baseline with emissions expressed in pounds of VOC per gallon of solids when transfer efficiency is used to compensate for excess emissions from spray painting operations, ~~the transfer efficiency shall be based on a 60 percent baseline, with emissions expressed in pounds of solvent per gallon of solids. Credits for improvements in transfer efficiency shall be demonstrated with in plant testing which complies with approved EPA methods.~~

(v) a demonstration of credits for improvements in transfer efficiency with in plant testing that complies with EPA methods.

~~(E)(vi)~~ quantification of emissions, in terms of pounds per day of ~~organic solvents~~ VOCs, for each source both before and after the improvement or installation of any applicable control system, or any physical or operational changes to such a facility or facilities to reduce emissions and the date on which such reductions will be achieved; and,

~~(F)(vii)~~ a description of the procedures and methods used to determine the emissions of ~~organic solvents~~ VOCs.

~~(2)(B)~~ The plant-wide emission reduction plan does not include decreases in emissions resulting from requirements of other applicable air pollution rules. The plant-wide emission reduction plan as described in the Emissions Trading Policy may include voluntary decreases in emissions accomplished through installation or improvement of a control system or through physical or operational changes to ~~facilities~~ emission units, including permanently reduced production or closing a facility, located on the premises of a surface-coating operation.

~~(3)(2)~~ Compliance with a plant-wide emission plan. The implementation of a plant-wide emission reduction plan instead of compliance with the emissions VOC content limitation prescribed in 252:100-39-46(d) has been expressly approved by the Executive Director and the EPA Administrator. Upon approval of a plan, any emissions in excess of those established for each facility under the plan shall be a violation of these rules.

(k) Compliance, testing, and monitoring requirements.

(1) The ~~Executive Division~~ Director may require the ~~owner/operator~~ owner or operator of a source to demonstrate at his expense, compliance with the emission limits using EPA Methods 24, 24A, 1-4, 25, 25A, 25B in 40 CFR 60.444 or EPA Document 450/3-84-019. At a minimum, such test must show that the overall capture efficiency and destruction efficiency are equal to 85 percent, (e.g., 90 percent capture efficiency multiplied by 95 percent destruction efficiency equals 85.5 percent system efficiency). The one hour bake option in Method 24 is required when doing compliance testing.

(2) Testing for plant-wide emission plans shall be conducted by the ~~owner/operator~~ owner or operator at his expense to demonstrate compliance with the emission VOC content limits contained in 252:100-39-46(d).

(3) Monitoring shall be required of any ~~owner/operator~~ owner or operator subject to this Section who uses add-on control equipment for compliance. Such monitoring shall include:

~~(A)~~ installation and maintenance of monitors to accurately measure and record operational parameters of all required control devices to ensure the proper functioning of those devices in accordance with design specifications, including:

~~(i)~~ (A) the exhaust temperature of direct flame incinerators and/or gas temperature immediately upstream and downstream of any catalyst bed;

~~(ii)~~ (B) the total amount of ~~volatile organic substances~~ VOCs recovered by carbon adsorption or other ~~solvent~~ VOC recovery system during a calendar month; and,

~~(iii)~~ (C) the dates and reasons for any maintenance and repair of the required control devices and the estimated quantity and duration of ~~volatile organic substance~~ emissions during such activities;

~~(B)~~ maintenance of records of any testing conducted at an affected facility in accordance with the provisions specified in ~~252:100-39-46(k)(3)(A)(i)~~; and,

~~(C)~~ maintenance of all records at the affected facility for at least two years and make such records available to representative of the State or local air pollution control agency upon request.

~~(1) Reporting and recordkeeping. The owner/operator of a facility subject to this Section shall submit to the Executive Director upon written request, reports detailing specific VOS sources; the quantity of coatings used for a specific time period, VOS content of each coating; capture and control efficiencies; and any other information pertinent to the calculation of VOS emissions. The data necessary to supply the requested information shall be retained by the owner/operator for a minimum of two years.~~

(1) The owner or operator of a facility subject to this Section shall submit to the Division Director upon written request, reports detailing specific VOC sources; the quantity of coatings used for a specific time period, VOC content of each coating; capture and control efficiencies; and any other information

pertinent to the calculation of VOC emissions. The data necessary to supply the requested information shall be retained by the owner or operator for a minimum of two years.

(2) The owner or operator of a facility subject to this Sections shall maintain records of any testing conducted at an affected facility in accordance with the provisions specified in 252:100-39-46(k), as well as all other records for at least two years. These records shall be available to representatives of the DEQ upon request.

(m) **Compliance date.** The date of compliance with the requirements of this Section will be is December 31, 1990.

252:100-39-47. Control of ~~VOS~~VOC emissions from aerospace industries coatings operations

(a) Applicability.

(1) This Section applies to all aerospace facilities located in Tulsa County. Sources once subject to this Section are always subject.

(2) This Section does not apply to individual coating formulations ~~which that~~, when aggregated, do not exceed fifty-five (55) gallons per year for the facility.

~~(3) New and modified sources and coating applications not included in the plan are subject to the permit requirements set forth in OAC 252:100-7 and will be submitted to EPA as source-specific SIP revision, unless:~~

~~(A) the new coatings meet the presumption norm (3.5 pound VOS per gallon less water and exempt solvents limit); or,~~

~~(B) the total usage of the new coating does not exceed fifty-five (55) gallons per year of each coating formulation.~~

~~(4)(3) Exemptions to this Section shall be permitted for combined emissions at one site/facility which do not exceed a ten ten per year emission cut off based on the Facilities with a potential of the facility to emit 10 tons/year or less of VOS VOC from coatings operations are exempt from this Section.~~

(b) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

(1) **"Aerospace"** means the industries, air bases and depots that ~~design and manufacture, rework, or repair~~ aircraft or military equipment components for either commercial or military customers.

(2) **"Aircraft"** means any machine designed to travel through the earth's atmosphere. This group includes but is not limited to: airplanes, balloons, dirigibles, drones, helicopters, missiles, and rockets.

(3) **"Alternate ~~reasonablereasonably~~ available control technology (ARACT)"** means the lowest emission limit that a particular source is capable of meeting by the application of control technology that is reasonably available considering technological and economic feasibility as determined on a case-by-case basis.

(4) **"Coating"** means a material which covers a surface which

alters the surface characteristics and from which Volatile Organic Solvents VOCs can be emitted during the application and/or curing process.

(5) "CTG" means the Control Techniques Guidance Document "Control of Volatile Organic Emissions From Existing Stationary Sources, Volume VI: Surface Coating of Miscellaneous Metal Parts and Products," EPA No. 450/2-78-015.

(6) "Facility" means all of the pollutant-emitting activities which that belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person or persons under common control.

(7) "Low organic solvent VOC coating (LOSE) (LVOCC)" means a coating which that contain contains less organic solvent VOC than the conventional coatings used by the industry. Low organic solvent VOC coatings include waterborne, higher solids, electrodeposition, and powder coatings.

(8) "Reasonable Reasonably available control technology (RACT)" means the lowest emission limit that a particular source is capable of meeting by the application of control technology that is reasonably available considering technological and economic feasibility and the need to impose such controls to attain and maintain a National Ambient Air Quality Standard.

(c) ~~General requirements. All affected facilities shall develop an emissions reduction plan as set forth in 252:100-39-47(d). Said plan, upon approval, shall constitute the determination of ARACT for that particular facility. ARACT must be installed and operating as approved in the plan no later than January 1, 1991 for existing facilities, unless additional phased compliance dates are otherwise approved in the plan. Provided, however, that in the case that Tulsa County is still nonattainment for ozone within five (5) years of approval of ARACT, the Emission Reductions Plan and the ARACT determination shall be subject to review and modification.~~

(1) All affected facilities shall develop an emissions reduction plan as set forth in 252:100-39-47(d). This plan, upon approval, shall constitute ARACT for that particular facility.

(2) ARACT must be installed and operating as provided in the approved plan no later than January 1, 1991 for existing facilities, unless additional phased compliance dates are approved in the plan.

(3) New and modified sources and coating applications not included in the plan are subject to the permit requirements set forth in 252:100-7 or 252:100-8, and will be submitted to EPA as source-specific SIP revisions, unless one of the following applies.

(A) The new coatings meet the presumptive norm of 3.5 pounds of VOC per gallon less water and exempt compounds.

(B) The total usage of the new coating does not exceed fifty-five (55) gallons per year of each coating formulation.

(d) Emissions reduction plan.

(1) Plan development. Each owner/operator shall develop an

~~emissions reduction plan for all affected facilities. Each plan shall include the following:~~

~~(A) a detailed, reasoned and exhaustive review of:~~

- ~~(i) each source of emissions within the facility and~~
- ~~(ii) (2) the entire plant collectively;~~

(A) a detailed, reasoned and exhaustive review of each source of emissions within the facility and the entire plant collectively;

(B) identification and quantification of emissions, in terms of pounds per day, of all ~~organic solvents~~ VOC both before and after the application of ARACT;

(C) a detailed, innovative engineering effort directed toward finding alternative air management schemes that can be incorporated in order to abate emissions at costs which are reasonable;

(D) a consideration of the level of control that is achievable using available alternative coatings, to include LVOCC for every application, ~~low organic solvent coatings (LOSC);~~

~~(E) a consideration of the level of control achievable using available add on control devices. This demonstration shall include, at a minimum, a demonstration of the feasibility/infeasibility of the following control options:~~

- ~~(i) carbon absorption;~~
- ~~(ii) incineration/flaring;~~
- ~~(iii) condensation; and~~
- ~~(iv) a combination of 252:100 39 47(d)(1)(E)(i) and 252:100 39 47(d)(1)(E)(ii).~~

(E) a demonstration of the level of control achievable using available add-on control devices which shall include, at a minimum, the feasibility/infeasibility of carbon adsorption, incineration/flaring, condensation, and a combination of carbon adsorption and incineration/flaring;

~~(F) a consideration of facility redesign, including the following:~~

- ~~(i) recirculation;~~
- ~~(ii) reduced air flows;~~
- ~~(iii) consolidation of spray operations; and,~~
- ~~(iv) installation of common control devices for two or more separate coatings operations.~~

(F) a consideration of facility redesign, including recirculation, reduced air flows, consolidation of spray operations, and installation of common control devices for two or more separate coating operations;

~~(G) a consideration of alternative applications, to improve transfer efficiency, including:~~

- ~~(i) high volume low pressure spray equipment;~~
- ~~(ii) heated spray guns; and,~~
- ~~(iii) electrostatic spray equipment/powder coatings.~~

(G) a consideration of alternative applications, to improve transfer efficiency, including high-volume-low-pressure spray equipment, heated spray guns, and electrostatic spray

equipment/powder coatings;

(H) an explanation why each source is not a typical coating source covered by the CTG as defined in 252:100-39-47(b);

(I) a cost/benefit analysis for all control technology considered; and,

(J) a detailed compliance schedule ~~which~~that includes the emission limit and/or control techniques for each emission source. ~~This schedule, which~~ together with other relevant considerations, shall be set forth in a separate section of the plan ~~which~~that summarizes and outlines ARACT for the referenced facility.

(2) Submission of emission reduction plans. ~~Upon completion, the~~The emissions reduction plan shall be submitted in triplicate to the Air Quality Division. The preparer shall also submit a copy of the plan to ~~Region VI Environmental Protection Agency (EPA) EPA,~~ Region VI.

(3) Action on plan. Within 30 days of submittal, or of the ~~effective date of this Section May 25, 1990,~~ whichever is later, the Air Quality Division shall, considering any comments submitted by EPA, either approve, modify or disapprove the plan.

(4) Public hearing. The Division shall, at the first meeting of the Air Quality Council following the approval, modification, or disapproval of the plan, present at public hearing, the staff's findings and ARACT determination. ~~Upon consideration of comments and recommendations from the Council, the owner/operator of the affected facility, the public and EPA, the Department shall, within ten (10) days after the public hearing, issue a final ARACT approval. Final approval shall constitute ARACT for the affected facility. The owner/operator shall be responsible for installation and operational provisions of the approved ARACT, including any specific provisions set forth therein. Any violation of the plan or of its provisions shall constitute a violation of this Section.~~

(5) Final approval. Upon consideration of comments and recommendations from the Council, the owner or operator of the affected facility, the public, and EPA, the DEQ shall, within ten (10) days after the public hearing, issue a final ARACT approval. Final approval shall constitute ARACT for the affected facility.

(6) Compliance. The owner or operator shall be responsible for installation and operational provisions of the approved ARACT. Any violation of the plan or of its provisions shall constitute a violation of this Section.

~~(5)~~(7) Submission of SIP revision. Upon approval by the ~~Department~~DEQ, the ARACT determination shall be submitted to EPA as a SIP revision.

(e) Reporting and recordkeeping.

(1) Recordkeeping requirements. ~~The owner/operator~~owner or operator shall maintain the following:

(A) a material data sheet which documents the ~~volatile organic solvent~~VOC content, composition, solids content, ~~solvent~~VOC density and other relevant information regarding

each coating and solvent VOC available for use in the affected surface coating processes; ~~information detailing the operational parameters of the coating process sufficient to determine continuous compliance with the applicable control limits. Information as to the amounts of each type coating used and the amounts of solvents used for dilution in each coating type shall be maintained for each coating operation. Daily usage records will be kept for all coatings used that do not comply with the applicable control limits specified in the plan;~~

(B) information detailing the operational parameters of the coating process sufficient to determine continuous compliance with the applicable control limits;

(C) information as to the amounts of each type coating used and the amounts of VOC used for dilution in each coating type for each coating operation;

(D) daily usage records for all coatings used that do not comply with the applicable control limits specified in the plan; and,

~~(B)~~ (E) records shall be maintained of any monitoring and testing conducted at an affected facility in accordance with the provisions specified in 252:100-39-47(f) τ_i .

~~(C)~~ (2) Method of calculating VOC content in coatings. records
Records required by 252:100-39-47(e) (1) (A) and 252:100-39-47(e) (1) (B) through 252:100-39-47(e) (1) (E) detailing VOSVOC in pounds per gallon of coating (less water and exempt compounds) shall be calculated as follows:

$$\text{VOSVOC in lbs/gal of coating} = \frac{Wv - Wx - WxWv - Ww - Wx}{Vm - Vw - Vx}$$

where: Wv = weight of all volatiles τ_i

Ww = weight of water τ_i

Wx = weight of exempt solvent compounds τ_i

Vm = 1 (one) τ_i

Vw = volume fraction of water τ_i ; and,

Vx = volume fraction of exempt solvent compounds.

~~(D)~~ (3) Maintenance of records. records
Records required by 252:100-39-47(e) (1) (A) and 252:100-39-47(e) (1) (B) through 252:100-39-47(e) (1) (E) shall be maintained for at least two years and shall be made available upon written request by representatives of the Air Quality Division, AOD U.S. Environmental Protection Agency or EPA or the Tulsa City County Health Department.

~~(2)~~ (4) Alternative recordkeeping provision. Alternatively to 252:100-39-47(e) (1) through 252:100-39-47(e) (3), an equivalent recordkeeping provision which that satisfies the substantive requirements of 252:100-39-47(e) (1) through 252:10-39-47(e) (3) may be approved under the plan.

(f) Testing and monitoring.

(1) Testing. Each ~~owner/operator~~ owner or operator shall, upon a determination by the ~~Air Quality Division~~ that testing is

required to establish emission from any particular source or sources, conduct such tests at his own expense. Test methods may include 1-4, 18, 24, 24A, 25A, 25B found in the Appendix A of 40 CFR Part 60, including the procedures found at 40 CFR 60.444.

(2) Monitoring. Monitoring shall be required of any ~~owner/operator~~ owner or operator ~~subject to this section~~ who uses add-on control equipment for compliance. Such monitoring shall include: accurately measure and record operational parameters of all required control devices to ensure the proper functioning of those devices in accordance with design specifications, including:

~~(A) installation and maintenance of monitors to accurately measure and record operational parameters of all required control devices to ensure the proper functioning of those devices in accordance with design specifications, including:~~

~~(i)(A) the exhaust temperature of direct flame incinerators and/or gas temperature immediately upstream and downstream of any catalyst bed;~~

~~(ii)(B) the total amount of volatile organic substances VOCs recovered by carbon adsorption or other solvent VOC recovery system during a calendar month; and,~~

~~(iii)(C) the dates and reasons for any maintenance and repair of the required control devices and the estimated quantity and duration of volatile organic substance VOC emissions during such activities.~~

~~(B) maintenance of records of any testing conducted at an affected facility in accordance with the provisions specified in 252:100-39-47(f)(2)(A)(i); and,~~

~~(C) maintenance of all records at the affected facility for at least two years and make such records available to representatives of the State or local air pollution control agencies upon request. (252:100-39-47 Effective May 25, 1990)~~

252:100-39-48. Vapor recovery systems [AMENDED AND RENUMBERED TO 252:100-39-41(e)]

~~(a) Applicability. This Section applies only in Tulsa County.~~

~~(b) Storage of volatile organic compounds 400-40,000 gallons (9.5-953 bbls).~~

~~(1) No person shall store or permit the storage of gasoline or other volatile organic compounds in any stationary storage container with a nominal capacity greater than 400 gallons (9.5 bbls) and less than 40,000 gallons (952.4 bbls) unless such container is equipped with a submerged fill pipe or is bottom filled. No person shall store or permit the storage of gasoline or other volatile organic compounds in any stationary storage container with a nominal capacity greater than 2,000 gallons (47.5 bbls) and less than 40,000 gallons (952.4 bbls) unless such container is equipped with a vapor control system that has an efficiency of no less than 90 percent by weight of the volatile organic compounds contained in the displaced vapors and~~

~~is equipped with a pressure relief valve in the atmospheric vent system which maintains a pressure of 16 ounces per square inch and 1/2 ounce per square inch vacuum.~~

~~(2) The vapor recovery system shall include one or more of the following:~~

~~(A) a vapor tight return line from the storage container to the delivery vessel and a system that will ensure that the vapor return line is connected before gasoline or volatile organic compounds can be transferred into the container (i.e., pipped connectors from the storage container to the delivery vessel.);~~

~~(B) a float vent valve assembly must be installed in the vapor return/vent line on new and existing dual point installations; however, for coaxial installations on existing stations, a vent sleeve extending six inches below the top of the tank will be allowed. Sleeves may be equipped with a 1/16 inch air bleed hole;~~

~~(C) the cross sectional area of the vapor recovery line must be at least half of the cross sectional area of the liquid delivery line, or;~~

~~(D) instead 252:100 39 48(b)(2)(A) through 252:100 39 48(b)(2)(C), other equipment that has a total collection efficiency no less than 90 percent by weight of the total hydrocarbon compounds in the displaced vapor provided that approval of the proposed design, installation, and operation is obtained from the Executive Director prior to start of construction.~~

~~(3) Exemptions to this Section may be granted provided the owner/operator shows to the satisfaction of the appropriate authority that the container is used exclusively for agricultural purposes or that the facility, based on the most current 12 month's data, dispenses 120,000 gallons per year or less.~~

~~(4) The applicability of this Section shall be determined by the most restrictive of the 2,000 gallon tank size as specified in 252:100 39 48(b)(1) or the 120,000 gallon annual throughput described in 252:100 39 48(b)(3). However, once a facility places a 2,000 gallon tank in service or exceeds the 120,000 gallon annual throughput described in 252:100 39 48(b)(3), that facility shall always be subject to the provisions of this Section. (effective February 12, 1990)~~

~~(5) If emission testing is conducted, the appropriate test methods selected from EPA Methods 1 through 4, 18, 21, 25, 25A and 25B will be utilized.~~

~~(6) Compliance with this subsection will be accomplished by affected owner/operator by December 31, 1986.~~

~~(7) The owner/operator of a facility or facilities shall obtain, by whatever means practicable, certification from the owner/operator of the transport/delivery vessels that all deliveries of gasoline or other volatile organic compounds made to their facility or facilities located in Tulsa County, shall be made by vessels which comply with the requirements contained~~

~~in 252:100-39-48(d). Compliance with this Section shall be accomplished by affected owner/operators no later than December 31, 1990. (Effective February 12, 1990)~~

~~(c) Loading of volatile organic compounds.~~

~~(1) No person shall operate, install or permit the building, operation or installation of a stationary volatile organic compound loading facility unless such loading facility is equipped with a vapor collection and/or disposal system properly installed, in good working order and in operation.~~

~~(2) When volatile organic compounds are loaded through the hatches of a transport vessel, a pneumatic, hydraulic or mechanical means shall be provided to ensure a vapor tight seal at the hatch.~~

~~(3) A means shall be provided to prevent organic material drainage from the loading device when it is removed from the transport vessel, or to accomplish complete drainage before removal.~~

~~(4) When loading is effected through means other than hatches, all loading and vapor lines shall be equipped with fittings which make vapor tight connections and which close automatically when disconnected.~~

~~(5) The vapor collection and/or disposal portion of the system shall consist of one or more of the following in addition to bottom loading or submerged fill of transport vessels:~~

~~(A) an absorption/adsorption system or condensation system with a minimum recovery efficiency of 90 percent by weight of all the volatile organic compound vapors and gases entering such disposal system;~~

~~(B) a vapor handling system which directs all vapors to a fuel gas incineration system with a minimum disposal efficiency of 95 percent; or,~~

~~(C) other equipment of at least 90 percent efficiency, provided plans for such equipment are submitted to and approved by the Executive Director. Storage vessels at service stations and bulk plants may be used for intermediate storage prior to recovery/disposal of vapors as per 252:100-39-48(c)(5)(A) through 252:100-39-48(c)(5)(C) if they are designed to prevent the release of vapors during use.~~

~~(6) Subsection 252:100-39-48(c) shall apply to any facility which loads volatile organic compounds into any transport vessel designed for transporting volatile organic compounds.~~

~~(7) Facilities will be checked annually in accordance with EPA Test Method 21, Leak Test. Leaks greater than 5000 ppm will be repaired within 15 days. Facilities will retain inspection and repair records for two years.~~

~~(d) Transport/delivery vessel requirements.~~

~~(1) Maintenance.~~

~~(A) The delivery vessel must be maintained so as to be vapor tight except when sampling, gauging, or inspecting. These activities shall not occur while the vehicle is loading or unloading or is in a pressurized state.~~

~~(B) The delivery vessel must be equipped, maintained and~~

~~operated to receive vapors from sources identified in 252:100-39 41(b) (1) and retain these and all other vapors until they are delivered into an authorized vapor recovery/disposal system.~~

~~(C) Vessels with defective equipment such as boots, seals, and hoses, or with other deficiencies which would impair the vessels ability to retain vapors or liquid shall be repaired within 5 days.~~

~~(D) The certified testing facility must certify to the approving agency that the proper testing and repairs have occurred in accordance with 252:100 39 48(d) (2) (A) (i). The vessel must also display on the rear panel a tag showing the date of the pressure test.~~

~~(E) No owner/operator will allow a delivery vessel to be filled at a facility unable to receive displaced organic vapors nor service tanks unable to deliver displaced vapors except for tanks/facilities exempted in 252:100 39 41(b). Terminal owners shall not fill vessels which do not display a current tag.~~

~~(F) Delivery vessels may be inspected by representatives of the appropriate health agency in order to determine their state of repair. Such a test may consist of a visual inspection, a vapor test with vapors not to exceed 5000 ppm. Failure of a vapor test will require the owner/operator to effect the necessary repairs within 10 days. Unless certification is made to the appropriate health agency within 5 days the vessel will be removed from service by the owner/operator. Failure to certify that the cited repairs have been effected will subject the vessel to sanctions. Upon certification of repairs the vessel will be allowed to operate in a normal manner.~~

~~(2) Testing requirements.~~

~~(A) Pressure test.~~

~~(i) Delivery vessels, delivering or receiving gasoline must be tested one time per year for vapor tightness. The vapor tightness test must be consistent with Appendix "A" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems", EPA 450/2 78 051. Tests shall be performed by the owner or a reputable transport service company. Test methods used to test these vessels by owners or testing companies must be approved for use by the Executive Director.~~

~~(ii) The vessel will be considered to pass the test prescribed in 252:100 39 48(d) (2) (A) (i) when the test results show that the vessel and its vapor collection systems do not sustain a pressure change of more than 3 inches of H₂O in addition there shall be no avoidable visible liquid leaks.~~

~~(B) Vapor test. Testing of the tank trucks for compliance with vapor tightness requirements as required under 252:100-39 41(d) (1) (F) must be consistent with Appendix "B" EPA~~

~~Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems", EPA 405/2-78-051, as modified for this purpose and contained in 252:100-43-15. The requirements of 252:100-39-48 will become effective December 15, 1988.~~

252:100-39-49. Manufacturing of fiberglass reinforced plastic products

~~(a) General provisions. Within 12 months after promulgation of this Section all affected facilities shall limit emissions of VOS from fiberglass manufacturing to those listed in 252:100-39-49(a)(1), or have an approved plan for the reduction of such emissions. The plan must be submitted to the Executive Director within 6 months after promulgation of this Section, and shall detail those emissions which will be controlled, the means by which control will be achieved and will demonstrate that compliance will be achieved within two years from the date of promulgation of this Section. The approval authority for such plans shall reside with the Air Quality Council. All approved plans shall be submitted as SIP revisions.~~

~~(1) Compliance with 252:100-39-49(a) shall be accomplished by use of control equipment which can demonstrate an 85 percent reduction in the VOS released from each process gas stream, e.g. 90 percent capture efficiency multiplied by 95 percent destruction efficiency equals 85.5 percent system efficiency.~~

~~(2) Exemptions to the limits listed in 252:100-39-49(a)(1) may be allowed for any process gas stream which does not exceed six tons per year actual emissions based on 6240 hours per year. However, once this limit is exceeded, controls must be put in place and maintained at any operating level.~~

~~(b) Demonstration of compliance. The Executive Director may require the owner/operator of a source to demonstrate at his expense, compliance with the prescribed emissions limits. The testing shall be accomplished using the appropriate EPA test method or methods, these include methods 1, 4, 18, 25, 25A, 25B and 40 CFR 60.444. Initial compliance testing shall be accomplished within 180 days of the applicable compliance date.~~

~~(c) Testing. Testing for the alternate emissions plan shall be conducted by the owner/operator at his expense and shall demonstrate compliance with the emission limits contained in the approved plan.~~

~~(d) Recordkeeping. The owner/operator of a facility subject to this Section shall submit to the Executive Director upon written request reports detailing specific VOS sources, the quantity of solvents used during specific months, a description of the solvent used, control equipment efficiencies, equipment downtime and any other information pertinent to the calculation of VOS emissions from the facility. The owner/operator must also maintain records which detail the maintenance performed on all control equipment as well as a record of the downtime with the reason for each occurrence. Such records shall be maintained by the source for a minimum of two years. (252:100-39-49, Effective February 12, 1990)~~

(a) Applicability.

(1) This Section applies to any process gas stream with actual VOC emissions that exceed six tons per year based on 6,240 hours of operation per year.

(2) Once the limit in 242:100-39-49(a)(1) is exceeded, the controls required in 252:100-39-49(b) must be put in place and maintained and used at any operating level.

(b) Standards. Affected facilities shall limit emissions of VOC from fiberglass manufacturing by use of control equipment which can demonstrate an 85 percent reduction in the VOC released from each process stream (e.g. 90 percent capture efficiency multiplied by 95 percent destruction efficiency equals 85.5 percent system efficiency).

(c) Compliance. All affected facilities must comply with one of the following.

(1) Meet the requirements of 252:100-39-49(b) by February 13, 1991.

(2) Have an approved plan for the reduction of VOC emissions as required by 252:100-39-49(b) by February 13, 1991.

(A) The plan shall be submitted by August 13, 1990, and shall:

(i) detail those emissions which will be controlled;

(ii) detail the means by which control will be achieved; and,

(iii) demonstrate that compliance will be achieved by February 13, 1992.

(B) The Air Quality Council shall have approval authority for the plans.

(C) All approved plans shall be submitted to the EPA as SIP revisions.

(d) Demonstration of compliance.

(1) The Division Director may require an owner or operator of a source to demonstrate at his expense, compliance with the requirements of 252:100-39-49(b).

(2) The testing shall be accomplished using the appropriate EPA test method or methods. These include methods 1-4, 18-25, 25A, 25B and 40 CFR 60.444.

(3) Initial compliance testing shall be accomplished within 180 days of the applicable compliance date.

(4) Testing for the emissions plan described in 252:100-39-49(c)(2) shall be conducted by the owner or operator at his expense and shall demonstrate compliance with the emission limits contained in the approved plan.

(e) Recordkeeping.

(1) The owner or operator of a facility subject to this Section shall submit to the Division Director upon written request, reports that include:

(A) details of specific VOC sources;

(B) the quantity of VOC used during specific months;

(C) a description of the VOC used;

(D) control equipment efficiencies;

(E) details of maintenance performed on all control

equipment;

(F) equipment downtime; and,

(G) any other information pertinent to the calculation of VOC emissions from the facility.

(2) The records required in 252:100-39-49(e)(1) shall be maintained by the source for at least two years. [252:100-390-49, Effective February 12, 1990]

LIST OF ORGANIC COMPOUNDS WITH NEGLIGIBLE
PHOTOCHEMICAL REACTIVITY
40 CFR 51.100(s)(1) as it existed on July 1, 1998
From the Federal Register dated 4/9/98

Sec. 51.100 Definitions.

(s) Volatile organic compounds (VOC)

(1) This includes any such organic compound other than the following, which have been determined to have negligible photochemical reactivity:

methane;
ethane;
methylene chloride (dichloromethane);
1,1,1-trichloroethane (methyl chloroform);
1,1,2-trichloro-1,2,2-trifluoroethane (CFC-113);
trichlorofluoromethane (CFC-11);
dichlorodifluoromethane (CFC-12);
chlorodifluoromethane (HCFC-22);
trifluoromethane (HFC-23);
1,2-dichloro 1,1,2,2-tetrafluoroethane (CFC-114);
chloropentafluoroethane (CFC-115);
1,1,1-trifluoro 2,2-dichloroethane (HCFC-123);
1,1,1,2-tetrafluoroethane (HFC-134a);
1,1-dichloro 1-fluoroethane (HCFC-141b);
1-chloro 1,1-difluoroethane (HCFC-142b);
2-chloro-1,1,1,2-tetrafluoroethane (HCFC-124);
pentafluoroethane (HFC-125);
1,1,2,2-tetrafluoroethane (HFC-134);
1,1,1-trifluoroethane (HFC-143a);
1,1-difluoroethane (HFC-152a);
parachlorobenzotrifluoride (PCBTF);
cyclic, branched, or linear completely methylated siloxanes;
acetone;
perchloroethylene (tetrachloroethylene);
3,3-dichloro-1,1,1,2,2-pentafluoropropane (HCFC-225ca);
1,3-dichloro-1,1,2,2,3-pentafluoropropane (HCFC-225cb);
1,1,1,2,3,4,4,5,5,5-decafluoropentane (HFC 43-10mee);
difluoromethane (HFC-32);
ethylfluoride (HFC-161);
1,1,1,3,3,3-hexafluoropropane (HFC-236fa);
1,1,2,2,3-pentafluoropropane (HFC-245ca);
1,1,2,3,3-pentafluoropropane (HFC-245ea);
1,1,1,2,3-pentafluoropropane (HFC-245eb);
1,1,1,3,3-pentafluoropropane (HFC-245fa);
1,1,1,2,3,3-hexafluoropropane (HFC-236ea);
1,1,1,3,3-pentafluorobutane (HFC-365mfc);

chlorofluoromethane (HCFC-31);
1 chloro-1-fluoroethane (HCFC-151a);
1,2-dichloro-1,1,2-trifluoroethane (HCFC-123a);
1,1,1,2,2,3,3,4,4-nonafluoro-4-methoxy-butane ($C_4F_9OCH_3$);
2-(difluoromethoxymethyl)-1,1,1,2,3,3,3-heptafluoropropane ($(CF_3)_2CFCF_2OCH_3$);
1-ethoxy-1,1,2,2,3,3,3,4,4,4-nonafluorobutane ($C_4F_9OC_2H_5$);
2-(ethoxydifluoromethyl)-1,1,1,2,3,3,3-heptafluoropropane ($(CF_3)_2CFCF_2OC_2H_5$);
methyl acetate

and perfluorocarbon compounds which fall into these classes:

- (i) Cyclic, branched, or linear, completely fluorinated alkanes;
- (ii) Cyclic, branched, or linear, completely fluorinated ethers with no unsaturations;
- (iii) Cyclic, branched, or linear, completely fluorinated tertiary amines with no unsaturations; and
- (iv) Sulfur containing perfluorocarbons with no unsaturations and with sulfur bonds only to carbon and fluorine.

REVISIONS TO THE PROPOSED MODIFICATION OF SUBCHAPTER 39 FOR THE
DECEMBER 15, 1998, AIR QUALITY COUNCIL MEETING

Following is a list of the revisions that have been made to the modification of Subchapter 39 that was presented at the October 20, 1998, AQC meeting. In addition to these changes, the Notes which are not part of the rule have been deleted and the "underlined strikeouts" and double underlines have been deleted from 252:100-39-18(a); 252:100-39-41(e); and 252:100-39-47(c).

1. In the title of the Subchapter "NON-ATTAINMENT" has been replaced by "NONATTAINMENT" for consistency.
2. 252:100-39-18(a) [page 8] Undeleted "discharge of the water" on line 4.
3. 252:100-39-30(a)(1) [page 9] Replaced "normal operating conditions" with "standard conditions".
4. 252:100-39-30(a)(5) [page 9] Replaced "tank" in the definition of liquid-mounted seal with "vessel".
5. 252:100-39-30(b)(2)(B) [page 9] Reversed the positions of "1,600,000 liters" and "420,000 gallons". Replaced "420,000 gallons with 422,675 gallons" and replaced "1,600,000 liters" with "1,600 m³".
6. 252:100-39-30(b)(2)(E) [page 10] Inserted "are" prior to "equipped" on line 1 and changed "has" to "have" on line 2.
7. 252:100-39-30(c)(1)(B)(iii) [page 10] Changed "tank diameter" to "vessel diameter" on line 6. In the second line reversed the positions of "1/8 in" and "0.32 cm" and replaced "in" with "inch". In lines 4 and 5 changed the order of tank diameter limits putting the English units first. In line 6 replaced ", as" with "This shall be" to make the last portion of this long sentence a new sentence. In line 9 added "1/8 inch" prior to "0.32 cm" and enclosed "0.32 cm" in parenthesis. In line 11 deleted the semicolon and changed "area" to "areas".
8. 252:100-39-41(b)(2)(A)9i) [page 14] In line 5 added "storage" in front of "vessel".
9. 252:100-39-41(e)(2)(A) [page 14] In line 3 changed "container" to "vessel".
10. 252:100-39-41(e)(2)(A)(i) [page 15] In lines 1 and 6 replaced "container" with "vessel", in line 4 replaced "container" with "storage vessel".
11. 252:100-39-41(e)(2)(A)(ii) [page 15] Replaced "tank" with "vessel".
12. 252:100-39-41(3)(2)(B)(ii) [page 15] Undeleted "the" prior to "owner" and changed "month's" to "months".
13. 252:100-39-41(e)(4)(A)(ii) [page 16] Inserted a comma after "maintained"..
14. 252:100-39-42(b)(2)(A) [page 19] Deleted "processing work" and added "degreasing parts".
15. 252:100-39-42(b)(2)(B)(iii) and (iv) [page 19] Changed "sec." to "seconds".
16. 252:100-39-42(c)(2) [page 20] Added "21.5 ft²" prior to "2.0 m²" and enclosed the later in parentheses.
17. 252:100-39-42(c)(2)(A)(ii) [page 20] Corrected "(15 m²/min per m²)" to "(15 m³/min per m²)".

18. 252:100-39-44(c)(2)(B)(iii) [page 25] Undeleted the period at the end of the sentence.
19. 252:100-39-46(e) [page 29] Added "for use in the development of a plant-wide emission plan as described in 252:100-39-46(j)(1) after "solids".
20. 252:100-39-46(j)(1) [page 30] Deleted "owner/operator" and added "owner or operator".
21. 252:100-39-47(b)(2) [page 33] Deleted "design and" and added ", rework, and repair" after "manufacture".
22. 252:100-39-47(b)(5) [page 34] Added "Techniques" after "Control".
23. 252:100-39-47(c)(3) [page 34] Added paragraph (3) Which was 252:100-39-47(d)(7)(B). It had originally been 252:39-47(a)(3).
24. 252:100-39-47(d)(7)(B) Moved this to 252:100-39-47(c)(3).

PUBLIC MEETING

Notice of Public Meeting for December 15, 1998 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance door of the meeting room.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Dr. Canter - aye; Ms. Myers - aye; Dr. Grosz - aye; Mr. Branecky - aye; Mr. Wilson - aye; Mr. Breisch - aye; Mr. Kilpatrick and Ms. Slagell did not attend.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the October 20, 1998 Public Meeting/Hearings. Motion was made by Dr. Grosz to approve the Minutes as presented and second was made by Mr. Branecky. Roll call as follows: Dr. Canter - aye; Ms. Myers - aye; Dr. Grosz - aye; Mr. Branecky - aye; Mr. Wilson - aye; Mr. Breisch - aye.

PUBLIC HEARINGS

Protocol Statement - As protocol officer, Mr. Dyke convened the hearings by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke entered into the hearing records the Hearing Agenda and Oklahoma Register Notice.

OAC 252:100-7 Permits [AMENDED]

Mr. Dyke called upon Ms. Jeanette Buttram for staff recommendation to Council. Ms. Buttram advised that proposed revisions delete the lower limit of 5 tons per year for Permit by Rule (PBR) facilities allowing those facilities with less than 5 tons per year emissions which are subject to new source performance standards and national emission standards for hazardous air pollutants to apply for a PBR instead of having to obtain an individual permit.

Also a new Part 9 is proposed which will outline the requirements necessary for a facility to qualify for F . . . Each subchapter containing a PBR for specific facilities would also be referenced under this new Part. Within Part 9, Section 252:100-7-60.3 was written due to the proposed PBR section for VOC storage and loading facilities in Subchapter (SC) 37. Staff recommendation for SC 37 will be to continue the rule until the February AQC meeting. Therefore, staff suggests the proposed new section be deleted from the rule and added once the PBR in SC 37 is approved. Mr. Branecky requested clarification of which part of the rule was being deleted. Ms. Buttram confirmed the suggestion to recommend the proposed rule, excluding Section 252:100-7-60.3, to the Environmental Quality Board for permanent adoption.

Following discussion and comments, Chairman Breisch entertained a motion to recommend this rule to the Environmental Quality board at the next meeting. Dr. Grosz made that motion with second made by Ms. Myers. Roll call as follows: Dr. Canter – aye; Ms. Myers – aye; Dr. Grosz – aye; Mr. Branecky – aye; Mr. Wilson – aye; Mr. Breisch – aye.

Copy of hearing transcript attached and made an official part of these minutes.

OAC 252:100:8-4(a)(2) Permits for Part 70 Sources [AMENDED]

Mr. Dyke called upon Ms. Joyce Sheedy for staff recommendation regarding this rule. Dr. Sheedy advised that these amendments update the incorporation by reference of the case-by-case MACT determinations for Part 70 sources in 252:100-8-4 (a)(2)(C) by adopting 40 CFR 63.41, 63.43, and 63.44 as they exist on July 1, 1998. Dr. Sheedy advised that this update would be made annually.

Mr. Breisch entertained motion recommending adoption as permanent rule by the Environmental Quality Board. Mr. Branecky made the motion with the second being made by Mr. Wilson. Roll call as follows: Dr. Canter – aye; Ms. Myers – aye; Dr. Grosz – aye; Mr. Branecky – aye; Mr. Wilson – aye; Mr. Breisch – aye.

Copy of hearing transcript attached and made an official part of these minutes.

OAC 252:100-37 Control of Emissions of Organic Materials (AMENDED)

Mr. Dyke called upon Dr. Joyce Sheedy who advised that proposed changes primarily simplify language and correct grammar and format but also include various substantive changes. Dr. Sheedy explained that one substantive change alters the definition of volatile organic compound (VOC) to make it reflect EPA's definition of VOC. Dr. Sheedy then stated the staff's recommendation to continue this rule until the February Council meeting because of remaining controversy.

Council discussion followed. Mr. Wilson expressed concern about SC 37 being open for so long with no action taken. During public discussion, Mr. Bradshaw from Boeing reiterated Mr. Wilson's concern. Mr. Bradshaw further explained that the specific point of concern for Boeing and American Airlines is the definition of VOC. He said the members of his industry would like to see the definition amended as soon as possible. Ms. Hoffman responded by explaining that it is the intent of the staff to have all remaining issues with SC 37 resolved and to recommend approval of the rule by the Council. She further explained that if the rule is

approved by the Council in February, there would be time to get the packet of information to the Environmental Quality Board before the March 5, 1999 meeting.

Mr. Breisch entertained a motion to continue this rule to Council's February meeting. Ms. Myers made motion with second made by Dr. Grosz. Roll call as follows: Dr. Canter – aye; Ms. Myers – aye; Dr. Grosz – aye; Mr. Branecky – aye; Mr. Wilson – aye; Mr. Breisch – aye.

Copy of hearing transcript attached and made an official part of these minutes.

OAC 252:100-39 Control of Organic Materials in Nonattainment Areas [AMENDED]
Mr. Dyke called upon Dr. Joyce Sheedy for staff recommendation. Dr. Sheedy pointed out that the proposed changes primarily simplify language and correct grammar and format but also include some substantive changes. Dr. Sheedy explained that written comments, staff responses and details of the substantive changes were summarized in the Council packet. Dr. Sheedy submitted the written letters from EPA and EFO for hearing record.

There were no questions or comments from the Council or from the public.

Following discussion, Mr. Breisch entertained a motion to continue this rule to the Council's February 17, 1999 meeting. Mr. Branecky made that motion with the second made by Ms. Myers. Roll call as follows: Dr. Canter – aye; Ms. Myers – aye; Dr. Grosz – aye; Mr. Branecky – aye; Mr. Wilson – aye; Mr. Breisch – aye.

Copy of hearing transcript attached and made an official part of these minutes

OAC 252:100-5 Registration, Emission Inventory and Annual Operating Fees [AMENDED]

OAC 252:100-7 Permits [AMENDED]

OAC 252:100-8-1.7 Permits for Part 70 Sources [AMENDED]

This subject was first brought before the Council on October 20, 1998 at which time the Council voted to continue the hearing until the December 15, 1998 Council meeting. The presentation for this public hearing consisted of several staff members. Mr. David Dyke began by informing those present that written comments have been received from the Environmental Federation of Oklahoma, Mid-Continent Oil and Gas Association, and the Small Business Advisory Panel. These comments and staff responses were submitted for official record. Mr. Dyke continued to explain the Division's anticipated increase in workload and discussed other factors contributing to the request for fee increases.

Mr. Dyke called upon Mr. Scott Thomas to describe the upcoming rulemaking activities. Mr. Thomas explained that the Division's rulemaking goals were designed according to proposed rules received from the EPA, instruction from the State Legislature to review all of our rules by December 2000, and efforts to go forward with the agencies directive and goals of the permit continuum. Mr. Thomas also stated that in order to accomplish these goals, additional staff would be required or the rulemaking priorities would have to be refined. Mr. Ray Bishop came forward to elaborate upon the need for additional permitting staff. He stated that even though the Permit program has instituted a number of time-saving and efficiency efforts, the Division does not anticipate meeting the impending Title V time frames and deadlines with the current staff. He also reviewed the non-Title V activities required of the permitting

staff. Mr. Terrill commented regarding potential actions that could occur at the federal level and consequently affect the Division.

Finally, Mr. Dyke called upon Ms. Shawna McWaters-Khalousi to explain the proposed fee increases and how they were derived. Staff recommended approval by the Council. Mr. Dyke summarized staff's position by stating that even though services and spending levels are reduced from previous years, the current level of services and management of oncoming issues cannot be maintained without additional staff. Mr. Dyke assured that the Division would not compromise the environmental protection, but be forced to shift and prioritize resources ultimately resulting in reduced services provided.

After extensive comment and discussion from the Council, the public and members of industry, Mr. Breisch entertained, and Mr. Branecky made the motion that: In SC 5, annual operating fees for minor facilities and for Part 70 sources be increased to \$17.12 per ton; In SC 7, the fee for minor source applicability determinations be increased to \$250 and the fees for all types of individual minor source permits be doubled; and In SC 8, the fee for major source applicability determinations be increased to \$250. Ms. Myers made the second to Mr. Branecky's motion with roll call as follows: Dr. Canter – aye; Ms. Myers – aye; Dr. Grosz – aye; Mr. Branecky – aye; Mr. Wilson – aye; Mr. Breisch – aye.

Copy of hearing transcript attached and made an official part of these minutes.

NEW BUSINESS The Council requested a monthly financial statement from Mr. Coleman's office. This information would enable the Finance Committee to monitor the cash flow of the AQD and work toward avoiding future budgetary shortfalls. Additionally, the Council requested that a comprehensive and detailed list of tasks that would be billed to Title V expenditures be created. This list would be a guideline for staff to follow when accounting time and effort. Finally, a request was made for additional state appropriations for a workload study that will determine staffing priorities.

ADJOURNMENT With no further business, meeting was adjourned with announcement that the next regularly scheduled meeting would be February 17, 1999 at the Department of Environmental Quality Multi-Purpose Room, First Floor, 707 North Robinson, Oklahoma City, Oklahoma.

NOTE: The sign-in sheet and the copies of hearing records are attached as an official part of these Minutes.

HEARING/MEETING AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
REGULAR MEETING
AIR QUALITY COUNCIL

Wednesday February 17, 1999 1:00 P.M.
707 North Robinson
DEQ Multi-Purpose Room, First Floor
Oklahoma City, OK

1. **Call to Order – Bill Breisch**
2. **Roll Call – Myrna Bruce**
3. **Approval of Minutes of the December 15, 1998 Regular Meeting**
4. **Election of Officers Calendar Year 1999**
Nominations and election by Council

5. **OAC 252:100-37 Control of Emissions of Organic Materials [AMENDED]**
Proposal would simplify the language under the agency-wide re-right/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. A substantive change deletes a sentence regarding fuel-burning and refuse-burning equipment resolving a contradiction. Continued from December 15, 1998 Air Quality Council meeting.
 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public
 - C. Possible action by Council
 - D. Roll call vote

6. **OAC 252:100-39 Emissions of Organic Materials in Nonattainment Areas [AMENDED]**
Proposal would simplify the language under the agency-wide re-right/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. Continued from December 15, 1998 Air Quality Council meeting.

BRIEFING AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
REGULAR MEETING
AIR QUALITY COUNCIL

Wednesday February 17, 1999 9:30 A.M.
707 North Robinson
DEQ Multi-Purpose Room, First Floor
Oklahoma City, OK

1. **Call to Order – Bill Breisch**
2. **Division Director's Report – Staff**
 - A. Update of current events and AQD activities
 - B. Discussion by Council / Public
3. **Election of Officers – Calendar Year 1999**

Discussion by Council
4. **OAC 252:100-37 Control of Emissions of Organic Materials [AMENDED]**

Proposal would simplify the language under the agency-wide re-right/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. A substantive change deletes a sentence regarding fuel-burning and refuse-burning equipment resolving a contradiction. Continued from December 15, 1998 Air Quality Council meeting.

 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public
5. **OAC 252:100-39 Emissions of Organic Materials in Nonattainment Areas [AMENDED]**

Proposal would simplify the language under the agency-wide re-right/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. Continued from December 15, 1998 Air Quality Council meeting.

 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public

February 3, 1999

MEMORANDUM

TO: Air Quality Council

FROM: Eddie Terrill, Director ^{ET}
AIR QUALITY DIVISION

SUBJECT: Modifications to Subchapter 39

Enclosed is a copy of the proposed modifications to OAC 252:100-39, EMISSIONS OF ORGANIC MATERIALS IN NONATTAINMENT AREAS. These revisions were brought to the Air Quality Council for the first time on August 18, 1998, and again on October 20, 1998, and December 15, 1998. At the December meeting the staff recommended that the rule be considered again at the February 17, 1999, Council meeting.

The proposed revisions primarily simplify and clarify language, correct grammar, and impose consistency in format on the rule without involving substantive changes. A number of non-substantive changes and two substantive changes were made to the rule following the December 15, 1998, Council meeting. The substantive changes are listed as items 3 and 5 below. The following substantive revisions to the rule are proposed.

1. The definition of "volatile organic compound (VOC)" in 252:100-39-2 has been revised. As part of the simplification process, staff proposes to have only one definition of volatile organic compound which will be consistent with the EPA definition and replace the terms "volatile organic solvent (VOS)" and "organic solvents." The new definition provides that any organic compound listed in 40 CFR 51.100(s)(1) shall be presumed to have negligible photochemical reactivity and will not be considered to be a VOC. This revision will also serve as a response to requests to exempt acetone, methylated siloxanes, perchloroethylene, and methyl acetate from being considered VOCs. These four substances are on the list in 40 CFR 51.100(s)(1), and, therefore, will not be considered to be VOCs.
2. The staff proposes to correct the placement of "prior to lease custody transfer" in 252:100-39-30(b). This phrase was located in paragraph (2) and was, therefore, applicable to all the exemptions listed in that paragraph. Research in the Air Quality Council records and in the Control Technology Guideline, Control of Volatile Organic Emissions from Petroleum Liquid Storage in External Floating Roof Tanks, EPA-450/2-78-047, indicates that this phrase should apply only to 252:100-39-30(b)(2)(B). Staff recommends moving this phrase to 252:100-39-30(b)(2)(B).
3. The addition of 252:100-39-30(b)(3) and (4) is proposed, which would exempt storage vessels subject to the equipment standards in 40 CFR 60, Subparts Ka or Kb and/or the equipment standards in 40 CFR 63, Subparts CC or G from the requirements of 252:100-39-30.

4. 252:100-39-41(c), Loading of volatile organic compounds, currently has no provisions to exclude small loading facilities. The staff proposes to add language that will limit the requirements of this subsection to facilities that have a minimum annual throughput of 120,000 gallons or storage capacity greater than 10,000 gallons.
5. Staff proposes to amend the definition of "aerospace" in 252:100-39-47((b) to make clear that the term includes rework or repair.

Staff will suggest that the proposed rule be recommended to the Board for permanent adoption.

In addition to the proposed draft revisions to Subchapter 39, a copy of 40 CFR 51.100(s)(1), a rule impact statement, two summaries of comments and staff responses, and a list of the revisions that were made to the rule after the December 15, 1998, Air Quality Council meeting are also included in the packet.

Enclosures 6

SUBCHAPTER 39. EMISSION OF VOLATILE ORGANIC MATERIALS COMPOUNDS (VOCs) IN NONATTAINMENT AREAS AND FORMER NONATTAINMENT AREAS

PART 1. GENERAL PROVISIONS		
252:100-39-1.	Purpose	1
252:100-39-2.	Definitions	1
252:100-39-3.	General applicability	2
252:100-39-4.	Exemptions	2
 PART 3. PETROLEUM REFINERY OPERATIONS		
252:100-39-15.	Petroleum refinery equipment leaks	2
252:100-39-16.	<u>Petroleum Refinery</u> refinery process unit turnaround	5
252:100-39-17.	<u>Petroleum Refinery</u> refinery vacuum producing system	6
252:100-39-18.	<u>Petroleum Refinery</u> refinery effluent water separators	7
 PART 5. PETROLEUM PROCESSING AND STORAGE		
252:100-39-30.	Petroleum liquid storage in <u>vessels with</u> <u>external floating reef tanks</u> roofs	8
 PART 7. SPECIFIC OPERATIONS		
252:100-39-40.	Cutback asphalt (paving)	11
252:100-39-41.	Vapor recovery systems <u>Storage, loading and</u> <u>transport/delivery of VOCs</u>	11
252:100-39-42.	Metal cleaning	16
252:100-39-43.	Graphic arts systems	21
252:100-39-44.	Manufacture of pneumatic rubber tires	22
252:100-39-45.	Petroleum (solvent) dry cleaning	26
252:100-39-46.	Coating of parts and products	28
252:100-39-47.	Control of <u>VOC</u> emissions from aerospace industries coatings operations	33
252:100-39-48.	Vapor recovery systems	38
252:100-39-49.	Manufacturing of fiberglass reinforced plastic products	42

PART 1. GENERAL PROVISIONS

252:100-39-1. Purpose

~~The purpose of this Subchapter is to control the emission of organic materials from stationary sources located in nonattainment areas and to specify the additional control measures required to protect and enhance the air quality to insure that the Oklahoma air quality standard is not exceeded and significant deterioration is prevented.~~ The purpose of this Subchapter is to prevent the formation of ozone by controlling the emissions of volatile organic compounds (VOCs). This Subchapter contains requirements for the control of emissions of VOCs from stationary sources located in areas that are nonattainment or were formerly nonattainment for ozone.

252:100-39-2. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise.

~~"Cutback asphalt" means a basic asphalt or asphaltic concrete containing a petroleum distillate.~~

~~"Effluent water separator" means any tank, box, sump, or other container in which any material compound floating on or entrained or contained in water entering such tank, box, sump or other container is physically separated and removed from such water prior to outfall, drainage, or recovery of such water.~~

~~"Organic materials" means any chemical compounds of carbon excluding carbon monoxides, carbon dioxide, carbonic acid, metallic carbides, metal carbonates and ammonium carbonates.~~

"Petroleum refinery" means any facility engaged in producing gasoline, aromatics, kerosene, distillate fuel oils, residual fuel oils, lubricants, asphalt, or other products through distillation of crude oil or other hydrocarbons or through redistillation, cracking, rearrangement or reforming or unfinished petroleum derivatives.

~~"Refinery" means any facility engaged in producing gasoline, kerosene, fuel oils or other products through distillation of crude oil or through redistillation, cracking or reforming of unfinished hydrocarbon derivatives.~~

"Refinery unit" means a set of components which are a part of a basic process operation, such as distillation, hydrotreating, cracking or reforming of hydrocarbons.

~~"Submerged fill pipe" means any fill pipe or discharge nozzle which that meets any one of the following conditions.~~

(A) ~~the~~The bottom of the discharge pipe or nozzle is below the surface of the liquid in the receiving vessel for at least 95 percent of the volume filled.

(B) ~~the~~The bottom of the discharge pipe or nozzle is less than 6 inches from the bottom of the receiving vessel.

(C) ~~the~~The bottom of the discharge pipe or nozzle is less than 2 pipe or nozzle diameters from the bottom of the receiving vessel, ~~or,~~

~~(D) other equivalent methods acceptable to the Executive Director.~~

~~"Volatile organic compound (VOC)" means any compound containing carbon and hydrogen or containing carbon and hydrogen in combination with any other element which has a vapor pressure of 1.5 pounds per square inch absolute or greater under actual storage conditions of carbon, excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate, which participates in atmospheric photochemical reactions. Any organic compound listed in 40 CFR 51.100(s)(1) will be presumed to have negligible photochemical reactivity and will not be considered to be a VOC.~~

~~"Volatile organic solvent (VOS)" means any organic compound which participates in atmospheric photochemical reactions, that is, any organic compound other than those which the EPA Administrator designates as having negligible photochemical reactivity. VOS may be measured by the EPA VOC reference method.~~

252:100-39-3. General applicability

In addition to any application of the requirements contained in OAG 252:100-37, the additional ~~control/prohibitions~~requirements contained in this Subchapter shall be required ~~on~~of existing and new facilities located in Tulsa and Oklahoma Counties.

252:100-39-4. Exemptions

VOCs with vapor pressures less than 1.5 pounds per square inch absolute (psia) under actual storage conditions are exempt from 252:100-39-16 through 252:100-39-18, 252:100-39-30, 252:100-39-41, and 252:100-48.

PART 3. PETROLEUM REFINERY OPERATIONS

252:100-39-15. Petroleum refinery equipment leaks

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise.

(1) **"Component"** means any piece of equipment which has the potential to leak ~~volatile organic compounds~~ VOCs when tested in the manner described in EPA Test Method 21 of 40 CFR Part 60. These sources include, but are not limited to, pumping seals, compressor seals, seal oil degassing vents, pipeline valves, flanges and other connections, pressure relief devices, process drains, and open ended pipes. Excluded from these sources are valves which are not externally regulated.

(2) **"Gas service"** means any equipment which processes, transfers or contains a ~~volatile organic compound~~ VOC or mixture of ~~volatile organic compounds~~ VOCs in the gaseous phase.

"Leaking component" means a component which has a VOC concentration exceeding 10,000 ppmv when tested according to the provisions in 252:100-39-15(e).

(3) **"Liquid service"** means any equipment which processes, transfers or contains a ~~volatile organic compound~~ VOC or mixture

of volatile organic compounds (VOCs) in the liquid phase.

~~(4) "Petroleum refinery" means any facility engaged in producing gasoline, aromatics, kerosene, distillate fuel oils, residual fuel oils, lubricants, asphalt, or other products through distillation of crude oil or other hydrocarbons or through redistillation, cracking, rearrangement or reforming or unfinished petroleum derivatives.~~

~~(5) "Refinery unit" means a set of components which are a part of a basic process operation, such as distillation, hydrotreating, cracking or reforming of hydrocarbons.~~

~~(6) "Valves not externally regulated" means valves that have no external controls, such as in-line check valves.~~

~~(7) "Volatile organic compounds" means any compound containing carbon and hydrogen or containing carbon and hydrogen in combination with any other element which has a vapor pressure of 0.3 kilopascals (0.0435 pounds per square inch absolute) or greater under actual storage conditions. (Effective 2-12-90)~~

(b) Applicability. This Section applies to all source facility petroleum refineries located in the following counties: Tulsa and Oklahoma.

(1) This Section applies to all petroleum refineries located in Tulsa County and Oklahoma County.

(2) VOCs with vapor pressures less than 0.0435 psia (0.3 kilopascals (kPa)) under actual storage conditions are exempt from 252:100-39-15. (Effective 2-12-90.)

(c) Provisions for specific processes. Standards and operating requirements

(1) The owner or operator of a petroleum refinery complex subject to this Section shall:

(A) develop and conduct a monitoring program consistent with the provisions in 252:100-39-15(d) and 252:100-39-15(f);

~~(B) conduct a monitoring program consistent with the provisions in 252:100-39-15(f);~~

~~(C) record all leaking components which have a VOC concentration exceeding 10,000 ppm when tested according to the provisions in 252:100-39-15(e) and place an identifying tag on each component consistent with the provisions in 252:100-39-15(f)(3);~~

~~(D) (C) repair and retest the leaking components, as defined in 252:100-39-15(e)(1)(C), as soon as possible but no later than 15 days after the leak is found; and,~~

~~(E) (D) identify all leaking components, as defined in 252:100-39-15(e)(1)(C), which cannot be repaired until the unit is shutdown for turnaround; and, Assure all lines or pipes terminating with a valve are sealed with a second valve, a blind flange, a plug or a cap.~~

(E) assure all lines or pipes terminating with a valve are sealed with a second valve, a blind flange, a plug or a cap.

(2) The Executive Division Director, may, at his/her discretion, take require the owner or operator to take appropriate remedial action, including early unit turnaround, based on the number and severity of tagged leaks awaiting repair.

(3) Pipeline valves and pressure relief valves in ~~gaseous gas~~ ~~volatile organic compound~~ service shall be marked in some manner that will be readily obvious to both petroleum refinery or contract personnel performing monitoring and the ~~Executive Director~~ DEQ.

(d) ~~Compliance schedule~~ schedule. The owner or operator of a petroleum refinery, ~~in order to comply with 252:100-39-15,~~ shall adhere to the increments of progress contained in the following ~~schedule~~.

~~(1) Submit~~ submit to the ~~Executive Division~~ Division Director a monitoring program by July 30, 1981. This program shall contain, at a minimum, a list of the refinery units ~~only~~ and the quarter in which they will be monitored, a copy of the log book format, and the make and model of the monitoring equipment to be used. In no case shall a monitoring contract relieve the owner or operator of a petroleum refinery of the responsibility for compliance with this Section.

~~(2) Submit quarterly monitoring report to the Executive Director.~~

(e) **Testing and monitoring procedures.** Testing and calibration procedures to determine compliance with this Section must be consistent with EPA Test Method 21 of 40 CFR Part 60.

(f) **Monitoring.**

(1) The owner or operator of a petroleum refinery ~~subject to this Section~~ shall conduct a monitoring program consistent with the following provisions. The owner or operator shall:

(A) monitor yearly by the methods referenced in ~~Test Method 21 of 40 CFR Part 60~~ 252:100-39-15(e) all:

~~(i) pump seals~~ +

~~(ii) pipeline valves in liquid service~~ + and +

~~(iii) process drains;~~

(B) monitor quarterly by the methods referenced in ~~252:100-39-15(d)~~ 252:100-39-15(e) + all:

~~(i) compressor seals~~ +

~~(ii) pipeline valves in gaseous gas service~~ + and +

~~(iii) pressure relief valves in gaseous gas service;~~

(C) monitor weekly by visual methods all pump seals;

(D) monitor immediately within 24 hours any pump seal from which VOC liquids are observed dripping;

(E) monitor any relief valve within 24 hours after it has vented to the atmosphere; and,

(F) monitor immediately after repair any component that was found leaking.

(2) Pressure relief devices ~~which that~~ are connected to an operating flare header, vapor recovery ~~device~~ devices, inaccessible valves, storage tank valves, and valves that are not externally regulated are exempt from the monitoring requirements in paragraph (1) of this subsection. ~~Provided~~ provided, however, such inaccessible valves will be monitored during annual shutdown.

(3) The owner or operator of a petroleum refinery, upon the detection of a leaking component, ~~as defined in 252:100-39-~~

~~15(e)(1)(C), which~~ that is not repaired on discovery, shall affix a weatherproof and readily visible tag, bearing an identification number and the date the leak is located, to the leaking component. This tag shall remain in place until the leaking component is repaired.

(g) **Recordkeeping.**

(1) The owner or operator of a petroleum refinery shall maintain a leaking components monitoring log ~~as specified in 252:100-39-15(e)(1)(C) which shall contain, at a minimum, the following data:~~

- (A) the name of the process unit where the component is located;
- (B) the type of component (e.g., valve, seal);
- (C) the tag number of the component, if not repaired immediately on discovery;
- (D) the date on which a leaking component is discovered;
- (E) the date on which a leaking component is repaired;
- (F) the date and instrument reading of the recheck procedure after a leaking component is repaired;
- (G) the date of the calibration of the monitoring instrument. ~~The record of calibration~~ which shall be made available for inspection on request;
- (H) those leaks that cannot be repaired until turnaround; and,
- (I) the total number of components checked and the total number of components found leaking.

(2) ~~Copies of the~~ The monitoring log shall be retained on site by the owner or operator for at least two years after the date on which the record was made or the report prepared.

(3) ~~Copies of the~~ The monitoring log shall be made available for inspection at any reasonable time and copies of the log shall be provided to the Executive Division Director, upon written request, at any reasonable time of the AOD.

(h) **Reporting.** The owner or operator of a petroleum refinery, ~~upon the completion of each monitoring procedure,~~ shall:

(1) submit a report to the Executive Division Director by the 30th day following the end of each calendar quarter that lists all leaking components that were located during the previous quarter but not repaired within 15 days, all leaking components awaiting unit turnaround, and the total number of components found leaking; and,

(2) submit a signed statement with the report attesting to the fact that, all monitoring and, with the exception of those leaking components listed in 252:100-39-15(h)(1), all ~~monitoring and~~ repairs were performed as stipulated in the monitoring program.

252:100-39-16. Petroleum Refinery refinery process unit turnaround

(a) **Definition.** ~~"Turn-around"~~ **"Turnaround"** means the planned procedure of shutting down a unit, inspecting and repairing it, and restarting it.

(b) **Procedures required.** For the shutdown, purging and blowdown

operation of any processing petroleum refinery processing unit the following procedures are required:

(1) Recovery of ~~volatile organic compounds (VOC)~~ VOCs shall be accomplished during the shutdown or turnaround to a process unit pressure compatible with the flare or vapor system pressure. The unit ~~will~~ shall then be purged or flushed to a flare or vapor recovery system with using a suitable material such as steam, water or nitrogen, ~~to a flare or vapor recovery system.~~ The unit shall not be vented to the atmosphere until pressure is reduced to less than 5 psig through control devices.

(2) Except where inconsistent with the "Minimum Federal Safety Standards for the Transportation of Natural and Other Gas by Pipeline," or any State of Oklahoma regulatory agency, no person shall emit ~~organic~~ VOC gases to the atmosphere from a vapor recovery blowdown system unless these gases are burned by smokeless flares, or an equally effective control device as approved by the ~~Executive~~ Division Director.

(3) At least fifteen days prior to a scheduled turnaround, a written notification shall be submitted to the ~~Executive~~ Division Director. As a minimum, the notification shall indicate the unit to be shutdown, the date of shutdown, and the approximate quantity of ~~hydrocarbons~~ VOCs to be emitted to the atmosphere.

(4) Scheduled refinery unit turnaround may be accomplished without the controls specified in 252:100-39-16(b)(1) and 252:100-39-16(b)(2) during non-oxidant seasons provided the notification to the ~~Executive~~ Division Director as required in 252:100-39-16(b)(3) ~~specifically contains such a request for such an exemption.~~ The Non-oxidant ~~non-oxidant~~ season is ~~understood to be between the months of October and April~~ from November 1 through March 31.

252:100-39-17. Petroleum Refinery refinery vacuum producing system

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

~~(1)~~ "Accumulator" means the vessel in the overhead stream of any fractionating tower, after the overhead condenses and separates noncondensable gases, liquid ~~hydrocarbons~~ VOCs and water.

~~(2)~~ "Hotwell" means the tank at the bottom of the barometer leg in a barometric condenser system to receive the water, condensate and entrained ~~hydrocarbons~~ VOCs generated by the barometric condenser.

(b) **Requirements.** ~~Noncondensable volatile organic compounds~~ VOCs ~~from the following equipment emitted from any of the vacuum producing systems listed in paragraphs (1) through (3) of this subsection shall be incinerated or reduced by 90 percent of what would be emitted without controls.~~ from the following vacuum producing system:

- (1) ~~steam~~ Steam ejectors with barometric condensers, ~~or,~~
- (2) ~~steam~~ Steam ejectors with surface condensers, ~~or,~~
- (3) ~~mechanical~~ Mechanical vacuum pumps.

(c) **Hotwells and accumulators.**

(1) Hot wells and accumulators shall be covered and the noncondensable vapors shall be vented to a fire-box or incinerator.

(2) The presence of a pilot flame shall be monitored using a thermocouple or any other equivalent device to detect the presence of a flame. (Effective February 12, 1990)

(d) **Compliance.** Compliance shall be determined in accordance with the provision of the CTG document ("Control of Refinery Vacuum Producing systems, Wastewater Separators and Process Unit Turnarounds," EPA 450/2-77-025, October, 1977). Test reports and maintenance records ~~will~~shall be maintained for at least two years. If emission testing is required, the appropriate test method(s) selected from EPA Reference Methods 1 through 4, 21, and/or 25, ~~will~~shall be utilized.

252:100-39-18. Petroleum Refinery~~refinery~~ effluent water separators

(a) **Definition.** "Effluent water separator" means any container in which any VOC floating on, entrained in, or contained in water entering the container is physically separated and removed from the water prior to discharge of the water from the container.

(b) **Requirements.** No ~~person~~owner or operator shall operate, or install or permit the operation or installation of a ~~single~~single-compartment or multiple-compartment ~~volatile organic compound water~~effluent water separator from any equipment processing, refining, treating, storing or handling ~~volatile organic compound~~ unless the compartment receiving ~~said~~ the effluent water is equipped to control emissions in one of the following ways. ~~with one of the following vapor control devices, properly installed, in good working order and in operation:~~

(1) ~~A~~The container totally encloses the liquid contents and having all openings are sealed, and totally enclosing the liquid contents. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The oil removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.

(2) ~~A~~The container is equipped with a vapor-recovery system, consisting of a vapor-gathering system capable of collecting the ~~organic material~~VOC vapors and gases discharged and a vapor-disposal system capable of processing such ~~organic material~~VOC vapors and gases ~~so as~~ to prevent their emission to the atmosphere. ~~and with all~~All tank gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The ~~organic material~~VOC removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.

(3) ~~A~~Containerscontainer that is equipped with controls of equal efficiency, provided the plans and specifications of such equipment are submitted and are approved by the Executive Division Director prior to their use.

PART 5. PETROLEUM PROCESSING AND STORAGE

252:100-39-30. Petroleum liquid storage in vessels with external floating roof tanks

(a) Definitions. The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise.

(1) "Condensate" means hydrocarbon liquid separated from natural gas which condenses due to changes in the temperature and/or pressure and remains liquid at ~~normal operating standard~~ conditions.

(2) "Crude oil" means a naturally occurring hydrocarbon mixture which is a liquid at standard conditions. It may contain sulfur, nitrogen and/or oxygen derivatives of hydrocarbon.

"Drilling or production facility" means all drilling and servicing equipment, wells, flow lines, separators, equipment, gathering lines, and auxiliary non-transportation-related equipment used in the production of petroleum but does not include natural gasoline plants.

(3) "Externally External floating roof" means a storage vessel cover in an open top tank consisting of a double deck or pontoon single deck which rests upon and is supported by the petroleum liquid being contained and is equipped with a closure seal or seals to close the space between the roof edge and tank wall.

(4) "Lease custody transfer" means the transfer of produced crude oil and/or condensate, after processing and/or treating in the producing operations, from storage ~~tank vessels~~ or automatic transfer facilities to pipelines or any other ~~forms~~ form of transportation.

(5) "Liquid-mounted seal" means primary seal mounted in continuous contact with the liquid between the ~~tank vessel~~ wall and the floating roof.

(6) "Petroleum liquid" means crude oil, condensate, and any finished or intermediate liquid products manufactured or extracted in a petroleum refinery.

(7) "Vapor-mounted seal" means a primary seal mounted so there is an annular vapor space underneath the seal. The annular vapor space is bounded by the bottom of the primary seal, the ~~tank vessel~~ wall, the liquid surface, and the floating roof.

(8) "Waxy, high pour point crude oil" means a crude oil with a pour point of 50°F or higher as determined by the American Society of Testing and Materials Standard D97-66, "Test for Pour Point of Petroleum Oils."

(b) Applicability.

(1) This Section applies to ~~all source facilities with petroleum liquid storage vessels equipped with external floating roofs, having capacities greater than 40,000 gal (150,000 liters) (40,000 gallons), that are located in Tulsa and Oklahoma Counties.~~

(2) This Section does not apply to petroleum liquid storage vessels ~~which that: prior to custody transfer.~~

(A) are used to store waxy, high pour point crude oil;

(B) have capacities less than ~~1,600,000 liters~~422,675 gal
~~(420,000 gallons, 1,600 m³)~~ and are used to store produced crude oil and condensate prior to lease custody transfer;

(C) contain a petroleum liquid with a true vapor pressure less than 1.5 psia (10.5 kPa) ~~(1.5 psia)~~;

(D) ~~contain a petroleum liquid with a true vapor pressure less than 27.6 Kpa (4.0 psia)~~; and,

~~(i) are of welded construction;~~

~~(ii) presently possess a metallic-type shoe seal, a liquid-mounted foam seal, a liquid mounted liquid filled type seal, or other closure device of demonstrated equivalence approved by the Executive Director; or, contain a petroleum liquid with a true vapor pressure less than 4.0 psia (27.6 kPa) if the vessels are of welded construction and have a metallic-type shoe seal, a liquid-mounted foam seal, a liquid-mounted liquid filled type seal, or other closure device of demonstrated equivalence approved by the Division Director; or,~~

(E) are of welded construction, are equipped with a metallic-type shoe primary seal and ~~has~~have a secondary seal from the top of the shoe seal to the ~~tank~~vessel wall (shoe-mounted secondary seal).

(3) Storage vessels that are subject to the equipment standards for external floating roofs in 40 CFR 60 Subparts Ka or Kb are exempt from the requirements of 252:100-39-30.

(4) Storage vessels that are subject to the equipment standards for external floating roofs in 40 CFR 63 Subparts CC (63.646) or G shall be exempt from the requirements of 252:100-39-30 upon the date compliance with the standards in Subparts CC and G is required.

(c) ~~Provisions for specific processes~~ Equipment and operating requirements.

(1) ~~Standards.~~ No owner of a petroleum liquidEach storage vessel subject to this Section shallused to store a petroleum liquid in that vessel unlessshall meet the following conditions.

(A) The vessel has been fitted with:

(i) a continuous secondary seal extending from the floating roof to the ~~tank~~vessel wall (rim-mounted secondary seal); or,

(ii) a closure device or other device which controls VOC emissions with an effectiveness equal to or greater than a seal required ~~above~~ under in 252:100-39-30(c)(1)(A)(i) and approved by the ~~Executive~~Division Director.

(B) All seal closure devices meet the following requirements:

(i) ~~there~~There are no visible holes, tears, or other openings in the seal(s) or seal fabric;

(ii) ~~the~~The seal(s) are intact and uniformly in place around the circumference of the floating roof between the floating roof and the ~~tank~~vessel wall; ~~and~~;

(iii) ~~for vapor mounted primary seals, the~~The accumulated

area of gaps exceeding ~~0.32 cm~~ 1/8 in. (~~1/8 in.~~ 0.32 cm) in width between the secondary seal and the ~~tankvessel~~ wall when the secondary seal is used in combination with a vapor mounted primary seal shall not exceed ~~21.2 cm²~~ 1.0 in.²/ft per meter of ~~tankvessel~~ diameter (~~1.0 in.~~ 221.2 cm²/m per foot of ~~tankvessel~~ diameter), ~~as.~~ This shall be determined by physically measuring the length and width of all gaps around the entire circumference of the secondary seal in each place where a 1/8 in. (0.32 cm) uniform diameter probe passes freely between the seal and the ~~tankvessel~~ wall, and summing the ~~area~~ areas of the individual gaps.

(C) All openings in the external floating roof, except for automatic bleeder vents, rim space vents, and leg sleeves, are:

- (i) equipped with covers, seals, or lids in the closed position except when the openings are in actual use; and,
- (ii) equipped with projections into the ~~tankvessel~~ which remain below the liquid surface at all times.

(D) Automatic bleeder vents are closed at all times except when the roof is floated off or landed on the roof leg supports.

(E) Rim vents are set to open when the roof is being floated off the leg supports or at the manufacturer's recommended settings, and.

(F) Emergency roof drains are provided with slotted membrane fabric covers or equivalent covers which cover at least 90 percent of the area of the opening.

(2) Monitoring. The owner or operator of a petroleum liquid storage vessel with an external floating roof subject to this Section shall:

(A) perform routine inspections semi-annually in order to ensure compliance with 252:100-39-30(c)(1)(B)(i), i.e., no visible holes, tears, or other openings in the seals or seal fabric;

(B) measure the secondary seal gap annually in accordance with 252:100-39-30(c)(1)(B)(iii), when the floating roof is equipped with a vapor-mounted primary seal; and,

(C) maintain records of the types of volatile petroleum liquids stored, the true vapor pressure of the liquid as stored, and the results of the inspections performed in 252:100-39-30(c)(2)(A) and 252:100-39-30(c)(2)(B).

(3) Recordkeeping.

~~(3)~~ (A) Copies of all records under 252:100-39-30(c)(2) shall be retained by the owner or operator for a minimum of two years after the date on which the record was made.

~~(4)~~ (B) Copies of all records under this Section shall be made available to the Executive Division Director, upon verbal or written request, at any reasonable time.

(d) Compliance schedule. Compliance with this Section will ~~shall~~ be accomplished by affected facilities ~~within two years of approval of this Section by the Oklahoma Environmental Quality Board by May 23, 1982.~~

PART 7. SPECIFIC OPERATIONS

252:100-39-40. Cutback asphalt (paving)

(a) Definitions. "Cutback asphalt" means a basic asphalt or asphaltic concrete containing a petroleum distillate.

(b) Requirements. No owner, operator and/or contractor shall prepare or apply cutback ~~liquified~~liquefied asphalt without the prior written consent of the ~~Executive~~Division Director, or the ~~Executive Director's~~ designee. Such consent may be granted during Oklahoma's non-oxidant season, i.e., ~~October through April~~November 1 through March 31.

252:100-39-41. ~~Vapor recovery systems~~Storage, loading and transport/delivery of VOCs

(a) Storage of ~~volatile organic compounds~~VOCs in vessels with storage capacities — greater than 40,000 gallons — ~~(953 bbls)~~. No person shall store or permit the storage of gasoline or any volatile organic compound in tanks or vessels. Each vessel having with a storage capacity greater than 40,000 gallons gal (151 m³) (953 bbls) which stores gasoline or any VOC unless such tank, reservoir or other container is toshall be a pressure tankvessel capable of maintaining working pressures sufficient at all times ~~to~~that prevent the loss of organicVOC vapor or gas less to the atmosphere, or ~~is~~shall be equipped with one or more of the following vapor control devices+.

(1) aAn external floating roof, consistingthat consists of a ~~pontoon-type, pontoon-type internal floating cover or double-deck type reef, cover or a fixed roof with an internal-floating cover.~~ whichThe cover willshall rest on the surface of the liquid contents at all times (i.e. off the leg supports), except during initial fill, when the storage vessel is completely empty, or during refilling. When the cover is resting on the leg supports, the process of filling, emptying, or refilling shall be continuous and shall be accomplished as rapidly as possible. The floating roof shall be equipped with a closure seal, or seals, to close the space between the ~~reef~~cover edge and tankvessel wall. ~~Such floating~~Floating roofs are not appropriate control devices if the organic compoundsVOCs have a vapor pressure of ~~11.011.1 pounds per square inch absolute psia (568 mm Hg) (76.6 kPa)~~ or greater under actual conditions. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. Closure seals for fixed roof vessels with an internal-floating cover willshall meet the requirements of 252:100-39-30(e) (1) (B), 252:100-39-30(c) (1) (B) (i) and (ii). Closure seals for vessels with external floating roofs shall meet the requirements of 252:100-39-30(c) (1) (B) (i), (ii), and (iii).

(2) aA vapor-recovery system consistingthat consists of a vapor-gathering system capable of collecting 90 percent by weight or more of the uncontrolled ~~volatile organic compounds~~VOCs that would otherwise be emitted to the atmosphere and a vapor-disposal system capable of processing such organic

~~compounds~~ VOCs so as to prevent emissions in excess of 6.68×10^{-4} lb/gal (80 mg/liter/mg/l) of gasoline VOCs transferred to the atmosphere. All tank/vessel gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place, or, (3) ~~other~~ Other equipment or methods that are of equal efficiency for purposes of air pollution control as may be used when approved by the Executive Division Director and are in concert with federal guidelines.

(b) Storage of volatile organic compounds VOCs in vessels with storage capacities of —400-40,000 gallons (9.5-953 bbls).

(1) ~~No person shall store or permit the storage of~~ Each gasoline or other volatile organic compounds VOC in any stationary storage container/vessel with a nominal capacity greater than 400 gallons/gal (1.5 m³) (9.5 bbls) and less than 40,000 gallons/gal (151 m³) (953 bbls) unless such container is/shall be equipped with a submerged fill pipe or is/be bottom filled. ~~No person shall store or permit the storage of gasoline or other volatile organic compound in any stationary storage container with an average daily throughput of 30,000 gallons or greater unless the displaced vapors from the storage container are processed by a system that has a total collection efficiency no less than 90 percent by weight of total hydrocarbon compounds in said vapors.~~

(2) The displaced vapors from each storage vessel with an average daily throughput of 30,000 gal (113,562 l) or greater which stores gasoline or other VOCs shall be processed by a system that has a total collection efficiency no less than 90 percent by weight of total VOCs in the vapors.

~~(2)(A)~~ (A) The vapor recovery system shall include one or more of the following:

~~(A)(i)~~ (i) a vapor-tight return line from the storage container/vessel to the delivery vessel and a system that will ensure that the vapor return line is connected before gasoline or volatile organic compounds VOCs can be transferred into the container/storage vessel; or,

~~(A)(ii)~~ (ii) other equipment that has a total collection efficiency no less than 90 percent by weight of the total hydrocarbon compounds VOCs in the displaced vapor provided that if approval of the proposed design installation, and operation is obtained from the Executive Division Director prior to start of construction.

~~(3)(B)~~ (B) Provided, however, that the/The requirements for vapor collection of displaced vapors shall not apply to operations that are not major sources.

(c) Loading of volatile organic compounds VOCs.

(1) ~~No person shall operate, install or permit the building, operation or installation of a stationary volatile organic compound~~ Each VOC loading facility with an annual throughput of 120,000 gal (454,249 l) or greater or storage capacity greater than 10,000 gal (38 m³) unless such loading facility is/shall be equipped with a vapor-collection and/or disposal system properly installed, in good working order and in operation.

(2) ~~When~~ While volatile organic compounds VOCs are loaded through

the hatches of a transport vessel, a pneumatic, hydraulic or mechanical means shall be provided to ensure a vapor-tight seal at the hatch.

(3) A means shall be provided to prevent ~~organic material~~VOC drainage from the loading device when it is removed from the transport vessel, or to accomplish complete drainage before removal.

(4) When loading is effected ~~throughby~~ means other than hatches, all loading and vapor lines shall be equipped with fittings ~~which~~that make vapor-tight connections and which close automatically when disconnected.

(5) The vapor collection and/or disposal portion of the system shall consist of one or more of the ~~following elements listed in 252:100-39-41(c)(5)(A) through 252:100-39-42(c)(5)(C)~~ in addition to bottom loading or submerged fill of transport vessels. Storage vessels at service stations and bulk plants may be used for intermediate storage prior to recovery/disposal of vapors as specified in 252:100-39-41(c)(5)(A) through 252:100-39-41(c)(5)(C) if they are designed to prevent the release of vapors during use.

(A) ~~an~~An absorption/adsorption system or condensation system ~~with that~~ has a minimum recovery efficiency of 90 percent by weight of all the ~~volatile organic compound~~VOC vapors and gases entering such disposal system.

(B) ~~a~~A vapor handling system which directs all vapors to a fuel gas incineration system with a minimum disposal efficiency of 95 percent ~~or~~.

(C) ~~either~~Other equipment ~~ef~~that has at least a 90 percent efficiency, provided plans for such equipment are ~~submitted to and approved by the Executive Division Director.~~ Storage vessels at service stations and bulk plants may be used for intermediate storage prior to recovery/disposal of vapors as per 252:100-39-41(c)(5)(A) through 252:100-39-41(c)(5)(C) if they are designed to prevent the release of vapors during use.

(6) Subsection 252:100-39-41(c) shall apply to any facility ~~which~~that loads ~~volatile organic compounds~~VOCs into any transport vessel designed for transporting ~~volatile organic compounds~~VOCs.

(d) Transport/delivery.

(1) The vapor-laden delivery vessel shall meet one of the following requirements.

(A) ~~the~~The delivery vessel must be ~~so~~ designated and operated ~~as~~ to be vapor tight except when sampling, gauging, or inspecting ~~or~~.

(B) ~~the~~The delivery vessel must be equipped and operated ~~so~~ that to deliver the ~~volatile organic compound~~VOC vapors are ~~delivered to~~ a vapor recovery/disposal system.

(2) No ~~owner/operator~~ owner or operator ~~will~~shall allow a delivery vessel to be filled at a facility unable to receive displaced ~~organic~~VOC vapors nor service ~~tanks/vessels~~ unable to deliver displaced vapors except for ~~tanks/facilities~~vessels and facilities exempted in 252:100-39-41(b) and 252:100-39-41(c).

(3) Testing of the tank trucks for compliance with the vapor tightness requirements must be consistent with Appendix "B" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems," EPA 450/2-78-051, or an equivalent method as determined by the Executive Division Director.

(e) ~~Additional requirements for Tulsa County. Also see 252:100-39-48 for additional requirements pertaining to Tulsa County.~~

(1) Applicability. This subsection applies only in Tulsa County.

(2) Storage of VOCs.

(A) 2,000 - 40,000 gallons capacity. Each storage vessel with a nominal capacity greater than 2,000 gal (7.6 m³) and less than 40,000 gal (151 m³) that stores gasoline or other VOCs or each storage vessel located at a facility that dispenses more than 120,000 gal/yr of gasoline or other VOCs, in addition to being equipped with a submerged fill pipe or being bottom loading, shall be equipped with a vapor control system. The vapor control system shall have an efficiency of no less than 90 percent by weight of the VOCs contained in the displaced vapors and shall be equipped with a pressure relief valve in the atmospheric vent system which maintains a pressure of 16 oz/in.² and 1/2 oz/in.² vacuum. The vapor recovery system shall include one or more of the following.

(i) A vapor-tight return line from the storage vessel to the delivery vessel and a system that will ensure that the vapor return line is connected before gasoline or VOCs can be transferred into the storage vessel (i.e., popped connectors from the storage vessel to the delivery vessel.).

(ii) A float vent valve assembly installed in the vapor return/vent line on new and existing dual point installations; however, for coaxial installations on existing stations, a vent sleeve extending 6 in. (15 cm) below the top of the vessel will be allowed. Sleeves may be equipped with a 1/16 in. (0.16 cm) air bleed hole.

(iii) A vapor recovery line with a cross-sectional area that is at least half of the cross-sectional area of the liquid delivery line.

(iv) Other equipment that has a total collection efficiency no less than 90 percent by weight of the total VOCs in the displaced vapor if approved by Division Director prior to start of construction.

(B) Applicability.

(i) Any vessel with a capacity greater than 2,000 gal (7.6 m³) or any vessel located at a facility that dispenses more than 120,000 gal/yr (454,249 l/yr) shall be and will always remain subject to 252:100-39-41(e)(2). (effective February 12, 1990)

(ii) Exemptions to 252:100-39-41(e)(2) may be granted if the owner or operator shows to the satisfaction of the Division Director that the vessel is used exclusively for

agricultural purposes.

(C) Emission testing. If emission testing is conducted, the appropriate test methods selected from EPA Methods 1 through 4, 18, 21, 25, 25A and 25B shall be utilized.

(D) Compliance. Compliance with 252:100-39-41(e)(2) shall be accomplished by the owner or operator of affected facilities by December 31, 1986.

(E) Certification. The owner or operator of a facility shall obtain, by whatever means practicable, certification from the owner or operator of the transport/delivery vessels that all deliveries of gasoline or other VOCs made to their 400-gallon to 40,000-gallon storage facility located in Tulsa County shall be made by transport/delivery vessels that comply with the requirements contained in 252:100-39-41(e)(4). Compliance with 252:100-39-41(e)(2) shall be accomplished by owners or operators of affected facilities no later than December 31, 1990. (Effective February 12, 1990)

(3) Loading of VOCs. In addition to those requirements contained in 252:100-39-41(c), stationary loading facilities shall be checked annually in accordance with EPA Test Method 21, Leak Test. Leaks greater than 5,000 ppmv shall be repaired within 15 days. Facilities shall retain inspection and repair records for at least two years.

(4) Transport/delivery vessel requirements. In addition to the requirements contained in 252:100-39-41(d), facilities located in Tulsa County must meet the following requirements.

(A) Maintenance.

(i) The delivery vessel must be maintained so that it is vapor tight except when sampling, gauging, or inspecting. These activities shall not occur while the vehicle is loading or unloading or is in a pressurized state.

(ii) The delivery vessel must be equipped, maintained, and operated to receive vapors from sources identified in 252:100-39-41(b)(1) and 252:100-39-41(b)(2) and retain these and all other vapors until they are delivered into an authorized vapor recovery/disposal system.

(iii) Vessels with defective equipment such as boots, seals, and hoses, or with other deficiencies that would impair the vessels' ability to retain vapors or liquid shall be repaired within 5 days.

(iv) The certified testing facility must certify to the approving agency that the proper testing and repairs have occurred in accordance with 252:100-39-41(e)(4)(B)(i). The vessel must also display on the rear panel a tag showing the date of the pressure test.

(v) No owner or operator shall allow a delivery vessel to be filled at a facility unable to receive displaced VOCs nor service vessels unable to deliver displaced vapors except for vessels/facilities exempted in 252:100-39-41(b). Terminal owners shall not fill vessels that do not display a current tag.

(vi) Delivery vessels may be inspected by representatives

of the DEO in order to determine their state of repair. Such a test may consist of a visual inspection or a vapor test with vapors not to exceed 5,000 ppmv. Failure of a vapor test shall require the owner or operator to make the necessary repairs within 10 days. Failure to certify within 10 days of a vapor test that the necessary repairs have been made shall subject the owner or operator to sanctions. Upon certification of repairs, the vessel will be allowed to resume normal operation.

(B) Testing requirements.

(i) Pressure test.

(I) Delivery vessels, delivering or receiving gasoline must be tested one time per year for vapor tightness. The vapor tightness test must be consistent with Appendix "A" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems", EPA 450/2-78-051. Tests shall be performed by the owner or a transport service company. Test methods used to test these vessels by owners or testing companies must be approved for use by the Division Director.

(II) The vessel shall be considered to pass the test prescribed in 252:100-39-41(e)(4)(B)(i)(I) when the test results show that the vessel and its vapor collection systems do not sustain a pressure change of more than 3 in. H₂O. There shall be no avoidable visible liquid leaks.

(ii) Vapor test. Testing of the tank trucks for compliance with vapor tightness requirements as required under 252:100-39-41(e)(4)(A)(vi) must be consistent with Appendix "B" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems", EPA 405/2-78-051, as modified for this purpose and contained in 252:100-43-15. The requirements of 252:100-39-41(e) took effect December 15, 1988.

252:100-39-42. Metal cleaning

(a) Cold cleaning facility requirements.

(1) ~~Equipment requirements. NoAn personowner or operator shall allow the construction or operation of any cold cleaning unit for metal degreasing usingwhich uses an organic solventa VOC shall unless the following requirements are met:~~

(A) ~~install~~ a cover or door shall be installed on the facility that can be easily operated with one hand;

(B) ~~provide~~ an internal drain board will be provided in such a manner that will allow lid closure if practical; if not practical, the drainage facility may beprovide an external drainage facility; and,

(C) ~~attach~~ a permanent, conspicuous label summarizing the operating requirements specified in 252:100-39-42(a)(2) will be permanently attached to the facility.

(2) Operating requirements. The operating requirements

~~specified in 252:100-39-42(a)(1)(C) shall as a minimum specify~~ Owners or operators shall at a minimum:

(A) drain clean parts at least 15 seconds or until dripping ceases before removal;

(B) close degreaser cover when not handling parts in cleaner; and,

(C) store waste solvent/VOC in covered containers; ~~Do not dispose or allow disposition in such a manner that more than 20 percent by weight can evaporate into the atmosphere.~~

(D) not dispose or allow disposition of waste VOC in such a manner that more than 20 percent by weight can evaporate into the atmosphere.

~~(3)(E) If used, a solvent spray will be of a solid fluid stream (not atomized or spray)~~ use a solid fluid stream, not an atomized spray, when VOC is sprayed.

~~(4)(3) Requirements for controls.~~ If the solvent volatility/vapor pressure of the VOC is greater than 33 mm Hg (0.6 psi) 0.6 psi (4.1 kPa) measured at 38°C (100°F) (100°F) (38°C) or if solvent/VOC is heated to 120 degrees C (248°F) (120°C), the owner or operator shall apply one or more of the following control devices/techniques will be required.

(A) ~~freeboard~~ Freeboard that gives a free board/freeboard ratio greater than or equal to 0.7.

(B) ~~water~~ Water cover and where the solvent/VOC is insoluble in and heavier/denser than water or such equivalent; or,

(C) ~~other~~ Another system of equivalent control as approved by the Executive/Division Director.

~~(5)(4) Compliance and recordkeeping.~~ Compliance will/shall be determined in accordance with EPA guidance document "Control of Volatile Organic Emissions from Solvent Metal Cleaning," 450/2-77-022. Test reports and maintenance and repair records of control equipment will/shall be maintained by the source for at least two years.

(b) Vapor-type metal degreasing requirements.

(1) ~~Equipment requirements.~~ ~~No~~ An person/owner or operator shall allow the construction or operation of any vapor-type metal degreasing unit using an organic solvent a VOC unless/shall ensure that the following requirements are met.

(A) ~~the~~ The unit shall have a cover or door that can easily be opened and closed without disturbing the vapor zone.

(B) ~~the~~ The unit will/shall have the following safety switches.

(i) ~~condenser~~ Condenser flow switch and thermostat or equivalent capable of shutting off the sump heat if condenser coolant is not circulating or coolant exceeds solvent/VOC manufacturer's recommended level; and,

(ii) ~~spray~~ Spray safety switch capable of shutting off spray pumps if the vapor level drops in excess of ~~four~~ 4 inches (10 cm).

(C) ~~the~~ The unit will/shall have one or more of the following control devices/techniques.

(i) ~~freeboard~~ Freeboard ratio not less than 0.75, i.e., the

ratio of the freeboard to the width of the degreaser wherein the term freeboard is defined as the distance from the top of the vapor zone to the top of the degreaser tank.

(ii) ~~refrigerated~~ Refrigerated chiller, i.e., condenser coils in the upper limit of the vapor zone.

(iii) ~~enclosed~~ Enclosed design, i.e., cover or door is opened only when a part is actually entering or exiting the facility.

(iv) ~~a~~ A carbon adsorption system with ventilation greater than 50 ~~cfm/ft²~~ cfm/ft² of air/vapor area when cover is open. ~~and exhausting~~ The system shall exhaust less than 25 ppmv solvent VOC average over one adsorption cycle.

(v) ~~a~~ A control system demonstrated to have a control efficiency equal to or greater than any of the systems in ~~(C) of this paragraph~~ 252:100-39-42(b)(1)(C).

(D) ~~a~~ A permanent conspicuous label summarizing operating ~~procedures~~ requirements in 252:100-39-42(b)(2) will ~~shall~~ be attached to the facility ~~unit~~.

(2) Operating requirements. ~~The operating requirements referred to in 252:100-39-42(b)(1)(D) shall as a minimum specify:~~ An owner or operator of a vapor type metal degreasing unit using VOC shall ensure that the following requirements are met.

(A) As a minimum operators shall:

(i) ~~keep the cover closed at all times except when processing work~~ degreasing parts;

~~(B) minimize solvent carry out by the following measures:~~

~~(i)~~ (ii) rack parts to allow full drainage;

~~(ii)~~ (iii) move parts in and out of the degreaser at less than 3.3 m/sec 11 ft/min (11 ft/min.) (3.4 m/min);

~~(iii)~~ (iv) degrease the workload in the vapor zone at least 30 sec-seconds or until condensation ceases;

~~(iv)~~ (v) tip out any pools of solvent VOC on the cleaned parts before removal;

~~(v)~~ (vi) allow parts to dry within the degreaser for at least 15 sec-seconds or until visually dry;

(vii) assure that VOC leaks are immediately repaired or the degreaser is shut down; and,

(viii) store waste VOC only in closed containers.

(B) As a minimum operators shall not:

~~(C)~~ (i) do not degrease porous or absorbent materials, such as cloth, leather, wood or rope;

~~(D)~~ (ii) workloads should not allow workloads to occupy more than half of the degreaser's open top area;

~~(E)~~ (iii) never spray above the vapor level;

~~(F) assure solvent leaks immediately repaired or the degreaser is shut down,~~

~~(G)~~ (iv) do not dispose of waste solvent or transfer it to another party in such a manner that allow greater than 20 percent of the VOC waste (by weight) will to evaporate into the atmosphere when disposing of the waste or transferring

~~the waste to another party~~ ~~Store waste solvent only in closed containers;~~

~~(H)(v) allow exhaust ventilation should not exceed 20m³/min. per m² 65 cfm/ft² (65 cfm per ft²) (20 m³/min/m²) of degreaser open area, unless necessary to meet OSHA requirements. Ventilation fans should not be used near the degreaser opening; and,~~

~~(vi) use ventilation fans near the degreaser opening; or,~~
~~(I)(vii) allow water should not be visually detectable in solvent VOC exiting the water separator.~~

(3) **Compliance and recordkeeping.** Compliance ~~will~~ shall be determined in accordance with EPA document 450/2-77-022 and all test and maintenance records ~~will~~ shall be retained by the source for at least two years.

(c) **Conveyorized degreasing unit requirements.**

(1) **Operating requirements.** ~~No~~ An ~~person~~ owner or operator shall operate of a conveyorized degreasing unit using VOC shall ensure that unless the following requirements are met:

(A) ~~exhaust~~ Exhaust ventilation ~~should~~ shall not exceed ~~20m³/min. per m² 65 cfm/ft² (65 cfm per ft²) (20 m³/min/m²)~~ of degreaser opening, unless necessary to meet OSHA requirements. ~~Work place fans should not be used near the degreaser opening;~~

(B) Work place fans shall not be used near the degreaser opening.

~~(B)(C) minimize~~ carry out Carry-out emissions shall be minimized by:

(i) racking parts for best drainage; and,

(ii) maintaining vertical conveyor speed at less than ~~3-3 m/min. 11 ft/min (11 ft./min.) (3.4 m/min).~~

~~(C)(D) do~~ Evaporation of waste VOC into the atmosphere shall not be dispose of waste solvent or transfer it to another party in such a manner that greater than 20 percent of the waste (by weight) can evaporate into the atmosphere when disposing of the waste or transferring the waste to another party. Store waste solvent VOC only in covered containers;

(E) Waste VOC shall be stored only in covered containers.

~~(D)(F) repair~~ solvent VOC leaks must be repaired immediately, or shut down the degreaser must be shut down.

~~(E)(G) water~~ Water ~~should~~ shall not be visibly detectable in the ~~solvent~~ VOC exiting the water separator; ~~and.~~

~~(F)(H) a~~ A permanent conspicuous label ~~will be attached to the facility summarizing the operating requirements listed in 252:100-39-42(b) and 252:100-39-42(c) shall be attached to the unit.~~

(2) **Control requirements.** In addition to the requirements in 252:100-39-42(c) (1), any ~~unit~~ that has an air/vapor interface of more than 21.5 ft² 2.0m² (2.0 m²) ~~will~~ shall be subject to the following control requirements.

(A) **Major control devices.** The degreaser must be controlled by either:

(i) a refrigerated chiller;

(ii) a carbon adsorption system that exhausts less than 25

ppmv of VOC averaged over a complete adsorption cycle and has, with ventilation equal to or greater than $15 \text{ m}^3/\text{min}$ per m^2 $50 \text{ cfm}/\text{ft}^2$ ($50 \text{ cfm}/\text{ft}^2$) ($15 \text{ m}^3/\text{min}/\text{m}^2$) of air/vapor area (when down-time covers are open), and exhausting less than 25 ppm of solvent by volume averaged over a complete adsorption cycle. ~~or,~~

(iii) a system demonstrated to have control efficiency equivalent to or better than either of the above.

(B) **Carryover prevention.** Either a drying tunnel, or another means such as rotating (tumbling) basket, sufficient to prevent cleaned parts from carrying out solvent/VOC liquid or vapor subject to space limitations must be installed.

(C) **Safety switches.** The following safety switches must be installed and be operational.

(i) Condenser flow switch and thermostat ~~that~~ ~~(shuts off sump heat if coolant is either not circulating or too warm).~~

(ii) Spray safety switch ~~that~~ ~~(shuts off spray pump or conveyor if the vapor level drops excessively, e.g. more than 10 cm (4 in.))~~ 4 in. (10 cm).

(iii) Vapor level control thermostat ~~that~~ ~~(shuts off sump heat when vapor level rises too high).~~

(D) **Minimized openings.** Entrances and exits ~~should~~ shall silhouette work loads so that the average clearance ~~(between parts and the edge of the degreaser opening)~~ is either less than ~~10 cm (4 in.)~~ 4 in. (10 cm) or less than 10 percent of the width of the opening.

(E) **Covers.** Down-time ~~cover~~ covers must be placed over entrances and exits of conveyORIZED degreasers immediately after the conveyor and exhaust are shutdown and removed just before they are started up.

(3) **Compliance and recordkeeping.** Compliance ~~will~~ shall be determined in accordance with EPA document 450/2-77-022. ~~and all~~ All test and maintenance records ~~will~~ shall be retained by the source for at least two years.

(d) **Alternative control methods.** As an alternative to the requirements of 252:100-39-42(a) through 252:100-39-42(c) and subject to EPA approval, an operator may request the approval by the Division Director of other methods of control. ~~may be approved by, subject to EPA approval, the Executive Director upon application by a source; provided, the~~ The applicant ~~can~~ must demonstrate that the proposed method will ~~preclude no less than prevent at least~~ 80 percent of the emissions from each source from being emitted to the atmosphere, as determined by the appropriate test methods selected from EPA Methods 1 through 4, 18, 25, 25A and 25B.

252:100-39-43. Graphic arts systems

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise.

(1) "Flexographic printing" means the application of words,

designs and pictures to a substrate by means of a roll printing technique in which the pattern to be applied is raised above the printing roll and the image carrier is made of rubber or other elastomeric materials.

~~(2)~~ "Packaging rotogravure printing" means rotogravure printing upon paper, paper board, metal foil, plastic film, and other substrates, ~~which that~~ are, in subsequent operations, formed into packaging products and labels for articles to be sold.

~~(3)~~ "Publication rotogravure printing" means rotogravure printing upon paper which is subsequently formed into books, magazines, catalogues, brochures, directories, newspaper supplements, and other types of printed materials.

~~(4)~~ "Roll printing" means the application of words, designs and pictures to a substrate usually by means of a series of hard rubber or steel rolls each with only partial coverage.

~~(5)~~ "Rotogravure printing" means the application of works, designs and pictures to a substrate by means of a roll printing technique ~~which that~~ involves an intaglio or recessed image areas in the form of cells.

(b) **Applicability.**

~~(1) This Section applies to all packaging rotogravure, publication rotogravure, and flexographic printing facilities located in Tulsa and Oklahoma counties.~~

~~(2) This Section applies only to only packaging rotogravure, publication rotogravure, and flexographic printing facilities whose potential emissionemissions of organic solventVOC isare equal to or more than 100 tons/yr (90 megagramsMg/yr) (106 grams) per year (100 tons/yr.). Potential emissions are toshall be calculated based on historical records of actual consumption of solventVOC and ink.~~

(c) **Provisions for specific processes.**

~~(1) NoAn owner or operator of a packaging rotogravure, publication rotogravure or flexographic printing facility subject to this Section and employingwhich uses solventVOC containing ink may operate, cause, allow or permit the operation of the facility unlessshall ensure that one of the following conditions is met+.~~

~~(A) theThe volatile fraction of ink, as it is applied to the substrate, contains 25.0 percent by volume or less of organic solventVOC and 75.0 percent by volume or more of water+.~~

~~(B) theThe ink as it is applied to the substrate, less water, contains 60.0 percent by volume or more of nonvolatile material, or+.~~

~~(C) theThe owner or operator installs and operates:~~

~~(i) a carbon adsorption system whichthat reduces the organic solventVOC emissions from the capture system by at least 90.0 percent by weight;~~

~~(ii) an incineration system whichthat oxidizes at least 90.0 percent of the nonmethane volatile organic solventVOC measured as total combustible carbon to carbon dioxide and water; or,~~

~~(iii) an alternative organic solventVOC emission reduction~~

system demonstrated to have at least 90.0 percent reduction efficiency, measured across the control system, ~~and which~~ has been approved by the ~~Executive Division~~ Director.

(2) A capture system must be used in conjunction with the emission control systems in 252:100-39-43(c)(1)(C). The design and operation of the capture system must be consistent with good engineering practice, and shall be required to provide for an overall reduction in ~~volatile organic compound~~ VOC emissions of at least:

(A) 75.0 percent where a publication rotogravure process is employed;

(B) 65.0 percent where a packaging rotogravure process is employed; ~~or,~~

(C) 60.0 percent where a flexographic printing process is employed.

(d) **Compliance schedule.** Compliance with this Section ~~will~~ shall be accomplished by affected facilities ~~within two (2) years of approval of this Subchapter by the Oklahoma Environmental Quality Board by May 23, 1982.~~

(e) **Testing.** Test procedures to determine compliance with this Subchapter must be consistent with EPA Reference Method 24 or equivalent ASTM Methods.

252:100-39-44. Manufacture of pneumatic rubber tires

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise.

(1) **"Automatic tread end cementing"** means the application of a ~~solvent~~ VOC based cement to the tire tread ends by automated devices.

(2) **"Bead dipping"** means the dipping of an assembled tire bead into a ~~solvent~~ VOC based cement.

(3) **"Green tires"** means assembled tires before molding and curing have occurred.

(4) **"Green tire spraying"** means the spraying of green tires, both inside and outside, with release compounds ~~which~~ that help remove air from the tire during molding and prevent the tire from sticking to the mold after curing.

(5) **"Manual tread end cementing"** means the application of a ~~solvent~~ VOC based cement to the tire tread ends by manufacturers.

(6) **"Passenger type tire"** means agricultural, airplane, industrial, mobile home, light and medium duty truck, and passenger vehicle tires with a bead diameter up to but not including 20.0 inches and cross section dimension up to 12.8 inches.

(7) **"Pneumatic rubber tire manufacture"** means the production of pneumatic rubber, passenger type tires on a mass production basis.

(8) **"Undertread cementing"** means the application of a ~~solvent~~ VOC based cement to the underside of a tire tread.

(9) **"Water based sprays"** means release compounds, sprayed on the inside and outside of green tires, in which solids, water

and emulsifiers have been substituted for ~~organic solvents~~VOCs. These sprays may contain an average of up to five percent ~~organic solvent~~VOC.

(b) Applicability.

(1) This Section applies to VOC emissions ~~from the following operations~~infrom all major source pneumatic rubber tire manufacturing facilities located in Oklahoma County from:

- (A) undertread cementing;
- (B) automatic tread end cementing; and,
- (C) green tire spraying.

(2) The provisions of this Section do not apply to the ~~productions~~production of specialty tires for antique or other vehicles when produced on an irregular basis or with short production runs. This exemption applies only to tires produced on equipment separate from normal production lines for passenger type tires.

(3) Manual tread end cementing operations are exempt from the provisions of this Section.

(c) Provisions for specific processes Control requirements.

(1) Undertread cementing or automatic tread end cementing. The owner or operator of an undertread cementing, or automatic tread end cementing, operation subject to this Section shall install and operate the following.

(A) ~~install and operate a~~a capture system, designed to achieve maximum reasonable capture from all undertread cementing, and automatic tread end cementing operations. Maximum reasonable capture would require that hood enclosures be designed ~~in such a manner~~ to minimize open areas and enclose as much of the emission source as practical while maintaining a minimum in-draft velocity of 200 ~~feet per minute~~ft/min (61 m/min) except during times when the enclosure must be opened to allow work inside or for the inspections of the product in progress. Maximum reasonable capture shall be consistent with ~~the following documents~~:

- (i) Industrial Ventilation, A Manual of Recommended Practices, 14th Edition, American Federation of Industrial Hygienists~~;~~ and,
- (ii) Recommended Industrial Ventilation guidelines, U.S. Department of Health Education and Welfare, National Institute of Occupational Safety and Health.

(B) ~~install and operate a~~a control device that meets the requirements of one of the following systems.

- (i) A carbon adsorption system designed and operated ~~in a manner such so~~ that there is at least an initial 95.0 percent removal of VOC by weight from the gases ducted to the control device with at least a 90 percent 3 year removal average ~~or,~~
- (ii) An incineration system that oxidizes at least 90.0 percent of the ~~nonmethane volatile organic compounds~~ (VOCs) (measured as total combustible carbon) which enter the incinerator to carbon dioxide and water.
- (iii) An alternative ~~volatile organic compound~~VOC emission

reduction system certified by the owner or operator to have at least a 90.0 percent reduction efficiency, measured across the control system, and that has been approved by the ~~Executive~~Division Director.

(2) Green tire spraying. The owner or operator of a green tire spraying operation subject to this Section shall implement one of the following means of reducing ~~volatile organic compound~~VOC emissions~~+~~.

(A) ~~substitute~~Substitute water-based sprays for the normal ~~solvent-based~~ VOC-based mold release compound~~;~~er,

(B) ~~install~~Install a capture system designed and operated ~~in a manner that will~~to capture and transfer at least 90.0 percent of the VOC emitted by the green tire spraying operation to a control device, and install and operate a control device that meets the requirements of one of the following systems~~+~~.

(i) ~~a~~An carbon adsorption system designed and operated ~~in a manner such~~ so that there is at least 95.0 percent removal of VOC by weight from the gases ducted to the control device~~;~~er,

(ii) ~~an~~An incineration system that oxidizes at least 90.0 percent of the ~~nonmethane volatile organic compounds~~(VOC VOCs (measured as total combustible carbon) to carbon dioxide and water~~;~~er,

(iii) ~~an~~An alternative ~~volatile organic compound~~VOC emission reduction system approved by the Division Director and certified by the owner or operator to have at least a 90.0 percent reduction efficiency, measured across the control system, ~~that has been approved by the Executive Director.~~

(3) Exemption. If the total ~~volatile organic compound~~VOC emissions from all undertread cementing, tread-end cementing, bead dipping, and green tire spraying operations at a pneumatic rubber tire manufacturing facility do not exceed 57 ~~grams per tire~~g/tire, 252:100-39-44(c)(1) and 252:100-39-44(c)(2) shall not apply.

~~(4) An owner or operator of an undertread cementing, tread-end cementing, bead dipping or green tire spraying operation subject to this Section may, instead of implementing measures required by 252:100-39-44(c)(1) and 252:100-39-44(c)(2), submit to the Executive Director a petition for alternative controls. The petition must be submitted in writing before September 15, 1981 and must contain:~~

~~(A) the name and address of the company and the name and telephone number of a responsible company representative over whose signature the petition is submitted;~~

~~(B) a description of all operations conducted at the location to which the petition applies and the purpose the volatile organic compound emitting equipment serves within the operations;~~

~~(C) reference to the specific emission limits, operational and/or equipment controls for which alternative emission~~

~~limits, operational and/or equipment controls are proposed;~~
~~(D) a detailed description of the proposed alternative emission limits, operational and/or equipment controls, the magnitude of volatile organic compound emission reduction which will be achieved, and the quantity and composition of volatile organic compounds which will be emitted if the alternative emission limits, operational and/or equipment controls are instituted;~~
~~(E) a schedule for the installation and/or institution of the alternative operational and/or equipment controls in conformance with the appropriate compliance schedule section; and,~~
~~(F) a demonstration that the alternative control program constitutes reasonably available control technology for the petitioned facility. The factors to be presented in this demonstration include but are not limited to:~~

- ~~(i) the capital expenditure necessary to achieve the petitioned level of control;~~
- ~~(ii) the impact of these costs on the firm;~~
- ~~(iii) the energy requirements of the petitioned level of control;~~
- ~~(iv) the impact on the environment in terms of any increase in air, water and solid waste effluent discharge of the petitioned level of control;~~
- ~~(v) any adverse worker or product safety implications of the petitioned level of control; and,~~
- ~~(vi) an analysis for each of the factors in 252:100 39-44(c)(4)(F)(i) through 252:100 39-44(c)(4)(F)(v) for the control levels specified in 252:100 39-44(c)(1) and 252:100 39-44(c)(2).~~

~~(5) The Executive Director may approve a Petition for Alternative Control if:~~

- ~~(A) the petition is submitted in accordance with 252:100-39-44(c);~~
- ~~(B) the petition demonstrates that the alternative controls represent reasonable available control technology;~~
- ~~or,~~
- ~~(C) the petition contains a compliance schedule for achieving and maintaining a reduction of volatile organic compound emissions as expeditiously as practicable, but no later than the photochemical oxidant attainment date.~~

(d) **Compliance schedule.** Compliance with this Section will be accomplished by affected facilities on or before December 31, 1982.

(e) **Testing and monitoring.**

(1) Test procedures to determine compliance with this Section must be approved by the Executive Division Director and be consistent with:

- (A) EPA Guideline Series Document "Measurement of Volatile Organic Compounds," EPA-450/2-78-041, and,
- (B) Appendix A of "Control of Volatile Organic Emissions from Existing Stationary Sources - Volume II: Surface coating of Cans, Coils, Paper, Fabrics, Automobiles, and Light-Duty

Trucks," EPA-450/2-77-008.

(2) The ~~Executive~~Division Director may accept, instead of green tire spray analysis, a certification by the manufacturer of the composition of the green tire spray, if supported by actual batch formulation records.

(3) If add-on control equipment is used, continuous monitors ~~of the following parameters~~ shall be installed, periodically calibrated, and operated at all times that the associated control equipment is operating. These monitors shall measure:

(A) exhaust gas ~~temperature~~temperature of ~~incinerators~~an incinerator;

(B) temperature rise across a catalytic incinerator bed;

(C) breakthrough of VOC on a carbon adsorption unit; and,

(D) any other parameter for which a continuous monitoring or recording device is required by the ~~Executive~~Division Director.

252:100-39-45. Petroleum (solvent) dry cleaning

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise.

(1) "**Cartridge filters**" means perforated canisters containing filtration paper and/or activated carbon that are used in a pressurized system to remove solid particles and fugitive dyes from soil-laden petroleum solvent.

(2) "**Containers and conveyors ~~and of~~ petroleum solvent**" means piping, ductwork, pumps, storage tanks, and other ancillary equipment that are associated with the installation and operation of washers, dryers, filters, stills, and settling tanks.

(3) "**Dry cleaning**" means a process of the cleaning of textiles and fabric products in which articles are washed in a non-aqueous solution (petroleum solvent) and then dried by exposure to a heated air stream.

(4) "**Housekeeping**" means those measures and precautions necessary to minimize the release of petroleum solvent to the atmosphere.

(5) "**Operations parameters**" means the activities required to insure that the equipment is operated in a manner to preclude the loss of petroleum solvents to the atmosphere.

(6) "**Perceptible leaks**" means any petroleum solvent vapor or liquid leaks that are conspicuous from visual observation, such as pools or droplets of liquid, or buckets or barrels of petroleum solvent or petroleum solvent-laden waste standing open to the atmosphere.

(7) "**Petroleum solvent**" means organic material produced by petroleum distillation comprising a hydrocarbon range of 8 to 12 carbon atoms per organic molecule that exists as a liquid under standard conditions.

(b) **Applicability.** This Section applies to petroleum solvent washers, dryers, ~~solvent~~-filters, settling tanks, vacuum stills, and other containers and conveyors of petroleum solvent that are

used in petroleum solvent dry cleaning facilities in Tulsa County only.

(c) ~~Provisions for specific processes~~ Operating requirements.

(1) The owner or operator of a petroleum solvent dry cleaning facility shall not operate any dry cleaning equipment using petroleum solvents unless:

(A) there are no perceptible liquid or vapor leaks from any portion of the equipment;

(B) all washer lint traps, button traps, access doors and other parts of the equipment where petroleum solvent may be exposed to the atmosphere are kept closed at all times except when required for proper operation or maintenance;

(C) the still residue is stored in sealed containers and ~~the~~ the used filtering material is ~~to be~~ placed into a sealed container suitable for use with petroleum solvents, immediately after removal from the filter and ~~be~~ disposed of in the prescribed manner; or,

(D) cartridge filters containing paper or carbon or a combination thereof, which are used in the dry cleaning process are ~~to be~~ drained in the filter housing for at least 24 hours prior to removal.

(2) The owner or operator of a petroleum solvent dry cleaning facility shall not operate any drying tumblers and cabinets that use petroleum solvents unless tumblers and cabinets are operated in such a manner as to control petroleum solvent vapor leaks by reducing the number of sources where petroleum solvent is exposed to the atmosphere. Under no circumstances should there be any open containers (can, buckets, barrels) of petroleum solvent or petroleum solvent-containing material. Equipment containing solvent (washers, dryers, extractors, and filters) should remain closed at all times other than during maintenance or load transfer. Lint filter and button trap covers should remain closed except when petroleum solvent-laden lint and debris are removed. Gaskets and seals should be inspected and replaced when found worn or defective. Petroleum solvent-laden solvent-laden clothes should never be allowed to ~~sit~~ remain exposed to the atmosphere for longer periods than are necessary for load transfers. Finally, vents on petroleum solvent-containing waste and new petroleum solvent storage tanks should be constructed and maintained in a manner that limits petroleum solvent vapor emissions to the maximum possible extent.

(3) The owner or operator shall repair all petroleum solvent vapor and liquid leaks within 3 working days after identifying the sources of the leaks. If necessary repair parts are not on hand, the owner or operator shall order these parts within 3 working days, and repair the leaks no later than 3 working days following the arrival of the necessary parts.

(d) Disposal of filters. Filters from the petroleum dry cleaning facility shall be disposed of by:

(1) incineration at a facility approved by the fire marshall's office for such disposal;

- (2) by recycling through an approved vendor of this service;
or,
(3) by any other method approved by the ~~Executive~~Division
Director.

(e) **Compliance schedule.** Compliance with 252:100-39-45(c)(1) through 252:100-39-45(c)(3), will~~shall~~ be accomplished by affected facilities on or before October 1, 1986.

252:100-39-46. Coating of parts and products

(a) **Applicability.** This Section shall apply only to these industries located in Tulsa County which manufacture and/or coat metal parts and products, such as ~~This Section is applicable to~~ large farm machinery, small farm machinery, small appliances, commercial machinery, industrial machinery and fabricated metal products. Architectural coating, aerospace coating, and automobile refinishing are not included.

(b) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

(1) **"Air or forced air dry coatings"** means coatings ~~which~~that are dried by the use of air or forced warm air at temperatures up to 194°F.

(2) **"Clear coat"** means a coating ~~which~~that lacks color and opacity or is transparent and uses the undercoat as a reflectant base.

(3) **"Extreme performance coatings"** mean coatings designed for harsh exposure or extreme environmental conditions (~~i.e.e.g.,~~ exposure to the weather, all of the time, temperature above 200°F, detergents, abrasive and scouring agents, solvents, corrosive atmosphere or similar conditions).

(4) **"Facility"** means all emission sources located on a contiguous ~~property~~properties under common control which are affected by the surface coating provisions of ~~OAC~~ 252:100-37 and 252:100-39.

(5) **"Powder"** means a coating ~~which~~that is applied in a finely divided (~~powder~~) state by various methods, and becomes a continuous, solid film when the metal part or product is moved to an oven for curing.

(6) **"Transfer efficiency"** means the weight (or volume) of coating solids adhering to the surface being coated divided by the total weight (or volume) of coating solids delivered to the applicator.

(c) **Existing source requirement.** No owner or operator ~~subject to the provisions of this Section~~ shall discharge or cause the discharge into the atmosphere from an existing coating line or individual coating operation any ~~organic solvent~~VOC in excess of the amounts listed in 252:100-39-46(d) as calculated by EPA method 24, 40 CFR Part 60.

(d) **Standards.** The following table enumerates the limitations for surface coatings in pounds of ~~solvent~~VOC per gallon of coating as applied (less ~~water/exempt solvent water and exempt compounds~~). If more than one limit listed in the table is applicable to a

specific coating, then the least stringent limitation shall be applied.

Coating type	Limitations	
	lbs/gal	kg/liter l
Air or Forced Air Dry	3.5	420.42
Clear Coat	4.3	520.52
Extreme Performance	3.5	420.42
Powder	0.4	050.05
Other	3.0	360.36

(e) **Emission factor.** For the purposes of calculating an emission factor (EF) in pounds ~~VOC~~ per gallon of coating solids for use in the development of a plant-wide emission plan as described in 252:100-39-46(j)(1), the following formula will be utilized:

$$EF = V D / 1 - (V+W) = V D / S$$

where: V = volume fraction of ~~solvent~~VOC in coating~~;~~
D = density of ~~solvent~~VOC in the coating~~;~~
W = volume fraction of water in coating~~;~~ and
S = 1 - (V+W) = volume fraction of solids in coating.

(f) ~~Emission limit Compliance.~~ ~~If more than one emission limit as listed in 252:100-39-46(d) is applicable to a specific coating, then the least stringent emission limitation shall be applied.~~ Compliance with the coating limits listed in 252:100-39-46(d) is to be calculated on a daily weighted average basis.

(g) ~~Solvent-containing~~VOC-containing materials. ~~Solvent-containing~~VOC-containing materials used for clean up shall be considered in the emissionsVOC content limits listed in 252:100-39-46(d) unless:

- (1) the ~~solvent~~VOC containing materials are maintained in a closed container when not in use;
- (2) closed containers are used for the disposal of cloth or paper or other materials used for surface preparation and cleanup;
- (3) the spray equipment is disassembled and cleaned in a ~~solvent~~VOC vat and the vat is closed when not in use; or,
- (4) the ~~solvent~~VOC containing materials used for the clean up of spray equipment are sprayed directly into closed containers.

(h) ~~Exemptions.~~ ~~Exemptions to this Section shall be permitted for combined emissions at one site/facility, which do not exceed a 10 tons/year emissions cutoff based on the facility's~~ Facilities with a potential to emit 10 tons/year or less of ~~VOC~~ from coating operations are exempt from this Section. Once this limit is exceeded, the ~~source~~facility will always be subject to the ~~limits of this Section.~~

(i) **Alternate standard.** Emissions Coatings with VOC contents in excess of those permitted ~~allowed~~ by 252:100-39-46(d) are ~~allowable~~ may be used if both of the following conditions are met~~;~~

(1) ~~emissions~~ Emissions that would result in the absence of control are reduced to levels equivalent to those permitted by that would occur if the VOC content of the coatings met the limits contained in 252:100-39-46(d) and ~~meet~~ there is an overall control efficiency of at least:

(A) 85 percent, ~~by incineration; or,~~

(B) 85 percent, ~~by absorption; or, any other equipment of equivalent reliability and effectiveness; and,~~

(C) 85 percent by any other equipment of equivalent reliability and effectiveness.

(2) ~~no~~ No air pollution, as defined by the Clean Air Act, results.

(j) Emission plan.

(1) Development of a plant-wide emission plan. An ~~owner/operator~~ owner or operator may develop a plant-wide emission plan consistent with EPA's Emission Trading Policy as published in the December 4, 1986 Federal Register instead of having each coating line comply with the ~~emission~~ VOC content limitations prescribed contained in subsection (d) of this Section 252:100-39-46(d), provided if the following conditions are met+.

~~(1)(A)~~ The owner or operator demonstrates, by means of approved material balance or manual emission test methods, by the methods prescribed in 252:100-5-2.1(d) that sufficient reductions in organic solvent VOC emissions may be obtained by controlling other ~~facilities~~ sources within the plant to the extent necessary to compensate for all excess emissions which result from one or more coating lines not achieving the prescribed limitation. Such demonstration shall be made ~~described in writing and shall include:~~

~~(A)(i)~~ a complete description of the coating line or lines ~~which that will~~ can not comply with the ~~emission~~ VOC content limitation in 252:100-39-46(d);

~~(B)(ii)~~ quantification of emissions, in terms of pounds per day of ~~organic solvents~~ VOCs, which are in excess of the prescribed ~~emission~~ VOC content limitation for each coating line described in 252:100-39-46(d) 252:100-39-46(j)(A)(i);

~~(C)(iii)~~ a complete description of each ~~facility and the related control system, if any, for those facilities within the plant where~~ how emissions will be decreased at specific sources to compensate for excess emissions from each coating line described in ~~252:100-39-46(d) 252:100-39-46(j)(A)(i)~~ and the date on which such reduction will be achieved;

~~(D)(iv)~~ a transfer efficiency based on a 60 percent baseline with emissions expressed in pounds of VOC per gallon of solids when transfer efficiency is used to compensate for excess emissions from spray painting operations, ~~the transfer efficiency shall be based on a 60 percent baseline, with emissions expressed in pounds of solvent per gallon of solids. Credits for improvements in transfer efficiency shall be demonstrated with in plant~~

~~testing which complies with approved EPA methods.;~~

(v) a demonstration of credits for improvements in transfer efficiency with in plant testing that complies with EPA methods.

~~(E)(vi)~~ quantification of emissions, in terms of pounds per day of ~~organic solvents~~VOCs, for each source both before and after the improvement or installation of any applicable control system, or any physical or operational changes to such a facility or facilities to reduce emissions and the date on which such reductions will be achieved; and,

~~(F)(vii)~~ a description of the procedures and methods used to determine the emissions of ~~organic solvents~~VOCs.

~~(2)(B)~~ The plant-wide emission reduction plan does not include decreases in emissions resulting from requirements of other applicable air pollution rules. The plant-wide emission reduction plan as described in the Emissions Trading Policy may include voluntary decreases in emissions accomplished through installation or improvement of a control system or through physical or operational changes to ~~facilities~~emission units, including permanently reduced production or closing a facility, located on the premises of a surface-coating operation.

~~(3)(2)~~ Compliance with a plant-wide emission plan. The implementation of a plant-wide emission reduction plan instead of compliance with the emissionsVOC content limitation prescribed in 252:100-39-46(d) has been expressly approved by the Executive Director and the EPA Administrator. Upon approval of a plan, any emissions in excess of those established for each facility under the plan shall be a violation of these rules.

(k) Compliance, testing, and monitoring requirements.

(1) The ~~Executive~~Division Director may require the ~~owner/operator~~at the expense of the owner or operator a demonstration of a ~~source to demonstrate at his expense,~~ compliance with the emission limits using EPA Methods 24, 24A, 1-4, 25, 25A, 25B in 40 CFR 60.444 or EPA Document 450/3-84-019. At a minimum, such test must show that the overall capture efficiency and destruction efficiency are equal to 85 percent, (e.g., 90 percent capture efficiency multiplied by 95 percent destruction efficiency equals 85.5 percent system efficiency). The one hour bake option in Method 24 is required when doing compliance testing.)

(2) Testing for plant-wide emission plans shall be conducted by ~~the owner/operator~~at the expense of the owner or operator ~~at his expense~~ to demonstrate compliance with the emission VOC content limits contained in 252:100-39-46(d).

(3) Monitoring shall be required of any ~~owner/operator~~ owner or operator subject to this Section who uses add-on control equipment for compliance. Such monitoring shall include:

~~(A)~~— installation and maintenance of monitors to accurately measure and record operational parameters of all required control devices to ensure the proper functioning of those

devices in accordance with design specifications, including:

~~(i)(A)~~ the exhaust temperature of direct flame incinerators and/or gas temperature immediately upstream and downstream of any catalyst bed;

~~(ii)(B)~~ the total amount of ~~volatile organic substances~~VOCs recovered by carbon adsorption or other ~~solvent~~VOC recovery system during a calendar month; and,

~~(iii)(C)~~ the dates and reasons for any maintenance and repair of the required control devices and the estimated quantity and duration of ~~volatile organic substance~~ emissions during such activities;

~~(B)~~ maintenance of records of any testing conducted at an affected facility in accordance with the provisions specified in 252:100-39-46(k)(3)(A)(i); and,

~~(C)~~ maintenance of all records at the affected facility for at least two years and make such records available to representative of the State or local air pollution control agency upon request.

(1) Reporting and recordkeeping. ~~The owner/operator of a facility subject to this Section shall submit to the Executive Director upon written request, reports detailing specific VOS sources, the quantity of coatings used for a specific time period, VOS content of each coating, capture and control efficiencies, and any other information pertinent to the calculation of VOS emissions. The data necessary to supply the requested information shall be retained by the owner/operator for a minimum of two years.~~

(1) The owner or operator of a facility subject to this Section shall submit to the Division Director upon written request reports detailing specific VOC sources; the quantity of coatings used for a specific time period, VOC content of each coating; capture and control efficiencies; and any other information pertinent to the calculation of VOC emissions. The data necessary to supply the requested information shall be retained by the owner or operator for a minimum of two years.

(2) The owner or operator of a facility subject to this Section shall maintain records of any testing conducted at an affected facility in accordance with the provisions specified in 252:100-39-46(k), as well as all other records, for at least two years. These records shall be available to representatives of the DEQ upon request.

(m) Compliance date. The date of compliance with the requirements of this Section will be is December 31, 1990.

252:100-39-47. Control of ~~VOS~~VOC emissions from aerospace industries coatings operations

(a) Applicability.

(1) This Section applies to all aerospace facilities located in Tulsa County. Sources once subject to this Section are always subject.

(2) This Section does not apply to individual coating formulations ~~which that~~, when aggregated, do not exceed ~~fifty-five (55) gallons per year~~55 gal/yr for the facility.

~~(3) New and modified sources and coating applications not included in the plan are subject to the permit requirements set forth in OAC 252.100-7 and will be submitted to EPA as source-specific SIP revision, unless:~~

~~(A) the new coatings meet the presumption norm (3.5 pound VOC per gallon less water and exempt solvents limit); or,~~

~~(B) the total usage of the new coating does not exceed fifty-five (55) gallons per year of each coating formulation.~~

~~(4)(3) Exemptions to this Section shall be permitted for combined emissions at one site/facility which do not exceed a ten-ton per year emission cut-off based on the facilities with a potential of the facility to emit 10 tons/year or less of VOC VOC from coatings operations are exempt from this Section.~~

(b) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise-

(1) **"Aerospace"** means the industries, air bases and depots that design and manufacture, rework, or repair aircraft or military equipment components for either commercial or military customers.

(2) **"Aircraft"** means any machine designed to travel through the earth's atmosphere. This group includes but is not limited to airplanes, balloons, dirigibles, drones, helicopters, missiles, and rockets.

(3) **"Alternate ~~reasonable~~ reasonably available control technology (ARACT)"** means the lowest emission limit that a particular source is capable of meeting by the application of control technology that is reasonably available considering technological and economic feasibility as determined on a case-by-case basis.

(4) **"Coating"** means a material which covers a surface which alters the surface characteristics and from which ~~Volatile Organic Solvents~~ VOCs can be emitted during the application and/or curing process.

(5) **"CTG"** means the Control Techniques Guidance Document "Control of Volatile Organic Emissions From Existing Stationary Sources, Volume VI: Surface Coating of Miscellaneous Metal Parts and Products," EPA No. 450/2-78-015.

(6) **"Facility"** means all of the pollutant-emitting activities ~~which~~ that belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person or persons under common control.

(7) **"Low ~~organic solvent~~ VOC coating (~~LOSC~~) (LVOCC)"** means a coating ~~which~~ that ~~contains~~ contains less ~~organic solvent~~ VOC than the conventional coatings used by the industry. Low ~~organic solvent~~ VOC coatings include waterborne, higher solids, electrodeposition, and powder coatings.

(8) **"Reasonable ~~Reasonably~~ available control technology (RACT)"** means the lowest emission limit ~~that a particular source is capable of meeting by the application of control technology that is reasonably available considering technological and economic feasibility~~ and the need to impose such controls to attain and

maintain a National Ambient Air Quality Standard.

(c) ~~General requirements. All affected facilities shall develop an emissions reduction plan as set forth in 252:100-39-47(d). Said plan, upon approval, shall constitute the determination of ARACT for that particular facility. ARACT must be installed and operating as approved in the plan no later than January 1, 1991 for existing facilities, unless additional phased compliance dates are otherwise approved in the plan. Provided, however, that in the case that Tulsa County is still nonattainment for ozone within five (5) years of approval of ARACT, the Emission Reductions Plan and the ARACT determination shall be subject to review and modification.~~

(1) All affected facilities shall develop an emissions reduction plan as set forth in 252:100-39-47(d). This plan, upon approval, shall constitute ARACT for that particular facility.

(2) ARACT must be installed and operating as provided in the approved plan no later than January 1, 1991 for existing facilities, unless additional phased compliance dates are approved in the plan.

(3) New and modified sources and coating applications not included in the plan are subject to the permit requirements set forth in 252:100-7 or 252:100-8, and will be submitted to EPA as source-specific SIP revisions, unless one of the following applies.

(A) The new coatings meet the presumptive norm of 3.5 pounds of VOC per gallon less water and exempt compounds.

(B) The total usage of the new coating does not exceed 55 gal/yr of each coating formulation.

(d) Emissions reduction plan.

~~(1) Plan development. Each owner/operator shall develop an emissions reduction plan for all affected facilities. Each plan shall include the following:~~

~~(A) a detailed, reasoned and exhaustive review of:~~

~~(i) each source of emissions within the facility and~~

~~(ii) (2) the entire plant collectively;~~

(A) a detailed, reasoned and exhaustive review of each source of emissions within the facility and the entire plant collectively;

(B) identification and quantification of emissions, in terms of pounds per day, of all organic solvents VOC both before and after the application of ARACT;

(C) a detailed, innovative engineering effort directed toward finding alternative air management schemes that can be incorporated in order to abate emissions at costs which are reasonable;

(D) a consideration of the level of control that is achievable using available alternative coatings, to include LVOCC for every application, low organic solvent coatings (LOSC);

~~(E) a consideration of the level of control achievable using available add on control devices. This demonstration shall~~

~~include, at a minimum, a demonstration of the feasibility/ infeasibility of the following control options:~~

- ~~(i) carbon absorption;~~
- ~~(ii) incineration/flaring;~~
- ~~(iii) condensation; and~~
- ~~(iv) a combination of 252:100-39-47(d)(1)(E)(i) and 252:100-39-47(d)(1)(E)(ii).~~

(E) a demonstration of the level of control achievable using available add-on control devices which shall include, at a minimum, the feasibility/infeasibility of carbon adsorption, incineration/flaring, condensation, and a combination of carbon adsorption and incineration/flaring;

~~(F) a consideration of facility redesign, including the following:~~

- ~~(i) recirculation;~~
- ~~(ii) reduced air flows;~~
- ~~(iii) consolidation of spray operations; and,~~
- ~~(iv) installation of common control devices for two or more separate coatings operations.~~

(F) a consideration of facility redesign, including recirculation, reduced air flows, consolidation of spray operations, and installation of common control devices for two or more separate coating operations;

~~(G) a consideration of alternative applications, to improve transfer efficiency, including:~~

- ~~(i) high volume low pressure spray equipment;~~
- ~~(ii) heated spray guns; and,~~
- ~~(iii) electrostatic spray equipment/powder coatings.~~

(G) a consideration of alternative applications, to improve transfer efficiency, including high-volume-low-pressure spray equipment, heated spray guns, and electrostatic spray equipment/powder coatings;

(H) an explanation why each source is not a typical coating source covered by the CTG as defined in 252:100-39-47(b);

(I) a cost/benefit analysis for all control technology considered; and,

(J) a detailed compliance schedule ~~which that~~ includes the emission limit and/or control techniques for each emission source. ~~This schedule, which~~ together with other relevant considerations, shall be set forth in a separate section of the plan ~~which that~~ summarizes and outlines ARACT for the referenced facility.

(2) Submission of emission reduction plans. ~~Upon completion, the three copies of the emissions reduction plan shall be submitted in triplicate to the Air Quality Division and one shall be submitted to EPA, Region VI. The preparer shall also submit a copy of the plan to Region VI Environmental Protection Agency (EPA), Region VI.~~

(3) Action on plan. Within 30 days of submittal, or of the effective date of this Section ~~May 25, 1990~~, whichever is later, the Air Quality Division shall, considering any comments submitted by EPA, either approve, modify or disapprove the plan.

(4) Public hearing. The Division shall, at the first meeting of the Air Quality Council following the approval, modification, or disapproval of the plan, present at public hearing, the staff's findings and ARACT determination. ~~Upon consideration of comments and recommendations from the Council, the owner/operator of the affected facility, the public and EPA, the Department shall, within ten (10) days after the public hearing, issue a final ARACT approval. Final approval shall constitute ARACT for the affected facility. The owner/operator shall be responsible for installation and operational provisions of the approved ARACT, including any specific provisions set forth therein. Any violation of the plan or of its provisions shall constitute a violation of this Section.~~

(5) Final approval. Upon consideration of comments and recommendations from the Council, the owner or operator of the affected facility, the public, and EPA, the DEQ shall, within ten (10) days after the public hearing, issue a final ARACT approval. Final approval shall constitute ARACT for the affected facility.

(6) Compliance. The owner or operator shall be responsible for installation and operational provisions of the approved ARACT. Any violation of the plan or of its provisions shall constitute a violation of this Section.

~~(5)~~ (7) Submission of SIP revision. Upon approval by the Department ~~DEQ~~, the ARACT determination shall be submitted to EPA as a SIP revision.

(e) Reporting and recordkeeping.

(1) Recordkeeping requirements. The ~~owner/operator~~ owner or operator shall maintain the following:

(A) ~~a material safety data sheet which documents the volatile organic solvent VOC content, composition, solids content, solvent VOC density and other relevant information regarding each coating and solvent VOC available for use in the affected surface coating processes; information detailing the operational parameters of the coating process sufficient to determine continuous compliance with the applicable control limits. Information as to the amounts of each type coating used and the amounts of solvents used for dilution in each coating type shall be maintained for each coating operation. Daily usage records will be kept for all coatings used that do not comply with the applicable control limits specified in the plan;~~

(B) information detailing the operational parameters of the coating process sufficient to determine continuous compliance with the applicable control limits;

(C) information as to the amounts of each type coating used and the amounts of VOC used for dilution in each coating type for each coating operation;

(D) daily usage records for all coatings used that do not comply with the applicable control limits specified in the plan; and,

~~(B)~~ (E) records shall be maintained of any monitoring and

testing conducted at an affected facility in accordance with the provisions specified in 252:100-39-47(f) ~~7.~~

~~(C)~~ (2) Method of calculating VOC content in coatings. ~~records~~ Records required by 252:100-39-47(e) (1) (A) and ~~252:100-39-47(e) (1) (B)~~ through 252:100-39-47(e) (1) (E) detailing VOSVOC in pounds per gallon of coating (less water and exempt compounds) shall be calculated as follows:

$$\text{VOSVOC in lbs/gal of coating} = \frac{W_v - W_x - W_x W_v - W_w - W_x}{V_m 1 - V_w - V_x}$$

where: W_v = weight of all volatiles T_i
 W_w = weight of water T_i
 W_x = weight of exempt solvent compounds T_i
 V_m = 1 (one),
 V_w = volume fraction of water T_i and,
 V_x = volume fraction of exempt solvent compounds.

~~(D)~~ (3) Maintenance of records. ~~records~~ Records required by 252:100-39-47(e) (1) (A) and ~~252:100-39-47(e) (1) (B)~~ through 252:100-39-47(e) (1) (E) shall be maintained for at least two years and shall be made available upon written request by representatives of the Air Quality Division, AOD U.S. Environmental Protection Agency or EPA or the Tulsa City County Health Department.

~~(2)~~ (4) Alternative recordkeeping provision. Alternatively to 252:100-39-47(e) (1) through 252:100-39-47(e) (3), an equivalent recordkeeping provision ~~which~~ that satisfies the substantive requirements of 252:100-39-47(e) (1) through 252:10-39-47(e) (3) may be approved under the plan.

(f) Testing and monitoring.

(1) Testing. ~~Each owner/operator~~ The Division may require testing at the expense of the owner or operator shall, upon a determination by the Air Quality Division that testing is required to establish emission from any particular source or sources, ~~conduct such tests at his own expense.~~ Test methods may include 1-4, 18, 24, 24A, 25A, 25B found in the Appendix A of 40 CFR Part 60, including the procedures found at 40 CFR 60.444.

(2) Monitoring. Monitoring shall be required of any ~~owner/operator~~ owner or operator subject to this section who uses add-on control equipment for compliance. Such monitoring shall ~~include~~ accurately measure and record operational parameters of all required control devices to ensure the proper functioning of those devices in accordance with design specifications, including:

~~(A) installation and maintenance of monitors to accurately measure and record operational parameters of all required control devices to ensure the proper functioning of those devices in accordance with design specifications, including:~~

~~(i)~~ (A) the exhaust temperature of direct flame incinerators and/or gas temperature immediately upstream and downstream of any catalytic bed;

~~(ii)(B) the total amount of volatile organic substances VOCs recovered by carbon adsorption or other solvent VOC recovery system during a calendar month; and,~~
~~(iii)(C) the dates and reasons for any maintenance and repair of the required control devices and the estimated quantity and duration of volatile organic substance VOC emissions during such activities.~~
~~(B) maintenance of records of any testing conducted at an affected facility in accordance with the provisions specified in 252:100-39-47(f)(2)(A)(i); and,~~
~~(C) maintenance of all records at the affected facility for at least two years and make such records available to representatives of the State or local air pollution control agencies upon request. (252:100-39-47 Effective May 25, 1990)~~

252:100-39-48. Vapor recovery systems [AMENDED AND RENUMBERED TO 252:100-39-41(e)]

~~(a) Applicability. This Section applies only in Tulsa County.~~
~~(b) Storage of volatile organic compounds — 400 40,000 gallons (9.5 953 bbls).~~

~~(1) No person shall store or permit the storage of gasoline or other volatile organic compounds in any stationary storage container with a nominal capacity greater than 400 gallons (9.5 bbls) and less than 40,000 gallons (952.4 bbls) unless such container is equipped with a submerged fill pipe or is bottom filled. No person shall store or permit the storage of gasoline or other volatile organic compounds in any stationary storage container with a nominal capacity greater than 2,000 gallons (47.5 bbls) and less than 40,000 gallons (952.4 bbls) unless such container is equipped with a vapor control system that has an efficiency of no less than 90 percent by weight of the volatile organic compounds contained in the displaced vapors and is equipped with a pressure relief valve in the atmospheric vent system which maintains a pressure of 16 ounces per square inch and 1/2 ounce per square inch vacuum.~~

~~(2) The vapor recovery system shall include one or more of the following:~~

~~(A) a vapor tight return line from the storage container to the delivery vessel and a system that will ensure that the vapor return line is connected before gasoline or volatile organic compounds can be transferred into the container (i.e., popped connectors from the storage container to the delivery vessel.);~~

~~(B) a float vent valve assembly must be installed in the vapor return/vent line on new and existing dual point installations, however, for coaxial installations on existing stations, a vent sleeve extending six inches below the top of the tank will be allowed. Sleeves may be equipped with a 1/16 inch air bleed hole;~~

~~(C) the cross sectional area of the vapor recovery line must be at least half of the cross sectional area of the liquid~~

delivery line, or,

~~(D) instead 252:100 39 48(b) (2) (A) through 252:100 39 48(b) (2) (C), other equipment that has a total collection efficiency no less than 90 percent by weight of the total hydrocarbon compounds in the displaced vapor provided that approval of the proposed design, installation, and operation is obtained from the Executive Director prior to start of construction.~~

~~(3) Exemptions to this Section may be granted provided the owner/operator shows to the satisfaction of the appropriate authority that the container is used exclusively for agricultural purposes or that the facility, based on the most current 12 month's data, dispenses 120,000 gallons per year or less.~~

~~(4) The applicability of this Section shall be determined by the most restrictive of the 2,000 gallon tank size as specified in 252:100 39 48(b) (1) or the 120,000 gallon annual throughput described in 252:100 39 48(b) (3). However, once a facility places a 2,000 gallon tank in service or exceeds the 120,000 gallon annual throughput described in 252:100 39 48(b) (3), that facility shall always be subject to the provisions of this Section. (effective February 12, 1990)~~

~~(5) If emission testing is conducted, the appropriate test methods selected from EPA Methods 1 through 4, 18, 21, 25, 25A and 25B will be utilized.~~

~~(6) Compliance with this subsection will be accomplished by affected owner/operator by December 31, 1986.~~

~~(7) The owner/operator of a facility or facilities shall obtain, by whatever means practicable, certification from the owner/operator of the transport/delivery vessels that all deliveries of gasoline or other volatile organic compounds made to their facility or facilities located in Tulsa County, shall be made by vessels which comply with the requirements contained in 252:100 39 48(d). Compliance with this Section shall be accomplished by affected owner/operators no later than December 31, 1990. (Effective February 12, 1990)~~

~~(c) Loading of volatile organic compounds.~~

~~(1) No person shall operate, install or permit the building, operation or installation of a stationary volatile organic compound loading facility unless such loading facility is equipped with a vapor collection and/or disposal system properly installed, in good working order and in operation.~~

~~(2) When volatile organic compounds are loaded through the hatches of a transport vessel, a pneumatic, hydraulic or mechanical means shall be provided to ensure a vapor tight seal at the hatch.~~

~~(3) A means shall be provided to prevent organic material drainage from the loading device when it is removed from the transport vessel, or to accomplish complete drainage before removal.~~

~~(4) When loading is effected through means other than hatches, all loading and vapor lines shall be equipped with fittings~~

~~which make vapor tight connections and which close automatically when disconnected.~~

~~(5) The vapor collection and/or disposal portion of the system shall consist of one or more of the following in addition to bottom loading or submerged fill of transport vessels:~~

~~(A) an absorption/adsorption system or condensation system with a minimum recovery efficiency of 90 percent by weight of all the volatile organic compound vapors and gases entering such disposal system;~~

~~(B) a vapor handling system which directs all vapors to a fuel gas incineration system with a minimum disposal efficiency of 95 percent; or,~~

~~(C) other equipment of at least 90 percent efficiency, provided plans for such equipment are submitted to and approved by the Executive Director. Storage vessels at service stations and bulk plants may be used for intermediate storage prior to recovery/disposal of vapors as per 252:100-39 48(c)(5)(A) through 252:100 39 48(c)(5)(C) if they are designed to prevent the release of vapors during use.~~

~~(6) Subsection 252:100 39 48(c) shall apply to any facility which loads volatile organic compounds into any transport vessel designed for transporting volatile organic compounds.~~

~~(7) Facilities will be checked annually in accordance with EPA Test Method 21, Leak Test. Leaks greater than 5000 ppm will be repaired within 15 days. Facilities will retain inspection and repair records for two years.~~

~~(d) Transport/delivery vessel requirements.~~

~~(1) Maintenance.~~

~~(A) The delivery vessel must be maintained so as to be vapor tight except when sampling, gauging, or inspecting. These activities shall not occur while the vehicle is loading or unloading or is in a pressurized state.~~

~~(B) The delivery vessel must be equipped, maintained and operated to receive vapors from sources identified in 252:100-39 41(b)(1) and retain these and all other vapors until they are delivered into an authorized vapor recovery/disposal system.~~

~~(C) Vessels with defective equipment such as boots, seals, and hoses, or with other deficiencies which would impair the vessels ability to retain vapors or liquid shall be repaired within 5 days.~~

~~(D) The certified testing facility must certify to the approving agency that the proper testing and repairs have occurred in accordance with 252:100 39 48(d)(2)(A)(i). The vessel must also display on the rear panel a tag showing the date of the pressure test.~~

~~(E) No owner/operator will allow a delivery vessel to be filled at a facility unable to receive displaced organic vapors nor service tanks unable to deliver displaced vapors except for tanks/facilities exempted in 252:100 39 41(b). Terminal owners shall not fill vessels which do not display a current tag.~~

~~(F) Delivery vessels may be inspected by representatives of the appropriate health agency in order to determine their state of repair. Such a test may consist of a visual inspection, a vapor test with vapors not to exceed 5000 ppm. Failure of a vapor test will require the owner/operator to effect the necessary repairs within 10 days. Unless certification is made to the appropriate health agency within 5 days the vessel will be removed from service by the owner/operator. Failure to certify that the cited repairs have been effected will subject the vessel to sanctions. Upon certification of repairs the vessel will be allowed to operate in a normal manner.~~

~~(2) Testing requirements.~~

~~(A) Pressure test.~~

~~(i) Delivery vessels, delivering or receiving gasoline must be tested one time per year for vapor tightness. The vapor tightness test must be consistent with Appendix "A" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems", EPA 450/2-78-051. Tests shall be performed by the owner or a reputable transport service company. Test methods used to test these vessels by owners or testing companies must be approved for use by the Executive Director.~~

~~(ii) The vessel will be considered to pass the test prescribed in 252:100-39-48(d)(2)(A)(i) when the test results show that the vessel and its vapor collection systems do not sustain a pressure change of more than 3 inches of H₂O in addition there shall be no avoidable visible liquid leaks.~~

~~(B) Vapor test. Testing of the tank trucks for compliance with vapor tightness requirements as required under 252:100-39-41(d)(1)(F) must be consistent with Appendix "B" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems", EPA 405/2-78-051, as modified for this purpose and contained in 252:100-43-15. The requirements of 252:100-39-48 will become effective December 15, 1988.~~

252:100-39-49. Manufacturing of fiberglass reinforced plastic products

~~(a) General provisions. Within 12 months after promulgation of this Section all affected facilities shall limit emissions of VOS from fiberglass manufacturing to those listed in 252:100-39-49(a)(1), or have an approved plan for the reduction of such emissions. The plan must be submitted to the Executive Director within 6 months after promulgation of this Section, and shall detail those emissions which will be controlled, the means by which control will be achieved and will demonstrate that compliance will be achieved within two years from the date of promulgation of this Section. The approval authority for such plans shall reside with the Air Quality Council. All approved plans shall be submitted as~~

~~SIP revisions.~~

~~(1) Compliance with 252:100-39-49(a) shall be accomplished by use of control equipment which can demonstrate an 85 percent reduction in the VOS released from each process gas stream, e.g. 90 percent capture efficiency multiplied by 95 percent destruction efficiency equals 85.5 percent system efficiency.~~

~~(2) Exemptions to the limits listed in 252:100-39-49(a)(1) may be allowed for any process gas stream which does not exceed six tons per year actual emissions based on 6240 hours per year. However, once this limit is exceeded, controls must be put in place and maintained at any operating level.~~

~~(b) Demonstration of compliance. The Executive Director may require the owner/operator of a source to demonstrate at his expense, compliance with the prescribed emissions limits. The testing shall be accomplished using the appropriate EPA test method or methods, these include methods 1-4, 18-25, 25A, 25B and 40 CFR 60.444. Initial compliance testing shall be accomplished within 180 days of the applicable compliance date.~~

~~(c) Testing. Testing for the alternate emissions plan shall be conducted by the owner/operator at his expense and shall demonstrate compliance with the emission limits contained in the approved plan.~~

~~(d) Recordkeeping. The owner/operator of a facility subject to this Section shall submit to the Executive Director upon written request reports detailing specific VOS sources, the quantity of solvents used during specific months, a description of the solvent used, control equipment efficiencies, equipment downtime and any other information pertinent to the calculation of VOS emissions from the facility. The owner/operator must also maintain records which detail the maintenance performed on all control equipment as well as a record of the downtime with the reason for each occurrence. Such records shall be maintained by the source for a minimum of two years. (252:100-39-49, Effective February 12, 1990)~~

(a) Applicability.

(1) This Section applies to any process gas stream with actual VOC emissions that exceed six tons per year based on 6,240 hours of operation per year.

(2) Once the limit in 242:100-39-49(a)(1) is exceeded, the controls required in 252:100-39-49(b) must be put in place and maintained and used at any operating level.

(b) Standards. Affected facilities shall limit emissions of VOC from fiberglass manufacturing by use of control equipment which can demonstrate an 85 percent reduction in the VOC released from each process stream (e.g. 90 percent capture efficiency multiplied by 95 percent destruction efficiency equals 85.5 percent system efficiency).

(c) Compliance. All affected facilities must comply with one of the following.

(1) Meet the requirements of 252:100-39-49(b) by February 13, 1991.

(2) Have an approved plan for the reduction of VOC emissions as required by 252:100-39-49(b) by February 13, 1991.

(A) The plan shall be submitted by August 13, 1990, and shall:

(i) detail those emissions which will be controlled;

(ii) detail the means by which control will be achieved;

and,

(iii) demonstrate that compliance will be achieved by February 13, 1992.

(B) The Air Quality Council shall have approval authority for the plans.

(C) All approved plans shall be submitted to the EPA as SIP revisions.

(d) Demonstration of compliance.

(1) The Division Director may require at the expense of the owner or operator a demonstration of compliance with the requirements of 252:100-39-49(b).

(2) The testing shall be accomplished using the appropriate EPA test method or methods. These include methods 1-4, 18-25, 25A, 25B and 40 CFR 60.444.

(3) Initial compliance testing shall be accomplished within 180 days of the applicable compliance date.

(4) Testing for the emissions plan described in 252:100-39-49(c)(2) shall be conducted at the expense of the owner or operator at his expense and shall demonstrate compliance with the emission limits contained in the approved plan.

(e) Recordkeeping.

(1) The owner or operator of a facility subject to this Section shall submit to the Division Director upon written request, reports that include:

(A) details of specific VOC sources;

(B) the quantity of VOC used during specific months;

(C) a description of the VOC used;

(D) control equipment efficiencies;

(E) details of maintenance performed on all control equipment;

(F) equipment downtime; and,

(G) any other information pertinent to the calculation of VOC emissions from the facility.

(2) The records required in 252:100-39-49(e)(1) shall be maintained by the source for at least two years. [252:100-39-49, Effective February 12, 1990]

LIST OF ORGANIC COMPOUNDS WITH NEGLIGIBLE
PHOTOCHEMICAL REACTIVITY
40 CFR 51.100(s)(1) as it existed on July 1, 1998
From the Federal Register dated 4/9/98

Sec. 51.100 Definitions.

(s) Volatile organic compounds (VOC)

(1) This includes any such organic compound other than the following, which have been determined to have negligible photochemical reactivity:

methane;
ethane;
methylene chloride (dichloromethane);
1,1,1-trichloroethane (methyl chloroform);
1,1,2-trichloro-1,2,2-trifluoroethane (CFC-113);
trichlorofluoromethane (CFC-11);
dichlorodifluoromethane (CFC-12);
chlorodifluoromethane (HCFC-22);
trifluoromethane (HFC-23);
1,2-dichloro 1,1,2,2-tetrafluoroethane (CFC-114);
chloropentafluoroethane (CFC-115);
1,1,1-trifluoro 2,2-dichloroethane (HCFC-123);
1,1,1,2-tetrafluoroethane (HFC-134a);
1,1-dichloro 1-fluoroethane (HCFC-141b);
1-chloro 1,1-difluoroethane (HCFC-142b);
2-chloro-1,1,1,2-tetrafluoroethane (HCFC-124);
pentafluoroethane (HFC-125);
1,1,2,2-tetrafluoroethane (HFC-134);
1,1,1-trifluoroethane (HFC-143a);
1,1-difluoroethane (HFC-152a);
parachlorobenzotrifluoride (PCBTF);
cyclic, branched, or linear completely methylated siloxanes;
acetone;
perchloroethylene (tetrachloroethylene);
3,3-dichloro-1,1,1,2,2-pentafluoropropane (HCFC-225ca);
1,3-dichloro-1,1,2,2,3-pentafluoropropane (HCFC-225cb);
1,1,1,2,3,4,4,5,5,5-decafluoropentane (HFC 43-10mee);
difluoromethane (HFC-32);
ethylfluoride (HFC-161);
1,1,1,3,3,3-hexafluoropropane (HFC-236fa);
1,1,2,2,3-pentafluoropropane (HFC-245ca);
1,1,2,3,3-pentafluoropropane (HFC-245ea);
1,1,1,2,3-pentafluoropropane (HFC-245eb);
1,1,1,3,3-pentafluoropropane (HFC-245fa);
1,1,1,2,3,3-hexafluoropropane (HFC-236ea);
1,1,1,3,3-pentafluorobutane (HFC-365mfc);

chlorofluoromethane (HCFC-31);
1 chloro-1-fluoroethane (HCFC-151a);
1,2-dichloro-1,1,2-trifluoroethane (HCFC-123a);
1,1,1,2,2,3,3,4,4-nonafluoro-4-methoxy-butane ($C_4F_9OCH_3$);
2-(difluoromethoxymethyl)-1,1,1,2,3,3,3-heptafluoropropane
($(CF_3)_2CFCF_2OCH_3$);
1-ethoxy-1,1,2,2,3,3,4,4,4-nonafluorobutane ($C_4F_9OC_2H_5$);
2-(ethoxydifluoromethyl)-1,1,1,2,3,3,3-heptafluoropropane
($(CF_3)_2CFCF_2OC_2H_5$);
methyl acetate

and perfluorocarbon compounds which fall into these classes:

- (i) Cyclic, branched, or linear, completely fluorinated alkanes;
- (ii) Cyclic, branched, or linear, completely fluorinated ethers with no unsaturations;
- (iii) Cyclic, branched, or linear, completely fluorinated tertiary amines with no unsaturations; and
- (iv) Sulfur containing perfluorocarbons with no unsaturations and with sulfur bonds only to carbon and fluorine.

REVISIONS TO THE PROPOSED MODIFICATION OF SUBCHAPTER 39 FOR THE
FEBRUARY 17, 1999, AIR QUALITY COUNCIL MEETING

Numerous changes have been made to the version of Subchapter 39 that was presented at the December 15, 1998, Air Quality Council meeting. Most of these changes are minor non-substantive changes consisting of replacing "will" and "should" with "shall", "gallons" with "gal", "liters" with "l", and "inch" with "in." Some portions of the rule were extensively rewritten for clarity without involving substantive changes. These include: 252:100-38-41(a), 252:39-41(b)(1), 252:100-39-41(e)(2)(A) and (B), 252:100-39-42(a)(1)(D), 252:100-39-42(b)(2)(A) and (B), 252:39-46(k)(1), 252:100-39-47(d)(2), 252:100-39-47(f)(a), and 252:100-39-49(d)(1).

One definition was added and one was modified. A definition of "drilling or production facility" was added to 252:100-39-30(a)(3). This definition is identical to that in 40 CFR 60, Subpart K. The definition of "aerospace" in 252:100-39-47(b) was revised to make clear that it does include rework.

Only one substantive change has been proposed since the December meeting. It is the addition of 252:100-39-30(b)(3) and (4) which exempts storage vessels subject to 40 CFR 60, Subparts Ka or Kb or 40 CFR 63, Subparts CC or G from the requirements of 252:100-39-30.

PUBLIC MEETING

Notice of Public Meeting for February 17, 1999 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance door of the meeting room.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Mr. Wilson - aye; Dr. Grosz - aye; Dr. Canter - aye; Mr. Kilpatrick - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye. Ms. Slagell did not attend.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the December 15, 1998 Public Meeting/Hearings. Motion was made by Dr. Grosz to approve the Minutes as presented and second was made by Dr. Canter. Roll call as follows: Mr. Wilson - aye; Dr. Grosz - aye; Dr. Canter - aye; Mr. Kilpatrick - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

Election of Officers - Floor was opened for nominations for Chairman for Calendar Year 1999. Dr. Canter nominated Mr. Breisch for Chairman and the second was made by Dr. Grosz. Roll call as follows: Mr. Wilson - aye; Dr. Grosz - aye; Dr. Canter - aye; Mr. Kilpatrick - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - abstain. Nominations were then requested for Vice Chairman. Mr. Kilpatrick nominated Dr. Canter and Dr. Grosz made the second. Roll call as follows: Mr. Wilson - aye; Dr. Grosz - aye; Dr. Canter - abstain; Mr. Kilpatrick - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

PUBLIC HEARINGS

Protocol Statement – As protocol officer, Mr. Terrill convened the hearings by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Terrill entered into the hearing records the Hearing Agenda and Oklahoma Register Notice.

OAC 252:100-37 Control of Emissions of Organic Materials (AMENDED)

Mr. Terrill called upon Dr. Joyce Sheedy who advised that proposed changes primarily simplify language and correct grammar and format but also include fourteen substantive changes. Dr. Sheedy explained that one substantive change alters the definition of volatile organic compound (VOC) to make it reflect EPA's definition of VOC. The other changes include:

1. an added definition of drilling or production facility
2. an added definition of lease custody transfer
3. an added new subsection 252:100-37-3(c)
4. a revised 252:100-37-4(b) to exempt methanol storage vessels at drilling or production sites
5. a revised the alternate standard 252:100-37-25(d)
6. and added new subparagraphs (A), (B) (C) to 252:100-37-41(2)

Dr. Sheedy reiterated eight substantive changes that had been previously proposed.

1. a revision of the definition of Volatile Organic Compound (VOC) 252:100-37-2
2. a deleted 252:100-37-3(a)
3. an added 252:100-37-15(c) to exempt storage tanks subject to NSPS subpart K, Ka, Kb
4. an added 252:100-37-16(c) to exempt loading facilities that are subject to NSPS subpart XX or NESHAP subpart R
5. a deleted 252:100-37-25(c)
6. a deleted first sentence in 252:100-37-36 to eliminate an impossible requirement
7. an added 252:100-37-38(b) to exempt pumps and compressors that are subject to equipment leak standards in NSPS subparts VV, GGG, or KKK from Section 38
8. an added part 9 Permit by Rule for VOC storage and loading facilities

Dr. Sheedy submitted the written letter from EPA dated February 10, 1999 indicating support for the proposed revisions for hearing record.

Dr. Sheedy then stated it was staff's recommendation that Council forward to the Environmental Quality Board at its March 5, 1999 meeting.

Council discussion followed which included question from Ms. Myers regarding the meaning of "expressly" in 252:100-37-25(b)(2). Ms. Hoffman explained the intent of the word to be that the approval must be in writing from the Division Director. Wording was changed.

Ms. Sandra Rennie, EPA, stated that these changes supported the SIP and also complimented EPA's own current program of simplifying language in their rules.

Mr. Breisch entertained a motion to send to this rule to the EQ Board in March. Mr. Wilson made motion with second made by Dr. Grosz. Roll call as follows: Mr. Wilson - aye; Dr. Grosz - aye; Dr. Canter - aye; Mr. Kilpatrick - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-39 Control of Organic Materials in Nonattainment Areas [AMENDED]

Mr. Terrill called upon Dr. Joyce Sheedy who advised that proposed changes primarily simplify language and correct grammar and format but also include substantive changes. Dr. Sheedy explained that one substantive change alters the definition of volatile organic compound (VOC) to make it reflect EPA's definition of VOC. She then submitted, for the record, the written letter from EPA dated February 10, 1999 indicating support for these proposed revisions.

Dr. Sheedy explained that one substantive change alters the definition of volatile organic compound (VOC) to make it reflect EPA's definition of VOC. The other changes include:

1. an added definition of drilling or production facility to 252:100-39-30(a)
2. a revised the definition of aerospace in 252:100-39-47(b) to make clear that it includes rework
3. an added 3252:100-9-30(b)(3) and (4) to exempt storage vessels subject to NSPS Ka and Kb or MACT standards CC or G from Section 30

Previous proposals were:

1. a definition of VOC
2. a correction of the placement of "prior to lease custody transfer" in 252:100-39-30(b)
3. an addition of language to 252:100-39-41(c) that exempts facilities that have an annual throughput less than 120,000 gallons or storage capacity less than 10,000 gallons from Section 41

Sandra Rennie re-stated EPA's support of subchapter 37 also applies to subchapter39.

Following discussion, Mr. Breisch entertained a motion to recommend this rule to the EQBoard at its March 5 meeting. Mr. Kilpatrick made that motion with the second made by Dr. Grosz. Roll call as follows: Mr. Wilson - aye; Dr. Grosz - aye; Dr. Canter - aye; Mr. Kilpatrick - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

NEW BUSINESS

Council discussed the possibility of changing the format of the Council meetings to make the briefing session shorter and less formal and the hearing sessions to include more of the discussions involved in the changes to rules as matter of record through court reporter transcripts. It was decided to make this discussion an agenda item at the next meeting to obtain additional input from audience.

Mr. Terrill advised that the monthly financial information and detailed list of tasks that would be billed to Title V expenditures requested at Council's last meeting is in rough draft form and would be made available to the Council Subcommittee at a meeting in March.

Mr. Breisch suggested that a management efficiency study that would determine staffing priorities should involve Council, staff, and industry to formulate scope and funding.

ADJOURNMENT With no further business, meeting was adjourned with announcement that the next regularly scheduled meeting would be April 20, 1999 at the Department of Environmental Quality Multi-Purpose Room, First Floor, 707 North Robinson, Oklahoma City, Oklahoma.

NOTE: The sign-in sheet is attached as an official part of these Minutes.

AIR QUALITY COUNCIL
RULEMAKING RECOMMENDATION TO THE ENVIRONMENTAL QUALITY BOARD

Identification of Proposed Rulemaking:

Chapter Number and Title – OAC 252:100-39

Subchapters or Sections Involved – [new, amended or revoked]

Emissions of Organic Materials in Nonattainment Areas [AMENDED]

On FEBRUARY 17, 1999 the members of this Council, by authority vested in them by the Oklahoma Environmental Quality Code (27 O.S.Supp. 1993, § 2-2-201), by roll call vote, recommended to the Environmental Quality Board that the rulemaking described above be adopted as:

permanent [take effect after legislative review]

emergency [temporary, to take effect upon approval by the Governor because of time; and/or special reason: _____]

This Council has considered the proposed rulemaking and comments about it and determined, to the best of its knowledge, that all applicable requirements of the Oklahoma Administrative Procedures Act have been followed.

This Council authorizes the Department to prepare this recommended rulemaking for the Board, making any changes approved by the Council, correcting typographical, grammatical and reference errors, and formatting them as required by the Office of Administrative Rules. This is to be done with the understanding that such changes shall neither alter the sense of what this Council recommends nor invalidate this recommendation.

Respectfully,

Date signed: 2-17-99

Chair or Designee

Environmental Quality Board

REGULAR MEETING AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
OKLAHOMA ENVIRONMENTAL QUALITY BOARD

A Public Meeting: 9:30 a.m., Friday, March 5, 1999
Association of County Commissioners of Oklahoma
429 NE 50th Street, Oklahoma City, Oklahoma

1. Call to Order - Herschel Roberts
2. Roll Call - Lynda Finch
3. Approval of Minutes of the November 10, 1998 Regular Meeting
4. Election of Officers (Chair and Vice-Chair) for 1999

5. **OAC 252:100 Air Pollution Control:**

Changes are proposed to five subchapters. The changes fall into three general groups.

- Proposed revisions to both Subchapters 37 (Control of Emissions of Organic Materials) and 39 (Emission of Organic Materials in Nonattainment Areas) include 1) definitional changes, including most notably the term "volatile organic compound (VOC)" and related terms; 2) exemption of certain types or sizes of VOC loading and storage vessels and facilities and certain pumps and compressors from some state requirements and standards, especially when the equipment or facilities are subject to related federal requirements; 3) deletion of a rule which allows the emission of 3,000 pounds per day or 450 pounds per hour of organic materials before controls are required; 4) revision of an alternate emission standard for coating operations; 5) correction of the impossible requirement that no emission of hydrocarbons or organic material is allowed from fuel-burning or refuse-burning equipment; and 6) addition of provisions for permit by rule for VOC storage and loading facilities.
- Proposed amendments to Subchapter 7 (Permits for Minor Facilities) will modify language applicable to de minimis facilities, Permit by Rule (PBR), and general permits. First, actual emissions of Total Suspended Particulates (TSP) will no longer be counted in determining whether a facility meets the definition of "de minimis facility." Second, the proposed revisions will delete the current lower tonnage limits for PBR and general permits. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Proposed amendments to Subchapter 8 (Permits for Part 70 Sources) will update the adoption by reference of the requirements for case-by-case MACT determinations contained in federal rules to July 1, 1998.
- Proposed amendments to Subchapter 5 would increase the annual operating fees for both Part 70 and minor emission sources. Proposed revisions to Subchapter 7 will increase the applicability determination fee and individual application fees for minor facilities. Subchapter 8 is revised to increase the fee for applicability determinations, consistent with the proposed increase in Subchapter 7.

- A. Presentation – David Branecky, Air Quality Council member
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote for permanent adoption

6. **OAC 252:200 and 205 Hazardous Waste Management:**

The state hazardous waste rules have been revised as part of the DEQ's effort to simplify and streamline its rules. The rewrite is not intended to change the requirements of the rules, but to make them clearer and more concise. Due to extensive reworking of the language and rearrangement of the text, the DEQ believes it is more understandable and straightforward to revoke Chapter 200 in its entirety and replace it with a new chapter. Chapter 205, than to present an underline/strike-out version of Chapter 200. This revocation and replacement was done last year by emergency rulemaking; it is proposed to repeat the action as permanent rulemaking.

Chapter 205 as proposed also contains three categories of substantive changes. The first is update of the adoption by reference of federal hazardous waste regulations to July 1, 1998. The second is to delineate certain hazardous waste regulatory duties which remain with the U.S. Environmental Protection Agency. The third is to clarify that although federal hazardous waste regulations allow conditionally exempt small quantity generators of hazardous waste to dispose of their hazardous waste in certain solid waste landfills, this practice is prohibited by Oklahoma statute.

- A. Presentation— David Bradshaw, Hazardous Waste Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote for permanent adoption

7. **OAC 252:400 Radiation Management:**

The proposed new rules support Oklahoma's pending application to the U.S. Nuclear Regulatory Commission (NRC) for State Agreement status. NRC approval of Oklahoma's application will shift regulation of source, byproduct and special nuclear material from the NRC to the DEQ.

New Subchapter 2 forms the framework for the State Agreement Program and the incorporation by reference of federal NRC regulations from Title 10 of the Code of Federal Regulations. Appendices G through P mirror NRC categories and set fees for Oklahoma's State Agreement Program. All fees in these Appendices are less than the current federal fees. Due to the requirement that fees must be adopted during the time the legislature is in session, these Appendices are presented to the Board before the remainder of Subchapter 2's State Agreement rules. However, these fee schedules will not go into effect until the date the State Agreement program becomes effective.

- A. Presentation— Dr. David Gooden, Radiation Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote for permanent adoption

8. **OAC 252:510 Municipal Solid Waste Landfills:**

The proposed addition of Subchapter 16 addresses new standards for the exclusion of hazardous, PCB, radioactive, or other restricted wastes from disposal in a municipal solid waste landfill (MSWLF). The rules require owners/operators to submit a new or amended Waste Exclusion Plan for approval by January 1, 2000, and sets standards for the plan. The amendment to 252:510-17-5 incorporates the Subchapter 16 provisions in the current rule requiring exclusion of unacceptable wastes.

The proposed amendment to 252:510-17-2(d) would require owners/operators of MSWLFs and nonhazardous industrial waste landfills to establish and maintain vegetative cover, or other

alternatives approved by DEQ, over waste areas that extend above the natural horizon if that area will not be receiving more waste in the upcoming year. The rule is designed to enhance dust control, erosion control and aesthetics at MSWLFs and nonhazardous industrial waste landfills once they begin placing waste above ground.

The amendment to 252:510-21-6 would clarify that the pay-in period under the Trust Fund financial assurance mechanism, which may be used to ensure the costs for closure and post-closure of the landfill, is limited to a maximum of 15 years. This change is consistent with the change in law provided by SB 1025 passed during the 1998 legislative session.

- A. Presentation— Steve Mason, Solid Waste Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote for permanent adoption

9. OAC 252:520 Solid Waste Management:

The proposed amendment to 252:520-9-11 would require owners/operators of landfills to establish and maintain vegetative cover, or other alternatives approved by DEQ, over waste areas that extend above the natural horizon if that area will not be receiving more waste in the upcoming year. The rule is designed to enhance dust control, erosion control and aesthetics at landfills once they begin placing waste above ground.

Changes to Subchapter 21 implement revisions to the waste tire recycling program as required by SB 1218 and SB 986 passed during the 1998 session.

The amendment to 252:510-23-51 would clarify that the pay-in period under the Trust Fund financial assurance mechanism, which may be used to ensure the costs for closure and post-closure of solid waste disposal sites, is limited to a maximum of 15 years. This change is consistent with the change in law provided by SB 1025 passed during the 1998 legislative session.

- A. Presentation— Steve Mason, Solid Waste Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote for permanent adoption

10. OAC 252:640 and 641 Individual and Small Public On-Site Sewage Disposal Systems:

252:640 is being revoked. The rules in Chapter 640 were clarified, substantially rewritten and reorganized through the re-right/de-wrong process and moved to 252:641. Subchapter 11 of Chapter 700 has also been rewritten and moved to new Chapter 641; among the revisions is a recategorization of certified installers. The purpose of these rules is to establish procedures for the construction, installation and operation of individual and small public on-site sewage disposal systems and to establish procedures for persons seeking certification as installers of individual sewage disposal systems.

- A. Presentation— Gary Collins, Director, Environmental Complaints and Local Services Division
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote for permanent adoption

11. **OAC 252:700 Water and Wastewater Works Operator Certification:**

This action is a corresponding action to agenda item 10. This rule change would revoke current Subchapter 11 of Chapter 700 (relating to certification for septic tank system installers), the provisions of which are included in new Chapter 641.

- A. Presentation— Gary Collins, Director, Environmental Complaints and Local Services Division
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote for permanent adoption

12. New Business (any matter not known about, or which could not have been reasonably foreseen prior to the time of posting of agenda)

13. Executive Director's Report

14. Adjournment

Public Forum: The Board meets four times a year at different locations across the State to hear the views and concerns of all Oklahomans about environmental issues. This opportunity is informal, and we invite you to sign the register to speak..

Should you have a disability and need an accommodation, please notify the DEQ three days in advance at 702-7100.

SUBCHAPTER 39. EMISSION OF VOLATILE ORGANIC MATERIALS COMPOUNDS (VOCs) IN NONATTAINMENT AREAS AND FORMER NONATTAINMENT AREAS

PART 1. GENERAL PROVISIONS

252:100-39-1.	Purpose	1
252:100-39-2.	Definitions	1
252:100-39-3.	General applicability	2

252:100-39-48.	Vapor recovery systems	38
252:100-39-49.	Manufacturing of fiberglass reinforced plastic products	42

PART 1. GENERAL PROVISIONS

252:100-39-1. Purpose

~~The purpose of this Subchapter is to control the emission of organic materials from stationary sources located in nonattainment areas and to specify the additional control measures required to protect and enhance the air quality to insure that the Oklahoma air quality standard is not exceeded and significant deterioration is prevented.~~ The purpose of this Subchapter is to reduce the formation of ozone by controlling the emissions of volatile organic compounds (VOCs). This Subchapter contains requirements for the control of emissions of VOCs from stationary sources located in areas that are nonattainment or were formerly nonattainment for ozone.

252:100-39-2. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise.

~~"Cutback asphalt" means a basic asphalt or asphaltic concrete containing a petroleum distillate.~~

~~"Effluent water separator" means any tank, box, sump, or other container in which any material compound floating on or entrained or contained in water entering such tank, box, sump or other container is physically separated and removed from such water prior to outfall, drainage, or recovery of such water.~~

~~"Organic materials" means any chemical compounds of carbon excluding carbon monoxides, carbon dioxide, carbonic acid, metallic carbides, metal carbonates and ammonium carbonates.~~

"Petroleum refinery" means any facility engaged in producing gasoline, aromatics, kerosene, distillate fuel oils, residual fuel oils, lubricants, asphalt, or other products through distillation of crude oil or other hydrocarbons or through redistillation, cracking, rearrangement or reforming or unfinished petroleum derivatives.

~~"Refinery" means any facility engaged in producing gasoline, kerosene, fuel oils or other products through distillation of crude oil or through redistillation, cracking or reforming of unfinished hydrocarbon derivatives.~~

"Refinery unit" means a set of components which are a part of a basic process operation, such as distillation, hydrotreating, cracking or reforming of hydrocarbons.

"Submerged fill pipe" means any fill pipe or discharge nozzle which that meets any one of the following conditions.

(A) ~~the~~The bottom of the discharge pipe or nozzle is below the surface of the liquid in the receiving vessel for at least 95 percent of the volume filled.

(B) ~~the~~The bottom of the discharge pipe or nozzle is less than 6 inches from the bottom of the receiving vessel.

(C) ~~the~~The bottom of the discharge pipe or nozzle is less than 2 pipe or nozzle diameters from the bottom of the receiving vessel, ~~or~~.

~~(D) other equivalent methods acceptable to the Executive~~

Director.

"Volatile organic compound (VOC)" means any compound containing carbon and hydrogen or containing carbon and hydrogen in combination with any other element which has a vapor pressure of 1.5 pounds per square inch absolute or greater under actual storage conditions of carbon, excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate, which participates in atmospheric photochemical reactions. Any organic compound listed in 40 CFR 51.100(s)(1) will be presumed to have negligible photochemical reactivity and will not be considered to be a VOC.

~~"Volatile organic solvent (VOS)" means any organic compound which participates in atmospheric photochemical reactions; that is, any organic compound other than those which the EPA Administrator designates as having negligible photochemical reactivity. VOS may be measured by the EPA VOC reference method.~~

252:100-39-3. General applicability

In addition to any application of the requirements contained in OAC 252:100-37, the additional ~~control/prohibitions~~ requirements contained in this Subchapter shall be required ~~on~~ of existing and new facilities located in Tulsa and Oklahoma Counties.

252:100-39-4. Exemptions

VOCs with vapor pressures less than 1.5 pounds per square inch absolute (psia) under actual storage conditions are exempt from 252:100-39-16 through 252:100-39-18, 252:100-39-30, 252:100-39-41, and 252:100-48.

PART 3. PETROLEUM REFINERY OPERATIONS

252:100-39-15. Petroleum refinery equipment leaks

(a) Definitions. The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise.

(1) ~~"Component"~~ "Component" means any piece of equipment which has the potential to leak ~~volatile organic compounds~~ VOCs when tested in the manner described in EPA Test Method 21 of 40 CFR Part 60. These sources include, but are not limited to, pumping seals, compressor seals, seal oil degassing vents, pipeline valves, flanges and other connections, pressure relief devices, process drains, and open ended pipes. Excluded from these sources are valves which are not externally regulated.

(2) ~~"Gas service"~~ "Gas service" means any equipment which processes, transfers or contains a ~~volatile organic compound~~ VOC or mixture of ~~volatile organic compounds~~ VOCs in the gaseous phase.

"Leaking component" means a component which has a VOC concentration exceeding 10,000 ppmv when tested according to the provisions in 252:100-39-15(e).

(3) ~~"Liquid service"~~ "Liquid service" means any equipment which processes, transfers or contains a ~~volatile organic compound~~ VOC or mixture of ~~volatile organic compounds~~ VOCs in the liquid phase.

~~(4) "Petroleum refinery" means any facility engaged in producing gasoline, aromatics, kerosene, distillate fuel oils, residual fuel oils, lubricants, asphalt, or other products through distillation of crude oil or other hydrocarbons or through redistillation, cracking, rearrangement or reforming or unfinished petroleum derivatives.~~

~~(5) "Refinery unit" means a set of components which are a part of a basic process operation, such as distillation, hydrotreating, cracking or reforming of hydrocarbons.~~

~~(6) "Valves not externally regulated" means valves that have no external controls, such as in-line check valves.~~

~~(7) "Volatile organic compounds" means any compound containing carbon and hydrogen or containing carbon and hydrogen in combination with any other element which has a vapor pressure of 0.3 kilopascals (0.0435 pounds per square inch absolute) or greater under actual storage conditions. (Effective 2-12-90)~~

~~(b) Applicability. This Section applies to all source facility petroleum refineries located in the following counties: Tulsa and Oklahoma.~~

(1) This Section applies to all petroleum refineries located in Tulsa County and Oklahoma County.

(2) VOCs with vapor pressures less than 0.0435 psia (0.3 kilopascals(kPa)) under actual storage conditions are exempt from 252:100-39-15. (Effective 2-12-90.)

(c) Provisions for specific processes. Standards and operating requirements

(1) The owner or operator of a petroleum refinery complex subject to this Section shall:

(A) develop and conduct a monitoring program consistent with the provisions in 252:100-39-15(d) and 252:100-39-15(f);

~~(B) conduct a monitoring program consistent with the provisions in 252:100-39-15(f);~~

~~(C) record all leaking components which have a VOC concentration exceeding 10,000 ppm when tested according to the provisions in 252:100-39-15(e) and place an identifying tag on each component consistent with the provisions in 252:100-39-15(f)(3);~~

~~(D) (C) repair and retest the leaking components, as defined in 252:100-39-15(e)(1)(C), as soon as possible but no later than 15 days after the leak is found; and,~~

~~(E) (D) identify all leaking components, as defined in 252:100-39-15(e)(1)(C), which cannot be repaired until the unit is shutdown for turnaround. Assure all lines or pipes terminating with a valve are sealed with a second valve, a blind flange, a plug or a cap; and,~~

(E) assure all lines or pipes terminating with a valve are sealed with a second valve, a blind flange, a plug or a cap.

(2) The Executive Division Director, may, at his/her discretion, take require the owner or operator to take appropriate remedial action, including early unit turnaround, based on the number and severity of tagged leaks awaiting repair.

(3) Pipeline valves and pressure relief valves in gaseous

~~volatile organic compound~~ gas service shall be marked in some manner that will be readily obvious to both petroleum refinery or contract personnel performing monitoring and the ~~Executive Director~~ DEQ.

(d) **Compliance ~~schedule~~ schedule.** The owner or operator of a petroleum refinery, ~~in order to comply with 252:100-39-15,~~ shall adhere to the increments of progress contained in the following ~~schedule~~.

~~(1) Submit~~ submit to the ~~Executive~~ Division Director a monitoring program by July 30, 1981. This program shall contain, at a minimum, a list of the refinery units ~~only~~ and the quarter in which they will be monitored, a copy of the log book format, and the make and model of the monitoring equipment to be used. In no case shall a monitoring contract relieve the owner or operator of a petroleum refinery of the responsibility for compliance with this Section.

~~(2) Submit quarterly monitoring report to the Executive Director.~~

(e) **Testing and monitoring procedures.** Testing and calibration procedures to determine compliance with this Section must be consistent with EPA Test Method 21 of 40 CFR Part 60.

(f) **Monitoring.**

(1) The owner or operator of a petroleum refinery ~~subject to this Section~~ shall conduct a monitoring program consistent with the following provisions. The owner or operator shall:

(A) monitor yearly by the methods referenced in ~~Test Method 21 of 40 CFR Part 60~~ 252:100-39-15(e) all:

~~(i) pump seals~~ 1

~~(ii) pipeline valves in liquid service~~ 1 and 7

~~(iii) process drains;~~

(B) monitor quarterly by the methods referenced in ~~252:100-39-15(d)~~ 252:100-39-15-(e) 7 all:

~~(i) compressor seals~~ 1

~~(ii) pipeline valves in gaseous~~ gas service 1 and 7

~~(iii) pressure relief valves in gaseous~~ gas service;

(C) monitor weekly by visual methods all pump seals;

(D) monitor ~~immediately~~ within 24 hours any pump seal from which VOC liquids are observed dripping;

(E) monitor any relief valve within 24 hours after it has vented to the atmosphere; and,

(F) monitor immediately after repair any component that was found leaking.

(2) Pressure relief devices ~~which~~ that are connected to an operating flare header, vapor recovery ~~device~~ devices, inaccessible valves, storage tank valves, and valves that are not externally regulated are exempt from the monitoring requirements in paragraph (1) of this subsection. ~~Provided~~ provided, however, such inaccessible valves will be monitored during annual shutdown.

(3) The owner or operator of a petroleum refinery, upon the detection of a leaking component, ~~as defined in 252:100-39-15(e)(1)(C), which~~ that is not repaired on discovery, shall affix

a weatherproof and readily visible tag, bearing an identification number and the date the leak is located, to the leaking component. This tag shall remain in place until the leaking component is repaired.

(g) **Recordkeeping.**

(1) The owner or operator of a petroleum refinery shall maintain a leaking components monitoring log ~~as specified in 252:100-39-15(e)(1)(C) which shall contain, at a minimum, the following data:~~

- (A) the name of the process unit where the component is located;
- (B) the type of component (e.g., valve, seal);
- (C) the tag number of the component, if not repaired immediately on discovery;
- (D) the date on which a leaking component is discovered;
- (E) the date on which a leaking component is repaired;
- (F) the date and instrument reading of the recheck procedure after a leaking component is repaired;
- (G) the date of the calibration of the monitoring instrument. ~~The record of calibration which~~ shall be made available for inspection on request;
- (H) those leaks that cannot be repaired until turnaround; and,
- (I) the total number of components checked and the total number of components found leaking.

(2) ~~Copies of the~~The monitoring log shall be retained on site by the owner or operator for at least two years after the date on which the record was made or the report prepared.

(3) ~~Copies of the~~The monitoring log shall be made available for inspection at any reasonable time and copies of the log shall be provided to the Executive Division Director, upon written request, ~~at any reasonable time of the AOD.~~

(h) **Reporting.** The owner or operator of a petroleum refinery, ~~upon the completion of each monitoring procedure,~~ shall:

(1) submit a report to the Executive Division Director by the 30th day following the end of each calendar quarter that lists all leaking components that were located during the previous quarter but not repaired within 15 days, all leaking components awaiting unit turnaround, and the total number of components found leaking; and,

(2) submit a signed statement with the report attesting to the fact that all monitoring and, with the exception of those leaking components listed in 252:100-39-15(h)(1), ~~all monitoring and~~ repairs were performed as stipulated in the monitoring program.

252:100-39-16. Refinery~~Petroleum refinery~~ process unit turnaround

(a) **Definition.** ~~"Turn-around"~~"Turnaround" means the planned procedure of shutting down a unit, inspecting and repairing it, and restarting it.

(b) **Procedures required.** For the shutdown, purging and blowdown operation of any ~~processing~~ petroleum refinery processing unit the

following procedures are required:

(1) Recovery of ~~volatile organic compounds (VOC)~~ VOCs shall be accomplished during the shutdown or turnaround to a process unit pressure compatible with the flare or vapor system pressure. The unit ~~will~~ shall then be purged or flushed ~~with~~ to a flare or vapor recovery system using a suitable material such as steam, water or nitrogen ~~to a flare or vapor recovery system~~. The unit shall not be vented to the atmosphere until pressure is reduced to less than 5 psig through control devices.

(2) Except where inconsistent with the "Minimum Federal Safety Standards for the Transportation of Natural and Other Gas by Pipeline," or any State of Oklahoma regulatory agency, no person shall emit ~~organic~~ VOC gases to the atmosphere from a vapor recovery blowdown system unless these gases are burned by smokeless flares, or an equally effective control device as approved by the ~~Executive~~ Division Director.

(3) At least fifteen days prior to a scheduled turnaround, a written notification shall be submitted to the ~~Executive~~ Division Director. As a minimum, the notification shall indicate the unit to be shutdown, the date of shutdown, and the approximate quantity of ~~hydrocarbons~~ VOCs to be emitted to the atmosphere.

(4) Scheduled refinery unit turnaround may be accomplished without the controls specified in 252:100-39-16(b)(1) and 252:100-39-16(b)(2) during non-oxidant seasons provided the notification to the ~~Executive~~ Division Director as required in 252:100-39-16(b)(3) ~~specifically contains such a request for such an exemption. Non-oxidant~~ The non-oxidant season is ~~understood to be between the months of October and April~~ from November 1 through March 31.

252:100-39-17. Refinery Petroleum refinery vacuum producing system

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

(1) ~~"Accumulator"~~ "Accumulator" means the vessel in the overhead stream of any fractionating tower, after the overhead condenses and separates noncondensable gases, liquid ~~hydrocarbons~~ VOCs and water.

(2) ~~"Hotwell"~~ "Hotwell" means the tank at the bottom of the barometer leg in a barometric condenser system to receive the water, condensate and entrained ~~hydrocarbons~~ VOCs generated by the barometric condenser.

(b) **Requirements.** ~~Noncondensable volatile organic compounds from the following equipment~~ VOCs emitted from any of the vacuum producing systems listed in paragraphs (1) through (3) of this subsection shall be incinerated or reduced by 90 percent of what would be emitted ~~from the following vacuum producing system without controls.~~

- (1) ~~steam~~ Steam ejectors with barometric condensers, ~~or,~~
- (2) ~~steam~~ Steam ejectors with surface condensers, ~~or,~~
- (3) ~~mechanical~~ Mechanical vacuum pumps.

(c) **Hotwells and accumulators.**

(1) Hot wells and accumulators shall be covered and the noncondensable vapors shall be vented to a fire-box or incinerator.

(2) The presence of a pilot flame shall be monitored using a thermocouple or any other equivalent device to detect the presence of a flame. (Effective February 12, 1990)

(d) **Compliance.** Compliance shall be determined in accordance with the provision of the CTG document ("Control of Refinery Vacuum Producing systems, Wastewater Separators and Process Unit Turnarounds," EPA 450/2-77-025, October, 1977). Test reports and maintenance records ~~will~~shall be maintained for at least two years. If emission testing is required, the appropriate test method(s) selected from EPA Reference Methods 1 through 4, 21, and/or 25, ~~will~~shall be utilized.

252:100-39-18. ~~Refinery~~Petroleum refinery effluent water separators

(a) **Definition.** "Effluent water separator" means any container in which any VOC floating on, entrained in, or contained in water entering the container is physically separated and removed from the water prior to discharge of the water from the container.

(b) **Requirements.** ~~No person~~owner or operator shall operate, or install or permit the operation or installation of a ~~single~~single-compartment or multiple-compartment ~~volatile organic compound~~water effluent water separator from any equipment processing, refining, treating, storing or handling ~~volatile organic compound~~ unless the compartment receiving ~~said~~the effluent water is equipped with one of the following vapor control devices, properly installed, in good working order and in operation to control emissions in one of the following ways.

(1) ~~A~~The container ~~having~~totally encloses the liquid contents and all openings are sealed ~~and totally enclosing~~ the liquid contents. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The oil removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.

(2) ~~A~~The container is equipped with a vapor-recovery system, consisting of a vapor-gathering system capable of collecting the ~~organic material~~VOC vapors and gases discharged and a vapor-disposal system ~~capable of processing such organic material~~VOC vapors and gases ~~so as to prevent their emission to the atmosphere and with all.~~ All tank gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. The ~~organic material~~VOC removal devices shall be gas-tight except when manual skimming, inspection and/or repair is in progress.

(3) ~~Containers~~A container that is equipped with controls of equal efficiency, provided the plans and specifications ~~of such equipment are submitted and are~~ approved by the ~~Executive~~Division Director prior to their use.

PART 5. PETROLEUM PROCESSING AND STORAGE

252:100-39-30. Petroleum liquid storage in vessels with external floating roof tanks

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise.

(1) — "**Condensate**" means hydrocarbon liquid separated from natural gas which condenses due to changes in the temperature and/or pressure and remains liquid at ~~normal operating~~ standard conditions.

(2) — "**Crude oil**" means a naturally occurring hydrocarbon mixture which is a liquid at standard conditions. It may contain sulfur, nitrogen and/or oxygen derivatives of hydrocarbon.

"Drilling or production facility" means all drilling and servicing equipment, wells, flow lines, separators, equipment, gathering lines, and auxiliary non-transportation-related equipment used in the production of petroleum but does not include natural gasoline plants.

(3) — "**Externally External floating roof**" means a storage vessel cover in an open top tank consisting of a double deck or pontoon single deck which rests upon and is supported by the petroleum liquid being contained and is equipped with a closure seal or seals to close the space between the roof edge and tank wall.

(4) — "**Lease custody transfer**" means the transfer of produced crude oil and/or condensate, after processing and/or treating in the producing operations, from storage ~~tanks~~ vessels or automatic transfer facilities to pipelines or any other ~~forms~~ form of transportation.

(5) — "**Liquid-mounted seal**" means primary seal mounted in continuous contact with the liquid between the ~~tank~~ vessel wall and the floating roof.

(6) — "**Petroleum liquid**" means crude oil, condensate, and any finished or intermediate liquid products manufactured or extracted in a petroleum refinery.

(7) — "**Vapor-mounted seal**" means a primary seal mounted so there is an annular vapor space underneath the seal. The annular vapor space is bounded by the bottom of the primary seal, the ~~tank~~ vessel wall, the liquid surface, and the floating roof.

(8) — "**Waxy, high pour point crude oil**" means a crude oil with a pour point of 50°F or higher as determined by the American Society of Testing and Materials Standard D97-66, "Test for Pour Point of Petroleum Oils."

(b) **Applicability.**

(1) This Section applies to ~~all source facilities with petroleum liquid storage vessels equipped with external floating roofs, having capacities greater than 150,000 liters (40,000 gallons), that are located in Tulsa and Oklahoma Counties~~ 40,000 gal (150,000 l).

(2) This Section does not apply to petroleum liquid storage vessels ~~which prior to custody transfer~~ that:

(A) are used to store waxy, high pour point crude oil;

(B) have capacities less than ~~1,600,000 liters~~ 422,675 gal (420,000 gallons, 1,600 m³) and are used to store produced crude

oil and condensate prior to lease custody transfer;
(C) contain a petroleum liquid with a true vapor pressure less than 1.5 psia (10.5 kPa) ~~(1.5 psia)~~;
(D) ~~contain a petroleum liquid with a true vapor pressure less than 27.6 Kpa (4.0 psia)~~, and,

~~(i) are of welded construction;~~
~~(ii) presently possess a metallic type shoe seal, a liquid-mounted foam seal, a liquid mounted liquid filled type seal, or other closure device of demonstrated equivalence approved by the Executive Director;~~ or, contain a petroleum liquid with a true vapor pressure less than 4.0 psia (27.6 kPa) if the vessels are of welded construction and have a metallic-type shoe seal, a liquid-mounted foam seal, a liquid-mounted liquid filled type seal, or other closure device of demonstrated equivalence approved by the Division Director; or,

(E) are of welded construction, are equipped with a metallic-type shoe primary seal and ~~have~~ a secondary seal from the top of the shoe seal to the ~~tank~~vessel wall (shoe-mounted secondary seal).

(3) Storage vessels that are subject to the equipment standards for external floating roofs in 40 CFR 60 Subparts Ka or Kb are exempt from the requirements of 252:100-39-30.

(4) Storage vessels that are subject to the equipment standards for external floating roofs in 40 CFR 63 Subparts CC (63.646) or G shall be exempt from the requirements of 252:100-39-30 upon the date compliance with the standards in Subparts CC and G is required.

(c) ~~Provisions for specific processes~~Equipment and operating requirements.

(1) ~~Standards.~~ No owner of a petroleum liquidEach storage vessel ~~subject to this Section shall~~used to store a petroleum liquid ~~in that vessel unless~~shall meet the following conditions.

(A) The vessel has been fitted with:

(i) a continuous secondary seal extending from the floating roof to the ~~tank~~vessel wall (rim-mounted secondary seal); or,

(ii) a closure device or other device which controls VOC emissions with an effectiveness equal to or greater than a seal required ~~above~~underin 252:100-39-30(c) (1) (A) (i) and approved by the ~~Executive~~Division Director.

(B) All seal closure devices meet the following requirements:

(i) ~~there~~There are no visible holes, tears, or other openings in the seal(s) or seal fabric.

(ii) ~~the~~The seal(s) are intact and uniformly in place around the circumference of the floating roof between the floating roof and the ~~tank~~vessel wall, ~~and~~.

(iii) ~~for vapor mounted primary seals, the~~The accumulated area of gaps exceeding 0.32 cm ($1/8 \text{ in.}$) 1/8 in. (0.32 cm) in width between the secondary seal and the ~~tank~~vessel wall

when the secondary seal is used in combination with a vapor mounted primary seal shall not exceed 21.2 cm^2 per meter 1.0 in.^2 /ft of tankvessel diameter (1.0 in.^2 per foot (21.2 cm^2 /m of tankvessel diameter), as. This shall be determined by physically measuring the length and width of all gaps around the entire circumference of the secondary seal in each place where a 0.32 cm $1/8 \text{ in.}$ (0.32 cm) uniform diameter probe passes freely between the seal and the tankvessel wall, and summing the areaareas of the individual gaps.

(C) All openings in the external floating roof, except for automatic bleeder vents, rim space vents, and leg sleeves, are:

- (i) equipped with covers, seals, or lids in the closed position except when the openings are in actual use; and,
- (ii) equipped with projections into the tankvessel which remain below the liquid surface at all times.

(D) Automatic bleeder vents are closed at all times except when the roof is floated off or landed on the roof leg supports.

(E) Rim vents are set to open when the roof is being floated off the leg supports or at the manufacturer's recommended settings, and.

(F) Emergency roof drains are provided with slotted membrane fabric covers or equivalent covers which cover at least 90 percent of the area of the opening.

(2) Monitoring. The owner or operator of a petroleum liquid storage vessel with an external floating roof subject to this Section shall:

(A) perform routine inspections semi-annually in order to ensure compliance with 252:100-39-30(c)(1)(B)(i), i.e., no visible holes, tears, or other openings in the seals or seal fabric;

(B) measure the secondary seal gap annually in accordance with 252:100-39-30(c)(1)(B)(iii), when the floating roof is equipped with a vapor-mounted primary seal; and,

(C) maintain records of the types of volatile petroleum liquids stored, the true vapor pressure of the liquid as stored, and the results of the inspections performed in 252:100-39-30(c)(2)(A) and 252:100-39-30(c)(2)(B).

(3) Recordkeeping.

~~(3)~~ (A) Copies of all records under 252:100-39-30(c)(2) shall be retained by the owner or operator for a minimum of two years after the date on which the record was made.

~~(4)~~ (B) Copies of all records under this Section shall be made available to the Executive Division Director, upon ~~verbal or~~ written request, at any reasonable time.

(d) Compliance schedule. Compliance with this Section ~~will~~ shall be accomplished by affected facilities ~~within two years of approval of this Section by the Oklahoma Environmental Quality Board~~ by May 23, 1982.

PART 7. SPECIFIC OPERATIONS

252:100-39-40. Cutback asphalt (paving)

(a) Definitions. "Cutback asphalt" means a basic asphalt or asphaltic concrete containing a petroleum distillate.

(b) Requirements. No owner, operator and/or contractor shall prepare or apply cutback ~~liquified~~liquefied asphalt without the prior written consent of the ~~Executive Division~~ Director ~~or the Executive Director's designee.~~ Such consent may be granted during Oklahoma's non-oxidant season, i.e., ~~October through April~~November 1 through March 31.

252:100-39-41. ~~Vapor recovery systems~~Storage, loading and transport/delivery of VOCs

(a) ~~Storage of volatile organic compounds~~VOCs in vessels with storage capacities greater than 40,000 gallons (953 bbls). ~~No person shall store or permit the storage of gasoline or any volatile organic compound in tanks or vessels having~~Each vessel with a storage capacity greater than 40,000 gallons (953 bbls) unless such tank, reservoir or other container is total (151 m³) which stores gasoline or any VOC shall be a pressure tankvessel capable of maintaining working pressures sufficient at all times tethat prevent organiethe loss of VOC vapor or gas less to the atmosphere, or isshall be equipped with one or more of the following vapor control devices.

(1) ~~aAn external floating roof, consistingthat consists of pontoon type, internal floating covera pontoon-type or double-deck type reef, which willcover or a fixed roof with an internal-floating cover.~~ The cover shall rest on the surface of the liquid contents at all times (i.e. off the leg supports), except during initial fill, when the storage vessel is completely empty, or during refilling. When the cover is resting on the leg supports, the process of filling, emptying, or refilling shall be continuous and shall be accomplished as rapidly as possible. The floating roof shall be equipped with a closure seal, or seals, to close the space between the reefcover edge and tankvessel wall. Such floatingFloating roofs are not appropriate control devices if the organic compoundsVOCs have a vapor pressure of ~~11.0 pounds per square inch absolute (568 mm Hg)~~11.1 psia (76.6 kPa) or greater under actual conditions. All gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place. Closure seals willfor fixed roof vessels with an internal-floating cover shall meet the requirements of 252:100-39-30(e)(1)(B), 252:100-39-30(c)(1)(B)(i) and (ii). Closure seals for vessels with external floating roofs shall meet the requirements of 252:100-39-30(c)(1)(B)(i), (ii), and (iii).

(2) ~~aA vapor-recovery system consistingthat consists of a vapor-gathering system capable of collecting 90 percent by weight or more of the uncontrolled volatile organic compoundsVOCs that would otherwise be emitted to the atmosphere and a vapor-disposal system capable of processing such organic~~

~~compounds so as~~ VOCs to prevent emissions in excess of 80 mg/liter of gasoline 6.68×10^{-4} lb/gal (80 mg/l) of VOCs transferred to the atmosphere. All ~~tank~~vessel gauging and sampling devices shall be gas-tight except when gauging or sampling is taking place, ~~or,~~

(3) ~~other~~Other equipment or methods that are of equal efficiency for purposes of air pollution control ~~as may be used when approved by the Executive Division Director and are in concert with federal guidelines.~~

(b) Storage of volatile organic compounds—VOCs in vessels with storage capacities of 400-40,000 gallons (9.5-953 bbls).

(1) ~~No person shall store or permit the storage of~~Each gasoline or other volatile organic compounds in any stationary VOC storage container ~~vessel~~ with a nominal capacity greater than 400 gallons (9.5 bbls) gal (1.5 m³) and less than 40,000 gallons (953 bbls) unless such container ~~is gal (151 m³) shall be~~ equipped with a submerged fill pipe or ~~is be~~ bottom filled. ~~No person shall store or permit the storage of gasoline or other volatile organic compound in any stationary storage container with an average daily throughput of 30,000 gallons or greater unless the displaced vapors from the storage container are processed by a system that has a total collection efficiency no less than 90 percent by weight of total hydrocarbon compounds in said vapors.~~

(2) The displaced vapors from each storage vessel with an average daily throughput of 30,000 gal (113,562 l) or greater which stores gasoline or other VOCs shall be processed by a system that has a total collection efficiency no less than 90 percent by weight of total VOCs in the vapors.

~~(2)(A)~~ (A) The vapor recovery system shall include ~~one or more of the following:~~

~~(A)(i)~~ (i) a vapor-tight return line from the storage container ~~vessel~~ to the delivery vessel and a system that will ensure that the vapor return line is connected before gasoline or volatile organic compounds VOCs can be transferred into the container ~~storage vessel~~; or,

~~(B)(ii)~~ (ii) other equipment that has a total collection efficiency no less than 90 percent by weight of the total hydrocarbon compounds VOCs in the displaced vapor provided that if approval of the proposed design installation, and operation is obtained from the Executive Division Director prior to start of construction.

~~(3)(B)~~ (B) Provided, however, that ~~the~~The requirements for vapor collection of displaced vapors shall not apply to operations that are not major sources.

(c) Loading of volatile organic compounds VOCs.

(1) ~~No person shall operate, install or permit the building, operation or installation of a stationary volatile organic compound~~Each VOC loading facility unless such loading facility ~~is with an annual throughput of 120,000 gal (454,249 l) or greater or storage capacity greater than 10,000 gal (38 m³) shall be~~ equipped with a vapor-collection and/or disposal system properly installed, in good working order and in operation.

(2) ~~When volatile organic compounds~~ While VOCs are loaded through the hatches of a transport vessel, a pneumatic, hydraulic or mechanical means shall be provided to ensure a vapor-tight seal at the hatch.

(3) A means shall be provided to prevent ~~organic material~~ VOC drainage from the loading device when it is removed from the transport vessel, or to accomplish complete drainage before removal.

(4) When loading is effected ~~through~~ by means other than hatches, all loading and vapor lines shall be equipped with fittings ~~which~~ that make vapor-tight connections and which close automatically when disconnected.

(5) The vapor collection and/or disposal portion of the system shall consist of one or more of the ~~following~~ elements listed in 252:100-39-41(c)(5)(A) through 252:100-39-42(c)(5)(C) in addition to bottom loading or submerged fill of transport vessels. Storage vessels at service stations and bulk plants may be used for intermediate storage prior to recovery/disposal of vapors as specified in 252:100-39-41(c)(5)(A) through 252:100-39-41(c)(5)(C) if they are designed to prevent the release of vapors during use.

(A) ~~an~~ An absorption/adsorption system or condensation system ~~with that~~ has a minimum recovery efficiency of 90 percent by weight of all the ~~volatile organic compound~~ VOC vapors and gases entering such disposal system.

(B) ~~a~~ A vapor handling system which directs all vapors to a fuel gas incineration system with a minimum disposal efficiency of 95 percent, ~~or,~~

(C) ~~either~~ Other equipment ~~of that~~ has at least a 90 percent efficiency, provided plans for such equipment are ~~submitted to and approved by the Executive Division Director.~~ Storage vessels at service stations and bulk plants may be used for intermediate storage prior to recovery/disposal of vapors as per 252:100-39-41(c)(5)(A) through 252:100-39-41(c)(5)(C) if they are designed to prevent the release of vapors during use.

(6) Subsection 252:100-39-41(c) shall apply to any facility ~~which~~ that loads ~~volatile organic compounds~~ VOCs into any transport vessel designed for transporting ~~volatile organic compounds~~ VOCs.

(d) **Transport/delivery.**

(1) The vapor-laden delivery vessel shall meet one of the following requirements.

(A) ~~the~~ The delivery vessel must be ~~so~~ designated and operated ~~as~~ to be vapor tight except when sampling, gauging, or inspecting, ~~or,~~

(B) ~~the~~ The delivery vessel must be equipped and operated ~~so that~~ to deliver the ~~volatile organic compound~~ VOC vapors are ~~delivered to~~ a vapor recovery/disposal system.

(2) No ~~owner/operator~~ owner or operator shall allow a delivery vessel to be filled at a facility unable to receive displaced ~~organic~~ VOC vapors nor service ~~tanks~~ vessels unable to deliver displaced vapors except for ~~tanks/facilities~~ vessels and

facilities exempted in 252:100-39-41(b) and 252:100-39-41(c).

(3) Testing of the tank trucks for compliance with the vapor tightness requirements must be consistent with Appendix "B" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems," EPA 450/2-78-051, or an equivalent method as determined by the Executive Division Director.

(e) Additional requirements for Tulsa County.—~~Also see 252:100-39-48 for additional requirements pertaining to Tulsa County.~~

(1) Applicability. This subsection applies only in Tulsa County.

(2) Storage of VOCs.

(A) 2,000 - 40,000 gallons capacity. Each storage vessel with a nominal capacity greater than 2,000 gal (7.6 m³) and less than 40,000 gal (151 m³) that stores gasoline or other VOCs or each storage vessel located at a facility that dispenses more than 120,000 gal/yr of gasoline or other VOCs, in addition to being equipped with a submerged fill pipe or being bottom loading, shall be equipped with a vapor control system. The vapor control system shall have an efficiency of no less than 90 percent by weight of the VOCs contained in the displaced vapors and shall be equipped with a pressure relief valve in the atmospheric vent system which maintains a pressure of 16 oz/in.² and 1/2 oz/in.² vacuum. The vapor recovery system shall include one or more of the following.

(i) A vapor-tight return line from the storage vessel to the delivery vessel and a system that will ensure that the vapor return line is connected before gasoline or VOCs can be transferred into the storage vessel (i.e., popped connectors from the storage vessel to the delivery vessel.).

(ii) A float vent valve assembly installed in the vapor return/vent line on new and existing dual point installations; however, for coaxial installations on existing stations, a vent sleeve extending 6 in. (15 cm) below the top of the vessel will be allowed. Sleeves may be equipped with a 1/16 in. (0.16 cm) air bleed hole.

(iii) A vapor recovery line with a cross-sectional area that is at least half of the cross-sectional area of the liquid delivery line.

(iv) Other equipment that has a total collection efficiency no less than 90 percent by weight of the total VOCs in the displaced vapor if approved by Division Director prior to start of construction.

(B) Applicability.

(i) Any vessel with a capacity greater than 2,000 gal (7.6 m³) or any vessel located at a facility that dispenses more than 120,000 gal/yr (454,249 l/yr) shall be and will always remain subject to 252:100-39-41(e)(2). (effective February 12, 1990)

(ii) Exemptions to 252:100-39-41(e)(2) may be granted if the owner or operator shows to the satisfaction of the

Division Director that the vessel is used exclusively for agricultural purposes.

(C) Emission testing. If emission testing is conducted, the appropriate test methods selected from EPA Methods 1 through 4, 18, 21, 25, 25A and 25B shall be utilized.

(D) Compliance. Compliance with 252:100-39-41(e)(2) shall be accomplished by the owner or operator of affected facilities by December 31, 1986.

(E) Certification. The owner or operator of a facility shall obtain, by whatever means practicable, certification from the owner or operator of the transport/delivery vessels that all deliveries of gasoline or other VOCs made to their 400-gallon to 40,000-gallon storage facility located in Tulsa County shall be made by transport/delivery vessels that comply with the requirements contained in 252:100-39-41(e)(4). Compliance with 252:100-39-41(e)(2) shall be accomplished by owners or operators of affected facilities no later than December 31, 1990. (Effective February 12, 1990)

(3) Loading of VOCs. In addition to those requirements contained in 252:100-39-41(c), stationary loading facilities shall be checked annually in accordance with EPA Test Method 21, Leak Test. Leaks greater than 5,000 ppmv shall be repaired within 15 days. Facilities shall retain inspection and repair records for at least two years.

(4) Transport/delivery vessel requirements. In addition to the requirements contained in 252:100-39-41(d), facilities located in Tulsa County must meet the following requirements.

(A) Maintenance.

(i) The delivery vessel must be maintained so that it is vapor tight except when sampling, gauging, or inspecting. These activities shall not occur while the vehicle is loading or unloading or is in a pressurized state.

(ii) The delivery vessel must be equipped, maintained, and operated to receive vapors from sources identified in 252:100-39-41(b)(1) and 252:100-39-41(b)(2) and retain these and all other vapors until they are delivered into an authorized vapor recovery/disposal system.

(iii) Vessels with defective equipment such as boots, seals, and hoses, or with other deficiencies that would impair the vessels' ability to retain vapors or liquid shall be repaired within 5 days.

(iv) The certified testing facility must certify to the approving agency that the proper testing and repairs have occurred in accordance with 252:100-39-41(e)(4)(B)(i). The vessel must also display on the rear panel a tag showing the date of the pressure test.

(v) No owner or operator shall allow a delivery vessel to be filled at a facility unable to receive displaced VOCs nor service vessels unable to deliver displaced vapors except for vessels/facilities exempted in 252:100-39-41(b). Terminal owners shall not fill vessels that do not display a current tag.

(vi) Delivery vessels may be inspected by representatives of the DEQ in order to determine their state of repair. Such a test may consist of a visual inspection or a vapor test with vapors not to exceed 5,000 ppmv. Failure of a vapor test shall require the owner or operator to make the necessary repairs within 10 days. Failure to certify within 10 days of a vapor test that the necessary repairs have been made shall subject the owner or operator to sanctions. Upon certification of repairs, the vessel will be allowed to resume normal operation.

(B) Testing requirements.

(i) Pressure test.

(I) Delivery vessels, delivering or receiving gasoline must be tested one time per year for vapor tightness. The vapor tightness test must be consistent with Appendix "A" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems", EPA 450/2-78-051. Tests shall be performed by the owner or a transport service company. Test methods used to test these vessels by owners or testing companies must be approved for use by the Division Director.

(II) The vessel shall be considered to pass the test prescribed in 252:100-39-41(e)(4)(B)(i)(I) when the test results show that the vessel and its vapor collection systems do not sustain a pressure change of more than 3 in. H₂O. There shall be no avoidable visible liquid leaks.

(ii) Vapor test. Testing of the tank trucks for compliance with vapor tightness requirements as required under 252:100-39-41(e)(4)(A)(vi) must be consistent with Appendix "B" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems", EPA 405/2-78-051, as modified for this purpose and contained in 252:100-43-15. The requirements of 252:100-39-41(e) took effect December 15, 1988.

252:100-39-42. Metal cleaning

(a) Cold cleaning facility requirements.

(1) Equipment requirements. ~~No person~~An owner or operator shall allow the construction or operation of any cold cleaning unit for metal degreasing using an organic solvent unless the following requirements are met~~which uses a VOC shall~~:

(A) install a cover or door shall be installed on the facility that can be easily operated with one hand;

(B) provide an internal drain board will be provided in such a manner that will allow lid closure if practical~~71~~ if not practical, the drainage facility may be provide an external drainage facility; and,

(C) attach a permanent, conspicuous label summarizing the operating requirements will be permanently attached~~specified~~ in 252:100-39-42(a)(2) to the facility.

(2) Operating requirements. ~~The operating requirements specified in 252:100 39 42(a)(1)(C) shall as a minimum specify~~ Owners or operators shall at a minimum:

(A) drain clean parts at least 15 seconds or until dripping ceases before removal;

(B) close degreaser cover when not handling parts in cleaner and

(C) store waste solvent VOC in covered containers. Do not dispose or allow disposition in such a manner that more than 20 percent by weight can evaporate into the atmosphere.

(D) not dispose or allow disposition of waste VOC in such a manner that more than 20 percent by weight can evaporate into the atmosphere.

~~(3)(E) If used, a solvent spray will be of a solid fluid stream (not atomized or spray)~~ use a solid fluid stream, not an atomized spray, when VOC is sprayed.

~~(4)(3)~~ Requirements for controls. If the solvent volatility/vapor pressure of the VOC is greater than 33 mm Hg (0.6 psi) 0.6 psi (4.1 kPa) measured at 38°C (100°F) 100°F (38°C) or if solvent VOC is heated to 120 degrees C 248°F (120°C), the owner or operator shall apply one or more of the following control devices will be required devices/techniques.

(A) freeboard Freeboard that gives a free board/freeboard ratio greater than or equal to 0.7.

(B) water Water cover and where the solvent VOC is insoluble in and heavier/denser than water or such equivalent, or

(C) ether Another system of equivalent control as approved by the Executive/Division Director.

~~(5)(4)~~ Compliance and recordkeeping. Compliance will shall be determined in accordance with EPA guidance document "Control of Volatile Organic Emissions from Solvent Metal Cleaning," 450/2-77-022. Test reports and maintenance and repair records of control equipment will shall be maintained by the source for at least two years.

(b) Vapor-type metal degreasing requirements.

(1) Equipment requirements. ~~No person shall allow the construction or operation~~ An owner or operator of any vapor-type metal degreasing unit using an organic solvent unless A VOC shall ensure that the following requirements are met.

(A) ~~the~~ The unit has shall have a cover or door that can easily be opened and closed without disturbing the vapor zone.

(B) ~~the~~ The unit will shall have the following safety switches.

(i) ~~condenser~~ Condenser flow switch and thermostat or equivalent capable of shutting off the sump heat if condenser coolant is not circulating or coolant exceeds solvent VOC manufacturer's recommended level, and

(ii) ~~spray~~ Spray safety switch capable of shutting off spray pumps if the vapor level drops in excess of four inches 4 in. (10 cm).

(C) ~~the~~ The unit will shall have one or more of the following control devices/techniques.

(i) ~~freeboard~~Freeboard ratio not less than 0.75, i.e., the ratio of the freeboard to the width of the degreaser wherein the term freeboard is defined as the distance from the top of the vapor zone to the top of the degreaser tank~~;~~.

(ii) ~~refrigerated~~Refrigerated chiller, i.e., condenser coils in the upper limit of the vapor zone~~;~~.

(iii) ~~enclosed~~Enclosed design, i.e., cover or door is opened only when a part is actually entering or exiting the facility~~;~~~~or~~.

(iv) ~~a~~A carbon adsorption system with ventilation greater than 50 ~~cfm/ft²~~cfm/ft² of air/vapor area when cover is open and ~~exhausting~~. The system shall exhaust less than 25 ppm ~~solvent~~ppmv VOC average over one adsorption cycle~~;~~~~or~~.

(v) ~~a~~A control system demonstrated to have a control efficiency equal to or greater than any of the systems in ~~(C)~~ of this paragraph~~252:100-39-42(b)(1)(C)~~.

(D) ~~a~~A permanent conspicuous label summarizing operating procedures ~~will~~requirements in 252:100-39-42(b)(2) shall be attached to the ~~facility~~unit.

(2) Operating requirements. The ~~operating~~ requirements referred to in 252:100-39-42(b)(1)(D) shall as a minimum ~~specify~~An owner or operator of a vapor type metal degreasing unit using VOC shall ensure that the following requirements are met.

(A) As a minimum operators shall:

(i) keep the cover closed at all times except when processing workdegreasing parts;

~~(B) minimize solvent carry out by the following measures:~~

~~(i)~~(ii) rack parts to allow full drainage~~;~~

~~(ii)~~(iii) move parts in and out of the degreaser at less than ~~3.3 m/sec (11 ft/min.)~~11 ft/min (3.4 m/min);

~~(iii)~~(iv) degrease the workload in the vapor zone at least 30 ~~sec~~seconds or until condensation ceases~~;~~

~~(iv)~~(v) tip out any pools of ~~solvent~~VOC on the cleaned parts before removal~~;~~

~~(v)~~(vi) allow parts to dry within the degreaser for at least 15 ~~sec~~seconds or until visually dry~~;~~

(vii) assure that VOC leaks are immediately repaired or the degreaser is shut down; and,

(viii) store waste VOC only in closed containers.

(B) As a minimum operators shall not:

~~(C)~~(i) ~~do not~~ degrease porous or absorbent materials, such as cloth, leather, wood or rope;

~~(D)~~(ii) ~~workloads should not~~allow workloads to occupy more than half of the degreaser's open top area;

~~(E)~~(iii) ~~never~~ spray above the vapor level;

~~(F)~~ ~~assure solvent leaks immediately repaired or the degreaser is shut down,~~

~~(G)~~(iv) ~~do not dispose of waste solvent or transfer it to another party in such a manner that~~allow greater than 20 percent of the VOC waste (by weight) ~~will~~to evaporate into

~~the atmosphere. Store waste solvent only in closed containers when disposing of the waste or transferring the waste to another party;~~

~~(H)(v) allow exhaust ventilation should not exceed 20m³/min. per m² (65 cfm per ft²) 65 cfm/ft² (20 m³/min/m²) of degreaser open area, unless necessary to meet OSHA requirements. Ventilation fans should not be used near the degreaser opening; and,~~

~~(i) use ventilation fans near the degreaser opening; or,~~
~~(I)(vii) allow water should not be visually detectable in solvent VOC exiting the water separator.~~

(3) **Compliance and recordkeeping.** Compliance ~~will~~ shall be determined in accordance with EPA document 450/2-77-022 and all test and maintenance records ~~will~~ shall be retained by the source for at least two years.

(c) **Conveyorized degreasing unit requirements.**

(1) **Operating requirements.** ~~No person shall operate~~ An owner or operator of a conveyorized degreasing unit using VOC shall ensure that unless the following requirements are met:.

(A) ~~exhaust~~ Exhaust ventilation ~~should~~ shall not exceed 20m³/min. per m² (65 cfm per ft²) 65 cfm/ft² (20 m³/min/m²) of degreaser opening, unless necessary to meet OSHA requirements.

~~Work place fans should not be used near the degreaser opening;~~
(B) Work place fans shall not be used near the degreaser opening.

~~(B)(C) minimize~~ Carry-out emissions shall be minimized by:

(i) racking parts for best drainage; and,

(ii) maintaining vertical conveyor speed at less than ~~3-3~~ 11 m/min. (11 ft./min.); 11 ft/min (3.4 m/min).

~~(C)(D) do~~ Evaporation of waste VOC into the atmosphere shall not dispose of waste solvent or transfer it to another party in such a manner that be greater than 20 percent of the waste (by weight) can evaporate into the atmosphere. ~~Store waste solvent VOC only in covered containers, when disposing of the waste or transferring the waste to another party.~~

(E) Waste VOC shall be stored only in covered containers.

~~(D)(F) repair~~ solvent VOC leaks must be repaired immediately, or shut down the degreaser, must be shut down.

~~(E)(G) water should~~ Water shall not be visibly detectable in the solvent VOC exiting the water separator, and,

~~(F)(H) a~~ A permanent conspicuous label will be attached to the facility summarizing the operating requirements listed in 252:100-39-42(b) and 252:100-39-42(c) shall be attached to the unit.

(2) **Control requirements.** In addition to the requirements in 252:100-39-42(c)(1), any unit that has an air/vapor interface of more than ~~2.0m²~~ 21.5 ft² (2.0 m²) shall be subject to the following control requirements:.

(A) **Major control devices.** The degreaser must be controlled by either:

(i) a refrigerated chiller;

(ii) a carbon adsorption system, with that exhausts less than 25 ppmv of VOC averaged over a complete adsorption cycle and has ventilation equal to or greater than 15 m²/min per m² (50 cfm/ft²) 50 cfm/ft² (15 m³/min/m²) of air/vapor area (when down-time covers are open), and exhausting less than 25 ppm of solvent by volume averaged over a complete adsorption cycle, or,

(iii) a system demonstrated to have control efficiency equivalent to or better than either of the above.

(B) **Carryover prevention.** Either a drying tunnel, or another means such as rotating (tumbling) basket, sufficient to prevent cleaned parts from carrying out ~~solvent~~VOC liquid or vapor subject to space limitations must be installed.

(C) **Safety switches.** The following safety switches must be installed and be operational.

(i) Condenser flow switch and thermostat -that (shuts off sump heat if coolant is either not circulating or too warm).

(ii) Spray safety switch -that (shuts off spray pump or conveyor if the vapor level drops excessively, e.g. more than 10 cm (4 in.) 4 in (10 cm).

(iii) Vapor level control thermostat -that (shuts off sump heat when vapor level rises too high).

(D) **Minimized openings.** Entrances and exits ~~should~~shall silhouette work loads so that the average clearance (between parts and the edge of the degreaser opening) is either less than ~~10 cm (4 in.) 4 in. (10 cm)~~ or less than 10 percent of the width of the opening.

(E) **Covers.** Down-time ~~cover~~covers must be placed over entrances and exits of conveyorized degreasers immediately after the conveyor and exhaust are shutdown and removed just before they are started up.

(3) **Compliance and recordkeeping.** Compliance ~~will~~shall be determined in accordance with EPA document 450/2-77-022 ~~and all.~~ All test and maintenance records ~~will~~shall be retained by the source for at least two years.

(d) **Alternative control methods.** As an alternative to the requirements of 252:100-39-42(a) through 252:100-39-42(c), and subject to EPA approval, an operator may request the approval by the Division Director of other methods of control may be approved by, subject to EPA approval, the Executive Director upon application by a source; provided, the. The applicant can must demonstrate that the proposed method will ~~preclude no less than~~prevent at least 80 percent of the emissions from each source from being emitted to the atmosphere, as determined by the appropriate test methods selected from EPA Methods 1 through 4, 18, 25, 25A and 25B.

252:100-39-43. Graphic arts systems

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise.

(1) — "Flexographic printing" means the application of words, designs and pictures to a substrate by means of a roll printing technique in which the pattern to be applied is raised above the printing roll and the image carrier is made of rubber or other elastomeric materials.

(2) — "Packaging rotogravure printing" means rotogravure printing upon paper, paper board, metal foil, plastic film, and other substrates, ~~which that~~ are, in subsequent operations, formed into packaging products and labels for articles to be sold.

(3) — "Publication rotogravure printing" means rotogravure printing upon paper which is subsequently formed into books, magazines, catalogues, brochures, directories, newspaper supplements, and other types of printed materials.

(4) — "Roll printing" means the application of words, designs and pictures to a substrate usually by means of a series of hard rubber or steel rolls each with only partial coverage.

(5) — "Rotogravure printing" means the application of words, designs and pictures to a substrate by means of a roll printing technique ~~which that~~ involves an intaglio or recessed image areas in the form of cells.

(b) **Applicability.**

(1) ~~This Section applies to all packaging rotogravure, publication rotogravure, and flexographic printing facilities located in Tulsa and Oklahoma counties.~~

(2) ~~This Section applies only to enlypackaging rotogravure, publication rotogravure, and flexographic printing facilities whose potential emissionemissions of organic solvent isVOC are equal to or more than 90 megagrams (106 grams) per year (100 tens/yr.) 100 tons/yr (90 Mg/yr). Potential emissions are teshall be calculated based on historical records of actual consumption of solventVOC and ink.~~

(c) **Provisions for specific processes.**

(1) ~~NoAn~~ owner or operator of a ~~packaging rotogravure, publication rotogravure or flexographic printing facility~~ subject to this Section and ~~employing solventwhich uses VOC containing ink may operate, cause, allow or permit the operation of the facility unless~~ shall ensure that one of the following conditions is met.

(A) ~~the~~The volatile fraction of ink, as it is applied to the substrate, contains 25.0 percent by volume or less of ~~organic solventVOC~~ and 75.0 percent by volume or more of water~~;~~.

(B) ~~the~~The ink as it is applied to the substrate, less water, contains 60.0 percent by volume or more of nonvolatile material~~;~~ or~~;~~.

(C) ~~the~~The owner or operator installs and operates:

(i) a carbon adsorption system ~~which that~~ reduces the ~~organic solventVOC~~ emissions from the capture system by at least 90.0 percent by weight;

(ii) an incineration system ~~which that~~ oxidizes at least 90.0 percent of the ~~nonmethane volatile organic solventVOC~~ measured as total combustible carbon to carbon dioxide and water; or,

(iii) an alternative ~~organic solvent~~VOC emission reduction system demonstrated to have at least 90.0 percent reduction efficiency, measured across the control system, ~~and which~~ has been approved by the ~~Executive Division~~ Director.

(2) A capture system must be used in conjunction with the emission control systems in 252:100-39-43(c)(1)(C). The design and operation of the capture system must be consistent with good engineering practice, and shall be required to provide for an overall reduction in ~~volatile organic compound~~VOC emissions of at least:

(A) 75.0 percent where a publication rotogravure process is employed;

(B) 65.0 percent where a packaging rotogravure process is employed; ~~or,~~

(C) 60.0 percent where a flexographic printing process is employed.

(d) **Compliance schedule.** Compliance with this Section ~~will~~shall be accomplished by affected facilities ~~within two (2) years of approval of this Subchapter by the Oklahoma Environmental Quality Board by May 23, 1982.~~

(e) **Testing.** Test procedures to determine compliance with this Subchapter must be consistent with EPA Reference Method 24 or equivalent ASTM Methods.

252:100-39-44. Manufacture of pneumatic rubber tires

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

(1) **"Automatic tread end cementing"** means the application of a ~~solvent~~VOC based cement to the tire tread ends by automated devices.

(2) **"Bead dipping"** means the dipping of an assembled tire bead into a ~~solvent~~VOC based cement.

(3) **"Green tires"** means assembled tires before molding and curing have occurred.

(4) **"Green tire spraying"** means the spraying of green tires, both inside and outside, with release compounds ~~which~~that help remove air from the tire during molding and prevent the tire from sticking to the mold after curing.

(5) **"Manual tread end cementing"** means the application of a ~~solvent~~VOC based cement to the tire tread ends by manufacturers.

(6) **"Passenger type tire"** means agricultural, airplane, industrial, mobile home, light and medium duty truck, and passenger vehicle tires with a bead diameter up to but not including 20.0 inches and cross section dimension up to 12.8 inches.

(7) **"Pneumatic rubber tire manufacture"** means the production of pneumatic rubber, passenger type tires on a mass production basis.

(8) **"Undertread cementing"** means the application of a ~~solvent~~VOC based cement to the underside of a tire tread.

(9) **"Water based sprays"** means release compounds, sprayed on

the inside and outside of green tires, in which solids, water and emulsifiers have been substituted for ~~organic solvents~~ VOCs. These sprays may contain an average of up to five percent ~~organic solvent~~ VOC.

(b) **Applicability.**

(1) This Section applies to VOC emissions ~~from the following operations infrom~~ all major source pneumatic rubber tire manufacturing facilities located in Oklahoma County from:

- (A) undertread cementing;
- (B) automatic tread end cementing; and,
- (C) green tire spraying.

(2) The provisions of this Section do not apply to the ~~productions~~ production of specialty tires for antique or other vehicles when produced on an irregular basis or with short production runs. This exemption applies only to tires produced on equipment separate from normal production lines for passenger type tires.

(3) Manual tread end cementing operations are exempt from the provisions of this Section.

(c) **~~Provisions for specific processes~~ Control requirements.**

(1) Undertread cementing or automatic tread end cementing. The owner or operator of an undertread cementing, or automatic tread end cementing, operation subject to this Section shall install and operate the following.

(A) ~~install and operate a~~ capture system, designed to achieve maximum reasonable capture from all undertread cementing, and automatic tread end cementing operations. Maximum reasonable capture would require that hood enclosures be designed ~~in such a manner~~ to minimize open areas and enclose as much of the emission source as practical while maintaining a minimum in-draft velocity of 200 feet ~~per minute~~ ft/min (61 m/min) except during times when the enclosure must be opened to allow work inside or for the inspections of the product in progress. Maximum reasonable capture shall be consistent with ~~the following documents:~~

(i) Industrial Ventilation, A Manual of Recommended Practices, 14th Edition, American Federation of Industrial Hygienists; and,

(ii) Recommended Industrial Ventilation guidelines, U.S. Department of Health Education and Welfare, National Institute of Occupational Safety and Health.

(B) ~~install and operate a~~ control device that meets the requirements of one of the following systems.

(i) A carbon adsorption system designed and operated ~~in a manner such so~~ that there is at least an initial 95.0 percent removal of VOC by weight from the gases ducted to the control device with at least a 90 percent 3 year removal average, ~~or,~~

(ii) An incineration system that oxidizes at least 90.0 percent of the ~~nonmethane volatile organic compounds~~ (VOC/VOCs) (measured as total combustible carbon) which enter the incinerator to carbon dioxide and water.

(iii) ~~An alternative volatile organic compound~~VOC emission reduction system certified by the owner or operator to have at least a 90.0 percent reduction efficiency, measured across the control system, and that has been approved by the Executive Division Director.

(2) Green tire spraying. The owner or operator of a green tire spraying operation subject to this Section shall implement one of the following means of reducing ~~volatile organic compound~~VOC emissions~~+~~.

(A) ~~substitute~~Substitute water-based sprays for the normal ~~solvent-based~~VOC-based mold release compound~~+~~+.

(B) ~~install~~Install a capture system designed and operated ~~in a manner that will~~to capture and transfer at least 90.0 percent of the VOC emitted by the green tire spraying operation to a control device, and install and operate a control device that meets the requirements of one of the following~~+~~ systems.

(i) ~~a~~A carbon adsorption system designed and operated ~~in a manner such~~ so that there is at least 95.0 percent removal of VOC by weight from the gases ducted to the control device~~+~~+.

(ii) ~~an~~An incineration system that oxidizes at least 90.0 percent of the ~~nonmethane volatile organic compounds~~(VOC/VOCs (measured as total combustible carbon) to carbon dioxide and water~~+~~+.

(iii) ~~an~~An alternative ~~volatile organic compound~~VOC emission reduction system approved by the Division Director and certified by the owner or operator to have at least a 90.0 percent reduction efficiency, measured across the control system, that has been approved by the Executive Director.

(3) Exemption. If the total ~~volatile organic compound~~VOC emissions from all undertread cementing, tread-end cementing, bead dipping, and green tire spraying operations at a pneumatic rubber tire manufacturing facility do not exceed 57 ~~grams per tire~~g/tire, 252:100-39-44(c)(1) and 252:100-39-44(c)(2) shall not apply.

~~(4) An owner or operator of an undertread cementing, tread end cementing, bead dipping or green tire spraying operation subject to this Section may, instead of implementing measures required by 252:100-39-44(c)(1) and 252:100-39-44(c)(2), submit to the Executive Director a petition for alternative controls. The petition must be submitted in writing before September 15, 1981 and must contain:~~

~~(A) the name and address of the company and the name and telephone number of a responsible company representative over whose signature the petition is submitted;~~

~~(B) a description of all operations conducted at the location to which the petition applies and the purpose the volatile organic compound emitting equipment serves within the operations;~~

~~(C) reference to the specific emission limits, operational~~

~~and/or equipment controls for which alternative emission limits, operational and/or equipment controls are proposed;~~
~~(D) a detailed description of the proposed alternative emission limits, operational and/or equipment controls, the magnitude of volatile organic compound emission reduction which will be achieved, and the quantity and composition of volatile organic compounds which will be emitted if the alternative emission limits, operational and/or equipment controls are instituted;~~

~~(E) a schedule for the installation and/or institution of the alternative operational and/or equipment controls in conformance with the appropriate compliance schedule section; and,~~

~~(F) a demonstration that the alternative control program constitutes reasonably available control technology for the petitioned facility. The factors to be presented in this demonstration include but are not limited to:~~

~~(i) the capital expenditure necessary to achieve the petitioned level of control;~~

~~(ii) the impact of these costs on the firm;~~

~~(iii) the energy requirements of the petitioned level of control;~~

~~(iv) the impact on the environment in terms of any increase in air, water and solid waste effluent discharge of the petitioned level of control;~~

~~(v) any adverse worker or product safety implications of the petitioned level of control; and,~~

~~(vi) an analysis for each of the factors in 252:100 39-44(e)(4)(F)(i) through 252:100 39-44(e)(4)(F)(v) for the control levels specified in 252:100 39-44(e)(1) and 252:100 39-44(e)(2).~~

~~(5) The Executive Director may approve a Petition for Alternative Control if:~~

~~(A) the petition is submitted in accordance with 252:100-39-44(e);~~

~~(B) the petition demonstrates that the alternative controls represent reasonable available control technology; or,~~

~~(C) the petition contains a compliance schedule for achieving and maintaining a reduction of volatile organic compound emissions as expeditiously as practicable, but no later than the photochemical oxidant attainment date.~~

(d) **Compliance schedule.** Compliance with this Section will be accomplished by affected facilities on or before December 31, 1982.

(e) **Testing and monitoring.**

(1) Test procedures to determine compliance with this Section must be approved by the Executive Division Director and be consistent with:

(A) EPA Guideline Series Document "Measurement of Volatile Organic Compounds," EPA-450/2-78-041, and,

(B) Appendix A of "Control of Volatile Organic Emissions from Existing Stationary Sources - Volume II: Surface coating of

Cans, Coils, Paper, Fabrics, Automobiles, and Light-Duty Trucks," EPA-450/2-77-008.

(2) The ~~Executive~~ Division Director may accept, instead of green tire spray analysis, a certification by the manufacturer of the composition of the green tire spray, if supported by actual batch formulation records.

(3) If add-on control equipment is used, continuous monitors ~~of the following parameters~~ shall be installed, periodically calibrated, and operated at all times that the associated control equipment is operating. These monitors shall measure:

(A) exhaust gas ~~temperature~~ temperature of ~~incinerators~~ an incinerator;

(B) temperature rise across a catalytic incinerator bed;

(C) breakthrough of VOC on a carbon adsorption unit; and,

(D) any other parameter for which a continuous monitoring or recording device is required by the ~~Executive~~ Division Director.

252:100-39-45. Petroleum (solvent) dry cleaning

(a) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:.

~~(1)~~ **"Cartridge filters"** means perforated canisters containing filtration paper and/or activated carbon that are used in a pressurized system to remove solid particles and fugitive dyes from soil-laden petroleum solvent.

~~(2)~~ **"Containers and conveyors ~~and~~ of petroleum solvent"** means piping, ductwork, pumps, storage tanks, and other ancillary equipment that are associated with the installation and operation of washers, dryers, filters, stills, and settling tanks.

~~(3)~~ **"Dry cleaning"** means a process of the cleaning of textiles and fabric products in which articles are washed in a non-aqueous solution (petroleum solvent) and then dried by exposure to a heated air stream.

~~(4)~~ **"Housekeeping"** means those measures and precautions necessary to minimize the release of petroleum solvent to the atmosphere.

~~(5)~~ **"Operations parameters"** means the activities required to insure that the equipment is operated in a manner to preclude the loss of petroleum solvents to the atmosphere.

~~(6)~~ **"Perceptible leaks"** means any petroleum solvent vapor or liquid leaks that are conspicuous from visual observation, such as pools or droplets of liquid, or buckets or barrels of petroleum solvent or petroleum solvent-laden waste standing open to the atmosphere.

~~(7)~~ **"Petroleum solvent"** means organic material produced by petroleum distillation comprising a hydrocarbon range of 8 to 12 carbon atoms per organic molecule that exists as a liquid under standard conditions.

(b) **Applicability.** This Section applies to petroleum solvent washers, dryers, ~~solvent~~ filters, settling tanks, vacuum stills,

and other containers and conveyors of petroleum solvent that are used in petroleum solvent dry cleaning facilities in Tulsa County only.

(c) ~~Provisions for specific processes~~ Operating requirements.

(1) The owner or operator of a petroleum solvent dry cleaning facility shall not operate any dry cleaning equipment using petroleum solvents unless:

(A) there are no perceptible liquid or vapor leaks from any portion of the equipment;

(B) all washer lint traps, button traps, access doors and other parts of the equipment where petroleum solvent may be exposed to the atmosphere are kept closed at all times except when required for proper operation or maintenance;

(C) the still residue is stored in sealed containers. ~~The and the~~ used filtering material is to be placed into a sealed container suitable for use with petroleum solvents, immediately after removal from the filter and be disposed of in the prescribed manner; or,

(D) cartridge filters containing paper or carbon or a combination thereof, which are used in the dry cleaning process are ~~to be drained~~ in the filter housing for at least 24 hours prior to removal.

(2) The owner or operator of a petroleum solvent dry cleaning facility shall not operate any drying tumblers and cabinets that use petroleum solvents unless tumblers and cabinets are operated in ~~such a manner as to control~~ petroleum solvent vapor leaks by reducing the number of sources where petroleum solvent is exposed to the atmosphere. Under no circumstances should there be any open containers (can, buckets, barrels) of petroleum solvent or petroleum solvent-containing material. Equipment containing solvent (washers, dryers, extractors, and filters) should remain closed at all times other than during maintenance or load transfer. Lint filter and button trap covers should remain closed except when petroleum solvent-laden lint and debris are removed. Gaskets and seals should be inspected and replaced when found worn or defective. ~~Solvent-laden~~ Petroleum solvent-laden clothes should never be allowed to ~~sit remain~~ exposed to the atmosphere for longer periods than are necessary for load transfers. Finally, vents on petroleum solvent-containing waste and new petroleum solvent storage tanks should be constructed and maintained in a manner that limits petroleum solvent vapor emissions to the maximum possible extent.

(3) The owner or operator shall repair all petroleum solvent vapor and liquid leaks within 3 working days after identifying the sources of the leaks. If necessary repair parts are not on hand, the owner or operator shall order these parts within 3 working days, and repair the leaks no later than 3 working days following the arrival of the necessary parts.

(d) Disposal of filters. Filters from the petroleum dry cleaning facility shall be disposed of by:

(1) incineration at a facility approved by the fire marshall's

office for such disposal;

(2) by recycling through an approved vendor of this service;
or,

(3) by any other method approved by the Executive Division
Director.

(e) **Compliance schedule.** Compliance with 252:100-39-45(c) (1) through 252:100-39-45(c) (3), will shall be accomplished by affected facilities on or before October 1, 1986.

252:100-39-46. Coating of parts and products

(a) **Applicability.** This Section shall apply only to ~~these~~ industries located in Tulsa County which manufacture and/or coat metal parts and products. ~~This Section is applicable to, such as~~ large farm machinery, small farm machinery, small appliances, commercial machinery, industrial machinery and fabricated metal products. Architectural coating, aerospace coating, and automobile refinishing are not included.

(b) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

(1) **"Air or forced air dry coatings"** means coatings ~~which that~~ are dried by the use of air or forced warm air at temperatures up to 194°F.

(2) **"Clear coat"** means a coating ~~which that~~ lacks color and opacity or is transparent and uses the undercoat as a reflectant base.

(3) **"Extreme performance coatings"** mean coatings designed for harsh exposure or extreme environmental conditions ~~(i.e., (e.g.,~~ exposure to the weather, all of the time, temperature above 200°F, detergents, abrasive and scouring agents, solvents, corrosive atmosphere or similar conditions).

(4) **"Facility"** means all emission sources located on a contiguous ~~property~~ properties under common control which are affected by the surface coating provisions of ~~OAC-252:100-37 and~~ 252:100-39.

(5) **"Powder"** means a coating ~~which that~~ is applied in a finely divided ~~(powder)~~ state by various methods, and becomes a continuous, solid film when the metal part or product is moved to an oven for curing.

(6) **"Transfer efficiency"** means the weight (or volume) of coating solids adhering to the surface being coated divided by the total weight (or volume) of coating solids delivered to the applicator.

(c) **Existing source requirement.** No owner or operator ~~subject to the provisions of this Section~~ shall discharge or cause the discharge into the atmosphere from an existing coating line or individual coating operation any ~~organic solvent~~ VOC in excess of the amounts listed in 252:100-39-46(d) as calculated by EPA method 24, 40 CFR Part 60.

(d) **Standards.** The following table enumerates the limitations for surface coatings in pounds of ~~solvent~~ VOC per gallon of coating as applied ~~(less water/exempt solvent)~~ (water and exempt compounds).

If more than one limit listed in the table is applicable to a specific coating, then the least stringent limitation shall be applied.

Coating type	Limitations	
	lbs/gal	kg/liter
Air or Forced Air Dry	3.5	<u>.420.42</u>
Clear Coat	4.3	<u>.520.52</u>
Extreme Performance	3.5	<u>.420.42</u>
Powder	0.4	<u>.050.05</u>
Other	3.0	<u>.360.36</u>

(e) **Emission factor.** For the purposes of calculating an emission factor (EF) in pounds ~~VOC~~ per gallon of coating solids for use in the development of a plant-wide emission plan as described in 252:100-39-46(j)(1), the following formula will be utilized:

$$EF = V D / 1 - (V+W) = V D / S$$

where: V = volume fraction of ~~solvent~~VOC in coating,
 D = density of ~~solvent~~VOC in the coating,
 W = volume fraction of water in coating, and
 S = 1 - (V+W) = volume fraction of solids in coating.

(f) **Emission limit**~~Compliance.~~ If more than one emission limit as listed in 252:100-39-46(d) is applicable to a specific coating, then the least stringent emission limitation shall be applied. Compliance with the coating limits listed in 252:100-39-46(d) is to be calculated on a daily weighted average basis.

(g) **Solvent containing**~~VOC-containing~~ materials. Solvent containing ~~VOC-containing~~ materials used for clean up shall be considered in the ~~emissions~~VOC content limits listed in 252:100-39-46(d) unless:

- (1) the ~~solvent~~VOC containing materials are maintained in a closed container when not in use;
- (2) closed containers are used for the disposal of cloth or paper or other materials used for surface preparation and cleanup;
- (3) the spray equipment is disassembled and cleaned in a ~~solvent~~VOC vat and the vat is closed when not in use; or,
- (4) the ~~solvent~~VOC containing materials used for the clean up of spray equipment are sprayed directly into closed containers.

(h) **Exemptions.** ~~Exemptions to this Section shall be permitted for combined emissions at one site/facility, which do not exceed a 10 tons/year emissions cutoff based on the facility's~~ Facilities with a potential to emit ~~VOC~~10 tons/year or less of VOC from coating operations are exempt from this Section. Once this limit is exceeded, the ~~source~~facility will always be subject to the limits of this Section.

(i) **Alternate standard.** ~~Emissions~~Coatings with VOC contents in excess of those ~~permitted~~allowed by 252:100-39-46(d) are

allowable may be used if both of the following conditions are met:

(1) ~~emissions that would result in the absence of control~~ Emissions are reduced to levels equivalent to those permitted by that would occur if the VOC content of the coatings met the limits contained in 252:100-39-46(d) and meet there is an overall control efficiency of at least:

(A) 85 percent, by incineration ~~or,~~

(B) 85 percent, by absorption; ~~or any other equipment of equivalent reliability and effectiveness; and,~~

(C) 85 percent by any other equipment of equivalent reliability and effectiveness.

(2) ~~no~~ No air pollution, as defined by the Clean Air Act, results.

(j) **Emission plan.**

(1) Development of a plant-wide emission plan. A ~~owner/operator~~ owner or operator may develop a plant-wide emission plan consistent with EPA's Emission Trading Policy as published in the December 4, 1986 Federal Register instead of having each coating line comply with the ~~emission~~ VOC content limitations prescribed contained in subsection (d) of this Section, provided 252:100-39-46(d), if the following conditions are met.

~~(1)(A)~~ The owner or operator demonstrates, ~~by means of approved material balance or manual emission test methods,~~ by the methods prescribed in 252:100-5-2.1(d) that sufficient reductions in ~~organic solvent~~ VOC emissions may be obtained by controlling other ~~facilities~~ sources within the plant to the extent necessary to compensate for all excess emissions which result from one or more coating lines not achieving the prescribed limitation. Such demonstration shall be made ~~described in writing~~ and shall include:

~~(A)(i)~~ a complete description of the coating line or lines ~~which will that~~ can not comply with the emission VOC content limitation in 252:100-39-46(d);

~~(B)(ii)~~ quantification of emissions, in terms of pounds per day of ~~organic solvents~~ VOCs, which are in excess of the prescribed ~~emission~~ VOC content limitation for each coating line described in 252:100-39-46(d) 252:100-39-46(j)(A)(i);

~~(C)(iii)~~ a complete description of each ~~facility and the related control system, if any, for those facilities within the plant where~~ how emissions will be decreased at specific sources to compensate for excess emissions from each coating line described in 252:100-39-46(d) 252:100-39-46(j)(A)(i) and the date on which such reduction will be achieved;

~~(D)(iv)~~ a transfer efficiency based on a 60 percent baseline with emissions expressed in pounds of VOC per gallon of solids when transfer efficiency is used to compensate for excess emissions from spray painting operations, the transfer efficiency shall be based on a 60 percent baseline, with emissions expressed in pounds of solvent per gallon of solids. Credits for improvements in

~~transfer efficiency shall be demonstrated with in plant testing which complies with approved EPA methods.~~

(v) a demonstration of credits for improvements in transfer efficiency with in plant testing that complies with EPA methods.

~~(E)(vi)~~ (vi) quantification of emissions, in terms of pounds per day of ~~organic solvents~~ VOCs, for each source both before and after the improvement or installation of any applicable control system, or any physical or operational changes to such a facility or facilities to reduce emissions and the date on which such reductions will be achieved; and,

~~(F)(vii)~~ (vii) a description of the procedures and methods used to determine the emissions of ~~organic solvents~~ VOCs.

~~(2)(B)~~ (B) The plant-wide emission reduction plan does not include decreases in emissions resulting from requirements of other applicable air pollution rules. The plant-wide emission reduction plan as described in the Emissions Trading Policy may include voluntary decreases in emissions accomplished through installation or improvement of a control system or through physical or operational changes to ~~facilities~~ emission units, including permanently reduced production or closing a facility, located on the premises of a surface-coating operation.

~~(3)(2)~~ (2) Compliance with a plant-wide emission plan. The implementation of a plant-wide emission reduction plan instead of compliance with the emissions VOC content limitation prescribed in 252:100-39-46(d) has been expressly approved by the Executive Director and the EPA Administrator. Upon approval of a plan, any emissions in excess of those established for each facility under the plan shall be a violation of these rules.

(k) Compliance, testing, and monitoring requirements.

(1) The ~~Executive Division~~ Director may require the ~~owner/operator~~ at the expense of the owner or operator a demonstration of a source to demonstrate at his expense, compliance with the emission limits using EPA Methods 24, 24A, 1-4, 25, 25A, 25B in 40 CFR 60.444 or EPA Document 450/3-84-019. At a minimum, such test must show that the overall capture efficiency and destruction efficiency are equal to 85 percent (e.g., 90 percent capture efficiency multiplied by 95 percent destruction efficiency equals 85.5 percent system efficiency). The one hour bake option in Method 24 is required when doing compliance testing.

(2) Testing for plant-wide emission plans shall be conducted by ~~the owner/operator at his expense~~ at the expense of the owner or operator to demonstrate compliance with the emission VOC content limits contained in 252:100-39-46(d).

(3) Monitoring shall be required of any ~~owner/operator~~ owner or operator subject to this Section who uses add-on control equipment for compliance. Such monitoring shall include-

~~(A)~~ installation and maintenance of monitors to accurately measure and record operational parameters of all required

control devices to ensure the proper functioning of those devices in accordance with design specifications, including:

~~(i)(A)~~ the exhaust temperature of direct flame incinerators and/or gas temperature immediately upstream and downstream of any catalyst bed;

~~(ii)(B)~~ the total amount of ~~volatile organic substances~~VOCs recovered by carbon adsorption or other ~~solvent~~VOC recovery system during a calendar month; and,

~~(iii)(C)~~ the dates and reasons for any maintenance and repair of the required control devices and the estimated quantity and duration of ~~volatile organic substance~~ emissions during such activities;

~~(B)~~ maintenance of records of any testing conducted at an affected facility in accordance with the provisions specified in 252:100-39-46(k)(3)(A)(i); and,

~~(C)~~ maintenance of all records at the affected facility for at least two years and make such records available to representative of the State or local air pollution control agency upon request.

(1) ~~Reporting and recordkeeping.~~—The owner/operator of a facility subject to this Section shall submit to the Executive Director upon written request, reports detailing specific VOS sources, the quantity of coatings used for a specific time period, VOS content of each coating, capture and control efficiencies, and any other information pertinent to the calculation of VOS emissions. The data necessary to supply the requested information shall be retained by the owner/operator for a minimum of two years.

(1) The owner or operator of a facility subject to this Section shall submit to the Division Director upon written request reports detailing specific VOC sources; the quantity of coatings used for a specific time period, VOC content of each coating; capture and control efficiencies; and any other information pertinent to the calculation of VOC emissions. The data necessary to supply the requested information shall be retained by the owner or operator for a minimum of two years.

(2) The owner or operator of a facility subject to this Section shall maintain records of any testing conducted at an affected facility in accordance with the provisions specified in 252:100-39-46(k), as well as all other records, for at least two years. These records shall be available to representatives of the DEQ upon request.

(m) ~~Compliance date.~~ The date of compliance with the requirements of this Section will be is December 31, 1990.

252:100-39-47. Control of ~~VOS~~VOC emissions from aerospace industries coatings operations

(a) Applicability.

(1) This Section applies to all aerospace facilities located in Tulsa County. Sources once subject to this Section are always subject.

(2) This Section does not apply to individual coating formulations ~~which~~that, when aggregated, do not exceed ~~fifty~~

~~five (55) gallons per year~~ 55 gal/yr for the facility.

~~(3) New and modified sources and coating applications not included in the plan are subject to the permit requirements set forth in OAC 252:100-7 and will be submitted to EPA as source-specific SIP revision, unless:~~

~~(A) the new coatings meet the presumption norm (3.5 pound VOS per gallon less water and exempt solvents limit); or,~~

~~(B) the total usage of the new coating does not exceed fifty-five (55) gallons per year of each coating formulation.~~

~~(4) (3) Exemptions to this Section shall be permitted for combined emissions at one site/facility which do not exceed a ten-ton per year emission cut-off based on the Facilities with a potential of the facility to emit VOS 10 tons/year or less of VOC from coatings operations are exempt from this Section.~~

(b) **Definitions.** The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

~~(1) "Aerospace" means the industries, air bases and depots that design and manufacture, rework, or repair aircraft or military equipment components for either commercial or military customers.~~

~~(2) "Aircraft" means any machine designed to travel through the earth's atmosphere. This group includes but is not limited to airplanes, balloons, dirigibles, drones, helicopters, missiles, and rockets.~~

~~(3) "Alternate reasonable reasonably available control technology (ARACT)" means the lowest emission limit that a particular source is capable of meeting by the application of control technology that is reasonably available considering technological and economic feasibility as determined on a case-by-case basis.~~

~~(4) "Coating" means a material which covers a surface which alters the surface characteristics and from which Volatile Organic Solvents VOCs can be emitted during the application and/or curing process.~~

~~(5) "CTG" means the Control Techniques Guidance Document "Control of Volatile Organic Emissions From Existing Stationary Sources, Volume VI: Surface Coating of Miscellaneous Metal Parts and Products," EPA No. 450/2-78-015.~~

~~(6) "Facility" means all of the pollutant-emitting activities which that belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person or persons under common control.~~

~~(7) "Low organic solvent VOC coating (LOSE) (LVOCC)" means a coating which that contains less organic solvent VOC than the conventional coatings used by the industry. Low organic solvent VOC coatings include waterborne, higher solids, electrodeposition, and powder coatings.~~

~~(8) "Reasonable Reasonably available control technology (RACT)" means the lowest emission limit that a particular source is capable of meeting by the application of control technology that is reasonably available considering technological and economic~~

feasibility and the need to impose such controls to attain and maintain a National Ambient Air Quality Standard.

~~(c) General requirements.—All affected facilities shall develop an emissions reduction plan as set forth in 252:100-39-47(d). Said plan, upon approval, shall constitute the determination of ARACT for that particular facility. ARACT must be installed and operating as approved in the plan no later than January 1, 1991 for existing facilities, unless additional phased compliance dates are otherwise approved in the plan. Provided, however, that in the case that Tulsa County is still nonattainment for ozone within five (5) years of approval of ARACT, the Emission Reductions Plan and the ARACT determination shall be subject to review and modification.~~

(1) All affected facilities shall develop an emissions reduction plan as set forth in 252:100-39-47(d). This plan, upon approval, shall constitute ARACT for that particular facility.

(2) ARACT must be installed and operating as provided in the approved plan no later than January 1, 1991 for existing facilities, unless additional phased compliance dates are approved in the plan.

(3) New and modified sources and coating applications not included in the plan are subject to the permit requirements set forth in 252:100-7 or 252:100-8, and will be submitted to EPA as source-specific SIP revisions, unless one of the following applies.

(A) The new coatings meet the presumptive norm of 3.5 pounds of VOC per gallon less water and exempt compounds.

(B) The total usage of the new coating does not exceed 55 gal/yr of each coating formulation.

~~(d) Emissions reduction plan.~~

~~(1) Plan development. Each owner/operator shall develop an emissions reduction plan for all affected facilities. Each plan shall include the following:~~

~~(A) a detailed, reasoned and exhaustive review of:~~

~~(i) each source of emissions within the facility and~~

~~(ii) (2) the entire plant collectively;~~

(A) a detailed, reasoned and exhaustive review of each source of emissions within the facility and the entire plant collectively;

(B) identification and quantification of emissions, in terms of pounds per day, of all organic solvents/VOC both before and after the application of ARACT;

(C) a detailed, innovative engineering effort directed toward finding alternative air management schemes that can be incorporated in order to abate emissions at costs which are reasonable;

(D) a consideration of the level of control that is achievable using available alternative coatings, to include LVOCC for every application, low organic solvent coatings (LOSC);

~~(E) a consideration of the level of control achievable using~~

~~available add on control devices. This demonstration shall include, at a minimum, a demonstration of the feasibility/infeasibility of the following control options:~~

- ~~(i) carbon absorption;~~
- ~~(ii) incineration/flaring;~~
- ~~(iii) condensation; and~~
- ~~(iv) a combination of 252:100-39-47(d)(1)(E)(i) and 252:100-39-47(d)(1)(E)(ii).~~

(E) a demonstration of the level of control achievable using available add-on control devices which shall include, at a minimum, the feasibility/infeasibility of carbon adsorption, incineration/flaring, condensation, and a combination of carbon adsorption and incineration/flaring;

~~(F) a consideration of facility redesign, including the following:~~

- ~~(i) recirculation;~~
- ~~(ii) reduced air flows;~~
- ~~(iii) consolidation of spray operations; and,~~
- ~~(iv) installation of common control devices for two or more separate coatings operations.~~

(F) a consideration of facility redesign, including recirculation, reduced air flows, consolidation of spray operations, and installation of common control devices for two or more separate coating operations;

~~(G) a consideration of alternative applications, to improve transfer efficiency, including:~~

- ~~(i) high volume low pressure spray equipment;~~
- ~~(ii) heated spray guns; and,~~
- ~~(iii) electrostatic spray equipment/powder coatings.~~

(G) a consideration of alternative applications, to improve transfer efficiency, including high-volume-low-pressure spray equipment, heated spray guns, and electrostatic spray equipment/powder coatings;

(H) an explanation why each source is not a typical coating source covered by the CTG as defined in 252:100-39-47(b);

(I) a cost/benefit analysis for all control technology considered; and,

(J) a detailed compliance schedule ~~which~~that includes the emission limit and/or control techniques for each emission source. ~~This schedule, which~~ together with other relevant considerations, shall be set forth in a separate section of the plan ~~which~~that summarizes and outlines ARACT for the referenced facility.

(2) Submission of emission reduction plans. ~~Upon completion, the three copies of the emissions reduction plan shall be submitted in triplicate to the Air Quality Division and one shall be submitted to EPA, Region VI. The preparer shall also submit a copy of the plan to Region VI Environmental Protection Agency (EPA), Region VI.~~

(3) Action on plan. Within 30 days of submittal, or of the effective date of this Section ~~May 25, 1990~~, whichever is later, the Air Quality Division shall, considering any comments

submitted by EPA, either approve, modify or disapprove the plan.

(4) Public hearing. The Division shall, at the first meeting of the Air Quality Council following the approval, modification, or disapproval of the plan, present at public hearing, the staff's findings and ARACT determination. ~~Upon consideration of comments and recommendations from the Council, the owner/operator of the affected facility, the public and EPA, the Department shall, within ten (10) days after the public hearing, issue a final ARACT approval. Final approval shall constitute ARACT for the affected facility. The owner/operator shall be responsible for installation and operational provisions of the approved ARACT, including any specific provisions set forth therein. Any violation of the plan or of its provisions shall constitute a violation of this Section.~~

(5) Final approval. Upon consideration of comments and recommendations from the Council, the owner or operator of the affected facility, the public, and EPA, the DEQ shall, within ten (10) days after the public hearing, issue a final ARACT approval. Final approval shall constitute ARACT for the affected facility.

(6) Compliance. The owner or operator shall be responsible for installation and operational provisions of the approved ARACT. Any violation of the plan or of its provisions shall constitute a violation of this Section.

~~(5)~~(7) Submission of SIP revision. Upon approval by the Department ~~DEQ~~, the ARACT determination shall be submitted to EPA as a SIP revision.

(e) Reporting and recordkeeping.

(1) Recordkeeping requirements. ~~The owner/operator~~ owner or operator shall maintain the following:

(A) ~~a material safety data sheet which documents the volatile organic solvent~~ VOC content, composition, solids content, ~~solvent~~ VOC density and other relevant information regarding each coating and ~~solvent~~ VOC available for use in the affected surface coating processes ~~information detailing the operational parameters of the coating process sufficient to determine continuous compliance with the applicable control limits. Information as to the amounts of each type coating used and the amounts of solvents used for dilution in each coating type shall be maintained for each coating operation. Daily usage records will be kept for all coatings used that do not comply with the applicable control limits specified in the plan;~~

(B) information detailing the operational parameters of the coating process sufficient to determine continuous compliance with the applicable control limits;

(C) information as to the amounts of each type coating used and the amounts of VOC used for dilution in each coating type for each coating operation;

(D) daily usage records for all coatings used that do not comply with the applicable control limits specified in the plan; and,

~~(B)(E)~~ records shall be maintained of any monitoring and testing conducted at an affected facility in accordance with the provisions specified in 252:100-39-47(f) ~~7~~.

~~(C)(2)~~ Method of calculating VOC content in coatings. ~~records~~ Records required by 252:100-39-47(e)(1)(A) and ~~252:100-39-47(e)(1)(B)~~ through 252:100-39-47(e)(1)(E) detailing ~~VOC~~VOC in pounds per gallon of coating (less water and exempt compounds) shall be calculated as follows:

$$\text{VOC in lbs/gal of coating} = \frac{W_v - W_x - W_x W_v - W_w - W_x}{V_m - V_w - V_x}$$

where: W_v = weight of all volatiles ~~7~~;

W_w = weight of water ~~7~~;

W_x = weight of exempt solvent ~~7~~ compounds;

$V_m = 1$ (one) ~~7~~;

V_w = volume fraction of water ~~7~~; and,

V_x = volume fraction of exempt solvent ~~7~~ compounds.

~~(D)(3)~~ Maintenance of records. ~~records~~ Records required by 252:100-39-47(e)(1)(A) and ~~252:100-39-47(e)(1)(B)~~ through 252:100-39-47(e)(1)(E) shall be maintained for at least two years and shall be made available upon written request by representatives of the Air Quality Division, U.S. Environmental Protection Agency or the Tulsa City County Health Department ~~AOD~~ or EPA.

~~(2)(4)~~ Alternative recordkeeping provision. Alternatively to 252:100-39-47(e)(1) through 252:100-39-47(e)(3), an equivalent recordkeeping provision ~~which~~ that satisfies the substantive requirements of 252:100-39-47(e)(1) through 252:10-39-47(e)(3) may be approved under the plan.

(f) Testing and monitoring.

(1) Testing. ~~Each owner/operator~~ The Division may require testing at the expense of the owner or operator shall, upon a determination by the Air Quality Division that testing is required to establish emission from any particular source or sources, conduct such tests at his own expense. Test methods may include 1-4, 18, 24, 24A, 25A, 25B found in the Appendix A of 40 CFR Part 60; including the procedures found at 40 CFR 60.444.

(2) Monitoring. Monitoring shall be required of any ~~owner/operator subject to this section~~ owner or operator who uses add-on control equipment for compliance. Such monitoring shall include accurately measure and record operational parameters of all required control devices to ensure the proper functioning of those devices in accordance with design specifications, including:

~~(A) installation and maintenance of monitors to accurately measure and record operational parameters of all required control devices to ensure the proper functioning of those devices in accordance with design specifications, including:~~
~~(i)(A) the exhaust temperature of direct flame incinerators and/or gas temperature immediately upstream and downstream of~~

any catalyst bed;

~~(ii)(B) the total amount of volatile organic substances VOCs recovered by carbon adsorption or other solvent VOC recovery system during a calendar month; and,~~

~~(iii)(C) the dates and reasons for any maintenance and repair of the required control devices and the estimated quantity and duration of volatile organic substance VOC emissions during such activities.~~

~~(B) maintenance of records of any testing conducted at an affected facility in accordance with the provisions specified in 252:100-39-47(f)(2)(A)(i); and,~~

~~(C) maintenance of all records at the affected facility for at least two years and make such records available to representatives of the State or local air pollution control agencies upon request. (252:100-39-47 Effective May 25, 1990)~~

252:100-39-48. Vapor recovery systems [AMENDED AND RENUMBERED TO 252:100-39-41(e)]

~~(a) Applicability. This Section applies only in Tulsa County.~~

~~(b) Storage of volatile organic compounds — 400 40,000 gallons (9.5 953 bbls).~~

~~(1) No person shall store or permit the storage of gasoline or other volatile organic compounds in any stationary storage container with a nominal capacity greater than 400 gallons (9.5 bbls) and less than 40,000 gallons (952.4 bbls) unless such container is equipped with a submerged fill pipe or is bottom filled. No person shall store or permit the storage of gasoline or other volatile organic compounds in any stationary storage container with a nominal capacity greater than 2,000 gallons (47.5 bbls) and less than 40,000 gallons (952.4 bbls) unless such container is equipped with a vapor control system that has an efficiency of no less than 90 percent by weight of the volatile organic compounds contained in the displaced vapors and is equipped with a pressure relief valve in the atmospheric vent system which maintains a pressure of 16 ounces per square inch and 1/2 ounce per square inch vacuum.~~

~~(2) The vapor recovery system shall include one or more of the following:~~

~~(A) a vapor tight return line from the storage container to the delivery vessel and a system that will ensure that the vapor return line is connected before gasoline or volatile organic compounds can be transferred into the container (i.e., popped connectors from the storage container to the delivery vessel.);~~

~~(B) a float vent valve assembly must be installed in the vapor return/vent line on new and existing dual point installations; however, for coaxial installations on existing stations, a vent sleeve extending six inches below the top of the tank will be allowed. Sleeves may be equipped with a 1/16 inch air bleed hole;~~

~~(C) the cross sectional area of the vapor recovery line must be at least half of the cross sectional area of the liquid~~

delivery line, or,

~~(D) instead 252:100 39 48 (b) (2) (A) through 252:100 39 48 (b) (2) (C), other equipment that has a total collection efficiency no less than 90 percent by weight of the total hydrocarbon compounds in the displaced vapor provided that approval of the proposed design, installation, and operation is obtained from the Executive Director prior to start of construction.~~

~~(3) Exemptions to this Section may be granted provided the owner/operator shows to the satisfaction of the appropriate authority that the container is used exclusively for agricultural purposes or that the facility, based on the most current 12 month's data, dispenses 120,000 gallons per year or less.~~

~~(4) The applicability of this Section shall be determined by the most restrictive of the 2,000 gallon tank size as specified in 252:100 39 48 (b) (1) or the 120,000 gallon annual throughput described in 252:100 39 48 (b) (3). However, once a facility places a 2,000 gallon tank in service or exceeds the 120,000 gallon annual throughput described in 252:100 39 48 (b) (3), that facility shall always be subject to the provisions of this Section. (effective February 12, 1990)~~

~~(5) If emission testing is conducted, the appropriate test methods selected from EPA Methods 1 through 4, 18, 21, 25, 25A and 25B will be utilized.~~

~~(6) Compliance with this subsection will be accomplished by affected owner/operator by December 31, 1986.~~

~~(7) The owner/operator of a facility or facilities shall obtain, by whatever means practicable, certification from the owner/operator of the transport/delivery vessels that all deliveries of gasoline or other volatile organic compounds made to their facility or facilities located in Tulsa County, shall be made by vessels which comply with the requirements contained in 252:100 39 48 (d). Compliance with this Section shall be accomplished by affected owner/operators no later than December 31, 1990. (Effective February 12, 1990)~~

~~(e) Loading of volatile organic compounds.~~

~~(1) No person shall operate, install or permit the building, operation or installation of a stationary volatile organic compound loading facility unless such loading facility is equipped with a vapor collection and/or disposal system properly installed, in good working order and in operation.~~

~~(2) When volatile organic compounds are loaded through the hatches of a transport vessel, a pneumatic, hydraulic or mechanical means shall be provided to ensure a vapor tight seal at the hatch.~~

~~(3) A means shall be provided to prevent organic material drainage from the loading device when it is removed from the transport vessel, or to accomplish complete drainage before removal.~~

~~(4) When loading is effected through means other than hatches, all loading and vapor lines shall be equipped with fittings~~

~~which make vapor tight connections and which close automatically when disconnected.~~

~~(5) The vapor collection and/or disposal portion of the system shall consist of one or more of the following in addition to bottom loading or submerged fill of transport vessels:~~

~~(A) an absorption/adsorption system or condensation system with a minimum recovery efficiency of 90 percent by weight of all the volatile organic compound vapors and gases entering such disposal system;~~

~~(B) a vapor handling system which directs all vapors to a fuel gas incineration system with a minimum disposal efficiency of 95 percent; or,~~

~~(C) other equipment of at least 90 percent efficiency, provided plans for such equipment are submitted to and approved by the Executive Director. Storage vessels at service stations and bulk plants may be used for intermediate storage prior to recovery/disposal of vapors as per 252:100-39-48(c)(5)(A) through 252:100-39-48(c)(5)(C) if they are designed to prevent the release of vapors during use.~~

~~(6) Subsection 252:100-39-48(c) shall apply to any facility which loads volatile organic compounds into any transport vessel designed for transporting volatile organic compounds.~~

~~(7) Facilities will be checked annually in accordance with EPA Test Method 21, Leak Test. Leaks greater than 5000 ppm will be repaired within 15 days. Facilities will retain inspection and repair records for two years.~~

~~(d) Transport/delivery vessel requirements.~~

~~(1) Maintenance.~~

~~(A) The delivery vessel must be maintained so as to be vapor tight except when sampling, gauging, or inspecting. These activities shall not occur while the vehicle is loading or unloading or is in a pressurized state.~~

~~(B) The delivery vessel must be equipped, maintained and operated to receive vapors from sources identified in 252:100-39-41(b)(1) and retain these and all other vapors until they are delivered into an authorized vapor recovery/disposal system.~~

~~(C) Vessels with defective equipment such as boots, seals, and hoses, or with other deficiencies which would impair the vessels ability to retain vapors or liquid shall be repaired within 5 days.~~

~~(D) The certified testing facility must certify to the approving agency that the proper testing and repairs have occurred in accordance with 252:100-39-48(d)(2)(A)(i). The vessel must also display on the rear panel a tag showing the date of the pressure test.~~

~~(E) No owner/operator will allow a delivery vessel to be filled at a facility unable to receive displaced organic vapors nor service tanks unable to deliver displaced vapors except for tanks/facilities exempted in 252:100-39-41(b). Terminal owners shall not fill vessels which do not display a current tag.~~

~~(F) Delivery vessels may be inspected by representatives of the appropriate health agency in order to determine their state of repair. Such a test may consist of a visual inspection, a vapor test with vapors not to exceed 5000 ppm. Failure of a vapor test will require the owner/operator to effect the necessary repairs within 10 days. Unless certification is made to the appropriate health agency within 5 days the vessel will be removed from service by the owner/operator. Failure to certify that the cited repairs have been effected will subject the vessel to sanctions. Upon certification of repairs the vessel will be allowed to operate in a normal manner.~~

~~(2) Testing requirements.~~

~~(A) Pressure test.~~

~~(i) Delivery vessels, delivering or receiving gasoline must be tested one time per year for vapor tightness. The vapor tightness test must be consistent with Appendix "A" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems", EPA 450/2 78 051. Tests shall be performed by the owner or a reputable transport service company. Test methods used to test these vessels by owners or testing companies must be approved for use by the Executive Director.~~

~~(ii) The vessel will be considered to pass the test prescribed in 252:100 39 48(d)(2)(A)(i) when the test results show that the vessel and its vapor collection systems do not sustain a pressure change of more than 3 inches of H₂O in addition there shall be no avoidable visible liquid leaks.~~

~~(B) Vapor test. Testing of the tank trucks for compliance with vapor tightness requirements as required under 252:100-39 41(d)(1)(F) must be consistent with Appendix "B" EPA Guideline Series Document, "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems", EPA 405/2 78 051, as modified for this purpose and contained in 252:100 43 15. The requirements of 252:100 39 48 will become effective December 15, 1988.~~

252:100-39-49. Manufacturing of fiberglass reinforced plastic products

~~(a) General provisions. Within 12 months after promulgation of this Section all affected facilities shall limit emissions of VOS from fiberglass manufacturing to those listed in 252:100 39-49(a)(1), or have an approved plan for the reduction of such emissions. The plan must be submitted to the Executive Director within 6 months after promulgation of this Section, and shall detail those emissions which will be controlled, the means by which control will be achieved and will demonstrate that compliance will be achieved within two years from the date of promulgation of this Section. The approval authority for such plans shall reside with the Air Quality Council. All approved plans shall be submitted as~~

SIP revisions.

~~(1) Compliance with 252:100-39-49(a) shall be accomplished by use of control equipment which can demonstrate an 85 percent reduction in the VOC released from each process gas stream, e.g. 90 percent capture efficiency multiplied by 95 percent destruction efficiency equals 85.5 percent system efficiency.~~

~~(2) Exemptions to the limits listed in 252:100-39-49(a)(1) may be allowed for any process gas stream which does not exceed six tons per year actual emissions based on 6240 hours per year. However, once this limit is exceeded, controls must be put in place and maintained at any operating level.~~

~~(b) Demonstration of compliance. The Executive Director may require the owner/operator of a source to demonstrate at his expense, compliance with the prescribed emissions limits. The testing shall be accomplished using the appropriate EPA test method or methods, these include methods 1-4, 18-25, 25A, 25B and 40 CFR 60.444. Initial compliance testing shall be accomplished within 180 days of the applicable compliance date.~~

~~(c) Testing. Testing for the alternate emissions plan shall be conducted by the owner/operator at his expense and shall demonstrate compliance with the emission limits contained in the approved plan.~~

~~(d) Recordkeeping. The owner/operator of a facility subject to this Section shall submit to the Executive Director upon written request reports detailing specific VOC sources, the quantity of solvents used during specific months, a description of the solvent used, control equipment efficiencies, equipment downtime and any other information pertinent to the calculation of VOC emissions from the facility. The owner/operator must also maintain records which detail the maintenance performed on all control equipment as well as a record of the downtime with the reason for each occurrence. Such records shall be maintained by the source for a minimum of two years. (252:100-39-49, Effective February 12, 1990)~~

(a) Applicability.

(1) This Section applies to any process gas stream with actual VOC emissions that exceed six tons per year based on 6,240 hours of operation per year.

(2) Once the limit in 242:100-39-49(a)(1) is exceeded, the controls required in 252:100-39-49(b) must be put in place and maintained and used at any operating level.

(b) Standards. Affected facilities shall limit emissions of VOC from fiberglass manufacturing by use of control equipment which can demonstrate an 85 percent reduction in the VOC released from each process stream (e.g. 90 percent capture efficiency multiplied by 95 percent destruction efficiency equals 85.5 percent system efficiency).

(c) Compliance. All affected facilities must comply with one of the following.

(1) Meet the requirements of 252:100-39-49(b) by February 13, 1991.

(2) Have an approved plan for the reduction of VOC emissions as required by 252:100-39-49(b) by February 13, 1991.

(A) The plan shall be submitted by August 13, 1990, and shall:

- (i) detail those emissions which will be controlled;
- (ii) detail the means by which control will be achieved;
- and,
- (iii) demonstrate that compliance will be achieved by February 13, 1992.

(B) The Air Quality Council shall have approval authority for the plans.

(C) All approved plans shall be submitted to the EPA as SIP revisions.

(d) Demonstration of compliance.

(1) The Division Director may require at the expense of the owner or operator a demonstration of compliance with the requirements of 252:100-39-49(b).

(2) The testing shall be accomplished using the appropriate EPA test method or methods. These include methods 1-4, 18-25, 25A, 25B and 40 CFR 60.444.

(3) Initial compliance testing shall be accomplished within 180 days of the applicable compliance date.

(4) Testing for the emissions plan described in 252:100-39-49(c)(2) shall be conducted at the expense of the owner or operator at his expense and shall demonstrate compliance with the emission limits contained in the approved plan.

(e) Recordkeeping.

(1) The owner or operator of a facility subject to this Section shall submit to the Division Director upon written request, reports that include:

- (A) details of specific VOC sources;
- (B) the quantity of VOC used during specific months;
- (C) a description of the VOC used;
- (D) control equipment efficiencies;
- (E) details of maintenance performed on all control equipment;
- (F) equipment downtime; and,
- (G) any other information pertinent to the calculation of VOC emissions from the facility.

(2) The records required in 252:100-39-49(e)(1) shall be maintained by the source for at least two years. [252:100-390-49, Effective February 12, 1990]

Additional Comments

CHAPTER 100. AIR POLLUTION CONTROL
SUBCHAPTER 39. EMISSION OF ORGANIC MATERIALS
IN NONATTAINMENT AREAS

EXECUTIVE SUMMARY: The proposed revisions to 252:100-39, Emission of Organic Materials in Nonattainment Areas, include the following non-substantive changes: 1) simplification and clarification of language, 2) correction of typographical errors, 3) removal of redundant language, and 4) reformatting. The proposed revisions also include the following substantive changes: 1) the redefinition of the term "volatile organic compound (VOC)" and the substitution of this term for "organic materials", "organic solvents", "volatile organic solvent (VOS)" and in some instances "hydrocarbons"; 2) the correction of the placement of "prior to lease custody transfer" in 252:100-39-30(b); 3) the addition of 252:100-39-30(b)(3) and (4), exempting storage vessels subject to the equipment standards in 40 CFR 60 Subparts Ka or Kb and/or the equipment standards in 40 CFR 63 Subparts CC or G from the requirements of 252:100-39-30; 4) the addition of a minimum annual throughput of 120,000 gallons and a minimum storage capacity of 10,000 gallons for determining applicability of 252:100-39-41(c); and 5) the clarification of the definition of "aerospace" in 252:100-39-47(b)(1), adding the words "rework or repair".

DIFFERENCES FROM ANALOGOUS FEDERAL RULES: None.

ENVIRONMENTAL BENEFIT STATEMENT: Not required because these rules are not more stringent than corresponding federal rules.

SUMMARY OF COMMENTS AND RESPONSES:

COMMENT: A letter from Dow Corning supports the proposed revisions to the definition of VOC that will exempt methylated siloxanes from being considered a VOC. EPA has determined that methylated siloxanes have negligible photochemical reactivity. This allows the use of methylated siloxanes as replacement for VOCs in manufacturing operations.

COMMENT: A letter written on behalf of Eastman Chemical Company supports the revision of the definition of VOC which results in methyl acetate, a substance with negligible photochemical reactivity, not being considered a VOC.

COMMENT: In 252:100-39-1 "to prevent the formation of ozone" should be replaced by "to reduce the ormatation of ozone".

RESPONSE: Staff agrees and this change has been made.

COMMENT: The definitions of "refinery" and "refinery process unit" in 252:100-39-2 are redundant because 40 CFR 63, Subpart CC defines the same terms.

RESPONSE: The definition of "refinery" has been deleted since the term used in Subchapter 39 is "petroleum refinery". However, staff feels that the definition of "refinery unit" should remain since this term continues to be used in Subchapter 39 and does not conflict with the definition in Subpart CC.

COMMENT: 252:100-39-15 is redundant since EPA promulgated 40 CFR Part 63, Subpart CC, that applies to refineries which are major sources of HAPs. All refineries in Oklahoma became major sources of HAPs after the compliance date of August 18, 1998, and are, therefore, subject to Subpart CC. Subpart CC is more stringent and covers all the same sources as Section 15 which should be removed.

RESPONSE: Staff does not agree. 252:100-39-15 applies to leaks of any VOC, unlike 40 CFR 63.648 (Subpart CC) which sets leak standards for equipment that either contains or contacts a liquid or gas that is in organic HAPs service (has at least 5 percent by weight of total HAPs).

COMMENT: 252:100-39-15(f)(3) refers to monitoring any leak in a pump seal, but does not require that the leak be fixed.

RESPONSE: 252:100-39-15(c)(1)(C) requires leaks to be fixed as soon as possible, but no later than 15 days after the leak is found.

COMMENT: 252:100-39-16 is redundant. 40 CFR 63, Subpart CC contains a provision for minimizing emissions during startup, shutdown, and malfunction of refinery units, referred to as the SSMP plan which is required by the General Provisions of Part 63 and Subpart CC. Recommend removal of Section 16.

RESPONSE: Staff does not agree that the requirements for turnaround in 252:100-39-16 are redundant. The rule applies to all VOCs, not just HAPs, and its requirements are more specific than those in 40 CFR 63.

COMMENT: 40 CFR 63, Subpart CC covers sources covered by 252:100-39-17 regarding petroleum refinery vacuum producing systems, therefore, Section 17 is redundant and should be removed.

RESPONSE: Staff does not agree. Staff is not certain that 40 CFR 63 Subpart CC covers everything covered by 252:100-39-17, which covers the emissions of all VOCs from vacuum producing systems. These systems are covered as miscellaneous process vents in Subpart CC. The requirements in 40 CFR 63.643 are for Group 1 miscellaneous process vents. These are limited to vents for which the total organic HAP concentration prior to discharge to the atmosphere is greater than or equal to 20 ppmv and total VOC emissions are equal to or greater than 33 kilograms/day for existing sources and 6.8 kilograms/day for new sources. 252:100-39-17 has no such limitations.

COMMENT: 40 CFR 63, Subpart CC covers the sources covered by 252:100-39-18 in refineries, therefore, Section 18 is redundant and should be removed.

RESPONSE: Staff does not agree. 40 CFR 63.647 requires each owner or operator of a Group 1 wastewater stream to comply with 61.340 through 61.355 of 40 CFR Part 61, Subpart FF. Group 1 wastewater stream is defined as a wastewater stream at a refinery with a total annual benzene loading of 10 megagrams/year or greater and a flow

rate of 0.02 liters/minute or greater, a benzene concentration of 10 ppmw or greater, and a stream that is not exempted from control requirements under 40 CFR Part 61, Subpart FF. Thus, it does not appear that Subparts CC and FF cover all the equipment that 252:10-39-18 does.

COMMENT: 252:100-39-30 is redundant in those cases when a source is also subject to NSPS 40 CFR 60, Subparts K, Ka, or Kb or 40 CFR 63, Subparts CC or RR. Recommend exempting those tanks subject to federal rule, which is as stringent or more stringent than Section 30, from the requirements of Section 30.

RESPONSE: Staff agrees and proposes the addition of 252:100-39-30(b)(3) and (4) exempting vessels subject to the equipment standards of 40 CFR 60, Subparts Ka or Kb or to 40 CFR 63, Subparts CC or G from the requirements of Section 30.

COMMENT: EPA commented that "...and remain liquid at normal operating conditions" in the definition of "condensate" found in 252:100-39-30(a)(1) should be changed to "...and remain liquid at standard conditions".

RESPONSE: Staff agrees and this change has been made. Research indicates that the current definition is identical to the EPA definition found in 40 CFR 60, Subpart K, except for the use of "normal operating conditions" instead of "standard conditions".

COMMENT: Where did the vessel size limits and pressure in 252:100-39-30(b) originate?

RESPONSE: These limits were taken from an EPA Control Techniques Guidance (CTG) "Control of Volatile Organic Emissions from Petroleum Liquid Storage in External Floating Roof Tanks", EPA-450/2-78-047. This CTG was designed to help states draft rules to bring nonattainment areas into attainment with NAAQS.

COMMENT: EPA commented that "...per foot of tank diameter" in 252:100-39-42(c)(1)(B) should be changed to "...per foot of vessel diameter" for consistency.

RESPONSE: Staff could not locate this language in 252:100-42(c)(1)(B). However, a word search located such language in 252:100-39-30(c)(1)(B)(iii). "...per foot of tank diameter" has been replaced with ".../ft of vessel diameter".

COMMENT: Exemptions should be added for those sources subject to 252:100-39-41 that are also subject to one of the new MACT rules in 40 CFR 63 or NSPS 40 CFR 60, Subpart XX.

RESPONSE: Staff does not agree. It is not immediately evident that the requirements in the new MACT standards in 40 CFR 63 or the NSPS in 40 CFR 60 Subpart XX are as stringent as Section 41.

COMMENT: What does "work" mean in 252:100-39-42(b)(2)(A)?

RESPONSE: Staff feels that this term means the degreasing of metal parts and has replaced "processing work" with "degreasing parts".

COMMENT: EPA commented that "...m²/min per m²" found in 252:100-39-42(c)(2)(A) should be corrected to read "...m³/min per m²".

RESPONSE: Staff has changed "...m²/min per m²" to "...m³/min/m²".

COMMENT: How were the numbers in 252:100-39-46(d) derived and why is the least stringent limitation applied?

RESPONSE: These limits represent a compromise worked out between the industries involved, the State, the Air Quality Council, and EPA that was acceptable to all parties. The least stringent limitation applies because often when a coating falls into more than one category, it will by its nature be unable to meet the most stringent limit. For example a clear coat may be air or forced air dried, but could not meet the limitation for other coatings that are found only in the air or forced air dried category.

COMMENT: The separation in the letters in the word "an" in 252:100-39-46(j)(1) and "the" in 252:100-39-46(j)(2) should be corrected.

RESPONSE: This has been corrected.

COMMENT: EPA commented that "owner/operator" found in 252:100-39-46(j)(1) should be changed to "owner and/or operator" for consistency.

RESPONSE: Staff agrees and this change has been made.

COMMENT: In the current definition of "aerospace" found in 252:100-39-47(b), the terminology "design and manufacture" is arbitrary in definition with regard to the nature and frequency of the work performed and the specific functions to which it may or may not apply. A clarification of the terminology that would either 1) reflect that found in the federal regulation under "affected facility" for applicability to 40 CFR 63, Subpart GG, or 2) explicitly exempt facilities that are engaged in routine maintenance and rework of aerospace vehicles would be helpful.

RESPONSE: Research indicates that the term "aerospace" was intended to and does covers rework. Staff has added language to the definition of "aerospace" to make clear that it does include rework.

COMMENT: Where was the presumptive norm limit in 252:100-39-47(d)(7)(i) found?

RESPONSE: This limit is from the CTG on coating of metal parts and products.

COMMENT: Should "material data sheet" in 252:100-39-47(e)(1)(A) be

"material safety data sheet"?

RESPONSE: Research indicates that it should be "material safety data sheet" and this change has been made.

COMMENT: How were the limits in 252:100-39-49(a) determined?

RESPONSE: At the time this section was added to the rule, there was no CTG and the State had no standard for manufacture of fiberglass reinforced plastic products. The limits were worked out by the State, the Air Quality Council, and the industry involved and approved by EPA Regional Office and Headquarters as a RACT equivalent rule.

RESPONSE TO WRITTEN COMMENTS FROM INDUSTRY AND THE PUBLIC
SUBCHAPTER 39

Below is a summation of written comments along with staff responses regarding the proposed revisions to Subchapter 39. This includes only those comments that were received prior to the mail-out of the Air Quality Council packets for the October 20, 1998 meeting.

EPA LETTER (received by FAX on 8/14/98, signed by Thomas H. Diggs, Region 6)

1. COMMENT: 252:100-39-30(a)(1). Change "...and remain liquid at normal operating conditions" in the definition of condensate to "...and remains liquid at standard conditions."

RESPONSE: Normal operating conditions and standards conditions are not necessarily the same thing. Additional research shows that this definition is identical to the EPA definition found in 40 CFR 60 Subpart K except for the use of "normal operating conditions" instead of "standard conditions." Staff will recommend this change at the October 20, 1998 Air Quality Council meeting.

2. COMMENT: 252:100-39-42(c)(1)(B). Change "...per foot of tank diameter" to "...per foot of vessel diameter" for consistency.

RESPONSE: Staff could not locate this language in 252:100-39-42(c)(1)(B). A word search located such language in 252:100-39-30(c)(1)(B)(iii). Staff will recommend that "tank" be replaced with "vessel" at the October 20, 1998, Air Quality Council meeting.

3. COMMENT: 252:100-39-42(c)(2)(A). Change "...m²/min per m²" to "...m³/min per m²".

RESPONSE: Staff concurs. This change to 252:100-39-42(c)(2)(A)(ii) was inadvertently omitted from the revisions to Subchapter 39 that were available to the public on September 15, 1998. This change will be recommended to the Council at the October Council meeting.

4. COMMENT: 252:100-39-46(j)(1) (*on page 30*). Change "owner/operator?" to "owner or operator" for consistency.

RESPONSE: Staff Concurs. This change was inadvertently omitted from the revisions to Subchapter 39 that were available to the public on September 15, 1998. Staff will recommend this change at the October Air Quality Council meeting.

DOW CORNING LETTER (dated 8/14/98, received 8/14/98, signed by Michael E. Thelen)

5. COMMENT; Dow Corning Corporation supports the proposed revisions to the definition of VOC to exempt methylated siloxanes due to its low photochemical

reactivity. This allows the use of methylated siloxanes as replacement for VOCs in manufacturing operations.

RESPONSE: The Staff appreciates Dow Corning Corporations support.

KILPATRICK STOCKTON LLP LETTER (dated August 13, 1998, received august 18, 1998, written on behalf of Eastman chemical Company and signed by W. Clark Jordan.)

6 COMMENT: A letter supporting the revision of the definition of VOC which results in methyl acetate not being considered a VOC.

RESPONSE: Staff appreciates the support.

**CHAPTER 100. AIR POLLUTION CONTROL
SUBCHAPTER 39. EMISSIONS OF ORGANIC MATERIALS IN
NONATTAINMENT AREAS**

SUMMARY OF COMMENTS AND RESPONSES

Air Quality Council Meeting: August 18, 1998

Comment Period: July 15, 1998 - August 18, 1998

Comment:

EPA suggested that "...and remain liquid at normal operating conditions" in the definition of condensate located in 252:100-39-30(a)(1) be changed to "...and remains liquid at standard conditions."

Response:

Staff agrees. Although normal operating conditions and standards conditions are not necessarily the same thing, research shows that this definition is identical to the EPA definition found in 40 CFR 60 Subpart K except for the use of "normal operating conditions" instead of "standard conditions." This change has been made.

Comment:

EPA suggested that "...per foot of tank diameter" located in 252:100-39-42(c)(1)(B). be changed to "...per foot of vessel diameter" for consistency.

Response:

Staff could not locate this language in 252:100-39-42(c)(1)(B). A word search located such language in 252:100-39-30(c)(1)(B)(iii). Staff agrees with the comment and the change has been made.

Comment:

EPA suggested that "...m²/min per m²" located in that 252:100-39-42(c)(2)(A) be changed to "...m³/min per m²".

Response:

Staff concurs and this change has been made.

Comment:

EPA suggested that "owner/operator" located in 252:100-39-46(j)(1) be changed to "owner or operator" for consistency.

Response:

Staff agrees and this change has been made.

Comment:

Dow Corning Corporation supports the proposed revisions to the definition of VOC to exempt methylated siloxanes due to its low photochemical reactivity. This allows the use of methylated siloxanes as replacement for VOCs in manufacturing operations.

Comment:

Response:

This limit is from the CTG on coating of metal parts and products.

Comment:

Should "material data sheet" in 252:100-39-47(e)(A) be "material safety data sheet"?

Response:

Staff could find no reference to this in Council records and is therefore not certain that material safety data sheets was meant.

Comment:

How were the limits in 252:100-39-49(a) determined?

Response:

Staff has been unable to locate any explanation for these limits in the Council records.

Comment:

In the current definition of "aerospace" found in 252:100-39-47(b), the terminology "design and manufacture" is arbitrary in definition with regard to the nature and frequency of the work performed and the specific functions that it may or may not apply to. A clarification of the terminology that would either 1) reflect that found in the federal regulation under "affected facility" for applicability to 40 CFR 63, Subpart GG, or 2) explicitly exempt facilities that are engaged in routine maintenance and rework of aerospace vehicles would be helpful.

Response:

Research indicates that the term "aerospace" covers rework. Staff has added language to the definition of "aerospace" to make clear that it does include rework.

Air Quality Council Meeting: December 15, 1998

Comment Period: October 16, 1998 - December 15, 1998

Comment:

The definitions of "refinery" and "refinery process unit" in 252:100-39-2 are redundant to EPA's Subpart CC MACT rules, which have definitions of the same sources.

Response:

Staff does not agree. These definitions are meant for use with Subchapter 39 and are not necessarily the same as those included in 40 CFR 63, Subpart CC. Staff was unable to locate a definition of "refinery" in Subpart CC.

Comment:

252:10-39-15 is entirely redundant since EPA promulgated 40 CFR Part 63, Subpart CC, which applies to refineries, which are major sources of HAPs. All refineries are major sources of HAPs when the compliance date of August 18, 1998 passed, therefore all refineries are subject to Subpart CC. Subpart CC is more stringent and covers all the same sources as 39-15. Therefore 39-15 no longer serves any purpose and can only confuse

sources, the public and regulators who are responsible for inspections in Oklahoma. Recommend removal of 39-15.

Response:

Staff does not agree. 252:100-39-15 applies to leaks of any VOC, unlike 40 CFR 63.648 (Subpart CC) which sets equipment leak standards for equipment that either contains or contacts a liquid or gas that is in organic HAPs service (has at least 5 percent by weight of total HAPs).

Comment:

252:100-39-16 is redundant. Subpart CC also contains a provision for minimizing emissions during startup, shutdown and malfunction of refinery units, referred to the SSMP plan required by the General Provisions of Part 63 and Subpart CC. Recommend removal of 39-16.

Response:

Staff does not agree that the requirements for turnaround in 252:100-39-16 are redundant. The rule applies to all VOCs, not just HAPs, and its requirements are more specific than those in the NESHAP.

Comment:

252:100-39-17. Petroleum refinery vacuum producing system. Subpart CC already covers the sources covered by 252:100-39-17, therefore, this regulation is now redundant and should be removed.

Response:

Staff does not agree. Staff is not certain that 40 CFR 63 Subpart CC covers everything covered by 252:100-39-17. 252:100-39-17 covers the emissions of all VOCs from vacuum producing systems. These systems are covered as miscellaneous process vents in Subpart CC. The requirements in 40 CFR 63.643 are for Group 1 miscellaneous process vents. Group 1 miscellaneous process vents are those for which the total organic HAP concentration at the outlet of the final recovery device (if any) prior to discharge to the atmosphere is greater than or equal to 20 ppm by volume and total VOC emissions are equal to or greater than 33 kilograms/day for existing sources and 6.8 kilograms/day for new sources

Comment:

Subpart CC covers the sources covered by 252:100-39-18 in refineries, therefore this is redundant. Recommend removal of 39-18.

Response:

Staff does not agree. 40 CFR 63.647 requires each owner or operator of a Group 1 wastewater stream to comply with 61.340 through 61.355 of 40 CFR Part 61, Subpart FF. Group 1 wastewater stream is defined as a wastewater stream at a refinery with a total annual benzene loading of 10 megagrams/year or greater and a flow rate of 0.02 liters/minute or greater, a benzene concentration of 10 ppm by weight or greater, and a

stream that is not exempted from control requirements under 40 CFR Part 61, Subpart FF. Thus, it does not appear that Subparts CC and FF cover all the equipment that 252:100-39-18 does.

Comment:

252:100-39-30 covers existing as well as new sources, therefore, it is not redundant except in those cases when a source is also subject to NSPS K, Ka, or Kb or one of the new MACT rules (Refinery Subpart CC, Gasoline Distribution Subpart RR, or Marine loading Subpart Y (if the Port of Catoosa is covered)). An exemption should be written for those sources. Recommend exempting those tanks also subject to federal rule, which is more stringent, or equally as stringent.

Response:

252:100-39-30 covers storage of petroleum liquid in vessels with external floating roofs with a design capacity greater than 40,000 gallons. Petroleum liquid is defined as crude oil, condensate, and any finished or intermediate liquid product manufactured or extracted in a petroleum refinery. However, the provisions of 40 CFR 63.646 apply to Group 1 storage vessels, which are defined as (1) a storage vessel at an existing source that has a design capacity equal to or greater than 177 cubic meters and stored-liquid maximum true vapor pressure equal to or greater than 10.4 kPa and stored-liquid annual average true vapor pressure equal to or greater than 8.3 kPa and an annual average HAP liquid concentration greater than 4 percent by weight total organic HAP; or (2) a storage vessel at a new-source that has a design storage capacity equal to or greater than 151 cubic meters and stored-liquid maximum true vapor pressure greater than or equal to 3.4 kPa and annual average HAPs liquid concentration greater than 2 percent by weight total organic HAP; or (3) a storage vessel at a new source that has a design storage capacity equal to or greater than 76 cubic meters and less than 151 cubic meters and stored-liquid maximum true vapor pressure greater than or equal to 77 kPa and an annual average HAP liquid concentration greater than 2 percent by weight total organic HAP. Thus, it does not appear that all the storage vessels covered by 252:100-39-30 are covered by Subpart CC.

Comment:

Similar to 39-30 exemptions should be added for those sources subject to 252:100-39-41 that are also subject to one of the new MACT rules or NSPS Subpart XX.

Response:

Staff's response is similar to that for 39-30. For the same reasons, it is not evident that all the storage vessels covered by 252:100-39-30 are covered by Subpart CC. The loading facilities and transport/delivery trucks covered by 252:100-39-41 are not limited to gasoline as Subpart XX is.

**CHAPTER 100. AIR POLLUTION CONTROL
SUBCHAPTER 39. EMISSIONS OF ORGANIC MATERIALS IN
NONATTAINMENT AREAS**

SUMMARY OF COMMENTS AND RESPONSES

Air Quality Council Meeting: August 18, 1998

Comment Period: July 15, 1998 - August 18, 1998

Comment:

EPA commented that "...and remain liquid at normal operating conditions" in the definition of "condensate" located in 252:100-39-30(a) should be changed to "...and remains liquid at standard conditions."

Response:

Staff agrees and this change has been made. Research indicates that the current definition is identical to the EPA definition found in 40 CFR 60, Subpart K, except for the use of "normal operating conditions" instead of "standard conditions."

Comment:

EPA commented that "(...per foot of tank diameter)" located in 252:100-39-42(c)(1)(B). should be changed to "(...per foot of vessel diameter)" for consistency.

Response:

Staff could not locate this language in 252:100-39-42(c)(1)(B). A word search located such language in 252:100-39-30(c)(1)(B)(iii). "(...per foot of tank diameter)" has been replaced with "(.../ft of vessel diameter)".

Comment:

EPA commented that "(...m²/min per m²)" located in that 252:100-39-42(c)(2)(A) should be corrected to "(...m³/min per m²)".

Response:

Staff agrees and "(...m²/min per m²)" has been changed to "(m³/min/m²)".

Comment:

EPA commented that "owner/operator" located in 252:100-39-46(j)(1) should be changed to "owner or operator" for consistency.

Response:

Staff agrees and this change has been made.

Comment:

Dow Corning Corporation supports the proposed revisions to the definition of VOC to exempt methylated siloxanes due to its low photochemical reactivity. This allows the use of methylated siloxanes as replacement for VOCs in manufacturing operations.

Comment:

A letter written on behalf of Eastman Chemical Company supported the revision of the definition of VOC which results in methyl acetate not being considered a VOC.

Air Quality Council Meeting: October 20, 1998

Comment Period: September 15, 1998 - October 20, 1998

Comment:

A comment letter from EPA, Region 6 supported the adoption of the proposed changes to Subchapter 39.

Comment:

252:100-39-15(f)(3) refers to monitoring any leak in a pump seal, but does not require that the leak be fixed.

Response:

252:100-39-15(c)(1)(C) requires leaks to be fixed as soon as possible, but no later than 15 days after the leak is found.

Comment:

Where did the vessel size limits and pressure in 252:100-39-30(b) and originate?

Response:

These limits were taken from an EPA Control Techniques Guidance (CTG) "Control of Volatile Organic Emissions from Petroleum Liquid Storage in External Floating Roof Tanks," EPA 450/2-78-047. This CTG was designed to help states draft rules to bring nonattainment areas into attainment with the NAAQS.

Comment:

What does "work" mean in 252:100-39-42(b)(2)(A)?

Response:

Staff feels this term means the degreasing of metal parts and has replaced "processing work" with "degreasing parts".

Comment:

How were the numbers in 252:100-39-46(d) derived and why is the least stringent limitation applied?

Response:

These limits represent a compromise worked out between the industries involved, the State, the Air Quality Council, and EPA that was acceptable to all parties. The least stringent limitation applies because often when a coating falls into more than one category, it will by its nature be unable to meet the most stringent limit. For example a clear coat may be air or forced air dried, but could not meet the limitation for other coatings that are found only in the air or forced air dried category.

Comment:

The separation in the letters in the words "an" and "the" in 252:100-39-46(j)(1) and (2) should be corrected.

Response:

This has been done.

Comment:

Where was the presumptive norm limit in 252:100-39-47(d)(7)(i) found?

Response:

This limit is from the CTG on coating of metal parts and products.

Comment:

Should "material data sheet" in 252:100-39-47(e)(A) be "material safety data sheet"?

Response:

Research indicates that it should be "material safety data sheet" and this change has been made.

Comment:

How were the limits in 252:100-39-49(a) determined?

Response:

At the time this section was added to the rule, there was no CTG and the State had no standard for the manufacture of fiberglass reinforced plastic products. The limits were worked out between the State, the Air Quality Council, and the industry involved and approved by EPA Regional Office and Headquarters as a RACT equivalent rule.

Comment:

In the current definition of "aerospace" found in 252:100-39-47(b), the terminology "design and manufacture" is arbitrary in definition with regard to the nature and frequency of the work performed and the specific functions to which it may or may not apply. A clarification of the terminology that would either 1) reflect that found in the federal regulation under "affected facility" for applicability to 40 CFR 63, Subpart GG, or 2) explicitly exempt facilities that are engaged in routine maintenance and rework of aerospace vehicles would be helpful.

Response:

Research indicates that the term "aerospace" was intended to and does covers rework. Staff has added language to the definition of "aerospace" to make clear that it does include rework.

Air Quality Council Meeting: December 15, 1998

Comment Period: October 16, 1998 - December 15, 1998

Comment:

The definitions of "refinery" and "refinery process unit" in 252:100-39-2 are redundant because 40 CFR 63, Subpart CC defines the same terms.

Response:

Staff does not agree. Staff was unable to find definitions of "refinery" or "refinery unit" in Subpart CC. The definition of "refinery" has been deleted since the term used in

Subchapter 39 is "petroleum refinery". However, staff feels that the definition of "refinery unit" should remain since this term continues to be used in Subchapter 39.

Comment:

252:10-39-15 is redundant since EPA promulgated 40 CFR Part 63, Subpart CC, that applies to refineries, which are major sources of HAPs. All refineries in Oklahoma became major sources of HAPs after the compliance date of August 18, 1998, and are, therefore, subject to Subpart CC. Subpart CC is more stringent and covers all the same sources as Section 15 which should be removed..

Response:

Staff does not agree. 252:100-39-15 applies to leaks of any VOC, unlike 40 CFR 63.648 (Subpart CC) which sets leak standards for equipment that either contains or contacts a liquid or gas that is in organic HAPs service (has at least 5 percent by weight of total HAPs).

Comment:

252:100-39-16 is redundant. 40 CFR 63, Subpart CC contains a provision for minimizing emissions during startup, shutdown and malfunction of refinery units, referred to the SSMP plan which is required by the General Provisions of Part 63 and Subpart CC. Recommend removal of Section 16.

Response:

Staff does not agree that the requirements for turnaround in 252:100-39-16 are redundant. The rule applies to all VOCs, not just HAPs, and its requirements are more specific than those in 40 CFR 63.

Comment:

40 CFR 63, Subpart CC covers the sources covered by 252:100-39-17 regarding petroleum refinery vacuum producing systems, therefore, Section 17 is redundant and should be removed.

Response:

Staff does not agree. Staff is not certain that 40 CFR 63, Subpart CC covers everything covered by 252:100-39-17, which covers the emissions of all VOCs from vacuum producing systems. These systems are covered as miscellaneous process vents in Subpart CC. The requirements in 40 CFR 63.643 are for Group 1 miscellaneous process vents. These are limited to vents for which the total organic HAP concentration prior to discharge to the atmosphere is greater than or equal to 20 ppmv and total VOC emissions are equal to or greater than 33 kilograms/day for existing sources and 6.8 kilograms/day for new sources. 252:100-39-17 has no such limitations.

Comment:

40 CFR 63, Subpart CC covers the sources covered by 252:100-39-18 in refineries, therefore Section 18 is redundant and should be removed.

Response:

Staff does not agree. 40 CFR 63.647 requires each owner or operator of a Group 1 wastewater stream to comply with 61.340 through 61.355 of 40 CFR Part 61, Subpart FF.

Group 1 wastewater stream is defined as a wastewater stream at a refinery with a total annual benzene loading of 10 megagrams/year or greater and a flow rate of 0.02 liters/minute or greater, a benzene concentration of 10 ppm by weight or greater, and a stream that is not exempted from control requirements under 40 CFR Part 61, Subpart FF. Thus, it does not appear that Subparts CC and FF cover all the equipment that 252:100-39-18 does.

Comment:

252:100-39-30 is redundant in those cases when a source is also subject to NSPS 40 CFR 60, Subparts K, Ka, or Kb or 40 CFR 63, Subparts CC or RR. Recommend exempting those tanks subject to federal rule, which is as stringent as or more stringent than Section 30 from the requirements of Section 30.

Response:

Staff agrees and proposes to add 252:100-39-30(b)(3) and (4) exempting vessels subject to the equipment standards of 40 CFR 60, Subparts Ka or Kb and 40 CFR 63, Subparts CC or G from the requirements of Section 30.

Comment:

Exemptions should be added for those sources subject to 252:100-39-41 that are also subject to one of the new MACT rules in 40 CFR 63 or NSPS 40 CFR 60, Subpart XX.

Response:

Staff does not agree. It is not immediately evident that the requirements in the new MACT standards in 40 CFR 63 or the NSPS in 40 CFR 60, Subpart XX are as stringent as Section 41.

**COMMENTS ON SUBCHAPTER 39 COPIED FROM THE COUNCIL PACKETS
OF MS. MYERS AND DR. GROSZ AT THE
DECEMBER 15, 1998 AIR QUALITY COUNCIL MEETING**

1. **COMMENT:** 252:100-39-15(a) In the definition of "leaking component" is the 10,000 ppm by weight or volume?

RESPONSE: Although the definition of a leak in 40 CFR 60, Subpart VV does not indicate if the ppm is by weight or by volume, 40 CFR 61, Subpart BB for benzene defines a leak in terms of ppmv and Method 21 examples use ppmv. Staff feels that this should be ppm by volume and has changed "ppm" to "ppmv".

2. **COMMENT:** 252:100-39-17(b) This is awkward.

RESPONSE: Staff has rewritten Subsection (b) in an attempt to make the sentence less awkward.

3. **COMMENT:** 252:100-39-30(c)(1)(B)(iii) There was a question mark by (iii).

RESPONSE: Staff has rewritten this in an effort to clarify the meaning.

4. **COMMENT:** 252:100-39-40(b) Prepare or apply to what?

RESPONSE: The requirements apply anytime cutback asphalt is prepared regardless of the reason and the requirements apply any time cutback asphalt is applied to any substrate. Cutback asphalt is often used in paving of roads.

5. **COMMENT:** 252:100-39-41(a)(2) "80 mg/liter" was circled and question marks appeared in the margin beside this paragraph..

RESPONSE: This limit was added in response to an EPA comment included in an enclosure to a letter from Thomas H. Diggs dated September 16, 1988. Staff has changed "80 mg/liter" to "80 mg/l" and enclosed it in parentheses and has added the English counterpart in parentheses for consistency in units. Upon further consideration staff has reinstated the word "transferred" which was struck out..

6. **COMMENT:** 252:100-39-41(c)(6) Should "loads" be "transfers"?

RESPONSE: Staff feels that "loads" should remain since subsection (c) is titled "Loading of VOCs."

7. **COMMENT:** 252:100-39-41(e)(3) Is "5000 ppm" by weight or by volume?

RESPONSE: See Item 1 above.

8. **COMMENT:** 252:100-39-41(e)(4)(B)(i)(I) "no avoidable" prior to "visible liquid leaks" was circled.

RESPONSE: CTG "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection systems" EPA-450/2-78-051, states "...there are to be no avoidable visible liquid leaks. Invariably there will be a few drops of liquid

from disconnection of dry breaks in liquid lines even when well maintained; these few drops should be allowed."

9. **COMMENT:** 252:39-42(a)(2)(E) Should "solid stream" be "liquid stream"?
RESPONSE: Staff agrees that inadvertently deleting "fluid" from the term "solid stream" is confusing and has revised the term to be "solid fluid stream".
10. **COMMENT:** 252:100-39-42(a)(3)(B) "heavier" should be "denser"..
RESPONSE: Staff agrees and has made this change.
11. **COMMENT:** 252:100-39-42(a)(3) "will" should be "shall".
RESPONSE: The sentence has been rewritten and "will" has been replaced by "shall".
12. **COMMENT:** 252:100-39-42(a)(4)- "will" should be "replaced" with "shall" in two places in this paragraph.
RESPONSE: Staff agrees and has made these changes.
13. **COMMENT:** 252:100-39-42(b)(1)(B), (C), and (D). "will" should be replaced with "shall".
RESPONSE: Staff agrees and has replaced "will" with "shall".
14. **COMMENT:** 252:100-39-42(b)(2) The mixing of what an owner or operator should do with those things an owner or operator should not do is confusing and the grammar may not be correct.
RESPONSE: Staff has rewritten this paragraph.
15. **COMMENT:** In 252:100-39-42(b)(2)(B)(v) (which was 252:100-39-42(b)(2)(I)) "per" should be replaced by a "/". e.g. "65 cfm per ft²" should be "65 cfm/ft²" .and "should" should be changed to "shall".
RESPONSE: Staff agrees and these changes have been made.
16. **COMMENT:** 252:100-39-42(b)(3) "will be" should be changed to "shall be".
RESPONSE: Staff agrees and this change has been made.
17. **COMMENT:** 252:100-39-42(c)(1)(A) and 252:100-39-42(c)(2)(A)(ii) As stated in item 17 above, "per" should be changed to "/".
RESPONSE: Staff agrees and the changes have been made.
19. **COMMENT:** 252:100-39-42(c)(1)(A) and (B) and 252:100-39-42(c)(2)(D) "should" should be changed to "shall".
RESPONSE: Staff agrees and the changes have been made.
20. **COMMENT:** 252:100-39-42(c)(3) "will" should be "shall".
Response: Staff agrees and "will" has been changed to "shall".

21. **COMMENT:** 252:100-39-43(b) and (d) "are to be" should be "shall be" and "will" should be "shall".

RESPONSE: These changes have been made.

22. **COMMENT:** 252:100-39-44(c)(1)(A)(i) Should the reference cited be updated to the latest edition.

RESPONSE: Research indicates that the latest edition of the cited reference is the 21st. Staff does not recommend that the edition cited be changed at this time. It was not intended that what constitutes the maximum reasonable capture should be changed with each new edition without evaluation. Staff recommends that this reference remains as is until such time as the industry and DEQ staff evaluate the new edition and recommend that the citation be updated.

23. **COMMENT:** 252:100-39-44(e)(2) At whose discretion will the certification by manufacturer be accepted instead of green tire spray analysis?

RESPONSE: At the discretion of the Division Director.

24. **COMMENT:** 252:100-39-44(e)(3) This paragraph is awkward.

RESPONSE: Staff has revised this paragraph.

25. **COMMENT:** 252:100-39-44(e)(3) "periodically" was circled.

RESPONSE: Staff assumes this was circled because it is somewhat vague. We believe that this term was used so that implementation of the rule would be flexible and case-specific. To choose a specific period of time, for example, daily calibration, would be a substantive change that would require another comment period. We have not heard of any compliance or enforcement problems with this language, and we currently have no support for another period of time.

26. **COMMENT:** 252:100-39-45(c)(3) What if there is a lengthy delay ?

RESPONSE: If the owner or operator does not repair the leaks within 3 working days after identification or if parts that are not on hand are not ordered within 3 working days and repair of leaks made no later than 3 working days following the arrival of the parts, the owner or operator is not in compliance this paragraph. The only place where a lengthy delay might occur that is not in violation of this paragraph is the amount of time it takes for the parts to arrive after they are ordered. The paragraph contains no limit on the time that may elapse between the ordering of the parts and their arrival. The time involved here is beyond the control of the owner or operator. There is no provision in the paragraph for shutting down the source because of a delay at this juncture.

27. **COMMENT:** 252:100-39-46(d) Why is the least stringent limitation used?

RESPONSE: These limits represent a compromise worked out between the industries involved, the State and EPA that was acceptable to all parties. The least stringent limitation applies because often when a coating falls into more than one category, it will by its nature be unable to meet the most stringent. For example a clear coat may

be air or forced air dried, but could not meet the limitation for other coatings that are found only in the air or forced air dried category.

28. **COMMENT:** 252:100-39-46(f) "daily weighted average basis" was circled .

RESPONSE: The use of daily weighted average is necessary because, for example, if more than one clear coat is used, the different colors of clear coat could have different pounds of VOC per gallon of coating. The number of gallons of each color of clear coat used in a day would be multiplied by the pounds of VOC per gallon for that color, the results would be added and an average taken.

29. **COMMENT:** 252:100-39-46(j)(1)(A)(i) "will" should be "can"..

RESPONSE: Staff has made this change.

30. **COMMENT:** 252:100-39-46(j)(1)(B) "may" in the second sentence was circled.

RESPONSE: Staff did not change "may" to "shall". An applicant for a plant-wide emission plan may not want to include voluntary decreases in the plan. If the plan does not need such decreases to be approved, the applicant can save those decreases for future netting purposes.

31. **COMMENT:** 252:100-39-47(d)(1)(A) Should "reasoned" be "reasonable"?

RESPONSE: Staff feels that "reasoned" is the correct term.

32. **COMMENT:** 252:100-39-47(d)(2) This paragraph is awkward.

RESPONSE: Staff has revised this paragraph.

33. **COMMENT:** 252:100-39-47(d)(5) and (7) Should "DEQ" be "AQD"?

RESPONSE: Staff feels that "DEQ" is the proper term.

34. **COMMENT:** 252:100-39-47(e)(1)(A) Should "material data sheet" be "material safety data sheet"?

RESPONSE: Staff researched this and discovered at the time this subparagraph was written, these two terms were sometimes used interchangeably. Staff has changed "material data sheet" to "material safety data sheet" for clarity.

35. **COMMENT:** 252:100-39-47(f)(1) The pronoun "his" referring to the owner or operator was circled.

RESPONSE: Staff rewrote this eliminating the necessity for the pronoun.

36. **COMMENT:** 252:100-39-49(d)(1) and (4) The pronoun "his" referring to the owner or operator was circled in these two paragraphs.

RESPONSE: Staff rewrote these two paragraphs eliminating the necessity for the pronoun.

1 PROCEEDINGS

2 MR. BYRN: This hearing is
3 convened by the Air Quality Council in
4 compliance with the Oklahoma Administrative
5 Procedures Act, Title 46 of the Code of
6 Federal Regulations, as well as the
7 Authority of Title 27A of the Oklahoma
8 Statutes. This hearing was advertised in
9 the Oklahoma Register, for the purpose of
10 receiving comments pertaining to the
11 proposed new rule, OAC 252:100-39,
12 Emissions of Organic Materials in
13 Nonattainment Areas.

14 If you wish to make a statement,
15 please complete the form at the
16 registration table. At this time I will
17 call upon Dr. Joyce Shedy.

18 DR. SHEDY: Mr. Chairman,
19 Members of the Council, ladies and
20 gentlemen, I am Joyce Shedy of the Rules
21 and Planning Unit. As stated in the
22 hearing on the proposed revisions of
23 Subchapter 37, these proposed revisions are
24 part of a rewrite wrong project that the
25 DEQ has undertaken.

26 The staff held a workshop on July
27 7th, requesting public input regarding
28 problems, inconsistencies and errors in
29 Subchapter 39. The comments from that
30 meeting have been considered in the

1 proposed revision.

2 Most of the proposed revisions are
3 changes in language, format, spelling and
4 correction of errors. These are summarized
5 in the Summary and Explanation of the
6 Proposed Revisions of Subchapter 39,
7 contained in the Council packets and
8 available at this meeting.

9 Most of the changes are not intended
10 to be substantive. However, five of the
11 proposed revisions are substantive.

12 The first one, the proposed revision
13 of the definition of "Volatile organic
14 compound (VOC)" in 252:100-39-1 on page 1
15 of the rules, and the replacement of
16 organic material, organic solvent and
17 volatile organic solvent by the term
18 volatile organic compound were discussed
19 previously in the hearing on subchapter 37.

20 The second change the staff proposes
21 to add language to 252:100-39-3 on page 2,
22 to make clear that Subchapter 39 applies
23 not only to Tulsa and Oklahoma Counties,
24 but to any other areas that may be
25 designated nonattainment for ozone in the
26 future.

27 The third change, the staff proposes
28 to add language to 252:100-39-15(d) on page
29 4, that sets a deadline of 60 days for a
30 refinery located in an area that becomes

7971

3 program. This puts a
4 time frame on the requirement for sources
5 in new nonattainment areas to submit the
6 written monitoring program and it also
7 makes it applicable in any area that
8 becomes nonattainment for ozone.

9 The fourth revision, the staff
10 proposes to correct the placement of "prior
11 to lease custody transfer" in 252:100-39-
12 30(b)(2) on page 9, by moving this phrase
13 to 252:100-39-30(b)(2)(B). This phrase was
14 located in paragraph (2) and was,
15 therefore, applicable to all the exemptions
16 listed in that paragraph. Research in the
17 Air Quality Council records and in the
18 Control Technology Guideline, Control of
19 Volatile Organic Emissions from Petroleum
20 Liquid Storage in External Floating Roof
21 Tanks, indicates that this phrase should
22 apply only to 252:100-39-30(b)(2)(B).

23 The fifth change the staff proposes
24 is to add a minimum annual throughput of
25 120,000 gallons and a minimum storage
26 capacity of 2,000 gallons to 252:100-39-
27 41(c) on page 13, for determining
28 applicability to subsection (c) which is
29 Loading of VOCs.

30 Currently there are no provisions to
include small loading facilities. Air

5

1 Quality Division has received a letter by
2 FAX on Friday, August 14th, from EPA and a
3 letter from Dow Corning on August 17th,
4 making comments. I would like to enter
5 these two letters in the hearing record.

6 Staff recommends that the rule be
7 considered again at the next Air Quality
8 Council meeting on October the 20th, 1990.

9 MR. DYER: Any questions of Dr.
10 Sheedy from the Council, or comments?

11 MR. BRANECKY: Yes. Under
12 paragraph 1, purpose. We talked about this
13 this morning, the inclusion of carbon
14 monoxide. I guess I would like to have
15 that researched a little bit and see why
16 carbon monoxide is included in that
17 sentence under former nonattainment areas.

18 DR. SHEEDY: Yes. We'll research
19 that to see if there is still any valid
20 reason --

21 MR. BRANECKY: Right.

22 DR. SHEEDY: -- to include that.
23 I believe that was originally included
24 quite some time ago.

25 MR. BRANECKY: Okay.

26 MR. DYER: Additional questions
27 or comments from the Council? From the
28 public?

29 MR. FISBACK: Joyce -- Bill
30 Fishback. Joyce, could you tell us where

6

1 you derived the source of the 120,000
2 gallons throughput, and then 2,000 gallons
3 tank size.

4 DR. SHEEDY: Well -- Barbara?

5 MS. HOFFMAN: We derived this
6 together. Well, we took it from the rule --
7 -- we added this one to the loading.

8 DR. SHEEDY: This is for the
9 loading of VOCs.

10 MS. HOFFMAN: And that minimum
11 was in the -- I think the storage section.

12 DR. SHEEDY: We kind of put it in
13 there to see what kind of comments we get
14 on that size as a cutoff.

15 MR. FISBACK: Test the water?
16 Well, most gasoline storage tanks at
17 service stations, which I assume this is
18 applicable to -- or not?

19 DR. SHEEDY: Well, I thought we
20 meant smaller.

21 MR. FISBACK: Yes. Most of
22 those -- most of those are 10,000 gallons
23 or larger underground storage tanks. Now,
24 I'm not even sure that this covers that.

25 DR. SHEEDY: I don't think it was
26 our intention to exempt them. We had been
27 told that there was some really small
28 operations where they were loading really
29 small containers. And they had to put on
30 the same kinds of controls that -- as if

7

1 they were doing large, major loading
2 operations.

3 MR. FISBACK: I mean, obviously
4 your intent here is to exempt small
5 sources.

6 DR. SHEEDY: That's right.

7 MR. FISBACK: I don't mean to be
8 critical at all. 2,000 is better than
9 zero. But I'm wondering why it should be
10 2,000 as opposed to 3,000 or 10,000. I
11 mean, I don't know the basis for that. I --
12 -- I don't know of a whole bunch of 2,000
13 gallon tanks in any application. I mean,
14 that's my question.

15 MS. MYERS: Some industrial sites
16 have 2,000 or 3,000 gallon tanks for use of
17 their company vehicles and whatever. Now
18 would that impact them?

19 DR. SHEEDY: Well, I don't think
20 we were thinking entirely of -- I didn't
21 think of just gasoline service stations. I
22 don't think it was our intention to -- for
23 big service stations to be exempted.

24 MR. FISBACK: This is
25 nonattainment areas only, correct?

26 DR. SHEEDY: Yes. This is just --
27 -- and therefore we have to be somewhat
28 careful about exempting sources that would
29 impact really negatively on the ozone
30 content -- not content, whatever that other

8

1 word is.
2 MR. FISBACK: I guess my comment
3 is, I'm not sure that 2,000 is going to do
4 anybody any good.
5 DR. SNEEDY: Well, I think that
6 is one thing we were curious to know. And
7 we had hoped to get some public comment
8 whether 2,000 would help anyone. Larry,
9 did you have a --
10 MR. BYNUM: Larry Byrum. My
11 recollection of when we were doing the
12 Stage 1 vehicle recovery rule for Tulsa, a
13 service station who doesn't go through
14 120,000 gallons per month limit is a very,
15 very small operation. Those we exempted.
16 The tank size, though, I think we were
17 looking at a little bit larger than 2,000.
18 But those records exist, and I would be
19 glad to help you try to find these.
20 DR. SNEEDY: I would appreciate
21 that, to get a better idea of --
22 MR. BYNUM: But I do know that
23 looking at the Tulsa situation and the
24 Oklahoma City situation for nonattainment,
25 that there are a lot of loading facilities
26 that load things besides gasoline in
27 smaller quantities. Well, you name it,
28 there is just a lot of them out there,
29 especially in association with the
30 aerospace industry in Tulsa.

9

1 DR. SNEEDY: I had heard that.
2 MR. BYNUM: So, there will be --
3 I guess I'm saying there will be some
4 relief at the 2,000 gallon level with what
5 you set up. But I don't know that -- I
6 think you probably need to look at that
7 size again.
8 DR. SNEEDY: If you would like to
9 help us, we would welcome that.
10 MR. BYNUM: Okay.
11 DR. SNEEDY: We'll look at that
12 size again. Barbara, did you have anything
13 additional to say about it?
14 MS. HOFFMAN: No.
15 DR. SNEEDY: Okay.
16 MR. DYKE: Any additional
17 questions of Dr. Sneed on this matter
18 today from the Council?
19 MR. CHAIRMAN: Is it your
20 recommendation that we continue this
21 hearing?
22 MR. DYKE: Yes.
23 MR. CHAIRMAN: I'll entertain the
24 motion.
25 DR. GROSS: So moved.
26 MR. BRANECKY: Second.
27 MR. CHAIRMAN: Motion has been
28 made and seconded. We will continue this
29 hearing until the October 20th meeting.
30 Any more questions or comments? If not,

10

1 Myrna, call roll.
2 MS. BRUCE: Ms. Myers?
3 MS. MYERS: Aye.
4 MS. BRUCE: Dr. Gross?
5 DR. GROSS: Aye.
6 MS. BRUCE: Mr. Kilpatrick?
7 MR. KILPATRICK: Aye.
8 MS. BRUCE: Mr. Wilson?
9 MR. WILSON: Aye.
10 MS. BRUCE: Mr. Branecky?
11 MR. BRANECKY: Aye.
12 MS. BRUCE: Ms. Slagell?
13 MS. SLAGELL: Aye.
14 MS. BRUCE: Mr. Breisch?
15 MR. BREISCH: Aye.
16 MR. CHAIRMAN: That concludes the
17 hearing portion of this meeting.

9. MR. DYKE - PROTOCOL OFFICER
10. MS. BRUCE - SECRETARY

PROCEEDINGS

MR. DYKE: The next item on the agenda, Item Number 11. This hearing was advertised in the Oklahoma Register for the purpose of receiving comments pertaining to the proposed new Rule OAC 252:100-39, Emissions of Organic Materials in Nonattainment Areas.

At this time, I will ask Dr. Joyce Sheedy to give the proposal on this new rule.

DR. SHEEDY: Mr. Chairman, Members of the Council, ladies and gentlemen, I am Joyce Sheedy of the Rules and Planning Unit. As stated in the hearing on proposed --- on Subchapter 37, the proposed revisions to Subchapter 39 are part of the Rewrite Dewrong project that the DEQ has undertaken.

They were brought to the Council the first time at the August 18th meeting. A number of changes have been made to the rule since the August 18th Council Meeting. The majority of these are insignificant and not intended to be substantive.

Simple revisions, unfortunately EPA submitted letters of comment that were received just prior to the August 18th, 1998 meeting, however, inadvertently omitted from the draft, and we feel that these are -- that these need to be made a part of the rule.

In addition to those revisions suggested by EPA, a number of minor changes for consistency of format and correction of errors have come to light, which also need to be

Christy A. Myers
Certified shorthand reporter

addressed.

The revisions to the rule at this point include only 3 substantive changes, which are the revision of the definition of "Volatile organic compounds" that we discussed in in Subchapter 37 will be identical to that revision. The staff proposes to correct the placement of the "prior to lease custody transfer" in 252:100-39-30(b)(2) on page 9. The staff also proposes to add a minimum annual throughput of 120,000 gallons and a minimum storage capacity of 10,000 gallons, which we have increased from the 2,000 gallons. This would be added to 252:100-39-41(c) on page 11, to be used for determining applicability to Subsection C, Loading of VOCs.

No new letters or comments have been received since the August Council Meeting. In light of additional changes that still need to be made to the rule, the staff recommends that this rule be continued, again, until the December meeting.

MR. DYKE: Comment or questions from the Council?

MS. MYERS: Yes, Joyce, I just want to go on record that I've asked for some kind of explanation on page 29 on the standards, for the least stringent limit versus the most stringent.

DR. SHEEDY: Page 29?

MS. MYERS: Page 29, under Part D, Standards, 39-46 D.

PROCEEDINGS

MR. DYKE: The next item on the agenda is Item Number 7, OAC 252:100-39, Emissions of Organic Materials in Nonattainment Areas Amended. Dr. Sheedy.

DR. SHEEDY: Mr. Chairman, Members of the Council, ladies and gentlemen, my name is Joyce Sheedy and I work in the Rules and Planning Unit.

The proposed revisions to Subchapter 39, Emissions of Organic Materials in Nonattainment Areas, were brought to the Council for the first time on August 18th, and again on October 20th.

The proposed revisions primarily simplify and clarify language and correct grammar and format without involving substantive changes. There were three substantive changes proposed, all of which were included in the proposed rule presented in the October Council meeting. A number of changes have been made to the rule following the October 20 meeting. None of these changes were intended to be substantive. The Council packet includes a list of the revisions that have been made after October 20th, as well as a summary of written comments received and staff responses to those comments.

Letters of comments have been received from EPO and from EPA, Region 6 since the October Council meeting. The EPO comments and the staff responses are summarized in the Council packet and the material available to the public on this table.

Christy A. Myers
Certified shorthand reporter

The EPA letter was dated December 10th, and mainly supports the adoption of the proposed changes to Subchapter 39. These letters will be made part of the hearing record. Because there remain unresolved issues regarding redundancy of some of the requirements contained in Part 3, regarding the petroleum refinery operations, the staff recommends that the rule be considered again at the next Air Quality Council meeting in February of 1999.

MR. DYKE: Questions and comments from the Council? Is there anyone from the public wishing to make a statement? Any additional questions or comments from the Council?

MR. BREISCH: What's the Council's pleasure on this?

MR. BRANECKY: I move that we continue this until February, our February meeting.

MR. MYERS: I second it.

MR. BREISCH: I've got a motion and a second to continue this to our regular meeting in February. Any further comments, questions? If not, Myrna, call the roll.

MS. BRUCE: Dr. Canter.

DR. CANTER: Aye.

MS. BRUCE: Ms. Myers.

- 9. MS. MYRNA BRUCE - SECRETARY
- 10. MR. EDDIE TERRILL - DIRECTOR

1 this morning's briefing, it was requested
 2 that "prevent" be changed to "reduce" in
 3 252:100-39-1 on page 1. The staff agrees
 4 that change be made.
 5 The majority of the proposed
 6 revisions to Subchapter 39 are to simplify
 7 and clarify language and to correct grammar
 8 and format, without involving substantive
 9 changes. A number of changes were made to
 10 the rule following the December 15, 1998,
 11 Council meeting. Most of these changes are
 12 minor nonsubstantive changes consisting of
 13 replacing "will" and "should" with "shall"
 14 and "inch" with "i-n period" (in.),
 15 "gallons" with "g-a-l", and "liters" with
 16 "l". Some portions of the rule -- I'm
 17 sorry.
 18 The staff added a definition of
 19 "drilling or production facility" to
 20 252:100-39-30(a) on page 8. This
 21 definition is essentially identical to that
 22 in 40 CFR 60, Subpart K.
 23 Staff revised the definition of
 24 "aerospace" in 252:100-39-47(b) on page 33,
 25 to make clear that it does include rework.

PROCEEDINGS

MR. TERRILL: The next item on
 the agenda for this hearing is Item 6, OAC
 252:100-39, Emissions of Organic Materials
 in Nonattainment Areas. And I'll call upon
 Dr. Joyce Sheedy to make the staff
 presentation on this proposed rule.

DR. SHEEDY: Mr. Chairman,
 Members of the Council, ladies and
 gentlemen, my name is Joyce Sheedy, and I
 work in the Rules and Planning Unit of the
 Air Quality Division of the Department of
 Environmental Quality. The proposed
 revisions to Subchapter 39, Emissions of
 Organic Materials in Nonattainment Areas,
 were brought to the Council for the first
 time on August the 18, 1998, and again on
 October 20, 1998, and December 15, 1998.
 At the December Council meeting, staff
 requested that the rule be considered again
 at the February meeting because of
 unresolved issues regarding redundancy of
 some of the requirements contained in Part
 3, petroleum refinery operations. These
 issues have been resolved. However, in

1 Only one truly substantive change has been
 2 proposed since the December meeting. It is
 3 the addition of 252:100-39-30(b)(3) and (4)
 4 on page 9. These paragraphs exempt storage
 5 vessels subject to the NSPS in 40 CFR 60,
 6 Subparts Ka or Kb or the MACT standards in
 7 40 CFR 63, Subparts CC or G from the
 8 requirements of 252:100-39-30.
 9 Three substantive changes were
 10 previously proposed. These are the
 11 revisions of the definition of "volatile
 12 organic compound" in 252:100-39-2 on page
 13 2. As part of the simplification process,
 14 staff proposes to have only one definition
 15 of VOC, and that that definition be
 16 consistent with the EPA definition and
 17 replaces the terms in Subchapter 39 of
 18 "volatile organic solvent (VOS)" and
 19 "organic solvents".
 20 The second previously proposed
 21 substantive change is the correction of the
 22 placement of "prior to lease custody
 23 transfer" in 252:100-39-30(b) on pages 8
 24 and 9. This phrase was located in
 25 paragraph 2 and was, therefore, applicable

1 to all the exemptions listed in that
 2 paragraph. Research in the Air Quality
 3 Council records and in the Control
 4 Techniques Guideline, Control of Volatile
 5 Organic Emissions from Petroleum Liquid
 6 Storage in External Floating Roof Tanks,
 7 indicates that this phrase should apply
 8 only to 252:100-39-30(b)(2)(B). So, we
 9 recommended moving that phrase.
 10 The addition of language to 252:100-
 11 39-41(c), Loading of VOCs on page 12. That
 12 limits the requirements of this subsection
 13 to facilities that have a minimum annual
 14 throughput of 120,000 gallons or storage
 15 capacity greater than 10,000 gallons.
 16 The Council packet includes a list
 17 of substantive revisions that have been
 18 made to the rule after December 15, 1998,
 19 as well as a summary of written comments
 20 received and the staff responses to those
 21 comments. One letter of comment has been
 22 received since the December Council
 23 meeting, a letter dated February 10, 1999,
 24 from Tom Diggs, EPA Region 6, which
 25 supports the proposed changes to Subchapter

1 exclude the internal floating roofs as
 2 well. But I see the purpose of the reg.
 3 MR. TERRILL: Any further
 4 questions from the Council at this time?
 5 I've got one request from EPA, Region 6,
 6 Sandra Rennie again to speak on 39.
 7 MS. RENNIE: The comments that we
 8 made with regard to Subchapter 37 also
 9 apply to Subchapter 39.
 10 MR. TERRILL: Those are the only
 11 request for comments that I received from
 12 the audience. Is there anyone else that
 13 would like to make a comment at this time?
 14 Seeing none, anything else from the
 15 Council?
 16 MR. WILSON: I would just like to
 17 say I appreciate Joyce and what she's done
 18 on this, and for the grammar lesson this
 19 morning.
 20 DR. SHEEDY: I was trained
 21 recently.
 22 MR. TERRILL: I guess we're ready
 23 to vote.
 24 MR. BREISCH: I'll entertain a
 25 motion to send this to the DEQ Board with a

1 39. I would like to make that letter a
 2 part of the record.
 3 Staff recommends that the proposed
 4 rule be recommended to the Board for
 5 permanent adoption.
 6 MR. TERRILL: Questions of Dr.
 7 Sheedy from the Council?
 8 MR. WILSON: I have a question.
 9 We make it a point in Part 5 to use the
 10 word external prior to the word, floating -
 11 - the words, floating roof. Is there a
 12 purpose for distinguishing external from
 13 those that are also internal?
 14 DR. SHEEDY: For what reason I do
 15 not know. This is obviously meant just to
 16 cover external floating roof tanks.
 17 MR. WILSON: Okay.
 18 DR. SHEEDY: And it may mean
 19 something to SIP requirements at the time.
 20 And Subchapter 39 is, like, in addition to
 21 the things that are in Subchapter 37. So
 22 there are some requirements for tanks in
 23 37, and this would be in addition to that.
 24 MR. WILSON: Okay. That's fine.
 25 I just wanted to make sure that we didn't

1 recommendation of passing this rule on a
 2 permanent basis.
 3 MS. MYERS: With the additions
 4 that were added?
 5 MR. BREISCH: I'm sorry. With
 6 the additions that we have added in
 7 previous meetings and in this meeting.
 8 DR. CANTER: I'll so move.
 9 MR. GROSZ: Second.
 10 MR. BREISCH: I've got a motion
 11 and a second. Any other comments or
 12 questions? If not, Myrna, call the roll.
 13 MS. BRUCE: Mr. Wilson.
 14 MR. WILSON: Aye.
 15 MS. BRUCE: Dr. Grosz.
 16 DR. GROSZ: Aye.
 17 MS. BRUCE: Dr. Canter.
 18 DR. CANTER: Aye.
 19 MS. BRUCE: Mr. Kilpatrick.
 20 MR. KILPATRICK: Aye.
 21 MS. BRUCE: Ms. Myers.
 22 MS. MYERS: Aye.
 23 MS. BRUCE: Mr. Branecky.
 24 MR. BRANECKY: Yes.
 25 MS. BRUCE: Mr. Breisch.

1 MR. BREISCH: Aye.
 2 MR. TERRILL: There is no further
 3 business for the hearing, so that concludes
 4 the hearing portion of this meeting.

OAC 252:100-45 SIP Revision

SUBCHAPTER 45. MONITORING OF EMISSIONS

Section

252:100-45-1. Purpose

252:100-45-2. Monitoring equipment required

252:100-45-3. Records required

252:100-45-4. Compliance certifications

252:100-45-5. Enforceability

252:100-45-1. Purpose

The purpose of this Subchapter is to outline the basic requirements for monitoring of emissions and their recording and reporting.

252:100-45-2. Monitoring equipment required

The Executive Director may require the owner or operator of any air contaminant source to:

- (1) install, use, and maintain such monitoring equipment;
- (2) sample such emissions in accordance with methods as the Executive Director shall prescribe;
- (3) establish and maintain such records; and
- (4) make such periodic emission reports as required in 252:100-45-3.

252:100-45-3. Records required

Records and reports as the Executive Director shall prescribe on air contaminants or fuel shall be recorded, compiled, and submitted on forms furnished by the Executive Director. (The procedures below are examples of such requirements.)

- (1) Emissions of particulate matter, sulfur dioxide, and oxides of nitrogen shall be expressed as follows:
 - (A) in pounds per hour and pounds per million BTU of heat input for fuel-burning equipment;
 - (B) in pounds per hour and pounds per 100 pounds of refuse burned for incinerators; and
 - (C) in pounds per hour and in pounds per hourly process weight or production rate or in terms of some other easily measured and meaningful process unit specified by the Executive Director.
- (2) Sulfur dioxide and oxides of nitrogen emission data shall be averaged over a 24-hour period and shall be summarized monthly. Daily averages and monthly summaries shall be submitted to the Executive Director biannually. Data should be calculated daily and available for inspection at any time.
- (3) Particulate matter emissions shall be sampled and submitted biannually.
- (4) Visible emissions shall be measured continuously and records kept indicating total minutes per day in which stack discharge effluent exceeds 20 percent opacity. Data should be summarized biannually. Current daily results shall be available for inspection at any time.
- (5) The sulfur content of fuels, as burned, except natural gas, shall be determined in accordance with current recognized ASTM procedures. Daily and monthly averages

shall be submitted biannually. Daily records shall be kept current and be available for inspection.

252:100-45-4. Compliance certifications

Notwithstanding any other provision in the State of Oklahoma implementation plan approved by the Administrator, for the purpose of submission of compliance certifications an owner or operator is not prohibited from using monitoring as required under 252:100-8-6 (a) (3) and incorporated into a federally enforceable operating permit in addition to any specified compliance methods.

252:100-45-5. Enforceability

Notwithstanding any other provision in the State of Oklahoma implementation plan approved by the Administrator, any credible evidence may be used for the purpose of establishing whether a person has violated or is in violation of any such plan.

(1) Information from the use of the following methods is presumptively credible evidence of whether a violation has occurred at the source:

(A) A monitoring method approved for the source pursuant to 252:100-8-6 (a) (3) and incorporated in a federally enforceable operating permit.

(B) Compliance methods specified in the applicable plan.

(2) The following testing, monitoring or information gathering methods are presumptively credible testing, monitoring or information gathering methods:

(A) Any federally-enforceable monitoring or testing methods, including those in 40 CFR parts 51, 60, 61 and 75.

(B) Other testing, monitoring or information-gathering methods that produce information comparable to that produced by any method in (1) or (2) (A) of this section.

Oklahoma Register

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking.

Proposed Rules: OAC 252:100-24, Control of Emissions from Grain Elevators [NEW].

Summary: This rule would subject all new and existing grain facilities to state permitting requirements and establish industry-specific emission and control standards. Includes facilities that handle, store, or process grain.

AUTHORITY: Environmental Quality Board; 27A O.S. Supp. 1993, §§ 2-2-101; 2-5-1-1 et seq.

COMMENT PERIOD: Interested persons may informally discuss the proposed rules with the Air Quality Program or may, before September 28, 1994, submit written comments to the Department of Environmental Quality, c/o Robert Kellogg, 1000 N.E. 10th Street, Oklahoma City, OK 73117-1212. Comments will be accepted during the Environmental Quality Board meeting scheduled for 9:30 a.m., Wednesday, September 28, 1994, in Broken Bow, Oklahoma, at a location to be announced later.

PUBLIC HEARINGS: Wednesday, September 28, 1994, at 9:30 a.m., in Broken Bow, Oklahoma, as noted above.

COPIES OF PROPOSED RULES: Copies of the proposed rules may be obtained from the Department of Environmental Quality, Air Quality Program, 4545 North Lincoln, Suite 250, Oklahoma City, OK 73105-3483.

RULE IMPACT STATEMENT: A rule impact statement will be prepared prior to the final action by the Environmental Quality Board. The rule impact statement may be obtained from the Air Quality Service at the above address.

CONTACT PERSON: Mr. Doyle McWhirter, (405) 271-5220.

ADDITIONAL INFORMATION: These rules were recommended by the Air Quality Council pursuant to public hearing on June 14, 1994.

[Okla. Reg. 94-1284; filed August 8, 1994]

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT and EMERGENCY rulemaking.

Proposed Rules: OAC 252:100-45, Monitoring of Emissions; and OAC 252:100-8, Operating Permits (Part 70) [AMENDED].

Summary: The intent of the revision to Subchapter 45 is to correct deficiencies in Oklahoma's Air Quality implementation plan with respect to Oklahoma's ability to use any credible evidence in determining a source's compliance. This action is a result of the Environmental Protection Agency's finding that Oklahoma's State Implementation Plan (SIP) is inadequate to fully implement Section 114(a)(3) of the Federal Clean Air Act. The proposed rule states that for the purpose of compliance certifications, an owner is not prohibited from using monitoring required under the Federal Part 70 Operating Permit rules. It also states that any credible evidence may be used for the purpose of establishing whether a person has violated provisions of the State Implementation Plan.

The revision to Subchapter 8 has two parts. The first incorporates by reference 40 CFR Part 72, the Federal rules regarding acid rain permits. The second revision is to adjust the fees for Part 70 sources. Part 70 sources are proposed to be subject to these new fee requirements on January 1, 1995. The owners or operator of a Part 70 source will be required to pay annual fees that are sufficient to cover the Part 70 program costs. The fee is proposed at \$15.19 per ton of regulated pollutant except carbon monoxide and is to be adjusted annually by increases or decreases in the Consumer Price Index.

AUTHORITY: Environmental Quality Board; 27A O.S. Supp. 1993, §§ 2-5-106.

COMMENT PERIOD: Written comments will be accepted prior to and during the regularly scheduled meeting of the Oklahoma Air Quality Council. The meeting will be held Tuesday, October 11, 1994, in the Lincoln Boulevard Plaza office complex, Brown Room, 4545 N. Lincoln Blvd, Oklahoma City, Oklahoma. Briefing is scheduled for 9:30 AM; meeting and hearing, for 1:00 PM. Oral comments will be accepted during the hearing; written comments on the proposed change may be mailed to Air Quality Division, 4545 N. Lincoln Blvd., Suite 250, Oklahoma City, OK 73105-3483 % Mr. Scott Thomas for Subchapter 8.

PUBLIC HEARINGS: Tuesday, October 11 and, if necessary, Wednesday, October 12, 1994, in the Brown Room, Lincoln Plaza office complex, 4545 N. Lincoln Blvd., Oklahoma City, Oklahoma.

COPIES OF PROPOSED RULES: Copies of the proposed rules may be obtained from the Department of Environmental Quality, Air Quality Program, 4545 North Lincoln, Suite 250, Oklahoma City, Oklahoma.

RULE IMPACT STATEMENT: A rule impact statement will be prepared prior to the final action by the Environmental Quality Board. The rule impact statement may be obtained from the Air Quality Division at the above address.

CONTACT PERSON: Subchapter 45: Mr. Scott Thomas (405) 271-5220.

Subchapter 8: Mr. Scott Thomas (405) 271-5220.

ADDITIONAL INFORMATION: It is anticipated that the above public hearings will initially take two days, October 11 and 12, and will probably be continued to future council meetings.

[Okla. Reg. 94-1285; filed August 8, 1994]

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT and EMERGENCY rulemaking.
Proposed Rules: OAC 252:100-31, Control of Emissions of Sulfur Compounds [AMENDED]

Summary: The intent of the revision is to resolve any discrepancies and inequities as applied to all new sulfur recovery units in the state. The result would be a relaxation of standards applicable to new sulfur recovery plants operated in conjunction with processes other than natural gas processing.

AUTHORITY: Environmental Quality Board; 27A O.S. Supp. 1993, §§ 2-2-101; 2-5-1-1 et seq.

COMMENT PERIOD: Interested persons may informally discuss the proposed rules with the Air Quality Program or may, before November 30, 1994, submit written comments to the Department of Environmental Quality, c/o Robert Kellogg, 1000 N.E. 10th Street, Oklahoma City, OK 73117-1212. Comments will be accepted during the Environmental Quality Board meeting scheduled for 9:30 a.m., Wednesday, November 30, 1994, Council and Court Room, City of Stroud, Administration Building, 220 W. Second Street, Stroud, OK.

PUBLIC HEARINGS: Wednesday, November 30, 1994, at 9:30 a.m., in Stroud, Oklahoma, as noted above.

COPIES OF PROPOSED RULES: Copies of the proposed rules may be obtained from the Department of Environmental Quality, Air Quality Program, 4545 North Lincoln, Suite 250, Oklahoma City, OK 73105-3483.

RULE IMPACT STATEMENT: A rule impact statement will be prepared prior to the final action by the Environmental Quality Board. The rule impact statement may be obtained from the Air Quality Service at the above address.

CONTACT PERSON: Mr. Scott Thomas, (405) 271-5220.

ADDITIONAL INFORMATION: These rules were recommended by the Air Quality Council pursuant to public hearings on June 14, and August 9, 1994.

[Okla. Reg. 94-1401; filed October 6, 1994]

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT and EMERGENCY rulemaking.
Proposed Rules: OAC 252:100-45, Monitoring of Emissions [AMENDED]

Summary: The intent of the revision to Subchapter 45 is to correct deficiencies in Oklahoma's Air Quality implementation plan with respect to Oklahoma's ability to use any credible evidence in determining a source's compliance. This action is a result of the Environmental Protection Agency's finding that Oklahoma's State Implementation Plan (SIP) is inadequate to fully implement Section 114(a)(3) of the Federal Clean Air Act. The proposed rule states that for the purpose of compliance certifications, an owner is not prohibited from using monitoring required under the Federal Part 70 Operating Permit rules. It also states that any credible evidence may be used for the purpose of establishing whether a person has violated provisions of the State Implementation Plan.

AUTHORITY: Environmental Quality Board; 27A O.S. Supp. 1993, §§ 2-2-101; 2-5-1-1 et seq.

COMMENT PERIOD: Interested persons may informally discuss the proposed rules with the Air Quality Program or may, before November 30, 1994, submit written comments to the Department of Environmental Quality, c/o Robert Kellogg, 1000 N.E. 10th Street, Oklahoma City, OK 73117-1212. **TITLE 252. OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 002. PROCEDURES OF THE DEPARTMENT OF ENVIRONMENTAL QUALITY**

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT/EMERGENCY rulemaking.
Proposed Rules: Procedures of the Department of Environmental Quality OAC 252:002 [AMENDMENTS]

Summary: The proposed amendments concern the procedure for logging complaints received after working hours, the procedure for referral of complaints occurring on Indian Country as defined by 42 U.S.C. 1151, and the procedure for complaints involving issues in litigation.

AUTHORITY: Environmental Quality Board, 27A Supp. 1993, §2-2-101 and 75 O.S. 1991, §302.

COMMENT PERIOD: Deliver or mail comments November 1 through November 21, 1994, to contact person listed below.

PUBLIC HEARINGS: Oral and written comments will be received by the Environmental Quality Board at its meeting in Stroud, Oklahoma, at 9:30 on November 30, 1994.

COPIES OF PROPOSED RULES: Copies of the proposed rules may be obtained from the contact person below.

RULE IMPACT STATEMENT: May be obtained from contact person.

CONTACT PERSON: Office of the General Counsel, 12th Floor, Department of Environmental Quality, 1000 N.E. 10th Street, Oklahoma City, OK 73117-1299; Barbara Rauch, (405) 271-8140

[Okla. Reg. 94-1427; filed October 14, 1994]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT and EMERGENCY rulemaking.
Proposed Rules: OAC 252:100-8, Operating Permits (Part 70) [AMENDED].

Summary: The revision to Subchapter 8 has two parts. The first incorporates by reference 40 CFR Part 72, the federal rules regarding acid rain permits. The second revision is to adjust the fees for Part 70 sources. The owner or operator of a Part 70 source will be required to pay annual fees that are sufficient to cover the Part 70 program costs. These fees, as proposed for recommendation by the Air Quality Council will approximate \$15 per ton of emissions regulated pollutants (excluding carbon monoxide) in 1995.

AUTHORITY: Environmental Quality Board; 27A O.S. Supp. 1993, §§ 2-2-101; 2-5-1-1 et seq.

COMMENT PERIOD: Interested persons may informally discuss the proposed rules with the Air Quality Program or may, before November 30, 1994, submit written comments to the Department of Environmental Quality, c/o Robert Kellogg, 1000 N.E. 10th Street, Oklahoma City, OK 73117-1212. Comments will be accepted during the Environmental Quality Board meeting scheduled for 9:30 a.m., Wednesday, November 30, 1994, Council and Court Room, City of Stroud, Administration Building, 220 W. Second Street, Stroud, OK.

PUBLIC HEARINGS: Wednesday, November 30, 1994, at 9:30 a.m., in Stroud, Oklahoma, as noted above.

COPIES OF PROPOSED RULES: Copies of the proposed rules may be obtained from the Department of Environmental Quality, Air Quality Program, 4545 North Lincoln, Suite 250, Oklahoma City, OK 73105-3483.

RULE IMPACT STATEMENT: A rule impact statement will be prepared prior to the final action by the Environmental Quality Board. The rule impact statement may be obtained from the Air Quality Service at the above address.

CONTACT PERSON: Mr. Scott Thomas, (405) 271-5220.

ADDITIONAL INFORMATION: The acid rain rule was recommended by the Air Quality Council pursuant to Public Hearing on August 9; the permit fees are scheduled for Public Hearing before the Air Quality Council on October 11, 1994.

[Okla. Reg. 94-1400; filed October 6, 1994]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL

RULE-MAKING ACTION: PERMANENT final adoption.

RULES: 252:100-45-4, Compliance certifications [NEW]; and
252:100-45-5, Enforceability [NEW]

AUTHORITY: Environmental Quality Board; 27A O.S. Supp. 1993,
§§ 2-2-101, 2-5-101 et seq.

DATES:

Comment period: October 6, 1994 through November 30, 1994.

Public hearing: November 30, 1994.

Adoption: November 30, 1994.

Submitted to Governor: December 9, 1994.

Submitted to House: December 9, 1994.

Submitted Senate: December 9, 1994.

Gubernatorial approval: January 23, 1995.

Legislative approval: Failure of the Legislature to disapprove
the rules resulted in approval on March 29, 1995.

Final adoption: March 29, 1995.

Effective: July 1, 1995.

SUPERSEDED EMERGENCY ACTIONS:

Superseded rules: 252:100-45-4, Compliance certifications [NEW];
and 252:100-45-5, Enforceability [NEW].

Gubernatorial approval: January 5, 1995.

Register publication: 12 Ok Reg 743.

Docket number: 95-3.

INCORPORATIONS BY REFERENCE: None

ANALYSIS: The intent of this revision is to correct inadequacies
in the Oklahoma State Implementation Plan (SIP) as identified by
EPA. The corrections allow a permitted source to use any credible
evidence to demonstrate compliance and allow the EPA to use any
credible evidence to establish violations and enforce the Oklahoma
SIP. The net result would be an EPA-approvable SIP, as required by
the 1990 Clean Air Act Amendments.

SUMMARY OF DIFFERENCES FROM ANALOGOUS FEDERAL RULES:

This revision corrects possible differences in interpretation of
state rules and federal law. The Air Quality Council recommended
the permanent adoption of this revision at their meeting on October
11, 1994. The Air Quality Council began receiving comments on this
new rule on August 8, 1994.

CONTACT PERSON: Mr. Scott Thomas, DEQ Air Quality Division, Suite
250, Lincoln Plaza Office Complex, 4545 N. Lincoln Blvd. Oklahoma
City, Oklahoma 73105. (405) 271-5220.

PURSUANT TO THE ACTIONS DESCRIBED HEREIN, THE FOLLOWING RULES ARE
CONSIDERED FINALLY ADOPTED AS SET FORTH IN 75 O.S., SECTION
308.1(A), WITH AN EFFECTIVE DATE OF JULY 1, 1995.

CHAPTER 100. AIR POLLUTION CONTROL
SUBCHAPTER 45. MONITORING OF EMISSIONS

252:100-45-4. Compliance certifications

Notwithstanding any other provision in the State of Oklahoma
implementation plan approved by the Administrator, for the purpose
of submission of compliance certifications an owner or operator is
not prohibited from using monitoring as required under 252:100-8-6
(a) (3) and incorporated into a federally enforceable operating
permit in addition to any specified compliance methods.

252:100-45-5. Enforceability

Notwithstanding any other provision in the State of Oklahoma
implementation plan approved by the Administrator, any credible
evidence may be used for the purpose of establishing whether
person has violated or is in violation of any such plan.

(1) Information from the use of the following methods is
presumptively credible evidence of whether a violation has
occurred at the source:

(A) A monitoring method approved for the source pursuant to
252:100-8-6 (a) (3) and incorporated in a federally
enforceable operating permit.

(B) Compliance methods specified in the applicable plan.

(2) The following testing, monitoring or information gathering
methods are presumptively credible testing, monitoring or
information gathering methods:

(A) Any federally-enforceable monitoring or testing methods,
including those in 40 CFR parts 51, 60, 61 and 75.

(B) Other testing, monitoring or information-gathering methods
that produce information comparable to that produced by any
method in (1) or (2) (A) of this section.

MEMORANDUM

TO: AIR QUALITY COUNCIL

THRU: Larry D. Byrum, Director *LDB*
AIR QUALITY DIVISION

FROM: Randy Ward, Supervisor *RW*
Analysis and Planning Unit

SUBJECT: REVISIONS TO OAC 252:100-45, MONITORING OF EMISSIONS

Please find enclosed the staff's suggested revisions to Oklahoma Air Pollution Rule OAC 252-100-45. These revisions are in response to an EPA SIP call dated June 9, 1994.

Also enclosed are copies of the SIP call letter and supporting information, the AQD's workplan, and EPA's comments on our proposed rule language. Included as additional information about Enhanced Monitoring are an Executive Summary and a clipping from the Clean Air Technology News.

SUBCHAPTER 45. MONITORING OF EMISSIONS

252:100-45-1. Purpose

The purpose of this Subchapter is to outline the basic requirements for monitoring of emissions and their recording and reporting.

252:100-45-2. Monitoring equipment required

The Executive Director may require the owner or operator of any air contaminant source to:

- (1) install, use, and maintain such monitoring equipment;
- (2) sample such emissions in accordance with methods as the Executive Director shall prescribe;
- (3) establish and maintain such records; and
- (4) make such periodic emission reports as required in 252:100-45-3.

252:100-45-3. Records required

Records and reports as the Executive Director shall prescribe on air contaminants or fuel shall be recorded, compiled, and submitted on forms furnished by the Executive Director. (The procedures below are examples of such requirements.)

(1) Emissions of particulate matter, sulfur dioxide, and oxides of nitrogen shall be expressed as follows:

(A) in pounds per hour and pounds per million BTU of heat input for fuel-burning equipment;

(B) in pounds per hour and pounds per 100 pounds of refuse burned for incinerators; and

(C) in pounds per hour and in pounds per hourly process weight or production rate or in terms of some other easily measured and meaningful process unit specified by the Executive Director.

(2) Sulfur dioxide and oxides of nitrogen emission data shall be averaged over a 24-hour period and shall be summarized monthly. Daily averages and monthly summaries shall be submitted to the Executive Director biannually. Data should be calculated daily and available for inspection at any time.

(3) Particulate matter emissions shall be sampled and submitted biannually.

(4) Visible emissions shall be measured continuously and records kept indicating total minutes per day in which stack discharge effluent exceeds 20 percent opacity. Data should be summarized biannually. Current daily results shall be available for inspection at any time.

(5) The sulfur content of fuels, as burned, except natural gas, shall be determined in accordance with current recognized ASTM procedures. Daily and monthly averages shall be submitted biannually. Daily records shall be kept current and be available for inspection.

252:100-45-4. Compliance Certifications

Notwithstanding any other provision in the State of Oklahoma implementation plan approved by the Administrator, for the purpose of submission of compliance certifications an owner or operator is not prohibited from using monitoring as required under 252:100-8-6 (a) (3) and incorporated into a federally enforceable operating permit in addition to any specified compliance methods.

252:100-45-5. Enforcibility

Notwithstanding any other provision in the State of Oklahoma implementation plan approved by the Administrator, any credible evidence may be used for the purpose of establishing whether a person has violated or is in violation of any such plan.

(1) Information from the use of the following methods is presumptively credible evidence of whether a violation has occurred at the source:

(A) A monitoring method approved for the source pursuant to 252:100-8-6 (a) (3) and incorporated in a federally enforceable operating permit.

(B) Compliance methods specified in the applicable plan.

(2) The following testing, monitoring or information gathering methods are presumptively credible testing, monitoring or information gathering methods:

(A) Any federally-enforceable monitoring or testing methods, including those in 40 CFR parts 51, 60, 61 and 75.

(B) Other testing, monitoring or information-gathering methods that produce information comparable to that produced by any method in (1) or (2) (A).

AIR QUALITY COUNCIL

Minutes

OCTOBER 11, 1994

1:00 p.m.

OKLAHOMA STATE DEPARTMENT OF ENVIRONMENTAL QUALITY
AIR QUALITY DIVISION
4545 NORTH LINCOLN, SUITE 250
OKLAHOMA CITY, OKLAHOMA

Council Members Present

William B. Breisch, Chairman
Larry Canter, Ph.D., Vice Chairman
Gary A. Kilpatrick
Mary Tillman
Kathryn Hinkle
David Branecky

Council Members Absent

Pierre Taron
Meribeth Slagell
Bill Fishback

Staff Present

Larry Byrum
David Dyke
Scott Thomas
Randall Ward
Dennis Doughty
Myrna Bruce

Guests Present

(See attached list)

PUBLIC MEETING

Notice of Public Meeting was forwarded to the Secretary of State's Office giving the time, date, and place of the meeting. Agendas were posted at the entrance door of the meeting room at the Lincoln Plaza location, and the entrance to the Air Quality Division.

Call to Order - Mr. Breisch called the meeting to order and roll call was taken. Members not in attendance were Ms. Slagell, Mr. Fishback, and Mayor Taron. Mr. Breisch turned the meeting over to Mr. Byrum.

Acting as protocol officer for Public Rulemaking Hearing OAC 252:100-45 Monitoring of Emissions.

Giving staff recommendations, Mr. Randall Ward advised Council that as part of a nationwide SIP call, Governor Walters received a letter on June 9, 1994 from Jane Saginaw, Regional Administrator for the Environmental Protection Agency, notifying that our State Implementation Plan was substantially inadequate to meet the Clean Air Acts requirements concerning enhanced monitoring, compliance certification, and the use of any credible evidence for enforcement purposes. Oklahoma's current SIP may be interpreted to limit the types of testing or monitoring data that may be used for determining compliance and establishing violations and to limit the EPA's ability to assess penalties. The EPA is requiring that the states revise their SIPs to allow any monitoring data that is approved and regarded as credible evidence for determining

compliance and for establishing violations of any standards specified in the permit. Mr. Ward pointed out that through consultation and correspondence with the EPA, the staff has developed new language to address these concerns and that the SIP letter and other material are part of the Council packets. OAC 252-100-45-4 Compliance Certification, allows a source to use the monitoring required by their Title V permit under OAC 252-100-8-6-a-3 for the purposes of compliance certification. The second section, OAC 252-100-45-5 Enforceability, allows the use of any credible evidence to determine violations and establishing presumptively credible methods and information sources. Mr. Ward entered into the official record a copy of the EPA comments approving staff's proposed rule language.

The staff's recommendation was that the Council take action to recommend this rule to the Environmental Quality Board for adoption as an emergency and permanent rule because it is important that the SIP be approved as soon as possible and no substantive comments to the rule had been received.

After discussion, the Chairman entertained a motion to recommend this rule change to the Environmental Quality Board. Mr. Kilpatrick made the motion to recommend the rule to the Board as a permanent and emergency rule with second made by Ms. Tillman. Roll call as follows: Dr. Canter - aye; Mr. Branecky - aye; Ms. Hinkle - aye; Mr. Kilpatrick - aye; Ms. Tillman - aye; Mr. Breisch - aye.

Mr. Byrum, as protocol officer, convened the Public Rulemaking Hearing OAC 252-100-8 Operating Permits Part 70, Fees and Fee Timing.

Giving staff recommendation, Mr. Scott Thomas advised that the Hearing was a continuation of the August 9 Hearing held in Tulsa, OK concerning proposed changes to subchapter 8 of Oklahoma's Air Pollution Control rules. These proposed changes specifically deal with the annual operating fee to be assessed to Title V sources in the State of Oklahoma. The revisions provide for an annual operating fee of \$15.19/ton of regulated pollutant, including carbon monoxide, be assessed on Part 70 sources. Due to some of the discussions held in the Briefing Session, staff also provided to the Council suggested language to support a surcharge that in the event that either the Oklahoma City-County Health Department or the Tulsa City-County Health Department should fail to permanently renew or shall declare their intent not to renew their contract for services necessary to implement the requirements of the Oklahoma Clean Air Act in either of their jurisdictions, the fee in each event shall increase an additional \$1.00/ton of regulated pollutant.

Mr. Thomas went on to say that the \$15.19/ton fee is consistent with the findings of the Theodore Barry & Associates (TB&A) Workload Analysis and will be effective January 1, 1995 for Part 70 sources and these sources will no longer be subject to the current \$10/ton fee specified in subchapter 7. The revisions also provide

for the fee to be adjusted annually in accordance with changes in the Consumer Price Index.

Mr. Thomas entered a letter, received from Hans J. Mueller, Manager of Regional Regulatory Affairs of Browning-Ferris Industries dated October 4, 1994 into the record and noted that Mr. Mueller supported adjustment of the fee and the previously recommended acid rain provisions and recommended that the Department revise the definition of major source to insure consistency with EPA's proposed changes to Part 70. Mr. Thomas advised that the staff felt that such change should only be considered after the proposed federal language becomes final as the current definition of major source in subchapter 8 is identical to the current Part 70 language.

Per Mr. Thomas, in order for the new fee to be effective January 1, 1995 the Council's recommendations would need to be adopted as a permanent and emergency rule at the Environmental Quality Board meeting on November 30, 1994, and subsequently signed by the Governor. After the Board acts, staff plans to send the rule to the EPA as an amendment to our Title V operating permit plan along with justification that the fee will be sufficient to cover the anticipated cost of a Title V program. There was not a representative from EPA present.

With much discussion between Council, staff, and commenters, suggested language was changed to read as follows: "...In the event that by January 15, 1995, either the Oklahoma City/County Health Department or the Tulsa City/County Health Department shall fail to permanently renew, or shall declare their intent not to renew their contract to provide the services necessary to implement the requirements of the Oklahoma Clean Air Act in either of their jurisdictions, the fees, in each event, shall increase an additional One dollar (\$1.00) per ton of regulated pollutant..."

Other discussion included Ms. Barton's concern for the possibility that Tulsa will go into nonattainment, and that this rulemaking body cannot define all the necessary things that will have to be done if that happens. She pointed out that it was her understanding that if nonattainment occurs, efforts have to be started right away for compliance with nonattainment regulations. She felt that the Council should produce language for an emergency to fund all of the people and the things that would need to be done to be in compliance with EPA's regulations under the nonattainment status.

Discussion was held regarding the fact that Tulsa may go into nonattainment and the possibility of having to pass a fee increase. It was felt that the fact that the fees must be billed January 1 precludes the ability to do anything at this time; and there would be plenty of time to take action when nonattainment occurs.

Ms. Tillman felt that nonattainment compliance would most likely not happen until next summer which would leave time for the rule

language. Mr. Byrum agreed and advised that if EPA found either area to be in nonattainment and if the Agency chose to go into nonattainment status, EPA could handle in one of two ways (1) they can say the SIP is insufficient to protect the ozone max which is not a "nonattainment" situation; that finding would have to be made on the data that was generated the day of the event and the earliest that data could get to EPA would be 45 days after the event; and it would take time for the federal wheels to grind; or (2) EPA could find a SIP deficiency; then the Agency would choose a SIP call rather than have the city designated nonattainment.

For the record, comment was made by Howard Ground, Public Service of Oklahoma, who asked if it was intentional that the sentence from the last packet "This fee is consistent with reasonable costs of operating permit program as a management consultant study" was left out. Mr. Doughty advised that he had struck it intentionally as he felt it was not relevant but was a reiteration of other things in the law. Mr. Ground felt that the sentence provided a bit of history. Dr. Canter agreed but Mr. Kilpatrick took the opposite viewpoint as he felt the hearing records demonstrates the history. In order to save time in this meeting, both agreed to leave the sentence out.

For the record, Mr. Breisch asked Mr. Byrum to go through the scenario of the expected timeframe using the date of June 15, 1995, if Tulsa would go into nonattainment. Mr. Byrum related that:

- The June 15 data would be submitted in 45-days (end of July)
- EPA would take 2 - 3 weeks to crunch that data
- EPA would generate a letter to the Governor setting forth the necessary action, and would give AQD a 30-day period to respond to that letter (end of August, first of September)
- Then by September 15, AQD would have to have a response detailing the agreement and that we would put together a plan with the timeframes.
- That response would go to EPA in mid-September and probably not require action other than looking at rulemaking until further into the next year.

Mr. Breisch believed there would be no expense due to this nonattainment status in 1995; Mr. Byrum agreed that any expense to the State would be minor expense for handling paper and putting together a plan.

Ms. Medley reiterated that Ms. Barton was trying to get across the fact that necessary fee increases can only be addressed on a yearly basis and wanted the Council to be aware of the potential need of an increase.

Mr. Byrum added that a significant portion of the cost for nonattainment would be Title V and that EPA is looking at the impacts of Title I on Part 70. EPA is ruling that any changes required on Title I are Part 70 and will remain Part 70 for the remainder of the life of the facility.

To Mr. Kilpatrick's question whether Title V would cover most of the sources, Mr. Byrum answered that he did not see a major impact in the emissions inventory in the metropolitan areas due to nonattainment for stationary sources. We have 90/95% control across the board but most of those reductions would have to come from mobile sources and area sources which would cause a minor impact, but not a major impact, on the amount of the fees currently being collected. Some sources that were not previously Title V sources may become Title V sources due to nonattainment.

Mr. Breisch stated that it appears the cost per ton of nonattainment status cannot be quantified as we are not 100% certain it will happen.

Mr. Byrum stated that he had not been comfortable in recommending a \$/ton amount for nonattainment at this point because various issues will effect that number dramatically such as the level of nonattainment, the timing, the pollutants involved, or federal court actions concerning interpretations of the Act. Staff is working on some of those issues and is trying to evaluate what those issues will be. He believed that some of the funding for nonattainment activities will have to come from different sources than Title V such as some of the states have proposed a surcharge on their automobile license plates to offset those costs; or looking for fees from area sources such as dry cleaners or minor source fees. Those would have to be in combination with anything we would do under this fee scenario to come up with an equitable distribution of the cost to those who are the responsible parties.

Mr. Kilpatrick felt that the key issue Ms. Medley and Ms. Barton was hitting upon was the issue that the Council should be aware of the need for adequate funding to last through an entire year in the event of nonattainment. He wanted all to know that the proposal now has areas built in to allow for adequate funding at this point: 1) the potential of a surplus of the \$10/ton fees; 2) the \$15.19 is based on the assumption of 142 FTEs of which only 90 have been hired plus the 18 at the counties for a total of 108; therefore, spending would not be done at the \$15.19 rate throughout 1995; 3) plus the additional \$2 potentially added with neither of those programs fully staffed now. When the program is at full speed it will be very close. He did not think at this time it is prudent to start adding in too many additional kitties. He was hopeful that next July when staff submits the proposal for the 1996 fees, it will provide good accounting data that will show how good the TB&A assumptions were and can be fine-tuned at that time.

Dr. Canter appreciated the longer term concern but wanted staff to consider doing a special study of various nonattainment scenarios that would provide in writing some justification for what a fee increase might need to be. He stated he would feel more comfortable with more detail about a rationale for whatever the future cost might be.

Mr. Byrum advised that the staff is currently working on options

available to the metropolitan areas. The metropolitan areas have choices that can be made and each affects the mix of the cost. The staff would consider the least-cost option.

Ms. Barton asked if this rule goes to EPA for approval what happens to the whole rule if EPA disagrees with the \$15.19 figure. Mr. Byrum answered that when the rule goes to EPA it will be adopted as a state rule and the billing will be taking place before EPA replies. If they determine it is an insufficient amount, EPA will tell us to adjust our fee to obtain interim approval of our Title V program. EPA has suggested federally \$25.00/ton, or an amount sufficient to cover the demonstrated cost of the Title V program. The burden on the staff, once the rule is passed, is to complete the analysis to show the fee set is sufficient to cover the costs. The TB&A Workload Analysis, as backup, helps significantly.

Howard Ground, Public Service of Oklahoma (PSO) recommended that everything be stricken that was talked about in the Briefing Session regarding and additional \$2/ton because of everything that will happen, an increase will not be needed until 1996.

Mr. Kilpatrick pointed out that Mr. Ground had hit the crux of the matter. He felt that when industry decided to try to limit the fee, they made a major error by going to the Legislature rather than going to the Council and using the Council as a mechanism of funding the study. He felt the TB&A study is good but the Legislature authorized \$150,000 which was spent, therefore, there were no state funds available for TB&A to travel to Oklahoma and present the report to the Council. He felt that originally if people had a concern with the fee they should have come to the Council. The idea of a study was not to limit the \$15 per ton but to be able to provide a basis for justifying the right amount to EPA, and was a good idea; but if it had been done via the Council, the Council could have then had the ability to spend the additional \$4,000 to fly TB&A here and be able to ask these additional questions.

He added that the issue on the Tulsa City County Health Department (TCCHD) and Oklahoma City County Health Department (OCCHD) counties is an area that was not discussed in New York because we had no knowledge of the current situation but the other issues discussed made us come away feeling that it is a very good report, the 53% is well substantiated, and is one that the EPA will have to accept as justifying the \$15.19.

Ms. Tillman added that everything the committee asked TB&A was thoroughly explained, the numbers did calculate, and that she was very pleased as was the other members.

Mr. Braneky pointed out that one of the difficulties in doing a report like this is trying to come up with a number for something that has never been done before.

Mr. Breisch agreed that the theory and the philosophy used to put

together this report is sound and supported the report.

Ron Truelove, representing Environmental Federation of Oklahoma's (EFO) Air Committee, commented for the record that EFO supported the study and would support similar studies for future rulemaking; this is a good way to approach rulemaking by developing the supporting data. EFO also supported the \$15.19/ton permitting fee associated with the study.

With no more discussion, comments, or questions from the Council, Mr. Breisch entertained a motion to accept the staff's recommendation to recommend to the DEQ Board for permanent and emergency rulemaking and that in turn will be forwarded to the EPA after DEQ has acted upon it.

Ms. Tillman made the motion and clarified her reasoning by saying that because of the length of time it does take to get authorization to add on staff, and due to what seems to be eminent from the county health departments, there is a need to be proactive. Mr. Kilpatrick made the second.

With the motion and second, discussion was as follows:

Mr. Branecky wanted the Council be sure that accounting procedures show accurate tracking so that if there are overages they can be applied to the following year.

Mr. Byrum felt that the accounting staff has been made abundantly aware of that situation.

Mr. Kilpatrick added that in the discussions with the accounting staff, one of the statements made was that the process of changing the fees for 1996 could start next July with staff providing accounting data to show that the money was spent on Title V. He wanted for the AQD staff to present to the Council some of the procedures used in the Time and Effort (T&E) study and also the allocation procedures, how to allocate some of the things that do not come directly out of salaries.

Mr. Breisch suggested that the accounting staff be invited to the next meeting to answer questions and also wanted to continue the committee, with Mr. Branecky in lieu of Dr. Hughes, at least through next year to monitor the difference in fees, if any, and the carryover of any fees from the \$10/ton original fee.

Mr. Kilpatrick agreed to continue to serve on the Committee because the questions will be accounting-type questions, and it will take a little study of the data. Ms. Tillman and Mr. Branecky agreed to remain on the Committee and Mr. Breisch spoke for Mr. Fishback.

With a motion and a second and no further discussion, roll was called as follows: Mr. Branecky - aye; Dr. Canter - aye; Ms. Hinkle - aye; Mr. Kilpatrick - aye; Ms. Tillman - aye; Mr. Breisch - aye.

The Hearing Session was closed and discussion was had under New Business as follows:

Ms. Barton wanted to make the Council aware that INCOG submitted a proposal to the EPA for the Maximizing Emission Reductions Intersource Trading (MERIT) program and it has been turned back to the state. She described the MERIT program to Council stating that INCOG initiated the ozone alert program along with MERIT where industry trades pollution credits back and forth. Her question to Mr. Byrum was how long before a draft plan from the State would be forthcoming that would institute the MERIT program.

Mr. Byrum answered that Air Quality has submitted draft comments back to INCOG, as INCOG had drafted the proposal, and are waiting for follow up. He further stated that INCOG is proposing that the trading transaction program be codified as a rule under the Air Quality Act and be part of the State SIP. He advised that at a meeting last month, INCOG agreed to help draft language on how it would apply to attainment areas to pass EPA's SIP requested information. In most cases, these emissions trading rules have always applied to nonattainment areas and they were questioning whether reductions could be used later in the event of nonattainment.

Ms. Barton wanted the Council to know that as an original member of the committee that started the MERIT program she felt that the original spirit of the committee was for citizen oversight.

Mr. Byrum advised that when the rule comes forward, it will be open for public hearing.

Ms. Hinkle made known the information she had received when she telephoned the Chair of the TCCHD Board during the lunch break stating that the TCCHD view is not nearly as negative about renewing the contract as Council had been thinking because negotiations were presently going on. Some of TCCHD concerns included some of the expenses they are incurring, more responsibilities, more supervision, and more say-so they might want to have since it involves some of their money. These negotiations are going on with DEQ. There is a meeting coming up with Mark Coleman and there are some letters as recently as yesterday that we would not know about. TCCHD feels they are at a negotiating standpoint and Ms. Hinkle felt that at least TCCHD wants to say the contract will be renewed after this negotiating process; and of course, negotiations could not be done over the phone. Essentially what TCCHD wanted to convey was that there is a lot of talking going on.

Mr. Byrum pointed out that most of the DEQ/health department contracts run from January 1 to December 31, but that the AQD contract runs from October 1 to September 30. Air Quality did not actually have a contract as of October 1 and bills cannot legally be paid until there is a contract.

Ms. Hinkle expressed hope that there has been some lack of communications and hoped the TCCHD Board had been alerted to the fact that Council is concerned and would like to be kept informed.

Mr. Byrum reiterated that these were last minute concerns to be brought forth at this meeting.

Approval of Minutes - Mr. Breisch requested a motion for approval of the August 9, 1994, meeting. Mr. Kilpatrick moved to accept the Minutes as presented with second by Dr. Canter. Roll call taken as follows: Dr. Canter - aye; Mr. Branecky - aye; Ms. Hinkle - aye; Mr. Kilpatrick - aye; Ms. Tillman - aye; Mr. Breisch - aye.

Other Business - Mr. Byrum advised the Council that Dr. Hughes had resigned and been replaced. Mr. Byrum recommended that Council invite Dr. Hughes to the next regular meeting and present to him a Certificate of Appreciation for his term of service. Mr. Breisch asked staff to prepare the proper documents and invite him to appear.

Next Meeting - The next regular meeting will be held December 13, 1994, at the Lincoln Plaza Office Complex Brown Room.

ADJOURNMENT - Meeting adjourned with a unanimous roll call vote.

TO BE USED FOR PERMANENT AND EMERGENCY RULES
RECOMMENDATION
TO THE
ENVIRONMENTAL QUALITY BOARD

FROM THE
AIR QUALITY **COUNCIL**

The members of this Council, acting pursuant to the authority vested in them by the Oklahoma Environmental Quality Code (27 O.S.Supp. 1993, Section 2-2-201, by roll call vote, make formal recommendation to the Environmental Quality Board that the rule(s) specified below be adopted as (a) permanent rule(s) and by emergency and that the Board find that adoption of the rule(s) by emergency is warranted by the compelling extraordinary circumstance of the need for the rule to be in effect for delegation of the Title V program from the Environmental Protection Agency by March, 1995.

OAC 252:100-45 MONITORING OF EMISSIONS

Prior to making this recommendation, this Council considered the rules and comments received thereon and determined, to the best of its knowledge, that all requirements of the Oklahoma Administrative Procedures Act applicable to this rulemaking have been followed.

With the understanding that such changes shall not invalidate this recommendation, this Council authorizes the Department staff to make any amendments approved by the Council, appropriate corrections of typographical errors, additions and deletions indicated by ~~strikeout~~/underline, and formatting as required by the Office of Administrative Rules.

Respectfully,

Chair or Designee

Signed this 11th day of October, 1994.

SUBCHAPTER 45. MONITORING OF EMISSIONS

252:100-45-1. Purpose

The purpose of this Subchapter is to outline the basic requirements for monitoring of emissions and their recording and reporting.

252:100-45-2. Monitoring equipment required

The Executive Director may require the owner or operator of any air contaminant source to:

- (1) install, use, and maintain such monitoring equipment;
- (2) sample such emissions in accordance with methods as the Executive Director shall prescribe;
- (3) establish and maintain such records; and
- (4) make such periodic emission reports as required in 252:100-45-3.

252:100-45-3. Records required

Records and reports as the Executive Director shall prescribe on air contaminants or fuel shall be recorded, compiled, and submitted on forms furnished by the Executive Director. (The procedures below are examples of such requirements.)

- (1) Emissions of particulate matter, sulfur dioxide, and oxides of nitrogen shall be expressed as follows:
 - (A) in pounds per hour and pounds per million BTU of heat input for fuel-burning equipment;
 - (B) in pounds per hour and pounds per 100 pounds of refuse burned for incinerators; and
 - (C) in pounds per hour and in pounds per hourly process weight or production rate or in terms of some other easily measured and meaningful process unit specified by the Executive Director.
- (2) Sulfur dioxide and oxides of nitrogen emission data shall be averaged over a 24-hour period and shall be summarized monthly. Daily averages and monthly summaries shall be submitted to the Executive Director biannually. Data should be calculated daily and available for inspection at any time.
- (3) Particulate matter emissions shall be sampled and submitted biannually.
- (4) Visible emissions shall be measured continuously and records kept indicating total minutes per day in which stack discharge effluent exceeds 20 percent opacity. Data should be summarized biannually. Current daily results shall be available for inspection at any time.
- (5) The sulfur content of fuels, as burned, except natural gas, shall be determined in accordance with current recognized ASTM procedures. Daily and monthly averages shall be submitted biannually. Daily records shall be kept current and be available for inspection.

252:100-45-4. Compliance Certifications

Notwithstanding any other provision in the State of Oklahoma implementation plan approved by the Administrator, for the purpose of submission of compliance certifications an owner or operator is not prohibited from using monitoring as required under 252:100-8-6 (a) (3) and incorporated into a federally enforceable operating permit in addition to any specified compliance methods.

252:100-45-5. Enforceability

Notwithstanding any other provision in the State of Oklahoma implementation plan approved by the Administrator, any credible evidence may be used for the purpose of establishing whether a person has violated or is in violation of any such plan.

(1) Information from the use of the following methods is presumptively credible evidence of whether a violation has occurred at the source:

(A) A monitoring method approved for the source pursuant to 252:100-8-6 (a) (3) and incorporated in a federally enforceable operating permit.

(B) Compliance methods specified in the applicable plan.

(2) The following testing, monitoring or information gathering methods are presumptively credible testing, monitoring or information gathering methods:

(A) Any federally-enforceable monitoring or testing methods, including those in 40 CFR parts 51, 60, 61 and 75.

(B) Other testing, monitoring or information-gathering methods that produce information comparable to that produced by any method in (1) or (2) (A).

Additional Comments

SUBCHAPTER 45. MONITORING OF EMISSIONS

EXECUTIVE SUMMARY:

The intent of the revision to OAC 252:100-45 is to correct inadequacies in the Oklahoma State Implementation Plan(SIP) as identified by the federal Environmental Protection Agency(EPA). The corrections allow a permitted source to use any credible evidence to demonstrate compliance, and allow the EPA to use any credible evidence to establish violations and enforce the Oklahoma SIP. The net result would be an EPA-approvable SIP, as required by the 1990 Clean Air Act Amendments.

SUMMARY OF DIFFERENCES FROM ANALOGOUS FEDERAL RULES:

The revision to Subchapter 45 corrects possible differences in interpretation of Oklahoma rules and federal law by allowing the use of any credible evidence for compliance and enforcement purposes.

Comments and Responses:

Comment: EPA, in correspondence dated Sept. 26, 1994, concurred with the staff's proposed language.

ENHANCED MONITORING

EXECUTIVE SUMMARY

Background

The United States Environmental Protection Agency (EPA) is initiating an Enhanced Monitoring Program. The implementation strategy is to require enhanced monitoring of major stationary sources of air pollution pursuant to Section 114(a)(3) and 110(a)(2)(A), (C) and (F) and 113(a) and (e) and 504(c) of the Clean Air Act Amendments of 1990. This new program represents a shift away from the historical process of using a performance test to demonstrate a source's ability to comply with applicable emission limits and agency surveillance to show compliance. Enhanced monitoring will place the burden upon the source's owner or operator to demonstrate compliance.

The proposed regulations will establish criteria and procedures that owners or operators must satisfy when selecting an enhanced monitoring protocol. The reporting and recordkeeping requirements will identify the basis, content, frequency and other requirements for enhanced monitoring reports. Appendices will consist of enhanced monitoring performance and quality assurance requirements. The implementation will be through the permitting process pursuant to 70.6(a)(3). The information collected will be used to determine compliance with applicable emission limitations for enforcement purposes, benefitting regulatory agencies. Conversely, the enhanced monitoring data will be used by an owner or operator to certify compliance pursuant to 70.6(a)(3) and/or as evidence for the compliance certificate pursuant to 70.5(d), benefitting regulated industries.

Issuance of a SIP Call

In anticipation of the enhanced monitoring provisions, the EPA has reviewed the Oklahoma Air Pollution Control Rules. The Oklahoma State Implementation Plan (SIP) has been found to be substantially inadequate to meet the requirements pertaining to enhanced monitoring at Sections 110(a)(2)(A), (C), and (F), 113(a) and (e), and 114(a)(3) of the Act. Oklahoma's present SIP may be interpreted to limit the types of testing or monitoring data that may be used for compliance certification purposes or establishing violations. Because the SIP becomes Federal law when approved by the EPA, some courts may inappropriately interpret Oklahoma's SIP to restrict the EPA's authority to assess penalties pursuant to the Clean Air Act section 113(e) and 504(c): thus EPA has determined the Federal enforceability of Oklahoma's SIP provisions are inadequate. Therefore, the Governor of Oklahoma has been issued a

SIP call to ensure consistent interpretation in Federal and State enforcement actions. The EPA is requiring that any monitoring data that is approved for the source is regarded as credible evidence for determining compliance with and for establishing violations of the underlying emissions standards specified in the permit. The EPA is requiring a SIP revision by the later of the final promulgation of the enhanced monitoring regulations or November 15, 1994. This will insure that the language is placed in Oklahoma's SIP prior to the time the Air Quality Division begins to issue Part 70 CFR 40 permits (Oklahoma Subchapter 8 Permits). Ostensively, this change in Oklahoma's SIP provides the premise which will become Oklahoma's enhanced monitoring program. Notwithstanding any action by Oklahoma, the Federal EPA is proposing a Federal Implementation plan language for those areas that fail to submit a SIP revision or submit a revision the EPA does not approve.

Staff Recommendations

The staff of the Air Quality Division has been restricted when establishing violations of Oklahoma Air Pollution Control Rules. Currently, enforcement actions are limited to emission limitations, operating scenarios, or control technology as stipulated in the operating permit. After full implementation, information from the enhanced monitoring protocol, as well as any other credible evidence may be presented in Federal court to establish whether a violation has occurred. The court would rule on the credibility of the evidence and the existence of a violation based on all the evidence presented. The allowing of any credible evidence yields flexibility to the industrial source when producing evidence in the proposal of enhanced monitoring protocol and, in defense of an enforcement action. The Federal EPA has issued a SIP call to the Governor and provided suggested language to correct the deficiencies in our existing SIP. The staff recommends adoption of these changes.

OFFICE OF
AIR AND RADIATION

MEMORANDUM

SUBJECT: Enhanced Monitoring SIP Call Language and Schedule

FROM: John B. Rasnic, Director *John B. Rasnic*
Stationary Source Compliance Division (6306W)
Office of Air Quality Planning and Standards

TO: Air, Pesticides and Toxics Management Division Directors
Regions I and IV

Air and Waste Management Division Director
Region II

Air, Radiation and Toxics Division Director
Region III

Air and Radiation Division Director
Region V

Air, Pesticides and Toxics Division Director
Region VI

Air and Toxics Division Director
Regions VII, VIII, IX and X

Attached to this memorandum is language for the State Implementation Plan (SIP) call component of the Enhanced Monitoring (EM) rulemaking. The EM rule, proposed September 30, 1993, requires that a direct link be established between EM data and compliance certifications, and that the resulting data be used for direct enforcement of an underlying emission limit or standard. The SIP call described in the rulemaking is in agreement with the decisions made during the Air Division Directors' conference call held on June 4, 1993. These decisions were in turn delineated in the July 26, 1993, memorandum from my office to the Air Division Directors.

As noted, this SIP call is necessary to allow Part 64 and Part 70 monitoring data to be used directly for compliance certifications and enforcement. Enclosed are two options for the SIP language. Option 1 is the preferred option, as it is more explicit as to what is both allowed and required. Option 2, which is significantly less desirable from the point of view of the

Recycled/Recyclable
Printed with Soy/Canada Ink on paper that
contains at least 50% recycled fiber

workgroup, may be used where States feel that they can not directly refer to regulations that have not yet been promulgated. On February 15, 1994, the Regions would issue a SIP call to each State that had not voluntarily submitted a SIP revision. The basis for the SIP call would be that the SIP does not allow compliance with the enforceability provisions of section 110(a)(2) of the Clean Air Act, in light of the new monitoring requirements of sections 114 and 504. This call would require the States to revise their SIPs by the later of two events: 1) The issuance of the final EM rule (scheduled, per a settlement agreement, for September 30, 1994); or 2) November 15, 1994, the anticipated date for final permit program approval. The EPA has drafted Federal Implementation Plan (FIP) language in the proposed EM rule, which would be used in the event that a State fails to submit anything by the final date. If the State submits a response that should be disapproved, EPA would finalize the FIP in its final disapproval action of the State submittal. A goal of June 30, 1995 has been set for promulgation of final SIPs and FIPs. Please note that under the current schedule, permit applications would be due approximately November 15, 1995.

The EM subworkgroup is of the opinion that the above described SIP call process is legally sound, and that it offers the best opportunity for the successful implementation of the monitoring rules. I look forward to continued cooperation with your offices, and in turn your respective States, as we work through the process. If you have any questions, please contact me or Keith Brown of my staff at (703) 308-8600.

Proposed SIP Language

Option 1

[Section] Compliance Certifications. Notwithstanding any other provision in any plan approved by the Administrator, for the purpose of submission of compliance certifications the owner or operator is not prohibited from using the following in addition to any specified compliance methods:

- (1) An enhanced monitoring protocol approved for the source pursuant to 40 CFR Part 64.
- (2) Any other monitoring method approved for the source pursuant to 40 CFR 70.6(a)(3) and incorporated into a federally enforceable operating permit.

[Section] Enforcement. (a) Notwithstanding any other provision in the [name of State or area] implementation plan approved by the Administrator, any credible evidence may be used for the purpose of establishing whether a person has violated or is in violation of any such plan.

- (1) Information from the use of the following methods is presumptively credible evidence of whether a violation has occurred at a source:
 - (A) An enhanced monitoring protocol approved for the source pursuant to 40 CFR Part 64.
 - (B) A monitoring method approved for the source pursuant to 40 CFR 70.6(a)(3) and incorporated in a federally enforceable operating permit.
 - (C) Compliance test methods specified in the applicable plan approved in this part.
- (2) The following testing, monitoring or information gathering methods are presumptively credible testing, monitoring or information-gathering methods:
 - (A) Any federally-enforceable monitoring or testing methods, including those in 40 CFR parts 51, 60, 61 and 75.
 - (B) Other testing, monitoring or information-gathering methods that produce information comparable to that produced by any method in (1) or (2)(A).

Option 2

[Section] Compliance Certifications. Notwithstanding any other provision in any plan approved by the Administrator, for the purpose of submission of compliance certifications an owner or operator is not prohibited from using monitoring as required under 40 CFR 70.6(a)(3) and incorporated into a federally enforceable operating permit in addition to any specified compliance methods.

[Section] Enforcement. (a) Notwithstanding any other provision in the [name of State or area] implementation plan approved by the Administrator, any credible evidence may be used for the purpose of establishing whether a person has violated or is in violation of any such plan.

(1) Information from the use of the following methods is presumptively credible evidence of whether a violation has occurred at the source:

- (A) An enhanced monitoring protocol approved for the source pursuant to 40 CFR Part 64.
- (B) A monitoring method approved for the source pursuant to 40 CFR 70.6(a)(3) and incorporated in a federally enforceable operating permit.
- (C) Compliance methods specified in the applicable plan.

(2) The following testing, monitoring or information gathering methods are presumptively credible testing, monitoring or information gathering methods:

- (A) Any federally-enforceable monitoring or testing methods, including those in 40 CFR parts 51, 60, 61 and 75.
- (B) Other testing, monitoring or information-gathering methods that produce information comparable to that produced by any method in (1) or (2) (A).

Oklahoma City, Oklahoma 73105-3483

Re: Work Plan and Schedule for Developing and Adopting
Regulations for Enhanced Monitoring

Dear Mr. Byrum:

The Environmental Protection Agency (EPA) proposed regulations pertaining to the use of enhanced monitoring on October 22, 1993. In that proposal, at section IV (K) of the preamble (SIP call), EPA stated that the State Implementation Plans (SIP) must be revised to incorporate provisions to enable the use of any credible evidence to determine compliance and violations of Prevention of Significant Deterioration (PSD) permits, nonattainment New Source Review (NNSR) permits, and operating permits issued pursuant to Title V of the Clean Air Act Amendments. Furthermore, the state plan must adopt these corrective SIP call regulations and submit them to EPA by November 15, 1994 in order that they will be included in PSD permits, NNSR permits, and Title V permits issued after November 15, 1994.

As stated above, it is essential that Oklahoma Department of Environmental Quality (ODEQ) adopt and submit regulations not later than November 15, 1994, to allow the use of any credible evidence to determine compliance and violations of PSD permits, NNSR permits and Title V permits. We request that you provide us, within 30 days, a draft schedule by which you will propose the regulations, hold public hearings, adopt the regulations, and submit the regulations to EPA as a SIP revision. Enclosed herein is information to assist you in developing regulatory language, and a sample schedule for your consideration.

We commend you for your efforts to date and we encourage you to proceed with the development and adoption of enhanced monitoring regulations.

Your cooperation will be greatly appreciated. If you have any questions please call me at (214) 655-7252 or Mr. Daron Page at (214) 655-7222 .

Sincerely yours,

Jole C. Luehrs

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

REGION 6
1445 ROSS AVENUE, SUITE 1200
DALLAS, TX 75202-2733

JUN 09 1994

Honorable David Walters
Governor of Oklahoma
Oklahoma City, OK 73105

Dear Governor Walters:

The purpose of this letter is to notify you pursuant to Section 110(k)(5) of the Clean Air Act (the Act), 42 U.S.C. § 7410(k)(5), that we find the Oklahoma State Implementation Plan (SIP) substantially inadequate to meet the requirements pertaining to enhanced monitoring at Sections 110(a)(2)(A), (C), and (F), 113(a) and (e), and 114(a)(3) of the Act, 42 U.S.C. §§ 7410(a)(2)(A), (C), and (F), 7413(a) and (e), and 7414(a)(3), respectively (see Enclosure 1).

As discussed in the preamble to the proposed Enhanced Monitoring Rules published in the Federal Register on October 22, 1993, the Environmental Protection Agency (EPA) believes that existing SIPs are inadequate for States as permitting authorities or the EPA to fully implement Section 114(a)(3) of the Clean Air Act. This section was added to the Act as part of the 1990 Amendments for purposes of compliance certification and enforceability as required by Section 110(a)(2), because the SIPs may be interpreted to limit the types of testing or monitoring data that may be used for determining compliance and establishing violations. Further, these SIP's may be interpreted to restrict the EPA's or the State's ability to use any credible evidence of a violation in enforcement actions. The EPA is also requiring States to revise their SIPs to clarify that any monitoring required under 40 C.F.R. part 64 or part 70 that is approved for the source and included in a federally-enforceable operating permit may form the basis of the compliance certification and that any credible evidence may be used for purposes of enforcement in Federal court. In addition, because the SIP becomes Federal law when approved by the EPA, the EPA is concerned that some courts may inappropriately interpret a SIP to restrict EPA's authority

under Section 113(e) and other promulgated Federal regulations concerning enforcement of the SIPs (e.g., 40 CFR 52.12). The EPA believes that any ambiguity with respect to the issue should be eliminated and States should revise their SIPs to ensure consistent interpretation of Section 113(e) in all Federal actions.

The EPA is therefore requesting the State of Oklahoma to cure the identified inadequacies by revising the SIP. In order to provide sufficient time to adopt and submit revisions, the State is required to revise its SIP by November 15, 1994. The State must submit a schedule for the development of the necessary enhanced monitoring SIP revision to the EPA not more than 15 days from the date of this letter. (In anticipation of this necessary SIP revision, a sample schedule has been forwarded to the State for their consideration.) If the State does not submit the curative enhanced monitoring SIP revisions to the EPA by November 15, 1994, the Clean Air Act requires the EPA to take action. In that event, the EPA believes that it would have to promulgate a corrective Federal Implementation Plan (FIP) to cure the deficiencies.

I recognize that the above schedule is ambitious, but I believe it can be met if we work together. I look forward to this cooperative effort.

Sincerely yours,

/s/ William B. Hathaway for

Dear Mr. Fontenot:

We are in receipt of Ms. Saginaw's June 9, 1994, letter to Governor Walters which finds the Oklahoma State Implementation Plan substantially inadequate in regards to the Clean Air Act's enhanced monitoring requirements.

Please find attached Oklahoma's proposed developmental schedule and workplan outlining the steps we plan to take in correcting these deficiencies.

An area that still concerns us is that we may have difficulty in formally referring in our SIP revision to federal rulemaking that has not yet been finalized. We plan to work closely with your staff in addressing this problem so that we can develop revisions that will be acceptable to all parties concerned.

Sincerely,

Re: Enhanced Monitoring SIP Call - Proposed Revisions to OAC
252:100-45 "Monitoring of Emissions"

Dear Mr. Byrum:

We have reviewed the regulatory changes outlined in your letter to Mr. Gerald Fontennot, dated August 2, 1994 which proposed language for OAC 252:100-45 "Monitoring of Emissions" in response to the June 9, 1994 SIP call. There were two versions of proposed regulation language attached. In the first version the proposed regulatory changes follow closely with the language outlined in Option 2 of the December 17, 1993 memorandum from Keith Brown, Workgroup chair, Enhanced Monitoring Program Workgroup to Regional Air Directors. We suggest that the more detailed language in the first version be adopted.

On the basis of our review of the proposed regulatory changes, we have no further comments or items of concern. The office of Regional Counsel will not be reviewing this draft; we strongly urge you to elicit the advise and counsel of your attorneys on this matter.

If you have any questions, please call Daron Page of my staff at (214) 665-7222.

Re: Emergency Rules
Environmental Quality Board, 11/30/94
252:100-45 (emissions monitoring) Air Pollution Control
[amended]

Dear Mr. Heiser:

Enclosed as required by 75 O.S.Supp. 1992, Section 253, is one copy of the referenced rules. Please note that these rules were adopted by the Environmental Quality Board, not the Department as is reflected on the rules heading. This is one of eight emergency rulemaking actions taken that day, and identical permanent rules were also adopted for all of these actions.

Please be advised that notice and hearing were accomplished; thus, the emergency is sought to achieve timely effectiveness of the rules.

We request your approval of the rules. If you find that such may not be warranted, please call. Also, feel free to call on me if I can in any way assist in the processing of this material under the Administrative Procedures Act.

Sincerely,

Robert D. Kellogg
General Counsel

Clean Air

Industry Readies Itself for the Enhanced Monitoring Rule

RICHARD A. HOVAN
KVB/Analect, a Research-Cottrell Company

On October 22, 1993, the U.S. Environmental Protection Agency (EPA) proposed a new enhanced monitoring program which included both new regulations and amendments to several existing regulations. The proposed rule, which has been estimated to cost industry between \$830 million and \$1.64 billion, will be finalized under a court-ordered deadline of September 30, 1994. If the final rule reflects the magnitude of the proposed rule, approximately 34,000 total sources will be affected.

The Regulation

The Clean Air Act Amendments (CAAA) of 1990 envision two goals for the enhanced monitoring (EM) provisions:

- 1) To provide real assurance that standards (New Source Performance Standards, NESHAPS) are being met;
- 2) To achieve emissions reductions. There is sufficient evidence that greater levels of emissions reductions are achieved when some kind of continuous compliance demonstration is required.

Five criteria pollutants are regulated under the proposed EM rule: ozone, i.e. volatile organic compounds (VOCs) and nitrogen dioxides (NO_x); total suspended particulates (TSP); carbon monoxide (CO); and sulfur dioxide (SO₂). Enhanced monitoring designated HAPs will be integrated in individual Title III regulations. The EM requirements apply to existing facilities; new or modified facilities will become subject to new standards for pollutant monitoring.

The Monitoring Techniques

Each source/facility that is required to obtain a Title V operating permit must, in the permit application that it submits for approval, identify an enhanced monitoring program and protocol, correlate it with the applicable monitoring or reference standards, and demonstrate that its implementation will be sufficient to show continuous compliance. To assist affected sources—as well as permit writers—EPA will publish a separate "Enhanced Monitoring Reference Document," a com-

pendium of established monitoring techniques.

Depending on the nature of the emissions unit being monitored, an enhanced monitoring protocol could include elements such as the following:

- continuous emission monitoring systems;
- continuous process or control device parameter monitoring systems or procedures;
- emission calculations based on accepted engineering estimation techniques;

- continued on page 2

LEV Program Technologies are on Track

BRUCE I. BERTELSEN
Executive Director, MECA

When California adopted its now famous Low Emission Vehicle and Clean Fuel Program in 1990, many simply shook their heads and said the standards could not possibly be met within the ambitious schedule set out by the program. But now, four years later, as a result of an unprecedented development effort 1) to reduce emissions from gasoline, diesel, and alternative fuel vehicles, 2) to improve fuel quality, and 3) to develop electric-powered vehicles, the California Air Resources Board recently concluded that compliance with the tough emission standards is on track.

This article will focus on some of the notable development efforts to reduce emissions from gasoline-fueled vehicles. Watch for articles in future issues of Clean Air Tech-

nology News on technological developments being made to reduce emissions from alternative- and diesel-fueled vehicles.

The California LEV Program

The cornerstone of the California LEV Program is a series of increasingly more stringent emission standards for light- and medium-duty vehicles phased in over a ten year period beginning in 1994. For passenger cars and light trucks there are four sets of standards — transitional low emission vehicle (TLEV), low emission vehicle (LEV), ultra-low emission vehicle (ULEV) and zero emission vehicle (ZEV) as shown in Table 1. Comparable standards have been established for light-duty trucks and medium duty vehicles, although no ZEV requirement is present.

The ZEV mandate is phased in over several years beginning with a two percent - continued on page 7

Enhanced Monitoring Rule

—continued from page 1

- maintenance and analysis of records, fuel or raw materials usage;
- periodic verification of emissions, process parameters or control device parameters using portable or in situ measurement devices;
- recording results of a program or protocol to conduct specific operation and maintenance procedures, leak detection, fugitive dust control, or other work practices;
- any other form of measuring emissions, process parameters or control device parameters that can achieve the requirements of the proposed regulations.

Traditional Technology Choices

While EPA's proposal made it clear that EM does not require sources to install CEMS, many facilities will opt for the "tried and true" CEMS technologies which are successfully operating on industrial and utility sources throughout the nation.

All CEMS incorporate three basic systems: sampling, monitoring or analyzing, and data acquisition and reporting/handling. CEMS either are extractive or in situ, depending on the location of the sampling system relative to the analyzer. Extractive systems use a sampling probe to remove and transport a gas sample to a remote analyzer, while in situ systems directly monitor and sample the gas within the stack or duct. Extractive systems can employ two varieties of sampling probe: fully extractive or dilution-extraction. The choice of probe type must be made on a case-by-case basis, and is dependent on the application and gas stream.

Emerging Technologies—Air Toxics Monitoring

The technology which has received a great deal of attention and associated testing under the EPA's Emission Measurement Branch has been fourier transform infrared (FTIR) spectrometry. FTIR uses infrared light absorption patterns to determine the emitted component. The heart of the FTIR spectrometer is an optical device called an interferometer which uses a beam splitter and mirrors to measure the infrared spectrum of a gas sample. The infrared source is split into a pair of

beams that recombine in the device to form a pattern. A computer algorithm converts the pattern into quantitative data.

Unlike traditional CEMS, FTIR potentially can measure thousands of components at a time. Currently, FTIR can measure up to 80 constituents at one time, with 135 out of the 189 Title III (Air Toxics) CAAA regulated pollutants able to be measured by the technology. The other clear advantage of FTIR over multi-component analytical techniques is the speed, accuracy, and reliability of the method. Results typically are available within minutes of analysis. Since many FTIR systems were designed for harsh process environments they are extremely rugged, with maintenance requirements typically limited to a once-a-year light source changeout.

FTIR testing and piloting have been underway for several years, and FTIR has proven to be extremely successful in numerous applications including utility, pulp and paper, cement manufacturing, waste incineration, and primary and secondary metals manufacturing.

Analyzer Advances

In response to industry's needs for greater reliability and increased accuracy from their monitoring devices, important advances in the actual analyzers have been achieved. One of the most impressive of these advances applies to the old industry standby, the opacity monitor. This new monitor differentiates itself by using a laser source which operates on the principle of light attenuation. While a traditional opacity-light source disintegrates over time and tends to misalign readily, the laser source does not waver in intensity, greatly improving both reliability and accuracy. The laser source operates without traditional filters,

resulting in a simpler operating system. Furthermore, beam collimation is a natural characteristic of the laser, producing a dramatic improvement in alignment (up to 10⁶ times).

The stability of the laser, coupled with its high intensity, results in a rugged and highly practical system for process conditions where high dust loads are common. The system is light, easy to install, and requires minimal maintenance. Since almost 40% of the sources under the proposed enhanced monitoring regulation will need to monitor for opacity, the laser system offers a simple, cost-effective response.

Software-Based Monitoring Systems

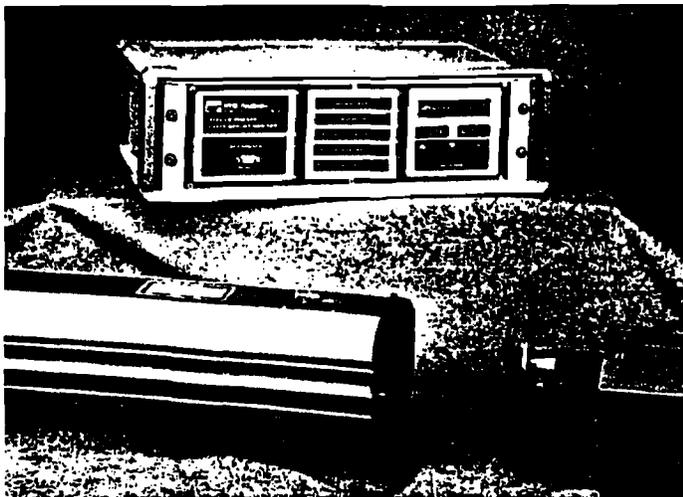

For years, engineers have designed process control models which have been used to predict downstream process output based on upstream process factors. However, these models were basically linear, able to create process approximations based only on a few parameters. Now, software advances have expanded modeling capabilities multidimensionally using techniques of fuzzy logic, neural networks, and chaotic system theory. These advances are proving to be applicable to modeling and predicting emissions generated from various combustion and chemical processes.

In practice, each model—for each individual source—must be "taught" to predict using historical operating and emissions data that has been generated by conventional CEMS. The model predicts emissions using a myriad of operating data integrated through the process' existing distributed control system (DCS). In addition to using this model to predict emissions for compliance purposes, the system can be used for pollution prevention and process optimization.

Anticipating the Regulations

The court-ordered deadline for EPA to finalize the EM rule is fast approaching, and industries are paying close attention to the anticipated requirements of the rule. Although the exact requirements of the final rule remain unknown, likely sources can get an important head-start on the compliance process by determining the likelihood that they will be regulated, by examining the available technical alternatives, and by understanding both the potential and the limits of new emissions monitoring technologies.

CATN

The KVB/MIP opacity monitor uses advanced laser technology to improve performance, reliability and accuracy.

INCIDENTS OF COMMISSION MEETING

	<u>PAGE</u>
MOTION BY MR. KILPATRICK08
SECOND BY MS. TILLMAN	08
ROLL CALL VOTE08

October 11, 1994
Oklahoma City, Oklahoma
1:15 o'clock p.m.

* * * * *

THE CHAIRMAN: We will call the board meeting to order. First on the agenda is the hearing portion of the meeting. Larry Byrum will act as protocol officer for the hearing portion of the meeting.

Larry.

MR. BYRUM: Ladies and gentlemen, my name is Larry Byrum. I am the director of the air quality division. As such, I will act as the protocol officer for this hearing. This hearing was convened by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 of the Code of Federal Regulations, part 51, as well as the authority of Title 63 of the Oklahoma Statutes, Section 1-1801 and following. This hearing was advertised in the Oklahoma Register for the purposes of receiving comments pertaining to the revisions of OAC 252:100-45 "Monitoring of Emissions."

If you wish to make comments on this, there are slips that are available at the registration table. If you would fill those out, they will be passed to me, and I will call upon you at the appropriate time to make

1 those statements.

2 At this time, I would call upon Mr. Randall
3 Ward of the staff to give the staff's position on these
4 proposed changes.

5 THE CHAIRMAN: Larry, may I interrupt for a
6 minute. I did not have the roll call. And I need -- we
7 better do that for the record.

8 Go ahead and call the roll.

9 MS. BRUCE: Dr. Canter.

10 DR. CANTER: Here.

11 MS. BRUCE: Mr. Branecky.

12 MR. BRANECKY: Here.

13 MS. BRUCE: Ms. Hinkle.

14 MS. HINKLE: Here.

15 MS. BRUCE: Mr. Kilpatrick.

16 MR. KILPATRICK: Here.

17 MS. BRUCE: Ms. Tillman.

18 MS. TILLMAN: Here.

19 MS. BRUCE: Mr. Breisch.

20 MR. BREISCH: Here.

21 MS. BRUCE: Members absent are Mr. Fishback,
22 Mayor Taron, and Ms. Slagell.

23 THE CHAIRMAN: Go ahead and continue.

24 MR. BYRUM: Mr. Ward.

25 MR. WARD: Mr. Chairman, members of the

1 Council, ladies and gentlemen: My name is Randall Ward,
2 representing the staff of the air quality division of
3 the Oklahoma Department of Environmental Quality. I am
4 currently the supervisor of the analysis and planning
5 unit.

6 On June 9, 1994, Governor Walters received a
7 letter from Jane Saginaw, Regional Administrator for the
8 Environmental Protection Agency, as part of a nationwide
9 SIP call. We were notified that our state
10 implementation plan was subsequently inadequate to meet
11 the Clean Air Act requirements concerning enhanced
12 monitoring, compliance certification, and the use of any
13 credible evidence for enforcement purposes.

14 Oklahoma's current SIP may be interpreted to
15 limit the types of testing or monitoring data that may
16 be used for determining compliance and establishing
17 violations and to limit the EPA's ability to assess
18 penalties. The EPA is requiring that the states revise
19 their SIP to allow any monitoring data that is approved
20 for a source be regarded as credible evidence for
21 determining compliance and for establishing violations
22 of any standards specified in the permit.

23 Through consultation and correspondence with
24 the EPA, the staff has developed new language to address
25 these concerns. SIP letter and other material are part

1 of the Council packets. Staff is proposing to add new
2 language to OAC 252:100-45 "Monitoring of Emissions."
3 The new language is indicated by underlining and
4 consists of two new sections: OAC 252:100-45-4
5 "Compliance Certification" allows a source to use the
6 monitoring required by their Title 5 permit under OAC
7 252:100-8-6 (a)(3) for the purposes of compliance
8 certification.

9 The second section, OAC 252:100-45-5
10 "Enforcability," allows the use of any credible evidence
11 to determine violations and establishes presumptively
12 credible methods and information sources. Copies of the
13 rule are in the Council packet and available to the
14 audience today. Also included in the packet is a letter
15 from Region 6 EPA approving our proposed rule language.

16 I will now officially enter a copy of the EPA
17 comments into the record. Because it is important that
18 SIP be approved as soon as possible and we have received
19 no substantive comments to the rule, the staff
20 recommends that the Council take action to recommend
21 this rule to the Environmental Quality Board for
22 adoption as an emergency and permanent rule.

23 I and the rest of the staff will now answer any
24 questions.

25 MR. BYRUM: Any questions of the Council for

1 Mr. Ward or other members of the staff? Any questions
2 from the audience for Mr. Ward? Are you raising your
3 hand? Okay. B.J.

4 MS. MEDLEY: I just want to make sure that we
5 are of the understanding that additional rules may be
6 added later regarding enhanced monitoring as soon as EPA
7 deals with that and adopts their final rules. Am I
8 correct on that?

9 MR. BYRUM: Additional rule making will be
10 required to put the provisions of the enhanced
11 monitoring program as proposed by the Federal Register
12 in place.

13 MS. MEDLEY: Thank you.

14 MR. BYRUM: Any other questions? Thank you. I
15 have notices on oral comments from B.J. Did you want to
16 address this rule further?

17 MS. MEDLEY: You mean on the sulfur? Did Tom
18 Diggs call you?

19 MR. BYRUM: No.

20 MS. MEDLEY: No. I'm fine.

21 MR. BYRUM: Nadine, did you --

22 MS. BARTON: I would like to defer my time. Is
23 that possible? To later? Or do we have to make a
24 statement at this time?

25 MR. BYRUM: On this particular rule, I think we

1 are getting ready to find out what the will of the
2 Council is as to whether to pass this rule at this point
3 and time or not.

4 MS. BARTON: I don't have a comment at this
5 time.

6 MR. BYRUM: I have no other indications that
7 anyone wishes to speak to this subject. Anyone else
8 wishing to speak?

9 Mr. Chairman, I find no other persons wishing
10 to speak.

11 THE CHAIRMAN: Any questions from the council?
12 I will entertain a motion on this matter to recommend it
13 to the DEQ.

14 MR. KILPATRICK: I will move that we recommend
15 this to the DEQ as a permanent and emergency rule.

16 MS. TILLMAN: Second.

17 THE CHAIRMAN: We've got a motion and a second.
18 Anymore comments? Any questions? Myrna, will you call
19 the roll?

20 MS. BRUCE: Dr. Canter.

21 DR. CANTER: Aye.

22 MS. BRUCE: Mr. Branecky.

23 MR. BRANECKY: Yes.

24 MS. BRUCE: Ms. Hinkle.

25 MS. HINKLE: Yes.

1 MS. BRUCE: Mr. Kilpatrick.

2 MR. KILPATRICK: Yes.

3 MS. BRUCE: Ms. Tillman.

4 MS. TILLMAN: Aye.

5 MS. BRUCE: Mr. Breisch.

6 MR. BREISCH: Aye.

7 (The hearing adjourned.)

Mr. Larry Byrum, Director
Air Quality Division
Oklahoma Department of
Environmental Quality
4545 North Lincoln Blvd., Suite 250
Oklahoma City, OK 73105-3483

Re: Enhanced Monitoring SIP Call - Proposed Revisions to OAC
252:100-45 "Monitoring of Emissions"

Dear Mr. Byrum:

We have reviewed the regulatory changes outlined in your letter to Mr. Gerald Fontennot, dated August 2, 1994 which proposed language for OAC 252:100-45 "Monitoring of Emissions" in response to the June 9, 1994 SIP call. There were two versions of proposed regulation language attached. In the first version the proposed regulatory changes follow closely with the language outlined in Option 2 of the December 17, 1993 memorandum from Keith Brown, Workgroup chair, Enhanced Monitoring Program Workgroup to Regional Air Directors. We suggest that the more detailed language in the first version be adopted.

On the basis of our review of the proposed regulatory changes, we have no further comments or items of concern. The office of Regional Counsel will not be reviewing this draft; we strongly urge you to elicit the advise and counsel of your attorneys on this matter.

If you have any questions, please call Daron Page of my staff at (214) 665-7222.

Sincerely yours,

A handwritten signature in cursive script that reads "Jole C. Luehrs".

SUBCHAPTER 5

COUNCIL MEETING DATES

AUGUST 19, 1997

OCTOBER 21, 1997

DECEMBER 16, 1997 (CONTINUED)

JANUARY 9, 1998

BOARD MEETING DATE

JANUARY 27, 1998 (CONTINUED)

MARCH 20, 1998

SUMMARY OF RULE CHANGE:

The changes to Subchapter 5 simplify and clarify the rule. Requirements to file an emission inventory moved from Subchapter 7 to Subchapter 5 and were revised. Also, requirements to pay annual operating fees moved from Subchapters 7 and 8 to Subchapter 5. The annual operating fees for minor facilities and non-part 70 sources were revised.

CHAPTER 100. AIR POLLUTION CONTROL

SUBCHAPTER 5. REGISTRATION, OF AIR CONTAMINANT SOURCES EMISSION INVENTORY AND ANNUAL OPERATING FEES

Outline-Section

252:100-5-1. Purpose

252:100-5-1.1. Definitions

252:100-5-2. Registration of potential sources of air contaminants

252:100-5-2.1. Emission inventory

252:100-5-3. Confidentiality of proprietary information

252:100-5-1. Purpose

~~The purpose of this subchapter is to provide the Council with data whereby they might determine conditions of air pollution, as between particular air contaminant sources and as between particular areas of the state, such as urban, suburban and rural areas~~ This Subchapter requires potential sources of air contaminants to register with the Division. It also requires facilities that emit air contaminants to file an emission inventory and pay annual operating fees.

[NOTE: 252:100-5-1.1 below is a new Section for Subchapter 5. It consists of new definitions and definitions moved from 252:100-7-4, 252:100-8-2, and 252:100-8-9 with necessary amendments. The definitions highlighted in yellow are not part of the SIP, and it is not our intention to make them part of the SIP since they refer to fee provisions. JDS 12/7/00]

252:100-5-1.1. Definitions

The following words and terms when used in this Subchapter shall have the following meaning unless the context clearly indicates otherwise:

"Actual emissions" means the total amount of regulated air pollutants emitted from a given facility during a particular calendar year, determined using methods contained in 252:100-5-2.1(d).

"Allowable emissions" means:

(A) The total amount of regulated air pollutant emitted based on limits contained in a federally enforceable permit or potential to emit, or

(B) For grandfathered sources, emission limits based on maximum design capacity and considering all applicable rules.

"Consumer Price Index" means an index determined by the U.S. Department of Labor measuring the change in the cost of typical wage-earner purchases of goods and services expressed as a percentage of the cost of these same goods and services in a base period.

"Date of billing" means the date the fee was billed. In the case no fee was billed because the owner or operator failed to submit the required annual emission inventory, the date of billing shall mean the date on which the fee would have been billed had the emission inventory been submitted when due.

"Emission inventory" means a compilation of all point source, storage and process fugitive air emissions for all regulated air pollutants at a given facility.

(b) Necessary information. The following information may be included for each source: total weight of the contaminant released per day; period or periods of operation; composition of the contaminant; physical state of the contaminant; temperature and moisture content of the air or gas stream at the point where released into the atmosphere and such other information as may be specifically requested by the Director. Where an air or gas cleaning device is incorporated in the air or gas stream preceding discharge to the atmosphere, the weight of material removed by the cleaning device, as well as the weight emitted, shall be stated.

(1) Total weight of the contaminant released per day.

(2) Period or periods of operation.

(3) Composition of the contaminant.

(4) Physical state of the contaminant.

(5) Temperature and moisture content of the air or gas stream at the point where released into the atmosphere.

(6) Efficiency of any control device.

(7) Such other information as may be specifically requested by the Director.

[NOTE: 252:100-5-2.1 below was formerly in 252:100-7-4(d) and is not and never has been part of the SIP. JDS 12/7/00]

252:100-5-2.1. Emission inventory

(a) Requirement to file an emission inventory. The owner or operator of any facility that is a source of air emissions shall submit a complete emission inventory annually on forms obtained from the Division.

(1) The inventory shall cover operations during a calendar year and shall be submitted prior to March 1 of the following year, unless a 30-day extension has been granted by the Division. An additional 30-day extension may be granted for good cause shown.

(2) Facilities registered under a permit by rule as outlined in Subchapter 7 and emitting 5 tons per year or less of each regulated pollutant are required to submit an emission inventory once every 5 years. The inventory shall cover operations during the last year of each 5-year period and be submitted by March 1 of the following year.

(3) De minimis facilities as defined in 252:100-7-1.1 are not required to submit an annual emission inventory.

(b) Content. All inventories submitted to the Division shall include, but shall not be limited to, the following:

(1) For those emissions subject to a permit, the permit number and the permitted allowable emissions as set forth therein.

(2) The amount of the actual emissions, including quantifiable excess emissions, and the basis for such determination.

(3) If the actual emissions vary from the allowable or from the previous year's actual by more than 30%, an explanation for the difference.

(4) For those emissions not the subject of a permit and when requested by the AQD, a list of all 252:100 rules setting forth emission limitations applicable to the facility in question and the maximum yearly allowable for the facility.

(c) Documentation. All calculations and assumptions must be verified by proper documentation. All supporting data, including actual production, throughput and measurement records along with engineering calculations and other data utilized in accordance with 252:100-5-2.1(d), below, must

~~furnished or obtained pursuant to this regulation Emission data must be made available at all times to the public during normal working hours.~~

~~(b) Upon the request of the interested party or parties, all hearings in which proprietary information is to be divulged shall be held "in camera" and such information shall be sealed and access otherwise limited. Emission data shall never be considered to be 'proprietary' for purposes of these regulations and must be available at all times to the public during normal working hours.~~

Notices of Rulemaking Intent

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must publish a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides other information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained. For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #97-1067]

INTENDED RULEMAKING ACTION:

Notice of proposed EMERGENCY and PERMANENT rulemaking

Proposed rules:

Subchapter 5. Registration of Air Contaminant Sources [AMENDED]

Subchapter 7. Construction Permits for Major and Minor Sources; Operating and Relocation Permits for Minor Sources [AMENDED]

Subchapter 41. Control of Emission of Hazardous and Toxic Air Contaminants [AMENDED].

Summary:

The proposed amendments to Subchapter 5 include moving the requirements to file an emission inventory from Subchapter 7 to Subchapter 5 and moving and revising the requirements to pay annual operating fees from Subchapters 7 and 8 to Subchapter 5. The proposed amendments to Subchapter 5 are designed to simplify and clarify the rules. The proposed amendments to Subchapter 7 are necessary to incorporate a new permit classification system into the Air Quality program. The proposed changes include: remove any requirements for Part 70 and major sources (which will be moved to Subchapter 8); define and exempt "de minimis" facilities from the requirements of Subchapter 7; revise minor permit application fees; and introduce two new types of construction and operating permits, permit by rule and general permit. The proposed amendments to Subchapter 41 include adopting by reference the existing Maximum Available Control Technology ("MACT") standards for hazardous air pollutants found in 40 C.F.R. Part 63, Subparts A, B, F, G, H, I, M, N, O, Q, R, T, W, X, CC, DD, EE, GG, JJ, KK, OO, PP, QQ, RR, VV, JJJ. The Division is requesting comments on these issues.

AUTHORITY:

Environmental Quality Board, 27A O.S. Supp. 1993, §§ 2-2-101 and 2-5-101 *et seq.*, Oklahoma Clean Air Act

COMMENT PERIOD:

Deliver or mail written comments from Tuesday, July 15, 1997, through Wednesday, August 13, 1997, to contact person.

Also scheduled before the Environmental Quality Board at their meeting on Monday, September 15, 1997 - 9:30 a.m. in Enid, Oklahoma (Location to be determined. See contact person.)

PUBLIC HEARINGS:

Tuesday, August 19, 1997 - 9:30 a.m. briefing and 1:00 p.m. hearing, Department of Environmental Quality, Air Quality Division, 4545 N. Lincoln Blvd., Burgundy Room Oklahoma City, Oklahoma.

COPIES OF PROPOSED RULES:

Copies of the rules will be available July 15, 1997, for review at the Air Quality Division office at the address listed below or may be obtained from the contact person.

RULE IMPACT STATEMENT:

The rule impact statements may be obtained from the Air Quality Division at the address below.

CONTACT PERSON:

Joyce D. Sheedy, Ph.D., Department of Environmental Quality, Air Quality Division, 4545 N. Lincoln Blvd., Suite 250, Oklahoma City, Oklahoma 73105-3483; (405) 290-8247

ADDITIONAL INFORMATION:

None

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 290-8247.

[OAR Docket #97-1067; filed 6-25-97]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 510. MUNICIPAL SOLID WASTE LANDFILLS

[OAR Docket #97-1079]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT and EMERGENCY rulemaking

Proposed rules:

252:510-1-7. Consideration of other law [AMENDED]

252:510-21-6. Types of financial assurance [AMENDED]

Notices of Rulemaking Intent

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must publish a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides other information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained. For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 2. PROCEDURES OF THE DEPARTMENT OF ENVIRONMENTAL QUALITY

[OAR Docket #97-1189]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking
Proposed rules:

252:2. Procedures of the Department of Environmental Quality Subchapter 15. Uniform Permitting Procedures [AMENDED]

Summary:

The proposed amendments of 252:2-15-40 and 252:2-15-41 result from the U.S. Environmental Protection Agency's (EPA) review of the Department of Environmental Quality's (DEQ) air quality permitting program for Title V. Per EPA request and other comments received, the Air Quality Tier I and II rules of the uniform permitting program are being amended. Amendments include format changes for purposes of clarity and substantive changes to move certain permits from Tier I to Tier II to allow more public participation - e.g., acid rain permits, temporary permits, some operating permits, and general permit authorizations required to have compliance schedules under OAC 252:100-8.

AUTHORITY:

Environmental Quality Board, 27A O.S. Supp. 1993, §§ 2-2-101 and 2-5-101 *et seq.*, Oklahoma Clean Air Act

COMMENT PERIOD:

Deliver or mail written comments from Tuesday, September 15, 1997, through Wednesday, October 15, 1997, to contact person. Also scheduled before the Environmental Quality Board at their meeting on Tuesday, November 18, 1997 - 9:30 a.m., in Oklahoma City, Oklahoma (Location to be determined. See contact person).

PUBLIC HEARINGS:

Before the Air Quality Council on Tuesday, October 21, 1997, 9:30 a.m. briefing and 1:00 p.m. hearing, at the Tulsa City-County Health Department, 4616 East 15th Street, Tulsa, Oklahoma.

COPIES OF PROPOSED RULES:

Copies of the rules will be available September 15, 1997, for review at the Air Quality Division office at the address listed below or may be obtained from the contact person.

RULE IMPACT STATEMENT:

The rule impact statement may be obtained from the Air Quality Division at the address below.

CONTACT PERSON:

Joyce D. Sheedy, Ph.D., Department of Environmental Quality, Air Quality Division, 4545 N. Lincoln Blvd., Suite 250, Oklahoma City, Oklahoma 73105-3483; (405) 290-8247

ADDITIONAL INFORMATION:

None

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 290-8247.

[OAR Docket #97-1189; filed 8-22-97]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #97-1190]

INTENDED RULEMAKING ACTION:

Notice of proposed EMERGENCY and PERMANENT rulemaking

Proposed rules:

Subchapter 5. Registration of Air Contaminant Sources [AMENDED]

Subchapter 7. Construction Permits for Major and Minor Sources; Operating and Relocation Permits for Minor Sources [AMENDED]

Subchapter 8. Operating Permits (Part 70) [AMENDED]

Subchapter 41. Control of Emission of Hazardous and Toxic Air Contaminants [AMENDED]

Summary:

The proposed amendments to Subchapter 5 include moving the requirements to file an emission inventory from Subchapter 7 to Subchapter 5, moving the requirements to pay annual operating fees from Subchapters 7 and 8 to Subchapter 5, and revising the annual operating fees for

minor facilities, non-part 70 sources and part 70 sources. The proposed amendments to Subchapter 5 are designed to simplify and clarify the rules. The proposed amendments to Subchapter 7 are necessary to incorporate a new permit classification system into the Air Quality program. The proposed changes include: remove any requirements for Part 70 sources and major facilities (which will be moved to Subchapter 8); define and exempt "de minimis" facilities from the requirements of Subchapter 7; revise minor permit application fees; and introduce two new types of construction and operating permits, permit by rule and general permit. The proposed amendments to Subchapter 8 are necessary to incorporate a new permit classification system; move the requirements for construction permits for Part 70 sources and major facilities from Subchapter 7 to Subchapter 8; move the requirement to pay annual operating fees from Subchapter 8 to Subchapter 5; and meet the federal permitting requirements for final approval of the Oklahoma Operating Permits Program under Title V of the federal Clean Air Act and 40 CFR Part 70. The proposed amendments include: introduction of general permits for construction of Part 70 sources and major facilities not subject to Part 70 and general permits for operating major sources not subject to Part 70; addition of the requirements for construction permits for Part 70 sources and construction and operating permits for major facilities not subject to Part 70; revision of the permit application fees; deletion of annual operating fees (which will be moved to Subchapter 5); and amendments to meet the requirements for final approval of the Title V program including the incorporation by reference of federal rules governing case-by-case MACT determinations (40 CFR §§63.40, 63.41, 63.43 and 63.44). The following changes were set forth by EPA in the interim approval of the Oklahoma Program published in the Federal Register at 62 FR 4220, Monday, February 5, 1996: (1) Revise Subchapter 8 to Include Transition Schedule; (2) Revise Subchapter 8 definition of "Major Source"; (3) Revise Subchapter 8 Insignificant Activities Provision; (4) Revise Subchapter 8 Permit Content Language; (5) Revise Subchapter 8 Judicial Review Provision; (6) Revise Subchapter 8 Administrative Amendment Provision; and (7) Submission of a SIP Revision for Subchapter 7. The proposed amendments to Subchapter 41 include adopting by reference the existing Maximum Available Control Technology ("MACT") standards for hazardous air pollutants found in 40 CFR Part 63, Subparts F, G, H, I, L, M, N, O, Q, R, T, U, W, X, Y, CC, DD, EE, GG, II, JJ, KK, OO, PP, QQ, RR, VV, JJJ. The Division is requesting comments on these issues.

AUTHORITY:

Environmental Quality Board, 27A O.S. Supp. 1993, §§ 2-2-101 and 2-5-101 *et seq.*, Oklahoma Clean Air Act

COMMENT PERIOD:

Deliver or mail written comments from Tuesday, September 15, 1997, through Wednesday, October 15, 1997, to contact person. Also scheduled before the

Environmental Quality Board at their meeting on Tuesday, November 18, 1997 - 9:30 a.m., in Oklahoma City, Oklahoma (Location to be determined. See contact person).

PUBLIC HEARINGS:

Before the Air Quality Council on Tuesday, October 21, 1997, 9:30 a.m. briefing and 1:00 p.m. hearing, at the Tulsa City-County Health Department, 4616 East 15th Street, Tulsa, Oklahoma.

COPIES OF PROPOSED RULES:

Copies of the rules will be available September 15, 1997, for review at the Air Quality Division office at the address listed below or may be obtained from the contact person.

RULE IMPACT STATEMENT:

The rule impact statements may be obtained from the Air Quality Division at the address below.

CONTACT PERSON:

Joyce D. Sheedy, Ph.D., Department of Environmental Quality, Air Quality Division, 4545 N. Lincoln Blvd., Suite 250, Oklahoma City, Oklahoma 73105-3483; (405) 290-8247.

ADDITIONAL INFORMATION:

The proposed rulemaking activities for Subchapters 5, 7, and 41 represent a continuation of a hearing held on August 19, 1997, in Oklahoma City, Oklahoma.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 290-8247

[OAR Docket #97-1190; filed 8-22-97]

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 200. HAZARDOUS WASTE MANAGEMENT**

[OAR Docket #97-1191a]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT and EMERGENCY rulemaking

Proposed rules:

252:200-3-1 [AMENDED]

252:200-3-2 [AMENDED]

252:200-9-7(b)(1) [AMENDED]

252:200-19-29 through 252:200-19-34 [AMENDED]

Summary:

The proposed amendment to 252:200-3-1 changes the "Reference to 40 CFR" Section of Subchapter 3, to allow the State of Oklahoma to continue to implement a hazardous waste management program in Oklahoma in lieu of the United States Environmental Protection Agency. The Section 3-1 amendment will update the reference of 40

Department of Environmental Quality, Air Quality Division, 4545 N. Lincoln Blvd., Burgundy Room, Oklahoma City, Oklahoma.

COPIES OF PROPOSED RULES:

Copies of the rules will be available November 17, 1997, for review at the Air Quality Division office at the address listed below or may be obtained from the contact person.

RULE IMPACT STATEMENT:

The rule impact statement may be obtained from the Air Quality Division at the address below.

CONTACT PERSON:

Joyce D. Sheedy, Ph.D., Department of Environmental Quality, Air Quality Division, 4545 N. Lincoln Blvd., Suite 250, Oklahoma City, Oklahoma 73105-3483; (405) 290-8247.

ADDITIONAL INFORMATION:

The proposed rulemaking activities for 252:2-15-40 and 41 represent a continuation of a hearing held on October 21, 1997, in Tulsa, Oklahoma.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 290-8247.

[OAR Docket #97-1271; filed 10-24-97]

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

[OAR Docket #97-1272]

INTENDED RULEMAKING ACTION:

Notice of proposed EMERGENCY and PERMANENT rulemaking

PROPOSED RULES:

- 252:100. Air Pollution Control
- Subchapter 5. Registration of Air Contaminant Sources [AMENDED]
- Subchapter 8. Operating Permits (Part 70) [AMENDED]
- Subchapter 17. Incinerators [AMENDED]

SUMMARY:

In Subchapter 5 at 252:100-5-2.2(b)(2), it is proposed to review the annual operating fees for Part 70 sources. The proposed amendments to Subchapter 8 are necessary to incorporate a new permit classification system; move the requirements for construction permits for Part 70 sources and major facilities from Subchapter 7 to Subchapter 8; move the requirement to pay annual operating fees from Subchapter 8 to Subchapter 5; and meet the federal requirements for final approval of the Oklahoma Operating Permits Program under Title V of the federal Clean Air Act and 40 CFR Part 70. The proposed amendments include: introduction of general permits for construction of Part 70

sources and major facilities not subject to Part 70 a general permits for operating major sources not subject Part 70; addition of the requirements for const permits for Part 70 sources and construction and opera permits for major facilities not subject to Part 70; revision the permit application fees; deletion of annual operati fees (which will be moved to Subchapter 5); a amendments to meet the requirements for final approval the Title V program including the incorporation reference of federal rules governing case-by-case MAC determinations (40 CFR §§63.40, 63.41, 63.43 and 63.44). The following changes were set forth by EPA in the interi approval of the Oklahoma program published in th Federal Register at 62 FR 4220, Monday, February 5, 1999 (1) Revise Subchapter 8 to Include Transition Schedule; (2) Revise Subchapter 8 definition of "Major Source"; (3) Revise Subchapter 8 Insignificant Activities Provision; (4) Revise Subchapter 8 Permit Content Language; (5) Revise Subchapter 8 Judicial Review Provision; (6) Revise Subchapter 8 Administrative Amendment Provision; and (7) Submission of a SIP Revision for Subchapter 7. It is proposed to amend Subchapter 17 by adding a new Part and a new Appendix K to address Municipal Was Combustors (MWC). This amendment is necessary to meet federal requirements for State plans under Section 111(c) of the federal Clean Air Act applicable to existing source. This change would adopt standards published on December 19, 1995, in the Federal register at 40 CFR 60, Subpart C and amended on August 25, 1997. These standards apply to MWC units with the capacity to combust more than 250 tons per day of municipal solid waste. In addition, the existing portions of Subchapter 17 are revised and redesignated as Part 1, General Provisions, and Part 2, Incinerators. Proposed revisions include deletion of references to Ringelmann standards and substitution of relative opacity. Revisions were also made to Appendices A and B for reasons of simplification. The Division is requesting comments on these issues.

AUTHORITY:

Environmental Quality Board, 27A O.S. Supp. 1993, §§ 2-2-101 and 2-5-101 *et seq.*, Oklahoma Clean Air Act

COMMENT PERIOD:

Monday, November 17, 1997, through Tuesday, December 16, 1997. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by Wednesday, December 10, 1997. Also scheduled before the Environmental Quality Board is their meeting on Tuesday, January 27, 1998 - 9:30 a.m. [Location to be determined. See contact person.]

PUBLIC HEARINGS:

Before the Air Quality Council on Tuesday, December 16, 1997, 9:30 a.m. briefing and 1:00 p.m. hearing, at the Department of Environmental Quality, Air Quality Division, 4545 N. Lincoln Blvd., Burgundy Room, Oklahoma City, Oklahoma.

Notices of Rulemaking Intent

COPIES OF PROPOSED RULES:

Copies of the rules will be available November 17, 1997, for review at the Air Quality Division office at the address listed below or may be obtained from the contact person.

RULE IMPACT STATEMENT:

The rule impact statements may be obtained from the Air Quality Division at the address below.

CONTACT PERSON:

Joyce D. Sheedy, Ph.D., Department of Environmental Quality, Air Quality Division, 4545 N. Lincoln Blvd., Suite 250, Oklahoma City, Oklahoma 73105-3483; (405) 290-8247.

ADDITIONAL INFORMATION:

The proposed rulemaking activities for Subchapters 5 and 8 represent a continuation of hearings held on October 21, 1997, in Tulsa, Oklahoma.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 290-8247.

[OAR Docket #97-1272; filed 10-24-97]

TITLE 317. OKLAHOMA HEALTH CARE AUTHORITY CHAPTER 2. GRIEVANCE PROCESS AND PROCEDURES

[OAR Docket #97-1278]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking
Proposed rules:

OAC 317:2-1-2.1 through 317:2-1-2.2 [AMENDED]
(Reference APA WF # 97-13)

SUMMARY:

Grievance Procedures and Process rules are revised to more accurately reflect the intent of the agency's grievance rules. The agency adopted rules on 2-19-97 which provide a wage and salary adjustment to long term care facilities. However, current rules do not specify the process for a facility to appeal an agency decision to recoup monies paid when the monies have not been used for the purpose intended, as allowed by agency rules. Revisions are needed to include the appeal process in the rules. Other revisions are needed to revise the process for non-payment or denial of provider claims. Current rules allow complaints regarding non-payment or denial of claims to be heard by the agency's Reimbursement Appeals Committee. This committee assures that payments are made equitably and within federal and state guidelines. Revised rules delete the requirement for a formal Level I proceeding hearing for complaints regarding claims payments to providers. Federal law does not require the formal hearing. Further

revisions are needed to allow for a process to reschedule a hearing on the basis of good cause. When an individual has duly exercised their rights and a hearing set, current rules do not address situations when the person does not appear for the hearing but later shows the absence was clearly beyond the person's control. Revised rules will allow the Administrative Law Judge to reschedule the hearing when good cause does exist.

AUTHORITY:

Oklahoma Health Care Authority Board; The Oklahoma Health Care Authority Act, Section 5003 through 5016 of Title 63 of Oklahoma Statutes

COMMENT PERIOD:

Written and oral comments will be accepted through December 8, 1997 during regular business hours by contacting Joanne Terlizzi, Oklahoma Health Care Authority, 4545 N. Lincoln Blvd., Suite 124, Oklahoma City, Oklahoma, 73105, Telephone 405-530-3272.

PUBLIC HEARING:

No public hearing is scheduled at this time but will be scheduled if a written request is submitted to the contact person listed above by 1) at least twenty-five persons, 2) a political subdivision, 3) an agency, or 4) an association having not less than twenty-five members.

COPIES OF PROPOSED RULES:

Copies of proposed rules may be obtained for review by contacting the above listed contact person.

RULE IMPACT STATEMENT:

Copies of the Rule Impact Statement may be obtained for review by contacting the above listed person.

CONTACT PERSON:

For information regarding processing of proposed rulemaking contact Joanne Terlizzi at 405-530-3272.

Beck, Jr.

Notices of Rulemaking Intent

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must publish Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides other information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained. For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 45. ALCOHOLIC BEVERAGE LAWS ENFORCEMENT COMMISSION CHAPTER 30. MANUFACTURERS, WHOLESALEERS, BREWERS, NONRESIDENT SELLERS AND CLASS B WHOLESALEERS

[OAR Docket #97-1446]

RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

Proposed rules:

45:30-3-7. Wholesalers Price Registration
[AMENDED]

Summary:

The Wholesaler's price registration rule requires wholesalers to post their proposed selling prices for their products so that the Commission may track and prevent any discrimination in sales to retailers. The Commission is required to prevent discrimination by statute. The proposed rule would remove flavored vodkas and flavored gins from the category of cordials and specialties and place them in the category of spirits. The proposed party believes that the category of spirits is a more appropriate listing for flavored vodkas and flavored gins. The intended effect of the rule change is to move flavored vodkas and flavored gins into the proper category for price registration purposes.

AUTHORITY:

Alcoholic Beverage Laws Enforcement Commission; 37 O.S., Section 502 et seq.

COMMENT PERIOD:

Any interest party may present their views by submitting them in writing by 4:30 p.m., February 19, 1998 to the ABLE Commission, 4545 North Lincoln, Suite 270, Oklahoma City, Oklahoma 73105.

PUBLIC HEARING:

A public hearing regarding the proposed rule change will be held before the ABLE Commission at 10:00 a.m. on February 20, 1998, at 4545 North Lincoln, Suite 270, Oklahoma City, Oklahoma.

COPIES OF PROPOSED RULES:

A copy of the proposed rule may be obtained for review the public from the ABLE Commission, 4545 North Lincoln, Suite 270, Oklahoma City, Oklahoma.

RULE IMPACT STATEMENT:

The ABLE Commission will prepare a rule impact statement which will be available on February 5, 1998, from the ABLE Commission, 4545 North Lincoln, Suite 270, Oklahoma City, Oklahoma.

Donna Elledge - (405) 521-3484

[OAR Docket #97-1446; filed 12-5-97]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #97-1451]

INTENDED RULEMAKING ACTION:

Notice of proposed EMERGENCY and PERMANENT rulemaking.

Proposed rules:

- 252:100. Air Pollution Control
- Subchapter 5. Registration of Air Contaminant Sources [AMENDED]
- Subchapter 7. Construction Permits for Major and Minor Sources; Operating and Relocation Permits for Minor Sources [AMENDED].

Summary:

The proposed amendments to Subchapter 5 include moving the requirements to file an emission inventory from Subchapter 7 to Subchapter 5, moving the requirements to pay annual operating fees from Subchapters 7 and 8 to Subchapter 5, and revising the annual operating fees for minor facilities, non-Part 70 sources and Part 70 sources. The proposed amendments to Subchapter 5 are designed to simplify and clarify the rules. The proposed amendments to Subchapter 7 are necessary to incorporate a new permit classification system into the Air Quality program. The proposed changes include: remove any requirements for Part 70 sources and major facilities (which will be moved to Subchapter 8); define and exempt "de minimis" facilities from the requirements of Subchapter 7; revise minor permit application fees; and introduce two new types of construction and operating permits, permit by rule and general permit.

1483

Notices of Rulemaking Intent

AUTHORITY:

Environmental Quality Board, 27A O.S. Supp. 1993, §§ 2-2-101 and 2-5-101 *et seq.*, Oklahoma Clean Air Act.

COMMENT PERIOD:

The period for written comments closed on October 15, 1997. Oral comments may be made before the Environmental Quality Board at their meeting on Tuesday, January 27, 1998 - 9:30 a.m., in Chickasha.

PUBLIC HEARINGS:

Subchapter 5 and Subchapter 7 were presented to the Air Quality Council August 19, 1997 and October 21, 1997. Before the Environmental Quality Board at their meeting on Tuesday, January 27, 1998 - 9:30 a.m., in Chickasha.

COPIES OF PROPOSED RULES:

Copies of the rules are available for review at the Air Quality Division office at the address listed below or may be obtained from the contact person.

RULE IMPACT STATEMENT:

The rule impact statements may be obtained from the Air Quality Division at the address below.

CONTACT PERSON:

Jeanette Buttram, Department of Environmental Quality, Air Quality Division, 4545 N. Lincoln Blvd., Suite 250, Oklahoma City, Oklahoma 73105-3483; (405) 290-8247.

ADDITIONAL INFORMATION:

With the exception of 252:100-5-2.2(b)(2), which establishes the annual operating fees for Part 70 sources, the hearing record for Subchapter 5 and the hearing record for Subchapter 7 were closed during the council meeting on October 21, 1997. A vote on whether to recommend the revised rules to the Environmental Quality Board was taken at the Air Quality Council meeting on December 16, 1997.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 290-8247.

The rule is revised to address compliance with the Terry D. Consent Decree. The proposed rule guides CW staff in obtaining inpatient psychiatric care for custody children.

Permanent Final Adoptions

majority is required for approval or that the margin between the votes for the issue and the number required for approval when more than a majority is required for approval is narrow enough to allow a recount. See 230:45-3-33. If the margin is narrow enough to allow a recount, the County Election Board shall not certify the results of the question election until after the close of the contest period at 5 p.m. on the Friday following the election. [26:8-109] If the margin is not close enough to allow a recount, the County Election Board may certify the results of the question on election night as outlined in 230:35-3-91.

SUBCHAPTER 7. FRAUD AND IRREGULARITIES

230:45-7-2.1. Allegations of fraud or irregularities involving two or more counties

(a) Petitions filed with State Election Board. When a petition alleging fraud or irregularities in two or more counties in an election for a state, legislative, or Congressional office is filed with the Secretary of the State Election Board, the Secretary shall notify the Supreme Court. The Supreme Court shall assign a single judge to hear the petition and to determine the issue for all the counties affected by the petition. [26:8-121.1]

(b) Petitions filed with County Election Board. When a petition alleging fraud or irregularities in two or more counties in an election for a multi-county school district or municipality is filed with the Secretary of the parent County Election Board, the Secretary shall schedule the hearings for all the counties affected by the petition. [26:8-121.1] See 230:45-7-1(b) and 230:45-7-2(b).

For Subchapter 5, August 19, 1997, October 21, 1997 and December 16, 1997.

For Subchapter 7, August 19, 1997 and October 21, 1997.

For Subchapter 8, October 21, 1997, December 16, 1997 and January 9, 1998.

Adoption:

March 20, 1998.

Submitted to Governor:

March 26, 1998.

Submitted to House:

March 26, 1998.

Submitted to Senate:

March 26, 1998.

Gubernatorial approval:

May 8, 1998.

Legislative approval:

Failure of the Legislature to disapprove the rules resulted in approval on May 21, 1998.

Final adoption:

May 21, 1998.

Effective:

June 25, 1998.

SUPERSEDED EMERGENCY ACTIONS:

None.

INCORPORATIONS BY REFERENCE:

None for Subchapters 5 and 7. For Subchapter 8:

Incorporated standards:

40 CFR §§ 63.41, 63.43, 63.44; 40 CFR Part 72.

Incorporating rule:

252:100-8-4(a)(2)(C); 252:100-8-6.3(h).

Availability:

The standards are available to the public for examination at the Department of Environmental Quality office at 707 N. Robinson, 4th Floor, Oklahoma City, Oklahoma.

ANALYSIS:

The changes to Subchapter 5 simplify and clarify the rule. Requirements to file an emission inventory moved from Subchapter 7 to Subchapter 5 and were revised. Also, requirements to pay annual operating fees moved from Subchapters 7 and 8 to Subchapter 5. The annual operating fees for minor facilities and non-part 70 sources were revised.

The changes to Subchapter 7 simplify and clarify the rule. Also, a new permit classification system is incorporated into the subchapter according to the environmental impact, emission levels, and source categories here in Oklahoma. Other changes include removing any requirements for Part 70 and major sources (which will be moved to Subchapter 8); defining and exempting "de

minimis" facilities from the requirements of Subchapter 7; revising minor permit application fees; and introducing two new types of construction and operating permits, permit by rule and general permit.

The changes in Subchapter 8 incorporate a new permit classification system, move the requirement to pay annual operating fees from Subchapter 8 to Subchapter 5, move the requirements for construction permits for Title V sources from Subchapter 7 to Subchapter 8, make corrections to meet the federal requirements for final approval of the Oklahoma Operating Permit Program under Title V of the Federal Clean Air Act and 40 CFR Part 70, adopt by reference the federal rules governing case-by-case MACT determinations found in 40 CFR §§63.41, 63.43 and 63.44 as they exist on July 1, 1997, and update the adoption of 40 CFR 72 by adopting the provisions published in the Federal Register on October 24, 1997.

The Air Quality Advisory Council recommended these amendments for adoption at their meeting on January 9, 1998.

SUMMARY OF DIFFERENCES FROM ANALOGOUS FEDERAL RULES:

None.

CONTACT PERSON:

For Subchapters 5 and 7: Jeanette Buttram, Department of Environmental Quality, Air Quality Division, 707 N. Robinson, 4th floor, Oklahoma City, Oklahoma 73102. (405) 702-4100.

For Subchapter 8: Joyce D. Sheedy, Ph.D., Department of Environmental Quality, Air Quality Division, 707 N. Robinson, 4th floor, Oklahoma City, Oklahoma 73102. (405) 702-4100.

DUE TO THE EXCESSIVE LENGTH OF THESE RULES (AS DEFINED IN OAC 655:10-7-12), THE FULL TEXT OF THESE RULES WILL NOT BE PUBLISHED. THE RULES ARE AVAILABLE FOR PUBLIC INSPECTION AT DEPARTMENT OF ENVIRONMENTAL QUALITY, 707 N. ROBINSON, FOURTH FLOOR, OKLAHOMA CITY, OKLAHOMA 73102 AND AT THE OFFICE OF ADMINISTRATIVE RULES, SECRETARY OF STATE, WILL ROGERS BUILDING, 2ND FLOOR NORTH, OKLAHOMA CITY, OKLAHOMA 73105. THE FOLLOWING SUMMARY HAS BEEN PREPARED PURSUANT TO 75 O.S., § 255(B):

Subchapters 5, 7, and 8 of the Air Pollution Control rules have been simplified and clarified. To assist in this effort, certain rules were moved from one subchapter to another. For example, requirements to file emission inventory reports were moved from Subchapter 7 to Subchapter 5. The annual operating fees, which are calculated based on the emission inventory reports, were moved from Subchapters 7 and 8 to Subchapter 5. The construction permit requirements and application fee rules for Part 70 sources have been moved from Subchapter 7 to Subchapter 8.

Other revisions to Subchapter 5 involve changing the fees for non-Part 70 sources from a stepped schedule to a flat rate of \$10.00 per ton.

Subchapter 7 was also amended to incorporate the Department's permit continuum. The continuum provides for 1) *de minimis* facilities, which emit less than five tons per year of any regulated pollutant and which are not required to obtain a permit; 2) permit-by-rule facilities, which emit less than 40 tons per year of any regulated pollutant and which belong to an industry group for which a rule has been promulgated; 3) general permit facilities, which emit 40 tons per year or more of any regulated pollutant and which belong to an industry group for which a general permit has been issued; and 4) individual permit facilities, which are not eligible for any of the

previous permit categories and must, therefore, apply for individual permits. In addition, the permit application fees were revised to reflect the new permit categories. The purpose of revising the fees was not to increase them, but to reapportion them according to the new permit categories.

The construction permit rules now in Subchapter 8 contain one new requirement: Federal regulations (40 CFR §§ 63.41, 63.43 and 63.44) concerning case-by-case determinations of maximum achievable control technology ("MACT") standards were incorporated by reference. In promulgating these rules, the State has adopted a program to implement section 112(g) of the Federal Clean Air Act with respect to construction or reconstruction of major sources of hazardous air pollutants. The permit fee rules in Subchapter 8 establish a new fee of \$900.00 for authorizations under general permits. Other new additions to the Part 70 permit rules include definitions for "insignificant activities" and "trivial activities" and additional rules for general permits. The latter rules explain how authorizations are obtained, revised, and renewed. Subchapter 8 rules were also revised to make changes required by the U. S. Environmental Protection Agency in order for Oklahoma to obtain final approval of its Part 70 operating permit program.

The full text of the rule may be obtained from Department of Environmental Quality, Air Quality Division, 707 N. Robinson, 4th Floor, Oklahoma City, Oklahoma 73102.

MEMORANDUM

TO: Air Quality Council

FROM: Larry Byrum, Director
AIR QUALITY DIVISION

LB

SUBJECT: Modifications to Subchapters 5

Enclosed is a copy of the proposed draft modifications to Subchapter 5, Registration of Air Contaminant Sources, that will be brought to public hearing on August 19, 1997. The proposed revisions include moving the requirement to file an emission inventory from Subchapter 7 to Subchapter 5; moving the annual operating fees from Subchapters 7 and 8 to Subchapter 5; changing the annual operating fees for minor facilities from a tiered system to a set cost per ton of pollutant emitted, and simplification and clarification of the rule. Most of the proposed changes are reorganization for clarity and simplification. The change in fees and in the calculation of fees is substantive.

Enclosed in the packet are two copies of Subchapter 5. One copy has OAC 252:100 Air Pollution Control Rules at the bottom left corner of each page. This is the original Title 252 Oklahoma Administrative Code, Chapter 100 Air Pollution Control, 1996 Annotated version. The strikeouts and underlines were removed from the annotated version for ease of reading. This annotated version of the rule was then used to make the proposed changes. The proposed revisions to Subchapter 5 has "Aug19-97/5(8-04).wp" at the bottom left corner of each page.

Enclosures: 2

**SUBCHAPTER 5. REGISTRATION, ~~OF AIR CONTAMINANT SOURCES~~
EMISSION INVENTORY AND ANNUAL OPERATING FEES**

252:100-5-1. Purpose

~~The purpose of this Subchapter is to provide the Council with data whereby they might determine conditions of air pollution, as between particular air contaminant sources and as between particular areas of the state, such as urban, suburban and rural areas. This Subchapter requires potential sources of air contaminants to register with the Air Quality Division. It also requires facilities that emit air contaminants to file an emission inventory and pay annual operating fees.~~

252:100-5-1.1. Definitions

The following words and terms when used in this Subchapter shall have the following meaning unless the context clearly indicates otherwise:

"Actual emissions" means the total amount of regulated air pollutants emitted from a given facility during a particular calendar year, determined using methods contained in ~~OAC 252:100-7-4(e)~~ 252:100-5-2.1(d).

[From 252:100-7-4(a)]

"Allowable emissions" means:

(A) The total amount of regulated air pollutant ~~(for fee calculation)~~ emitted based on limits contained in a federally enforceable permit or potential to emit, or

[From 252:100-8-9(a)]

(B) For grandfathered sources, emission limits based on maximum design capacity, ~~as determined by methods contained in 252:100-7-4(e), and/or~~ and considering all applicable rules.

[From 252:100-7-4(a)]

"Consumer Price Index" means an index determined by the U.S. Department of Labor measuring the change in the cost of typical wage-earner purchases of goods and services expressed as a percentage of the cost of these same goods and services in a base period.

[From 252:100-8-9(a)]

"Emission inventory" means a compilation of ~~the total of~~ all point source, storage and process fugitive air emissions for all regulated air pollutants at a given facility.

[From 252:100-7-4(a)]

"Grandfathered source" means a stationary source that was in existence when an otherwise applicable rule was promulgated unless that rule specifically applies to existing sources or the source has undergone modification since that rule was promulgated.

"Process Fugitive Emissions" means those emissions created by or incidental to any particular process which become airborne or have the potential to become airborne, and could not reasonably, taking into account economic considerations, be made to pass

through a stack, chimney, vent or other functionally equivalent opening.

[From 252:100-7-4(a)]

"Regulated air pollutant" means:

(A) ~~any~~Any Volatile Organic Compound (VOC), as that term is defined at 252:100-1-3, 252:100-37-2, or 252:100-39-2~~7~~, or any Volatile Organic Solvent (VOS), as that term is defined in 252:100-37-2 and 252:100-39-2

(B) Any Volatile Organic Solvent (VOS), as that term is defined at 252:100-37-2 and 252:100-39-2.

~~(B)~~(C) ~~any~~Any pollutant regulated under section 111 or 112 (except 112(r)) of the Federal Clean Air Act~~7~~.

~~(C)~~(D) ~~any~~Any pollutant for which a national primary ambient air quality standard has been promulgated ~~except Carbon Monoxide~~under the Federal Clean Air Act~~7~~.

~~(D)~~(E) ~~any~~Any Toxic Air Contaminant as defined and regulated under OAC 252:100-41-2~~7~~.

~~(E)~~(F) ~~any~~Any other substance for which an air emission limitation or equipment standard is set by permit or rule.

[From 252:100-7-4(a)]

"Regulated pollutant (for fee calculation)", which is used only for purposes of OAC ~~252:100-8-9~~ this Subchapter, means any "regulated air pollutant" except the following:

(A) Carbon monoxide~~7~~.

(B) Any pollutant that is a regulated air pollutant solely because it is a Class I or II substance subject to a standard promulgated under or established by Title VI of the Act~~7~~, ~~or~~.

(C) Any pollutant that is a regulated air pollutant solely because it is subject to a standard or regulation under section 112(r) of the Act.

(D) Total suspended particulates (TSP).

[From 252:100-8-2]

Agency Note: 252:100-5-1.1. Definitions - new section for Subchapter 5. Definitions were moved from 252:100-7-4, 252:100-8-2, and 252:100-8-9 with necessary amendments.

252:100-5-2. Registration of potential sources of air contaminants

(a) Filing. ~~The owner or operator of any potential air contaminant source on the effective date of this Subchapter shall at such time as requested, file with the Council information as to the nature of the air contamination source including such information as would be needed or useful in evaluating the potential of the source for causing air pollution. In addition to any requirements for the submission of information found in any other regulation in this Chapter, the owner or operator of an air contaminant source shall, upon request, provide the Air Quality Division with information necessary to evaluate the source's potential for causing air pollution.~~

(b) Necessary information. The following information ~~may~~ shall

be included for each source: ~~total weight of the contaminant released per day, period or periods of operation; composition of the contaminant; physical state of the contaminant; temperature and moisture content of the air or gas stream at the point where released into the atmosphere and such other information as may be specifically requested by the Director. Where an air or gas cleaning device is incorporated in the air or gas stream preceding discharge to the atmosphere, the weight of material removed, by the cleaning device, as well as the weight emitted, shall be stated.~~

- (1) Total weight of the contaminant released per day.
- (2) Period or periods of operation.
- (3) Composition of the contaminant.
- (4) Physical state of the contaminant.
- (5) Temperature and moisture content of the air or gas stream at the point where released into the atmosphere.
- (6) Efficiency of any control device.
- (7) Such other information as may be specifically requested by the Director.

Agency Note: 252:100-5-2. Original section with necessary amendments.

252:100-5-2.1. Emission inventory

(a) Requirement to file an emission inventory. The owner or operator of any ~~minor source facility that is a source of air emissions shall, by March 1 of 1993, and every succeeding year thereafter,~~ submit a complete emission inventory annually on forms obtained from the Air Quality Division. ~~These inventories, covering the previous calendar year, will be used for the purpose of calculating the annual operating fee.~~

[Information from 252:100-7-4(d)(1)]

(1) The initial emission inventory for minor facilities shall be submitted by March 1, 1993 and every succeeding year thereafter.

[From 252:100-7-4(d)(1)]

(2) The initial emission inventory for major facilities and Part 70 sources shall be submitted by April 1, 1994 and every succeeding year thereafter.

[From 252:100-8-9(d)(4)]

(3) De minimis facilities as defined in 252:100-7-1.1 are not required to submit an annual emission inventory.

(b) Content. All inventories submitted to the Air Quality Division shall include, but shall not be ~~not~~ limited to, the following:

~~(A) (1) For~~ For those emissions subject to a permit, the permit number and the permitted allowable emissions as set forth therein.

~~(B) for those emissions not the subject of a permit, a determination of all OAC 252:100 rules setting forth emission~~

~~limitations applicable to the facility in question and the maximum yearly allowable for the facility;~~

~~(C) an election as to the basis, either Actual Emissions or Allowable Emissions, to be used for calculation of the fee;~~

~~(D)(2) if actual emissions are chosen as the basis for fee assessment, the The amount of the actual emissions and the basis for such determination, and;~~

~~(E)(3) if If the actual emissions vary from the allowable or from the previous year's actual by more than 30%, an explanation for the difference, subject to confidentiality provisions provided in the Oklahoma Clean Air Act.~~

~~(B)(4) forFor those emissions not the subject of a permit, and when requested by the AOD, a determination list of all OAC 252:100 rules setting forth emission limitations applicable to the facility in question and the maximum yearly allowable for the facility.~~

[Information from 252:100-7-4(d) (1), (A), (B), (C), (D), and (E)]

(c) Documentation. All calculations and assumptions must be verified by proper documentation. All supporting data, including actual production, throughput and measurement records along with engineering calculations and other data utilized in accordance with ~~OAC 252:100-7-4(e)~~ 252:100-5-2.1(d), below, ~~if not submitted with the emission inventory,~~ must be maintained by the current ~~owner/operator~~ owner or operator at the facility in conjunction with facility records of the emission inventory. ~~and This information must either be submitted to the Air Quality Division or made available for inspection upon request, subject to confidentiality provisions provided in the Oklahoma Clean Air Act.~~

[Information from 252:100-7-4(d)(2)]

~~(e)(d) Method of calculation. The best available data at the time the emission inventory is or should have been prepared shall be used to determine emissions. It shall be the burden of the owner or operator to select the best available data. Said selection shall be binding upon acceptance by the Air Quality Division and the payment of fees. The following shall constitute acceptable methods for determining emissionsintended for use as the basis for assessment and payment of annual operating fees:~~

~~(1) current AP 42 factors or other factors acceptable to EPA and the Air Quality Division;~~

(1) Emission factors utilized in the issuance of a relevant Oklahoma Air Quality permit(s) for the facility.

(2) stackStack tests using appropriate EPA test methods, approved by the Environmental Protection Agency or the State Air Quality Division, with advance notification and opportunity for observation by the State Air Quality Division. or EPA;

(3) stackStack tests using appropriate EPA test methods performed on identical equipment (i.e., same model) at the same location under the same operating conditions and parameters or similar sources in other jurisdictions according

~~to methods approved by the EPA, the Air Quality Division or another regulatory agency when:~~

- ~~(A) tests~~Tests are actually performed according to the approved method by persons qualified by training and experience to perform said tests.
- ~~(B) copies~~Copies of the tests results and methods are available for review by the Air Quality Division.
- ~~(4) stack tests performed on an identical or similar source, when performed in accordance with OAC 252:100-7-4(e)(2) or (3) above, upon approval by the Air Quality Division;~~
- (4) Continuous emissions monitoring data, when supported by required certification and calibration data.
- (5) Current AP-42 factors or other factors acceptable to the Air Quality Division.
- ~~(5)(6) manufacturer's~~Manufacturer's test data, when approved by the Air Quality Division as reliable.
- ~~(6)(7) EPA and EPA-contracted industry-specific emission study data when it can be shown to be applicable to the facility in question;~~ and approved for use in the emission inventory by the Air Quality Division.
- ~~(7)(8) fuel~~Fuel usage and other mass-balance methods when supported by specific records applicable to the materials on which the calculations are based; and approved for use in the emission inventory by the Air Quality Division.
- ~~(8) continuous emissions monitoring data, when supported by required certification and calibration data; or,~~
- ~~(9) any~~Any other method ~~which that~~ can be shown to be reasonably accurate when supported by engineering data and calculations, and approved in advance for use in the emission inventory by the Air Quality Division.

[Information from 252:100-7-4(e)]

~~(f)(e) Testing requirements. Emission inventories determined by the Air Quality Division to be substantially incomplete or substantially incorrect;~~ shall, upon the request of the Air Quality Division, be subject to verification if not satisfactorily completed or corrected within a reasonable time. shall be subject to verification, upon request by the Air Quality Division, by an appropriate stack test, installation of continuous monitoring equipment or other approvable emissions testing methods. Verification shall be accomplished by an appropriate stack test using EPA approved methods, installation of continuous monitoring equipment, or other methods acceptable to the Air Quality Division.

[Information from 252:100-7-4(f)]

Agency Note: 252:100-5-2.1. Information moved from 252:100-7-4 (except 100-5-2.1(a)(2) which was moved from 252:100-8-9(d)(4)) with necessary amendments.

252:100-5-2.2. Annual Operating permit fees Fees applicable to

~~minor and major sources~~

~~(b)(a) Applicability.~~

~~(1) Sources Affected. OAC 252:100-7-4 This section applies to all major and minor sources facilities that are sources of air pollution, including government facilities, regardless of whether the source is currently permitted or is considered grandfathered from such requirement, or whether an emission inventory has or has not at any time been submitted for the facility. A Part 70 source shall be subject to fee requirements of this section on January 1, 1995 and as of this date shall no longer be subject to the major source annual operating fee specified in 252:100-7-4(b)(1)(A). The owners or operators of Part 70 sources shall pay annual fees that are sufficient to cover the part Part 70 program costs. The permitting authority shall ensure that any the fee fees required by these rules 252:100-5-2.2(b)(2) will be used solely for part Part 70 program costs.~~

~~(2) This section does not apply to de minimis facilities.~~

~~(A) The owner or operator of such major source shall be subject to an annual operating fee assessed in accordance with the provisions in OAC 252:100-8-9.~~

[252:100-5-2.2 - Applicability section is a combination of information taken from 252:100-7-4(b)(1) and (A) along with 252:100-8-9(b) and (c)]

~~(b) Fee schedule.~~

~~(1) Minor facilities and Non-Part 70 sources.~~

~~(B)(A) Until January 1, 1998, The the owner or operator of such a minor source a facility subject to this section shall be subject to pay an annual operating fee beginning January 1, 1994, based on annual emissions of regulated pollutants (for fee calculation), except for total suspended particulates in accordance with the following fee schedule:~~

- ~~(i) 10 - 24.99 tons/year - \$100/year~~
- ~~(ii) 25 - 49.99 tons/year - \$250/year~~
- ~~(iii) 50 - 74.99 tons/year - \$500/year~~
- ~~(iv) 75 - 99.99 tons/year - \$750/year~~

[252:100-5-2.2(b)(1)(A) - Information taken from 252:100-7-4(b)(1)(B) with necessary amendments]

~~(B) Beginning January 1, 1998, the owner or operator of a facility subject to this section shall pay an annual operating fee of \$10/ton. This fee is based on total annual emissions of regulated pollutants (for fee calculation).~~

~~(2) Part 70 Sources.~~

~~(i)(A) Effective January 1, 1995, the annual operating fee for Part 70 sources shall be \$15.19 per ton of regulated air pollutant (for fee calculation).~~

[252:100-5-2.2(b)(2)(A) - Information taken from 252:100-8-9(d)(1)(B)(i) with necessary amendments]

~~(ii)(B) The annual operating fee shall be adjusted automatically each year by the percentage, if any, by which the Consumer Price Index for the most recent calendar year~~

ending before the beginning of such year differs from the Consumer Price Index for the calendar year 1994. The Consumer Price Index for any calendar year is the average of the Consumer Price Index for all-urban consumers published by the Department of Labor, as of the close of the twelve month period ending on August 31 of each calendar year.

[252:100-5-2.2(b)(2)(B) - Information taken from 252:100-8-9(d)(1)(B)(ii)]

(c) Payment. The Owner or Operator of an affected facility shall remit to the State Air Quality Division an annual operating fee in accordance with OAC 252:100-7-3. For Part 70 sources fees fees will shall be paid by check or money order made payable to the Oklahoma Air Quality Control Fund, Title V Revolving Fund. All other sources shall pay fees by check or money order made payable to the Oklahoma Air Quality Division or, upon delegation, to the appropriate reviewing agency. Fees are due and payable upon receipt of invoice. Fees shall be considered delinquent 30 days from the date of billing, at which time simple interest shall accrue at the rate of one and one-half percent (1½%) per month on any amount unpaid. The Department shall allow a grace period of one hundred and twenty days from the date of billing before issuing any administrative order and assessing a reasonable administrative fine in accordance with the provisions of The Oklahoma Clean Air Act, 27A O.S. 1993 Supp. Sec. 2-5-101 et seq. Within five (5) years but not before a grace period of 120 days from the date of billing, the DEQ may issue an administrative order to recover such fees and may assess a reasonable administrative fine in accordance with the provisions of the Oklahoma Clean Air Act, 27A O.S. 1993 Supp., Sec. 2-5-101 et seq., to an owner or operator of a facility who has failed to pay such fees. If no fee was billed because the owner or operator failed to submit the required annual emission inventory, the term "date of billing" shall mean the date on which the fee would have been billed had the emission inventory been submitted when due. When a fee overpayment has been made as a result of a DEQ invoice error, an owner or operator may seek a credit for such fee overpayment within five years from the date on which payment of the fee was received by the DEQ. When a fee overpayment has been made as a result of an owner or operator's error in preparing the emission inventory upon which the fee was based, the owner or operator may seek credit for such overpayment within one year from the date on which payment of the fee was received by the DEQ.

[252:100-5-2.2(c) Payment - Information taken from 252:100-7-3(d) and combined with 252:100-8-9(d)(3) with necessary amendments.]

~~(3) Registration. The owner or operator of any Federal Major Source which has not submitted an emission inventory for the calendar year 1991 shall register with the Oklahoma Air Quality Division in accordance with the OAC 252:100-5 and submit a complete 1991 emission inventory no later than~~

~~November 1, 1992, or upon the effective date of this OAC 252:100-7-4, whichever is later.~~

~~[From 252:100-7-4(b)(3)]~~

~~(e)(d) Basis for annual operating fees.~~

~~(1) Operating fees shall be calculated on a source-specific basis and may be based on either actual or allowable emissions of regulated pollutants (for fee calculation) (at the option of the owner/operator paying the fee) as set forth in the facility emissions emission inventory unless the owner or operator elects to pay fees on allowable emissions. Fees shall be based on emission inventories submitted in the previous calendar year (for example, fees invoiced during the calendar year ~~1993~~ 1998 shall be based upon inventory data covering the calendar year ~~1991~~ 1996). All fees shall be determined according to the following:~~

~~(A) where only one basis for fee assessment, i.e. only actual, or only allowable is reflected by the inventory, that basis shall be used for invoicing.~~

~~(B) where both actual and allowable emissions are reflected on the inventory, the lesser of the two shall be used.~~

~~[252:100-5-2.2(d)(1) Basis for annual operating fees - Information taken from 252:100-7-4(c)(1), (A) and (B) along with 252:100-8-9(d)(1), (A)(i) and (ii)]~~

~~(iii)(2) Regulated pollutants (for fee calculation) in excess of 4,000 tons per year per pollutant for a part Part 70 source shall not be considered in the calculation of the annual fee.~~

~~[252:100-5-2.2(d)(2) - Information taken from 252:100-8-9(d)(1)(B)(iii)]~~

~~(2) Requests to exercise an option other than those set forth in OAC 252:100-7-4(c)(1)(A) or (B), must be made no later than November 1, 1992, or within thirty days after the effective date of OAC 252:100-7-4, whichever is later.~~

~~[From 252:100-7-4(c)(2)]~~

Agency Note: 252:100-5-2.2. Emission Inventory - new section for Subchapter 5. Combination of information moved from 252:100-7-3, 252:100-7-4 and 252:100-8-9 with necessary amendments.

252:100-5-3. Confidentiality of proprietary information

~~(a) No person shall disclose to anyone other than the Air Quality Council, the Executive Director, or a Court of competent jurisdiction any process information, except emission data, furnished or obtained pursuant to this Subchapter. Emission data must be made available at all times to the public during normal working hours.~~

~~(b) Upon the request of the interested party or parties, all hearings in which proprietary information is to be divulged shall be held "in camera" and such information shall be sealed and access otherwise limited. Emission data shall never be considered to be "proprietary" for purposes of this Subchapter~~

~~and must be available at all times to the public during normal working hours. [Refer to 27A O.S. Supp. 1993, 2-5-105.18]~~

Agency Note: 252:100-5-3. Information already covered in more detail in the Act - 27A O.S. Supp. 1993, 2-5-105.18. Therefore, deleted and the Oklahoma Clean Air Act referenced.

PUBLIC MEETING

Notice of Public Meeting for August 19, 1997 was forwarded to the Secretary of State's Office giving the time, date, and place of the meeting. Agendas were posted at the entrance door of the meeting room.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken: Mr. Fishback - aye; Dr. Canter - aye; Ms. Myers - aye; Mr. Branecky - aye; Ms. Andrews - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye; Ms. Slagell - absent.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the June 17, 1997 Public Meeting/Hearing. Motion was made by Mr. Kilpatrick to approve the Minutes and second to the motion was made by Mr. Branecky. Roll call as follows: Mr. Fishback - aye; Dr. Canter - aye; Ms. Myers - aye; Mr. Branecky - aye; Ms. Andrews - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-5 REGISTRATION OF AIR CONTAMINANT SOURCES [AMENDED]

As protocol officer, Larry Byrum convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51 and Title 27A Oklahoma Statutes. Mr. Byrum called upon Jeanette Buttram to give staff position on the proposed changes to the rule.

Ms. Buttram pointed out that the major task regarding the proposed changes was to simplify and clarify the rule. She pointed out the title of Subchapter 5 was changed to reflect the addition of emission inventory and operating fees to the subchapter. Ms. Buttram added that the revisions made to the original sections 5-2 and 5-3 were not intended to change the meaning of the rule, but to simplify and clarify it. Ms. Buttram stated that the remaining new proposed additions were moved to Subchapter 5 from other areas of the Air Quality Rules. She reminded that changes in conditions listed in Subchapter 5 are for all sources, major and minor. Ms. Buttram added that Section 5-2.2 included a proposed change in fees for minor sources from a sliding to a flat fee of \$10 a ton based on total annual emissions of regulated pollutants.

Ms. Buttram stated that it was staff recommendation to continue this hearing to the next Council meeting, October 21, 1997. She then opened the floor for discussion.

Discussion included the need for a fee amount that would be revenue neutral. Dr. Canter asked that staff provide additional analysis of the proposed fee changes.

Mr. Kilpatrick also suggested that Council ask staff to determine what per-ton rate would represent a revenue neutral number and asked staff to bring that recommendation, in writing, to the next Council meeting.

Mr. Breisch pointed out that it was the consensus of the Council to have this justification and asked for a motion to continue this hearing to the next meeting. Mr. Fishback moved for the continuation of this hearing with the second made by Mr. Kilpatrick. Roll call as follows: Mr. Fishback - aye; Dr. Canter - aye; Ms. Myers - aye; Mr. Branecky - aye; Ms. Andrews (left meeting); Mr. Kilpatrick - aye; Mr. Breisch - aye.

PUBLIC HEARING

**OAC 252:100-7 CONSTRUCTION PERMITS FOR MAJOR AND MINOR SOURCES;
OPERATING AND RELOCATION PERMITS FOR MINOR SOURCES [AMENDED]**

As protocol officer, Larry Byrum convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes. Mr. Byrum called upon Jeanette Buttram to give staff position on the proposed rule. Ms. Buttram stated that the staff was charged with not only the simplification and clarification of the rule but also to incorporate the new permit continuum according to the environmental impact, emission levels, and source categories in Oklahoma. She pointed out that the initial proposed change was to change the title to "Permits for Minor Facilities" as subchapter 7 will be dedicated to minor facilities only. Ms. Buttram then pointed out additional proposed changes as indicated in the attached hearing record.

Mr. Fishback entered into the record, as with Subchapter 5, the consensus of the Council that staff provide a written justification of the fees necessary for the program to be revenue neutral.

Mr. Kyle Arthur, DEQ Small Business Assistance Program, introduced Mr. Donald Law, a representative of the Small Business Compliance and Advisory Panel. On behalf of the Panel, Mr. Law offered staff support of the proposed changes to Subchapters 5, 7 and 8.

After additional discussion, Mr. Breisch entertained a motion to continue this hearing to the next regularly scheduled Council meeting. Mr. Branecky made the motion and the second was made by Dr. Canter. Roll call as follows: Mr. Fishback - aye; Dr. Canter - aye; Ms. Myers - aye; Mr. Branecky - aye; Ms. Andrews - (left meeting early); Mr. Kilpatrick - aye; Mr. Breisch - aye.

PUBLIC HEARING

**OAC 252:100-41-15 CONTROL OF EMISSION OF HAZARDOUS AND TOXIC AIR
CONTAMINANTS PART 3. HAZARDOUS AIR CONTAMINANTS-15 NATIONAL
EMISSION STANDARDS FOR HAZARDOUS AIR POLLUTANTS [AMENDED]**

As protocol officer, Larry Byrum convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A Oklahoma

Statutes. Mr. Byrum called upon Dr. Joyce Sheedy to give staff position on the proposed changes to the rule.

Dr. Sheedy stated that the proposed revisions were to update the adoption of 40 CFR 61 to July 1, 1997 and to adopt by reference, in Paragraph (B), the new MACT standards found in 40 CFR-63 as they stand with the exception of Subpart E, approval of state program; Subpart L, coke oven batteries, Subpart U, polymers; and Subpart II shipbuilding. Dr. Sheedy stated that staff proposed to adopt by reference Subparts A,B,C,D. Dr. Sheedy added that the reasoning for the proposed changes was to obtain delegation of the Title III program and to retain the Title V program in order that by July 1998, the program would allow for case-by-case MACT as well as handle other things included in part 63. Dr. Sheedy suggested staff recommendation was to continue the hearing.

Mr. Breisch entertained a motion to continue this hearing to the October meeting. Mr. Kilpatrick made the motion with second by Mr. Branecky. Roll call as follows: Mr. Fishback - aye; Dr. Canter - aye; Ms. Myers - aye; Mr. Branecky - aye; Ms. Andrews - (left meeting early); Mr. Kilpatrick - aye; Mr. Breisch - aye.

NEW BUSINESS - Mr. Fishback inquired as to the plans to fill the Council position vacated by Ms. Hinkle. Mr. Byrum stated that the governor's office would appoint someone.

ADJOURNMENT: With no further business, Mr. Breisch adjourned the meeting and announced that the next regularly scheduled meeting would be held on October 21, 1997 at the Tulsa City-County Health Department Auditorium, Tulsa, Oklahoma.

NOTE: The sign-in sheet and the hearing records are attached as an official part of these Minutes.

MEMORANDUM

TO: Air Quality Council

FROM: Larry Byrum, Director *AOB*
Air Quality Division

SUBJECT: Modifications to Subchapter 5

Enclosed is a copy of the proposed draft modifications to Subchapter 5, Registration of Air Contaminant Sources, that will be brought to public hearing on October 21, 1997. The proposed revisions include moving the requirement to file an emission inventory from Subchapter 7 to Subchapter 5; moving the annual operating fees from Subchapters 7 and 8 to Subchapter 5; changing the annual operating fees for minor facilities from a tiered system to a set cost per ton of pollutant emitted, and simplification and clarification of the rule. Most of the proposed changes are reorganization for clarity and simplification. The change in fees and in the calculation of fees is substantive. The modifications to Subchapter 5 also reflect those comments received regarding the modifications presented at the August 19, 1997, Air Quality Council meeting.

Enclosed in the packet is a copy of Subchapter 5 with the proposed revisions.

Enclosures: 1

**SUBCHAPTER 5. REGISTRATION, ~~OF AIR CONTAMINANT SOURCES~~
EMISSION INVENTORY AND ANNUAL OPERATING FEES**

252:100-5-1. Purpose

~~The purpose of this Subchapter is to provide the Council with data whereby they might determine conditions of air pollution, as between particular air contaminant sources and as between particular areas of the state, such as urban, suburban and rural areas. This Subchapter requires potential sources of air contaminants to register with the Air Quality Division. It also requires facilities that emit air contaminants to file an emission inventory and pay annual operating fees.~~

252:100-5-1.1. Definitions

The following words and terms when used in this Subchapter shall have the following meaning unless the context clearly indicates otherwise:

"Actual emissions" means the total amount of regulated air pollutants emitted from a given facility during a particular calendar year, determined using methods contained in ~~OAC 252:100-7-4(e)~~ 252:100-5-2.1(d).

[From 252:100-7-4(a)]

"Allowable emissions" means:

(A) The total amount of regulated air pollutant ~~(for fee calculation)~~ emitted based on limits contained in a federally enforceable permit or potential to emit, or

[From 252:100-8-9(a)]

(B) For grandfathered sources, emission limits based on maximum design capacity, ~~as determined by methods contained in 252:100-7-4(e), and/or~~ and considering all applicable rules.

[From 252:100-7-4(a)]

"Consumer Price Index" means an index determined by the U.S. Department of Labor measuring the change in the cost of typical wage-earner purchases of goods and services expressed as a percentage of the cost of these same goods and services in a base period.

[From 252:100-8-9(a)]

"Emission inventory" means a compilation of ~~the total of~~ all point source, storage and process fugitive air emissions for all regulated air pollutants at a given facility.

[From 252:100-7-4(a)]

"Grandfathered source" means a stationary source that was in operation in Oklahoma when an otherwise applicable rule was promulgated unless that rule specifically applies to existing sources or the source has undergone modification since that rule was promulgated.

"Major TSP facility" means any stationary facility which directly emits or has the potential to emit 100 tons per year or more of TSP and is not subject to the Part 70 program.

"Minor facility" means a facility with a potential to emit

less than 100 tons per year of each regulated air pollutant and which is not a Part 70 source.

"Part 70 source" means any source subject to the permitting requirements of Part 7 of Subchapter 8 of this Chapter as provided in 252:100-8-3(a) and 252:100-8-3(b).

"Process Fugitive Emissions" means those emissions created by or incidental to any particular process which become airborne or have the potential to become airborne, and could not reasonably, taking into account economic considerations, be made to pass through a stack, chimney, vent or other functionally equivalent opening.

[From 252:100-7-4(a)]

"Regulated air pollutant" means:

(A) ~~any~~Any Volatile Organic Compound (VOC), as that term is defined ~~at~~ in 252:100-1-3, 252:100-37-2, or 252:100-39-2 ~~or any Volatile Organic Solvent (VOS), as that term is defined in 252:100-37-2 and 252:100-39-2.~~

(B) Any Volatile Organic Solvent (VOS), as that term is defined in 252:100-37-2 and 252:100-39-2.

~~(B)~~(C) anyAny pollutant regulated under section 111 or 112 (except 112(r)) of the Federal Clean Air Act~~.~~

~~(C)~~(D) anyAny pollutant for which a national primary ambient air quality standard has been promulgated ~~except~~ Carbon Monoxide under the Federal Clean Air Act~~.~~

~~(D)~~(E) anyAny Toxic Air Contaminant as defined and regulated under OAC 252:100-41-2~~.~~

~~(E)~~(F) anyAny other substance for which an air emission limitation or equipment standard is set by permit or rule.

[From 252:100-7-4(a)]

"Regulated pollutant (for fee calculation)", which is used only for purposes of ~~OAC 252:100-8-9~~ this Subchapter, means any "regulated air pollutant" except the following:

(A) Carbon monoxide~~.~~

(B) Any pollutant that is a regulated air pollutant solely because it is a Class I or II substance subject to a standard promulgated under or established by Title VI of the Act ~~or.~~

(C) Any pollutant that is a regulated air pollutant solely because it is subject to a standard or regulation under section 112(r) of the Act.

(D) Total suspended particulates (TSP).

[From 252:100-8-2]

Agency Note: 252:100-5-1.1. Definitions - new section for Subchapter 5. Section consists of new definitions and definitions moved from 252:100-7-4, 252:100-8-2, and 252:100-8-9 with necessary amendments.

252:100-5-2. Registration of potential sources of air contaminants

(a) Filing. ~~The owner or operator of any potential air contaminant source on the effective date of this Subchapter shall~~

~~at such time as requested, file with the Council information as to the nature of the air contamination source including such information as would be needed or useful in evaluating the potential of the source for causing air pollution. In addition to any requirements for the submission of information found in any other regulation in this Chapter, the owner or operator of an air contaminant source shall, upon request, provide the Air Quality Division with information necessary to evaluate the source's potential for causing air pollution.~~

(b) Necessary information. ~~The following information may shall be included for each source: total weight of the contaminant released per day, period or periods of operation; composition of the contaminant; physical state of the contaminant; temperature and moisture content of the air or gas stream at the point where released into the atmosphere and such other information as may be specifically requested by the Director. Where an air or gas cleaning device is incorporated in the air or gas stream preceding discharge to the atmosphere, the weight of material removed, by the cleaning device, as well as the weight emitted, shall be stated.~~

- (1) Total weight of the contaminant released per day.
- (2) Period or periods of operation.
- (3) Composition of the contaminant.
- (4) Physical state of the contaminant.
- (5) Temperature and moisture content of the air or gas stream at the point where released into the atmosphere.
- (6) Efficiency of any control device.
- (7) Such other information as may be specifically requested by the Director.

Agency Note: 252:100-5-2. Original section with necessary amendments.

252:100-5-2.1. Emission inventory

(a) Requirement to file an emission inventory. ~~The owner or operator of any minor source facility that is a source of air emissions shall, by March 1 of 1993, and every succeeding year thereafter, submit a complete emission inventory annually on forms obtained from the Air Quality Division. These inventories, covering the previous calendar year, will be used for the purpose of calculating the annual operating fee.~~

[Information from 252:100-7-4(d)(1)]

- (1) The initial emission inventory for minor facilities shall be submitted by March 1, 1993 and every succeeding year thereafter.

[From 252:100-7-4(d)(1)]

- (2) The initial emission inventory for major TSP facilities and Part 70 sources shall be submitted by April 1, 1994 and every succeeding year thereafter.

[From 252:100-8-9(d)(4)]

(3) De minimis facilities as defined in 252:100-7-1.1 are not required to submit an annual emission inventory.

(b) Content. All inventories submitted to the Air Quality Division shall include, but shall not be ~~not~~ limited to, the following:

~~(A)(1) For~~ For those emissions subject to a permit, the permit number and the permitted allowable emissions as set forth therein,

~~(B) for those emissions not the subject of a permit, a determination of all OAC 252:100 rules setting forth emission limitations applicable to the facility in question and the maximum yearly allowable for the facility,~~

~~(C) an election as to the basis, either Actual Emissions or Allowable Emissions, to be used for calculation of the fee,~~

~~(D)(2) if actual emissions are chosen as the basis for fee assessment, the~~ The amount of the actual emissions and the basis for such determination, and,

~~(E)(3) if~~ If the actual emissions vary from the allowable or from the previous year's actual by more than 30%, an explanation for the difference, subject to confidentiality provisions provided in the Oklahoma Clean Air Act.

~~(B)(4) For~~ For those emissions not the subject of a permit, and when requested by the AQD, a determination list of all OAC 252:100 rules setting forth emission limitations applicable to the facility in question and the maximum yearly allowable for the facility,

[Information from 252:100-7-4(d) (1), (A), (B), (C), (D), and (E)]

(c) Documentation. All calculations and assumptions must be verified by proper documentation. All supporting data, including actual production, throughput and measurement records along with engineering calculations and other data utilized in accordance with ~~OAC 252:100-7-4(e)~~ 252:100-5-2.1(d), below, ~~if not submitted with the emission inventory,~~ must be maintained for at least 5 years by the current ~~owner/operator~~ owner or operator at the facility in conjunction with facility records of the emission inventory, and This information must either be submitted to the Air Quality Division or made available for inspection upon request, subject to confidentiality provisions provided in the Oklahoma Clean Air Act.

[Information from 252:100-7-4(d)(2)]

~~(e)(d)~~ Method of calculation. The best available data at the time the emission inventory is or should have been prepared shall be used to determine emissions. It shall be the burden of the owner or operator to select the best available data. Said selection shall be binding upon acceptance by the Air Quality Division and the payment of fees. The following shall constitute acceptable methods for determining emissions ~~intended for use as the basis for assessment and payment of annual operating fees:~~

~~(1) current AP-42 factors or other factors acceptable to EPA and the Air Quality Division;~~

(1) Emission factors utilized in the issuance of a relevant

Oklahoma Air Quality permit(s) for the facility.

~~(2) stackStack tests using appropriate EPA test methods, approved by the Environmental Protection Agency or the State Air Quality Division, with advance notification and opportunity for observation by the State Air Quality Division or EPA,~~

~~(3) stackStack tests using appropriate EPA test methods performed on identical equipment (i.e., same model) at the same location under the same operating conditions and parameters or similar sources in other jurisdictions according to methods approved by the EPA, the Air Quality Division or another regulatory agency when:~~

~~(A) testsTests are actually performed according to the approved method by persons qualified by training and experience to perform said tests,~~

~~(B) copiesCopies of the tests results and methods are available for review by the Air Quality Division,~~

~~(4) stack tests performed on an identical or similar source, when performed in accordance with OAC 252:100-7-4(e)(2) or (3) above, upon approval by the Air Quality Division,~~

~~(4) Continuous emissions monitoring data, when supported by required certification and calibration data.~~

~~(5) Current AP-42 factors or other factors acceptable to the Air Quality Division.~~

~~(5)(6) manufacturer'sManufacturer's test data, when approved by the Air Quality Division as reliable,~~

~~(6)(7) EPA and EPA-contracted industry-specific emission study data when it can be shown to be applicable to the facility in question, and approved for use in the emission inventory by the Air Quality Division.~~

~~(7)(8) fuelFuel usage and other mass-balance methods when supported by specific records applicable to the materials on which the calculations are based, and approved for use in the emission inventory by the Air Quality Division.~~

~~(8) continuous emissions monitoring data, when supported by required certification and calibration data, or,~~

~~(9) anyAny other method which that can be shown to be reasonably accurate when supported by engineering data and calculations, and approved in advance for use in the emission inventory by the Air Quality Division.~~

[Information from 252:100-7-4(e)]

~~(f)(e) Testing requirements Methods of verification. Emission inventories determined by the Air Quality Division to be substantially incomplete or substantially incorrect, shall, upon the request of the Air Quality Division, be subject to verification if not satisfactorily completed or corrected within a reasonable time, shall be subject to verification, upon request by the Air Quality Division, by an appropriate stack test, installation of continuous monitoring equipment or other approvable emissions testing methods. Verification shall be accomplished by an appropriate stack test using EPA approved~~

methods, installation of continuous monitoring equipment, or other methods acceptable to the Air Quality Division.
[Information from 252:100-7-4(f)]

Agency Note: 252:100-5-2.1. Emission inventory - new section for Subchapter 5. Information moved from 252:100-7-4 (except 100-5-2.1(a)(2) which was moved from 252:100-8-9(d)(4)) with necessary amendments.

252:100-5-2.2. Annual Operating permit fees Fees applicable to minor and major sources

~~(b)(a) Applicability.~~

~~(1) Sources Affected. OAC 252:100-7-4 This section applies to all major and minor sources facilities that are sources of air pollution, including government facilities, regardless of whether the source is currently permitted or is considered grandfathered from such requirement, or whether an emission inventory has or has not at any time been submitted for the facility. A Part 70 source shall be subject to fee requirements of this section on January 1, 1995 and as of this date shall no longer be subject to the major source annual operating fee specified in 252:100-7-4(b)(1)(A). The owners or operators of Part 70 sources shall pay annual fees that are sufficient to cover the part Part 70 program costs. The permitting authority shall ensure that any the fee fees required by these rules 252:100-5-2.2(b)(2) will be used solely for part Part 70 program costs.~~

~~(2) This section does not apply to de minimis facilities.~~

~~(A) The owner or operator of such major source shall be subject to an annual operating fee assessed in accordance with the provisions in OAC 252:100-8-9.~~

[252:100-5-2.2 - Applicability section is a combination of information taken from 252:100-7-4(b)(1) and (A) along with 252:100-8-9(b) and (c)]

(b) Fee schedule.

(1) Minor facilities and Non-Part 70 sources.

~~(B)(A) Until January 1, 1998, The the owner or operator of such a minor source a facility subject to this section shall be subject to pay an annual operating fee beginning January 1, 1994, based on annual emissions of regulated pollutants (for fee calculation), except for total suspended particulates in accordance with the following fee schedule:~~

- (i) 10 - 24.99 tons/year - \$100/year
- (ii) 25 - 49.99 tons/year - \$250/year
- (iii) 50 - 74.99 tons/year - \$500/year
- (iv) 75 - 99.99 tons/year - \$750/year

[252:100-5-2.2(b)(1)(A) - Information taken from 252:100-7-4(b)(1)(B) with necessary amendments]

(B) Beginning January 1, 1998, the owner or operator of a facility subject to this section shall pay an annual

operating fee of \$10/ton. This fee is based on total annual emissions of regulated pollutants (for fee calculation).

(2) Part 70 Sources.

~~(i)~~ (A) Effective January 1, 1995, the annual operating fee for Part 70 sources shall be \$15.19 per ton of regulated air pollutant (for fee calculation).

[252:100-5-2.2(b)(2)(A) - Information taken from 252:100-8-9(d)(1)(B)(i) with necessary amendments]

~~(ii)~~ (B) The annual operating fee shall be adjusted automatically each year by the percentage, if any, by which the Consumer Price Index for the most recent calendar year ending before the beginning of such year differs from the Consumer Price Index for the calendar year 1994. The Consumer Price Index for any calendar year is the average of the Consumer Price Index for all-urban consumers published by the Department of Labor, as of the close of the twelve month period ending on August 31 of each calendar year.

[252:100-5-2.2(b)(2)(B) - Information taken from 252:100-8-9(d)(1)(B)(ii)]

(c) Payment. The Owner or Operator of an affected facility shall remit to the State Air Quality Division an annual operating fee in accordance with OAC 252:100-7-3. For Part 70 sources Fees fees will shall be paid by check or money order made payable to the Oklahoma Air Quality Control Fund, Title V Revolving Fund. All other sources shall pay fees by check or money order made payable to the Oklahoma Air Quality Division or, upon delegation, to the appropriate reviewing agency. Fees are due and payable upon receipt of invoice. Fees shall be considered delinquent 30 days from the date of billing, at which time simple interest shall accrue at the rate of one and one-half percent (1½%) per month on any amount unpaid. The Department shall allow a grace period of one hundred and twenty days from the date of billing before issuing any administrative order and assessing a reasonable administrative fine in accordance with the provisions of The Oklahoma Clean Air Act, 27A O.S. 1993 Supp. Sec. 2-5-101 et seq. Within five (5) years but not before a grace period of 120 days from the date of billing, the DEQ may issue an administrative order to recover such fees and may assess a reasonable administrative fine in accordance with the provisions of the Oklahoma Clean Air Act, 27A O.S. 1993 Supp., Sec. 2-5-101 et seq., to an owner or operator of a facility who has failed to pay such fees. If no fee was billed because the owner or operator failed to submit the required annual emission inventory, the term "date of billing" shall mean the date on which the fee would have been billed had the emission inventory been submitted when due. When a fee overpayment has been made as a result of a DEQ invoice error, an owner or operator may seek a credit for such fee overpayment within five years from the date on which payment of the fee was received by the DEQ. When a fee overpayment has been made as a result of an owner or operator's

error in preparing the emission inventory upon which the fee was based, the owner or operator may seek credit for such overpayment within one year from the date on which payment of the fee was received by the DEQ.

[252:100-5-2.2(c) Payment - Information taken from 252:100-7-3(d) and combined with 252:100-8-9(d)(3) with necessary amendments.]

~~(3) Registration. The owner or operator of any Federal Major Source which has not submitted an emission inventory for the calendar year 1991 shall register with the Oklahoma Air Quality Division in accordance with the OAC 252:100-5 and submit a complete 1991 emission inventory no later than November 1, 1992, or upon the effective date of this OAC 252:100-7-4, whichever is later.~~

[From 252:100-7-4(b)(3)]

~~(e)(d) Basis for annual operating fees.~~

~~(1) Operating fees shall be calculated on a source-specific basis and may be based on either actual or allowable emissions of regulated pollutants (for fee calculation) (at the option of the owner/operator paying the fee) as set forth in the facility emissions emission inventory unless the owner or operator elects to pay fees on allowable emissions. Fees shall be based on emission inventories submitted in the previous calendar year (for example, fees invoiced during the calendar year ~~1993~~ 1998 shall be based upon inventory data covering the calendar year ~~1991~~ 1996). All fees shall be determined according to the following:~~

~~(A) where only one basis for fee assessment, i.e. only actual, or only allowable is reflected by the inventory, that basis shall be used for invoicing.~~

~~(B) where both actual and allowable emissions are reflected on the inventory, the lesser of the two shall be used.~~

[252:100-5-2.2(d)(1) Basis for annual operating fees - Information taken from 252:100-7-4(c)(1), (A) and (B) along with 252:100-8-9(d)(1), (A)(i) and (ii)]

~~(iii)(2) Regulated pollutants (for fee calculation) in excess of 4,000 tons per year per pollutant for a part Part 70 source shall not be considered in the calculation of the annual fee.~~

[252:100-5-2.2(d)(2) - Information taken from 252:100-8-9(d)(1)(B)(iii)]

~~(2) Requests to exercise an option other than those set forth in OAC 252:100-7-4(c)(1)(A) or (B), must be made no later than November 1, 1992, or within thirty days after the effective date of OAC 252:100-7-4, whichever is later.~~

[From 252:100-7-4(c)(2)]

Agency Note: 252:100-5-2.2. Annual operating fees - new section for Subchapter 5. Combination of information moved from 252:100-7-3, 252:100-7-4 and 252:100-8-9 with necessary amendments.

252:100-5-3. Confidentiality of proprietary information

~~(a) No person shall disclose to anyone other than the Air Quality Council, the Executive Director, or a Court of competent jurisdiction any process information, except emission data, furnished or obtained pursuant to this Subchapter. Emission data must be made available at all times to the public during normal working hours.~~

~~(b) Upon the request of the interested party or parties, all hearings in which proprietary information is to be divulged shall be held "in camera" and such information shall be sealed and access otherwise limited. Emission data shall never be considered to be "proprietary" for purposes of this Subchapter and must be available at all times to the public during normal working hours. [Refer to 27A O.S. Supp. 1993, 2-5-105.18]~~

Agency Note: 252:100-5-3. Information already covered in more detail in the Act - 27A O.S. Supp. 1993, 2-5-105.18. Therefore, deleted and the Oklahoma Clean Air Act referenced.

Air Quality Division *LB*

SUBJECT: JUSTIFICATION FOR PROPOSED ANNUAL OPERATING FEES
FOR MINOR SOURCES

The proposed annual operating fee system for minor sources found in Subchapter 5 and suggested to be \$10.00 per ton was recommended to resolve several inequities that existed under the old system. The step system resulted in many sources of similar size paying very different fees. The glaring example is the 24 ton source paying \$100 and the 25 ton source paying \$250. A 4% increase in emissions resulted in a 250% increase in fees. Minor sources in the state paid between \$3.68 and \$10.00 per ton with generally the larger the source, the lower the per ton rate. The suggested per ton system would also reduce the discrepancy between the 99 ton minor source and the 100 ton major source. The new system would consolidate the significance levels for "de minimis" sources, permitted sources and feeable sources at the same level of emissions.

At the previous Council meeting we were charged with determining what per ton rate would represent a "revenue neutral" outcome for the suggested revision in the minor source fee scale. Our interpretation of "revenue neutral" is that the overall proceeds for the minor sources in the state would be the same if either system was used. The changeable nature of the inventory due to facilities changing classification, exemptions, changes in the levels of operation, changes in permits for a facility, and the use of different estimation methods suggest unreliability for any projections for next year. We therefore chose to use the past year's information evaluated under both systems.

The 535 minor sources that paid fees in 1997 paid a total of \$174,900 under the step system. The average fee per "billable ton" was \$7.48 1/2, which would have collected \$174,879.54. A suggested \$7.50 rate would collect \$175,230 and be a "revenue equal" solution. The average fee under the old system was \$326.91. Under the new system the average would be \$327.53.

The uncertainty of the number of sources also led us to calculate the fees in the event of an even distribution of numbers of sizes of sources. The total fees under the old system was \$174,879 and gave an average of \$7.95 per ton. A fee of \$7.95 would result in approximately the same amount of revenue as the step system, \$185,743. The actual distribution of sources includes many more sources in the lower steps than in the higher steps.

With all the variation and the changeable nature of the inventory, it appears the most equitable solution will be a per ton rate. A "revenue neutral" system for the total will not be a revenue neutral situation for the individual sources. Even charging the average rate of \$7.50 per ton would result in a fee increase for 283 sources, over half of the minor system.

The attempt to equalize the fees will result in a general increase in fees for most facilities. Whereas the fee for a smaller facility will see a larger percentage change, the actual dollar amount of increase will be greater for the larger minor sources. The change is to assure that as the amount of pollutant increases the fee increases, assuring that larger sources share the burden more equally with the smaller sources.

The attached spreadsheet shows each existing source and the amount it paid in 1997, the fee per ton for these sources in 1997, and various projected fees under a per ton system.

The Division operates its minor source permit program at a cost that is significantly greater than the amount received from fees from minor sources. We anticipate that annual operating fee increases above that of \$10/ton will be needed to help offset the cost of the minor source program.

PUBLIC MEETING

Notice of Public Meeting for October 21, 1997 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance door of the meeting room.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Mr. Fishback - aye; Ms. Slagell - aye; Mr. Kilpatrick - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye. Ms. Andrews and Dr. Canter were absent.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the October 21, 1997 Public Meeting/Hearing. Motion was made by Mr. Branecky to approve the Minutes and second to the motion was made by Ms. Myers. Roll call as follows: Mr. Fishback - aye; Ms. Slagell - abstain; Mr. Kilpatrick - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

Meeting Schedule - Mr. Breisch entertained motion to approve the 1998 Meeting Schedule as proposed. Ms. Myers made the motion with the second being made by Mr. Kilpatrick. Roll call as follows: Mr. Fishback - aye; Ms. Slagell - aye; Mr. Kilpatrick - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye. (*Note: Dates proposed were February 18, April 21, June 16, August 18, October 20, December 15*).

PUBLIC HEARING

OAC 252:100-5 REGISTRATION OF AIR CONTAMINANT SOURCE [AMENDED]

As protocol officer, Larry Byrum convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51 and Title 27A Oklahoma Statutes. Mr. Byrum called upon Jeanette Buttram to give staff position on the proposed changes to the rule.

After discussion and comments by Council and audience, Mr. Breisch stated that staff recommendation was to close the comment period as of October 21 and vote on SC 5, along with SC 7 and SC 8, at the next regularly scheduled meeting in December. He entertained motion as such.

Mr. Fishback wanted to be leave a portion of SC5 open for the subcommittee report discussion because the fees would have to be changed by the December meeting in order that the DEQ Board could take action.

Mr. Kilpatrick made motion that SC 5 be closed with the exception of consideration of the operating fee for Title V Part 70 sources remaining open. Mr. Fishback seconded the motion. With no other comments or discussion, Mr. Breisch asked for roll call. Roll call as follows: Mr. Fishback - aye; Ms. Slagell - aye; Mr. Kilpatrick - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-7 CONSTRUCTION PERMITS FOR MAJOR AND MINOR SOURCES; OPERATING AND RELOCATION PERMITS FOR MINOR SOURCES [AMENDED]

As protocol officer, Larry Byrum convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51 and Title 27A, Oklahoma Statutes. Mr. Byrum called upon Jeanette Buttram to give staff position on the proposed rule.

Ms. Buttram pointed out that staff was charged with not only simplifying and clarifying the rule, but also incorporating the new permit continuum which takes into account the environmental impact, emission levels, and source categories in Oklahoma. Ms. Buttram then pointed out the areas of change to the rule.

Mr. Byrum opened the floor for discussion. Kyle Arthur, representing the Small Business Assistance Panel, offered the Panel's support for the proposed changes. Ms. Barton, CASE, asked if the EPA representatives were satisfied with the proposed changes. EPA had no comment.

After discussion and comments from Council and audience, Mr. Breisch entertained motion to continue the hearing to the December 16 Air Quality Council meeting to be voted on along with SC 8 and SC 5. Ms. Slagell made that motion and second was by Mr. Kilpatrick. Roll call as follows: Mr. Fishback - aye; Ms. Slagell - aye; Mr. Kilpatrick - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-8 OPERATING PERMITS (PART 70) [AMENDED]

As protocol officer, Larry Byrum convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes. Mr. Byrum called upon Dr. Joyce Sheedy to give staff position on the proposed rule.

Dr. Sheedy stated that it was staff's objective to correct deficiencies listed in the approval of the interim Title V Program to incorporate case-by-case MACT requirements; to incorporate permit continuum; as well as to clarify, simplify, and streamline the rule. Dr. Sheedy advised that staff recommendation was that the hearing on the revisions be continued to Council's December 16 meeting.

Mr. Byrum opened the floor for discussion and comments. Ms. Barton complimented staff on the monumental task accomplished making these changes.

Mr. Breisch entertained motion to continue this item to the next meeting on December 16 and that the comment period would remain open. Ms. Myers made this motion with second being made by Mr. Branecky. Roll call as follows: Mr. Fishback - aye; Ms. Slagell - aye; Mr. Kilpatrick - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:10041-15 CONTROL OF EMISSIONS OF HAZARDOUS AND TOXIC AIR CONTAMMANTS PART 3: HAZARDOUS AIR CONTAMINANTS -15 NATIONAL EMISSION STANDARDS FOR HAZARDOUS AIR POLLUTANTS [AMENDED]

As protocol officer, Mr. Byrum convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 Code of Federal Regulations (CFR) Part 51, and Title 27A Oklahoma Statutes. Mr. Byrum called upon Dr. Joyce Sheedy to give staff recommendations.

Dr. Sheedy pointed out that the hearing on the proposed revisions to 252:100-41-15 was continued from the August 19, 1997 AQC meeting. She noted that revisions were made based on comments received. Dr. Sheedy outlined proposed changes to 252:100-41-15(a) as follows:

update the adoption of National Emission Standards for Hazardous Air Pollutants (NESHAP) by adopting by reference the NESHAP as found in 40 CFR Part 61 as they existed on 7/1/97 with the exception of the NESHAP which address radionuclides and are contained in Subparts B, H, I, K, Q, R, T, and W and Appendices D and E.

Changes to 252:100-41-15(b) were to adopt by reference the General provisions contained in 40 CFR Part 63, Subpart A and the all the Maximum Achievable Control Technology (MACT) standards as they existed on July 1, 1997.

She advised that adoption of this rule was necessary to obtain delegation of the Title III program and to enable Air Quality Division to include MACT standards in Title V permits. Staff recommended that the Council forward and recommend these provisions to the Environmental Quality Board to be adopted as both emergency and permanent.

Ms. Barton, CASE, felt that a summary of the rules would be advantageous to the public for better understanding to those who do not have copies of written text.

Mr. Breisch entertained a motion to recommend this rule to the Board. Mr. Kilpatrick moved to approve the proposed revisions to SC 41 and recommend them to the DEQ Board for both emergency and permanent adoption. Second was made by Ms. Slagell. With no further discussion, roll call was taken as follows: Mr. Fishback - aye; Ms. Slagell - aye; Mr. Kilpatrick - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

Mr. Fishback added a further note for the record pointing out staff's intentions to revisit annually around July 1 to provide an update of the appropriate NESHAP regulations. Byrum affirmed and pointed out that July 1 coincides with publication in the *Federal Register*.

PUBLIC HEARING

OAC 252:2-40 and OAC 252:2-41 UNIFORM PERMITTING PROCEDURES [AMENDED]

As protocol officer, Larry Byrum convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 Code of Federal Regulations Part 51, and Title 27A Oklahoma Statutes. Mr. Byrum called upon Ms. Barbara Hoffman to give staff recommendations.

Staff requested that the Council recommend the revisions to the Environmental Quality Board for adoption. Mr. Kilpatrick made motion to continue the hearing until the next regularly scheduled meeting on December 16. Second was made by Ms. Slagell. Roll call was taken as follows: Mr. Fishback - aye; Ms. Slagell - aye; Mr. Kilpatrick - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

NEW BUSINESS - Mr. Byrum advised that a fax had been received from EnerCon Services dealing with a problem anticipated by those who worked on the Aerospace/ARACT rules. In the fax, EnerCon pointed out that at that time EPA had rules under NESHAP provision which could be in conflict with the State rules. He added that now industry petitioned to revisit these rules so that industry is not covered by two different rules that say two different things. Mr. Byrum suggested that a committee be formed with four people from the aerospace industry and four staff to handle most of the items administratively; then to bring any changes to the Council. He also pointed out that no action was required from Council at this time.

Nadine Barton recognized Mr. Byrum's years of service saying 'good luck'.

ADJOURNMENT: With no further business, meeting was adjourned with next meeting being held on December 16, 1997 at the Lincoln Plaza Office Park Burgundy Room, 4545 North Lincoln Boulevard, Oklahoma City, Oklahoma.

NOTE: The sign-in sheet and the hearing records are attached as an official part of these Minutes.

December 1, 1997

MEMORANDUM

TO: Air Quality Council
FROM: David Dyke, Assistant Director *DD*
SUBJECT: Annual Operating Fee Adjustment for Title V
OAC 252:100-5-2.2 (b)(2) Part 70 Sources

The hearing on Subchapter 5 (specifically 252:100-5-2.2(b)(2) concerning the annual operating fee for Part 70 sources) has been continued to the December 16 meeting of the Council.

At the hearing, the staff will recommend that the annual operating fee billed in 1998 for Part 70 sources be adjusted by the Consumer Price Index as specified in the existing rule. This will provide for a 2.2% increase resulting in raising the fee from \$16.03 to \$16.39 per ton.

The following is a demonstration of how the fee was calculated:

The CPI for August 1997 is 160.8. This CPI represents an increase of 2.2% for the 12-month period. Our fee last year was based on a CPI of 157.3.

160.8 minus 157.3 equals 3.5 (CPI index points)

3.5 divided by 157.3 equals 0.0223

0.0223 multiplied by 100 equals 2.23%

\$16.03 (last year's fee) multiplied by 2.23% equals \$0.3567

\$16.03 plus \$0.3567 equals \$16.3867

Based on the CPI correction, the fee next year is estimated to be \$16.39 per ton.

In the future, the staff intends to bring before the Council on a regular annual basis any proposed adjustments to the fee.

SUBCHAPTER 5. REGISTRATION, ~~OF AIR CONTAMINANT SOURCES~~
EMISSION INVENTORY AND ANNUAL OPERATING FEES

252:100-5-2.2. Annual Operating permit fees Fees applicable to minor and major sources

(b) Fee schedule.

(2) Part 70 Sources.

~~(i)(A)~~ Effective January 1, 1995, the annual operating fee for Part 70 sources shall be \$15.19 per ton of regulated air pollutant (for fee calculation).

[252:100-5-2.2(b)(2)(A) - Information taken from 252:100-8-9(d)(1)(B)(i) with necessary amendments]

~~(ii)(B)~~ The annual operating fee shall be adjusted automatically each year by the percentage, if any, by which the Consumer Price Index for the most recent calendar year ending before the beginning of such year differs from the Consumer Price Index for the calendar year 1994. The Consumer Price Index for any calendar year is the average of the Consumer Price Index for all-urban consumers published by the Department of Labor, as of the close of the twelve month period ending on August 31 of each calendar year.

[252:100-5-2.2(b)(2)(B) - Information taken from 252:100-8-9(d)(1)(B)(ii)]

December 1, 1997

MEMORANDUM

TO: Air Quality Council

FROM: David Dyke, Assistant Director
Air Quality Division *DD*

SUBJECT: Modifications to Subchapter 5

Enclosed is a copy of the proposed draft modifications to Subchapter 5, Registration of Air Contaminant Sources, that will be brought to public hearing on December 16, 1997. The proposed modifications were brought to public hearing on August 19 and October 21, 1997. Council agreed to close the hearing record for this rule except for 252:100-5-2.2(b)(2) Part 70 sources. They also agreed to consider approving the rule during the same time Subchapter 8 is approved. Along with the original proposed revisions, comments were received during the October council meeting and a modification to the rule was made. A change in the name and content of the definition for "Major TSP facility" to "Major non-part 70 facilities" was made in order to stay consistent with changes made in Subchapter 8.

Enclosed in the packet is a copy of Subchapter 5 with the proposed revisions.

Enclosures: 1

**SUBCHAPTER 5. REGISTRATION, ~~OF AIR CONTAMINANT SOURCES~~
EMISSION INVENTORY AND ANNUAL OPERATING FEES**

252:100-5-1. Purpose

~~The purpose of this Subchapter is to provide the Council with data whereby they might determine conditions of air pollution, as between particular air contaminant sources and as between particular areas of the state, such as urban, suburban and rural areas. This Subchapter requires potential sources of air contaminants to register with the Air Quality Division. It also requires facilities that emit air contaminants to file an emission inventory and pay annual operating fees.~~

252:100-5-1.1. Definitions

The following words and terms when used in this Subchapter shall have the following meaning unless the context clearly indicates otherwise:

"Actual emissions" means the total amount of regulated air pollutants emitted from a given facility during a particular calendar year, determined using methods contained in ~~OAC 252:100-7-4(e)~~ 252:100-5-2.1(d).

[From 252:100-7-4(a)]

"Allowable emissions" means:

(A) The total amount of regulated air pollutant ~~(for fee calculation)~~ emitted based on limits contained in a federally enforceable permit or potential to emit, or

[From 252:100-8-9(a)]

(B) For grandfathered sources, emission limits based on maximum design capacity, ~~as determined by methods contained in 252:100-7-4(e), and/or~~ and considering all applicable rules.

[From 252:100-7-4(a)]

"Consumer Price Index" means an index determined by the U.S. Department of Labor measuring the change in the cost of typical wage-earner purchases of goods and services expressed as a percentage of the cost of these same goods and services in a base period.

[From 252:100-8-9(a)]

"Emission inventory" means a compilation of ~~the total of~~ all point source, storage and process fugitive air emissions for all regulated air pollutants at a given facility.

[From 252:100-7-4(a)]

"Grandfathered source" means a stationary source that was in operation in Oklahoma when an otherwise applicable rule was promulgated unless that rule specifically applies to existing sources or the source has undergone modification since that rule was promulgated:

"Major non-part 70 facility" means any stationary facility which directly emits or has the potential to emit 100 tons per year or more of any air pollutant for which a rule or standard exists and is not subject to the Part 70 program.

"Minor facility" means a facility with a potential to emit less than 100 tons per year of each regulated air pollutant and which is not a Part 70 source.

"Part 70 source" means any source subject to the permitting requirements of Part 7 of Subchapter 8 of this Chapter as provided in 252:100-8-3(a) and 252:100-8-3(b).

"Process Fugitive Emissions" means those emissions created by or incidental to any particular process which become airborne or have the potential to become airborne, and could not reasonably, taking into account economic considerations, be made to pass through a stack, chimney, vent or other functionally equivalent opening.

[From 252:100-7-4(a)]

"Regulated air pollutant" means:

(A) ~~any~~Any Volatile Organic Compound (VOC), as that term is defined ~~at~~ in 252:100-1-3, 252:100-37-2, or 252:100-39-2, ~~or any Volatile Organic Solvent (VOS), as that term is defined in 252:100-37-2 and 252:100-39-2~~

(B) Any Volatile Organic Solvent (VOS), as that term is defined in 252:100-37-2 and 252:100-39-2.

~~(B)~~(C) ~~any~~Any pollutant regulated under section 111 or 112 (except 112(r)) of the Federal Clean Air Act, ~~or~~

~~(C)~~(D) ~~any~~Any pollutant for which a national primary ambient air quality standard has been promulgated ~~except Carbon Monoxide~~under the Federal Clean Air Act, ~~or~~

~~(D)~~(E) ~~any~~Any Toxic Air Contaminant as defined and regulated under ~~CAE~~ 252:100-41-2, ~~or~~

~~(E)~~(F) ~~any~~Any other substance for which an air emission limitation or equipment standard is set by permit or rule.

[From 252:100-7-4(a)]

"Regulated pollutant (for fee calculation)", which is used only for purposes of ~~CAE 252:100-8-9~~ this Subchapter, means any "regulated air pollutant" except the following:

(A) Carbon monoxide, ~~or~~

(B) Any pollutant that is a regulated air pollutant solely because it is a Class I or II substance subject to a standard promulgated under or established by Title VI of the Act, ~~or~~

(C) Any pollutant that is a regulated air pollutant solely because it is subject to a standard or regulation under section 112(r) of the Act.

(D) Total suspended particulates (TSP).

[From 252:100-8-2]

Agency Note: 252:100-5-1.1. Definitions - new section for Subchapter 5. Section consists of new definitions and definitions moved from 252:100-7-4, 252:100-8-2, and 252:100-8-9 with necessary amendments.

252:100-5-2. Registration of potential sources of air contaminants

(a) Filing. ~~The owner or operator of any potential air~~

~~contaminant source on the effective date of this Subchapter shall at such time as requested, file with the Council information as to the nature of the air contamination source including such information as would be needed or useful in evaluating the potential of the source for causing air pollution. In addition to any requirements for the submission of information found in any other regulation in this Chapter, the owner or operator of an air contaminant source shall, upon request, provide the Air Quality Division with information necessary to evaluate the source's potential for causing air pollution.~~

(b) Necessary information. The following information ~~may~~ shall be included for each source: ~~total weight of the contaminant released per day, period or periods of operation, composition of the contaminant, physical state of the contaminant, temperature and moisture content of the air or gas stream at the point where released into the atmosphere and such other information as may be specifically requested by the Director. Where an air or gas cleaning device is incorporated in the air or gas stream preceding discharge to the atmosphere, the weight of material removed, by the cleaning device, as well as the weight emitted, shall be stated.~~

- (1) Total weight of the contaminant released per day.
- (2) Period or periods of operation.
- (3) Composition of the contaminant.
- (4) Physical state of the contaminant.
- (5) Temperature and moisture content of the air or gas stream at the point where released into the atmosphere.
- (6) Efficiency of any control device.
- (7) Such other information as may be specifically requested by the Director.

Agency Note: 252:100-5-2. Original section with necessary amendments.

252:100-5-2.1. Emission inventory

(a) Requirement to file an emission inventory. The owner or operator of any ~~minor Source~~ facility that is a source of air emissions shall, by March 1 of 1993, and every succeeding year thereafter, submit a complete emission inventory annually on forms obtained from the Air Quality Division. ~~These inventories, covering the previous calendar year, will be used for the purpose of calculating the annual operating fee.~~

[Information from 252:100-7-4(d)(1)]

(1) The initial emission inventory for minor facilities shall be submitted by March 1, 1993 and every succeeding year thereafter.

[From 252:100-7-4(d)(1)]

(2) The initial emission inventory for major non-part 70 facilities and Part 70 sources shall be submitted by April 1, 1994 and every succeeding year thereafter.

[From 252:100-8-9(d)(4)]

(3) De minimis facilities as defined in 252:100-7-1.1 are not required to submit an annual emission inventory.

(b) Content. All inventories submitted to the Air Quality Division shall include, but shall not be ~~not~~ limited to, the following:

~~(A)(1) for~~For those emissions subject to a permit, the permit number and the permitted allowable emissions as set forth therein.

~~(B) for~~ those emissions not the subject of a permit, a determination of all OAC 252:100 rules setting forth emission limitations applicable to the facility in question and the maximum yearly allowable for the facility.

~~(C) an election as to the basis, either Actual Emissions or Allowable Emissions, to be used for calculation of the fee;~~

~~(D)(2) if~~ actual emissions are chosen as the basis for fee assessment, the The amount of the actual emissions and the basis for such determination, ~~and.~~

~~(E)(3) if~~If the actual emissions vary from the allowable or from the previous year's actual by more than 30%, an explanation for the difference, ~~subject to confidentiality provisions provided in the Oklahoma Clean Air Act.~~

~~(B)(4) for~~For those emissions not the subject of a permit, and when requested by the AOD, a determination list of all OAC 252:100 rules setting forth emission limitations applicable to the facility in question and the maximum yearly allowable for the facility.

[Information from 252:100-7-4(d) (1), (A), (B), (C), (D), and (E)]

(c) Documentation. All calculations and assumptions must be verified by proper documentation. All supporting data, including actual production, throughput and measurement records along with engineering calculations and other data utilized in accordance with ~~OAC 252:100-7-4(e)~~ 252:100-5-2.1(d), below, ~~if not submitted with the emission inventory,~~ must be maintained for at least 5 years by the current ~~owner/operator~~ owner or operator at the facility in conjunction with facility records of the emission inventory. and This information must either be submitted to the Air Quality Division or made available for inspection upon request, ~~subject to confidentiality provisions provided in the Oklahoma Clean Air Act.~~

[Information from 252:100-7-4(d)(2)]

~~(e)(d) Method of calculation.~~ The best available data at the time the emission inventory is or should have been prepared shall be used to determine emissions. It shall be the burden of the owner or operator to select the best available data. Said selection shall be binding upon acceptance by the Air Quality Division and the payment of fees. The following shall constitute acceptable methods for determining emissions ~~intended for use as the basis for assessment and payment of annual operating fees:~~

~~(1) current AP 42 factors or other factors acceptable to EPA and the Air Quality Division;~~

- (1) Emission factors utilized in the issuance of a relevant Oklahoma Air Quality permit(s) for the facility.
- (2) ~~stack~~Stack tests using appropriate EPA test methods, approved by the Environmental Protection Agency or the State Air Quality Division, with advance notification and opportunity for observation by the State Air Quality Division or EPA,
- (3) ~~stack~~Stack tests using appropriate EPA test methods performed on identical equipment (i.e., same model) at the same location under the same operating conditions and parameters or similar sources in other jurisdictions according to methods approved by the EPA, the Air Quality Division or another regulatory agency when:
- (A) ~~tests~~Tests are actually performed according to the approved method by persons qualified by training and experience to perform said tests,
- (B) ~~copies~~Copies of the tests results and methods are available for review by the Air Quality Division,
- ~~(4) stack tests performed on an identical or similar source, when performed in accordance with OAC 252:100-7-4(e)(2) or (3) above, upon approval by the Air Quality Division,~~
- (4) Continuous emissions monitoring data, when supported by required certification and calibration data.
- (5) Current AP-42 factors or other factors acceptable to the Air Quality Division.
- ~~(5)(6) manufacturer's~~Manufacturer's test data, when approved by the Air Quality Division as reliable,
- ~~(6)(7) EPA and EPA-contracted industry-specific emission study data when it can be shown to be applicable to the facility in question, and approved for use in the emission inventory by the Air Quality Division.~~
- ~~(7)(8) fuel~~Fuel usage and other mass-balance methods when supported by specific records applicable to the materials on which the calculations are based, and approved for use in the emission inventory by the Air Quality Division.
- ~~(8) continuous emissions monitoring data, when supported by required certification and calibration data, or,~~
- (9) ~~any~~Any other method which that can be shown to be reasonably accurate when supported by engineering data and calculations, and approved in advance for use in the emission inventory by the Air Quality Division.

[Information from 252:100-7-4(e)]

~~(f)(e) Testing requirements~~ Methods of verification. Emission inventories determined by the Air Quality Division to be substantially incomplete or substantially incorrect, shall, upon the request of the Air Quality Division, be subject to verification if not satisfactorily completed or corrected within a reasonable time. ~~shall be subject to verification, upon request by the Air Quality Division, by an appropriate stack test, installation of continuous monitoring equipment or other approvable emissions testing methods.~~ Verification shall be

accomplished by an appropriate stack test using EPA approved methods, installation of continuous monitoring equipment, or other methods acceptable to the Air Quality Division.
[Information from 252:100-7-4(f)]

Agency Note: 252:100-5-2.1. Emission inventory - new section for Subchapter 5. Information moved from 252:100-7-4 (except 100-5-2.1(a)(2) which was moved from 252:100-8-9(d)(4)) with necessary amendments.

252:100-5-2.2. Annual Operating permit fees Fees applicable to minor and major sources

(b)(a) Applicability.

(1) ~~Sources Affected.~~ OAC 252:100-7-4 This section applies to all ~~major and minor sources~~ facilities that are sources of air pollution, including government facilities, regardless of whether the source is currently permitted ~~or is considered grandfathered from such requirement~~, or whether an emission inventory has or has not at any time been submitted for the facility. A Part 70 source shall be subject to fee requirements of this section on January 1, 1995 and ~~as of this date shall no longer be subject to the major source annual operating fee specified in 252:100-7-4(b)(1)(A)~~. The owners or operators of Part 70 sources shall pay annual fees that are sufficient to cover the ~~part~~ Part 70 program costs. The permitting authority shall ensure that any the fee fees required by ~~these rules~~ 252:100-5-2.2(b)(2) will be used solely for ~~part~~ Part 70 program costs.

(2) This section does not apply to de minimis facilities.

~~(A) The owner or operator of such major source shall be subject to an annual operating fee assessed in accordance with the provisions in OAC 252:100-8-9.~~

[252:100-5-2.2 - Applicability section is a combination of information taken from 252:100-7-4(b)(1) and (A) along with 252:100-8-9(b) and (c)]

(b) Fee schedule.

(1) Minor facilities and Non-Part 70 sources.

~~(B)(A) Until January 1, 1998, The the owner or operator of such a minor source a facility subject to this section shall be subject to pay an annual operating fee beginning January 1, 1994, based on annual emissions of regulated pollutants (for fee calculation), except for total suspended particulates in accordance with the following fee schedule:~~

- (i) 10 - 24.99 tons/year - \$100/year
- (ii) 25 - 49.99 tons/year - \$250/year
- (iii) 50 - 74.99 tons/year - \$500/year
- (iv) 75 - 99.99 tons/year - \$750/year

[252:100-5-2.2(b)(1)(A) - Information taken from 252:100-7-4(b)(1)(B) with necessary amendments]

(B) Beginning January 1, 1998, the owner or operator of a

facility subject to this section shall pay an annual operating fee of \$10/ton. This fee is based on total annual emissions of regulated pollutants (for fee calculation).

(2) Part 70 Sources.

~~(i)~~ (A) Effective January 1, 1995, the annual operating fee for Part 70 sources shall be \$15.19 per ton of regulated air pollutant (for fee calculation).

[252:100-5-2.2(b)(2)(A) - Information taken from 252:100-8-9(d)(1)(B)(i) with necessary amendments]

~~(ii)~~ (B) The annual operating fee shall be adjusted automatically each year by the percentage, if any, by which the Consumer Price Index for the most recent calendar year ending before the beginning of such year differs from the Consumer Price Index for the calendar year 1994. The Consumer Price Index for any calendar year is the average of the Consumer Price Index for all-urban consumers published by the Department of Labor, as of the close of the twelve month period ending on August 31 of each calendar year.

[252:100-5-2.2(b)(2)(B) - Information taken from 252:100-8-9(d)(1)(B)(ii)]

(c) Payment. The Owner or Operator of an affected facility shall remit to the State Air Quality Division an annual operating fee in accordance with OAC 252:100-7-3. For Part 70 sources Fees fees will shall be paid by check or money order made payable to the Oklahoma Air Quality Control Fund, Title V Revolving Fund. All other sources shall pay fees by check or money order made payable to the Oklahoma Air Quality Division or, upon delegation, to the appropriate reviewing agency. Fees are due and payable upon receipt of invoice. Fees shall be considered delinquent 30 days from the date of billing, at which time simple interest shall accrue at the rate of one and one-half percent (1½%) per month on any amount unpaid. The Department shall allow a grace period of one hundred and twenty days from the date of billing before issuing any administrative order and assessing a reasonable administrative fine in accordance with the provisions of The Oklahoma Clean Air Act, 27A O.S. 1993 Supp. Sec. 2-5-101 et seq. Within five (5) years but not before a grace period of 120 days from the date of billing, the DEQ may issue an administrative order to recover such fees and may assess a reasonable administrative fine in accordance with the provisions of the Oklahoma Clean Air Act, 27A O.S. 1993 Supp., Sec. 2-5-101 et seq., to an owner or operator of a facility who has failed to pay such fees. If no fee was billed because the owner or operator failed to submit the required annual emission inventory, the term "date of billing" shall mean the date on which the fee would have been billed had the emission inventory been submitted when due. When a fee overpayment has been made as a result of a DEQ invoice error, an owner or operator may seek a credit for such fee overpayment within five years from the date on which payment of the fee was received by the DEQ. When a fee

overpayment has been made as a result of an owner or operator's error in preparing the emission inventory upon which the fee was based, the owner or operator may seek credit for such overpayment within one year from the date on which payment of the fee was received by the DEQ.

[252:100-5-2.2(c) Payment - Information taken from 252:100-7-3(d) and combined with 252:100-8-9(d)(3) with necessary amendments.]

~~(3) Registration. The owner or operator of any Federal Major Source which has not submitted an emission inventory for the calendar year 1991 shall register with the Oklahoma Air Quality Division in accordance with the OAC 252:100-5 and submit a complete 1991 emission inventory no later than November 1, 1992, or upon the effective date of this OAC 252:100-7-4, whichever is later.~~

[From 252:100-7-4(b)(3)]

~~(e)(d) Basis for annual operating fees.~~

~~(1) Operating fees shall be calculated on a source-specific basis and may be based on either actual or allowable emissions of regulated pollutants (for fee calculation) (at the option of the owner/operator paying the fee) as set forth in the facility emissions emission inventory unless the owner or operator elects to pay fees on allowable emissions. Fees shall be based on emission inventories submitted in the previous calendar year (for example, fees invoiced during the calendar year ~~1993~~ 1998 shall be based upon inventory data covering the calendar year ~~1991~~ 1996). All fees shall be determined according to the following:~~

~~(A) where only one basis for fee assessment, i.e. only actual, or only allowable is reflected by the inventory, that basis shall be used for invoicing.~~

~~(B) where both actual and allowable emissions are reflected on the inventory, the lesser of the two shall be used.~~

[252:100-5-2.2(d)(1) Basis for annual operating fees - Information taken from 252:100-7-4(c)(1), (A) and (B) along with 252:100-8-9(d)(1), (A)(i) and (ii)]

~~(iii)(2) Regulated pollutants (for fee calculation) in excess of 4,000 tons per year per pollutant for a ~~part~~ Part 70 source shall not be considered in the calculation of the annual fee.~~

[252:100-5-2.2(d)(2) - Information taken from 252:100-8-9(d)(1)(B)(iii)]

~~(2) Requests to exercise an option other than those set forth in OAC 252:100-7-4(c)(1)(A) or (B), must be made no later than November 1, 1992, or within thirty days after the effective date of OAC 252:100-7-4, whichever is later.~~

[From 252:100-7-4(c)(2)]

Agency Note: 252:100-5-2.2. Annual operating fees - new section for Subchapter 5. Combination of information moved from 252:100-7-3, 252:100-7-4 and 252:100-8-9 with necessary amendments.

252:100-5-3. Confidentiality of proprietary information

~~(a) No person shall disclose to anyone other than the Air Quality Council, the Executive Director, or a Court of competent jurisdiction any process information, except emission data, furnished or obtained pursuant to this Subchapter. Emission data must be made available at all times to the public during normal working hours.~~

~~(b) Upon the request of the interested party or parties, all hearings in which proprietary information is to be divulged shall be held "in camera" and such information shall be sealed and access otherwise limited. Emission data shall never be considered to be "proprietary" for purposes of this Subchapter and must be available at all times to the public during normal working hours. [Refer to 27A O.S. Supp. 1993, 2-5-105.18]~~

Agency Note: 252:100-5-3. Information already covered in more detail in the Act - 27A O.S. Supp. 1993, 2-5-105.18. Therefore, deleted and the Oklahoma Clean Air Act referenced.

PUBLIC MEETING

Notice of Public Meeting for December 16, 1997 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance door of the meeting room.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Mr. Kilpatrick - aye; Ms. Slagell - aye; Mr. Fishback - aye; Dr. Canter - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye. Ms. Andrews was absent during the hearing session.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the October 21, 1997 Public Meeting/Hearing. Motion was made by Mr. Kilpatrick to approve the Minutes as presented and second to the motion was made by Mr. Branecky. Roll call as follows: Mr. Kilpatrick - aye; Ms. Slagell - aye; Mr. Fishback - aye; Dr. Canter - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-5-2.2(B)(2) PART 70 SOURCES ANNUAL OPERATING FEE [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51 and Title 27A Oklahoma Statutes, Section 2-5-101 through 2-5-118. Mr. Dyke called upon Jeanette Buttram to give staff position on the proposed changes to the rule.

Ms. Buttram advised that staff's recommendation was that the annual operating fee billed in 1998 for Part 70 sources be adjusted by the Consumer Price Index as specified in the existing rule which would render a 2.2 % increase from \$16.03 to \$16.39 per ton. She also pointed out staff's intention to bring before the Council any proposed adjustments to the fee on an annual basis.

Dr. Canter introduced the committee's report *Title V Fee Committee Findings and Recommendations* dated December 15, 1997 into the record. Members of this committee were Dr. Canter, Mr. Fishback, and Mr. Branecky. The full report is made an official part of these Minutes. Mr. Kilpatrick made motion to accept the committee's report and second was made by Mr. Fishback. With discussion that perhaps Mr. Fishback should not make the second since he was on the committee, Ms. Myers made the second. Roll call as follows: Mr. Kilpatrick - aye; Ms. Slagell - aye; Mr. Fishback - aye; Dr. Canter - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

Ms. Myers made additional motion to leave the fees as stated for 1998 with only the Consumer Price Index increase from \$16.03 to \$16.39. Mr. Fishback made the second. Mr. Doughty, staff attorney, mentioned that Council is recommending no action; therefore, this portion of the rule would not go before the Environmental Quality Board specifically. Roll call was as follows: Mr. Kilpatrick - aye; Ms. Slagell - aye; Mr. Fishback - aye; Dr. Canter - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-8 OPERATING PERMITS (PART 70) [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Section 2-5-101 through Section 2-5-118. Mr. Dyke stated that since there was extensive discussion in the briefing session regarding continuation of this subchapter to a later date, Dr. Joyce Sheedy would stand ready to discuss staff proposal for the rule.

Mr. Kilpatrick made motion to continue the hearing to January 9, 1998 at 1:00. Mr. Branecky made the second. Roll call as follows: Mr. Kilpatrick - aye; Ms. Slagell - aye; Mr. Fishback - aye; Dr. Canter - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-17 INCINERATORS [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51

and Title 27A Oklahoma Statutes, Section 2-5-101 through Section 2-5-118. Mr. Dyke called upon Michelle Martinez to give staff position on the proposed changes to the rule. Staff's recommendation was for approval as both emergency and permanent adoption.

Mr. Kilpatrick made motion to continue this hearing until January 9, 1998 at 1:00 p.m. Second was made by Ms. Slagell. During discussion, it was noted that continuing this hearing to February would cause the rule to be adopted by the Board as an emergency rule only, which could possibly put the State Plan at risk. Roll call as follows: Mr. Kilpatrick – aye; Ms. Slagell – aye; Mr. Fishback – no; Dr. Canter – no; Ms. Myers - no; Mr. Branecky - no; Mr. Breisch - no.

After this discussion, Mr. Branecky made motion that Council accept Subchapter 17 as amended and recommend to the Environmental Quality Board for both emergency and permanent adoption. Ms. Myers made the second. Roll call as follows: Mr. Kilpatrick – no; Ms. Slagell – no; Mr. Fishback – aye; Dr. Canter – aye; Ms. Myers – aye; Mr. Branecky - aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:2-40 and OAC 252:2-41 UNIFORM PERMITTING PROCEDURES [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 Code of Federal Regulations Part 51, and Title 27A Oklahoma Statutes, Section 2-5-101 through Section 2-5-118. Mr. Dyke called upon Ms. Barbara Hoffman to give staff recommendations.

Staff requested that the Council recommend the revisions to the Environmental Quality Board for adoption as a permanent rule. After discussion, Ms. Myers made motion to approve the rule as amended and recommend to the Environmental Quality Board for permanent adoption. Mr. Branecky made the second. Roll call as follows: Mr. Kilpatrick – no; Ms. Slagell – aye; Mr. Fishback – aye; Dr. Canter – aye; Ms. Myers – aye; Mr. Branecky - aye; Mr. Breisch - aye.

OLD BUSINESS

OAC 252:100-5 REGISTRATION OF AIR CONTAMINANT SOURCE [AMENDED]

Mr. Dyke called upon Jeanette Buttram to give staff position on the proposed changes to this rule. After summarizing the changes, Ms. Buttram stated staff's recommendation was that Subchapter 5 be approved by Council and forwarded to the Environmental Quality Board at the same time that Subchapter 8 is approved.

Mr. Branecky moved that Council continue this hearing to January 9, 1998; and Ms. Myers made the second. Roll call as follows: Mr. Kilpatrick – aye; Ms. Slagell – aye; Mr. Fishback – aye; Dr. Canter – aye; Ms. Myers – aye; Mr. Branecky - aye; Mr. Breisch - aye.

**OAC 252:100-7 CONSTRUCTION PERMITS FOR MAJOR AND MINOR SOURCES;
OPERATING AND RELOCATION PERMITS FOR MINOR SOURCES [AMENDED]**

Mr. Dyke called upon Jeanette Buttram to give staff position on the proposed rule. After summarizing the changes, Ms. Buttram stated that staff recommended that Subchapter 7 be approved by Council at the same time that Subchapter 8 is approved.

Mr. Kilpatrick moved that Council continue the hearing on to the January 9, 1998 meeting. Second to the motion was made by Ms. Myers. Roll call as follows: Mr. Kilpatrick – aye; Ms. Slagell – aye; Mr. Fishback – aye; Dr. Canter – aye; Ms. Myers – aye; Mr. Branecky - aye; Mr. Breisch - aye.

NEW BUSINESS Dr. Canter stated that no one member of the public could claim to represent all of the public, and that he believes Council hearings provide the proper forum to hear comments from the public on proposed rules. While it is sometimes difficult to decide what rule changes requested at hearings by AQD staff or the public are substantive, Dr. Canter said he resented the implication that the public was not given adequate opportunity to comment on Subchapter 17, since it had been presented at two Council meetings.

ADJOURNMENT With no further business, meeting was adjourned and an additional meeting scheduled for January 9, 1998 at the Lincoln Plaza Office Park Burgundy Room, 4545 North Lincoln Boulevard, Oklahoma City, Oklahoma.

NOTE: The sign-in sheet and the hearing records are attached as an official part of these Minutes.

MEMORANDUM

TO: Air Quality Council

FROM: David R. Dyke, Interim Director
AIR QUALITY DIVISION *DRD*

SUBJECT: Modifications to Subchapter 5

Enclosed is a copy of the proposed draft modifications to OAC 252:100-5 REGISTRATION OF AIR CONTAMINANT SOURCES, that will be brought before the Council for possible action on January 9, 1997. The proposed modifications were brought to public hearing on August 19, October 21 and December 16, 1997.

Staff has made no changes to the draft that was presented at the December meeting. It is staff's position that the Council recommend this proposed rule to the Department of Environmental Quality Board for permanent and emergency adoption at their January 27, 1998 meeting.

Enclosures: 1

**SUBCHAPTER 5. REGISTRATION, ~~OF AIR CONTAMINANT SOURCES~~
EMISSION INVENTORY AND ANNUAL OPERATING FEES**

252:100-5-1. Purpose

~~The purpose of this Subchapter is to provide the Council with data whereby they might determine conditions of air pollution, as between particular air contaminant sources and as between particular areas of the state, such as urban, suburban and rural areas. This Subchapter requires potential sources of air contaminants to register with the Air Quality Division. It also requires facilities that emit air contaminants to file an emission inventory and pay annual operating fees.~~

252:100-5-1.1. Definitions

The following words and terms when used in this Subchapter shall have the following meaning unless the context clearly indicates otherwise:

"**Actual emissions**" means the total amount of regulated air pollutants emitted from a given facility during a particular calendar year, determined using methods contained in ~~OAC 252:100-7-4(e)~~ 252:100-5-2.1(d).

[From 252:100-7-4(a)]

"**Allowable emissions**" means:

(A) The total amount of regulated air pollutant ~~(for fee calculation)~~ emitted based on limits contained in a federally enforceable permit or potential to emit, or

[From 252:100-8-9(a)]

(B) For grandfathered sources, emission limits based on maximum design capacity, ~~as determined by methods contained in 252:100-7-4(e), and/or~~ and considering all applicable rules.

[From 252:100-7-4(a)]

"**Consumer Price Index**" means an index determined by the U.S. Department of Labor measuring the change in the cost of typical wage-earner purchases of goods and services expressed as a percentage of the cost of these same goods and services in a base period.

[From 252:100-8-9(a)]

"**Emission inventory**" means a compilation of ~~the total of~~ all point source, storage and process fugitive air emissions for all regulated air pollutants at a given facility.

[From 252:100-7-4(a)]

"**Grandfathered source**" means a stationary source that was in operation in Oklahoma when an otherwise applicable rule was promulgated unless that rule specifically applies to existing sources or the source has undergone modification since that rule was promulgated.

"**Minor facility**" means a facility which is not a Part 70 source.

"**Part 70 source**" means any source subject to the permitting requirements of Part 5 of Subchapter 8 of this Chapter as

provided in 252:100-8-3(a) and 252:100-8-3(b).

"Process Fugitive Emissions" means those emissions created by or incidental to any particular process which become airborne or have the potential to become airborne, and could not reasonably, taking into account economic considerations, be made to pass through a stack, chimney, vent or other functionally equivalent opening.

[From 252:100-7-4(a)]

"Regulated air pollutant" means:

(A) ~~any~~Any Volatile Organic Compound (VOC), as that term is defined ~~at~~ in 252:100-1-3, 252:100-37-2, or 252:100-39-2, ~~or~~ any Volatile Organic Solvent (VOS), as that term is defined in ~~252:100-37-2 and 252:100-39-2~~

(B) Any Volatile Organic Solvent (VOS), as that term is defined in 252:100-37-2 and 252:100-39-2.

~~(B)~~(C) ~~any~~Any pollutant regulated under section 111 or 112 (except 112(r)) of the Federal Clean Air Act.

~~(C)~~(D) ~~any~~Any pollutant for which a national primary ambient air quality standard has been promulgated ~~except Carbon Monoxide~~ under the Federal Clean Air Act.

~~(D)~~(E) ~~any~~Any Toxic Air Contaminant as defined and regulated under OAC 252:100-41-2.

~~(E)~~(F) ~~any~~Any other substance for which an air emission limitation or equipment standard is set by permit or rule.

[From 252:100-7-4(a)]

"Regulated pollutant (for fee calculation)", which is used only for purposes of ~~OAC 252:100-8-9~~ this Subchapter, means any "regulated air pollutant" except the following:

(A) Carbon monoxide.

(B) Any pollutant that is a regulated air pollutant solely because it is a Class I or II substance subject to a standard promulgated under or established by Title VI of the Act, ~~or~~.

(C) Any pollutant that is a regulated air pollutant solely because it is subject to a standard or regulation under section 112(r) of the Act.

(D) Total suspended particulates (TSP).

[From 252:100-8-2]

Agency Note: 252:100-5-1.1. Definitions - new section for Subchapter 5. Section consists of new definitions and definitions moved from 252:100-7-4, 252:100-8-2, and 252:100-8-9 with necessary amendments.

252:100-5-2. Registration of potential sources of air contaminants

(a) Filing. ~~The owner or operator of any potential air contaminant source on the effective date of this Subchapter shall at such time as requested, file with the Council information as to the nature of the air contamination source including such information as would be needed or useful in evaluating the~~

~~potential of the source for causing air pollution. In addition to any requirements for the submission of information found in any other regulation in this Chapter, the owner or operator of an air contaminant source shall, upon request, provide the Air Quality Division with information necessary to evaluate the source's potential for causing air pollution.~~

(b) Necessary information. ~~The following information may shall be included for each source: total weight of the contaminant released per day, period or periods of operation; composition of the contaminant; physical state of the contaminant; temperature and moisture content of the air or gas stream at the point where released into the atmosphere and such other information as may be specifically requested by the Director. Where an air or gas cleaning device is incorporated in the air or gas stream preceding discharge to the atmosphere, the weight of material removed, by the cleaning device, as well as the weight emitted, shall be stated.~~

- (1) Total weight of the contaminant released per day.
- (2) Period or periods of operation.
- (3) Composition of the contaminant.
- (4) Physical state of the contaminant.
- (5) Temperature and moisture content of the air or gas stream at the point where released into the atmosphere.
- (6) Efficiency of any control device.
- (7) Such other information as may be specifically requested by the Director.

Agency Note: 252:100-5-2. Original section with necessary amendments.

252:100-5-2.1. Emission inventory

(a) Requirement to file an emission inventory. ~~The owner or operator of any minor source facility that is a source of air emissions shall, by March 1 of 1993, and every succeeding year thereafter, submit a complete emission inventory annually on forms obtained from the Air Quality Division. These inventories, covering the previous calendar year, will be used for the purpose of calculating the annual operating fee.~~

[Information from 252:100-7-4(d)(1)]

(1) The initial emission inventory for minor facilities shall be submitted by March 1, 1993 and every succeeding year thereafter.

[From 252:100-7-4(d)(1)]

(2) The initial emission inventory for Part 70 sources shall be submitted by April 1, 1994 and every succeeding year thereafter.

[From 252:100-8-9(d)(4)]

(3) De minimis facilities as defined in 252:100-7-1.1 are not required to submit an annual emission inventory.

(b) Content. All inventories submitted to the Air Quality Division shall include, but shall not be ~~not~~ limited to, the following:

~~(A)(1) For~~ For those emissions subject to a permit, the permit number and the permitted allowable emissions as set forth therein.

~~(B) for those emissions not the subject of a permit, a determination of all OAC 252:100 rules setting forth emission limitations applicable to the facility in question and the maximum yearly allowable for the facility;~~

~~(C) an election as to the basis, either Actual Emissions or Allowable Emissions, to be used for calculation of the fee;~~

~~(D)(2) if actual emissions are chosen as the basis for fee assessment, the~~ The amount of the actual emissions and the basis for such determination, ~~and;~~

~~(E)(3) if~~ If the actual emissions vary from the allowable or from the previous year's actual by more than 30%, an explanation for the difference, ~~subject to confidentiality provisions provided in the Oklahoma Clean Air Act.~~

~~(B)(4) For~~ For those emissions not the subject of a permit, ~~and when requested by the AOD,~~ a determination list of all OAC 252:100 rules setting forth emission limitations applicable to the facility in question and the maximum yearly allowable for the facility.

[Information from 252:100-7-4(d) (1), (A), (B), (C), (D), and (E)]

(c) Documentation. All calculations and assumptions must be verified by proper documentation. All supporting data, including actual production, throughput and measurement records along with engineering calculations and other data utilized in accordance with ~~OAC 252:100-7-4(e)~~ 252:100-5-2.1(d), below, ~~if not submitted with the emission inventory,~~ must be maintained for at least 5 years by the current ~~owner/operator~~ owner or operator at the facility in conjunction with facility records of the emission inventory, and This information must either be submitted to the Air Quality Division or made available for inspection upon request, ~~subject to confidentiality provisions provided in the Oklahoma Clean Air Act.~~

[Information from 252:100-7-4(d)(2)]

~~(e)(d)~~ Method of calculation. The best available data at the time the emission inventory is or should have been prepared shall be used to determine emissions. It shall be the burden of the owner or operator to select the best available data. Said selection shall be binding upon acceptance by the Air Quality Division and the payment of fees. The following shall constitute acceptable methods for determining emissions ~~intended for use as the basis for assessment and payment of annual operating fees:~~

~~(1) current AP 42 factors or other factors acceptable to EPA and the Air Quality Division;~~

(1) Emission factors utilized in the issuance of a relevant Oklahoma Air Quality permit(s) for the facility.

(2) ~~stack~~ Stack tests using appropriate EPA test methods.

~~approved by the Environmental Protection Agency or the State Air Quality Division, with advance notification and opportunity for observation by the State Air Quality Division or EPA,~~

(3) ~~stack~~Stack tests using appropriate EPA test methods performed on identical equipment (i.e., same model) at the same location under the same operating conditions and parameters or similar sources in other jurisdictions according to methods approved by the EPA, the Air Quality Division or another regulatory agency when:

(A) ~~tests~~Tests are ~~actually performed according to the approved method by persons qualified by training and experience to perform said tests,~~

(B) ~~copies~~Copies of the tests results and methods are available for review by the Air Quality Division.

~~(4) stack tests performed on an identical or similar source, when performed in accordance with OAC 252:100-7-4(e)(2) or (3) above, upon approval by the Air Quality Division,~~

(4) Continuous emissions monitoring data, when supported by required certification and calibration data.

(5) Current AP-42 factors or other factors acceptable to the Air Quality Division.

~~(5)~~(6) manufacturer'sManufacturer's test data, when approved by the Air Quality Division as reliable.

~~(6)~~(7) EPA and EPA-contracted industry-specific emission study data when it can be shown to be applicable to the facility in question, and approved for use in the emission inventory by the Air Quality Division.

~~(7)~~(8) fuelFuel usage and other mass-balance methods when supported by specific records applicable to the materials on which the calculations are based, and approved for use in the emission inventory by the Air Quality Division.

~~(8) continuous emissions monitoring data, when supported by required certification and calibration data, or,~~

(9) ~~any~~Any other method ~~which that~~ can be shown to be reasonably accurate when supported by engineering data and calculations, and approved in advance for use in the emission inventory by the Air Quality Division.

[Information from 252:100-7-4(e)]

~~(f)~~(e) Testing requirements Methods of verification. Emission inventories determined by the Air Quality Division to be substantially incomplete or substantially incorrect, shall, upon the request of the Air Quality Division, be subject to verification if not satisfactorily completed or corrected within a reasonable time, shall be subject to verification, upon request by the Air Quality Division, by an appropriate stack test, installation of continuous monitoring equipment or other approvable emissions testing methods. Verification shall be accomplished by an appropriate stack test using EPA approved methods, installation of continuous monitoring equipment, or other methods acceptable to the Air Quality Division.

[Information from 252:100-7-4(f)]

Agency Note: 252:100-5-2.1. Emission inventory - new section for Subchapter 5. Information moved from 252:100-7-4 (except 100-5-2.1(a)(2) which was moved from 252:100-8-9(d)(4)) with necessary amendments.

252:100-5-2.2. Annual Operating permit fees Fees applicable to minor and major sources

~~(b)(a)~~ Applicability.

(1) Sources Affected. ~~OAC 252:100-7-4~~ This section applies to all ~~major and minor sources~~ facilities that are sources of air pollution, including government facilities, regardless of whether the source is currently permitted ~~or is considered grandfathered from such requirement~~, or whether an emission inventory has or has not at any time been submitted for the facility. A Part 70 source shall be subject to fee requirements of this section on January 1, 1995 and ~~as of this date shall no longer be subject to the major source annual operating fee specified in 252:100-7-4(b)(1)(A)~~. The owners or operators of Part 70 sources shall pay annual fees that are sufficient to cover the ~~part~~ Part 70 program costs. The permitting authority shall ensure that any the fee fees required by ~~these rules~~ 252:100-5-2.2(b)(2) will be used solely for ~~part~~ Part 70 program costs.

(2) This section does not apply to de minimis facilities.

~~(A) The owner or operator of such major source shall be subject to an annual operating fee assessed in accordance with the provisions in OAC 252:100-8-9.~~

[252:100-5-2.2 - Applicability section is a combination of information taken from 252:100-7-4(b)(1) and (A) along with 252:100-8-9(b) and (c)]

(b) Fee schedule.

(1) Minor facilities.

~~(B)(A) Until January 1, 1998, The the owner or operator of such a minor source a facility subject to this section shall be subject to pay an annual operating fee beginning January 1, 1994, based on annual emissions of regulated pollutants (for fee calculation), except for total suspended particulates in accordance with the following fee schedule:~~

- (i) 10 - 24.99 tons/year - \$100/year
- (ii) 25 - 49.99 tons/year - \$250/year
- (iii) 50 - 74.99 tons/year - \$500/year
- (iv) 75 - 99.99 tons/year - \$750/year

[252:100-5-2.2(b)(1)(A) - Information taken from 252:100-7-4(b)(1)(B) with necessary amendments]

(B) Beginning January 1, 1998, the owner or operator of a facility subject to this section shall pay an annual operating fee of \$10/ton. This fee is based on total annual

emissions of regulated pollutants (for fee calculation).

(2) Part 70 Sources.

~~(i)~~ (A) Effective January 1, 1995, the annual operating fee for Part 70 sources shall be \$15.19 per ton of regulated air pollutant (for fee calculation).

[252:100-5-2.2(b)(2)(A) - Information taken from 252:100-8-9(d)(1)(B)(i) with necessary amendments]

~~(ii)~~ (B) The annual operating fee shall be adjusted automatically each year by the percentage, if any, by which the Consumer Price Index for the most recent calendar year ending before the beginning of such year differs from the Consumer Price Index for the calendar year 1994. The Consumer Price Index for any calendar year is the average of the Consumer Price Index for all-urban consumers published by the Department of Labor, as of the close of the twelve month period ending on August 31 of each calendar year.

[252:100-5-2.2(b)(2)(B) - Information taken from 252:100-8-9(d)(1)(B)(ii)]

(c) Payment. The Owner or Operator of an affected facility shall remit to the State Air Quality Division an annual operating fee in accordance with OAC 252:100-7-3. For Part 70 sources Fees fees will shall be paid by check or money order made payable to the Oklahoma Air Quality Control Fund, Title V Revolving Fund. All other sources shall pay fees by check or money order made payable to the Oklahoma Air Quality Division or, upon delegation, to the appropriate reviewing agency. Fees are due and payable upon receipt of invoice. Fees shall be considered delinquent 30 days from the date of billing, at which time simple interest shall accrue at the rate of one and one-half percent (1½%) per month on any amount unpaid. The Department shall allow a grace period of one hundred and twenty days from the date of billing before issuing any administrative order and assessing a reasonable administrative fine in accordance with the provisions of The Oklahoma Clean Air Act, 27A O.S. 1993 Supp. Sec. 2-5-101 et seq. Within five (5) years but not before a grace period of 120 days from the date of billing, the DEQ may issue an administrative order to recover such fees and may assess a reasonable administrative fine in accordance with the provisions of the Oklahoma Clean Air Act, 27A O.S. 1993 Supp., Sec. 2-5-101 et seq., to an owner or operator of a facility who has failed to pay such fees. If no fee was billed because the owner or operator failed to submit the required annual emission inventory, the term "date of billing" shall mean the date on which the fee would have been billed had the emission inventory been submitted when due. When a fee overpayment has been made as a result of a DEQ invoice error, an owner or operator may seek a credit for such fee overpayment within five years from the date on which payment of the fee was received by the DEQ. When a fee overpayment has been made as a result of an owner or operator's error in preparing the emission inventory upon which the fee was

based, the owner or operator may seek credit for such overpayment within one year from the date on which payment of the fee was received by the DEQ.

[252:100-5-2.2(c) Payment - Information taken from 252:100-7-3(d) and combined with 252:100-8-9(d)(3) with necessary amendments.]

~~(3) Registration. The owner or operator of any Federal Major Source which has not submitted an emission inventory for the calendar year 1991 shall register with the Oklahoma Air Quality Division in accordance with the OAC 252:100-5 and submit a complete 1991 emission inventory no later than November 1, 1992, or upon the effective date of this OAC 252:100-7-4, whichever is later.~~

[From 252:100-7-4(b)(3)]

~~(e)~~ (d) Basis for annual operating fees.

(1) Operating fees shall be calculated on a source-specific basis and may be based on either actual or allowable emissions of regulated pollutants (for fee calculation) ~~(at the option of the owner/operator paying the fee)~~ as set forth in the facility ~~emissions~~ emission inventory unless the owner or operator elects to pay fees on allowable emissions. Fees shall be based on emission inventories submitted in the previous calendar year (for example, fees invoiced during the calendar year ~~1993~~ 1998 shall be based upon inventory data covering the calendar year ~~1991~~ 1996). ~~All fees shall be determined according to the following:~~

~~(A) where only one basis for fee assessment, i.e. only actual, or only allowable is reflected by the inventory, that basis shall be used for invoicing.~~

~~(B) where both actual and allowable emissions are reflected on the inventory, the lesser of the two shall be used.~~

[252:100-5-2.2(d)(1) Basis for annual operating fees - Information taken from 252:100-7-4(c)(1), (A) and (B) along with 252:100-8-9(d)(1), (A)(i) and (ii)]

~~(iii)~~ (2) Regulated pollutants (for fee calculation) in excess of 4,000 tons per year per pollutant for a ~~part~~ Part 70 source shall not be considered in the calculation of the annual fee.

[252:100-5-2.2(d)(2) - Information taken from 252:100-8-9(d)(1)(B)(iii)]

~~(2) Requests to exercise an option other than those set forth in OAC 252:100-7-4(c)(1)(A) or (B), must be made no later than November 1, 1992, or within thirty days after the effective date of OAC 252:100-7-4, whichever is later.~~

[From 252:100-7-4(c)(2)]

Agency Note: 252:100-5-2.2. Annual operating fees - new section for Subchapter 5. Combination of information moved from 252:100-7-3, 252:100-7-4 and 252:100-8-9 with necessary amendments.

252:100-5-3. Confidentiality of proprietary information

~~(a) No person shall disclose to anyone other than the Air Quality Council, the Executive Director, or a Court of competent jurisdiction any process information, except emission data, furnished or obtained pursuant to this Subchapter. Emission data must be made available at all times to the public during normal working hours.~~

~~(b) Upon the request of the interested party or parties, all hearings in which proprietary information is to be divulged shall be held "in camera" and such information shall be sealed and access otherwise limited. Emission data shall never be considered to be "proprietary" for purposes of this Subchapter and must be available at all times to the public during normal working hours. [Refer to 27A O.S. Supp. 1993, 2-5-105.18]~~

Agency Note: 252:100-5-3. Information already covered in more detail in the Act - 27A O.S. Supp. 1993, 2-5-105.18. Therefore, deleted and the Oklahoma Clean Air Act referenced.

MINUTES
AIR QUALITY COUNCIL
Continued From December 16, 1997
January 9, 1998
Lincoln Plaza Office Park Burgundy Room
4545 North Lincoln, Oklahoma City, OK

Council Members Present

Larry Canter, Vice-Chairman

PUBLIC MEETING

Notice of Continued Public Meeting for January 9, 1998 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. The January 9, 1998 agenda contained items from the December 16, 1997 agenda exclusively. Copies of the agenda were posted at the entrance doors of the meeting room.

Call to Order -- Dr. Canter, Vice-Chairman, called the meeting to order and roll call was taken as follows: Mr. Fishback - aye; Ms. Myers - aye; Mr. Kilpatrick - aye; Ms. Slagell - aye; Mr. Branecky - aye; Dr. Canter - aye. Mr. Breisch and Ms. Andrews were absent.

PUBLIC HEARING

OAC 252:100-8 OPERATING PERMITS (PART 70) [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Section 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy to give staff's position.

Dr. Sheedy stated that the proposed revisions to Subchapter 8 are to correct the deficiencies in the interim Title V Program as identified by EPA in their February 5, 1996 notice of approval of the interim program. After summarizing the changes, Dr. Sheedy stated that staff's recommendation was for Council to forward this rule to the Environmental Quality Board for approval as both emergency and permanent rule.

Mr. Kilpatrick made motion that Council recommend this rule to the Board for permanent and emergency adoption. Second was made by Mr. Fishback. Roll call as follows: Mr. Fishback - aye; Ms. Myers - aye; Mr. Kilpatrick - aye; Ms. Slagell - aye; Mr. Branecky - aye; Dr. Canter - aye.

OLD BUSINESS

OAC 252:100-5 REGISTRATION OF AIR CONTAMINANT SOURCE [AMENDED]

Mr. Dyke then called upon Ms. Jeanette Buttram to give staff's position. With no additional changes made, Ms. Buttram stated that staff recommended that Subchapter 5 be approved by Council and recommended to the Environmental Quality Board for emergency and permanent adoption.

Mr. Fishback moved that Council adopt Subchapter 5, as presented, to the Environmental Quality Board for both emergency and permanent adoption. Mr. Branecky made the second to the motion. Roll call as follows: Mr. Fishback – aye; Ms. Myers – aye; Mr. Kilpatrick – aye; Ms. Slagell – aye; Mr. Branecky – aye; Dr. Canter – aye.

**OAC 252:100-7 CONSTRUCTION PERMITS FOR MAJOR AND MINOR SOURCES;
OPERATING AND RELOCATION PERMITS FOR MINOR SOURCES [AMENDED]**

Mr. Dyke called upon Ms. Jeanette Buttram to give staff's position on this rule. With one additional change, Ms. Buttram stated that staff recommended that Subchapter 7 be approved by Council and recommended to the Environmental Quality Board for emergency and permanent adoption. Mr. Fishback made the motion that Subchapter 7, including the change to Appendix H regarding wire drawing equipment, be approved by the Council and recommended for adoption to the Environmental Quality Board as permanent and emergency rule. The second was made by Ms. Myers. Roll call was as follows: Mr. Fishback – aye; Ms. Myers – aye; Mr. Kilpatrick – aye; Ms. Slagell – aye; Mr. Branecky – aye; Dr. Canter – aye.

ADJOURNMENT: With no further business, Dr. Canter adjourned stating that the next regularly scheduled meeting would be February 18, 1998 at the Lincoln Plaza Office Park Burgundy Room, 4545 North Lincoln Boulevard, Oklahoma City, Oklahoma.

NOTE: The sign-in sheet and the hearing records are attached as an official part of these Minutes.

**AIR QUALITY COUNCIL
RULEMAKING RECOMMENDATION TO THE ENVIRONMENTAL QUALITY BOARD**

Identification of Proposed Rulemaking:

Chapter Number and Title - OAC 252:100-5

REGISTRATION OF AIR CONTAMINANT SOURCES [AMENDED]

Subchapters or Sections Involved - [new, amended or revoked]

On JANUARY 9, 1998 the members of this Council, by authority vested in them by the Oklahoma Environmental Quality Code (27 O.S. Supp. 1993, § 2-2-201), by roll call vote, recommended to the Environmental Quality Board that the rulemaking described above be adopted as:

permanent [take effect after legislative review]

emergency [temporary, to take effect upon approval by the Governor because of time; and/or special reason: _____]

(mark as appropriate)

This Council has considered the proposed rulemaking and comments about it and determined, to the best of its knowledge, that all applicable requirements of the Oklahoma Administrative Procedures Act have been followed.

This Council authorizes the Department to prepare this recommended rulemaking for the Board, making any changes approved by the Council, correcting typographical, grammatical and reference errors, and formatting them as required by the Office of Administrative Rules. This is to be done with the understanding that such changes shall neither alter the sense of what this Council recommends nor invalidate this recommendation.

Respectfully,

 Date signed: 1/9/98
Chair or Designee

VOTING TO APPROVE:

SUBCHAPTER 5. REGISTRATION, OF AIR CONTAMINANT SOURCES
EMISSION INVENTORY AND ANNUAL OPERATING FEES

252:100-5-1. Purpose

The purpose of this Subchapter is to provide the Council with data whereby they might determine conditions of air pollution, as between particular air contaminant sources and as between particular areas of the state, such as urban, suburban and rural areas. This Subchapter requires potential sources of air contaminants to register with the Air Quality Division. It also requires facilities that emit air contaminants to file an emission inventory and pay annual operating fees.

252:100-5-1.1. Definitions

The following words and terms when used in this Subchapter shall have the following meaning unless the context clearly indicates otherwise:

"Actual emissions" means the total amount of regulated air pollutants emitted from a given facility during a particular calendar year, determined using methods contained in 252:100-5-2.1(d).

"Allowable emissions" means:

(A) The total amount of regulated air pollutant emitted based on limits contained in a federally enforceable permit or potential to emit, or

(B) For grandfathered sources, emission limits based on maximum design capacity and considering all applicable rules.

"Consumer Price Index" means an index determined by the U.S. Department of Labor measuring the change in the cost of typical wage-earner purchases of goods and services expressed as a percentage of the cost of these same goods and services in a base period.

"Emission inventory" means a compilation of all point source, storage and process fugitive air emissions for all regulated air pollutants at a given facility.

"Grandfathered source" means a stationary source that was in operation in Oklahoma when an otherwise applicable rule was promulgated unless that rule specifically applies to existing sources or the source has undergone modification since that rule was promulgated.

"Minor facility" means a facility which is not a Part 70 source.

"Part 70 source" means any source subject to the permitting requirements of Part 5 of Subchapter 8 of this Chapter as provided in 252:100-8-3(a) and 252:100-8-3(b).

"Process Fugitive Emissions" means those emissions created by or incidental to any particular process which become airborne or have the potential to become airborne, and could not reasonably, taking into account economic considerations, be made to pass through a stack, chimney, vent or other functionally equivalent opening.

"Regulated air pollutant" means:

(A) Any Volatile Organic Compound (VOC), as that term is defined in 252:100-1-3, 252:100-37-2, or 252:100-39-2.

(B) Any Volatile Organic Solvent (VOS), as that term is defined in 252:100-37-2 and 252:100-39-2.

(C) Any pollutant regulated under section 111 or 112 (except

112(r)) of the Federal Clean Air Act.

(D) Any pollutant for which a national primary ambient air quality standard has been promulgated under the Federal Clean Air Act.

(E) Any Toxic Air Contaminant as defined and regulated under 252:100-41-2.

(F) Any other substance for which an air emission limitation or equipment standard is set by permit or rule.

"Regulated pollutant (for fee calculation)", which is used only for purposes of this Subchapter, means any "regulated air pollutant" except the following:

(A) Carbon monoxide.

(B) Any pollutant that is a regulated air pollutant solely because it is a Class I or II substance subject to a standard promulgated under or established by Title VI of the Act.

(C) Any pollutant that is a regulated air pollutant solely because it is subject to a standard or regulation under section 112(r) of the Act.

(D) Total suspended particulates (TSP).

[Agency Note (1): 252:100-5-1.1. Definitions - new section for Subchapter 5. Section consists of new definitions and definitions moved from 252:100-7-4, 252:100-8-2, and 252:100-8-9 with necessary amendments.]

252:100-5-2. Registration of potential sources of air contaminants

~~(a) **Filing.** The owner or operator of any potential air contaminant source on the effective date of this Subchapter shall at such time as requested, file with the Council information as to the nature of the air contamination source including such information as would be needed or useful in evaluating the potential of the source for causing air pollution. In addition to any requirements for the submission of information found in any other regulation in this Chapter, the owner or operator of an air contaminant source shall, upon request, provide the Air Quality Division with information necessary to evaluate the source's potential for causing air pollution.~~

~~(b) **Necessary information.** The following information may shall be included for each source: total weight of the contaminant released per day, period or periods of operation, composition of the contaminant, physical state of the contaminant, temperature and moisture content of the air or gas stream at the point where released into the atmosphere and such other information as may be specifically requested by the Director. Where an air or gas cleaning device is incorporated in the air or gas stream preceding discharge to the atmosphere, the weight of material removed, by the cleaning device, as well as the weight emitted, shall be stated.~~

~~(1) Total weight of the contaminant released per day.~~

~~(2) Period or periods of operation.~~

~~(3) Composition of the contaminant.~~

~~(4) Physical state of the contaminant.~~

~~(5) Temperature and moisture content of the air or gas stream~~

at the point where released into the atmosphere.

(6) Efficiency of any control device.

(7) Such other information as may be specifically requested by the Director.

252:100-5-2.1. Emission inventory

(a) Requirement to file an emission inventory. The owner or operator of any facility that is a source of air emissions shall submit a complete emission inventory annually on forms obtained from the Air Quality Division.

(1) The initial emission inventory for minor facilities shall be submitted by March 1, 1993 and every succeeding year thereafter.

(2) The initial emission inventory for Part 70 sources shall be submitted by April 1, 1994 and every succeeding year thereafter.

(3) De minimis facilities as defined in 252:100-7-1.1 are not required to submit an annual emission inventory.

(b) Content. All inventories submitted to the Air Quality Division shall include, but shall not be limited to, the following:

(1) For those emissions subject to a permit, the permit number and the permitted allowable emissions as set forth therein.

(2) The amount of the actual emissions and the basis for such determination.

(3) If the actual emissions vary from the allowable or from the previous year's actual by more than 30%, an explanation for the difference.

(4) For those emissions not the subject of a permit and when requested by the AOD, a list of all 252:100 rules setting forth emission limitations applicable to the facility in question and the maximum yearly allowable for the facility.

(c) Documentation. All calculations and assumptions must be verified by proper documentation. All supporting data, including actual production, throughput and measurement records along with engineering calculations and other data utilized in accordance with 252:100-5-2.1(d), below, must be maintained for at least 5 years by the current owner or operator at the facility in conjunction with facility records of the emission inventory. This information must either be submitted to the Air Quality Division or made available for inspection upon request.

(d) Method of calculation. The best available data at the time the emission inventory is or should have been prepared shall be used to determine emissions. It shall be the burden of the owner or operator to select the best available data. Said selection shall be binding upon acceptance by the Air Quality Division and the payment of fees. The following shall constitute acceptable methods for determining emissions:

(1) Emission factors utilized in the issuance of a relevant Oklahoma Air Quality permit(s) for the facility.

(2) Stack tests using appropriate EPA test methods, with advance notification and opportunity for observation by the Air Quality Division.

(3) Stack tests using appropriate EPA test methods on identical equipment (i.e., same model) at the same location under the same operating conditions and parameters when:

(A) Tests are performed by persons qualified by training and

experience to perform said tests.

(B) Copies of the tests results and methods are available for review by the Air Quality Division.

(4) Continuous emissions monitoring data, when supported by required certification and calibration data.

(5) Current AP-42 factors or other factors acceptable to the Air Quality Division.

(6) Manufacturer's test data, when approved by the Air Quality Division as reliable.

(7) EPA and EPA-contracted industry-specific emission study data when it can be shown to be applicable to the facility in question and approved for use in the emission inventory by the Air Quality Division.

(8) Fuel usage and other mass-balance methods when supported by specific records applicable to the materials on which the calculations are based and approved for use in the emission inventory by the Air Quality Division.

(9) Any other method that can be shown to be reasonably accurate when supported by engineering data and calculations, and approved for use in the emission inventory by the Air Quality Division.

(e) Methods of verification. Emission inventories determined by the Air Quality Division to be substantially incomplete or substantially incorrect shall, upon the request of the Air Quality Division, be subject to verification if not satisfactorily completed or corrected within a reasonable time. Verification shall be accomplished by an appropriate stack test using EPA approved methods, installation of continuous monitoring equipment or other methods acceptable to the Air Quality Division.

[Agency Note (2): 252:100-5-2.1. Emission inventory - new section for Subchapter 5. Information moved from 252:100-7-4 (except 100-5-2.1(a) (2) which was moved from 252:100-8-9(d) (4)) with necessary amendments].

252:100-5-2.2. Annual Operating Fees

(a) Applicability.

(1) This section applies to all facilities that are sources of air pollution, including government facilities, regardless of whether the source is currently permitted or whether an emission inventory has or has not at any time been submitted for the facility. A Part 70 source shall be subject to fee requirements of this section on January 1, 1995. The owners or operators of Part 70 sources shall pay annual fees that are sufficient to cover the Part 70 program costs. The permitting authority shall ensure that the fees required by 252:100-5-2.2(b)(2) will be used solely for Part 70 program costs.

(2) This section does not apply to de minimis facilities.

(b) Fee schedule.

(1) Minor facilities

(A) Until January 1, 1998, the owner or operator of a facility subject to this section shall pay an annual operating fee based on annual emissions of regulated pollutants (for fee

calculation), in accordance with the following fee schedule:

- (i) 10 - 24.99 tons/year - \$100/year
- (ii) 25 - 49.99 tons/year - \$250/year
- (iii) 50 - 74.99 tons/year - \$500/year
- (iv) 75 - 99.99 tons/year - \$750/year

(B) Beginning January 1, 1998, the owner or operator of a facility subject to this section shall pay an annual operating fee of \$10/ton. This fee is based on total annual emissions of regulated pollutants (for fee calculation).

(2) Part 70 Sources

(A) Effective January 1, 1995, the annual operating fee for Part 70 sources shall be \$15.19 per ton of regulated pollutant (for fee calculation).

(B) The annual operating fee shall be adjusted automatically each year by the percentage, if any, by which the Consumer Price Index for the most recent calendar year ending before the beginning of such year differs from the Consumer Price Index for the calendar year 1994. The Consumer Price Index for any calendar year is the average of the Consumer Price Index for all-urban consumers published by the Department of Labor, as of the close of the twelve month period ending on August 31 of each calendar year.

(c) Payment. For Part 70 sources fees shall be paid by check or money order made payable to the Oklahoma Air Quality Title V Revolving Fund. All other sources shall pay fees by check or money order made payable to the Oklahoma Air Quality Division. Fees are due and payable upon receipt of invoice. Fees shall be considered delinquent 30 days from the date of billing, at which time simple interest shall accrue at the rate of one and one-half percent (1½%) per month on any amount unpaid. Within five (5) years but not before a grace period of 120 days from the date of billing, the DEQ may issue an administrative order to recover such fees and may assess a reasonable administrative fine in accordance with the provisions of the Oklahoma Clean Air Act, 27A O.S. 1993 Supp., Sec. 2-5-101 et seq., to an owner or operator of a facility who has failed to pay such fees. If no fee was billed because the owner or operator failed to submit the required annual emission inventory, the term "date of billing" shall mean the date on which the fee would have been billed had the emission inventory been submitted when due. When a fee overpayment has been made as a result of a DEQ invoice error, an owner or operator may seek a credit for such fee overpayment within five years from the date on which payment of the fee was received by the DEQ. When a fee overpayment has been made as a result of an owner or operator's error in preparing the emission inventory upon which the fee was based, the owner or operator may seek credit for such overpayment within one year from the date on which payment of the fee was received by the DEQ.

(d) Basis for annual operating fees.

(1) Operating fees shall be calculated on a source-specific basis and based on actual emissions of regulated pollutants (for fee calculation) as set forth in the facility-emission inventory unless the owner or operator elects to pay fees on allowable emissions. Fees shall be based on emission inventories submitted in the previous calendar year (for example, fees invoiced during the calendar year 1998 shall be based upon

inventory data covering the calendar year 1996).

(2) Regulated pollutants (for fee calculation) in excess of 4,000 tons per year per pollutant for a Part 70 source shall not be considered in the calculation of the annual fee.

[Agency Note (3): 252:100-5-2.2. Annual operating fees - new section for Subchapter 5. Combination of information moved from 252:100-7-3, 252:100-7-4 and 252:100-8-9 with necessary amendments].

252:100-5-3. Confidentiality of proprietary information

~~(a) No person shall disclose to anyone other than the Air Quality Council, the Executive Director, or a Court of competent jurisdiction any process information, except emission data, furnished or obtained pursuant to this Subchapter. Emission data must be made available at all times to the public during normal working hours.~~

~~(b) Upon the request of the interested party or parties, all hearings in which proprietary information is to be divulged shall be held "in camera" and such information shall be sealed and access otherwise limited. Emission data shall never be considered to be "proprietary" for purposes of this Subchapter and must be available at all times to the public during normal working hours. [Refer to 27A O.S. Supp. 1993, § 2-5-105.18.]~~

OAC 252:100-5[1]
Additional Comments

CHAPTER 100. AIR POLLUTION CONTROL
SUBCHAPTER 5. REGISTRATION OF AIR CONTAMINANT SOURCES

EXECUTIVE SUMMARY:

The original purpose of the modifications to this subchapter was to simplify and clarify the rule. Other amendments include moving the requirements to file an emission inventory from Subchapter 7 to Subchapter 5. Also, payment of annual operating fees was moved from Subchapters 7 and 8 to Subchapter 5. The primary substantive change in the rule is the annual operating fees for minor facilities will change from a tiered system to a set figure per ton of pollutant emitted.

DIFFERENCES FROM ANALOGOUS FEDERAL RULES: None.

ENVIRONMENTAL BENEFIT STATEMENT: Not required because these rules are not more stringent than corresponding federal rules.

SUMMARY OF COMMENTS AND RESPONSES:

Comment: Request staff add time limits for maintaining emission inventory records under 252:100-5-2.1(c).

Response: Staff agreed and added "for at least 5 years" to the rule to be consistent with the time frames outlined in 252:100-5-2.2(c) and Title V.

Comment: Request staff change the tagline from "Testing requirements" to "Methods of verification" to reflect the information the section is actually requesting.

Response: Staff agreed and changed the tagline to "Methods of verification."

P R O C E E D I N G S

MR. BREISCH: We'll call the meeting to order. Myrna, do you want to call the roll?

MS. BRUCE: Mr. Fishback?

MR. FISHBAC: Here.

MS. BRUCE: Dr. Canter?

DR. CANTER: Present.

MS. BRUCE: Ms. Myers?

MS. MYERS: Here.

MS. BRUCE: Mr. Branecky?

MR. BRANECKY: Here.

MS. BRUCE: Ms. Andrews?

MS. ANDREWS: Here.

MS. BRUCE: Mr. Kilpatrick?

MR. KILPATRICK: Here.

MS. BRUCE: Mr. Breisch?

MR. BREISCH: Here.

MS. BRUCE: For the record, Ms. Slagell is absent.

MR. BREISCH: Do you all have the minutes of the June 17th meeting? Do I hear a motion for approval?

MR. KILPATRICK: I'll so move.

MR. BRANECKY: Second.

MR. BREISCH: We've got a motion and a second. Any questions, comments or additions? If not, Myrna, call the roll.

MS. BRUCE: Mr. Fishback?

MR. FISHBAC: Approved.

MS. BRUCE: Dr. Canter?

DR. CANTER: Approved.

MS. BRUCE: Ms. Myers?

MS. MYERS: Yee.

MS. BRUCE: Mr. Branecky?

MR. BRANECKY: Aye.

MS. BRUCE: Ms. Andrewe?

MS. ANDREWS: Aye.

MS. BRUCE: Mr. Kilpatrick?

MR. KILPATRICK: Aye.

MS. BRUCE: Mr. Breisch?

MR. BREISCH: Yes.

MR. FISHBAC: We are individuals, aren't we. That's a given.

MR. BREISCH: Next on agenda are four public hearing items. Larry Byrum will act as protocol officar. We'll break between each one of these and Larry will handle that. So, Larry, take these items up.

MR. BYRUM: Ladies and gentlemen, my name is Larry Byrum. I am the director of the Air Quality Division and as so will act as protocol officer for this hearing.

This hearing is convened by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act titled 40 in the Code of Federal Regulations, Part 51, as well as the authority of Title 63 of the Oklahoma Statutee, Sections 1, 1801 and following. This hearing was advertised in the Oklahoma Register for the purposes of receiving comments pertaining to the proposed revisions of OAC 252:100-5 for registration of Air Contaminant Sources.

If you wish to make a statement in regards to this particular rule, would you please complete the form at the regatration table and you will be called upon at the appropriate time. At this time, I would like to call on staff to give the staff position on the proposed changes.

JEANETTE BUTTRAM: Members of the

1589

1 council, ladies and gentlemen, my name
2 Jeanette Buttram. I'm with the Rules and
3 Planning Unit. First off, I would like to
4 mention on July 23, 1997, an informational
5 meeting was held between the public and the
6 Air Quality Division to discuss the
7 proposed changes to Subchapters 5 and 7.
8 During that meeting comments were received
9 and taken into consideration for the final
10 draft of the proposed rules.

11 A major task for the Rules and
12 Planning Unit regarding changes to
13 Subchapter 5 was to clarify and simplify
14 the rules. So with every change made those
15 two goals were kept in mind. Throughout
16 the Subchapter, you will see revisions that
17 include strike-outs or underlined text.
18 The struck out text is language we are
19 proposing to be deleted and underlined text
20 is proposed the new language. Throughout
21 the Subchapter, you will also notice
22 reference material within the rule enclosed
23 in brackets along with agency notes located
24 at the end of the section. This
25 information can be used as a guide to tell

1 you where a rule came from and where it was
2 moved.

3 Subchapter 5 changes: The title of
4 Subchapter 5 was changed to Registration,
5 Emission Inventory and Annual Operating
6 Fees to reflect the addition of emission
7 inventory and operating fees to the
8 Subchapter. The changes made to the
9 original sections in Subchapter 5, Sections
10 5-2 and 5-3 were not intended to change the
11 meaning of the rule, rather simplify and
12 clarify it. The remaining sections with
13 underlined headings, were moved here from
14 other areas of the Air Quality Rules.
15 Remember, changes in conditions listed in
16 Subchapter 5 are for all sources, major and
17 minor.

18 Section 5-1.1 contains a new
19 definition section. This section consists
20 of definitions moved from Subchapters 7 and
21 8 along with a new definition for
22 grandfathered sources.

23 Section 5-2.1, Emission Inventory
24 moved in its entirety from Subchapter 7
25 along with some information from Subchapter

1 8. This includes important changes made in
2 method of calculation and testing
3 requirements.

4 Section 5-2.2, Annual Operating Fees
5 includes a proposed change in fees from
6 minor sources to a flat fee of \$10 a ton
7 based on total annual emissions of
8 regulated pollutants for fee calculations
9 instead of the previous sliding scale. It
10 also includes a proposed change in payment
11 of fees, establishing time periods from
12 when sources can change their inventories
13 and when the DEQ can collect fees that are
14 past due. Staff recommends that Subchapter
15 5 be continued to the next council meeting.
16 I'll now open the floor for questions.

17 Present today to assist in answering
18 questions is Barbara Hoffman with General
19 Council and Dr. Joyce Sheedy with the Rules
20 and Planning Unit.

21 DR. HYRUM: Questions from the
22 council for Jeanette.

23 DR. CARTER: I have some questions
24 regarding the fees, the operating fees, and
25 I think that it looks like to me that if

1 these fees are changed as proposed that the
2 income to be generated goes up -- depends
3 on what assumptions you want to make, but
4 could go up in excess of 25 percent. And I
5 understand a flat fee concept.

6 It looks like to me that if the
7 average fee was \$8 per ton rather than \$10
8 per ton, that this change would be, I think
9 the term we used this morning was revenue
10 neutral. So having said that, I would feel
11 more comfortable if the staff could provide
12 some additional analysis of these proposed
13 fee changes.

14 I don't -- I think that -- the way I
15 look at it is unless a source was at the
16 minimum of those ranges, that is, 10 tons a
17 year, 25 tons a year, etc., every other
18 source is going to have to pay more money.
19 And I am not at all clear as to the need
20 for that and certainly, you know, what is
21 that money being spent for? So I am
22 asking, or -- at least for me, I need
23 additional information that is
24 justification for this change. And I
25 understand we'll continue this hearing

1 our next meeting, but I just need
2 additional information.

3 I'm not for just changing the fee
4 without any kind of rational basis for such
5 change. And it looks to me like every
6 source in the state is going to have to pay
7 more money with the exception of those who
8 are at the bottom of each of those ranges.
9 That's my comment. Can anybody -- I guess
10 it's a comment not a question.

11 MR. FISHBACK: Do you want to make
12 the request for justification a resolution?

13 DR. CANTER: I will at the
14 appropriate time. That would just --

15 MR. BYRUM: Other questions for
16 Jeanette?

17 DR. CANTER: Let me rephrase that as
18 a question. It was mentioned this morning
19 that staff calculations showed that this
20 was to be a 10, 15 percent overall
21 increase. Could that be explained a little
22 bit, please?

23 MR. MOFFETT: My name is Morris
24 Moffett. I'm in the Emission Inventory
25 section. As I indicated, we have a lot of

State Transcription Service
(408) 525-4111

1 sources either coming in from synthetic
2 minors or exiting through the OCC
3 jurisdictional document. I disregarded the
4 '96 data and went back to the '95 data and
5 ran the calculations using those numbers.
6 I had another fellow in the section do the
7 same, working from, sort of from the other
8 end, working from the money end back down
9 these sources or working from how many
10 sources and up to the money.

11 We ended up with like 10 percent
12 differences and that's accounted for by
13 sources that are no longer operating or new
14 sources that have come in after they
15 appeared in one spread sheet and not the
16 other. The increase was -- it could be
17 expected to be like 30 percent to be in the
18 middle, but that's not the way the numbers
19 worked out when we did it. Maybe there is
20 a preponderance of sources that are 15 tons
21 rather than 19 tons. It was done in an
22 attempt to level the playing field for
23 sources that were on either side of the
24 breakovers at 25-50-75.

25 And it's true that if a source was a

State Transcription Service
(408) 525-4111

1 10 ton source then his fees are going to go
2 well up, but a source that was in the upper
3 bracket between 75 and 100 tons is going to
4 see a smaller percentage-wise increase. In
5 other words from the difference in 75 and
6 99 is only one third where the difference
7 in 10 and 25 is two and a half tons. The
8 higher dollar figures -- any one higher
9 change will cancel out three of them in the
10 lower bracket. That's for the percentage-
11 wise.

12 I checked the numbers really hard
13 because I came back with a number a lot
14 lower than what I was expecting to see.
15 And the only way that I have been able to
16 find it out is sources coming and going and
17 the fact that there are a lot of sources in
18 the 50, 60, 70 ton range as opposed to the
19 10 to 25 range. So the overall increase
20 was, you know, 15 percent or in that area
21 rather than 50 percent as you believed if
22 you look at the 10 to 25 range.

23 DR. CANTER: Was the purpose of the
24 change to raise more revenue?

25 MS. HOFFMAN: The major purpose was

State Transcription Service
(408) 525-4111

1 to try to make it a little more equitable
2 for all the participants. We had received
3 comments from some that indicated that they
4 thought it was unfair that they were on one
5 end of the sliding scale as opposed to the
6 other.

7 MS. BUTTRAM: And we did look at
8 some numbers and one of the comparisons
9 that we talked about before and maybe these
10 numbers could help too, but as you realize
11 being on the higher-end scale -- like with
12 the existing scale if they made it 49.87
13 tons a year they would pay \$250 a year and
14 while sources that emit 50.002 tons would
15 pay \$500 a year. So the difference there
16 if we brought it down to the \$10 ton then
17 it's only, maybe two dollars -- two or
18 three dollar difference. We are trying,
19 like was mentioned, to satisfy the request
20 for industry to have it more equitable.

21 DR. CANTER: It would it seem to me
22 and I don't know how many sources are in
23 these categories, but you kind of assume
24 that equal distribution in each of the
25 category of sources, it looks like to me if

State Transcription Service
(408) 525-4111

1 the objective is not to raise the total
2 revenue and kind of assuming equal
3 distributions, you could use a flat fee of
4 \$8 per ton. And looks like to me that's
5 kind of the average as opposed to \$10 a
6 ton.

7 I'm just a little bit concerned
8 about raising another fee when it's not
9 clear to me, and I don't care --
10 personally, I don't care whether this is
11 percent of the total money coming to the
12 division or 30 percent or 5 percent. I
13 just would feel better if there was a
14 written justification, written
15 justification as to what these changes are
16 and what the implications are.

17 MR. KILPATRICK: I don't understand
18 your suggestion to make it \$8 if it was
19 represented that based on the '95 data -- I
20 don't understand why you threw out the '96
21 and went with the '95, but the '95 data
22 indicated a 10 to 15 percent increase.
23 That would suggest to me, if I do the math
24 right, that to be revenue neutral, which is
25 what you are saying, you would either pay

1 \$8.50 or \$9 depending on whether you have
2 10 or 15 percent. But you're suggesting \$8
3 which is collect less money.

4 DR. CANTER: I'm just assuming an
5 equal distribution of all the sources in
6 each category.

7 MR. KILPATRICK: His calculations
8 show -- is not equal.

9 DR. CANTER: See, I'm not sure what
10 sources you left out. I heard you saying
11 that there were sources that were going to
12 be omitted from this program and when you
13 say, overall 10 to 15 percent, does that
14 mean that the sources that haven't been
15 moved out to another program, on average,
16 they're going to have to pay 25 percent
17 more? Am I tracking that or am I mixed up?

18 MR. MOFFETT: I'm not certain that --
19 - I did not use the '96-year data because
20 there are at least one hundred emission
21 inventories that haven't been turned in and
22 entered into the computer yet. We make
23 every effort to get those in as quickly as
24 possible, but we get a lot of people
25 either, for whatever reason can't get it to

1 us on time, and they are not entered yet.
2 And I want to compare apples to apples.

3 The other thing was the synthetic
4 minors who are getting a large number of
5 sources that were -- may just be for, by
6 virtue of potential to emit and now they
7 have got the proper permitting so that now
8 they are under 100 tons, and generally when
9 they are under 100 tons that doesn't drop
10 them down to the 10 to 25 range, it drops
11 them just below 100 tons or a number just
12 below 100. It seems like if there is a
13 category that is growing and it's the
14 synthetic minors, the majors becoming
15 synthetic minors, and they are in the upper
16 portion of that, the '96 is going to show
17 probably 10 times as many synthetic minors
18 as what the '95 did. So I was kind of
19 trying to lean that way with it.

20 MR. KILPATRICK: I would suggest that
21 if the desire of the council is to have a
22 revenue neutral number in here, that we
23 simply just ask the service division to
24 come back at the next meeting with a
25 recommendation for what would a revenue

1 neutral number would be and let them take
2 the data and do the calculations and make a
3 recommendation to us rather than us trying
4 to pick the data. We don't have the data
5 in front of us.

6 DR. CANTER: Right, and I accept
7 that, except I would like to see all of it
8 in writing and not a piece of paper that
9 says we recommend \$8 a ton, because that
10 still doesn't help me because I want to see
11 what the rationale is. So I'm asking for a
12 written justification of whatever the
13 changes are. That doesn't mean I'm not in
14 favor of it. I just don't feel like I've
15 got the information to know what kinds of
16 analysis was done.

17 MR. FISHBACK: And to Gary
18 Kilpatrick's point, you're not proposing \$8
19 a ton, you're not proposing a revenue
20 neutral number --

21 DR. CANTER: Yes.

22 MR. FISHBACK: -- whatever it is,
23 but justified in writing.

24 DR. CANTER: Yes.

25 MR. FISHBACK: Okay. I would agree

1 with that.

2 MR. BYRUM: Other comments for
3 Jeanette?

4 MS. MYERS: I've got one question.
5 We talked about it a little bit this
6 morning. Under the section on the Emission
7 Inventory 5-2.1, the section on
8 documentation, I would like to ask for
9 clarification on how long the records need
10 to be maintained.

11 MS. BUTTRAM: We'll take a closer
12 look at that and any other requirements
13 that we may have, and come up with a
14 recommendation for you.

15 MS. MYERS: Thank you.

16 MR. BYRUM: Any other questions?

17 MR. FISHBAC: Jeanette, could you
18 point out, I believe you mentioned in your
19 opening comments that there was a change in
20 Subsection 5 related to testing procedures?

21 MS. BUTTRAM: Testing and method of
22 calculation 5-2.1 under Emission Inventory.
23 Testing requirements is Number E and there
24 are some changes in there, struck out text
25 and underlined the additional information

dict's Transcription Service
(402) 528-4111

1 that was added.

2 MR. FISHBAC: What is the intent of
3 that change as you see it?

4 MS. BUTTRAM: I think we had
5 comments from staff on the changes for the
6 staff text. If you want to draw my memory,
7 but I think it was.

8 MS. HOFFMAN: Number 3 stack test,
9 using appropriate test methods on identical
10 equipment the same model and the same
11 location and the same operating conditions
12 and parameters and then it goes on. That
13 wording was changed slightly to make it a
14 little more precise. We had some people --
15 and Morris might want to explain this more.
16 He can probably explain it better than I
17 can.

18 MR. MOFFETT: What we were getting
19 at before is, I guess the wording wasn't
20 specific enough so a person that put the
21 same -- I'll use compressors because
22 they're so many of them. Using the same
23 compressor with the same factors for
24 calculating its emissions in the southeast
25 corner of state compared to the identical

dict's Transcription Service
(402) 528-4111

1 equipment in the northwest corner of the
2 state, the gas that flows through, the gas
3 is combusted, the operating parameters
4 conditions things are so widely separated
5 that we wanted to try and narrow down how
6 close -- identical, you know, without
7 trying to define sameness or identical, we
8 wanted to narrow it down so that there
9 would be a smaller range.

10 There have been instances where one
11 engine was tested and applied to 15
12 different facilities around the state and
13 it may have been good on several of them
14 and not on some of them and we didn't
15 really have a way to say, no, I'm sorry but
16 you're going to have to use a different
17 method or a better test or some other way
18 to come up with these numbers.

19 MR. FISHBAC: So the intent of
20 Section E there is, if you receive emission
21 inventory that you determined to be --
22 you, the Air Quality Division, determine to
23 be either incomplete or incorrect, you ask
24 for verification by one of three methods it
25 looks like, EPA, CEMS or other methods

dict's Transcription Service
(402) 528-4111

1 which is a negotiation with the source?

2 MR. MOFFETT: Well, actually, this
3 occurred during the last year and the
4 emission factors were, maybe 10 percent of
5 that. Seeing a thousand of them a year
6 tells me they possibly or should have been.
7 Whenever I spoke to the people about it
8 they said, well, they are not going to run
9 another stack test and I said that will be
10 fine. We can use AP-42 or mass balance or
11 manufacturer. There are a lot of
12 inexpensive and accurate methods to use in
13 lieu of a stack test that I may not or that
14 we may not deem to be accurate or
15 appropriate for a particular facility.

16 MR. FISHBAC: So in your example
17 you had someone coming in at 10 percent of
18 what you would expect and it was clearly an
19 outlier and you said he needs some
20 independent verification.

21 MR. MOFFETT: That's true.

22 MR. FISHBAC: The important point
23 here is that you don't force the source
24 into an expensive stack test.

25 MR. MOFFETT: No, and I try to

dict's Transcription Service
(402) 528-4111

1595

1 stress that to everyone out there. There
2 are a lot of different methods. Another
3 reason these were changed around is some of
4 the methods that were at the top of the
5 list and would seem to be preferred, were
6 not really the most accurate or the best
7 methods to be used and we tried to move
8 them around a little bit.

9 MR. FISHBACK: So this catch-all,
10 the last phrase, other methods acceptable
11 to the Air Quality Division, that's
12 intended to include a lot of options?

13 MR. MOFFETT: Yes.

14 DR. CANTER: I think you capsulized
15 when you said negotiation. The heading of
16 that section is testing, and I have no
17 problem, Morris, with what you said to use
18 other methods. But I wonder -- when I read
19 that other methods, I thought they were
20 other methods of testing and you described
21 other methods that might not necessarily
22 include source-specific testing. So I'm
23 wondering if maybe a qualifier word or
24 something -- I don't have a suggestion
25 right now, but --

1 MR. FISHBACK: I think an
2 appropriate word in line with what you said
3 is other method of verifying the emission
4 inventory. That's really what you are
5 that's a good point. It's not a method
6 be tested.

7 MS. BUTTRAM: Could we just call it
8 verification or methods of verification?

9 MR. FISHBACK: Other methods of
10 verification? Yes.

11 MR. BYRUM: Other questions for
12 Jeanette from the council? Questions from
13 the audience for Jeanette?

14 MS. BARTON: I have a question.
15 Just a note of clarity on 252:8 and 9 about
16 the fee schedule. Are these all related to
17 the Title 5 fees, both of minor sources and
18 the \$15 a ton? Is that all related to the
19 fee that is going into the Title 5 funds
20 for operating?

21 MS. BUTTRAM: Now are you on 15?

22 MS. BARTON: I'm on page six, there
23 under fee schedules.

24 MS. BUTTRAM: Right.

25 MS. BARTON: It doesn't really say

1 that until you get over to the method of
2 payment, but are those fees related to the
3 Title 5 fee funds that we are talking about
4 increasing?

5 MS. BUTTRAM: Well, Number 2, Part
6 70 sources, refers to Title 5 only and the
7 other above it, where it says minor
8 facilities and Non-Part 70 sources are only
9 the minor sources and Non-Part 70 sources
10 and there are two different funds that that
11 money goes into.

12 MS. BARTON: The other question that
13 I have and I don't know whether industry
14 has noted that or not. Over under payment,
15 under C, they talk about in the middle of --
16 -- at the top of the payment where fees are
17 due and payable upon receipt of invoice,
18 fees shall be considered delinquent 30 days
19 from the date of billing at which time
20 simple interest shall accrue at the rate of
21 one and one and a half [sic] percent per
22 month on any unpaid amount. Do you have
23 any provision that if they over pay and you
24 all are keeping the money that the DEQ is
25 going to pay them a percent and a half

1 interest on the money that they haven't
2 used, that's just been sitting there until
3 they decide to refund it? You know, when
4 you are talking about a lot of money -- I
5 know David would be interested in that.

6 MR. BYRUM: I don't know of anybody
7 that sends me extre money.

8 MS. BARTON: Well, I'm talking about
9 those little overages that are supposed to
10 be refunded from the point in time that
11 they are calculated to the point in time
12 that they are refunded. Or should I say,
13 being given credit for. I just wanted to
14 bring that up for industry to look at that.

15 MS. BUTTRAM: That is true, but also
16 we are talking about fees that are due and
17 payable upon receipt of the invoice and
18 that are delinquent, will be charged that
19 interest fee. But further down what we are
20 talking about is a billing error. So those
21 are two different points and if that's what
22 you are referring to the billing error
23 having an interest charge, I don't know if
24 that's just --

25 MS. BARTON: And I don't know wh

1 you mean a billing error, but they just
2 paid too much in there and it just sat
3 because there wasn't enough time for staff
4 to catch up with the invoices and auditing
5 both of them to make sure they did pay
6 enough in and, you know, that a large
7 amount of money just didn't sit there.

8 MS. BUTTRAM: Right, but I don't
9 believe there's anything in here that says
10 they will be charged interest for under
11 payment either.

12 MR. FISHBACK: Morris, do you happen
13 to know what percent if any of any
14 regulated community that pays fees, does
15 not pay it all in one check. Does anybody
16 try to make payments?

17 MR. HOFFETT: There have been a
18 couple of instances where that has
19 happened. It's not a common occurrence.
20 There have been times when they called and
21 said, can I send this much or -- your
22 question is right, yes. Nearly no one does
23 it that way but it has happened in the
24 past.

25 MR. FISHBACK: And you accommodate

1 that there on an individual basis? Do you
2 make a decision yes or no?

3 MR. HOFFETT: Larry Trent handles
4 all that and I think it has only happened
5 like three or four times in seven years.
6 Very seldom.

7 MR. FISHBACK: Since we are on the
8 record, I wanted to correct a statement
9 that Ms. Barton made. Her comment was that
10 we are reviewing a Title 5 fee and her
11 phrase was the fee that we are increasing.
12 We are reviewing it, but it's not
13 necessarily going to be increased. It's
14 being reviewed for possible change and so
15 that can go either way. And I didn't want
16 it to stay on the record that it was just a
17 financial increase.

18 MR. BYRUM: Any other questions in
19 the audience for Jeanette? Additionally,
20 back to the council, any questions for
21 Jeanette?

22 Thank you.

23 MR. BREISCH: I believe that Larry
24 has requested some justification of these
25 fees. I am not sure whether we have to

1 make a resolution out of that. I would
2 think a consensus of the council, and by
3 the looks that I see we do have a consensus
4 of the council to have this justification.
5 And if any council person doesn't agree
6 with that, why I would like to know. If
7 not, we'll leave that stand as a matter of
8 record that we expect to see this at the
9 next hearing. And by the way, when do we
10 formally continue this hearing?

11 MR. BYRUM: We'll do it after we
12 finish. I suggest you make a motion to
13 continue. I have indication that Ms.
14 Nadine Barton would like to speak to this
15 Subchapter. Do I have an indication from
16 anyone else? If anyone else wishes to
17 speak, make that known.

18 MS. BARTON: My name is Nadine
19 Barton. I'm with CASE, Citizens Action for
20 a Safe Environment in Tulsa, Oklahoma. And
21 I wish to make a public comment for the
22 record on Subchapter 5, Registration,
23 Emissions Inventory and Annual Operating
24 Fees.

25 Page 6 of the draft concerning the

1 fee schedule, 252:100-5-2.2. It's probably
2 going to sound funny, but I am really
3 sympathetic with industry here concerning
4 the increasing or changing these fees at
5 all until -- until we have our eggs all in
6 a row on the accounting of the Title 5
7 fees, which the Subcommittee is looking
8 into at this time, so that we can have some
9 type of understanding, as I'm asked many
10 times, that we have enough money to operate
11 this program.

12 And at the Altus meeting of the DEQ
13 board, at that time the board saw fit to
14 vote on a rule to refund any excess that
15 were in that fund, back to industry. And
16 now that we are in the processes of doing
17 all of this I think we are putting the cart
18 before the horse. I think that we should
19 have a complete and total understanding
20 where these fees are going and if we have
21 enough to operate.

22 Now if you'll recall on Part 70
23 sources here, \$15.19 per ton was the least
24 expensive fees that were voted on, it's my
25 understanding in the United States, to run

1099

1 their Title 5 program. So if it appeared
2 at that DEQ board meeting in Altus that
3 there was indeed overages in that account
4 and that the legislation wanted to use up
5 those funds and that's why we needed to
6 look at refunding them, we need to have a
7 clear understanding if we have enough money
8 to operate this program sufficiently before
9 we even talk about doing any of these fees.
10 It would seem premature to me. I thank you
11 for the opportunity to speak at that this
12 hearing. Thank you.

13 MR. BYRUM: Questions from the
14 council for Ms. Barton?

15 MR. KILPATRICK: I understand your
16 comment. The fee we are talking about
17 changing here has nothing to do with the
18 Part 70 fee. We are not changing it. So
19 the two issues are really unrelated. The
20 Part 70 fee is in the committee and whether
21 the committee finishes and gets their
22 recommendation either in October or the
23 December meeting we will consider whether
24 or not \$15.19 gets changed or not. The
25 only thing we are doing now is changing the

1 existing Non-Title 5 fee from a sliding
2 scale fee to a fixed fee with the
3 recommendation to look at -- making it
4 revenue neutral. So it doesn't collect any
5 different amount of money, it just does it
6 a different way.

7 MR. BRANECKY: The intent of that
8 fee is not to fund the entire program.

9 MR. KILPATRICK: And the intent of
10 that fee is not to collect all the money
11 that -- to run that program nor do we have
12 the data to even know how to do that.

13 MS. BARTON: Could I make a comment?
14 I would just like to also bring to your
15 attention, I would like to know that we do
16 have enough fees for the minor sources, the
17 minor facilities, the Non-Part 70 to run
18 that program so that it goes smoothly.

19 MR. KILPATRICK: We know --

20 MS. BARTON: It does go smoothly
21 now?

22 MR. KILPATRICK: No, we don't have -
23 - this fee is not designed to do that. You
24 are talking about changes. If we had a
25 philosophy that the fee would cover the

1 cost of the minor sources then those fees
2 would have to go up.

3 MR. BRANECKY: This is funded by EPA
4 grant money.

5 MS. BARTON: Okay, I did not -- I
6 did not understand that and I appreciate
7 that.

8 MR. KILPATRICK: That's the
9 difference between it and the Title 5. The
10 Title 5 fees cover the cost of the program.
11 Non-Title 5 fees do not cover the cost.
12 It's funded elsewhere.

13 DR. CANTER: If I could comment.
14 I'm not sure what kind of data the DEQ
15 board may have looked at but certainly
16 information that the Subcommittee has
17 suggests that there's not any excess funds
18 for the Title 5 program that won't be
19 spent. In fact, one of our concerns is
20 possible over expenditure or expenses
21 greater than the income. So I know that
22 you can look at it given the snapshot in
23 time, say this much money in the account
24 but hopefully there would be a review, say,
25 over a period of time for that. So I think

1 certainly in the case of the Air Quality
2 Program it's not excess money in terms of
3 Title 5
4 to be sure.

5 MR. BYRUM: Other questions? Mr.
6 Chairman?

7 MR. BREISCH: I'll entertain a
8 motion to continue this hearing.

9 MR. FISHBACK: I'll so move.

10 MR. KILPATRICK: Second.

11 MR. BREISCH: A motion has been made
12 and seconded to continue this hearing until
13 the next meeting which is October
14 21st.

15 MS. BRUCE: Mr. Fishback?

16 MR. FISHBACK: Aye.

17 MS. BRUCE: Dr. Canter?

18 DR. CANTER: Aye.

19 MS. BRUCE: Ms. Myers?

20 MS. MYERS: Aye.

21 MS. BRUCE: Mr. Branecky?

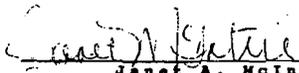

22 MR. BRANECKY: Aye.

23 MS. BRUCE: Mr. Kilpatrick?

24 MR. KILPATRICK: Aye.

25 MS. BRUCE: Mr. Breisch?

1 MR. BREISCH: Aye.

AIR QUALITY COUNCIL

1:00 P.M. .

TUESDAY, OCTOBER 21, 1997

TULSA CITY-COUNTY HEALTH DEPARTMENT AUDITORIUM

TULSA, OKLAHOMA

PUBLIC HEARING

OAC 252:100-5

REGISTRATION OF AIR CONTAMINANT SOURCES

(AMENDED)

Reported by: Deanna Szurgot, CSR
1012 Elm
Yukon, Oklahoma 73099

Dick's Transcription Service (405) 525-4111

MEMBERS OF THE COUNCIL:

MR. FISHBACK

MS. SLAGELL

MR. KILPATRICK

MS. MYERS

MR. BRANECKY

MR. BREISCH -- CHAIRMAN

MR. BYRUM -- PROTOCOL OFFICER

MS. MYRNA BRUCE -- SECRETARY

Dick's Transcription Service (405) 525-4111

PUBLIC MEETING:

MR. BYRUM: Ladies and gentlemen, my name is Larry Byrum, Director of the Air Quality Division. As such, I will act as the Protocol Officer for this hearing.

This hearing is convened by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act, Title 40 of the Federal Regulations, Part 51, as well as the authority in Title 27 A of the Oklahoma Statutes, Section 2-1-101 and following.

This hearing was advertised in the Oklahoma Register for the purposes of receiving comments pertaining to proposed revisions of registration of emissions inventory and annual operating fees, Sub Chapter 5, Section OAC 252:100-5.

And if you wish to make a statement, we have forms at the back of the room. If you will please complete one of those, it will be passed to me, and I will call upon you at the appropriate time.

At this time, I would like to call upon Staff to make a proposed Staff position on these changes.

Ms. Jeanette Buttram.

MS. BUTTRAM: Members of the Council, ladies and gentlemen, my name is Jeanette Buttram. The main objective for proposed changes to Sub Chapter 5 is to

clarify and simplify the rule.

Previously proposed changes to Sub Chapter 5 were presented at the August 19, 1997, Council Meeting, where additional comments were received and considered. The following is a summary of the proposed changes to Sub Chapter 5:

The title of Sub Chapter 5 was changed to Registration, Emission Inventory, and Annual Operating Fees, to reflect the addition of emission inventory and operating fees to the sub chapter. The changes made to the original sections in Sub Chapter 5, Sections 5-2 and 5-3, were not intended to change the meaning of the rule, rather simplify and clarify it. The remaining sections with underlinings were moved here from other areas of the Air Quality Rules. Remember, changes and conditions listed in Sub Chapter 5 are for all sources, major and minor.

Section 5-1.1 contains a new definition section. This section consists of definitions moved from Sub Chapter 7 and 8, along with new definitions for grandfather sources, major TSP facility, minor facility and Part 70 sources.

Section 5-2.1, Emission Inventory, moved in its entirety from Sub Chapter 7 along with some information from Sub Chapter 8. This includes changes made in the

1 method of calculations and testing requirements. A
2 comment was received regarding time limits while
3 maintaining emission inventory records.

4 252:100-5-2.1 (c). Language was added for at least
5 five years to the rule to be consistent in the time
6 frames outlined in 252:100-5-2.2 (c) in Title 5. Also,
7 the tag line in 252:100-5-2.1 (e), testing requirements,
8 was changed to methods of verification to reflect the
9 information this section is actually requesting.

10 Section 5-2.2, Annual Operating Fees, includes a
11 proposed change in fees from minor sources to a flat fee
12 of \$10 a ton based on total annual emissions of
13 regulative pollutants in fee calculations instead of the
14 previous sliding scale. It also includes a proposed
15 change in payments of fees, establishing time periods
16 for when sources can change their inventories and when
17 the DEQ can collect fees that are past due.

18 Comments received requesting Staff provide a
19 written evaluation of the proposed annual operating fee
20 change for minor facilities and non Part 70 sources, a
21 written evaluation was included in the Council packets.

22 Staff recommends the hearing record for
23 Sub Chapter 5 be closed and these rules be recommended
24 for approval at the same time Sub Chapter 8 is
25 approved.

Dick's Transcription Service (405) 525-4111

1 were -- some of the fees, were the lowest in the nation
2 to administer this program.

3 Now, the program has come up short. We are
4 adjusting the fees for the minor sources, which will
5 probably not cover the deficit that we have. I concede
6 to the fact that the Subcommittee of the Air Quality
7 Council has been investigating the fee situation, and
8 due to the absence of Dr. Cantor, who would present that
9 Subcommittee's finding, it kind of leaves a hole as to
10 what we really have here.

11 I am concerned that we do not have enough money to
12 operate this program effectively. We have a hiring
13 freeze on. That also probably means that staff will not
14 get increases in salaries, which compromises the
15 position of the citizens, I believe, because they don't
16 make enough money. They're overworked, overloaded,
17 then industry comes in and pirates them away for their
18 programs.

19 I find this an unfortunate situation that I have to
20 do this. This is not pleasant.

21 MR. BYRUM: Questions for Ms. Barton?

22 (No response from Council.)

23 MR. BYRUM: Thank you. I have no indications
24 that anyone else wishes to address this issue. Is there
25 anyone else who wishes to address the issue?

1 MR. BYRUM: Questions for Ms. Buttram from the
2 Council?

3 (No response from Council.)

4 MR. BYRUM: I have notification that
5 Ms. Medley would like to speak.

6 SPEAKER: (Unidentified.) She's not here.

7 MR. BYRUM: Okay. And then I have a
8 notification that Ms. Barton would like to speak.

9 Thank you, Jeanette.

10 MS. BARTON: My name is Nadine Barton, and I
11 am with CASE, Citizen's Action for a Safe Environment.
12 And I would like to comment, for the record, on this
13 section.

14 I feel that it's my responsibility as the citizen
15 representative on the task force that set these fees,
16 that I need to make a statement for the record, and
17 also, submit a copy of a letter for the record. And I
18 will not read it into the record. I assume that you
19 will type it into the record.

20 I have asked continually about the Title 5 fees,
21 and voiced a concern that at the beginning of this long
22 process two years ago, when we did a study to find out
23 the amount that we needed to charge industry to
24 establish a budget to administer this program, that the
25 fees were what I felt were low considering that they

Dick's Transcription Service (405) 525-4111

1 MR. KILPATRICK: I would like to ask
2 Ms. Barton a question.

3 Nadine, are you suggesting that the Council should
4 take some action on the Title 5 fees right now? Because
5 what we have before us is not Title 5.

6 MS. BARTON: No. It's all of the fees that
7 were for the whole program. And it's my understanding
8 that the Subcommittee was investigating not only the
9 Title 5 fees, but the programs itself, and the
10 administration of the fees; is that not correct?

11 MR. BRANECKY: Our charge was strictly to
12 investigate Title 5.

13 Am I correct on that, Council?

14 MS. BARTON: Okay.

15 MR. KILPATRICK: That's correct.

16 MR. FISHBACK: That's correct. The
17 requirement is to investigate receipts and expenditures,
18 and set the fee for the following year, and that's --
19 but Title 5 operating permit program fee only. We don't
20 have any jurisdiction over other fees. But I concede
21 that it's impossible to investigate one program within
22 the division without looking at the overall receipt
23 expenditures. But we don't have any authority to
24 recommend a fee for anything other than the Title 5
25 operating permit program.

1 MR. BYRUM: Other questions or discussion?

2 MR. FISHBACK: I had a thought, too, when
3 Nadine was speaking. Correct me if I'm wrong, Larry,
4 but I believe the salaries that are paid to the Air
5 Quality Division staff are set by the state, and they're
6 really independent of the amount of the money received
7 from the Title 5 Program.

8 The problem that you alluded to of salary
9 differentials between industry and government has been
10 there probably since 1776. I don't know, but it's been
11 there a long time. And I don't think this program has a
12 significant impact one way or the other on that problem.
13 But the folks that work on Title 5 are not paid any
14 more -- they're paid by their state job classification.
15 They're not paid any more or less depending on how much
16 the program brings in.

17 Now, number of staff is dependent on the amount the
18 program brings in. As Larry said this morning, the TBA
19 study set an amount, and we have considerably fewer than
20 that on staff, but their salaries are not -- the job
21 exists as a result of the Title 5 money, but their
22 salaries are not set by the amount of Title 5 money
23 that's brought in. Is that a correct statement?

24 MR. BYRUM: That's a correct statement.

25 MR. FISHBACK: Okay.

Dick's Transcription Service (405) 525-4111

1 MR. BYRUM: All salaries are set by the Office
2 of Personnel Management, and are basically equivalent
3 throughout the network.

4 Other questions or comments?

5 (No response.)

6 MR. BYRUM: Mr. Chairman.

7 MR. BREISCH: It's my understanding that the
8 staff recommendation is to close this comment period or
9 the comment period on this rule as of today and not vote
10 on it until at least next regular meeting, which is in
11 December, or at whatever time we bring up Sub Chapter 8.
12 Is this true?

13 MR. BYRUM: That's correct. The package that
14 we are looking at needs to be just that, looked at as a
15 package. They're intertwined. If you did it in bits,
16 you would have cross match. And we would prefer that we
17 pass the rules that are in front of you today, as well
18 as Sub Chapter 8, as one package.

19 MR. BRANECKY: Does that mean at the next
20 meeting that there will not be any further discussion on
21 Chapter 5 --

22 MR. BYRUM: That would mean that Sub Chapter 5
23 would not be discussed. It would be just up for a vote.

24 We would be closing the hearing and comment
25 period.

Dick's Transcription Service (405) 525-4111

1 MR. FISHBACK: Since the Subcommittee report
2 is intended to be reviewed at the next Council Meeting,
3 and the Title 5 fees are part of Sub Chapter 5, I would
4 hope that wouldn't preclude discussion of this
5 sub-committee report if that's closed out today.

6 MR. BYRUM: I would think that the
7 sub-committee report would be handled as not part of the
8 rule making as such.

9 MR. FISHBACK: That's right. It's not
10 intended to be an amendment to the rule in any sense,
11 but it's a related topic.

12 MR. BYRUM: Right. It's a related topic, but
13 much similar to some of the other things we talk about.
14 It does not directly influence this particular rule at
15 this time.

16 MR. FISHBACK: What you are talking about is
17 closing out changes to the rule language?

18 MR. BYRUM: Right.

19 MR. FISHBACK: So does that fix the Title 5
20 fee proposal at what is currently in Sub Chapter 5,
21 1519, plus cost of living adjustments? Does that mean
22 that is not open for discussion next time?

23 MR. BYRUM: Depending on how you would close
24 it out. You could close everything but the fee amount.
25 If you wanted to leave that portion of --

1 SPEAKER: (Mr. Doughty) Mr. Byrum.

2 MR. BYRUM: Yes.

3 SPEAKER: (Mr. Doughty) My name Dennis
4 Doughty. I don't believe that the 1519 was even up for
5 hearing, was it, at this time? I don't believe that
6 was an issue for this hearing to determine whether or
7 not --

8 MR. BYRUM: Not at this particular hearing.

9 SPEAKER: (Mr. Doughty) The report can be
10 given simply as an agenda item, Mr. Fishback. And at
11 the time that we propose any changes up or down to the
12 1519, we can discuss whatever's appropriate at that
13 time, and I don't think there is any problem with
14 presenting your committee report just as an agenda item.

15 MR. BRANECKY: Does not the fact that
16 Sub Chapter 5 is up for revision open everything in
17 Sub Chapter 5?

18 SPEAKER: (Mr. Doughty) No, no. I don't
19 think the notice said anything about revising the 1519.
20 I don't believe there was any notice or any intent. And
21 I don't know if we are prepared to adequately
22 demonstrate the need for a change at this time, which we
23 would have to do. Is that not correct?

24 SPEAKER: (Mr. Thomas) The notice, the period
25 of register did have a statement in there that would

1 allow that possibility to do it.
2 MR. FISHBACK: Yeah. We specifically
3 requested at the last Council Meeting that fees be on
4 the agenda today, and --
5 SPEAKER: (Mr. Thomas) It's on -- I might
6 refer ya'll to -- I'm Scott Thomas -- refer you to the
7 notice, first page of your Council packet, and I have to
8 find it. The bottom, right hand column. They're
9 saying.
10 MR. FISHBACK: We can --
11 SPEAKER: (Mr. Thomas) We are revising the
12 annual operating fees for minor facilities and
13 non Part 70 sources and Part 70 sources. That could
14 have been items for discussion.
15 MR. FISHBACK: Yeah, we requested that, so
16 that if we had conclusions or recommendations to bring
17 forth today, we could do so. And in anticipation that
18 if we didn't do so today, we'd do so at the
19 December 16th meeting.
20 But Dennis is correct. We have nothing to bring
21 forward today in the way of recommendation. I was just
22 concerned about if it was closed out, if that -- I think
23 we want to leave it open for discussion on
24 December 16th.
25 MR. BYRUM: You could leave a very narrow

1 portion of that open, is what my recommendation would
2 be.
3 What we are trying to do is, we have got five rules
4 here today we are looking at. We are looking at
5 bringing you in December a couple of additional ones,
6 and juggling those and having the time to discuss them
7 as we had this morning, we ran over. And if we can
8 close those out where we can narrow it, the scope of
9 discussion can be shorter. That's the benefit, and the
10 Staff can focus on those issues and not the expanded
11 issues.
12 MR. FISHBACK. The Title 5 Operating Permit
13 Program Fee will need to be changed or left alone at the
14 December 16th meeting in order that -- and that was the
15 time line that we talked about at the last Council
16 Meeting -- in order that the DEQ Board can approve it in
17 January and the invoices can be mailed out in April.
18 That was this meeting, today, and that meeting, were the
19 last two opportunities to change it if, in fact, it
20 needed to be changed. So, if it still can be changed in
21 December, then that's fine.
22 MR. BYRUM: Yeah, and you can leave that
23 narrow portion open if you chose to.
24 MR. BREISCH: That particular item happens on
25 Page 7 of the Rule. If we want to narrow it down using

1 that part of the Rule, we need to do so on a motion.
2 MR. KILPATRICK: Mr. Chairman, I'll move that
3 the record for Sub Chapter 5 be closed with the
4 exception of consideration of the operating fee for --
5 MR. FISHBACK: Title 5.
6 MR. KILPATRICK: -- Title 5, I guess, or
7 Part 70 sources, operating fee for Part 70 sources
8 remain open.
9 MR. BREISCH: I hear a motion. Do I have a
10 second?
11 MR. FISHBACK: Second.
12 MR. BREISCH: Motion is made and second that
13 we close this hearing with the exception of Part 70
14 source operating fees.
15 Any further comment?
16 (No response.)
17 MR. BREISCH: Myrna.
18 MS. BRUCE: Mr. Fishback?
19 MR. FISHBACK: Aye.
20 MS. BRUCE: Ms. Slagell?
21 MS. SLAGELL: Aye.
22 MS. BRUCE: Mr. Kilpatrick?
23 MR. KILPATRICK: Aye.
24 MS. BRUCE: Mr. Myers?
25 MR. MYERS: Aye.

1 MS. BRUCE: Mr. Branecky?
2 MR. BRANECKY: Yes.
3 MS. BRUCE: Mr. Breisch.

MARK S. COLEMAN
Executive Director

FRANK KEATING
Governor

State of Oklahoma
DEPARTMENT OF ENVIRONMENTAL QUALITY

October 15, 1997

Ms. Nadine Barton
6609 E 86th Place
Tulsa, Oklahoma 74133

Dear Ms. Barton:

I am writing to respond to your inquiry at the September 15, 1997, Public Forum at Enid about Title V fee allocation to the cost of the purchase and renovation of the Southwestern Bell building. Your inquiry was clarified by your subsequent discussion with the press which suggested that we have acted in some way inequitably or improperly in the allocation of the cost of the building to Title V fees.

The amounts allocated to each fee account were based on a calculation of the proportion of the building occupied by the personnel in the program supported by that fund. That calculation produced a building proportional cost of \$556,381 due to the Title V program.

The housing of agency operations will initially be accomplished at the same annual rate as a lease. Space costs about \$9 per square foot per year in the Oklahoma City area. Our calculations of costs for operation of the building are \$3 to \$4 per square foot per year. Assuming the more conservative figure of \$4 per square foot per year, we will "pay out" the building in under five years. Thereafter, the Title V program (and the other programs) will have a reduced cost of \$110,000 per year.

Thank you for your interest in this issue.

Sincerely,

Steven A. Thompson
Deputy Executive Director

3
1 PROCEEDINGS

2 MR. DYKE: The next item called
3 before the Council is OAC 252:100-5,
4 Registration of Air Contaminant Sources,
5 being brought before the Council for
6 possible action. And I'll call on Jeanette
7 Buttram of the staff.

8 MS. BUTTRAM: Members of the
9 Council, ladies and gentlemen, proposed
10 changes to Subchapter 5 were presented at
11 the August 19th and October 21, 1997
12 Council Meetings. Comments were received
13 at the October Council Meeting and staff
14 proposed changes. However, some additional
15 changes were made to the rules after the
16 Council packets were mailed. The following
17 is a summary of the proposed changes to
18 Subchapter 5.

19 The only changes made since the
20 October 21, 1997 hearing were to conform
21 the language in Subchapter 5 to the changes
22 made in Subchapter 8 concerning major TSP
23 facilities or as they were called in your
24 packet, major non-Part 70 facilities. As
25 Dr. Sheedy has explained that definition

1 has been deleted so that we now have, Part
2 70 sources, minor facilities, and de
3 minimis facilities. Therefore, references
4 to either major TSP facilities or major
5 non-Part 70 facilities has been deleted
6 from Subchapter 5. These changes are found
7 on page 1, 252:100-5-1.1, in the definition
8 section, page 3, 252:100-5-2.1A2, emission
9 inventory.

10 Page 6, 252:100-5-2.2B1, Fee
11 schedule. In addition, the definition of
12 minor facility, on page 2, has been amended
13 by deleting the phrase, with a potential to
14 emit less than a hundred (100) tons per
15 year of each regulated air pollutant. The
16 definition now reads, minor facility, means
17 a facility that is not a Part 70 source.

18 Finally, in the definition of Part
19 70 sources, the part number which changed
20 from, 7 to 5, to be in agreement with
21 Subchapter 8 changes.

22 Staff recommends Subchapter 5 be
23 approved by Council at the same time
24 Subchapter 8 is approved.

25 MR. DYKE: Questions by the

1605

1 Council of Ms. Buttram? Any questions from
2 the public? Anyone wishing to speak on
3 this matter?

4 MR. BREISCH: Is there any other
5 questions from the Council? If not, I'll
6 entertain a motion.

7 MR. BRANECKY: I move that we
8 continue the hearing on this item to the
9 January 9th meeting.

10 MS. MYERS: Second.

11 MR. BREISCH: I have a motion and
12 a second that this item be continued to
13 January 9th. Any questions on that?

14 Myrna, call the roll.

15 MS. BRUCE: Mr. Kilpatrick.

16 MR. KILPATRICK: Aye.

17 MS. BRUCE: Ms. Slagell.

18 MS. SLAGELL: Aye.

19 MS. BRUCE: Mr. Fishback.

20 MR. FISHBACK: Aye.

21 MS. BRUCE: Dr. Canter.

22 DR. CANTER: Aye.

23 MS. BRUCE: Ms. Myers.

24 MS. MYERS: Aye.

25 MS. BRUCE: Mr. Branecky.

1 MR. BRANECKY: Aye.
2 MS. BRUCE: Mr. Breisch.
3 MR. BREISCH: Aye.

1 PROCEEDINGS

2 MR. BREISCH: Call the meeting to
3 order. Myrna, will you call the roll?
4 MS. BRUCE: Mr. Kilpatrick.
5 MR. KILPATRICK: Here.
6 MS. BRUCE: Ms. Slagell.
7 MS. SLAGELL: Here.
8 MS. BRUCE: Mr. Fishback.
9 MR. FISHBACK: Here.
10 MS. BRUCE: Dr. Canter.
11 DR. CANTER: Here.
12 MS. BRUCE: Ms. Myers.
13 MS. MYERS: Present.
14 MS. BRUCE: Mr. Branecky.
15 MR. BRANECKY: Here.
16 MS. BRUCE: Mr. Breisch.
17 MR. BREISCH: Here.
18 MS. BRUCE: And for the record,
19 absent is Ms. Andrews.
20 MR. BREISCH: Okay. I need a
21 motion on the Minutes.
22 MR. KILPATRICK: I move that we
23 accept the Minutes.
24 MR. BRANECKY: Second.
25 MR. BREISCH: We have a motion

1 and a second. Is there any discussion,
2 questions or any additions to the Minutes?
3 If not, Myrna, call the roll.

4 MS. BRUCE: Mr. Kilpatrick.
5 MR. KILPATRICK: Aye.
6 MS. BRUCE: Ms. Slagell.
7 MS. SLAGELL: Aye.
8 MS. BRUCE: Mr. Fishback.
9 MR. FISHBACK: Aye.
10 MS. BRUCE: Dr. Canter.
11 DR. CANTER: Aye.
12 MS. BRUCE: Ms. Myers.
13 MS. MYERS: Aye.
14 MS. BRUCE: Mr. Branecky.
15 MR. BRANECKY: Aye.
16 MS. BRUCE: Mr. Breisch.
17 MR. BREISCH: Aye.

18 We can now go back and continue some
19 of our briefing on a couple or no items.

20 (Whereupon, items from the morning
21 meeting were continued after which the
22 following took place).

23 MR. BREISCH: I'm going to turn
24 the hearing portion of this meeting over to
25 David Dyke who will act as Protocol

Christy A. Myers
Qualified shorthand Reporter

1007

1 Officer.

2 MR. DYKE: Ladies and gentlemen,
3 my name is David Dyke. I'm the Interim
4 Director of the Air Quality Division. As
5 such, I will act as the Protocol Officer
6 for this hearing.

7 This hearing is convened by the Air
8 Quality Council in compliance with the
9 Oklahoma Administrative Procedures Act, in
10 Title 40 of the Code of Federal
11 Regulations, Part 51, as well as the
12 Authority of Title 27A of the Oklahoma
13 Statutes, Sections 2-2-201 and 2-5-101,
14 through 2-5-118.

15 The hearing was advertised in the
16 Oklahoma Register for the purposes of
17 receiving comments pertaining to the
18 proposed revisions of OAC 252:100-5-2.2(b)
19 (2) Part 70 Sources Annual Operating Fees.
20 If you wish to make a statement, please
21 complete the form at the registration
22 table, and you will be called on at the
23 appropriate time.

24 At this time, I will call upon
25 Jeanette Buttram to give the staff position

Christy A. Moore
Certified shorthand Reporter

1 on these proposed changes.

2 Ms. Buttram.

3 MS. BUTTRAM: Staff recommends
4 the Annual Operating Fee billed in 1998 for
5 Part 70 Sources be adjusted by the Consumer
6 Price Index as specified in the existing
7 rule. This will render a 2.2 percent
8 increase in the fee from \$16.03 to \$16.39
9 per ton. Staff intends to bring before the
10 Council on a regular annual basis any
11 proposed adjustments to the fee.

12 MR. DYKE: Any questions of Ms.
13 Buttram from the Council?

14 MR. BREISCH: When is the
15 appropriate time to introduce this Air
16 Quality Council Title V Fee Committee
17 Findings and Recommendations dated December
18 16, 1997 into the record?

19 MR. DYKE: I would say during the
20 discussion period.

21 MR. BREISCH: I would recommend
22 that the Chairman of that subcommittee
23 introduce this into the record.

24 DR. CANTER: Okay. My name is
25 Larry Canter. And myself, David Branecky

Christy A. Moore
Certified shorthand Reporter

1 and Bill Fishback, Members of the Council,
2 served as a three person subcommittee to
3 review Title V budgetary matters pursuant
4 to a recommendation relative to either
5 changing, maintaining or decreasing the
6 Title V permit fee for 1998. We have a
7 written report. I would propose that this
8 written report be made a part of the
9 record. I don't know that we need to read
10 this report in at this point. But based
11 upon this written report, it would be, I
12 believe the recommendation of the
13 subcommittee, that other than for the
14 Consumer Price Index Adjustment, that there
15 be no change in the Title V Permit Fee for
16 1998.

17 MS. MYERS: Other than the CPI.

18 DR. CANTER: Other than the CPI,
19 yes.

20 MR. BREISCH: Let me ask a
21 question for clarification. Dennis, does
22 this need a vote of the Council to do one
23 thing or the other with this fee, or is it
24 as we discussed previously, we don't have
25 to take any action on this?

Christy A. Moore
Certified shorthand Reporter

1 MR. DOUGHTY: Well, Mr.

2 Chairman, my recommendation would be to go
3 ahead and vote that you have no
4 recommendation on change in the fee one way
5 or the other, just for the record. And
6 then introduce this into the record.

7 MR. BREISCH: We've already
8 introduced this into the record. I guess
9 my question is, do we have to vote?

10 MR. DOUGHTY: Since this is a
11 public hearing, I would go ahead and
12 recommend that you vote. If I understand
13 your recommendation correctly, that you're
14 recommending there be no change in the fee,
15 I would suggest that you go ahead and vote
16 on that and get it into the record.

17 MS. MYERS: Other than the CPI
18 percentage increase.

19 MR. DOUGHTY: Well, that passes
20 as a matter of law.

21 MS. MYERS: Okay.

22 MR. BREISCH: Do we need to
23 continue any further comments on this?

24 MR. BRANECKY: The only question
25 I would have at this point is, is that

Christy A. Moore
Certified shorthand Reporter

1 report, itself, does contain some other
2 recommendations that are not related
3 specifically to the fee. So I presume that
4 -- what happens to those recommendations,
5 that's my question?

6 MR. BREISCH: Well, at this
7 point, they'll be a matter of record.

8 MR. BRANECKY: Okay, fine.

9 MR. FISHBACK: And it would be
10 true, I believe, that Council's vote would
11 demonstration Council's support for the
12 recommendations of the subcommittee.

13 MR. BREISCH: Well, Bill, I would

14 --

15 MR. FISHBACK: Is that correct?

16 MR. BREISCH: I am afraid I can't
17 answer that. I don't know what action
18 needs to be taken for the Council to accept
19 the Committee's report. And that's a good
20 question. The Council can vote, I
21 understand, or should vote, I understand,
22 on leaving the fees as is except for an
23 increase in the Consumer Price Index.
24 That's one issue. And we're going to do
25 that each year, or annually. Now, as to

Christy A. Breen
Certified shorthand reporter

11

1 MS. BARTON: Are we going to have
2 a public comment?

3 MR. BREISCH: Sure.

4 MS. BARTON: My name is Nadine
5 Barton, and I'm with CASE, Citizens Action
6 for a Save Environment. And I would like
7 to make a public comment concerning the Key
8 Financial Data for Air Quality Division,
9 Title V Program that the subcommittee is
10 presenting for a vote.

11 The Committee did an excellent job
12 in their investigation of this. As the
13 public representative who sat on the task
14 force to establish the fees for Title V, I
15 want to go on public record as saying that
16 I feel that the report did not go far
17 enough in the extent of establishing the
18 amounts of the funds of Title V that were
19 actually used to purchase the new DEQ
20 building in Oklahoma City.

21 There is a question in my mind as to
22 the 1996 Administrative Indirect Fees. And
23 then in Note Number 3 of the report where
24 it has stated that DEQ realized that they
25 exceeded the amount of money that should

Christy A. Breen
Certified shorthand reporter

1 the acceptance of the report, I think
2 that's a question that we haven't ever
3 asked ourselves. But, in my opinion, we
4 should as a Council, accept the Committee's
5 report.

6 MR. FISHBACK: Right. And
7 basically by doing so, endorse the
8 recommendation.

9 MR. BREISCH: That's right.

10 MR. FISHBACK: Right? Okay.

11 MR. KILPATRICK: Mr. Chairman, I
12 move that the Council accept the
13 Committee's report.

14 MR. FISHBACK: Second. Maybe I
15 can't do that since I'm on the Committee.

16 MR. BREISCH: Yes, you can.

17 MR. FISHBACK: Okay.

18 MS. MYERS: I'll second it to
19 make it legal.

20 MR. FISHBACK: Yes. Get somebody
21 that wasn't on the subcommittee. It
22 certainly is an excellent report, though.

23 MR. BREISCH: We have a motion
24 and a second to accept and endorse the
25 Committee's report. Any other comments?

Christy A. Breen
Certified shorthand reporter

17

1 have been assessed based on the percentage
2 of the total square footage of the new
3 building of the Title V activities, and
4 consequently, DEQ refunded this amount back
5 to the Title V account. And then it shows
6 a projected negative balance in Operating
7 Expenses for 12-31 of '97, of two hundred
8 and thirty-eight thousand, eight hundred
9 and forty-six dollars (\$238,846) as a
10 problem in hiring the amount of personal,
11 it appears, to adequately administrate the
12 Title V Program.

13 The question of at the point when
14 the building is purchased and the money is
15 given to the seller, are we also going to
16 have a shortage in that money? Because of
17 the amount of money that is collected
18 through Title V, there should be an
19 independent accounting firm that oversees
20 these funds. It has the appearance from
21 the public perspective that there is not
22 adequate accountability as to the
23 administration of these funds. And I'm in
24 full compliance with the recommendation of
25 the subcommittee made in these findings.

Christy A. Breen
Certified shorthand reporter

1 But I feel that it falls short and that
2 there should be some type of public
3 oversight or state auditing of these fees.
4 End of comment.

5 MR. DYKE: Is there anybody else
6 wishing to speak on this matter? I see
7 none.

8 MR. BREISCH: All right. At this
9 time I will entertain motions concerning
10 this item.

11 DR. CANTER: We have a motion on
12 the table to accept the report.

13 MR. BREISCH: I think that we're
14 probably a little premature on doing that
15 until we've heard from the public.

16 DR. CANTER: Sorry.

17 MR. BREISCH: So I'll open up for
18 those motions again.

19 MS. SLAGELL: It's still there,
20 though.

21 MR. BREISCH: We can go ahead and
22 accept that motion then, even though it
23 might have been before we heard the
24 comment?

25 MS. SLAGELL: Yes.

Christy A. Myers
Certified shorthand Reporter

Christy A. Myers
Certified shorthand Reporter

1 motion and a second. Any more comments
2 from the Council?

3 DR. CANTER: Let me clarify a
4 point here. So if we vote on this motion
5 then we still have another motion which is
6 related to the fee excess?

7 MR. FISHBACK: The thirty-eight
8 (38) cents.

9 DR. CANTER: Right.

10 MR. FISHBACK: Yes.

11 MR. BREISCH: Myrna, call the
12 roll.

13 MS. BRUCE: Mr. Kilpatrick.

14 MR. KILPATRICK: Aye.

15 MS. BRUCE: Ms. Slagell.

16 MS. SLAGELL: Aye.

17 MS. BRUCE: Mr. Fishback.

18 MR. FISHBACK: Aye.

19 MS. BRUCE: Dr. Canter.

20 DR. CANTER: Aye.

21 MS. BRUCE: Ms. Myers.

22 MS. MYERS: Aye.

23 MS. BRUCE: Mr. Brenecky.

24 MR. BRANECKY: Aye.

25 MS. BRUCE: Mr. Breisch.

Christy A. Myers
Certified shorthand Reporter

Christy A. Myers
Certified shorthand Reporter

1 MR. BREISCH: That motion and
2 second stands. Any further comments or
3 questions from Council?

4 MR. FISHBACK: Mr. Chairman, I
5 believe I heard Ms. Barton say that
6 concurred with the recommendation of
7 subcommittee that there be an independent
8 financial audit of Air Quality Division
9 finances. And I would like to point out
10 that that is not the recommendation of the
11 subcommittee. The recommendation of the
12 subcommittee is that the financial
13 oversight of the Air Quality Division by
14 the Air Quality Council, continue. The
15 subcommittee did not recommend an
16 independent audit, and I believe that's
17 what I heard you say.

18 MS. BARTON: I just want to
19 clarify -- Nadine Barton, again, that as a
20 public representative, I stand corrected by
21 Mr. Fishback's comment. And I do recommend
22 that a third party outside audit, or state
23 auditing, audit those funds.

24 Thank you.

25 MR. BREISCH: Okay. We do have a

1 MR. BREISCH: Aye.

2 Do we have another motion
3 pertaining to this item.

4 MS. MYERS: I move that we leave
5 those as they are, with only the Consumer
6 Price Index increase.

7 MR. BREISCH: Do I hear a second.

8 MR. FISHBACK: Second. And that
9 specifically means an increase from 16.03
10 to 16.39 per ton.

11 MR. BREISCH: That's right.

12 DR. CANTER: And I'm presuming
13 this is for 1998.

14 MS. MYERS: Yes.

15 MR. BREISCH: Any further
16 questions or comments from the Council?
17 From anybody else that is present?

18 MR. DOUGHTY: Mr. Chairman, if I
19 may, my name is Dennis Doughty. I
20 mentioned what I mentioned earlier, that
21 you're basically recommending no action,
22 which means it does not have to go to the
23 Board for any action on the part the Board.

24 MR. BREISCH: Any other com
25 or questions?

1 Myrna, call the roll.
 2 MS. BRUCE: Mr. Kilpatrick.
 3 MR. KILPATRICK: Aye.
 4 MS. BRUCE: Ms. Slagell.
 5 MS. SLAGELL: Aye.
 6 MS. BRUCE: Mr. Fishback.
 7 MR. FISHBACK: Aye.
 8 MS. BRUCE: Dr. Canter.
 9 DR. CANTER: Aye.
 10 MS. BRUCE: Ms. Myers.
 11 MS. MYERS: Aye.
 12 MS. BRUCE: Mr. Branecky.
 13 MR. BRANECKY: Aye.
 14 MS. BRUCE: Mr. Breisch.
 15 MR. BREISCH: Aye.

AIR QUALITY COUNCIL TITLE V FEE SUBCOMMITTEE
FINDINGS AND RECOMMENDATIONS
DECEMBER 16, 1997

TABLE 1
KEY FINANCIAL DATA FOR AIR QUALITY DIVISION
TITLE V PROGRAM

An Oklahoma Air Quality Council subcommittee was appointed by chairman William B Breisch in early 1996 to fulfill the statutory requirement to review annually the Title V program receipts and expenditures as the basis for setting the Title V operating permit program fee.

Cash Balance at 12-31-95		1,501,326	(5)
Income 1-1-96 through 12-31-96	+	4,003,615	
Total 1996 expenses except administrative indirect	-	4,135,633	
1996 administrative indirects (2)	-	887,133	
Cash Balance at 12-31-96		482,175	
Cash Balance at 12-31-96		482,175	
Income 1-1-97 through 6-30-97 (1)	+	3,395,356	
1997 expenses through 6-30-97 except admin ind	-	2,707,296	
1997 administrative indirects (2)	-	17,436	
Building expenses reallocation 10-7-97 (3)	+	408,355	
Projected expenses 7-1-97 through 12-31-97 (4)	-	1,800,000	
Projected Balance at 12-31-97		(238,846)	NEGATIVE

The subcommittee includes three members of the Air Quality Council:

Dr. Larry Canter, Ph.D.
Mr. David Branecky
J. William Fishback II, P.E.

The subcommittee met several times with Air Quality Division management and staff and representatives of the DEQ Administrative Services Division. Present at most meetings were:

Larry Byrum	Director, Air Quality Division
David Dyke	Assistant Director, Air Quality Division
Marilyn Simpson	Administrative Services Division
Monte Boyce	Administrative Services Division
Travis Monroe	Administrative Services Division

At the subcommittee's request, the Air Quality Division staff with the assistance of the Administrative Services Division began the process of documenting receipts and expenditures related to Title V (and concurrently similar data for non-Title V activities) for 1996 and 1997. Records for prior years (in particular time sheets for AQD personnel) are not available. The results of that effort produced the following key financial data shown in Table 1:

Notes:

- (1) The Title V fee income is essentially all received in the first half of the year. Therefore no additional income is anticipated in the second half of the year.
- (2) The administrative indirect costs are a fixed percentage of the fee income (20% for Title V fees). The dramatic drop in this cost between 1996 and 1997 resulted, not from a reduction in the administrative indirect services provided or percentage charged, but rather a fluke of timing. The assessment date for withdrawal of the administrative indirect cost from the Title V account came after the fees had been deposited in 1996 but before the fees were deposited in 1997. Therefore in 1997 there was very little fee balance on which to make the assessment.
- (3) The DEQ decided on 10-7-97 that previous assessments of Title V funds toward the purchase of a new DEQ headquarters building exceeded the amount that should have been assessed based on the percentage of the total square footage of the new building devoted to Title V activities. Consequently, DEQ refunded this amount to the Title V account.
- (4) Projected expenses for the second half of 1997 are estimated to be \$907,296, or 33% less than actual expenses for the first half of 1997 due, in large part, to AQD's intention to retrain AQD employees to properly code their time sheets so that charges to Title V more accurately reflect only the Title V work being done. In addition, second half costs are projected to be reduced by the deferral of some purchases, the elimination of others, and by not filling vacated positions.
- (5) All data in Table 1 is as supplied to the subcommittee by the Air Quality Division with the assistance of the Administrative Services Division. The subcommittee did not undertake an independent audit of the finances.

After analyzing the financial and other data supplied by the Air Quality Division and Administrative Services Division staff, the Air Quality Council subcommittee has made the following findings and recommendations:

For the Air Quality Council:

December 16, 1997

FINDINGS

- (1) In calendar year 1996, the AQD expenses exceeded income by over \$1,000,000.
- (2) In calendar year 1997, the AQD expenses will exceed income by approximately \$721,000 even with the following three significant cost adjustments:
 - (A) a one time reduction of \$869,697 in administrative indirect costs
 - (B) a one time building expenses reallocation of \$408,355
 - (C) a proposed reduction of more than \$900,000 in 2nd half expenses
- (3) Without the adjustments in 2) above for 1997, AQD expenses would exceed income by approximately \$2,900,000.
- (4) Without continued spending reductions or increased income, future year expenditures could also far exceed income.

RECOMMENDATIONS

- (1) The Air Quality Division, the Administrative Services Division and the Office of the Executive Director of the Department of Environmental Quality, should continue to refine accounting procedures, review financial practices, and closely monitor staffing levels and implement changes wherever necessary to reduce both current and future deficits.
- (2) The AQD should institute spending reductions prior to any consideration of a fee increase by the Air Quality Council.
- (3) The financial oversight of the AQD by the Air Quality Council should continue indefinitely. In addition, monthly financial statements should be provided to the Subcommittee by the AQD.
- (4) The Air Quality Council should not dictate to the AQD how to reduce costs to both balance the annual budget and create the surplus necessary to pay off the current negative balance. The Subcommittee believes, however, that if a reduction in staff (while maintaining current fee levels) is necessary to balance the budget, the Title V program will not be jeopardized, although some lengthening of time to issue permits may occur.

PROCEEDINGS

DR. CANTER: Let's move to the next item which is Registration of Air Contaminant Sources. Mr. Dyke.

MR. DYKE: The next item before the Council today is OAC 252:100-5, Registration of Air Contaminant Sources. It has been brought to public hearing on August 19 and October 21, 1997.

Ladies and gentlemen, my name is David Dyke. I'm the Interim Director of the Air Quality Division. As such, I will act as the Protocol Officer for this hearing.

This hearing is convened by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act, in Title 40 of the Code of the Federal Regulations, Part 51, as well as the Authority of Title 27A of the Oklahoma Statutes, Section 2-5-101 through 2-5-118.

The hearing was advertised in the Oklahoma Register for the purposes of receiving comments pertaining to the proposed revisions of OAC 252:100-5,

1 Registration of Air Contaminant Sources
2 Amended. If you wish to make a statement,
3 please complete the form at the
4 registration table, and you will be called
5 upon at the appropriate time.

6 At this time I will call on Ms.
7 Jeanette Buttram of the Air Quality staff
8 to give our position.

9 MS. BUTTRAM: Members of the
10 Council, ladies and gentlemen, my name is
11 Jeanette Buttram with the Rules and
12 Planning Unit. Proposed changes to
13 Subchapter 5 were presented at the August
14 19, October 21, and December 16, 1997
15 Council Meetings. No additional changes
16 the rule have been made. Staff recommend
17 that the proposed rule be approved and
18 recommended to the Department of
19 Environmental Quality Board for emergency
20 and permanent adoption.

21 MR. DYKE: Questions of Ms.
22 Buttram?

23 MS. MYERS: I have one question
24 Under the fee schedules where it's talkin'
25 about all of the different fees and

1 calculations, there are several different
2 places for fee calculations as a
3 parenthetical expression that is stuck into
4 the definition. I'm on page 6, under minor
5 facilities, for instances. It talks about
6 based on annual emissions, regulated
7 pollutants, and then in parenthesis it says
8 for fee calculations. Is that in there for
9 some reason? We're -- you're talking about
10 the fees that -- I figured there probably
11 was, Joyce. I can't figure it out. Out of
12 curiosity, why?

13 MS. BUTTRAM: Well, I believe, if
14 I remember right, when we were making the
15 changes, we had a question about regulated
16 pollutants for fee calculations and just
17 regulated pollutants. And so we wanted to
18 make sure that they understood that the
19 regulated pollutants for fee calculations
20 is what we're going to fee them on.

21 MS. MYERS: Okay.

22 DR. SHEEDY: This is Joyce
23 Sheedy. And in the -- with Title V you
24 don't have to pay fees on carbon monoxide,
25 for instances. And we're not requiring

Christy A. Myers
Certified shorthand reporter

7

1 page 1, the definition section, there is an
2 intent, apparently, in putting definitions
3 in the rule to bring them close to the
4 place where they are used and applicable in
5 implementing the rule. And I'm,
6 specifically, wanting to ask about the
7 grandfathered source definition there on
8 page 1. There are certain source
9 categories of emission units that are
10 exempted from permitting, exempted from
11 emission inventory and exempted from annual
12 operating fee requirements that are not
13 grandfathered. I'm, specifically,
14 referring to the Drake Engines as one
15 example, and there may be others. I'm
16 wondering if we ought to not also include a
17 definition for exempted from permitting or
18 some such language. Because this
19 particular Subchapter 5, applies to those
20 specific things, emission inventory and fee
21 payment. And those sources don't pay fees,
22 they're not on the emissions inventory, but
23 it's not because they're grandfathered.
24 It's because they were otherwise exempted
25 from permitting.

Christy A. Myers
Certified shorthand reporter

1 fees on total suspended solids, or total
2 suspended particulates. But they are
3 regulated pollutants. So there is a
4 separate definition for regulated
5 pollutants for fee purposes that eliminate
6 those.

7 MS. MYERS: I figured there's
8 good reason. Thank you.

9 MR. FISHBACK: Since it's now
10 after January 1, 1998, can we strike b 1?

11 MS. BUTTRAM: Little b, one (1)?

12 MR. FISHBACK: On page 6.

13 MS. BUTTRAM: I don't see why
14 not.

15 MS. HOFFMAN: No, we can't.

16 MR. DYKE: Identify yourself,
17 please.

18 MS. HOFFMAN: I'm Barbara
19 Hoffman, staff attorney. And as I
20 understand it, we will soon be sending out
21 the fee notices or the fee calculations for
22 last year. And so that's still going to be
23 relevant this year.

24 MR. FISHBACK: Okay. I
25 understand. I have a second question. On

Christy A. Myers
Certified shorthand reporter

8

1 MS. HOFFMAN: I think they're
2 suppose to be paying fees.

3 MR. FISHBACK: That's not been
4 the basis of our discussions with the
5 division so far. So that's my suggestion,
6 that there are -- in other words, the only
7 reason you're exempted from emission
8 inventory and fee payments is not
9 grandfathered. There are other reasons.
10 And there may be others besides the one I
11 mentioned.

12 DR. SHEEDY: This is Joyce
13 Sheedy, again. Actually being the
14 grandfather source doesn't exempt you from
15 fee payments and emissions inventory. We
16 have many grandfather sources on the
17 inventory and they pay fees.

18 MR. BRANECKY: How come they
19 don't file an emission inventory?

20 MR. FISHBACK: In the case of the
21 Drake Engines, it's because they're not
22 under the jurisdiction of DEQ. And what
23 you said, Joyce, I believe is correct in
24 theory, put in practice it doesn't happen.
25 Because if there is no permit, it's an

Christy A. Myers
Certified shorthand reporter

1 enforcement issue, basically. But if
2 there's no permit then there is no
3 mechanism to track a source and see whether
4 it should be paying emission fees and be on
5 the inventory. So, you're correct. It's
6 not -- and I should correct my earlier
7 statement, technically they're not exempted
8 from fee payment and emission inventory
9 reporting because they're grandfathered.
10 But, in practice that happens a lot.

11 DR. SHEEDY: I'm not sure if we
12 have anyone who inventories, here, but I do
13 believe that we have a number of sources on
14 the inventory without permits.

15 MR. DOUGHTY: My name is Dennis
16 Doughty. If I might just make one comment
17 here. I think everybody is -- basically, I
18 think what everybody said so far is true.
19 There is a distinction between de minimis,
20 where threshold levels of which something
21 is permitted or fee'd or inventoried, and
22 being grandfathered. So I think we're
23 getting two different terms commingled here
24 that -- Bill is right, when he says there
25 are certain facilities out there that are

Christy A. Hume
Certified Maricopa Reporter

11

1 it. You're looking for some statement on
2 exemptions.

3 MR. FISHBACK: Well, since this
4 is the Subchapter in which inventories and
5 fees determination will be made, I mean,
6 the owner/operator of a source will come to
7 this and say, well, am I covered or not?
8 I'm not sure I agree with what you said.
9 Definitions are sometimes used in an
10 explanatory way rather than being there
11 only because they're referenced in the
12 rule. In other words, definitions can be
13 used as information.

14 MR. BRANECKY: You're looking
15 for a statement of applicability.

16 MR. FISHBACK: The concept that I
17 have is, that sources that are exempted
18 from inventory and fees should be
19 identified as exempted in Subchapter 5 as a
20 way of conveying that information to the
21 owner/operator. The owner/operator comes
22 to this Subchapter and says, I operate the
23 X, Y, Z source and this is how I determine
24 if I should file an inventory, or pay a
25 fee. And so he ought to be able to find

Christy A. Hume
Certified Maricopa Reporter

1 not grandfathered that are not kicked into
2 the system based on a threshold, that is a
3 de minimis level at which they're not
4 regulated, permitted or otherwise. Of
5 course, Joyce is right, when she talks
6 about the grandfathered sources that --
7 indeed we have grandfathered sources that
8 are extremely large sources that are Title
9 V, perhaps PSD level that pay fees.
10 Emission inventories will have to get Title
11 V fees. I don't think there is anything
12 inconsistent. I think the situation as it
13 is will handle the issue that Bill is
14 talking about.

15 MR. FISHBACK: My only question
16 is, do we need a definition of exempted
17 from permit as well as a definition for
18 grandfathered?

19 MR. BRANECKY: No. It's not
20 referenced in any regulation. Is there a
21 statement in there about --

22 MR. FISHBACK: Not that specific
23 source category, no. No, there is not.

24 MR. BRANECKY: The definitions
25 or whatever words are used to make note on

Christy A. Hume
Certified Maricopa Reporter

12

1 out in here if that is a requirement or
2 not. And I'm not sure he can from what's
3 here now.

4 DR. SHEEDY: If that is an
5 exempted source, then just the fact that it
6 had -- I mean, if we have no jurisdiction
7 over that exempted source, then, of course,
8 it stands to reason we wouldn't have the
9 ability to require a fee or inventory.

10 MR. FISHBACK: This is always the
11 concern that comes up. You can't put
12 everything you need to make a determination
13 in one place because then the rules would
14 be huge. And the person that is subject to
15 this, the facility that is subject to this,
16 if they have the correct overall knowledge,
17 the system will come to the correct
18 determination. I'm really just looking to
19 enhance that if we can help them here.
20 Now, if that is a confusing issue, if you
21 offer a definition of exempted facilities,
22 if that's confusing and it's detracting
23 overall, then, I'm not in favor of it.

24 But there is going to be a lot of
25 people who say, well, I need to go to

Christy A. Hume
Certified Maricopa Reporter

1017

1 Subchapter 5 and figure out if I should
2 file an inventory and pay a fee. And they
3 may not have the overall general knowledge.
4 But, you're right, you have to take
5 everything in total to make the
6 determination.

7 MS. BUTTRAM: But, we also have
8 an emission inventory section that can
9 field those type of questions if it's not
10 in the rule. Because like you say, to try
11 to put something like that in the rule may
12 be extreme. But then, for them to be able
13 to call the emission inventory section and
14 ask them if they would be exempted from
15 filing the emission inventory and fees may
16 be adequate.

17 MS. MYERS: Putting in a
18 definition like that at this point in time
19 will be a substantive change and we would
20 have to delay acceptance of this.

21 MS. BUTTRAM: That's true.

22 MR. FISHBACK: I don't think so.

23 MS. BUTTRAM: Unless you came up
24 with a definition right now. But, then
25 we'd have to --

Christy A. Moore
Certified shorthand reporter

15

1 this process.

2 Let me ask Barbara, is there a way
3 in a rule to have information conveyed
4 that's not part of the rule text? Can you
5 have paragraphs of explanation in a formal
6 rule or does that violate some principle of
7 rule?

8 MS. HOFFMAN: Actually, Jeanette
9 can answer that better than I can. She's
10 our rules format expert.

11 MS. BUTTRAM: We can put in
12 agenda notes like I have in some of the
13 rules, now. But, it's not codified and so
14 it won't be seen after it goes through that
15 process.

16 MR. FISHBACK: Okay. So the end
17 user, it's transparent?

18 MS. BUTTRAM: Right.

19 MR. FISHBACK: Okay. So that
20 doesn't accomplish -- you know, if you
21 could just have -- what I'm thinking of is
22 just a paragraph that says exactly what I
23 just said. If you're exempted from
24 permitting for the following reasons,
25 you're not subject to this inventory. But

Christy A. Moore
Certified shorthand reporter

1 MR. FISHBACK: You'd have to ha
2 a specific word to vote on, that's correct.
3 I trying to help folks out here. And
4 you're right, anybody that operates these
5 sources that is prudent, is going to ask
6 the question and hopefully get a correct
7 answer.

8 That's another problem, too. If yo
9 have it spelled out, it's not likely to
10 change from time to time or from individu
11 to individual. You know, it's well
12 defined. And so it is consistently
13 applied. I'm not saying this is a critica
14 enough issue to hold up approval of this,
15 but I personally think this would be an
16 enhancement because it's right in the plac
17 where the person will look.

18 It's just like you would look up in
19 a catalogue, if you were looking for
20 something in a store. If you were looking
21 for shoes, you'd look under shoes. If
22 you're looking for emission inventory
23 requirements, you're going to come to this
24 Subchapter and there is no clue here that
25 some source categories are exempted from

Christy A. Moore
Certified shorthand reporter

1 you can't do that?

2 MR. HOFFMAN: I'd be happy to
3 work with you on some language, if you
4 wanted to try to come up with a definition

5 MR. FISHBACK: Today?

6 MS. HOFFMAN: No. Not today.

7 MR. FISHBACK: Okay. Are you
8 talking about language to incorporate in
9 the rule?

10 MS. HOFFMAN: Yes.

11 MR. FISHBACK: For future
12 revisions?

13 MS. HOFFMAN: Yes.

14 MR. FISHBACK: Okay. And there
15 is no problem with re-opening this for a
16 change like that in the future?

17 MS. HOFFMAN: I don't know why
18 not.

19 MR. FISHBACK: Okay. Then I'll
20 take Barbara's offer and we'll do that and
21 we won't hold up the process today.

22 DR. CANTER: I was just thinking
23 that maybe -- I know that applicability in
24 the case of Subchapter 5. But, I'm
25 thinking that point might be applica

Christy A. Moore
Certified shorthand reporter

1 maybe in a different Subchapter with a
2 whole string of definitions.

3 MR. FISHBACK: It's been my
4 concern for a long time that there is a
5 real opportunity to help the affected
6 industries with the issuance of these
7 rules. And you know, when I take a rule,
8 the first thing I do is try to rewrite it
9 in English instead of in regulatory ease.
10 And that's really what I'm saying here. A
11 major applicability issue I think is
12 important to identify to someone that is
13 potentially covered. So I'll be glad to
14 work with Barbara and do that.

15 But you're right, this process --
16 that's why we have guidance documents and
17 other tools to help the effected industries
18 because you can't put everything in the
19 rule. But this is a fairly simple concept.
20 If you're exempted from permitting for the
21 following reasons, you don't file an
22 emissions inventory and you don't pay a
23 fee.

24 MS. HOFFMAN: It's also a very
25 delicate area. We'll have to be very

Charles A. Myers
Certified shorthand reporter

1 careful how we word it.

2 MR. FISHBACK: Yes.

3 MS. BUTTRAM: I'm beginning to
4 wonder if that might be added to something
5 instead of in the rule, the Subchapter
6 itself, it might be added to the package of
7 the rule. Where you're talking about
8 guidance documents instead of putting it
9 directly in that Subchapter, but could be
10 added to the packet that goes out with the
11 rules. And it has other things that
12 industry can read, but sees right offhand
13 that they're applicable in certain cases.
14 That might be something to look at, also.

15 MR. FISHBACK: Okay.

16 MR. DYKE: Additional questions
17 of Ms. Buttram from the Council? Question
18 from the audience? Is there anyone wishing
19 to speak on this matter?

20 Thank you Jeanette.

21 MR. FISHBACK: Did this rule
22 incorporate the current -- I just happened
23 to glance down here at the -- 15-19 was the
24 starting value. Does this incorporate the
25 current escalated fee?

Charles A. Myers
Certified shorthand reporter

1 DR. CANTER: Yes. Second
2 paragraph. On page 77

3 MR. FISHBACK: It doesn't -- it
4 gives the method but it doesn't give the
5 number.

6 DR. CANTER: No.

7 MR. FISHBACK: Okay. But, did we
8 not in a previous council meeting, did we
9 not approve a specific number for dollars
10 per ton but we didn't do it as part of a
11 rule? We did it as a recommendation from
12 the staff. Basically, if I remember right,
13 we made -- there was no recommendation,
14 staff would change --

15 MS. MYERS: We approved the
16 increase.

17 MR. FISHBACK: In the --

18 MS. MYERS: We approved the
19 increase --

20 MR. FISHBACK: We approved the 38
21 cent -- yeah.

22 MS. MYERS: We approved it based
23 on the CPI.

24 MR. FISHBACK: Yeah. And the
25 mechanism for that approval was not a rule.

Charles A. Myers
Certified shorthand reporter

1 What was it?

2 MR. KILPATRICK: You don't have
3 to approve it.

4 MS. MYERS: We just gave it our
5 blessing.

6 MR. KILPATRICK: We did it for
7 the sake of it. It was an automatic
8 calculation. We don't have to do anything
9 about it.

10 MR. FISHBACK: Yeah. But we did
11 at the last -- but I'm asking what was the
12 mechanism for that? Was that just a motion
13 that was passed and it's not a rule?

14 MR. KILPATRICK: You can make a
15 motion and act on it.

16 MR. FISHBACK: And we did that?

17 MR. KILPATRICK: Yes.

18 MR. FISHBACK: Okay. It was not
19 part of another rule, it didn't appear some
20 place else, that dollar figure?

21 MR. KILPATRICK: No.

22 MR. FISHBACK: Okay.

23 MR. DYKE: Anything further?

24 DR. CANTER: Thank you. I think
25 the Chair will entertain a motion for an

Charles A. Myers
Certified shorthand reporter

1 action in conjunction with Subchapter 5.
 2 MR. FISHBACK: I would move that
 3 Subchapter 5 be adopted as presented today.
 4 There were no changes proposed by the staff
 5 and we need to adopt it, I believe, as both
 6 emergency and permanent? So that would
 7 also be part of my motion.

8 DR. CANTER: Thank you. Is there
 9 a second?

10 MR. BRANECKY: Second.

11 DR. CANTER: Any final
 12 questions? Myrna, would you please poll
 13 the Council.

14 MS. BRUCE: Mr. Fishback.

15 MR. FISHBACK: Aye.

16 MS. BRUCE: Ms. Myers.

17 MS. MYERS: Aye.

18 MS. BRUCE: Mr. Kilpatrick.

19 MR. KILPATRICK: Aye.

20 MS. BRUCE: Ms. Slagell.

21 MS. SLAGELL: Aye.

22 MS. BRUCE: Mr. Branecky.

23 MR. BRANECKY: Aye.

24 MS. BRUCE: Dr. Canter.

25 DR. CANTER: Aye.

SUBCHAPTER 5

COUNCIL MEETING DATES

OCTOBER 20, 1998

DECEMBER 15, 1998

BOARD MEETING DATE

MARCH 05, 1999

SUMMARY OF RULE CHANGE:

The changes to Subchapter 5 modified fees for both Part 70 and minor emission sources. In 252:100-5-2.2(b)(1)(C), new language was proposed which sets the base annual operating fee for minor facilities at \$17.12 per ton of regulated pollutant beginning January 1, 1999. In 252:100-5-2.2(b)(2)(B), the annual operating fee for Part 70 sources will be increased to \$17.12 per ton of regulated pollutant beginning January 1, 1999.

CHAPTER 100. AIR POLLUTION CONTROL

SUBCHAPTER 5. REGISTRATION, EMISSION INVENTORY AND ANNUAL OPERATING FEES

Section:

252:100-5-2-2. Annual operating fees [AMENDED]

252:100-5-2.2. Annual operating fees

(a) Applicability.

(1) This section applies to all facilities that are sources of air pollution, including government facilities, regardless of whether the source is currently permitted or whether an emission inventory has or has not at any time been submitted for the facility. A Part 70 source shall be subject to fee requirements of this section on January 1, 1995. The owners or operators of Part 70 sources shall pay annual fees that are sufficient to cover the Part 70 program costs. The permitting authority shall ensure that the fees required by 252:100-5-2.2(b)(2) will be used solely for Part 70 program costs.

(2) This section does not apply to de minimis facilities.

(b) Fee schedule.

(1) Minor facilities.

(A) Until January 1, 1998, the owner or operator of a facility subject to this section shall pay an annual operating fee based on annual emissions of regulated pollutants (for fee calculation), in accordance with the following fee schedule:

- (i) 10 - 24.99 tons/year - \$100/year
- (ii) 25 - 49.99 tons/year - \$250/year
- (iii) 50 - 74.99 tons/year - \$500/year
- (iv) 75 - 99.99 tons/year - \$750/year

~~(B) Beginning January 1, 1998, the owner or operator of a facility subject to this section shall pay an annual operating fee of \$10/ton. This fee is based on total annual emissions of regulated pollutants (for fee calculation).~~ In calendar year 1998, annual operating fees shall be invoiced at \$10 per ton of regulated pollutant (for fee calculation).

(C) Beginning January 1, 1999, annual operating fees shall be invoiced at \$17.12 per ton of regulated pollutant (for fee calculation).

(2) Part 70 Sources.

~~(A) Effective From~~ From January 1, 1995, until January 1, 1999, the annual operating fee for Part 70 sources shall be \$15.19 per ton of regulated pollutant (for fee calculation).

(B) Beginning January 1, 1999, the annual operating fee for Part 70 sources shall be \$17.12 per ton of regulated pollutant (for fee calculation).

~~(B)~~(C) The annual operating fee shall be adjusted automatically each year by the percentage, if any, by which the Consumer Price Index for the most recent calendar year ending before the beginning of such year differs from the Consumer Price Index for the calendar year 1994. The Consumer Price Index for any calendar year is the average of the

Consumer Price Index for all-urban consumers published by the Department of Labor, as of the close of the twelve month period ending on August 31 of each calendar year.

(c) **Payment.** For Part 70 sources fees shall be paid by check or money order made payable to the Oklahoma Air Quality Title V Revolving Fund. All other sources shall pay fees by check or money order made payable to the Oklahoma Air Quality Division. Fees are due and payable upon receipt of invoice. Fees shall be considered delinquent 30 days from the date of billing, at which time simple interest shall accrue at the rate of one and one-half percent (1½ %) per month on any amount unpaid. Within five (5) years but not before a grace period of 120 days from the date of billing, the DEQ may issue an administrative order to recover such fees and may assess a reasonable administrative fine in accordance with the provisions of the Oklahoma Clean Air Act, 27A O.S. 1993-Supp. 1993, Sec. § 2-5-101 ~~et seq.~~ *et seq.*, to an owner or operator of a facility who has failed to pay such fees. If no fee was billed because the owner or operator failed to submit the required annual emission inventory, the term "date of billing" shall mean the date on which the fee would have been billed had the emission inventory been submitted when due. When a fee overpayment has been made as a result of a DEQ invoice error, an owner or operator may seek a credit for such fee overpayment within five years from the date on which payment of the fee was received by the DEQ. When a fee overpayment has been made as a result of an owner or operator's error in preparing the emission inventory upon which the fee was based, the owner or operator may seek credit for such overpayment within one year from the date on which payment of the fee was received by the DEQ.

(d) **Basis for annual operating fees.**

(1) Operating fees shall be calculated on a source-specific basis and based on actual emissions of regulated pollutants (for fee calculation) as set forth in the facility emission inventory unless the owner or operator elects to pay fees on allowable emissions. Fees shall be based on emission inventories submitted in the previous calendar year (for example, fees invoiced during the calendar year 1998 shall be based upon inventory data covering the calendar year 1996).

(2) Regulated pollutants (for fee calculation) in excess of 4,000 tons per year per pollutant for a Part 70 source shall not be considered in the calculation of the annual fee.

OAC 252:100-5[2]
Oklahoma Register

Notices of Rulemaking Intent

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must publish a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides other information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained.

For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-1358]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

PROPOSED RULES:

- Subchapter 5. Registration, Emission Inventory and Annual Operating Fees [AMENDED]
- Subchapter 7. Permits for Minor Sources [AMENDED]
- Subchapter 8. Permits for Part 70 Sources [AMENDED]
- Subchapter 23. Control of Emissions from Cotton Gins [AMENDED]
- Subchapter 24. Control of Emissions from Grain Elevators [AMENDED]
- Appendix L. PM-10 Emission Factors for Permit by Rule for Grain Elevators [NEW]
- Subchapter 25. Smoke, Visible Emissions and Particulates [AMENDED]
- Subchapter 37. Control of Emission of Organic Materials [AMENDED]
- Subchapter 39. Emission of Organic Materials in Nonattainment Areas [AMENDED]
- Subchapter 41. Control of Emission of Hazardous and Toxic Air Contaminants [AMENDED]

SUMMARY:

In Subchapter 5, the Department is considering possible increases in annual operating fees for both minor facilities and Part 70 sources.

The proposed revisions to Subchapter 7 will modify language applicable to de minimis facilities, Permit by Rule (PBR), and general permits. First, actual emissions of Total Suspended Particulates (TSP) will no longer be counted in determining whether a facility meets the definition of "de minimis facility." Second, the proposed revisions will delete the lower limit of 5 tons per year for PBR facilities. This will allow those facilities with less than 5 tons per year emissions, which are subject to New Source Performance Standards (NSPS) or National Emissions Standards for Hazardous Air Pollutants (NESHAP), to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a

PBR for specific facilities will be referenced under this new Part also. Third, the proposed revisions will delete the lower limit for general permits. This will allow facilities that may have less than 40 tons per year of emissions, but for which no PBR has been written, the opportunity to apply for coverage under an applicable general permit. The Department also proposes to delete the definition for "Volatile Organic Solvents (VOS)," because the proposed changes to Subchapters 37 and 39 would exclude that term from the rules.

The Department is considering increases in the permit application fees in both Subchapters 7 and 8.

The proposed revisions to Subchapters 23 and 24 would simplify the language under the agency-wide re-write/de-wrong initiative. It is also proposed to add a new PBR section to both subchapters. The PBR will streamline the permitting process by creating a mechanism that will eliminate the necessity for some cotton gins and elevators to obtain an individual air quality permit. Also, a new Appendix L is proposed which contains PM-10 emission factors for PBR grain elevators. Additional changes to both subchapters follow a proposed amendment of Subchapter 25 concerning short-term exceedances of the opacity standard. The revised rules would allow such exceedances during one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours.

The proposed amendments to Subchapter 25 would fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the Department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P. Additionally, the Department proposes to exempt from Appendix P requirements those sources already subject to a new source performance standard and sources scheduled for retirement within 5 years after the amended rule takes effect. The amended rule would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include exempting sources subject to opacity standards promulgated under Section 111 of the Federal Clean Air Act, along with a clarification of how the opacity standard will be determined at sources that have CEMs and how it will be determined at sources without CEMs. Other

proposed amendments to Subchapter 25 are designed to simplify and clarify the rule.

The proposed changes to Subchapters 37 and 39 include clarification of language, correction of typographical errors, deletion of redundant language, and reformatting. Three substantive changes are proposed for each Subchapter. One of those substantive changes affects both Subchapter 37 and 39. The definition of "volatile organic compounds (VOC)" in 252:100-37-2 and 252:100-39-2 has been revised in response to the Air Quality Council's direction to the staff to review the petition from the Chemical Manufacturers Association dated October 25, 1995, to exclude acetone from the definition of VOC; the request from American Airlines, Boeing, and Nordam, dated January 19, 1998, that acetone be excluded from the definition of VOC; a request dated April 21, 1997, from the Halogenated Solvents Industry Alliance, requesting that perchloroethylene be excluded from the definition of VOC; a request from Dow Corning that methylated siloxanes be excluded from the definition of VOC; and a request on behalf of the Eastman Chemical Company dated August 18, 1998, that methyl acetate be excluded from the definition of VOC. The definition of VOC has been modified to be consistent with the EPA definition. The second substantive change to Subchapter 37 is the removal of the requirement for permits and best available control technology (BACT) for new sources of VOC contained in 252:100-37-3(a). The third substantive change for Subchapter 37 deals with the first sentence in 252:100-37-36 regarding fuel-burning and refuse-burning equipment, which has been deleted to resolve the contradiction between the first and second sentences. The second substantive change to Subchapter 39 is the correction of the placement of "prior to lease custody transfer" in 252:100-39-30(b)(2). The third substantive change is the addition of a minimum annual throughput of 120,000 gallons and a minimum storage capacity of 2,000 gallons to 252:100-39-41(c) to determine applicability of subsection (c). In addition, the Department is requesting comments on 252:100-39-47, Control of VOS Emissions from Aerospace Industries Coatings Operations. Options include (1) retain the present (ARACT) rule and enforce the emissions reduction plan specified therein; (2) repeal the present rule and promulgate new rules regulating specialty coatings; or (3) retain the present plan, promulgate new rules for specialty coatings, and allow the facility to choose which of the two they prefer. These options recognize that the new NESHAP for the aerospace industry controls VOC emissions except for specialty coatings. The proposed amendments to Subchapter 41 include adopting by reference the Maximum Available Control Technology (MACT) standards for hazardous air pollutants that have been promulgated in 40 CFR 63 from July 1, 1997, through July 1, 1998. These are Subparts S and LL. The Department is also updating in Subchapter 41 the incorporation by reference of the NESHAP found in 40

CFR 61 to July 1, 1998. The Department is requesting comments on these proposed changes.

AUTHORITY:

Environmental Quality Board, 27A O.S.Supp. 1997, §§ 2-2-101 and 2-5-101 *et seq.*

COMMENT PERIOD:

Tuesday, September 15, 1998, through Tuesday, October 20, 1998. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by Tuesday, October 13, 1998

Also scheduled before the Environmental Quality Board at their meeting on Tuesday, November 10, 1998 - 9:30 a.m. in Poteau (Location to be determined. See contact person)

PUBLIC HEARINGS:

Tuesday, October 20, 1998 - 9:30 a.m. briefing and 1:00 p.m. hearing, at the Tulsa City-County Health Department, 5051 South 129th East (Northeast corner of 51st and 129th), Tulsa, Oklahoma

COPIES OF PROPOSED RULES:

Copies of the rules will be available September 15, 1998, for review at the Air Quality Division office at 707 North Robinson, Suite 4100, Oklahoma City, Oklahoma, 73102, or may be obtained from Myrna Bruce at 405-702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statements may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Shawna McWaters-Khalousi (Subchapters 5 and 8), Michelle Martinez (Subchapter 24), Jeanette Buttram (Subchapters 7 and 25), Becky Mainord (Subchapter 23), Joyce Sheedy, Ph.D. (Subchapters 37, 39 and 41). Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

ADDITIONAL INFORMATION:

Additional proposed revisions have been made to the versions of Subchapters 7, 23, 24, 25, 37 and 39 that were the subject of a public hearing on August 18, 1998.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #98-1358; filed 8-26-98]

Notices of Rulemaking Intent

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must publish a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides other information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained. For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-1473]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

PROPOSED RULES:

Subchapter 5. Registration, Emission Inventory and Annual Operating Fees

252:100-5-2.2 [AMENDED]

Subchapter 7. Permits for Minor Facilities [AMENDED]

Subchapter 8. Permits for Part 70 Sources

252:100-8-1.7 [AMENDED]

252:100-8-4 [AMENDED]

Subchapter 37. Control of Emission of Organic Materials [AMENDED]

Subchapter 39. Emission of Organic Materials in Nonattainment Areas [AMENDED]

SUMMARY:

The Department is proposing to amend 252:100-5-2.2 to increase annual operating fees for minor facilities and to include a provision for state appropriations and federal grants to be used to offset annual operating fees assessed to minor facilities. The Department is also proposing to increase the base annual operating fee for Part 70 sources.

The proposed revisions to Subchapter 7 will modify language applicable to de minimis facilities, Permit by Rule (PBR), and general permits. First, actual emissions of Total Suspended Particulates (TSP) will no longer be counted in determining whether a facility meets the definition of "de minimis facility." Second, the proposed revisions will delete the lower limit of 5 tons per year for PBR facilities. This will allow those facilities with less than 5 tons per year emissions, which are subject to New Source Performance Standards (NSPS) or National Emissions Standards for Hazardous Air Pollutants (NESHAP), to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a PBR for specific facilities will be referenced under this new Part also. Third, the proposed revisions will delete the lower limit for general permits. This will allow facilities that may have less than 40 tons per year of emissions, but for which no

PBR has been written, the opportunity to apply for coverage under an applicable general permit.

The Department is also proposing to amend 252:100-7-3 to increase fees for minor facilities for applicability determinations, relocation permits, and applications for individual permits.

The Department is proposing amendments to 252:100-8-1.7 to increase applicability determination fees for Part 70 Sources. In addition, it is proposed that 252:100-8-4(a)(2) be amended to update the incorporation by reference of 40 CFR 63.41, 63.43, and 63.44 to July 1, 1998.

The proposed changes to Subchapters 37 and 39 include clarification of language, correction of typographical errors, deletion of redundant language, and reformatting. Substantive changes are proposed for each subchapter. One of those substantive changes affects both Subchapter 37 and 39. The definition of "volatile organic compounds (VOC)" in 252:100-37-2 and 252:100-39-2 has been revised in response to the Air Quality Council's direction to the staff to review the petition from the Chemical Manufacturers Association dated October 25, 1995, to exclude acetone from the definition of VOC; a request from American Airlines, Boeing, and Nordam, dated January 19, 1998, to exclude acetone from the definition of VOC; a request from the Halogenated Solvents Industry Alliance dated April 21, 1997, to exclude perchloroethylene from the definition of VOC; a request from Dow Corning to exclude methylated siloxanes from the definition of VOC; and a request on behalf of the Eastman Chemical Company dated August 18, 1998, to exclude methyl acetate from the definition of VOC. The definition of VOC has been modified to be consistent with the EPA definition. The second substantive change to Subchapter 37 is the removal of the requirement for permits and best available control technology (BACT) for new sources of VOC contained in 252:100-37-3(a). The third substantive change for Subchapter 37 deals with the first sentence in 252:100-37-36 regarding fuel-burning and refuse-burning equipment, which has been deleted to resolve the contradiction between the first and second sentences. The fourth substantive change to Subchapter 37 will be the addition of a new Part 9, Permit by Rule for Volatile Organic Compound Storage and Loading Facilities. The second substantive change to Subchapter 39 is the correction of the placement of "prior to lease custody transfer" in 252:100-39-30(b)(2). The third substantive

change is the addition of a minimum annual throughput of 120,000 gallons and a minimum storage capacity of 10,000 gallons to 252:100-39-41(c) to determine the applicability of subsection (c).

AUTHORITY:

Environmental Quality Board; 27A O.S.Supp. 1997, §§ 2-2-101 and 2-5-101, *et seq.*

COMMENT PERIOD:

Written comments on proposed amendments to 252:100-5-2.2, 252:100-7-3, and 252:100-8-1.7 will be accepted until December 8, 1998. Oral comments may be made at the December 15, 1998 hearing.

Comments on all other proposed amendments and new rules included in this notice will be accepted beginning Monday, November 16, 1998, through Tuesday, December 15, 1998. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by Tuesday, December 8, 1998.

Also scheduled before the Environmental Quality Board (Date and location to be determined. See contact person.)

PUBLIC HEARINGS:

Tuesday, December 15, 1998 - 9:30 a.m. briefing and 1:00 p.m. hearing, at the Lincoln Plaza, 4545 N. Lincoln Blvd., Burgundy Room, Oklahoma City, Oklahoma

COPIES OF PROPOSED RULES:

Copies of the rules will be available November 16, 1998, for review at the Air Quality Division office at 707 North Robinson, Suite 4100, Oklahoma City, Oklahoma, 73102, or may be obtained from Myrna Bruce at 405-702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statements may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Shawna McWaters-Khalousi (252:100-5-2.2, 252:100-7-3, and 252:100-8-1.7), Jeanette Buttram (Subchapter 7 except 252:100-7-3), and Joyce Sheedy (252:100-8-4 and Subchapters 37 and 39), Department of Environmental Quality, Air Quality Division, P.O. **TITLE 330. OKLAHOMA HOUSING
FINANCE AGENCY
CHAPTER 55. HOME INVESTMENTS
PARTNERSHIP PROGRAM RULES**

[OAR Docket #98-1472]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

PROPOSED RULES:

330:55-1-1 through 330:55-1-7 [NEW]

330:55-3-1 through 330:55-3-6 [NEW]

330:55-5-1 through 330:55-5-2 [NEW]

330:55-7-1 through 330:55-7-5 [NEW]

SUMMARY:

The Board of Trustees of the Oklahoma Housing Finance Agency (OHFA) a public trust, have in compliance with Title II of the Cranston-Gonzalez National Affordable Housing Act, as amended and codified at 42 U.S.C. 12701-12839; and 24 CFR Part 92, Section 92.1, *et seq.* (Title II) adopted OHFA's Chapter 55. HOME Investments Partnership Program Rules (the 'Rules') for use in the allocation and issuance of HOME Program funds throughout the state of Oklahoma.

The Rules provide guidelines which OHFA follows in allocating HOME funds pursuant to Title II and are intended to provide a description of the procedures to be followed by applicants for evaluating and prioritizing applications. The Rules also provide an overview of Title II and other federal regulations which govern the administration of the HOME Program.

AUTHORITY:

These Chapter 55 rules are authorized by the Trustees of The Oklahoma Housing Finance Agency (OHFA), the Amended Trust Indenture of OHFA, and the Bylaws of OHFA.

COMMENT PERIOD:

Written comments will be accepted November 16, 1998 through December 16, 1998. Comments should reference the section of the rules addressed and be sent to Oklahoma Housing Finance Agency, P. O. Box 26720, Oklahoma City, Oklahoma 73126-0720, Attn: Byron Debruler.

PUBLIC HEARING:

The following public hearing will be held: December 8, 1998, at 10:00 a.m. at the offices of OHFA, 1140 N. W. 63rd Oklahoma City, OK in the 4th floor conference room. All interested persons are invited to attend and present their views.

COPIES OF PROPOSED RULES:

Copies of the proposed Rules may be obtained by contacting Byron Debruler, at OHFA, 1140 Northwest 63rd, P. O. Box 26720, Oklahoma City, Oklahoma 73126-0720, 405-848-1144 Ext. 314. There will be a \$5.00 per copy charge.

Memorial Building, 2500 North Lincoln Boulevard, Oklahoma City, Oklahoma.

RULE IMPACT STATEMENT:

[OAR Docket #98-1721; filed 12-22-98]

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

[OAR Docket #98-1721]

RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

RULES:

252:100. Air Pollution Control

Subchapter 5. Registration, Emission Inventory and Annual Operating Fees

252:100-5-2.2 [AMENDED]

Subchapter 7. Permits for Minor Facilities [AMENDED]

Subchapter 8. Permits for Part 70 Sources

252:100-8-1.7 [AMENDED]

252:100-8-4 [AMENDED]

SUMMARY:

The Department is proposing to amend 252:100-5-2.2 to increase annual operating fees for minor facilities and the base annual operating fee for Part 70 sources.

The proposed revisions to Subchapter 7 will modify language applicable to de minimis facilities, Permit by Rule (PBR), and general permits. First, actual emissions of Total Suspended Particulates (TSP) will no longer be counted in determining whether a facility meets the definition of "de minimis facility." Second, the proposed revisions will delete the lower limit of five (5) tons per year for PBR facilities. This will allow those facilities with less than five (5) tons per year emissions which are subject to New Source Performance Standards (NSPS) or National Emissions Standards for Hazardous Air Pollutants (NESHAP) to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a PBR for specific facilities will be referenced under this new Part 9 also. Third, the proposed revisions will delete the lower limit for general permits. This will allow facilities that may have less than 40

Final adoption:

May 7, 1999

Effective:

June 11, 1999

SUPERSEDED EMERGENCY ACTIONS:

None

INCORPORATIONS BY REFERENCE:

None

ANALYSIS:

The changes to Subchapter 5 will modify fees for both Part 70 and minor emission sources. In 252:100-5-2.2(b)(1)(C), new language has been proposed which sets the base annual operating fee for minor facilities at \$17.12 per ton of regulated pollutant beginning January 1, 1999. In 252:100-5-2.2(b)(2)(B), the annual operating fee for Part 70 sources would be increased to \$17.12 per ton of regulated pollutant beginning January 1, 1999.

The Air Quality Advisory Council recommended these amendments for adoption at their meeting on December 15, 1998.

Jeanette Buttram, Department of Environmental Quality, Air Quality Division, 707 N. Robinson, Suite 4100, Oklahoma City, Oklahoma 73101-1677. (405) 702-4100

PURSUANT TO THE ACTIONS DESCRIBED HEREIN, THE FOLLOWING RULES ARE CONSIDERED FINALLY ADOPTED AS SET FORTH IN 75 O.S., SECTION 308.1(A), WITH AN EFFECTIVE DATE OF JUNE 11, 1999.

SUBCHAPTER 5. REGISTRATION, EMISSION INVENTORY AND ANNUAL OPERATING FEES

252:100-5-2.2. Annual operating fees

(a) Applicability.

(1) This section applies to all facilities that are sources of air pollution, including government facilities, regardless of whether the source is currently permitted or whether an emission inventory has or has not at any time been submitted for the facility. A Part 70 source shall be subject to fee requirements of this section on January 1, 1995. The owners or operators of Part 70 sources shall pay annual fees that are sufficient to cover the Part 70 program costs. The permitting authority shall ensure that the fees required by 252:100-5-2.2(b)(2) will be used solely for Part 70 program costs.

(2) This section does not apply to de minimis facilities.

(b) Fee schedule.

(1) Minor facilities.

(A) Until January 1, 1998, the owner or operator of a facility subject to this section shall pay an annual operating fee based on annual emissions of regulated pollutants (for fee calculation), in accordance with the following fee schedule:

- (i) 10 - 24.99 tons/year - \$100/year
(ii) 25 - 49.99 tons/year - \$250/year
(iii) 50 - 74.99 tons/year - \$500/year
(iv) 75 - 99.99 tons/year - \$750/year

(B) Beginning January 1, 1998, the owner or operator of a facility subject to this section shall pay an annual operating fee of \$10/ton. This fee is based on total annual emissions of regulated pollutants (for fee calculation) In calendar year 1998, annual operating fees shall be invoiced at \$10 per ton of regulated pollutant (for fee calculation).

(C) Beginning January 1, 1999, annual operating fees shall be invoiced at \$17.12 per ton of regulated pollutant (for fee calculation).

(2) Part 70 Sources.

(A) Effective From January 1, 1995, until January 1, 1999, the annual operating fee for Part 70 sources shall be \$15.19 per ton of regulated pollutant (for fee calculation).

(B) Beginning January 1, 1999, the annual operating fee for Part 70 sources shall be \$17.12 per ton of regulated pollutant (for fee calculation).

(B)(C) The annual operating fee shall be adjusted automatically each year by the percentage, if any, by which the Consumer Price Index for the most recent

calendar year ending before the beginning of such year differs from the Consumer Price Index for the calendar year 1994. The Consumer Price Index for any calendar year is the average of the Consumer Price Index for all-urban consumers published by the Department of Labor, as of the close of the twelve month period ending on August 31 of each calendar year.

(c) **Payment.** For Part 70 sources fees shall be paid by check or money order made payable to the Oklahoma Air Quality Title V Revolving Fund. All other sources shall pay fees by check or money order made payable to the Oklahoma Air Quality Division. Fees are due and payable upon receipt of invoice. Fees shall be considered delinquent 30 days from the date of billing, at which time simple interest shall accrue at the rate of one and one-half percent (1½%) per month on any amount unpaid. Within five (5) years but not before a grace period of 120 days from the date of billing, the DEQ may issue an administrative order to recover such fees and may assess a reasonable administrative fine in accordance with the provisions of the Oklahoma Clean Air Act, 27A O.S.-1993-Supp. 1993, Sec. § 2-5-101 *et seq. et seq.*, to an owner or operator of a facility who has failed to pay such fees. If no fee was billed because the owner or operator failed to submit the required annual emission inventory, the term "date of billing" shall mean the date on which the fee would have been billed had the emission inventory been submitted when due. When a fee overpayment has been made as a result of a DEQ invoice error, an owner or operator may seek a credit for such fee overpayment within five years from the date on which payment of the fee was received by the DEQ. When a fee overpayment has been made as a result of an owner or operator's error in preparing the emission inventory upon which the fee was based, the owner or operator may seek credit for such overpayment within one year from the date on which payment of the fee was received by the DEQ.

(d) **Basis for annual operating fees.**

- (1) Operating fees shall be calculated on a source-specific basis and based on actual emissions of regulated pollutants (for fee calculation) as set forth in the facility emission inventory unless the owner or operator elects to pay fees on allowable emissions. Fees shall be based on emission inventories submitted in the previous calendar year (for example, fees invoiced during the calendar year 1998 shall be based upon inventory data covering the calendar year 1996).
- (2) Regulated pollutants (for fee calculation) in excess of 4,000 tons per year per pollutant for a Part 70 source shall not be considered in the calculation of the annual fee.

[OAR Docket #99-847; filed 5-7-99]

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

[OAR Docket #99-848]

RULEMAKING ACTION:

PERMANENT final adoption

RULES:

- Subchapter 7. Permits for Minor Facilities
 - Part 1. General Provisions
252:100-7-1.1 through 252:100-7-2 [AMENDED]
 - Part 2. Permit Application Fees
252:100-7-3 [AMENDED]
 - Part 3. Construction Permits
252:100-7-15 [AMENDED]
 - Part 4. Operating Permits
252:100-7-18 [AMENDED]
 - Part 9. Permits by Rule
252:100-7-60 through 252:100-7-60.2 [NEW]

AUTHORITY:

Environmental Quality Board; 27A O.S.Supp. 1998, §§ 2-2-101, 2-5-101, *et seq.*

DATES:

Comment period:

For 252:100-7 except 252:100-7-3 - July 15, 1998, through August 18, 1998; September 15, 1998, through October 20, 1998; and November 16, 1998 through December 15, 1998

For 252:100-7-3. Permit Application Fees - September 15, 1998 through December 8, 1998; and December 15, 1998

Public hearing:

For 252:100-7 except 252:100-7-3 - August 18, October 20, and December 15, 1998; and March 5, 1999

For 252:100-7-3. Permit Application Fees - October 20 and December 15, 1998; and March 5, 1999

Adoption:

March 5, 1999

Submitted to Governor:

March 15, 1999

Submitted to House:

March 15, 1999

Submitted to Senate:

March 15, 1999

Gubernatorial approval:

April 19, 1999

Legislative approval:

Failure of the Legislature to disapprove the rules resulted in approval on May 7, 1999

Final adoption:

May 7, 1999

Effective:

June 11, 1999

SUPERSEDED EMERGENCY ACTIONS:

None

INCORPORATIONS BY REFERENCE:

None

ANALYSIS:

The changes to Subchapter 7 will modify language applicable to minimis facilities, Permit by Rule (PBR), and general permits. First, actual emissions of Total Suspended Particulates (TSP) will no longer be counted in determining whether a facility meets the

OAC 252:100-5[2]
Air Quality Council

**BRIEFING AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
REGULAR MEETING
AIR QUALITY COUNCIL**

**Tuesday October 20, 1998 9:30 A.M.
Tulsa City-County Health Department Auditorium
5051 South 129 East — Tulsa, Oklahoma**

1. **Call to Order – Bill Breisch**
2. **Division Director's Report**
Informational update of current events and AQD activities
 - A. Discussion by Council / Public
3. **CY99 Meeting Schedule**
 - A. Discussion by Council
4. **OAC 252:100-5 Registration, Emission Inventory and Annual Operating Fees [AMENDED]**
OAC 252:100-7 Permits [AMENDED]
OAC 252:100-8 Permits for Part 70 Sources [AMENDED]
In Subchapter 5, the Department is considering possible increases in annual operating fees for both minor facilities and Part 70 sources with possible increases of permit application fees in Subchapters 7 and 8.
 - A. Presentation – Shawna McWaters-Khalousi
 - B. Questions and discussion by Council / Public
5. **OAC 272:100-7 Permits [AMENDED]**
Proposed revisions will delete the lower limit of 5 tons per year for Permit by rule (PBR) facilities allowing those facilities with less than 5 tons per year emissions which are subject to new source performance standards and national emissions standards for hazardous air pollutants to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a PBR for specific facilities will be referenced under this new Part also. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Jeanette Buttram
 - B. Questions and discussion by Council / Public
6. **OAC 252:100-25 Smoke, Visible Emissions and Particulates [AMENDED]**
Proposed amendments to Subchapter 25 are needed to fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P, and would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include exempting sources subject to opacity standards promulgated under Section 111 of the Federal Clean Air Act, along with a clarification of how the opacity standard will be determined at sources that have CEMs and how it will be determined at sources without CEMs. A new subsection would contain methods for determining compliance with the opacity limits. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Jeanette Buttram
 - B. Questions and discussion by Council / Public

7. **OAC 252:100-23 Control of Emissions from Cotton Gins [AMENDED]**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and add a new PBR section. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – ~~Becky Mainord~~ *Michelle*
 - B. Questions and discussion by Council / Public

8. **OAC 252:100-24 Control of Emissions from Grain Elevators [AMENDED]**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and add a new PBR section. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Michelle Martinez
 - B. Questions and discussion by Council / Public

9. **OAC 252:100-37 Control of Emissions of Organic Materials [AMENDED]**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. A substantive change deletes a sentence regarding fuel-burning and refuse-burning equipment resolving a contradiction. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public

10. **OAC 252:100-39 Emissions of Organic Materials in Nonattainment Areas [AMENDED]**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public

11. **OAC 252:100-41 Control of Emission of Hazardous and Toxic Air Contaminants [AMENDED]**
The proposed amendments to Subchapter 41 include adopting by reference the Maximum Available Control Technology (MACT) standards for hazardous air pollutants that have been promulgated in 40 CFR 63 from July 1, 1997, through July 1, 1998. These are Subparts S and LL. The Department is also updating in Subchapter 41 the incorporation by reference of the NESHAP found in 40 CFR 61 to July 1, 1998. The Department is requesting comments on these proposed changes.
 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public

AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
REGULAR MEETING/HEARING
AIR QUALITY COUNCIL

Tuesday October 20, 1998 1:00 p.m.
Tulsa City-County Health Department Auditorium
5051 South 129 East --- Tulsa, Oklahoma

1. Call to Order – Bill Breisch
2. Roll Call – Myrna Bruce
3. Approval of Minutes of the August 18, 1998 Regular Meeting
4. CY99 Meeting Schedule
 - A. Discussion by Council
 - B. Possible action by Council
 - C. Roll call vote
5. OAC 252:100-5 Registration, Emission Inventory and Annual Operating Fees [AMENDED]
OAC 252:100-7 Permits [AMENDED]
OAC 252:100-8 Permits for Part 70 Sources [AMENDED]
In Subchapter 5, the Department is considering possible increases in annual operating fees for both minor facilities and Part 70 sources with possible increases of permit application fees in Subchapters 7 and 8.
 - A. Presentation – Shawna McWaters-Khalousi
 - B. Questions and discussion by Council / Public
 - C. Roll call vote
6. OAC 272:100-7 Permits [AMENDED]
Proposed revisions will delete the lower limit of 5 tons per year for Permit by rule (PBR) facilities allowing those facilities with less than 5 tons per year emissions which are subject to new source performance standards and national emissions standards for hazardous air pollutants to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. MINUTES

AIR QUALITY COUNCIL

OCTOBER 20, 1998

Tulsa City-County Health Department Auditorium
5051 South 129th Street East
Tulsa, Oklahoma

Council Members Present

William B. Breisch, Chairman
David Branecky
Sharon Myers
Joel Wilson
Fred Grosz

Staff Present

Eddie Terrill
David Dyke
Dennis Doughty
Barbara Hoffman
Ray Bishop
Linn Wainner

Staff Present

Scott Thomas
Cheryl Bradley
Jeanette Buttram
Michelle Martinez
Shawna McWaters-Khalousi
Joyce Sheedy
Myrna Bruce

Council Members Absent

Larry Canter
Gary Kilpatrick
Meribeth Slagell

Guests Present

**see attached list

PUBLIC MEETING

Notice of Public Meeting for October 20, 1998 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance door of the meeting room.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Mr. Branecky - aye; Ms. Myers - aye; Mr. Wilson - aye; Dr. Grosz - aye. Mr. Kilpatrick, Ms. Slagell and Dr. Canter did not attend.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the August 18, 1998 Public Meeting/Hearings. Motion was made by Mr. Wilson to approve the Minutes as presented and second to the motion was made by Dr. Grosz. Roll call as follows: Mr. Branecky - aye; Ms. Myers - aye; Mr. Wilson - aye; Dr. Grosz - aye; Mr. Breisch - aye.

1999 Meeting Schedule - Mr. Dyke presented Council with proposed scheduled for 1999 meetings with the suggestion that the December 21 date mentioned in the packet memo be changed to December 14. Ms. Myers made motion to accept the schedule as proposed: Wednesday, February 17, Tuesday, April 20, Tuesday, August 17, and Tuesday, December 14 at OKC, DEQ Multi-Purpose Room; with Tuesday, June 15 and October 19 at Tulsa, TCCHD Auditorium. Second to motion was made by David Branecky. Roll call as follows: Mr. Branecky - aye; Ms. Myers - aye; Mr. Wilson - aye; Dr. Grosz - aye; Mr. Breisch - aye.

Auditorium. Second to motion was made by David Branecky. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-7 Permits [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Jeanette Buttram for staff position regarding this rule. Ms. Buttram pointed out proposed revisions would modify language applicable to de minimis facilities, Permit by Rule (PBR), and general permits stating that actual emissions of Total Suspended Particulates (TSP) will no longer be counted in determining whether a facility meets the definition of “de minimis facility.” Also, she stated that proposed revision would delete the lower limit of five tons per year for PBR facilities allowing those facilities with less than five tons per year emissions which are subject to NSPS or NESHAP to apply for a PBR instead of having to obtain an individual permit. Ms. Buttram advised that staff proposed that a new Part 9 be added that would outline the requirements necessary for a facility to qualify for a PBR. A third point she brought out was the proposed revision to delete the lower limit for general permits allowing facilities that may have less than 40 tons per year of emissions, but for which no PBR had been written, the opportunity to apply for coverage under an applicable general permit. Lastly, she added that the Department proposed to amend 252-7-3 to increase fees for minor facilities for applicability determinations, relocation permits, and applications for individual permits.

Following discussion and comments, Chairman Breisch entertained a motion to continue this rule to the Council’s October 20, 1998 meeting. Ms. Myers made that motion with second made by Dr. Grosz. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-25 Smoke, Visible Emissions and Particulates [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Jeanette Buttram to give staff’s position on this rule. Ms. Buttram pointed out that the proposed amendments would fulfill an EPA requirement concerning Continuous Emissions Monitoring proposing to incorporate by reference the Federal opacity monitoring requirements for fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries and fossil fuel-fired steam generators as specified in 40 CFR 51, Appendix P. She noted that the Department proposed to exempt from Appendix P requirements for those sources already subject to a new source performance standard and for sources scheduled for retirement within five years after the

amended rule takes effect. Ms. Buttram added that the amended rule would also provide criteria for approval of alternative monitoring requirements with additional changes that would clarify how the opacity standard is determined.

Mr. Breisch asked for a motion to recommend the rule as proposed to the Environmental Quality Board for permanent adoption. Mr. Wilson made the motion with David Branecky making the second. Roll call was as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-23 Control of Emissions from Cotton Gins [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Michelle Martinez who related that the draft rule included simplification of language according to the Agency's re-write/de-wrong initiative and the addition of a Permit by Rule section. She then pointed out that the proposed revisions add a new Permit by Rule section that would streamline the permitting process by creating a mechanism that eliminates the necessity for some cotton gins to obtain an individual air quality permit. Ms. Martinez added that additional changes would allow exceedances of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours.

Following discussion, Mr. Breisch entertained a motion to recommend this rule to the Environmental Quality Board for permanent adoption. Ms. Myers made the motion with second made by Mr. Branecky. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-24 Control of Emissions from Grain Elevators [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Michelle Martinez who advised that the proposed revisions would simplify the language under the agency-wide re-right/de-wrong initiative and would add a new Permit by Rule section to streamline the permitting process by creating a mechanism that would eliminate the necessity for some grain elevators to obtain an individual air quality permit. Ms. Martinez added that a new Appendix L proposed would contain PM-10 emission factors for PBR grain elevators. Additional changes follow a proposed amendment of Subchapter 25 concerning short-term exceedances of the

opacity standard allowing exceedances of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours.

Mr. Breisch entertained a motion to recommend the rule to the Environmental Quality Board for permanent adoption at its November 10 meeting. Mr. Wilson made that motion with second made by Ms. Myers. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-37 Control of Emissions of Organic Materials (AMENDED)

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy who advised that proposed changes included language consistent with the re-right/de-wrong initiative. She then pointed out four substantive changes that were proposed for Subchapter 37 as well as Subchapter 39:

- 1) to change the definition of “volatile organic compounds (VOC)” per Council’s direction and requests from industry to exclude acetone, perchloroethylene, methylated siloxanes, methyl acetate from the definition of VOC and to modify the definition of VOC to be consistent with the EPA definition;
- 2) to remove of the requirement for permits and best available control technology (BACT) for new sources of VOC contained in 252:100-37-3(a);
- 3) a change regarding fuel-burning and refuse-burning equipment, which has been deleted to resolve the contradiction between the first and second sentences; and
- 4) to add a new Part 9, Permit by Rule for Volatile Organic Liquid Storage and Loading Facilities.

Mr. Breisch entertained a motion to continue this rule to Council’s December meeting. Ms. Myers made motion with second made by Dr. Grosz. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-39 Control of Organic Materials in Nonattainment Areas [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy who advised that proposed changes included language consistent with the re-right/de-wrong initiative. She stated that one substantive change affects both Subchapters 39 and 37

which is to change the definition of "volatile organic compounds" per Council's direction and requests from industry to exclude acetone, perchloroethylene, methylated siloxanes, methyl acetate from the definition of VOC and to modify the definition of VOC to be consistent with the EPA definition;

In Subchapter 39, Dr. Sheedy pointed out the need for correction of the placement of "prior to lease custody transfer" in 252:100-39-30(b)(2) which would be a substantive change along with the addition of a minimum annual throughput of 120,000 gallons and a minimum storage capacity of 2,000 gallons to 252:100-39-41(c) to determine applicability of subsection (c).

Following discussion, Mr. Breisch entertained a motion to continue this rule to the Council's December 15 meeting. Mr. Branecky made that motion with the second made by Mr. Wilson. Roll call as follows: Mr. Branecky - aye; Ms. Myers - aye; Mr. Wilson - aye; Dr. Grosz - aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-41 Control of Emission of Hazardous and Toxic Air Contaminants [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy who stated that the proposed revisions would update the adoption by reference of 40 CFR Part 63 to include Maximum Achievable Control Technology (MACT) standards promulgated or amended between July 1, 1997 and July 1, 1998. She pointed out that the new standards are Subpart S - NESHAP for Pulp and Paper Production and Subpart LL - NESHAP for Aluminum Production Plants. The proposed revisions will also update the adoption by reference of the NESHAP as found in 40 CFR Part 61 (with the exception of Subparts B, H, I, K, Q, R, T, and W. and Appendices D and E which address radionuclides) to July 1, 1998. Dr. Sheedy advised the Council that these modifications were necessary to obtain EPA's delegation of authority to implement the federal hazardous air pollutant program in Oklahoma.

Mr. Breisch entertained a motion to recommend this rule to the Environmental Quality Board for permanent adoption. Mr. Wilson made that motion with the second made by Mr. Branecky. Roll call as follows: Mr. Branecky - aye; Ms. Myers - aye; Mr. Wilson - aye; Dr. Grosz - aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

**OAC 252:100-5 Registration, Emission Inventory and Annual Operating Fees
[AMENDED]**

OAC 252:100-7 Permits [AMENDED]

OAC 252:100-8 Permits for Part 70 Sources [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Shawna McWaters-Khalousi for staff recommendation. Ms. Khalousi advised that the Department is proposing to amend 252:100-5-2.2 to increase annual operating fees assessed to minor facilities; amend 252:100-7-3 to increase fees for minor facilities for applicability determinations, relocation permits, and applications for individual permits; and amend 252:100-8-1.7 to increase applicability determination fees for Part 70 Sources. Ms. Khalousi stated that it was staff's recommendation that this rule be continued to Council's December 15 meeting.

Mr. Breisch entertained motion to continue these rules to the December meeting. Ms. Myers made the motion and second was made by Mr. Branecky. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes.

NEW BUSINESS – None

ADJOURNMENT With no further business, meeting was adjourned and next regularly scheduled meeting being December 15, 1998 at Lincoln Plaza Office Complex Burgundy Room, 4545 North Lincoln, Oklahoma City, Oklahoma.

NOTE: The sign-in sheet and the hearing records are attached as an official part of these Minutes.

BRIEFING AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
REGULAR MEETING
AIR QUALITY COUNCIL

Tuesday - December 15, 1998 9:30 A.M.
4545 North Lincoln Boulevard
Burgundy Room
Oklahoma City, OK

1. **Call to Order – Bill Breisch**
2. **Division Director's Report - Staff**
 - A. Update of current events and AQD activities
 - B. Discussion by Council / Public
3. **OAC 252:100-7 Permits for Minor Facilities [AMENDED]**

Proposed revisions will delete the lower limit of 5 tons per year for Permit by Rule (PBR) facilities allowing those facilities with less than 5 tons per year emissions which are subject to new source performance standards and national emissions standards for hazardous air pollutants to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a PBR for specific facilities will also be referenced under this new Part. Continued from August 18 and October 20, 1998 Air Quality Council meeting.

 - A. Presentation – Jeanette Buttram
 - B. Questions and discussion by Council / Public
4. **OAC 252:100-8-4(a)(2) Permits for Part 70 Sources [AMENDED]**

The Department proposes to update the incorporation by reference of the case-by-case MACT rules in 40 CFR 63.41, 63.43, and 63.44 to July 1, 1998.

 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public
5. **OAC 252:100-37 Control of Emissions of Organic Materials [AMENDED]**

Proposal would simplify the language under the agency-wide re-right/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. A substantive change deletes a sentence regarding fuel-burning and refuse-burning equipment resolving a contradiction. Continued from August 18, 1998 Air Quality Council meeting.

 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public

6. **OAC 252:100-39 Emissions of Organic Materials in Nonattainment Areas [AMENDED]**

Proposal would simplify the language under the agency-wide re-right/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. Continued from August 18 and October 20, 1998 Air Quality Council meeting.

- A. Presentation – Joyce Sheedy
- B. Questions and discussion by Council / Public

7. **OAC 252:100-5-2.2 Registration, Emission Inventory and Annual Operating Fees [AMENDED]**

OAC 252:100-7-3 Permits for Minor Facilities [AMENDED]

OAC 252:100-8-1.7 Permits for Part 70 Sources [AMENDED]

In Subchapter 5, the Department is proposing increases in annual operating fees for both minor facilities and Part 70 sources, with increases of specific permit application fees in Subchapters 7 and 8.

- A. Presentation – Shawna McWaters-Khalousi
- B. Questions and discussion by Council / Public

HEARING/MEETING AGENDA

DEQ Multi-Purpose Room, First Floor
707 North Robinson, Oklahoma City, Oklahoma

December 4, 1998

MEMORANDUM

TO: Air Quality Council

FROM: Eddie Terrill, Director ^{ET.}
Air Quality Division

SUBJECT: Modifications to Air Quality Fees - Subchapters 5, 7, 8

Enclosed are copies of the proposed draft modifications to the Air Quality Fees (Subchapters 5, 7 and 8). These proposed rule changes were brought before the Air Quality Council during the October 20, 1998 public hearing, and it was recommended that it be heard again on December 15, 1998. These proposed changes increase fees to both major and minor sources.

Subchapter 5 Modifications:

- The annual minor source operating fee changes from \$10.00 to \$31.01 per ton, effective 1/1/99.
- The annual operating fee will be reduced to a level not less than the major source annual operating fee, if additional state appropriations or federal grants are received.
- The annual major source operating fee changes from \$16.39 (\$15.19 + CPI adjustments) to \$17.56 per ton, effective 1/1/99. *This represents a decrease of \$0.16 per ton from the \$17.72 per ton proposal presented at the 10/20/98 meeting.*

Subchapter 7 Modifications:

- The fee for a minor source applicability determination changes from \$100 to \$250.
- The fees for all types of individual minor source permits double.

Subchapter 8 Modifications:

- The fee for a major source applicability determination changes from \$100 to \$250.

Since the 10/20/98 Council meeting, we have presented our original proposal to the Small Business Advisory Panel at their regular meeting on 10/26/98 and further discussed fees at a continued meeting on 11/16/98. We have also met with the Council's Financial Subcommittee on 11/13/98 and hope to meet again before the 12/15/98 Council meeting. Additional documentation and support information will be delivered under separate cover before the meeting.

Staff will suggest that the proposed rules be recommended to the Board for permanent and emergency adoption.

Enclosures: 3

SUBCHAPTER 5. REGISTRATION,
EMISSION INVENTORY AND ANNUAL OPERATING FEES

252:100-5-2.2. Annual operating fees

(a) **Applicability.**

(1) This section applies to all facilities that are sources of air pollution, including government facilities, regardless of whether the source is currently permitted or whether an emission inventory has or has not at any time been submitted for the facility. A Part 70 source shall be subject to fee requirements of this section on January 1, 1995. The owners or operators of Part 70 sources shall pay annual fees that are sufficient to cover the Part 70 program costs. The permitting authority shall ensure that the fees required by 252:100-5-2.2(b)(2) will be used solely for Part 70 program costs.

(2) This section does not apply to de minimis facilities.

(b) **Fee schedule.**

(1) **Minor facilities.**

(A) Until January 1, 1998, the owner or operator of a facility subject to this section shall pay an annual operating fee based on annual emissions of regulated pollutants (for fee calculation), in accordance with the following fee schedule:

- (i) 10 - 24.99 tons/year - \$100/year
- (ii) 25 - 49.99 tons/year - \$250/year
- (iii) 50 - 74.99 tons/year - \$500/year
- (iv) 75 - 99.99 tons/year - \$750/year

~~(B) Beginning January 1, 1998, the owner or operator of a facility subject to this section shall pay an annual operating fee of \$10/ton. This fee is based on total annual emissions of regulated pollutants (for fee calculation). In calendar year 1998, annual operating fees shall be invoiced at \$10 per ton of regulated pollutant (for fee calculation).~~

(C) Beginning January 1, 1999, annual operating fees shall be invoiced at \$31.01 per ton of regulated pollutant (for fee calculation).

(D) State appropriations and federal grants will be used, where possible, to reduce the annual fee to an amount no lower than the annual operating fee calculated under 252:100-5-2.2(b)(2) for that calendar year.

(2) **Part 70 Sources.**

(A) Effective From January 1, 1995, until January 1, 1999, the annual operating fee for Part 70 sources shall be \$15.19 per ton of regulated pollutant (for fee calculation).

(B) Beginning January 1, 1999, the annual operating fee for Part 70 sources shall be \$17.56 per ton of regulated pollutant (for fee calculation).

~~(B)~~ (C) The annual operating fee shall be adjusted automatically each year by the percentage, if any, by which the Consumer Price Index for the most recent calendar year

DRAFT - Notice Date:

November 16, 1998

ending before the beginning of such year differs from the Consumer Price Index for the calendar year 1994. The Consumer Price Index for any calendar year is the average of the Consumer Price Index for all-urban consumers published by the Department of Labor, as of the close of the twelve month period ending on August 31 of each calendar year.

(c) **Payment.** For Part 70 sources fees shall be paid by check or money order made payable to the Oklahoma Air Quality Title V Revolving Fund. All other sources shall pay fees by check or money order made payable to the Oklahoma Air Quality Division. Fees are due and payable upon receipt of invoice. Fees shall be considered delinquent 30 days from the date of billing, at which time simple interest shall accrue at the rate of one and one-half percent (1½%) per month on any amount unpaid. Within five (5) years but not before a grace period of 120 days from the date of billing, the DEQ may issue an administrative order to recover such fees and may assess a reasonable administrative fine in accordance with the provisions of the Oklahoma Clean Air Act, 27A O.S. 1993 Supp., Sec. 2-5-101 et seq., to an owner or operator of a facility who has failed to pay such fees. If no fee was billed because the owner or operator failed to submit the required annual emission inventory, the term "date of billing" shall mean the date on which the fee would have been billed had the emission inventory been submitted when due. When a fee overpayment has been made as a result of a DEQ invoice error, an owner or operator may seek a credit for such fee overpayment within five years from the date on which payment of the fee was received by the DEQ. When a fee overpayment has been made as a result of an owner or operator's error in preparing the emission inventory upon which the fee was based, the owner or operator may seek credit for such overpayment within one year from the date on which payment of the fee was received by the DEQ.

(d) **Basis for annual operating fees.**

(1) Operating fees shall be calculated on a source-specific basis and based on actual emissions of regulated pollutants (for fee calculation) as set forth in the facility emission inventory unless the owner or operator elects to pay fees on allowable emissions. Fees shall be based on emission inventories submitted in the previous calendar year (for example, fees invoiced during the calendar year 1998 shall be based upon inventory data covering the calendar year 1996).

(2) Regulated pollutants (for fee calculation) in excess of 4,000 tons per year per pollutant for a Part 70 source shall not be considered in the calculation of the annual fee.

PUBLIC MEETING

Notice of Public Meeting for December 15, 1998 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance door of the meeting room.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Dr. Canter - aye; Ms. Myers - aye; Dr. Grosz - aye; Mr. Branecky - aye; Mr. Wilson - aye; Mr. Breisch - aye; Mr. Kilpatrick and Ms. Slagell did not attend.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the October 20, 1998 Public Meeting/Hearings. Motion was made by Dr. Grosz to approve the Minutes as presented and second was made by Mr. Branecky. Roll call as follows: Dr. Canter - aye; Ms. Myers - aye; Dr. Grosz - aye; Mr. Branecky - aye; Mr. Wilson - aye; Mr. Breisch - aye.

PUBLIC HEARINGS

Protocol Statement - As protocol officer, Mr. Dyke convened the hearings by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke entered into the hearing records the Hearing Agenda and Oklahoma Register Notice.

OAC 252:100-7 Permits [AMENDED]

Mr. Dyke called upon Ms. Jeanette Buttram for staff recommendation to Council. Ms. Buttram advised that proposed revisions delete the lower limit of 5 tons per year for Permit by Rule (PBR) facilities allowing those facilities with less than 5 tons per year emissions which are subject to new source performance standards and national emission standards for hazardous air pollutants to apply for a PBR instead of having to obtain an individual permit.

Also a new Part 9 is proposed which will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a PBR for specific facilities would also be referenced under this new Part. Within Part 9, Section 252:100-7-60.3 was written due to the proposed PBR section for VOC storage and loading facilities in Subchapter (SC) 37. Staff recommendation for SC 37 will be to continue the rule until the February AQC meeting. Therefore, staff suggests the proposed new section be deleted from the rule and added once the PBR in SC 37 is approved. Mr. Branecky requested clarification of which part of the rule was being deleted. Ms. Buttram confirmed the suggestion to recommend the proposed rule, excluding Section 252:100-7-60.3, to the Environmental Quality Board for permanent adoption.

Following discussion and comments, Chairman Breisch entertained a motion to recommend this rule to the Environmental Quality board at the next meeting. Dr. Grosz made that motion with second made by Ms. Myers. Roll call as follows: Dr. Canter – aye; Ms. Myers – aye; Dr. Grosz – aye; Mr. Branecky – aye; Mr. Wilson – aye; Mr. Breisch – aye.

Copy of hearing transcript attached and made an official part of these minutes.

OAC 252:100:8-4(a)(2) Permits for Part 70 Sources [AMENDED]

Mr. Dyke called upon Ms. Joyce Sheedy for staff recommendation regarding this rule. Dr. Sheedy advised that these amendments update the incorporation by reference of the case-by-case MACT determinations for Part 70 sources in 252:100-8-4 (a)(2)(C) by adopting 40 CFR 63.41, 63.43, and 63.44 as they exist on July 1, 1998. Dr. Sheedy advised that this update would be made annually.

Mr. Breisch entertained motion recommending adoption as permanent rule by the Environmental Quality Board. Mr. Branecky made the motion with the second being made by Mr. Wilson. Roll call as follows: Dr. Canter – aye; Ms. Myers – aye; Dr. Grosz – aye; Mr. Branecky – aye; Mr. Wilson – aye; Mr. Breisch – aye.

Copy of hearing transcript attached and made an official part of these minutes.

OAC 252:100-37 Control of Emissions of Organic Materials (AMENDED)

Mr. Dyke called upon Dr. Joyce Sheedy who advised that proposed changes primarily simplify language and correct grammar and format but also include various substantive changes. Dr. Sheedy explained that one substantive change alters the definition of volatile organic compound (VOC) to make it reflect EPA's definition of VOC. Dr. Sheedy then stated the staff's recommendation to continue this rule until the February Council meeting because of remaining controversy.

Council discussion followed. Mr. Wilson expressed concern about SC 37 being open for so long with no action taken. During public discussion, Mr. Bradshaw from Boeing reiterated Mr. Wilson's concern. Mr. Bradshaw further explained that the specific point of concern for Boeing and American Airlines is the definition of VOC. He said the members of his industry would like to see the definition amended as soon as possible. Ms. Hoffman responded by explaining that it is the intent of the staff to have all remaining issues with SC 37 resolved and to recommend approval of the rule by the Council. She further explained that if the rule is

approved by the Council in February, there would be time to get the packet of information to the Environmental Quality Board before the March 5, 1999 meeting.

Mr. Breisch entertained a motion to continue this rule to Council's February meeting. Ms. Myers made motion with second made by Dr. Grosz. Roll call as follows: Dr. Canter – aye; Ms. Myers – aye; Dr. Grosz – aye; Mr. Branecky – aye; Mr. Wilson – aye; Mr. Breisch – aye.

Copy of hearing transcript attached and made an official part of these minutes.

OAC 252:100-39 Control of Organic Materials in Nonattainment Areas [AMENDED]
Mr. Dyke called upon Dr. Joyce Sheedy for staff recommendation. Dr. Sheedy pointed out that the proposed changes primarily simplify language and correct grammar and format but also include some substantive changes. Dr. Sheedy explained that written comments, staff responses and details of the substantive changes were summarized in the Council packet. Dr. Sheedy submitted the written letters from EPA and EFO for hearing record.

There were no questions or comments from the Council or from the public.

Following discussion, Mr. Breisch entertained a motion to continue this rule to the Council's February 17, 1999 meeting. Mr. Branecky made that motion with the second made by Ms. Myers. Roll call as follows: Dr. Canter – aye; Ms. Myers – aye; Dr. Grosz – aye; Mr. Branecky – aye; Mr. Wilson – aye; Mr. Breisch – aye.

Copy of hearing transcript attached and made an official part of these minutes

OAC 252:100-5 Registration, Emission Inventory and Annual Operating Fees [AMENDED]
OAC 252:100-7 Permits [AMENDED]

OAC 252:100-8-1.7 Permits for Part 70 Sources [AMENDED]

This subject was first brought before the Council on October 20, 1998 at which time the Council voted to continue the hearing until the December 15, 1998 Council meeting. The presentation for this public hearing consisted of several staff members. Mr. David Dyke began by informing those present that written comments have been received from the Environmental Federation of Oklahoma, Mid-Continent Oil and Gas Association, and the Small Business Advisory Panel. These comments and staff responses were submitted for official record. Mr. Dyke continued to explain the Division's anticipated increase in workload and discussed other factors contributing to the request for fee increases.

Mr. Dyke called upon Mr. Scott Thomas to describe the upcoming rulemaking activities. Mr. Thomas explained that the Division's rulemaking goals were designed according to proposed rules received from the EPA, instruction from the State Legislature to review all of our rules by December 2000, and efforts to go forward with the agencies directive and goals of the permit continuum. Mr. Thomas also stated that in order to accomplish these goals, additional staff would be required or the rulemaking priorities would have to be refined. Mr. Ray Bishop came forward to elaborate upon the need for additional permitting staff. He stated that even though the Permit program has instituted a number of time-saving and efficiency efforts, the Division does not anticipate meeting the impending Title V time frames and deadlines with the current staff. He also reviewed the non-Title V activities required of the permitting

staff. Mr. Terrill commented regarding potential actions that could occur at the federal level and consequently affect the Division.

Finally, Mr. Dyke called upon Ms. Shawna McWaters-Khalousi to explain the proposed fee increases and how they were derived. Staff recommended approval by the Council. Mr. D summarized staff's position by stating that even though services and spending levels are reduced from previous years, the current level of services and management of oncoming issues cannot be maintained without additional staff. Mr. Dyke assured that the Division would not compromise the environmental protection, but be forced to shift and prioritize resources ultimately resulting in reduced services provided.

After extensive comment and discussion from the Council, the public and members of industry, Mr. Breisch entertained, and Mr. Branecky made the motion that: In SC 5, annual operating fees for minor facilities and for Part 70 sources be increased to \$17.12 per ton; In SC 7, the fee for minor source applicability determinations be increased to \$250 and the fees for all types of individual minor source permits be doubled; and In SC 8, the fee for major source applicability determinations be increased to \$250. Ms. Myers made the second to Mr. Branecky's motion with roll call as follows: Dr. Canter – aye; Ms. Myers – aye; Dr. Grosz – aye; Mr. Branecky – aye; Mr. Wilson – aye; Mr. Breisch – aye.

Copy of hearing transcript attached and made an official part of these minutes.

NEW BUSINESS The Council requested a monthly financial statement from Mr. Coleman's office. This information would enable the Finance Committee to monitor the cash flow of the AQD and work toward avoiding future budgetary shortfalls. Additionally, the Council requested that a comprehensive and detailed list of tasks that would be billed to Title V expenditures be created. This list would be a guideline for staff to follow when accounting time and effort. Finally, a request was made for additional state appropriations for a workload study that will determine staffing priorities.

ADJOURNMENT With no further business, meeting was adjourned with announcement that the next regularly scheduled meeting would be February 17, 1999 at the Department of Environmental Quality Multi-Purpose Room, First Floor, 707 North Robinson, Oklahoma City, Oklahoma.

NOTE: The sign-in sheet and the copies of hearing records are attached as an official part of these Minutes.

AIR QUALITY COUNCIL
RULEMAKING RECOMMENDATION TO THE ENVIRONMENTAL QUALITY BOARD

Identification of Proposed Rulemaking:

Chapter Number and Title – OAC 252:100

Subchapters or Sections Involved – [new, amended or revoked]

OAC 252:100-5-2.2 Registration, Emission Inventory and Annual Operating Fees AMENDED]
OAC 252:100-7-3 Permits for Minor Facilities [AMENDED]
OAC 252:100-8-1.7 Permits for Part 70 Sources [AMENDED]

On DECEMBER 15, 1998 the members of this Council, by authority vested in them by the Oklahoma Environmental Quality Code (27 O.S. Supp. 1993, § 2-2-201), by roll call vote, recommended to the Environmental Quality Board that the rulemaking described above be adopted as:

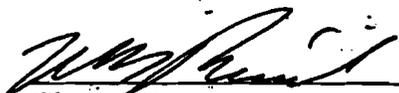

permanent [take effect after legislative review]

emergency [temporary, to take effect upon approval by the Governor because of time; and/or special reason: _____]

This Council has considered the proposed rulemaking and comments about it and determined, to the best of its knowledge, that all applicable requirements of the Oklahoma Administrative Procedures Act have been followed.

This Council authorizes the Department to prepare this recommended rulemaking for the Board, making any changes approved by the Council, correcting typographical, grammatical and reference errors, and formatting them as required by the Office of Administrative Rules. This is to be done with the understanding that such changes shall neither alter the sense of what this Council recommends nor invalidate this recommendation.

Respectfully,

Chair or Designee

Date signed: 12-15-98

Environmental Quality Board

REGULAR MEETING AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
OKLAHOMA ENVIRONMENTAL QUALITY BOARD

A Public Meeting: 9:30 a.m., Friday, March 5, 1999
Association of County Commissioners of Oklahoma
429 NE 50th Street, Oklahoma City, Oklahoma

1. Call to Order - Herschel Roberts
2. Roll Call - Lynda Finch
3. Approval of Minutes of the November 10, 1998 Regular Meeting
4. Election of Officers (Chair and Vice-Chair) for 1999

5. **OAC 252:100 Air Pollution Control:**

Changes are proposed to five subchapters. The changes fall into three general groups.

- Proposed revisions to both Subchapters 37 (Control of Emissions of Organic Materials) and 39 (Emission of Organic Materials in Nonattainment Areas) include 1) definitional changes, including most notably the term "volatile organic compound (VOC)" and related terms; 2) exemption of certain types or sizes of VOC loading and storage vessels and facilities and certain pumps and compressors from some state requirements and standards, especially when the equipment or facilities are subject to related federal requirements; 3) deletion of a rule which allows the emission of 3,000 pounds per day or 450 pounds per hour of organic materials before controls are required; 4) revision of an alternate emission standard for coating operations; 5) correction of the impossible requirement that no emission of hydrocarbons or organic material is allowed from fuel-burning or refuse-burning equipment; and 6) addition of provisions for permit by rule for VOC storage and loading facilities.
- Proposed amendments to Subchapter 7 (Permits for Minor Facilities) will modify language applicable to de minimis facilities, Permit by Rule (PBR), and general permits. First, actual emissions of Total Suspended Particulates (TSP) will no longer be counted in determining whether a facility meets the definition of "de minimis facility." Second, the proposed revisions will delete the current lower tonnage limits for PBR and general permits. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Proposed amendments to Subchapter 8 (Permits for Part 70 Sources) will update the adoption by reference of the requirements for case-by-case MACT determinations contained in federal rules to July 1, 1998.
- Proposed amendments to Subchapter 5 would increase the annual operating fees for both Part 70 and minor emission sources. Proposed revisions to Subchapter 7 will increase the applicability determination fee and individual application fees for minor facilities. Subchapter 8 is revised to increase the fee for applicability determinations, consistent with the proposed increase in Subchapter 7.

- A. Presentation— David Branecky, Air Quality Council member
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote for permanent adoption

6. **OAC 252:200 and 205 Hazardous Waste Management:**

The state hazardous waste rules have been revised as part of the DEQ's effort to simplify and streamline its rules. The rewrite is not intended to change the requirements of the rules, but to make them clearer and more concise. Due to extensive reworking of the language and rearrangement of the text, the DEQ believes it is more understandable and straightforward to revoke Chapter 200 in its entirety and replace it with a new chapter, Chapter 205, than to present an underline/strike-out version of Chapter 200. This revocation and replacement was done last year by emergency rulemaking; it is proposed to repeat the action as permanent rulemaking.

Chapter 205 as proposed also contains three categories of substantive changes. The first is update of the adoption by reference of federal hazardous waste regulations to July 1, 1998. The second is to delineate certain hazardous waste regulatory duties which remain with the U.S. Environmental Protection Agency. The third is to clarify that although federal hazardous waste regulations allow conditionally exempt small quantity generators of hazardous waste to dispose of their hazardous waste in certain solid waste landfills, this practice is prohibited by Oklahoma statute.

- A. Presentation— David Bradshaw, Hazardous Waste Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote for permanent adoption

7. **OAC 252:400 Radiation Management:**

The proposed new rules support Oklahoma's pending application to the U.S. Nuclear Regulatory Commission (NRC) for State Agreement status. NRC approval of Oklahoma's application will shift regulation of source, byproduct and special nuclear material from the NRC to the DEQ.

New Subchapter 2 forms the framework for the State Agreement Program and the incorporation by reference of federal NRC regulations from Title 10 of the Code of Federal Regulations. Appendices G through P mirror NRC categories and set fees for Oklahoma's State Agreement Program. All fees in these Appendices are less than the current federal fees. Due to the requirement that fees must be adopted during the time the legislature is in session, these Appendices are presented to the Board before the remainder of Subchapter 2's State Agreement rules. However, these fee schedules will not go into effect until the date the State Agreement program becomes effective.

- A. Presentation— Dr. David Gooden, Radiation Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote for permanent adoption

8. **OAC 252:510 Municipal Solid Waste Landfills:**

The proposed addition of Subchapter 16 addresses new standards for the exclusion of hazardous, PCB, radioactive, or other restricted wastes from disposal in a municipal solid waste landfill (MSWLF). The rules require owners/operators to submit a new or amended Waste Exclusion Plan for approval by January 1, 2000, and sets standards for the plan. The amendment to 252:510-17-5 incorporates the Subchapter 16 provisions in the current rule requiring exclusion of unacceptable wastes.

The proposed amendment to 252:510-17-2(d) would require owners/operators of MSWLFs and nonhazardous industrial waste landfills to establish and maintain vegetative cover, or other

alternatives approved by DEQ, over waste areas that extend above the natural horizon if that area will not be receiving more waste in the upcoming year. The rule is designed to enhance dust control, erosion control and aesthetics at MSWLFs and nonhazardous industrial waste landfills once they begin placing waste above ground.

The amendment to 252:510-21-6 would clarify that the pay-in period under the Trust Fund financial assurance mechanism, which may be used to ensure the costs for closure and post-closure of the landfill, is limited to a maximum of 15 years. This change is consistent with the change in law provided by SB 1025 passed during the 1998 legislative session.

- A. Presentation— Steve Mason, Solid Waste Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote for permanent adoption

9. OAC 252:520 Solid Waste Management:

The proposed amendment to 252:520-9-11 would require owners/operators of landfills to establish and maintain vegetative cover, or other alternatives approved by DEQ, over waste areas that extend above the natural horizon if that area will not be receiving more waste in the upcoming year. The rule is designed to enhance dust control, erosion control and aesthetics at landfills once they begin placing waste above ground.

Changes to Subchapter 21 implement revisions to the waste tire recycling program as required by SB 1218 and SB 986 passed during the 1998 session.

The amendment to 252:510-23-51 would clarify that the pay-in period under the Trust Fund financial assurance mechanism, which may be used to ensure the costs for closure and post-closure of solid waste disposal sites, is limited to a maximum of 15 years. This change is consistent with the change in law provided by SB 1025 passed during the 1998 legislative session.

- A. Presentation— Steve Mason, Solid Waste Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote for permanent adoption

10. OAC 252:640 and 641 Individual and Small Public On-Site Sewage Disposal Systems:

252:640 is being revoked. The rules in Chapter 640 were clarified, substantially rewritten and reorganized through the re-right/de-wrong process and moved to 252:641. Subchapter 11 of Chapter 700 has also been rewritten and moved to new Chapter 641; among the revisions is a recategorization of certified installers. The purpose of these rules is to establish procedures for the construction, installation and operation of individual and small public on-site sewage disposal systems and to establish procedures for persons seeking certification as installers of individual sewage disposal systems.

- A. Presentation— Gary Collins, Director, Environmental Complaints and Local Services Division
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote for permanent adoption

11. **OAC 252:700 Water and Wastewater Works Operator Certification:**
This action is a corresponding action to agenda item 10. This rule change would revoke current Subchapter 11 of Chapter 700 (relating to certification for septic tank system installers), the provisions of which are included in new Chapter 641.
 - A. Presentation– Gary Collins, Director, Environmental Complaints and Local Services Division
 - B. Questions and discussion by the Board
 - C. Questions, comments and discussion by the public
 - D. Discussion by the Board
 - E. Roll call vote for permanent adoption
12. New Business (any matter not known about, or which could not have been reasonably foreseen prior to the time of posting of agenda)
13. Executive Director's Report
14. Adjournment

Public Forum: The Board meets four times a year at different locations across the State to hear the views and concerns of all Oklahomans about environmental issues. This opportunity is informal, and we invite you to sign the register to speak..

Should you have a disability and need an accommodation, please notify the DEQ three days in advance at 702-7100.

**SUBCHAPTER 5. REGISTRATION,
EMISSION INVENTORY AND ANNUAL OPERATING FEES**

252:100-5-2.2. Annual operating fees

(a) Applicability.

(1) This section applies to all facilities that are sources of air pollution, including government facilities, regardless of whether the source is currently permitted or whether an emission inventory has or has not at any time been submitted for the facility. A Part 70 source shall be subject to fee requirements of this section on January 1, 1995. The owners or operators of Part 70 sources shall pay annual fees that are sufficient to cover the Part 70 program costs. The permitting authority shall ensure that the fees required by 252:100-5-2.2(b)(2) will be used solely for Part 70 program costs.

(2) This section does not apply to de minimis facilities.

(b) Fee schedule.

(1) Minor facilities.

(A) Until January 1, 1998, the owner or operator of a facility subject to this section shall pay an annual operating fee based on annual emissions of regulated pollutants (for fee calculation), in accordance with the following fee schedule:

- (i) 10 - 24.99 tons/year - \$100/year
- (ii) 25 - 49.99 tons/year - \$250/year
- (iii) 50 - 74.99 tons/year - \$500/year
- (iv) 75 - 99.99 tons/year - \$750/year

(B) ~~Beginning January 1, 1998, the owner or operator of a facility subject to this section shall pay an annual operating fee of \$10/ton. This fee is based on total annual emissions of regulated pollutants (for fee calculation).~~ In calendar year 1998, annual operating fees shall be invoiced at \$10 per ton of regulated pollutant (for fee calculation).

(C) Beginning January 1, 1999, annual operating fees shall be invoiced at \$17.12 per ton of regulated pollutant (for fee calculation).

(2) Part 70 Sources.

(A) ~~Effective From~~ From January 1, 1995, until January 1, 1999, the annual operating fee for Part 70 sources shall be \$15.19 per ton of regulated pollutant (for fee calculation).

(B) Beginning January 1, 1999, the annual operating fee for Part 70 sources shall be \$17.12 per ton of regulated pollutant (for fee calculation).

~~(B)~~ (C) The annual operating fee shall be adjusted automatically each year by the percentage, if any, by which the Consumer Price Index for the most recent calendar year ending before the beginning of such year differs from the Consumer Price Index for the calendar year 1994. The Consumer Price Index for any calendar year is the average of the Consumer Price Index for all-urban consumers published by the Department of Labor, as of the close of the twelve month period ending on August 31 of each calendar year.

(c) Payment. For Part 70 sources fees shall be paid by check or

money order made payable to the Oklahoma Air Quality Title V Revolving Fund. All other sources shall pay fees by check or money order made payable to the Oklahoma Air Quality Division. Fees are due and payable upon receipt of invoice. Fees shall be considered delinquent 30 days from the date of billing, at which time simple interest shall accrue at the rate of one and one-half percent (1½%) per month on any amount unpaid. Within five (5) years but not before a grace period of 120 days from the date of billing, the DEQ may issue an administrative order to recover such fees and may assess a reasonable administrative fine in accordance with the provisions of the Oklahoma Clean Air Act, 27A O.S. ~~1993~~ Supp. 1993, ~~Sec. § 2-5-101 et seq. et seq.~~, to an owner or operator of a facility who has failed to pay such fees. If no fee was billed because the owner or operator failed to submit the required annual emission inventory, the term "date of billing" shall mean the date on which the fee would have been billed had the emission inventory been submitted when due. When a fee overpayment has been made as a result of a DEQ invoice error, an owner or operator may seek a credit for such fee overpayment within five years from the date on which payment of the fee was received by the DEQ. When a fee overpayment has been made as a result of an owner or operator's error in preparing the emission inventory upon which the fee was based, the owner or operator may seek credit for such overpayment within one year from the date on which payment of the fee was received by the DEQ.

(d) Basis for annual operating fees.

(1) Operating fees shall be calculated on a source-specific basis and based on actual emissions of regulated pollutants (for fee calculation) as set forth in the facility emission inventory unless the owner or operator elects to pay fees on allowable emissions. Fees shall be based on emission inventories submitted in the previous calendar year (for example, fees invoiced during the calendar year 1998 shall be based upon inventory data covering the calendar year 1996).

(2) Regulated pollutants (for fee calculation) in excess of 4,000 tons per year per pollutant for a Part 70 source shall not be considered in the calculation of the annual fee.

OAC 252:100-5[2]
Additional Comments

CHAPTER 100. AIR POLLUTION CONTROL
SUBCHAPTER 5. REGISTRATION, EMISSION INVENTORY AND ANNUAL
OPERATING FEES

EXECUTIVE SUMMARY: The proposed amendments to Subchapter 5 would increase the annual operating fees for both Part 70 and minor emission sources. In 252:100-5-2.2(b)(1)(C), new language has been proposed which sets the base annual operating fee for minor facilities at \$17.12 per ton of regulated pollutant beginning January 1, 1999. In OAC 252:100-5-2.2(b)(2)(B), the base annual operating fee for Part 70 sources would be increased to \$17.12 per ton of regulated pollutant beginning January 1, 1999.

DIFFERENCES FROM ANALOGOUS FEDERAL RULES: None.

ENVIRONMENTAL BENEFIT STATEMENT: Not required because no one federal rule corresponds to these rules.

SUMMARY OF COMMENTS AND RESPONSES:

COMMENT: ODEQ has not sufficiently demonstrated publicly that Title V permit fees have been used exclusively for the Title V program and that a fee increase is warranted at this time.

RESPONSE: DEQ disagrees. As discussed at the hearing on October 20, 1998, the Air Quality Division (AQD) of the DEQ instituted a detailed tracking system for Time and Effort (T&E) coding in 1996. Employees received training on how to code their time, and training continues on a regular basis. The 1996 calendar year financial report showed that 66% of employees' time in 1996 was spent on Title V activities. The 1997 report showed that 75% of employees' time in 1997 was spent on Title V activities. In the first half of 1998, approximately 60% of employees' time was spent on Title V activities. To determine what the Title V annual operating fee should be to cover Title V expenses, DEQ took the budget for fiscal year 1999 and added to it necessities that had been cut (such as 17 previously filled, vacant positions, computer replacements and upgrades, and statutorily-authorized salary increases for existing employees), and multiplied the total cost times 60%. From this total, DEQ subtracted projected Title V permit application fees in 1999, then divided the remaining number by 249,276 (the projected Title V emissions in 1999), to arrive at the cost per ton of \$17.72. DEQ has further refined its figures in the last month and has determined that the Title V fee should be \$17.56, which staff will propose at the December 15, 1998 hearing.

DEQ is justified in using Title V fees for 60% of its expenses because the Oklahoma Clean Air Act requires the DEQ to charge an annual operating fee "sufficient to cover the reasonable costs, both direct and indirect, of implementing and enforcing the permit program authorized by the Oklahoma Clean Air Act and the Federal Clean Air Act, including, but not to be limited to:

- a. the costs of reviewing and acting upon any permit renewal,
- b. emissions and ambient monitoring, for those costs incurred under the permitting program,
- c. preparing generally applicable rules or guidance
- d. modeling, monitoring, analyses and demonstrations,
- e. preparing inventories and tracking emissions, and
- f. inspections and enforcement."

Oklahoma Statutes Title 27A, Section 2-5-113.A.2. The budget consists of the costs, both direct and indirect, of doing these activities. The Title V program share of these costs is currently 60%, the minor facility program share is 40%.

COMMENT: DEQ should obtain an independent audit (one commenter specified that the audit should cover all funds received and disbursed by the AQD since 1995) and justify past "overcharges", building allocation charges to Title V, and administrative overhead charges of 15%.

RESPONSE: The only comment here that is relevant to the proposed fee increases is the one concerning administrative overhead charges. Overhead, termed "administrative indirect cost", is a percentage of fees collected by each program. This percentage is set by the DEQ and is charged against fees collected on an April through March timetable. This percentage is set quite low, in that it usually does not cover all overhead costs. The DEQ is operated in accordance with State law and accounting procedures, and its books are open anytime a member of the public or the State Auditor wishes to review them. We would welcome an independent audit, but the extra cost of obtaining one is not in our budget at this time.

COMMENT: DEQ should charge Title V fees quarterly at the option of the fee payer.

RESPONSE: This would have no effect on the proposed fee increases. This is, however, a convenience that we are planning to offer large fee payors in the near future. This policy change would not require a rule change.

COMMENT: Raising fees might jeopardize Oklahoma's industrial and economic strength. DEQ should run a lean program, even if that means permits will be issued at a slower rate.

RESPONSE: There are rules that require DEQ to issue air quality permits within so many days after receiving complete permit applications. See OAC 252:2-15-72. These rules were put into place to protect both the public and permit applicants. DEQ intends to propose fees that will allow it to hire the staff necessary to adequately implement all of the rules that govern the agency.

COMMENT: The proposed annual operating fee for minor facilities is too high, especially since minor facilities emitted only 10% of the

pollutants emitted by Title V sources. DEQ should propose the same fee for major and minor facilities.

RESPONSE: Both the Federal Clean Air Act and the Oklahoma Clean Air Act require that Title V fees support the Title V program. Thus, Title V fees cannot be used to support the minor facility program costs or other costs not attributable to the Title V program. In addition, the DEQ is expected to generate revenue to cover the costs of implementing its minor facility program from fees. Precisely because Title V sources emit more pollutants, the total fee income generated from that program (which are based on tons per year emitted) are much greater than the fees derived from the minor facilities. Yet, 40% of the Air Quality Division's costs must be funded by the minor facility fees, and any federal grants and state appropriations we might receive. State appropriations cannot be used to cover the costs of the Title V program.

COMMENT: Any future increase in state appropriations or other income sources should offset any current annual operating fee increase, and language assuring this should be included in the rule, as the Air Quality Division has proposed.

RESPONSE: We agree.

COMMENT: Fees could be reduced if more facilities covered by the rules were brought into the program.

RESPONSE: DEQ agrees that there are more facilities that need to be participating in the air program. With the new streamlined permitting process, we hope to bring unpermitted facilities into the fold. Finding those individual facilities would incur costs that we cannot afford at this time.

COMMENT: DEQ should hold stakeholder discussions to determine appropriate uses for minor and Title V fees.

RESPONSE: DEQ believes that it has been engaging in such discussions, and certainly intends to continue to do so.

COMMENT: DEQ should develop a process where all new programs assumed by the state have an identified source of funding.

RESPONSE: This is an ongoing process. Like every business that provides a service, we must have the flexibility to proactively handle new mandates or market influences. Given our ever increasing budget shortfalls, each activity - both existing and new, will be increasingly scrutinized by DEQ. Decisions will be made regarding the efforts that we undertake with all our requirements and charges in mind - protection of the environment, citizens and industries. In general, funded activities will get the bulk of our resources. Those programs and projects which are not funded, will be given lower priority. Sometimes DEQ is mandated by the legislature to conduct

a program with no appropriated funding. We have to divert other appropriations, institute a fee, or be directed by the legislature to use an unrelated fee source.

COMMENT: The Small Business Advisory Panel does support an increase of the minor source annual operating fees to a level equal to what Part 70 sources are being charged. However, SBAP does not support tripling the minor source annual operating fees from \$10.00 per ton to \$31.01 per ton. SBAP does support lobbying and will assist in lobbying the Legislature on DEQ's behalf to ask for additional appropriations so that services to small businesses would not have to be reduced. The SBAP also recommends efforts be taken to encourage more small business to participate in the Air Quality program. SBAP believes increased participation in the system will generate additional revenue.

RESPONSE: The Division agrees with the need to obtain additional state appropriations to help offset some of the budgetary shortfall and encourages the SBAP to lobby the Legislature as they see fit. Also, the Division recognizes the necessity of increasing participation of small businesses in our regulatory system. The Division agrees to address the issue of lack of participation by expanding our base primarily through outreach programs assisted by Customer Service Division or through the Trade Associations.

COMMENT: DEQ does not need to increase fees to the proposed amount in order to provide a sufficient level of funding for the entire length of the Title V program. Rather, steps should be taken to evaluate the budget and provide necessary funding on an annual basis.

RESPONSE: DEQ's Air Quality Division (AQD) has been affected by a trend of increasing mandates coupled with decreasing funding. Over the past few years:

- The federal grant contributions have decreased more than 35% over the past 2 years.
- As annual emissions decrease due to more effective pollution controls, funds generated from annual operating fees decrease.
- State appropriations for the statewide program have been minimal.

Budget shortfalls over the past three years have necessitated a self-imposed hiring freeze. As a consequence, our core staff of people is at the lowest level since the Title V requirements were implemented. This creates difficulties when the Division is called upon to react to issues locally, regionally or nationally. It also prevents the Division from strategically planning, which in turn would allow us to operate more efficiently. The AQD faces several issues which should be proactively addressed today. Most worrisome are the potential exceedences of the ozone, and particulate matter standards. Non-attainment area designations may be made for not only Tulsa and Oklahoma City but also many rural communities. If non-attainment areas are designated, the staff faces a burdensome

workload. Additional duties would include:

- Sophisticated modeling efforts
- State implementation plan changes
- Special non-attainment inventory preparations
- Significant outreach to smaller sources
- Possible development and implementation of automobile inspection and maintenance program

COMMENT: When ODEQ Title V fees were originally established they were one of the lowest in the United States. It is now obvious that they were set too low. It is possible that the requested state appropriations and some grant monies may not be made available to the Division and should not be relied upon too heavily when planning the budget. If the Division does not receive the required revenue it will be forced to reduce services which could result in a hindrance to the economic development in Oklahoma. An industry representative commends DEQ on the quality and efficiency of services provided and further stated willingness to pay the cost of increased fees to ensure that the quality of services is not decreased.

RESPONSE: History has clearly demonstrated that the states that have the flexibility to handle issues proactively rather than reactively arrive at solutions that are beneficial to industry, citizens and the environment. Keeping this in mind, there are substantial benefits to these fee increases:

- Timely permit issuance
- More equitable enforcement efforts
- Ability to handle the burdensome workload associated with nonattainment status, if areas in Oklahoma are designated nonattainment
- Ability to use emissions inventories to better address transport issues
- Improved customer service
- Ability to proactively respond to dynamic Air Quality issues at the state and regional levels, resulting in less federal intervention

MR. DYKE: Now we would like to go back to Item
Number 5 on the Hearing Agenda. This hearing was advertised in
the Oklahoma Register for purposes of receiving comments
pertaining to the proposed new Rule, OAC 252:100-5,
Registration, Emission Inventory and Annual Operating Fees,
Subchapter 7 Permits and Subchapter 8 Permits for Part 70
Sources.

At this time, I will call on Shawna McWaters-Khalousi
to give staff presentation on the proposed rule.

MS. MCWATERS-KHALOUSI: Mr. Chairman, Members of
the Council, and ladies and gentlemen, I am Shawna McWaters-
Khalousi, Supervisor of the Special Air Projects Unit. It is
with the utmost respect and a desire for responsible air
quality protection that I stand before you today, in order to
portray the current financial situation of the Air Quality
Division. Asking for additional fees from our industries is
not popular, but I hope after making this presentation,
everyone will have a better understanding of our position and
the proposals we've set forth.

This presentation is for information only. We are
not asking for action today. We are only seeking comment on
our proposal. Six pages have been provided to the public and
to members of the Council as handouts. Previously today, Mr.
Terrill, Mr. Thomas and Mr. Bishop described the current status
of the Air Quality Division. We are facing a dynamic and

increasing number of challenges.

Just to reiterate, these nonattainment issues in
Tulsa and Oklahoma City are becoming more and more important.
New fees that we see coming about in response to these are
modeling, SIP revisions, preparations of special nonattainment
inventories, lower limits for major sources, significant
outreach to smaller sources, potential for I&M program
development, which would take both legislative and rulemaking
efforts. Urban toxics is a new issue that is rather an
iceberg.

OTAG 2. Many of the Western states continue to be
pointed at as potential contributors to Eastern states' ozone
problems. Data analysis and committee participation is
imperative, but time consuming on behalf of Air Quality staff.

Agency directives ask us to concentrate efforts on
those facilities and industries which pose the greatest
environmental risk. However, we have backlog of permits and
behind on our inspections. We're operating a skeleton crew --
skeleton crew on skeleton budget, as we continue to face a
serious budget shortfall.

Mr. Coleman gave us a very simple mission with this
project. Set fees to cover the costs to operate an effective
program. At the same time that we ask the Council for rule
changes, DEQ requested additional appropriations from the
Oklahoma Legislature. During the next Legislative Session, we

Christy A. Myers
Certified shorthand Reporter

1 hope to present the legislators with two options, then allow
2 them to choose. The two options are a fee package or
3 appropriations.

4 To proceed, we developed and used a model year
5 concept. Our permit backlog, the backlog of inspections and
6 the increasing demands on each of our Air Quality staff are
7 evidence of our problems. Our existing program is at rock
8 bottom. In order to truly assess the costs to operate an
9 effective program, we need to develop a model year. We
10 employed a conservative approach by using known and measurable
11 changes to the extent possible. In general, the existing bare
12 bones program was conservatively augmented to acceptable
13 operating levels.

14 Moving to Exhibit 1, which is entitled Model Year,
15 Budget and Expense Projections, with this exhibit we project
16 income -- income at the current fee rates and expenses for a
17 given model year, to arrive at an annual shortfall. The income
18 is defined by Title V emissions, also called annual operating
19 fees, to generate about 4.1 million dollars, at the current
20 16.49 per ton rate.

21 Minor source emissions fees generate about 244,000 at
22 the \$10.00 per ton rate. We collect about \$260,000.00 in
23 permit application fees. State appropriations remain
24 relatively constant at \$235,000.00 annually. Federal grant
25 contributions have decreased in recent years, but our FY 99

Christy A. Spive
Certified Shortland Reporter

1 expects 1.1 million dollars. Grand total of income of about
2 6.1 million.

3 To generate the expenses, we used our existing
4 skeleton budget and added back in items that are needed to run
5 an effective program. In most cases, these items were
6 originally planned but were cut to meet budget constraints.

7 Given our backlog, we are asking to fill an
8 additional 17 FTEs. This equals a Environmental Specialists
9 and 9 Engineers. We'll detail the Title V/Non-Title V split
10 shortly. The expense grand total is 7.1 million dollars.

11 The overall shortfall of \$950,000.00, detailed with a
12 112,000 for Title V and 637,000.00 for Non-Title V.

13 Moving on to Exhibit No. 2, which is a gridline chart
14 entitled Air Quality Division of a Model Year Projections. Our
15 expenses to break those down, enumerate those -- our expenses,
16 we took our program cost from January to June of this year,
17 added in the base budget for July through December of this
18 year, and then added the modest salary increase for existing
19 staff, then we added the salary cost for 17 vacancies.

20 Operational costs which were not in the budget,
21 includes hardware/software replacements and upgrades. We need
22 to replace about a third of our computers annually. Currently,
23 we are down to one new computer in stock. We have a number of
24 re-built computers, but we have old computers that are being
25 used. We must earmark money for software upgrades to meet

Christy A. Spive
Certified Shortland Reporter

1 agency standards. Please note that this entire category costs
2 under \$1,000.00 per person annually.

3 Also, contractual database services are needed to
4 handle the data entry services that involve the anti-tampering
5 program. Currently we have 7 staff members which contribute
6 part-time to these data entry services. This will allow them
7 to devote their efforts to emerging Air Quality issues.
8 Likewise, each change to our annual operating fees requires a
9 database programmer to make that change. Ozone monitoring
10 upgrades are needed by updating and replacing monitoring
11 stations.

12 Indirect costs -- there are 2 components to an
13 indirect cost. We pay 15 percent of our fee. 15 percent of
14 our fees go to an indirect cost, as well we pay a federal
15 indirect rate which is negotiated annually and charged solely
16 against salaries. The FY 98 on-site rate was 10.26 percent,
17 and the off-site rate was 21.49 percent. This leads to a total
18 projected expense of 7.1 million dollars, which details a 2.7
19 million Non-Title V and 4.4 million to Title V. Our income
20 projection, as we talked about previously, is a little under
21 6.2 million. Our shortfall is \$950,000.00.

22 Moving on to our next exhibit, Exhibit 3, which is
23 entitled Model Year Projection, Title V Fee Determination. The
24 model year Title V fee is determined as follows: We take the
25 Title V income, add the projected Title V shortfall to obtain

Christy A. Spive
Certified Shortland Reporter

1 the Title V income requirement. By dividing the income
2 requirement by the Title V tons billed, we project a fee of
3 \$17.72 per ton.

4 With proposed rule changes that will be detailed in a
5 few moments, we provide the necessary revenue to provide the
6 shortfall. The current fee generates a little over
7 \$4,000,000.00. The CPI adjustment of \$0.28 per ton generates
8 another \$69,000.00. By increasing the base fee an additional
9 \$1.05 per ton, we arrive at the proposed fee of \$17.72 per ton.
10 This fee will generate 4.4 million dollars annually.

11 Our meetings with the Air Quality Financial
12 Subcommittee have proved extremely valuable. During these
13 meetings, we were requested by the committee members to
14 recalculate this fee after taking existing cash balances into
15 consideration. We have not obtained hard numbers from DEQ
16 Finance to date, but we expect to come back to the Council at
17 the December meeting with this information. In the meantime,
18 we do have some draft rule changes that we would like to
19 propose for public comment.

20 Exhibit No. 4 is entitled Model Year Projection, Non-
21 Title V Fee. When dealing with the minor source income
22 streams, the only subsets that we can effect are the annual
23 operating fees and the permit application fees. We have
24 attempted to increase fees in both these subsets.

25 For fee determination, we projected the shortfall.

Christy A. Spive
Certified Shortland Reporter

brought in straightforward from the front sheet. We propose generating additional income of \$124,000.00 in minor source permit application fees. This gives an adjusted shortfall of \$512,810.00. By dividing the shortfall by the Non-Title V billed tons, we arrived at the additional figure of \$21.01 per ton. Then, we had to add back in our existing fee of \$10.00, calculating the new Non-Title V base fee of \$31.01 per ton.

The proof of revenue, we have our existing emissions fee plus the emissions fee increase. The existing application fee, plus the additional fees -- this is simply doubling the fees for individual permit applications. This doubling of the individual permit fees, while not asking for an adjustment in the truly minor source fees, is in line with the agency's philosophy of concentrating our efforts on the pollution sources that presents the greatest environmental risk. Other income streams, which are state appropriations and grants, remain the same. We can see that we do generate the shortfall necessary.

Exhibit 5 is a draft rule on the emissions and annual operating fees. In the Minor Source Arena Rule Number 252:100-5-2.2(b)(1)(C), this is where we add the new language, which sets the base fee at 31.01 per ton.

In 252:100-5-2.2(b)(1)(D), we add new language which allows the fee to be reduced to a rate not lower than that year's adjusted Title V fee, if additional state appropriations

Charley A. Ryan
Certified shorthand reporter

or federal grant dollars are received. This is proven language from other DEQ programs, that the new -- the new income, either an additional state appropriations or additional grant dollars, will be used to offset the annual operating fee. This is an important change in philosophy, one to that of a ton of pollution equals a ton of pollution.

In the Major Source Emissions Fee Arena in 252:100-5-2-2.2(b)(2)(B), we set the new base fee at \$17.72 per ton, effective January 1st, 1999. Please note that no offset language was included as both the state and federal Clean Air Acts require that Title V be a self-supporting program.

The last exhibit is one of Application Fees, Rule 252:100-7-3(a)(1). This is where we raise the fee from an applicability determination to \$250.00.

Rule 252:100-7-3(a)(2)(C) doubles the existing individual permit fees. Please note that these fees were lowered last year during rulemaking efforts for the Permit Continuum.

Rule Number 252:100-7-3(a)(3)(C)(D) and (E), these are where the individual permit fees are doubled.

When we do comparisons with other states, we would like to point out that our Title V fees, both as they exist now and as we propose them, are well below the national average and those in surrounding states are well below the federal presumptive minimum of \$33.53 per ton. Likewise, we are below

Charley A. Ryan
Certified shorthand reporter

that rate calculated for fiscal year 1998 for TB&A of \$18.21 per ton. We continue to refine our studies and hope that during the course of this fee case that it will be proven as valuable.

We also can demonstrate that our hourly rates, although we are not proposing one, are well below those that are available in other states.

Our action plan is to take this proposal to the Small Business Assistance Panel on October 16th, 1998. We also plan to perform new calculations, taking the Title V cash flows into account, as well as receiving public comments on the proposed language provided today.

MR. DYKE: Questions or comments from the Council?

MR. WILSON: I have a question. What is the trend in variability in the emission inventory, from one year to the next?

MS. MCWATERS-KHALOUSI: Actually, we have that as a diagram, but we see that you're talking less than a 15 percent trend. Between categories it will be different, but overall we have an increase, but now we have a subtle decrease overall.

MR. WILSON: A decrease in reported emissions?

MS. MCWATERS-KHALOUSI: In total emissions, yes, in total emissions billed.

Charley A. Ryan
Certified shorthand reporter

MR. WILSON: The \$2,000.00 major source or Title V permit application fee, is that a Title V income?

MS. MCWATERS-KHALOUSI: I'm not sure. I know that -- I know that that goes into a permit application fee, but I'm not sure how that's allocated. I can check on that.

MR. DYKE: It should be.

MR. WILSON: It should be?

MR. DYKE: It should be, but I can't answer that question today. I might have it here in front of me in my documents. It should be.

MR. WILSON: So, it may vary well be than a part of the income, the Title V income, in addition to emissions?

MR. DYKE: It could be. It certainly could be. We could be rolling that into that 4.4 million income.

MR. WILSON: Okay.

MR. DYKE: And then, therefore, that would make our calculations of 17.72, based on these figures, incorrect.

MR. WILSON: Okay.

MR. DYKE: David?

MR. BRANECKY: I would just like to go on the record commending the Air Quality Division for their work that they've done. We've come a long way in the last couple of years, as far as financial accounting. We've got -- we've still got a ways to go, in working with the Subcommittee, the Financial Subcommittee of the Council. I'd like to also say

Charley A. Ryan
Certified shorthand reporter

1 that the main focus of the Subcommittee is Title V fees. That
 2 was our charge, was to account for Title V fees. So, we don't
 3 -- we're not only not necessarily endorsing the amount that's
 4 put up today, nor the minor source fee. Those are just numbers
 5 that I think are being thrown out, they're not endorsed by the
 6 Subcommittee of the Council. I would like to continue, and I'm
 7 not sure what the schedule is now between now and the next
 8 meeting, but the Subcommittee is more than willing to sit down
 9 with you guys and continue to work.

10 MR. DYKE: We intend to have a Subcommittee
 11 meeting as soon as we get the cash flow balances brought up to
 12 date, and projected through the end of the --

13 MS. MYERS: Have you determined what the time
 14 frame is?

15 MR. DYKE: I think we should have that by the
 16 end of the week.

17 MS. MYERS: Okay.

18 MR. DYKE: So, we're talking about scheduling a
 19 meeting within the next couple of weeks, if that's when we can
 20 get together. Let me add that we would propose, at the very
 21 latest, comments by December 1. It's our intent to have this
 22 matter wrapped up and completed, and a package -- a complete
 23 package, as close to a final package for the Board packets for
 24 the December meeting. And that would give us two weeks before
 25 -- and that's our mailing time, isn't it, Scott, two weeks

Charley A. Ryan
 Certified Merit-based Reporter

1 before the next one? Comments, written comments as soon as
 2 possible would obviously be good for us. And as soon as we get
 3 a revised -- we go back through, we re-crunch the numbers, we
 4 reach some agreement with the Finance Committee, we'll attempt
 5 to put this proposed rule back out on the web page with the new
 6 figures in it. We will not change them until we've gone
 7 through this process, at the Committee meeting again.

8 MR. WILSON: Another question. The requirement
 9 for a minor source to obtain a synthetic minor, is that
 10 considered Title V expense, or is it Non-Title V?

11 MR. DYKE: I think today that that's being
 12 booked as Non-Title V.

13 MR. WILSON: That's Non-Title V.

14 MS. MYERS: That's not always been.

15 MR. DYKE: Not always been. And that would be a
 16 subject that we would need to review some of our T&Es on.
 17 We're considering a minor source for fees, though.

18 MR. BRBISCH: David, by the time that the
 19 Committee meets, I would like them to have your latest monthly
 20 update on your financial status. And when you ask for that,
 21 remind them that this had been asked for before and promised
 22 that we would have a monthly update. And I don't know whether
 23 you've had that or not, but I don't believe you have. So, if
 24 you don't mind reminding the administrative branch to get this
 25 to you all.

Charley A. Ryan
 Certified Merit-based Reporter

1 MR. DYKE: We'll carry that message back.
 2 Comments, Bill.

3 MR. PISHBACK: Bill Fishback. I am here
 4 representing Mid-Continent Oil and Gas Association. There are
 5 a few comments that I would like to make. I agree with Mr.
 6 Branecky that there has been tremendous progress on the part of
 7 the Air Quality Division in accounting for and managing their
 8 finances. I served on the subcommittee -- the subcommittee of
 9 the Air Quality Council for a couple of years, and there is a
 10 great -- great deal of progress that's been made. The fact of
 11 having this discussion, and having the figures in front of us
 12 is evidence of to that. We were required by statute to do this
 13 from the very beginning in the Title V program and were -- we
 14 were negligent in not doing so.

15 I think, also, that it's -- it's very important that
 16 we recognize that we -- we do have a program that is adequately
 17 staffed to serve the needs of the citizens of Oklahoma and
 18 protect the environment. Having said that, I have some
 19 concerns which I want to express on the record, and which Mid-
 20 Continent Oil and Gas will also provide written comments by the
 21 December 1st deadline.

22 The major concern that we have, I think, is the
 23 disproportionate growth in this program that's relegated to
 24 Title V. If you look at the 17 vacancies that are proposed to
 25 be filled, 75 percent of those, 12.75 FTEs are allocated to

Charley A. Ryan
 Certified Merit-based Reporter

1 Title V, and only 4.25 are allocated to the Non-Title V.
 2 Historically, the T&A study estimated that the Title V effort
 3 in Oklahoma would be 53 percent of the total effort of the Air
 4 Quality Division. That was some years ago. It was an
 5 estimate, you understand that. But historically, in 1997, the
 6 most recent year for which we have complete data, during the
 7 first 8 months of 1997, the Title V expenditures were about 81
 8 percent of the total Air Quality Division expenditures. And as
 9 you can well imagine, if you have cost of labor under control,
 10 basically you have the entire program under control, because
 11 it's primarily driven by the cost of salaries and expenses.
 12 After this was pointed out, the Air Quality Division made
 13 tremendous strides, primarily in informing their staff how to
 14 code their -- their time sheets. So, that the -- for the last
 15 -- the last four months of 1997, the total amount of staff time
 16 that went toward Title V was reduced to about 60 percent, which
 17 of course, is much closer to what was originally estimated.

18 Mid-Continent Oil and Gas Association used the first
 19 8 months of 1997, where Title V was charged 83 to 85 percent of
 20 the total, that's basically being overcharged to Title V. The
 21 numbers when you run through them come to about a quarter
 22 million dollars that was erroneously by the Division's own
 23 subsequent corrections, charged to Title V. It is
 24 our concern that that money be recovered by some mechanism.
 25 And I understand from our discussions previously with the State

Charley A. Ryan
 Certified Merit-based Reporter

1 finance people, that basically it is impossible to go back and
2 adjust those records in the past, so maybe the only option open
3 to us in the future, is to reduce, by some proportion, the
4 Title V fees that would otherwise be increased. That number
5 happens to be about \$1.00 a ton, also, because there is 250,000
6 tons in inventory.

7 And the concern that this would sacrifice air quality
8 in Oklahoma or sacrifice the protection of the environment is a
9 very valid concern. Although I would point out that the Title
10 V program, in theory and by EPA's own white papers, is not
11 supposed to add any additional requirements to regulated
12 sources. It's merely supposed to incorporate all those
13 requirements in one place. So, there are not unregulated
14 sources that are emitting excess emissions into the environment
15 as a result of Title V permits not being issued.

16 So, I would submit for the Council's consideration
17 that the growth in FTEs in the Title V program is really not
18 warranted, based on protection of the environment. It might be
19 warranted based on speeding up the rate at which permits are
20 issued. But as we heard earlier today, there is no practical
21 consequence of delay in permit issues. The environment doesn't
22 suffer and although it looks good to issue permits as quickly
23 as we can, I don't think we really need to invest 75 percent of
24 the growth in staff in issuing permits faster, when there is no
25 good reason to do so.

Christy A. Spurr
Certified shorthand Reporter

1 Another point I wanted to make is about the
2 administrative indirect costs. As Shawna said, this is 15
3 percent of the total fees collected. It is internally assessed
4 fee that's assigned by the -- assigned to the Air Quality
5 Division by the DEQ. And it is twice, at \$615,000.00, it is
6 twice the amount of the shortfall. I would like to see a
7 complete accounting and disclosure of what the administrative
8 indirect fees go for.

9 The reason I'm concerned about that is because, in
10 1996, those administrative indirect fees were \$887,000.00,
11 which was 20 percent of the total fees collected. In 1997,
12 they were \$17,000.00, and this was an adjustment to help
13 balance the books of the program. But the point that has been
14 made in the past, and I'd like to make again, is you either
15 need that fee or you don't. If it's \$887,000.00 one year, and
16 \$17,000.00 the next year, now it's proposed to be \$615,000.00,
17 there needs to be some accounting on what that fee is for. And
18 if you don't need it, as apparently was not needed in 1997, you
19 just eliminated the shortfall by a factor of 2.

20 The other comment I'd like to make is that all the
21 staff in the world, unlimited funds, as we said this morning,
22 is not going to solve the problem of efficiency, turnover,
23 productivity, morale, all the things that affect an
24 organization's abilities to deliver the goods and services that
25 they're paid to deliver. That's out of our control. It's

Christy A. Spurr
Certified shorthand Reporter

1 based on the salaries established by the state government, for
2 the employees of the Division, and there is absolutely no way
3 that we can effect that. So, I think it is a little bit
4 misguided to say that we can just add 17 people, and in effect,
5 if the efficiency and turnover and all the other factors are
6 not improved at the same time --and, of course, I think
7 everyone will admit the salary is the thing that improves that.

8 If you had no control over that, we may not actually
9 experience the gains that we seek.

10 Again, there is another point here about the state
11 appropriations. If you look at the relative numbers that have
12 been presented to us, the state appropriation is almost in the
13 round-off area. It is one-twentieth of the Title V fees.
14 Whether there is state appropriation or not, I think is
15 irrelevant. If this is an effort to get more money from the
16 state, that is great. But if the citizens of the state all
17 benefit from the program, then the citizens should all pay.
18 But as you all know, it is very, very easy for Legislature to
19 pass fee programs that effect rate payers of those fees as
20 opposed to the general public.

21 And the last thing I'd like to make is a suggestion
22 that I made before, which is that the provision be put into
23 this program, so that whatever fee is decided on, whatever fee
24 is ultimately paid, can be paid quarterly instead of annually.

25 This does several things that I think are beneficial for all

Christy A. Spurr
Certified shorthand Reporter

1 parties involved, and I would say that can be just as important
2 here. The company does not have to pay a quarterly fee. If
3 they only owe a few hundred dollars, then the administrative
4 cost of cutting checks overcomes this. But in order to assist
5 DEQ in the great strides that they have made in managing the
6 finances, it's appropriate, I think, to have the money spread
7 out, coming in over quarters instead of annually. The blunt
8 fact is that the Title V program is a cash cow for DEQ, and we
9 all know that in the past, when the money has been there, the
10 Legislature can hide it, with the idea of taking it.

11 So, if we can have one-fourth of the income in one-
12 fourth the year, I think it would solve that problem. It would
13 also let DEQ manage their finances better. And it would also
14 allow companies who pay tremendous in -- hundreds of thousands
15 of dollars a year in fees, to spread out their fee rate.
16 Nobody would like to make a mortgage payment for an entire year
17 all on January 1st or April 1st, so, this is the same concept.

18 All of these things we'll be putting in a letter to
19 submit formally. But I wanted to get it into the record today,
20 because I think they are important concerns that need to be
21 addressed by, not only the Air Quality Council, but also the
22 Finance Subcommittee, and also the DEQ. And again, I must say
23 that we, without a lot of effort and a lot of work, we wouldn't
24 be here today talking about it. And I really do appreciate

Christy A. Spurr
Certified shorthand Reporter

1 everything that's been done to date. The cooperation has been
2 excellent, and I think we are -- I think we're headed in the
3 right direction. Thank you.

4 MR. DYKE: Any additional comments from the
5 public? David?

6 MR. EMERY: My name is David Emery, I'm
7 representing the Environmental Federation of Oklahoma. I would
8 like to echo a little bit of what Bill is saying. You guys
9 have done a wonderful job. This is much, much better than last
10 time. I think you know what we need to do. We talked about
11 the accountability. I think B.J. had some good points earlier
12 when she said business doesn't like to pay any more fees.
13 We're not asking you guys to come out like beggars and ask for
14 money. But it is an accountability of what the money is for.
15 Businesses do not want to write a blank check. So, I think
16 you've done a real good job on Title V, it does look better.

17 But, on the minors, you know it's hard -- it's hard
18 to understand, I still don't understand why there is a
19 \$637,000.00 shortfall in the program as it would exist if there
20 was no Title V program at all. And it may be simple, but if I
21 don't understand it, maybe other people won't. I think you're
22 going to have a hard time convincing them, therefore to pony up
23 money. Obviously, we would all prefer for our costs to go
24 down, but at the same time, we did this a few years ago, I
25 spoke on behalf of Total Petroleum, and Jeff Wallerd spoke on

Charley A. Myers
Certified shorthand reporter

1 behalf of Wierhouser and we both reiterated the fact that we
2 want the State of Oklahoma to have a good program, and we feel
3 we have an advantage to having a good permit program for
4 industry. And when you get a permit application in, you can
5 actually get a permit back in a timely manner, then you need
6 the resources to do that. But you are always going to have
7 trouble getting industry to just give you a blank check,
8 because we just don't know what you are doing with the money.
9 So, accountability that you talked about this morning, I think
10 is the key to getting some kind of funding done. I'm sure this
11 will all work out. There is going to be some give and take,
12 but I think some accountability, just a little better
13 explanation of where the \$637,000.00 shortfall for the minors
14 are and would be very helpful in explaining why we need higher
15 fees.

16 MR. DYKE: Yes, ma'am.

17 MS. MEDLEY: Just a quick comment. I think
18 we'll know a lot more as they -- between now and December,
19 produce a little more information and get it down. I assume,
20 hopefully, that we can call you and get a copy of that so we
21 can readjust our comments, if we wanted to, I don't know how
22 you are going to handle that.

23 One other thing I would like to say is, I appreciate
24 the fact that industry doesn't want to write a blank check.
25 First, you haven't been writing a very big check and certainly

Charley A. Myers
Certified shorthand reporter

1 in Title V, since this program started. And I think we are
2 paying for it now by having to adjust. I think we made a
3 mistake in the beginning, and I just think we all need to
4 realize that.

5 Again, I don't want industry upset about paying any
6 more. But I do feel that industry is being overseen by Air
7 Quality. Yes, because it's a federal law, but also -- and a
8 state law, but also they're the ones polluting, therefore they
9 have to help pay for permitting and so forth. And we just
10 always need to keep remembering that. And we as taxpayers,
11 individuals pay, also, as we all know. So, it's just, like it
12 or not, if you're going to have something good, if you're going
13 to have something done right, you are going to have to pay for
14 it. I think we all need to come up with, you know, a little
15 more detail on the figures, and then I think we'll have a
16 better idea and hopefully industry and all of us (inaudible).
17 But I think at the end -- I think in the end we'll see that
18 we'll have a pretty good budget. For years, we've never seen a
19 budget. It would be nice to see one.

20 MR. DYKE: Nadine?

21 MS. BARTON: My name is Nadine Barton, I'm with
22 CASE, Citizen's Action for a Safe Environment. I have watched
23 this fee -- Title V fee process from its birth. And as I said
24 this morning, when you all voted for one of the lowest fees in
25 the United States, that you would have problems when it came

Charley A. Myers
Certified shorthand reporter

1 down the line, and you are having it now. And I hope that the
2 EPA can see what we, the citizens, are up against here in the
3 State of Oklahoma, with some of the comments made previously by
4 industry, as this Title V program is a cash cow. And that, you
5 know, we have a great program here, we don't need any more
6 people to run this Title V program.

7 Well, in my opinion, the figures speak for themselves
8 as far as how many people that we have, and how many permits
9 that we have coming up, and what the case load or the permit
10 load is per person. And I will state again, as I did this
11 morning, I feel that this is a moral issue. It's not right to
12 overload these people that we have with so much work. And we
13 haven't even gone into the real detailed and heavy duty permits
14 in Title V as we stated this morning. So, what's our future
15 going to be for those people that are qualified to do that? I
16 will have to say that it is refreshing to see some figures, now
17 that we have a change in direction with the director, of this
18 amount. And I would have to -- I would have to concur with Mr.
19 Fishback about all of a sudden, you know, that big amount of
20 money that we had in '97, that deficit, and now we have a
21 different, you know, why do we have that difference?

22 But I will say that it is not right for the industry
23 to be the one that pays for the salaries, a majority of the
24 salaries of state employees, to basically enforce themselves.
25 And it has been seen time and again, both federally and in

Charley A. Myers
Certified shorthand reporter

1 state issues, that how is the best way to get away with
2 whatever you can is to de-fund a program so you don't have
3 enough people to run the program, to write the permits, to do
4 the enforcement and to go out. So, therefore, you don't -- you
5 don't, you know, you can get away with pretty much what you
6 want to. And that's the way it has been going on since we've
7 been going into this Title V program. We have to have more
8 people.

9 And I will refer to one of the things that Shawna
10 said in her opening statement concerning ozone. That some of
11 those industries that are doing the most polluting have not
12 been effectively policed where ozone is concerned. Am I
13 correct in reiterating your statement, basically? I don't want
14 to be incorrect. At the beginning of your statement.

15 MS. MCWATERS-KHALOUSI: I remember bringing up
16 some issues regarding OTAG and transportation issues
17 nationally, and talking about attainment issues and that if we
18 were to designate a nonattainment area, we would have to lower
19 our major source definitions, so that those that emit less
20 pollution would actually be major sources.

21 MS. BARTON: And one thing about the minor
22 sources that hasn't been mentioned today, is Chief Supply,
23 which is now -- what is it?

24 MR. MEDLEY: Greenway. It's a nice
25 environmental name.

Christy A. Myers
Certified shorthand reporter

1 MS. BARTON: Greenway, you know, has taken an
2 immense amount of time from DEQ, just to police them, of what's
3 going down -- what's going on down there. So, they should be
4 paying -- an industry, hello, you are subsidizing them. Make
5 them pay their own way. That's all I have to say.

6 MR. DYKE: Additional comments? Frank?

7 MR. CONLEY: Frank Conley, DEQ Board.

8 THE REPORTER: I'm sorry, Frank, I can't hear
9 you.

10 MR. CONLEY: Frank Conley, DEQ Board. I want to
11 get it on the record, about the comment period. Are you going
12 to extend this comment period, and if so, for how long?

13 MR. DYKE: Comment period. We're establishing a
14 comment period, a written comment period to end on December 1 -
15 December 1st. Of course, we'll take comments at the hearing
16 on the 15th. So, we'll continue the comment period that's open
17 today until December 1st.

18 MR. BRANECKY: I would like to respond to
19 Nadine, and I'm going to take off my Council hat and put on my
20 OG&E hat for a little while if it's all right. I didn't want
21 people to get the impression that all the industry is doing
22 things underhandedly. OG&E supports a good program for the
23 State of Oklahoma. We've paid well over one and one quarter
24 million dollars in Title V fees since it's inception. And OG&E
25 does the best we can to protect the environment. And I think

Christy A. Myers
Certified shorthand reporter

1 most industry in the state does that. We may be talking about
2 a few, but most industry tries their best to do what's good for
3 the environment and the State of Oklahoma.

4 MS. BARTON: I would like to respond back. Just
5 like with any profession, whether there is doctors and lawyers,
6 guess what, you've got to take the bad with the good. I
7 recognize OG&E, but there are some bad people out there, bad
8 industries out there, we have to take it along with the good.

9 MR. DYKE: Additional comments from the public?
10 Additional comments, questions from the Council today? We
11 welcome your comments in writing.

12 MR. BREISCH: I'll entertain a motion that this
13 item be continued until the next regular meeting. David,
14 question. Do we have to put in this that the comment period is
15 ending on the 1st of December, or is that statement in the
16 record?

17 MR. DYKE: I think for this purpose, the
18 statement in the record will be sufficient.

19 MR. BREISCH: Okay. Well, I'll entertain a
20 motion.

21 MS. MYERS: I so move.

22 MR. FISHBACK: David, if I may, do you have --
23 can you designate someone to whom these comments should be
24 addressed? Should it be Shawna?

25 MR. DYKE: Go ahead and send them to Shawna.

Christy A. Myers
Certified shorthand reporter

1 MR. FISHBACK: Okay.

2 MS. MYERS: I make a motion that we continue --

3 THE REPORTER: I'm sorry, Sharon, I can't hear
4 you.

5 MS. MYERS: I make a motion that we continue
6 until the December meeting.

7 MR. BRANECKY: Second.

8 MR. BREISCH: We've got a motion and a second
9 that we continue this item to the next regular meeting.

10 Myrna, call the roll.

11 MS. BRUCE: Mr. Branecky.

12 MR. BRANECKY: Aye.

13 MS. BRUCE: Ms. Myers.

14 MS. MYERS: Yes.

15 MS. BRUCE: Mr. Wilson.

16 MR. WILSON: Aye.

17 MS. BRUCE: Dr. Gross.

18 DR. GROSZ: Aye.

19 MS. BRUCE: Mr. Breisch.

20 MR. BREISCH: Aye.

21 MR. BREISCH: That concludes the hearing portion
22 of this meeting.

(PROCEEDINGS CONCLUDED)

PROCEEDINGS

MR. DYKE: The next item on the agenda is Item
Number 8, OAC 252:100-5-2.2, Registration, Emission Inventory
and Annual Operating Fees; OAC 252:100-7, Permits for Minor
Facilities; OAC 252:100-8-1.7, Permits for Part 70 Sources.

I'd like to start the presentation today, and there
will be several people speaking on behalf of staff. If we
could hold our questions and comments until the staff has
presented all of it's information, it would make things work
smoother today.

I'll point out that this matter was first brought
before the Council on the October 20, 1998 meeting. We have
received public comments from the Environmental Federation of
Oklahoma, Mid-Continent Oil and Gas Association, and the Small
Business Advisory Panel. Copies of those comments and staff's
responses are contained in the Council packets, and I believe
they're here on the front desk. Copies of this presentation of
these overheads will be presented into the record today.

I would like to begin by talking about the Air
Quality Division Program, a statewide program operating in all
77 counties.

I would like to present some information here
regarding our workload. Currently our Monitoring and Quality
Assurance groups are operating 41 monitors at 31 monitoring
sites across the state. We currently are pooling about 130

Christy A. Myers
Certified shorthand reporter

4
data audits a year, and about 950 instrument precision checks.

This is an area where we must maintain this level of service.

In addition to the existing monitoring sites, we have a new
program for PM 2.5. We have added 18 new PM 2.5 monitors.
They are either on-site or will be on-site shortly, and I think
our total will be 20 before the year is out.

The next area I want to talk about is the
Enforcement/Compliance Section. Currently, this -- the
Compliance Section is performing 340 compliance inspections, at
least that's what we performed last year. That's down about 50
from the year before. That's 340 inspections, in most
situations, Title V sources, out of 425 to 450 Title V sources.

We are not inspecting all of our Title V sources in a year.
The reason we were able to maintain this level of compliance
inspections, which was up in the 340 range, was because we
utilized some of our Enforcement staff to cross-train to help
on those inspections.

Regarding formal enforcement actions by our
Enforcement Group, we maintained a reasonable level there with
33 enforcement actions, formal enforcement actions last year.
That was the same as the year before, but that was down about
25 from the previous year. I would like to state that we do
have 74 enforcement referrals waiting to be worked.

Eddie, do you have anything to add in that area?

MR. TERRILL: Well, I might add that we know of

Christy A. Myers
Certified shorthand reporter

at least two areas where enforcement is going to be important in the coming year. One of them is the Inspector General's Report that we just issued to Congress. I don't want to go into a lot of detail with it, but what it basically said was that in the regions they audited and the states they looked at, there was a deficiency in the compliance and enforcement effort. One of the things they wanted to tie it to was two things happening. One, a change in the significant violators policy, and also the timely and appropriate guidelines. Once those are issued, which we expect to happen sometime in the first half of '99, we think that EPA is going to make a real effort to insure that the states are following that guideline, and the hammer we're supposed to be used is withholding of our earmarked 105 money, grant money for enforcement, or lack thereof. Lack of enforcement could constitute them to withhold grant money. We need to do a lot of work with them on that, to make sure it is not a onerous type oversight requirement for more of a reasonable requirement to insure the program is done in a proper fashion.

The other item is the national initiatives for the priorities for the year 2000. We just got back from a national meeting where it was agreed that the regions should work with the states to set priorities, and to work together and to pool resources. What that means is that in order for the regents to have an oversight priority in the states, they want to be able

*Christy A. Spore
Certified shorthand reporter*

to come in and do a certain amount of inspections. We don't believe that's an appropriate role for them, unless we cannot get to those that legitimately need to be done. In that case, we don't really have a lot of argument to their point that it needs to be done, because they do need to be inspected. But we feel like if we can get to them, we need to be doing them ourselves. But if we can't, we're probably going to have to work out something where we share our resources in some type of fashion, so that they all get inspected.

MR. DYKE: The next item here is Complaints. We worked 374 or we assisted in working 374 complaints statewide last year. We resolved all of those within the timelines established by the agency.

The next area here that I have on the list is Emissions Inventory. Currently we have about 1600 facilities on the Emissions Inventory. That group, of course, collects the emissions for the criteria of pollutants, they do our annual billing and collecting of emissions fees. This is an area where we cannot reduce services. Our Emissions Inventory must be -- it must be better. It's got to continue to be better. Any modeling that's done for attainment, nonattainment, for OTAG, is going to be utilizing these inventories. We've got to refine them and continue to work on them.

At this time, I'll go ahead and look at Rules and

*Christy A. Spore
Certified shorthand reporter*

Planning. Our Rules and Planning Group is responsible for all of our SIP activities. Most of you know the Rules and Planning Group from the rules that we bring in before the Council. They are also responsible for working on the Dewrong and Rewrite initiative, which is to review and correct, clarify all of our regulations by December 31st, 2000. That in itself is a pretty big task. At this time, I would like to call on Scott Thomas to talk about some of the other things going on in that area.

MR. THOMAS: My name is Scott Thomas, I'm the Program Director of the Analysis and Inventory Section in the Air Quality Division. I'd like to just briefly describe the upcoming rulemaking activities that we see before us on this. Right now we presently have a staff of 5 people working in the rules unit. We are mainly assisted by Barbara Hoffman, and I'd like to take this opportunity now to thank them, they've really been doing a good job. But there is a lot more to do.

There is a lot of rules coming down the pipe, and we're going to probably have to add staff or get priorities somewhere straight to handle it all. We're getting the rules really from two different sources. One is what I would call our Oklahoma driven goals and priorities. The second source would be priorities from EPA. As far as our Oklahoma priorities for establishing rules, we've been directed, as David said, by the Legislature to review all our rules by December of 2000. Right now we have done 10 of the 26 rules.

*Christy A. Spore
Certified shorthand reporter*

So, we look for 16 more coming through, as far as the permit for simplification in the Rewrite/Dewrong and so forth.

We also are going forward with the agencies directive and goals of the permit continuum, regulatory continuum. It's a rule that involves many rulemaking changes. But right off the bat, it's going to involve several Permits by Rules that will be coming before the Council. These will include in the near future chrome electroplating, general manufacturing, rock crushers, concrete plants, asphalt plants, oil and gas compressors, and natural gas liquids. We are also receiving a lot of proposed rules from the Environmental Protection Agency.

Generally we consider these in most cases to be unfunded mandates because there is no money to associate it with. Basically, if we don't do this, EPA will, in most all of these cases.

Some of the rules that we'll be looking at in the near future in this category would include medical waste incinerators. The rules that would be associated with the 8 hour ozone standard in Tulsa or Oklahoma City go nonattainment, which is very likely. I'd like to point out in this case, we may have to submit a set, if we choose to go the transition route for Tulsa or Oklahoma City, as early as May of 2000. We would have to identify nonattainment areas as early as July of next year. That takes quite a bit of staff time and work. It's too early to say what those rules -- what would be in

*Christy A. Spore
Certified shorthand reporter*

those rules, but very likely will contain emission limitations for VOC and NOX sources.

Other things that are out there are -- EPA's proposed new source review requirement rules are supposed to be out in the spring, as well as regional (inaudible) rules,

transportation and conformity rules, in which we would have to establish emission budgets for mobile sources. We would also be involved in promulgating MACT standards for the source categories in a 10 year period that EPA fails to promulgate in.

Other rules we can see coming down from EPA include pathological incinerator rules, biowaste incinerator rules, miscellaneous industrial and commercial incinerator rules, drilling parts and reclaimers, incinerators.

I'm sure there are some rules out there that are coming down that I missed. Needless to say, we're going to be swamped with work in this area. Thank you.

MR. DYKE: I'd like to continue on here with the Special Projects. The Special Projects Group does have some alternate sources for funding and we did discuss the Lead Based Paint Program. We have a Lead Based Paint Graph associated with that. The Special Projects Unit coordinate our Clean Air Alert Programs and work with the ACOG, probably a lot with ACOG in the future.

This group also maintains and produces the daily Pollution Standards Index, the PSI every day. They also do some of our

Christy A. Spoor
Certified Marshall Reporter

general work, such as the newsletter and maintaining our web page.

I'll go back now to permitting, and I would like to put up some information on our permitting program. The blue is Non-Title V permits, the yellow is Title V permits. Going back in history a little bit, in this area right here, '93 and '94, we started wrapping up with people. We also knew we had a tremendous, tremendous backlog of permits at that time. We didn't have any tracking mechanisms. We had one, but it wasn't working very well. We didn't have any timelines for moving those things out. The agency implemented timelines and with the increased staff and those new timelines, knocked out a lot of those permits, about 800 or so in '95, '96 and '97. In '96 we started working on our first Title V permit. We also implemented a great deal of training, negotiations with EPA, on how we were going to do the program. What -- we basically learned how to do it.

In '97 we issued 17 Title V permits. And I'm sure most of those, if not all of them, were associated with that very first general operating permit for crude oil and natural gas that we put in first thing. That's where our first Title V filings were going to be, obviously that's where we need to target. I would imagine that it saved a lot of effort, staff time and effort, and it probably saved a lot of time and effort on the industry as well.

Christy A. Spoor
Certified Marshall Reporter

In 1998, it looks like we're going to issue about 93 Title V permits. You can also tell that our other work, Non-Title V, has dropped off quite a bit. That is probably directly proportional to the time it takes to do Title V permits versus the number of staff that we have.

The last item over here is 264, is what we have to work today. That's our backlog. And with that, I'll call on Ray Bishop to talk a little more about our Title V program.

MR. BISHOP: My name is Ray Bishop and I have worked primarily in the Permits program. The Permit program has instituted a number of time-saving and efficiency moves over the past year. For that reason, we have increased the efficiency of the program. However, we do not feel that the efficiency increases are going to be sufficient to meet the demands of issuing the Title V permits within the time frames that we agreed to do so with the implementation plan.

To date we have issued 91 Title V permits. Sixty-seven (67) of those were individual permits, the rest of them were all synthetic, not synthetic minors, but general operating permits. A general operating permit is simply an authorization to work or to operate under a permit that has already been issued. Therefore, the time required to issue those permits or to issue the authorizations is much less than it is to issue an individual permit. Calculations to date indicate that a Title V permit requires something over twice the time,

Christy A. Spoor
Certified Marshall Reporter

or about twice the time of a Non-Title V permit. We issued -- have issued historically an average of around 600 Non-Title V permits each year. That has gone down slightly to 500 or so, but we feel like that will probably will continue on throughout the time we have to issue Title V's. With the Title V program -- Title V permits that are remaining to be issued, which I calculate to be slightly more than this, because I anticipate somewhere over 400 Title V permit applications being received.

I feel like that when the first Title V permit that we issued expires, which will occur in June of 2002, that we will still have remaining somewhere in the neighborhood of 100 Title V permits that have not been issued. The numbers here don't bear that out exactly. But the reason that is is because the first permits that we have issued have all been the very simplest and least time consuming permits. That was done by design to give us more experience for when we do get to the more difficult permits. It's anticipated that one of the permits that remains to be issued will require in excess of 2,000 hours to issue, and that may be a very, a very conservative estimate. It could be much larger than that. We have already issued one Title V permit that has required more than 2,500 hours. All of the most complicated and time consuming Title V permits are yet to be issued, except for the one that we have issued.

Christy A. Spoor
Certified Marshall Reporter

We do not anticipate meeting the time frames with the staff that we have. Presently there are 22 engineers on staff, 3 of whom are supervisors and do not do a great deal of permit writing, although they do some. Two additional engineers work primarily in developing general operating permits, or Permit by Rule, or working with the permit staff.

An additional burden that we see coming has already started, and that is some of the Title V permits that have already been issued are coming back for modifications. We cannot anticipate how many of those may come back for modifications before the Title V permit expires, but we do know that that can be significant. And some states anticipate as much as 40 percent of the permits needing some type of modification before the permit actually expires.

MR. DYKE: One of the reasons why we're here asking for fee adjustments and appropriations has to do with some of these items. Back in '96, the Financial Committee put together a report that basically says you've got to reduce expenditures. You've got to reduce expenditures because you're spending more than you're bringing in. Today's, this year's budgeted expenditures, is 1.8 million dollars less than we spent in the fiscal year '96. Back when we absorbed the Oklahoma City County Health Department, we lost \$250,000 of match money, money that they put into the program. We hired the staff into our vacancies, but we didn't absorb the

Charley A. Spurr
Certified shorthand reporter

additional vacancies and the additional people, and we lost \$250,000 of money that went into running the program in the county. If you'll recall, or some of you might remember that - also remember that time we had an option in our fees to add a dollar a ton for any of the Tulsa or Oklahoma, either one of the Tulsa or City County Health Departments. If they went un- and decided not to stay in business, then we would add a dollar a ton. We did, and then the next year, because that rule did not get signed by the Governor's office, we had to refund that \$250,000. We did that through a credit. Federal grant reduction, over the last three years, we've had a 15 -- a little over 15 percent reduction in federal grants equalling \$447,000 less money a year than we're receiving. And as most of you know, and as Ray and Scott both alluded to, a lot of additional federal mandate is coming down. What this has amounted to is reduced staff. A considerable reduction in staff to date. That's also helped us get our budget down to some extent, also.

This is where we're at today. Our organizational chart today has 138 positions on it. Eleven of them are vacancies of the agency, and we have to continue to keep those vacant. Our current level today of actual people is 104, and that includes our legal staff and the secretary in that area. So, 99 people -- 99 people other than our legal staff working on Air.

Charley A. Spurr
Certified shorthand reporter

Our model year which we based our fee requests -- our fee proposals on, Shawna will talk about it in just a minute, add 17 or at least funding for 17 vacancies. We think 121 FTE's is where we need to be to run our program. I'll point out that we today have 23 vacant positions that previously were filled. Like I say, they were all not filled at one time, but pretty close to it. Twenty-three vacant positions, we've asked for 17 of those back in our fee request proposal.

I've got one other graphic I would like to put up. This was recently calculated for fiscal year '96 through '98, total income for the agency, I'm sorry, for the Division, for the Air Program on all sources of grants and fees. The Title V income, the Title V monies received represents 64 percent of all the income we've got, matched up with those particular years, FY '96 through '98. Our expenditures for those same years, total expenditures for the Air Program, Title V expenditures represented 61.3 percent of all our expenditures over that period of time.

And I think with that, I'll call on Shawna to talk about our model year and our fee proposals.

MS. MCWATERS-KHALOUSI: Mr. Chairman, Members of the Council, ladies and gentlemen, I'm Shawna McWaters-Khalousi, Supervisor of the Special Air Projects Unit. Overheads used in this presentation will be made part of the hearing record.

Charley A. Spurr
Certified shorthand reporter

Once more, I'm charged to present information concerning our current financial situation and to recommend reasonable and appropriate Air Quality fees.

Since the October Council meeting, we've met on one occasion with the Small Business Assistance Panel, and on two occasions with the Air Quality Council's Financial Subcommittee. As Mr. Terrill, Mr. Dyke, Mr. Thomas, and Mr. Bishop have described previously, we continue to face an increasing regulatory burden, as well as economic hardships. As a reminder, Mr. Coleman gave us a very simple mission: Set fees to cover the costs to operate an effective Air Quality program. Concurrent to this fee proposal, we have requested additional appropriations from the Oklahoma Legislature. We hope to present our legislators with two viable options, leaving the ultimate decision to them.

We approached our fee proposal by developing a model year. Due to cuts and decreases that we have made to our program, to adequately assess the costs to operate an effective program, we needed to develop a model year. We employed a conservative approach by using known and measurable changes to the extent possible.

The first exhibit is entitled Air Quality Division - Model Year Projections. With this exhibit, we forecast expenses and income at current fee rates for a model year. From these two numbers, we calculate an annual shortfall.

Charley A. Spurr
Certified shorthand reporter

Please note that all income and expenses are appropriately allocated to Title V and Non-Title V.

In the expense projection, we used our existing lean budget and added back items that are needed to run an effective program. In most cases, these items were originally planned but were cut when revenues decreased.

Given our backlog, we are asking for an additional 17 PTEs, 8 Environmental Specialists and 9 Engineers. This gives an expense grand total of just over 7.2 million. These expenses detail to 2.7 million in Non-Title V, and almost \$4 and a half million in Title V.

Looking at the income portion of the projection, state appropriations remain constant at around \$235,000 annually. The Tulsa City County contribution is \$235,000 this year. The future of this income stream is somewhat questionable. A separate request has been made to the Oklahoma Legislature for additional monies to fund the Regional Office at Tulsa. Minor source emissions fees generate about \$244,000 at the \$10 per ton rate. We collect about \$260,000 in permit application fees annually, \$83,200 of which is from Title V permits. Title V emissions or annual operating fees generate about \$4.1 million at the \$16.39 per ton rate. Federal grant contributions have decreased in recent years, but FY 99 expects \$1.1 million. The grand total of income is just over \$6.1 million annually. Our shortfall, our overall shortfall of just

Shelby A. Hyatt
Certified Bookbind Supervisor

over \$1 million details to about \$757,000 for Non-Title V, \$274,000 for Title V.

The second exhibit that I have is entitled Title V Fee Calculation. With this, I bring forward the Title V expenses of almost \$4 and a half million from our model year. We then subtract out the Title V permit application fees of \$83,200. This leaves a remaining expense of almost \$4.4 million to be generated through annual operating fees.

Our latest estimate of the Title V or major source funds that will be billed is \$249,276. We divide the billing into the total remaining expenses. We -- the staff recommends a Title V fee of \$17.56 per ton. We compare this fee to the current fee of \$16.39. We see that involves an increase of \$0.89 over the current fee when combined with the current \$0.28 CFI adjustment. Staff recommends that this change occur per the new language contained in OAC 252:100-5-2.2(b)(2)(B). Beginning January 1, 1999, the annual operating fee for Part 70 sources shall be \$17.56 per ton of regulated pollutant for fee calculation.

Please note that this staff recommendation differs from the \$17.72 per ton originally recommended at the October Council meeting. In response to questions raised and recommendations made by the Council and Financial Subcommittee members, staff realigned income streams and revisited expenses that lead to a downward adjustment to the Title V

Shelby A. Hyatt
Certified Bookbind Supervisor

recommendation.

The third exhibit is entitled Minor Source Fee Calculation. The recommended fee was determined as follows: From the model year, we bring forward the Non-Title V expenses of \$2.7 million. Then, we subtract all forecasted income streams. We expect to generate \$176,800 annually in minor source permit application fees, without an increase in the minor source permit application fees. We subtract out the grant income, the Tulsa match and state appropriations, leaving remaining expenses of around \$1 million to generate via Non-Title V permit income streams.

Staff proposes that we have two mechanisms to generate this \$1 million dollars, through permit application fees and annual operating fees. We have 24,407 minor source tons of emissions currently. If application fees are not increased, the annual operating fee calculates to \$41.05 per ton. If individual permit application fees are increased as recommended, the calculated annual operating fee calculates to \$35.93 per ton. Staff recommends an annual operating fee of \$31.01 per ton and increases to individual permit application fees.

Staff recommends the following changes to our rules. In OAC 252:100-5-2.2(b)(1)(C), to establish the new base fee of \$31.01 per ton. In OAC 252:100-5-2.2(b)(1)(D), this is where we put the offset language so that any new income,

Shelby A. Hyatt
Certified Bookbind Supervisor

whether it be state appropriations or federal grants, be used to offset the annual operating fee to an amount not less than the major source fee.

Exhibit 4 is entitled Minor Source Permit Actions, it is a graph. We studied the time spent issuing each subset of individual minor source permit actions. We obtained these numbers from our TEAM database, which tracks all permit actions. From TEAM's average issuance time, we developed a calculated cost. We then compare that calculated cost to the proposed fee and the current fee for each individual minor source permit action type. Please note that TEAM did not track construction permits to the detail of less than 40 tons and between 40 and 99 tons. These permit types were developed after TEAM was developed. Therefore, the average for all minor source construction permits is shown for both subsets.

Please note that without exception, the proposed fee is less than the calculated cost of issuing the permit.

Staff recommends that individual permit application fees change in OAC 252:100-7-1(2) and (3), so the applicability determinations are raised from \$100 to \$250, and so that all individual permit actions double.

Please note that with these increases to individual permit actions, the minor source cost causers will more truly be the cost payers. No increases have been recommended to the

Shelby A. Hyatt
Certified Bookbind Supervisor

Permit by Rule registrations and the general permit authorizations.

In OAC 252:100-6-1.7(1), we recommend that applicability determinations for major sources be increased from \$100 to \$250, for the sake of consistency.

The last exhibit concisely represents staff recommendations. We ask that we set the major source emissions fee at \$17.56 per ton. We set the minor source emissions fee at \$31.01 per ton. We include the minor source emissions fee offset language such that they will only be adjusted down to the level of major sources, that minor source individual permit applications fee increase as well as applicability determinations go from \$100 to \$250. We do recommend passage to the Environmental Quality Board.

MR. DYKE: Let me finish with staff's position.

In summary, our services today, as well as our spending levels, are reduced from the previous years. We cannot continue the level of services that we have today without staff, without adding staff. We can't continue, or we cannot pursue a great deal of new oncoming issues without adding staff. However, if we do not get the funding necessary to run the program the way we think it needs to be run, or the way we have requested today, we will not compromise our environmental protection. We will shift our resources to take care of those things, such as compliance inspections, but we will reduce

Christy A. Spurr
Certified Marshall Inspector

services, and we must. Questions and comments of the Council and the staff?

MR. WILSON: David, just to follow up on what you just said, it's my understanding that in order to sustain the current levels of assistance that we've given for minor sources, that that fee has got to be like \$35 per ton, is that right?

MR. DYKE: That's correct.

MR. WILSON: That's just to sustain that level of service. So, if it's any less, the level of service is going to go down, and what -- can we be more specific about the decrease in services?

MR. DYKE: Sure. And I think you can -- I think our response is back to the last graphic where it shows the amount of time that we spend assisting the minor sources with their permit applications and their permit types. I think we spend a great deal of time there providing a form of consulting services for those people.

MR. WILSON: And those consulting services quickly and easily going away, if it's not funded?

MR. DYKE: I think that's an area where we definitely will have to target.

MR. BREISCH: David, if we were to add monies to the state appropriations to bring the fee calculations to the point that they did equal approximately \$17 more or less per

Christy A. Spurr
Certified Marshall Inspector

ton, and we went to the Legislature and said, you know, we're short. If you don't give us this, then we reduce our services.

Is that a reverse of what we're doing, and tell me why we couldn't do that. What we're doing by saying, you know, we've run into a shortfall, and we'll just cut back if you don't give it to us. You guys tell us whether to cut back or not. If you don't give this to us, so we can charge the same amount per ton in both categories, then you are going to cut the services that this division can give to the stakeholders.

MR. DYKE: I think that's exactly what we'll have to tell the Appropriations Committee when we go over there.

MR. BREISCH: You tell them that, but you don't show that here.

MR. DYKE: Well, our directive here was to put before the Legislature the option. Appropriations or fee increase to continue the level of service. That was our proposal with the fee.

MR. TERRILL: Let me comment on that just for a little bit. It is a double edged sword, you're absolutely right. You either go to the Legislature with a fee amount that you know is not enough to cover it, hoping that they'll make up the shortfall, and they probably won't. Or you go there with a fee amount that you know is too much, hoping they will give

Christy A. Spurr
Certified Marshall Inspector

enough money to drop that fee in line with what the major sources are paying. At least with that, you're not going to cut off any sources, or any services to those minor sources. There is still a revenue stream there at \$31 a ton to continue that, and then they have an option, as well as we do, to lobby the Legislature to educate them to say, look, it's not fair for them to pay that much, we know that. But because these programs cut across all counties, there should be some level of appropriations that is appropriate enough to fund it, and hopefully they give it. But there is no good way to do that, and that's just how we elected to do it, with hopes of possibly getting it.

MR. BRANECKY: Aren't the minor sources willing to take that cut? Apparently in their comments from the Small Business Administration or with Council, whatever they are recommending it be equal to, the major source fees, is that what they want?

MR. DYKE: That was in their comments.

MR. BRANECKY: And, so, they understand by doing that they are not going to get the service that you currently provide. Is that what the Small Business people want? Does anybody -- can anybody address that? Are you willing to pay the \$31?

MR. DYKE: Would you like for Kyle to speak on behalf of the Small Business Panel now?

Christy A. Spurr
Certified Marshall Inspector

MR. BRANECKY: Yeah, if they are willing to pay the \$31, then we'll give it to them.

MR. ARTHUR: Let me introduce myself before I answer that. My name is Kyle Arthur, and I'm with the Customer Service Division of the DEQ. And part of my job is to work with the Small Business Compliance Advisory Panel, and we have come before you a couple of times. Unfortunately, Don Lovell was charged with the task of coming before the Council, and I was going to meet him at Love's this morning to usher him here, and I called him yesterday and he said he could not make it. So, the burden fell upon me to come and to basically summarize the key points of their comments.

I do want to draw attention to what David has mentioned, that these comments are, I believe, in the packet. I hope all the Council Members will have or have had a chance to read them. What the -- I want to say first of all, very emphatically, that when this issue came up and obviously staff, and I'm mentioning, specifically Eddie, David and Shawn, when this issue came up, I knew there was some discussion about raising the minor source fees. I did not know to what level. I was down in the Air Quality Division and I was visiting, and David cornered me, and he said we want to come before the Small Business Panel with this proposal. We want to educate them about what the issue is. And I think that spoke volumes about the approach they are trying to take, the staff is trying to

Christy A. Spoor
Certified shorthand reporter

take here. They came not only once, but twice. They came to the October 26th meeting, which was 6 days after when you guys first heard about the fee increase on October 20th, if I'm not mistaken. And they also came back because the Small Business Panel, the first time they heard it, they wanted to continue their meeting to look over it. They then reconvened in November, I believe it was November 16th, yes, and discussed it further. The presentations were very professional and the people that were involved on the Panel, Panel Members, were very impressed. And so I want to -- I want to be sure and acknowledge that fact of how up front and honest the Air Quality staff was and still is.

My purpose here today is not to state my opinions on the issue, it is simply to state their opinions on the issue since no one is here from their group to do that. I think they are fairly well summarized in their written comments. I do want to highlight a couple of things. Number one, they do support an increase of the minor source annual operating fees to a level equal to that of what you would charge those Part 70 sources or Title V sources, whatever that number may be. Originally that was \$17.72, that's what I quoted in the comments here, but it is now proposed at \$17.56. They do support that. They do not support a tripling, or a slightly higher than tripling of the minor source annual operating fees from \$10 per ton to \$31 per ton. I think, again, I can't

Christy A. Spoor
Certified shorthand reporter

comment between the lines on that, but I think that probably speaks for itself. I mean, they are just a little uncomfortable with the tripling. But they do understand the financial issues that are before the Division, and that they are very sensitive to those and they are willing to take an increase of 70 percent, roughly, up to \$17.56 per ton. I don't know that they have thought through, David, to respond to your comments, the services that are provided to them. I can't -- I can ask David, I don't know how well that was discussed, or whether it even came up or whether they, if you mentioned it and they didn't think about it. I can't --

MR. DYKE: The way they answered it is that they have agreed to approach the Legislature on our behalf. Who do they contact, help us with the draft letter, tell us what it needs to say to get that difference. They don't want reduced services, they want to make --

MR. BRANECKY: They recognize that that's a possibility that they will get. If they don't get appropriations, they've got reduced services.

MR. ARTHUR: I think that's clear, I believe that's clear. And that is a point that is mentioned in the written comments in your packet, that they support and are willing to support in any way, lobbying if you will, the Legislature. I think they were even ready at their second meeting to get names and write letters, and we said, well,

Christy A. Spoor
Certified shorthand reporter

those people haven't been appointed yet. So, they are eager to do that and they understand that situation.

Another thing I think, and I'm not going to go over all of these points, but another thing I think that's interesting to note that they recommend and it kind of intertwines in with some of the other things that have been discussed on other rules that have been proposed for changes today, and that is Item Number 6 there. You know, when they look at the raw numbers they see that 10 percent of the total emissions that are out there, roughly, slightly more, maybe, belong to minor sources and the rest of them belong to the, quote, unquote, Part 70 sources. So, on the surface what they are seeing is a tripling of their fees, when they are a small contributor to the total amount of emissions that are out there. But what they also realize, and several of the Panel Members were very emphatic about this, was that does that mean that there is only really 24,407 tons worth of emissions coming out there from small businesses. No, of course that's -- they are fairly unwashed, if you will. There is a lot more of them out there than what participate in the system. And one thing that the Panel is proposing to do, and we have talked about it after the panel meeting and some of us in SBAP, and the program I was involved in before, and that is to get better participation into the system. Now, there is several ways you can do that. In fact, there are several ways that you can

Christy A. Spoor
Certified shorthand reporter

generate more revenue, if you will, besides raising fees, and that is getting more people into the system. What may be one reason why they are not in the system, maybe they've never heard of us, maybe they never thought about it, maybe they think it's too complicated and they don't participate. And we've come before you and talked about the complication issues for the small businesses. But a lot of that has changed in the last year with the permit continuum, with the regulatory oversight continuum as it's now called Rewrite/Dewrong on all those words and terms and names, it has to be simplified. And they want to encourage a couple of things. That the Council be supportive of general permits and Permits by Rule, that is things that not only make it more efficient for the folk in the Air Quality Division, but also that makes it simpler for the people that are part of those being regulated. A couple of things that will do, that will hopefully make things more efficient obviously, rather than individual permits. Secondly, it will hopefully increase participation. What we want to do is when we get these Permit by Rules and general permits written, is to go out and actively solicit those facilities participation in the regulatory process. Maybe reluctantly on their part, but nevertheless it will be a more simplified approach than anything they would have had to face in the past. And we think that will encourage participation and thus generate hopefully more revenue in the minor source program.

Christy A. Myers
Certified shorthand reporter

we're just talking about dollars and cents. That's one way to do it and something we support.

So, in summary, you know, they do not support tripling. They support an increase up to the Title, excuse me, the Title V level. They -- we talked about the phrase of a ton of pollution is a ton of pollution regardless of where it comes from, and that's where they stand on that. So, that's really all I have to say. Do the Council members have questions of me?

MR. DYKE: Questions and comments from the Council?

MS. MYERS: Do the small business people understand that the level of services that they are provided encompasses more effort on the part of the Air Quality Division than maybe to some of the major sources?

MR. ARTHUR: Are they aware of it?

MS. MYERS: Yes.

MR. ARTHUR: Probably not. I mean, I think the Panel Members were made aware of the fact that those services may be decreased. But I don't know that the small businesses, I mean, you're asking my opinion and I'm speaking on behalf of the Panel. But in my opinion, no, I don't think that they probably fully realize the extent to which they are assisted.

MR. WILSON: Did the Panel attempt to go out into those regulated sources or the sources that would be

Christy A. Myers
Certified shorthand reporter

impacted by this and say what do you think?

MR. ARTHUR: I think between -- I can't speak for any of them specifically, but I think between the time that we met on October 26th and on November 16th, that some of the trade groups that they were involved with, they did go back and discuss that. You know, they are a Panel that's charged with representing Small Business, obviously. They are appointed a 7 member Panel, just like this Council. One difference is they do not have rulesmaking ability. They can render advice or opinions, and so, yes, they sought input from their constituency of people.

MR. BRANECKY: The Small Business probably ought to be aware that if the level of services decrease and they have to go out and hire a consultant off the street, they could probably end up paying more.

MR. ARTHUR: Right.

MR. BRANECKY: Then they would have if they paid \$11 per ton.

MR. ARTHUR: Right.

MR. TERRILL: Well, if I might just kind of fill in on what he started on. What we told -- what we agreed with them that we would do is we would try to address their issue about lack of participation by expanding our base. But in order for us to do that without exacerbating the minor source problem, we've got to do that as we initiate a Permit by Rule

Christy A. Myers
Certified shorthand reporter

or some other mechanism. So that we can cut down our paperwork process, we'll go out and do an outreach program through Customer Service or through the Trade Associations and give -- and EPA doesn't want to hear this, I'm sure, an Amnesty program, if you will, to get those facilities that haven't been in the program, in the program, but give them a drop dead date, if you will. After that, we're going to do some enforcement action. But that's going to take staff to do that. We've got to have people to go out and do the outreach and do the tracking, do the inventorying, all the other stuff that goes along with increasing your permit base or your emissions inventory base. We're also going to do that with the Title V area as well. We're going to sector, target different sectors every year, check our records with the state, and other means to insure that all of the major sources are in the system, as well, and that's only fair. And so that's one thing we'll be doing, as well, to broaden that fee base, too.

MR. WILSON: But the data shows, though, that the more sources we have, the more minor sources we have in this program, the more money we're losing.

MR. TERRILL: You are exactly right, and that's why we have to have a Permit by Rule some other way, so we'll cut down on our paperwork, and give them the permit they needed --

MR. ARTHUR: You don't just get people in the

Christy A. Myers
Certified shorthand reporter

system with individual permits, you hopefully get them in --

MR. TERRILL: Right.

MR. ARTHUR: With a more efficient process?

MR. TERRILL: Exactly.

MR. ARTHUR: That's the goal.

MR. DYKE: We're going to monitor that. We should see some success there. If it's not, we'll quit doing those things. As just a point to possibly simplify this, I thought what we might do is go ahead and let -- I have notice that Bill wants to speak and Nadine wants to speak. And if it's okay with Council, we'll let everybody speak, and then let the Council ask questions whether it's of individuals or of us, the staff, or Kyle, as they come up. Is that acceptable to everybody? Bill, I guess I'll have to call on you, because Nadine has stepped out. Are you prepared?

MR. FISHBAC: Certainly.

MR. DYKE: Very good.

MR. FISHBAC: Maybe I don't even need to introduce myself, but I will anyway. Bill Fishback, and today I'm representing Mid-Continent Oil and Gas Association of Oklahoma. We submitted formal comments on December 8th. I'll give you those for the record.

THE REPORTER: Thank you, very much.

MR. FISHBAC: I've been involved in this issue now for about 3 years. Originally as a member of the Air

Shirley A. Sporn
Certified shorthand reporter

Quality Council and now I have the privilege of coming before the Air Quality Council to give Mid-Continent's position.

I don't think it's necessary to read this letter that Mid-Continent submitted, our formal comments. But I would like to highlight the issues that we think are important, some of which we discussed this morning, some of which we did not. And then based on some of the information that we received this morning, I'd like to take you into the arithmetic for just a little bit.

I think I see an opportunity here for us to maybe resolve some of these issues. Mid-Continent had a total of 7 issues that we wanted to bring forward for consideration today in the light of the fee increase.

The first one that we had talked about this morning is to obtain an independent annual audit of the Title V program. I think Mid-Continent fully supports the idea that this audit should be paid for either by Title V fees or legislative appropriations. I think we --

MR. BRANECKY: You are talking financial audit?

MR. FISHBAC: Well, yes. This audit is both financial and as we described earlier, a work study or workload evaluation similar to EPA. We would support an increase in Title V fees, specifically earmarked for that audit, as Dr. Canter said, that's not within our purview today, but we would certainly support that. Because it is a very inexpensive insurance policy. I believe, to guarantee the accuracy and

Shirley A. Sporn
Certified shorthand reporter

integrity of the overall program expenditures. So, that's point number 1. Mid-Continent definitely supports both types of audits.

The second point that we made in our submittal was that in 1997, the Title V program was overcharged by approximately \$250,000, which is approximately \$1 per ton based on incorrect coding of time and effort sheets. And I would like to see any consideration that the Council gives to a fee increase be modified by some mechanism to refund that to all of the rate payers or all of the fee payers. The precise amount of that might be debated, but I think in general the concept is reasonable. And I think the Air Quality Division acknowledges that those problems occurred with time and effort sheets and were corrected. And now the percentage of total time that is charged to Title V is running about 60 to 65 percent. In the first 8 months of 1997 it was running 83 percent, until this problem was identified and to their credit by the agency themselves.

Step number 3 is to justify the administrative overhead charges. Dr. Canter asked questions about those this morning and we understand that they are 15 percent of the total fees. I would like to see -- Mid-Continent would like to see a detailed accounting of what those monies are spent for. Because if you look at the amount of the administrative overhead, and I'm going to put all the comments that I make in

Shirley A. Sporn
Certified shorthand reporter

the context of dollar per ton, that's our common denominator here. So, keep in mind that the agency is asking for \$1.17 a ton. So, if you look at the administrative overhead charges, those administrative overhead charges run about, Title V program only, about \$2.50 per ton. So, we're debating whether to add \$1.17, and we're not clear on where \$2.50 is spent per ton, just to put it in perspective. The issue that David Dyke addressed this morning about the building allocation charges, I'm glad to know that that's finally about to come out and be documented. Whatever, I mean, Title V program benefitted from being -- from a charge being credited back to their program, we would just like to see the before and after calculations. We'd like to see why that occurred. And again, that was on the order of \$1.60 or \$1.70 per ton, just to put it in perspective.

Step 5, which in DEQ's response to Mid-Continent's comments they embraced, we believe that the fee should be charged quarterly. This does several things. It addresses the concern that DEQ and industry have had all along that the Legislature sees that fee balance and they go after it. If we only have the money in four pieces instead of one piece, that tends to solve that problem. Plus, you get better management of the money if you don't get it all at once. Plus, the payers, just like any of us, wouldn't want to have to pay our mortgage in one chunk in January. We like the fact that we get

Shirley A. Sporn
Certified shorthand reporter

1701

to pay it every month, and I think quarterly is the reasonable way to do this. And David Dyke mentioned this morning that there would be some additional administrative burden if we went to a quarterly payment schedule. I think that would be significantly minimized if the agency sent out one billing. Any of you that pay your state income taxes quarterly know how that works. You've got one mailing from the Oklahoma Tax Commission, you send in four checks with four stubs. So, I think we can really reduce the administrative burden in a manner similar to that.

Step 6, is to identify legitimate Title V charges, and we talked about that at length this morning. I certainly embrace the idea that we develop a list of Title V activities that everybody agrees is Title V, another list that everybody agrees isn't, and then as David Dyke said, we're not always going to agree on everything, so there is a third list of at least issues that we have identified where we disagree. Because I've said this many times, but I think it bears saying again. Even if the accounting is perfect, even if there were no questions about how much money was spent where, and even if the T&E coding was perfect, which we've acknowledged is not. Even if both of those things were true, we're still going to have a problem with the Title V program growth if programs or initiatives are charged to it that really shouldn't be. And of course, as Eddie has said, EPA would love to have all their new

Charley A. Spivey
Certified Merit Award Recipient

mandates charged off to Title V and that's where the -- that's where the friction comes from. So, I think it's very important that we identify charges that are legitimate for Title V.

And our last point in the letter was that we really should plan for the future. And this is a lead-in to some arithmetic that I want to try to help you work through here. I think it's unreasonable for anybody, any program, any agency, any business, any project, to try to staff for what they think they are going to need in the long term, and make a step change adjustment in the level of staff, and that's what I see here. I'm sure that DEQ thinks that this is -- this is an incremental change, but I think it's really a step change in the level of staff. And the question really revolves around this. What do you do when Title V permit writing is over? Now, of course, Ray Bishop just said well, modifications to existing Title V permits will require some time. And permit renewals, or the five year renewal of Title V permits will require some time, and I think that's true. But by his own admissions, he said we really don't know how much time that's going to take. Therefore, we don't know how much staff it's going to take.

So, when you talk about adding staff, let's narrow the scope and not try to do it for a 1 year time period, maybe let's do it for a 1 year time period. We should revisit this issue every year. We don't have to figure out what the program needs for all eternity today and pass a fee today that takes

Charley A. Spivey
Certified Merit Award Recipient

care of that. So, that's a key issue here, planning for the future so that we don't have like Texas has, millions and millions of dollars in their Title V program in an account, and dozens of permit engineers sitting around with not a whole lot to do. In other words, we want to keep it lean because we don't want to hire people and then have to get rid of them. Let me -- let me take you through some arithmetic now, if I may, based on some of the presentations, some of the overheads that we saw this morning.

Could I put up -- or shavna, it is -- could I put up the model year projection slide?

MS. MCWATERS-KHALOUSHI: Certainly.

MR. FISHBACK: Okay. That's the one we have a copy of. Being an engineer, I never go anywhere without my calculator. So I've been busy cracking through the numbers this morning. And I would like to share some thoughts with you that I think may help you resolve the issue we've got here. DEQ's proposal on Title V is to add \$1.17 a ton, and that is this \$274,000. Of that \$1.17, about 40 some cents is CPI?

MS. MCWATERS-KHALOUSHI: Twenty-eight.

MR. FISHBACK: Twenty-eight, okay. Inflation has been real low, so, yeah. Twenty-eight cents of that \$1.17 is CPI. And Mid-Continent definitely supports, as we have in the past, the addition of the CPI. In fact, I don't even think that's a -- that's not even an issue for Council deliberation.

Charley A. Spivey
Certified Merit Award Recipient

that's automatic.

Okay. So \$1.17 minus \$0.28 is \$0.89 a ton. That's the amount they are looking for in addition to that. This number right here, \$460,000, is \$1.85 a ton. That's the 12.75 FTEs that are proposed to be added to the Title V program. And as Ray Bishop said this morning, he has about 21 people in permits, 3 supervisors, leaves 18 people doing permit writing. So, when you look at this number and it's equivalent in FTEs, this number is \$1.85 a ton, it's also 12.75 FTEs. Basically, what you're saying is you want to add 70 percent to the permit writing staff. You want to go from 18 to 30.75, okay.

Now, if -- because this is \$1.85 a ton. If there was no increase at all, the \$0.28 is automatic. But if there was no increase in fee at all, in other words, the \$1.85 a ton was not added, fees could go down. That's the conclusion you reach from this data. In other words, that's \$1.85, and so if you didn't add anybody, and you are asking for \$1.17, and you don't add \$1.85, fees would go down. What we support -- and fees would go down by the difference between \$1.85 and \$1.17, which is \$0.68, okay. So, what we're proposing, what Mid-Continent would definitely support is keep the fees exactly the same, add the \$0.28, and now if you work through the arithmetic, you would find that since that's \$1.85 and that represents 12.75 FTEs, if you then say, all right, we're going to give you \$0.28 out of that \$1.85, plus the \$0.89 that the fees would have gone

Charley A. Spivey
Certified Merit Award Recipient

down without that, bottom line is keep the fees the same, add the \$0.28, you can add half of the number of people that they are proposing to add based on their own numbers.

Now, what I would like to see is -- I would like to see that done. Mid-Continent would support that, I would support that. See -- and I hope that's clear. I mean, if I had a slicky board, we could go through the numbers. But, what they are proposing to add is \$1.85 a ton, that's this number. And yet the amount of the fee increase that they are asking for is \$1.17. So, that's says that there is \$0.68 -- in other words, one-third of these people, one-third of these people can be added with no increase in fees. You look puzzled, is that --

DR. CANTER: I think part of the problem, Bill, is that you are assuming that the 12.75 would all be in permit writing. And my understanding is that's not necessarily the case. They would be in Title V, but not necessarily in permitting. That would be one comment I would make.

MR. FISBACK: Well, but yeah, but the \$1.17 is not all in permit, either.

DR. CANTER: I understand that. But you are losing me on this -- some kind of a rebate. The way I calculate it is if you just add the \$0.28, forget how they've got it divided there. If you say a \$0.28 increase, the CPI, I would say that you can have 28 over 187, or whatever the number

Christy A. Spivey
Certified Mechanical Inspector

was that you had there, one-sixth, okay. So, I would calculate that you could add 2 people, you are saying 6?

MR. FISBACK: Let me try to explain it, again.

DR. CANTER: Okay.

MR. FISBACK: That's the conclusion that I first reached before I did it again. If they add no one, if they add no one, this line goes away.

DR. CANTER: Correct.

MR. FISBACK: Then the total cost goes down by \$1.85 a ton. We all agree that that divided by 250,000 tons is \$1.85. Total cost goes down by \$1.85. They are proposing to increase it by \$1.17. So, the difference between \$1.85 and \$1.17 is \$0.68. So, that says that if they hired no one, the fees would go down by \$0.68 a ton. Does that make sense? We'll do it in 3 steps.

Okay. So this number is now not 12.75 but it is zero (0). So, now fees go down by \$0.68 a ton, because this number includes the \$1.17. Now you say let's keep the fee the same, no CPI, let's leave the \$0.68 in there. Now you've got \$0.68 over \$1.85, which is one-third, now you can hire 4 people out of 12.75. Now, if you add the CPI on it, another \$0.28, now you are up to about \$0.90 out of \$1.85, now you can add half of them, you can add half of 12.75 or 60. And that's what I would propose to do, for the very reason that we have a lot of uncertainties in the program. If you keep -- if you keep the

Christy A. Spivey
Certified Mechanical Inspector

fee the same, then you can add -- see, it would go down by \$0.68 if you eliminate it. So, if you keep it the same, you can hire \$0.68 over \$1.85, you can hire one-third of them. That's 4 people, and we know we're going to do that, we're not here to reduce it. Now you give them the CPI, that's \$0.28. Now you can add 6 people. Let's do that, let's see how it works, and as Ray said, let's find out if these Title V permits, the more complex ones, let's find out if they are -- he gave a range of 350 to 500 hours. Let's find out where it is, let's revisit it in a year.

In other words, you don't need to add the full amount here, because all of those permits are not due in the next year. That goes back to my original comment. You don't need to make a step change in the level of funding for the entire length of the program in one year. We need to revisit it every year. So, let's do that. Let's add 6 -- let's add 6 people to the Title V program. And according to this presentation, which is, of course, your folk's numbers, you can add 6 people to the Title V program by voting to increase the fee by the CPI, and that's it. Does that make sense to you, Joel?

MR. WILSON: Your math has made sense to me, yeah.

MR. FISBACK: Okay. Dr. Canter, did that -- am I making myself clear?

DR. CANTER: Yeah. I see what you did.

Christy A. Spivey
Certified Mechanical Inspector

MR. FISBACK: That only became evident to me this morning when we saw these numbers. And then -- and that's a beautiful compromise and you are giving them half of what they are asking for. And more next year if it's justified, and we get to work on the two audits, we get to work on our list of Title V and Non-Title V. We buy ourselves more time to figure out what's really important for the long term. I think it's a compromise, I mean, I just sat there and came up with this. This was not something that I could prepare for, because I hadn't worked the numbers that way. Joel, did you have a question?

MR. WILSON: Bill, I have several questions. You and I are in a business where we get to see new regulations working. They are actually forcing us to reduce our emissions, and therefore, we're going to be paying less emission fees. And conversely, the DEQ has increased oversight as a result of these new regulatory programs --

MR. FISBACK: Going in opposite directions.

MR. WILSON: Do you see this and recognize this dichotomy?

MR. FISBACK: Absolutely. And again what I think we need to do -- when I was on the Council and involved in the Subcommittee, to the credit of the DEQ we made tremendous progress in even getting this information assembled and before the public. And if we revisit this every year like

Christy A. Spivey
Certified Mechanical Inspector

we're supposed to do, because these fees are supposed to be adjusted for the demonstrative cost to the program every year, not just once, we can take into account things like that. A lot of industry had concern, and it was expressed in Mid-Continent's letter, if you've got regulations that reduce emissions and you've got a program that's, you know, if the denominator is going down, you've got dollars per ton, the denominator is going down and fees are going to go up because you did a good job in complying with regulations. So, yeah, we need to revisit it -- we need to revisit it every year. But the beauty of what I'm proposing here is that they get 6 people, additional people, with no increase in fee above the CPI.

MR. WILSON: Bill, another question that I have is that -- do you agree that EPA should be involved in these unfunded mandates and EPA initiatives that require their time or would --

MR. FISHBACK: Yes. And I have a commitment from our membership that given a targeted audience within EPA, given a targeted audience within the state legislative process, that we will be glad to make any presentations anywhere, anytime, to take that message home. Our feeling is that it is very seductive, for want of a better word, for Congress and EPA to pass regulations that are unfunded, knowing that there is a program in place, where as everybody will recognize, it's

Charley A. Spivey
Certified Merit Award Recipient

relatively easy to get additional money. I mean, it's a whole lot easier to get money out of 6 Air Quality Council members than it is the State legislature or the Federal Government. And, so, yeah, it's absolutely essential that we take that message, and we're prepared to do that.

MR. WILSON: Who's going to pay for this?

MR. FISHBACK: Who's going to pay for --

MR. WILSON: Who should pay for the --

MR. FISHBACK: The lobbying effort, for want of a better term?

MR. WILSON: Yes.

MR. FISHBACK: Well, I think whatever time DEQ's staff spends on that, in my opinion, chargeable to Title V. Industry, my industry, my company is willing, because we do it all the time anyway on the federal level, we're willing to pay for my time and my travel to go to Washington D.C., or wherever the proper audience is. I mean it's real easy to go down to the State Capitol. That doesn't cost anything other than time. The companies are willing to pay for their employees to do that, because we participate in trade associations all the time. But if you're asking do I think lobbying to reduce Title V fees and increase appropriations should be Title V chargeable, I'd say yes. And just in the same way that we'd be willing to pay \$0.50 a ton or whatever that number is to get an audit, we'd be willing to pay \$0.10 a ton to lobby to reduce

Charley A. Spivey
Certified Merit Award Recipient

it. Yeah, there is a cost of doing business, regardless of what side of the issue you are on.

MR. WILSON: OTAG as an example, I sense from your comments earlier that you didn't feel that that's an entirely a Title V issue?

MR. FISHBACK: I am absolutely convinced that it's not entirely Title V. The best solution I can see is a compromise where it's prorated based on the emissions between stationary and mobile sources. David Dyke said, well, it's primarily related to a NOX SIP call, and 85 percent of the total NOX emissions are from 110 stationary sources. If you use that index, then you conclude that 85 percent of it ought be chargeable to Title V, but still not 100. And if you use another index like VOCs and tailpipe emissions and all of that, you come up with a completely different conclusion, maybe it's fifty-fifty. But I'm absolutely convinced that it's not one hundred/zero, and we need to work out fair and equitable distributions of the burden.

MR. BREISCH: Bill, we're going to have to go on with the meeting.

MR. FISHBACK: Okay.

MR. BREISCH: Have you about concluded?

MR. FISHBACK: I've concluded, unless there are other questions.

MR. BREISCH: Okay. Is there any more questions

Charley A. Spivey
Certified Merit Award Recipient

from the Council?

MR. WILSON: I have one more question, Bill, if I could. You are supporting quarterly payments?

MR. FISHBACK: Yes.

MR. WILSON: Quarterly payments means that some money would stay in the accounts of industry and earn interest over a longer period of time than it did before.

MR. FISHBACK: And conversely not in the DEQ account, and not earning interest to their credit. Go ahead.

MR. WILSON: Would you support any increases associated with these accounts of earnings that industry would gain by having the luxury of paying quarterly?

MR. FISHBACK: Well, in this era of low interest rates, that's a good question. If you want to do this like a bank would do it and you look at the DEQ Title V account balance, and you look at the average daily balance, and you say I'm going to assign 5 percent to that. You know, that money that they don't have now could have earned 5 percent. If we did -- the short answer to your question is, yes. But it would not be, as you can well understand, it would not be -- if 5 percent is the interest rate that we agreed on, it would not be a 5 percent of 4.4 million.

MR. WILSON: I understand that.

MR. FISHBACK: Because that money is not in there on January 1st and not in there all year. They are

Charley A. Spivey
Certified Merit Award Recipient

spending it, and in fact in some years spent more than that.

1 But, yes, conceptually I would support that. I think that's a
 2 small amount of money, 5 percent -- 1 percent of this number is
 3 \$44,000. Five (5) percent of this number is a dollar a ton.
 4 And, so, the most I could see that being based on average daily
 5 balance is \$0.25 to \$0.50 a ton. But, yeah, because that's to
 6 industry's credit and therefore it's a debit to DEQ, and, yeah,
 7 I think that's a legitimate thing to do.

So, in summary, if you accept my arithmetic here, I
 8 would propose that you increase the fee by the CPI, not any
 9 additional amount, institute the audits, institute the
 10 definition of what's Title V and what's Non-Title V and add
 11 those 6 people and revisit it in a year.

MR. BREISCH: Any more questions of Bill?

MR. FISBACK: Thank you.

MR. BREISCH: Thank you.

MR. DYKE: Nadine.

MS. BARTON: I know you're weary. My name is
 1 Nadine Barton, I'm with CASE, Citizens Action for a Safe
 2 Environment. We are the successful intervenors to stop the
 3 building of the Black Fox Nuclear Plant in Inola. I'm also a
 4 member of the Tulsa City County Health Department's
 5 Environmental Advisory Council. I'm also a member of INCOG. I
 6 do not represent them today, only Case. At the height of our
 7 campaign, we had 3,000 members.

Christy A. Spivey
 Certified shorthand reporter

First of all, I want to commend staff for the job
 1 that they've done. And I'm sure that if all we needed was a
 2 CPI amount, that's what we would have gotten. You know, I have
 3 to say for the record that back when we passed these fees to
 4 begin with for the Title V, they were low, one of the lowest in
 5 the United States. And here we are today, 2 or 3 years down
 6 the line, and we realize that, yeah, they were too low. So,
 7 what we're talking about today is to bringing them up to
 8 something that is just minimum to run the program as it is. I
 9 think that we have to look at the Tulsa City County issue that
 10 we may not have those funds. We can go to the Legislature, ask
 11 for appropriations, where is the appropriations going to come
 12 from? Rainy day fund? Okay. Are we going to have to raise
 13 any more taxes. As a taxpayer I resent the fact that I'm going
 14 to have to fund this. You all, you know, if you make the
 15 profit you are going to have to pay for the pollution. Why
 16 should I as a taxpayer, again, have to basically support
 17 industry. We got raked over the coals with our chicken and pig
 18 legislation that we have, where the taxpayers have to pay for
 19 that. And those folks are getting the profits, but we're
 20 having to pay for the pollution. I don't want to see that
 21 happen here again.

You know, we have to look at the State of Oklahoma.
 1 Here we are today with people that -- with an agency with our
 2 Title V program, which we have so many permits that are off in

Christy A. Spivey
 Certified shorthand reporter

the wings that have to be done, we're short of personnel, how
 1 do you think this looks to companies that have to have these
 2 permits for their operation of business, when they are looking
 3 at states to come in? When they are looking at states to come
 4 in to do business. I don't think it looks very good. And you
 5 can argue the other way, well, it's cheaper, yeah, they're
 6 going to come here. Well, if it's cheaper and you can't get
 7 the work done, no, they are not going to come here and the word
 8 is going to get out. So, I think for economic development, we
 9 haven't even talked about that today. We need to prepare now.
 10 You know, I was really impressed by what Ray had to say about
 11 -- I guess, I'm sorry, it was Scott, about the Special Projects
 12 that are coming on down the line. I don't know how many of you
 13 were really paying attention to what he was talking about, but
 14 we have to look at that. That work has to go on, along with
 15 everything else that we're doing today. I kind of feel like an
 16 attorney for the other side, you know, and you all are the jury
 17 here and we're pleading. And it's, you know, it's like the
 18 wife that goes to the husband and begs for more money to run
 19 the household. You know, it's a terrible position to have to
 20 put your staff in to have to beg.

I support staff's majors. I'm sorry to see -- I have
 1 to make a -- you know, being a small business person myself,
 2 that they are going to have such a large increase. And I'm
 3 thinking, you know, I don't know whether I can support that

Christy A. Spivey
 Certified shorthand reporter

large of an increase. And I don't know why the big guys don't
 1 take up more of that slack of that increase. You all know that
 2 sooner or later that you are going to be passing it on to us,
 3 the consumers, so we're going to pay for it one way or another.
 4 But your stockholders are going to get the profits just the
 5 same.

I think we have to realize that we're going to be
 6 dealing -- this is the last year, '99, the last year of this
 7 century, the last year of this century. And we're going into a
 8 new century and there is going to be things coming up that none
 9 of us can foresee. So, I think that we should allow staff,
 10 their recommendations, to stand. You know, I'll have to say
 11 that I recommended, you know, like when you all ask for a job
 12 you should ask for more than you need, and maybe you'll get
 13 basically what you need. And I was told, hey, we've got it cut
 14 right down to the bone. This is what we need to run this
 15 program. We have to be supportive of our people. And if all
 16 we needed was the CPI, that's all we would have needed and
 17 that's all they would have brought to us.

And industry, if you want to go ahead and have an
 1 audit and a study like we did before, how in the heck do you
 2 know that it's going to support your point of view? Maybe it's
 3 going to be more, so then are you going to ask for another
 4 study? You know, that's the way to defer anything, study,
 5 study, study to death. Meanwhile, we've got all of this, you

Christy A. Spivey
 Certified shorthand reporter

1705

know, these expenses. What can we count on, what can we not count on. Federal grants are not going to be there, folks, so you better be thinking about that. And every year are we going to have to come back and do this pleading again? I hope not. I hope that you paid attention to the wisdom of your Chairman earlier this morning when we talked about this. Anyway, what can I say? Vote your conscience. Let God be your guide and not your pocketbooks. Thank you.

MR. DYKE: Back to questions and comments.

MR. BREISCH: David, how long does it take when you hire an employee, how long -- let me ask it this way. How long does it take you to hire an employee and get him into staff, let alone train him?

MR. DYKE: Two months.

MR. BREISCH: You mean, let's say you could hire 10 people and in 2 months you would have them?

MR. DYKE: No, I would have them on staff. The training part -- Shanna?

MS. MCWATERS-KHALOUSHI: David, if I may enter into the record, the T&A study is the only written document that we have that assesses what a training cost is of a new person. The T&A report issued an amount of 179 percent of the first quarter salary is what it costs to train a new employee in the Air Quality Division.

MR. TERRILL: Time-wise, it would be about a

Cheryl A. Spivey
Certified Bookbind Reporter

year, probably, before they are -- you can do some -- it depends on how well they are trained coming in. If they come from industry, then it takes less time.

MR. BREISCH: Well, really my question was how long it takes to hire them.

MR. DYKE: It takes about 2 months through the process to get them on board.

MR. BREISCH: And there are those people out there, you think that you can get to come to work?

MR. DYKE: There will be at the end of the school system -- school year.

MR. BREISCH: And that's when?

MR. DYKE: April, May.

MR. BREISCH: Well, okay, so, you won't be hiring --

MR. DYKE: I won't be able to hire until July 1st, or around July 1st when I get a projection and forecast of what my budget is going to be next year.

MR. BREISCH: I guess what I'm getting at is --

MR. DYKE: Six months.

MR. BREISCH: -- if you had authorization to hire 17, you are telling me you are going to hire only about 8 this year, anyhow?

MR. DYKE: Probably more than that, because we'll do it in a lump situation like we've done in the past.

Cheryl A. Spivey
Certified Bookbind Reporter

But yeah, that's exactly right. And on our forecast, we used 17 people, which we think we need to design the fee, but we also used that as a surrogate. I mean, the money associated with that, we know we can't spend it on an annual basis. There is always going to be a vacancy beyond that, even with the 17 people. But what you don't have in there, as Shanna was trying to point out, is training costs, and operational cost increases. And my budget this year, my expenditure levels this year is \$200,000 more than this base budget. We probably made a mistake, but we took a simple approach. We only asked for certain things with dollars associated with them from a flat budget, an absolute flat budget. And what we should have done was gone in and elevated all those expense accounts to what it would take to support these kind of people, and then ask for the people on top of them. That would have got us a figure somewhat different than we have today. So, we made a mistake in our presentation by doing that, it appears, especially from the last calculations. Because that's what's not in there. That's why those figures work, is because we don't have that kind of operational expense in there. So, yes, there is no way I can put 17 people on right away. It would take at least 2 different interview teams, because we're looking at 2 types of employees, Engineers and Environmental Specialists.

MR. BREISCH: So, tell me again what the total of \$614,000 represents.

Cheryl A. Spivey
Certified Bookbind Reporter

MR. DYKE: Seventeen vacancies with their salary, with a salary increase. The salary increase put on top of them. Those are -- I'm not sure the details of -- those are seniors, right?

MR. BREISCH: Average of 16,000 a year.

MR. DYKE: We probably won't hire all seniors. We'll hire some ES I's and ES II's, and Senior Environmental Specialists. That's why that's in it, that's a large amount.

MR. BREISCH: It seems like this time next year, though, you will not have spent --

MR. DYKE: That amount of money.

MR. BREISCH: -- anywhere near that amount of money.

MR. DYKE: That's true. That is true.

MR. BREISCH: David, you are the Hearing Officer, but let me just ask the Council, myself. Is there any other questions or comments from the Council before we take a vote on this?

MR. BRANECKY: I'm ready to make a motion whenever the time is right.

MR. EDDINGTON: May I make one comment, please? My name is Robert Eddington, I work for Armstrong Flooring Division, based out of Allentown, Pennsylvania. We are currently putting in a new process in my plant. It is in multiples of tens of millions of dollars. The one reason why

Cheryl A. Spivey
Certified Bookbind Reporter

we chose Oklahoma was because the permit process is quick here.

1 We have had excellent service from DEQ. We couldn't get it in
2 Pennsylvania or in California, or New Jersey. We chose
3 Oklahoma because the system they have in place here, they are
4 fast and efficient for us. We went in there in April for
5 construction permits. I had two (inaudible) for comment
6 period. We got our permit on time. And in like 6 months from
7 now, we'll go back for an operating permit, and then next year
8 probably for a Title V. If they don't have the staff, that's
9 going to hurt us. We want it done quickly. I am racing time
10 with my competitors, the other guys who make floors. And there
11 are two right now with the new technology, first of its kind.
12 They're fighting New Jersey's rule. We're with Oklahoma. So,
13 please give the staff what they need. I defer to the experts.

1 They don't sit down in the morning and figure what they need.

2 They have done hours and hours on this, sitting down what they
3 need to do their job. Give it to them, what they think. You
4 know the people with DEQ, they are good people. Defer to them,
5 their expertise and let them decide what they think. You find
6 a mistake, fine, but right now they are doing a great job. And
7 don't cut them shorthanded. And, hey, 2 or 3 years from now,
8 yeah, okay, if you have to cut back, cut back. But don't
9 nitpick them, a nickel here and a nickel there. I will gladly
10 pay the extra cost if I know I'll get my permit in 90 days. If
11 you hold me up 6 months, my competitor may get his through the
12

Charley L. Spoo
Certified Airboard Inspector

system before me. And we race a November deadline next year at
the floor show. We have to be first on the scene. If we're
not, then we have a problem. So, please don't nitpick them too
much. That's all I have to say.

MR. BREISCH: I don't see anybody else from the
Council that wants to talk, David.

MR. DYKE: Anybody else wishing to make a
statement on this matter from the public?

MR. BREISCH: Okay. I'll entertain a motion
from the Council on this matter.

MR. BRANECKY: I'm ready to throw something out
and see what happens. I guess, there is enough concern in my
mind about finances. I think we still need to get a better
accounting of the finances. I'm not blaming Air Quality. I'll
probably pass that on up to the Finance Division, that they
need to provide better financial information to us. I think
there is some Title V or projects that are attributed to Title
V that are not really Title V. But they should be, the bill
should be paid for by the citizens of Oklahoma or some other
mobile sources. I think there is enough question in my mind
that what I'm going to propose, and Bill, I had this down
before you got up there, and I got language that I will
propose. But basically what I'm going to make a motion for is
that the Title V fee be adjusted by the CPI, that the minor
source fee be equal to the major source fee, and that the

Charley L. Spoo
Certified Airboard Inspector

increase in the minor source application fee be accepted as
proposed by the DEQ. At the same time, I'm going to encourage
industry, both small business and large business, to go to the
legislature and seek appropriations. I think the citizens of
Oklahoma need to provide some base funding for the program.
But there are issues that are not Title V that benefit the
entire state, and that ought to be paid for by the state. And
that's the message the industry needs to take to the
legislature, that we can get additional money. If those 3, the
Title V, minor source fee, and the permitting application fee
are passed, my calculations come up with an additional \$357,000
approximately. And then if we can get additional
appropriations on top of that, that will just be extra money.
With the \$357,000, that is approximately 10 people that DEQ can
add. If there is a workload analysis, that needs to be a
separate funding of appropriations, that the industry needs to
seek out. If we don't get that, then the workload analysis
will not be done. So, in light of that, what I'm going to
propose is actual changes to the rule.

1 In 252:100-5-2.2(b)(1)(A), I think that whole
2 paragraph can be stricken since that's out of date. It says
3 until January 1st, 1998. We can just strike that paragraph.
4 We can strike paragraph B, that's no longer applicable. We can
5 make paragraph C under that section, paragraph A, stating
6 beginning January 1st, 1999, annual operating fees shall be
7

Charley L. Spoo
Certified Airboard Inspector

invoiced at the rate equivalent to that listed in 252:100-5-
2.2(b)(2)(A), which in effect says the minor source fees are
equivalent to the major source fees. We can then delete
paragraph D under that section.

252:100-5-2.2(b)(2), Part 70 Sources, we can leave
paragraph A as is, disregarding the proposed changes, and
delete paragraph B and change paragraph C back to paragraph B.
I think that would accomplish what I stated.

MS. HOFFMAN: I have two quick comments. First
of all, did you want to include in your motion the Subchapter
B?

MR. BRANECKY: Yes. That will be accepted as
proposed by the Air Quality Division.

MS. HOFFMAN: Okay. And secondly, on Subchapter
B, on the fees that were in place prior to January 1, 1999, I
would recommend that you leave those as stated, simply because
it makes it easier for our Enforcement people when they have to
go back and collect fees that haven't been paid in prior years.
Then if it's in the rule, then they know exactly how much they
need to collect.

MR. DYKE: So, we would adopt the CPI as it
comes?

MR. BRANECKY: The CPI would be an automatic
adjustment. We don't have to act on the CPI, is what I
understand.

Charley L. Spoo
Certified Airboard Inspector

MS. HOFFMAN: Right.

MR. BRANECKY: Okay. I take that back, then. Leaving in paragraph A, is that what you are saying?

MS. HOFFMAN: Yes.

MR. BRANECKY: And still striking paragraph B, or leaving that in, also? I guess we'd have to leave paragraph B in, also?

MS. HOFFMAN: Right.

MR. BRANECKY: The only thing we would strike would be paragraph D under that section, and changing paragraph C to read beginning January 1, 1999, annual operating fees shall be invoiced at the rate equivalent to that listed in 252:100-5-2.2(b)(2)(A).

MS. HOFFMAN: Are you --

MR. BRANECKY: I'm trying to set the minor source fee equivalent to the Title V fee.

MS. HOFFMAN: To the base Title V fee or to the Title V fee base plus the CPI?

MR. BRANECKY: Plus the CPI, that's what I'm intending. I'm intending them both to track as they are adjusted every year, they'll both go up.

MR. DYKE: I think we might have a problem with that.

MR. BRANECKY: Okay.

MR. DYKE: I think we're going to have to adjust

Christy A. Hyatt
Certified Marshall Reporter

the minor source every year. So we'll need to state a specific amount for the minor source.

MR. BRANECKY: Okay. So, beginning January 1, 1999, annual operating fees shall be invoiced at \$16.67 per ton. That's under paragraph C.

MR. WILSON: I have a question about that.

DR. CANTER: Is there a second on that motion?

MR. BRANECKY: No.

MR. WILSON: Okay. If appropriations are not obtained for this workload analysis, it's not going to get done, is it?

MR. BRANECKY: Right.

MR. WILSON: And we're going to be here doing the same thing next year, a good chance?

MR. BRANECKY: Well, I think we'll probably be here next year.

MR. WILSON: But with the same questions and uncertainty that we're concerned about now. And I heard Mr. Fishback earlier state that he would be willing to, at least as a representative of Mid-Continent Oil and Gas Association, be willing to pay for one of these things through the emission fee and the emission fee increase, as protection of the current Title V charge process.

MR. BRANECKY: I think we discussed that, and I think the difficulty arose in how we would earmark that money

Christy A. Hyatt
Certified Marshall Reporter

specifically for that study through the regulation. And that's why we kicked it back to the legislative level.

MR. WILSON: We've killed that, then, due to the lack of the ability to specify how it gets spent?

MR. DYKE: I think the problem is the rub where you have to look at the total program, Title V and Non-Title V, and we're spending Title V fees on Non-Title V program.

MS. MYERS: Because you would have to evaluate all of the programs.

MR. WILSON: But in my opinion, it's Title V requesting -- it's driven solely by Title V.

MR. FISHBAC: As I said earlier, I would definitely -- the Oil and Gas Industry would definitely support that. The problem is what David Dyke said about using a Title V fee increase to analyze the entire program, which includes Non-Title V. If that's the issue, then that strikes to the heart of what we've been talking about, keeping them separate.

But I would submit to you that the incremental cost in a workload analysis, of including Non-Title V programs in a Title V workload analysis, would be very, very small. So, if \$0.50 a ton is the right number, \$125,000 to do this, maybe \$25,000 of that \$125,000 is spent in including additional items in the workload analysis. In other words, putting together the process and hiring the contractor is going to be by far and away the biggest issue. And if they evaluate a few other work

Christy A. Hyatt
Certified Marshall Reporter

teams, a few other work processes, it's not a big deal. Now, you know, I'm very sensitive to that issue, don't spend Title V money on Non-Title V. But in this case, I think it would be very minor additional costs to do it all. But I also think that Mr. Wilson is right, you can't do one without doing the other.

MS. MYERS: I don't see how you could legitimately say that the Non-Title V would be a very minor part of it.

MR. FISHBAC: Of the analysis.

MS. MYERS: Of the analysis. I mean, it would have to be very comprehensive of what they are doing in Non-Title V, as well.

MR. FISHBAC: Well, yeah, nobody really knows.

All I'm saying is it's not linear. It's not -- if the amount of effort on Non-Title V was equal to Title V, and let's assume it's either -- well, it's 60/40, it's supposed to be 60/40. I don't think that it would cost an additional 40 percent to analyze it all. But that's strictly a judgement call. I guess said another way -- I guess said another way, I would be willing -- and I speak for my industry, I'd be willing to absorb that additional cost to get it right.

MR. DYKE: And we're not getting it by any means. If our lawyers tell me that's okay, let's do it. You know, I just think maybe we attempt to earmark one depending on

Christy A. Hyatt
Certified Marshall Reporter

the other, pay for your part of it.

1 MR. BREISCH: According to these figures, then,
2 that you just made a motion on, Dave, we will have on the -- I
3 don't know what we call it, the typical year --

4 MR. DYKE: Model year.

5 MR. BREISCH: You will have an increase in the
6 deficit for the model year. A decrease in the deficit, an
7 increase in the deficit, you will have less money?

8 MR. BRANKCKY: Right.

9 MR. BREISCH: Okay. Then if you are right and
10 this time next year we break even, we're still at a point that
11 we have decreased the amount that we have to offer for the
12 first quarter. And my question is, if we increased the fee,
13 the other \$0.90 approximately, we can always decrease it, we
14 can always refund it. But we're facing the probability of a
15 year from now of having to play more catch-up. And I either
16 have to believe the staff in what they are saying in the needs
17 that they can't quite quantify here, that we're really going to
18 need that money. And our committee can certainly judge whether
19 it's being spent right. If Mark Coleman's office will send us,
20 supply us, with the proper financial documents, which I would
21 like at this time to make a record that we are requesting those
22 documents on a monthly basis, and I would like this record to
23 be transmitted to the DEQ Board.

24 But I am still very concerned about cutting back just

Charley A. Ryan
Certified Budgeting Inspector

1 to the CPI index on this raise. I feel uncomfortable with it
2 from what I've heard from the staff. And I have a very
3 difficult time, though, in telling industry to go ahead and put
4 that money up. It's -- I wouldn't want to. Maybe we lessen
5 the impact by going it on a quarterly basis, you know, but I
6 see a definite shortfall in the Non-Title V. I don't see this --
7 I don't see the legislators being friendly about giving us
8 more money. And I hope you can lobby that in, but this would
9 be one of the first times. And they are very, very difficult
10 to convince to do this thing, because of the difference between
11 the attitudes in the rural areas and the metropolitan areas.
12 So, you are going to have a tough -- a tough time. And I
13 believe with what I've said, I've still got to support the
14 increase recommended by the staff. I hope -- maybe I'm voted
15 down, but I just -- I have fought this thing for a long time,
16 and I've listened to everybody. But I don't think we've made a
17 mistake by increasing it as much as a mistake we would make by
18 not increasing it. So, it kind of comes down to that. A
19 lesser mistake by increasing.

20 MS. MYERS: May I make a comment, please? I'm
21 not saying anything that I haven't already said to the DEQ
22 staff, I think they've done an incredible job of trying to dig
23 themselves out of a mess. They've had difficulty on getting
24 information from the Finance Department. The problem that I
25 have with it is that through sitting through the budget

Charley A. Ryan
Certified Budgeting Inspector

1 meetings, every time we come in and sit down with the financial
2 people, there is something different. There is no consistency
3 from meeting to meeting on what the numbers should be. They
4 change anywhere from \$0.25 to over \$1.00 from meeting to
5 meeting. I realize that's a difficulty in the financial part
6 of it. I would not want to penalize or cut Air Quality short
7 by any means, but I'm not totally comfortable with the
8 information that we've been given to try to make this decision
9 today. We have to make a decision. I don't totally disagree
10 with you, but I don't totally disagree with David, either.
11 Honestly, I just really don't know at this point in time. And
12 I'm not saying anything that I haven't already said out loud to
13 a number of folks.

14 DR. CANTER: I would note that I do not pay any
15 of the fees. So, I want to say that at the beginning. I --
16 this has been a very difficult process. I think, for me
17 personally. I have thought about this quite a bit, and one of
18 the -- and I'd like to make 2 or 3 points and then say what I
19 would support. First of all, I -- over the last year and a
20 half or so, I have seen the staff of the Air Quality Division
21 make considerable belt-tightening efforts, organize
22 information, granted that every time we get a report there are
23 differences, but at the same time, I have the sense that we're
24 moving in the right direction. It's a difficult process, but I
25 do believe that the Air Quality Division staff are trying to

Charley A. Ryan
Certified Budgeting Inspector

1 move in the right direction and I commend them for their
2 budgetary decision making that has occurred over the last many,
3 many months.

4 I do believe that issues such as changing the
5 consulting services on the minor source makes a lot of sense,
6 as we've discussed today. One of the things that I would be a
7 little concerned about is that the staff has been working very
8 hard, and I am also concerned about the morale of the staff if
9 we continue year after year to not provide any kind of relief,
10 in terms of the staff requirements. If we accept what David
11 has proposed, my calculation is, based upon the model year,
12 that we're still approximately \$640,000 in the deficit, even
13 with David's proposal. I do believe that a quarterly payment
14 plan would make sense, and what I would feel comfortable
15 supporting is the recommendation of the staff for Title V, the
16 entire recommendation for Title V, understanding that if it's a
17 quarterly payment, then those sources that pay the fee, there
18 is at least a little relief in the interest that might be
19 earned there. And even if we went to the entire Title V
20 proposal, that would still leave a deficit of about a half a
21 million dollars, based upon the model year. But, I would feel
22 comfortable for myself in accepting the proposal for the Title
23 V fee, making the changes 2 and 3 that David has suggested,
24 which is change the minor source to the Title V fee and
25 accepting the application fees as recommended. This is, as I

Charley A. Ryan
Certified Budgeting Inspector

said, a difficult thing for me, because I've tried to think about these different issues, et cetera, and I do believe that what can be encouraged is for all of the Title V sources to do whatever they can to do pollution prevention and to reduce their inventories, and thus reduce what they are paying, and perhaps that is an offset. But that would be -- what I would certainly feel comfortable in supporting would be that the recommended Title V fee and the second and third points that David recommended.

MR. BREISCH: Is there any way in our motion to cause a study to be made?

DR. CANTER: I would think that would have to be -- you mean, like on the audit of the workload study, the financial audit?

MR. BREISCH: Workload study.

DR. CANTER: It seems to me that ought to be, as part of this recommendation, I don't know. But I would think it should be appropriately taken up under Item 9A, New Business, on the agenda. I mean, that would be what I would suggest on that point.

MR. BRANECKY: Unless you can provide the funding, how can we cause it to be done, force it to be done. There is no money available.

MS. BRADLEY: Bill, can the Council actually --

MR. DYKE: Cheryl Bradley.

Cheryl A. Myers
Certified shorthand reporter

MS. BRADLEY: Cheryl Bradley, excuse me. I was involved in the Water Quality study that was done for NPDS, and to my knowledge, the Council can make a recommendation but couldn't actually take an action that would bring about the study. It was a recommendation of the Council to the Executive Director, and then the Executive Director and the Council worked together to find a funding source through the Legislature. But they couldn't do it with a recommendation that would effect the budget of the agency.

MR. DYKE: And I don't think we're trying to do that. I think we're all on the same sheet of music here.

MR. BRANECKY: Mark Coleman has approached the -- preparing to approach the Legislature asking for \$950,000 --

MR. DYKE: \$950,000, yes.

MR. BRANECKY: Specifically for the Air Quality Division?

MR. DYKE: Yes.

MR. BRANECKY: Okay.

MR. DYKE: Up and above and different from that for the Tulsa Office.

MR. BREISCH: What category is that in, Non-Title V?

MR. BRANECKY: It would be Non-Title V. And I guess what I'm saying is I believe there is some Title V expenditures that could be moved out of Title V, like the

Cheryl A. Myers
Certified shorthand reporter

nonattainment issues in Oklahoma County and Tulsa County, and absorbed in that Non-Title V area, if those appropriations were there, thereby reducing the load on Title V and the need for a larger fee increase, and absorb that in the other areas.

MR. BREISCH: We can't make a contingent recommendation, I think that's the problem there.

MR. WILSON: I would like to enter into the record that I have requested information on criteria for determining what tasks are Title V and which ones are Non-Title V, and I don't have that list. I think that's a big issue here, that there is differences of opinion on how to divvy up these costs. And that's, again, why I would support some workload study and involvement from the Council to determine what's Title V and what's Non-Title V. The last thing that I want as a representative or of an employee of Conoco, a major source, is less service. And I agree with the gentleman from Armstrong. We can't afford less service, that's our competitive edge in some cases.

But we can't sit back and say I want to ignore what's fair or what's not fair, so that I can get quick service from the State. I think the fee payers, the bulk of the fee payers of the major sources, should know very well what tasks are Title V and what tasks are Non-Title V. They are paying the money, they deserve to know, and they deserve to get involved in public hearings such as these, to provide their comments on

Cheryl A. Myers
Certified shorthand reporter

how that -- on what that definition is. That hasn't been done. There has been very little argument here about what's Title V and Non-Title V, because no one knows. And until we can get that definition, it would be very difficult for me to say, yeah, Title V is underfunded, because I don't know what it is.

MR. BREISCH: As a way to get this thing off dead-center, it appears right now that there is a couple of us doubting your motion, and that means it fails. Because you have got to have 5 for it.

MS. MYERS: It needs to be seconded and voted on.

MR. BREISCH: Well, I'm saying if it was seconded and it was voted on, and only 5 people --

MR. BRANECKY: Right, I understand that.

MS. MYERS: Why don't we clear it off the deck real quick?

MR. BREISCH: Well, you know, I kind of like things to go as smooth as possible from this Council. I'm not happy with this, and what I'm going to ask for is a compromise. And the compromise is, split the difference. And I haven't got any reason to do it. But there is enough doubt in everybody's mind, there is enough questions in everybody's mind, you know, on both sides, could you consider that as a -- the motion hasn't been seconded yet. Could you consider that?

Cheryl A. Myers
Certified shorthand reporter

1 MR. BRANECKY: What specifically -- how much are
2 you asking for?

3 MR. BREISCH: Well, I'm asking for about half of

4 MR. BRANECKY: \$0.45?

5 MR. BREISCH: Yeah, \$0.45.

6 MS. MYERS: Plus the CPI.

7 MR. BREISCH: The CPI plus the \$0.45.

8 MR. WILSON: Bill, would that also come with the
9 quarterly payment schedules?

10 MR. BREISCH: Yes, comes with the quarterly
11 payment schedule, and also I can assure you that after the next
12 item that we're going to bring up here is going to request some
13 of these studies that we believe we have to have made, even if
14 we involve ourselves as a Council in making it.

15 MS. MYERS: It was my understanding that we
16 didn't have to put the quarterly payment in, as part of the
17 rule, is that correct?

18 MR. DYKE: That's correct. And if I could, I
19 would like to address that because I never did get to address
20 that totally, and we'll put that to rest. We have agreed to
21 meet with EFO or whoever, to work out the details on a
22 quarterly payment. I want it made clear, though, that we're
23 going to do one billing with the four installments on that
24 situation. We're going to limit that to the large fee payers,

Charley A. Spoor
Certified shorthand reporter

1 because we don't want to handle 16 times 4 checks. Okay.
2 We're only going to do one billing. We're not going to
3 increase it, but we're going to limit that to some agreeable
4 large fee payers. We're not going to offer that right now to
5 everybody that receives an invoice.

6 MR. BREISCH: I think we need to hear your
7 thinking on that now, David. Is it \$5,000, is it \$10,000, or
8 what?

9 MS. MYERS: I would say -- I don't know -- how
10 many fee payers do you have, over 100,000?

11 MR. DYKE: I have not looked at this
12 information. I have this information. By what they pay, where
13 they are at, and I have not looked at it. I think that -- I'm
14 going to have to work from memory here, totally from memory.

15 MR. THOMAS: \$50,000, payers who pay more than
16 \$50,000 per year pay quarterly. \$25,000 I've heard discussed,
17 too. We've batted this around. I don't remember the exact
18 figures.

19 MR. DYKE: Again, that doesn't have to be in the
20 rule. In fact, we don't want that in the rule so we have some
21 flexibility with it.

22 MR. BREISCH: We just need to know what you're
23 thinking about here.

24 MS. MYERS: Is that something that you could
25 possibly work with some of us that are on the budget committee

Charley A. Spoor
Certified shorthand reporter

1 or EFO or somebody --

2 MR. DYKE: I think that is exactly where we need
3 to start.

4 MS. MYERS: I think we need to do that outside
5 of this meeting and outside of this hearing.

6 MR. DYKE: And I think we're agreeable and we
7 can come to some agreement on it. We just don't want to send
8 out 1,600 minor sources' bills, and multiply that by 4 coming
9 in. The tracking of the checks, the State's requirement that a
10 check received by the agency has to be deposited within 24
11 hours, we do not have the infrastructure to handle that. We
12 can handle it a couple of times, 4 times a year, we can handle
13 incoming and we can handle some additional. So, I think if we
14 start with the -- if it's agreeable to everybody, we start with
15 the Finance Committee and we bring that proposal. Because
16 we've looked at it, our computer is programmed to do it, the
17 agency has looked at it, they are expecting us to do it. It's
18 just a matter of sitting down and working out the details. We
19 have not cut the lines off yet.

20 MR. BREISCH: Well, that's all right as far as
21 I'm concerned. I just needed to know how it was going to be
22 done and what your thinking was.

23 MR. DYKE: And we can bring that back and
24 discuss it in the Director's meeting before the Council. I
25 think in the briefing session would be the best place to

Charley A. Spoor
Certified shorthand reporter

1 present that back through.

2 MR. BREISCH: After you've reviewed it.

3 MR. DYKE: After we've reviewed it and worked
4 out the details.

5 MS. MYERS: I think we've got a counter offer
6 for you.

7 MR. DYKE: Just a moment. Bill.

8 MR. FISBACK: Could I ask a point of
9 clarification about Mr. Breisch's statement. Is the vote of
10 the Council, since there are 9 members on the Council, one is
11 yet to be appointed, so there's 8 active members. Does a vote
12 have to pass by the majority of those present, or a majority of
13 the Council? I thought it was majority of those present?

14 MR. DOUGHTY: It takes 5 voting to pass a rule.

15 MR. FISBACK: Regardless of those present or
16 the active members?

17 MR. DOUGHTY: That's correct.

18 MR. DYKE: Back to the Council.

19 MS. MYERS: Go ahead.

20 MR. BRANECKY: I would agree to the additional
21 \$0.45.

22 MS. MYERS: Plus the CPI.

23 MR. BRANECKY: With the CPI, which comes to
24 \$0.73.

25 MR. BREISCH: So, it's \$17 --

Charley A. Spoor
Certified shorthand reporter

1711

MR. BRANECKY: \$17.12 should be the number.

MR. BREISCH: And that will be reflected up in the other paragraph on the minor sources.

MR. BRANECKY: That would be -- right.

MR. BREISCH: Everything else back to the originally --

MS. MYERS: In his original proposal, his original motion, for the minor sources to be brought up to the same fee paying that the major sources are paying. What was that other thing?

MR. BRANECKY: The other would be the increase in the application fees.

MS. MYERS: The increase in the application fees, approve those, and I would like to add the option to revisit this issue in a year to see how things have turned out.

MR. BREISCH: Absolutely.

MR. BRANECKY: And also perform the --

MS. MYERS: The study.

MR. BRANECKY: -- the workload analysis, if we can get funding for that from the Legislature.

MR. DYKE: We'll go on record that we're agreeable if we get funding from the Legislature.

MR. WILSON: I would like to say that certain things are going to have to be done by DEQ to spend this money in the next year. And if it's not done, do we get a refund?

Christy A. Spivey
Certified Notarized Reporter

MR. BREISCH: I think that will come out in -- as they call the revisit of this next year. But if we see a trend that reflects this, Joel, I would be in favor, no question about it. I will see us building up a fund beyond any -- beyond reasonable amount.

MR. BRANECKY: But we do institute the quarterly payment options for those large sources.

MS. MYERS: But that doesn't need to be in our motion?

MR. DYKE: Let me -- I'll go on record as saying we don't want to start the Legislative Session next year with a large balance. The quarterly payment should help us in this aspect, but we don't want to grow the balance in our Title V account. We want it to be a reasonable reserve, but we don't want to grow that balance because the Tulsa Office is funded out of the Solid Waste fees, just for that reason. We don't want to go in that direction.

DR. CANTER: Let me be sure that I'm clear on what we would vote on. So, I'm looking at page 1 of the Subchapter 5?

MR. BRANECKY: Right.

DR. CANTER: Let me be sure I'm clear on that. So, down on the bottom of the page in paragraph 8, with this proposal--

MR. BRANECKY: Under Part 2 of Paragraph 2?

Christy A. Spivey
Certified Notarized Reporter

DR. CANTER: It would be \$17.12 rather than \$17.56?

MR. BRANECKY: Yes.

MR. BREISCH: Yes.

MR. BRANECKY: And that also will be reflected up in (b)(1)(C), the Minor Sources, the \$17.12.

DR. CANTER: Okay.

MR. BREISCH: Do I have a second to that motion?

MS. MYERS: I'll second it.

MR. BREISCH: Okay. Is everybody clear?

MR. WILSON: I'm sorry, Mr. Fishback had his hand up.

MR. DYKE: I'm sorry.

MR. FISHBACK: I wanted to ask, the DEQ and the Air Quality Division has the authority to contract with outside suppliers for various services without specific authorization of -- I'm asking a question. Do they have that authority without specific authorization of the Legislature or any other Division of the Oklahoma State Government. In other words, if you want to hire someone to come in and fix your software, you just go do it?

MR. DYKE: Not quite.

MR. FISHBACK: Well, you may have to go through a process where you get bids, that type of thing. But you can initiate that process for any service for anything you deem as

Christy A. Spivey
Certified Notarized Reporter

appropriate to provide, is that correct?

MR. DYKE: I can begin that service for any need. It takes a freeze exception from the Secretary of Environment, and I have to use a contracting format and philosophy of the Office of State Finance. It's not an easy process to do, but yes, I can do it.

MR. FISHBACK: Given that ability, is there any reason why you could not contract for an outside firm to come in and do a workload analysis?

MR. BREISCH: Bill, let me ask you this. Is this leading to asking the Council to add this to this rule wording? Yes or no?

MR. FISHBACK: No.

MR. BREISCH: Okay. Why can't we go on with this rule and take it up in other business, because he's got a good point?

MR. BRANECKY: Subchapter 8, is this going to be under a separate motion? I forgot about Subchapter 8.

MR. BREISCH: Well, I did, too.

MR. BRANECKY: Can we address that in a separate motion?

MR. BREISCH: Do we have to?

MR. BRANECKY: Well, there is a change from 100 to 250. Can I amend my motion --

MR. BREISCH: Amend your motion.

Christy A. Spivey
Certified Notarized Reporter

MR. BRANECKY: -- to include the change as suggested and recommended by Air Quality Division in Subchapter 8. Can we include that?

MR. BREISCH: Do I have that same second?

MS. MYERS: Yes. Do we need to read the motion back to see what all we've done to it?

MR. BREISCH: No. I'm on the verge of taking a vote. If I hear no more comments.

MR. BRANECKY: Joyce had a concern.

DR. SHEEDY: You said that the base for the Part 70 is going to be raised to \$17.19?

MR. BRANECKY: \$17.12.

DR. SHEEDY: \$17.12, and you want the CPI to automatically --

MR. BRANECKY: No, that's including the CPI.

MS. MYERS: That's including the CPI.

MR. BREISCH: That's including the CPI.

DR. SHEEDY: Okay, thank you.

MR. BREISCH: No more comments from the Council.

If not, call the roll, Myrna.

MS. BRUCE: Dr. Canter.

DR. CANTER: Aye.

MS. BRUCE: Ms. Myers.

MS. MYERS: Aye.

MS. BRUCE: Dr. Gross.

Christy A. Myers
Certified Shorthand Reporter

DR. GROSZ: Aye.

MS. BRUCE: Mr. Branecky.

MR. BRANECKY: Aye.

MS. BRUCE: Mr. Wilson.

MR. WILSON: Aye.

MS. BRUCE: Mr. Breisch.

MR. BREISCH: Aye.

That motion did say recommend this to the DEQ Board for approval?

MR. DYKE: Yes, it did. Yes, it did in February.

(PROCEEDINGS CONCLUDED)

SUBCHAPTER 5

COUNCIL MEETING DATES

OCTOBER 19, 1999

DECEMBER 14, 1999

BOARD MEETING DATE

FEBRUARY 25, 2000

SUMMARY OF RULE CHANGE:

The changes to Subchapter 5 will allow the agency to bill annual operating fees on a flexible schedule. The changes should also allow the fees to be based on the most recent emission data possible. The proposed rule language clarifies that an owner or operator of a facility must report quantifiable excess emissions on their annual emission inventory.

Substantive changes include requiring all inventories to be submitted prior to March 1 and providing up to a 60-day extension upon request and good cause shown. It allows fee payers five years after payment is made to notify the DEQ that they overpaid and receive credit for such overpayment, and reduces to six months after inventories are due or submitted the period of time in which either the facility owner/operator or the DEQ, respectively, can challenge the method used to calculate the facility's emissions for fee calculation purposes.

CHAPTER 100. AIR POLLUTION CONTROL

SUBCHAPTER 5. REGISTRATION, EMISSION INVENTORY AND ANNUAL OPERATING FEES

Section:

252:100-5-1. Purpose [AMENDED]

252:100-5-1.1 Definitions [AMENDED]

252:100-5-2. Registration of potential sources of air contaminants [AMENDED]

252:100-5-2.1. Emission inventory [AMENDED]

252:100-5-2.2. Annual operating fees [AMENDED]

252:100-5-3. Confidentiality of proprietary information [AMENDED]

252:100-5-1. Purpose

This Subchapter requires potential sources of air contaminants to register with the ~~Air Quality~~ Division. It also requires facilities that emit air contaminants to file an emission inventory and pay annual operating fees.

252:100-5-1.1. Definitions

The following words and terms when used in this Subchapter shall have the following meaning unless the context clearly indicates otherwise:

"Actual emissions" means the total amount of regulated air pollutants emitted from a given facility during a particular calendar year, determined using methods contained in 252:100-5-2.1(d).

"Allowable emissions" means:

(A) The total amount of regulated air pollutant emitted based on limits contained in a federally enforceable permit or potential to emit, or

(B) For grandfathered sources, emission limits based on maximum design capacity and considering all applicable rules.

"Consumer Price Index" means an index determined by the U.S. Department of Labor measuring the change in the cost of typical wage-earner purchases of goods and services expressed as a percentage of the cost of these same goods and services in a base period.

"Date of billing" means the date the fee was billed. In the case no fee was billed because the owner or operator failed to submit the required annual emission inventory, the date of billing shall mean the date on which the fee would have been billed had the emission inventory been submitted when due.

"Emission inventory" means a compilation of all point source, storage and process fugitive air emissions for all regulated air pollutants at a given facility.

"Error" means, with regard to fees, a fee overpayment made as a result of a mistake on the part of the DEQ in invoicing or the part of the owner or operator in calculating emissions. It does not mean a mistake made in the decision to use or not to use a particular emission factor or method of calculation.

"Grandfathered source" means a stationary source that was in operation in Oklahoma when

an otherwise applicable rule was promulgated unless that rule specifically applies to existing sources or the source has undergone modification since that rule was promulgated.

"Minor facility" means a facility which is not a Part 70 source.

"Part 70 source" means any source subject to the permitting requirements of Part 5 of Subchapter 8 of this Chapter as provided in 252:100-8-3(a) and 252:100-8-3(b).

"Process Fugitive Emissions" means those emissions created by or incidental to any particular process which become airborne or have the potential to become airborne, and could not reasonably, taking into account economic considerations, be made to pass through a stack, chimney, vent or other functionally equivalent opening.

"Regulated air pollutant" means:

(A) Any Volatile Organic Compound (VOC), as that term is defined in 252:100-1-3, 252:100-37-2, or 252:100-39-2.

~~(B) Any Volatile Organic Solvent (VOS), as that term is defined in 252:100-37-2 and 252:100-39-2.~~

~~(C)~~ (B) Any pollutant regulated under section 111 or 112 (except 112(r)) of the Federal Clean Air Act.

~~(D)~~ (C) Any pollutant for which a national primary ambient air quality standard has been promulgated under the Federal Clean Air Act.

~~(E)~~ (D) Any Toxic Air Contaminant as defined and regulated under 252:100-41-2.

~~(F)~~ (E) Any other substance for which an air emission limitation or equipment standard is set by permit or rule.

"Regulated pollutant (for fee calculation)", which is used only for purposes of this Subchapter, means any "regulated air pollutant" except the following:

(A) Carbon monoxide.

(B) Any pollutant that is a regulated air pollutant solely because it is a Class I or II substance subject to a standard promulgated under or established by Title VI of the Act.

(C) Any pollutant that is a regulated air pollutant solely because it is subject to a standard or regulation under section 112(r) of the Act.

(D) Total suspended particulates (TSP).

252:100-5-2. Registration of potential sources of air contaminants

(a) **Filing.** In addition to any requirements for the submission of information found in any other regulation in this Chapter, the owner or operator of an air contaminant source shall, upon request, provide the Air Quality Division with information necessary to evaluate the source's potential for causing air pollution.

(b) **Necessary information.** The following information shall be included for each source:

(1) Total weight of the contaminant released per day.

(2) Period or periods of operation.

(3) Composition of the contaminant.

(4) Physical state of the contaminant.

(5) Temperature and moisture content of the air or gas stream at the point where released into the atmosphere.

(6) Efficiency of any control device.

(7) Such other information as may be specifically requested by the Director.

252:100-5-2.1. Emission inventory

(a) **Requirement to file an emission inventory.** The owner or operator of any facility that is a source of air emissions shall submit a complete emission inventory annually on forms obtained from the Air Quality Division.

(1) ~~The initial emission inventory for minor facilities shall be submitted by March 1, 1993 and every succeeding year thereafter. The inventory shall cover operations during a calendar year and shall be submitted prior to March 1 of the following year, unless a 30-day extension has been granted by the Division. An additional 30-day extension may be granted for good cause shown.~~

(2) ~~The initial emission inventory for Part 70 sources shall be submitted by April 1, 1994 and every succeeding year thereafter. Facilities registered under a permit by rule as outlined in Subchapter 7 and emitting 5 tons per year or less of each regulated pollutant are required to submit an emission inventory once every 5 years. The inventory shall cover operations during the last year of each 5-year period and be submitted by March 1 of the following year.~~

(3) De minimis facilities as defined in 252:100-7-1.1 are not required to submit an annual emission inventory.

(b) **Content.** All inventories submitted to the Air Quality Division shall include, but shall not be limited to, the following:

(1) For those emissions subject to a permit, the permit number and the permitted allowable emissions as set forth therein.

(2) The amount of the actual emissions, including quantifiable excess emissions, and the basis for such determination.

(3) If the actual emissions vary from the allowable or from the previous year's actual by more than 30%, an explanation for the difference.

(4) For those emissions not the subject of a permit and when requested by the AQD, a list of all 252:100 rules setting forth emission limitations applicable to the facility in question and the maximum yearly allowable for the facility.

(c) **Documentation.** All calculations and assumptions must be verified by proper documentation. All supporting data, including actual production, throughput and measurement records along with engineering calculations and other data utilized in accordance with 252:100-5-2.1(d), below, must be maintained for at least 5 years by the current owner or operator at the facility in conjunction with facility records of the emission inventory. This information must either be submitted to the Air Quality Division or made available for inspection upon request.

(d) **Method of calculation.** The best available data at the time the emission inventory is or should have been prepared shall be used to determine emissions. It shall be the burden of the owner or operator to select the best available data, based on an acceptable method of calculation. Said selection shall be binding upon acceptance by the Air Quality Division and the payment of fees. The method of calculation used to determine emissions shall be binding upon the owner or operator and the Division for the purpose of calculating fees under 252:100-5-2.2 unless challenged by the owner or operator prior to September 1 of the year the inventory is due or by the Division within six (6) months after the date the inventory is received. ~~The following shall constitute acceptable~~

Acceptable methods of calculation for determining actual emissions are:

- (1) Emission factors utilized in the issuance of a relevant Oklahoma Air Quality permit(s) for the facility.
 - (2) Stack tests using appropriate EPA test methods, with advance notification and opportunity for observation by the Air Quality Division.
 - (3) Stack tests using appropriate EPA test methods on identical equipment (i.e., same model) at the same location under the same operating conditions and parameters when may be used for determining the emissions of identical equipment (i.e., same model, same location, and same operating conditions and parameters) when:
 - (A) Tests are performed by persons qualified by training and experience to perform said tests.
 - (B) Copies of the tests results and methods are available for review by the Air Quality Division.
 - (4) Continuous emissions monitoring data, when supported by required certification and calibration data.
 - (5) Current AP-42 factors or other factors acceptable to the ~~Air Quality Division~~.
 - (6) Manufacturer's test data, when approved by the ~~Air Quality Division~~ as reliable.
 - (7) EPA and EPA-contracted industry-specific emission study data when it can be shown to be applicable to the facility in question and approved for use in the emission inventory by the ~~Air Quality Division~~.
 - (8) Fuel usage and other mass-balance methods when supported by specific records applicable to the materials on which the calculations are based and approved for use in the emission inventory by the ~~Air Quality Division~~.
 - (9) Any other method that can be shown to be reasonably accurate when supported by engineering data and calculations, and approved for use in the emission inventory by the ~~Air Quality Division~~.
- (e) **Methods of verification.** Emission inventories determined by the ~~Air Quality Division~~ to be substantially incomplete or substantially incorrect shall, upon the request of the ~~Air Quality Division~~, be subject to verification if not satisfactorily completed or corrected within a reasonable time. Verification shall be accomplished by an appropriate stack test using EPA approved methods, installation of continuous monitoring equipment, or other methods acceptable to the ~~Air Quality Division~~.

252:100-5-2.2. Annual operating fees

(a) **Applicability.**

- (1) This section applies to all facilities that are sources of air pollution, including government facilities, regardless of whether the source is currently permitted or whether an emission inventory has or has not at any time been submitted for the facility. ~~A Part 70 source shall be subject to fee requirements of this section on January 1, 1995.~~ The owners or operators of Part 70 sources shall pay annual fees that are sufficient to cover the Part 70 program costs. The permitting authority shall ensure that the fees required by 252:100-5-2.2(b)(2) will be used solely for Part 70 program costs.
- (2) This section does not apply to de minimis facilities.

(b) **Fee schedule.**

(1) **Minor facilities.**

(A) Until January 1, 1998, the owner or operator of a facility subject to this section shall pay an annual operating fee based on annual emissions of regulated pollutants (for fee calculation), in accordance with the following fee schedule:

- (i) 10 - 24.99 tons/year - \$100/year
- (ii) 25 - 49.99 tons/year - \$250/year
- (iii) 50 - 74.99 tons/year - \$500/year
- (iv) 75 - 99.99 tons/year - \$750/year

(B) In calendar year 1998, annual operating fees shall be invoiced at \$10 per ton of regulated pollutant (for fee calculation).

(C) Beginning January 1, 1999, annual operating fees shall be invoiced at \$17.12 per ton of regulated pollutant (for fee calculation).

(2) **Part 70 Sources.**

(A) From January 1, 1995, until January 1, 1999, the annual operating fee for Part 70 sources shall be \$15.19 per ton of regulated pollutant (for fee calculation).

(B) Beginning January 1, 1999, the annual operating fee for Part 70 sources shall be \$17.12 per ton of regulated pollutant (for fee calculation).

(C) The annual operating fee shall be adjusted automatically each year by the percentage, if any, by which the Consumer Price Index for the most recent calendar year ending before the beginning of such year differs from the Consumer Price Index for the calendar year 1994. The Consumer Price Index for any calendar year is the average of the Consumer Price Index for all-urban consumers published by the Department of Labor, as of the close of the twelve month period ending on August 31 of each calendar year.

(c) **Payment.** ~~For Part 70 sources fees shall be paid by check or money order made payable to the Oklahoma Air Quality Title V Revolving Fund. All other sources shall pay fees by check or money order made payable to the Oklahoma Air Quality Division.~~

~~(1) Fees are due and payable upon receipt of on the invoice due date(s). Fees shall be considered delinquent 30 days from the date of billing, at which time simple interest shall accrue at the rate of one and one-half percent (1½ %) per month on any amount unpaid after the invoice due date(s). Within five (5) years but not before a grace period of 120 days from the date of billing-invoice due date, the DEQ may issue an administrative order to recover such fees and may assess a reasonable administrative fine in accordance with the provisions of the Oklahoma Clean Air Act, 27A O.S.Supp. 1993, §§ 2-5-101 et seq., to an owner or operator of a facility who has failed to pay or has underpaid such fees. If no fee was billed because the owner or operator failed to submit the required annual emission inventory, the term "date of billing" shall mean the date on which the fee would have been billed had the emission inventory been submitted when due. When a fee overpayment has been made as a result of a DEQ invoice error, an owner or operator may seek a credit for such fee overpayment within five years from the date on which payment of the fee was received by the DEQ. When a fee overpayment has been made as a result of an owner or operator's error in preparing the emission inventory upon which the fee was based, the owner or operator may seek credit for such overpayment within one year from the date on which payment of the fee was received by the~~

DEQ.

(2) If an owner or operator has failed to submit the required annual emission inventory, the DEQ may issue an administrative order to recover fees that would have been invoiced had the emission inventory been submitted when due. The DEQ may issue such order within five (5) years from the date of billing and may assess a reasonable administrative fine in accordance with the provisions of the Oklahoma Clean Air Act, 27A O.S. §§ 2-5-101 et seq.

(3) When a fee overpayment has been made as a result of an error, an owner or operator may seek a credit for such fee overpayment within five years from the date on which payment of the fee was received by the DEQ.

(d) Basis for annual operating fees.

(1) Operating fees shall be calculated on a source-specific basis and based on actual emissions of regulated pollutants (for fee calculation) as set forth in the facility emission inventory unless the owner or operator elects to pay fees on allowable emissions. ~~Fees shall be based on emission inventories submitted in the previous calendar year (for example, fees invoiced during the calendar year 1998 shall be based upon inventory data covering the calendar year 1996).~~

(2) Regulated pollutants (for fee calculation) in excess of 4,000 tons per year per pollutant for a Part 70 source shall not be considered in the calculation of the annual fee.

252:100-5-3. Confidentiality of proprietary information

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #99-1303]

RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

PROPOSED RULES:

Subchapter 5. Registration, Emission Inventory and Annual Operating Fees [AMENDED]

Subchapter 9. Excess Emission and Malfunction Reporting Requirements [AMENDED]

Subchapter 13. Prohibition of Open Burning [AMENDED]

Subchapter 19. Particulate Matter Emissions from Fuel-Burning Equipment [AMENDED]

Subchapter 21. Particulate Matter Emissions from Wood-Waste Burning Equipment [REVOKED]

Subchapter 27. Particulate Matter Emissions from Industrial and Other Processes and Operations [REVOKED]

Appendix C. Particulate Matter Emission Limits for Fuel-Burning Equipment [REVOKED]

Appendix C. Particulate Matter Emission Limits for Fuel-Burning Equipment [NEW]

Appendix D. Particulate Matter Emission Limits for Wood-Waste Burning Equipment [REVOKED]

Appendix D. Particulate Matter Emission Limits for Wood-Waste Fuel-Burning Equipment [NEW]

SUMMARY:

The proposed changes to Subchapter 5 are designed to allow the agency to bill annual operating fees on a flexible

schedule. The changes should also allow the fees to be based on the most recent emission data possible. The proposed rule language also requires an owner or operator of a facility to report excess emissions on their annual emission inventory. Substantive changes include requiring inventories to be submitted one month earlier than presently required, allowing fee payers five years after payment is made to notify the DEQ that they overpaid and to receive credit for such overpayment, and reducing the period of time to six months in which either the DEQ or the facility owner or operator can challenge the data or methods used to calculate the facility's emissions.

The proposed changes to Subchapter 9 include correction of typographical and grammatical errors and deletion of redundant language. Also, the rule was simplified and clarified according to the agency-wide re-right/de-wrong initiative. Substantive changes to the rule include narrowing the scope of the rule to minor facilities only. A new condition was added to explain when excess emissions from a process are due to a malfunction and when they are due to negligent, marginal, or unsafe operation. The new language establishes a rebuttable presumption that the combined time of all excess emissions from a process due to a malfunction does not exceed eight hours or 1.5 percent of the process's operation time, whichever is greater, in a 3 month period. The burden of proving that excess emissions occurring more often are due to a malfunction rather than negligent, marginal, or unsafe operation is on the owner or operator of the process.

The proposed changes to Subchapter 13 will simplify and clarify the Subchapter as a part of the agency-wide re-right/de-wrong initiative. Such changes include consolidating the general conditions and requirements for allowed open burning into a new section. A few substantive changes were made such as adding definitions for "domestic refuse" and "landclearing operation" and a section on disaster relief procedures. In some instances, the requirement to notify the DEQ or other appropriate official for authorization to burn was added. In addition, the open-pit incinerator requirements were moved to a new section. The rule is proposed to be amended to require owners or operators to register with their local DEQ office; however, if the owner or operator anticipates operating an open-pit incinerator in the same pit for more than 90 days in a 365-day period, they would be required to obtain a permit and pay the required permit fee. Also, hazardous materials may not be burned in an open-pit incinerator unless prior written approval has been obtained from both the local fire chief and the DEQ.

Subchapters 19, 21 and 27 all deal with particulate matter (PM) emissions. The proposed changes will merge the requirements of Subchapter 21 and Subchapter 27 into Subchapter 19. Subchapters 21 and 27 will then be revoked.

1733
9-15-99

Subchapter 19 as proposed will be simplified and clarified according to the agency-wide re-right/de-wrong initiative. In addition, a Permit by Rule for particulate matter facilities is being proposed for Subchapter 19. It is also being proposed that both Appendix C and Appendix D be revoked in favor of two new tabular appendices.

The DEQ is requesting comments on all of these proposed rule changes.

AUTHORITY:

Environmental Quality Board, 27A O.S.Supp. 1998, §§ 2-2-101 and 2-5-101, *et seq.*

REQUEST FOR COMMENTS:

The DEQ requests that business entities affected by these rules provide the DEQ, within the comment period, in dollar amounts if possible, the increase in the level of direct costs such as fees, and the indirect costs such as reporting, recordkeeping, equipment, construction, labor, professional services, revenue loss, or other costs expected to be incurred by a particular entity due to compliance with the proposed rules.

COMMENT PERIOD:

Written comments will be accepted prior to and at the hearing on October 19, 1999. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by October 12, 1999. Oral comments may be made at the October 19, 1999, hearing and at the November 16, 1999, hearing.

PUBLIC HEARINGS:

Tuesday, October 19, 1999 - 9:00 a.m. hearing, at the Tulsa City-County Health Department, 5051 South 129th East (Northeast corner of 51st and 129th), Tulsa, Oklahoma.

Scheduled before the Environmental Quality Board on Tuesday, November 16, 1999, 9:30 a.m., McAlester, Oklahoma.

Contact Myrna Bruce at (405) 702-4177 for exact location.

COPIES OF PROPOSED RULES:

The proposed rules are available for review at the Air Quality Division office at 707 North Robinson, Suite 4100, Oklahoma City, Oklahoma, 73102, and on the DEQ website (www.deq.state.ok.us), Air Quality Division Current Events and Issues, or copies may be obtained from Myrna Bruce by calling (405) 702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statement may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Jeanette Buttram (252:100-5, 252:100-9 and 252:100-13), Max Price (252:100-19, 252:100-21, 252:100-27 and Appendices C and D). Department of Environmental Quality, Air Quality

Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

ADDITIONAL INFORMATION:

Subchapters 9, 19, 21, 27, and Appendices C and D were brought to public hearing on August 24, 1999.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #99-1303; filed 8-26-99]

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 510. MUNICIPAL SOLID WASTE LANDFILLS [REVOKED]**

[OAR Docket #99-1304]

RULEMAKING ACTION:

Notice of proposed PERMANENT Rulemaking
PROPOSED RULES:

Chapter 510. Municipal Solid Waste Landfills
[REVOKED]

SUMMARY:

Chapter 510 is being revoked subject to the adoption of Chapter 530 as part of the re-right/de-wrong process. Some rules which were in Chapter 510 were deleted. Others were amended and renumbered in Chapter 530. A conversion table is available from the DEQ upon request.

AUTHORITY:

Environmental Quality Board powers and duties, 27A O.S. § 2-2-101; and the Oklahoma Solid Waste Management Act, 27A O.S. § 2-10-101 *et seq.*

REQUEST FOR COMMENTS:

The DEQ requests that business entities affected by this rule provide the DEQ, within the comment period, in dollar amounts if possible, the increase in the level of direct costs such as fees, and the indirect costs such as reporting, recordkeeping, equipment, construction, labor, professional services, revenue loss, or other costs expected to be incurred by a particular entity due to compliance with the proposed rule.

COMMENT PERIOD:

Deliver or mail written comments to the contact person from September 15 through October 15, 1999.

PUBLIC HEARINGS:

Before the Solid Waste Management Advisory Council at 9:00 a.m. on October 21, 1999, at the Stillwater Public Library, 1107 S. Duck, Stillwater, Oklahoma, 74074. Before the Environmental Quality Board at 9:30 on November 16, 1999, in McAlester, Oklahoma, at a location to be announced.

Michelle

Notices of Rulemaking Intent

of this intended action and the rule impact statement, if available, will be mailed within three days after publication of this Notice to all persons who have made a timely request for advanced notice of proposed rulemaking proceedings.

[OAR Docket #99-1403; filed 10-29-99]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 2. PROCEDURES OF THE DEPARTMENT OF ENVIRONMENTAL QUALITY

[OAR Docket #99-1397]

RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking PROPOSED RULES:

Subchapter 15. Uniform Permitting Procedures

Part 5. Tier Classifications [AMENDED]

252:2-15-40 [AMENDED]

252:2-15-41 [AMENDED]

Part 7. Review Procedures and Permitting Time Lines

252:2-15-72 [AMENDED]

SUMMARY:

The Department is proposing amendments to the air quality provisions of 252:2-15, Environmental Permit Processing Times, to make them consistent with 252:100, Air Pollution Control. The terms "minor source(s)" and major "facility(ies)" would be changed to "minor facility(ies)" and "Part 70 source(s)", respectively.

The DEQ is requesting comments on the proposed rule changes.

AUTHORITY:

Environmental Quality Board, 27A O.S.Supp. 1998, §§ 2-2-101 and 2-5-101, et seq.

REQUEST FOR COMMENTS:

The DEQ requests that business entities or any other members of the public affected by these rules provide the DEQ, within the comment period, in dollar amounts if possible, the increase in the level of direct costs such as fees, and the indirect costs such as reporting, recordkeeping, equipment, construction, labor, professional services, revenue loss, or other costs expected to be incurred by a particular entity due to compliance with the proposed rules.

COMMENT PERIOD:

Written comments will be accepted prior to and at the hearing on December 14, 1999. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by December 7, 1999. Oral comments may be made at the December 14, 1999 hearing and at the Environmental Quality Board hearing (date, time and location to be determined).

PUBLIC HEARINGS:

Tuesday, December 14, 1999 - 9:00 a.m. hearing, at Department of Environmental Quality, Room 101, 7 North Robinson, Oklahoma City, Oklahoma.

Scheduled before the Environmental Quality Board (date, time and location to be determined).

Contact Myrna Bruce at (405) 702-4177 for exact location.

COPIES OF PROPOSED RULES:

The proposed rules are available for review at the Air Quality Division office at 707 North Robinson, Suite 410, Oklahoma City, Oklahoma, 73102, and on the DEQ website (www.deq.state.ok.us), Air Quality Division Current Events and Issues, or copies may be obtained from Myrna Bruce by calling (405) 702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statement may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Cheryl Bradley, Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #99-1397; filed 10-26-99]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #99-1398]

RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking PROPOSED RULES:

Subchapter 5. Registration, Emission Inventory and Annual Operating Fees [AMENDED]

Subchapter 9. Excess Emission and Malfunction Reporting Requirements [AMENDED]

Subchapter 13. Prohibition of Open Burn [AMENDED]

Appendix E. Primary Ambient Air Quality Standards [REVOKED]

Appendix E. Primary Ambient Air Quality Standards [NEW]

Appendix F. Secondary Ambient Air Quality Standards [REVOKED]

Appendix F. Secondary Ambient Air Quality Standards [NEW]

11-15-99
1735

Notices of Rulemaking Intent

SUMMARY:

The proposed changes to Subchapter 5 are designed to allow the agency to bill annual operating fees on a flexible schedule. The changes should also allow the fees to be based on the most recent emission data possible. The proposed rule language also requires an owner or operator of a facility to report excess emissions on their annual emission inventory. Substantive changes include requiring inventories to be submitted one month earlier than presently required, allowing fee payers five years after payment is made to notify the DEQ that they overpaid and to receive credit for such overpayment, and reducing the period of time to six months in which either the DEQ or the facility owner or operator can challenge the methods used to calculate the facility's emissions for fee calculation purposes.

The proposed changes to Subchapter 9 include correction of typographical and grammatical errors and deletion of redundant language. Also, the rule was simplified and clarified according to the agency-wide re-right/de-wrong initiative. Substantive changes to the rule include establishing a time limit on excess emissions caused by properly reported malfunction, startup/shutdowns, and maintenance procedures. The burden of proving that excess emissions occurring more than eight hours or 1.5 percent of the process's operation time in a 3-month period are due to excusable malfunctions, startup/shutdowns or maintenance procedures rather than negligent, marginal, or improper operation is on the owner or operator of the process. Language was added to explain that compliance with this Subchapter will not exempt sources from complying with any applicable federal requirement, and additional demonstration requirements for malfunctions, maintenance, and startup/shutdowns were added under proposed section 252:100-9-3.2, Demonstration of cause.

The proposed changes to Subchapter 13 will simplify and clarify the Subchapter as a part of the agency-wide re-right/de-wrong initiative. Such changes include consolidating the general conditions and requirements for allowed open burning into a new section. A few substantive changes were made, such as adding definitions for "domestic refuse" and "land clearing operation," along with a section on disaster relief procedures. In some instances, the requirement to notify the DEQ or other appropriate official for authorization to burn was added. In addition, the open-pit incinerator requirements were moved to a new section. The rule is proposed to be amended to require owners or operators to register with their local DEQ office; however, if the owner or operator anticipates operating an open-pit incinerator in the same pit for more than 30 days in a 365-day period, they would be required to obtain a permit and pay the required permit fee. Also, the rule would only allow material from a land clearing operation to be burned in an open-pit incinerator.

The proposed amendments to Appendices E and F would restore the primary and secondary ambient air quality standards to what they were prior to July 18, 1997. The 8-hour ozone standard of 0.08 ppm would be revoked and the 1-hour standard of 0.12 ppm restored. The PM-2.5 standard would be revoked along the revised form of the PM-10 standard and replaced with the previous form of the PM-10 standard.

The DEQ is requesting comments on all of these proposed rule changes.

AUTHORITY:

Environmental Quality Board, 27A O.S. Supp. 1998, §§ 2-2-101 and 2-5-101, *et seq.*

REQUEST FOR COMMENTS:

The DEQ requests that business entities or any other members of the public affected by these rules provide the DEQ, within the comment period, in dollar amounts if possible, the increase in the level of direct costs such as fees, and the indirect costs such as reporting, recordkeeping, equipment, construction, labor, professional services, revenue loss, or other costs expected to be incurred by a particular entity due to compliance with the proposed rules.

COMMENT PERIOD:

Written comments will be accepted prior to and at the hearing on December 14, 1999. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by December 10, 1999. Oral comments may be made at the December 14, 1999 hearing and at the Environmental Quality Board hearing (date, time and location to be determined).

PUBLIC HEARINGS:

Tuesday, December 14, 1999 - 9:00 a.m. hearing, at the Department of Environmental Quality, Room 101, 707 North Robinson, Oklahoma City, Oklahoma.

Scheduled before the Environmental Quality Board (the date, time and location to be determined).

Contact Myrna Bruce at (405) 702-4177 for exact location.

COPIES OF PROPOSED RULES:

The proposed rules are available for review at the Air Quality Division office at 707 North Robinson, Suite 4100, Oklahoma City, Oklahoma, 73102, and on the DEQ website (www.deq.state.ok.us), Air Quality Division Current Events and Issues, or copies may be obtained from Myrna Bruce by calling (405) 702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statement may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Jeanette Buttrick (252:100-5, 252:100-9 and 252:100-13) and Michael Martinez (Appendices E and F), Department of Environmental Quality, Air Quality Division, P.O. Box

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 615. INDUSTRIAL WASTEWATER SYSTEMS [REVOKED]

[OAR Docket #99-1399]

RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking
PROPOSED RULES:

Chapter 615. Industrial Wastewater Systems
[REVOKED]

SUMMARY:

This rulemaking action revokes Chapter 615 of Title 252 of the Oklahoma Administrative Code, Industrial Wastewater Systems. The revocation of Chapter 615, Industrial Wastewater Systems is part of the agency's re-right/de-wrong process. This chapter is being replaced by a new chapter, OAC 252:616, Industrial Wastewater Systems.

AUTHORITY:

Environmental Quality Board; 27A O.S.Supp. 1998, §§ 2-2-101, 2-2-201, 2-6-402, and 2-6-501

COMMENT PERIOD:

Written comments may be submitted to the contact person listed below from November 15 through December 7, 1999. Oral and written comments will be accepted by the Water Quality Management Advisory Council at its December 7, 1999, meeting. Also scheduled before the Environmental Quality Board (the date, time and location to be determined).

PUBLIC HEARING:

Before the Water Quality Management Advisory Council at its December 7, 1999, meeting at 1:00 p.m. in the Multi-Purpose room of the Department of Environmental Quality, located at 707 N. Robinson, Oklahoma City, Oklahoma 73101.

Also scheduled before the Environmental Quality Board (the date, time and location to be determined).

COPIES OF PROPOSED RULES:

Copies of the proposed rules may be obtained from the contact person.

RULE IMPACT STATEMENT:

The rule impact statement is available from the contact person.

CONTACT PERSON:

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

[OAR Docket #99-1638]

RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

PROPOSED RULES:

Subchapter 5. Registration, Emission Inventory and Annual Operating Fees [AMENDED]

Subchapter 13. Prohibition of Open Burning [AMENDED]

SUMMARY:

The proposed changes to Subchapter 5 are designed to allow the agency to bill annual operating fees on a flexible schedule. The changes should also allow the fees to be based on the most recent emission data possible. The proposed rule language clarifies that an owner/operator of a facility must report quantifiable excess emissions on their annual emission inventory. Substantive changes include requiring all inventories to be submitted prior to March 1 and providing up to a 60-day extension upon request and good cause shown. It allows fee payers five years after payment is made to notify the DEQ that they overpaid and receive credit for such overpayment, and reduces to six months after inventories are due or submitted the period of time in which either the facility owner/operator or the DEQ, respectively, can challenge the method used to calculate the facility's emissions for fee calculation purposes.

The proposed changes to Subchapter 13 will simplify and clarify the Subchapter as a part of the agency-wide re-right/de-wrong initiative. Such changes include consolidating the general conditions and requirements for

allowed open burning into a new section. A few substantive changes were made, such as adding definitions for "domestic refuse" and "land clearing operation," along with a section on disaster relief procedures. In some instances, the requirement to notify the DEQ or other appropriate official for authorization to burn was added. New language was added under "land management and land clearing operations" requiring those who clear land in areas that are or have been designated nonattainment to burn their vegetation in open-pit incinerators. Existing language on open-pit incinerators was expanded and now prohibits accepting any material owned by other persons and from transporting any material to the property where the open-pit incinerator is located in order to burn the material.

AUTHORITY:

Environmental Quality Board powers and duties, 27A O.S. Supp. 1999, Section 2-2-101; and Oklahoma Clean Air Act Section 2-5-101, *et. seq.*

REQUEST FOR COMMENTS:

The DEQ requests that business entities or any other members of the public affected by these rules provide the DEQ, within the comment period, in dollar amounts if possible, the increase in the level of direct costs such as fees, and the indirect costs such as reporting, recordkeeping, equipment, construction, labor, professional services, revenue loss, or other costs expected to be incurred by a particular entity due to compliance with the proposed rules.

COMMENT PERIOD:

The comment period for the proposed amendments to Subchapters 5 and 13 were September 15 through October 19, 1999, and November 15 through December 14, 1999.

PUBLIC HEARINGS:

Previously held before the Air Quality Council on October 19 and December 14, 1999. However, additional oral comments may be made at the meeting of the Environmental Quality Board, Friday, February 25, 2000 - 9:30 a.m., at the Department of Environmental Quality, Room 101, 707 North Robinson, Oklahoma City, Oklahoma.

Contact Myrna Bruce at (405) 702-4177 for additional information.

COPIES OF PROPOSED RULES:

The proposed rules are available for review at the Air Quality Division office at 707 North Robinson, Suite 4100, Oklahoma City, Oklahoma, 73102, and on the DEQ website (www.deq.state.ok.us), Air Quality Division Current Events and Issues, or copies may be obtained from Myrna Bruce by calling (405) 702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statement may be obtained from the Air Quality Division.

ANALYSIS:

The changes to Subchapter 5 will allow the agency to bill annual operating fees on a flexible schedule. The changes should also allow the fees to be based on the most recent emission data possible. The proposed rule language clarifies that an owner or operator of a facility must report quantifiable excess emissions on

their annual emission inventory. Substantive changes include requiring all inventories be submitted prior to March 1 and providing up to a 60-day extension upon request and good cause shown. It allows fee payers five years after payment is made to notify the DEQ that they overpaid and receive credit for such overpayment, and reduces to six months after inventories are due or submitted the period of time in which either the facility owner/operator or the DEQ, respectively, can challenge the method used to calculate the facility's emissions for fee calculation purposes.

The Air Quality Advisory Council recommended these amendments for adoption at their meeting on December 14, 1999.
SUMMARY OF DIFFERENCES FROM ANALOGOUS FEDERAL RULES:

None

Jeanette Buttram, Department of Environmental Quality, Air Quality Division, 707 N. Robinson, Suite 4100, Oklahoma City, Oklahoma 73101-1677. (405) 702-4100

PURSUANT TO THE ACTIONS DESCRIBED HEREIN, THE FOLLOWING RULES ARE CONSIDERED FINALLY ADOPTED AS SET FORTH IN 75 O.S., SECTION 308.1(A), WITH AN EFFECTIVE DATE OF JUNE 12, 2000.

SUBCHAPTER 5. REGISTRATION, EMISSION INVENTORY AND ANNUAL OPERATING FEES

252:100-5-1. Purpose

This Subchapter requires potential sources of air contaminants to register with the Air Quality Division. It also requires facilities that emit air contaminants to file an emission inventory and pay annual operating fees.

252:100-5-1.1. Definitions

The following words and terms when used in this Subchapter shall have the following meaning unless the context clearly indicates otherwise:

"Actual emissions" means the total amount of regulated air pollutants emitted from a given facility during a particular calendar year, determined using methods contained in 252:100-5-2.1(d).

"Allowable emissions" means:

- (A) The total amount of regulated air pollutant emitted based on limits contained in a federally enforceable permit or potential to emit, or
- (B) For grandfathered sources, emission limits based on maximum design capacity and considering all applicable rules.

"Consumer Price Index" means an index determined by the U.S. Department of Labor measuring the change in the cost of typical wage-earner purchases of goods and services expressed as a percentage of the cost of these same goods and services in a base period.

"Date of billing" means the date the fee was billed. In the case no fee was billed because the owner or operator failed to submit the required annual emission inventory, the

date of billing shall mean the date on which the fee would have been billed had the emission inventory been submitted when due.

“Emission inventory” means a compilation of all point source, storage and process fugitive air emissions for all regulated air pollutants at a given facility.

“Error” means, with regard to fees, a fee overpayment made as a result of a mistake on the part of the DEO in invoicing or the part of the owner or operator in calculating emissions. It does not mean a mistake made in the decision to use or not to use a particular emission factor or method of calculation.

“Grandfathered source” means a stationary source that was in operation in Oklahoma when an otherwise applicable rule was promulgated unless that rule specifically applies to existing sources or the source has undergone modification since that rule was promulgated.

“Minor facility” means a facility which is not a Part 70 source.

“Part 70 source” means any source subject to the permitting requirements of Part 5 of Subchapter 8 of this Chapter as provided in 252:100-8-3(a) and 252:100-8-3(b).

“Process Fugitive Emissions” means those emissions created by or incidental to any particular process which become airborne or have the potential to become airborne, and could not reasonably, taking into account economic considerations, be made to pass through a stack, chimney, vent or other functionally equivalent opening.

“Regulated air pollutant” means:

(A) Any Volatile Organic Compound (VOC), as that term is defined in 252:100-1-3, 252:100-37-2, or 252:100-39-2.

~~(B)~~ Any Volatile Organic Solvent (VOS), as that term is defined in 252:100-37-2 and 252:100-39-2.

~~(C)~~(B) Any pollutant regulated under section 111 or 112 (except 112(r)) of the Federal Clean Air Act.

~~(D)~~(C) Any pollutant for which a national primary ambient air quality standard has been promulgated under the Federal Clean Air Act.

~~(E)~~(D) Any Toxic Air Contaminant as defined and regulated under 252:100-41-2.

~~(F)~~(E) Any other substance for which an air emission limitation or equipment standard is set by permit or rule.

“Regulated pollutant (for fee calculation)”, which is used only for purposes of this Subchapter, means any “regulated air pollutant” except the following:

(A) Carbon monoxide.

(B) Any pollutant that is a regulated air pollutant solely because it is a Class I or II substance subject to a standard promulgated under or established by Title VI of the Act.

(C) Any pollutant that is a regulated air pollutant solely because it is subject to a standard or regulation under section 112(r) of the Act.

(D) Total suspended particulates (TSP).

252:100-5-2. Registration of potential sources of air contaminants

(a) **Filing.** In addition to any requirements for the submission of information found in any other regulation in this Chapter, the owner or operator of an air contaminant source shall, upon request, provide the Air Quality Division with information necessary to evaluate the source’s potential for causing air pollution.

(b) **Necessary information.** The following information shall be included for each source:

- (1) Total weight of the contaminant released per day.
- (2) Period or periods of operation.
- (3) Composition of the contaminant.
- (4) Physical state of the contaminant.
- (5) Temperature and moisture content of the air or gas stream at the point where released into the atmosphere.
- (6) Efficiency of any control device.
- (7) Such other information as may be specifically requested by the Director.

252:100-5-2.1. Emission inventory

(a) **Requirement to file an emission inventory.** The owner or operator of any facility that is a source of air emissions shall submit a complete emission inventory annually on forms obtained from the Air Quality Division.

~~(1) The initial emission inventory for minor facilities shall be submitted by March 1, 1993 and every succeeding year thereafter. The inventory shall cover operations during a calendar year and shall be submitted prior to March 1 of the following year, unless a 30-day extension has been granted by the Division. An additional 30-day extension may be granted for good cause shown.~~

~~(2) The initial emission inventory for Part 70 sources shall be submitted by April 1, 1994 and every succeeding year thereafter. Facilities registered under a permit by rule as outlined in Subchapter 7 and emitting 5 tons per year or less of each regulated pollutant are required to submit an emission inventory once every 5 years. The inventory shall cover operations during the last year of each 5-year period and be submitted by March 1 of the following year.~~

~~(3) De minimis facilities as defined in 252:100-7-1.1 are not required to submit an annual emission inventory.~~

(b) **Content.** All inventories submitted to the Air Quality Division shall include, but shall not be limited to, the following:

(1) For those emissions subject to a permit, the permit number and the permitted allowable emissions as set forth therein.

(2) The amount of the actual emissions, including quantifiable excess emissions, and the basis for such determination.

(3) If the actual emissions vary from the allowable or

Permanent Final Adoptions

from the previous year's actual by more than 30%, an explanation for the difference.

(4) For those emissions not the subject of a permit and when requested by the AQD, a list of all 252:100 rules setting forth emission limitations applicable to the facility in question and the maximum yearly allowable for the facility.

(c) **Documentation.** All calculations and assumptions must be verified by proper documentation. All supporting data, including actual production, throughput and measurement records along with engineering calculations and other data utilized in accordance with 252:100-5-2.1(d), below, must be maintained for at least 5 years by the current owner or operator at the facility in conjunction with facility records of the emission inventory. This information must either be submitted to the Air Quality Division or made available for inspection upon request.

(d) **Method of calculation.** The best available data at the time the emission inventory is or should have been prepared shall be used to determine emissions. It shall be the burden of the owner or operator to select the best available data, based on an acceptable method of calculation. Said selection shall be binding upon acceptance by the Air Quality Division and the payment of fees. The method of calculation used to determine emissions shall be binding upon the owner or operator and the Division for the purpose of calculating fees under 252:100-5-2.2 unless challenged by the owner or operator prior to September 1 of the year the inventory is due or by the Division within six (6) months after the date the inventory is received. The following shall constitute acceptable methods of calculation for determining actual emissions are:

(1) Emission factors utilized in the issuance of a relevant Oklahoma Air Quality permit(s) for the facility.

(2) Stack tests using appropriate EPA test methods, with advance notification and opportunity for observation by the Air Quality Division.

(3) Stack tests using appropriate EPA test methods on ~~identical equipment (i.e., same model) at the same location under the same operating conditions and parameters when may be used for determining the emissions of identical equipment (i.e., same model, same location, and same operating conditions and parameters) when:~~

(A) Tests are performed by persons qualified by training and experience to perform said tests.

(B) Copies of the tests results and methods are available for review by the Air Quality Division.

(4) Continuous emissions monitoring data, when supported by required certification and calibration data.

(5) Current AP-42 factors or other factors acceptable to the Air Quality Division.

(6) Manufacturer's test data, when approved by the Air Quality Division as reliable.

(7) EPA and EPA-contracted industry-specific emission study data when it can be shown to be applicable to the facility in question and approved for use in the emission inventory by the Air Quality Division.

(8) Fuel usage and other mass-balance methods when supported by specific records applicable to the materials on which the calculations are based and approved for use in the emission inventory by the Air Quality Division.

(9) Any other method that can be shown to be reasonably accurate when supported by engineering data and calculations, and approved for use in the emission inventory by the Air Quality Division.

(e) **Methods of verification.** Emission inventories determined by the Air Quality Division to be substantially incomplete or substantially incorrect shall, upon the request of the Air Quality Division, be subject to verification if not satisfactorily completed or corrected within a reasonable time. Verification shall be accomplished by an appropriate stack test using EPA approved methods, installation of continuous monitoring equipment, or other methods acceptable to the Air Quality Division.

252:100-5-2.2. Annual operating fees

(a) Applicability.

(1) This section applies to all facilities that are sources of air pollution, including government facilities, regardless of whether the source is currently permitted or whether an emission inventory has or has not at any time been submitted for the facility. ~~A Part 70 source shall be subject to fee requirements of this section on January 1, 1995.~~ The owners or operators of Part 70 sources shall pay annual fees that are sufficient to cover the Part 70 program costs. The permitting authority shall ensure that the fees required by 252:100-5-2.2(b)(2) will be used solely for Part 70 program costs.

(2) This section does not apply to de minimis facilities.

(b) Fee schedule.

(1) Minor facilities.

(A) Until January 1, 1998, the owner or operator of a facility subject to this section shall pay an annual operating fee based on annual emissions of regulated pollutants (for fee calculation), in accordance with the following fee schedule:

(i) 10 - 24.99 tons/year - \$100/year

(ii) 25 - 49.99 tons/year - \$250/year

(iii) 50 - 74.99 tons/year - \$500/year

(iv) 75 - 99.99 tons/year - \$750/year

(B) In calendar year 1998, annual operating fees shall be invoiced at \$10 per ton of regulated pollutant (for fee calculation).

(C) Beginning January 1, 1999, annual operating fees shall be invoiced at \$17.12 per ton of regulated pollutant (for fee calculation).

(2) Part 70 Sources.

(A) From January 1, 1995, until January 1, 1999, the annual operating fee for Part 70 sources shall be \$15.19 per ton of regulated pollutant (for fee calculation).

(B) Beginning January 1, 1999, the annual operating fee for Part 70 sources shall be \$17.12 per ton of regulated pollutant (for fee calculation).

(C) The annual operating fee shall be adjusted automatically each year by the percentage, if any, by which the Consumer Price Index for the most recent calendar year ending before the beginning of such year differs from the Consumer Price Index for the calendar year 1994. The Consumer Price Index for any calendar year is the average of the Consumer Price Index for all-urban consumers published by the Department of Labor, as of the close of the twelve month period ending on August 31 of each calendar year.

(c) ~~Payment. For Part 70 sources fees shall be paid by check or money order made payable to the Oklahoma Air Quality Title V Revolving Fund. All other sources shall pay fees by check or money order made payable to the Oklahoma Air Quality Division.~~

~~(1) Fees are due and payable upon receipt of on the invoice due date(s). Fees shall be considered delinquent 30 days from the date of billing, at which time simple interest shall accrue at the rate of one and one half percent (1 1/2%) per month on any amount unpaid after the invoice due date(s). Within five (5) years but not before a grace period of 120 days from the date of billing invoice due date, the DEQ may issue an administrative order to recover such fees and may assess a reasonable administrative fine in accordance with the provisions of the Oklahoma Clean Air Act, 27A O.S. Supp. 1993, §§ 2-5-101 et seq., to an owner or operator of a facility who has failed to pay or has underpaid such fees. If no fee was billed because the owner or operator failed to submit the required annual emission inventory, the term "date of billing" shall mean the date on which the fee would have been billed had the emission inventory been submitted when due. When a fee overpayment has been made as a result of a DEQ invoice error, an owner or operator may seek a credit for such fee overpayment within five years from the date on which payment of the fee was received by the DEQ. When a fee overpayment has been made as a result of an owner or operator's error in preparing the emission inventory upon which the fee was based, the owner or operator may seek credit for such overpayment within one year from the date on which payment of the fee was received by the DEQ.~~

~~(2) If an owner or operator has failed to submit the required annual emission inventory, the DEQ may issue~~

an administrative order to recover fees that would have been invoiced had the emission inventory been submitted when due. The DEQ may issue such order within five (5) years from the date of billing and may assess a reasonable administrative fine in accordance with the provisions of the Oklahoma Clean Air Act, 27A O.S. §§ 2-5-101 et seq.

(3) When a fee overpayment has been made as a result of an error, an owner or operator may seek a credit for such fee overpayment within five years from the date on which payment of the fee was received by the DEQ.

(d) Basis for annual operating fees.

(1) Operating fees shall be calculated on a source-specific basis and based on actual emissions of regulated pollutants (for fee calculation) as set forth in the facility emission inventory unless the owner or operator elects to pay fees on allowable emissions. ~~Fees shall be based on emission inventories submitted in the previous calendar year (for example, fees invoiced during the calendar year 1998 shall be based upon inventory data covering the calendar year 1996).~~

(2) Regulated pollutants (for fee calculation) in excess of 4,000 tons per year per pollutant for a Part 70 source shall not be considered in the calculation of the annual fee.

AGENDA
AIR QUALITY COUNCIL
DEPARTMENT OF ENVIRONMENTAL QUALITY
HEARING/MEETING
* 9:00 A.M.
Tuesday, October 19, 1999
Tulsa City-County Auditorium
5051 South 129 Street East Avenue
Tulsa, Oklahoma

1. Call to Order – Bill Breisch
2. Roll Call – Myrna Bruce
3. CY 2000 Meeting Schedule
 - A. Discussion by Council
4. Approval of Minutes of the August 24, 1999 Regular Meeting
5. Public Rulemaking Hearings
 - A. OAC 252:100-4 New Source Performance Standards
Proposal would update the incorporations by reference of the federal NSPS from 7-1-97 to 7-1-99. Previously, incorporated NSPS subparts that have been amended by the USEPA since 7-1-97 are: AA, AAA, Da, Db, Eb, and WWW. A new Subpart Ec has been added to the NSPS. Subpart Ce was added to 252:100-4-5 as an exception.
 1. Presentation – Michelle Martinez
 2. Questions and discussion by Council / Public
 3. Possible action by Council
 4. Roll call vote(s) for emergency and permanent adoption
 - B. OAC 252:100- 5 Registration, Emission Inventory and Annual Operating Fees
Proposal is designed to allow the Agency to bill annual operating fees on a flexible schedule; to allow the fees to be based on the most recent emission data possible; requires an owner or operator of a facility to report excess emissions on their annual emission inventory; requires inventories to be submitted one month earlier than presently required allowing fee payers five years after payment is made to notify the DEQ that they overpaid and to receive credit for such overpayment; and reducing the period of time to six months in which either the DEQ or the facility owner or operator can challenge the data or methods used to calculate the facility's emissions.
 1. Presentation – Jeanette Buttram
 2. Questions and discussion by Council / Public
 3. Possible action by Council
 4. Roll call vote(s) for permanent adoption
 - C. OAC 252:100-9 Excess Emission and Malfunction Reporting [AMENDED]
Proposal would simplify the language under the agency-wide re-right/de-wrong initiative including correction of typographical and grammatical errors and deletion of redundant language. Substantive changes include narrowing the scope of the rule to minor facilities only. A new condition was added to explain when excess emissions from a process are due to a malfunction and when they are due to negligent, marginal, or unsafe operation. The new language establishes a rebuttable presumption that the combined time of all excess emissions from a process due to a malfunction does not exceed eight hours or 1.5% of the process's operation time, whichever is greater, in a 3-month period. The burden of proving that excess emissions occurring more often are due to a malfunction rather than negligent, marginal, or unsafe operation is on the owner or operator of the process.
 1. Presentation – Jeanette Buttram
 2. Questions and discussion by Council / Public
 3. Possible action by Council
 4. Roll call vote(s) for permanent adoption
 - D. OAC 252:100-13. Prohibition of Open Burning
Proposal would simplify the language under the agency-wide re-right/de-wrong initiative including consolidating the general conditions and requirements for allowed open burning into a new section. Substantive changes would add certain definitions and notification requirements.
 1. Presentation – Jeanette Buttram
 2. Questions and discussion by Council / Public
 3. Possible action by Council
 4. Roll call vote(s) for permanent adoption

- E. COMBINED**
OAC 252:100-19 Particulate Matter Emissions from Fuel-burning Equipment [AMENDED]
OAC 252:100-21 Particulate Matter Emissions from Wood-Waste Burning Equipment [REVOKED]
OAC 252:100-27 Particulate Matter Emissions from Industrial and Other Processes and Operations [REVOKED]
Appendix C Particulate Matter Emissions Limits for Fuel Burning Equipment [REVOKED]
Appendix D Particulate Matter Emission Limits for Wood-Waste Burning Equipment [REVOKED]
Appendix C Particulate Matter Emissions Limits for Fuel Burning Equipment [NEW]
Appendix D Particulate Matter Emission Limits for Wood-Waste Burning Equipment [NEW]
 Proposal would merge requirements into SC 19 and revoke SC 21 and SC 27. SC 19, as proposed, would simplify the language under the agency-wide re-right/de-wrong initiative. Also a Permit by Rule for particulate matter facilities is being proposed for SC 19. The graphics in Appendices C and D would be replaced by two new tabular appendices.
1. Presentation – Max Price
 2. Questions and discussion by Council / Public
 3. Possible action by Council
 4. Roll call vote(s) for permanent adoption
- F. OAC 252:100-35 Control of Emission of Carbon Monoxide [AMENDED]**
 Proposal would simplify and clarify the language under the agency-wide re-right/de-wrong initiative; and narrow the scope to specific sources that are the primary emitters of carbon monoxide. Other changes include addition of definitions "existing source" and "new source" and the replacement of "foundry cupola" with "gray iron cupola". Also, Section 35-3 would be revoked because performance testing requirements are already provided for in SC 8 and SC 43.
1. Presentation – Michelle Martinez
 2. Questions and discussion by Council / Public
 3. Possible action by Council
 4. Roll call vote(s) for emergency and permanent adoption
- H. OAC 252:100-41 Sections 15 and 16, Control of Emission of Hazardous and Toxic Air Contaminant [AMENDED]**
 Proposal would simplify and clarify the language under the agency-wide re-right/de-wrong initiative. The proposed changes to section 15 would incorporate by reference the MACT standards for hazardous air pollutants in 40 CFR 63 promulgated by EPA from 7-1-98 through 7-1-99. The proposed changes to section 16 would update to 7-1-99 the NESHAP found in 40 CFR 61.
1. Presentation – Cheryl Bradley
 2. Questions and discussion by Council / Public
 3. Possible action by Council
 4. Roll call vote(s) for emergency and permanent adoption
- I. OAC 252:100-47 Control of Emission from Existing Municipal Solid Waste Landfills [AMENDED]**
 Proposal would amend to update the incorporation by reference of 40 CFR 60.751 through 60.759 to 7-1-99.
1. Presentation – Cheryl Bradley
 2. Questions and discussion by Council / Public
 3. Possible action by Council
 4. Roll call vote(s) for emergency and permanent adoption
- 6. Division Director's Report – Eddie Terrill**
7. New Business – Any matter not known about, or which could not have been reasonably foreseen, prior to the time of posting the agenda.
8. Adjournment – Next Regular Meeting
 Tuesday, December 14, 1999 DEQ Multi-Purpose Room

* Council decided at its August 24 meeting to begin early due to the number of agenda items

Lunch Break, if necessary

September 24, 1999

MEMORANDUM

TO: Air Quality Council

FROM: Eddie Terrill, Division Director
Air Quality Division

SUBJECT: Modifications to Subchapter 5

CT.

Enclosed is a copy of the proposed draft modifications to Subchapter 5, Registration, Emission Inventory and Annual Operating Fees. The rule will be brought to public hearing on October 19, 1999. The proposed changes to the rule are designed to allow the agency to bill fee payers on a flexible schedule. These changes should also allow the fees to be based on the most recent emission data possible. Also, the proposed rule language clarifies that excess emissions must be reported on the annual emission inventory. Substantive changes include inserting a definition for "error" and requiring all inventories be submitted prior to March 1 and providing for a 30-day extension upon request. It allows fee payers five years after payment is made to notify the DEQ that they overpaid and receive credit for such overpayment, and reduces to six months after inventories are due or submitted the period of time in which either the facility owner/operator or the DEQ, respectively, can challenge the data or methods used to calculate the facility's emissions. A new subsection is proposed regarding the use of stack tests as a method of calculation.

Comments were received from Fort James and addressed by staff. A copy of the letter and response to comments are included in the packet.

Staff will recommend the rule be considered again at the next Air Quality Council meeting on December 14, 1999.

Enclosures: 3

**SUBCHAPTER 5. REGISTRATION,
EMISSION INVENTORY AND ANNUAL OPERATING FEES**

Section

- 252:100-5-1. Purpose
- 252:100-5-1.1. Definitions
- 252:100-5-2. Registration of potential sources of air
contaminants
- 252:100-5-2.1. Emission inventory
- 252:100-5-2.2. Annual operating fees
- 252:100-5-3. Confidentiality of proprietary information

**DRAFT
SEPTEMBER 15, 1999**

**SUBCHAPTER 5. REGISTRATION,
EMISSION INVENTORY AND ANNUAL OPERATING FEES**

252:100-5-1. Purpose

This Subchapter requires potential sources of air contaminants to register with the ~~Air Quality~~ Division. It also requires facilities that emit air contaminants to file an emission inventory and pay annual operating fees.

252:100-5-1.1. Definitions

The following words and terms when used in this Subchapter shall have the following meaning unless the context clearly indicates otherwise:

"Actual emissions" means the total amount of regulated air pollutants emitted from a given facility during a particular calendar year, determined using methods contained in 252:100-5-2.1(d).

"Allowable emissions" means:

(A) The total amount of regulated air pollutant emitted based on limits contained in a federally enforceable permit or potential to emit, or

(B) For grandfathered sources, emission limits based on maximum design capacity and considering all applicable rules.

"Consumer Price Index" means an index determined by the U.S. Department of Labor measuring the change in the cost of typical wage-earner purchases of goods and services expressed as a percentage of the cost of these same goods and services in a base period.

"Date of billing" means, the date the fee was billed. In the case no fee was billed because the owner or operator failed to submit the required annual emission inventory, the date of billing shall mean the date on which the fee would have been billed had the emission inventory been submitted when due.

"Emission inventory" means a compilation of all point source, storage and process fugitive air emissions for all regulated air pollutants at a given facility.

"Error" means, with regard to fees, a fee overpayment made as a result of a mistake on the part of the DEQ in invoicing or the part of the owner or operator in calculating emissions. It does not mean a mistake made in the decision to use or not to use a particular emission factor or method of calculation.

"Grandfathered source" means a stationary source that was in operation in Oklahoma when an otherwise applicable rule was promulgated unless that rule specifically applies to existing sources or the source has undergone modification since that rule was promulgated.

"Minor facility" means a facility which is not a Part 70 source.

"Part 70 source" means any source subject to the permitting requirements of Part 5 of Subchapter 8 of this Chapter as provided

DRAFT

SEPTEMBER 15, 1999

in 252:100-8-3(a) and 252:100-8-3(b).

"Process Fugitive Emissions" means those emissions created by or incidental to any particular process which become airborne or have the potential to become airborne, and could not reasonably, taking into account economic considerations, be made to pass through a stack, chimney, vent or other functionally equivalent opening.

"Regulated air pollutant" means:

(A) Any Volatile Organic Compound (VOC), as that term is defined in 252:100-1-3, 252:100-37-2, or 252:100-39-2.

~~(B) Any Volatile Organic Solvent (VOS), as that term is defined in 252:100-37-2 and 252:100-39-2.~~

~~(C)~~ (B) Any pollutant regulated under section 111 or 112 (except 112(r)) of the Federal Clean Air Act.

~~(D)~~ (C) Any pollutant for which a national primary ambient air quality standard has been promulgated under the Federal Clean Air Act.

~~(E)~~ (D) Any Toxic Air Contaminant as defined and regulated under 252:100-41-2.

~~(F)~~ (E) Any other substance for which an air emission limitation or equipment standard is set by permit or rule.

"Regulated pollutant (for fee calculation)", which is used only for purposes of this Subchapter, means any "regulated air pollutant" except the following:

(A) Carbon monoxide.

(B) Any pollutant that is a regulated air pollutant solely because it is a Class I or II substance subject to a standard promulgated under or established by Title VI of the Act.

(C) Any pollutant that is a regulated air pollutant solely because it is subject to a standard or regulation under section 112(r) of the Act.

(D) Total suspended particulates (TSP).

252:100-5-2. Registration of potential sources of air contaminants

(a) **Filing.** In addition to any requirements for the submission of information found in any other regulation in this Chapter, the owner or operator of an air contaminant source shall, upon request, provide the ~~Air Quality~~ Division with information necessary to evaluate the source's potential for causing air pollution.

(b) **Necessary information.** The following information shall be included for each source:

(1) Total weight of the contaminant released per day.

(2) Period or periods of operation.

(3) Composition of the contaminant.

(4) Physical state of the contaminant.

(5) Temperature and moisture content of the air or gas stream at the point where released into the atmosphere.

(6) Efficiency of any control device.

DRAFT
SEPTEMBER 15, 1999

(7) Such other information as may be specifically requested by the Director.

252:100-5-2.1. Emission inventory

(a) **Requirement to file an emission inventory.** The owner or operator of any facility that is a source of air emissions shall submit a complete emission inventory annually on forms obtained from the ~~Air Quality Division~~. The inventory shall cover operations during a calendar year and shall be submitted prior to March 1 of the following year, unless a 30-day extension has been granted by the Division.

~~(1) The initial emission inventory for minor facilities shall be submitted by March 1, 1993 and every succeeding year thereafter.~~

~~(2) The initial emission inventory for Part 70 sources shall be submitted by April 1, 1994 and every succeeding year thereafter.~~

~~(3) De minimis facilities as defined in 252:100-7-1.1 are not required to submit an annual emission inventory.~~

(b) **Content.** All inventories submitted to the ~~Air Quality Division~~ shall include, but shall not be limited to, the following:

(1) For those emissions subject to a permit, the permit number and the permitted allowable emissions as set forth therein.

(2) The amount of the actual emissions and the basis for such determination.

(3) The amount of excess emissions and the basis for such determination.

~~(3)(4)~~ If the actual emissions vary from the allowable or from the previous year's actual by more than 30%, an explanation for the difference.

~~(4)(5)~~ For those emissions not the subject of a permit and when requested by the AQD, a list of all 252:100 rules setting forth emission limitations applicable to the facility in question and the maximum yearly allowable for the facility.

(c) **Documentation.** All calculations and assumptions must be verified by proper documentation. All supporting data, including actual production, throughput and measurement records along with engineering calculations and other data utilized in accordance with 252:100-5-2.1(d), below, must be maintained for at least 5 years by the current owner or operator at the facility in conjunction with facility records of the emission inventory. This information must either be submitted to the ~~Air Quality Division~~ or made available for inspection upon request.

(d) **Method of calculation.** The best available data at the time the emission inventory is or should have been prepared shall be used to determine emissions. It shall be the burden of the owner or operator to select the best available data, based on an

DRAFT

SEPTEMBER 15, 1999

acceptable method of calculation. Said selection shall be binding upon acceptance by the Air Quality Division and the payment of fees. The method of calculation used to determine emissions shall be binding upon the owner or operator and the Division unless challenged by the owner or operator prior to September 1 of the year the inventory is due or by the Division within six (6) months after the date the inventory is received. The following shall constitute acceptable methods of calculation for determining actual emissions are:

(1) Emission factors utilized in the issuance of a relevant Oklahoma Air Quality permit(s) for the facility.

(2) Stack tests using appropriate EPA test methods, with advance notification and opportunity for observation by the Air Quality Division that meet the requirements of 252:100-5-2.1(e).

(3) Stack tests using appropriate EPA test methods on identical equipment (i.e., same model) at the same location under the same operating conditions and parameters when:

(A) Tests are performed by persons qualified by training and experience to perform said tests.

(B) Copies of the tests results and methods are available for review by the Air Quality Division.

(4) Continuous emissions monitoring data, when supported by required certification and calibration data.

(5) Current AP-42 factors or other factors acceptable to the Air Quality Division.

(6) Manufacturer's test data, when approved by the Air Quality Division as reliable.

(7) EPA and EPA-contracted industry-specific emission study data when it can be shown to be applicable to the facility in question and approved for use in the emission inventory by the Air Quality Division.

(8) Fuel usage and other mass-balance methods when supported by specific records applicable to the materials on which the calculations are based and approved for use in the emission inventory by the Air Quality Division.

(9) Any other method that can be shown to be reasonably accurate when supported by engineering data and calculations, and approved for use in the emission inventory by the Air Quality Division.

(e) Method of calculation using stack test.

(1) Stack tests may be used for determining actual emissions when:

(A) Appropriate EPA test methods were used.

(B) The test were conducted during the preceding 5-year period.

(C) The Division was provided advance notification and opportunity for observation.

(D) The testing was performed by persons qualified by training and experience to conduct said tests.

DRAFT
SEPTEMBER 15, 1999

(E) The testing was performed on sources of NOx and/or VOC emissions between April 1 and October 31 under actual operating conditions or as required by the appropriate EPA test method.

(2) Stack tests may be used for determining the emissions of identical equipment (i.e., same model, same location, and same operating conditions and parameters) when the tests are performed according to the requirements listed in 252:100-5.2.1(e)(1).

~~(e)(f)~~ **Methods of verification.** Emission inventories determined by the ~~Air Quality~~ Division to be substantially incomplete or substantially incorrect shall, upon the request of the ~~Air Quality~~ Division, be subject to verification if not satisfactorily completed or corrected within a reasonable time. Verification shall be accomplished by an appropriate stack test using EPA approved methods, installation of continuous monitoring equipment, or other methods acceptable to the ~~Air Quality~~ Division.

252:100-5-2.2. Annual operating fees

(a) Applicability.

(1) This section applies to all facilities that are sources of air pollution, including government facilities, regardless of whether the source is currently permitted or whether an emission inventory has or has not at any time been submitted for the facility. ~~A Part 70 source shall be subject to fee requirements of this section on January 1, 1995.~~ The owners or operators of Part 70 sources shall pay annual fees that are sufficient to cover the Part 70 program costs. The permitting authority shall ensure that the fees required by 252:100-5-2.2(b)(2) will be used solely for Part 70 program costs.

(2) This section does not apply to de minimis facilities.

(b) Fee schedule.

(1) Minor facilities.

(A) Until January 1, 1998, the owner or operator of a facility subject to this section shall pay an annual operating fee based on annual emissions of regulated pollutants (for fee calculation), in accordance with the following fee schedule:

- (i) 10 - 24.99 tons/year - \$100/year
- (ii) 25 - 49.99 tons/year - \$250/year
- (iii) 50 - 74.99 tons/year - \$500/year
- (iv) 75 - 99.99 tons/year - \$750/year

(B) In calendar year 1998, annual operating fees shall be invoiced at \$10 per ton of regulated pollutant (for fee calculation).

(C) Beginning January 1, 1999, annual operating fees shall be invoiced at \$17.12 per ton of regulated

pollutant (for fee calculation).

(2) **Part 70 Sources.**

(A) From January 1, 1995, until January 1, 1999, the annual operating fee for Part 70 sources shall be \$15.19 per ton of regulated pollutant (for fee calculation).

(B) Beginning January 1, 1999, the annual operating fee for Part 70 sources shall be \$17.12 per ton of regulated pollutant (for fee calculation).

(C) The annual operating fee shall be adjusted automatically each year by the percentage, if any, by which the Consumer Price Index for the most recent calendar year ending before the beginning of such year differs from the Consumer Price Index for the calendar year 1994. The Consumer Price Index for any calendar year is the average of the Consumer Price Index for all-urban consumers published by the Department of Labor, as of the close of the twelve month period ending on August 31 of each calendar year.

(c) **Payment.** ~~For Part 70 sources fees shall be paid by check or money order made payable to the Oklahoma Air Quality Title V Revolving Fund. All other sources shall pay fees by check or money order made payable to the Oklahoma Air Quality Division. Fees are due and payable upon receipt of on the invoice due date(s). Fees shall be considered delinquent 30 days from after the invoice due date(s), date of billing, at which time simple interest shall accrue at the rate of one and one half percent (1½%) per month on any amount unpaid. Within five (5) years but not before a grace period of 120 days from the date of billing, the DEQ may issue an administrative order to recover such fees and may assess a reasonable administrative fine in accordance with the provisions of the Oklahoma Clean Air Act, 27A O.S. Supp. 1993, §§ 2-5-101 et seq., to an owner or operator of a facility who has failed to pay or has underpaid such fees. If no fee was billed because the owner or operator failed to submit the required annual emission inventory, the term "date of billing" shall mean the date on which the fee would have been billed had the emission inventory been submitted when due. When a fee overpayment has been made as a result of a DEQ invoice error, an owner or operator may seek a credit for such fee overpayment within five years from the date on which payment of the fee was received by the DEQ. When a fee overpayment has been made as a result of an owner or operator's error in preparing the emission inventory upon which the fee was based, the owner or operator may seek credit for such overpayment within one year from the date on which payment of the fee was received by the DEQ.~~

(d) **Basis for annual operating fees.**

~~(1) Operating fees shall be calculated on a source specific basis and based on actual emissions of regulated pollutants~~

DRAFT
SEPTEMBER 15, 1999

~~(for fee calculation) as set forth in the facility emission inventory unless the owner or operator elects to pay fees on allowable emissions. Fees shall be based on emission inventories submitted in the previous calendar year (for example, fees invoiced during the calendar year 1998 shall be based upon inventory data covering the calendar year 1996).~~

~~(2) Regulated pollutants (for fee calculation) in excess of 4,000 tons per year per pollutant for a Part 70 source shall not be considered in the calculation of the annual fee.~~

Notice of Public Meeting for October 19, 1999 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance doors at the Tulsa City-County Health Department.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye. Dr. Canter, and Dr. Grosz did not attend. Mr. Breisch announced that Ms. Slagell had offered her resignation to the Governor.

CY 2000 Meeting Schedule - Council was presented with dates emulating the past years of the third Tuesday in February, April, June, August, October, and December. There was discussion to change the day of week to Wednesday of these months which would accommodate both staff and Council. Council voted to continue this item to the December 14 meeting. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the August 24, 1999 Public Meeting/Hearings. Motion was made by Mr. Branecky to approve the Minutes as presented and second was made by Mr. Kilpatrick. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

Protocol Statement - As protocol officer, Mr. Dyke convened the hearings by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke entered the Agenda and the Oklahoma Register Notice into the record.

PUBLIC HEARING
OAC 252:100-4
New Source Performance Standards [AMENDED]

Ms. Michelle Martinez made staff presentation advising Council that the proposed amendments to Subchapter 4 would update the incorporations by reference of the federal NSPS from July 1, 1997 to July 1, 1999. She pointed out that previously incorporated NSPS subparts that had been amended by the EPA since July 1, 1997 were: AA, AAa, Da, Db, Eb, and WWW. She advised that a new Subpart Ec had been added to the NSPS and that Subpart Ce was added to 252:100-4-5. She advised that this was the first time for the proposal to be considered, but staff's recommendation would be to request that the rule be sent to the Environmental Quality Board for permanent and emergency adoption. She pointed out that since the amendments update the incorporation by reference of new federal rules, adoption as an emergency would allow the amended rule to take effect earlier than June 1, 2000 and make state rules consistent with federal rules.

Mr. Breisch entertained motion to forward this rule to the Environmental Quality Board for both emergency and permanent adoption. Motion was made by Mr. Kilpatrick and second to the motion was by Ms. Myers. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING
OAC 252:100-5
Registration, Emission Inventory and Annual Operating Fees [AMENDED]

Ms. Jeanette Buttram made the staff presentation advising that the proposed changes to Subchapter 5 were designed to allow the agency to bill annual operating fees on a flexible schedule, and that the changes should also allow the fees to be based on the most recent emission data possible. Ms. Buttram advised that the proposed rule language would also require an owner or operator of a facility to report excess emissions on their annual emission inventory. Ms. Buttram pointed out that substantive changes included the requirement that inventories were to be submitted one month earlier than presently required which would allow fee payers five years after payment is made to notify the DEQ that they overpaid and to receive credit for such overpayment. That change would also reduce the period of time to six months in which either the DEQ or the facility owner or operator could challenge the data or methods used to calculate the facility's emissions.

Ms. Buttram advised that comments had been received from Fort James and EPA which were included in this proposal and that comments from Weyerhaeuser received the day before would be considered in the next draft of the rule; therefore, staff recommended that the rule be continued to the December meeting.

Comments and questions were discussed from Council members and the audience. Comments were heard from Stephen Landers of Ft. James; Mike Wood, Weyerhaeuser; Howard Ground, Central and Southwest; Bill Fishback; Mid-Continent Oil and Gas; Tom Bauckham, Reliant Energy; Gary Collins, Terra. Following discussion, Mr. Breisch entertained motion to continue

the rule to Council's December 14 meeting per staff recommendation. Motion to continue was made by Ms. Myers with the second made by Mr. Wilson. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-9

Excess Emission And Malfunction Reporting [AMENDED]

Ms. Jeanette Buttram gave the staff presentation advising that the proposed changes to Subchapter 9 included correction of typographical and grammatical errors and deletion of redundant language and was simplified and clarified according to the agency-wide re-right/de-wrong initiative. Ms. Buttram pointed out substantive changes to the rule which included narrowing the scope of the rule to minor facilities only. She advised that a new condition was added to explain when excess emissions from a process are due to a malfunction and when they are due to negligent, marginal, or unsafe operation advising that the new language would establish a rebuttable presumption that the combined time of all excess emissions from a process due to a malfunction does not exceed eight hours or 1.5 % of the process's operation time, whichever is greater, in a three-month period. Ms. Buttram added that the burden of proving that excess emissions occurring more often are due to a malfunction rather than negligent, marginal, or unsafe operation is on the owner or operator of the process.

Ms. Buttram entered into the record comments received from Mid-Continent Oil and Gas Association and from EPA. She further advised that the EPA comments indicated that further changes might need to be made to the rule due to their recent review of Oklahoma's SIP. Ms. Buttram advised that due to these comments, staff recommendation would be to continue this rule to the December meeting to allow staff more time to review the EPA guidance document. Mr. Tom Diggs, EPA, was asked to explain that document in detail and accepted comments regarding same. Additional comments were made by Bill Fishback.

Mr. Breisch entertained motion to continue this rule to the December meeting. Motion was made by Mr. Branecky with the second by Mr. Fallon. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-13

Prohibition of Open Burning [AMENDED]

Mr. Dyke again called upon Ms. Jeanette Buttram who advised that the proposed changes to Subchapter 13 would simplify and clarify the Subchapter as a part of the agency-wide re-right/de-wrong initiative. She pointed out that such changes include consolidating the general conditions and requirements for allowed open burning into a new section; and that a few substantive changes were made such as adding definitions for "domestic refuse" and "land clearing operation" and a section on disaster relief procedures. Ms. Buttram continued stating

that in some instances, the requirement to notify the DEQ or other appropriate official for authorization to burn was added and that the open-pit incinerator requirements were moved to a new section. She pointed out the proposal would require owners or operators to register with their local DEQ office; however, if the owner or operator anticipates operating an open-pit incinerator in the same pit for more than 90 days in a 365-day period, they would be required to obtain a permit and pay the required permit fee adding that hazardous materials may not be burned in an open-pit incinerator unless prior written approval has been obtained from both the local fire chief and the DEQ.

Ms. Buttram entered written comments from EPA and a letter from the City of Hobart into the record.

Following questions and discussion by Council, Mr. Breisch entertained motion to continue this rule to the December meeting. Motion was made by Ms. Myers with the second by Mr. Fallon. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARINGS (COMBINED HEARINGS ON SC 19, SC 21, and SC 27)

OAC 252:100-19 Particulate Matter Emissions from Fuel-burning Equipment [AMENDED]

OAC 252:100-21 Particulate Matter Emissions from Wood-Waste Burning Equipment [REVOKED]

OAC 252:100-27 Matter Emissions from Industrial and Other Processes and Operation [REVOKED]

APPENDIX C Particulate Matter Emissions Limits for Fuel Burning Equipment [REVOKED]

APPENDIX D Particulate Matter Emission Limits for Wood-Waste Burning Equipment [REVOKED]

APPENDIX C Particulate Matter Emissions Limits for Fuel Burning Equipment [NEW]

APPENDIX D Particulate Matter Emission Limits for Wood-Waste Burning Equipment [NEW]

Mr. Dyke called upon Mr. Max Price to make the staff presentation regarding these combined rules. Mr. Price advised that Subchapters 19, 21, and 27 all deal with particulate matter (PM) emissions and that the proposed changes merged the requirements of Subchapter 21 and Subchapter 27 into Subchapter 19; then Subchapters 21 and 27 would be revoked. Mr. Price pointed out that Subchapter 19 as proposed would be simplified and clarified according to the agency-wide re-right/de-wrong initiative. He advised that a permit by rule for particulate matter facilities is being proposed for Subchapter 19. Mr. Price also advised that the proposal included that Appendix C and Appendix D would be revoked in favor of two new tabular appendices.

Mr. Mike Wood, Weyerhaeuser, commented regarding the definition of "wood fuel". After much discussion, motion was made to by Mr. Wilson to amend Subchapter 19 to include the wording "for any wood derived fuel as approved by the Division"; to revoke subchapters 21 and 27; to revoke both Appendix C and Appendix D in favor of tabular appendices; and to send the rules to the Environmental Quality Board in one package for adoption as a permanent rule. Mr. Kilpatrick seconded that motion. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-35

Control Of Emission Of Carbon Monoxide [AMENDED]

Mr. Dyke called upon Ms. Michelle Martinez to make staff presentation. Ms. Martinez stated that the proposed changes to Subchapter 35 would simplify and clarify the Subchapter as a part of the agency-wide re-right/de-wrong initiative; and that the scope of the Subchapter would be narrowed to specific sources that are the primary contributors of carbon monoxide emissions. Ms. Martinez added that other changes included the addition of the definitions "existing source" and "new source" and the replacement of "foundry cupola" with "gray iron cupola". She further advised that Section 35-3, Performance Testing, would be revoked because performance testing requirements are already provided for in Subchapters 8 and 43.

Ms. Martinez advised that staff's recommendation was to send the rule to the Environmental Quality Board for adoption as permanent and emergency. Mr. Breisch entertained motion which was made by Mr. Fallon. The second was made by Ms. Myers. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-41 Sections 15 and 16

Control Of Emission Of Hazardous and Toxic Air Contaminants [AMENDED]

Mr. Dyke called upon Ms. Cheryl Bradley who advised that changes are being proposed for section 15 would incorporate by reference the Maximum Achievable Control Technology (MACT) standards for hazardous air pollutants in 40 CFR 63 that have been promulgated by the EPA from July 1, 1998, through July 1, 1999. These are subparts HH, SS, TT, UU, WW, YY, CCC, DDD, EEE, GGG, HHH, III, LLL, MMM, NNN, PPP, TTT, and XXX. Ms. Bradley continued that the DEQ is also proposing to update to July 1, 1999 the incorporation by reference in 252:100-41-16 of the National Emission Standards for Hazardous Air Pollutants (NESHAP) found in 40 CFR 61. She added that other minor revisions are proposed to Section 15 and 16 to clarify, simplify and correct these sections as required by statute.

Ms. Bradley advised that staff's recommendation would be to send to the rule to the Environmental Quality Board for adoption as permanent and emergency rule. She advised that since the amendments update the incorporation by reference of new federal rules, adoption as an emergency rule would allow the amended rules to take effect earlier and minimize the lag time in making the state program consistent with the federal program. Mr. Breisch entertained motion which was made by Mr. Kilpatrick. The second was made by Mr. Wilson. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-47

Control of Emissions from Existing Municipal Solid Waste Landfills [AMENDED]

Mr. Dyke again called upon Ms. Cheryl Bradley who advised that the modifications to Subchapter 47 would update the incorporation by reference of 40 CFR 60.751 through 60.759 to July 1, 1999. She advised that one comment had been received from the EPA in support of the proposed amendments. She continued that it would be staff's recommendation to send to the rule to the Environmental Quality Board for permanent and emergency adoption as adoption as an emergency rule would allow the amended rule to take effect earlier than June 1, 2000 and thereby minimize confusion for regulated landfills. Mr. Breisch entertained motion which was made by Mr. Fallon. The second was made by Ms. Myers. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes

DIVISION DIRECTOR'S REPORT

Mr. Dyke announced that the Council representative for agriculture, Meribeth Slagell, had turned in her letter of resignation from the Council. Also, Scott Thomas stated that due to a recent remand of the revised ozone, PM-2.5 and PM-10, staff plans on bringing this matter to public hearing at the December Council.

NEW BUSINESS - It was decided that the next meeting would again begin at 9:00 a.m. due to the number of agenda items and would follow the same format.

ADJOURNMENT With no further business, meeting was adjourned with announcement that the next regularly scheduled meeting would be December 14, 1999 in the Multipurpose Room of the DEQ in Oklahoma City beginning at 9:00 a.m.

NOTE: The sign-in sheet is attached as an official part of these Minutes.

AGENDA
AIR QUALITY COUNCIL
DEPARTMENT OF ENVIRONMENTAL QUALITY
HEARING/MEETING

* 9:00 A.M.

Tuesday, December 14, 1999
DEQ Multi-Purpose Room, First Floor
707 North Robinson
Oklahoma City Oklahoma

1. Call to Order – Bill Breisch
2. Roll Call – Myrna Bruce
3. CY 2000 Meeting Schedule
 - A. Discussion by Council
 - B. Roll call vote
4. Resolution for Meribeth Slagell
5. Approval of Minutes of the October 19, 1999 Regular Meeting
6. Public Rulemaking Hearings

A. OAC 252:100 Appendices E and F [AMENDED]

Appendix E Primary Ambient Air Quality Standards [REVOKED]

Appendix E Primary Ambient Air Quality Standards [NEW]

Appendix F Secondary Ambient Air Quality Standards [REVOKED]

Appendix F Secondary Ambient Air Quality Standards [NEW]

Proposal would restore the primary and secondary ambient air quality standards for ozone and particulate matter to what they were prior to June 1, 1999. The 8-hour ozone standard of 0.08 ppm would be revoked and the 1-hour standard of 0.12 ppm restored. The PM-2.5 standard would be revoked along with the revised form of the PM-10 standard and replaced with the previous form of the PM-10 standard.

1. Presentation – Michelle Martinez
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent adoption

B. OAC 252:100- 5 Registration, Emission Inventory and Annual Operating Fees [AMENDED]

Proposal is designed to allow the Agency to bill annual operating fees on a flexible schedule; to allow the fees to be based on the most recent emission data possible; to require an owner or operator of a facility to report excess emissions on their annual emission inventory; to require inventories to be submitted one month earlier than presently required; to allow fee payers five years after payment is made to notify the DEQ that they overpaid and to receive credit for such overpayment; and to reduce the period of time to six months in which either the DEQ or the facility owner or operator can challenge the data or methods used to calculate the facility's emissions.

1. Presentation – Jeanette Buttram
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent adoption

C. OAC 252:100-9 Excess Emission and Malfunction Reporting [AMENDED]

Proposal would simplify the language under the agency-wide re-right/de-wrong initiative, including correction of typographical and grammatical errors and deletion of redundant language. Substantive changes include establishing a time limit on excess emissions caused by properly reported malfunctions, startup/shutdowns, and maintenance procedures. The burden of proving that excess emissions occurring more than eight hours or 1.5 percent of the process's operation time in a 3-month period are due to excusable malfunctions, startup/shutdowns or maintenance procedures rather than negligent, marginal, or improper operation is on the owner or operator of the process. Language was added to explain that compliance with this Subchapter will not exempt sources from complying with any applicable federal requirement; and additional demonstration requirements for malfunctions, maintenance, and startup/shutdowns were added under proposed section 252:100-9-3.2, Demonstration of cause.

1. Presentation – Jeanette Buttram

2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent adoption

D. OAC 252:100-13. Prohibition of Open Burning [AMENDED]

Proposal would simplify the language under the agency-wide re-right/de-wrong initiative, including consolidating the general conditions and requirements for allowed open burning into a new section. Substantive changes would add definitions for "domestic refuse" and "land clearing operation" along with a section on disaster relief procedures. In some instances, the requirement to notify the DEQ or other appropriate official for authorization to burn was added. In addition, the open-pit incinerator requirements were expanded and moved to a new section. Also the rule would only allow material from a land clearing operation to be burned in an open-pit incinerator.

1. Presentation – Jeanette Buttram
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent adoption

E. OAC 252:100-23 Control of Emissions from Cotton Gins [AMENDED]

1. Presentation – Max Price
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for emergency adoption

Proposal would amend OAC 252:100-23-3(a) to remove references to OAC 252:100-27, which will be revoked effective June 1, 2000, and replace them with new section OAC 252:100-19-12, to take effect June 1, 2000.

F. OAC 252:100-24 Control of Emissions from Grain Elevators [AMENDED]

1. Presentation – Max Price
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for emergency adoption

Proposal would amend OAC 252:100-24-3(a)(1) and (2) to remove references to OAC 252:100-27, which will be revoked effective June 1, 2000, and replace them with new section OAC 252:100-19-12, to take effect June 1, 2000.

G. OAC 252:2-15 Environmental Permit Processing Times [AMENDED]

The proposal would change the terms used in 252:2-15-40, 41 and 72 to be consistent with those used in 252:100, Air Pollution Control. The terms "minor source(s)" and "major facility(ies)" would be changed to "minor facility(ies)" and "Part 70 source(s)", respectively.

1. Presentation – Cheryl Bradley
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent adoption

7. Division Director's Report – Eddie Terrill

8. New Business – Any matter not known about, or which could not have been reasonably foreseen, prior to the time of posting the agenda.

9. Adjournment – Next Regular Meeting

Date and Time: To Be Announced

Place: DEQ Multi-Purpose Room - OKC

* Council decided at its October 19 meeting to begin at 9:00 a.m. due to the number of agenda items.

Lunch Break, if necessary

Should you desire to attend but have a disability and need an accommodation, please notify our Department three days in advance at (405) 720-4100.

November 30, 1999

MEMORANDUM

TO: Air Quality Council
FROM: Eddie Terrill, Director
Air Quality Division

CT.

Protocol

SUBJECT: Modifications to Subchapter 5

Enclosed is a copy of the proposed draft modifications to Subchapter 5, Registration, Emission Inventory and Annual Operating Fees. The rule was brought before the October 19, 1999, Council meeting and will be brought back to public hearing on December 14, 1999. The proposed changes to the rule are designed to allow the agency to bill fee payers on a flexible schedule and should also allow the fees to be based on the most recent emission data possible. An additional change to the rule reduces the period of time to six months in which either the DEQ or the facility owner or operator can challenge the methods used to calculate the facility's emissions for fee calculation purposes. Since the last hearing, proposed language on stack tests was deleted and will be addressed next year when Subchapter 45, Monitoring of Emissions, undergoes the re-right/de-wrong process. Also, existing language on the option of using actual or allowable emissions for fee calculation was reinstated.

Staff will suggest that the proposed rule as amended be recommended for adoption by the Board as a permanent rule.

Enclosures: 1

SUBCHAPTER 5. REGISTRATION,
EMISSION INVENTORY AND ANNUAL OPERATING FEES

Section

- 252:100-5-1. Purpose
- 252:100-5-1.1. Definitions
- 252:100-5-2. Registration of potential sources of air
contaminants
- 252:100-5-2.1. Emission inventory
- 252:100-5-2.2. Annual operating fees
- 252:100-5-3. Confidentiality of proprietary information

SUBCHAPTER 5. REGISTRATION,
EMISSION INVENTORY AND ANNUAL OPERATING FEES

252:100-5-1. Purpose

This Subchapter requires potential sources of air contaminants to register with the ~~Air Quality~~ Division. It also requires facilities that emit air contaminants to file an emission inventory and pay annual operating fees.

252:100-5-1.1. Definitions

The following words and terms when used in this Subchapter shall have the following meaning unless the context clearly indicates otherwise:

"Actual emissions" means the total amount of regulated air pollutants emitted from a given facility during a particular calendar year, determined using methods contained in 252:100-5-2.1(d).

"Allowable emissions" means:

(A) The total amount of regulated air pollutant emitted based on limits contained in a federally enforceable permit or potential to emit, or

(B) For grandfathered sources, emission limits based on maximum design capacity and considering all applicable rules.

"Consumer Price Index" means an index determined by the U.S. Department of Labor measuring the change in the cost of typical wage-earner purchases of goods and services expressed as a percentage of the cost of these same goods and services in a base period.

"Date of billing" means the date the fee was billed. In the case no fee was billed because the owner or operator failed to submit the required annual emission inventory, the date of billing shall mean the date on which the fee would have been billed had the emission inventory been submitted when due.

"Emission inventory" means a compilation of all point source, storage and process fugitive air emissions for all regulated air pollutants at a given facility.

"Error" means, with regard to fees, a fee overpayment made as a result of a mistake on the part of the DEQ in invoicing' or the part of the owner or operator in calculating emissions. It

does not mean a mistake made in the decision to use or not to use a particular emission factor or method of calculation.

"Grandfathered source" means a stationary source that was in operation in Oklahoma when an otherwise applicable rule was promulgated unless that rule specifically applies to existing sources or the source has undergone modification since that rule was promulgated.

"Minor facility" means a facility which is not a Part 70 source.

"Part 70 source" means any source subject to the permitting requirements of Part 5 of Subchapter 8 of this Chapter as provided in 252:100-8-3(a) and 252:100-8-3(b).

"Process Fugitive Emissions" means those emissions created by or incidental to any particular process which become airborne or have the potential to become airborne, and could not reasonably, taking into account economic considerations, be made to pass through a stack, chimney, vent or other functionally equivalent opening.

"Regulated air pollutant" means:

(A) Any Volatile Organic Compound (VOC), as that term is defined in 252:100-1-3, 252:100-37-2, or 252:100-39-2.

~~(B) Any Volatile Organic Solvent (VOS), as that term is defined in 252:100-37-2 and 252:100-39-2.~~

~~(C)(B)~~ Any pollutant regulated under section 111 or 112 (except 112(r)) of the Federal Clean Air Act.

~~(D)(C)~~ Any pollutant for which a national primary ambient air quality standard has been promulgated under the Federal Clean Air Act.

~~(E)(D)~~ Any Toxic Air Contaminant as defined and regulated under 252:100-41-2.

~~(F)(E)~~ Any other substance for which an air emission limitation or equipment standard is set by permit or rule.

"Regulated pollutant (for fee calculation)", which is used only for purposes of this Subchapter, means any "regulated air pollutant" except the following:

(A) Carbon monoxide.

(B) Any pollutant that is a regulated air pollutant solely because it is a Class I or II substance subject to a standard promulgated under or established by Title VI of the Act.

(C) Any pollutant that is a regulated air pollutant solely because it is subject to a standard or regulation under section 112(r) of the Act.

(D) Total suspended particulates (TSP).

252:100-5-2. Registration of potential sources of air contaminants

(a) **Filing.** In addition to any requirements for the submission of information found in any other regulation in this Chapter, the owner or operator of an air contaminant source shall, upon request, provide the ~~Air Quality~~ Division with information necessary to evaluate the source's potential for causing air pollution.

(b) **Necessary information.** The following information shall be included for each source:

- (1) Total weight of the contaminant released per day.
- (2) Period or periods of operation.
- (3) Composition of the contaminant.
- (4) Physical state of the contaminant.
- (5) Temperature and moisture content of the air or gas stream at the point where released into the atmosphere.
- (6) Efficiency of any control device.
- (7) Such other information as may be specifically requested by the Director.

252:100-5-2.1. Emission inventory

(a) **Requirement to file an emission inventory.** The owner or operator of any facility that is a source of air emissions shall submit a complete emission inventory annually on forms obtained from the ~~Air Quality~~ Division.

~~(1) The initial emission inventory for minor facilities shall be submitted by March 1, 1993 and every succeeding year thereafter. The inventory shall cover operations during a calendar year and shall be submitted prior to March 1 of the following year, unless a 30-day extension has been granted by the Division.~~ *Add 1 extension*

~~(2) The initial emission inventory for Part 70 sources shall be submitted by April 1, 1994 and every succeeding year thereafter. Facilities registered under a permit by rule as outlined in Subchapter 7 and emitting 5 tons per year or less of each regulated pollutant are required to submit an~~

emission inventory once every 5 years. The inventory shall cover operations during the last year of each 5-year period and be submitted by March 1 of the following year.

(3) De minimis facilities as defined in 252:100-7-1.1 are not required to submit an annual emission inventory.

(b) Content. All inventories submitted to the ~~Air Quality~~ Division shall include, but shall not be limited to, the following:

(1) For those emissions subject to a permit, the permit number and the permitted allowable emissions as set forth therein.

(2) The amount of the actual emissions, including quantifiable excess emissions, and the basis for such determination.

(3) If the actual emissions vary from the allowable or from the previous year's actual by more than 30%, an explanation for the difference.

(4) For those emissions not the subject of a permit and when requested by the AQD, a list of all 252:100 rules setting forth emission limitations applicable to the facility in question and the maximum yearly allowable for the facility.

(c) Documentation. All calculations and assumptions must be verified by proper documentation. All supporting data, including actual production, throughput and measurement records along with engineering calculations and other data utilized in accordance with 252:100-5-2.1(d), below, must be maintained for at least 5 years by the current owner or operator at the facility in conjunction with facility records of the emission inventory. This information must either be submitted to the ~~Air Quality~~ Division or made available for inspection upon request.

(d) Method of calculation. The best available data at the time the emission inventory is or should have been prepared shall be used to determine emissions. It shall be the burden of the owner or operator to select the best available data, based on an acceptable method of calculation. ~~Said selection shall be binding upon acceptance by the Air Quality Division and the payment of fees.~~ The method of calculation used to determine emissions shall be binding upon the owner or operator and the Division for the purpose of calculating fees under 252:100-5-2.2 unless challenged by the owner or operator prior to September 1

of the year the inventory is due or by the Division within six (6) months after the date the inventory is received. The following shall constitute acceptable methods of calculation for determining actual emissions are:

(1) Emission factors utilized in the issuance of a relevant Oklahoma Air Quality permit(s) for the facility.

(2) Stack tests using appropriate EPA test methods, with advance notification and opportunity for observation by the Air Quality Division.

(3) Stack tests using appropriate EPA test methods on ~~identical equipment (i.e., same model) at the same location under the same operating conditions and parameters when~~ may be used for determining the emissions of identical equipment (i.e., same model, same location, and same operating conditions and parameters) when:

(A) Tests are performed by persons qualified by training and experience to perform said tests.

(B) Copies of the tests results and methods are available for review by the Air Quality Division.

(4) Continuous emissions monitoring data, when supported by required certification and calibration data.

(5) Current AP-42 factors or other factors acceptable to the ~~Air Quality Division.~~

(6) Manufacturer's test data, when approved by the ~~Air Quality Division~~ as reliable.

(7) EPA and EPA-contracted industry-specific emission study data when it can be shown to be applicable to the facility in question and approved for use in the emission inventory by the ~~Air Quality Division.~~

(8) Fuel usage and other mass-balance methods when supported by specific records applicable to the materials on which the calculations are based and approved for use in the emission inventory by the ~~Air Quality Division.~~

(9) Any other method that can be shown to be reasonably accurate when supported by engineering data and calculations, and approved for use in the emission inventory by the ~~Air Quality Division.~~

(e) **Methods of verification.** Emission inventories determined by the ~~Air Quality Division~~ to be substantially incomplete or substantially incorrect shall, upon the request of the ~~Air Quality Division~~, be subject to verification if not

satisfactorily completed or corrected within a reasonable time. Verification shall be accomplished by an appropriate stack test using EPA approved methods, installation of continuous monitoring equipment, or other methods acceptable to the ~~Air Quality~~ Division.

252:100-5-2.2. Annual operating fees

(a) Applicability.

(1) This section applies to all facilities that are sources of air pollution, including government facilities, regardless of whether the source is currently permitted or whether an emission inventory has or has not at any time been submitted for the facility. ~~A Part 70 source shall be subject to fee requirements of this section on January 1, 1995.~~ The owners or operators of Part 70 sources shall pay annual fees that are sufficient to cover the Part 70 program costs. The permitting authority shall ensure that the fees required by 252:100-5-2.2(b)(2) will be used solely for Part 70 program costs.

(2) This section does not apply to de minimis facilities.

(b) Fee schedule.

(1) Minor facilities.

(A) Until January 1, 1998, the owner or operator of a facility subject to this section shall pay an annual operating fee based on annual emissions of regulated pollutants (for fee calculation), in accordance with the following fee schedule:

- (i) 10 - 24.99 tons/year - \$100/year
- (ii) 25 - 49.99 tons/year - \$250/year
- (iii) 50 - 74.99 tons/year - \$500/year
- (iv) 75 - 99.99 tons/year - \$750/year

(B) In calendar year 1998, annual operating fees shall be invoiced at \$10 per ton of regulated pollutant (for fee calculation).

(C) Beginning January 1, 1999, annual operating fees shall be invoiced at \$17.12 per ton of regulated pollutant (for fee calculation).

(2) Part 70 Sources.

(A) From January 1, 1995, until January 1, 1999, the annual operating fee for Part 70 sources shall be

\$15.19 per ton of regulated pollutant (for fee calculation).

(B) Beginning January 1, 1999, the annual operating fee for Part 70 sources shall be \$17.12 per ton of regulated pollutant (for fee calculation).

(C) The annual operating fee shall be adjusted automatically each year by the percentage, if any, by which the Consumer Price Index for the most recent calendar year ending before the beginning of such year differs from the Consumer Price Index for the calendar year 1994. The Consumer Price Index for any calendar year is the average of the Consumer Price Index for all-urban consumers published by the Department of Labor, as of the close of the twelve month period ending on August 31 of each calendar year.

(c) ~~Payment. For Part 70 sources fees shall be paid by check or money order made payable to the Oklahoma Air Quality Title V Revolving Fund. All other sources shall pay fees by check or money order made payable to the Oklahoma Air Quality Division. Fees are due and payable upon receipt of on the invoice due date(s). Fees shall be considered delinquent 30 days from after the invoice due date(s), date of billing, at which time simple interest shall accrue at the rate of one and one half percent (1½%) per month on any amount unpaid. Within five (5) years but not before a grace period of 120 days from the date of billing, the DEQ may issue an administrative order to recover such fees and may assess a reasonable administrative fine in accordance with the provisions of the Oklahoma Clean Air Act, 27A O.S. Supp. 1993, §§ 2-5-101 et seq., to an owner or operator of a facility who has failed to pay or has underpaid such fees. If no fee was billed because the owner or operator failed to submit the required annual emission inventory, the term "date of billing" shall mean the date on which the fee would have been billed had the emission inventory been submitted when due. When a fee overpayment has been made as a result of an DEQ invoice error, an owner or operator may seek a credit for such fee overpayment within five years from the date on which payment of the fee was received by the DEQ. When a fee overpayment has been made as a result of an owner or operator's error in preparing the emission inventory upon which the fee was based, the owner or operator may~~

~~seek credit for such overpayment within one year from the date on which payment of the fee was received by the DEQ.~~

(d) **Basis for annual operating fees.**

(1) Operating fees shall be calculated on a source-specific basis and based on actual emissions of regulated pollutants (for fee calculation) as set forth in the facility emission inventory unless the owner or operator elects to pay fees on allowable emissions. ~~Fees shall be based on emission inventories submitted in the previous calendar year (for example, fees invoiced during the calendar year 1998 shall be based upon inventory data covering the calendar year 1996).~~

(2) Regulated pollutants (for fee calculation) in excess of 4,000 tons per year per pollutant for a Part 70 source shall not be considered in the calculation of the annual fee.

252:100-5-3. **Confidentiality of proprietary information**
[Refer to 27A O.S. ~~Supp. 1993, §§ 2-5-105.18.~~]

MINUTES
AIR QUALITY COUNCIL
DECEMBER 14, 1999
Department of Environmental Quality
MultiPurpose Room - 707 North Robinson, OKC

Council Members Present

William B. Breisch, Chairman
Joel Wilson
David Branecky
Rick Treeman
Leo Fallon
Fred Grosz

Staff Present

David Dyke
Dennis Doughty
Barbara Hoffman
Scott Thomas
Dawson Lasseter
Linn Wainner
Ray Bishop
Shawna McWaters-Khalousi

Staff Present

Cheryl Bradley
Jeanette Buttram
Michelle Martinez
Max Price

Myrna Bruce

Council Members Absent

Larry Canter
Sharon Myers
Gary Kilpatrick

Guests Present

**see attached list

Notice of Public Meeting for December 14, 1999 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance doors.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Mr. Wilson - aye; Mr. Branecky - aye; Mr. Treeman - aye; Mr. Fallon - aye; Dr. Grosz - aye; Mr. Breisch - aye. Dr. Canter, Ms. Myers, and Mr. Kilpatrick did not attend. Mr. Breisch and Mr. Terrill presented Meribeth Slagell a Resolution from the Council and Certificate of Appreciation from Mr. Coleman and thanked her for her years of dedicated service on the Council. Mr. Breisch introduced new Council member, Rick Treeman, who was appointed by the Governor to replace the position vacated by Mrs. Slagell.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the August 24, 1999 Public Meeting/Hearings. Motion was made by Mr. Fallon to approve the Minutes as presented and second was made by Dr. Grosz. Roll call as follows: Mr. Wilson - aye; Mr. Branecky - aye; Mr. Treeman - aye; Mr. Fallon - aye; Dr. Grosz - aye; Mr. Breisch - aye.

CY 2000 Meeting Schedule - Staff suggested the following Year 2000 meeting dates:

Wednesday, February 16 at Tulsa
Wednesday, April 19 at Lawton
Wednesday, June 14 at Tulsa
Wednesday, August 16 at Ponca City
Wednesday, October 18 at Oklahoma City
Wednesday, December 14 at Oklahoma City

Motion to accept the schedule was made by Mr. Fallon with second by Mr. Branecky with following vote: Mr. Wilson - aye; Mr. Branecky - aye; Mr. Treeman - aye; Mr. Fallon - aye; Dr. Grosz - aye; Mr. Breisch - aye.

Protocol Statement — As protocol officer, Mr. Dyke convened the hearings by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke entered the Agenda and the Oklahoma Register Notice into the record.

PUBLIC HEARING

OAC 252:100- Appendices E & F

Appendix E Primary Ambient Air Quality Standards [AMENDED]

Appendix F Secondary Ambient Air Quality Standards [AMENDED]

Ms. Michelle Martinez made the staff presentation stating that the proposed amendments to Appendices E and F would restore the primary and secondary ambient air quality standards for ozone to what they were prior to June 1, 1999. She advised that the 8-hour ozone standard of 0.08 ppm would be revoked and the 1-hour standard of 0.12 ppm restored; and that the PM-2.5 standards would be revoked along with the revised form of the PM-10 standard and replaced with the previous form of the PM-10 standard.

Ms. Martinez entered into the record a fax received from EPA Region 6 dated December 10, 1999 which stated that updating these appendices was timely and appropriate. Ms. Martinez then asked that Council recommend proposed Appendices E and F to the Environmental Quality Board for permanent adoption.

Following discussion, Mr. Breisch asked for a motion to recommend the rule for adoption. Mr. Branecky made motion to recommend to the Board for permanent/emergency adoption. Second was made by Mr. Fallon. The roll call vote: Mr. Wilson - aye; Mr. Branecky - aye; Mr. Treeman - aye; Mr. Fallon - aye; Dr. Grosz - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-5

Registration, Emission Inventory and Annual Operating Fees [AMENDED]

Ms. Jeanette Buttram presented the staff presentation and advised that the proposed changes to Subchapter 5 were designed to allow the agency the ability to bill annual operating fees on a flexible schedule, and that these changes would also allow the fees to be based on the most recent emission data possible. Ms. Buttram pointed out that the proposed rule clarified that an owner or operator of a facility must report quantifiable excess emissions on their annual emission inventory. She stated that substantive changes included the requirement that all inventories be submitted prior to March 1, and the Agency would provide up to a 30-day extension upon request. Council made a recommendation that the language be changed to allow an additional 30-day extension for good cause shown. Also, the rule will allow fee payers five years after payment is made to notify the DEQ that they overpaid and receive

credit for such overpayment. Also, new language was proposed to reduce to six months after inventories are due or submitted, the period of time in which either the facility owner/operator or the DEQ, respectively, can challenge the methods used to calculate the facility's emissions for "fee calculation purposes."

Ms. Buttram advised that comments had been received from Central and Southwest Services and she entered them into the record. She stated that it was staff's recommendation that Council forward this rule to the Environmental Quality Board for adoption as a permanent rule.

Following comments from Council members and the audience, changes were made in the wording and Mr. Wilson made a motion to forward this rule, with changes, to the Environmental Quality Board for adoption. Second was made by Mr. Branecky. The roll call vote: Mr. Wilson - aye; Mr. Branecky - aye; Mr. Treeman - aye; Mr. Fallon - aye; Dr. Grosz - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-9

Excess Emission And Malfunction Reporting [AMENDED]

Ms. Jeanette Buttram was called upon to make the staff recommendation for this rule. She stated that the proposed changes to Subchapter 9 included correction of typographical and grammatical errors and deletion of redundant language; and that the rule was simplified and clarified according to the agency-wide re-right/de-wrong initiative.

Substantive changes include the addition of new definitions and the addition of a new subsection for certification of the information submitted.

Also, language was added under 100-9-3.3, Demonstration of cause, which states excess emissions caused by malfunction and maintenance, start-up/shutdown, can be exempt from compliance which air emission limitations established in permits, rules, orders of the DEQ if the owner/operator properly complies with the requirements in 252:100-9-3.1 and 252:100-9-3.2, respectively; and meets the demonstrations listed in those subsections. Then additional subsections added to 100-9-3.3 were discussed.

Ms. Buttram advised that comments had been received from EPA Region 6 and from Central and Southwest Services and entered them into the record. She stated that staff suggested that the rule be recommended for adoption by the Environmental Quality Board.

After much discussion with staff, Council, and audience members, Mr. Breisch called for a motion. Mr. Fallon made motion to continue this rule to the next regular meeting. Mr. Branecky made the second. The roll call vote: Mr. Wilson - aye; Mr. Branecky - aye; Mr. Treeman - aye; Mr. Fallon - aye; Dr. Grosz - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-13

Prohibition of Open Burning [AMENDED]

Ms. Jeanette Buttram was called upon to give the staff recommendation concerning this rule. She stated that the proposed changes to Subchapter 13 would simplify and clarify the Subchapter as a part of the agency-wide re-right/de-wrong initiative. She added that such changes included consolidating the general conditions and requirements for allowed open burning into a new section. She pointed out that a few substantive changes were made such as adding definitions for "domestic refuse" and "landclearing operation" and a section on disaster relief procedures; and that in some instances, the requirement to notify the DEQ or other appropriate official for authorization to burn was added. Ms. Buttram stated that new language was added under "land management and land clearing operations" requiring those who clear land in areas that are or have been designated nonattainment to burn their vegetation in open-pit incinerators. She stated that existing language on open-pit incinerators was expanded it would now prohibit accepting any material owned by other persons and from transporting any material to be burned to the property where the open-pit incinerator is located. She advised that it was staffs recommendation that Council forward this rule to the Environmental Quality Board for adoption as a permanent rule.

Ms. Buttram entered written comments from Central and Southwest Services into the record. Following questions and discussion by Council, changes were made in the wording after which Mr. Breisch entertained motion to accept the changes made and forward the rule to the Board for adoption as a permanent rule. The roll call vote: Mr. Wilson - aye; Mr. Branecky - aye; Mr. Treeman - aye; Mr. Fallon - aye; Dr. Grosz - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-23 Control of Emissions from Cotton Gins [AMENDED]

OAC 252:100-24 Control of Emissions from Grain Elevators [AMENDED]

Mr. Dyke called upon Mr. Max Price who advised Council that the proposed changes to 100-23-3 and 100-24-3, would substitute references to 252:100-19-12 for references to Subchapter 27. He added that these revisions were necessary because the substantive requirements of Subchapter 27 would be moved to 100-19-12 and Subchapter 27 would be revoked in June of 2000. He added that the references to Subchapter 27 would become meaningless unless they are replaced by references to 100-19-12. Mr. Price stated that it was staff's recommendation that Council refer these rules to the Environmental Quality Board for emergency adoption effective June 1, 2000.

Mr. Breisch stated that these two rules would be voted on separately and called for a motion on Subchapter 23. Mr. Wilson made the motion to forward to the Board as recommended

by staff. The second made by Mr. Branecky. The roll call vote: Mr. Wilson - aye; Mr. Branecky - aye; Mr. Treeman - aye; Mr. Fallon - aye; Dr. Grosz - aye; Mr. Breisch - aye.

Mr. Breisch then called for the same motion for Subchapter 24. Mr. Branecky made the motion and Dr. Grosz made the second. The roll call vote: Mr. Wilson - aye; Mr. Branecky - aye; Mr. Treeman - aye; Mr. Fallon - aye; Dr. Grosz - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:2-15

Environmental Permit Processing Times [AMENDED]

Mr. Dyke called upon Ms. Cheryl Bradley who stated that the proposed amendments to Sections 40, 41, and 72 would make them consistent with 252:100, Air Pollution Control; and that the references to "minor source(s)" and "major facility(ies)" would be changed to "minor facility(ies)" and Part 70 source(s)", respectively. She added that changes were also made at the Council meeting to section 2-15-72(1)(A) such that the phrase "and part 70 sources" was added along with changing the number of days from 540 to 365. Ms. Bradley stated that comments had been received from EPA Region 6 and she entered them into the record. Following discussion Ms. Bradley advised that it was staff's recommendation that Council refer this rule to the Board for permanent adoption of the proposed amendments. Mr. Breisch called for a motion. Mr. Branecky made motion to accept the changes as stated and forward the rule to the Board for adoption. Mr. Fallon made the second. The roll call vote: Mr. Wilson - aye; Mr. Branecky - aye; Mr. Treeman - aye; Mr. Fallon - aye; Dr. Grosz - aye; Mr. Breisch - aye.

DIVISION DIRECTOR'S REPORT - Mr. Terrill advised that he and Mr. Dyke would be attending a meeting with Central States Air Resources Board (CenSARA) to discuss, among other things, the status of the Regional Planning Body activities. He stated that he would like to take a few minutes at the next regular meeting for an update on these activities.

NEW BUSINESS - None

ADJOURNMENT With no further business, meeting was adjourned with announcement that the next regularly scheduled meeting would be February 16, 2000 at 9:00 a.m. in the Auditorium at OSU-Tulsa (formerly UCAT).

NOTE: The sign-in sheet is attached as an official part of these Minutes.

AIR QUALITY COUNCIL
RULEMAKING RECOMMENDATION TO THE ENVIRONMENTAL QUALITY BOARD

Identification of Proposed Rulemaking:

Chapter Number and Title – OAC 252:100-5

Subchapters or Sections Involved – [new, amended or revoked]

OAC 252:100-5 Registration, Emission Inventory and Annual Operating Fees

On December 14, 1999 the members of this Council, by authority vested in them by the Oklahoma Environmental Quality Code (27 O.S.Supp. 1993, § 2-2-201), by roll call vote, recommended to the Environmental Quality Board that the rulemaking described above be adopted as:

permanent [take effect after legislative review]

emergency [temporary, to take effect upon approval by the Governor because of time; and/or special reason: _____]

This Council has considered the proposed rulemaking and comments about it and determined, to the best of its knowledge, that all applicable requirements of the Oklahoma Administrative Procedures Act have been followed.

This Council authorizes the Department to prepare this recommended rulemaking for the Board, making any changes approved by the Council, correcting typographical, grammatical and reference errors, and formatting them as required by the Office of Administrative Rules. This is to be done with the understanding that such changes shall neither alter the sense of what this Council recommends nor invalidate this recommendation.

Respectfully,

Date signed: December 14, 1999

Chair or Designee

OAC 252:100-5[3]
Environmental Quality Board

REGULAR MEETING AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
OKLAHOMA ENVIRONMENTAL QUALITY BOARD

A Public Meeting: 9:30 a.m., Friday, February 25, 2000
Department of Environmental Quality
707 North Robinson
Oklahoma City, Oklahoma 73102

NOTE: The business meeting of the Board will be preceded at 8:30 a.m. by a continental breakfast. No business will be conducted, but there will be opportunity for an informal interchange among attendees, particularly on matters of interest raised by individual Board members. Board members and DEQ staff will be present, and the public may attend.

1. Call to Order – Lee Paden, Chair
2. Roll Call - Lynda Finch
3. Approval of Minutes of the November 16, 1999 Regular Meeting
4. **Election of Officers**
Election of Chair and Vice-Chair for 2000
5. **Rulemaking – OAC 252:002 Procedures of the DEQ (Administrative Fees)**
The proposed rule relates to administrative fees. The Oklahoma Open Records Act allows an agency to charge a document copying fee, a fee for certified copies, and a reasonable fee for document searches when the search request is solely for a commercial purpose or clearly would cause an excessive disruption of the agency's essential functions. Fees must be promulgated as rules under the Administrative Procedures Act (1999 Okl.Op.Atty.Gen. 55, August 17, 1999). The proposed rule establishes a photocopy fee of \$0.25 per page, a certified copy fee of \$1.00 per document, and a document search fee of \$5.00 per one-half (1/2) hour (with the first 15 minutes free).
 - A. Presentation – Jimmy Givens, DEQ General Counsel
 - B. Questions and discussion by the Board
 - C. Questions, comments and discussion by the public
 - D. Discussion by the Board
 - E. Roll call vote on permanent adoption
6. **Rulemaking – OAC 252:100 Air Pollution Control**
Four sets of changes are proposed:
 - Subchapter 5: The proposed amendments are designed to allow the agency to bill on a flexible schedule those owners and operators with sources that produce emissions. The changes also allow the fees to be based on the most recent emission data possible. The proposal clarifies that an owner or operator of a facility must report quantifiable excess emissions on the annual emission inventory, which must be submitted prior to March 1 unless an extension is granted. The proposal also establishes time frames for requests for credit based on overpayment and for challenges to the method used to calculate the facility's emissions for fee calculation purposes.
 - Subchapter 13: The proposed amendments simplify and clarify the rule as part of the agency-wide re-right/de-wrong initiative. Such changes include consolidating the general conditions and requirements for allowed open burning into a new section. Some substantive changes were made,

including adding a section on disaster relief procedures; requiring notification to the DEQ or other appropriate official for authorization to burn in some circumstances; requiring those who clear land in areas that are or have been designated nonattainment to burn their vegetation in open-pit incinerators; and prohibiting burning of off-site material in open-pit incinerators.

- Subchapters 23 and 24: The changes replace references to Subchapter 27 with references to 252:100-19-12. These changes are necessary because, based on Board action last November, the substantive requirements of Subchapter 27 will be moved to section 252:100-19-12 and Subchapter 27 will be revoked, effective June of 2000.
- Appendices E and F: The proposed amendments restore the primary and secondary ambient air quality standards to what they were prior to June 1, 1999. The 8-hour ozone standard of 0.08 ppm would be revoked and the 1-hour standard of 0.12 ppm restored. The PM-2.5 standard would be revoked along with the revised form of the PM-10 standard and replaced with the previous form of the PM-10 standard.
 - A. Presentation— David Branecky, Air Quality Council Member
 - B. Questions and discussion by the Board
 - C. Questions, comments and discussion by the public
 - D. Discussion by the Board
 - E. Roll call vote(s) on permanent adoption of amendments to Subchapters 5 and 13, on emergency adoption* (only) of amendments to Subchapters 23 and 24, and on both permanent and emergency adoptions of amended Appendices E and F

7. Rulemaking— OAC 252:002 Procedures of the DEQ (Air Quality-Related)

The Department is proposing amendments to the air quality provisions of OAC 252:2-15, Environmental Permit Processing Times, to make them consistent with 252:100, Air Pollution Control. The terms "minor source(s)" and major "facility(ies)" would be changed to "minor facility(ies)" and "Part 70 source(s)", respectively.

- A. Presentation— David Branecky, Air Quality Council Member
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote on permanent adoption

8. Rulemaking— OAC 252:205 Hazardous Waste Management

Two sets of changes are proposed:

- Subchapter 3: The proposed amendment to OAC 252:205-3-1 updates the adoption by reference of federal hazardous waste regulations to July 1, 1999. Proposed revisions to 252:205-3-3 incorporate new or superseding amendments to 40 CFR contained in 64 FR 36465-36490, published July 6, 1999, which add hazardous waste lamps as a universal waste at the federal level. Corresponding changes are made in other sections.
- Subchapters 5 and 9: The proposed revisions to 252:205-5 move language from 252:205-5-5(b) to 252:205-5-3(b)(5). The amendment to 252:205-9-6 provides alternative waste characterization mechanisms for off-site hazardous waste facilities.
 - A. Presentation— Jody Reinhart, Hazardous Waste Council Chair
 - B. Questions and discussion by the Board
 - C. Questions, comments and discussion by the public
 - D. Discussion by the Board
 - E. Roll call vote(s) on emergency* and permanent adoption of amendments to Subchapter 3, and on permanent adoption of amendments to Subchapters 5 and 9

9. Rulemaking-- OAC 252:220 Brownfields

The proposed language is the result of recent legislation. It states the criteria by which the DEQ will verify loan application eligibility of Brownfields sites for loans from the Wastewater Facility Construction Revolving Loan Account and other state funding sources.

- A. Presentation-- Jody Reinhart, Hazardous Waste Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote(s) on emergency* and permanent adoption

10. Rulemaking-- OAC 252:615 and 616 Industrial Wastewater Systems

Chapter 615 has been reviewed as part of the "re-right/de-wrong" process of simplifying DEQ rules. Because so many changes were made, it is proposed that Chapter 615 be revoked and a new Chapter 616 created to replace it. Language has been simplified and clarified and rules deemed unenforceable have been removed.

- A. Presentation-- Robert Johnston, Water Quality Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote on permanent adoption

11. Rulemaking-- OAC 252:630 and 631 Public Water Supply Operation

Chapter 630 has been reviewed as part of the "re-right/de-wrong" process of simplifying DEQ rules. Because so many changes were made, it is proposed that Chapter 630 be revoked and a new Chapter 631 created to replace it. Language has been simplified and clarified and unenforceable rules have been removed. The most recent federal requirements for maintaining primacy over the Safe Drinking Water Act program have been included.

- A. Presentation-- Robert Johnston, Water Quality Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote on permanent adoption

12. Rulemaking-- OAC 252:641 On-Site Sewage Disposal Systems

The proposed rule amendments eliminate the document search fee, combination fee (soil percolation test and final inspection or existing system evaluation report) and residential plat review fees, and reduce the soil percolation/soil profile fee, final inspection fee, existing system evaluation fee and the certified installer final inspection fee.

- A. Presentation -- Gary Collins, Director, DEQ Environmental Complaints and Local Services Division
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote on permanent adoption

13. Rulemaking -- OAC 252:700 and 710 Waterworks/Wastewater Works Operator Certification
Chapter 700 has been reviewed as part of the "re-right/de-wrong" process of simplifying DEQ rules. Because so many changes were made, it is proposed that Chapter 700 be revoked and a new chapter 710 created to replace it. New subchapters have been created; many rules have been simplified and/or broken into several shorter rules for clarity; and statutory citations have been updated. The rules for landfill operator certification are being revoked as inappropriate to these chapters.

- A. Presentation—Rick Stebbens, Waterworks and Wastewater Works Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote on permanent adoption

14. Rulemaking -- OAC 252:002 Procedures of the DEQ (Operator Certification-Related)
The DEQ proposes that Section 252:2-15-49 be revoked as part of the "re-right/de-wrong" rules simplification process. This revocation does not affect the operator certification program or the proposed rules in Chapter 710. The basic Tier I permitting process was designed for environmental permits where notice was given to landowners. The DEQ believes that personal licensure should not have been included in the Tier categories.

- A. Presentation—Rick Stebbens, Waterworks and Wastewater Works Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote on permanent adoption

15. New Business (any matter not known about and which could not reasonably have been foreseen prior to the time of posting of agenda)

16. Executive Director's Report

17. Adjournment

Public Forum: The Board meets four times a year at different locations across the State to hear the views and concerns of all Oklahomans about environmental issues. This opportunity is informal, and we invite you to sign the register to speak. The forum will also include a short presentation from the DEQ Water Quality Division about State Water Quality Standards implementation, the State "303(d)" (impaired waters) list, and related issues.

Should you have a disability and need an accommodation, please notify the DEQ three days in advance at 702-7100.

* Specification of proposed adoption by emergency rulemaking, by permanent rulemaking, or by both, is based on the recommendations of the respective advisory councils. Adoption or amendment of rules as emergency rulemaking requires a finding by the Board that a compelling extraordinary circumstance warrants the seeking of emergency certification, so that the rules will take effect immediately upon the Governor's signature. Absent a finding and certification of emergency, rules adopted today will not become effective until on or about June 1st.

**SUBCHAPTER 5. REGISTRATION,
EMISSION INVENTORY AND ANNUAL OPERATING FEES**

252:100-5-1. Purpose

This Subchapter requires potential sources of air contaminants to register with the ~~Air Quality Division~~. It also requires facilities that emit air contaminants to file an emission inventory and pay annual operating fees.

252:100-5-1.1. Definitions

The following words and terms when used in this Subchapter shall have the following meaning unless the context clearly indicates otherwise:

"**Actual emissions**" means the total amount of regulated air pollutants emitted from a given facility during a particular calendar year, determined using methods contained in 252:100-5-2.1(d).

"**Allowable emissions**" means:

(A) The total amount of regulated air pollutant emitted based on limits contained in a federally enforceable permit or potential to emit, or

(B) For grandfathered sources, emission limits based on maximum design capacity and considering all applicable rules.

"**Consumer Price Index**" means an index determined by the U.S. Department of Labor measuring the change in the cost of typical wage-earner purchases of goods and services expressed as a percentage of the cost of these same goods and services in a base period.

"**Date of billing**" means the date the fee was billed. In the case no fee was billed because the owner or operator failed to submit the required annual emission inventory, the date of billing shall mean the date on which the fee would have been billed had the emission inventory been submitted when due.

"**Emission inventory**" means a compilation of all point source, storage and process fugitive air emissions for all regulated air pollutants at a given facility.

"**Error**" means, with regard to fees, a fee overpayment made as a result of a mistake on the part of the DEO in invoicing or the part of the owner or operator in calculating emissions. It does not mean a mistake made in the decision to use or not to use a particular emission factor or method of calculation.

"**Grandfathered source**" means a stationary source that was in operation in Oklahoma when an otherwise applicable rule was promulgated unless that rule specifically applies to existing sources or the source has undergone modification since that rule was promulgated.

"**Minor facility**" means a facility which is not a Part 70 source.

"**Part 70 source**" means any source subject to the permitting requirements of Part 5 of Subchapter 8 of this Chapter as provided in 252:100-8-3(a) and 252:100-8-3(b).

"**Process Fugitive Emissions**" means those emissions created by or incidental to any particular process which become airborne or have the potential to become airborne, and could not reasonably, taking into account economic considerations, be made to pass through a stack, chimney, vent or other functionally equivalent opening.

"Regulated air pollutant" means:

(A) Any Volatile Organic Compound (VOC), as that term is defined in 252:100-1-3, 252:100-37-2, or 252:100-39-2.

~~(B) Any Volatile Organic Solvent (VOS), as that term is defined in 252:100-37-2 and 252:100-39-2.~~

~~(C) (B)~~ Any pollutant regulated under section 111 or 112 (except 112(r)) of the Federal Clean Air Act.

~~(D) (C)~~ Any pollutant for which a national primary ambient air quality standard has been promulgated under the Federal Clean Air Act.

~~(E) (D)~~ Any Toxic Air Contaminant as defined and regulated under 252:100-41-2.

~~(F) (E)~~ Any other substance for which an air emission limitation or equipment standard is set by permit or rule.

"Regulated pollutant (for fee calculation)", which is used only for purposes of this Subchapter, means any "regulated air pollutant" except the following:

(A) Carbon monoxide.

(B) Any pollutant that is a regulated air pollutant solely because it is a Class I or II substance subject to a standard promulgated under or established by Title VI of the Act.

(C) Any pollutant that is a regulated air pollutant solely because it is subject to a standard or regulation under section 112(r) of the Act.

(D) Total suspended particulates (TSP).

252:100-5-2. Registration of potential sources of air contaminants

(a) **Filing.** In addition to any requirements for the submission of information found in any other regulation in this Chapter, the owner or operator of an air contaminant source shall, upon request, provide the ~~Air Quality Division~~ with information necessary to evaluate the source's potential for causing air pollution.

(b) **Necessary information.** The following information shall be included for each source:

(1) Total weight of the contaminant released per day.

(2) Period or periods of operation.

(3) Composition of the contaminant.

(4) Physical state of the contaminant.

(5) Temperature and moisture content of the air or gas stream at the point where released into the atmosphere.

(6) Efficiency of any control device.

(7) Such other information as may be specifically requested by the Director.

252:100-5-2.1. Emission inventory

(a) **Requirement to file an emission inventory.** The owner or operator of any facility that is a source of air emissions shall submit a complete emission inventory annually on forms obtained from the ~~Air Quality Division~~.

(1) ~~The initial emission inventory for minor facilities shall be submitted by March 1, 1993 and every succeeding year thereafter. The inventory shall cover operations during a calendar year and shall be submitted prior to March 1 of the following year, unless a 30-day extension has been granted by~~

the Division. An additional 30-day extension may be granted for good cause shown.

(2) The initial emission inventory for Part 70 sources shall be submitted by April 1, 1994 and every succeeding year thereafter. Facilities registered under a permit by rule as outlined in Subchapter 7 and emitting 5 tons per year or less of each regulated pollutant are required to submit an emission inventory once every 5 years. The inventory shall cover operations during the last year of each 5-year period and be submitted by March 1 of the following year.

(3) De minimis facilities as defined in 252:100-7-1.1 are not required to submit an annual emission inventory.

(b) **Content.** All inventories submitted to the ~~Air Quality~~ Division shall include, but shall not be limited to, the following:

(1) For those emissions subject to a permit, the permit number and the permitted allowable emissions as set forth therein.

(2) The amount of the actual emissions, including quantifiable excess emissions, and the basis for such determination.

(3) If the actual emissions vary from the allowable or from the previous year's actual by more than 30%, an explanation for the difference.

(4) For those emissions not the subject of a permit and when requested by the AQD, a list of all 252:100 rules setting forth emission limitations applicable to the facility in question and the maximum yearly allowable for the facility.

(c) **Documentation.** All calculations and assumptions must be verified by proper documentation. All supporting data, including actual production, throughput and measurement records along with engineering calculations and other data utilized in accordance with 252:100-5-2.1(d), below, must be maintained for at least 5 years by the current owner or operator at the facility in conjunction with facility records of the emission inventory. This information must either be submitted to the ~~Air Quality~~ Division or made available for inspection upon request.

(d) **Method of calculation.** The best available data at the time the emission inventory is or should have been prepared shall be used to determine emissions. It shall be the burden of the owner or operator to select the best available data, based on an acceptable method of calculation. ~~Said selection shall be binding upon acceptance by the Air Quality Division and the payment of fees.~~ The method of calculation used to determine emissions shall be binding upon the owner or operator and the Division for the purpose of calculating fees under 252:100-5-2.2 unless challenged by the owner or operator prior to September 1 of the year the inventory is due or by the Division within six (6) months after the date the inventory is received. ~~The following shall constitute acceptable~~ Acceptable methods of calculation for determining actual emissions are:

(1) Emission factors utilized in the issuance of a relevant Oklahoma Air Quality permit(s) for the facility.

(2) Stack tests using appropriate EPA test methods, with advance notification and opportunity for observation by the Air Quality Division.

(3) Stack tests using appropriate EPA test methods ~~on identical equipment (i.e., same model) at the same location under the same~~

operating conditions and parameters when may be used for determining the emissions of identical equipment (i.e., same model, same location, and same operating conditions and parameters) when:

(A) Tests are performed by persons qualified by training and experience to perform said tests.

(B) Copies of the tests results and methods are available for review by the Air Quality Division.

(4) Continuous emissions monitoring data, when supported by required certification and calibration data.

(5) Current AP-42 factors or other factors acceptable to the ~~Air Quality Division~~.

(6) Manufacturer's test data, when approved by the ~~Air Quality Division~~ as reliable.

(7) EPA and EPA-contracted industry-specific emission study data when it can be shown to be applicable to the facility in question and approved for use in the emission inventory by the ~~Air Quality Division~~.

(8) Fuel usage and other mass-balance methods when supported by specific records applicable to the materials on which the calculations are based and approved for use in the emission inventory by the ~~Air Quality Division~~.

(9) Any other method that can be shown to be reasonably accurate when supported by engineering data and calculations, and approved for use in the emission inventory by the ~~Air Quality Division~~.

(e) **Methods of verification.** Emission inventories determined by the ~~Air Quality Division~~ to be substantially incomplete or substantially incorrect shall, upon the request of the ~~Air Quality Division~~, be subject to verification if not satisfactorily completed or corrected within a reasonable time. Verification shall be accomplished by an appropriate stack test using EPA approved methods, installation of continuous monitoring equipment, or other methods acceptable to the ~~Air Quality Division~~.

252:100-5-2.2. Annual operating fees

(a) Applicability.

(1) This section applies to all facilities that are sources of air pollution, including government facilities, regardless of whether the source is currently permitted or whether an emission inventory has or has not at any time been submitted for the facility. ~~A Part 70 source shall be subject to fee requirements of this section on January 1, 1995.~~ The owners or operators of Part 70 sources shall pay annual fees that are sufficient to cover the Part 70 program costs. The permitting authority shall ensure that the fees required by 252:100-5-2.2(b)(2) will be used solely for Part 70 program costs.

(2). This section does not apply to de minimis facilities.

(b) Fee schedule.

(1) Minor facilities.

(A) Until January 1, 1998, the owner or operator of a facility subject to this section shall pay an annual operating fee based on annual emissions of regulated pollutants (for fee calculation), in accordance with the following fee schedule:

(i) 10 - 24.99 tons/year - \$100/year

- (ii) 25 - 49.99 tons/year - \$250/year
- (iii) 50 - 74.99 tons/year - \$500/year
- (iv) 75 - 99.99 tons/year - \$750/year

(B) In calendar year 1998, annual operating fees shall be invoiced at \$10 per ton of regulated pollutant (for fee calculation).

(C) Beginning January 1, 1999, annual operating fees shall be invoiced at \$17.12 per ton of regulated pollutant (for fee calculation).

(2) **Part 70 Sources.**

(A) From January 1, 1995, until January 1, 1999, the annual operating fee for Part 70 sources shall be \$15.19 per ton of regulated pollutant (for fee calculation).

(B) Beginning January 1, 1999, the annual operating fee for Part 70 sources shall be \$17.12 per ton of regulated pollutant (for fee calculation).

(C) The annual operating fee shall be adjusted automatically each year by the percentage, if any, by which the Consumer Price Index for the most recent calendar year ending before the beginning of such year differs from the Consumer Price Index for the calendar year 1994. The Consumer Price Index for any calendar year is the average of the Consumer Price Index for all-urban consumers published by the Department of Labor, as of the close of the twelve month period ending on August 31 of each calendar year.

(c) ~~Payment. For Part 70 sources fees shall be paid by check or money order made payable to the Oklahoma Air Quality Title V Revolving Fund. All other sources shall pay fees by check or money order made payable to the Oklahoma Air Quality Division.~~

~~(1) Fees are due and payable upon receipt of on the invoice due date(s). Fees shall be considered delinquent 30 days from the date of billing, at which time simple interest shall accrue at the rate of one and one half percent (1½%) per month on any amount unpaid after the invoice due date(s). Within five (5) years but not before a grace period of 120 days from the date of billing invoice due date, the DEQ may issue an administrative order to recover such fees and may assess a reasonable administrative fine in accordance with the provisions of the Oklahoma Clean Air Act, 27A O.S. Supp. 1993, § 2-5-101 et seq., to an owner or operator of a facility who has failed to pay or has underpaid such fees. If no fee was billed because the owner or operator failed to submit the required annual emission inventory, the term "date of billing" shall mean the date on which the fee would have been billed had the emission inventory been submitted when due. When a fee overpayment has been made as a result of a DEQ invoice error, an owner or operator may seek a credit for such fee overpayment within five years from the date on which payment of the fee was received by the DEQ. When a fee overpayment has been made as a result of an owner or operator's error in preparing the emission inventory upon which the fee was based, the owner or operator may seek credit for such overpayment within one year from the date on which payment of the fee was received by the DEQ.~~

~~(2) If an owner or operator has failed to submit the required annual emission inventory, the DEQ may issue an administrative~~

order to recover fees that would have been invoiced had the emission inventory been submitted when due. The DEQ may issue such order within five (5) years from the date of billing and may assess a reasonable administrative fine in accordance with the provisions of the Oklahoma Clean Air Act, 27A O.S. §§ 2-5-101 et seq.

(3) When a fee overpayment has been made as a result of an error, an owner or operator may seek a credit for such fee overpayment within five years from the date on which payment of the fee was received by the DEQ.

(d) Basis for annual operating fees.

(1) Operating fees shall be calculated on a source-specific basis and based on actual emissions of regulated pollutants (for fee calculation) as set forth in the facility emission inventory unless the owner or operator elects to pay fees on allowable emissions. ~~Fees shall be based on emission inventories submitted in the previous calendar year (for example, fees invoiced during the calendar year 1998 shall be based upon inventory data covering the calendar year 1996).~~

(2) Regulated pollutants (for fee calculation) in excess of 4,000 tons per year per pollutant for a Part 70 source shall not be considered in the calculation of the annual fee.

252:100-5-3. Confidentiality of proprietary information
[Refer to 27A O.S. ~~Supp. 1993, §~~ §§ 2-5-105.18.]

OAC 252:100-5[3]
Additional Comments

CHAPTER 100. AIR POLLUTION CONTROL
SUBCHAPTER 5. REGISTRATION, EMISSION INVENTORY AND
ANNUAL OPERATING FEES

EXECUTIVE SUMMARY: The proposed amendments to Subchapter 5 are designed to allow the agency to bill on a flexible schedule those owners and operators with sources that produce emissions. The changes should also allow the fees to be based on the most recent emission data possible. The proposed rule language clarifies that an owner or operator of a facility must report quantifiable excess emissions on their annual emission inventory. Substantive changes include requiring all inventories be submitted prior to March 1 and providing up to a 60-day extension upon request and good cause shown. It allows fee payers five years after payment is made to notify the DEQ that they overpaid and receive credit for such overpayment, and reduces to six months after inventories are due or submitted the period of time in which either the facility owner/operator or the DEQ, respectively, can challenge the method used to calculate the facility's emissions for fee calculation purposes.

DIFFERENCES FROM ANALOGOUS FEDERAL RULES: None.

ENVIRONMENTAL BENEFIT STATEMENT: Not required because no one federal rule corresponds to these rules.

SUMMARY OF COMMENTS AND RESPONSES:

Comment: (Fort James) Fort James owns and operates a pulp and paper facility in Muskogee, Oklahoma. The facility is a Part 70 source and as such, submits an annual emission inventory and pays an annual emission fee. Due to the size of this facility, operating and material usage data is not available at the beginning of a new calendar year. The compilation of pertinent data can take as long as a month or more, thereby creating difficulty in complying with the new requirement in 252:100-5-2.1(a) to submit the inventory "...prior to March 1..." Understanding this requirement may be legislatively driven, Fort James would ask that the 30-day extension mentioned in that same citation, be given as a matter of right by the permittee. In other words, while there is still the requirement that the permittee make the effort to ask to be given the extension, the Division simply cannot decline the request.

Comment: (Public Service Company of Oklahoma (PSO), an operating subsidiary of Central and South West Corporation) 252:100-5-2.1(a) Requirement to file an emission inventory. The requirement to submit the emission inventory by March 1 each year does not provide sufficient time to obtain the necessary annual operating data and perform the required emissions calculations. A request for a 30-day extension will be a certainty, especially in the case of PSO who owns and operates several power plants with multiple fossil fuel-fired boilers or gas turbines. The assurance of being granted an extension of time for submitting the EI is vitally important to

avoid enforcement action.

Response: Extensions of time were given in the past by the DEQ, even though they were not specifically authorized by rule. Providing for a 30-day extension in the rule strengthens the Division's authority to grant them, so we do not believe they will be more difficult to obtain. After a discussion during the Council meeting, Council agreed to modify the language to allow an additional 30-day extension for good cause shown. Therefore, facilities may be granted up to 60 additional days to submit their emission inventories.

Comment: (Fort James) The sentence in 252:100-5-2.1(d) beginning with "The method of calculation used to determine emissions..." should be clarified. We suggest the following: "The method of calculation used to determine emissions shall be binding upon the owner or operator and the Division solely for the purpose of calculating fees under 252:100-5-2.2 unless challenged by the owner or operator prior to September 1 of the year the inventory is due or by the Division within six (6) months after the date the inventory is received." It should be clear that the method of calculation is binding for calculating fees only, and not for other reasons, such as potential enforcement actions for emissions stated on an inventory that were later determined to be in error.

Comment: (EPA) In section 5-2.1 we recommend adding a statement, "Methods of calculation in an emission inventory are for fee calculation purposes only."

Response: Staff agrees and made a change to the rule which states "The method of calculation used to determine emissions shall be binding upon the owner or operator and the Division for the purpose of calculating fees..."

Comment: (Fort James) In 252:100-5-2.1(e)(1)(B), the requirement to use stack test data from tests that "...were conducted during the preceding 5-year period" will add more frequent compliance tests. If there is not another applicable requirement or a permit condition requiring stack test more frequently than five years, there will then be an added burden to provide additional and costly stack test data simply for assessing fees. Generally, if current stack testing requirements are sufficient for compliance purposes, they should be sufficient for assessing fees. It is recommended that this requirement be stricken.

Comment: (Fort James) We feel the requirement to perform stack testing on NOx and/or VOC sources "...between April 1 and October 31..." in 252:100-5-2.1(e)(1)(E), should be stricken as well. Unless an appropriate EPA test method, applicable regulation, or permit condition requires testing during the time frame mentioned here, there would again be additional compliance requirements simply for assessing fees. Furthermore, at a time of the year when sources of NOx and/or VOC, i.e. power boilers, are needed to run due to increased power consumption, this new requirement will

require additional and very costly shutdowns in order to comply. This is due to the fact that the Fort James power boilers share common stacks, and stack testing one boiler requires that the boiler sharing the common stack be shutdown. Again, current stack testing requirements that are sufficient for compliance should be sufficient for assessing fees.

Comment: Many oral comments were received during the Council meeting objecting to language in 252:100-5-2.1(e)(1)(B), the requirement to use stack test data from tests that "...were conducted during the preceding 5-year period," and the requirement to perform stack testing on NOx and/or VOC sources "...between April 1 and October 31..." in 252:100-5-2.1(e)(1)(E). Commenters believed that if stack test data are good enough for compliance purposes, they should be good enough for assessing fees.

Response: Staff decided that detailed testing requirements do not belong in Subchapter 5 and removed the proposed language from the draft rule presented to the Council in December. The proposed language will be addressed again when Subchapter 45, Monitoring of Emissions, is brought before the Council in the next year.

Comment: Oral comments were received during the Council asking how a facility reports excess emissions for opacity when there is no way to correlate opacity exceedances with particulate emissions?

Response: Staff reworded the proposed language to read "including quantifiable excess emission."

Comment: (Public Service Company of Oklahoma (PSO), an operating subsidiary of Central and South West Corporation) 252:100-5-2.2(d)(1) Basis for annual operating fees. It is recommended that the last sentence which is proposed to be stricken, be reinstated for clarity. Otherwise, there is no referenced year in which the fees would apply to the actual emissions of a particular annual emission inventory.

Response: Staff disagrees. The proposed changes to the rule allow the agency to bill on a quarterly basis and/or spread out the total payments over the year. Also, the fees will now be based on the most recent emission data possible; therefore, the dates currently in the rule would no longer apply.

RESPONSE TO WRITTEN COMMENTS SUBCHAPTER 5

FORT JAMES LETTER (received on 9/29/99, dated 9/27/99, signed by Stephen E. Landers, Sr. Process Engineer)

1. **Comment:** Fort James owns and operates a pulp and paper facility in Muskogee, Oklahoma. The facility is a Part 70 source and as such, submits an annual emission inventory and pays an annual emission fee. Due to the size of this facility, operating and material usage data is not available at the beginning of a new calendar year. The compilation of pertinent data can take as long as a month or more, thereby creating difficulty in complying with the new requirement in 252:100-5-2.1(a) to submit the inventory "...prior to March 1..." Understanding this requirement may be legislatively driven, Fort James would ask that the 30-day extension mentioned in that same citation, be given as a matter of right by the permittee. In other words, while there is still the requirement that the permittee make the effort to ask to be given the extension, the Division simply cannot decline the request.

Response: Staff does not agree with Fort James' proposed change. Inventories are needed by March 1 for staff to prepare invoices in a timely manner. If extensions were automatic, everyone would take advantage of them, and inventories would not be submitted until April 1. However, staff recognizes that there will be situations where companies need more time. Staff needs the flexibility to look at each request on a case by case basis and determine which requests have merit. It should be noted that extensions were given in the past by the DEQ even though they were not specifically authorized by the rule. Therefore, we do not believe authorized extensions will be difficult to obtain when a legitimate request is made.

2. **Comment:** The sentence in 252:100-5-2.1(d) beginning with "The method of calculation used to determine emissions..." should be clarified. We suggest the following: "The method of calculation used to determine emissions shall be binding upon the owner or operator and the Division solely for the purpose of calculating fees under 252:100-5-2.2 unless challenged by the owner or operator prior to September 1 of the year the inventory is due or by the Division within six (6) months after the date the inventory is received." It should be clear that the method of calculation is binding for calculating fees only, and not for other reasons, such as potential enforcement actions for emissions stated on an inventory that were later determined to be in error.

Response: Staff does not agree with Fort James' proposed change. The rule currently requires the owner or operator to submit the "best available data" at the time the inventory is prepared. These data are dependent on the method of calculation chosen and are used not only to calculate fees, but also to provide the most accurate picture possible of emissions in Oklahoma. The data are used to determine PSD increment consumption and to decide how the State can best meet the National Ambient Air Quality Standards. Consequently, both the owner/operator and the Division need to agree as quickly as possible on the method used to calculate the data. Some facilities want to change the method used to calculate one year's emissions several years later. There needs to be some finality to the process, so that the Division can rely on the data. Further,

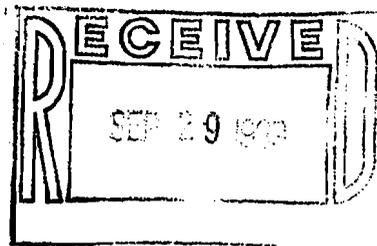

the Division does use emissions data, whether they are found in records kept at the facility or on emission inventories, for enforcement purposes. Again, there needs to be a point after which neither the facility nor the Division can claim that a difference method of calculation should have been used for the emission inventory. This does not mean that mathematical or factual errors cannot be corrected after the six-month period, only that the method of calculation chosen by the owner/operator and accepted by the Division cannot be changed after the six-month period.

3. **Comment:** In 252:100-5-2.1(e)(1)(B), the requirement to use stack test data from tests that "...were conducted during the preceding 5-year period" will add more frequent compliance tests. If there is not another applicable requirement or a permit condition requiring stack test more frequently than five years, there will then be an added burden to provide additional and costly stack test data simply for assessing fees. Generally, if current stack testing requirements are sufficient for compliance purposes, they should be sufficient for assessing fees. It is recommended that this requirement be stricken.

4. **Comment:** We feel the requirement to perform stack testing on NO_x and/or VOC sources "...between April 1 and October 31..." in 252:100-5-2.1(e)(1)(E), should be stricken as well. Unless an appropriate EPA test method, applicable regulation, or permit condition requires testing during the time frame mentioned here, there would again be additional compliance requirements simply for assessing fees. Furthermore, at a time of the year when sources of NO_x and/or VOC, i.e. power boilers, are needed to run due to increased power consumption, this new requirement will require additional and very costly shutdowns in order to comply. This is due to the fact that the Fort James power boilers share common stacks, and stack testing one boiler requires that the boiler sharing the common stack be shutdown. Again, current stack testing requirements that are sufficient for compliance should be sufficient for assessing fees.

Response: Staff will address comments #3 and #4 together. These proposed changes are important to ensure DEQ maintains an accurate emission inventory. The DEQ keeps track of emissions as part of the overall program to maintain compliance with the National Ambient Air Quality Standards, not just to determine fees. Staff believes extremely old stack tests are not representative of current emissions especially since equipment efficiency can deteriorate over time. Also, we are not aware that extremely old stack tests are sufficient for compliance purposes since Title V permitting requires monitoring data and other more recent compliance demonstrations. Furthermore, stack testing is just one option that may be used when choosing a method of calculation. There are other methods of calculation that may be used by the owner and/or operator of a facility to determine emissions. Finally, in regards to the statement these changes will contribute to an added burden to provide additional and costly stack test data, new requirements have been outlined in the notice of rulemaking intent which will address these concerns. The DEQ now requests that business entities affected by these rules provide us, within the comment period, in dollar amounts if possible, the increase in the level of direct costs such as fees, and the indirect costs such as reporting, recordkeeping, equipment, construction, labor, professional services, revenue loss, or other costs expected to be incurred by a particular entity due to compliance with the proposed rules. Staff will ask the Council to consider the rule again at the December meeting, so we would encourage Fort James to submit such information prior to that meeting.

AP-42 vs. Syn. Old Stacktest

Air Quality Division
P.O. Box 1677
Oklahoma City, OK 73101-1677

RE: Proposed Changes to OAC sec. 252:100; Air Pollution Control,
Subchapter 5. Registration, Emission Inventory and Operating
Fees

Dear Ms. Buttram:

Fort James Operating Company, ("Fort James" or the "Company") appreciates the opportunity to provide these comments to the Oklahoma Department of Environmental Quality ("ODEQ"), Air Quality Division ("Division") in connection with the proposed amendments to OAC 252:100-5 concerning emission inventories and operating fees.

Fort James owns and operates a pulp and paper facility in Muskogee, Oklahoma. The facility is a Part 70 source and as such, submits an annual emission inventory and pays an annual emission fee. Due to the size of this facility, operating and material usage data is not available at the beginning of a new calendar year. The compilation of pertinent data can take as long as a month or more, thereby creating difficulty in complying with the new requirement in 252:100-5-2.1(a) to submit the inventory "...prior to March 1..." Understanding this requirement may be legislatively driven, Fort James would ask that the 30-day extension mentioned in that same citation, be given as a matter of right by the permittee. In other words, while there is still the requirement that the permittee make the effort to ask to be given the extension, the Division simply cannot decline the request.

e16

The sentence in 252:100-5-2.1(d) beginning with "The method of calculation used to determine emissions..." should be clarified. We suggest the following: "The method of calculation used to determine emissions shall be binding upon the owner or operator and the Division solely for the purposes of calculating fees under 252:100-5-2.2 unless challenged by the owner or operator prior to September 1 of the year the inventory is due or by the Division within six (6) months after the date the inventory is received". It should be clear that the method of calculation is binding for calculating fees only, and not for other reasons, such as potential enforcement actions for emissions stated on an inventory that were later determined to be in error.

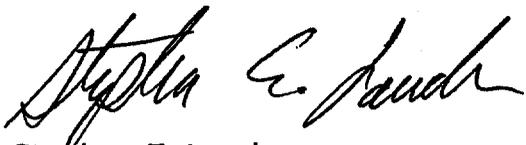

In 252:100-5-2.1(e)(1)(B), the requirement to use stack test data from tests that "...were conducted during the preceding 5-year period" will add more frequent compliance tests. If there is not another applicable requirement or a permit condition requiring stack tests more frequently than five years, there will then be an added burden to provide additional and costly stack test data simply for assessing fees. Generally, if current stack testing requirements are sufficient for compliance purposes, they should be sufficient for assessing fees. It is recommended that this requirement be stricken.

Lastly, we feel the requirement to perform stack testing on NO_x and/or VOC sources "...between April 1 and October 31..." in 252:100-5-2.1(e)(1)(E), should be stricken as well. Unless an appropriate EPA test method, applicable regulation, or permit condition requires testing during the time frame mentioned here, there would again be additional compliance requirements simply for assessing fees. Furthermore, at a time of the year when sources of NO_x and/or VOC, i.e. power boilers, are needed to run due to increased power consumption, this new requirement will require additional and very costly shutdowns in order to comply. This is due to the fact that the Fort James power boilers share common stacks, and stack testing one boiler requires that the boiler sharing the common stack be shutdown. Again, current stack testing requirements that are sufficient for compliance should be sufficient for assessing fees.

Thank you again for this opportunity to comment on these proposals. If we can discuss this further, please call me at 918-683-7671 x-458.

Sincerely,

FORT JAMES OPERATING COMPANY, Muskogee

Stephen E. Landers
Sr. Process Engineer

1 First, the change should prevent
2 confusion, since the date will be the same
3 for both minor and Part 70 sources.
4 And second, this change will allow
5 staff sufficient time to receive and review
6 the inventory in order to develop an
7 accurate invoice for the preceding year's
8 emissions.
9 Also, new language was added in the
10 rule, which will allow facilities to apply
11 for a 30 day extension if they can't meet
12 the deadline.
13 Section 252:100-5-2.1(b), Content,
14 page 4. New language is proposed to
15 clarify that an owner or operator of a
16 facility must report excess emissions on
17 their annual emission inventory.
18 Section 252:100-5-2.1(d), Method of
19 Calculation, page 5. New language is
20 proposed to reduce to six months after
21 inventories are due or submitted the period
22 of time in which either the facility
23 owner/operator or the DEQ, respectively,
24 can challenge the date or methods used to
25 calculate the facility's emissions.

1 MR. DYKE: The next item on the
2 agenda, Item 5B, OAC 252:100-5,
3 Registration, Emission Inventory and Annual
4 Operating Fees. I will call on staff
5 member, Jeanette Buttram.
6 MS. BUTTRAM: Good morning, Mr.
7 Chairman, Members of the Council, and
8 ladies and gentlemen. The following
9 revisions to Subchapter 5, Registration,
10 Emission Inventory and Annual Operating
11 Fees, are being proposed for the first time
12 to the Council. Most of the proposed
13 changes are substantive changes.
14 Section 252:100-5-1.1, Definitions,
15 page 2. An existing definition in the rule
16 for "date of billing" was moved to the
17 definitions section. A new definition is
18 proposed for "error".
19 Section 252:100-5-2.1(a),
20 requirement to file an emission inventory,
21 page 4. Staff is proposing the submission
22 date for annual emissions for both minor
23 and Part 70 sources be changed to March 1.
24 This change is proposed for several
25 reasons.

1 This proposed language is necessary
2 because it will allow the DEQ to maintain a
3 more accurate emission inventory and fee on
4 the most recent emission data possible.
5 Section 252:100-5-2.1(e), Method of
6 Calculation Using Stack Test, page 5. This
7 new section is proposed for owners or
8 operators who elect to use stack test for
9 determining actual emissions.
10 Most of the language in this section
11 is existing and moved here from subsection
12 d; however, subparagraph B and E is
13 proposed language. Recently, while
14 reviewing and auditing the emission
15 inventory, staff became aware of
16 deficiencies which need to be corrected.
17 Under subparagraph B, a 5 year
18 period is proposed for stack test. Under
19 subparagraph E, staff is proposing testing
20 be performed on sources of NOx and/or VOC
21 emissions between April 1 and October 31,
22 under actual operating conditions or as
23 required by the appropriate EPA test
24 method.
25 In the draft rule, the language "or

Page 6

1 as required by the appropriate EPA test
2 method" should be deleted from the rule.
3 MR. DYKE: Say that again.
4 MS. BUTTRAM: In the draft rule,
5 the language "or as required by the
6 appropriate EPA test method" should be
7 deleted from the rule.
8 These proposed changes are important
9 to ensure DEQ maintains an accurate
10 emission inventory. Staff believes
11 extremely old stack tests are not
12 representative of current emissions,
13 especially since equipment efficiency can
14 deteriorate over time.
15 It is important to remember that the
16 DEQ keeps track of emissions as part of the
17 overall program to maintain compliance with
18 National Ambient Air Quality Standards, not
19 just to determine fees.
20 If Oklahoma happens to go
21 nonattainment for ozone, it is imperative
22 that we know who the VOC and NOx sources
23 are and how much they are contributing to
24 the situation. The course of action
25 necessary to bring the State back into

Page 7

1 compliance cannot be determined without
2 accurate and updated information. EPA
3 Region 6 is requiring more accurate
4 emission inventories and we believe these
5 changes will increase our reporting
6 accuracy. We also believe increasing the
7 accuracy quantification of NOx and VOC
8 emissions increases the effectiveness of
9 our rules currently in place dealing with
10 those emissions.
11 Section 252:100-5-2.2(c), Payment,
12 page 7. Much of the language in this
13 subsection was clarified and simplified
14 since it was determined it was unnecessary
15 to have it in the rule. However, a
16 proposed change was made which states when
17 a fee overpayment has been made as a result
18 of an error, again "error" is now defined
19 in the definitions section, the fee payer
20 has five years after payment is made to
21 notify the DEQ that they overpaid and
22 received credit for such overpayment.
23 Previously, they were given one year.
24 Comments were received from Fort
25 James regarding the proposed changes.

Page 8

1 Those comments and staff's responses have
2 been included in your council packet and
3 copies are on the table. At this time, no
4 changes to the rule are proposed due to
5 those comments received.
6 Comments were received from EPA
7 recommending in Section 5-2.1, we add the
8 statement, "methods of calculation in an
9 emission inventory are for fee calculation
10 purposes only."
11 Comments from Weyerhaeuser were
12 received yesterday afternoon and will be
13 considered in the next draft.
14 The written comments from EPA and
15 Fort James and Weyerhaeuser, along with our
16 responses to those comments from Fort James
17 will be entered into the record.
18 Staff recommends the rule be
19 considered again at the December 14, 1999,
20 Council meeting.
21 MR. DYKE: Questions of Ms.
22 Buttram from the Council?
23 MR. BRANECKY: I guess I'll go
24 ahead and start. I understand you are
25 wanting to move the middle date up to March

Page 9

1 1st. Are we then still planning on
2 invoicing -- when?
3 MR. DYKE: Are you talking about
4 next year?
5 MR. BRANECKY: Yes. If these are
6 due -- if emission inventories are due
7 March 1, when is the invoice for the fees
8 coming out?
9 MR. DYKE: I can't tell you about
10 next year until the income situation is
11 worked out at the DEQ, regarding the
12 balances. But I think the idea is to move
13 everything closer together for the future.
14 Not this year -- not for this year.
15 MR. BRANECKY: So it's not that
16 critical next year as far as invoicing?
17 MR. DYKE: Right.
18 MR. BRANECKY: Next year are you
19 still going to invoice on '98 emission
20 inventories?
21 MR. DYKE: I don't think we have
22 an answer to that, yet. At some point in
23 time we need to get the emission inventory
24 and the billing closer together. We're not
25 sure how to make that extension.

1 MR. BRANECKY: Well, one of the
2 things that I can see that can be done in
3 helping to get emission inventories -- the
4 data in and invoicing out more quickly
5 would be some type of electronic filing.
6 It seems like a lot of time, probably most
7 of the time spent in the Emission Inventory
8 Section of your group is taking the paper
9 copies that come in and then re-entering
10 that data into your database and then
11 calculating fees. If you could eliminate
12 or minimize that by some kind of electronic
13 filing, that would help and maybe you
14 wouldn't have to have it by March 1st. You
15 could still have it at a later date and
16 still meet your -- whatever your invoice
17 deadline would be. I don't know if that's
18 something that -- it would sure make it
19 easier on us.

20 I know I ran into a problem this
21 year where an inspector came out to a
22 facility and on the emission inventory he
23 had, we showed 60,000 tons of NOx, where
24 actually we submitted 6,000 tons. It was
25 an error in the data entry from the paper

1 MS. BUTTRAM: That was our
2 understanding.

3 MS. MYERS: So how are you going
4 to convert opacity into some kind of excess
5 emission? There is not a conversion method
6 if you are only regulating stack emissions
7 based on opacity.

8 MS. BUTTRAM: I would have to
9 refer that question to Larry Trent, who is
10 in charge of emission inventory.

11 MR. TRENT: Probably the only way
12 I can see doing that is that if you have a
13 stack test you have to correlate --
14 visibility testing on the same equipment,
15 you can show what you have coming out at
16 that time, you can correlate those to that.

17 MS. MYERS: I'm not sure it's
18 always a linear correlation.

19 MR. TRENT: Well, you get as
20 close as you can.

21 MR. FISHBACK: More to the point,
22 Sharon, it's always (inaudible).

23 MR. DYKE: Bill, would you
24 identify yourself, please.

25 MR. FISHBACK: Bill Fishback,

1 copy over to your database. That would
2 help alleviate that, also. Maybe that
3 might encourage DEQ to move toward some
4 type of electronic filing of the emission
5 inventory.

6 MR. DYKE: I agree. That would
7 be much better.

8 MR. BRANECKY: The next question
9 I had is on 252:100 5-2.1(b) content.

10 Would the statement that you added and
11 requirements you added effect the amount of
12 excess emissions and the basis for such
13 determination. To me, when I read that,
14 that could be interpreted as we have to
15 identify excess emissions and their amounts
16 separately on the emission inventory. And
17 I don't think that's your intent. Your
18 intent is just to make sure everybody
19 includes all their emissions on emission
20 inventory?

21 MS. BUTTRAM: That's correct.

22 MR. BRANECKY: And I guess I've
23 always included all our emissions. I guess
24 some people don't include their excess
25 emissions?

1 Mid-Continent Oil and Gas. You can't
2 correlate is what you said.

3 MS. MYERS: Right. I think we
4 need to take another look at that and how
5 that's going to impact all of your major
6 sources, because I don't think there is a
7 way you can actually correlate opacity
8 exceedences with particulate emissions.

9 MR. DYKE: Additional questions
10 of Ms. Buttram from the Council?

11 MR. KILPATRICK: I have a
12 question on page 5 under paragraph D, the
13 list of 1 through 9 there. It looks like 3
14 disappeared. I assume the bottom numbers
15 just need to be renumbered?

16 MS. BUTTRAM: Yes. It will be --
17 4 will be changed to 3, and 5 will be
18 changed to 4, in the next draft and so on.

19 MR. KILPATRICK: Okay.

20 MR. WILSON: My question is in
21 regards to the method of calculation and
22 the issue behind the stack test being
23 conducted in the previous five years. You
24 are suggesting that anything that's older
25 than five years is not current enough, yet

Page 14

1 you allow the use of AP42 factors, which
2 are just -- could be very inaccurate in
3 estimating emissions. And my question is,
4 how do you come up with the thought that a
5 stack test older than five years is no
6 longer valid?

7 MS. BUTTRAM: Again, I will have
8 to refer that question to Larry Trent.

9 MR. DYKE: Larry, you need to
10 speak up, too. We can't hear you over
11 here.

12 MR. TRENT: It would be due to
13 deteriorating of the equipment in place,
14 changes in the fuel being used or any
15 number of things can add to it to make it
16 change. And principally we probably,
17 according to this pressure --

18
19 MR. WILSON: You are suggesting -
20 - I'm sorry. Larry, I'm having trouble
21 hearing you.

22 MR. TRENT: It would probably be
23 a problem of whether or not the maintenance
24 is kept up on some of the equipment and
25 whether it's changed out and cleaned and at

Page 16

1 they are not able to do a stack test, and
2 we allow them to use some other method.
3 But if it is available to us then we would
4 prefer it.

5 MR. WILSON: So if after a five
6 year period a source that had a stack test
7 that's now out of date could revert back to
8 a AP42 factor and be more of an acceptable
9 emission rate to be reported rather than
10 the old stack test?

11 MR. TRENT: We would still prefer
12 the stack test, even though it's better
13 than AP42. But it's still -- we know it's
14 not updated, it can be updated, that's what
15 we want to happen.

16 MR. BRANECKY: But you can
17 require a company to do a stack test just
18 for emission inventory purposes. You can
19 have a stack test that's five years old or
20 older, you can use that. But you can't say
21 we're not going to accept that, we want you
22 to do a newer stack test, when the company
23 has the option of using the AP42.

24 MR. TRENT: I don't know. It
25 would probably be up to the Director then.

Page 15

1 what point in time does this occur and how
2 often does it have to occur and probably a
3 stack test every five years -- in some
4 other states we're looking at every two
5 years. So I think that would be a minimum
6 thing we would be looking at.

7 MR. WILSON: The objective here
8 is to get accurate emission numbers.

9 MR. TRENT: Right.

10 MR. WILSON: And you accept the
11 AP42 factor which is for the most part, I
12 think, overestimates the amount of
13 emissions. Would you consider AP42 as a
14 more accurate method of emission
15 estimating, rather than an old stack test?

16 MR. TRENT: Probably not. We
17 would accept stack test information as the
18 number one piece of equipment data to look
19 at, probably emission monitoring would be
20 right there with it. And then after that,
21 you go down into perhaps the manufacturer
22 specifications and then probably AP42 and
23 then just a guess. If that's all you have,
24 that's all you have. So depending upon all
25 of that and what occurred -- most times

Page 17

1 MR. DYKE: I don't think we can
2 require it.

3 MR. WILSON: Actual emissions are
4 important to you just as potential
5 emissions are, is that my understanding?
6 Because I had always thought the potential
7 to emit was the primary concern for
8 figuring out what our ambient air quality
9 problems are, rather than actual emissions.

10 MR. TRENT: There is such a
11 difference between the two sometimes, I
12 don't think you want to overkill, because
13 you might cause something to occur in an
14 area that you don't want to happen. There
15 is the possibility, if someone wants to do
16 it from year to year, they can use their
17 potential emissions, their allowable
18 emissions, as their emissions inventory.

19 MR. WILSON: So potential to emit
20 is allowable for reporting in the
21 inventory?

22 MR. TRENT: Yes.

23 MR. WILSON: Is that stated in
24 here anywhere?

25 MS. BUTTRAM: I'm not sure if it

Page 18

1 is or not.
2 MR. BRANECKY: Well, it says the
3 methods of calculation for determining
4 actual emissions is under D.
5 MS. BUTTRAM: Do you mean the
6 rule as a whole or just in that section?
7 MR. WILSON: Is it acceptable to
8 report emissions for the emission inventory
9 using potential to emit?
10 MR. TRENT: We accept it. I
11 don't know of anyone that does it, but yes.
12 MR. WILSON: And that should be
13 reflected in these regulations, shouldn't
14 it? And it's not.
15 MR. BUTTRAM: I'm not sure if it
16 is or not.
17 MS. MYERS: Jeanette, under --
18 MR. DOUGHTY: Joel, would you
19 like me to address that issue? My name is
20 Dennis Doughty. The statute gives the fee
21 payer the option of submitting either
22 potential -- either actuals or allowables
23 for the purpose of paying their fees. So
24 for that purpose, either would be
25 acceptable. We might require stack tests

Page 19

1 for other reasons, though, for some other
2 purpose where actuals are necessary, we may
3 try to persuade you to give us a stack test
4 or performance test of some such. But
5 specifically for the purpose of paying your
6 fees, if you want to pay it based on
7 potentials, then you can submit that
8 information and pay your fee based on that.
9 MR. WILSON: Dennis, that's my
10 understanding in some other states. I'm
11 looking for that language within the
12 subchapter. Is that language within this
13 subchapter?
14 MS. HOFFMAN: Excuse me, I'm
15 Barbara Hoffman, I'm also a staff attorney.
16 It's in the statute. It's in Section 2-5-
17 113. And because it's in the statute, it's
18 not as -- according to what we're told on
19 our rules on rulemaking, we're not supposed
20 to copy and get into regulations. We can
21 if that's necessary, but the point is it is
22 in the statute, therefore it does cover all
23 the regulated entities.
24 And your other question about
25 whether or not you can -- whether or not

Page 20

1 it's in the rule about submitting
2 potentials. If you look at 5-2.1(b) where
3 it says what the inventories have to
4 include. One of the items is the -- for
5 those emissions subject to a permit -- the
6 permitted allowable emissions. So I
7 believe that would be your potential to
8 emit.
9 MR. WILSON: So a source could
10 then, if they had a permit, list the permit
11 and then report the emissions as equal to
12 that permit under that subchapter?
13 MS. HOFFMAN: That's right.
14 MR. WILSON: And especially if
15 their stack test is more than five years
16 old.
17 MS. HOFFMAN: Right.
18 MR. WILSON: I have another
19 question regarding the response to the Fort
20 James letter. It says, Title V permitting
21 required --
22 MS. BUTTRAM: Excuse me, which
23 number?
24 MR. WILSON: I'm sorry. It's the
25 response to the third comment from Fort

Page 21

1 James. It says that Title V permitting
2 required monitoring data and other more
3 recent compliance demonstrations.
4 And it's my understanding that Title
5 V permitting was really an activity that
6 summed up all of the applicable
7 requirements to the source and not imposing
8 any additional monitoring on those sources.
9 Am I right or not?
10 MS. HOFFMAN: Well, may I respond
11 to that again? My understanding is that
12 EPA has some policy guidance out for
13 periodic monitoring and they point to the
14 Part 70 rules as requiring periodic
15 monitoring for all Title V sources. So
16 they do have some guidance out on that and
17 as I understand it, our permit writers are
18 supposed to include that type of monitoring
19 requirement in Title V permits, even if the
20 source currently is not required to
21 monitor.
22 MR. WILSON: This is coming from
23 EPA policy and guidance?
24 MS. HOFFMAN: That's my
25 understanding. I could be wrong.

1 MR. WILSON: Not from any
2 statutes?
3 MS. HOFFMAN: Well, it's in the
4 Part 70 rules that we have to do periodic
5 monitoring and that we have to be able to
6 do your compliance certification. And so
7 the reason there is how can you do
8 compliance certification if you don't
9 monitor to assess your emissions
10 MR. DYKE: David.
11 MR. BRANECKY: My turn? This
12 question is kind of directed at Fort James
13 and also the emission inventory people. In
14 your comments, Fort James said you had to
15 have two boilers and one stack. And in
16 order to test that, you have to shut down
17 one boiler and run the test. Is it not
18 acceptable to run one test with both
19 boilers going or are you just concerned
20 with what's coming out of the stack for
21 emission inventory purposes? Could you not
22 run a stack test with both boilers going
23 and just split the difference as half
24 coming from this one and half coming from
25 this one, as long as you knew what the

1 MR. DYKE: David, we have several
2 people wanting to make comments. Can I
3 suggest that we go ahead and allow those
4 comments to be made and then we can ask
5 questions of all the people.
6 MR. BRANECKY: Okay.
7 MR. DYKE: By alphabetical order,
8 Ron ~~Silver~~ Ron, could you come up,
9 please? The court reporter is having a
10 hard time picking up everyone out there.
11 MR. ~~SILVER~~ I'll be very brief.
12 The Environmental Federation of Oklahoma is
13 looking into Subchapter 5. We still have a
14 number of questions in our own mind and we
15 would like an opportunity to review with
16 staff and obtain answers to these
17 questions. Our recommendation would be to
18 not act upon these proposed rules at this
19 time.
20 MR. DYKE: Steve Landers.
21 MR. LANDERS: My name is Steve
22 Landers with Fort James Operating Company
23 in Muskogee. I would like to first thank
24 both the Council and the staff for the
25 opportunity to comment on the proposed

1 emissions were coming out of the stack?
2 MR. TRENT: As long as you know
3 what the emissions are, I don't see any
4 problem with it.
5 MR. BRANECKY: You don't care
6 where it's coming from, just as long as you
7 know what's coming out of the stack, a
8 total number?
9 MR. TRENT: Right.
10 MR. BRANECKY: Is that something
11 that can be done?
12 MR. LANDERS: It could be done.
13 THE REPORTER: I'm sorry, who are
14 you?
15 MR. LANDERS: Stephen Landers,
16 Fort James, Muskogee. I don't know if EPA
17 approves the method to allow us to do that.
18
19 MR. BRANECKY: Well, this is not
20 for compliance purposes, this is just for
21 emission inventory purposes.
22 MS. MYERS: Well, for compliance
23 purposes, we have two kilns on one stack.
24 We're measuring what's coming out of our
25 stack.

1 changes to Subchapter 5.
2 If you will look at the Fort James
3 comment letter on Subchapter 5, I would
4 like to discuss the two comments we have on
5 page 2 of that letter, concerning stack
6 tests first.
7 Let me emphasize from the beginning
8 that Fort James can understand and
9 appreciate the Division's desire and need
10 to have emissions inventories that were
11 compiled with accurate, current data. Let
12 me say also, however, that requiring stack
13 test data that is less than five years old,
14 as proposed in 252:100-5-2.1(e)(1)(B),
15 raises in our mind some general compliance
16 concerns. For example, I have stack test
17 data that were used in writing permit
18 applications and subsequently setting
19 emissions limits. And I'm able to use that
20 data for determining compliance with the
21 particular emission limit or standard. Yet
22 this proposal suggests that that data is
23 too old to assess fees. It almost seems to
24 me, in our mind, that it should be the
25 other way around. Generally speaking is

1 our belief that if stack test data is good
 2 enough for compliance purposes, it should
 3 be good enough for assessing fees.
 4 If there is a legitimate concern,
 5 compliance concern due to the age of stack
 6 test data, it should be addressed in the
 7 source's Title V Permit or for minor
 8 sources Subchapter 7. And the reason for
 9 that is that we fully expect -- to give you
 10 an example, we fully expect to receive some
 11 periodic monitoring requirement with the
 12 issuance of our Title V Permit. But if I
 13 have one requirement in my Title V Permit
 14 and another requirement in Subchapter 5, it
 15 is very possible that there will be some
 16 inconsistencies in these separate
 17 requirements which we have seen in the
 18 past.
 19 Concerning the ability to use other
 20 methods. Fort James was not required to
 21 install continuous emission monitors, other
 22 than opacity monitors, due to its initial
 23 performance stack test or performance test
 24 results. So we are restricted to using
 25 either our best available data, which in

1 our opinion is our stack test data, which
 2 is also greater than five years old or a
 3 very conservative AP42. And it's ironic,
 4 really, and it's been alluded to already.
 5 To give you an example, the Fourth Edition
 6 of the EPA's AP42 was published in
 7 September of 1985. The Fifth Edition was
 8 published in 1995. Now, there are
 9 supplements along the way to update factors
 10 as they become available. Yet, the irony
 11 is that the passage of this language could
 12 prohibit me from using a five year, one day
 13 old stack test, yet force me to use an AP42
 14 that is conceivably older than the stack
 15 test. I did, however, look at using
 16 current AP42's for emission estimates for
 17 our power boilers, which are our largest
 18 source of emissions. Based on 1998's
 19 emissions and using current AP42's, our
 20 emission fees will increase by almost
 21 \$106,000.00 each year. To put this into
 22 perspective, our 1997 inventory invoice was
 23 only \$88,000.00 -- was \$88,000.00, not only
 24 \$88,000.00. So using those current AP42's,
 25 that fee for 1998 would have increased to

1 at least \$194,000.00. It would have over
 2 doubled. So you may be thinking stack
 3 testing would be easily justified if fees
 4 would increase by that much, which is true.
 5 But that leads me to my next issue
 6 concerning 252:100-5-2.1(e)(1)(E), which
 7 requires stack testing for NOx and/or VOC
 8 sources to be performed between April 1 and
 9 October 31. Initially, I questioned what
 10 the Division stands to gain by this
 11 requirement. If it is full load where
 12 maximum emissions typically occur, then
 13 that is specified by the appropriate EPA
 14 method, which is the first requirement in
 15 252:100-5-2.1(e)(1)(A), full load is
 16 defined for NSPS sources for the purposes
 17 of stack testing.
 18 Secondly, to avoid paying the fee
 19 increase I mentioned a moment ago, I must
 20 test four boilers between April 1 and
 21 October 31, which has been estimated to
 22 cost around \$30,000.00 just for the stack
 23 test. However, as we have discussed
 24 already, I have four boilers and only two
 25 stacks. That means to stack test the

1 emissions for one boiler, the boiler
 2 sharing the common stack must be shut down
 3 for the duration of that test. And I will
 4 have to take an unscheduled shutdown on
 5 each boiler. I say unscheduled because
 6 power demands are very high during the time
 7 frame in question here, the warmer months
 8 of the year. We try to coordinate
 9 shutdowns with the cooler months when the
 10 demand is not as high. So I'm forced at
 11 that time to either shut down equipment
 12 that is dependent upon the boiler running
 13 or buy very expensive power. I don't have
 14 a cost estimate for these alternatives yet,
 15 but I can perceive these costs easily
 16 exceeding the additional inventory fees. ||
 17 Concerning stack testing, both
 18 boilers online, I don't have a good
 19 response for that yet. Each boiler has its
 20 own permit. Stack testing them both at the
 21 same time -- I don't know if there could
 22 not be another compliance concern raised
 23 there, especially with credible evidence
 24 rule.
 25 Fort James, therefore recommends

1 that both 252:100-5-2.1(e)(1)(B) and
 2 (e)(1)(E) be stricken.
 3 Lastly, in 252:100-5-2.1(d), Method
 4 of Calculation, Fort James does feel that
 5 there should be some finality to the
 6 process of calculating emission estimates.
 7 But this finality should be limited to the
 8 purpose of calculating fees. Let me offer
 9 a scenario. Upon the completion of an
 10 emission inventory, a source discovers that
 11 it is out of compliance with some
 12 applicable limit. And in a routine
 13 inspection that occurs sometime outside the
 14 deadlines mentioned in paragraph D, the
 15 method of calculation is questioned, a
 16 stack test is required and a source
 17 discovers after the test that it is in fact
 18 in compliance. That source may still be
 19 subject to enforcement since the previous
 20 method is binding and can't be challenged.
 21 This proposal, however, can cut both ways,
 22 so-to-speak. If the complete reverse were
 23 to occur, say a source is in compliance as
 24 shown on an emission inventory, yet in a
 25 routine inspection that occurs again

1 outside the deadlines mentioned in
 2 paragraph D, the method of calculation is
 3 again questioned. A stack test is again
 4 required and a source discovers after the
 5 stack test that it is in fact out of
 6 compliance. Legally, one may be able to
 7 argue that the DEQ cannot bring enforcement
 8 actions against that source because
 9 according to the proposed language here,
 10 the method and therefore the number is
 11 binding and can't be challenged.
 12 Fort James recommends in the best
 13 interest of both the regulated community
 14 and the DEQ that the method of calculation
 15 be binding, solely for the purpose of
 16 calculating fees as expressed on page 1 of
 17 our comment letter, and as alluded to in
 18 the existing language. Thank you again for
 19 this opportunity to comment.
 20 MR. DYKE: Mike Wood.
 21 MR. WOOD: I'm Mike Wood with
 22 Weyerhaeuser Company. I would like to
 23 thank the Council for this opportunity to
 24 comment. I won't repeat the comments that
 25 are in my letter to the staff, since this

1 rule is going to be -- or the staff has
 2 recommended that it be considered again in
 3 December.
 4 I would like to reinforce some of
 5 the comments about the requirement in
 6 252:100-5-2.1(e)(1)(B) for stack test being
 7 within the last five years. Weyerhaeuser's
 8 approach to using stack test data is that
 9 whether it's for fees or for compliance
 10 demonstration is that we have an accurate
 11 assessment of our emissions. There has
 12 been some reference to periodic monitoring
 13 requiring more frequent stack tests and
 14 that is probably true for a lot of units,
 15 emission units, within a facility. Our
 16 approach to using those stack test data for
 17 calculating fees would be to average or to
 18 use the results of stack tests to develop a
 19 statistically valid estimate of emissions,
 20 unless there was some reason to suspect
 21 that there is some declining performance in
 22 emission control. We would combine all the
 23 stack tests and use the old ones to give
 24 them the same weight as more recent ones to
 25 develop emission factors. And there's some

1 units that you would not expect any
 2 declining performance. Because of their
 3 physical shape and configuration, there
 4 would be no justification for new stack
 5 testing. And I don't think our experience
 6 with Title V permitting in other states is
 7 that -- for many units where we have a
 8 single stack test, as long as there are no
 9 modifications to the unit, we're not being
 10 required to do any periodic monitoring.
 11 And those are primarily for minor emission
 12 units within a facility. That's all I had
 13 to say. Thank you.
 14 MR. DYKE: Now back to the
 15 Council. Additional questions? Okay,
 16 Howard ~~Brown~~ *Ground*.
 17 ~~Ground~~ *Ground* MR. BROWN: *Ground* My name is Howard
 18 ~~Brown~~ *Ground* I'm with Central and Southwest. We
 19 are the owner of Public Service Company of
 20 Oklahoma, so I am representing the Public
 21 Service Company today.
 22 I have a few comments that I was
 23 wanting to make, starting with 100-5-2.1,
 24 the emissions inventory and the change to
 25 March 31st. I would just like to comment

Page 34

1 on this, that if there is not any real
2 reason to do that, we would rather stay
3 with the end of the month. I know that in
4 my years of doing this there are times that
5 I can get it out by March 1st, and there
6 are more times than not that I cannot get
7 it out by March 1st, and we would be asking
8 for extensions, I would say, probably 90
9 percent of the time. So if we could go to
10 more electronic reporting, that might help,
11 like Mr. Branecky suggested, that might
12 help us. But if it's not required, I would
13 rather leave it at the end of the month.
14 My second comment is 100-5-2.1(b)(4)
15 -- I'm sorry, (b)(3). It talks about the
16 amount of excess emissions and the basis
17 for such a determination. My comment on
18 this, I guess I question -- does this
19 include the exempted opacity time such as
20 startup/shutdown? And I have a general
21 comment that we've also seen that we cannot
22 correlate between our PM testing and excess
23 emissions. Especially if you are talking
24 about startup/shutdown, we do not have any
25 testing at all. And if it's above 20

Page 35

1 percent, which is our limit, we've never
2 tested above 20 percent, which would be in
3 excess. So we really have no way at all to
4 determine particulate matter, excess
5 emissions for inclusion in this number 3.
6 And I'll just reiterate, especially if it's
7 times that are exempted such as
8 startup/shutdown, malfunction -- there are
9 times when the unit is not even operating
10 and we can have an opacity exceedence
11 because of maintenance, which we have no
12 idea. All we know is that it's gone above
13 20 percent. We have no idea what the
14 particulate matter loading is.
15 My next comment is that same
16 subchapter, (e), Method of Calculation
17 Using Stack Testing. And again, this is a
18 point on the testing being done within five
19 years. I know in our power plants we have
20 13 units, each of them has a set of sims
21 that we do RATA testing every year, except
22 for the particulate matter and that was
23 done on original certification of that
24 equipment. And for our unit, we have not
25 tested again since the original startup.

Page 36

1 But within the Central and Southwest System
2 we have had other units that we have had to
3 do particulate matter testing since the
4 original startup. And I thought I would
5 just bring up the fact that one unit, which
6 is a very large coal unit, Subpart (D)(A).
7 We ran the original test in 1987, we ran a
8 subsequent test in 1988, and then another
9 test 10 years later in 1998 and saw no
10 degradation whatsoever, which is
11 essentially what we would hope to find. We
12 don't want our parcipitators to degrade.
13 But it showed no degradation at all. If
14 you would like to see some type of
15 correlation that we've done, we can show
16 that to you. But we do not feel like the
17 way we maintain and operate our equipment
18 that we're going to have a degradation of
19 that equipment. That's our feeling on
20 that.
21 And then the last comment on that
22 same method of calculation using stack
23 testing on 1(e), the testing to be
24 performed on sources of NOx and VOCs
25 between April 1st and October 31st. I

Page 37

1 didn't really understand this until the man
2 representing Fort James brought this up.
3 Like I said, we have 13 units that we have
4 to schedule maintenance, RATAS, the
5 operations, and we do not run all of our
6 tests between April 1st and October 31st.
7 And it would be difficult if not impossible
8 to run all 13 and schedule these units to
9 run and operate at a time to run their RATA
10 between those dates. I have never looked
11 or seen a discrepancy or difference between
12 running a NOx test in the summer and
13 running a NOx test in the winter. So I
14 have a question on that provision as well.
15 That's all the comments I have. I thank
16 you, very much, for allowing me to give,
17 those to you this morning.
18 MR. FISHBACK: Good morning.
19 Bill Fishback, and I'm representing Mid-
20 Continent Oil and Gas Association. Let me
21 say first in response to Bud's question. I
22 believe the theory about seasonal testing
23 for NOx has to do with the combustion air
24 temperature. The inlet is higher in the
25 summer and that tends to produce higher

Page 38

1 NOx. I think that's not necessarily true
2 in all cases. But particularly if a boiler
3 has air pre-heat, the ambient air
4 temperature is basically negligible. But
5 that's my understanding of the reason for
6 that testing requirement. But I agree with
7 you, I'm not sure that it's valid.

8 I would like to reinforce two or
9 three points that I heard made here this
10 morning and it would be Mid-Continent's
11 position as stated by Mr. Wilson and Mr.
12 Branecky. Barbara Hoffman mentioned that
13 the statute does allow or the statute
14 states that actual or allowable emissions
15 could be used for emission inventories.
16 The concern we have, of course, is that the
17 people who read the rules don't necessarily
18 read the statutes. And I would like the
19 rule to be instructive as well as a rule.
20 So if there is no prohibition against
21 having that information in the rule, I
22 think it would be very good to be there.
23 Because the people that are in the trenches
24 reading the rules very often don't read the
25 statutes, and even if they read the

Page 39

1 statutes, they are written in legalese and
2 they may be very difficult for somebody to
3 interpret. So I think we want to be as
4 instructive as we can be to the regulated
5 community and I would encourage two things
6 to be put into the rule -- actually three,
7 I guess.

8 The first point would be that for
9 emission inventory purposes, either actual
10 or allowable emissions could be used. And
11 also concerning -- we've heard discussion
12 about the five year age of the test data.
13 If in fact it's acceptable to DEQ that any
14 basis be used for the calculation of
15 emission inventories, whether it's AP42 or
16 the sims or stack testing or whatever it
17 is, let's make sure that the rule clearly
18 says that all of those are options. With
19 particular regard to fluid cat-cracking
20 units at refineries, which Mr. Wilson is
21 very aware of, the issue of correlating
22 excess emissions with opacity is -- we have
23 attempted to do that over the years many,
24 many times with a number of expensive tests
25 and basically have not been successful. So

Page 40

1 we have a very definite concern that excess
2 opacity readings wouldn't necessarily
3 translate into excess emissions that should
4 be reported for compliance purposes or for
5 emission inventory purposes. The technical
6 reason why this is difficult or essentially
7 impossible is that the opacity is dependent
8 not on the mass emission rate alone but
9 it's dependent on the mass emission rate
10 and also particle size. If you visualize a
11 bowling ball coming out of a stack, that
12 could be a lot of mass but very little
13 opacity. And you take that same bowling
14 ball and make it submicron size, you could
15 have the same amount of mass but a very
16 large opacity. And that is the essence of
17 the problem. So we would have very
18 definite concern about that.

19 And then the final point I wanted to
20 make, we had discussed this in Council in
21 previous meetings, and I don't believe I
22 heard it in Jeanette's presentation,
23 concerning the fee payment itself. I
24 believe there was a lot of support and
25 consensus for the idea that even though the

Page 41

1 fees would be calculated and invoiced once
2 a year, that they could be paid quarterly
3 to better manage the cash flow, both for
4 the payer and the recipient for the
5 Division. And I didn't hear that in the
6 proposal and I'm hoping that you are still
7 considering it. Or if you are not
8 considering it, I think we need to discuss
9 why. May I just ask that question of
10 Jeanette?

11 MS. BUTTRAM: Jeanette Buttram.
12 That is one of the reasons for the March
13 1st date, is to try to get the emissions
14 inventory in so that we can bill on a
15 quarterly basis or spread out the total
16 payments over the year.

17 MR. BRANECKY: We're moving
18 towards that bill right now. My fees for
19 this year are in two payments. I paid half
20 and I am paying the other half in December.

21 MR. FISHBACK: But the methods of
22 fee payment are not prescribed in the rule?

23 MR. BRANECKY: No.

24 MR. FISHBACK: As of this time.

25 MR. BRANECKY: Right.

Page 42

1 MR. FISHBACK: Is it the will of
2 the Council that they should be?
3 MR. BRANECKY: No. I'm sorry,
4 I'm not speaking for the Council.
5 MR. FISHBACK: Again, we have the
6 issue of communication. Shouldn't the fee
7 payers know what their options are? How
8 would that be communicated if it's not in
9 the rule?
10 MR. DYKE: Can I respond?
11 Because we haven't worked all the details
12 out on this yet. We have outside
13 influences on our appropriations issues for
14 fee balances being rated. We are trying to
15 figure out as an agency how to protect our
16 fee balances to use them on things they're
17 collected for and we don't have all those
18 details worked out. We did a very
19 unorthodox billing this particular year,
20 one we hope we don't do again. We hope
21 that it's much more clear and more set out.
22 But we don't have all the details worked
23 out yet to put into the rule.
24 MR. FISHBACK: And that was a
25 real advantage of quarterly payments for

Page 43

1 the Division to not have high fee balances
2 that could be rated.
3 MR. DYKE: It worked.
4 MR. FISHBACK: Right.
5 MR. DYKE: The concept works for
6 both of us.
7 MR. FISHBACK: Right. So you are
8 moving toward it, but is it your intention
9 then once you do have the details worked
10 out to do a rule modification that
11 communicates the final conclusion?
12 MR. DYKE: Possibly. Once we put
13 it in a rule, we have to follow it and
14 different circumstances arise.
15 MR. BREISCH: Does that have to
16 be in the rule or can that be an
17 administrative decision?
18 MR. DYKE: I don't think it has
19 to be in a rule. That's my personal
20 opinion.
21 MR. FISHBACK: We'll talk about
22 that in another issue. But that's not
23 prescribed by the '87 statute, you think
24 that --
25 MS. HOFFMAN: It's my opinion

Page 44

1 that the statute requires that we have a
2 rule that sets the fees, but it does not
3 say that we have to have a rule that says
4 how we bill that fee.
5 MR. DYKE: But we hope to make
6 the process open.
7 MR. FISHBACK: And Mid-Continent,
8 that's another issue that we're going to be
9 taking up later. But Mid-Continent
10 certainly supports the concept make into
11 guidance what you make into guidance.
12 MR. DYKE: I understand. We
13 understand.
14 MR. FISHBACK: We'll talk about
15 that some more later. Thank you, very
16 much.
17 MR. DYKE: Is there anyone else
18 wishing to comment on this particular rule?
19 Yes, sir? *Bauckham*
20 MR. BUKIN: I have a question.
21 Do you want me to go up there?
22 MR. DYKE: Please. *Bauckham*
23 MR. BUKIN: I'm Tom *Bukin*, I
24 work with Reliant Energy out of Oklahoma
25 City. And I just have a question, and that

Page 45

1 has to do with method of testing. And
2 that's that on item page 5 of the draft
3 here, (e)(1) and relating to stack tests
4 and (A) appropriate EPA test methods were
5 used.
6 My question is, do we need any more
7 detail on what that is or not. And let me
8 tell you where I'm coming from. We do
9 stack testing routinely but we also do
10 quarterly monitoring, particularly for
11 carbon monoxide and NOx. And we use
12 portable emissions testing methods, it's
13 EPA method 19. And I just want to
14 understand if that is covered under this or
15 whether that is not considered to be an
16 appropriate method. *11*
17 MR. TRENT: That would be
18 appropriate. But the thing is we
19 (inaudible) stack tests or what we call a
20 stack test for what we feel really is all
21 there, something that's totally (inaudible)
22 because the manufacturer says these figures
23 can't even come out of what's being shown.
24 So we're trying to prevent the problem. We
25 have one of those units on order and we'll

1 come out and cross-verification and if that
2 is in fact what it is, then we will allow
3 it. If not, then we will probably have to
4 make some kind of negotiations between what
5 we come up with and what is shown there.

6 MR. ~~BUKIN~~^{Backham}: Thank you.

7 MR. DYKE: Thank you. Anyone
8 else?

9 MR. COLLINS: I'm Gary Collins,
10 representing Terra. And we operate two
11 ammonia plants and two nitric acid plants
12 in the Catoosa area. And I have a couple
13 of comments on the stack testing five year
14 requirement on stack testing.

15 MS. MYERS: Excuse me. We can
16 barely hear you down here. David, is the
17 microphone on?

18 MR. DYKE: Yes.

19 MS. MYERS: This unit is blowing
20 on this end of the room.

21 MR. COLLINS: I'll try to speak
22 up. A couple of comments. One, on the
23 seasonal testing for NOx and VOC, I agree
24 with that philosophy that summer months
25 would represent more conservative or higher

1 NOx emissions from a combustion source such
2 as a boiler. But for nitric acid plants,
3 that is not necessarily the case. You do
4 not have higher NOx emissions necessarily
5 in the summer months due to combustion air
6 -- higher combustion air temperatures like
7 you would see in a boiler or a unit such as
8 that. So we disagree with the seasonal
9 stack testing for NOx.

10 The other comment I wanted to make
11 is -- and I think it's important. The AP42
12 factors for combustion sources like boilers
13 for NOx a lot of times are higher than the
14 state limits for combustion sources. I
15 think that there might be a chance that
16 somebody would try to use AP42 to try to
17 save money if their stack test was older
18 than five years and actually be reporting
19 emissions or paying for emissions that are
20 higher than state limits for NOx.
21 Especially for boilers and big combustion
22 units, the AP42 factors are going to be
23 well above .2 pounds per million.

24 So it would be concerning for us to
25 try to use AP42 to report air emissions

1 inventories, at least for combustion
2 sources. We would ask that that five year
3 period for stack testing be stricken as
4 well. We believe that -- I agree with the
5 earlier comments for combustion sources.
6 You don't necessarily see a decrease in
7 efficiency over a period of time. We have
8 not seen a decrease or an increase in NOx
9 emissions over a 10 or 15 year period per
10 our combustion units as well, especially in
11 our large furnaces. That's all I have.

12 Thank you.

13 MR. DYKE: Yes?

14 MR. LANDERS: Stephen Landers
15 from Fort James one more time. Let me say
16 that --

17 THE REPORTER: Why don't you come
18 up here? I'm sorry.

19 MR. LANDERS: Okay. Stephen
20 Landers again for Fort James. Let me just
21 say one last thing concerning NOx --
22 seasonal NOx testing.

23 We pre-heat the air to our boiler,
24 the combustion air to 350 degrees
25 fahrenheit, regardless of the ambient

1 temperature. So the effect of the ambient
2 temperature in our opinion and some of our
3 corporate experts' opinions is negligible
4 for power boilers.

5 MR. WILSON: Steve, how do you
6 pre-heat your combustion air?

7 MR. LANDERS: We heat first with
8 steam and then we have a revolving air
9 heater using exhaust gas.

10 MR. WILSON: It would take more
11 energy to get it up to that temperature?

12 MR. LANDERS: You're correct.
13 During the winter, we would actually use
14 more steam and more energy to pre-heat the
15 air.

16 MR. WILSON: Right.

17 MR. DYKE: Any additional
18 comments? Larry?

19 MR. TRENT: I think the five year
20 revisit is probably tied to the permits
21 being revisited every five years on major
22 sources. Do these people not also do a
23 stack test during that time? Is that part
24 of revisiting the permit, I am not sure.
25 Also, the season it's in there (inaudible)

1 and I'm sure that some boilers, heaters,
 2 dryers, whatever, have the capability of
 3 getting everything up to temperature and
 4 not having problems -- as much of a problem
 5 with air compressor -- not air compressor
 6 but gas compressor sitting out in the
 7 panhandle at 29 degrees or 10 degrees above
 8 zero, unless the stack test shows they are
 9 going to use that the whole year to
 10 calculate what they are looking at. We
 11 would just like to have a fair, reasonable
 12 way of looking at these emissions and to
 13 put them all in perspective so that we can
 14 say yes, this is as close as we can get and
 15 this is the true fact here. So what we
 16 tried to do here is make that happen and
 17 it's not going to fit everyone, but we want
 18 it to fit as many as possible.
 19 MR. DYKE: Thanks, Larry. Any
 20 additional questions or comments from the
 21 Council?
 22 MR. BREISCH: Well, it's the
 23 staff's recommendation and it's
 24 understandable that we continue this
 25 hearing until the next regular council

1 meeting. Do I have a motion for that?
 2 MS. MYERS: I'll make a motion.
 3 MR. WILSON: I'll second.
 4 MR. BREISCH: I've got a motion
 5 and a second to continue this item. Any
 6 further questions or comments? Myrna, call
 7 the roll.
 8 MS. BRUCE: Mr. Wilson.
 9 MR. WILSON: Yes.
 10 MS. BRUCE: Mr. Fallon.
 11 MR. FALLON: Yes.
 12 MS. BRUCE: Ms. Myers.
 13 MS. MYERS: Aye.
 14 MS. BRUCE: Mr. Branecky.
 15 MR. BRANECKY: Yes.
 16 MS. BRUCE: Mr. Kilpatrick.
 17 MR. KILPATRICK: Aye.
 18 MS. BRUCE: Mr. Breisch.
 19 MR. BREISCH: Aye.

Page 4

1 Section 252:100-5-2.1(b)(2), page 5,
2 new language is proposed to clarify that an
3 owner or operator of a facility must report
4 quantifiable excess emissions on their
5 annual emission inventory.
6 Section 252:100-5-2.1(d), page 5,
7 new language is proposed to reduce to six
8 months after inventories are due or
9 submitted, the period of time in which
10 either the facility owner/operator or the
11 DEQ, respectively, can challenge the
12 methods used to calculate the facility's
13 emissions for "fee calculation purposes".
14 Section 252:100-5-2.1(d)(3), page 6,
15 existing language in this paragraph was
16 modified for clarification purposes. Since
17 the October meeting proposed language on
18 stack tests was deleted and will be
19 addressed next year when Subchapter 45,
20 Monitoring of Emissions, undergoes the
21 rereight/dewrong process.
22 Also, you have received a hand-out
23 for Section 252:100-5-2.2(c), and a hand-
24 out is also available on the table for
25 public review. Staff reviewed this section

Page 3

1 **PROCEEDINGS**
2 **MR. DYKE:** The next item on the
3 Agenda is listed as Number 6B, OAC 252:100-
4 5, Registration, Emission Inventory and
5 Annual Operating Fees. I'll call on Ms.
6 Jeanette Buttram.
7 **MS. BUTTRAM:** Mr. Chairman,
8 Members of the Council, ladies and
9 gentlemen, revisions to Subchapter 5,
10 Registration, Emission Inventory and Annual
11 Operating Fees, are being proposed for the
12 second time to the Council. The proposed
13 changes are designed to allow the agency to
14 bill annual operating fees on a flexible
15 schedule and to clarify several
16 requirements.
17 Changes to Subchapter 5 since the
18 last Council meeting include the following:
19 Section 252:100-5-2.1(a)(2), page 4,
20 existing language currently in Subchapter 7
21 was also inserted here to explain emission
22 reporting requirements for facilities that
23 emit 5 tons per year or less of each
24 regulated pollutant and are registered
25 under a permit-by-rule.

Page 5

1 again after the draft version of the rule
2 was made available for public review.
3 Additional changes are proposed that differ
4 from the version in your packet. A copy of
5 the new proposed changes has been given to
6 you. Therefore, these changes are not
7 intended to be substantive. The subsection
8 was divided into three paragraphs to
9 arrange the requirements for better
10 understanding, and to clarify when the DEQ
11 may issue orders to those who did not pay
12 their annual operating fees because they
13 failed to submit their emission
14 inventories.
15 Section 252:100-5-2.2(d), basis for
16 annual operating fees, page 9, existing
17 language on the option of using actual or
18 allowable emissions for fee calculation was
19 reinstated. Previously, we had suggested
20 that it be struck out of the rule.
21 Comments were received yesterday
22 afternoon from Central and Southwest
23 Services. A copy of those comments will be
24 entered into the record, and I believe a
25 representative is here today who will

Page 6

1 address their concerns on this subchapter.
 2 Staff suggests the proposed rule as
 3 amended be recommended for adoption by the
 4 Board as a permanent rule.
 5 MR. DYKE: Questions of Ms.
 6 Buttram from the Council?
 7 MR. BRANECKY: None of these
 8 changes will then be able to take effect
 9 next year, it would be the following year?
 10 MS. BUTTRAM: The rule won't
 11 become effective until June of 2000 --
 12 approximately June of 2000.
 13 MR. BRANECKY: Nothing would be
 14 addressed prior to that.
 15 MS. BUTTRAM: Right.
 16 MR. BRANECKY: These will
 17 probably take effect in 2001.
 18 MS. BUTTRAM: That's true.
 19 MR. DYKE: Additional questions
 20 from the Council?
 21 MR. TREEMAN: Under D, on Method
 22 of Calculation, there have been instances
 23 in the past where some of the emission
 24 factors, published factors have been
 25 interim factors, if they are ever changed

Page 7

1 to permanent, what all is going to be
 2 required of industry to get the approval of
 3 the agency?
 4 MS. BUTTRAM: I'm sorry, I don't
 5 understand your question.
 6 MR. TREEMAN: Well, if you have
 7 an interim factor and you may have a
 8 permanent based on a interim factor -- I
 9 mean, you go in and do an annual inventory,
 10 the factors may have changed just a little
 11 bit as the factors are finalized, is that
 12 just an agreed upon thing between the
 13 industry and the agency, or is there
 14 something you have to go through?
 15 MS. BUTTRAM: On current AP 42
 16 factors?
 17 MR. TREEMAN: Right. That's
 18 basically what I'm looking at. It doesn't
 19 really effect the permit itself.
 20 MS. BUTTRAM: Well, it's -- I
 21 believe what it says is acceptable to the
 22 Division. So if they are current AP 42
 23 factors, and then if the Division accepts
 24 them then they will be acceptable.
 25 MR. TREEMAN: What if they accept

Page 8

1 them as an interim factor and then they
 2 become final, I guess that's what I'm
 3 saying, is there any change that would be
 4 required? Do you understand where I'm
 5 going?
 6 MS. HOFFMAN: Yes. So you are
 7 saying that between the time you submitted
 8 your emission inventory?
 9 MR. TREEMAN: Or between the time
 10 you did a -- you actually did a permit --
 11 may have a permit and then the time an
 12 inventory is done, the factors changed. Is
 13 there going to be a problem in submitting
 14 it on a final factor versus an interim
 15 factor, or a special factor that's agreed
 16 upon and then going to a published AP 42
 17 factor, that shouldn't be a problem?
 18 MS. HOFFMAN: It shouldn't be. I
 19 would think you might want to note that on
 20 your emission inventory that the factor was
 21 changed, just so that everyone's clear.
 22 But I can't imagine that it would be a
 23 problem.
 24 MR. DYKE: Additional questions
 25 from the Council?

Page 9

1 MR. WILSON: I have a question.
 2 Under what criteria will the 30-day
 3 extension be granted?
 4 MS. BUTTRAM: Well, I guess that
 5 would be up to Emission Inventory. You
 6 would just call in and request a 30-day
 7 extension. And it's my understanding that
 8 it's pretty much granted.
 9 MR. WILSON: It's going to be
 10 pretty much automatic?
 11 MS. BUTTRAM: Well, I can't say
 12 that it's going to be automatic, but it's
 13 my understanding that in the past that's
 14 pretty much the way it was handled in the
 15 past.
 16 MR. WILSON: So a large source
 17 that says look, I've got a lot of this
 18 stuff to do, a lot of data to gather up and
 19 I'm not going to be able to meet your March
 20 1st deadline, would be able to call up and
 21 receive a 30-day extension for the
 22 submittal of that?
 23 MS. BUTTRAM: That's a reasonable
 24 request. Other than to -- if you --
 25 especially since you're saying that you

1 have a lot of information that you have to
2 collect that still hasn't been collected, I
3 personally wouldn't see any problems with
4 that, but that's up to Emission Inventory
5 to decide. And it's my understanding from
6 them that they haven't had any problems
7 with that.

8 MR. BRANECKY: And there would be
9 only one 30-day extension granted?

10 MS. BUTTRAM: Currently in the
11 rule it says a 30-day extension.

12 MR. BRANECKY: So if everybody is
13 going to ask for a 30-day extension, what
14 would be gained?

15 MS. BUTTRAM: That's right. I
16 don't know if everybody will ask for a 30-
17 day extension.

18 MR. TERRILL: My name is Eddie
19 Terrill. I think what we're trying to do
20 here is those that are ready to come in, we
21 would like to get them in because we are
22 trying to get these things evaluated in a
23 shorter time frame than we have in the
24 past, in order to implement this quarterly
25 billing. So we need to get those as

1 going to send them out like in November.

2 MR. TRENT: I have not talked
3 about that past November

4 MS. HOFFMAN: No, I understand.
5 But once this rule --

6 MR. DYKE: What's the answer?

7 MS. HOFFMAN: That once this rule
8 is in effect, that we will try to get those
9 forms out --

10 MR. DYKE: In advance.

11 MS. HOFFMAN: -- in advance.

12 MR. TRENT: We'll mail the forms
13 out as soon as they are calculated.

14 THE REPORTER: Larry, I can't
15 hear you.

16 MR. TRENT: We will get the forms
17 out as soon as we calculate it and put it
18 in the system. I mean, we can do a
19 turnaround on them. So the sooner we can
20 get them in, the sooner we can get them
21 back out. They can go ahead and calculate
22 early, if they can estimate what they are
23 going to be doing. That would help us and
24 actually help them, also.

25 MS. HOFFMAN: Maybe I wasn't

1 quickly as possible. But we also
2 understand that there is going to be some
3 industry that can't do that. So for us,
4 having them come in staggered is not a bad
5 deal. So we're kind of hoping probably
6 that there will be some industry that don't
7 -- can't meet that deadline. But the
8 reality of it is that we may not be able to
9 get to them as quickly as we do the ones
10 that come in early anyway. So I think
11 that's really what we're trying to get at
12 here. Ultimately, the extension would be
13 my call anyway and I can't see not letting
14 -- or not granting that request, just based
15 on this deadline.

16 MR. BRANECKY: When will the
17 emission inventory be sent out from DEQ?
18 The 1st -- January 1st or wait until March
19 15th?

20 MR. DYKE: I think we're looking
21 to get on cycle January 1; is that correct,
22 Larry?

23 MR. TRENT: Yes.

24 MS. HOFFMAN: I hate to butt in,
25 but I was under the impression that we were

1 clear. What I meant was that you would
2 actually send their form that they are
3 supposed to fill-out -- for the emission
4 inventory form, that you would send that
5 form out earlier than usual, like in
6 November or December.

7 MR. TRENT: I didn't know we
8 agreed upon an advancement. What I'm
9 saying is that once they've been sent out
10 and it's come back in and it's in the
11 system, it can be turned around as soon as
12 it's in the system if there is no
13 correction. And they can send it back as
14 soon as they need to.

15 MS. HOFFMAN: All right.

16 MR. DYKE: Barbara, I think some
17 of the industry has that form computerized.

18 MS. HOFFMAN: Okay.

19 MR. DYKE: Additional questions
20 from the Council?

21 MR. WILSON: So a large source
22 will be able to get a 30-day extension, and
23 if there is any question, they can refer to
24 the record of this meeting whereby it looks
25 to me like there is an agreement that a 30-

Page 14

1 day extension will be granted for large
 2 sources, at least, if that's -- if their
 3 claim is it takes a lot of time to gather
 4 up the data.
 5 MS. BUTTRAM: If they give a
 6 reasonable -- if they ask because they have
 7 a reasonable request, and the reason for
 8 not being able to get their information in,
 9 then that's true.
 10 MS. HOFFMAN: I would like to
 11 clarify that this is not limited to large
 12 sources.
 13 MR. WILSON: Okay.
 14 MS. HOFFMAN: This is a 30-day
 15 extension that's available to any source
 16 that legitimately has a need to have an
 17 extra 30 days.
 18 MR. WILSON: Okay.
 19 MR. BRANECKY: Will we have --
 20 will industry have to submit a written
 21 request to DEQ to ask for that extension,
 22 or how is that extension --
 23 MS. BUTTRAM: It's my
 24 understanding the way --
 25 MR. BRANECKY: Are you going to

Page 15

1 issue a letter back to us granting that
 2 extension in the industry?
 3 MS. BUTTRAM: Larry, did you hear
 4 that question?
 5 MR. BRANECKY: My question was,
 6 if the industry were asking for an
 7 extension, is that going to have to be a
 8 written request to you and will you respond
 9 back in writing granting that request or
 10 how is that going to be handled?
 11 MR. TRENT: The general procedure
 12 has been for them to call in and request
 13 it, and I ask for a follow-up just for the
 14 record so that I can tell when it was done
 15 and when to expect the inventory back in.
 16 It's a tracking document, no more. And I
 17 don't generally respond back by letter
 18 unless they request it.
 19 MR. DYKE: Let me ask, is there
 20 any industry in the room that's had a
 21 problem getting an extension in the past?
 22 I think this is something that we've used
 23 for quite some time.
 24 We do have notice that someone
 25 wishes to speak. If that's okay, we'll

Page 16

1 call them at this time. Mr. Howard Ground.
 2 THE REPORTER: Would you spell
 3 your name, please?
 4 MR. GROUND: My name is Howard
 5 Ground, G-R-O-U-N-D.
 6 THE REPORTER: Thank you.
 7 MR. GROUND: I can give you a
 8 copy of my statement if you would like.
 9 THE REPORTER: Okay.
 10 MR. GROUND: Chairman, Members of
 11 the Council, thank you, very much, for
 12 allowing me to address you today. And I
 13 would like to say I really appreciate the
 14 changes that were made from the last --
 15 from the October meeting and basically from
 16 the comments that were given.
 17 And there were just a couple of
 18 issues that I wanted to bring forth today,
 19 and one of them has to do with the March
 20 1st deadline. I did submit comments. I'm
 21 not sure if you have a copy of those, but
 22 the first one is 100-5-2.1(a), the
 23 requirement to have the emissions inventory
 24 submitted by March 1st. I know this isn't
 25 a deal killer, I know this is something we

Page 17

1 can work around if it has to happen. It's
 2 just historically we have asked for an
 3 extension, even on the March 31st deadline.
 4 There are times that we cannot get all the
 5 information together, and we have 17
 6 generating units in the State of Oklahoma.
 7 And the most onerous is the coal plant. We
 8 have a lot of particulate emission sources
 9 that we want to make sure we have all the
 10 coal flow, the inventory correct. We're
 11 being scrutinized more and more as an
 12 industry by a lot of different groups. If
 13 our numbers do not match what we submit to
 14 other agencies such as DOE or EPA, we're
 15 called about that, and so we want to make
 16 sure we submit a correct emissions
 17 inventory and that same number is carried
 18 forth. And with the toxins release
 19 inventory that we've had to start
 20 submitting this year, it's become even more
 21 important that we make sure all of our
 22 emissions inventories or the amount of fuel
 23 we actually burn, everything is correct.
 24 I'm just bringing that up to just let you
 25 know that 30 days may not seem like much,

1 but when you are getting information from a
 2 lot of different sources within your
 3 company and correlating them into different
 4 reports of different agencies, we just want
 5 to make sure we do them correctly. And if
 6 it's going to be an automatic extension --
 7 I'm just bringing the point that if it's
 8 going to be an automatic extension, and if
 9 it's not a real big deal to the agency, I
 10 would rather leave it at March 31st or
 11 April 1st. If it's an underlying problem
 12 for another -- or if it's a symptom of
 13 another problem, I think that the agency
 14 and the Council should look at correcting
 15 that problem, whatever that problem is. I
 16 also don't particularly see why a 30-day
 17 sooner report -- or submitting it 30 days
 18 sooner is going to solve a lot of problems
 19 within the agency. And that's probably
 20 from my lack of knowledge on their process.

21
 22 The other comment I have is on 100-
 23 5-2.2(d)(1), it's on the last page. And
 24 it's the area that was stricken that says,
 25 fees shall be based on emissions inventory

1 submitted in the previous calendar year.
 2 And as I saw that that was stricken, that
 3 to me really clarifies a lot of how we're
 4 paying fees. And I didn't find it anywhere
 5 else, and maybe it was actually referenced
 6 somewhere else and I didn't catch it. But
 7 to me, as far as budgeting and looking at
 8 what we're going to be paying as far as
 9 fees, that tells me what we're going to be
 10 paying and when we're going to be paying
 11 it. And I would just like to ask that it
 12 be reinstated unless there is another
 13 reason or another area that that's covered.
 14 MR. BRANECKY: I think the reason
 15 -- there is a reason for that change.
 16 MR. DYKE: Does someone from
 17 staff want to address that?
 18 MS. BUTTRAM: I thought you were
 19 going to.
 20 MR. DYKE: Please speak up.
 21 MS. BUTTRAM: All these changes
 22 are basically to streamline the new process
 23 of sending out and requiring fees. And we
 24 want to have our emissions based on the
 25 most recent emission fees -- that inventory

1 sent out that you send in on the most
 2 recent inventory that you have for your
 3 emissions. So in Section 5-2.1, it does
 4 say that the inventory shall cover
 5 operations during a calendar year and shall
 6 be submitted prior to March 1st of the
 7 following year. So in reality, we are
 8 going on year-by-year now, rather than
 9 looking back on dates that will no longer
 10 be applicable with the new system of
 11 setting out fees.
 12 Also, our statute requires that we
 13 have a rule that sets the fees, but it
 14 doesn't require that the rules say how
 15 we're going to bill the fee. So that's
 16 partly reasons why we were making some of
 17 these revisions to the rule, also.
 18 MR. DYKE: Thank you, Jeanette.
 19 MR. GROUND: Well, I guess if
 20 that's what the agency wants to do, I would
 21 rather you just say it, we want you to base
 22 these on last year's emissions, instead of
 23 the prior year. That would just help me --
 24 I think it would make it more clear.
 25 That's all the comments I have.

1 MR. DYKE: Thank you. Are there
 2 questions from the Council for Mr. Ground?
 3 MR. GROUND: Thanks.
 4 MR. BRANECKY: So I guess at some
 5 point in time, if this is adopted as is,
 6 there will be a year of emissions that will
 7 not be billed for, is that true?
 8 MR. TERRILL: Well, that's the
 9 reason that we're struggling with how to do
 10 this, because we've got two things going
 11 here that really are driving this.
 12 One is, we've got basically a notice
 13 from the Legislature that we need to be
 14 cognizant of our fee balances. And so
 15 we're trying to level those off so they
 16 don't become a tempting target to be taken
 17 and used for other purposes.
 18 The other thing that we've been
 19 encouraged to do is get our fees basically
 20 on a same year basis. And right now, we're
 21 a year behind as you well now and we're
 22 trying to struggle with how to get current.
 23 And basically what would happen is, unless
 24 we figure a deal where you pay for those,
 25 too, and I don't think anybody will want to

Page 22

1 do that, then we've got to figure out a way
 2 to basically forgive, for lack of a better
 3 word, those emissions from that year. And
 4 we're still struggling with how to do that,
 5 and this is kind of a first step to that.
 6 And you know, I don't know why we couldn't
 7 make these changes and see if it works, and
 8 if it doesn't, we can always come back and
 9 change it, because we're not looking to
 10 create any unusual problems or create an
 11 onerous situation for anybody and we may
 12 find out that these can't be met. But what
 13 we're trying to do is move this timing for
 14 the submittal of these emissions
 15 inventories so we can analyze them and get
 16 those bills out the same year, because
 17 that's where we're trying to get to with
 18 this. So we're not sure exactly how to do
 19 it and what the repercussions would be in
 20 letting that year go. But what you're
 21 really saying is we're going to bill a year
 22 after the agency or whatever entity goes
 23 out of existence. And that's really the
 24 way this would work and that's not going to
 25 happen. So why not get current. And it's

Page 24

1 would like to remain that way. There are
 2 times that we do question what's being
 3 submitted and until we can get some census
 4 that we have to have a particular one and
 5 agree upon it, then I think we'll probably
 6 continue to be flexible on it.
 7 MR. DYKE: Thank you, Larry.
 8 Yes, in the back of the room.
 9 MR. SPARIN: David Sparin, with
 10 Williams Company out of Tulsa. Has thought
 11 been given by staff having the fees
 12 submitted with the emission inventory?
 13 (Electricity went off) That way the
 14 operator can balance at the same time the
 15 emissions fees are reported? Other states
 16 do that.
 17 MS. BUTTRAM: Well, I would have
 18 to --
 19 MR. DYKE: Larry.
 20 MR. TRENT: As far as I'm
 21 concerned, they could do that. What we are
 22 doing now is we take the information and
 23 the data from the inventory and create our
 24 invoices. These invoices are then given to
 25 fiscal, who has to include it into their

Page 23

1 just a matter of cleaning up something that
 2 was done years ago. So that's why we're
 3 making this type of proposal.
 4 MR. DYKE: Additional questions
 5 of staff from the Council? Is there anyone
 6 else wishing to speak on this matter? Mr.
 7 Fishback.
 8 MR. FISHBACK: My name is Bill
 9 Fishback with Mid-Continent Oil and Gas
 10 Association. We just ask one question.
 11 Would the staff confirm that the methods of
 12 emission calculation have the same
 13 flexibility that they have had in the past?
 14 In other words, AP 42 manufacturers, data,
 15 emissions testing, whatever methods are
 16 available, as opposed to limiting that to
 17 certain methods? I guess I direct that to
 18 Jeanette.
 19 MS. BUTTRAM: Yes. I think I
 20 would have to direct that -- I would have
 21 to direct that question to Larry Trent,
 22 since he deals with emission inventory and
 23 he can answer that question as far as --
 24 MR. TRENT: Well, historically we
 25 have been quite flexible on that and we

Page 25

1 system and do whatever they need to do to
 2 it.
 3 So there you have two processes that
 4 we do. If they came in with the emissions
 5 inventory and the inventory is correct,
 6 then that's fine. But if we see something
 7 in there and there is a discrepancy, we're
 8 going to have to go back and correct it.
 9 Things like that are usually done on our
 10 end with the agreement of the people who
 11 submitted the inventory. So it's a good
 12 idea and works for a lot of states. It
 13 could probably work for us, but we haven't
 14 tried it yet.
 15 MR. DYKE: The process that Larry
 16 describes also allows us to do the
 17 quarterly billing through the staff for our
 18 fiscal group. That was the only way we
 19 could do that with that option.
 20 MR. SPARIN: And whether it's a
 21 invoice or receipt for the submission of
 22 the fee, I don't see the difference, I
 23 guess. If everything is correct, you get a
 24 receipt back instead of an invoice. It's
 25 still the same paper trail. Thank you.

1 MR. DYKE: I hope he answered your
2 question. Thank you.

3 MR. TERRILL: David brought up a
4 good point. I think that we're probably
5 going to have to go beyond what we do in
6 this. We're actually going to have to get
7 into this and visit with our effected
8 industry, maybe with a work group or
9 something to polish this thing up a little
10 bit and make it more workable. Because we
11 are departing somewhat from what we've done
12 in the past and it does create some unusual
13 situations for some of our industry and
14 we're aware of that. And like I said, I
15 think we're going to be real flexible on
16 how this thing is implemented. Until we
17 see the pitfalls and the good points about
18 it, we'll probably have to have some type
19 of a work session to get input and maybe
20 fine-tune this, if you will, at some point
21 in time in the future.

22 MS. ARMSTEAD: Mr. Chairman,
23 Members of the Council, good morning. My
24 name is Laura Armstead. I am representing
25 Reliant Energy Gas Transmission and Reliant

1 to a means of collecting fees. Reliant
2 Energy believes that the ODEQ should assess
3 fees from emissions as a means to
4 supporting its air program. However, this
5 should be done on a more simplified basis,
6 such as increase in the rate charge for the
7 emissions inventory fees.

8 Reliant Energy, as well as the
9 balance of the natural gas industry,
10 strives to maintain an unquestionable
11 compliance record. The industry as a whole
12 spends in excess of a million dollars on
13 research programs to improve the operation
14 of natural gas compressors and to better
15 quantify the emissions from the same, with
16 the ultimate goal of emission reduction.
17 Reliant Energy has estimated that the
18 proposed change to the regulations will
19 result in an annual increase of
20 approximately 35 percent in its emissions
21 inventory program cost, based strictly on
22 the prohibition of the use of portable
23 analyzers and requiring stack testing to be
24 performed every five years.

25 Currently Reliant Energy pays

1 Energy Field Services and I would like to
2 refer to them collectively as Reliant
3 Energy. And as Mr. Terrill said, if you do
4 continue to remain flexible on some of
5 these issues, some of my comments may be
6 moot at this point, as long as that stays
7 in effect. And if you don't mind, I would
8 like to address some of the proposed
9 changes to Subchapters 5 and 9 together.

10 Reliant Energy would like to thank
11 the Air Quality Council and the ODEQ for
12 the opportunity to comment on proposed
13 changes to Subchapter 5 and Subchapter 9 of
14 Chapter 100. We believe that it's crucial
15 for the industry and the governing bodies
16 to work together to develop meaningful
17 regulations that benefit the environment,
18 while minimizing the administrative burden
19 and addressing the real world issues.

20 The proposed changes to Subchapter 5
21 and 9 cause Reliant Energy great concern,
22 as it seems that the focus of the
23 regulation is shifting from an overall
24 intent of providing a clean environment by
25 determining the conditions of air pollution

1 approximately \$40,000.00 annually in
2 emissions fees. The five year cost of band
3 stack testing would be approximately
4 \$100,000.00. We anticipate no additional
5 revenues to the ODEQ based on this and no
6 emissions reductions would be experienced.
7 The regulated community has always had a
8 general duty to provide inventory numbers
9 based on best available data.

10 The current regulations allow stack
11 tests performed by portable analyzers to be
12 used as the basis for the emissions
13 inventory. We fail to see a useful purpose
14 behind the additional testing requirement,
15 because the data provided by portable
16 analyzers is efficiently accurate to
17 maintain the integrity of the inventory
18 database and the payment of fees. We
19 understand that the ODEQ has stated that it
20 needs to have accurate inventory numbers to
21 run its program and requiring a new stack
22 test every five years is one way of
23 obtaining more accurate numbers. We have
24 not seen data from ODEQ to substantiate
25 this concern and believe that such data

Page 30

1 should be developed, if indeed that is the
 2 true ODEQ concern. In addition, we believe
 3 that ODEQ has within its compliance
 4 authority the power to demand a source
 5 performance stack test, if it appears to
 6 the ODEQ that quarterly compliance testing
 7 results vary greatly from stack test data.
 8 To make the additional testing requirement
 9 a part of the structure of an ODEQ income
 10 stream, without regard to the need for more
 11 accurate numbers, is to place a burden on
 12 permittees without justification.
 13 We note that portable analyzers have
 14 been acceptable in Oklahoma, are used for
 15 quarterly compliance purposes, and are
 16 acceptable for purposes of substantiating
 17 exempt status in Oklahoma. We also note
 18 that portable analyzers are acceptable in
 19 Louisiana. These portable units provide a
 20 cost effective accurate method of
 21 quantifying emissions. Their use, in our
 22 opinion, fulfills the purpose of such
 23 testing, which is to ensure compliance with
 24 permits which are designated to maintain
 25 air quality.

Page 31

1 We also believe that it is crucial
 2 that the permitting emissions inventory and
 3 enforcement arms of ODEQ be consistent in
 4 their regulations without duplication. We
 5 believe that it's inappropriate for the
 6 ODEQ to use the emission fee regulation to
 7 impose test method restrictions which are
 8 more stringent than federally required. A
 9 discussion on the appropriate test methods,
 10 which can be used in Oklahoma for permit
 11 compliance purposes, should be done in the
 12 form of permit application development, not
 13 fee payment. If the ODEQ can substantiate
 14 their concern that tests performed by
 15 portable analyzers are inaccurate, then a
 16 separate discussion could be had on the
 17 appropriate remedy. However, for the ODEQ
 18 to substitute a much more costly test
 19 method, which would not offer additional
 20 environmental benefits, at a much higher
 21 cost to the regulated community, is
 22 detrimental to the overall environment, the
 23 regulated community, and industry.
 24 Ultimately, the consumer must pay these
 25 additional costs with no additional

Page 32

1 benefit.
 2 Once again, it is important to stay
 3 focused on the purpose of providing benefit
 4 to the environment, with the least amount
 5 of administrative burden for industry and
 6 the agency.
 7 Reliant Energy is troubled by the
 8 proposed insertion of the concept of excess
 9 emissions into the emission inventory
 10 process. The goal of the proposed changes
 11 is so vague that we recommend that DEQ
 12 refrain from making the proposed changes
 13 pertaining to excess emissions. The
 14 regulated community is already under a duty
 15 to self-report. Further, almost any
 16 release of excess emissions represents an
 17 inefficient business activity that
 18 incentivize the regulated community to
 19 avoid such releases. To insert excess
 20 emissions into the emissions inventory
 21 process is merely another layering of
 22 reporting requirements that has, as its
 23 apparent goal, a relatively minor margin of
 24 revenue for the state, and yet a major
 25 administrative burden on the regulated

Page 33

1 community and the agency. Since no method
 2 is specified, it will be up to each company
 3 to generate a methodology, and all the
 4 assumptions necessary to calculate such
 5 excess emissions. Then the agency will be
 6 in position not only to take issue with,
 7 but also to debate the company's
 8 assumptions and method. It is also unclear
 9 how the permitting conditions that would
 10 generally produce excess emissions, such as
 11 startup and shutdown, will be handled. The
 12 calculation of annual emissions is based on
 13 generalities, as engines operate at various
 14 conditions over the year resulting in
 15 varying emissions. The engines are
 16 generally permitted at the higher rates.
 17 However, the actual emissions are less on
 18 an annual basis. The proposed changes
 19 indicate that the excess emissions should
 20 be added to, when in fact they are normally
 21 offset by lower emissions. There should be
 22 no additional reporting requirements, as
 23 long as the total annual emissions are
 24 within the permitted potential limits.
 25 The proposed revision in Subchapter

1 9, 3.2(a), which result in imposing
 2 additional requirements on the regulated
 3 community than is warranted by federal
 4 requirements. The use of the ODEQ
 5 guidelines for enforcement action
 6 concerning continuous emission monitoring
 7 and excess emissions is a useful set of
 8 guidelines to continue to use. Since this
 9 proposed revision is not required by the
 10 federal program, we believe that there
 11 should be continued flexibility in
 12 enforcing compliance with the Oklahoma
 13 program and in substantiating causes of
 14 excess emissions. Therefore, we would
 15 recommend that these changes not be
 16 adopted. The published proposal includes
 17 definition of "release", which would mean
 18 any spilling, leaking, pumping, pouring,
 19 emitting, emptying, discharging, injecting,
 20 escaping, dumping or exposing into the
 21 environment of any air contaminant which
 22 becomes or may become airborne. We find
 23 this new definition to be unnecessary and
 24 entirely too broad for these purposes. Not
 25 all events which would fit within universal

1 releases are regulated events. We support
 2 staff's recommendation that this definition
 3 be taken out. Reliant --
 4 MR. BRANECKY: Are you going to
 5 reiterate this when we get to Subchapter 9?
 6 Because I'm afraid this may get lost in the
 7 record. We're hearing Subchapter 5.
 8 MS. ARMSTEAD: I can. I can do
 9 that, if you like.
 10 MR. BRANECKY: It might get lost
 11 since --
 12 MS. ARMSTEAD: Okay.
 13 MR. BRANECKY: -- we're on 5 now.
 14 MS. ARMSTEAD: Okay.
 15 MR. DYKE: For the record --
 16 MR. BRANECKY: For the record, it
 17 might be easier to keep track of it that
 18 way.
 19 MS. ARMSTEAD: Okay. I can do
 20 that. Reliant Energy believes that
 21 Subchapter 9 should not be changed. If,
 22 however, the changes are to be implemented,
 23 then the regulation should apply only to
 24 minor sources, because we find that
 25 Subchapter 9 requirements overlap with

1 those of Subchapter 8, which applies to
 2 Part 70 sources. In an effort to maintain
 3 a clear reporting structure source, it
 4 should be required to look at one location
 5 for the reporting requirements and not in
 6 several.
 7 Finally, ODEQ has worked hard to
 8 develop a trust between itself and the
 9 regulated community over the years and has
 10 worked to provide protection to the
 11 environment. These proposed regulations
 12 seem to be an attack on the trustworthiness
 13 and honesty of the regulated community
 14 without cause. We urge the ODEQ to
 15 implement a system that benefits the
 16 environment while minimizing the
 17 administrative burden and addresses the
 18 real world issues. A fee structure to
 19 support this type of system, such as a
 20 reasonable, substantiated increased rate
 21 schedule from emission inventory should be
 22 implemented. I thank you for this
 23 opportunity to express Reliant Energy's
 24 concerns and look forward to the
 25 opportunity to work with you on these

1 issues in the future.
 2 MR. DYKE: Questions from the
 3 Council?
 4 MR. BRANECKY: I have a question.
 5 Explain to me again what prohibits you from
 6 using portable analyzers to estimate
 7 emissions for emissions inventory?
 8 MS. ARMSTEAD: We've had
 9 conversations over the past three years
 10 with the emissions inventory group, and
 11 every time it is over the use of the
 12 portable analyzer results. They have told
 13 us continually that they don't like them
 14 and they don't want to use them. And we
 15 felt the changes that they were proposing
 16 in here were leaning towards prohibiting
 17 the use of portable analyzers. And as Mr.
 18 Terrill said, things are going to remain
 19 flexible, I mean, that works great for us.
 20 MR. BRANECKY: Well, I guess I
 21 didn't see anything in there that would
 22 prohibit specifically the portable
 23 analyzer. It's, again, a judgment call, I
 24 guess, from DEQ whether that's acceptable
 25 or not. But you can still propose that and

Page 38

1 ask that that be used. Am I not -- is that
2 true?
3 MR. DYKE: Ms. Buttram, can you
4 address that issue?
5 MS. BUTTRAM: Well, first off, I
6 guess I'm a little confused. I haven't
7 seen the comments, but are you referring to
8 the draft version of the rule that was
9 proposed to the Council in October or are
10 you referring these comments to the draft
11 proposal that's being presented now?
12 Because it seems like some of the comments
13 that you are making are no longer in the
14 draft rule today.
15 MS. ARMSTEAD: Well, that's the
16 only one I have a copy of. I didn't
17 realize there was another proposal out
18 there.
19 MS. BUTTRAM: Yes. That's the
20 process that we go through. Every time a
21 Council Meeting is held, we will always
22 have a new draft version of the rule.
23 MS. ARMSTEAD: Okay. We didn't
24 get a copy of that.
25 MS. BUTTRAM: We don't send out a

Page 39

1 copy of the rule. We have the notice that
2 says when the Council Meeting will be, and
3 then a copy of the rule will be available
4 from our agency.
5 MR. DYKE: It's available on the
6 website.
7 MS. ARMSTEAD: Some of these
8 comments may be inappropriate, but the main
9 reason that we are here is because we have
10 had conversations for the past three years
11 with the inventory group and time and
12 again, it is concerning the use of portable
13 analyzers. And again, some of the changes
14 that were proposed, we thought prohibited
15 the use of portable analyzers. And if we
16 are going to be allowed to continue to use
17 them, then that would work for us.
18 MR. TERRILL: Let me speak to
19 that just for a second, because I think
20 that we're getting on two different issues
21 here. We are going to continue to allow
22 the flexibility like you talked about. But
23 I think it's appropriate that we throw out
24 a word of caution, and I'm not speaking
25 directly toward Reliant, it's just an

Page 40

1 overall broad statement.
2 When you make your submittal to us
3 on those emissions inventory, you need to
4 really look at them and make sure that what
5 you submitted makes sense. Because if you
6 are submitting data to us from, like, a
7 large group of industry and what you submit
8 to us looks blatantly wrong, we're going to
9 question it. And one of the things we're
10 going to do, and it's not a matter of trust
11 or anything else, is we're going to start
12 auditing some of this data. It's something
13 we should have been doing for years and we
14 haven't been doing. We have the ability
15 through some of the equipment we just
16 purchased to do that, and we intend to
17 audit some of it. And so when you submit
18 your data, if you're submitting things that
19 don't look right, you may want to take a
20 look at it and make sure what you submitted
21 is correct. Because if it sticks out,
22 compared to the other data submitted by
23 like-industry, we're probably going to come
24 pay you a visit and find out how you did
25 your calculations. So that's just how

Page 41

1 we're going to do things. But I still
2 think you will be allowed to use the
3 flexibility to do that. But you just need
4 to make sure that what you submit to us is
5 correct. That's all we're really after.
6 MS. ARMSTEAD: And if I could
7 respond to that. As I mentioned, we've had
8 these conversations with the inventory
9 group for the past three years. And each
10 year they have questioned our results
11 because they thought that they were too
12 low. In many cases, the emission factors
13 we used were based on reference method
14 testing, which we supplied copies. The
15 emission factors that were based on
16 portable analyzer results, we provided
17 supplemental reference method testing from
18 the same engine at another location that
19 indicated that those portable test results
20 were accurate. And I guess because we've
21 had these same conversations for three
22 years in a row, we felt like our
23 trustworthiness was being called into
24 question. Because for three years we have
25 provided sufficient information to support

Page 42

1 this, and time and again we get the call
 2 saying no, your rates are too low. But we
 3 have supported that each and every time.
 4 And that is where our concern stems
 5 from, that we will have these conversations
 6 for many years to come. And it's very
 7 burdensome and time consuming to go back
 8 and have to resupport what we've already
 9 proven in the past, and that's our major
 10 concern that we don't want this to
 11 continue. We don't mind being audited,
 12 please come. We'll be happy to support
 13 that.
 14 MR. TERRILL: And that may have
 15 to be how we resolve it. Once we do that,
 16 that would satisfy to everybody's
 17 satisfaction.
 18 MR. BRANECKY: I don't see
 19 anything in this reg that prohibits what
 20 you are doing or what you've been talking
 21 about. That option is still there.
 22 MS. ARMSTEAD: Okay. Thank you.
 23 MR. DYKE: Are there any other
 24 questions from the Council on this rule?
 25 Is there anyone else wishing to speak on

Page 43

1 this rule?
 2 MR. WILSON: David, I wanted to
 3 make one comment, and that is, I happen to
 4 be one of those sources that have a lot of
 5 calculating to do when the first of the
 6 year comes around, and we do it in several
 7 states. It seems like everything is due
 8 about after the first of the year, and
 9 there is a lot of work going on. It gets
 10 to be quite burdensome, many hours of
 11 overtime, and we're constantly looking for
 12 ways to improve our emission calculation
 13 methods and automating that. Still, with
 14 all of these inventories being due, so much
 15 to do after the first of the year, I can
 16 easily understand where the 30-day
 17 extension, which would allow this to be
 18 submitted up to March 31st, could be quite
 19 difficult to meet. Before I vote for this
 20 -- and I am prepared to vote for this, I
 21 just want to mention that sources are not
 22 out there delaying their process of
 23 calculating emissions because it gives them
 24 any advantages. It's basically how they
 25 seek to apply their resources. And in many

Page 44

1 cases, it's going to be very difficult to
 2 even meet the 30-day deadline. I'm asking
 3 for the state to consider this, if it
 4 becomes a problem, let's get this thing in
 5 front of the Council again to reconsider
 6 and figure out how to resolve that problem.
 7 Because there are some legitimate concerns
 8 with regard to this submittal date.
 9 MR. BRANECKY: Would it be
 10 possible to have more than one 30-day
 11 extension? Would the DEQ consider that, at
 12 least? Right now, the way it's written it
 13 says a 30-day extension, but in some cases,
 14 in Joel's case, and as many, many sources,
 15 he may need an additional 15, 30 days. Is
 16 that an option?
 17 MR. TERRILL: I don't know why
 18 not. Do you know of a reason, Barbara, why
 19 we couldn't put something in there that
 20 allows us to grant it?
 21 MR. BRANECKY: That's still up to
 22 the DEQ to decide whether that's acceptable
 23 or not, but I think I would like to see --
 24 have that available.
 25 MR. TERRILL: Why not put

Page 45

1 something in there that maybe says, unless
 2 an extension of up to 60 days has been
 3 granted by the Division. That way -- what
 4 we're really trying to do here is get
 5 sources on the -- used to sending us the
 6 data early enough for us to process it and
 7 start billing on a more frequent schedule.
 8 I don't see a problem with doing it. That
 9 gets you -- the big sources that needs the
 10 extra time to basically stay the same. But
 11 it gets us what we need, which is a push,
 12 if you will, to get this data in quicker
 13 for those that can, so we can start
 14 processing it. That's really all we're
 15 after.
 16 MR. DYKE: If we put April 1st in
 17 there, that's when we're going to get the
 18 majority of the submissions.
 19 MS. HOFFMAN: Dennis just had a
 20 good suggestion, that we say unless a 30-
 21 day extension has been granted by the
 22 Division and then say, additional
 23 extensions may be granted for good cause
 24 shown.
 25 MR. WILSON: I think that's

Page 46

1 acceptable.

2 MS. BEAVERS: Can I offer a

3 suggestion. This is just an idea. It

4 sounds to me like --

5 MR. DYKE: Excuse me. Please

6 identify yourself.

7 MS. BEAVERS: I'm sorry. I'm

8 Julie Beavers with OG&E. Just a

9 suggestion, listening to this, I've only

10 come to one meeting before. But if the

11 problem -- it sounds like the problem is

12 getting all these submissions at one time,

13 why not just stagger them by zip code?

14 Have different due dates quarterly or

15 something.

16 MR. TERRILL: And we might do

17 that at some point in time. But let's take

18 baby steps as we do this. We can always

19 revise it. That's not a bad suggestion.

20 We're having a hard enough time getting to

21 this point without implementing that. But

22 it's something to consider for the future

23 as we refine this process, absolutely.

24 MR. DYKE: We have someone

25 wishing to comment.

Page 48

1 understanding that at any time that the

2 agency determines that it has received an

3 emissions inventory that doesn't appear to

4 be accurate, that there can be additional

5 testing required. But the basic threshold

6 question of, is this an acceptable method,

7 is one that I would like to hear today

8 stated.

9 Now, if the comment from the

10 emissions inventory group is, we need some

11 sort of a protocol, some sort of a method

12 of use of portable analyzers to ensure the

13 accuracy of their use, great. But it

14 appears to me that we are presenting a very

15 inconsistent set of circumstances where

16 your permit and compliance group will

17 accept this -- does accept data from

18 portable analyzers, and emissions inventory

19 group is not.

20 So I would appreciate it, if we

21 could, not just hear that we're going to be

22 flexible today, but also hear that with

23 certain protocols in place or some kind of

24 an understanding of how portable analyzers

25 will be used, that this will continue to be

Page 47

1 MR. WILLIAMS: Thank you. My

2 name is Ken Williams, I'm an attorney with

3 the law firm of Hall-Estel. I appreciate

4 the opportunity to make a comment. And I

5 planned to, but now that we've heard these

6 comments today, I feel compelled to offer a

7 couple of observations.

8 Mr. Terrill has indicated that the

9 emissions inventory group wants to be

10 flexible. I just want to share with the

11 Council my personal experience over the

12 last three years with regard to the

13 flexibility of the emissions inventory

14 group. I have clients that have Title V

15 permits that allow the use of hand-held

16 portable analyzers for compliance purposes.

17 Obviously, the agency has approved that

18 method as a reliable method of gauging

19 compliance of the regulated activities.

20 And yet, every year, I'm debating with the

21 emissions inventory group, the reliability

22 of those same test methods. It will be

23 helpful to my clients if we have some kind

24 of indication that portable analyzers will

25 continue to be an acceptable method,

Page 49

1 one of the approved methods. Thank you.

2 MR. WILSON: Let me see if I

3 understand what you are saying. You have -

4 - you represent clients that have major

5 source permits that identify the

6 demonstration of compliance method as

7 portable analyzers, and then you are faced

8 with an argument as to whether or not

9 that's acceptable for paying fees. Is that

10 your argument?

11 MR. WILLIAMS: That is exactly

12 correct.

13 MR. WILSON: And you see nothing

14 in these regulations that would allow you

15 or grant you automatic acceptance of that

16 method for fee reporting?

17 MR. WILLIAMS: I do not see

18 portable analyzers listed as one of the

19 acceptable methods. And you know, that's

20 kind of the converse of the comments I'm

21 hearing today.

22 MR. WILSON: Would you accept

23 language in there that accepted permitted

24 use or method acceptable for compliance

25 with permit?

1 MR. WILLIAMS: Absolutely.
 2 MR. WILSON: That would solve
 3 that issue?
 4 MR. WILLIAMS: Absolutely.
 5 MS. BUTTRAM: First off, before
 6 you do that, I would like to remind the
 7 Council that language regarding stack tests
 8 and also some of these other issues that
 9 are brought up today will be looked at when
 10 Subchapter 43 and 45 go through the
 11 rewrite/dewrong process in the year 2000.
 12 MR. WILSON: Well, it seems to me
 13 like there is an issue here that needs to
 14 be addressed with some inclusion of
 15 language. Because I think it's entirely
 16 unreasonable for a source to be held to a
 17 compliance demonstration standard in a
 18 permit and for that compliance
 19 demonstration standard to be nonacceptable
 20 for reporting fees. There needs to be, in
 21 my opinion, almost an automatic acceptance
 22 for fee payment for methods that are
 23 included in a source's permit.
 24 MR. TERRILL: Let me address
 25 that, because I really think that the real

1 can do under ideal conditions and what they
 2 report as one-tenth of the emissions as to
 3 what the manufacturer says happened under
 4 ideal conditions. So we feel that either
 5 the operator was in error or the machine
 6 somehow -- I don't know whether they were
 7 doing it right, but we have no way of
 8 correcting it. We now have a portable
 9 emissions analyzer. We will cross-check,
 10 and when we do, if it's there, then it's
 11 there. But up to now, we have had no way
 12 to do this. And this is why we have said
 13 if it's that small, we really want to look
 14 at it, and now we can look at it.
 15 MR. TERRILL: And I think we'll
 16 address this overall issue when we look at
 17 stack testing, because I really think we're
 18 going to have to have an industry work
 19 group to look at the stack testing issue
 20 and the portable analyzer issue to make
 21 sure that what we come up with is what we
 22 need, without being burdensome to the
 23 industry. So we will get some input at the
 24 time we do that rewrite/dewrong on that
 25 particular section.

1 issue here is -- that's not the issue. The
 2 issue is what I stated before. If you
 3 submit data on your emissions inventory
 4 that sticks out as visually different from
 5 everybody else submitting similar data,
 6 we're going to question it because it
 7 doesn't match. And that's probably what's
 8 happened here. I don't know that for a
 9 fact, but I suspect that the data that was
 10 submitted does not jive with the data
 11 that's being submitted by other like-
 12 sources. And so we're questioning what is
 13 correct. The source is considerably higher
 14 or the source is considerably lower. One
 15 of them is not right if they are that much
 16 different.
 17 MR. BRANECKY: Has DEQ accepted
 18 at any time portable stack analyzer data on
 19 emission inventories, or is it just certain
 20 ones that you are questioning that are out
 21 of line or is it just unacceptable at all?
 22 MR. TRENT: Well, we haven't been
 23 able to verify these conditions. And in
 24 the past, we see a great disparity between
 25 what the manufacturer of the engine says it

1 MR. WILLIAMS: I would certainly
 2 volunteer to be part of that work group and
 3 would like to say that, for my clients,
 4 most of them on their Title V permit
 5 applications went through a stack test to
 6 establish a baseline. And we believe that
 7 our portable analyzer results are very
 8 consistent with that baseline which we
 9 established through the permit process,
 10 which is part of why we think that this is
 11 unreasonable to have to continue to argue
 12 about it every year.
 13 MR. WILSON: It's the burden of
 14 argument?
 15 MR. WILLIAMS: Yes.
 16 MR. TERRILL: Well, we won't do
 17 that anymore because we have the ability to
 18 audit. So if something doesn't look right,
 19 then it will be our burden to prove that
 20 and we'll just audit, and see what -- you
 21 know, if we're in the ballpark or not.
 22 MR. WILLIAMS: Final comment, and
 23 I very much appreciate the Council's
 24 patience. It seems to me that what might
 25 be helpful would be for this work group to

Page 54

1 try to establish a protocol that will be
2 acceptable to the agency and to the
3 industry for use of this particular testing
4 method. Not to make a regulation, but to
5 have an understanding that everybody is
6 aware of how to administer the test. Thank
7 you, very much.

8 MR. WILSON: Can we not insert
9 language that says, any method listed in a
10 state issued permit?

11 MS. HOFFMAN: Joel --

12 MR. DYKE: Please speak up.

13 MS. HOFFMAN: I think that it's
14 not the method that emissions inventory was
15 complaining about, it was the results.

16 MR. WILSON: Which is not an
17 issue here.

18 MS. HOFFMAN: Yes. And I think
19 that -- I believe that the rule allows,
20 first of all, you to use any emission
21 factors that were utilized in the issuance
22 of your permit. First of all, that's one
23 of the methods that's acceptable. And
24 then, also, at the end where it says, and
25 any other method that can be shown to be

Page 55

1 reasonably accurate. So I think that it
2 really covers those things -- this rule
3 does. I think the problems that we've been
4 hearing here really haven't been related to
5 the method that was used as much as the
6 results. Because we're going to use that
7 method when we go out to audit them.

8 MR. WILSON: You are not
9 challenging their method?

10 MS. HOFFMAN: Right.

11 MR. WILSON: You are challenging
12 the results of the method?

13 MS. HOFFMAN: I think that's
14 what's happening, yes.

15 MR. DYKE: Additional questions
16 from the Council? Anyone else wishing to
17 speak on this matter?

18 MR. FISHBACK: Bill Fishback,
19 representing Mid-Continent Oil and Gas. I
20 would agree with Mr. Wilson's comment that
21 specificity in the rule is an advantage to
22 the effected industry. And I also agree
23 with Barbara's statement that the rule
24 seems to embrace, as it's presently
25 written, any method of emission

Page 56

1 calculation. This is why I asked the
2 question earlier to confirm that any
3 emission methods are acceptable. It would
4 certainly help the effected industries in
5 this case -- and it may be true that the
6 objections from the DEQ are related to
7 results and not method. But it's
8 interesting that in almost every case that
9 we've heard of, the results that are being
10 objected to are coming from portable
11 analyzers. And as Barbara said, DEQ could
12 hardly be in the position of prohibiting
13 portable analyzers if their audit method is
14 dependent on that.

15 So I think it would be a very good
16 idea if portable analyzers were
17 specifically allowed by the rule, even
18 though that language seems to embrace many
19 different methods. And the DEQ has been,
20 and is now, and always will, be able to
21 challenge the results of any method. And
22 in fact, it's within their right to require
23 stack tests by EPA standardized methods
24 anytime there is a question. So the public
25 is certainly protected if there is a

Page 57

1 question about the emissions data. But I
2 would very much like to see the rule not
3 encouraged, but allow the use of a portable
4 analyzer, and we don't need to make a
5 laundry list of all of them. But I think
6 the focus of the emissions inventory group
7 has been in questioning the results from
8 portable analyzers. And my company and my
9 industry's personal experience with
10 portable analyzers is that if they are
11 calibrated correctly and operated
12 correctly, just as the gentleman said --
13 the attorney said his clients have
14 observed, the results are extremely
15 consistent with formal EPA test methods.
16 So my recommendation to the Council is, put
17 language in there that says portable
18 analyzers can be used. DEQ can always
19 challenge results from any method. Thank
20 you.

21 MR. DYKE: Yes, in the back.

22 MR. SPARIN: David Sparin, again.

23

24 THE REPORTER: Can you speak up?

25 MR. SPARIN: I hate to be the

1 lone wolf for industry, but we have used
 2 portable analyzer test result data in our
 3 calculations in the past, and we have not
 4 been challenged. We usually get an
 5 exceptional method for stack testing.
 6 MR. DYKE: Thank you. Max.
 7 MR. PRICE: Max Price of DEQ. I
 8 wanted to elaborate on what Mr. Trent said.
 9 The kind of magnitude that they are
 10 actually having problems with are off by
 11 two magnitudes. They've actually
 12 (inaudible) they are one-one hundredth of
 13 the manufacturer says it's possible under
 14 ideal circumstances. Those kinds of
 15 numbers are definitely -- there is
 16 something amiss. Either their technique in
 17 using the analyzer or some other problem
 18 that needs to be audited, for the company
 19 as well as us. Because if they have a
 20 problem, it's not been with their way of
 21 doing the test, we need to know that and
 22 they need to correct it.
 23 MR. DYKE: That's why we
 24 purchased the equipment.
 25 MR. WILSON: Do these regulations

1 prohibit your ability to audit that?
 2 MR. PRICE: Excuse me, sir?
 3 MR. TERRILL: No.
 4 MR. TERRILL: We just haven't had
 5 the capability to audit up until recently
 6 and we do now and we intend to do that. We
 7 should have been doing it all along.
 8 MR. WILSON: So you are not
 9 taking exception to the use of portable
 10 analyzers here. They are quite an
 11 acceptable means of measuring, and
 12 therefore reporting emissions?
 13 MR. TERRILL: Absolutely. The
 14 only problem is when the data is reported,
 15 and we have like-industry reporting results
 16 from like-equipment under like-conditions,
 17 using the same method, and they are off by
 18 this tremendous factor, something is wrong.
 19 Either somebody is way over-reporting or
 20 somebody is way under-reporting or there is
 21 something else going on there. And we owe
 22 it to the other industry that we haven't
 23 had a problem with to either say we're
 24 charging you guys too much or something.
 25 We're just trying to resolve the

1 difference. And that's really what we're
 2 trying to do here.
 3 MR. FALLON: But that's a red
 4 flag you would apply no matter what
 5 equipment.
 6 MR. TERRILL: That's exactly
 7 right. Regardless of the method -- it's
 8 really not the method at all. It's the
 9 results and how they compare with other
 10 like-industry using like-methods. That's
 11 really what it's about.
 12 MR. PRICE: I have one more
 13 comment, if I may. Max Price.
 14 MR. DYKE: Please speak up, Max.
 15 THE REPORTER: Could you stand
 16 up? I'm sorry. I can hear better.
 17 MR. PRICE: Max Price, DEQ. I
 18 have one other comment to make on the
 19 emissions inventory, in and of itself.
 20 It's not just used to calculate fees. This
 21 is a big issue, of course, because that's
 22 the green going out of your pocket, so I
 23 understand that. So emissions inventory,
 24 especially an inaccurate one, is very
 25 important to us in future planning.

1 Because of what regulations the Feds passed
 2 while we're trying to do our designations.
 3 What we're going to have to do, if we do go
 4 nonattainment, it's very important that all
 5 the data that's in that emissions inventory
 6 be as accurate as possible. And the
 7 testing which is taken out of the fees,
 8 that's the reason we're looking at that
 9 later on this year to make sure that we
 10 have a good solid basis to base all of our
 11 decisions on. Because the (inaudible) is
 12 the absolute basis of all our regulations.
 13 Thank you.
 14 MR. DYKE: Thank you, Max.
 15 Additional questions from the Council?
 16 Anyone else wishing to speak on this
 17 matter? Mr. Chairman.
 18 MR. BREISCH: Is there any
 19 changes necessary in this from the Council
 20 to vote on it? I might state that I heard
 21 the same thing over here about three or
 22 four times from three or four people. My
 23 opinion says we don't need to change the
 24 wording in this. We've got a method set up
 25 evidently to monitor this and to audit

Page 62

1 this. I don't think that we need to
 2 mention any more about the portable
 3 analyzers. But that's just an opinion. I
 4 want to get this rule passed, if you all
 5 will make a motion.
 6 MR. TREEMAN: There was a
 7 suggestion made on changing the 30-day
 8 extension to 60 days for just cause. I'm
 9 wondering if that needs to be discussed.
 10 MR. BREISCH: Let me ask,
 11 Barbara, what did you make as a suggestion
 12 to that?
 13 MS. HOFFMAN: Okay. I suggested
 14 that in 5-2.1(a)(1), that we add another
 15 sentence that says additional extensions
 16 may be granted for good cause shown.
 17 MR. BREISCH: Okay.
 18 MR. FALLON: Is that plural,
 19 extensions?
 20 MS. HOFFMAN: Yes.
 21 MR. BREISCH: Extensions, 30-day
 22 extensions or what? Do you know what I
 23 mean?
 24 MS. HOFFMAN: Right.
 25 MR. BREISCH: Well, why not just

Page 63

1 say extensions can be granted rather than
 2 put a number in there?
 3 MS. HOFFMAN: Well, mostly
 4 because of the way the sentence was
 5 written. I would have to think about it
 6 again. We'll have to change that sentence.
 7 MR. TERRILL: Can we just say
 8 additional extensions of time may be
 9 granted upon submittal of just cause or
 10 something like that?
 11 MR. BREISCH: Well, Eddie, that's
 12 fine. But why not just say that and not
 13 talk about the 30 days? I mean, I don't
 14 get your --
 15 MR. BRANECKY: Do you want to
 16 have it open-ended where it could be an
 17 indefinite extension, or do you want to put
 18 at least some end-point?
 19 MR. BREISCH: David, you've open
 20 ended it when you say additional extensions
 21 can be --
 22 MR. BRANECKY: The other option
 23 would be an additional 30 days.
 24 MR. BREISCH: That's what I was
 25 trying to get at.

Page 64

1 MR. BRANECKY: A total of 60
 2 would be the limit. I'm afraid just to
 3 leave it open-ended where it could go on
 4 and on and on.
 5 MR. TERRILL: An additional 30-
 6 day extension may be granted on just cause.
 7 MS. HOFFMAN: Good cause shown.
 8 MR. FALLON: I would buy that.
 9 MR. TERRILL: Good cause shown.
 10 MR. BREISCH: Everybody
 11 understand that? That's the only thing
 12 we're changing in this rule?
 13 MS. HOFFMAN: No.
 14 MR. BREISCH: Barbara, what else?
 15 MS. HOFFMAN: I don't know if
 16 you all had a chance to look at the
 17 language that Jeanette passed out while we
 18 were talking about this rule. They are
 19 really not substantive changes, it's just
 20 hopefully a way of clarifying the language
 21 and also adjusting for the fact that people
 22 that haven't submitted the emission
 23 inventories don't really have an invoice
 24 due date. So we had to explain -- we had
 25 to rewrite the language just a little bit

Page 65

1 so that it's clear that people who haven't
 2 submitted an emission inventory will be --
 3 the five years will go back to what their
 4 date of billing should have been.
 5 MR. BREISCH: I didn't know that
 6 was a question.
 7 MS. HOFFMAN: Yes. Well, it was
 8 just something we realized when we reread
 9 the draft rule, that we were giving a
 10 potential out there to people that had
 11 never submitted emission inventories. So
 12 we just divided them into three paragraphs
 13 there. And I think it still says the same
 14 thing. It's just that it's clear now when
 15 we would go back five years for the folks
 16 that hadn't submitted emission inventories.
 17 So I would suggest that you pass the rule
 18 using the language that Jeanette just
 19 passed out for 5-2.2(c) -- yes, 5-2.2(c).
 20 MR. BREISCH: I guess what you
 21 are saying, since that was just passed out,
 22 then that's going to be a change from what
 23 was in our packet, along with the other
 24 extension?
 25 MS. HOFFMAN: Yes.

1 MR. BREISCH: Is that agreeable
 2 with the Council?
 3 MR. BRANECKY: Are you
 4 entertaining a motion?
 5 MR. BREISCH: I'm asking if what
 6 was handed out is agreeable.
 7 MR. BRANECKY: Okay.
 8 MR. BREISCH: And then my next
 9 one, yes, I'm asking for a motion.
 10 MR. WILSON: I'll make a motion
 11 that we pass this with the changes
 12 suggested in 5-2.1, and with the changes
 13 suggested in 5-2.2. Could you read --
 14 someone read those changes in 5-2.1, So I
 15 can make sure I understand how it ended up?
 16 MS. HOFFMAN: I think that we
 17 agreed to add a sentence at the end of 5-
 18 2.1(a)(1), that would read an additional
 19 30-day extension may be granted for good
 20 cause shown.
 21 MR. FALLON: That's the way I
 22 understood it. And the other was just this
 23 language.
 24 MR. BRANECKY: I'll second that.
 25 MR. BREISCH: I've got a motion

1 and a second. Any more comments? If not,
 2 Myrna, call the roll.
 3 MS. BRUCE: Mr. Wilson.
 4 MR. WILSON: Yes.
 5 MS. BRUCE: Mr. Branecky.
 6 MR. BRANECKY: Yes.
 7 MS. BRUCE: Mr. Treeman.
 8 MR. TREEMAN: Yes.
 9 MS. BRUCE: Mr. Fallon.
 10 MR. FALLON: Yes.
 11 MS. BRUCE: Dr. Grosz.
 12 DR. GROSZ: Yes.
 13 MS. BRUCE: Mr. Breisch.
 14 MR. BREISCH: Yes.

OAC 252:100-8
SIP Revision

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

SUBCHAPTER 8. PERMITS FOR PART 70 SOURCES

PART 1. GENERAL PROVISIONS

Section

- 252:100-8-1. Purpose
- 252:100-8-1.1. Definitions
- 252:100-8-1.2. General information
- 252:100-8-1.3. Duty to comply
- 252:100-8-1.4. Cancellation or extension of a construction permit or authorization under a general construction permit
- 252:100-8-1.5. Stack height limitations

PART 3. PERMIT APPLICATION FEES

- 252:100-8-1.7. Permit application fees

PART 5. PERMITS FOR PART 70 SOURCES

- 252:100-8-2. Definitions
- 252:100-8-3. Applicability
- 252:100-8-4. Requirements for construction and operating permits
- 252:100-8-5. Permit applications
- 252:100-8-6. Permit content
- 252:100-8-6.1. General permits
- 252:100-8-6.2. Temporary sources
- 252:100-8-6.3. Special provisions for affected (acid rain) sources
- 252:100-8-7. Permit issuance
- 252:100-8-7.1. Permit renewal and expiration
- 252:100-8-7.2. Administrative permit amendments and permit modifications
- 252:100-8-7.3. Reopening of operating permits for cause
- 252:100-8-7.4. Revocations of operating permits
- 252:100-8-7.5. Judicial review
- 252:100-8-8. Permit review by EPA and affected states
- 252:100-8-9. Permit fees

**PART 7. PREVENTION OF SIGNIFICANT DETERIORATION (PSD)
REQUIREMENTS FOR ATTAINMENT AREAS**

- 252:100-8-30. Applicability
- 252:100-8-31. Definitions
- 252:100-8-32. Source applicability determination
- 252:100-8-33. Exemptions

- 252:100-8-34. Best available control technology
- 252:100-8-35. Air quality impact evaluation
- 252:100-8-36. Source impacting Class I areas
- 252:100-8-37. Innovative control technology

PART 9. MAJOR SOURCES AFFECTING NONATTAINMENT AREAS

- 252:100-8-50. Applicability
- 252:100-8-51. Definitions
- 252:100-8-52. Source applicability determination
- 252:100-8-53. Exemptions
- 252:100-8-54. Requirements for sources located in nonattainment areas

PART 1. GENERAL PROVISIONS

252:100-8-1. Purpose

This Subchapter sets forth permit application fees and the substantive requirements for permits for Part 70 sources.

252:100-8-1.1. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise. Except as specifically provided in this section, terms used in this Subchapter retain the meaning accorded them under the applicable requirements of the Act.

"A stack in existence" means for purposes of OAC 252:100-8-1.5 that the owner or operator had:

- (A) begun, or caused to begin, a continuous program of physical on-site construction of the stack; or
- (B) entered into binding agreements or contractual obligations, which could not be canceled or modified without substantial loss to the owner or operator, to undertake a program of construction of the stack to be completed in a reasonable time.

"Act" means the federal Clean Air Act, as amended, 42 U.S.C. 7401 *et seq.*

"Actual emissions" means, except for Parts 7 and 9 of this Subchapter, the total amount of regulated air pollutants emitted from a given facility during a particular calendar year, determined using methods contained in OAC 252:100-5-2.1(d).

"Administrator" means the Administrator of the United States Environmental Protection Agency (EPA) or the Administrator's designee.

"Allowable emissions" means, for purposes of Parts 7 and 9 of this Subchapter, the emission rate of a stationary source calculated using the maximum rated capacity of the source (unless the source is subject to enforceable limits which restrict the operating rate, or hours of operation, or both) and the most stringent of the following:

- (A) the applicable standards as set forth in 40 CFR Parts 60 and 61;
- (B) the applicable State rule allowable emissions; or,
- (C) the emissions rate specified as an enforceable permit condition.

"Begin actual construction" means:

- (A) for purposes of Parts 7 and 9 of this Subchapter, in general, initiation of physical on-site

construction activities on an emissions unit which are of a permanent nature. Such activities include, but are not limited to, installation of building supports and foundations, laying of underground pipework, and construction of permanent storage structures. With respect to a change in method of operation this term refers to those on-site activities, other than preparatory activities, which mark the initiation of the change.

(B) for purposes of Part 5 of this Subchapter, that the owner or operator has begun the construction or installation of the emitting equipment on a pad or in the final location at the facility.

"Best available control technology" or "BACT" means the control technology to be applied for a major source or modification is the best that is available as determined by the Director on a case-by-case basis taking into account energy, environmental, and economic impacts and other costs of alternate control systems.

"Building, structure, facility, or installation" means, for purposes of Parts 7 and 9 of this Subchapter, all of the pollutant-emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person or persons under common control. Pollutant-emitting activities shall be considered as part of the same industrial grouping if they belong to the same "Major Group" (i.e., which have the same two-digit code), as described in the Standard Industrial Classification manual, 1972, as amended by the 1977 Supplement.

"Commence" for purposes of Parts 7 and 9 of this Subchapter means, as applied to construction of a major stationary source or major modification, that the owner or operator has all necessary preconstruction approvals or permits and either has:

(A) begun, or caused to begin, a continuous program of actual on-site construction of the source, to be completed within a reasonable time; or,

(B) entered into binding agreements or contractual obligations, which cannot be cancelled or modified without substantial loss to the owner or operator, to undertake a program of actual construction of the source to be completed within a reasonable time.

"Construction" means, for purposes of Parts 7 and 9 of this Subchapter, any physical change or change in the method of operation (including fabrication, erection, installation, demolition, or modification of an emissions unit) which would result in a change in actual emissions.

"Dispersion technique" means for purposes of OAC 252:100-8-1.5 any technique which attempts to affect the concentration of a pollutant in the ambient air by using that portion of a stack which exceeds good engineering practice stack height; varying the rate of emission of a pollutant according to atmospheric conditions or ambient concentrations of that pollutant; or increasing final exhaust gas plume rise by manipulating source process parameters, exhaust gas parameters, stack parameters or combining exhaust gases from several existing stacks into one stack, or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise. The preceding sentence does not include:

(A) The reheating of a gas stream, following use of a pollution control system, for the purpose of returning the gas to the temperature at which it was originally discharged from the facility generating the gas stream.

(B) The merging of exhaust gas streams where:

(i) the source owner or operator documents that the facility was originally designed and constructed with such merged streams;

(ii) after July 8, 1985, such merging is part of a change in operation at the facility that includes the installation of pollution controls and is accompanied by a net reduction in the

allowable emissions of a pollutant. This exclusion from "dispersion technique" applicability shall apply only to the emission limitation for the pollutant affected by such change in operation; or

(iii) before July 8, 1985, such merging was part of a change in operation at the facility that included the installation of emissions control equipment or was carried out for sound economic or engineering reasons. Where there was an increase in the emission limitation or, in the event that no emission limitation existed prior to the merging, there was an increase in the quantity of pollutants actually emitted prior to the merging, it shall be presumed that merging was primarily intended as a means of gaining emissions credit for greater dispersion. Before such credit can be allowed, the owner or operator must satisfactorily demonstrate that merging was not carried out for the primary purpose of gaining credit for greater dispersion.

(C) Manipulation of exhaust gas parameters, merging of exhaust gas streams from several existing stacks into one stack, or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise in those cases where the resulting allowable emissions of sulfur dioxide from the facility do not exceed 5,000 tons per year.

"Emission limitations and emission standards" means for purposes of OAC 252:100-8-1.5 requirements that limit the quantity, rate or concentration of emissions of air pollutants on a continuous basis, including any requirements that limit the level of opacity, prescribe equipment, set fuel specifications or prescribe operation or maintenance procedures for a source to assure continuous reduction.

"Emissions unit" means, for purposes of Parts 7 and 9 of this Subchapter, any part of a source which emits or would have the potential to emit any pollutant subject to regulation.

"EPA" means the United States Environmental Protection Agency.

"Fugitive emissions" means, for purposes of Parts 7 and 9 of this Subchapter, those emissions which could not reasonably pass through a stack, chimney, vent or other functionally equivalent opening.

"National Emission Standards for Hazardous Air Pollutants" or "NESHAP" means those standards found in 40 CFR Parts 61 and 63.

"Necessary preconstruction approvals or permits" means, for purposes of Parts 7 and 9 of this Subchapter, those permits or approvals required under all applicable air quality control laws and rules.

"New Source Performance Standards" or "NSPS" means those standards found in 40 CFR Part 60.

"Part 70 permit" means (unless the context suggests otherwise) any permit or group of permits covering a Part 70 source that is issued, renewed, amended, or revised pursuant to this Chapter.

"Part 70 program" means a program approved by the Administrator under 40 CFR Part 70.

"Part 70 source" means any source subject to the permitting requirements of Part 5 of this Subchapter, as provided in OAC 252:100-8-3(a) and (b).

"Potential to emit" means, for purposes of Parts 7 and 9 of this Subchapter, the maximum capacity of a source to emit a pollutant under its physical and operational design. Any physical or operational limitation on the capacity of the source to emit a pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored or processed, shall be treated as part of its design if the limitation or the effect it would have on emissions is enforceable. Secondary emissions do not count in determining the

potential to emit of a source.

"Secondary emissions" means, for purposes of Parts 7 and 9 of this Subchapter, emissions which occur as a result of the construction or operation of a major stationary source or modification, but do not come from the source or modification itself. Secondary emissions must be specific, well defined, quantifiable, and impact the same general areas as the source or modification which causes the secondary emissions. Secondary emissions may include, but are not limited to:

(A) emissions from trains coming to or from the new or modified stationary source; and,

(B) emissions from any offsite support facility which would not otherwise be constructed or increase its emissions as a result of the construction or operation of the major source or modification.

"Stack" means for purposes of OAC 252:100-8-1.5 any point in a source designed to emit solids, liquids or gases into the air, including a pipe or duct but not including flares.

"Stationary source" means, for purposes of Parts 7 and 9 of this Subchapter, any building, structure, facility or installation which emits or may emit any air pollutant subject to OAC 252:100.

252:100-8-1.2. General information

(a) Permit categories. Two types of construction and operating permits are available: general permit and individual permit.

(1) General permit.

(A) A general permit may be issued for an industry if there are a sufficient number of facilities that have the same or substantially similar operations, emissions and activities which are subject to the same standards, limitations and operating and monitoring requirements.

(B) Facilities may be eligible for authorization under a general permit if the following criteria are met:

(i) The facility has actual emissions of 100 tpy or more of any one regulated air pollutant emitted and/or is a Part 70 source.

(ii) The DEQ has issued a general permit for the industry.

(2) Individual permit. Facilities requiring permits under this Subchapter that do not qualify for a general permit shall obtain individual permits. An owner or operator may apply for an individual permit even if the facility qualifies for a general permit.

(b) Applicability determination. Any person may submit a request in writing that the DEQ make a determination as to whether a particular source or installation, which that person operates or proposes to operate, is subject to the permit requirements of this Subchapter. The request must contain sufficient information for the DEQ to make the requested determination and the required fee. The DEQ may request any additional information that it needs for purposes of making the determination.

252:100-8-1.3. Duty to comply

(a) An owner or operator who applies for a permit or authorization, upon notification of coverage, shall be bound by the terms and conditions therein.

(b) An owner or operator who violates any condition of a permit or authorization is subject to enforcement under the Oklahoma Clean Air Act.

252:100-8-1.4. Cancellation or extension of a construction permit or authorization under a general construction permit

(a) Cancellation of permit or authorization to construct or modify. A duly issued permit or authorization to construct or modify will terminate and become null and void (unless extended as provided in Subsection (b) of this Section) if the construction is not commenced within 18 months after the date the permit or authorization was issued, or if work is suspended for more than 18 months after it has commenced.

(b) Extension of permit or authorization to construct or modify.

(1) Prior to the expiration date of the permit or authorization, a permittee may apply for extension of the permit or authorization by written request of the DEQ stating the reasons for the delay or suspension and providing justification for the extension. The DEQ may grant:

(A) One extension of 18 months or less, or

(B) One extension of up to 36 months where the applicant is proposing to expand an already existing facility to accommodate the proposed new construction or the applicant has expended a significant amount of money (1% of total project cost as identified in the original application, not including land cost) in preparation for meeting the definition of "commence construction" at the proposed site, or

(C) One extension of up to 72 months will be granted to major industrial facilities (project cost greater than \$100,000,000.00), where the applicant proposes to construct at an existing site and demonstrates that the existing site was originally designed and constructed to accommodate the proposed new facilities. The applicant shall show a commitment to the site by having purchased land necessary to construct facilities covered by this extension and expended \$1,000,000.00 or more on engineering and/or site development.

(2) If construction has not commenced within three (3) years of the effective date of the original permit or authorization, the permittee must undertake and complete an appropriate available control technology review and an air quality analysis. This review must be approved by the DEQ before construction may commence.

(3) Upon formal request of any applicant whose permit has been denied for lack of increment, the DEQ may require any permittee under OAC 252:100:8-1.4(b)(1)(B) or (C), to furnish a complete air quality analysis and/or an appropriate available control technology review if such review is required in order to provide new or current information.

252:100-8-1.5. Stack height limitations

(a) Stack height exclusion. Air quality modeling or ambient impact evaluation shall exclude the effect of that portion of the height of any stack which exceeds good engineering practice or the effect of any other dispersion techniques.

(b) Determination of good engineering practice (GEP) stack height. GEP stack height shall be the greater of:

(1) 65 meters, measured from the ground-level elevation at the base of the stack; or

(2) The height under either OAC 252:100-8-1.5(b)(2)(A) or (B):

(A) for stacks in existence on January 12, 1979 and for which the owner or operator had obtained all applicable permits or approvals required under OAC 252:100-8 or 40 CFR Part 52, $H_g = 2.5H$, provided the owner or operator can demonstrate that this equation was relied upon in establishing an emission limitation;

(B) for all other stacks, $H_g = H + 1.5L$, where:

(i) H_g = good engineering practice stack height, measured from the ground-level elevation at the base of the stack,

(ii) H = height of nearby structure(s) measured from the ground-level elevation at the

base of the stack,

(iii) L = lesser dimension (height or projected width) of nearby structure(s), provided that the owner or operator may be required to verify such GEP stack height by the use of a field study or fluid model as the Executive Director shall determine; or

(3) The height demonstrated by a fluid model or a field study approved by the reviewing agency, which ensures that the emissions from a stack do not result in excessive concentrations of any air pollutant as a result of atmospheric downwash, wakes, or eddy effects created by the source itself, nearby structures, or nearby terrain features.

(c) Nearby.

(1) For the formulae in OAC 252:100-8-1.5(b)(2). A structure or terrain feature shall be considered nearby if it is located within a distance of up to five times the lesser of the height or the width of a structure, but not more than 0.5 miles (0.8 km).

(2) For demonstration in OAC 252:100-8-1.5(b)(3).

(A) A structure or terrain feature shall be considered nearby if located at a distance not greater than 0.5 mile (0.8 km), except that

(B) A portion of a terrain feature may be considered nearby if:

(i) It falls within a distance (not to exceed 2 miles) of up to 10 times the maximum height (Ht) of the feature, and

(ii) At a distance of 0.5 mile, the height of such feature is at least 40 percent of the GEP stack height determined by the formulae provided in OAC 252:100-8-1.5(b)(2)(B) or 85.3 feet (26 meters), whichever is greater, as measured from the base of the stack.

(3) Measurement of height of structure or terrain. The height of the structure or terrain feature is measured from the ground-level elevation at the base of the stack.

(d) Excessive concentrations. When utilized for the purpose of determining GEP stack height under OAC 252:100-8-1.5(b)(3), excessive concentrations shall be as follows:

(1) For sources seeking credit for stack height exceeding that calculated under OAC 252:100-8-1.5(b)(2), a maximum ground-level pollutant concentration from a stack due in whole or part to downwash, wakes, and eddy effects produced by nearby structures or nearby terrain features which is at least 40 percent in excess of the maximum concentration experienced in the absence of such downwash, wakes, or eddy effects and which, when combined with the impacts due to all sources, produces a concentration in excess of an ambient air quality standard. For sources subject to the prevention of significant deterioration program (Part 7 of this Subchapter or Federal 40 CFR 52.21), the same criteria apply except that a concurrent exceedance of a prevention of significant deterioration increment is experienced. In making demonstrations under this part, the allowable emission rate shall conform to the new source performance standard that is applicable to the source category unless the owner or operator can demonstrate that this emission rate is infeasible. Where such demonstrations are approved by the Director, an alternative emission rate shall be established in consultation with the owner or operator;

(2) For sources seeking credit after October 1, 1983, for increases in existing stack heights up to the heights established under OAC 252:100-8-1.5(b)(2) either:

(A) a maximum ground-level concentration due in whole or part to downwash, wakes or eddy effects as specified in OAC 252:100-8-1.5(b)(2), except that the emission rate specified by any applicable state implementation plan (or, in the absence of such a limit, the actual emission rate) shall be used, or

(B) the actual presence of a local nuisance caused by the existing stack, as determined by the Director; and

(3) For sources seeking credit after January 12, 1979 for a stack height determined under OAC 252:100-8-1.5(b)(2) where the Director requires the use of a field study or fluid model to verify GEP stack height, for sources seeking stack height credit after November 9, 1984 based on the aerodynamic influence of cooling towers, and for sources seeking stack height credit after December 31, 1970 based on the aerodynamic influence of structures not adequately represented by the formulae in OAC 252:100-8-1.5(b)(2), a maximum ground-level concentration due in whole or part to downwash, wakes or eddy effects that is at least 40 percent in excess of the maximum concentration experienced in the absence of such downwash, wakes or eddy effects.

PART 3. PERMIT APPLICATION FEES

252:100-8-1.7. Permit application fees

~~A permit application or a request for an applicability determination received after the effective date of this subsection will be assessed a one-time fee, which must accompany the application or request. Applications received without appropriate fees are administratively incomplete. Fees must be paid by check or money order made payable to the Oklahoma Air Quality Division in accordance with the following fee schedule:~~

~~(1) **Applicability determination.** \$250, to be credited against the construction or operating permit application fee, if a permit is required. If no permit is required, the fee will be retained to cover the cost of making the determination.~~

~~(2) **Construction permit application.**~~

~~(A) New Part 70 source - \$2,000.~~

~~(B) Modification of a Part 70 source - \$1,500.~~

~~(C) Authorization under a general permit - \$900.~~

~~(3) **Operating permit application.**~~

~~(A) Initial Part 70 permit - \$2,000.~~

~~(B) Authorization under a general permit - \$900~~

~~(C) Renewal Part 70 permit - \$1,000.~~

~~(D) Significant modification of Part 70 permit - \$1,000.~~

~~(E) Minor modification of Part 70 permit - \$500.~~

~~(F) Part 70 Temporary Source Relocation - \$500.~~

PART 5. PERMITS FOR PART 70 SOURCES

252:100-8-2. Definitions

The following words and terms, when used in this Part, shall have the following meaning, unless the context clearly indicates otherwise. Except as specifically provided in this Section, terms used in this Part retain the meaning accorded them under the applicable requirements of the Act.

"Administratively complete" means an application that provides:

(A) All information required under OAC 252:100-8-5(c), (d), or (e);

(B) A landowner affidavit as required by OAC 252:2-15-20(b)(3);

(C) The appropriate application fees as required by OAC 252:100-8-1.7; and

(D) Certification by the responsible official as required by OAC 252:100-8-5(f).

"Affected source" means the same as the meaning given to it in the regulations promulgated under Title IV (acid rain) of the Act.

"Affected states" means:

(A) all states:

(i) That are one of the following contiguous states: Arkansas, Colorado, Kansas, Missouri, New Mexico and Texas, and

(ii) That in the judgment of the DEQ may be directly affected by emissions from the facility seeking the permit, permit modification, or permit renewal being proposed; or

(B) all states that are within 50 miles of the permitted source.

"Affected unit" means the same as the meaning given to it in the regulations promulgated under Title IV (acid rain) of the Act.

"Applicable requirement" means all of the following as they apply to emissions units in a Part 70 source subject to this Chapter (including requirements that have been promulgated or approved by EPA through rulemaking at the time of issuance but have future effective compliance dates):

(A) Any standard or other requirements provided for in the applicable implementation plan approved or promulgated by EPA through rulemaking under Title I of the Act that implements the relevant requirements of the Act, including any revisions to that plan promulgated in 40 CFR Part 52;

(B) Any term or condition of any preconstruction permits issued pursuant to regulations approved or promulgated through rulemaking under Title I, including parts C or D, of the Act;

(C) Any standard or other requirement under section 111 of the Act, including section 111(d);

(D) Any standard or other requirement under section 112 of the Act, including any requirement concerning accident prevention under section 112(r)(7) of the Act, but not including the contents of any risk management plan required under 112(r) of the Act;

(E) Any standard or other requirement of the acid rain program under Title IV of the Act or the regulations promulgated thereunder;

(F) Any requirements established pursuant to section 504(b) or section 114(a)(3) of the Act;

(G) Any standard or other requirement governing solid waste incineration, under section 129 of the Act;

(H) Any standard or other requirement for consumer and commercial products, under section 183(e) of the Act;

(I) Any standard or other requirement for tank vessels, under section 183(f) of the Act;

(J) Any standard or other requirement of the regulations promulgated to protect stratospheric ozone under Title VI of the Act, unless the Administrator has determined that such requirements need not be contained in a Title V permit; and

(K) Any national ambient air quality standard or increment or visibility requirement under part C of Title I of the Act, but only as it would apply to temporary sources permitted pursuant to section 504(e) of the Act.

"Designated representative" means with respect to affected units, a responsible person or official authorized by the owner or operator of a unit to represent the owner or operator in matters pertaining to the holding, transfer, or disposition of allowances allocated to a unit, and the submission of and compliance with permits, permit applications, and compliance plans for the unit.

"Draft permit" means the version of a permit for which the DEQ offers public participation under 27A O.S. §§ 2-14-101 through 2-14-401 and OAC 252:100-2-15 or affected State review under OAC 252:100-8-8.

"Emergency" means, when used in OAC 252:100-8-6(a)(3)(C)(iii)(I) and (e), any situation arising from sudden and reasonably unforeseeable events beyond the control of the source,

including acts of God, which situation requires immediate corrective action to restore normal operation, and that causes the source to exceed a technology-based emission limitation under the permit, due to unavoidable increases in emissions attributable to the emergency. An emergency shall not include noncompliance to the extent caused by improperly designed equipment, lack of preventive maintenance, careless or improper operation, or operator error.

"Emissions allowable under the permit" means a federally enforceable permit term or condition determined at issuance to be required by an applicable requirement that establishes an emissions limit (including a work practice standard) or a federally enforceable emissions cap that the source has assumed to avoid an applicable requirement to which the source would otherwise be subject.

"Emissions unit" means any part or activity of a stationary source that emits or has the potential to emit any regulated air pollutant or any pollutant listed under section 112(b) of the Act. Fugitive emissions from valves, flanges, etc. associated with a specific unit process shall be identified with that specific emission unit. This term is not meant to alter or affect the definition of the term "unit" for purposes of Title IV of the Act.

"Final permit" means the version of a part 70 permit issued by the DEQ that has completed all review procedures required by OAC 252:100-8-7 through 252:100-8-7.5 and OAC 252:100-8-8.

"Fugitive emissions" means those emissions of regulated air pollutants which could not reasonably pass through a stack, chimney, vent, or other functionally-equivalent opening.

"General permit" means a part 70 permit that meets the requirements of OAC 252:100-8-6.1.

"Insignificant activities" means individual emissions units that are either on the list approved by the Administrator and contained in Appendix I, or whose actual calendar year emissions do not exceed any of the limits in (A) through (C) of this definition. Any activity to which a State or federal applicable requirement applies is not insignificant even if it meets the criteria below or is included on the insignificant activities list.

(A) 5 tons per year of any one criteria pollutant.

(B) 2 tons per year for any one hazardous air pollutant (HAP) or 5 tons per year for an aggregate of two or more HAP's, or 20 percent of any threshold less than 10 tons per year for single HAP that the EPA may establish by rule.

~~(C) 0.6 tons per year for any one category A substance, 1.2 tons per year for any one category B substance or 6 tons per year for any one category C substance as defined in OAC 252:100-41-40.~~

"MACT" means maximum achievable control technology.

"Major source" means any stationary source (or any group of stationary sources that are located on one or more contiguous or adjacent properties and are under common control of the same person (or persons under common control)) belonging to a single major industrial grouping and that is described in subparagraph (A), (B), or (C) of this definition. For the purposes of defining "major source," a stationary source or group of stationary sources shall be considered part of a single industrial grouping if all of the pollutant emitting activities at such source or group of sources on contiguous or adjacent properties belong to the same Major Group (i.e., all have the same two-digit primary SIC code) as described in the Standard Industrial Classification Manual, 1987.

(A) A major source under section 112 of the Act, which is defined as:

(i) For pollutants other than radionuclides, any stationary source or group of stationary sources located within a contiguous area and under common control that emits or has the potential to emit, in the aggregate, 10 tons per year ("tpy") or more of any hazardous air

pollutant which has been listed pursuant to section 112(b) of the Act, 25 tpy or more of any combination of such hazardous air pollutants, or such lesser quantity as the Administrator may establish by rule. Notwithstanding the preceding sentence, emissions from any oil or gas exploration or production well (with its associated equipment) and emissions from any pipeline compressor or pump station shall not be aggregated with emissions from other similar units, whether or not such units are in a contiguous area or under common control, to determine whether such units or stations are major sources; or.

(ii) For radionuclides, "major source" shall have the meaning specified by the Administrator by rule.

(B) A major stationary source of air pollutants, as defined in section 302 of the Act, that directly emits or has the potential to emit, 100 tpy or more of any regulated air pollutant (except that fraction of particulate matter that exhibits an average aerodynamic particle diameter of more than 10 micrometers) (including any major source of fugitive emissions of any such pollutant, as determined by rule by the Administrator). The fugitive emissions of a stationary source shall not be considered in determining whether it is a major stationary source for the purposes of section 302(j) of the Act, unless the source belongs to one of the following categories of stationary sources:

(i) Coal cleaning plants (with thermal dryers);

(ii) Kraft pulp mills;

(iii) Portland cement plants;

(iv) Primary zinc smelters;

(v) Iron and steel mills;

(vi) Primary aluminum ore reduction plants;

(vii) Primary copper smelters;

(viii) Municipal incinerators capable of charging more than 250 tons of refuse per day;

(ix) Hydrofluoric, sulfuric, or nitric acid plants;

(x) Petroleum refineries;

(xi) Lime plants;

(xii) Phosphate rock processing plants;

(xiii) Coke oven batteries;

(xiv) Sulfur recovery plants;

(xv) Carbon black plants (furnace process);

(xvi) Primary lead smelters;

(xvii) Fuel conversion plants;

(xviii) Sintering plants;

(xix) Secondary metal production plants;

(xx) Chemical process plants;

(xxi) Fossil-fuel boilers (or combination thereof) totaling more than 250 million British thermal units per hour heat input;

(xxii) Petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels;

(xxiii) Taconite ore processing plants;

(xxiv) Glass fiber processing plants;

(xxv) Charcoal production plants;

(xxvi) Fossil-fuel-fired steam electric plants of more than 250 million British thermal units per hour heat input; or

(xxvii) All other stationary source categories which, as of August 7, 1980, are being regulated by a standard promulgated under section 111 or 112 of the Act, but only with respect to those air pollutants that have been regulated for that category.

(C) A major stationary source as defined in part D of Title I of the Act, including:

(i) For ozone non-attainment areas, sources with the potential to emit 100 tpy or more of volatile organic compounds or oxides of nitrogen in areas classified as "marginal" or "moderate," 50 tpy or more in areas classified as "serious," 25 tpy or more in areas classified as "severe," and 10 tpy or more in areas classified as "extreme"; except that the references in this paragraph to 100, 50, 25, and 10 tpy of nitrogen oxides shall not apply with respect to any source for which the Administrator has made a finding, under section 182(f)(1) or (2) of the Act, that requirements under section 182(f) of the Act do not apply;

(ii) For ozone transport regions established pursuant to section 184 of the Act, sources with the potential to emit 50 tpy or more of volatile organic compounds;

(iii) For carbon monoxide non-attainment areas:

(I) that are classified as "serious"; and

(II) in which stationary sources contribute significantly to carbon monoxide levels as determined under rules issued by the Administrator, sources with the potential to emit 50 tpy or more of carbon monoxide; and

(iv) For particulate matter (PM-10) non-attainment areas classified as "serious," sources with the potential to emit 70 tpy or more of PM-10.

"Maximum capacity" means the quantity of air contaminants that theoretically could be emitted by a stationary source without control devices based on the design capacity or maximum production capacity of the source and 8,760 hours of operation per year. In determining the maximum theoretical emissions of VOCs for a source, the design capacity or maximum production capacity shall include the use of raw materials, coatings and inks with the highest VOC content used in practice by the source.

"Permit" means (unless the context suggests otherwise) any permit or group of permits covering a Part 70 source that is issued, renewed, amended, or revised pursuant to this Chapter.

"Permit modification" means a revision to a Part 70 construction or operating permit that meets the requirements of OAC 252:100-8-7.2(b).

"Permit program costs" means all reasonable (direct and indirect) costs required to develop and administer a permit program, as set forth in OAC 252:100-5-2.2 (whether such costs are incurred by the DEQ or other State or local agencies that do not issue permits directly, but that support permit issuance or administration).

"Permit revision" means any permit modification or administrative permit amendment.

"Potential to emit" means the maximum capacity of a stationary source to emit any air pollutant under its physical and operational design. Any physical or operational limitation on the capacity of a source to emit an air pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitation is enforceable by the Administrator. This term does not alter or affect the use of this term for any other purposes under the Act, or the term "capacity factor" as used in Title IV of the Act or the regulations promulgated thereunder.

"Proposed permit" means the version of a permit that the DEQ proposes to issue and forwards to the Administrator for review in compliance with OAC 252:100-8-8.

"Regulated air pollutant" means the following:

(A) Nitrogen oxides or any volatile organic compound (VOC), including those substances

defined in OAC 252:100-1-3, 252:100-37-2, and 252:100-39-2, except those specifically excluded in the EPA definition of VOC in 40 CFR 51.100(s);

(B) Any pollutant for which a national ambient air quality standard has been promulgated;

(C) Any pollutant that is subject to any standard promulgated under section 111 of the Act;

(D) Any Class I or II ozone-depleting substance subject to a standard promulgated under or established by Title VI of the Act;

(E) Any pollutant subject to a standard promulgated under section 112 or other requirements established under section 112 of the Act (Hazardous Air Pollutants), including sections 112(g) (Modifications), (j) (Equivalent Emission Limitation by Permit, and (r) (Prevention of Accidental Releases), including the following:

(i) any pollutant subject to the requirements under section 112(j) of the Act. If the Administrator fails to promulgate a standard by the date established pursuant to section 112(e) of the Act (Schedule for Standards and Review), any pollutant for which a subject source would be major shall be considered to be regulated as to that source on the date 18 months after the applicable date established pursuant to section 112(e) of the Act; and,

(ii) any pollutant for which the requirements of section 112(g)(2) of the Act have been met, but only with respect to the individual source subject to the section 112(g)(2) requirement;

or

(F) Any other substance for which an air emission limitation or equipment standard is set by an existing permit or regulation.

"Renewal" means the process by which a permit is reissued at the end of its term.

"Responsible official" means one of the following:

(A) For a corporation: a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation, or a duly authorized representative of such person if the representative is responsible for the overall operation of one or more manufacturing, production, or operating facilities applying for or subject to a permit and either:

(i) The facilities employ more than 250 persons or have gross annual sales or expenditures exceeding \$25 million (in second quarter 1980 dollars); or

(ii) The delegation of authority to such representatives is approved in advance by the DEQ;

(B) For the partnership or sole proprietorship: a general partner or the proprietor, respectively;

(C) For a municipality, State, Federal, or other public agency: Either a principal executive officer or ranking elected official. For purposes of this Subchapter, a principal executive officer or installation commander of a Federal agency includes the chief executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., a Regional Administrator of EPA); or

(D) For affected sources:

(i) The designated representative in so far as actions, standards, requirements, or prohibitions under Title IV of the Act or the regulations promulgated thereunder are concerned; and

(ii) The designated representative for any other purposes under this Subchapter.

"Section 502(b)(10) changes" means changes that contravene an express permit term. Such changes do not include changes that would violate applicable requirements or contravene federally enforceable permit terms and conditions that are monitoring (including test methods), recordkeeping, reporting, or compliance certification requirements.

"Small unit" means a fossil fuel fired combustion device which serves a generator with a name

plate capacity of 25 MWe or less.

"State-only requirement" means any standard or requirement pursuant to Oklahoma Clean Air Act (27A O.S. § 2-5-101 through 2-5-118, as amended) that is not contained in the State Implementation Plan (SIP).

"State program" means a program approved by the Administrator under 40 CFR Part 70.

"Stationary source" means any building, structure, facility, or installation that emits or may emit any regulated air pollutant or any pollutant listed under section 112(b) of the Act.

"Trivial activities" means any individual or combination of air emissions units that are considered inconsequential and are on a list approved by the Administrator and contained in Appendix J.

"Unit" means, for purposes of Title IV, a fossil fuel-fired combustion device.

252:100-8-3. Applicability

(a) Covered sources. Except as exempted from the requirement to obtain a permit under subsection (b) of this Section or elsewhere in this Subchapter, the sources listed below are subject to the permitting requirements under this Subchapter. A major source or major stationary source shall remain a Part 70 source until a federally enforceable permit is obtained which contains emission limitations and/or conditions to limit the operation of the facility to below that which would define it as a covered source pursuant to this section.

(1) Any major source (as defined in OAC 252:100-8-2);

(2) Any source subject to a NSPS;

(3) Any source, including an area source, subject to a NESHAP;

(4) Any affected source (as defined in OAC 252:100-8-2);

(5) Any source in a source category designated by the Administrator pursuant to 40 CFR § 70.3; and

(6) Any major stationary source required to have a permit under Parts 7 or 9 of this Subchapter.

(b) Source category exemptions.

(1) All sources listed in subsection (a) of this section that are not major sources, major stationary sources, affected sources, or solid waste incineration units required to obtain a permit pursuant to section 129(e) of the Act, are exempt from the obligation to obtain a Part 70 permit unless required to do so by appropriate implementation of EPA administrative rulemaking for non-major sources. Any such exempt source may opt to apply for a permit under these rules and shall be issued a permit if the applicant otherwise satisfies all of the requirements of this Chapter.

(2) If the Administrator determines after appropriate rulemaking that an exemption is applicable to non-major sources when adopting standards or other requirements under section 111 or section 112 of the Act after July 21, 1992, then at that time the exemption will apply.

(3) Unless otherwise required to obtain a Part 70 permit, the following source categories are exempted from the obligation to obtain a Part 70 permit:

(A) All sources in source categories that would be required to obtain a permit solely because they are subject to part 60, subpart AAA -- Standards of Performance for New Residential Wood Heaters; and

(B) All sources in source categories that would be required to obtain a permit solely because they are subject to part 61, subpart M -- National Emission Standard for Hazardous Air Pollutants for Asbestos, Section 61.145, Standard for Demolition and Renovation.

252:100-8-4. Requirements for construction and operating permits

(a) Construction permits.

(1) Construction permit required. No person shall begin actual construction or installation of any new source that will require a Part 70 operating permit without first obtaining a DEQ-issued air quality construction permit. A construction permit is also required prior to reconstruction of a major affected source under 40 CFR Part 63, reconstruction of a major source if it would then become a major affected source under 40 CFR 63, or for any physical change that would be a significant modification under OAC 252:100-8-7.2(b)(2). In addition to the requirements of this Part, sources subject to Part 7 or Part 9 of this Subchapter must also meet the applicable requirements contained therein.

(2) Requirement for case-by-case MACT determinations.

(A) Applicability. The requirement for case-by-case MACT determinations apply to any owner or operator who constructs or reconstructs a major source of hazardous air pollutants after June 29, 1998, unless the source has been specifically regulated or exempted from regulation under a subpart of 40 CFR Part 63, or the owner or operator has received all necessary air quality permits for such construction or reconstruction before June 29, 1998.

(B) Exclusions. The following sources are not subject to this subsection.

(i) Electric utility steam generating units unless and until these units are added to the source category list.

(ii) Stationary sources that are within a source category that has been deleted from the source category list.

(iii) Research and development activities as defined in 40 CFR § 63.41.

(C) MACT determinations. If subject to this subsection, an owner or operator may not begin actual construction or reconstruction of a major source of HAP until obtaining from the DEQ an approved MACT determination in accordance with the following regulations: 40 CFR 63.41, 40 CFR 63.43 and 40 CFR 63.44, which are hereby incorporated by reference as they exist on July 1, 2000.

(b) Operating permits.

(1) Operating permits required. Except as provided in subparagraphs (A) and (B) of this section, no Part 70 source subject to this Chapter may operate after the time that it is required to file a timely application with the DEQ, except in compliance with a DEQ-issued permit.

(A) If the owner or operator of a source subject to the requirement to obtain a Part 70 permit submits a timely application for Part 70 permit issuance or renewal, that source's failure to have a Part 70 permit shall not be a violation of the requirement to have such a permit until the DEQ takes final action on the application. This protection shall cease to apply if the applicant fails to submit, by the deadline specified in writing by the DEQ or OAC 252:100-8-4, any additional information identified as being reasonably required to process the application.

(B) If the owner or operator of a source subject to this Subchapter files a timely application that the DEQ determines to be administratively incomplete due to the applicant's failure to timely provide additional information requested by the DEQ, the applicant loses the protection granted under paragraph (A) of this Section. The source's failure to have a Part 70 permit shall be deemed a violation of this Subchapter.

(C) Filing an operating permit application shall not affect the requirement, if any, that a source have a construction permit.

(2) Duty to apply. For each Part 70 source, the owner or operator shall submit a timely and

complete permit application on forms supplied by the DEQ in accordance with this section.

(3) **Timely application.** Sources that are subject to the operating permit program established by this Chapter as of March 6, 1996, shall file applications on the following schedules outlined in OAC 252:100-8-4(b)(4). A timely application is one that is postmarked on or before the relevant date listed below. In the event a major source consists of operations under multiple SIC codes, the primary activity shall form the basis for the initial permit application.

(4) **Application submittal schedule.** The following sources are subject to the operating permit program and shall submit initial permit applications according to the following schedule.

(A) No later than September 5, 1996:

(i) Affected sources under the acid rain provisions of the Act shall submit a permit application for at least the affected units at the site. Regardless of the effective date of the program and the requirement to file an application defined in this section, applications for initial Phase II acid rain permits shall be submitted to the DEQ no later than January 1, 1996, for sulfur dioxide, and by January 1, 1998, for nitrogen oxides, pursuant to the Act, 407.

(ii) Any owner or operator shall submit no less than one-third of their total applications for Part 70 sources located at sources classified by the following Source Standard Industrial Classification Codes and which belong to a single major industrial grouping other than 28 (Chemicals and allied products) or 29 (Petroleum refining and related industries):

(I) Petroleum and Natural Gas, 1311;

(II) Natural Gas Liquids, 1321;

(III) Electric Services, 4911, 4961;

(IV) Natural Gas Transmission, 4922;

(V) Natural Gas Transmission and Distribution, 4923; and

(VI) Petroleum Bulk Stations and Terminals, 5171.

(B) All remaining Part 70 sources identified in (b)(4)(A)(ii) of this Subsection shall be subject to the operating permit program and shall submit initial permit applications no later than March 5, 1997.

(C) No later than March 5, 1997, any owner or operator shall submit their applications for Part 70 sources located at sources classified by the following Standard Industrial Classification Codes:

(i) Metals, 3312, 3315, 3321, 3341, 3351, 3411, 3412, 3432, 3466,

(ii) Brick Plants, 3251, 3297,

(iii) Commercial Printing, 2752, 2761.

(D) No later than July 5, 1998, any owner or operator shall submit their applications for Part 70 sources located at sources classified by the following Standard Industrial Classification Codes:

(i) Refineries, 2911;

(ii) Cement Plants, 3241;

(iii) Chemical/Carbon, 2819, 2821, 2851, 2861, 2869, 2891, 2895, 2899, 2999, 3053, 3086, 3089;

(iv) Petroleum Transportation/Terminals/Storage, 4612, 4613;

(v) Food Products, 2013, 2074, 2095.

(E) All remaining Part 70 sources shall be subject to the operating permit program and shall submit initial permit applications no later than March 6, 1999.

(5) **Newly regulated sources.** A source that becomes subject to the operating permit program established by this Chapter at any time following the effective date shall file an administratively complete operating permit application within 180 days of commencement of operation.

(6) **Application acceptability.** Notwithstanding the deadlines established in paragraph (4) of this subsection, an application filed prior to the above deadlines following submission of the state program to EPA for approval shall be accepted for processing.

(7) **112(g) applications.** A source that is required to meet the requirements under section 112(g) of the Act, or to have a permit under a preconstruction review program under Title I of such Act, shall file an application to obtain an operating permit or permit amendment or modification within twelve months of commencing operation. Where an existing Part 70 operating permit would prohibit such construction or change in operation, the source must obtain a construction permit before commencing construction.

(8) **Application for renewal.** Sources subject to this Chapter shall file an application for renewal of an operating permit at least six months before the date of permit expiration, unless a longer period (not to exceed 18 months) is specified in the permit. Renewal periods greater than six months are subject to negotiation on a case-by-case basis.

(9) **Phase II acid rain permits.** Sources required to submit applications under the Acid Rain Program shall submit these applications as required by 40 CFR 72.30(b)(2)(i) through (viii).

(10) **Application completeness.** See Uniform Permitting Rules, OAC 252:2-15-70 and the definition of "administratively complete" in OAC 252:100-8-2.

252:100-8-5. Permit applications

(a) **Confidential information.** If a source submits information to the DEQ under a claim of confidentiality, the source shall also submit a copy of such information directly to the Administrator, if the DEQ requests that the source do so.

(b) **Duty to supplement or correct application.** Any applicant who fails to submit any relevant facts or who has submitted incorrect information in a permit application shall, upon becoming aware of such failure or incorrect submittal, submit such supplementary facts or corrected information within 30 days unless the applicant's request for more time has been approved by the DEQ. In addition, an applicant shall provide additional information as necessary to address any requirements that become applicable to the source after the date it filed a complete application but prior to release of a draft permit.

(c) **Standard application form and required information.** Sources that are subject to the Part 70 permit program established by this Chapter shall file applications on the standard application form that the DEQ makes available for that purpose in accordance with OAC 252:2-15. The application must include information needed to determine the applicability of any applicable requirement, or state-only requirement, or to evaluate the fee amount required under the schedule approved pursuant to OAC 252:100-5-2.2(b)(2). The applicant shall submit the information called for by the application form for each emissions unit at the source to be permitted. The source must provide a list of any insignificant activities that are exempted because of size or production rate. Trivial activities need not be listed. The standard application form and any attachments shall require that the information required by OAC 252:100-8-5(d) and/or (e) be provided.

(d) **Construction permit applications.**

(1) An application for a construction permit shall provide data and information required by this Chapter and/or requested on the application form available from the DEQ pursuant to the requirements of this Chapter. Such data and information shall include but not be limited to site

information, process description, emission data and when required, BACT, modeling and sampling point data as follows:

(A) **BACT determination.** To be approved for a construction permit, a major source must demonstrate that the control technology to be applied is the best that is available for each pollutant that would cause the source to be defined as a major source. This determination will be made on a case by case basis taking into account energy, environmental, and economic impacts and other costs of alternative control systems. Unless required under Part 7 of this Subchapter, a BACT determination is not required for a modification that will result in an increase of emissions of less than 100 tons per year of any regulated air pollutant.

(B) **Modeling.** Any air quality modeling or ambient impact evaluation that is required shall be prepared in accordance with procedures acceptable to the DEQ and accomplished by the applicant.

(C) **Sampling points.** If required by the DEQ an application shall show how the new source will be equipped with sampling ports, instrumentation to monitor and record emission data and other sampling and/or testing equipment.

(2) Construction permit applications for new sources must also include the requirements for operating permits contained in OAC 252:100-8-5(e) to the extent they are applicable.

(e) **Operating permit applications.**

(1) Identifying information, including company name and address (or plant name and address if different from the company name), owner's name and agent, and telephone number and names of plant site manager/contact.

(2) A description of the source's processes and products (by two-digit Standard Industrial Classification Code) including any associated with each alternate scenario identified by the source.

(3) The following emissions-related information:

(A) All emissions of pollutants for which the source is major, and all emissions (including fugitive emissions) of regulated air pollutants. The permit application shall describe all emissions of regulated air pollutants emitted from any emissions unit, except where such units are exempted under subsection (c) of this Section or OAC 252:100-8-3(b).

(B) Identification and description of all points of emissions described in subparagraph (e)(3)(A) of this Section in sufficient detail to establish the basis for fees and applicability of the Act's requirements.

(C) Emissions rates in tons per year and in such terms as are necessary to establish compliance consistent with the applicable standard.

(D) The following information to the extent it is needed to determine or regulate emissions:

(i) fuels,

(ii) fuel use,

(iii) raw materials,

(iv) production rates, and

(v) operating schedules.

(E) Identification and description of air pollution control equipment and compliance monitoring devices or activities.

(F) Limitations on source operation affecting emissions or any work practice standards, where applicable, for all regulated pollutants at the covered source.

(G) Other information required by any applicable requirement, or state-only requirement

(including information related to stack height limitations developed pursuant to section 123 of the Act).

(H) Calculations on which the information in items (A) through (G) of this paragraph is based.

(4) The following air pollution control requirements:

(A) Citation and description of all applicable requirements and all state-only requirements.

(B) Description of or reference to any applicable test method for determining compliance with each applicable requirement and state-only requirement.

(5) Other specific information required under the DEQ's rules and statutes to implement and enforce other applicable requirements of the Act or of this Chapter or to determine the applicability of such requirements.

(6) An explanation of any proposed exemptions from otherwise applicable requirements and state-only requirements.

(7) Additional information as determined to be necessary by the DEQ to define alternative operating scenarios identified by the source pursuant to OAC 252:100-8-6(a)(9) or to define permit terms and conditions implementing OAC 252:100-8-6(f) or 252:100-8-6(a)(10).

(8) A compliance plan for all covered sources that contains all the following:

(A) A description of the compliance status of the source with respect to all applicable requirements and state-only requirements as follows:

(i) For applicable requirements and state-only requirements with which the source is in compliance, a statement that the source will continue to comply with such requirements.

(ii) For applicable requirements and state-only requirements that will become effective during the permit term, a statement that the source will meet such requirements on a timely basis shall satisfy this provision, unless a more detailed schedule is expressly required by the applicable requirement.

(iii) For requirements for which the source is not in compliance at the time of permit issuance, a narrative description of how the source will achieve compliance with such requirements.

(B) For sources not in complete compliance, a compliance schedule as follows:

(i) A schedule of compliance for sources that are not in compliance with all applicable requirements and state-only requirements at the time of permit issuance. Such a schedule shall include a schedule of remedial measures, including an enforceable sequence of actions with milestones, leading to compliance with any applicable requirements and state-only requirements for which the source will be in noncompliance at the time of permit issuance. This compliance schedule shall resemble and be equivalent in stringency to that contained in any judicial consent decree or administrative order to which the source is subject. Any such schedule of compliance shall be supplemental to, and shall not sanction non-compliance with, the applicable requirements on which it is based.

(ii) A schedule for submission of certified progress reports no less frequently than every 6 months.

(C) The compliance plan content requirements specified in this paragraph shall apply and be included in the acid rain portion of a compliance plan for an affected source, except as specifically superseded by regulations promulgated under Title IV of the Act with regard to the schedule and method(s) the source will use to achieve compliance with the acid rain emissions limitations.

(9) Requirements for compliance certification, including the following:

(A) A certification of compliance with all applicable requirements and state-only requirements by a responsible official consistent with subsection (f) of this section and section 114(a)(3) of the Act;

(B) A statement of methods used for determining compliance, including a description of monitoring, recordkeeping, and reporting requirements and test methods;

(C) A schedule for submission of compliance certifications during the permit term, which shall be submitted annually, or more frequently if required by an underlying applicable requirement state-only requirements or by the permitting authority; and

(D) A statement indicating the source's compliance status with any applicable enhanced monitoring and compliance certification requirements of the Act.

(10) The use of nationally-standardized forms for acid rain portions of permit applications and compliance plans, as required by regulations promulgated under Title IV of the Act.

(f) **Certification.** Any application form, report, or compliance certification submitted pursuant to this Chapter shall contain certification by a responsible official of truth, accuracy, and completeness. This certification and any other certification required under this Chapter shall be signed by a responsible official and shall contain the following language: "I certify, based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete."

252:100-8-6. Permit content

(a) **Standard permit requirements.** Part 70 permits issued under this Chapter shall include all applicable requirements and state-only requirements (as defined in OAC 252:100-8-2) that apply to the permitted source at the time of issuance. Each permit shall include the following elements:

(1) **Emission limitations and standards.** The permit shall specify emissions limitations and standards that constitute applicable requirements and state-only requirements and shall include those operational conditions and limitations necessary to assure compliance with all such requirements.

(A) The permit shall specify and reference the origin of and authority for each term or condition, and identify any difference in form as compared to the applicable requirement or state-only requirement upon which the term or condition is based.

(B) The permit shall state that, where an applicable requirement of the Act is more stringent than an applicable requirement of regulations promulgated under Title IV of the Act, both provisions shall be incorporated into the permit and shall be enforceable by EPA.

(C) If the State implementation plan or an applicable requirement allows a source to comply through an alternative emission limit or means of compliance, a source may request that such an alternative limit or means of compliance be specified in its permit. Such an alternative emission limit or means of compliance shall be included in a source's permit upon a showing that it is quantifiable, accountable, enforceable, and based on replicable procedures. The source shall propose permit terms and conditions to satisfy these requirements in its application.

(2) **Permit duration.**

(A) **Operating permits.** The permit shall specify a fixed term. The DEQ shall issue permits for any fixed period requested in the permit application, not to exceed five years, except as provided in subparagraphs (i) and (ii) of this paragraph:

(i) Permits issued to affected sources shall in all cases have a fixed term of five years.

(ii) Permits issued to solid waste incineration units combusting municipal waste subject to standards under section 129(e) of the Act shall have a term not to exceed 12 years. Such permits shall be reviewed every five years.

(B) Construction permits. See OAC 252:100-8-1.4.

(3) Monitoring and related recordkeeping and reporting requirements.

(A) Monitoring requirements.

(i) All emissions monitoring and analysis procedures or test methods required under applicable requirements and state-only requirements, including any procedures and methods promulgated pursuant to sections 114(a)(3) or 504(b) of the Act;

(ii) Where an applicable requirement or state-only requirement does not require periodic testing or instrumental or non-instrumental monitoring (which may consist of recordkeeping designed to serve as monitoring), periodic monitoring during the relevant time period sufficient to yield reliable data that are representative of the source's compliance with the permit, as reported pursuant to (a)(3)(C) of this section. Such monitoring requirements shall assure use of terms, test methods, units, averaging periods, and other statistical conventions consistent with the applicable requirement or state-only requirement. Recordkeeping provisions may be sufficient to meet the requirements of this subparagraph.

(iii) As necessary, requirements concerning the use, maintenance, and, where appropriate, installation of monitoring equipment or methods.

(iv) Provisions for the permittee to request the use of alternative test methods or analysis procedures, and provisions for the DEQ to approve or disapprove the request within 60 days.

(B) Recordkeeping requirements. The permit shall incorporate all applicable recordkeeping requirements and require, where applicable, the following:

(i) Records of required monitoring information that include the following:

(I) The date, place as defined in the permit, and time of sampling or measurements;

(II) The date(s) analyses were performed;

(III) The company or entity that performed the analyses;

(IV) The analytical techniques or methods used;

(V) The results of such analyses; and

(VI) The operating conditions existing at the time of sampling or measurement.

(ii) Retention of records of all required monitoring data and support information for a period of at least five years from the date of the monitoring sample, measurement, report, or application. Support information includes all calibration and maintenance records and all original stripchart recordings for continuous monitoring instrumentation, and copies of all reports required by the permit. Where appropriate, the permit may specify that records may be maintained in computerized form.

(C) Reporting requirements. The permit shall incorporate all applicable reporting requirements and require the following requirements:

(i) A permit issued under this Part shall require the permittee to submit a report of any required monitoring at least every six months. To the extent possible, the schedule for submission of such reports shall be timed to coincide with other periodic reports required by the permit, including the permittee's annual compliance certification. However, the reports may be submitted at any time within the reporting period, as stipulated in the permit.

(ii) Each report submitted under (C)(i) of this paragraph shall identify any exceedances from permit requirements since the previous report that have been monitored by the monitoring systems required under the permit, and any exceedances from the monitoring, recordkeeping and reporting requirements under the permit.

(iii) In addition to semiannual monitoring reports, each permittee shall be required to submit supplemental reports as follows:

(I) Any exceedance resulting from an emergency as defined in OAC 252:100-8-2 or upset conditions as defined in the permit shall be reported promptly but no later than 4:30 p.m. on the next working day after the permittee first becomes aware of the exceedance. The initial report must contain a description of the emergency or upset conditions, any steps taken to mitigate emissions, and corrective actions taken. Quantification of exceedances attributable to emergencies or upset conditions shall be made by the best available method. If the permittee wishes to assert the affirmative defense authorized under subsection (e) of this Section for emergencies, the permittee shall submit a followup written report within 10 working days of first becoming aware of the exceedance.

(II) Any exceedance that poses an imminent and substantial danger to public health, safety, or the environment shall be reported as soon as is practicable; but under no circumstance shall notification be more than 24 hours after exceedance.

(III) Any other exceedances that are identified in the permit as requiring more frequent reporting than the permittee's semiannual report shall be reported on the schedule specified in the permit.

(IV) All reports of exceedances shall identify the probable cause of the exceedances and any corrective actions or preventive measures taken.

(iv) Every report submitted under this subsection shall be certified by a responsible official, except that if a report of an exceedance required under (C)(iii) of this paragraph must be submitted within ten days of the exceedance, the report may be submitted in the first instance without a certification if an appropriate certification is provided within ten days thereafter, together with any corrected or supplemental information required concerning the exceedance. Reports submitted shall be consistent with the requirements of OAC 252:100-9.

(4) Risk management plans. If the source is required to develop and register a risk management plan pursuant to section 112(r) of the Act, the permit need only specify that the permittee will comply with the requirement to register such a plan. Although the requirement to have a risk management plan may be a term of the permit, the risk management plan contents are not part of the permit.

(5) Title IV allowances.

(A) No permit revision shall be required for increases in emissions that are authorized by allowances acquired pursuant to the acid rain program, provided that such increases do not require a permit revision under any other applicable requirement.

(B) No limit shall be placed on the number of allowances held by the source. The source may not, however, use allowances as a defense to noncompliance with any other applicable requirement.

(C) The permit shall prohibit emissions exceeding any allowance that the source lawfully holds under Title IV of the Act or the regulations promulgated thereunder. Compliance with this paragraph will be determined on January 31st of any given year and be based on

actual emissions and the number of allowances held for the previous calendar year.

(6) **Severability clause.** The permit shall include a severability clause to ensure the continued validity of the various permit requirements in the event of a challenge to any portions of the permit.

(7) **General requirements.** The permit shall include provisions stating the following:

(A) The permittee must comply with all conditions of the permit. Any permit noncompliance constitutes a violation of the Oklahoma Clean Air Act and is grounds for:

(i) enforcement action;

(ii) permit termination, revocation and reissuance, or modification; or

(iii) denial of a permit renewal application.

(B) It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit. However, nothing in this subsection shall be construed as precluding consideration of a need to halt or reduce activity as a mitigating factor in assessing penalties for noncompliance if the health, safety, or environmental impacts of halting or reducing operations would be more serious than the impacts of continuing operations.

(C) The permit may be modified, revoked, reopened, and reissued, or terminated for cause. Except as provided under OAC 252:100-8-7.2(b)(1) for minor permit modifications, the filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or of a notification of planned changes or anticipated noncompliance does not stay any permit condition.

(D) The permit does not convey any property rights of any sort or any exclusive privilege.

(E) The permittee shall furnish to the DEQ, upon receipt of a written request and within a reasonable time, any information that the DEQ may request to determine whether cause exists for modifying, reopening, or revoking and reissuing or terminating the permit or to determine compliance with the permit. Upon request, the permittee shall also furnish to the DEQ copies of records required to be kept by the permit. The permittee may make a claim of confidentiality pursuant to 27A O.S. § 2-5-105.18 for any information or records submitted under this paragraph.

(8) **Fees.** The permit shall provide that the permittee will pay fees to the DEQ consistent with the fee schedule established under OAC 252:100-5-2.2.

(9) **Emissions trading.** The permit shall provide that no permit revision shall be required under any approved economic incentives, marketable permits, emissions trading and other similar programs or processes for changes that are provided for in the permit.

(10) **Operating scenarios.** The permit shall include terms and conditions applicable to all operating scenarios described in the permit application and eligible for approval under applicable requirements and state-only requirements. The permit shall authorize the permittee to make changes among operating scenarios authorized in the permit without notice, but shall require the permittee contemporaneously with making a change from one operating scenario to another to record in a log at the permitted facility the scenario under which it is operating.

(11) **Emissions averaging.** The permit shall include terms and conditions, if the permit applicant requests them, for the trading or averaging of emissions increases and decreases in the permitted facility, to the extent that the applicable requirements provide for trading or averaging such increases and decreases. Such terms and conditions shall include terms under subsections (a) and (c) of this Section to determine compliance and shall satisfy all requirements of the

applicable requirements authorizing such trading or averaging.

(b) Federally enforceable requirements.

(1) Except as provided in paragraph (b)(2) of this Section, all terms and conditions in a permit issued under this Section, including any provisions designed to limit a source's potential to emit, are enforceable by the DEQ, by EPA, and by citizens under section 304 of the Act.

(2) Notwithstanding paragraph (b)(1) of this Section, the DEQ shall designate as not being federally enforceable under the Act any terms and conditions included in the permit that are not required under the Act or any of its applicable requirements, and such terms and conditions shall not be enforceable by EPA and citizens under section 304 of the Act.

(c) Compliance requirements. All permits issued under this Part shall contain the following elements with respect to compliance:

(1) Consistent with paragraph (a)(3) of this Section, compliance certification, testing, monitoring, reporting, and recordkeeping requirements sufficient to assure compliance with the terms and conditions of the permit. Any document (including reports) required by a permit under this Part shall contain a certification by a responsible official as to the results of the required monitoring.

(2) Inspection and entry requirements that require that, upon presentation of credentials and other documents as may be required by law, the permittee shall allow authorized officials of the DEQ to perform the following:

(A) Enter upon the permittee's premises during reasonable/normal working hours where a source is located or emissions-related activity is conducted, or where records must be kept under the conditions of the permit;

(B) Have access to and copy, at reasonable times, any records that must be kept under the conditions of the permit;

(C) Inspect at reasonable times and using reasonable safety practices any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under the permit; and

(D) As authorized by the Oklahoma Clean Air Act, sample or monitor at reasonable times substances or parameters for the purpose of assuring compliance with the permit .

(3) A schedule of compliance if required under OAC 252:100-8-5(e)(8)(B).

(4) To the extent required under an applicable schedule of compliance and OAC 252:100-8-5(e)(8), progress reports, to be submitted semiannually or more frequently if specified in the applicable requirement or by the DEQ. Such progress reports shall contain the following:

(A) Dates for achieving the activities, milestones, or compliance required in the schedule of compliance, and dates when such activities, milestones or compliance were achieved; and

(B) An explanation of why any dates in the schedule of compliance were not or will not be met, and any preventive or corrective measures adopted.

(5) Requirements for compliance certification with terms and conditions contained in the permit that are federally enforceable, including emission limitations, standards, or work practices. Each permit shall specify:

(A) The frequency (which shall be annually unless the applicable requirement or state-only requirement specifies submission more frequently) of submissions of compliance certifications;

(B) In accordance with paragraph (a)(3) of this Section, a means for monitoring the compliance of the source with emissions limitations, standards, and work practices;

(C) A requirement that the compliance certification include the following:

(i) The identification of each term or condition of the permit that is the basis of the certification;

(ii) The permittee's current compliance status, as shown by monitoring data and other information available to the permittee;

(iii) Whether compliance was continuous or intermittent;

(iv) The method(s) used for determining the compliance status of the source, currently and over the reporting period as required by paragraph (a)(3) of this Section; and

(v) Such other facts as the DEQ may require to determine the compliance status of the source;

(D) A requirement that all compliance certifications be submitted to EPA as well as to the DEQ;

(E) Such additional requirements as may be specified pursuant to sections 114(a)(3) and 504(b) of the Act; and

(6) Such other provisions as the DEQ may require.

(d) Permit shield.

(1) Each operating permit issued under this Part shall include a "permit shield" provision, which shall state that compliance with the terms and conditions of the permit (including terms and conditions established for alternate operating scenarios, emissions trading, and emissions averaging, but excluding terms and conditions for which the permit shield is expressly prohibited under this Subchapter) shall be deemed compliance with the applicable requirements identified and included in the permit.

(2) Upon request, the DEQ shall include in the permit or in a separate written finding issued with the permit a determination identifying specific requirements that do not apply to the source. The source shall specify in its application for such a determination the requirements for which the determination is requested. If the determination is issued in a separate finding, that finding shall be summarized in the permit. The permit shall state that the permit shield applies to any requirements so identified. A request for a determination to extend the shield to requirements deemed inapplicable to the source may be made either in the original permit application or in a subsequent application for a permit modification.

(3) A Part 70 permit that does not expressly state that a permit shield exists shall be presumed not to provide such a shield.

(4) Nothing in this Section or in the permit shall alter or affect the following:

(A) the provisions of section 303 of the Act, including the authority of the Administrator under that section;

(B) the liability of an owner or operator of a source for any violation of applicable requirements or state-only requirements prior to or at the time of permit issuance;

(C) the applicable requirements of the acid rain program, consistent with section 408(a) of the Act; or

(D) the ability of EPA to obtain information from a source pursuant to section 114 of the Act.

(e) Emergencies.

(1) An emergency constitutes an affirmative defense to an action brought for noncompliance with such technology-based emission limitations if the conditions of paragraph (e)(3) of this Section and the reporting requirements of OAC 252:100-8-6(a)(3)(C)(iii)(I) are met.

(2) The affirmative defense of emergency shall be demonstrated through properly signed, contemporaneous operating logs or other relevant evidence that:

- (A) An emergency occurred and that the permittee can identify the cause(s) of the emergency;
 - (B) The permitted facility was at the time being properly operated;
 - (C) During the period of the emergency the permittee took all reasonable steps to minimize levels of emissions that exceeded the emission standards or other requirements in the permit.
- (3) In any enforcement proceeding, the permittee seeking to establish the occurrence of an emergency has the burden of proof.
- (4) The provision in this subsection is in addition to any emergency or upset provision contained in any applicable requirement or OAC 252:100-9.

(f) Operational flexibility.

- (1) **Applicant's duty to apply for alternative scenarios.** A facility may implement any operating scenario allowed for in its Part 70 permit without the need for any permit revision or any notification to the permitting authority. It is incumbent upon the Part 70 permit applicant to apply for any reasonably anticipated alternative facility operating scenarios at the time of initial or renewal permit application.
- (2) **Changes resulting in no emissions increases.** A permitted Part 70 source may make changes within the facility that:
- (A) Are not modifications under any provision of Title I of the Act;
 - (B) Do not cause any hourly or annual permitted emission rate of any existing emissions unit to be exceeded; and
 - (C) Result in a net change in emissions of zero, provided that the facility notifies the DEQ and EPA in writing at least 7 days in advance of the proposed changes. The source, DEQ, and EPA shall attach each such notice to their copy of the relevant permit. For each such change, the written notification required above shall include a brief description of the change within the permitted facility, the date on which the change will occur, any change in emissions, and any permit term or condition that is no longer applicable as a result of the change. The permit shield described in OAC 252:100-8-6(d) does not apply to any change made pursuant to this subsection.

252:100-8-6.1. General permits

(a) Applicability.

- (1) The DEQ may, after notice and opportunity for public participation, issue a general permit for any source category if it concludes that the category is appropriate for permitting on a generic basis. Any general permit shall comply with all requirements applicable to other Part 70 permits. No general permit may be issued for affected sources under the acid rain program unless otherwise provided in regulations promulgated under Title IV of the Act.
- (2) A general permit may be issued for a source category based upon an application from a source within the source category or upon the DEQ's own initiative. The DEQ shall, following receipt of an application for a general permit, or upon a determination that issuance of a general permit for a category of sources may be appropriate, follow the same procedures for issuance of a general permit as for any other permit issued under this part.
- (3) A general permit may be issued to establish:
- (A) Terms and conditions to implement applicable requirements and state-only requirements for a source category.

- (B) Terms and conditions to implement applicable requirements and state-only requirements for specified categories of changes to permitted sources.
- (C) Terms and conditions for new requirements that apply to sources with existing permits.
- (D) Federally-enforceable caps on emissions from sources in a specified category.
- (4) The DEQ may issue a general permit if it finds that:
 - (A) There are several permittees, permit applicants, or potential permit applicants who:
 - (i) Have the same or substantially similar operations, emissions, activities, or facilities.
 - (ii) Emit the same types of regulated air pollutants.
 - (B) The operations, emissions, activities, or facilities are subject to the same or similar:
 - (i) Standards, limitations, and operating requirements.
 - (ii) Monitoring requirements.
- (5) If some, but not all, of a source's operations, activities, and emissions are eligible for coverage under one or more general permits, the source must apply for an individual Part 70 permit for all of its covered sources.
- (6) Facilities located in areas that are federally designated as non-attainment are not eligible for coverage under a general permit.
- (7) Sites that are not in compliance with all applicable State and Federal air regulations are eligible for a general operating permit only if:
 - (A) They submit to DEQ an approvable compliance plan, and
 - (B) The facility submits to Tier II public review.
- (8) Facilities with existing state operating permits are eligible for coverage under a general operating permit. (9) Facilities existing prior to the effective date of any applicable standard that would have created specific quantifiable and enforceable emission rates are eligible for coverage under a general operating permit.
- (b) Authorization.**
 - (1) A general permit issued under this section shall identify criteria by which sources may qualify for the general permit. After a general permit has been issued, any source may submit a request to be covered under the permit in the form of an application for authorization to operate under the general permit. Such application shall identify the source and provide information sufficient to demonstrate that it falls within the source category covered by the general permit, together with any additional information that may be specified in the general permit.
 - (2) See 252:2-15 for Tier I permitting procedures and timelines for individual authorizations under general permits. The DEQ shall act to approve or deny the application within 90 days of filing.
 - (3) A final action approving an authorization to operate under a general permit shall not be subject to public comment or judicial review.
 - (4) The DEQ will publish, at least monthly, an updated list of sources approved for inclusion under the general permit and any aggrieved person may petition the DEQ to review the approval of any stationary source for inclusion under a general permit within 30 days after publication of the list.
 - (5) A copy of the general permit, together with a list of sources approved for coverage under it, shall be kept on file for public review at the offices of the DEQ.
- (c) Permit shield.** A general permit issued under this section shall provide that any source approved for coverage under a general permit shall be entitled to the protection of the permit shield for all operations, activities, and emissions addressed by the general permit, unless and to the extent

that it is subsequently determined that the source does not qualify for the conditions and terms of the general permit.

(d) Revisions.

(1) If an owner or operator of a source(s) makes a change to a source covered by a general permit that affects any applicability information supplied in the general permit application, but the source is still eligible for coverage under a general permit, the owner or operator must revise the general permit application and submit it to the DEQ within 60 days.

(2) After coverage is granted to a source under the general permit, physical changes to the facility which result in the addition of equipment new to the facility, either as a replacement (except like-kind replacements) or net addition, will require a construction permit or a new authorization. Any significant modification to a stationary source included under a general permit shall subject the source to a Tier II review.

(3) If equipment new to the facility is newly purchased or is relocated from another facility where a permit was issued with enforceable emissions limits on that equipment, then authorization under the general permit shall be modified or amended to include an emissions limit for the newly purchased or relocated equipment. "Grandfathered" emissions sources at the facility will retain only the equipment descriptions as permit conditions. "Grandfathered" means a unit that was in existence prior to the effective date of any applicable regulation that would have created specific quantifiable and enforceable emissions rate limits.

(4) For a general operating permit, if emissions change for any reason that subjects the facility to PSD permitting requirements, then the facility no longer qualifies for a general operating permit. However, the existing general operating permit will remain valid during the time period covered by the PSD construction permit until the facility receives a Part 70 site specific operating permit for the entire facility.

(e) Permit content. Specific terms and conditions that will make the applicable rules and requirements enforceable shall be stipulated in the general permit.

(f) Renewal of general operating permits.

(1) The DEQ will initiate the renewal process for a general operating permit at least 180 days prior to the permit's expiration date and will follow the requirements in 252:100-8-7(a).

(2) Owners or operators shall apply to renew an authorization at least 60 days prior to expiration of the existing authorization. Upon submittal of a timely and administratively complete application, the applicant may continue to operate until such time as the DEQ grants or denies coverage under the general operating permit.

252:100-8-6.2 Temporary sources

The DEQ may issue a single permit authorizing emissions from similar operations by the same source owner or operator at multiple temporary locations. The operation must be temporary and involve at least one change of location during the term of the permit. No affected source shall be permitted as a temporary source. Permits for temporary sources shall include the following:

(1) Conditions that will assure compliance with all applicable requirements at all authorized locations;

(2) Requirements that the owner or operator notify the permitting authority at least ten days in advance of each change in location; and

(3) Conditions that assure compliance with all other provisions of this section.

252:100-8-6.3. Special provisions for affected (acid rain) sources

- (a) **Application binding until permit issuance or denial.** A complete acid rain permit application is binding on the applicant and enforceable as a permit until an acid rain permit is issued or denied. For applicable permitting procedures, see 252:2-15.
- (b) **Exemption petitions.** Applicants with small units that burn low sulfur fuel or sources that retire a unit can petition to have such units exempted from certain permitting and monitoring requirements under the acid rain regulations.
- (c) **Permit shield.** The acid rain portion of every operating permit is covered by a permit shield. This shield assures that an applicant operating in accordance with a permit issued in accordance with Title IV of the Act, will be deemed to be operating in compliance with the Acid Rain Program.
- (d) **Modifications.** See 40 CFR 72.82.
- (e) **Duration.** Acid rain permits will have a term of five years commencing on the permits effective date. The DEQ may issue a permit with a future effective date.
- (f) **Right of intervention.** The Administrator may intervene as a matter of right in any administrative appeal involving an Acid Rain permit or denial of an Acid Rain permit.
- (g) **Administrative appeal.** The administrative appeal period shall be no more than 90 days following the issuance of the Acid Rain permit and the judicial appeal period shall be no more than 90 days following a final agency action.
- (h) **Adoption of 40 CFR Part 72 by reference.** DEQ hereby adopts and incorporates by reference the provisions of 40 CFR Part 72, as published in the Federal Register on January 11, 1993, on March 23, 1993, and on October 24, 1997, for purposes of implementing an acid rain program that meets the requirements of Title IV of the Act. The term "permitting authority" shall mean the Oklahoma Department of Environmental Quality and the term "Administrator" shall mean the Administrator of the United States Environmental Protection Agency. If the provisions or requirements of 40 CFR Part 72 conflict with or are not included in 252:100-8, the Part 72 provisions and requirements shall apply and take precedence.

252:100-8-7. Permit issuance

- (a) **Criteria for issuance.** A permit, permit modification, or renewal may be issued only if the applicable requirements of 27A O.S. §§ 2-14-101 through 2-14-401; OAC 252:2-15; and this Chapter have been met and the DEQ has determined that the conditions of the permit provide for compliance with all applicable requirements and, for applications subject to OAC 252:100-8-8, that the requirements of that Section have been satisfied.
- (b) **Draft permits and notice thereof.** See OAC 252:2-15. A statement that sets forth the legal and factual basis for the draft permit conditions (including references to the applicable statutory or regulatory provisions) shall accompany the draft permit.
- (c) **EPA review.** See OAC 252:100-8-8.
- (d) **DEQ final action.** See OAC 252:2-15 and 252:100-8-8 when applicable.
- (e) **Timeline for technical review and issuance.** The DEQ shall take final action on each application for a permit within 18 months after beginning its technical review in accordance with OAC 252:2-15-70 through 252:2-15-72 and OAC 252:100-8-4(b)(7).
- (f) **Action priorities.** See OAC 252:100-8-4(b)(2) through (10) and OAC 252:100-8-7.1(a).
- (g) **No issuance by default.** See 27A O.S. § 2-5-112(D).

252:100-8-7.1. Permit renewal and expiration

(a) Timely application for permit renewal.

- (1) Applications for permit renewal and for permits for new Part 70 sources or amendments,

shall be considered timely if the applicant meets the requirements of this subsection.

- (2) Stationary sources operating under permits issued by the DEQ under this Subchapter shall apply for permit reissuance at least 180 days before the expiration of the existing permit, unless the permit specifies that the application must be submitted sooner. The DEQ shall require in a permit that a reissuance application be submitted sooner if it determines that an earlier application is needed to minimize the possibility of expiration prior to reissuance. The DEQ may make the determination if it anticipates a relatively lengthy permit review process due to the complexity of the stationary source or anticipated involvement of the public. In no event shall the permit require application for reissuance sooner than eighteen months prior to the expiration of the permit.

(b) Application content for renewal of expiring permit. In submitting an application for renewal of a Part 70 operating permit, a source may identify and incorporate by reference terms and conditions in its previous permit and permit application(s) that should remain unchanged. In addition, a renewal application must contain:

(1) information specified in 252:100-8-5(e) for those products, processes, operations, and emissions:

(A) That are not addressed in the existing permit;

(B) That are subject to applicable requirements or state-only requirements that are not addressed in the existing permit; or

(C) For which the source seeks permit terms and conditions that differ from those in the existing permit; and

(2) a compliance plan and certification as required in 252:100-8-5(e)(8) and (9).

(c) Issuance of renewal permit. Applications for permit renewal shall be subject to the same procedural requirements, including those for public participation, affected State comment, and EPA review, that apply to initial permit issuance under 252:100-8-7(a).

(d) Expiration of permit.

(1) A source's right to operate shall terminate upon the expiration of its permit unless a timely and complete renewal application has been submitted at least 180 days before the date of expiration.

(2) If a timely and complete application for a permit renewal is submitted, but the DEQ fails to take final action to issue or deny the renewal permit before the end of the term of the previous permit, then the permit shall not expire until the renewal permit has been issued or denied, and any permit shield granted for the permit shall continue in effect during that time.

252:100-8-7.2. Administrative permit amendments and permit modifications

(a) Administrative permit amendments.

(1) An administrative permit amendment:

(A) Corrects typographical errors;

(B) Identifies a change in the name, address, or phone number of any person identified in the permit, or provides a similar minor administrative change at the source;

(C) Requires more frequent monitoring or reporting by the permittee;

(D) Allows for a change in ownership or operational control of a source where no other change in the permit is necessary, provided that a written agreement containing a specific date for transfer of permit responsibility, coverage, and liability between the current and new permittee has been submitted to the DEQ;

(E) Incorporates into the permit the requirements from preconstruction review permits

issued by the DEQ under this Part.

(2) Administrative permit amendments for purposes of the acid rain portion of the permit shall be governed by 40 CFR Part 72.

(3) An administrative permit amendment shall be made by the DEQ in accordance with the following:

(A) The DEQ shall take final action on a request for an administrative permit amendment within 60 days from the date of receipt of such a request, and may incorporate the proposed changes without providing notice to the public or affected States provided that it designates any such permit revisions as having been made pursuant to this paragraph.

(B) The DEQ shall submit a copy of the revised permit to the Administrator upon the Administrator's request.

(C) The source may implement the changes addressed in the request for an administrative amendment immediately upon submittal of the request.

(4) The DEQ shall, upon taking final action granting a request for an administrative permit amendment, allow coverage by the permit shield in OAC 252:100-8-6(d) for administrative permit amendments made pursuant to subparagraph 7.2(a)(1)(E) of this Section.

(b) **Permit modification.** A permit modification is any revision to a permit that cannot be accomplished under subsection (a) of this Section. A permit modification for purposes of the acid rain portion of the permit shall be governed by 40 CFR Part 72.

(1) **Minor permit modification procedures.**

(A) **Criteria.**

(i) Minor permit modification procedures may be used only for those permit modifications that:

(I) Do not violate any applicable requirement, or state-only requirements;

(II) Do not involve significant changes to existing monitoring, reporting or recordkeeping requirements in the permit;

(III) Do not require or change a case-by-case determination of an emission limitation or other standard, or a source-specific determination for temporary sources of ambient impacts, or a visibility or increment analysis;

(IV) Do not seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement or state-only requirement which the source has assumed to avoid some other applicable requirement or state-only requirement to which the source would otherwise be subject. Such terms and conditions include federally-enforceable emissions caps assumed to avoid classification as a modification under any provision of Title I and alternative emissions limits approved pursuant to regulations promulgated under 112(i)(5) of the Act; and

(V) Are not modifications under any provision of Title I of the Act.

(ii) Notwithstanding OAC 252:100-8-7.2(b)(1)(A)(i) and 252:100-8-7.2(b)(2)(A), minor permit modification procedures may be used for permit modifications involving the use of economic incentives, marketable permits, emissions trading, and other similar approaches, to the extent that such minor permit modification procedures are explicitly provided for in the State's implementation plan or in applicable requirements promulgated by EPA.

(B) **Application.** To use the minor permit modification procedures, a source shall submit an application requesting such use which shall meet the permit application requirements of

Tier I under OAC 252:2-15 and shall include the following:

- (i) A description of the change, the emissions resulting from the change, and any new applicable requirements or state-only requirements that will apply if the change occurs;
- (ii) The source's suggested modification language;
- (iii) Certification by a responsible official, that the application and the proposed modification meet the criteria for use of minor permit modification procedures; and
- (iv) Completed forms for any notices required by OAC 252:2-15 and subparagraph (C) of this paragraph.

(C) **EPA and affected state notification.** If the proposed minor modification is of a permit that underwent EPA review in accordance with OAC 252:100-8-8, the provisions of that section shall apply to the minor modification application unless waived by the Administrator.

(D) **Timetable for issuance.** Within 90 days of the DEQ's receipt of a complete application under OAC 252:2-15 the DEQ shall:

- (i) Issue the minor permit modification as approved;
- (ii) Deny the minor permit modification application; or
- (iii) Determine that the requested modification does not meet the minor permit modification criteria and should be reviewed under the significant modification procedures or administrative amendment procedures.

(E) **Source's ability to make change.** Immediately after filing an application meeting the requirements of these minor permit modification procedures, the source is authorized to make the change or changes proposed in the application. After the source makes the change and until the DEQ takes any of the actions specified in (1)(D)(i) through (iii) of this subsection, the source must comply with the applicable requirements and state-only requirements governing the change and the proposed permit terms and conditions. During this period, the source need not comply with the existing terms and conditions it seeks to modify. However, if the source fails to comply with its proposed permit terms and conditions during this time period, the existing permit terms and conditions it seeks to modify may be enforced against it.

(F) **Permit shield.** The permit shield under OAC 252:100-8-6(d) will not extend to minor permit modifications.

(G) **Permittee's risk in commencing construction.** The permittee assumes the risk of losing any investment it makes toward implementing a modification prior to receiving a permit amendment authorizing the modification. The DEQ will not consider the possibility of the permittee suffering financial loss due to such investment when deciding whether to approve, deny, or approve in modified form a minor permit amendment.

(2) **Significant modification procedures.**

(A) **Criteria.** Significant modification procedures shall be used for applications requesting permit modifications that:

- (i) Involve any significant changes in existing monitoring requirements in the permit;
- (ii) Relax any reporting or recordkeeping requirements.
- (iii) Change any permit condition that is required to be based on a case-by-case determination of an emission limitation or other standard, on a source-specific determination of ambient impacts, or on a visibility or increment analysis;
- (iv) Seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement or state-only requirement which the

source has assumed to avoid some other applicable requirement or state-only requirement to which the source would otherwise be subject. Such terms and conditions include:

(I) A federally enforceable emissions cap assumed to avoid classification as a modification under any provision of Title I;

(II) An alternative emissions limit approved pursuant to regulations promulgated under section 112(i)(5) of the Act; and

(v) Are modifications under any provision of Title I of the Act; and,

(vi) Do not qualify as minor permit modifications or administrative amendments.

(B) Procedures for processing. Significant permit modifications shall meet all requirements of these rules that are applicable to Tier II applications. The application for the modification shall describe the change, the emissions resulting from the change, and any new applicable requirements or state-only requirements that will apply if the change occurs.

(C) Issuance. The DEQ shall complete review of significant permit modifications within nine months after receipt of a complete application, but shall be authorized to extend that date by up to three months for cause.

252:100-8-7.3. Reopening of operating permits for cause

(a) Mandatory reopening. Each issued permit shall include provisions specifying the conditions under which the permit will be reopened prior to the expiration date of the permit. A permit shall be reopened and revised under any of the following circumstances:

(1) Additional federal applicable requirements become applicable to a stationary source with a remaining permit term of three or more years. Such a reopening and amendment shall be completed not later than 18 months after promulgation of the federal applicable requirement. Reopening is allowed if an applicable requirement becomes effective and the original permit or any of its terms and conditions has been extended pursuant to the application shield provided at 252:100-8-7.1(d)(2) beyond the 18-month timeframe for revision. No such reopening is required if the effective date of the requirement is later than the date on which the permit is due to expire.

(2) Additional requirements (including excess emissions requirements) become applicable to an affected source under the acid rain program. Upon approval by the Administrator, excess emissions offset plans shall be deemed to be incorporated into the permit.

(3) The DEQ or the EPA determines that the permit contains a material mistake or that inaccurate statements were made in establishing the emissions standards, limitations, or other terms or conditions of the permit.

(4) The Administrator or the DEQ determines that the permit must be revised or revoked to assure compliance with the applicable requirements.

(b) Discretionary reopening. The DEQ may reopen and amend a permit when:

(1) additional state-only requirements become applicable to a permitted stationary source and the effective date of the requirement is at least 18 months prior to the date on which the permit is due to expire;

(2) alterations or modifications to the permitted facility will result in or have the potential to result in significant alteration of the nature or quantity of regulated air pollutants to be emitted by the permittee;

(3) the DEQ receives information previously unavailable to the DEQ that shows that the terms and conditions of the permit do not accurately represent the actual circumstances relating to the

permitted facility;

(4) a court of competent jurisdiction invalidates or modifies an Oklahoma or federal statute or rule or federal guideline upon which a condition of the permit is based; or

(5) an event occurs that is beyond the control of the permittee that necessitates modification of a compliance schedule in the permit.

(c) Reopening procedures. To reopen and amend a permit, the DEQ shall follow the procedures that apply to significant permit modifications under this Subchapter, unless the amendment can be made as an administrative amendment under 252:100-8-7.2(a). Mandatory reopenings under 252:00-8-7.3(a) shall be made as expeditiously as practicable. In lieu of an application, the significant permit modification process will commence when the DEQ gives the permittee written notice of its intent to amend the permit. The DEQ shall not issue the amendment, or make public notice of the amendment where public notice is required, until at least thirty days after the DEQ has given the permittee written notice of its intent to amend the permit, unless the permittee consents to less notice, or in the case of an emergency. In cases where public participation is required, only those portions of the permit that the DEQ proposes to amend shall be open for public comment or consideration at a meeting or hearing.

(d) Reopenings for cause by EPA.

(1) If the Administrator finds that cause exists to terminate, modify, or revoke and reissue a permit, the Administrator shall notify the DEQ and the permittee of such findings in writing.

(2) The DEQ shall, within 90 days after receipt of such notification, forward to EPA a proposed determination of termination, modification, or revocation and reissuance, as appropriate. The Administrator may extend this 90-day period for an additional 90 days if he finds that a new or revised permit application is necessary or that the DEQ must require the permittee to submit additional information.

(3) The Administrator will review the proposed determination from the DEQ within 90 days of receipt.

(4) The DEQ shall have 90 days from receipt of an EPA objection to resolve any objection that EPA makes and to terminate, modify, or revoke and reissue the permit in accordance with the Administrator's objection.

(5) If the DEQ fails to submit a proposed determination pursuant to this subsection, or fails to resolve any objection pursuant to this subsection, the Administrator will terminate, modify, or revoke and reissue the permit after taking the following actions:

(A) Providing at least 30 days' notice to the permittee in writing of the reasons for any such action.

(B) Providing the permittee an opportunity for comment on the Administrator's proposed action and an opportunity for a hearing.

252:100-8-7.4. Revocations of operating permits

(a) Revocation of a permit or authorization under a general permit without reissuance.

The DEQ may revoke permits or authorizations under a general permit and not reissue them when:

(1) there exists at the permitted facility unresolved noncompliance with applicable requirements or a condition of the permit or authorization, and the permittee refuses to undertake an enforceable schedule of compliance to resolve the noncompliance;

(2) the permittee fails to disclose fully the facts relevant to issuance of the permit or authorization or submits false or misleading information to the DEQ or the Administrator;

(3) the permittee has failed to comply with any requirement under 252:100-5 to pay fees; or

(4) the permittee has failed to pay a penalty owed pursuant to court order, consent decree, stipulation agreement, or schedule of compliance.

(b) **Revocation procedures.** The DEQ shall give notice to the permittee of its intention to revoke a permit without reissuance. This notice must state that within 30 days of the receipt of the notice the permittee may request a contested case hearing be held on the proposed action, except that the DEQ may provide less notice in case of an emergency. If the permittee requests a contested case hearing, the DEQ shall hold the hearing in accordance with the Oklahoma Administrative Procedures Act.

252:100-8-7.5. Judicial review

Any final action in granting or denying an application for a permit, permit amendment or modification, or permit renewal shall be subject to judicial review in the court of appropriate jurisdiction upon an application filed by the applicant or permittee, or by any affected state or other person who participated in the public comment process. Except for authorizations under General Permits, judicial review is available to all affected parties for all final permit actions including minor modifications and administrative actions. If no public comment procedure was employed for the action under challenge, an application for review may be filed by the permittee or an affected state. The opportunity for judicial review provided for in this subsection shall be the exclusive means for obtaining judicial review of any permit action.

(1) No application for judicial review may be filed more than 90 days following the final action on which review is sought, unless the grounds for review arose at a later time, in which case the application for review shall be filed within 90 days of the date on which the grounds for review first arose and review shall be limited to such later-arising grounds.

(2) Any application for judicial review shall be limited to issues that:

(A) were raised in comments filed with the DEQ or during a public hearing on the proposed permit action (if the grounds on which review is sought were known at that time), except that this restriction shall not apply if the person seeking review was not afforded an advance opportunity to comment on the challenged action; and

(B) are germane and material to the permit action at issue.

(3) For purposes of this section, "final action" shall include a failure by the DEQ to take final action to grant or deny an application within the time specified in this Chapter.

252:100-8-8. Permit review by EPA and affected states

(a) **Applicability.** This Section applies only to specific Tier II and III applications for Part 70 construction and/or operating permits and permit actions that have not been waived from compliance with this section by the Administrator.

(b) **Format.** To the extent practicable, information provided to the EPA by applicants shall be in computer-readable format compatible with EPA's national database management system.

(c) **Recordkeeping.** The DEQ will keep for 5 years records required by this Section and will submit to the Administrator such information as the Administrator may reasonably require to ascertain whether the State program complies with the requirements of the Act or of this Chapter.

(d) **Transmission of Part 70 applications to EPA.** For Part 70 Tier II and III applications subject to this section, the DEQ shall require an applicant upon filing to also provide a copy to the Administrator or the DEQ may submit a permit application summary form and any relevant portion of the permit application and compliance plan, in place thereof.

(e) Transmittal of notice of draft permit to affected states. See 27A O.S. § 2-5-112(E); 27A O.S. §§ 2-14-101 through 2-14-401; and OAC 252:2-15.

(f) Preparation and submittal of EPA review copy.

(1) Tier II applications. For Tier II applications, the DEQ shall review public comments, revise the draft permit as appropriate and submit the revision to EPA for review no later than 60 days before the issuance deadline established in OAC 252:2-15-72 or, if none, by this Chapter.

(2) Tier III applications. For Tier III applications, the DEQ shall prepare a proposed permit according to 27A O.S. §2-14-304, and submit it to EPA for review upon the publication of notice of an administrative permit hearing opportunity.

(g) Notice of non-acceptance. As part of the DEQ's submittal of a revised draft permit (Tier II) or a proposed permit (Tier III) to the Administrator, the DEQ shall notify the Administrator and any affected State in writing of any refusal by the DEQ to accept all recommendations for the revised draft permit or proposed permit that the affected State submitted during the review period. The notice will include the DEQ's reasons for not accepting any such recommendation. The DEQ is not required to accept recommendations that are not based on applicable requirements of the Oklahoma Clean Air Act or these rules.

(h) EPA review and non-objection. Upon receipt of notice from the EPA that it will not object to:

(1) A revised draft permit based on a Tier II application, the DEQ shall issue the permit.

(2) A proposed permit based on a Tier III application, the DEQ shall issue the proposed permit as final unless an administrative permit hearing has been timely and properly requested.

(i) EPA review and objection.

(1) Timing. Except as specified in paragraph 5 of this subsection, no permit for which an application must be transmitted to the Administrator under subsection (a) of this Section shall be issued if the Administrator objects to its issuance in writing within 45 days of receipt of the revised draft permit (Tier II) or proposed permit (Tier III) and all necessary supporting information.

(2) Form of objection. An EPA objection shall include a statement of the Administrator's reasons for objection and a description of the terms and conditions that the permit must include to respond to the objections.

(3) Additional grounds. Failure of the DEQ to do any of the following also shall constitute grounds for an objection:

(A) Comply with subsections (d) or (e) of this Section;

(B) Submit any information necessary to review adequately the revised draft permit (Tier II) or the proposed permit (Tier III); or

(C) Process the permit application according to the uniform permitting requirements of OAC 252:2-15.

(4) Copy. The Administrator will provide the permit applicant a copy of the objection.

(5) DEQ response. The DEQ shall consult with EPA and the applicant and shall either:

(A) Amend permit. Amend the permit and submit for approval an amended draft (Tier II) or proposed (Tier III) permit to EPA within 90 days after the date of EPA's objection, or

(B) Give notice and issue. Determine that one or more revisions sought by EPA are inconsistent with applicable state or federal statutes or regulations, inform EPA accordingly within 90 days following the date of the Administrator's objection, decline to make those particular revisions and:

(i) issue the amended or revised draft permit (Tier II) as final, or

(ii) issue the proposed permit (Tier III) as final unless an administrative permit hearing has been timely and properly requested.

(6) Failure of DEQ to respond. If the DEQ fails, within 90 days after the date of the EPA objection, to amend and resubmit the draft permit or proposed permit in response to the objection, the Administrator will issue or deny the permit in accordance with the requirements of EPA's Part 70 regulations.

(j) Public petitions to the Administrator. If the Administrator does not object in writing under subsection (h) of this section, any person that meets the requirements of this subsection may petition the Administrator within 60 days after the expiration of the Administrator's 45-day review period to make such objection. Any such petition shall be based only on objections to the permit that the petitioner raised with reasonable specificity during the public comment period provided for in OAC 252:2-15, unless the petitioner demonstrates that it was impracticable to raise such objections within such period, or unless the grounds for such objection arose after such period. If the Administrator objects to the permit as a result of a petition filed under this subsection, the DEQ shall not issue the permit until EPA's objection has been resolved, except that a petition for review does not stay the effectiveness of a permit or its requirements if the permit was issued after the end of the 45-day review period and prior to an EPA objection. If the DEQ has issued a permit prior to receipt of an EPA objection under this subsection, the Administrator will modify, terminate, or revoke such permit, and shall do so consistent with the procedures in OAC 252:100-8-7 through 252:100-8-7.5 except in unusual circumstances. If the DEQ revokes the permit, it may thereafter issue only a revised permit that satisfies EPA's objection. In any case, the source will not be in violation of the requirement to have submitted a timely and complete application.

(k) Effect on Tier III administrative permit hearing. When a public petition or an EPA objection is registered on a proposed permit (Tier III) on which an administrative permit hearing has been requested in accordance with 27A O.S. §§ 2-14-101 through 2-14-401, the DEQ may stay the evidentiary part of the hearing involving cross-examination until EPA objections are resolved or determined to be inconsistent with applicable laws.

252:100-8-9. Permit fees

[252:100-8-9(a), (b), (c), (d)(1), (d)(3) and (d)(4) amended and renumbered to 252:100-5. 252:100-8-9(d)(2) amended and renumbered to 252:100-8-1.7]

PART 7. PREVENTION OF SIGNIFICANT DETERIORATION (PSD) REQUIREMENTS FOR ATTAINMENT AREAS

252:100-8-30. Applicability

The new source requirements of this Part, in addition to the requirements of Parts 1, 3, and 5 of this Subchapter, shall apply to the construction of all major stationary sources and major modifications as specified in 252:100-8-31 through 252:100-8-33. Sources subject to this Part are also subject to the operating permit provisions contained in Part 5 of 252:100-8.

252:100-8-31. Definitions

The following words and terms when used in this Part shall have the following meaning, unless the context clearly indicates otherwise:

"Actual emission" means the actual rate of emissions of a pollutant from an emissions unit, as determined in accordance with the following:

(A) In general, actual emissions as of a particular date shall equal the average rate in tons per year at which the unit actually emitted the pollutant during a two-year period which precedes the particular date and which is representative of normal source operation. The reviewing authority may allow the use of a different time period upon a determination that it is more representative of normal source operation. Actual emissions shall be calculated using the unit's actual operating hours, production rates, and types of materials processed, stored, or combusted during the selected time period. Actual emissions may also be determined by source tests, or by best engineering judgment in the absence of acceptable test data.

(B) The reviewing authority may presume that source-specific allowable emissions for the unit are equivalent to the actual emissions of the unit.

(C) For any emissions unit which has not begun normal operations on the particular date, actual emissions shall equal the potential to emit of the unit on that date.

"Adverse impact on visibility" means visibility impairment which interferes with the management, protection, preservation or enjoyment of the visitor's visual experience of the Federal Class I area. This determination must be made by the DEQ on a case-by-case basis taking into account the geographic extent, intensity, duration, frequency and time of visibility impairments, and how these factors correlate with:

(A) times of visitor use of the Federal Class I area; and

(B) the frequency and timing of natural conditions that reduce visibility.

"Baseline area" means any areas designated as attainment or unclassifiable in which the major source or major modification establishing the minor source baseline date would construct or would have an air quality impact equal to or greater than 1 g/m³ (annual average) of the pollutant for which the minor source baseline date is established.

"Baseline concentration" means that ambient concentration level which exists in the baseline area at the time of the applicable minor source baseline date.

(A) A baseline concentration is determined for each pollutant for which a minor source baseline date is established and shall include:

(i) the actual emissions representative of sources in existence on the applicable minor source baseline date, except as provided in (B) of this definition.

(ii) the allowable emissions of major sources which commenced construction before the major source baseline date but were not in operation by the applicable minor source baseline date.

(B) The following will not be included in the baseline concentration and will affect the applicable maximum allowable increase(s):

(i) actual emissions from any major source on which construction commenced after the major source baseline date; and,

(ii) actual emissions increases and decreases at any source occurring after the minor source baseline date.

"Baseline date" means:

(A) for major sources,

(i) in the case of particulate matter and sulfur dioxide, January 6, 1975, and,

(ii) in the case of nitrogen dioxide, February 8, 1988; and,

(B) for minor sources, the earliest date after the trigger date on which a major source or major modification (subject to 40 CFR 52.21 or OAC 252:100-8, Part 7) submits a complete application. The trigger date is:

(i) in the case of particulate matter and sulfur dioxide, August 7, 1977, and

(ii) in the case of nitrogen oxides, February 8, 1988.

"Complete" means, in reference to an application for a permit, that the application contains all the information necessary for processing the application. Designating an application complete for purposes of permit processing does not preclude the reviewing authority from requesting or accepting any additional information.

"Federal land manager" means the Secretary of the department with authority over the Federal Class I area or his representative.

"Innovative control technology" means any system of air pollution control that has not been adequately demonstrated in practice, but would have a substantial likelihood of achieving greater continuous emissions reduction than any control system in current practice or of achieving at least comparable reductions at lower cost in terms of energy, economics, or non-air quality environmental impacts.

"Major modification" means any physical change in or change in the method of operation of a major source that would result in a significant net emissions increase of any pollutant subject to regulation.

(A) Any net emissions increase that is significant for volatile organic compounds shall be considered significant for ozone.

(B) A physical change or change in the method of operation shall not include:

(i) routine maintenance, repair and replacement.

(ii) use of an alternate fuel or raw material by reason of any order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation) or by reason of a natural gas curtailment plan pursuant to the Federal Power Act.

(iii) use of an alternate fuel by reason of an order or rule under Section 125 of the Federal Clean Air Act.

(iv) use of an alternate fuel at a steam generating unit to the extent that the fuel is generated from municipal solid waste.

(v) Use of an alternate fuel or raw material by a source which:

(I) the source was capable of accommodating before January 6, 1975, unless such change would be prohibited under any enforceable permit limitation which was established after January 6, 1975; or,

(II) the source is approved to use under any permit issued under 40 CFR 52.21 or OAC 252:100-8.

(vi) An increase in the hours of operation or in the production rate, unless such change would be prohibited under any enforceable permit limitation which was established after January 6, 1975.

(vii) Any change in source ownership.

"Major stationary source" means any source which meets any of the following conditions:

(A) Any of the following sources of air pollutants which emits, or has the potential to emit, 100 tons per year or more of any pollutant subject to regulation:

(i) carbon black plants (furnace process),

(ii) charcoal production plants,

(iii) chemical process plants,

(iv) coal cleaning plants (with thermal dryers),

(v) coke oven batteries,

(vi) fossil-fuel boilers (or combination thereof) totaling more than 250 million BTU per

hour heat input,

(vii) fossil fuel-fired steam electric plants of more than 250 million BTU per hour heat input,

(viii) fuel conversion plants,

(ix) glass fiber processing plants,

(x) hydrofluoric, sulfuric or nitric acid plants,

(xi) iron and steel mill plants,

(xii) kraft pulp mills,

(xiii) lime plants,

(xiv) municipal incinerators capable of charging more than 50 tons of refuse per day,

(xv) petroleum refineries,

(xvi) petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels,

(xvii) phosphate rock processing plant,

(xviii) portland cement plants,

(xix) primary aluminum ore reduction plants,

(xx) primary copper smelters,

(xxi) primary lead smelters,

(xxii) primary zinc smelters,

(xxiii) secondary metal production plants,

(xxiv) sintering plants,

(xxv) sulfur recovery plants, or

(xxvi) taconite ore processing plants.

(B) Any other source not on the list in (A) of this definition which emits, or has the potential to emit, 250 tons per year or more of any pollutant subject to regulation.

(C) Any physical change that would occur at a source not otherwise qualifying as a major source under (A) and (B) of this definition if the change would constitute a major source by itself.

(D) A major source that is major for volatile organic compounds shall be considered major for ozone.

"Natural conditions" mean naturally occurring phenomena against which any changes in visibility are measured in terms of visual range, contrast or coloration.

"Net emissions increase" means:

(A) The amount by which the sum of the following exceeds zero:

(i) any increase in actual emissions from a particular physical change or change in the method of operation at a source; and,

(ii) any other increases and decreases in actual emissions at the source that are contemporaneous with the particular change and are otherwise creditable.

(B) An increase or decrease in actual emissions is contemporaneous with the increase from the particular change only if it occurs within 3 years before the date that the increase from the particular change occurs.

(C) An increase or decrease in actual emissions is creditable only if the Executive Director has not relied on it in issuing a permit under OAC 252:100-8, Part 7, which permit is in effect when the increase in actual emissions from the particular change occurs.

(D) An increase or decrease in actual emissions of sulfur dioxide, particulate matter, or nitrogen oxides which occurs before the applicable minor source baseline date is creditable only

if it is required to be considered in calculating the amount of maximum allowable increases remaining available.

(E) An increase in actual emissions is creditable only to the extent that the new level of actual emissions exceeds the old level.

(F) A decrease in actual emissions is creditable only to the extent that:

(i) the old level of actual emissions or the old level of allowable emissions, whichever is lower, exceeds the new level of actual emissions;

(ii) it is enforceable at and after the time that actual construction on the particular change begins;

(iii) it has approximately the same qualitative significance for public health and welfare as that attributed to the increase from the particular change.

(G) An increase that results from a physical change at a source occurs when the emission unit on which construction occurred becomes operational and begins to emit a particular pollutant. Any replacement unit that requires shakedown becomes operational only after a reasonable shakedown period, not to exceed 180 days.

"Significant" means:

(A) In reference to a net emissions increase or the potential of a source to emit any of the following pollutants, a rate of emissions that would equal or exceed any of the following rates:

(i) carbon monoxide: 100 tons per year (tpy),

(ii) nitrogen oxides: 40 tpy,

(iii) sulfur dioxide: 40 tpy,

(iv) particulate matter: 25 tpy of particulate matter emissions or 15 tpy of PM-10 emissions,

(v) ozone: 40 tpy of volatile organic compounds,

(vi) lead: 0.6 tpy,

(vii) asbestos: 0.007 tpy,

(viii) beryllium: 0.0004 tpy,

(ix) mercury: 0.1 tpy,

(x) vinyl chloride: 1 tpy,

(xi) fluorides: 3 tpy,

(xii) sulfuric acid mist: 7 tpy,

(xiii) hydrogen sulfide (H₂S): 10 tpy,

(xiv) total reduced sulfur (including H₂S): 10 tpy, and

(xv) reduced sulfur compounds (including H₂S): 10 tpy.

(B) Notwithstanding (A) of this definition, "significant" means any emissions rate or any net emissions increase associated with a major source or modification which would construct within 6 miles of a Class I area, and have an impact on such area equal to or greater than 1 g/m³ (24-hour average).

"Visibility impairment" means any humanly perceptible reduction in visibility (visual range, contrast and coloration) from that which would have existed under natural conditions.

252:100-8-32. Source applicability determination

Proposed new sources and source modifications to which this Part is applicable are determined by size, geographical location and type of emitted pollutants.

(1) Size.

(A) Permit review will apply to sources and modifications that emit any regulated pollutant

in major amounts. These quantities are specified in the definitions for major stationary source, major modification, potential to emit, net emissions increase, significant and other associated definitions in 252:100-8-31, 252:100-8-1.1, and 252:100-1.

(B) When a source or modification becomes major solely by virtue of a relaxation in any enforceable permit limitation established after August 7, 1980, on the capacity of the source or modification to emit a pollutant, such as a restriction on hours of operation, then the requirements of 252:100-8, Parts 1, 3, 5, and 7 shall apply to that source or modification as though construction had not yet commenced on it.

(2) Location.

(A) Sources and modifications which are major in size and proposed for construction in an area which has been designated as attainment or unclassified for any applicable ambient air standard are subject to the PSD requirements.

(B) Those sources and modifications locating in an attainment or unclassified area but impacting on a nonattainment area may also be subject to the requirements for major sources affecting nonattainment areas in 252:100-8, Part 9.

252:100-8-33. Exemptions

(a) Exemptions from PSD requirements. PSD requirements do not apply to a particular source or modification if:

(1) It is a nonprofit health or educational institution.

(2) The source is major by virtue of fugitive emissions, to the extent quantifiable, included in calculating the potential to emit and is a source other than:

(A) One of the categories listed in (A)(i) through (xxvi) under the definition of "Major stationary source" in OAC 252:100-8-31, or

(B) A stationary source category which, as of August 7, 1980, is being regulated by NSPS or NESHAP.

(3) The source or modification is a portable stationary source which has previously received a permit under the PSD requirements and proposes to relocate to a temporary new location from which its emissions would not impact a Class I area or an area where an applicable increment is known to be violated.

(b) Exemption from air quality impact evaluation.

(1) The requirements of OAC 252:100-8-35 are not applicable if the emissions, with respect to a particular pollutant, would be temporary and impact no Class I area and no area where an applicable increment is known to be violated.

(2) The requirements of OAC 252:100-8-35 are not applicable to the emissions, with respect to a particular pollutant, to a modification of a major source that was in existence on March 1, 1978 if the net increase in allowable emissions of each regulated pollutant, after the application of BACT, would be less than 50 tons per year.

(c) Exemption from monitoring requirements.

(1) The monitoring requirements of OAC 252:100-8-35 are not applicable for a particular pollutant if the emission increase of the pollutant from a new source or the net emissions increase of the pollutant from a modification would cause, in any area, air quality impacts less than the following listed amounts, or are pollutant concentrations that are not on the list.

(A) Carbon monoxide - 575 g/m³, 8-hour average,

(B) Nitrogen dioxide - 14 g/m³, annual average,

(C) Particulate matter - 10 g/m³, TSP, 24-hour average, or 10 g/m³ PM-10, 24-hour

average,

(D) Sulfur dioxide - 13 g/m³, 24-hour average,

(E) Ozone - see (N) below,

(F) Lead - 0.1 g/m³, 24-hour 3-month average,

(G) Mercury - 0.25 g/m, 24-hour average,

(H) Beryllium - 0.001 g/m³, 24-hour average,

(I) Fluorides - 0.25 g/m³, 24-hour average,

(J) Vinyl chloride - 15 g/m³, 24-hour average,

(K) Total reduced sulfur - 10 g/m³, 1-hour average,

(L) Hydrogen sulfide - 0.2 g/m³, 1-hour average, or

(M) Reduced sulfur compounds - 10 g/m³, 1-hour average.

(N) No de minimis air quality level is provided for ozone. However, any net increase of 100 tons per year or more of volatile organic compounds subject to PSD would be required to perform an ambient impact analysis, including the gathering of ambient air quality data.

(2) The requirements for air quality monitoring in OAC 252:100-8-35(b),(c) and (d)(2) shall not apply to a source or modification that was subject to 40 CFR 52.21 as in effect on June 19, 1978, if a permit application was submitted before June 8, 1981 and the Director subsequently determined that the application was complete except for OAC 252:100-8-35(b), (c) and (d)(2). Instead, the requirements in 40 CFR 52.21(m)(2) as in effect on June 19, 1978, shall apply to such source or modification.

(3) The requirements for air quality monitoring in OAC 252:100-8-35(b), (c), and (d)(2) shall not apply to a source or modification that was not subject to 40 CFR 52.21 as in effect on June 19, 1978, if a permit application was submitted before June 8, 1981 and the Director subsequently determined that the application as submitted was complete, except for the requirements in OAC 252:100-8-35(b), (c) and (d)(2).

(4) The Director shall determine if the requirements for air quality monitoring of PM-10 in OAC 252:100-8-35(a) through (c) and OAC 252:100-8-35(d)(2) may be waived for a source or modification when an application for a permit was submitted on or before June 1, 1988 and the Director subsequently determined that the application, except for the requirements for monitoring particulate matter under OAC 252:100-8-35(a) through (c) and OAC 252:100-8-35(d)(2), was complete before that date.

(5) The requirements for air quality monitoring of PM-10 in OAC 252:100-8-35(b), (c), (d)(2) and (d)(6) shall apply to a source or modification if an application for a permit was submitted after June 1, 1988 and no later than December 1, 1988. The data shall have been gathered over at least the period from February 1, 1988 to the date the application becomes otherwise complete in accordance with the provisions of OAC 252:100-8-33(b)(1), except that if the Director determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period (not to be less than 4 months), the data required by OAC 252:100-8-35(b)(1) and OAC 252:100-8-35(c) shall have been gathered over that shorter period.

(d) Exemption from BACT requirements and monitoring requirements. If a complete permit application for a source or modification was submitted before August 7, 1980 the requirements for BACT in OAC 252:100-8-34 and for monitoring in OAC 252:100-8-35(a) through (c) and OAC 252:100-8-35(d)(2) through (4) are not applicable. Instead, the federal requirements at 40 CFR 52.21 (j) and (n) as in effect on June 19, 1978 are applicable to any such source or modification.

(e) Exemption of modifications. As specified in the applicable definitions of OAC 252:100-8-31,

252:100-8-1.1, and 252:100-1, the requirements of OAC 252:100-8, Part 7 for PSD and OAC 252:100-8, Part 9 for nonattainment areas are not applicable to a modification if the existing source was not major on August 7, 1980 unless the proposed addition to that existing minor source is major in its own right.

(f) **Exemption from impact analyses.** The requirements of OAC 252:100-8-35 and OAC 252:100-8-36 do not apply to a source or modification with respect to any maximum allowable increase for nitrogen oxides if the owner or operator of the source or modification submitted a completed application for a permit before February 8, 1988.

(g) **Exemption from increment consumption.** Excluded from increment consumption are the following cases:

(1) Concentrations from an increase in emissions from any source converting from the use of petroleum products, natural gas, or both by reason of any order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation), or by reason of a natural gas curtailment plan pursuant to the Federal Power Act. Such exclusion is limited to five years after the effective date of the order or plan.

(2) Emissions of particulate matter from construction or other temporary emission-related activities of new or modified sources.

(3) A temporary increase of sulfur dioxide, particulate matter, or nitrogen oxides by order or authorized variance from any source.

252:100-8-34. Best available control technology

(a) A new source must demonstrate that the control technology to be applied is the best that is available (i.e., BACT as defined herein for each regulated pollutant that it would have the potential to emit in significant amounts).

(b) A major modification must demonstrate that the control technology to be applied is the best that is available for each regulated pollutant for which it would be a significant net emissions increase at the source. This requirement applies to each proposed emissions unit at which a net emissions increase in the pollutant would occur as a result of a physical change or change in the method of operation in the unit.

(c) The determination of best available control technology shall be made on a case by case basis taking into account costs and energy, environmental and economic impacts.

(d) For phased construction projects the determination of best available control technology shall be reviewed and modified at the discretion of the Executive Director at a reasonable time but no later than 18 months prior to commencement of construction of each independent phase of the project. At such time the owner or operator may be required to demonstrate the adequacy of any previous determination of best available control technology.

252:100-8-35. Air quality impact evaluation

(a) **Application contents.** Any application for a permit shall contain, as the Executive Director determines appropriate, an evaluation of ambient air quality in the area that the source or modification would affect for each of the following pollutants:

(1) for a new source, each regulated pollutant that it would have the potential to emit in a significant amount;

(2) for a major modification, each regulated pollutant for which it would result in a significant net emissions increase.

(b) **Continuous monitoring data.** For visibility and any pollutant, other than volatile organic

compounds, for which an ambient air quality standard exists, the evaluation shall contain continuous air quality monitoring data gathered to determine whether emissions of that pollutant would cause or contribute to a violation of the applicable ambient air quality standard. For any such pollutant for which a standard does not exist, the monitoring data required shall be that which the Executive Director determines is necessary to assess the ambient air quality for that pollutant in that area. (Amended 7-9-87, effective 8-10-87)

(c) **Increment consumption.** The evaluation shall demonstrate that, as of the source's start-up date, the increase in emissions from that source, in conjunction with all other applicable emissions increases or reductions of that source, will not cause or contribute to any increase in ambient concentrations exceeding the remaining available PSD increment for the specified air contaminants as determined by the Executive Director.

(d) **Monitoring.**

(1) **Monitoring method.** With respect to any requirements for air quality monitoring of PM-10 under 252:100-8-33(c)(4) and 252:100-8-33(c)(5), the owner or operator of the source or modification shall use a monitoring method approved by the Executive Director and shall estimate the ambient concentrations of PM-10 using the data collected by such approved monitoring method in accordance with estimating procedures approved by the Executive Director.

(2) **Monitoring period.** The required monitoring data shall have been gathered for a time period of up to one year and shall represent the year preceding submission of the application. Ambient monitoring data collected for a time period shorter than one year (but no less than four months) or for a time period other than immediately preceding the application may be acceptable if such data are determined by the Executive Director to be within the time period that maximum pollutant concentrations would occur, and to be complete and adequate for determining whether the source or modification will cause or contribute to a violation of any applicable ambient air quality standard or consume more than the remaining available PSD increment.

(3) **Monitoring period exceptions.**

(A) For any application which becomes complete except as to the monitoring requirements of 252:100-8-35(b) through 252:100-8-35(c) and 252:100-8-35(d)(2), between June 8, 1981 and February 9, 1982, the data that 252:100-8-35(b) and 252:100-8-35(c) require shall have been gathered over the period from February 9, 1981 to the date the application becomes otherwise complete, except that:

(i) If the source or modification would have been major for that pollutant under 40 CFR 52.21 as in effect on June 19, 1978, any monitoring data shall have been gathered over the period required by those regulations.

(ii) If the Executive Director determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period, not to be less than four months, the data that 252:100-8-35(b) and 252:100-8-35(c) require shall have been gathered over that shorter period.

(iii) If the monitoring data would relate exclusively to ozone and would not have been required under 40 CFR 52.21 as in effect on June 19, 1978, the Executive Director may waive the otherwise applicable requirements of 252:100-8-35(d)(3)(A) to the extent that the applicant shows that the monitoring data would be unrepresentative of air quality over a full year.

(B) For any application that becomes complete, except as to the requirements of 252:100-8-

35(b), (c) and (d)(2) pertaining to monitoring of PM-10, after December 1, 1988 and no later than August 1, 1989, the data that 252:100-8-35(b) and (c) require shall have been gathered over at least the period from August 1, 1988 to the date the application becomes otherwise complete, except that if the Executive Director determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period(not to be less than 4 months), the data that 252:100-8-35(b) and 252:100-8-35(c) require shall have been gathered over that shorter period.

(4) **Ozone post-approval monitoring.** The application for a source or modification of volatile organic compounds which satisfies all conditions of 252:100-8-54 may provide post-approval monitoring data for ozone in lieu of providing preconstruction data as required under 252:100-8-35.

(5) **Post-construction monitoring.** The applicant for a permit for a new source or modification shall conduct, after construction, such ambient monitoring and visibility monitoring as the Executive Director determines necessary to determine the effect its emissions may have, or are having, on air quality in any area. (Amended 7-9-87, effective 8-10-87)

(6) **Monitoring system operation.** The operation of monitoring stations for any air quality monitoring required under Part 7 of this Subchapter shall meet the requirements of 40 CFR 58 Appendix B.

(e) Air quality models.

(1) Any air quality dispersion modeling that is required under Part 7 of this Subchapter for estimates of ambient concentrations shall be based on the applicable air quality models, data bases and other requirements specified in the Guidelines on Air Quality Models, OAQPS 1.2-080, U.S. Environmental Protection Agency, April, 1978 and subsequent revisions.

(2) Where an air quality impact model specified in the Guidelines on Air Quality Models is inappropriate, the model may be modified or another model substituted, as approved by the Executive Director. Methods like those outlined in the Workbook for the Comparison of Air Quality Models, U.S. Environmental Protection Agency, April, 1977 and subsequent revisions, can be used to determine the comparability of air quality models.

(f) **Growth analysis.** Upon request of the Executive Director the permit application shall provide information on the nature and extent of any or all general commercial, residential, industrial and other growth which has occurred since August 7, 1977 in the area the source or modification would affect. The permit application shall also contain an analysis of the air quality impact projected for the area as a result of general commercial, residential and other growth associated with the source or modification.

(g) **Visibility and other impacts analysis.** The permit application shall provide an analysis of the impairment to visibility, soils and vegetation as a result of the source or modification. The Executive Director may require monitoring of visibility in any Federal Class I area near the proposed new stationary source or major modification for such purposes and by such means as the Executive Director deems necessary and appropriate. (Amended 7-9-87, effective 8-10-87)

252:100-8-36. Source impacting Class I areas

(a) **Permits issuance.** Permits may be issued at variance to the limitations imposed on a Class I area in compliance with the procedures and limitations established in State and Federal Clean Air Acts.

(b) **Impact analysis required.** The permit application for a proposed new source or modification will contain an analysis on the impairment of visibility and an assessment of any

anticipated adverse impacts on soils and vegetation in the vicinity of the source resulting from construction of the source. The Executive Director shall notify the appropriate Federal Land Manager of the receipt of any such analysis and include a complete copy of the permit application. Any analysis performed by the Land Manager shall be considered by the Executive Director provided that the analysis is filed with the DEQ within 30 days of receipt of the application by the Land Manager. Where the Executive Director finds that such an analysis does not demonstrate to the satisfaction of the Executive Director that an adverse impact on visibility will result in the Federal Class I area, the Executive Director will, in any notice of public hearing on the permit application, either explain his decision or give notice as to where the explanation can be obtained. Further, upon presentation of good and sufficient information by a Federal Land Manager, the Executive Director may deny the issuance of a permit for a source, emissions from which will adversely impact areas heretofore or hereafter categorized as Class I areas even though the emissions would not cause the increment for such Class I areas to be exceeded.

252:100-8-37. Innovative control technology

(a) An applicant for a permit for a proposed major source or modification may request the Executive Director in writing to approve a system of innovative control technology.

(b) The Executive Director may determine that the innovative control technology is permissible if:

(1) The proposed control system would not cause or contribute to an unreasonable risk to public health, welfare or safety in its operation or function.

(2) The applicant agrees to achieve a level of continuous emissions reductions equivalent to that which would have been required for best available control technology under 252:100-8-34 by a date specified by the Executive Director. Such date shall not be later than 4 years from the time of start-up or 7 years from permit issuance.

(3) The source or modification would meet the requirements equivalent to those in Parts 1 and 5 of this Subchapter and 252:100-8-36 based on the emissions rate that the source employing the system of innovative control technology would be required to meet on the date specified by the Executive Director.

(4) The source or modification would not, before the date specified, cause or contribute to any violation of the applicable ambient air standards, or impact any Class I area or area where an applicable increment is known to be violated.

(5) All other applicable requirements including those for public review have been met.

(c) The Executive Director shall withdraw approval to employ a system of innovative control technology made under 252:100-8-37, if:

(1) The proposed system fails by the specified date to achieve the required continuous reduction rate; or,

(2) The proposed system fails before the specified date so as to contribute to an unreasonable risk to public health, welfare or safety; or,

(3) The Executive Director decides at any time that the proposed system is unlikely to achieve the required level of control or to protect the public health, welfare or safety.

(d) If a source or modification fails to meet the required level of continuous emissions reduction within the specified time period, or if the approval is withdrawn in accordance with 252:100-8-37(c), the source or modification may be allowed up to an additional 3 years to meet the requirement for application of best available control technology through the use of a demonstrated system of control.

PART 9. MAJOR SOURCES AFFECTING NONATTAINMENT AREAS

252:100-8-50. Applicability

The new source requirements of this Part, in addition to the applicable requirements of Parts 1, 3, and 5 of this Subchapter, shall apply to the construction of all major sources and major modifications affecting designated nonattainment areas as specified in 252:100-8-51 through 252:100-8-53.

252:100-8-51. Definitions

The following words and terms, when used in this Part, shall have the following meaning, unless the context clearly indicates otherwise:

"Actual emissions" means the actual rate of emissions of a pollutant from an emissions unit, as determined in accordance with the following:

(A) In general, actual emissions as of a particular date shall equal the average rate in tons per year at which the unit actually emitted the pollutant during a two-year period which precedes the operation. The reviewing authority may allow the use of a different time period upon a determination that it is more representative of normal source operation. Actual emissions shall be calculated using the unit's actual operating hours, production rates, and types of materials processed, stored, or combusted during the selected time period. Actual emissions may also be determined by source tests, or by best engineering judgment in the absence of acceptable test data.

(B) The reviewing authority may presume that source-specific allowable emissions for the unit are equivalent to the actual emissions of the unit.

(C) For any emissions unit which has not begun normal operations on the particular date, actual emissions shall equal the potential to emit of the unit on that date.

"Lowest achievable emissions rate" means the control technology to be applied to a major source or modification which the Director, on a case by case basis, determines is achievable for a source based on the lowest achievable emission rate achieved in practice by such category of source (i.e., lowest achievable emission rate as defined in the Federal Clean Air Act).

"Major modification" means any physical change in, or change in the method of operation of, a major source that would result in a significant net emissions increase of any pollutant subject to regulation.

(A) Any net emissions increase that is significant for volatile organic compounds shall be considered significant for ozone.

(B) A physical change or change in the method of operation shall not include:

(i) routine maintenance, repair and replacement;

(ii) use of an alternate fuel or raw material by reason of any order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation) or by reason of a natural gas curtailment plan pursuant to the Federal Power Act;

(iii) use of an alternate fuel by reason of an order or rule under Section 125 of the Federal Clean Air Act;

(iv) use of an alternate fuel at a steam generating unit to the extent that the fuel is generated from municipal solid waste;

(v) Use of an alternate fuel or raw material by a source which:

(I) the source was capable of accommodating before December 21, 1976, unless such

change would be prohibited under any enforceable permit limitation which was established after December 21, 1976; or,

(II) the source is approved to use under any permit issued under 40 CFR 52.21 or OAC 252:100-7 or 8.

(vi) An increase in the hours of operation or in the production rate unless such change would be prohibited under any enforceable permit limitation which was established after December 21, 1976, or

(vii) any change in source ownership.

"Major stationary source" means:

(A) any stationary source of air pollutants which emits, or has the potential to emit, 100 tons per year or more of any pollutant subject to regulation; or,

(B) any physical change that would occur at a source not qualifying under (A) of this definition as a major source, if the change would constitute a major source by itself.

(C) for ozone, a source that is major for volatile organic compounds shall be considered major.

"Net emissions increase" means:

(A) The amount by which the sum of the following exceeds zero:

(i) any increase in actual emissions from a particular physical change or change in the method of operation at a source; and,

(ii) any other increases and decreases in actual emission at the source that are contemporaneous with the particular change and are otherwise creditable.

(B) An increase or decrease in actual emissions is contemporaneous with the increase from the particular change only if it occurs within 3 years before the date that the increase from the particular change occurs.

(C) An increase or decrease in actual emissions is creditable only if the Director has not relied on it in issuing a permit under Part 9 of this Subchapter, which permit is in effect when the increase in actual emissions from the particular change occurs.

(D) An increase in actual emissions is creditable only to the extent that the new level of actual emissions exceeds the old level.

(E) A decrease in actual emissions is creditable only to the extent that:

(i) the old level of actual emissions or the old level of allowable emissions, whichever is lower, exceeds the new level of actual emissions;

(ii) it is enforceable at and after the time that actual construction on the particular change begins;

(iii) the reviewing authority has not relied on it in issuing any permit under State air quality rules; and,

(iv) it has approximately the same qualitative significance for public health and welfare as that attributed to the increase from the particular change.

(F) An increase that results from a physical change at a source occurs when the emission unit on which construction occurred becomes operational and begins to emit a particular pollutant. Any replacement unit that requires shakedown becomes operational after a reasonable shakedown period, not to exceed 180 days.

"Significant" means, in reference to a net emissions increase or the potential of a source to emit any of the following pollutants, a rate of emissions that would equal or exceed any of the following rates:

(A) Carbon monoxide: 100 tons per year (tpy),

(B) Nitrogen oxides: 40 tpy,

- (C) Sulfur dioxide: 40 tpy,
- (D) Particulate matter: 15 tpy of PM-10 emissions,
- (E) Ozone: 40 tpy of volatile organic compounds, or
- (F) Lead: 0.6 tpy.

252:100-8-52. Source applicability determination

Proposed new sources and source modifications to which Part 9 of this Subchapter is applicable are determined by size, geographical location and type of emitted pollutants:

(1) Size.

(A) Permit review will apply to sources and modifications that emit any regulated pollutant in major amounts. These quantities are specified in the definitions for major stationary source, major modification, potential to emit, net emissions increase, significant, and other associated definitions in OAC 252:100-8-51, 252:100-8-1.1, and 252:100-1-3.

(B) At such time that a particular source or modification becomes major solely by virtue of a relaxation in any enforceable permit limitation which was established after August 7, 1980 on the capacity of the source or modification otherwise to emit a pollutant, such as a restriction on hours of operation, then the requirements of Parts 1, 3, 5, and 9 of this Subchapter shall apply to that source or modification as though construction had not yet commenced on it.

(2) Location.

(A) Sources and modifications that are major in size and proposed for construction in an area which has been designated as nonattainment for any applicable ambient air quality standard are subject to the requirements for the nonattainment area, if the source or modification is major for the nonattainment pollutant(s) of that area.

(B) In addition, the requirements of a PSD review (Part 7 of this Subchapter) would be applicable if any other regulated pollutant other than the nonattainment pollutant is emitted in significant amounts by that source or modification.

(3) Location in attainment or unclassifiable area but causing or contributing to NAAQS violation.

(A) A proposed major source or major modification that would locate in an area designated attainment or unclassifiable is considered to cause or contribute to a violation of the national ambient air quality standards when such source or modification would, as a minimum, exceed the following significance levels at any locality that does not or would not meet the applicable national standard:

(i) SO₂:

(I) 1.0 g/m³ annual average;

(II) 5 g/m³ 24-hour average;

(III) 25 g/m³ 3-hour average;

(ii) PM-10:

(I) 1.0 g/m³ annual average;

(II) 5 g/m³ 24-hour average;

(iii) NO₂: 1.0 g/m³ annual average;

(iv) CO:

(I) 500 g/m³ 8-hour average;

(II) 2000 g/m³ one-hour average.

(B) A proposed major source or major modification subject to OAC 252:100-8-52(3)(A)

may reduce the impact of its emissions upon air quality by obtaining sufficient emissions reductions to, at a minimum, compensate for its adverse ambient impact where the proposed source or modification would otherwise cause or contribute to a violation of any national ambient air quality standard. In the absence of such emission reductions, a permit for the proposed source or modification shall be denied.

(C) The requirements of OAC 252:100-8-52(3)(A) and (B) shall not apply to a major source or major modification with respect to a particular pollutant if the owner or operator demonstrates that, as to that pollutant, the source or modification is located in an area designated nonattainment.

(D) Sources of volatile organic compounds located outside a designated ozone nonattainment area will be presumed to have no significant impact on the designated nonattainment area. If ambient monitoring indicates that the area of source location is in fact nonattainment, then the source may be granted its permit since the area has not yet been designated nonattainment.

(E) Sources locating in an attainment area but impacting on a nonattainment area above the significant levels listed in OAC 252:100-8-52(3) are exempted from the condition of OAC 252:100-8-54(4)(A).

(F) The determination whether a source or modification will cause or contribute to a violation of an applicable ambient air quality standard for sulfur dioxide, particulate matter or carbon monoxide will be made on a case by case basis as of the proposed new source's start-up date by an atmospheric simulation model. For sources of nitrogen oxides the model can be used for an initial determination assuming all the nitric oxide emitted is oxidized to nitrogen dioxide by the time the plume reaches ground level, and the initial concentration estimates will be adjusted if adequate data are available to account for the expected oxidation rate.

(G) The determination as to whether a source would cause or contribute to a violation of applicable ambient air quality standards will be made on a case by case basis as of the new source's start-up date. Therefore, if a designated nonattainment area is projected to be attainment as part of the state implementation plan control strategy by the new source start-up date, offsets would not be required if the new source would not cause a new violation.

252:100-8-53. Exemptions

(a) Nonattainment area requirements do not apply to a particular source or modification locating in or impacting on a nonattainment area if:

(1) The source is major by virtue of fugitive emissions, to the extent quantifiable, included in calculating the potential to emit and is a source other than one of the following categories:

(A) carbon black plants (furnace process),

(B) charcoal production plants,

(C) chemical process plants,

(D) coal cleaning plants (with thermal dryers),

(E) coke oven batteries,

(F) fossil-fuel boilers (or combination thereof) totaling more than 250 million BTU per hour heat input,

(G) fossil fuel-fired steam electric plant of more than 250 million BTU per hour heat input,

(H) fuel conversion plants,

- (I) glass fiber processing plants,
- (J) hydrofluoric, sulfuric or nitric acid plants,
- (K) iron and steel mills,
- (L) kraft pulp mills,
- (M) lime plants,
- (N) municipal incinerators capable of charging more than 250 tons of refuse per day,
- (O) petroleum refineries,
- (P) petroleum storage and transfer units with a total storage exceeding 300,000 barrels,
- (Q) phosphate rock processing plants,
- (R) portland cement plants,
- (S) primary aluminum ore reduction plants,
- (T) primary copper smelters,
- (U) primary lead smelters,
- (V) primary zinc smelters,
- (W) secondary metal production plants,
- (X) sintering plants,
- (Y) sulfur recovery plants,
- (Z) taconite ore processing plants, or
- (AA) any other stationary source category which, as of August 7, 1980, is being regulated by NSPS or NESHAP.

(2) A source or modification was not subject to 40 CFR Part 51, Appendix S (emission offset interpretative ruling) as in effect on January 16, 1979 and the source:

- (A) Obtained all final federal and state construction permits before August 7, 1980;
- (B) Commenced construction within 18 months from August 7, 1980 or any earlier time required by the State Implementation Plan; and,
- (C) Did not discontinue construction for a period of 18 months or more and completed construction within a reasonable time.

(b) Secondary emissions are excluded in determining the potential to emit (see definition of "potential to emit" in 252:100-8-1.1). However, upon determination of the Executive Director, if a source is subject to the requirements on the basis of its direct emissions, the applicable requirements must also be met for secondary emissions but the source would be exempt from the conditions of 252:100-8-52(3)(F) and 252:100-8-54(1) through 252:100-8-54(3). Also, the indirect impacts of mobile sources are excluded.

(c) As specified in the applicable definitions, the requirements of Part 7 for PSD and Part 9 for nonattainment areas of this Subchapter are not applicable to a modification if the existing source was not major on August 7, 1980 unless the proposed addition to the existing minor source is major in its own right.

252:100-8-54. Requirements for sources located in nonattainment areas

In the event a major source or modification would be constructed in an area designated as nonattainment for a pollutant for which the source or modification is major, approval shall be granted only if the following conditions are met:

- (1) The new source must demonstrate that it has applied control technology which the Executive Director, on a case by case basis, determines is achievable for a source based on the lowest achievable emission rate (LAER) achieved in practice by such category of source (i.e., lowest achievable emission rate as defined in the Act).

(2) If the Executive Director determines that imposition of an enforceable numerical emission standard is infeasible due to technological or economic limitations on measurement methodology, a design, equipment, work practice or operational standard, or combination thereof, may be prescribed as the emission limitation rate.

(3) The owner or operator of the new source must demonstrate that all other major sources owned or operated by such person in Oklahoma are in compliance, or are meeting all steps on a schedule for compliance, with all applicable limitations and standards under Oklahoma and Federal Clean Air Acts.

(4) The owner or operator of the new source must demonstrate that upon commencing operations:

(A) The emissions from the proposed source and all other sources permitted in the area do not exceed the planned growth allowable for the area designated in the State Implementation Plan; or,

(B) The total allowable emissions from existing sources in the region and the emissions from the proposed source will be sufficiently less than the total emissions from existing sources allowed under the State Implementation Plan at the date of construction permit application so as to represent further progress toward attainment or maintenance of the ambient air quality standards in the problem area.

(5) The owner or operator may present with the application an analysis of alternate sites, sizes and production processes for such proposed source.

APPENDIX I. INSIGNIFICANT ACTIVITIES (REGISTRATION) LIST [NEW]

Any Activity to which a State of federal applicable requirement applies is not insignificant even if it is included on this list.

COMBUSTION EQUIPMENT

* Stationary reciprocating engines burning natural gas, gasoline, aircraft fuels, or diesel fuel which are either used exclusively for emergency power generation or for peaking power service not exceeding 500 hours/year

Space heaters, boilers, process heaters, and emergency flares less than or equal to 5 MMBTU/hr heat input (commercial natural gas)

Emissions from stationary internal combustion engines rated less than 50 hp output

Emissions from gas turbines with less than 215 kilowatt rating of electric output

STORAGE TANKS/DISTRIBUTION

* Emissions from fuel storage/dispensing equipment operated solely for facility owned vehicles if fuel throughput is not more than 2,175 gallons/day, averaged over a 30-day period

* Storage tanks with less than or equal to 10,000 gallons capacity that store volatile organic liquids with a true vapor pressure less than or equal to 1.0 psia at maximum storage temperature

* Bulk gasoline or other fuel distribution with a daily average throughput less than 2,175 gallons per day, including dispensing, averaged over a 30-day period

Gasoline and aircraft fuel handling facilities, equipment, and storage tanks except those subject to New Source Performance Standards and standards in 252:100-37-15, 252:100-39-30, 252:100-39-41, and 252:100-39-48

Emissions from condensate tanks with a design capacity of 400 gallons or less in ozone attainment areas

Emissions from crude oil and condensate marine and truck loading equipment operations at crude oil and natural gas production sites where the loading rate does not exceed 10,000 gallons per day averaged over a 30-day period

* Emissions from crude oil and condensate storage tanks with a capacity of less than or equal to 420,000 gallons that store crude oil and condensate prior to custody transfer

* Emissions from storage tanks constructed with a capacity less than 39,894 gallons which store VOC with a vapor pressure less than 1.5 psia at maximum storage temperature

ANALYSIS/LABORATORY ACTIVITIES

Additions or upgrades of instrumentation or control systems that result in emissions increases less than the pollutant quantities specified in 252:100-8-3(e)(1)

EQUIPMENT

Alkaline/phosphate washers and associated burners
Cold degreasing operations utilizing solvents that are denser than air
* Welding and soldering operations utilizing less than 100 pounds of solder and 53 tons per year of electrodes
Wood chipping operations not associated with the primary process operation
* Torch cutting and welding of under 200,000 tons of steel fabricated per year

REMEDIATION

Site restoration and/or bioremediation activities of < 5 years expected duration
Hydrocarbon contaminated soil aeration pads utilized for soils excavated at the facility only
Emissions from the operation of groundwater remediation wells including but not limited to emissions from venting, pumping, and collecting activities subject to ~~de minimis limits for air toxics (252.100-41-43)~~ and HAPs (§112(b) of CAAA90)

SOLID WASTE

* Non-commercial water washing operations (less than 2,250 barrels/year) and drum crushing operations of empty barrels less than or equal to 55 gallons with less than three percent by volume of residual material
Hazardous waste and hazardous materials drum staging areas
Sanitary sewage collection and treatment facilities other than incinerators and Publicly Owned Treatment Works (POTW)
Stacks or vents for sanitary sewer plumbing traps are also included (i.e., lift station)
Emissions from landfills and land farms unless otherwise regulated by an applicable state or federal regulation

COATINGS

* Automobile body shops located in an ozone attainment area emitting less than 5 tons/year of volatile organic solvents
Electrophoretic-process coating application operations (i.e., paint bath positively charged, painted object negatively charged)
* Surface coating operations which do not exceed a combined total usage of more than 60 gallons/month of coatings, thinners, and clean-up solvents at any one emissions unit

MISCELLANEOUS

Exhaust systems for chemical, paint, and/or solvent storage rooms or cabinets, including hazardous waste satellite (accumulation) areas
Hand wiping and spraying of solvents from containers with less

than 1 liter capacity used for spot cleaning and/or degreasing in ozone attainment areas

* Activities having the potential to emit no more than 5 TPY (actual) of any criteria pollutant (see instructions in Title V application)

* Appropriate records of hours, quantity, or capacity must be kept on the activity to verify its insignificance.

APPENDIX J. TRIVIAL ACTIVITIES (DE MINIMIS) LIST [NEW]

Any activity to which a State or federal applicable requirement applies is not trivial even if it is included on this list.

AGRICULTURAL

Lawn care (noncommercial)

Weed control (noncommercial)

Pest control (noncommercial)

Herbicide and pesticide activities except for manufacturing and formulation for commercial sale

ANALYSIS/TESTING

Hydraulic or hydrostatic testing

Analysis/laboratory activities emissions from the following: air contaminant detectors, air contaminant recorders, combustion controllers, combustion shut-off devices, product analyzers, laboratory analyzers, continuous emissions monitors, other analyzers (e.g., water quality), and emissions associated with sampling activities. Also, emissions from bench scale laboratory equipment and laboratory equipment used exclusively for chemical and physical analysis, including assorted vacuum producing devices and vents but **NOT** lab fume hoods or vents

Site assessment work, including but not limited to, the evaluation of waste disposal or remediation sites

Emissions from instrument systems utilizing air or natural gas

Environmental field sampling operations

Sampling connections used exclusively to withdraw materials for testing and analysis, including air contaminant detectors and vent lines

Compressed gas cylinders and gases utilized for equipment calibration and testing

ANIMALS

Equipment used to mix and package soaps, vegetable oil, grease, animal fat, and nonvolatile aqueous salt solutions, provided appropriate lids and covers are utilized

Equipment used exclusively to slaughter animals, but **not** including other equipment at slaughterhouses, such as rendering cookers, boilers, heating plants, incinerators, and electrical power generating

BATTERY CHARGING

Industrial battery recharging and maintenance operations for batteries utilized within the facility only

BLOWDOWNS

Emissions from the depressurization during startup, shut down, maintenance or emergencies of compressors or other vessels containing natural gas or liquid hydrocarbons for the purpose of maintenance due to emergency circumstances

CLEANING

Acid washing (maintenance cleaning)
Caustic washing (maintenance cleaning)

Abrasive blasting

Steam cleaning

Carbon dioxide blasting equipment in degreasing or depainting

High pressure water depainting operations and aqueous industrial spray washers

Vacuum cleaning systems used exclusively for industrial, commercial, or residential housekeeping purposes, except those systems used to collect particulate matter subject to 252:100 and hazardous and/or toxic air contaminants

Ultrasonic cleaning operations which do not utilize volatile organic compounds

Molten salt bath descaling operations

Natural gas water heating systems for fixed vehicle wash racks

COOLING TOWERS/BOILER WATER

Emissions from non-contact cooling towers (cooling water that has not been in contact with other materials or fluids containing regulated air pollutants)

Boiler water treatment operations

Deaerator units associated with boilers or hot water heating systems

Process water filtration systems and demineralizers

Demineralized water tanks and demineralizer vents

ELECTRIC POWER

Equipment associated with electrical power transmission which do not involve fuel-burning activities using transformers and substations

Electric or steam-heated drying ovens and autoclaves, but not the emissions from the articles or substances being processed in the ovens or autoclaves or the boilers delivering the steam

FIREFIGHTING

Emissions from fire or emergency response equipment and training to include use of fire control equipment including equipment for testing and training, engines used exclusively for firefighting, and open burning of materials or fuels associated with firefighting training. Buildings burned for firefighting training must still adhere to NESHP for Asbestos.

Fire extinguishers and fire extinguishing systems

FUGITIVE EMISSIONS

Seal replacement (i.e., manhole gaskets)

Roof coating, service, and repair

Paving of roads, parking lots, and other areas

Vent emissions from gas streams used as buffer or seal gas in rotating pump and compressor seals

Emissions from natural gas odorizing activities

Emissions from pneumatic starters on reciprocating engines, turbines, compressors, or other equipment

Gas flares or flares used solely to indicate danger to the public (e.g. road hazard)

Warehouse activities including the storage of packaged raw materials and finished goods

Non-routine clean out of tanks, lift stations, and equipment for the purposes of worker entry or in preparation for maintenance or decommissions

Unpaved roadways and parking areas

Gravel, sand and dirt storage for use in on-site construction projects

VOC fugitive emissions from component additions (e.g. valves, flanges, connectors, pump seals, compressor seals, etc.) regulated by a fugitive monitoring program where the total increase is less than one ton per year of any criteria pollutant ~~or the de minimis set forth in 252:100-41-43.~~ The component additions must be identified in the next scheduled monitoring report required by the applicable requirements. VOC fugitive emissions from component additions (e.g. valves, flanges, connectors, pump seals, compressor seals, etc.) not regulated by a fugitive monitoring program provided that no applicable requirement is triggered when components are added.

Fugitive emissions of jet fuels associated with aircraft fuel cell and fuel bladder repair

Fugitive emissions related to movement of passenger vehicles provided the emissions are not counted for applicability purposes or any required fugitive dust control plan or its equivalent is submitted

INSULATION

Insulation installing or removal (non-asbestos)

Application of refractory & insulation (calcium silicate, etc.)

LUBRICATING

Lubricating pumps, sumps, and systems

Emissions from engine crankcase vents and equipment lubricating sumps

MAINTENANCE

Welding, brazing, soldering for maintenance purposes
Use of adhesives for maintenance purposes
Grinding, cutting, sanding for maintenance purposes
Emissions from pipeline maintenance pigging activities
Maintenance, upkeep, and replacement types of activities, including those not altering the capacity of process, combustion or control equipment, and which do not increase regulated pollutant emissions unless subject to NESHAP or NSPS

METALS

Equipment used for inspection of metal products
Die casting machines
Foundry sand mold forming equipment to which no heat is applied, and from which no organics are emitted
Equipment used exclusively to mill or grind coatings and holding compounds where all materials charged are in paste form (unless HAP emission)
Equipment used exclusively for rolling, forging, pressing, spinning, drawing, or extruding either hot or cold metals unless their emissions exceed any applicable regulated amount
Carbon monoxide lasers, used only on metals and other materials which do not emit HAP in the process

MISCELLANEOUS

Operations previously determined to be de minimis pursuant to 252:100-7-2(b)(3) ~~or 252:100-41-43(a)(5)~~
Laser trimmers using dust collection to prevent fugitive emissions
Shock chambers
Humidity chambers
Solar simulators

MOBILE SOURCES

Mobile source emissions from cars, trucks, forklifts, courier vehicles, front loaders, graders, cranes, carts, hydrostatic and hydraulic testing equipment, maintenance trucks, helicopters, locomotives, marine vessels, portable generators moveable by hand, portable pumps, portable air compressors, portable welding machines, and portable fuel tanks
Other on and off road mobile sources (i.e. coal stacker & reclaimer)
Well servicing/workover rigs and associated equipment
Well drilling rigs and associated equipment
Aircraft ground support (AGE) equipment, including but not limited to portable power generators, lights, and HVAC support
Vehicle exhaust from maintenance or repair shops
Road sanding and salting operations

OFFICE AND JANITORIAL

Janitorial services
Sweeping (Floor Sweep)
Office emissions (photocopying, blueprint copying, photograph processes)

OUTDOOR RECREATION

Outdoor recreational emissions (campfires, barbecue pits)
Open burning for the purpose of land management (must get permission from Air Quality Enforcement even though exempt from permitting)
Outdoor kerosene heaters

PLASTICS/FIBERGLASS

Plastic or fiberglass welding or repair
Sealing or cutting plastic film or foam with heat or wires
Processes used for the curing of fiberglass or paint products

REFRIGERANTS

Cold storage refrigerator equipment
De minimis refrigerant releases

RESIDENTIAL

Air conditioning or comfort ventilation systems not regulated under Title VI of the Clean Air Act
Emissions from residential housing units, dormitories, and multifamily dwellings to include fuel burning for the purposes of heating except prohibited open burning

SOLID WASTE

Solid waste landfill operations
RCRA Solid Waste Management Units subject to 40 CFR Part 265, Subparts AA, BB, and CC

SOLVENT

Emissions from laundry care equipment processing bedding, clothing or other fabric items. These include dryers, extractors, & tumblers. **NOT CLEANING OPERATIONS USING PERCHLOROETHYLENE OR PETROLEUM SOLVENTS (i.e., dry cleaning)**
Covered cold solvent degreasers not subject to federal emission standards (e.g. NESHAP or NSPS)

STORAGE TANKS/DISTRIBUTION

Emissions from lube oil, seal oil, or hydraulic fluid storage tanks and equipment as long as not emitting VOCs or HAPs

Storage and use of chemicals unless otherwise regulated by an applicable state or federal regulation. These chemicals include, but not limited to: alum, ammonia, biocides, corrosion inhibitors, dechlorination chemicals, inorganic salts, acids or bases to include caustic and sulfuric acid, coagulants, flocculants, precipitants, surfactants, anti-foam chemicals, sealing inhibitors, oxygen scavengers, phosphates, polyelectrolytes, limestone slurry, lime and lime slurry, flue gas desulfurization system slurry, and sulfur slurry; propane and acetylene under pressure

Storage and use of products or equipment for maintaining motor vehicles operated at the site (including but not limited to antifreeze and fuel additives) not regulated under Title VI, CFC rules)

Emissions from tanks containing separated water produced from oil and gas operations

Commercial gasoline dispensing stations, including those located within the physical boundaries of a Title V source

Lubricants and waxes used for machinery and other equipment lubrication and emission from lubricating oil or hydraulic fluid storage tanks and equipment

Runway and aircraft de-icing activities, including de-icer storage tanks unless otherwise regulated

Storage tanks, reservoirs, and pumping and handling equipment of any size containing soaps, vegetable oil, grease, animal fat, and nonvolatile aqueous salt solutions, provided appropriate lids and covers are utilized

SURFACE COATING

Surface coating for maintenance purposes such as roll/brush/pad coating, painting with aerosol cans, spray airless, and conventional spray painting

Touch-up painting operations where paints/coatings are applied at less than one quart per hour

WASTEWATER

Removal of basic sediment & water from collection/storage systems (i.e., clarifiers)

Water and wastewater treatment and transportation system

Pit, ponds, sumps, or wastewater conveyance facilities

Emissions from skimmer pits, oil/water separators, and maintenance of filter separators

Emissions from the removal of sludge or sediment from pits, ponds, sumps, or wastewater conveyance facilities

Industrial and/or municipal wastewater treatment processes (excluding combustion or incineration equipment), storage silos for dry material (sludges), composting, or grease trap waste handling or treatment

Ozonization process or process equipment including ozone generation for water treatment processes

Sanitary sewerage and storm water runoff collection systems

Emissions from dredging pits, ponds, sumps, or other

wastewater conveyance facilities

WOODWORKING

Wood working (saw-cutting, staining & varnishing)
(noncommercial)

Woodworking utilized for hobby purposes or maintenance of
grounds or buildings

OAC 252:100-8
Oklahoma Register

Blair

Notices of Rulemaking Intent

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must publish a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides other information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained. For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

**TITLE 235. OKLAHOMA STATE BOARD OF EMBALMERS AND FUNERAL DIRECTORS
CHAPTER 10. FUNERAL SERVICES
LICENSING**

[OAR Docket #97-258]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking
Proposed rules:

- 235:10-1. General Provisions (AMENDED)
- 235:10-3. Qualifications and Requirements for Licensure (AMENDED)
- 235:10-5. Licensing Fees (AMENDED)
- 235:10-7. License Renewal, Revocation, and Suspension (AMENDED)
- 235:10-9. Procedures for the Disposition of Complaints (AMENDED)
- 235:10-11. Minimum Standards of Performance (AMENDED)
- 235:10-15. Advertising (AMENDED)

Summary:

Subchapter 1 clarifies the activities and definition of holders of licenses, registration, and certificates. Subchapter 3 clarifies the qualification and requirements for licensure and deletes the requirement of the oral examination. It clarifies the educational requirements for licensure for a funeral director and embalmer. It changes the term Limited Service Establishment to Commercial Embalming Establishment. It changes licensing to registration of individual sellers of pre-need funeral service merchandise and deletes requirement for licensing or registration of telemarketers. Clarifies the terms and scope of apprenticeship.

Sets conditions of Licensee in charge of multiple establishments. Subchapter 5 creates a new category of retired license, it sets fee for registration of pre-need sellers. Subchapter 7 adds failure to comply with the FTC Funeral Rule as gross malpractice, requires all pre-need and at-need funeral contracts contain the name address and phone number of the State Board, required all establishment ot have a copy of the rules and funeral related statutes at the establishment. Subchapter 9 adds the requirement of clear and convincing evidence as the standard of proof for findings of fact and conclusions of law. Subchapter 15 prohibits individual(s) not licensed as a funeral director from using name on funeral establishment or advertising.

AUTHORITY:

Title 59 O.S. Stupp. 1995, Section 395.1 et seq.

COMMENT PERIOD:

Written comments will be accepted until the conclusion of the public hearing on April 10, 1997. Written comments may be delivered to the State Board of Embalmers and Funeral Directors office or may be mailed. Comments may also may be presented orally during the hearing. Mailing Address: State Board of Embalmers and Funeral Directors, 4545 N. Lincoln Blvd., Suite 175, Oklahoma City, OK 73105

PUBLIC HEARING:

Public hearing will be held April 10, 1997 at 9:00 AM in the Lincoln Park Office Plaza, 4545 N. Lincoln Blvd., Burgundy Room, Oklahoma City, OK.

COPIES OF PROPOSED RULES:

Copies of the proposed amendments are available in the offices of the State Board of Embalmers and Funeral Directors.

RULE IMPACT STATEMENT:

A rule impact statement will be prepared and will be available in the Board office on or after April 10, 1997.

CONTACT PERSON:

Terry McEnany, Executive Secretary/Treasurer, State Board of Embalmers and Funeral Directors, 4545 N. Lincoln Blvd., suite 175, Oklahoma City, OK 73105 (405) 525-0158

[OAR Docket #97-258; filed 2-20-97]

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

[OAR Docket #97-259]

INTENDED RULEMAKING ACTION:

Notice of proposed EMERGENCY and PERMANENT rulemaking

Proposed Rules:

- Subchapter 7. Construction Permits for Major and Minor Sources; Operating and Relocation Permits for Minor Sources [AMENDED]
- Subchapter 8. Operating Permits (Part 70) [AMENDED]

Summary:

The proposed amendments to Subchapter 7 are necessary to meet federal permitting requirements for final approval of the Oklahoma Operating Permits Program under Title V of the federal Clean Air Act and 40 CFR part 70 and to incorporate the permit continuum concept into the Air Quality program. The proposed amendments to Subchapter 8 are necessary to meet federal permitting requirements for final approval of the Oklahoma Operating Permits Program under Title V of the federal Clean Air Act and 40 CFR part 70. The following proposed changes were set forth by EPA in the interim approval of the Oklahoma program published in the Federal Register at 61 FR 4220, Monday, February 5, 1996: revise Subchapter 8 definition of "Major Source," revise Subchapter 8 Insignificant Activities Provisions, revise Subchapter 8 Permit Content Language, and revise Subchapter 8 Administrative Amendment Provisions. It is further proposed that inconsistencies in Subchapter 7 and 8 be cured, including requirements for Public Review under Title V. Furthermore, it is proposed that the provisions for major source permitting in Subchapter 7 be moved to Subchapter 8. The Division is requesting comments on these issues.

AUTHORITY:

Environmental Quality Board, 27A O.S. Supp. 1993, §§ 2-2-101 and 2-5-101 *et seq.*, Oklahoma Clean Air Act

COMMENT PERIOD:

Deliver or mail written comments from Tuesday, March 18, 1997, through Tuesday, April 8, 1997, to contact person.

Also scheduled before the Environmental Quality Board at their meeting on Tuesday, June 24, 1997 - 9:30 a.m., in Guymon, Oklahoma (Location to be determined. See contact person.)

PUBLIC HEARINGS:

Tuesday, April 15, 1997 - 9:30 a.m. briefing and 1:00 p.m. hearing, Department of Environmental Quality, Air Quality Division, 4545 N. Lincoln Blvd., Burgundy Room, Oklahoma City, Oklahoma.

COPIES OF PROPOSED RULES:

Copies of the rules will be available March 17, 1997, for review at the Air Quality Division office at the address listed below or may be obtained from the contact person.

RULE IMPACT STATEMENT:

Rule impact statements have been prepared. The rule impact statements may be obtained from the Air Quality Division at the address below.

CONTACT PERSON:

Joyce D. Sheedy, Ph.D., Department of Environmental Quality, Air Quality Division, 4545 N. Lincoln Blvd., Suite 250, Oklahoma City, Oklahoma 73105-3483; (405) 290-8247

ADDITIONAL INFORMATION:

The proposed rulemaking activities for Subchapter 7 and 8 that are necessary to meet federal permitting requirements for final approval of the Oklahoma Operating

Permits Program under Title V of the federal Clean Air Act and 40 CFR part 70 represent a continuation of hearing held on June 11, 1996, in Tulsa, Oklahoma, and August 1996, in Oklahoma City. These changes were held in abeyance at a hearing held on October 15, 1996 in Tulsa, Oklahoma.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 290-8247.

[OAR Docket #97-259; filed 2-21-97]

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 510. MUNICIPAL SOLID WASTE LANDFILLS**

[OAR Docket #97-263]

INTENDED RULEMAKING ACTION:

Notice of proposed EMERGENCY AND PERMANENT rulemaking

Proposed Rules:

- 252:510-21-12. Local government financial test [NEW]
- 252:510-21-13. Discounting [NEW]

Summary:

Proposed 252:510-21-12 adds a financial test as a new financial assurance option for local government owners and operators of municipal solid waste landfills (MSWLFs). The EPA added this option [40 CFR 258.74(f)] as part of its recent amendment of the financial assurance provisions of the Municipal Solid Waste Landfill Criteria under Subtitle D of the Resource Conservation and Recovery Act. (61 FR 60337, November 27, 1996.) Use of the proposed test will allow a local government to use its financial strength to avoid incurring the expenses associated with use of a third-party financial instrument. Proposed 252:510-21-13 is based on new federal provisions [40 CFR 258.75] for the conditional use of discounting in evaluating MSWLFs' closure, post-closure and corrective action costs for which financial assurances must be provided. (61 FR 60339, November 27, 1996.) If approved, discounting would be allowed only up to the rate of return for essentially risk free investments and would require annual computations. Discounting, if approved, would allow a MSWLF owner or operator to reduce his financial assurances required by the estimated growth of the investment over the term of the assurance.

AUTHORITY:

Environmental Quality Board, 27A O.S. Supp. 1995, § 2-2-101, 2-2-201 and 2-10-201

Notices of Rulemaking Intent

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must publish a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides other information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained. For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 2. PROCEDURES OF THE DEPARTMENT OF ENVIRONMENTAL QUALITY

[OAR Docket #97-1189]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking
Proposed rules:

252:2. Procedures of the Department of Environmental Quality Subchapter 15. Uniform Permitting Procedures [AMENDED]

Summary:

The proposed amendments of 252:2-15-40 and 252:2-15-41 result from the U.S. Environmental Protection Agency's (EPA) review of the Department of Environmental Quality's (DEQ) air quality permitting program for Title V. Per EPA request and other comments received, the Air Quality Tier I and II rules of the uniform permitting program are being amended. Amendments include format changes for purposes of clarity and substantive changes to move certain permits from Tier I to Tier II to allow more public participation - e.g., acid rain permits, temporary permits, some operating permits, and general permit authorizations required to have compliance schedules under OAC 252:100-8.

AUTHORITY:

Environmental Quality Board, 27A O.S. Supp. 1993, §§ 2-2-101 and 2-5-101 *et seq.*, Oklahoma Clean Air Act

COMMENT PERIOD:

Deliver or mail written comments from Tuesday, September 15, 1997, through Wednesday, October 15, 1997, to contact person. Also scheduled before the Environmental Quality Board at their meeting on Tuesday, November 18, 1997 - 9:30 a.m., in Oklahoma City, Oklahoma (Location to be determined. See contact person).

PUBLIC HEARINGS:

Before the Air Quality Council on Tuesday, October 21, 1997, 9:30 a.m. briefing and 1:00 p.m. hearing, at the Tulsa City-County Health Department, 4616 East 15th Street, Tulsa, Oklahoma.

COPIES OF PROPOSED RULES:

Copies of the rules will be available September 15, 1997, for review at the Air Quality Division office at the address listed below or may be obtained from the contact person.

RULE IMPACT STATEMENT:

The rule impact statement may be obtained from the Air Quality Division at the address below.

CONTACT PERSON:

Joyce D. Sheedy, Ph.D., Department of Environmental Quality, Air Quality Division, 4545 N. Lincoln Blvd., Suite 250, Oklahoma City, Oklahoma 73105-3483; (405) 290-8247

ADDITIONAL INFORMATION:

None

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 290-8247.

[OAR Docket #97-1189; filed 8-22-97]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #97-1190]

INTENDED RULEMAKING ACTION:

Notice of proposed EMERGENCY and PERMANENT rulemaking

Proposed rules:

Subchapter 5. Registration of Air Contaminant Sources [AMENDED]

Subchapter 7. Construction Permits for Major and Minor Sources; Operating and Relocation Permits for Minor Sources [AMENDED]

Subchapter 8. Operating Permits (Part 70) [AMENDED]

Subchapter 41. Control of Emission of Hazardous and Toxic Air Contaminants [AMENDED]

Summary:

The proposed amendments to Subchapter 5 include moving the requirements to file an emission inventory from Subchapter 7 to Subchapter 5, moving the requirements to pay annual operating fees from Subchapters 7 and 8 to Subchapter 5, and revising the annual operating fees for

minor facilities, non-part 70 sources and part 70 sources. The proposed amendments to Subchapter 5 are designed to simplify and clarify the rules. The proposed amendments to Subchapter 7 are necessary to incorporate a new permit classification system into the Air Quality program. The proposed changes include: remove any requirements for Part 70 sources and major facilities (which will be moved to Subchapter 8); define and exempt "de minimis" facilities from the requirements of Subchapter 7; revise minor permit application fees; and introduce two new types of construction and operating permits, permit by rule and general permit. The proposed amendments to Subchapter 8 are necessary to incorporate a new permit classification system; move the requirements for construction permits for Part 70 sources and major facilities from Subchapter 7 to Subchapter 8; move the requirement to pay annual operating fees from Subchapter 8 to Subchapter 5; and meet the federal permitting requirements for final approval of the Oklahoma Operating Permits Program under Title V of the federal Clean Air Act and 40 CFR Part 70. The proposed amendments include: introduction of general permits for construction of Part 70 sources and major facilities not subject to Part 70 and general permits for operating major sources not subject to Part 70; addition of the requirements for construction permits for Part 70 sources and construction and operating permits for major facilities not subject to Part 70; revision of the permit application fees; deletion of annual operating fees (which will be moved to Subchapter 5); and amendments to meet the requirements for final approval of the Title V program including the incorporation by reference of federal rules governing case-by-case MACT determinations (40 CFR §§63.40, 63.41, 63.43 and 63.44). The following changes were set forth by EPA in the interim approval of the Oklahoma Program published in the Federal Register at 62 FR 4220, Monday, February 5, 1996: (1) Revise Subchapter 8 to Include Transition Schedule; (2) Revise Subchapter 8 definition of "Major Source"; (3) Revise Subchapter 8 Insignificant Activities Provision; (4) Revise Subchapter 8 Permit Content Language; (5) Revise Subchapter 8 Judicial Review Provision; (6) Revise Subchapter 8 Administrative Amendment Provision; and (7) Submission of a SIP Revision for Subchapter 7. The proposed amendments to Subchapter 41 include adopting by reference the existing Maximum Available Control Technology ("MACT") standards for hazardous air pollutants found in 40 CFR Part 63, Subparts F, G, H, I, L, M, N, O, Q, R, T, U, W, X, Y, CC, DD, EE, GG, II, JJ, KK, OO, PP, QQ, RR, VV, JJJ. The Division is requesting comments on these issues.

AUTHORITY:

Environmental Quality Board, 27A O.S. Supp. 1993, §§ 2-2-101 and 2-5-101 *et seq.*, Oklahoma Clean Air Act

COMMENT PERIOD:

Deliver or mail written comments from Tuesday, September 15, 1997, through Wednesday, October 15, 1997, to contact person. Also scheduled before the

Environmental Quality Board at their meeting on Tuesday, November 18, 1997 - 9:30 a.m., in Oklahoma City, Oklahoma (Location to be determined. See contact person).

PUBLIC HEARINGS:

Before the Air Quality Council on Tuesday, October 21, 1997, 9:30 a.m. briefing and 1:00 p.m. hearing, at the Tulsa City-County Health Department, 4616 East 15th Street, Tulsa, Oklahoma.

COPIES OF PROPOSED RULES:

Copies of the rules will be available September 15, 1997, for review at the Air Quality Division office at the address listed below or may be obtained from the contact person.

RULE IMPACT STATEMENT:

The rule impact statements may be obtained from the Air Quality Division at the address below.

CONTACT PERSON:

Joyce D. Sheedy, Ph.D., Department of Environmental Quality, Air Quality Division, 4545 N. Lincoln Blvd., Suite 250, Oklahoma City, Oklahoma 73105-3483; (405) 290-8247.

ADDITIONAL INFORMATION:

The proposed rulemaking activities for Subchapters 5, 7, and 41 represent a continuation of a hearing held on August 19, 1997, in Oklahoma City, Oklahoma.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 290-8247

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 200. HAZARDOUS WASTE MANAGEMENT**

[OAR Docket #97-1191a]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT and EMERGENCY rulemaking

Proposed rules:

252:200-3-1 [AMENDED]

252:200-3-2 [AMENDED]

252:200-9-7(b)(1) [AMENDED]

252:200-19-29 through 252:200-19-34 [AMENDED]

Summary:

The proposed amendment to 252:200-3-1 changes the "Reference to 40 CFR" Section of Subchapter 3, to allow the State of Oklahoma to continue to implement a hazardous waste management program in Oklahoma in lieu of the United States Environmental Protection Agency. The Section 3-1 amendment will update the reference of 40

Department of Environmental Quality, Air Quality Division, 4545 N. Lincoln Blvd., Burgundy Room, Oklahoma City, Oklahoma.

COPIES OF PROPOSED RULES:

Copies of the rules will be available November 17, 1997, for review at the Air Quality Division office at the address listed below or may be obtained from the contact person.

RULE IMPACT STATEMENT:

The rule impact statement may be obtained from the Air Quality Division at the address below.

CONTACT PERSON:

Joyce D. Sheedy, Ph.D., Department of Environmental Quality, Air Quality Division, 4545 N. Lincoln Blvd., Suite 250, Oklahoma City, Oklahoma 73105-3483; (405) 290-8247.

ADDITIONAL INFORMATION:

The proposed rulemaking activities for 252:2-15-40 and 41 represent a continuation of a hearing held on October 21, 1997, in Tulsa, Oklahoma.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 290-8247.

[OAR Docket #97-1271; filed 10-24-97]

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

[OAR Docket #97-1272]

INTENDED RULEMAKING ACTION:

Notice of proposed EMERGENCY and PERMANENT rulemaking

PROPOSED RULES:

- 252:100. Air Pollution Control
- Subchapter 5. Registration of Air Contaminant Sources [AMENDED]
- Subchapter 8. Operating Permits (Part 70) [AMENDED]
- Subchapter 17. Incinerators [AMENDED]

SUMMARY:

In Subchapter 5 at 252:100-5-2.2(b)(2), it is proposed to review the annual operating fees for Part 70 sources. The proposed amendments to Subchapter 8 are necessary to incorporate a new permit classification system; move the requirements for construction permits for Part 70 sources and major facilities from Subchapter 7 to Subchapter 8; move the requirement to pay annual operating fees from Subchapter 8 to Subchapter 5; and meet the federal requirements for final approval of the Oklahoma Operating Permits Program under Title V of the federal Clean Air Act and 40 CFR Part 70. The proposed amendments include: introduction of general permits for construction of Part 70

sources and major facilities not subject to Part 70 and general permits for operating major sources not subject to Part 70; addition of the requirements for construction permits for Part 70 sources and construction and operating permits for major facilities not subject to Part 70; revision of the permit application fees; deletion of annual operating fees (which will be moved to Subchapter 5); and amendments to meet the requirements for final approval of the Title V program including the incorporation by reference of federal rules governing case-by-case MACT determinations (40 CFR §§63.40, 63.41, 63.43 and 63.44). The following changes were set forth by EPA in the interim approval of the Oklahoma program published in the Federal Register at 62 FR 4220, Monday, February 5, 1996: (1) Revise Subchapter 8 to Include Transition Schedule; (2) Revise Subchapter 8 definition of "Major Source"; (3) Revise Subchapter 8 Insignificant Activities Provision; (4) Revise Subchapter 8 Permit Content Language; (5) Revise Subchapter 8 Judicial Review Provision; (6) Revise Subchapter 8 Administrative Amendment Provision; and (7) Submission of a SIP Revision for Subchapter 7. It is proposed to amend Subchapter 17 by adding a new Part 5 and a new Appendix K to address Municipal Waste Combustors (MWC). This amendment is necessary to meet federal requirements for State plans under Section 111(d) of the federal Clean Air Act applicable to existing sources. This change would adopt standards published on December 19, 1995, in the Federal register at 40 CFR 60, Subpart Cb and amended on August 25, 1997. These standards would apply to MWC units with the capacity to combust more than 250 tons per day of municipal solid waste. In addition, the existing portions of Subchapter 17 are revised and redesignated as Part 1, General Provisions, and Part 3, Incinerators. Proposed revisions include deletion of references to Ringelmanh standards and substitution of relative opacity. Revisions were also made to Appendices A and B for reasons of simplification. The Division is requesting comments on these issues.

AUTHORITY:

Environmental Quality Board, 27A O.S. Supp. 1993, §§ 2-2-101 and 2-5-101 *et seq.*, Oklahoma Clean Air Act

COMMENT PERIOD:

Monday, November 17, 1997, through Tuesday, December 16, 1997. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by Wednesday, December 10, 1997. Also scheduled before the Environmental Quality Board at their meeting on Tuesday, January 27, 1998 - 9:30 a.m. [Location to be determined. See contact person.]

PUBLIC HEARINGS:

Before the Air Quality Council on Tuesday, December 16, 1997, 9:30 a.m. briefing and 1:00 p.m. hearing, at the Department of Environmental Quality, Air Quality Division, 4545 N. Lincoln Blvd., Burgundy Room, Oklahoma City, Oklahoma.

[OAR Docket #97-1272; filed 10-24-97]

TITLE 317. OKLAHOMA HEALTH CARE AUTHORITY CHAPTER 2. GRIEVANCE PROCESS AND PROCEDURES

[OAR Docket #97-1278]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking
Proposed rules:

OAC 317:2-1-2.1 through 317:2-1-2.2 [AMENDED]
(Reference APA WF # 97-13)

SUMMARY:

Grievance Procedures and Process rules are revised to more accurately reflect the intent of the agency's grievance rules. The agency adopted rules on 2-19-97 which provide a wage and salary adjustment to long term care facilities. However, current rules do not specify the process for a facility to appeal an agency decision to recoup monies paid when the monies have not been used for the purpose intended, as allowed by agency rules. Revisions are needed to include the appeal process in the rules. Other revisions are needed to revise the process for non-payment or denial of provider claims. Current rules allow complaints regarding non-payment or denial of claims to be heard by the agency's Reimbursement Appeals Committee. This committee assures that payments are made equitably and within federal and state guidelines. Revised rules delete the requirement for a formal Level I proceeding hearing for complaints regarding claims payments to providers. Federal law does not require the formal hearing. Further

revisions are needed to allow for a process to reschedule a hearing on the basis of good cause. When an individual has duly exercised their rights and a hearing set, current rules do not address situations when the person does not appear for the hearing but later shows the absence was clearly beyond the person's control. Revised rules will allow the Administrative Law Judge to reschedule the hearing when good cause does exist.

AUTHORITY:

Oklahoma Health Care Authority Board; The Oklahoma Health Care Authority Act, Section 5003 through 5016 of Title 63 of Oklahoma Statutes

COMMENT PERIOD:

Written and oral comments will be accepted through December 8, 1997 during regular business hours by contacting Joanne Terlizzi, Oklahoma Health Care Authority, 4545 N. Lincoln Blvd., Suite 124, Oklahoma City, Oklahoma, 73105, Telephone 405-530-3272.

PUBLIC HEARING:

No public hearing is scheduled at this time but will be scheduled if a written request is submitted to the contact person listed above by 1) at least twenty-five persons, 2) a political subdivision, 3) an agency, or 4) an association having not less than twenty-five members.

COPIES OF PROPOSED RULES:

Copies of proposed rules may be obtained for review by contacting the above listed contact person.

RULE IMPACT STATEMENT:

Copies of the Rule Impact Statement may be obtained for review by contacting the above listed person.

CONTACT PERSON:

For information regarding processing of proposed rulemaking contact Joanne Terlizzi at 405-530-3272.

Permanent Final Adoptions

majority is required for approval or that the margin between the votes for the issue and the number required for approval when more than a majority is required for approval is narrow enough to allow a recount. See 230:45-3-33. If the margin is narrow enough to allow a recount, the County Election Board shall not certify the results of the question election until after the close of the contest period at 5 p.m. on the Friday following the election. [26:8-109] If the margin is not close enough to allow a recount, the County Election Board may certify the results of the question on election night as outlined in 230:35-3-91.

SUBCHAPTER 7. FRAUD AND IRREGULARITIES

230:45-7-2.1. Allegations of fraud or irregularities involving two or more counties

(a) Petitions filed with State Election Board. When a petition alleging fraud or irregularities in two or more counties in an election for a state legislative, or Congressional office is filed with the Secretary of the State Election Board, the Secretary shall notify the Supreme Court. The Supreme Court shall assign a single judge to hear the petition and to determine the issue for all the counties affected by the petition. [26:8-121.1]

(b) Petitions filed with County Election Board. When a petition alleging fraud or irregularities in two or more counties in an election for a multi-county school district or municipality is filed with the Secretary of the parent County Election Board, the Secretary shall schedule the hearings for all the counties affected by the petition. [26:8-121.1] See 230:45-7-1(b) and 230:45-7-2(b).

Submitted to House:

March 26, 1998.

Submitted to Senate:

March 26, 1998.

Gubernatorial approval:

May 8, 1998.

Legislative approval:

Failure of the Legislature to disapprove the rules resulted in approval on May 21, 1998.

Final adoption:

May 21, 1998.

Effective:

June 25, 1998.

SUPERSEDED EMERGENCY ACTIONS:

None.

INCORPORATIONS BY REFERENCE:

None for Subchapters 5 and 7. For Subchapter 8:

Incorporated standards:

40 CFR §§ 63.41, 63.43, 63.44; 40 CFR Part 72.

Incorporating rule:

252:100-8-4(a)(2)(C); 252:100-8-6.3(h).

Availability:

The standards are available to the public for examination at the Department of Environmental Quality office at 707 N. Robinson, 4th Floor, Oklahoma City, Oklahoma.

ANALYSIS:

The changes to Subchapter 5 simplify and clarify the rule. Requirements to file an emission inventory moved from Subchapter 7 to Subchapter 5 and were revised. Also, requirements to pay annual operating fees moved from Subchapters 7 and 8 to Subchapter 5. The annual operating fees for minor facilities and non-part 70 sources were revised.

The changes to Subchapter 7 simplify and clarify the rule. Also, a new permit classification system is incorporated into the subchapter according to the environmental impact, emission levels, and source categories here in Oklahoma. Other changes include removing any requirements for Part 70 and major sources (which will be moved to Subchapter 8); defining and exempting "de

minimis" facilities from the requirements of Subchapter 7; revising minor permit application fees; and introducing two new types of construction and operating permits, permit by rule and general permit.

The changes in Subchapter 8 incorporate a new permit classification system, move the requirement to pay annual operating fees from Subchapter 8 to Subchapter 5, move the requirements for construction permits for Title V sources from Subchapter 7 to Subchapter 8, make corrections to meet the federal requirements for final approval of the Oklahoma Operating Permit Program under Title V of the Federal Clean Air Act and 40 CFR Part 70, adopt by reference the federal rules governing case-by-case MACT determinations found in 40 CFR §§63.41, 63.43 and 63.44 as they exist on July 1, 1997, and update the adoption of 40 CFR 72 by adopting the provisions published in the Federal Register on October 24, 1997.

The Air Quality Advisory Council recommended these amendments for adoption at their meeting on January 9, 1998.

SUMMARY OF DIFFERENCES FROM ANALOGOUS FEDERAL RULES:

None.

CONTACT PERSON:

For Subchapters 5 and 7: Jeanette Buttram, Department of Environmental Quality, Air Quality Division, 707 N. Robinson, 4th floor, Oklahoma City, Oklahoma 73102. (405) 702-4100.

For Subchapter 8: Joyce D. Sheedy, Ph.D., Department of Environmental Quality, Air Quality Division, 707 N. Robinson, 4th floor, Oklahoma City, Oklahoma 73102. (405) 702-4100.

DUE TO THE EXCESSIVE LENGTH OF THESE RULES (AS DEFINED IN OAC 655:10-7-12), THE FULL TEXT OF THESE RULES WILL NOT BE PUBLISHED. THE RULES ARE AVAILABLE FOR PUBLIC INSPECTION AT DEPARTMENT OF ENVIRONMENTAL QUALITY, 707 N. ROBINSON, FOURTH FLOOR, OKLAHOMA CITY, OKLAHOMA 73102 AND AT THE OFFICE OF ADMINISTRATIVE RULES, SECRETARY OF STATE, WILL ROGERS BUILDING, 2ND FLOOR NORTH, OKLAHOMA CITY, OKLAHOMA 73105. THE FOLLOWING SUMMARY HAS BEEN PREPARED PURSUANT TO 75 O.S., § 255(B):

Subchapters 5, 7, and 8 of the Air Pollution Control rules have been simplified and clarified. To assist in this effort, certain rules were moved from one subchapter to another. For example, requirements to file emission inventory reports were moved from Subchapter 7 to Subchapter 5. The annual operating fees, which are calculated based on the emission inventory reports, were moved from Subchapters 7 and 8 to Subchapter 5. The construction permit requirements and application fee rules for Part 70 sources have been moved from Subchapter 7 to Subchapter 8.

Other revisions to Subchapter 5 involve changing the fees for non-Part 70 sources from a stepped schedule to a flat rate of \$10.00 per ton.

Subchapter 7 was also amended to incorporate the Department's permit continuum. The continuum provides for 1) *de minimis* facilities, which emit less than five tons per year of any regulated pollutant and which are not required to obtain a permit; 2) permit-by-rule facilities, which emit less than 40 tons per year of any regulated pollutant and which belong to an industry group for which a rule has been promulgated; 3) general permit facilities, which emit 40 tons per year or more of any regulated pollutant and which belong to an industry group for which a general permit has been issued; and 4) individual permit facilities, which are not eligible for any of the

previous permit categories and must, therefore, apply for individual permits. In addition, the permit application fees were revised to reflect the new permit categories. The purpose of revising the fees was not to increase them, but to reapportion them according to the new permit categories.

The construction permit rules now in Subchapter 8 contain one new requirement: Federal regulations (40 CFR §§ 63.41, 63.43 and 63.44) concerning case-by-case determinations of maximum achievable control technology ("MACT") standards were incorporated by reference. In promulgating these rules, the State has adopted a program to implement section 112(g) of the Federal Clean Air Act with respect to construction or reconstruction of major sources of hazardous air pollutants. The permit fee rules in Subchapter 8 establish a new fee of \$900.00 for authorizations under general permits. Other new additions to the Part 70 permit rules include definitions for "insignificant activities" and "trivial activities" and additional rules for general permits. The latter rules explain how authorizations are obtained, revised, and renewed. Subchapter 8 rules were also revised to make changes required by the U. S. Environmental Protection Agency in order for Oklahoma to obtain final approval of its Part 70 operating permit program.

The full text of the rule may be obtained from Department of Environmental Quality, Air Quality Division, 707 N. Robinson, 4th Floor, Oklahoma City, Oklahoma 73102.

Notices of Rulemaking Intent

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must publish a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides other information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained.

For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-1358]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rule

PROPOSED RULES:

- Subchapter 5. Registration, Emission Annual Operating Fees [AMENDED]
- Subchapter 7. Permits for Minor Sources [AMENDED]
- Subchapter 8. Permits for Part 70 Sources [AMENDED]
- Subchapter 23. Control of Emissions from Cotton Gins [AMENDED]
- Subchapter 24. Control of Emissions from Grain Elevators [AMENDED]
- Appendix L. PM-10 Emission Factors for Permit by Rule for Grain Elevators [NEW]
- Subchapter 25. Smoke, Visible Emissions and Particulates [AMENDED]
- Subchapter 37. Control of Emission of Organic Materials [AMENDED]
- Subchapter 39. Emission of Organic Materials in Nonattainment Areas [AMENDED]
- Subchapter 41. Control of Emission of Hazardous and Toxic Air Contaminants [AMENDED]

SUMMARY:

In Subchapter 5, the Department is considering possible increases in annual operating fees for both minor facilities and Part 70 sources.

The proposed revisions to Subchapter 7 will modify language applicable to de minimis facilities, Permit by Rule (PBR), and general permits. First, actual emissions of Total Suspended Particulates (TSP) will no longer be counted in determining whether a facility meets the definition of "de minimis facility." Second, the proposed revisions will delete the lower limit of 5 tons per year for PBR facilities. This will allow those facilities with less than 5 tons per year emissions, which are subject to New Source Performance Standards (NSPS) or National Emissions Standards for Hazardous Air Pollutants (NESHAP), to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a

PBR for specific facilities will be referenced under this new Part also. Third, the proposed revisions will delete the lower limit for general permits. This will allow facilities that may have less than 40 tons per year of emissions, but for which no PBR is written, the opportunity to apply for coverage under a general permit. The Department also will delete the definition for "Volatile Organic Compound (VOC)," because the proposed changes to Subchapter 25 and 39 would exclude that term from the

The Department is considering increases in the permit fees for both Subchapters 7 and 8.

The proposed revisions to Subchapters 23 and 24 would clarify the language under the agency-wide re-write/de-wrong initiative. It is also proposed to add a new PBR section to both subchapters. The PBR will streamline the permitting process by creating a mechanism that will eliminate the necessity for some cotton gins and elevators to obtain an individual air quality permit. Also, a new Appendix L is proposed which contains PM-10 emission factors for PBR grain elevators. Additional changes to both subchapters follow a proposed amendment of Subchapter 25 concerning short-term exceedances of the opacity standard. The revised rules would allow such exceedances during one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours.

The proposed amendments to Subchapter 25 would fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the Department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P. Additionally, the Department proposes to exempt from Appendix P requirements those sources already subject to a new source performance standard and sources scheduled for retirement within 5 years after the amended rule takes effect. The amended rule would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include exempting sources subject to opacity standards promulgated under Section 111 of the Federal Clean Air Act, along with a clarification of how the opacity standard will be determined at sources that have CEMs and how it will be determined at sources without CEMs. Other

proposed amendments to Subchapter 25 are designed to simplify and clarify the rule.

The proposed changes to Subchapters 37 and 39 include clarification of language, correction of typographical errors, deletion of redundant language, and reformatting. Three substantive changes are proposed for each Subchapter. One of those substantive changes affects both Subchapter 37 and 39. The definition of "volatile organic compounds (VOC)" in 252:100-37-2 and 252:100-39-2 has been revised in response to the Air Quality Council's direction to the staff to review the petition from the Chemical Manufacturers Association dated October 25, 1995, to exclude acetone from the definition of VOC; the request from American Airlines, Boeing, and Nordam, dated January 19, 1998, that acetone be excluded from the definition of VOC; a request dated April 21, 1997, from the Halogenated Solvents Industry Alliance, requesting that perchloroethylene be excluded from the definition of VOC; a request from Dow Corning that methylated siloxanes be excluded from the definition of VOC; and a request on behalf of the Eastman Chemical Company dated August 18, 1998, that methyl acetate be excluded from the definition of VOC. The definition of VOC has been modified to be consistent with the EPA definition. The second substantive change to Subchapter 37 is the removal of the requirement for permits and best available control technology (BACT) for new sources of VOC contained in 252:100-37-3(a). The third substantive change for Subchapter 37 deals with the first sentence in 252:100-37-36 regarding fuel-burning and refuse-burning equipment, which has been deleted to resolve the contradiction between the first and second sentences. The second substantive change to Subchapter 39 is the correction of the placement of "prior to lease custody transfer" in 252:100-39-30(b)(2). The third substantive change is the addition of a minimum annual throughput of 120,000 gallons and a minimum storage capacity of 2,000 gallons to 252:100-39-41(c) to determine applicability of subsection (c). In addition, the Department is requesting comments on 252:100-39-47, Control of VOS Emissions from Aerospace Industries Coatings Operations. Options include (1) retain the present (ARACT) rule and enforce the emissions reduction plan specified therein; (2) repeal the present rule and promulgate new rules regulating specialty coatings; or (3) retain the present plan, promulgate new rules for specialty coatings, and allow the facility to choose which of the two they prefer. These options recognize that the new NESHAP for the aerospace industry controls VOC emissions except for specialty coatings. The proposed amendments to Subchapter 41 include adopting by reference the Maximum Available Control Technology (MACT) standards for hazardous air pollutants that have been promulgated in 40 CFR 63 from July 1, 1997, through July 1, 1998. These are Subparts S and LL. The Department is also updating in Subchapter 41 the incorporation by reference of the NESHAP found in 40

CFR 61 to July 1, 1998. The Department is requesting comments on these proposed changes.

COMMENT PERIOD:

Tuesday, September 15, 1998, through Tuesday, October 20, 1998. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by Tuesday, October 13, 1998

Also scheduled before the Environmental Quality Board at their meeting on Tuesday, November 10, 1998 - 9:30 a.m. in Poteau (Location to be determined. See contact person)

PUBLIC HEARINGS:

Tuesday, October 20, 1998 - 9:30 a.m. briefing and 1:00 p.m. hearing, at the Tulsa City-County Health Department, 5051 South 129th East (Northeast corner of 51st and 129th), Tulsa, Oklahoma

COPIES OF PROPOSED RULES:

Copies of the rules will be available September 15, 1998, for review at the Air Quality Division office at 707 North Robinson, Suite 4100, Oklahoma City, Oklahoma, 73102, or may be obtained from Myrna Bruce at 405-702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statements may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Shawna McWaters-Khalousi (Subchapters 5 and 8), Michelle Martinez (Subchapter 24), Jeanette Buttram (Subchapters 7 and 25), Becky Mainord (Subchapter 23), Joyce Sheedy, Ph.D. (Subchapters 37, 39 and 41). Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

ADDITIONAL INFORMATION:

Additional proposed revisions have been made to the versions of Subchapters 7, 23, 24, 25, 37 and 39 that were the subject of a public hearing on August 18, 1998.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #98-1358; filed 8-26-98]

Notices of Rulemaking Intent

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must publish a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides other information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained. For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-1473]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

PROPOSED RULES:

Subchapter 5. Registration, Emission Inventory and Annual Operating Fees

252:100-5-2.2 [AMENDED]

Subchapter 7. Permits for Minor Facilities [AMENDED]

Subchapter 8. Permits for Part 70 Sources

252:100-8-1.7 [AMENDED]

252:100-8-4 [AMENDED]

Subchapter 37. Control of Emission of Organic Materials [AMENDED]

Subchapter 39. Emission of Organic Materials in Nonattainment Areas [AMENDED]

SUMMARY:

The Department is proposing to amend 252:100-5-2.2 to increase annual operating fees for minor facilities and to include a provision for state appropriations and federal grants to be used to offset annual operating fees assessed to minor facilities. The Department is also proposing to increase the base annual operating fee for Part 70 sources.

The proposed revisions to Subchapter 7 will modify language applicable to de minimis facilities, Permit by Rule (PBR), and general permits. First, actual emissions of Total Suspended Particulates (TSP) will no longer be counted in determining whether a facility meets the definition of "de minimis facility." Second, the proposed revisions will delete the lower limit of 5 tons per year for PBR facilities. This will allow those facilities with less than 5 tons per year emissions, which are subject to New Source Performance Standards (NSPS) or National Emissions Standards for Hazardous Air Pollutants (NESHAP), to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a PBR for specific facilities will be referenced under this new Part also. Third, the proposed revisions will delete the lower limit for general permits. This will allow facilities that may have less than 40 tons per year of emissions, but for which no

PBR has been written, the opportunity to apply for coverage under an applicable general permit.

The Department is also proposing to amend 252:100-7-3 to increase fees for minor facilities for applicability determinations, relocation permits, and applications for individual permits.

The Department is proposing amendments to 252:100-8-1.7 to increase applicability determination fees for Part 70 Sources. In addition, it is proposed that 252:100-8-4(a)(2) be amended to update the incorporation by reference of 40 CFR 63.41, 63.43, and 63.44 to July 1, 1998.

The proposed changes to Subchapters 37 and 39 include clarification of language, correction of typographical errors, deletion of redundant language, and reformatting. Substantive changes are proposed for each subchapter. One of those substantive changes affects both Subchapter 37 and 39. The definition of "volatile organic compounds (VOC)" in 252:100-37-2 and 252:100-39-2 has been revised in response to the Air Quality Council's direction to the staff to review the petition from the Chemical Manufacturers Association dated October 25, 1995, to exclude acetone from the definition of VOC; a request from American Airlines, Boeing, and Nordam, dated January 19, 1998, to exclude acetone from the definition of VOC; a request from the Halogenated Solvents Industry Alliance dated April 21, 1997, to exclude perchloroethylene from the definition of VOC; a request from Dow Corning to exclude methylated siloxanes from the definition of VOC; and a request on behalf of the Eastman Chemical Company dated August 18, 1998, to exclude methyl acetate from the definition of VOC. The definition of VOC has been modified to be consistent with the EPA definition. The second substantive change to Subchapter 37 is the removal of the requirement for permits and best available control technology (BACT) for new sources of VOC contained in 252:100-37-3(a). The third substantive change for Subchapter 37 deals with the first sentence in 252:100-37-36 regarding fuel-burning and refuse-burning equipment, which has been deleted to resolve the contradiction between the first and second sentences. The fourth substantive change to Subchapter 37 will be the addition of a new Part 9, Permit by Rule for Volatile Organic Compound Storage and Loading Facilities. The second substantive change to Subchapter 39 is the correction of the placement of "prior to lease custody transfer" in 252:100-39-30(b)(2). The third substantive

BM

change is the addition of a minimum annual throughput of 120,000 gallons and a minimum storage capacity of 10,000 gallons to 252:100-39-41(c) to determine the applicability of subsection (c).

AUTHORITY:

Environmental Quality Board; 27A O.S.Supp. 1997, §§ 2-2-101 and 2-5-101, *et seq.*

COMMENT PERIOD:

Written comments on proposed amendments to 252:100-5-2.2, 252:100-7-3, and 252:100-8-1.7 will be accepted until December 8, 1998. Oral comments may be made at the December 15, 1998 hearing.

Comments on all other proposed amendments and new rules included in this notice will be accepted beginning Monday, November 16, 1998, through Tuesday, December 15, 1998. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by Tuesday, December 8, 1998.

Also scheduled before the Environmental Quality Board (Date and location to be determined. See contact person.)

PUBLIC HEARINGS:

Tuesday, December 15, 1998 - 9:30 a.m. briefing and 1:00 p.m. hearing, at the Lincoln Plaza, 4545 N. Lincoln Blvd., Burgundy Room, Oklahoma City, Oklahoma

COPIES OF PROPOSED RULES:

Copies of the rules will be available November 16, 1998, for review at the Air Quality Division office at 707 North Robinson, Suite 4100, Oklahoma City, Oklahoma, 73102, or may be obtained from Myrna Bruce at 405-702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statements may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Shawna McWaters-Khalousi (252:100-5-2.2, 252:100-7-3, and 252:100-8-1.7), Jeanette Buttram (Subchapter 7 except 252:100-7-3), and Joyce Sheedy (252:100-8-4 and Subchapters 37 and 39), Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

[OAR Docket #98-1473; filed 10-23-98]

**TITLE 330. OKLAHOMA HOUSING FINANCE AGENCY
CHAPTER 55. HOME INVESTMENTS
PARTNERSHIP PROGRAM RULES**

[OAR Docket #98-1472]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

PROPOSED RULES:

- 330:55-1-1 through 330:55-1-7 [NEW]
- 330:55-3-1 through 330:55-3-6 [NEW]
- 330:55-5-1 through 330:55-5-2 [NEW]
- 330:55-7-1 through 330:55-7-5 [NEW]

SUMMARY:

The Board of Trustees of the Oklahoma Housing Finance Agency (OHFA) a public trust, have in compliance with Title II of the Cranston-Gonzalez National Affordable Housing Act, as amended and codified at 42 U.S.C. 12701-12839; and 24 CFR Part 92, Section 92.1, *et seq.* (Title II) adopted OHFA's Chapter 55, HOME Investments Partnership Program Rules (the Rules) for use in the allocation and issuance of HOME Program funds throughout the state of Oklahoma.

The Rules provide guidelines which OHFA follows in allocating HOME funds pursuant to Title II and are intended to provide a description of the procedures to be followed by applicants for evaluating and prioritizing applications. The Rules also provide an overview of Title II and other federal regulations which govern the administration of the HOME Program.

AUTHORITY:

These Chapter 55 rules are authorized by the Trustees of The Oklahoma Housing Finance Agency (OHFA), the Amended Trust Indenture of OHFA, and the Bylaws of OHFA.

COMMENT PERIOD:

Written comments will be accepted November 16, 1998 through December 16, 1998. Comments should reference the section of the rules addressed and be sent to Oklahoma Housing Finance Agency, P.O. Box 26720, Oklahoma City, Oklahoma 73126-0720, Attn: Byron Debruler.

PUBLIC HEARING:

The following public hearing will be held: December 8, 1998, at 10:00 a.m. at the offices of OHFA, 1140 N. W. 63rd Oklahoma City, OK in the 4th floor conference room. All interested persons are invited to attend and present their views.

COPIES OF PROPOSED RULES:

Copies of the proposed Rules may be obtained by contacting Byron Debruler, at OHFA, 1140 Northwest 63rd, P. O. Box 26720, Oklahoma City, Oklahoma 73126-0720, 405-848-1144 Ext. 314. There will be a \$5.00 per copy charge.

[OAR Docket #98-1685; filed 12-17-98]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-1721]

RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

RULES:

- 252:100. Air Pollution Control
- Subchapter 5. Registration, Emission Inventory and Annual Operating Fees
- 252:100-5-2.2 [AMENDED]
- Subchapter 7. Permits for Minor Facilities [AMENDED]
- Subchapter 8. Permits for Part 70 Sources
- 252:100-8-1.7 [AMENDED]
- 252:100-8-4 [AMENDED]

SUMMARY:

The Department is proposing to amend 252:100-5-2.2 to increase annual operating fees for minor facilities and the base annual operating fee for Part 70 sources.

The proposed revisions to Subchapter 7 will modify language applicable to de minimis facilities, Permit by Rule (PBR), and general permits. First, actual emissions of Total Suspended Particulates (TSP) will no longer be counted in determining whether a facility meets the definition of "de minimis facility." Second, the proposed revisions will delete the lower limit of five (5) tons per year for PBR facilities. This will allow those facilities with less than five (5) tons per year emissions which are subject to New Source Performance Standards (NSPS) or National Emissions Standards for Hazardous Air Pollutants (NESHAP) to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a PBR for specific facilities will be referenced under this new Part 9 also. Third, the proposed revisions will delete the lower limit for general permits. This will allow facilities that may have less than 40

tons per year of emissions, but for which no PBR has been written, the opportunity to apply for coverage under an applicable general permit.

The Department is also proposing to amend 252:100-7-3 to increase fees for minor facilities for applicability determinations, relocation permits, and applications for individual permits.

The Department is proposing amendments to 252:100-8-1.7 to increase applicability determination fees for Part 70 sources. In addition, it is proposed that 252:100-8-4(a)(2) be amended to update the incorporation by reference of 40 CFR 63.41, 63.43, and 63.44 to July 1, 1998.

AUTHORITY:

Environmental Quality Board; 27A O.S. Supp. 1998, §§ 2-2-101 and 2-5-101, *et seq.*

COMMENT PERIOD:

The comment period through December 8, 1998 was published in the November 16, 1998 Oklahoma Register for the Air Quality Advisory Council meeting held on December 15, 1998.

PUBLIC HEARINGS:

Previously held before the Air Quality Advisory Council on December 15, 1998.

However, oral comments may be made at the meeting of the Environmental Quality Board, March 5, 1999, 9:30 a.m., at the Association of County Commissioners of Oklahoma, 429 NE 50th Street, Oklahoma City, Oklahoma.

COPIES OF PROPOSED RULES:

Copies of the rules are available for review at the Air Quality Division office at 707 N. Robinson, Suite 4100, Oklahoma City, Oklahoma, 73102, or may be obtained from Myrna Bruce at (405) 702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statements may be obtained from the Air Quality Division.

CONTACT PERSON:

Shawna McWaters-Khalousi (252:100-5-2.2, 252:100-7-3, and 252:100-8-1.7), Jeanette Buttram (Subchapter 7 except 252:100-7-3), and Joyce Sheedy (252:100-8-4), Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100

ADDITIONAL INFORMATION:

None

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #98-1721; filed 12-22-98]

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

[OAR Docket #98-1722]

RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

RULES:

252:100. Air Pollution Control

Subchapter 37. Control of Emission of Organic Materials [AMENDED]

Subchapter 39. Emission of Organic Materials in Nonattainment Areas [AMENDED]

SUMMARY:

The proposed changes to Subchapters 37 and 39 include clarification of language, correction of typographical and grammatical errors, deletion of redundant language, and reformatting. Substantive changes are proposed for each subchapter. One of these changes affects both Subchapters. The definition of Volatile Organic Compound (VOC) has been modified in both subchapters to be consistent with the definition used by the Environmental Protection Agency. The substantive changes to Subchapter 37 are: the removal of the requirement for Best Available Control Technology (BACT) for all new sources of VOC in 252:100-37-3(a); the addition of 252:100-37-16(c), exempting loading facilities that are subject to 40 CFR 60, Subparts K, Ka and Kb; the addition of 252:100-37-25(c), exempting loading facilities that are subject to 40 CFR 60, Subpart XX, and 40 CFR 63, Subpart R; the deletion of 252:100-37-36, regarding fuel-burning and refuse-burning equipment, to resolve the contradiction between the first and second sentences; the addition of 252:100-37-38(b), exempting pumps and compressors that are subject to the equipment leak standards in 40 CFR 60, Subparts VV, GGG and KKK; and the addition of a new Part 9, Permit by Rule for Volatile Organic Compound Storage and Loading Facilities. The substantive changes to Subchapter 39 are: the correction of the placement of the phrase "prior to lease custody transfer" in 252:100-39-30(b)(2), the deletion of requirements in Part 3 regarding petroleum refinery operations which were made redundant by new federal requirements, and the addition of a minimum annual throughput of 120,000 gallons and a minimum storage capacity of 10,000 gallons to 252:100-39-41(c) for the determination of applicability of subsection (c).

AUTHORITY:

Environmental Quality Board; 27A O.S. Supp. 1998, §§ 2-2-101 and 2-5-101, *et seq.*

COMMENT PERIOD:

Written comments on the proposed amendments to 252:100-37 and 252:100-39 will be accepted until February 10, 1999. Oral comments may be made at the Air Quality Advisory Council hearing, February 17, 1999.

PUBLIC HEARINGS:

Air Quality Advisory Council meeting will be Wednesday, February 17, 1999 - 9:30 a.m. briefing and p.m. hearing, at the Department of Environmental Quality, Room 101, 707 North Robinson, Oklahoma City, Oklahoma

Subchapter 252:100-37 and 252:100-39 are also scheduled to be heard by the Environmental Quality Board on Friday, March 5, 1999, 9:30 a.m., at the Association of County Commissioners of Oklahoma, 429 NE 50th Street, Oklahoma City, Oklahoma.

COPIES OF PROPOSED RULES:

Copies of the rules will be available January 15, 1999, for review at the Air Quality Division office at 707 North Robinson, Suite 4100, Oklahoma City, Oklahoma, 73102, or may be obtained from Myrna Bruce at (405) 702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statements may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Joyce Sheedy, Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100

ADDITIONAL INFORMATION:

Additional proposed revisions have been made to the versions of Subchapters 37 and 39 that were the subject of the public hearing on December 15, 1998.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

Permanent Final Adoptions

permitting requirements in this Chapter if it meets the requirements of 100-7-15(b)(1) and this Part.

(b) General requirements.

(1) To construct or operate a facility under a permit by rule, the owner or operator should submit a letter to the Division requesting registration under the appropriate permit by rule. The letter must contain written certification by the owner or operator that the facility will be constructed or operated in compliance with such permit by rule. A construction or operating permit application fee, as specified in 252:100-7-3, must accompany the letter.

(2) In accordance with the requirements of Subchapter 5, an emission inventory shall be submitted to the DEO every year, except that facilities emitting 5 tons per year or less of each regulated pollutant are required to submit an emission inventory once every 5 years. No other reporting requirements shall apply unless required by NSPS in Subchapter 4 or NESHAP in Subchapter 41.

(3) Compliance inspections will be conducted by the DEO in response to complaints and on a random basis.

(4) Any change that would cause a facility to no longer qualify for a permit by rule will require the owner or operator to apply for an individual or, if applicable, general permit.

(c) **Registration.** After receiving the appropriate application fee and certification, the DEO will acknowledge in writing that the facility is registered to construct or operate under the specified permit by rule. No facility may be constructed or operated under a permit by rule until DEO issues written acknowledgement of the registration.

INCORPORATIONS BY REFERENCE:

Incorporated standards:

40 CFR 63.41, 40 CFR 63.43, and 40 CFR 63.44

Incorporating rules:

252:100-8-4(a)(2)(C)

Availability:

The standards are available to the public for examination at the Department of Environmental Quality office at 707 North Robinson, 4th Floor, Oklahoma City, Oklahoma

ANALYSIS:

The change to 252:100-8-1.7 will increase the fee for applicability determinations from \$100 to \$250. This fee change is consistent with the proposed applicability determination fee increase proposed in Subchapter 7.

The change to 252:100-8-4(a)(2)(C) updates the adoption by reference of the requirements for case-by-case MACT determinations contained in 40 CFR 63.41, 40 CFR 63.43, and 40 CFR 63.44 to July 1, 1998.

The Air Quality Advisory Council recommended these amendments for adoption at their meeting on December 15, 1998.

PURSUANT TO THE ACTIONS DESCRIBED HEREIN, THE FOLLOWING RULES ARE CONSIDERED FINALLY ADOPTED AS SET FORTH IN 75 O.S., SECTION 308.1(A), WITH AN EFFECTIVE DATE OF JUNE 11, 1999.

SUBCHAPTER 8. PERMITS FOR PART 70 SOURCES

PART 3. PERMIT APPLICATION FEES

252:100-8-1.7. Permit application fees

A permit application or a request for an applicability determination received after the effective date of this subsection will be assessed a one-time fee, which must accompany the application or request. Applications received without appropriate fees are administratively incomplete. Fees must be paid by check or money order made payable to the Oklahoma Air Quality Division in accordance with the following fee schedule:

- (1) **Applicability determination.** ~~\$100~~\$250, to be credited against the construction or operating permit application fee, if a permit is required. If no permit is required, the fee will be retained to cover the cost of making the determination.
- (2) **Construction permit application.** The fee is \$2,000.
- (3) **Operating permit application.**
 - (A) Initial Part 70 permit - \$2,000.
 - (B) Authorization under a general permit - \$900
 - (C) Renewal Part 70 permit - \$1,000.
 - (D) Significant modification of Part 70 permit - \$1,000.
 - (E) Minor modification of Part 70 permit - \$500.
 - (F) Part 70 Temporary Source Relocation - \$500.

PART 5. PERMITS FOR PART 70 SOURCES

252:100-8-4. Requirements for construction and operating permits

(a) Construction permits.

(1) **Construction permit required.** No person shall cause or allow the construction or installation of any new facility that will require a Part 70 operating permit without first obtaining a DEQ-issued air quality construction permit. A construction permit is also required for any physical change that would be a modification under 252:100-8-7.2(b). In addition to the requirements of this Part, sources subject to Part 7 or Part 9 of this Subchapter must also meet the applicable requirements contained therein.

(2) **Requirement for case-by-case MACT determinations.**

(A) **Applicability.** The requirement case-by-case MACT determinations apply to owner or operator who constructs or reconstructs a major source of hazardous air pollutants after June 29, 1998, unless the source has been specifically regulated or exempted from regulation under a subpart of 40 CFR Part 63, or the owner or operator has received all necessary air quality permits for such construction or reconstruction before June 29, 1998.

(B) **Exclusions.** The following sources are not subject to this subsection.

- (i) Electric utility steam generating units unless and until these units are added to the source category list.
- (ii) Stationary sources that are within a source category that has been deleted from the source category list.
- (iii) Research and development activities defined in 40 CFR § 63.41.

(C) **MACT determinations.** If subject to this subsection, an owner or operator may not begin actual construction or reconstruction of a major source of HAP until obtaining from the DEQ an approved MACT determination in accordance with the following regulations: 40 CFR 63.41, 40 CFR 63.43 and 40 CFR 63.44, which are hereby incorporated by reference as they exist on June 11, 1997/1998.

(b) Operating permits.

(1) **Operating permits required.** Except as provided in subparagraphs (A) and (B) of this section, no Part 70 source subject to this Chapter may operate after the time that it is required to file a timely application with the DEQ, except in compliance with a DEQ-issued permit.

(A) If the owner or operator of a source subject to the requirement to obtain a permit submits a timely application for permit issuance or renewal and that source's failure to have a permit shall not be a violation of the requirement to have such a permit until the DEQ takes final action on the application. This protection shall cease to apply if the applicant fails to submit, by the deadline specified in writing by the DEQ or 252:100-8-4, any additional information identified as being reasonably required to process the application.

(B) If the owner or operator of a source subject to this Subchapter files a timely application that the DEQ determines to be administratively incomplete due to the applicant's failure to timely provide additional information requested by the DEQ, the applicant loses the protection granted in paragraph (A) of this section. The source's failure to have a permit shall be deemed a violation of this Subchapter.

Permanent Final Adoptions

(C) Filing an operating permit application shall not affect the requirement, if any, that a source have a construction permit.

(2) **Duty to apply.** For each Part 70 source, the owner or operator shall submit a timely and complete permit application on forms supplied by the DEQ in accordance with this section.

(3) **Timely application.** Sources that are subject to the operating permit program established by this Chapter as of March 6, 1996, shall file applications on the following schedules outlined in 252:100-8-4(b)(4). A timely application is one that is postmarked on or before the relevant date listed below. In the event a major source consists of operations under multiple SIC codes, the primary activity shall form the basis for the initial permit application.

(4) **Application submittal schedule.** The following sources are subject to the operating permit program and shall submit initial permit applications according to the following schedule.

(A) No later than September 5, 1996:

(i) Affected sources under the acid rain provisions of the Act shall submit a permit application for at least the affected units at the site. Regardless of the effective date of the program and the requirement to file an application defined in this section, applications for initial Phase II acid rain permits shall be submitted to the DEQ no later than January 1, 1996, for sulfur dioxide, and by January 1, 1998, for nitrogen oxides, pursuant to the Act, §407.

(ii) Any owner or operator shall submit no less than one-third of their total applications for Part 70 sources located at sources classified by the following Source Standard Industrial Classification Codes and which belong to a single major industrial grouping other than 28 (Chemicals and allied products) or 29 (Petroleum refining and related industries):

- (I) Petroleum and Natural Gas, 1311;
- (II) Natural Gas Liquids, 1321;
- (III) Electric Services, 4911, 4961;
- (IV) Natural Gas Transmission, 4922;
- (V) Natural Gas Transmission and Distribution, 4923; and
- (VI) Petroleum Bulk Stations and Terminals, 5171.

(B) All remaining Part 70 sources identified in (b)(4)(A)(ii) of this Subsection shall be subject to the operating permit program and shall submit initial permit applications no later than March 5, 1997.

(C) No later than March 5, 1997, any owner or operator shall submit their applications for Part 70

sources located at sources classified by the following Standard Industrial Classification Codes:

- (i) Metals, 3312, 3315, 3321, 3341, 3351, 3411, 3412, 3432, 3466,
- (ii) Brick Plants, 3251, 3297,
- (iii) Commercial Printing, 2752, 2761.

(D) No later than July 5, 1998, any owner or operator shall submit their applications for Part 70 sources located at sources classified by the following Standard Industrial Classification Codes:

- (i) Refineries, 2911;
- (ii) Cement Plants, 3241;
- (iii) Chemical/Carbon, 2819, 2821, 2851, 2861, 2869, 2891, 2895, 2899, 2999, 3053, 3086, 3089;
- (iv) Petroleum Transportation/Terminals/Storage, 4612, 4613;
- (v) Food Products, 2013, 2074, 2095.

(E) All remaining Part 70 sources shall be subject to the operating permit program and shall submit initial permit applications no later than March 6, 1999.

(5) **Newly regulated sources.** A source that becomes subject to the operating permit program established by this Chapter at any time following the effective date shall file an administratively complete operating permit application within 180 days of commencement of operation.

(6) **Application acceptability.** Notwithstanding the deadlines established in paragraph (4) of this subsection, an application filed prior to the above deadlines following submission of the state program to EPA for approval shall be accepted for processing.

(7) **112(g) applications.** A source that is required to meet the requirements under section 112(g) of the Act, or to have a permit under a preconstruction review program under Title I of such Act, shall file an application to obtain an operating permit or permit amendment or modification within twelve months of commencing operation. Where an existing Part 70 operating permit would prohibit such construction or change in operation, the source must obtain a construction permit before commencing construction.

(8) **Application for renewal.** Sources subject to this Chapter shall file an application for renewal of an operating permit at least six months before the date of permit expiration, unless a longer period (not to exceed 18 months) is specified in the permit. Renewal periods greater than six months are subject to negotiation on a case-by-case basis.

(9) **Phase II acid rain permits.** Sources required to submit applications under the Acid Rain Program shall submit these applications as required by 40 CFR 72.30(b)(2)(i) through (viii).

(10) **Application completeness.** See Uniform

Permitting Rules, 252:2-15-70 and the definition of administratively complete in 252:100-8-2.

ANALYSIS:

The proposed revisions to Oklahoma Administrative Code 252:100-37, Control of Emission of Organic Materials, will simplify the language under the agency-wide re-right/de-wrong initiative. The revisions also include the following substantive changes: 1) the redefinition of the term "volatile organic compound (VOC)" and the substitution of this term for "organic materials", "organic solvents", and "hydrocarbons"; 2) the deletion of 252:100-37-3(a) which is a redundant requirement except to the extent that it requires new minor sources to apply best available control technology (BACT); 3) the exemption of methanol storage at a drilling or production facility for use on site in 252:100-37-3(c); 4) the addition of 252:100-37-15(c), exempting VOC storage vessels that are subject to the equipment standards in 40 CFR 60 Subparts K, Ka, or Kb from the requirements of 252:100-37-15(a) and (b); 5) the addition of 252:100-37-16(c), exempting VOC loading facilities subject to the requirements of 40 CFR 60 Subpart XX or 40 CFR 63 Subpart R from the requirements of 252:100-37-15(a) and (b); 6) the deletion of 252:100-37-25(c), which allows the emission of 3,000 pounds per day or 450 pounds per hour of organic materials before controls are required; 7) the revision of the alternate standard for coatings in 252:100-37-25(d); 8) the correction of the impossible requirement in 252:100-37-36 that no emission of hydrocarbons or organic material is allowed from fuel-burning or refuse-burning equipment; 9) the addition of 252:37-38(b), exempting pumps and compressors subject to the standards for pumps and compressors contained in 40 CFR 60 Subparts VV, GGG, or KKK from 252:100-37-38; and 10) the addition of Part 9, which contains the permit by rule for VOC storage and loading facilities.

None

CONTACT PERSON:

Joyce D. Sheedy, Ph.D., Department of Environmental Quality, Air Quality Division, 707 North Robinson, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677, (405) 702-4100

PURSUANT TO THE ACTIONS DESCRIBED HEREIN, THE FOLLOWING RULES ARE CONSIDERED FINAL AND ADOPTED AS SET FORTH IN 75 O.S., SECTION 308.1(A), WITH AN EFFECTIVE DATE OF JUNE 11, 1999.

Notices of Rulemaking Intent

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must publish a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides other information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained. For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 3. PROCEDURES OF THE ENVIRONMENTAL QUALITY COUNCILS

[OAR Docket #00-792]

RULEMAKING ACTION:

Notice of proposed EMERGENCY rulemaking

PROPOSED RULES:

✓ Subchapter 5. Air Quality Advisory Council Hearings [NEW]

Appendix B. Style of Request for Hearing [NEW]

SUMMARY:

The addition of 252:3-5, Air Quality Advisory Council Hearings, is proposed to establish procedures for individual proceedings on enforcement matters and requests for variance. A new Appendix B, Style of Request for Hearing, would also be added to 252:3.

AUTHORITY:

Environmental Quality Board powers and duties, 27A O.S.Supp. 1999, § 2-2-101; and Oklahoma Clean Air Act §§ 2-5-101, *et seq.*

REQUEST FOR COMMENTS:

The DEQ requests that business entities or any other members of the public affected by these rules provide the DEQ, within the comment period, in dollar amounts if possible, the increase in the level of direct costs such as fees, and the indirect costs such as reporting, recordkeeping, equipment, construction, labor, professional services, revenue loss, or other costs expected to be incurred by a particular entity due to compliance with the proposed rules.

COMMENT PERIOD:

Written comments will be accepted prior to and at the hearing on June 14, 2000. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by June 7, 2000. Oral comments may be made at the June 14, 2000 hearing and at the Environmental Quality Board hearing on August 29, 2000, in Durant, Oklahoma.

PUBLIC HEARINGS:

Wednesday, June 14, 2000 - 9:00 a.m. hearing, 707 North Greenwood, Room 150, OSU at Tulsa, Tulsa, OK.

Scheduled before the Environmental Quality Board at 9:30 a.m. on August 29, 2000, Durant, OK, (exact location to be announced).

COPIES OF PROPOSED RULES:

The proposed rules are available for review at the Air Quality Division office at 707 North Robinson, Suite 4100, Oklahoma City, Oklahoma, 73102, and on the DEQ website (www.deq.state.ok.us), Air Quality Division Current Events and Issues, or copies may be obtained from Myrna Bruce by calling (405) 702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statement may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Cheryl Bradley, Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #00-792; filed 4-25-00]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #00-793]

RULEMAKING ACTION:

Notice of proposed PERMANENT and EMERGENCY rulemaking

PROPOSED RULES:

✓ Subchapter 8. Permits for Part 70 Sources [AMENDED]

SUMMARY:
The proposed changes to Subchapter 8 would amend sections 1.1, 1.4, 1.5, 1.7, 2, 3, 4, 5, 6, 7, 8, 31, 33, and 52. The changes correct errors, clarify language, and add fee categories for construction permit authorizations and modifications. Substantive changes include amending the definition of "trivial activities" in section 2 by deleting the

Notices of Rulemaking Intent

exception for activities that are subject to an applicable requirement. The amendments to section 4(a)(1) clarify that de minimis emissions increases do not require construction permits, but that additions of equipment that are subject to NSPS or NESHAP would. The changes in section 5(d)(1)(A) clarify that BACT is not required for modifications that result in emissions increases of less than 100 tons per year, unless the Prevention of Significant Deterioration rules in Part 7 would require it. The reporting time in section 6(a)(3)(C) for excess emissions caused by emergencies or upsets would be changed from 24 hours to the end of the next working day to make it consistent with Subchapter 9 reporting requirements. A substantive change is proposed for the definition of "major stationary source" in section 31, where paragraph (xiv) would be changed to read "municipal incinerators capable of charging more than 50 tons of refuse per day." This change is required by the 1990 amendment to section 169(1) of the federal Clean Air Act. The changes to section 52 were adopted in 1989 but were accidentally excluded during codification of the rules.

AUTHORITY:

Environmental Quality Board powers and duties, 27A O.S.Supp. 1999, § 2-2-101; and Oklahoma Clean Air Act §§ 2-5-101, *et seq.*

REQUEST FOR COMMENTS:

The DEQ requests that business entities or any other members of the public affected by these rules provide the DEQ, within the comment period, in dollar amounts if possible, the increase in the level of direct costs such as fees, and the indirect costs such as reporting, recordkeeping, equipment, construction, labor, professional services, revenue loss, or other costs expected to be incurred by a particular entity due to compliance with the proposed rules.

COMMENT PERIOD:

Written comments will be accepted prior to and at the hearing on June 14, 2000. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by June 7, 2000. Oral comments may be made at the June 14, 2000 hearing and at the Environmental Quality Board hearing on August 29, 2000, in Durant, Oklahoma.

PUBLIC HEARINGS:

Wednesday, June 14, 2000 - 9:00 a.m. hearing, 707 North Greenwood, Room 150, OSU at Tulsa, Tulsa, OK.

Scheduled before the Environmental Quality Board at 9:30 a.m. on August 29, 2000, Durant, OK, (exact location to be announced).

COPIES OF PROPOSED RULES:

The proposed rules are available for review at the Air Quality Division office at 707 North Robinson, Suite 4100,

Oklahoma City, Oklahoma, 73102, and on the DEQ website (www.deq.state.ok.us), Air Quality Division Current Events and Issues, or copies may be obtained from Myrna Bruce by calling (405) 702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statement may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Joyce Sheedy, Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #00-793; filed 4-25-00]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #00-794]

RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

PROPOSED RULES:

✓ Subchapter 29. Control of Fugitive Dust [AMENDED]
SUMMARY:

The proposed changes to Subchapter 29 will simplify and clarify the Subchapter as a part of the agency-wide re-right/de-wrong initiative. A substantive change is included which would make the rule more enforceable by deleting the qualification that the fugitive dust be emitted to such an extent as to be classified as air pollution, before precautions are required. The proposed revocation of 252:100-29-5, Variance, is due to its redundancy with the Clean Air Act at 27A O.S.Supp. § 2-5-109.

AUTHORITY:

Environmental Quality Board powers and duties, 27A O.S.Supp. 1999, § 2-2-101; and Oklahoma Clean Air Act §§ 2-5-101, *et seq.*

REQUEST FOR COMMENTS:

The DEQ requests that business entities or any other members of the public affected by these rules provide the DEQ, within the comment period, in dollar amounts if possible, the increase in the level of direct costs such as fees and the indirect costs such as reporting, recordkeeping, equipment, construction, labor, professional services,

Notices of Rulemaking Intent

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must publish a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides other information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained. For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #00-2181]

RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

PROPOSED RULES:

Subchapter 6. Permitting [REVOKED]

Subchapter 8. Permits for Part 70 Sources [AMENDED]

Subchapter 29. Control of Fugitive Dust [AMENDED]

Subchapter 31. Control of Emission of Sulfur Compounds [AMENDED]

SUMMARY:

It is proposed that Subchapter 6 be revoked in its entirety. This action fulfills the Department's goal of eliminating redundant or unnecessary language through the re-right/de-wrong process. The rule is for the most part a summary of the permit programs contained in Subchapters 7 and 8, and a restatement of Oklahoma statutes on permitting. Only a few portions of the rule contain substantive language that will be placed into Subchapter 8. Revocation of the rule will have no effect on permit actions.

The proposed changes to Subchapter 8 would amend sections 1-1, 1-4, 1-5, 1-7, 2, 3, 4, 5, 6, 7, 8, 31, 33, 51, and 52. The changes correct errors, clarify language, add paragraphs that had previously been adopted but not codified, and add fee categories for construction permit authorizations and modifications. Substantive changes include amending the definition of "trivial activities" in section 2 by deleting the exception for activities that are subject to an applicable requirement. The amendments to section 4(a)(1) clarify that de minimis emissions increases do not require construction permits, but that additions of equipment that are subject to NESHAP would. The changes in section 5(d)(1)(A) clarify that BACT is not required for modifications that result in emissions increases of less than 100 tons per year, unless the Prevention of Significant Deterioration rules in Part 7 would require it. The reporting time in section 6(a)(3)(C) for excess emissions caused by emergencies or upsets would be changed from 24 hours to the end of the next working day to make it consistent with Subchapter 9 reporting

requirements. A substantive change is proposed for the definition of "major stationary source" in section 31, where paragraph (xiv) would be changed to read "municipal incinerators capable of charging more than 50 tons of refuse per day." This change is required by the 1990 amendment to section 169(1) of the federal Clean Air Act. The definitions of "reconstruction" and "resource recovery facility" in section 51 would be deleted since those terms are not used in Part 9. The changes to section 52 were adopted in 1989 but were accidentally excluded during codification of the rules.

The proposed changes to Subchapter 29 will simplify and clarify the Subchapter as a part of the agency-wide re-right/de-wrong initiative. The provisions 252:100-29-2(a) and (b) will be combined to require reasonable precautions to control any visible fugitive dust emissions beyond the property line on which the emissions originate if such emissions interfere with the use of adjacent properties, cause air quality standards to be exceeded, or interfere with the maintenance of air quality standards. The proposed revocation of 252:100-29-5, Variance, is due to its redundancy with the Clean Air Act at 27A O.S.Supp. 1999 § 2-5-109.

The proposed changes to Subchapter 31 are primarily to simplify language, clarify requirements, and remove redundant requirements or language as part of the agency-wide re-right/de-wrong initiative. New definitions of the terms "existing source" or "existing equipment" and "new source" or "new equipment" clearly identify the effective date for each industry affected by the rule. Section 252:100-31-3 regarding performance testing is revoked, since performance testing is covered in Subchapter 43. In section 252:100-31-12(a) the use of an annual arithmetic mean is revoked. Section 252:100-31-25(c)(3) regarding emission monitoring is revoked, since emission monitoring is covered in Subchapter 45. Section 252:100-31-15(b) and those portions of 252:100-31-12(b) and 252:100-31-13(b) which identify the requirements to prove a violation are recommended for deletion, since 252:100-45-5 allows the use of any credible evidence to determine a violation. Sections, subsections, and paragraphs will also be moved to facilitate use of the rule. Six substantive revisions are also proposed. (1) Revoke 252:100-31-14(c) regarding the testing procedures for ambient hydrogen sulfide, as the listed procedures are out of date and will be replaced with

Notices of Rulemaking Intent

sampling and test methods in Subchapter 43. (2) Delete 252:100-31-25(a) pertaining to new sulfuric acid plants since it is identical to the NSPS, 40 CFR 60 Subpart H, except for the opacity limit and the averaging time. The differences between the federal and state standards are minimal, and the state rule was intended to reflect the federal standard. (3) The averaging time for ambient hydrogen sulfide concentration from existing equipment in 252:100-31-14(a) is changed from 30 minutes to one hour to match the averaging time for ambient hydrogen sulfide concentrations from new equipment. (4) Section 252:100-31-25(c) covering new gas sweetening and sulfur recovery plants, and Section 252:100-31-26 covering hydrogen sulfide from petroleum and natural gas processes will be combined and rewritten to make clear which sources are subject to the standard. The sources subject to the hydrogen sulfide standard are more narrowly drawn to cover only sweetening plants and sulfur recovery units. Other processes referenced in the sulfur dioxide standard are limited to petroleum refinery processes, consistent with the intent of the rule. (5) Section 252:100-31-26(a), the hydrogen sulfide standard for new petroleum and natural gas processes contains several changes: (a) the standard has been changed from a combination equipment and emission standard to a more straightforward emission standard; (b) the exception for pipeline quality sweetened gas was moved to 252:100-31-26(b)(1) and changed to an emission based exception; and (c) an exception to the required exhaust stack is provided based on modeling. (6) Several subsections of the rule require a maximum average testing period. Because it is unclear what is a maximum average, all subsections will be changed to a time-based average.

AUTHORITY:

Environmental Quality Board powers and duties, 27A O.S. Supp. 1999, § 2-2-101; and Oklahoma Clean Air Act §§ 2-5-101, *et seq.*

REQUEST FOR COMMENTS:

The DEQ requests that business entities or any other members of the public affected by these rules provide the DEQ, within the comment period, in dollar amounts if possible, the increase in the level of direct costs such as fees, and the indirect costs such as reporting, recordkeeping, equipment; construction, labor, professional services, revenue loss, or other costs expected to be incurred by a particular entity due to compliance with the proposed rules.

COMMENT PERIOD:

Written comments will be accepted prior to and at the hearing on August 16, 2000. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by August 9, 2000. Oral comments may be made at the August 16, 2000 hearing and at the Environmental Quality Board hearing on November 14, 2000, in Hooker, Oklahoma.

PUBLIC HEARINGS:

Wednesday, August 16, 2000 - 9:00 a.m. hearing, Pioneer Technology Center, Education Business Center, 2101 North Ash Street, Ponca City, OK.

Scheduled before the Environmental Quality Board at 9:30 a.m. on November 14, 2000, Hooker, OK, (exact location to be announced).

COPIES OF PROPOSED RULES:

The proposed rules are available for review at the Air Quality Division office at 707 North Robinson, Suite 4100, Oklahoma City, Oklahoma, 73102, and on the DEQ website (www.deq.state.ok.us), Air Quality Division Current Events and Issues, or copies may be obtained from Myrna Bruce by calling (405) 702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statement may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Jeanette Buttram (SC 6), Joyce Sheedy (SC 8 and SC 31), and Cheryl Bradley (SC 29), Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #00-2181; filed 6-23-00]

TITLE 3A. OKLAHOMA HORSE RACING COMMISSION CHAPTER 25. ENTRIES AND DECLARATIONS

[OAR Docket #00-2183]

RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

PROPOSED RULES:

325:25-1-30.1. Naming/engaging of riders [NEW]

SUMMARY:

The new rule proposed to Chapter 25 is being proposed to prevent problems of rider changes on races programs, and the adoption of this proposed new rule would be consistent with rules of other racing jurisdictions.

AUTHORITY:

Title 3A O.S. §204(A); Oklahoma Horse Racing Commission

COMMENT PERIOD:

Persons wishing to present their views in writing may do so before 4:30 p.m., Monday August 7, 2000, at the following

along with the required fee and any relevant information needed, the DEQ will make a determination of whether a permit is required.

~~(d)~~(e) **Change in permit status.** The owner or operator of a permitted facility may at any time notify the DEQ that the facility:

- (1) Is de minimis, requesting termination of the permit, or
- (2) Qualifies for either a permit by rule or a general permit, submitting the appropriate application for such permit.

~~(e)~~(f) **Transfer of permit.** The transfer of ownership of a stationary source or a facility shall subject the new owner or operator to existing permit conditions and/or compliance schedules. A new permit is not required. The transferor shall notify the AQD in writing no later than 10 days following the change in ownership.

[OAR Docket #01-762; filed 4-23-01]

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

[OAR Docket #01-763]

RULEMAKING ACTION:

PERMANENT final adoption

RULES:

Subchapter 8. Permits for Part 70 Sources

Environmental Quality Board; 27A O.S.Supp. 2000, §§ 2-2-101, 2-2-201 and 2-5-101, *et seq.*

DATES:

Comment period:

- May 15, 2000 through June 14, 2000
- July 17, 2000 through August 16, 2000

Public hearing:

June 14, 2000, August 16, 2000 and November 14, 2000

Adoption:

November 14, 2000

Submitted to Governor:

November 21, 2000

Submitted to House:

November 21, 2000

Submitted to Senate:

November 21, 2000

Gubernatorial approval:

January 2, 2001

Legislative approval:

Failure of the Legislature to disapprove the rules resulted in approval on March 27, 2001

Final adoption:

March 27, 2001

Effective:

June 1, 2001

SUPERSEDED EMERGENCY ACTIONS:

Superseded rules:

- 252:100-8-1.7 [AMENDED]
- 252:100-8-4 [AMENDED]

Gubernatorial approval:

January 2, 2001

01-83

INCORPORATIONS BY REFERENCE:

Incorporated standards:

40 CFR 63.41, 40 CFR 63.43, and 40 CFR 63.44 updated to July 1, 2000

Incorporating rules:

252:100-8-4(a)(2)(C)

Availability:

Through the contact person listed below

ANALYSIS:

The proposed revisions to Sections 1.1, 1.4, 1.5, 1.7, 2, 3, 4, 5, 6, 7, 7.2, 8, 31, 33, 51, and 52 of Oklahoma Administrative Code 252:100-8, Permits for Part 70 Sources, correct errors, clarify language, add definitions, delete definitions, and add fee categories for construction permit authorizations and modifications. Substantive changes include amending the definition of "trivial activities" in Section 2 by deleting the exception for activities that are subject to an applicable requirement. The amendments to Section 4(a)(1) clarify which modifications to Part 70 sources require construction permits. The changes in Section 5(d)(1)(A) clarify that best available control technology (BACT) is not required for modifications that result in emissions increases of less than 100 tons per year, unless the Prevention of Significant Deterioration rules in Part 7 would require it. The reporting time in Section 6(a)(3)(C) for excess emissions caused by emergencies or upsets would be changed from 24 hours to the end of the next working day to make it consistent with Subchapter 9 reporting requirements. A substantive change is proposed for the definition of "major stationary source" in Section 31, where paragraph (xiv) would be changed to read "municipal incinerators capable of charging more than 50 tons of refuse per day." This change is required by the 1990 amendment to section 169(1) of the federal Clean Air Act. The changes to Section 52 were adopted in 1989 but were accidentally excluded during codification of the rules. Section 4(a)(2)(C) updates the

Permanent Final Adoptions

incorporation by reference of 40 CFR 63.41, 40 CFR 63.43, and 40 CFR 63.44 to July 1, 2000.

SUMMARY OF DIFFERENCES FROM ANALOGOUS FEDERAL RULES:

None

CONTACT PERSON:

Joyce D. Sheedy, Ph.D., Department of Environmental Quality, Air Quality Division, 707 North Robinson, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677, (405) 794-6800

PURSUANT TO THE ACTIONS DESCRIBED HEREIN, THE FOLLOWING RULES ARE CONSIDERED FINALLY ADOPTED AS SET FORTH IN 75 O.S., SECTION 308.1(A), WITH AN EFFECTIVE DATE OF JUNE 1, 2001:

SUBCHAPTER 8. PERMITS FOR PART 70 SOURCES

PART 1. GENERAL PROVISIONS

252:100-8-1.1. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise. Except as specifically provided in this section, terms used in this Subchapter retain the meaning accorded them under the applicable requirements of the Act.

"A stack in existence" means for purposes of OAC 252:100-8-1.5 that the owner or operator had:

(A) begun, or caused to begin, a continuous program of physical on-site construction of the stack; or

(B) entered into binding agreements or contractual obligations, which could not be canceled or modified without substantial loss to the owner or operator, to undertake a program of construction of the stack to be completed in a reasonable time.

"Act" means the federal Clean Air Act, as amended, 42 U.S.C. 7401 *et seq.*

"Actual emissions" means, except for Parts 7 and 9 of this Subchapter, the total amount of regulated air pollutants emitted from a given facility during a particular calendar year, determined using methods contained in OAC 252:100-5-2.1(d).

"Administrator" means the Administrator of the United States Environmental Protection Agency (EPA) or the Administrator's designee.

"Allowable emissions" means, for purposes of Parts 7 and 9 of this Subchapter, the emission rate of a stationary source calculated using the maximum rated capacity of the source (unless the source is subject to enforceable limits which restrict the operating rate, or hours of operation, or both) and the most stringent of the following:

(A) the applicable standards as set forth in 40 CFR Parts 60 and 61;

(B) the applicable State rule allowable emissions; or,

(C) the emissions rate specified as an enforceable permit condition.

"Begin actual construction" means:

(A) for purposes of Parts 7 and 9 of this Subchapter means, in general, initiation of physical on-site construction activities on an emissions unit which are of a permanent nature. Such activities include, but are not limited to, installation of building supports and foundations, laying of underground pipework, and construction of permanent storage structures. With respect to a change in method of operation this term refers to those on-site activities, other than preparatory activities, which mark the initiation of the change.

(B) for purposes of Part 5 of this Subchapter, that the owner or operator has begun the construction or installation of the emitting equipment on a pad or in the final location at the facility.

"Best available control technology" or "BACT" means the control technology to be applied for a major source or modification is the best that is available as determined by the Director on a case-by-case basis taking into account energy, environmental, and economic impacts and other costs of alternate control systems.

"Building, structure, facility or installation" means, for purposes of Parts 7 and 9 of this Subchapter, all of the pollutant-emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person or persons under common control. Pollutant-emitting activities shall be considered as part of the same industrial grouping if they belong to the same "Major Group" (i.e., which have the same two-digit code), as described in the Standard Industrial Classification manual, 1972, as amended by the 1977 Supplement.

"Commence" for purposes of Parts 7 and 9 of this Subchapter means, as applied to construction of a major stationary source or major modification, that the owner or operator has all necessary preconstruction approvals or permits and either has:

(A) begun, or caused to begin, a continuous program of actual on-site construction of the source, to be completed within a reasonable time; or,

(B) entered into binding agreements or contractual obligations, which cannot be cancelled or modified without substantial loss to the owner or operator, to undertake a program of actual construction of the source to be completed within a reasonable time.

"Construction" means, for purposes of Parts 7 and 9 of this Subchapter, any physical change or change in the method of operation (including fabrication, erection, installation, demolition, or modification of an emissions unit) which would result in a change in actual emissions.

"Dispersion technique" means for purposes of OAC

252:100-8-1.5 any technique which attempts to affect the concentration of a pollutant in the ambient air by using that portion of a stack which exceeds good engineering practice stack height; varying the rate of emission of a pollutant according to atmospheric conditions or ambient concentrations of that pollutant; or increasing final exhaust gas plume rise by manipulating source process parameters, exhaust gas parameters, stack parameters or combining exhaust gases from several existing stacks into one stack, or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise. The preceding sentence does not include:

(A) The reheating of a gas stream, following use of a pollution control system, for the purpose of returning the gas to the temperature at which it was originally discharged from the facility generating the gas stream.

(B) The merging of exhaust gas streams where:

- (i) the source owner or operator documents that the facility was originally designed and constructed with such merged streams;
- (ii) after July 8, 1985, such merging is part of a change in operation at the facility that includes the installation of pollution controls and is accompanied by a net reduction in the allowable emissions of a pollutant. This exclusion from "dispersion technique" applicability shall apply only to the emission limitation for the pollutant affected by such change in operation; or
- (iii) before July 8, 1985, such merging was part of a change in operation at the facility that included the installation of emissions control equipment or was carried out for sound economic or engineering reasons. Where there was an increase in the emission limitation or, in the event that no emission limitation existed prior to the merging, there was an increase in the quantity of pollutants actually emitted prior to the merging, it shall be presumed that merging was primarily intended as a means of gaining emissions credit for greater dispersion. Before such credit can be allowed, the owner or operator must satisfactorily demonstrate that merging was not carried out for the primary purpose of gaining credit for greater dispersion.

(C) Manipulation of exhaust gas parameters, merging of exhaust gas streams from several existing stacks into one stack, or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise in those cases where the resulting allowable emissions of sulfur dioxide from the facility do not exceed 5,000 tons per year.

"Emission limitations and emission standards" means for purposes of OAC 252:100-8-1.5 requirements that

limit the quantity, rate or concentration of emissions of air pollutants on a continuous basis, including any requirements that limit the level of opacity, prescribe equipment, set fuel specifications or prescribe operation or maintenance procedures for a source to assure continuous reduction. (~~Amended 7-9-87, effective 8-10-87~~)

"Emissions unit" means, for purposes of Parts 7 and 9 of this Subchapter, any part of a source which emits or would have the potential to emit any pollutant subject to regulation.

"EPA" means the United States Environmental Protection Agency.

"Fugitive emissions" means, for purposes of Parts 7 and 9 of this Subchapter, those emissions which could not reasonably pass through a stack, chimney, vent or other functionally equivalent opening.

"National Emission Standards for Hazardous Air Pollutants" or "NESHAP" means those standards found in 40 CFR Parts 61 and 63.

"Necessary preconstruction approvals or permits" means, for purposes of Parts 7 and 9 of this Subchapter, those permits or approvals required under all applicable air quality control laws and rules.

"New Source Performance Standards" or "NSPS" means those standards found in 40 CFR Part 60.

"Part 70 permit" means (unless the context suggests otherwise) means any permit or group of permits covering a Part 70 source that is issued, renewed, amended, or revised pursuant to this Chapter.

"Part 70 program" means a program approved by the Administrator under 40 CFR Part 70.

"Part 70 source" means any source subject to the permitting requirements of Part 5 of this Subchapter, as provided in OAC 252:100-8-3(a) and ~~252:100-8-3(b)-(b)~~.

"Potential to emit" means, for purposes of Parts 7 and 9 of this Subchapter, the maximum capacity of a source to emit a pollutant under its physical and operational design. Any physical or operational limitation on the capacity of the source to emit a pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored or processed, shall be treated as part of its design if the limitation or the effect it would have on emissions is enforceable. Secondary emissions do not count in determining the potential to emit of a source.

"Secondary emissions" means, for purposes of Parts 7 and 9 of this Subchapter, emissions which occur as a result of the construction or operation of a major stationary source or modification, but do not come from the source or modification itself. ~~For the purpose of 252:100-8, Part 9, secondary~~ Secondary emissions must be specific, well defined, quantifiable, and impact the same general areas as the source or modification which causes the secondary emissions. Secondary emissions may include, but are not limited to:

Permanent Final Adoptions

(A) emissions from trains coming to or from the new or modified stationary source; and,

(B) emissions from any offsite support facility which would not otherwise be constructed or increase its emissions as a result of the construction or operation of the major source or modification.

"Stack" means for purposes of OAC 252:100-8-1.5 any point in a source designed to emit solids, liquids or gases into the air, including a pipe or duct but not including flares.

"Stationary source" means, for purposes of Parts 7 and 9 of this Subchapter, any building, structure, facility or installation which emits or may emit any air pollutant subject to OAC 252:100.

252:100-8-1.4. Cancellation or extension of a construction permit or authorization under a general construction permit

(a) Cancellation of permit or authorization to construct or modify. A duly issued permit or authorization to construct or modify will terminate and become null and void (unless extended as provided in Subsection (b) of this Section) if the construction is not commenced within 18 months after the date the permit or authorization was issued, or if work is suspended for more than 18 months after it has commenced.

(b) Extension of permit or authorization to construct or modify.

(1) Prior to the expiration date of the permit or authorization, a permittee may apply for extension of the permit or authorization by written request of the DEQ stating the reasons for the delay or suspension and providing justification for the extension. The DEQ may grant:

(A) One extension of 18 months or less, or

(B) One extension of up to 36 months where the applicant is proposing to expand an already existing facility to accommodate the proposed new construction or the applicant has expended a significant amount of money (1% of total project cost as identified in the original application, not including land cost) in preparation for meeting the definition of "commence construction" at the proposed site, or

(C) One extension of up to 72 months will be granted to major industrial facilities (project cost greater than \$100,000,000.00), where the applicant proposes to construct at an existing site and demonstrates that the existing site was originally designed and constructed to accommodate the proposed new facilities. The applicant shall show a commitment to the site by having purchased land necessary to construct facilities covered by this extension and expended \$1,000,000.00 or more on engineering and/or site development.

(2) If construction has not commenced within three (3) years of the effective date of the original permit or

authorization, the permittee must undertake and complete an appropriate available control technology review and an air quality analysis. This review must be approved by the DEQ before construction may commence.

(3) Upon formal request of any applicant whose permit has been denied for lack of increment, the DEQ may require any permittee under OAC 252:100-8-1.4(b)(1)(B) or ~~252:100-8-1.4(b)(1)(C)~~ (C), to furnish a complete air quality analysis and/or an appropriate available control technology review if such review is required in order to provide new or current information.

252:100-8-1.5. Stack height limitations

(a) Stack height exclusion. Air quality modeling or ambient impact evaluation shall exclude the effect of that portion of the height of any stack which exceeds good engineering practice or the effect of any other dispersion techniques.

(b) Determination of good engineering practice (GEP) stack height. GEP stack height shall be the greater of:

(1) 65 meters, measured from the ground-level elevation at the base of the stack; or

(2) The height under either OAC 252:100-8-1.5(b)(2)(A) or (B):

(A) for stacks in existence on January 12, 1979 and for which the owner or operator had obtained all applicable permits or approvals required under OAC 252:100-8 or 40 CFR Part 52, $H_g = 2.5H$, provided the owner or operator can demonstrate that this equation was relied upon in establishing an emission limitation;

(B) for all other stacks, $H_g = H + 1.5L$, where:

(i) H_g = good engineering practice stack height, measured from the ground-level elevation at the base of the stack,

(ii) H = height of nearby structure(s) measured from the ground-level elevation at the base of the stack,

(iii) L = lesser dimension (height or projected width) of nearby structure(s), provided that the owner or operator may be required to verify such GEP stack height by the use of a field study or fluid model as the Executive Director shall determine; or

(3) The height demonstrated by a fluid model or a field study approved by the reviewing agency, which ensures that the emissions from a stack do not result in excessive concentrations of any air pollutant as a result of atmospheric downwash, wakes, or eddy effects created by the source itself, nearby structures, or nearby terrain features.

(c) Nearby.

(1) For the formulae in OAC 252:100-8-1.5(b)(2). A structure or terrain feature shall be considered nearby if

it is located within a distance of up to five times the lesser of the height or the width of a structure, but not more than 0.5 miles (0.8 km).

(2) For demonstration in OAC 252:100-8-1.5(b)(3).

(A) A structure or terrain feature shall be considered nearby if located at a distance not greater than 0.5 mile (0.8 km), except that

(B) A portion of a terrain feature may be considered nearby if:

(i) It falls within a distance (not to exceed 2 miles) of up to 10 times the maximum height (Ht) of the feature, and

(ii) At a distance of 0.5 mile, the height of such feature is at least 40 percent of the GEP stack height determined by the formulae provided in OAC 252:100-8-1.5(b)(2)(B) or 85.3 feet (26 meters), whichever is greater, as measured from the base of the stack.

(3) **Measurement of height of structure or terrain.** The height of the structure or terrain feature is measured from the ground-level elevation at the base of the stack.

(d) **Excessive concentrations.** When utilized for the purpose of determining GEP stack height under OAC 252:100-8-1.5(b)(3), excessive concentrations shall be as follows:

(1) For sources seeking credit for stack height exceeding that calculated under ~~262:100-8-1.5(b)(2)~~ OAC 252:100-8-1.5(b)(2), a maximum ground-level pollutant concentration from a stack due in whole or part to downwash, wakes, and eddy effects produced by nearby structures or nearby terrain features which is at least 40 percent in excess of the maximum concentration experienced in the absence of such downwash, wakes, or eddy effects and which, when combined with the impacts due to all sources, produces a concentration in excess of an ambient air quality standard. For sources subject to the prevention of significant deterioration program (Part 7 of this Subchapter or Federal 40 CFR 52.21), the same criteria apply except that a concurrent exceedance of a prevention of significant deterioration increment is experienced. In making demonstrations under this part, the allowable emission rate shall conform to the new source performance standard that is applicable to the source category unless the owner or operator can demonstrate that this emission rate is infeasible. Where such demonstrations are approved by the ~~Executive~~ Director, an alternative emission rate shall be established in consultation with the owner or operator;

(2) For sources seeking credit after October 1, 1983, for increases in existing stack heights up to the heights established under OAC 252:100-8-1.5(b)(2) either:

(A) a maximum ground-level concentration due in whole or part to downwash, wakes or eddy effects as specified in OAC 252:100-8-1.5(b)(2), except that the emission rate specified by any applicable state

implementation plan (or, in the absence of such a limit, the actual emission rate) shall be used, or
 (B) the actual presence of a local nuisance caused by the existing stack, as determined by the ~~Executive~~ Director; and

(3) For sources seeking credit after January 12, 1979 for a stack height determined under OAC 252:100-8-1.5(b)(2) where the ~~Executive~~ Director requires the use of a field study or fluid model to verify GEP stack height, for sources seeking stack height credit after November 9, 1984 based on the aerodynamic influence of cooling towers, and for sources seeking stack height credit after December 31, 1970 based on the aerodynamic influence of structures not adequately represented by the formulae in OAC 252:100-8-1.5(b)(2), a maximum ground-level concentration due in whole or part to downwash, wakes or eddy effects that is at least 40 percent in excess of the maximum concentration experienced in the absence of such downwash, wakes or eddy effects.

PART 3. PERMIT APPLICATION FEES

252:100-8-1.7. Permit application fees

A permit application or a request for an applicability determination received after the effective date of this subsection will be assessed a one-time fee, which must accompany the application or request. Applications received without appropriate fees are administratively incomplete. Fees must be paid by check or money order made payable to the Oklahoma Air Quality Division in accordance with the following fee schedule:

- (1) **Applicability determination.** \$250, to be credited against the construction or operating permit application fee, if a permit is required. If no permit is required, the fee will be retained to cover the cost of making the determination.
- (2) **Construction permit application.** The fee is \$2,000.
 - (A) New Part 70 source - \$2,000.
 - (B) Modification of a Part 70 source - \$1,500.
 - (C) Authorization under a general permit - \$900.
- (3) **Operating permit application.**
 - (A) Initial Part 70 permit - \$2,000.
 - (B) Authorization under a general permit - \$900
 - (C) Renewal Part 70 permit - \$1,000.
 - (D) Significant modification of Part 70 permit - \$1,000.
 - (E) Minor modification of Part 70 permit - \$500.
 - (F) Part 70 Temporary Source Relocation - \$500.

PART 5. PERMITS FOR PART 70 SOURCES

252:100-8-2. Definitions

The following words and terms, when used in this Part, shall have the following meaning, unless the context clearly

Permanent Final Adoptions

indicates otherwise. Except as specifically provided in this section, terms used in this Part retain the meaning accorded them under the applicable requirements of the Act.

"Administratively complete" means an application that provides:

- (A) All information required under OAC 252:100-8-5(c), (d), or (e);
- (B) A landowner affidavit as required by OAC 252:2-15-20(b)(3);
- (C) The appropriate application fees as required by OAC 252:100-8-1.7; and
- (D) Certification by the responsible official as required by OAC 252:100-8-5(f).

"Affected source" means the same as the meaning given to it in the regulations promulgated under Title IV (acid rain) of the Act.

"Affected states" means:

- (A) all states:
 - (i) That are one of the following contiguous states: Arkansas, Colorado, Kansas, Missouri, New Mexico and Texas, and
 - (ii) That in the judgment of the DEQ may be directly affected by emissions from the facility seeking the permit, permit modification, or permit renewal being proposed; or
- (B) all states that are within 50 miles of the permitted source.

"Affected unit" means the same as the meaning given to it in the regulations promulgated under Title IV (acid rain) of the Act.

"Applicable requirement" means all of the following as they apply to emissions units in a Part 70 source subject to this Chapter (including requirements that have been promulgated or approved by EPA through rulemaking at the time of issuance but have future effective compliance dates):

- (A) Any standard or other requirements provided for in the applicable implementation plan approved or promulgated by EPA through rulemaking under Title I of the Act that implements the relevant requirements of the Act, including any revisions to that plan promulgated in 40 CFR Part 52;
- (B) Any term or condition of any preconstruction permits issued pursuant to regulations approved or promulgated through rulemaking under Title I, including parts C or D, of the Act;
- (C) Any standard or other requirement under section 111 of the Act, including section 111(d);
- (D) Any standard or other requirement under section 112 of the Act, including any requirement concerning accident prevention under section 112(r)(7) of the Act, but not including the contents of any risk management plan required under 112(r) of the Act;

(E) Any standard or other requirement of the acid rain program under Title IV of the Act or the regulations promulgated thereunder;

(F) Any requirements established pursuant to section 504(b) or section 114(a)(3) of the Act;

(G) Any standard or other requirement governing solid waste incineration, under section 129 of the Act;

(H) Any standard or other requirement for consumer and commercial products, under section 183(e) of the Act;

(I) Any standard or other requirement for tank vessels, under section 183(f) of the Act;

(J) Any standard or other requirement of the regulations promulgated to protect stratospheric ozone under Title VI of the Act, unless the Administrator has determined that such requirements need not be contained in a Title V permit; and

(K) Any national ambient air quality standard or increment or visibility requirement under part C of Title I of the Act, but only as it would apply to temporary sources permitted pursuant to section 504(e) of the Act.

"Designated representative" means with respect to affected units, a responsible person or official authorized by the owner or operator of a unit to represent the owner or operator in matters pertaining to the holding, transfer, or disposition of allowances allocated to a unit, and the submission of and compliance with permits, permit applications, and compliance plans for the unit.

"Draft permit" means the version of a permit for which the DEQ offers public participation under 27A O.S. Supp. 1995, § 2-14-101 et seq., 27A O.S. §§ 2-14-101 through 2-14-401 and OAC 252:100-2-15 or affected State review under OAC 252:100-8-8.

"Emergency" means, when used in OAC 252:100-8-6(a)(3)(C)(iii)(I) and (e), any situation arising from sudden and reasonably unforeseeable events beyond the control of the source, including acts of God, which situation requires immediate corrective action to restore normal operation, and that causes the source to exceed a technology-based emission limitation under the permit, due to unavoidable increases in emissions attributable to the emergency. An emergency shall not include noncompliance to the extent caused by improperly designed equipment, lack of preventive maintenance, careless or improper operation, or operator error.

"Emissions allowable under the permit" means a federally enforceable permit term or condition determined at issuance to be required by an applicable requirement that establishes an emissions limit (including a work practice standard) or a federally enforceable emissions cap that the source has assumed to avoid an applicable requirement to which the source would otherwise be subject.

"Emissions unit" means any part or activity of a

stationary source that emits or has the potential to emit any regulated air pollutant or any pollutant listed under section 112(b) of the Act. Fugitive emissions from valves, flanges, etc. associated with a specific unit process shall be identified with that specific emission unit. This term is not meant to alter or affect the definition of the term "unit" for purposes of Title IV of the Act.

"Final permit" means the version of a part 70 permit issued by the DEQ that has completed all review procedures required by OAC 252:100-8-7 through 252:100-8-7.5 and OAC 252:100-8-8.

"Fugitive emissions" means those emissions of regulated air pollutants which could not reasonably pass through a stack, chimney, vent, or other functionally-equivalent opening.

"General permit" means a part 70 permit that meets the requirements of OAC 252:100-8-6.1.

"Insignificant activities" means individual emissions units that are either on the list approved by the Administrator and contained in Appendix I, or whose actual calendar year emissions do not exceed any of the limits in (A) through (C) of this definition. Any activity to which a State or federal applicable requirement applies is not insignificant even if it meets the criteria below or is included on the insignificant activities list.

(A) 5 tons per year of any one criteria pollutant.

(B) 2 tons per year for any one hazardous air pollutant (HAP) or 5 tons per year for an aggregate of two or more HAP's, or 20 percent of any threshold less than 10 tons per year for single HAP that the EPA may establish by rule.

(C) 0.6 tons per year for any one category A substance, 1.2 tons per year for any one category B substance or 6 tons per year for any one category C substance as defined in OAC 252:100-41-40.

"MACT" means maximum achievable control technology.

"Major source" means any stationary source (or any group of stationary sources that are located on one or more contiguous or adjacent properties and are under common control of the same person (or persons under common control)) belonging to a single major industrial grouping and that is described in subparagraph (A), (B), or (C) of this definition. For the purposes of defining "major source," a stationary source or group of stationary sources shall be considered part of a single industrial grouping if all of the pollutant emitting activities at such source or group of sources on contiguous or adjacent properties belong to the same Major Group (i.e., all have the same two-digit primary SIC code) as described in the Standard Industrial Classification Manual, 1987.

(A) A major source under section 112 of the Act, which is defined as:

(i) For pollutants other than radionuclides, any stationary source or group of stationary sources located within a contiguous area and

under common control that emits or has the potential to emit, in the aggregate, 10 tons per year ("tpy") or more of any hazardous air pollutant which has been listed pursuant to section 112(b) of the Act, 25 tpy or more of any combination of such hazardous air pollutants, or such lesser quantity as the Administrator may establish by rule. Notwithstanding the preceding sentence, emissions from any oil or gas exploration or production well (with its associated equipment) and emissions from any pipeline compressor or pump station shall not be aggregated with emissions from other similar units, whether or not such units are in a contiguous area or under common control, to determine whether such units or stations are major sources; or.

(ii) For radionuclides, "major source" shall have the meaning specified by the Administrator by rule.

(B) A major stationary source of air pollutants, as defined in section 302 of the Act, that directly emits or has the potential to emit, 100 tpy or more of any regulated air pollutant (except TSP that fraction of particulate matter that exhibits an average aerodynamic particle diameter of more than 10 micrometers) (including any major source of fugitive emissions of any such pollutant, as determined by rule by the Administrator). The fugitive emissions of a stationary source shall not be considered in determining whether it is a major stationary source for the purposes of section 302(j) of the Act, unless the source belongs to one of the following categories of stationary sources:

(i) Coal cleaning plants (with thermal dryers);

(ii) Kraft pulp mills;

(iii) Portland cement plants;

(iv) Primary zinc smelters;

(v) Iron and steel mills;

(vi) Primary aluminum ore reduction plants;

(vii) Primary copper smelters;

(viii) Municipal incinerators capable of charging more than 250 tons of refuse per day;

(ix) Hydrofluoric, sulfuric, or nitric acid plants;

(x) Petroleum refineries;

(xi) Lime plants;

(xii) Phosphate rock processing plants;

(xiii) Coke oven batteries;

(xiv) Sulfur recovery plants;

(xv) Carbon black plants (furnace process);

(xvi) Primary lead smelters;

(xvii) Fuel conversion plants;

(xviii) Sintering plants;

(xix) Secondary metal production plants;

Permanent Final Adoptions

- (xx) Chemical process plants;
- (xxi) Fossil-fuel boilers (or combination thereof) totaling more than 250 million British thermal units per hour heat input;
- (xxii) Petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels;
- (xxiii) Taconite ore processing plants;
- (xxiv) Glass fiber processing plants;
- (xxv) Charcoal production plants;
- (xxvi) Fossil-fuel-fired steam electric plants of more than 250 million British thermal units per hour heat input; or
- (xxvii) All other stationary source categories which, as of August 7, 1980, are being regulated by a standard promulgated under section 111 or 112 of the Act, but only with respect to those air pollutants that have been regulated for that category.

(C) A major stationary source as defined in part D of Title I of the Act, including:

(i) For ozone non-attainment areas, sources with the potential to emit 100 tpy or more of volatile organic compounds or oxides of nitrogen in areas classified as "marginal" or "moderate," 50 tpy or more in areas classified as "serious," 25 tpy or more in areas classified as "severe," and 10 tpy or more in areas classified as "extreme"; except that the references in this paragraph to 100, 50, 25, and 10 tpy of nitrogen oxides shall not apply with respect to any source for which the Administrator has made a finding, under section 182(f)(1) or (2) of the Act, that requirements under section 182(f) of the Act do not apply;

(ii) For ozone transport regions established pursuant to section 184 of the Act, sources with the potential to emit 50 tpy or more of volatile organic compounds;

(iii) For carbon monoxide non-attainment areas:

- (I) that are classified as "serious"; and
- (II) in which stationary sources contribute significantly to carbon monoxide levels as determined under rules issued by the Administrator, sources with the potential to emit 50 tpy or more of carbon monoxide; and

(iv) For particulate matter (PM-10) non-attainment areas classified as "serious," sources with the potential to emit 70 tpy or more of PM-10.

"Maximum capacity" means the quantity of air contaminants that theoretically could be emitted by a stationary source without control devices based on the

design capacity or maximum production capacity of the source and 8,760 hours of operation per year. In determining the maximum theoretical emissions of VOCs for a source, the design capacity or maximum production capacity shall include the use of raw materials, coatings and inks with the highest VOC content used in practice by the source.

"Permit" means (unless the context suggests otherwise) means any permit or group of permits covering a Part 70 source that is issued, renewed, amended, or revised pursuant to this Chapter.

"Permit modification" means a revision to a Part 70 construction or operating permit that meets the requirements of OAC 252:100-8-7.2(b).

"Permit program costs" means all reasonable (direct and indirect) costs required to develop and administer a permit program, as set forth in OAC 252:100-5-2.2 (whether such costs are incurred by the DEQ or other State or local agencies that do not issue permits directly, but that support permit issuance or administration).

"Permit revision" means any permit modification or administrative permit amendment.

"Potential to emit" means the maximum capacity of a stationary source to emit any air pollutant under its physical and operational design. Any physical or operational limitation on the capacity of a source to emit an air pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitation is enforceable by the Administrator. This term does not alter or affect the use of this term for any other purposes under the Act, or the term "capacity factor" as used in Title IV of the Act or the regulations promulgated thereunder.

"Proposed permit" means the version of a permit that the DEQ proposes to issue and forwards to the Administrator for review in compliance with OAC 252:100-8-8.

"Regulated air pollutant" means the following:

- (A) Nitrogen oxides or any volatile organic compound (VOC), including those substances defined in OAC 252:100-1-3, 252:100-37-2, and 252:100-39-2, or any Volatile Organic Solvent (VOS), as that term is defined in 252:100-37-2 and 252:100-39-2, or any organic material defined in 252:100-37-2 except those specifically excluded in the EPA definition of VOC in 40 CFR 51.100(s);
- (B) Any pollutant for which a national ambient air quality standard has been promulgated;
- (C) Any pollutant that is subject to any standard promulgated under section 111 of the Act;
- (D) Any Class I or II ozone-depleting substance subject to a standard promulgated under or established by Title VI of the Act;
- (E) Any pollutant subject to a standard promulgated under section 112 or other

requirements established under section 112 of the Act (Hazardous Air Pollutants), including sections 112(g) (Modifications), (j) (Equivalent Emission Limitation by Permit, and (r) (Prevention of Accidental Releases), including the following:

(i) any pollutant subject to the requirements under section 112(j) of the Act. If the Administrator fails to promulgate a standard by the date established pursuant to section 112(e) of the Act (Schedule for Standards and Review), any pollutant for which a subject source would be major shall be considered to be regulated as to that source on the date 18 months after the applicable date established pursuant to section 112(e) of the Act; and,

(ii) any pollutant for which the requirements of section 112(g)(2) of the Act have been met, but only with respect to the individual source subject to the section 112(g)(2) requirement; or

(F) Any other substance for which an air emission limitation or equipment standard is set by an existing permit or regulation.

"Renewal" means the process by which a permit is reissued at the end of its term.

"Responsible official" means one of the following:

(A) For a corporation: a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation, or a duly authorized representative of such person if the representative is responsible for the overall operation of one or more manufacturing, production, or operating facilities applying for or subject to a permit and either:

(i) The facilities employ more than 250 persons or have gross annual sales or expenditures exceeding \$25 million (in second quarter 1980 dollars); or

(ii) The delegation of authority to such representatives is approved in advance by the DEQ;

(B) For the partnership or sole proprietorship: a general partner or the proprietor, respectively;

(C) For a municipality, State, Federal, or other public agency: Either a principal executive officer or ranking elected official. For purposes of this Subchapter, a principal executive officer or installation commander of a Federal agency includes the chief executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., a Regional Administrator of EPA); or

(D) For affected sources:

(i) The designated representative in so far as

actions, standards, requirements, or prohibitions under Title IV of the Act or the regulations promulgated thereunder are concerned; and

(ii) The designated representative for any other purposes under this Subchapter.

"Section 502(b)(10) changes" means changes that contravene an express permit term. Such changes do not include changes that would violate applicable requirements or contravene federally enforceable permit terms and conditions that are monitoring (including test methods), recordkeeping, reporting, or compliance certification requirements.

"Small unit" means a fossil fuel fired combustion device which serves a generator with a name plate capacity of 25 MWe or less.

"State-only requirement" means any standard or requirement pursuant to Oklahoma Clean Air Act (27A O.S. 1993 Supp. Sec. 2-5-101 et seq. 27A O.S. §§ 2-5-101 through 2-5-118, as amended) that is not contained in the State Implementation Plan (SIP).

"State program" means a program approved by the Administrator under 40 CFR Part 70.

"Stationary source" means any building, structure, facility, or installation that emits or may emit any regulated air pollutant or any pollutant listed under section 112(b) of the Act.

"Trivial activities" means any individual or combination of air emissions units that are considered inconsequential and are on a list approved by the Administrator and contained in Appendix J. ~~Any activity to which a State or federal applicable requirement applies is not trivial even if included on the trivial activities list.~~

"Unit" means, for purposes of Title IV, a fossil fuel-fired combustion device.

252:100-8-3. Applicability

(a) **Covered sources.** Except as exempted from the requirement to obtain a permit under subsection (b) of this Section or elsewhere in this Subchapter, the sources listed below are subject to the permitting requirements under this Subchapter. ~~A covered major source or major stationary source shall remain a Part 70 source until a federally enforceable permit is obtained which contains emission limitations and/or conditions to limit the operation of the facility to below that which would define it as a covered source pursuant to this section.~~

(1) Any major source (as defined in OAC 252:100-8-2);

(2) Any source subject to a NSPS;

(3) Any source, including an area source, subject to a NESHAP;

(4) Any affected source (as defined in OAC 252:100-8-2);

(5) Any source in a source category designated by the Administrator pursuant to 40 CFR §70.3; and

4201

Permanent Final Adoptions

(6) Any major stationary source required to have a permit under Parts 7 or 9 of this Subchapter.

(b) Source category exemptions.

(1) All sources listed in subsection (a) of this section that are not major sources, major stationary sources, affected sources, or solid waste incineration units required to obtain a permit pursuant to section 129(e) of the Act, are exempt from the obligation to obtain a Part 70 permit unless required to do so by appropriate implementation of EPA administrative rulemaking for non-major sources. Any such exempt source may opt to apply for a permit under these rules and shall be issued a permit if the applicant otherwise satisfies all of the requirements of this Chapter.

(2) If the Administrator determines after appropriate rulemaking that an exemption is applicable to non-major sources when adopting standards or other requirements under section 111 or section 112 of the Act after July 21, 1992, then at that time the exemption will apply.

(3) Unless otherwise required to obtain a Part 70 permit, the following source categories are exempted from the obligation to obtain a Part 70 permit:

(A) All sources in source categories that would be required to obtain a permit solely because they are subject to part 60, subpart AAA -- Standards of Performance for New Residential Wood Heaters; and

(B) All sources in source categories that would be required to obtain a permit solely because they are subject to part 61, subpart M -- National Emission Standard for Hazardous Air Pollutants for Asbestos, Section 61.145, Standard for Demolition and Renovation.

252:100-8-4. Requirements for construction and operating permits

(a) Construction permits.

(1) **Construction permit required.** No person shall ~~cause or allow the begin actual~~ construction or installation of any new ~~facility source~~ that will require a Part 70 operating permit without first obtaining a DEQ-issued air quality construction permit. A construction permit is also required prior to reconstruction of a major affected source under 40 CFR Part 63, reconstruction of a major source if it would then become a major affected source under 40 CFR 63, or for any physical change that would be a significant modification under 252:100-8-7.2(b) OAC 252:100-8-7.2(b)(2). In addition to the requirements of this Part, sources subject to Part 7 or Part 9 of this Subchapter must also meet the applicable requirements contained therein.

(2) **Requirement for case-by-case MACT determinations.**

(A) **Applicability.** The requirement for

case-by-case MACT determinations apply to any owner or operator who constructs or reconstructs a major source of hazardous air pollutants after June 29, 1998, unless the source has been specifically regulated or exempted from regulation under a subpart of 40 CFR Part 63, or the owner or operator has received all necessary air quality permits for such construction or reconstruction before June 29, 1998.

(B) **Exclusions.** The following sources are not subject to this subsection.

(i) Electric utility steam generating units unless and until these units are added to the source category list.

(ii) Stationary sources that are within a source category that has been deleted from the source category list.

(iii) Research and development activities as defined in 40 CFR § 63.41.

(C) **MACT determinations.** If subject to this subsection, an owner or operator may not begin actual construction or reconstruction of a major source of HAP until obtaining from the DEQ an approved MACT determination in accordance with the following regulations: 40 CFR 63.41, 40 CFR 63.43 and 40 CFR 63.44, which are hereby incorporated by reference as they exist on July 1, 1998-2000.

(b) Operating permits.

(1) **Operating permits required.** Except as provided in subparagraphs (A) and (B) of this section, no Part 70 source subject to this Chapter may operate after the time that it is required to file a timely application with the DEQ, except in compliance with a DEQ-issued permit.

(A) If the owner or operator of a source subject to the requirement to obtain a Part 70 permit submits a timely application for Part 70 permit issuance or renewal, that source's failure to have a Part 70 permit shall not be a violation of the requirement to have such a permit until the DEQ takes final action on the application. This protection shall cease to apply if the applicant fails to submit, by the deadline specified in writing by the DEQ or OAC 252:100-8-4, any additional information identified as being reasonably required to process the application.

(B) If the owner or operator of a source subject to this Subchapter files a timely application that the DEQ determines to be administratively incomplete due to the applicant's failure to timely provide additional information requested by the DEQ, the applicant loses the protection granted under paragraph (A) of this ~~section~~ Section. The source's failure to have a Part 70 permit shall be deemed a violation of this Subchapter.

(C) Filing an operating permit application shall not affect the requirement, if any, that a source have a construction permit.

(2) **Duty to apply.** For each Part 70 source, the owner or operator shall submit a timely and complete permit application on forms supplied by the DEQ in accordance with this section.

(3) **Timely application.** Sources that are subject to the operating permit program established by this Chapter as of March 6, 1996, shall file applications on the following schedules outlined in OAC 252:100-8-4(b)(4). A timely application is one that is postmarked on or before the relevant date listed below. In the event a major source consists of operations under multiple SIC codes, the primary activity shall form the basis for the initial permit application.

(4) **Application submittal schedule.** The following sources are subject to the operating permit program and shall submit initial permit applications according to the following schedule.

(A) No later than September 5, 1996:

(i) Affected sources under the acid rain provisions of the Act shall submit a permit application for at least the affected units at the site. Regardless of the effective date of the program and the requirement to file an application defined in this section, applications for initial Phase II acid rain permits shall be submitted to the DEQ no later than January 1, 1996, for sulfur dioxide, and by January 1, 1998, for nitrogen oxides, pursuant to the Act, §407.

(ii) Any owner or operator shall submit no less than one-third of their total applications for Part 70 sources located at sources classified by the following Source Standard Industrial Classification Codes and which belong to a single major industrial grouping other than 28 (Chemicals and allied products) or 29 (Petroleum refining and related industries):

- (I) Petroleum and Natural Gas, 1311;
- (II) Natural Gas Liquids, 1321;
- (III) Electric Services, 4911, 4961;
- (IV) Natural Gas Transmission, 4922;
- (V) Natural Gas Transmission and Distribution, 4923; and
- (VI) Petroleum Bulk Stations and Terminals, 5171.

(B) All remaining Part 70 sources identified in (b)(4)(A)(ii) of this Subsection shall be subject to the operating permit program and shall submit initial permit applications no later than March 5, 1997.

(C) No later than March 5, 1997, any owner or operator shall submit their applications for Part 70 sources located at sources classified by the following Standard Industrial Classification Codes:

(i) Metals, 3312, 3315, 3321, 3341, 3351, 3411, 3412, 3432, 3466,

(ii) Brick Plants, 3251, 3297,

(iii) Commercial Printing, 2752, 2761.

(D) No later than July 5, 1998, any owner or operator shall submit their applications for Part 70 sources located at sources classified by the following Standard Industrial Classification Codes:

(i) Refineries, 2911;

(ii) Cement Plants, 3241;

(iii) Chemical/Carbon, 2819, 2821, 2851, 2861, 2869, 2891, 2895, 2899, 2999, 3053, 3086, 3089;

(iv) Petroleum Transportation/Terminals/Storage, 4612, 4613;

(v) Food Products, 2013, 2074, 2095.

(E) All remaining Part 70 sources shall be subject to the operating permit program and shall submit initial permit applications no later than March 6, 1999.

(5) **Newly regulated sources.** A source that becomes subject to the operating permit program established by this Chapter at any time following the effective date shall file an administratively complete operating permit application within 180 days of commencement of operation.

(6) **Application acceptability.** Notwithstanding the deadlines established in paragraph (4) of this subsection, an application filed prior to the above deadlines following submission of the state program to EPA for approval shall be accepted for processing.

(7) **112(g) applications.** A source that is required to meet the requirements under section 112(g) of the Act, or to have a permit under a preconstruction review program under Title I of such Act, shall file an application to obtain an operating permit or permit amendment or modification within twelve months of commencing operation. Where an existing Part 70 operating permit would prohibit such construction or change in operation, the source must obtain a construction permit before commencing construction.

(8) **Application for renewal.** Sources subject to this Chapter shall file an application for renewal of an operating permit at least six months before the date of permit expiration, unless a longer period (not to exceed 18 months) is specified in the permit. Renewal periods greater than six months are subject to negotiation on a case-by-case basis.

(9) **Phase II acid rain permits.** Sources required to submit applications under the Acid Rain Program shall submit these applications as required by 40 CFR 72.30(b)(2)(i) through (viii).

(10) **Application completeness.** See Uniform Permitting Rules, OAC 252:2-15-70 and the definition of administratively complete—“administratively complete” in OAC 252:100-8-2.

4203

Permanent Final Adoptions

252:100-8-5. Permit applications

(a) **Confidential information.** If a source submits information to the DEQ under a claim of confidentiality, the source shall also submit a copy of such information directly to the Administrator, if the DEQ requests that the source do so.

(b) **Duty to supplement or correct application.** See ~~252:100-6-50(e)~~. ~~Any applicant who fails to submit any relevant facts or who has submitted incorrect information in a permit application shall, upon becoming aware of such failure or incorrect submittal, submit such supplementary facts or corrected information within 30 days unless the applicant's request for more time has been approved by the DEQ. In addition, an applicant shall provide additional information as necessary to address any requirements that become applicable to the source after the date it filed a complete application but prior to release of a draft permit.~~

(c) **Standard application form and required information.** Sources that are subject to the Part 70 permit program established by this Chapter shall file applications on the standard application form that the DEQ makes available for that purpose in accordance with OAC 252:2-15. The application must include information needed to determine the applicability of any applicable requirement, or state-only requirement, or to evaluate the fee amount required under the schedule approved pursuant to OAC 252:100-5-2.2(b)(2). The applicant shall submit the information called for by the application form for each emissions unit at the source to be permitted. The source must provide a list of any insignificant activities that are exempted because of size or production rate. Trivial activities need not be listed. The standard application form and any attachments shall require that the information required by OAC 252:100-8-5(d) and/or ~~252:100-8-5(e)-(e)~~ be provided.

(d) Construction permit applications.

(1) An application for a construction permit shall provide data and information required by this Chapter and/or requested on the application form available from the DEQ pursuant to the requirements of this Chapter. Such data and information shall include but not be limited to site information, process description, emission data and when required, BACT, modeling and sampling point data as follows:

(A) **BACT determination.** To be approved for a construction permit, a major source must demonstrate that the control technology to be applied is the best that is available for each pollutant that would cause the source to be defined as a major source. This determination will be made on a case by case basis taking into account energy, environmental, cost and economic impacts and other costs of alternative control systems. Unless required under Part 7 of this Subchapter, a BACT determination is not required for a modification that will result in an increase of emissions of less than 100 tons per year of any regulated air pollutant.

(B) **Modeling.** Any air quality modeling or ambient impact evaluation that is required shall be prepared in accordance with procedures acceptable to the DEQ and accomplished by the applicant.

(C) **Sampling points.** If required by the DEQ an application shall show how the new source will be equipped with sampling ports, instrumentation to monitor and record emission data and other sampling and/or testing equipment. ~~[NOTE: 252:100-8-1.4(b)(1) was taken from 252:100-7-15(b)]~~

(2) Construction permit applications for new sources must also include the requirements for operating permits contained in OAC 252:100-8-5(e) to the extent they are applicable.

(e) Operating permit applications.

(1) Identifying information, including company name and address (or plant name and address if different from the company name), owner's name and agent, and telephone number and names of plant site manager/contact.

(2) A description of the source's processes and products (by two-digit Standard Industrial Classification Code) including any associated with each alternate scenario identified by the source.

(3) The following emissions-related information:

(A) All emissions of pollutants for which the source is major, and all emissions (including fugitive emissions) of regulated air pollutants. The permit application shall describe all emissions of regulated air pollutants emitted from any emissions unit, except where such units are exempted under ~~this subsection 252:100-8-5(e)-(c) of this Section~~ or OAC 252:100-8-3(b).

(B) Identification and description of all points of emissions described in subparagraph (e)(3)(A) of this ~~section~~ Section in sufficient detail to establish the basis for fees and applicability of the Act's requirements.

(C) Emissions rates in tons per year and in such terms as are necessary to establish compliance consistent with the applicable standard.

(D) The following information to the extent it is needed to determine or regulate emissions:

- (i) fuels,
- (ii) fuel use,
- (iii) raw materials,
- (iv) production rates, and
- (v) operating schedules.

(E) Identification and description of air pollution control equipment and compliance monitoring devices or activities.

(F) Limitations on source operation affecting emissions or any work practice standards, where applicable, for all regulated pollutants at the covered source.

(G) Other information required by any

applicable requirement, or state-only requirement (including information related to stack height limitations developed pursuant to section 123 of the Act).

(H) Calculations on which the information in items (A) through (G) of this paragraph is based.

(4) The following air pollution control requirements:

(A) Citation and description of all applicable requirements and all state-only requirements.

(B) Description of or reference to any applicable test method for determining compliance with each applicable requirement and state-only requirement.

(5) Other specific information required under the DEQ's rules and statutes to implement and enforce other applicable requirements of the Act or of this Chapter or to determine the applicability of such requirements.

(6) An explanation of any proposed exemptions from otherwise applicable requirements and state-only requirements.

(7) Additional information as determined to be necessary by the DEQ to define alternative operating scenarios identified by the source pursuant to OAC 252:100-8-6(a)(9) or to define permit terms and conditions implementing OAC 252:100-8-6(f) or 252:100-8-6(a)(10).

(8) A compliance plan for all covered sources that contains all the following:

(A) A description of the compliance status of the source with respect to all applicable requirements and state-only requirements as follows:

(i) For applicable requirements and state-only requirements with which the source is in compliance, a statement that the source will continue to comply with such requirements.

(ii) For applicable requirements and state-only requirements that will become effective during the permit term, a statement that the source will meet such requirements on a timely basis shall satisfy this provision, unless a more detailed schedule is expressly required by the applicable requirement.

(iii) For requirements for which the source is not in compliance at the time of permit issuance, a narrative description of how the source will achieve compliance with such requirements.

(B) For sources not in complete compliance, a compliance schedule as follows:

(i) A schedule of compliance for sources that are not in compliance with all applicable requirements and state-only requirements at the time of permit issuance. Such a schedule shall include a schedule of remedial measures,

including an enforceable sequence of actions with milestones, leading to compliance with any applicable requirements and state-only requirements for which the source will be in noncompliance at the time of permit issuance. This compliance schedule shall resemble and be equivalent in stringency to that contained in any judicial consent decree or administrative order to which the source is subject. Any such schedule of compliance shall be supplemental to, and shall not sanction non-compliance with, the applicable requirements on which it is based.

(ii) A schedule for submission of certified progress reports no less frequently than every 6 months.

(C) The compliance plan content requirements specified in this paragraph shall apply and be included in the acid rain portion of a compliance plan for an affected source, except as specifically superseded by regulations promulgated under Title IV of the Act with regard to the schedule and method(s) the source will use to achieve compliance with the acid rain emissions limitations.

(9) Requirements for compliance certification, including the following:

(A) A certification of compliance with all applicable requirements and state-only requirements by a responsible official consistent with subsection (f) of this section and section 114(a)(3) of the Act;

(B) A statement of methods used for determining compliance, including a description of monitoring, recordkeeping, and reporting requirements and test methods;

(C) A schedule for submission of compliance certifications during the permit term, which shall be submitted annually, or more frequently if required by an underlying applicable requirement state-only requirements or by the permitting authority; and

(D) A statement indicating the source's compliance status with any applicable enhanced monitoring and compliance certification requirements of the Act.

(10) The use of nationally-standardized forms for acid rain portions of permit applications and compliance plans, as required by regulations promulgated under Title IV of the Act.

(f) **Certification.** Any application form, report, or compliance certification submitted pursuant to this Chapter shall contain certification by a responsible official of truth, accuracy, and completeness. This certification and any other certification required under this Chapter shall be signed by a responsible official and shall contain the following language: "I certify, based on information and belief formed after reasonable inquiry, the statements and

Permanent Final Adoptions

information in the document are true, accurate, and complete."

(g) ~~Number of application copies. See Part 3 of 252:2-15.~~

252:100-8-6. Permit content

(a) **Standard permit requirements.** Part 70 permits issued under this Chapter shall include all applicable requirements and state-only requirements (as defined in OAC 252:100-8-2) that apply to the permitted source at the time of issuance. Each permit shall include the following elements:

(1) **Emission limitations and standards.** The permit shall specify emissions limitations and standards that constitute applicable requirements and state-only requirements and shall include those operational conditions and limitations necessary to assure compliance with all such requirements.

(A) The permit shall specify and reference the origin of and authority for each term or condition, and identify any difference in form as compared to the applicable requirement or state-only requirement upon which the term or condition is based.

(B) The permit shall state that, where an applicable requirement of the Act is more stringent than an applicable requirement of regulations promulgated under Title IV of the Act, both provisions shall be incorporated into the permit and shall be enforceable by EPA.

(C) If the State implementation plan or an applicable requirement allows a source to comply through an alternative emission limit or means of compliance, a source may request that such an alternative limit or means of compliance be specified in its permit. Such an alternative emission limit or means of compliance shall be included in a source's permit upon a showing that it is quantifiable, accountable, enforceable, and based on replicable procedures. The source shall propose permit terms and conditions to satisfy these requirements in its application.

(2) Permit duration.

(A) **Operating permits.** The permit shall specify a fixed term. The DEQ shall issue permits for any fixed period requested in the permit application, not to exceed five years, except as provided in subparagraphs (i) and (ii) of this paragraph:

(i) Permits issued to affected sources shall in all cases have a fixed term of five years.

(ii) Permits issued to solid waste incineration units combusting municipal waste subject to standards under section 129(e) of the Act shall have a term not to exceed 12 years. Such permits shall be reviewed every five years.

(B) **Construction permits.** See OAC 252:100-8-1.4.

(3) Monitoring and related recordkeeping and reporting requirements.

(A) Monitoring requirements.

(i) All emissions monitoring and analysis procedures or test methods required under applicable requirements and state-only requirements, including any procedures and methods promulgated pursuant to sections 114(a)(3) or 504(b) of the Act;

(ii) Where an applicable requirement or state-only requirement does not require periodic testing or instrumental or non-instrumental monitoring (which may consist of recordkeeping designed to serve as monitoring), periodic monitoring during the relevant time period sufficient to yield reliable data that are representative of the source's compliance with the permit, as reported pursuant to (a)(3)(C) of this section. Such monitoring requirements shall assure use of terms, test methods, units, averaging periods, and other statistical conventions consistent with the applicable requirement or state-only requirement. Recordkeeping provisions may be sufficient to meet the requirements of this subparagraph.

(iii) As necessary, requirements concerning the use, maintenance, and, where appropriate, installation of monitoring equipment or methods.

(iv) Provisions for the permittee to request the use of alternative test methods or analysis procedures, and provisions for the DEQ to approve or disapprove the request within 60 days.

(B) **Recordkeeping requirements.** The permit shall incorporate all applicable recordkeeping requirements and require, where applicable, the following:

(i) Records of required monitoring information that include the following:

(I) The date, place as defined in the permit, and time of sampling or measurements;

(II) The date(s) analyses were performed;

(III) The company or entity that performed the analyses;

(IV) The analytical techniques or methods used;

(V) The results of such analyses; and

(VI) The operating conditions existing at the time of sampling or measurement.

(ii) Retention of records of all required monitoring data and support information for a period of at least five years from the date of the monitoring sample, measurement, report, or

application. Support information includes all calibration and maintenance records and all original stripchart recordings for continuous monitoring instrumentation, and copies of all reports required by the permit. Where appropriate, the permit may specify that records may be maintained in computerized form.

(C) **Reporting requirements.** The permit shall incorporate all applicable reporting requirements and require the following requirements:

(i) A permit issued under this Part shall require the permittee to submit a report of any required monitoring at least every six months. To the extent possible, the schedule for submission of such reports shall be timed to coincide with other periodic reports required by the permit, including the permittee's annual compliance certification. However, the reports may be submitted at any time within the reporting period, as stipulated in the permit.

(ii) Each report submitted under (C)(i) of this paragraph shall identify any exceedances from permit requirements since the previous report that have been monitored by the monitoring systems required under the permit, and any exceedances from the monitoring, recordkeeping and reporting requirements under the permit.

(iii) In addition to semiannual monitoring reports, each permittee shall be required to submit supplemental reports as follows:

(I) Any exceedance resulting from an emergency or upset conditions as defined in 252:100-8-6(e) OAC 252:100-8-2 or upset conditions as defined in the permit shall be reported within 24 hours of the date on which promptly but no later than 4:30 p.m. on the next working day after the permittee first becomes aware of the exceedance, if the permittee wishes to assert the affirmative defense authorized under said section, and the permittee shall submit a follow up written report within 10 working days of first becoming aware of the exceedance. The initial report must contain a description of the emergency or upset conditions, any steps taken to mitigate emissions, and corrective actions taken. Quantification of exceedances attributable to emergencies or upset conditions shall be made by the best available method. If the permittee wishes to assert the affirmative defense authorized under subsection (e) of this Section for emergencies, the permittee shall submit a followup written report within 10 working

days of first becoming aware of the exceedance.

(II) Any exceedance that poses an imminent and substantial danger to public health, safety, or the environment shall be reported as soon as is practicable; but under no circumstance shall notification be more than 24 hours after exceedance.

(III) Any other exceedances that are identified in the permit as requiring more frequent reporting than the permittee's semiannual report shall be reported on the schedule specified in the permit.

(IV) All reports of exceedances shall identify the probable cause of the exceedances and any corrective actions or ~~preventative~~ preventive measures taken.

(iv) Every report submitted under this subsection shall be certified by a responsible official, except that if a report of an exceedance required under (C)(iii) of this paragraph must be submitted within ten days of the exceedance, the report may be submitted in the first instance without a certification if an appropriate certification is provided within ten days thereafter, together with any corrected or supplemental information required concerning the exceedance. Reports submitted shall be consistent with the requirements of OAC 252:100-9.

(4) **Risk management plans.** If the source is required to develop and register a risk management plan pursuant to section 112(r) of the Act, the permit need only specify that the permittee will comply with the requirement to register such a plan. Although the requirement to have a risk management plan may be a term of the permit, the risk management plan contents are not part of the permit.

(5) **Title IV allowances.**

(A) No permit revision shall be required for increases in emissions that are authorized by allowances acquired pursuant to the acid rain program, provided that such increases do not require a permit revision under any other applicable requirement.

(B) No limit shall be placed on the number of allowances held by the source. The source may not, however, use allowances as a defense to noncompliance with any other applicable requirement.

(C) The permit shall prohibit emissions exceeding any allowance that the source lawfully holds under Title IV of the Act or the regulations promulgated thereunder. Compliance with this paragraph will be determined on January 31st of any given year and be based on actual emissions and

4207

Permanent Final Adoptions

the number of allowances held for the previous calendar year.

(6) **Severability clause.** The permit shall include a severability clause to ensure the continued validity of the various permit requirements in the event of a challenge to any portions of the permit.

(7) **General requirements.** The permit shall include provisions stating the following:

(A) The permittee must comply with all conditions of the permit. Any permit noncompliance constitutes a violation of the Oklahoma Clean Air Act and is grounds for:

- (i) enforcement action;
- (ii) permit termination, revocation and reissuance, or modification; or
- (iii) denial of a permit renewal application.

(B) It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit. However, nothing in this subsection shall be construed as precluding consideration of a need to halt or reduce activity as a mitigating factor in assessing penalties for noncompliance if the health, safety, or environmental impacts of halting or reducing operations would be more serious than the impacts of continuing operations.

(C) The permit may be modified, revoked, reopened, and reissued, or terminated for cause. Except as provided under OAC 252:100-8-7.2(b)(1) for minor permit modifications, the filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or of a notification of planned changes or anticipated noncompliance does not stay any permit condition.

(D) The permit does not convey any property rights of any sort or any exclusive privilege.

(E) The permittee shall furnish to the DEQ, upon receipt of a written request and within a reasonable time, any information that the DEQ may request to determine whether cause exists for modifying, reopening, or revoking and reissuing or terminating the permit or to determine compliance with the permit. Upon request, the permittee shall also furnish to the DEQ copies of records required to be kept by the permit. The permittee may make a claim of confidentiality pursuant to 27A O.S. 1993 Supp. Section 2-5-105.18-27A O.S. § 2-5-105.18 for any information or records submitted under this paragraph.

(8) **Fees.** The permit shall provide that the permittee will pay fees to the DEQ consistent with the fee schedule established under OAC 252:100-5-2.2.

(9) **Emissions trading.** The permit shall provide that no permit revision shall be required under any approved economic incentives, marketable permits,

emissions trading and other similar programs or processes for changes that are provided for in the permit.

(10) **Operating scenarios.** The permit shall include terms and conditions applicable to all operating scenarios described in the permit application and eligible for approval under applicable requirements and state-only requirements. The permit shall authorize the permittee to make changes among operating scenarios authorized in the permit without notice, but shall require the permittee contemporaneously with making a change from one operating scenario to another to record in a log at the permitted facility the scenario under which it is operating.

(11) **Emissions averaging.** The permit shall include terms and conditions, if the permit applicant requests them, for the trading or averaging of emissions increases and decreases in the permitted facility, to the extent that the applicable requirements provide for trading or averaging such increases and decreases. Such terms and conditions shall include terms under subsections (a) and (c) of this ~~section~~ Section to determine compliance and shall satisfy all requirements of the applicable requirements authorizing such trading or averaging.

(b) **Federally enforceable requirements.**

(1) Except as provided in paragraph (b)(2) of this ~~section~~ Section, all terms and conditions in a permit issued under this ~~section~~ Section, including any provisions designed to limit a source's potential to emit, are enforceable by the DEQ, by EPA, and by citizens under section 304 of the Act.

(2) Notwithstanding paragraph (b)(1) of this ~~section~~ Section, the DEQ shall designate as not being federally enforceable under the Act any terms and conditions included in the permit that are not required under the Act or any of its applicable requirements, and such terms and conditions shall not be enforceable by EPA and citizens under section 304 of the Act.

(c) **Compliance requirements.** All permits issued under this Part shall contain the following elements with respect to compliance:

(1) Consistent with paragraph (a)(3) of this ~~section~~ Section, compliance certification, testing, monitoring, reporting, and recordkeeping requirements sufficient to assure compliance with the terms and conditions of the permit. Any document (including reports) required by a permit under this Part shall contain a certification by a responsible official as to the results of the required monitoring.

(2) Inspection and entry requirements that require that, upon presentation of credentials and other documents as may be required by law, the permittee shall allow authorized officials of the DEQ to perform the following:

(A) Enter upon the permittee's premises during reasonable/normal working hours where a source is located or emissions-related activity is conducted, or where records must be kept under the conditions of the permit;

(B) Have access to and copy, at reasonable times, any records that must be kept under the conditions of the permit;

(C) Inspect at reasonable times and using reasonable safety practices any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under the permit; and

(D) As authorized by the Oklahoma Clean Air Act, sample or monitor at reasonable times substances or parameters for the purpose of assuring compliance with the permit.

(3) A schedule of compliance if required under OAC 252:100-8-5(e)(8)(B).

(4) To the extent required under an applicable schedule of compliance and OAC 252:100-8-5(e)(8), progress reports, to be submitted semiannually or more frequently if specified in the applicable requirement or by the DEQ. Such progress reports shall contain the following:

(A) Dates for achieving the activities, milestones, or compliance required in the schedule of compliance, and dates when such activities, milestones or compliance were achieved; and

(B) An explanation of why any dates in the schedule of compliance were not or will not be met, and any preventive or corrective measures adopted.

(5) Requirements for compliance certification with terms and conditions contained in the permit that are federally enforceable, including emission limitations, standards, or work practices. Each permit shall specify:

(A) The frequency (which shall be annually unless the applicable requirement or state-only requirement specifies submission more frequently) of submissions of compliance certifications;

(B) In accordance with paragraph (a)(3) of this ~~section~~ Section, a means for monitoring the compliance of the source with emissions limitations, standards, and work practices;

(C) A requirement that the compliance certification include the following:

(i) The identification of each term or condition of the permit that is the basis of the certification;

(ii) The permittee's current compliance status, as shown by monitoring data and other information available to the permittee;

(iii) Whether compliance was continuous or intermittent;

(iv) The method(s) used for determining the compliance status of the source, currently and

over the reporting period as required by paragraph (a)(3) of this ~~section~~ Section; and

(v) Such other facts as the DEQ may require to determine the compliance status of the source;

(D) A requirement that all compliance certifications be submitted to EPA as well as to the DEQ;

(E) Such additional requirements as may be specified pursuant to sections 114(a)(3) and 504(b) of the Act; and

(6) Such other provisions as the DEQ may require.

(d) **Permit shield.**

(1) Each operating permit issued under this Part shall include a "permit shield" provision, which shall state that compliance with the terms and conditions of the permit (including terms and conditions established for alternate operating scenarios, emissions trading, and emissions averaging, but excluding terms and conditions for which the permit shield is expressly prohibited under this Subchapter) shall be deemed compliance with the applicable requirements identified and included in the permit.

(2) Upon request, the DEQ shall include in the permit or in a separate written finding issued with the permit a determination identifying specific requirements that do not apply to the source. The source shall specify in its application for such a determination the requirements for which the determination is requested. If the determination is issued in a separate finding, that finding shall be summarized in the permit. The permit shall state that the permit shield applies to any requirements so identified. A request for a determination to extend the shield to requirements deemed inapplicable to the source may be made either in the original permit application or in a subsequent application for a permit modification.

(3) A Part 70 permit that does not expressly state that a permit shield exists shall be presumed not to provide such a shield.

(4) Nothing in this ~~section~~ Section or in the permit shall alter or affect the following:

(A) the provisions of section 303 of the Act, including the authority of the Administrator under that section;

(B) the liability of an owner or operator of a source for any violation of applicable requirements or state-only requirements prior to or at the time of permit issuance;

(C) the applicable requirements of the acid rain program, consistent with section 408(a) of the Act; or

(D) the ability of EPA to obtain information from a source pursuant to section 114 of the Act.

(e) **Emergencies.**

4209

Permanent Final Adoptions

~~(1) When used in this Subsection, "Emergency" means any situation arising from sudden and reasonably unforeseeable events beyond the control of the source, including acts of God, which situation requires immediate corrective action to restore normal operation, and that causes the source to exceed a technology-based emission limitation under the permit, due to unavoidable increases in emissions attributable to the emergency. An emergency shall not include noncompliance to the extent caused by improperly designed equipment, lack of preventive maintenance, careless or improper operation, or operator error. Quantification of accidental releases shall be made by the best available method.~~

~~(2)(1) An emergency constitutes an affirmative defense to an action brought for noncompliance with such technology-based emission limitations if the conditions of paragraph (e)(3) of this section Section and the reporting requirements of OAC 252:100-8-6(a)(3)(C) (iii)(I) are met.~~

~~(3)(2) The affirmative defense of emergency shall be demonstrated through properly signed, contemporaneous operating logs or other relevant evidence that:~~

~~(A) An emergency occurred and that the permittee can identify the cause(s) of the emergency;~~

~~(B) The permitted facility was at the time being properly operated;~~

~~(C) During the period of the emergency the permittee took all reasonable steps to minimize levels of emissions that exceeded the emission standards or other requirements in the permit.~~

~~(4)(3) In any enforcement proceeding, the permittee seeking to establish the occurrence of an emergency has the burden of proof.~~

~~(5)(4) The provision in this subsection is in addition to any emergency or upset provision contained in any applicable requirement or OAC 252:100-9.~~

(f) Operational flexibility.

~~(1) Applicant's duty to apply for alternative scenarios. Any operating scenario allowed for in an applicable Part 70 permit may be implemented by the A facility may implement any operating scenario allowed for in its Part 70 permit without the need for any permit revision or any notification to the permitting authority. It is incumbent upon the Part 70 permit applicant to apply for any reasonably anticipated alternative facility operating scenarios at the time of initial or renewal permit application.~~

~~(2) Changes resulting in no emissions increases. A permitted Part 70 source may make changes within the facility that:~~

~~(A) Are not modifications under any provision of Title I of the Act;~~

~~(B) Do not cause any hourly or annual permitted~~

~~emission rate of any existing emissions unit to be exceeded; and~~

~~(C) Result in a net change in emissions of zero, provided that the facility notifies the DEQ and EPA in writing at least 7 days in advance of the proposed changes. The source, DEQ, and EPA shall attach each such notice to their copy of the relevant permit. For each such change, the written notification required above shall include a brief description of the change within the permitted facility, the date on which the change will occur, any change in emissions, and any permit term or condition that is no longer applicable as a result of the change. The permit shield described in OAC 252:100-8-6(d) does not apply to any change made pursuant to this subsection.~~

252:100-8-7. Permit issuance

~~(a) Criteria for issuance. A permit, permit modification, or renewal may be issued only if the applicable requirements of 27A O.S. Supp. 1995, 2-14-101 et seq. 27A O.S. §§ 2-14-101 through 2-14-401; OAC 252:2-15; and this Chapter have been met and the DEQ has determined that the conditions of the permit provide for compliance with all applicable requirements and, for applications subject to OAC 252:100-8-8, that the requirements of that section Section have been satisfied.~~

~~(b) Draft permits and notice thereof. See OAC 252:2-15. The draft permit shall be accompanied by a statement that sets forth the legal and factual basis for the draft permit conditions (including references to the applicable statutory or regulatory provisions) A statement that sets forth the legal and factual basis for the draft permit conditions (including references to the applicable statutory or regulatory provisions) shall accompany the draft permit.~~

~~(c) EPA review. See OAC 252:100-8-8.~~

~~(d) DEQ final action. See OAC 252:2-15, and 252:100-8-8 when applicable.~~

~~(e) Timeline for technical review and issuance. The DEQ shall take final action on each application for a permit within 18 months after beginning its technical review in accordance with OAC 252:2-15-70 through 15-72 252:2-15-72 and OAC 252:100-8-4(b)(7).~~

~~(f) Action priorities. See OAC 252:100-8-4(b)(2) through (10) and OAC 252:100-8-7.1(a).~~

~~(g) No issuance by default. See 27A O.S. § 2-5-112(D).~~

252:100-8-7.2. Administrative permit amendments and permit modifications

~~(a) Administrative permit amendments.~~

~~(1) An administrative permit amendment:~~

~~(A) Corrects typographical errors;~~

~~(B) Identifies a change in the name, address, or phone number of any person identified in the~~

permit, or provides a similar minor administrative change at the source;

(C) Requires more frequent monitoring or reporting by the permittee;

(D) Allows for a change in ownership or operational control of a source where no other change in the permit is necessary, provided that a written agreement containing a specific date for transfer of permit responsibility, coverage, and liability between the current and new permittee has been submitted to the DEQ;

(E) Incorporates into the permit the requirements from preconstruction review permits issued by the DEQ under this Part.

(2) Administrative permit amendments for purposes of the acid rain portion of the permit shall be governed by 40 CFR Part 72.

(3) An administrative permit amendment shall be made by the DEQ in accordance with the following:

(A) The DEQ shall take final action on a request for an administrative permit amendment within 60 days from the date of receipt of such a request, and may incorporate the proposed changes without providing notice to the public or affected States provided that it designates any such permit revisions as having been made pursuant to this paragraph.

(B) The DEQ shall submit a copy of the revised permit to the Administrator upon the Administrator's request.

(C) The source may implement the changes addressed in the request for an administrative amendment immediately upon submittal of the request.

(4) The DEQ shall, upon taking final action granting a request for an administrative permit amendment, allow coverage by the permit shield in OAC 252:100-8-6(d) for administrative permit amendments made pursuant to subparagraph ~~252:100-8-7.2(a)(1)(E)~~ 7.2(a)(1)(E) of this section-Section.

(b) **Permit modification.** A permit modification is any revision to a permit that cannot be accomplished under subsection (a) of this section-Section. A permit modification for purposes of the acid rain portion of the permit shall be governed by 40 CFR Part 72.

(1) **Minor permit modification procedures.**

(A) **Criteria.**

(i) Minor permit modification procedures may be used only for those permit modifications that:

(I) Do not violate any applicable requirement, or state-only requirements;

(II) Do not involve significant changes to existing monitoring, reporting or recordkeeping requirements in the permit;

(III) Do not require or change a

case-by-case determination of an emission limitation or other standard, or a source-specific determination for temporary sources of ambient impacts, or a visibility or increment analysis;

(IV) Do not seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement or state-only requirement which the source has assumed to avoid some other applicable requirement or state-only requirement to which the source would otherwise be subject. Such terms and conditions include federally-enforceable emissions caps assumed to avoid classification as a modification under any provision of Title I and alternative emissions limits approved pursuant to regulations promulgated under ~~§§112(i)(5)~~ § 112(i)(5) of the Act; and

(V) Are not modifications under any provision of Title I of the Act.

(ii) Notwithstanding OAC 252:100-8-7.2(b)(1)(A)(i) and 252:100-8-7.2(b)(2)(A), minor permit modification procedures may be used for permit modifications involving the use of economic incentives, marketable permits, emissions trading, and other similar approaches, to the extent that such minor permit modification procedures are explicitly provided for in the State's implementation plan or in applicable requirements promulgated by EPA.

(B) **Application.** To use the minor permit modification procedures, a source shall submit an application requesting such use which shall meet the permit application requirements of Tier I under OAC 252:2-15 and shall include the following:

(i) A description of the change, the emissions resulting from the change, and any new applicable requirements or state-only requirements that will apply if the change occurs;

(ii) The source's suggested modification language;

(iii) Certification by a responsible official, that the application and the proposed modification meet the criteria for use of minor permit modification procedures; and

(iv) Completed forms for any notices required by OAC 252:2-15 and subparagraph (C) of this paragraph.

(C) **EPA and affected state notification.** If the proposed minor modification is of a permit that underwent EPA review in accordance with OAC 252:100-8-8, the provisions of that section shall apply

Permanent Final Adoptions

to the minor modification application unless waived by the Administrator.

(D) **Timetable for issuance.** Within 90 days of the DEQ's receipt of a complete application under OAC 252:2-15 the DEQ shall:

- (i) Issue the minor permit modification as approved;
- (ii) Deny the minor permit modification application; or
- (iii) Determine that the requested modification does not meet the minor permit modification criteria and should be reviewed under the significant modification procedures or administrative amendment procedures.

(E) **Source's ability to make change.** Immediately after filing an application meeting the requirements of these minor permit modification procedures, the source is authorized to make the change or changes proposed in the application. After the source makes the change and until the DEQ takes any of the actions specified in (1)(D)(i) through (iii) of this subsection, the source must comply with the applicable requirements and state-only requirements governing the change and the proposed permit terms and conditions. During this period, the source need not comply with the existing terms and conditions it seeks to modify. However, if the source fails to comply with its proposed permit terms and conditions during this time period, the existing permit terms and conditions it seeks to modify may be enforced against it.

(F) **Permit shield.** The permit shield under OAC 252:100-8-6(d) will not extend to minor permit modifications.

(G) **Permittee's risk in commencing construction.** The permittee assumes the risk of losing any investment it makes toward implementing a modification prior to receiving a permit amendment authorizing the modification. The DEQ will not consider the possibility of the permittee suffering financial loss due to such investment when deciding whether to approve, deny, or approve in modified form a minor permit amendment.

(2) Significant modification procedures.

(A) **Criteria.** Significant modification procedures shall be used for applications requesting permit modifications that:

- (i) Involve any significant changes in existing monitoring requirements in the permit;
- (ii) Relax any reporting or recordkeeping requirements.
- (iii) Change any permit condition that is required to be based on a case-by-case determination of an emission limitation or

other standard, on a source-specific determination of ambient impacts, or on a visibility or increment analysis;

(iv) Seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement or state-only requirement which the source has assumed to avoid some other applicable requirement or state-only requirement to which the source would otherwise be subject. Such terms and conditions include:

- (I) A federally enforceable emissions cap assumed to avoid classification as a modification under any provision of Title I;
- (II) An alternative emissions limit approved pursuant to regulations promulgated under section 112(i)(5) of the Act; and

(v) Are modifications under any provision of Title I of the Act; and,

(vi) Do not qualify as minor permit modifications or administrative amendments.

(B) **Procedures for processing.** Significant permit modifications shall meet all requirements of these rules that are applicable to Tier II applications. The application for the modification shall describe the change, the emissions resulting from the change, and any new applicable requirements or state-only requirements that will apply if the change occurs.

(C) **Issuance.** The DEQ shall complete review of significant permit modifications within nine months after receipt of a complete application, but shall be authorized to extend that date by up to three months for cause.

252:100-8-8. Permit review by EPA and affected states

(a) **Applicability.** This ~~section~~ Section applies only to specific Tier II and III applications for Part 70 construction and/or operating permits and permit actions that have not been waived from compliance with this section by the Administrator.

(b) **Format.** To the extent practicable, information provided to the EPA by applicants shall be in computer-readable format compatible with EPA's national database management system.

(c) **Recordkeeping.** The DEQ will keep for 5 years records required by this ~~section~~ Section and will submit to the Administrator such information as the Administrator may reasonably require to ascertain whether the State program complies with the requirements of the Act or of this Chapter.

(d) **Transmission of Part 70 applications to EPA.** For Part 70 Tier II and III applications subject to this section, the DEQ shall require an applicant upon filing to also provide a copy to the Administrator or the DEQ may submit a

permit application summary form and any relevant portion of the permit application and compliance plan, in place thereof.

(e) **Transmittal of notice of draft permit to affected states.** See 27A O.S. Supp. 1995, § 2-5-112(E); 27A O.S. Supp. 1995, § 2-14-101 et seq. 27A O.S. § 2-5-112(E); 27A O.S. §§ 2-14-101 through 2-14-401; and OAC 252:2-15.

(f) **Preparation and submittal of EPA review copy.**

(1) **Tier II applications.** For Tier II applications, the DEQ shall review public comments; revise the draft permit as appropriate and submit the revision to EPA for review no later than 60 days before the issuance deadline established in OAC 252:2-15-72 or, if none, by this Chapter.

(2) **Tier III applications.** For Tier III applications, the DEQ shall prepare a proposed permit according to 27A O.S. Supp. 1995, § 2-14-304 27A O.S. § 2-14-304, and submit it to EPA for review upon the publication of notice of an administrative permit hearing opportunity.

(g) **Notice of non-acceptance.** As part of the DEQ's submittal of a revised draft permit (Tier II) or a proposed permit (Tier III) to the Administrator, the DEQ shall notify the Administrator and any affected State in writing of any refusal by the DEQ to accept all recommendations for the revised draft permit or proposed permit that the affected State submitted during the review period. The notice will include the DEQ's reasons for not accepting any such recommendation. The DEQ is not required to accept recommendations that are not based on applicable requirements of the Oklahoma Clean Air Act or these rules.

(h) **EPA review and non-objection.** Upon receipt of notice from the EPA that it will not object to:

(1) A revised draft permit based on a Tier II application, the DEQ shall issue the permit.

(2) A proposed permit based on a Tier III application, the DEQ shall issue the proposed permit as final unless an administrative permit hearing has been timely and properly requested.

(i) **EPA review and objection.**

(1) **Timing.** Except as specified in paragraph 5 of this subsection, no permit for which an application must be transmitted to the Administrator under subsection (a) of this ~~section~~ Section shall be issued if the Administrator objects to its issuance in writing within 45 days of receipt of the revised draft permit (~~Tier I~~) (Tier II) or proposed permit (Tier III) and all necessary supporting information.

(2) **Form of objection.** An EPA objection shall include a statement of the Administrator's reasons for objection and a description of the terms and conditions that the permit must include to respond to the objections.

(3) **Additional grounds.** Failure of the DEQ to do any of the following also shall constitute grounds for an objection:

(A) Comply with subsections (d) or (e) of this ~~section~~ Section;

(B) Submit any information necessary to review adequately the revised draft permit (Tier II) or the proposed permit (Tier III); or

(C) Process the permit application according to the uniform permitting requirements of OAC 252:2-15.

(4) **Copy.** The Administrator will provide the permit applicant a copy of the objection.

(5) **DEQ response.** The DEQ shall consult with EPA and the applicant and shall either:

(A) **Amend permit.** Amend the permit and submit for approval an amended draft (Tier II) or proposed (Tier III) permit to EPA within 90 days after the date of EPA's objection, or

(B) **Give notice and issue.** Determine that one or more revisions sought by EPA are inconsistent with applicable state or federal statutes or regulations, inform EPA accordingly within 90 days following the date of the Administrator's objection, decline to make those particular revisions and:

(i) issue the amended or revised draft permit (Tier II) as final, or

(ii) issue the proposed permit (Tier III) as final unless an administrative permit hearing has been timely and properly requested.

(6) **Failure of DEQ to respond.** If the DEQ fails, within 90 days after the date of the EPA objection, to amend and resubmit the draft permit or proposed permit in response to the objection, the Administrator will issue or deny the permit in accordance with the requirements of EPA's Part 70 regulations.

(j) **Public petitions to the Administrator.** If the Administrator does not object in writing under subsection (h) of this section, any person that meets the requirements of this subsection may petition the Administrator within 60 days after the expiration of the Administrator's 45-day review period to make such objection. Any such petition shall be based only on objections to the permit that the petitioner raised with reasonable specificity during the public comment period provided for in ~~252:002-15~~ OAC 252:2-15, unless the petitioner demonstrates that it was impracticable to raise such objections within such period, or unless the grounds for such objection arose after such period. If the Administrator objects to the permit as a result of a petition filed under this subsection, the DEQ shall not issue the permit until EPA's objection has been resolved, except that a petition for review does not stay the effectiveness of a permit or its requirements if the permit was issued after the end of the 45-day review period and prior to an EPA objection. If the DEQ has issued a permit prior to receipt of an EPA objection under this subsection, the Administrator will modify, terminate, or revoke such permit, and shall do so consistent with the procedures in OAC 252:100-8-7 through 252:100-8-7.5 except in unusual

4213

Permanent Final Adoptions

circumstances. If the DEQ revokes the permit, it may thereafter issue only a revised permit that satisfies EPA's objection. In any case, the source will not be in violation of the requirement to have submitted a timely and complete application.

(k) **Effect on Tier III administrative permit hearing.** When a public petition or an EPA objection is registered on a proposed permit (Tier III) on which an administrative permit hearing has been requested in accordance with ~~27A O.S. Supp. 1995, Section 2-14-101 et seq.~~ 27A O.S. §§ 2-14-101 through 2-14-401, the DEQ may stay the evidentiary part of the hearing involving cross-examination until EPA objections are resolved or determined to be inconsistent with applicable laws.

PART 7. PREVENTION OF SIGNIFICANT DETERIORATION (PSD) REQUIREMENTS FOR ATTAINMENT AREAS

252:100-8-31. Definitions

The following words and terms when used in this Part shall have the following meaning, unless the context clearly indicates otherwise:

"Actual emission" means the actual rate of emissions of a pollutant from an emissions unit, as determined in accordance with the following:

(A) In general, actual emissions as of a particular date shall equal the average rate in tons per year at which the unit actually emitted the pollutant during a two-year period which precedes the particular date and which is representative of normal source operation. The reviewing authority may allow the use of a different time period upon a determination that it is more representative of normal source operation. Actual emissions shall be calculated using the unit's actual operating hours, production rates, and types of materials processed, stored, or combusted during the selected time period. Actual emissions may also be determined by source tests, or by best engineering judgment in the absence of acceptable test data.

(B) The reviewing authority may presume that source-specific allowable emissions for the unit are equivalent to the actual emissions of the unit.

(C) For any emissions unit which has not begun normal operations on the particular date, actual emissions shall equal the potential to emit of the unit on that date.

"Adverse impact on visibility" means visibility impairment which interferes with the management, protection, preservation or enjoyment of the visitor's visual experience of the Federal Class I area. This determination must be made by the DEQ on a case-by-case basis taking into account the geographic extent, intensity, duration, frequency and time of visibility impairments, and how these factors correlate with:

- (A) times of visitor use of the Federal Class I area; and
- (B) the frequency and timing of natural conditions that reduce visibility.

"Baseline area" means any areas designated as attainment or unclassifiable in which the major source or major modification establishing the minor source baseline date would construct or would have an air quality impact equal to or greater than $1 \mu\text{g}/\text{m}^3 - \mu\text{g}/\text{m}^3$ (annual average) of the pollutant for which the minor source baseline date is established.

"Baseline concentration" means that ambient concentration level which exists in the baseline area at the time of the applicable minor source baseline date.

(A) A baseline concentration is determined for each pollutant for which a minor source baseline date is established and shall include:

(i) the actual emissions representative of sources in existence on the applicable minor source baseline date, except as provided in (B) of this definition.

(ii) the allowable emissions of major sources which commenced construction before the major source baseline date but were not in operation by the applicable minor source baseline date. ~~(Effective May 11, 1991)~~

(B) The following will not be included in the baseline concentration and will affect the applicable maximum allowable increase(s):

(i) actual emissions from any major source on which construction commenced after the major source baseline date; and,

(ii) actual emissions increases and decreases at any source occurring after the minor source baseline date. ~~(Effective May 11, 1991)~~

"Baseline date" means:

(A) for major sources,

(i) in the case of particulate matter and sulfur dioxide, January 6, 1975, and,

(ii) in the case of nitrogen dioxide, February 8, 1988; and,

(B) for minor sources, the earliest date after the trigger date on which a major source or major modification (subject to 40 CFR 52.21 or OAC 252:100-8, Part 7) submits a complete application. The trigger date is:

(i) in the case of particulate matter and sulfur dioxide, August 7, 1977, and

(ii) in the case of nitrogen oxides, February 8, 1988. ~~(Effective May 11, 1991)~~

~~**"Best available control technology"** means the control technology to be applied for a major source or modification is the best that is available as determined by the Executive Director on a case-by-case basis taking into account energy, environmental, costs and economic impacts of alternate control systems.~~

~~“Building, structure, facility or installation” means all of the pollutant emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person or persons under common control. Pollutant emitting activities shall be considered as part of the same industrial grouping if they belong to the same “Major Group” (i.e., which have the same two digit code) as described in the Standard Industrial Classification Manual, 1972, as amended by the 1977 Supplement.~~

“Complete” means, in reference to an application for a permit, means that the application contains all the information necessary for processing the application. Designating an application complete for purposes of permit processing does not preclude the reviewing authority from requesting or accepting any additional information.

“Federal land manager” means the Secretary of the department with authority over the Federal Class I area or his representative.

“Innovative control technology” means any system of air pollution control that has not been adequately demonstrated in practice, but would have a substantial likelihood of achieving greater continuous emissions reduction than any control system in current practice or of achieving at least comparable reductions at lower cost in terms of energy, economics, or non-air quality environmental impacts.

“Major modification” means any physical change in or change in the method of operation of a major source that would result in a significant net emissions increase of any pollutant subject to regulation.

(A) Any net emissions increase that is significant for volatile organic compounds shall be considered significant for ozone.

(B) A physical change or change in the method of operation shall not include:

(i) routine maintenance, repair and replacement.

(ii) use of an alternate fuel or raw material by reason of any order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation) or by reason of a natural gas curtailment plan pursuant to the Federal Power Act.

(iii) use of an alternate fuel by reason of an order or rule under Section 125 of the Federal Clean Air Act.

(iv) use of an alternate fuel at a steam generating unit to the extent that the fuel is generated from municipal solid waste.

(v) Use of an alternate fuel or raw material by a source which:

(I) the source was capable of accommodating before January 6, 1975, unless such change would be prohibited

under any enforceable permit limitation which was established after January 6, 1975; or,

(II) the source is approved to use under any permit issued under 40 CFR 52.21 or OAC 252:100-8.

(vi) An increase in the hours of operation or in the production rate, unless such change would be prohibited under any enforceable permit limitation which was established after January 6, 1975.

(vii) Any change in source ownership.

“Major stationary source” means any source which meets any of the following conditions:

(A) Any of the following sources of air pollutants which emits, or has the potential to emit, 100 tons per year or more of any pollutant subject to regulation:

(i) carbon black plants (furnace process),

(ii) charcoal production plants,

(iii) chemical process plants,

(iv) coal cleaning plants (with thermal dryers),

(v) coke oven batteries,

(vi) fossil-fuel boilers (or combination thereof) totaling more than 250 million BTU per hour heat input,

(vii) fossil fuel-fired steam electric plants of more than 250 million BTU per hour heat input,

(viii) fuel conversion plants,

(ix) glass fiber processing plants,

(x) hydrofluoric, sulfuric or nitric acid plants,

(xi) iron and steel mill plants,

(xii) kraft pulp mills,

(xiii) lime plants,

(xiv) municipal incinerators capable of charging more than 250-50 tons of refuse per day,

(xv) petroleum refineries,

(xvi) petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels,

(xvii) phosphate rock processing plant,

(xviii) portland cement plants,

(xix) primary aluminum ore reduction plants,

(xx) primary copper smelters,

(xxi) primary lead smelters,

(xxii) primary zinc smelters,

(xxiii) secondary metal production plants,

(xxiv) sintering plants,

(xxv) sulfur recovery plants, or

(xxvi) taconite ore processing plants.

(B) Any other source not on the list in (A) of this definition which emits, or has the potential to emit, 250 tons per year or more of any pollutant subject to regulation.

4215

Permanent Final Adoptions

(C) Any physical change that would occur at a source not otherwise qualifying as a major source under (A) and (B) of this definition if the change would constitute a major source by itself.

(D) A major source that is major for volatile organic compounds shall be considered major for ozone.

"Natural conditions" mean naturally occurring phenomena against which any changes in visibility are measured in terms of visual range, contrast or coloration.

"Net emissions increase" means:

(A) The amount by which the sum of the following exceeds zero:

(i) any increase in actual emissions from a particular physical change or change in the method of operation at a source; and,

(ii) any other increases and decreases in actual emissions at the source that are contemporaneous with the particular change and are otherwise creditable.

(B) An increase or decrease in actual emissions is contemporaneous with the increase from the particular change only if it occurs within 3 years before the date that the increase from the particular change occurs.

(C) An increase or decrease in actual emissions is creditable only if the Executive Director has not relied on it in issuing a permit under OAC 252:100-8, Part 7, which permit is in effect when the increase in actual emissions from the particular change occurs.

(D) An increase or decrease in actual emissions of sulfur dioxide, particulate matter, or nitrogen oxides which occurs before the applicable minor source baseline date is creditable only if it is required to be considered in calculating the amount of maximum allowable increases remaining available. ~~(Effective May 11, 1991)~~

(E) An increase in actual emissions is creditable only to the extent that the new level of actual emissions exceeds the old level.

(F) A decrease in actual emissions is creditable only to the extent that:

(i) the old level of actual emissions or the old level of allowable emissions, whichever is lower, exceeds the new level of actual emissions;

(ii) it is enforceable at and after the time that actual construction on the particular change begins;

(iii) it has approximately the same qualitative significance for public health and welfare as that attributed to the increase from the particular change.

(G) An increase that results from a physical change at a source occurs when the emission unit on

which construction occurred becomes operational and begins to emit a particular pollutant. Any replacement unit that requires shakedown becomes operational only after a reasonable shakedown period, not to exceed 180 days.

"Significant" means:

(A) In reference to a net emissions increase or the potential of a source to emit any of the following pollutants, a rate of emissions that would equal or exceed any of the following rates:

(i) carbon monoxide: 100 tons per year (tpy),

(ii) nitrogen oxides: 40 tpy,

(iii) sulfur dioxide: 40 tpy,

(iv) particulate matter: 25 tpy of particulate matter emissions or 15 tpy of PM-10 emissions,

(v) ozone: 40 tpy of volatile organic compounds,

(vi) lead: 0.6 tpy,

(vii) asbestos: 0.007 tpy,

(viii) beryllium: 0.0004 tpy,

(ix) mercury: 0.1 tpy,

(x) vinyl chloride: 1 tpy,

(xi) fluorides: 3 tpy,

(xii) sulfuric acid mist: 7 tpy,

(xiii) hydrogen sulfide (H₂S): 10 tpy,

(xiv) total reduced sulfur (including H₂S): 10 tpy, and

(xv) reduced sulfur compounds (including H₂S): 10 tpy.

(B) Notwithstanding (A) of this definition, "significant" means any emissions rate or any net emissions increase associated with a major source or modification which would construct within 6 miles of a Class I area, and have an impact on such area equal to or greater than 1 $\mu\text{g}/\text{m}^3$ $\mu\text{g}/\text{m}^3$ (24-hour average).

"Visibility impairment" means any humanly perceptible reduction in visibility (visual range, contrast and coloration) from that which would have existed under natural conditions.

252:100-8-33. Exemptions

(a) **Exemptions from PSD requirements.** PSD requirements do not apply to a particular source or modification if:

(1) It is a nonprofit health or educational institution.

(2) The source is major by virtue of fugitive emissions, to the extent quantifiable, included in calculating the potential to emit and is a source other than:

(A) One of the categories listed in (A)(i) through (xxvi) under the definition of "Major stationary source" in OAC 252:100-8-31, or

(B) A stationary source category which, as of August 7, 1980, is being regulated by NSPS or NESHAP.

(3) The source or modification is a portable stationary

source which has previously received a permit under the PSD requirements and proposes to relocate to a temporary new location from which its emissions would not impact a Class I area or an area where an applicable increment is known to be violated.

(b) Exemption from air quality impact evaluation.

(1) The requirements of OAC 252:100-8-35 are not applicable if the emissions, with respect to a particular pollutant, would be temporary and impact no Class I area and no area where an applicable increment is known to be violated.

(2) The requirements of OAC 252:100-8-35 are not applicable to the emissions, with respect to a particular pollutant, to a modification of a major source that was in existence on March 1, 1978 if the net increase in allowable emissions of each regulated pollutant, after the application of ~~best available control technology~~ BACT would be less than 50 tons per year.

(c) Exemption from monitoring requirements.

(1) The monitoring requirements of OAC 252:100-8-35 are not applicable for a particular pollutant if the emission increase of the pollutant from a new source or the net emissions increase of the pollutant from a modification would cause, in any area, air quality impacts less than the following listed amounts, or are pollutant concentrations that are not on the list.

(A) Carbon monoxide - $575 \mu\text{g}/\text{m}^3$ - $\mu\text{g}/\text{m}^3$, 8-hour average,

(B) Nitrogen dioxide - $14 \mu\text{g}/\text{m}^3$ - $\mu\text{g}/\text{m}^3$, annual average,

(C) Particulate matter - $10 \mu\text{g}/\text{m}^3$ - $\mu\text{g}/\text{m}^3$, TSP, 24-hour average, or $10 \mu\text{g}/\text{m}^3$ - $\mu\text{g}/\text{m}^3$ PM-10, 24-hour average,

(D) Sulfur dioxide - $13 \mu\text{g}/\text{m}^3$ - $\mu\text{g}/\text{m}^3$, 24-hour average,

(E) Ozone - see (N) below,

(F) Lead - $0.1 \mu\text{g}/\text{m}^3$ - $\mu\text{g}/\text{m}^3$, 24-hour 3-month average,

(G) Mercury - $0.25 \mu\text{g}/\text{m}^3$ - $\mu\text{g}/\text{m}^3$, 24-hour average,

(H) Beryllium - 0.0005 - $0.001 \mu\text{g}/\text{m}^3$ - $\mu\text{g}/\text{m}^3$, 24-hour average,

(I) Fluorides - $0.25 \mu\text{g}/\text{m}^3$ - $\mu\text{g}/\text{m}^3$, 24-hour average,

(J) Vinyl chloride - $15 \mu\text{g}/\text{m}^3$ - $\mu\text{g}/\text{m}^3$, 24-hour average,

(K) Total reduced sulfur - $10 \mu\text{g}/\text{m}^3$ - $\mu\text{g}/\text{m}^3$, 1-hour average,

(L) Hydrogen sulfide - 0.04 - $0.2 \mu\text{g}/\text{m}^3$ - $\mu\text{g}/\text{m}^3$, 1-hour average, or

(M) Reduced sulfur compounds - $10 \mu\text{g}/\text{m}^3$ - $\mu\text{g}/\text{m}^3$, 1-hour average.

(N) No de minimis air quality level is provided for ozone. However, any net increase of 100 tons per year or more of volatile organic compounds subject to PSD would be required to perform an ambient

impact analysis, including the gathering of ambient air quality data.

(2) The requirements for air quality monitoring in OAC 252:100-8-35(b),(c) and (d)(2) shall not apply to a source or modification that was subject to 40 CFR 52.21 as in effect on June 19, 1978, if a permit application was submitted before June 8, 1981 and the ~~Executive~~ Director subsequently determined that the application was complete except for OAC 252:100-8-35(b), (c) and (d)(2). Instead, the requirements in 40 CFR 52.21(m)(2) as in effect on June 19, 1978, shall apply to such source or modification.

(3) The requirements for air quality monitoring in OAC 252:100-8-35(b), (c), and (d)(2) shall not apply to a source or modification that was not subject to 40 CFR 52.21 as in effect on June 19, 1978, if a permit application was submitted before June 8, 1981 and the ~~Executive~~ Director subsequently determined that the application as submitted was complete, except for the requirements in OAC 252:100-8-35(b), (c) and (d)(2).

(4) The ~~Executive~~ Director shall determine if the requirements for air quality monitoring of PM-10 in OAC 252:100-8-35(a) through ~~252:100-8-35(e)-(c)~~ and OAC 252:100-8-35(d)(2) may be waived for a source or modification when an application for a permit was submitted on or before June 1, 1988 and the ~~Executive~~ Director subsequently determined that the application, except for the requirements for monitoring particulate matter under OAC 252:100-8-35(a) through ~~252:100-8-35(e)-(c)~~ and OAC 252:100-8-35(d)(2), was complete before that date.

(5) The requirements for air quality monitoring of PM-10 in OAC 252:100-8-35(b), (c), (d)(2) and (d)(6) shall apply to a source or modification if an application for a permit was submitted after June 1, 1988 and no later than December 1, 1988. The data shall have been gathered over at least the period from February 1, 1988 to the date the application becomes otherwise complete in accordance with the provisions of OAC 252:100-8-33(b)(1), except that if the ~~Executive~~ Director determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period (not to be less than 4 months), the data required by OAC 252:100-8-35(b)(1) and OAC 252:100-8-35(c) shall have been gathered over that shorter period.

(d) Exemption from BACT requirements and monitoring requirements. If a complete permit application for a source or modification was submitted before August 7, 1980 the requirements for ~~best available control technology~~ BACT in OAC 252:100-8-34 and for monitoring in OAC 252:100-8-35(a) through ~~252:100-8-35(e)-(c)~~ and OAC 252:100-8-35(d)(2) through ~~252:100-8-35(d)(4)-(4)~~ are not applicable. Instead, the federal requirements at 40 CFR 52.21 (j) and (n) as in effect on June 19, 1978 are applicable to any such source or modification.

(e) Exemption of modifications. As specified in the

4217

Permanent Final Adoptions

applicable definitions of OAC 252:100-8-31, 252:100-8-1.1, and 252:100-1, the requirements of OAC 252:100-8, Part 7 for PSD and OAC 252:100-8, Part 9 for nonattainment areas are not applicable to a modification if the existing source was not major on August 7, 1980 unless the proposed addition to that existing minor source is major in its own right.

(f) **Exemption from impact analyses.** The requirements of OAC 252:100-8-35 and OAC 252:100-8-36 do not apply to a source or modification with respect to any maximum allowable increase for nitrogen oxides if the owner or operator of the source or modification submitted a completed application for a permit before February 8, 1988.

(g) **Exemption from increment consumption.** Excluded from increment consumption are the following cases:

(1) Concentrations from an increase in emissions from any source converting from the use of petroleum products, natural gas, or both by reason of any order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation), or by reason of a natural gas curtailment plan pursuant to the Federal Power Act. Such exclusion is limited to five years after the effective date of the order or plan.

(2) Emissions of particulate matter from construction or other temporary emission-related activities of new or modified sources.

(3) A temporary increase of sulfur dioxide, particulate matter, or nitrogen oxides by order or authorized variance from any source.

PART 9. MAJOR SOURCES AFFECTING NONATTAINMENT AREAS

252:100-8-51. Definitions

The following words and terms, when used in this Part, shall have the following meaning, unless the context clearly indicates otherwise:

"Actual emissions" means the actual rate of emissions of a pollutant from an emissions unit, as determined in accordance with the following:

(A) In general, actual emissions as of a particular date shall equal the average rate in tons per year at which the unit actually emitted the pollutant during a two-year period which precedes the operation. The reviewing authority may allow the use of a different time period upon a determination that it is more representative of normal source operation. Actual emissions shall be calculated using the unit's actual operating hours, production rates, and types of materials processed, stored, or combusted during the selected time period. Actual emissions may also be determined by source tests, or by best engineering judgment in the absence of acceptable test data.

(B) The reviewing authority may presume that

source-specific allowable emissions for the unit are equivalent to the actual emissions of the unit.

(C) For any emissions unit which has not begun normal operations on the particular date, actual emissions shall equal the potential to emit of the unit on that date.

"Building, structure, facility" means all of the pollutant emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person (or persons under common control). Pollutant emitting activities shall be considered as part of the same industrial grouping if they belong to the same "Major Group" (i.e., which have the same two digit code) as described in the Standard Industrial Classification Manual, 1972, as amended by the 1977 Supplement.

"Installation" means an identifiable piece of process equipment.

"Lowest achievable emissions rate" means the control technology to be applied to a major source or modification which the Executive Director, on a case by case basis, determines is achievable for a source based on the lowest achievable emission rate achieved in practice by such category of source (i.e., lowest achievable emission rate as defined in the Federal Clean Air Act).

"Major modification" means any physical change in, or change in the method of operation of, a major source that would result in a significant net emissions increase of any pollutant subject to regulation.

(A) Any net emissions increase that is significant for volatile organic compounds shall be considered significant for ozone.

(B) A physical change or change in the method of operation shall not include:

(i) routine maintenance, repair and replacement;

(ii) use of an alternate fuel or raw material by reason of any order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation) or by reason of a natural gas curtailment plan pursuant to the Federal Power Act;

(iii) use of an alternate fuel by reason of an order or rule under Section 125 of the Federal Clean Air Act;

(iv) use of an alternate fuel at a steam generating unit to the extent that the fuel is generated from municipal solid waste;

(v) Use of an alternate fuel or raw material by a source which:

(I) the source was capable of accommodating before December 21, 1976, unless such change would be prohibited under any enforceable permit limitation

which was established after December 21, 1976; or,

(II) the source is approved to use under any permit issued under 40 CFR 52.21 or OAC 252:100-7 or 8.

(vi) An increase in the hours of operation or in the production rate unless such change would be prohibited under any enforceable permit limitation which was established after December 21, 1976, or

(vii) any change in source ownership.

"Major stationary source" means:

(A) any stationary source of air pollutants which emits, or has the potential to emit, 100 tons per year or more of any pollutant subject to regulation; or,

(B) any physical change that would occur at a source not qualifying under (A) of this definition as a major source, if the change would constitute a major source by itself.

(C) for ozone, a source that is major for volatile organic compounds shall be considered major.

"Net emissions increase" means:

(A) The amount by which the sum of the following exceeds zero:

(i) any increase in actual emissions from a particular physical change or change in the method of operation at a source; and,

(ii) any other increases and decreases in actual emission at the source that are contemporaneous with the particular change and are otherwise creditable.

(B) An increase or decrease in actual emissions is contemporaneous with the increase from the particular change only if it occurs within 3 years before the date that the increase from the particular change occurs.

(C) An increase or decrease in actual emissions is creditable only if the Executive Director has not relied on it in issuing a permit under 252:100-8, Part 9 of this Subchapter, which permit is in effect when the increase in actual emissions from the particular change occurs.

(D) An increase in actual emissions is creditable only to the extent that the new level of actual emissions exceeds the old level.

(E) A decrease in actual emissions is creditable only to the extent that:

(i) the old level of actual emissions or the old level of allowable emissions, whichever is lower, exceeds the new level of actual emissions;

(ii) it is enforceable at and after the time that actual construction on the particular change begins;

(iii) the reviewing authority has not relied on it

in issuing any permit under State air quality rules; and,

(iv) it has approximately the same qualitative significance for public health and welfare as that attributed to the increase from the particular change.

(F) An increase that results from a physical change at a source occurs when the emission unit on which construction occurred becomes operational and begins to emit a particular pollutant. Any replacement unit that requires shakedown becomes operational after a reasonable shakedown period, not to exceed 180 days.

"Reconstruction" means the replacement of components of an existing source (which will then be treated as a new source for purposes of Part 9 of this Subchapter) to the extent that will be determined by the Executive Director based on:

(A) The fixed capital cost (the capital needed to provide all the depreciable components) of the new components exceeds 50% of the fixed capital cost of a comparable entirely new source; and,

(B) The estimated life of the source after the replacements is comparable to the life of an entirely new source; and,

(C) the extent to which the components being replaced cause or contribute to the emissions from the source.

"Resource recovery facility" means any facility at which solid waste is processed for the purpose of extracting, converting to energy, or otherwise separating and preparing solid waste for reuse. Energy conversion facilities must utilize solid waste to provide more than 50 percent of the heat input to be considered a resource recovery facility under Part 9 of this Subchapter.

"Significant" means, in reference to a net emissions increase or the potential of a source to emit any of the following pollutants, a rate of emissions that would equal or exceed any of the following rates:

- (A) Carbon monoxide: 100 tons per year (tpy),
- (B) Nitrogen oxides: 40 tpy,
- (C) Sulfur dioxide: 40 tpy,
- (D) Particulate matter: 15 tpy of PM-10 emissions,
- (E) Ozone: 40 tpy of volatile organic compounds, or
- (F) Lead: 0.6 tpy.

252:100-8-52. Source applicability determination

Proposed new sources and source modifications to which Part 9 of this Subchapter ~~are~~ is applicable are determined by size, geographical location and type of emitted pollutants:

(1) Size.

(A) Permit review will apply to sources and modifications that emit any regulated pollutant in

Permanent Final Adoptions

major amounts. These quantities are specified in the definitions for major stationary source, major modification, potential to emit, net emissions increase, significant, and other associated definitions in OAC 252:100-8-51, 252:100-8-1.1, and 252:100-1-252:100-1-3.

(B) At such time that a particular source or modification becomes major solely by virtue of a relaxation in any enforceable permit limitation which was established after August 7, 1980 on the capacity of the source or modification otherwise to emit a pollutant, such as a restriction on hours of operation, then the requirements of Parts 1, 3, 5, and 9 of this Subchapter shall apply to that source or modification as though construction had not yet commenced on it.

(2) **Location.**

(A) Sources and modifications that are major in size and proposed for construction in an area which has been designated as nonattainment for any applicable ambient air quality standard are subject to the requirements for the nonattainment area, if the source or modification is major for the nonattainment pollutant(s) of that area.

(B) In addition, the requirements of a PSD review (Part 7 of this Subchapter) would be applicable if any other regulated pollutant other than the nonattainment pollutant is emitted in significant amounts by that source or modification.

(3) **Location in attainment or unclassifiable area but causing or contributing to NAAQS violation.**

(A) A proposed major source or major modification that would locate in an area designated attainment or unclassifiable is considered to cause or contribute to a violation of the national ambient air quality standards when such source or modification would, as a minimum, exceed the following significance levels at any locality that does not or would not meet the applicable national standard:

Pollutant	Concentration, $\mu\text{g}/\text{m}^3$			
	Averaging Time (hours)			
	Annual	24	8	3
SO ₂	1.0	5		25
PM-10	1.0	5		
NO ₂	1.0			
CO			500	2000

(i) **SO₂:**

(I) 1.0 $\mu\text{g}/\text{m}^3$ annual average;

(II) 5 $\mu\text{g}/\text{m}^3$ 24-hour average;

(III) 25 $\mu\text{g}/\text{m}^3$ 3-hour average;

(ii) **PM-10:**

(I) 1.0 $\mu\text{g}/\text{m}^3$ annual average;

(II) 5 $\mu\text{g}/\text{m}^3$ 24-hour average;

(iii) NO₂: 1.0 $\mu\text{g}/\text{m}^3$ annual average;

(iv) CO:

(I) 500 $\mu\text{g}/\text{m}^3$ 8-hour average;

(II) 2000 $\mu\text{g}/\text{m}^3$ one-hour average.

(B) A proposed major source or major modification subject to OAC 252:100-8-52(3)(A) may reduce the impact of its emissions upon air quality by obtaining sufficient emissions reductions to, at a minimum, compensate for its adverse ambient impact where the proposed source or modification would otherwise cause or contribute to a violation of any national ambient air quality standard. In the absence of such emission reductions, a permit for the proposed source or modification shall be denied.

(C) The requirements of OAC 252:100-8-52(3)(A) and (B) shall not apply to a major source or major modification with respect to a particular pollutant if the owner or operator demonstrates that, as to that pollutant, the source or modification is located in an area designated nonattainment.

(D) Sources of volatile organic compounds located outside a designated ozone nonattainment area will be presumed to have no significant impact on the designated nonattainment area. If ambient monitoring indicates that the area of source location is in fact nonattainment, then the source may be granted its permit since the area has not yet been designated nonattainment.

(E) Sources locating in an attainment area but impacting on a nonattainment area above the significant levels listed in OAC 252:100-8-52(3) are exempted from the condition of OAC 252:100-8-54(4)(A).

(F) The determination whether a source or modification will cause or contribute to a violation of an applicable ambient air quality standard for sulfur dioxide, particulate matter or carbon monoxide will be made on a case by case basis as of the proposed new source's start-up date by an atmospheric simulation model. For sources of nitrogen oxides the model can be used for an initial determination assuming all the nitric oxide emitted is oxidized to nitrogen dioxide by the time the plume reaches ground level, and the initial concentration estimates will be adjusted if adequate data are available to account for the expected oxidation rate.

(G) The determination as to whether a source would cause or contribute to a violation of applicable ambient air quality standards will be made on a case by case basis as of the new source's start-up date. Therefore, if a designated nonattainment area is projected to be attainment as part of the state implementation plan control strategy by the new source start-up date, offsets

would not be required if the new source would not cause a new violation.

~~(F) Sources causing a new violation of applicable ambient air standards as determined by the Executive Director but not contributing to an existing violation, will be approved if both of the following conditions are met:~~

~~(i) The new source is required to meet a more stringent emission limitations and/or the control of existing sources below allowable levels so that the new violation of ambient standards does not occur.~~

~~(ii) The new emission limitations for the new source, as well as for any existing sources affected, are enforceable under the Oklahoma and Federal Clean Air Acts.~~

ANALYSIS:

The changes to Subchapter 9 include correction of typographical and grammatical errors and deletion of redundant language. As part of the re-right/de-wrong process, the Subchapter has been reorganized. Also, substantive changes were made, such as amending the definition of "malfunction" and adding definitions for "bypass," "regulated air pollutant," "technological limitation," and "working day." Also, new language is proposed requiring that a certification of truth, accuracy and completeness be submitted with any written report. Additional demonstration requirements for malfunctions and startups/shutdowns were added under proposed section 252:100-9-3.3, Demonstration of cause. Owners or operators must meet these requirements in order to be exempt from compliance with air emission limitations established in permits, rules, and orders of the DEQ. Language has been proposed to allow owners and operators to submit excess emission reports on a quarterly basis when those emissions are due to a technological limitation. Also, language has been proposed to explain that compliance with this Subchapter will not exempt sources from complying with any applicable federal requirement. New language sets forth the Division's interpretation that excess emissions occurring more than 1.5 percent of the time that a process operated in a calendar quarter may be indicative of inadequate design, operation, or maintenance, and the DEQ may initiate further investigation to determine if that is so. Prior notice to the DEQ by facilities of maintenance activities has been proposed to be deleted from the rule. Finally, proposed language would clarify that even if a facility has made a demonstration of cause so as to be exempt from compliance with an applicable requirement, the DEQ still has the authority to order corrective action or to require a cessation of activities if the emissions would cause a condition of air pollution.

The Air Quality Advisory Council recommended these amendments for adoption at their meeting on April 19, 2000.

MEMORANDUM

TO: Air Quality Council

FROM: Larry Byrum, Director
AIR QUALITY DIVISION *JB*

SUBJECT: JUSTIFICATION OF REVISION OF PERMIT PROCESSING FEES
FOR PART 70 SOURCES IN SUBCHAPTER 8

One new permit processing fee is proposed in the revisions to Subchapter. This is a fee for authorizations under a general permit. At this time, the fee for an initial Title V permit is also used for processing an application for an authorization under a general operating permit. The general permit was intended to simplify and streamline preparation of permit applications and processing of permit applications. This being the case, it seems appropriate that the processing fee for an authorization should be less than that for an individual permit.

It is proposed that a new fee of \$900 be set for processing an application for authorization under a general permit. This is based on the following data:

Average time to process an authorization - 30 hours
Average cost for staff engineer - \$28.29/hour

Average Processing Time	X	Average Cost	=	Processing Fee
30 hours	X	\$28.29/hour	=	\$848.70

Because of the limited number of applications for authorizations that have been received and processed to date, the average processing time is tentative. Further study regarding permit processing time requirements is underway and the final proposed fee will reflect the results of this study.

October 7, 1997

MEMORANDUM

TO: Air Quality Council

FROM: Larry Byrum, Director *LBB*
AIR QUALITY DIVISION

SUBJECT: Modifications to Subchapter 8

Enclosed is a copy of the proposed draft modifications to Subchapter 8 Operating Permits (Part 70), that will be brought to public hearing on October 21, 1997. The proposed amendments include: incorporation of the permit continuum by the introduction of general construction permits for Part 70 sources and general construction and operating permits for major facilities that are not subject to Part 70; the addition of the requirements for construction permits for Part 70 sources and construction and operating permits for major facilities not subject to Part 70; revision of the permit application processing fees by setting a fee for processing authorizations under a general permit; deletion of annual operating fees (which will be moved to Subchapter 5); incorporation by reference of federal rules governing case-by-case MACT determinations (40 CFR "63.40, 63.41, 63.43 and 63.44); and revisions to meet the requirements set forth in the February 5, 1996, Federal Register for final approval of the Title V program. The proposed draft also includes revisions intended to simplify and clarify the rule. Material in the Subchapter was reorganized and in some cases reworded. It is proposed to add Appendix I, Insignificant Activities List and Appendix J, Trivial Activities List to the rules.

Enclosed in the packet are copies of the proposed revisions to Subchapter 8 and the proposed Appendices I and J. Also included in the packet is a table that compares the Parts, Sections, Subsections, etc., of the proposed revision to Subchapter 8 to the Parts, Sections, Subsections, etc., of existing Subchapters 7, 8 and 10.

252:100-8-33. Review, applicability and exemptions	70
252:100-8-34. <u>Best available control Control technology</u>	75
252:100-8-35. Air quality impact evaluation	75
252:100-8-36. Source Impacting Class I areas	78
252:100-8-37. Innovative control technology	79
PART 11. MAJOR SOURCES AFFECTING NONATTAINMENT AREAS	80
252:100-8-50. Applicability	80
252:100-8-51. Definitions	81
252:100-8-52. Source applicability determination	85
252:100-8-53. Exemptions	87
252:100-8-54. Requirements for sources located in nonattainment areas	88

SUBCHAPTER 8. OPERATING PERMITS FOR MAJOR TSP (TOTAL SUSPENDED PARTICULATES) FACILITIES AND PART 70 SOURCES (PART 70)

PART 1. GENERAL PROVISIONS

[NOTE: Throughout this rule language that has been moved from other Sections and Subchapters will be underlined once, new language is double underlined and deletions are struck out.]

252:100-8-1. Purpose

~~The purpose of this Subchapter is to provide for the promulgation and enforcement of the requirements necessary to meet Title V of the federal Clean Air Act (42 U.S.C. 7401, et seq.) and 40 CFR Part 70 by establishing a comprehensive state air quality permitting program for major sources of air contaminant emissions. Permits issued under this program will address all applicable air contaminant emissions and regulatory requirements in a single document. This Subchapter sets forth permit application fees and the substantive requirements for permits for major TSP facilities and Part 70 sources.~~

252:100-8-1.1. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise. Except as specifically provided in this section, terms used in this Subchapter retain the meaning accorded them under the applicable requirements of the Act.

[NOTE: From 252:100-8-2]

"A stack in existence" means for purposes of 252:100-8-1.6 that the owner or operator had:

(A) begun, or caused to begin, a continuous program of physical on-site construction of the stack; or

(B) entered into binding agreements or contractual obligations, which could not be canceled or modified without substantial loss to the owner or operator, to undertake a program of construction of the stack to be completed in a reasonable time. [NOTE: From 252:100-7-16(b)]

"Act" means the federal Clean Air Act, as amended, 42 U.S.C. 7401 et. seq. [NOTE: From 252:100-8-2]

"Administrator" means the Administrator administrator of the United States Environmental Protection Agency (EPA) or the Administrator's administrator's designee. [NOTE: From 252:100-8-2]

"Dispersion technique" means for purposes of 252:100-8-1.6 any technique which attempts to affect the concentration of a pollutant in the ambient air by using that portion of a stack which exceeds good engineering practice stack height; varying the rate of emission of a pollutant according to atmospheric conditions or ambient concentrations of that pollutant; or increasing final exhaust gas plume rise by manipulating source process parameters, exhaust gas parameters, stack parameters or

combining exhaust gases from several existing stacks into one stack, or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise. The preceding sentence does not include:

(A) The reheating of a gas stream, following use of a pollution control system, for the purpose of returning the gas to the temperature at which it was originally discharged from the facility generating the gas stream.

(B) The merging of exhaust gas streams where:

(i) the source owner or operator documents that the facility was originally designed and constructed with such merged streams;

(ii) after July 8, 1985, such merging is part of a change in operation at the facility that includes the installation of pollution controls and is accompanied by a net reduction in the allowable emissions of a pollutant. This exclusion from "dispersion technique" applicability shall apply only to the emission limitation for the pollutant affected by such change in operation;

or

(iii) before July 8, 1985, such merging was part of a change in operation at the facility that included the installation of emissions control equipment or was carried out for sound economic or engineering reasons. Where there was an increase in the emission limitation or, in the event that no emission limitation existed prior to the merging, there was an increase in the quantity of pollutants actually emitted prior to the merging, it shall be presumed that merging was primarily intended as a means of gaining emissions credit for greater dispersion. Before such credit can be allowed, the owner or operator must satisfactorily demonstrate that merging was not carried out for the primary purpose of gaining credit for greater dispersion.

(C) Manipulation of exhaust gas parameters, merging of exhaust gas streams from several existing stacks into one stack, or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise in those cases where the resulting allowable emissions of sulfur dioxide from the facility do not exceed 5,000 tons per year. [NOTE: from 252:100-7-16(b)]
