"Emission limitations and emission standards" means for purposes of 252:100-8-1.6 a requirement requirements that which limits limit the quantity, rate or concentration of emissions of air pollutants on a continuous basis, including any requirements which that limit the level of opacity, prescribe equipment, set fuel specifications or prescribe operation or maintenance procedures for a source to assure continuous reduction. (Amended 7-9-87, effective 8-10-87) [NOTE: From 252:100-7-16(b)]

"EPA" means the United States Environmental Protection Agency. [NOTE: From 252:100-8-2]

"Major TSP facility" means any stationary facility which directly emits or has the potential to emit 100 tons per year or more of TSP and is not subject to the Part 70 program.

"National Emission Standards for Hazardous Air Pollutants" or "NESHAP" means those standards found in 40 CFR Parts 61 and 63.

"New Source Performance Standards" or "NSPS" means those standards found in 40 CFR Part 60.

"Part 70 permit" (unless the context suggests otherwise) means any permit or group of permits covering a Part 70 source that is issued, renewed, amended, or revised pursuant to this Chapter. [NOTE: From 252:100-8-2]

"Part 70 program" means a program approved by the Administrator under 40 CFR Part 70. [NOTE: From 252:100-8-2]

"Part 70 source" means any source subject to the permitting requirements of Part 70 of this Chapter Subchapter, as provided in OAG 252:100-8-3(a) and 252:100-8-3(b). [NOTE: From 252:100-8-2]

"Regulated air pollutant" means:

(A) any Any Volatile Organic Compound (VOC), as that term is defined at in 252:100-1-3, 252:100-37-2, or 252:100-39-2, or any Volatile Organic Solvent (VOS), as that term is defined in 252:100-37-2 and 252:100-39-2.

(B) Any Volatile Organic Solvent (VOS), as that term is defined at in 252:100-37-2 and 252:100-39-2.

(C) ~~(B)~~ any Any pollutant regulated under section 111 or 112 (except 112(r)) or the Federal Clean Air Act.

(D) ~~(C)~~ any Any pollutant for which a national primary ambient air quality standard has been promulgated except Carbon Monoxide under the Federal Clean Air Act.

(E) ~~(D)~~ any Any Toxic Air Contaminant as defined and regulated under OAG 252:100-41.

(F) ~~(E)~~ any Any other substance for which an air emission limitation or equipment standard is set by permit or rule.

"Stack" means for purposes of 252:100-8-1.6 any point in a source designed to emit solids, liquids or gases into the air, including a pipe or duct but not including flares. [NOTE: From 252:100-7-16(b)]

252:100-8-1.2. Requirement for permits for major TSP facilities and Part 70 sources

(a) Permit required. Except as provided in this section, no person may commence construction or modification of any major TSP facility or minor Part 70 source, or operate any new minor major TSP facility or Part 70 source, or relocate any minor source without obtaining a permit from the DEQ. For application and permitting procedures, see 252:100-6 and the Uniform Permitting Rules, 252:2-15. [NOTE: From 252:100-7-2(b)]

(b) Permit categories. Two types of construction and operating permits are available: general permit and individual permit.

(1) General permit.

(A) A general permit may be issued for an industry if there are a sufficient number of facilities that have the same or

substantially similar operations, emissions and activities which are subject to the same standards, limitations and operating and monitoring requirements.

(B) Facilities may be eligible for authorization under a general permit if the following criteria are met:

(i) The facility has actual emissions of 100 tpy or more of any one regulated air pollutant emitted and/or is a Part 70 source.

(ii) The DEQ has issued a general permit for the industry.

(2) Individual permit. Facilities requiring permits under this Subchapter that do not qualify for a general permit shall obtain individual permits. An owner or operator may apply for an individual permit even if the facility qualifies for a general permit.

(c) Applicability determination. Any person may submit a request in writing that the Agency DEQ make a determination as to whether a particular source or installation, which that person operates or proposes to operate, is subject to the permit requirements of this rule Subchapter. The request must contain such sufficient information as is believed sufficient for the Agency DEQ to make the requested determination and the required fee. The Agency DEQ may request any additional information that it needs for purposes of making the determination. [NOTE: From 252:100-8-3(f)]

252:100-8-1.3. Transfer of permit

The Transfer transfer of a stationary source or a facility to a new owner or operator is not considered an increase in emissions and does not require new permits. However, any transfer shall be subject the new owner or operator to existing permit conditions and/or compliance schedules. Notification of such transfers shall be made promptly in writing to the DEQ. The transferor shall notify the AOD in writing no later than 10 days following the change in ownership. No new permit is required. Transfer of permits for Part 70 sources is an administrative permit amendment and covered in 252:100-8-7.2(a)(1)(D). [NOTE: From 252:100-7-2(c)(2)]

252:100-8-1.4. ~~Failure Duty to comply with a construction permit~~

~~A violation of these limitations or conditions by the owner/operator shall subject the owner/operator to any or all enforcement penalties, including permit revocation, available under the Oklahoma Clean Air Act and Air Pollution Control Rules.~~

(a) An owner or operator who applies for a permit or authorization, upon notification of coverage, shall be bound by the terms and conditions therein. [NOTE: Based on 252:100-10-5(j)]

(b) An owner or operator who violates any condition of a permit or authorization is subject to enforcement under the Oklahoma Clean Air Act. [NOTE: 252:100-8-1.4(b) was based on 252:100-7-

252:100-8-1.5. Cancellation or extension of a construction permit or authorization under a general construction permit

(a) Cancellation of permit or authorization to construct or modify. A duly issued permit or authorization to construct or modify will terminate and become null and void (unless extended as provided in Subsection subsection (b) of this Section section) if the construction is not commenced within 18 months after of the date the permit or authorization was issued issuance date, or if work is suspended for more than 18 months after it has commenced.

(b) Extension of permit or authorization to construct or modify.

(1) Prior to the expiration date of the permit or authorization expiration date, a permittee may apply for extension of the permit or authorization by written request of the DEQ stating the reasons for the delay or suspension and providing justification for the extension. The DEQ may grant:

(A) One extension Extensions for terms of 18 months or less, or

(B) One extension of up to 36 months where the applicant is proposing to expand an already existing facility to accommodate the proposed new construction or the applicant has expended a significant amount of money (1% of total project cost as identified in the original application, not including land cost) in preparation for meeting the definition of "commence construction" at the proposed site-, or

(C) One extension of up to 72 months will be granted to major industrial facilities (project cost greater than \$100,000,000.00), where the applicant proposes to construct at an existing site and demonstrates that the existing site was originally designed and constructed to accommodate the proposed new facilities. The applicant shall show a commitment to the site by having purchased land necessary to construct facilities covered by this extension and expended \$1,000,000.00 or more on engineering and/or site development.

(2) If construction has not commenced within three (3) years of the effective date of the original permit or authorization, the permittee must undertake and complete an appropriate available control technology review and an air quality analysis. This review must be approved by the DEQ before construction may commence.

(3) Upon formal request of any applicant whose permit has been denied for lack of increment, the DEQ may require any permittee under 252:100:8-1.5(b) (1) (B) or 252:100-8-1.5

(b) (1) (C), to furnish a complete air quality analysis and/or an appropriate available control technology review if such review is required in order to provide new or current information. [NOTE: 252:100-8-1.5 is from 252:100-7-15(g)]

252:100-8-1.6. Stack height limitations

(a) Stack height exclusion. Air quality modeling or ambient impact evaluation shall exclude the effect of that portion of the height of any stack which exceeds good engineering practice or the effect of any other dispersion techniques.

~~(b) Definitions.~~ The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise: [NOTE: Definitions were moved to 252:100-8-1.1]

~~(1) "A stack in existence" means that the owner or operator had:~~

~~(A) begun, or caused to begin, a continuous program of physical on site construction of the stack; or~~

~~(B) entered into binding agreements or contractual obligations, which could not be canceled or modified without substantial loss to the owner or operator, to undertake a program of construction of the stack to be completed in a reasonable time.~~

~~(2) "Dispersion technique" means any technique which attempts to affect the concentration of a pollutant in the ambient air by using that portion of a stack which exceeds good engineering practice stack height; varying the rate of emission of a pollutant according to atmospheric conditions or ambient concentrations of that pollutant; or increasing final exhaust gas plume rise by manipulating source process parameters, exhaust gas parameters, stack parameters or combining exhaust gases from several existing stacks into one stack, or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise. The preceding sentence does not include:~~

~~(A) The reheating of a gas stream, following use of a pollution control system, for the purpose of returning the gas to the temperature at which it was originally discharged from the facility generating the gas stream.~~

~~(B) The merging of exhaust gas streams where:~~

~~(i) the source owner or operator documents that the facility was originally designed and constructed with such merged streams;~~

~~(ii) after July 8, 1985, such merging is part of a change in operation at the facility that includes the installation of pollution controls and is accompanied by a net reduction in the allowable emissions of a pollutant. This exclusion from "dispersion technique" applicability shall apply only to the emission limitation for the pollutant affected by such change in operation; or~~

~~(iii) before July 8, 1985, such merging was part of a change in operation at the facility that included the installation of emissions control equipment or was carried out for sound economic or engineering~~

~~reasons. Where there was an increase in the emission limitation or, in the event that no emission limitation existed prior to the merging, there was an increase in the quantity of pollutants actually emitted prior to the merging, it shall be presumed that merging was primarily intended as a means of gaining emissions credit for greater dispersion. Before such credit can be allowed, the owner or operator must satisfactorily demonstrate that merging was not carried out for the primary purpose of gaining credit for greater dispersion.~~

~~(C) Manipulation of exhaust gas parameters, merging of exhaust gas streams from several existing stacks into one stack, or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise in those cases where the resulting allowable emissions of sulfur dioxide from the facility do not exceed 5,000 tons per year.~~

~~(3) "Emission limitations and emission standards" means a requirement which limits the quantity, rate or concentration of emissions of air pollutants on a continuous basis, including any requirements which limit the level of opacity, prescribe equipment, set fuel specifications or prescribe operation or maintenance procedures for a source to assure continuous reduction. (Amended 7-9-87, effective 8-10-87)~~

~~(4) "Stack" means any point in a source designed to emit solids, liquids or gases into the air, including a pipe or duct but not including flares.~~

(b)(c) Determination of good engineering practice (GEP) stack height. GEP shall be the greater of:

(1) 65 meters, measured from the ground-level elevation at the base of the stack; or

(2) The height under either OAC 252:100-7-16(c)(2)(A) or (B) 252:100-8-1.6(b)(2)(A) or (B):

(A) for stacks in existence on January 12, 1979 and for which the owner or operator had obtained all applicable permits or approvals required under OAC 252:100-7-252:100-8 or Federal 40 CFR Part 52,

$$H_g = 2.5H$$

provided the owner or operator can demonstrate that this equation was relied upon in establishing an emission limitation;

(B) for all other stacks,

$$H_g = H + 1.5L,$$

where: H_g = good engineering practice stack height, measured from the ground-level elevation at the base of the stack,

H = height of nearby structure(s) measured from the ground-level elevation at the base of the stack.

L = lesser dimension (height or projected width) of nearby structure(s), provided that the owner or operator may be required to verify such GEP stack height by the use of a field study or fluid model as the Executive Director shall determine; or

(3) The height demonstrated by a fluid model or a field study approved by the reviewing agency, which ensures that the emissions from a stack do not result in excessive concentrations of any air pollutant as a result of atmospheric downwash, wakes, or eddy effects created by the source itself, nearby structures, or nearby terrain features.

(c)(d) Nearby. A structure or terrain feature shall be considered to be nearby:

(1) For purposes of applying the formula in OAC 252:100-7-16(c), if that distance up to five times the lesser of the height or the width dimension of a structure, but not greater than 0.8 km (0.5 mile), and

(2) For conducting demonstrations under OAC 252:100-7-16(c)(2), if not greater than 0.8 km (0.5 mile), except that the portion of a terrain feature may be considered to be nearby which falls within a distance of up to 10 times the maximum height of the feature, not to exceed 2 miles if such feature achieves a height at 0.8 km (0.5 mile) from the stack that is at least 40 percent of the GEP stack height determined by the formulae in OAC 252:100-7-16(c)(3) or 26 meters, whichever is greater, as measured from the base of the stack. The height of the structure or terrain feature is measured from the ground level elevation at the base of the stack.

(1) For the formulae in 252:100-8-1.6(b)(2). A structure or terrain feature shall be considered nearby if it is located within a distance of up to five times the lesser of the height or the width of a structure, but not more than 0.5 miles (0.8 km).

(2) For demonstration in 252:100-8-1.6(b)(3).

(A) A structure or terrain feature shall be considered nearby if located at a distance not greater than 0.5 mile (0.8 km), except that

(B) A portion of a terrain feature may be considered nearby if:

(i) It falls within a distance (not to exceed 2 miles) of up to 10 times the maximum height (Ht) of the feature, and

(ii) At a distance of 0.5 mile, the height of such feature is at least 40 percent of the GEP stack height determined by the formulae provided in 252:100-8-1.6(b)(2)(B) or 85.3 feet (26 meters), whichever is

greater, as measured from the base of the stack.

(3) Measurement of height of structure or terrain. The height of the structure or terrain feature is measured from the ground-level elevation at the base of the stack.

(d)-(e) Excessive concentrations. When utilized for the purpose of determining GEP stack height under ~~OAC 252:100-7-16(e)(3)~~ 252:100-8-1.6(b)(3), excessive concentrations shall be as follows:

(1) For sources seeking credit for stack height exceeding that calculated under ~~OAC 252:100-7-16(e)(2)~~ 262:100-8-1.6(b)(2), a maximum ground-level pollutant concentration from a stack due in whole or part to downwash, wakes, and eddy effects produced by nearby structures or nearby terrain features which is at least 40 percent in excess of the maximum concentration experienced in the absence of such downwash, wakes, or eddy effects and which, when combined with the impacts due to all sources, produces a concentration in excess of an ambient air quality standard. For sources subject to the prevention of significant deterioration program (Part 5 9 of this Subchapter or Federal 40 CFR 52.21), the same criteria apply except that a concurrent exceedance of a prevention of significant deterioration increment is experienced. In making demonstrations under this part, the allowable emission rate shall conform to the new source performance standard that is applicable to the source category unless the owner or operator can demonstrate that this emission rate is infeasible. Where such demonstrations are approved by the Executive Director, an alternative emission rate shall be established in consultation with the owner or operator;

(2) For sources seeking credit after October 1, 1983, for increases in existing stack heights up to the heights established under ~~OAC 252:100-7-16(e)(2)~~ 252:100-8-1.6(b)(2) either:

(A) a maximum ground-level concentration due in whole or part to downwash, wakes or eddy effects as specified in ~~OAC 252:100-7-16(e)(2)~~ 252:100-8-1.6(b)(2), except that the emission rate specified by any applicable state implementation plan (or, in the absence of such a limit, the actual emission rate) shall be used, or

(B) the actual presence of a local nuisance caused by the existing stack, as determined by the Executive Director; and

(3) For sources seeking credit after January 12, 1979 for a stack height determined under ~~OAC 252:100-7-16(e)(1)~~ 252:100-8-1.6(b)(2) where the Executive Director requires the use of a field study or fluid model to verify GEP stack height, for sources seeking stack height credit after November 9, 1984 based on the aerodynamic influence of cooling towers, and for sources seeking stack height credit after December 31, 1970 based on the aerodynamic influence of structures not adequately represented by the formulae in ~~OAC 252:100-7-~~

16(e)(1) 252:100-8-1.6(b)(2), a maximum ground-level concentration due in whole or part to downwash, wakes or eddy effects that is at least 40 percent in excess of the maximum concentration experienced in the absence of such downwash, wakes or eddy effects. [NOTE: 252:100-8-1.6 was moved from 252:100-7-16]

PART 3. PERMIT APPLICATION FEES

252:100-8-1.7. Permit application fees

A permit application or a request for an applicability determination received after the effective date of this subsection will be assessed a one-time fee, which must accompany the application or request. Applications received without appropriate fees are administratively incomplete. Fees must be paid by check or money order made payable to the Oklahoma Air Quality Division in accordance with the following fee schedule:

(1) Applicability determination. \$100, to be credited against the construction or operating permit application fee, if a permit is required. If no permit is required, the fee will be retained to cover the cost of making the determination. [NOTE: Based on 252-7-3(c)]

(2) Construction permit application. \$2,000

(1) Part 70 source construction permit \$2,000 [NOTE: from 252:100-7-3(b)(1)]

(3) Operating permit application.

(2) Permit processing fees. Permit processing fees shall be as follows:

(A) Initial Part 70 or major TSP facility permit -\$2,000.

(B) Authorization under a general permit - \$900

(C)-(B) Renewal Part 70 permit - \$1,000.

(D)-(C) Significant Part 70 Permit Mod. modification of Part 70 or major TSP facility permit - \$1,000.

(E)-(D) Minor modification of Part 70 or major TSP facility permit Permit Modification - \$ 500.

(E) The Part 70 Temporary Permit \$1,000.

(F)-(F) Part 70 Temporary Source Relocation - \$ 500.

[NOTE: 252:100-8-1.7(c) is from 252:100-8-9(d)(2)]

PART 5. PERMITS FOR MAJOR TSP FACILITIES

252:100-8-1.8. Major TSP facility construction permit

(a) Construction permit required. No person shall cause or allow the construction or modification installation of any new minor or major source TSP facility without first obtaining a DEQ-issued air quality construction permit to construct or modify the source. A construction permit is also required for any modification to add a piece of equipment or a process that is subject to a NSPS or NESHAP or to increase actual emissions of

any one regulated air pollutant by more than 5 TPY at an existing facility. [NOTE: from 252:100-7-15(a)(1)]

(b) Construction permit requirements.

(1) Content of construction permit application. An application for a construction permit shall provide data and information required by this Chapter and/or requested on the application from form available from the DEQ pursuant to the requirements of this Chapter. Such data and information shall include ~~including~~ but not be limited to: site information, process description, emission data and when required, BACT, modeling and sampling point data as follows:

~~(1) Site and process information. Site information, process description, emission data and, when required, BACT determination, modeling and sampling point data as follows:~~

(A) BACT determination. To be approved for a construction permit, a major TSP facility source must demonstrate that the control technology to be applied is the best that is available for TSP, each pollutant controlled under air pollution control rules if such pollutant would cause the source to be defined as a major source. This determination will be made on a case by case basis taking into account energy, environmental, cost and economic impacts of alternative control systems;

(B) Modeling. Any air quality modeling or ambient impact evaluation that is required shall be prepared in accordance with procedures acceptable to the DEQ and accomplished by the applicant; and

(C) Sampling points. If required by the DEQ an application shall show how the new source will be equipped with sampling ports, instrumentation to monitor and record emission data and other sampling and/or testing equipment. [NOTE: 252:100-8-1.8(b)(1) was taken from 252:100-7-15(b)]

(2) Public review participation. See 27A O.S.Supp. 1995, Section 2-14-101 et seq. and OAC 252:2-15. [NOTE: From 252:100-7-15(d)]

(c) Action on applications. See OAC 252:2-15, and Subchapter 6 of this Chapter.

(1) Review procedures. See OAC 252:2-15.

(2) Issuance or denial timelines. See Part 7 of OAC 252:2-15.

[NOTE: 252:100-8-1.8(c) is from 252:100-7-15]

(d) Construction permit contents. The construction permit:

(1) Shall require the permittee to comply with all applicable air pollution rules, federal new source performance standards ~~(NSPS)~~ NSPS and National Emission Standards for Hazardous Air Pollutants ~~(NESHAP)~~ NESHAP, established in sections 111 and 112 of the Federal Clean Air Act.

(2) Shall prohibit the exceedance of ambient air quality standards contained in 252:100-3, and

(3) May establish permit conditions and limitations as necessary to assure compliance with all rules.

[NOTE: From 252:100-7-15(a)(2)]

252:100-8-1.9. Major TSP facility operating permit

(a) Operating permit required.

(1) No person shall cause or authorize the operation of a new or modified major TSP facility source for more than a 180-day period without applying for a DEQ permit to operate.

(2) No owner or operator shall cause or authorize the operation of a new major TSP facility source if the DEQ denies or revokes a permit to operate. [NOTE: From 252:100-7-18(a)]

(b) Application Operating permit requirements.

(1) Content of operating permit application Application content. Application will shall be made on a form provided by the DEQ and. An application shall contain:

(A) The proposed operation start-up date, or phased dates when applicable.

(B) Revisions to the installation/construction, if any, that differed from the construction design and plan given in the permit application material, data and specifications.

(2) Performance testing. Before a permit to operate a new or modified major TSP facility source is granted, the applicant, if required by the DEQ, shall demonstrate compliance with applicable standards by conducting ~~conduct~~ emission test(s) test in accordance with methods approved by the DEQ with the tests being made at the expense of the applicant. The DEQ may monitor performance tests conducted by the applicant and may also conduct emissions tests. The results of any required test must be provided to the DEQ along with supporting information as required. [NOTE: 252:100-8-1.9(b) is from 252:100-7-18(b)]

(3) Public participation. See 27A O.S.Supp. 1995, Section 2-14-101 et seq.

(c) Action on application.

(1) Review procedures. See 252:100-2-15 252:2-15.

(2) Issuance or denial timelines. See Part 7 of 252:2-15.

[NOTE: 252:100-8-1.9(c) is from 252:100-7-15(c)]

(d) Operating permit conditions.

(1) Emissions Emission limitations established and made a part of the construction permit are ~~carried over,~~ incorporated into and are made enforceable limitations of the subsequently issued operating permit.

(2) Permit limitations in adjustment of, or in addition to, the a ~~minor source's~~ facility's construction permit limitations may be made a condition of the ~~minor source's~~ facility's operating permit issuance. [NOTE: 252:100-8-1.9(d) is from 252:100-7-18(c)]

PART 7. PERMITS FOR PART 70 Sources

252:100-8-2. Definitions

The following words and terms, when used in this Subchapter Part, shall have the following meaning, unless the context

clearly indicates otherwise. Except as specifically provided in this section, terms used in this ~~Subchapter~~ Part retain the meaning accorded them under the applicable requirements of the Act.

~~"Act" means the Clean Air Act, as amended, 42 U.S.C. 7401 et. seq. [NOTE: Moved to 252:100-8-1.1]~~

~~"Administratively complete" means the same as defined at OAC 252:002-11. an application that provides:~~

- ~~(A) All information required under 252:100-8-5(c);~~
- ~~(B) A landowner affidavit as required by 252:2-15-20(b)(3);~~
- ~~(C) The appropriate application fees as required by 252:100-8-1.7; and~~
- ~~(D) Certification by the responsible official as required by 252:100-8-5(d)~~

~~"Administrator" means the administrator of the United States Environmental Protection Agency (EPA) or the administrator's designee. [NOTE: Moved to 252:100-8-1.1]~~

~~"Affected source" means the same as the meaning given to it in the regulations promulgated under Title IV (acid rain) of the Act.~~

~~"Affected states" means:~~

- ~~(A) all states:
 - ~~(i) That ~~that~~ are one of the following contiguous states: Arkansas, Colorado, Kansas, Missouri, New Mexico and Texas, and~~
 - ~~(ii) That in the judgment of the DEQ Agency, may be directly affected by emissions from the facility seeking the permit, permit modification, or permit renewal being proposed; or~~~~
- ~~(B) all states that are within 50 miles of the permitted source.~~

~~"Affected unit" means the same as the meaning given to it in the regulations promulgated under Title IV (acid rain) of the Act.~~

~~"Agency" means Air Quality Division of the Oklahoma Department of Environmental Quality.~~

~~"Applicable requirement" means all of the following as they apply to emissions units in a ~~part~~ Part 70 source subject to this Chapter (including requirements that have been promulgated or approved by EPA through rulemaking at the time of issuance but have future effective compliance dates):~~

- ~~(A) Any standard or other requirements provided for in the applicable implementation plan approved or promulgated by EPA through rulemaking under Title I of the Act that implements the relevant requirements of the Act, including any revisions to that plan promulgated in 40 C.F.R. Part 52;~~
- ~~(B) Any term or condition of any preconstruction permits issued pursuant to regulations approved or promulgated through rulemaking under Title I, including parts C or D, of the Act;~~
- ~~(C) Any standard or other requirement under section 111 of the Act, including section 111(d);~~
- ~~(D) Any standard or other requirement under section 112 of~~

the Act, including any requirement concerning accident prevention under section 112(r) (7) of the Act, but not including the contents of any risk management plan required under 112(r) of the Act;

(E) Any standard or other requirement of the acid rain program under Title IV of the Act or the regulations promulgated thereunder;

(F) Any requirements established pursuant to section 504(b) or section 114(a) (3) of the Act;

(G) Any standard or other requirement governing solid waste incineration, under section 129 of the Act;

(H) Any standard or other requirement for consumer and commercial products, under section 183(e) of the Act;

(I) Any standard or other requirement for tank vessels, under section 183(f) of the Act;

(J) Any standard or other requirement of the regulations promulgated to protect stratospheric ozone under Title VI of the Act, unless the Administrator has determined that such requirements need not be contained in a Title V permit; and

(K) Any national ambient air quality standard or increment or visibility requirement under part C of Title I of the Act, but only as it would apply to temporary sources permitted pursuant to section 504(e) of the Act.

~~"Department" means the Department of Environmental Quality.~~

~~"Designated representative" means the same as the meaning given to it in section 402(26) of the Act and the regulations promulgated thereunder with respect to affected units, a responsible person or official authorized by the owner or operator of a unit to represent the owner or operator in matters pertaining to the holding, transfer, or disposition of allowances allocated to a unit, and the submission of and compliance with permits, permit applications, and compliance plans for the unit.~~

~~"Draft permit" means the version of a permit for which the Agency DEQ offers public participation under OAC 252:100-8-7(i)-27A O.S.Supp. 1995, §2-14-101 et seq. and 252:100-2-15 or affected State review under OAC 252:100-8-8.~~

"Emissions allowable under the permit" means a federally enforceable permit term or condition determined at issuance to be required by an applicable requirement that establishes an emissions limit (including a work practice standard) or a federally enforceable emissions cap that the source has assumed to avoid an applicable requirement to which the source would otherwise be subject.

"Emissions unit" means any part or activity of a stationary source that emits or has the potential to emit any regulated air pollutant or any pollutant listed under section 112(b) of the Act. Fugitive emissions from valves, flanges, etc. associated with a specific unit process shall be identified with that specific emission unit. This term is not meant to alter or affect the definition of the term "unit" for purposes of Title IV of the Act.

~~"EPA" means the United States Environmental Protection Agency.~~
[NOTE: Moved to 252:100-8-1.1]

"Final permit" means the version of a part 70 permit issued by the Agency DEO that has completed all review procedures required by OAC 252:100-8-7 through 252:100-8-7.5 and 252:100-8-8.

~~"Fugitive emissions" means those emissions of regulated air pollutants which could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening. [NOTE: In Subchapter 1]~~

"General permit" means a part 70 permit that meets the requirements of OAC ~~252:100-8-6(d)~~ 252:100-8-6.1.

"Insignificant activities" means individual emissions units that are either on the list approved by the Administrator and contained in Appendix I, or whose actual calendar year emissions do not exceed:

(A) 5 tons per year of any one criteria pollutant.

(B) 2 tons per year for any one hazardous air pollutant (HAP) or 5 tons per year for an aggregate of two or more HAP's, or 20 percent of any threshold less than 50 tons per year for single HAP that the EPA may establish by rule, and

(C) 0.06 tons per year for any one category A substance, 1.2 tons per year for any one category B substance or 6 tons per year for any one category C substance as defined in 252:100-41-40.

Any activity to which a state or federal applicable requirement applies is not insignificant even if it meets the criteria above.

"MACT" means maximum achievable control technology.

"Major source" means any stationary source (or any group of stationary sources that are located on one or more contiguous or adjacent properties, and are under common control of the same person (or persons under common control)) belonging to a single major industrial grouping and that are is described in subparagraph (A), (B), or (C), ~~or (D)~~, of this definition. For the purposes of defining "major source," a stationary source or group of stationary sources shall be considered part of a single industrial grouping if all of the pollutant emitting activities at such source or group of sources on contiguous or adjacent properties belong to the same Major Group (i.e., all have the same two-digit primary SIC code) as described in the Standard Industrial Classification Manual, 1987.

(A) A major source under section 112 of the Act, which is defined as:

(i) For pollutants other than radionuclides, any stationary source or group of stationary sources located within a contiguous area and under common control that emits or has the potential to emit, in the aggregate, 10 tons per year ("tpy") or more of any hazardous air pollutant which has been listed pursuant to section 112(b) of the Act, 25 tpy or more of any combination of such hazardous air pollutants, or such lesser quantity as the Administrator may establish by rule. Notwithstanding the preceding sentence, emissions

from any oil or gas exploration or production well (with its associated equipment) and emissions from any pipeline compressor or pump station shall not be aggregated with emissions from other similar units, whether or not such units are in a contiguous area or under common control, to determine whether such units or stations are major sources; or

(ii) For radionuclides, "major source" shall have the meaning specified by the Administrator by rule.

(B) A major stationary source of air pollutants, as defined in section 302 of the Act, that directly emits or has the potential to emit, 100 tpy or more of any regulated air pollutant (except ~~Total Suspended Particulates (TSP)~~ TSP) (including any major source of fugitive emissions of any such pollutant, as determined by rule by the Administrator). The fugitive emissions of a stationary source shall not be considered in determining whether it is a major stationary source for the purposes of section 302(j) of the Act, unless the source belongs to one of the following categories of stationary sources:

- (i) Coal cleaning plants (with thermal dryers);
- (ii) Kraft pulp mills;
- (iii) Portland cement plants;
- (iv) Primary zinc smelters;
- (v) Iron and steel mills;
- (vi) Primary aluminum ore reduction plants;
- (vii) Primary copper smelters;
- (viii) Municipal incinerators capable of charging more than 250 tons of refuse per day;
- (ix) Hydrofluoric, sulfuric, or nitric acid plants;
- (x) Petroleum refineries;
- (xi) Lime plants;
- (xii) Phosphate rock processing plants;
- (xiii) Coke oven batteries;
- (xiv) Sulfur recovery plants;
- (xv) Carbon black plants (furnace process);
- (xvi) Primary lead smelters;
- (xvii) Fuel conversion plants;
- (xviii) Sintering plants;
- (xix) Secondary metal production plants;
- (xx) Chemical process plants;
- (xxi) Fossil-fuel boilers (or combination thereof) totaling more than 250 million British thermal units per hour heat input;
- (xxii) Petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels;
- (xxiii) Taconite ore processing plants;
- (xxiv) Glass fiber processing plants;
- (xxv) Charcoal production plants;
- (xxvi) Fossil-fuel-fired steam electric plants of more than 250 million British thermal units per hour

- heat input; or
- (xxvii) All other stationary source categories regulated by a standard promulgated under section 111 or 112 of the Act, but only with respect to those air pollutants that have been regulated for that category.

(C) A major stationary source as defined in part D of Title I of the Act, including:

(i) For ozone non-attainment areas, sources with the potential to emit 100 tpy or more of volatile organic compounds or oxides of nitrogen in areas classified as "marginal" or "moderate," 50 tpy or more in areas classified as "serious," 25 tpy or more in areas classified as "severe," and 10 tpy or more in areas classified as "extreme"; except that the references in this paragraph to 100, 50, 25, and 10 tpy of nitrogen oxides shall not apply with respect to any source for which the Administrator has made a finding, under section 182(f)(1) or (2) of the Act, that requirements under section 182(f) of the Act do not apply;

(ii) For ozone transport regions established pursuant to section 184 of the Act, sources with the potential to emit 50 tpy or more of volatile organic compounds;

(iii) For carbon monoxide non-attainment areas:

(I) that are classified as "serious"; and

(II) in which stationary sources contribute significantly to carbon monoxide levels as determined under rules issued by the Administrator, sources with the potential to emit 50 tpy or more of carbon monoxide; and

(iv) For particulate matter (PM-10) non-attainment areas classified as "serious," sources with the potential to emit 70 tpy or more of PM-10.

~~(D) Notwithstanding the source categories in (A) through (C) of this definition, emissions from any oil or gas exploration or production well (with its associated equipment) and emissions from any pipeline compressor station or pump station shall not be aggregated with emissions from other similar units, whether or not such units are in a contiguous area or under common control, to determine whether such units or stations are major sources and in the case of any oil or gas exploration or production well (with its associated equipment), such emissions shall not be aggregated for any purpose under this definition.~~

"Maximum capacity" means the quantity of air contaminants that theoretically could be emitted by a stationary source without control devices based on the design capacity or maximum production capacity of the source and 8,760 hours of operation per year. In determining the maximum theoretical emissions of VOCs for a source, the design capacity or maximum production capacity shall include the use of raw materials, coatings and inks with the highest VOC content used in practice by the source.

~~"Part 70 permit"~~ (unless the context suggests otherwise) means any permit or group of permits covering a part 70 source that is issued, renewed, amended, or revised pursuant to this Chapter. [NOTE: Moved to 252:100-8-1.1]

~~"Part 70 program"~~ means a program approved by the Administrator under 40 C.F.R Part 70. [NOTE: Moved to 252:100-8-1.1]

~~"Part 70 source"~~ means any source subject to the permitting requirements of this Chapter, as provided in OAC 252:100-8-3(a) and 252:100-8-3(b). [NOTE: Moved to 252:100-8-1.1]

"Permit" (unless the context suggests otherwise) means any permit or group of permits covering a part Part 70 source that is issued, renewed, amended, or revised pursuant to this Chapter.

"Permit modification" means a revision to a part Part 70 permit that meets the requirements of OAC ~~252:100-8-7(e)~~ 252:100-8-7.2(b).

"Permit program costs" means all reasonable (direct and indirect) costs required to develop and administer a permit program, as set forth in OAC ~~252:100-8-9~~ 252:100-5-2.2 (whether such costs are incurred by the DEQ Agency or other State or local agencies that do not issue permits directly, but that support permit issuance or administration).

"Permit revision" means any permit modification or administrative permit amendment.

~~"Permitting authority"~~ means the Department of Environmental Quality/

"Potential to emit" means the maximum capacity of a stationary source to emit any air pollutant under its physical and operational design. Any physical or operational limitation on the capacity of a source to emit an air pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitation is enforceable by the Administrator. This term does not alter or affect the use of this term for any other purposes under the Act, or the term "capacity factor" as used in Title IV of the Act or the regulations promulgated thereunder.

"Proposed permit" means the version of a permit that the DEQ Agency proposes to issue and forwards to the Administrator for review in compliance with OAC 252:100-8-8.

"Regulated air pollutant" means the following:

- (A) Nitrogen oxides or any volatile organic compounds compound (VOC), including those substances defined in at OAC 252:100-1-3, 252:100-37-2, 252:100-39-2, or any Volatile Organic Solvent (VOS), as that term is defined in at OAC 252:100-37-2 and 252:100-39-2, or any organic material defined at in 252:100-37-2 except those specifically excluded in the EPA definition of VOC per in 40 CFR 51.100(s);
- (B) Any pollutant for which a national ambient air quality standard has been promulgated;
- (C) Any pollutant that is subject to any standard promulgated

under section 111 of the Act;

(D) Any Class I or II ozone-depleting substance subject to a standard promulgated under or established by Title VI of the Act;

(E) Any pollutant subject to a standard promulgated under section 112 or other requirements established under section 112 of the Act (Hazardous Air Pollutants), including sections 112(g) (Modifications), (j) (Equivalent Emission Limitation by Permit, and (r) (Prevention of Accidental Releases), including the following:

(i) any pollutant subject to the requirements under section 112(j) of the Act. If the Administrator fails to promulgate a standard by the date established pursuant to section 112(e) of the Act (Schedule for Standards and Review), any pollutant for which a subject source would be major shall be considered to be regulated as to that source on the date 18 months after the applicable date established pursuant to section 112(e) of the Act; and,

(ii) any pollutant for which the requirements of section 112(g) (2) of the Act have been met, but only with respect to the individual source subject to the section 112(g) (2) requirement; or

(F) Any other substance for which an air emission limitation or equipment standard is set by an existing permit or regulation.

"Renewal" means the process by which a permit is reissued at the end of its term.

"Responsible official" means one of the following:

(A) For a corporation: a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation, or a duly authorized representative of such person if the representative is responsible for the overall operation of one or more manufacturing, production, or operating facilities applying for or subject to a permit and either:

(i) The facilities employ more than 250 persons or have gross annual sales or expenditures exceeding \$25 million (in second quarter 1980 dollars); or

(ii) The delegation of authority to such representatives is approved in advance by the ~~permitting authority~~ DEQ;

(B) For the partnership or sole proprietorship: a general partner or the proprietor, respectively;

(C) For a municipality, State, Federal, or other public agency: Either a principal executive officer or ranking elected official. For purposes of this Subchapter, a principal executive officer or installation commander of a Federal agency includes the chief executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., a Regional Administrator of EPA); or

(D) For affected sources:

- (i) The designated representative in so far as actions, standards, requirements, or prohibitions under Title IV of the Act or the regulations promulgated thereunder are concerned; and
- (ii) The designated representative for any other purposes under this Subchapter.

"Section 502(b)(10) changes" means changes that contravene an express permit term. Such changes do not include changes that would violate applicable requirements or contravene federally enforceable permit terms and conditions that are monitoring (including test methods), recordkeeping, reporting, or compliance certification requirements.

"Small unit" means a fossil fuel fired combustion device which serves a generator with a name plate capacity of 25 MWe or less.

"State-only requirement" means any standard or requirement pursuant to Oklahoma Clean Air Act (27A O.S. 1993 Supp. Sec. 2-5-101 et seq. as amended) that is not contained in the State Implementation Plan (SIP).

"State program" means a program approved by the Administrator under 40 CFR C.F.R Part 70.

"Stationary source" means any building, structure, facility, or installation that emits or may emit any regulated air pollutant or any pollutant listed under section 112(b) of the Act.

"Trivial activities" means any individual or combination of air emissions units that are considered inconsequential and are on a list approved by the Administrator and contained in Appendix J.

"Unit" means, for purposes of Title IV, a fossil fuel-fired combustion device.

252:100-8-3. Applicability

(a) Covered sources. Except as exempted from the requirement to obtain a permit under subsection (b) of this Section and or elsewhere in this Subchapter Chapter, the following sources listed below are subject to the permitting requirements under this Subchapter Chapter. A covered source shall remain a Part 70 source until a federally enforceable permit is obtained which contains emission limitations and/or conditions to limit the operation of the facility to below that which would define it as a covered source pursuant to this section 252:100-8-3(a). [NOTE: The underlined language was formerly 252:100-8-3(g).]

- (1) Any major source (as defined in OAC 252:100-8-2);
- (2) Any source, ~~including an area source, subject to a NSPS standard, limitation, or other requirement under section 111 of the Act;~~
- (3) Any source, including an area source, subject to a NESHAP standard or other requirement under section 112 of the Act, except that a source is not required to obtain a permit solely because it is subject to regulations or requirements under

~~section 112(r) of the Act,~~

(4) Any affected source (as defined in OAC 252:100-8-2); and
(5) Any source in a source category designated by the Administrator pursuant to 40 CFR C.F.R. §70.3.

(b) Source category exemptions.

(1) All sources listed in subsection (a) of this section that are not major sources, affected sources, or solid waste incineration units required to obtain a permit pursuant to section 129(e) of the Act, are exempt from the obligation to obtain a Part 70 permit unless required to do so by appropriate implementation of EPA administrative rulemaking for non-major sources. Any such exempt source may opt to apply for a permit under these rules and shall be issued a permit if the applicant otherwise satisfies all of the requirements of this Chapter.

(2) If the Administrator determines after appropriate rulemaking that an exemption is applicable to non-major sources when adopting standards or other requirements under section 111 or section 112 of the Act after July 21, 1992, then at that time the exemption will apply.

(3) Unless otherwise required to obtain a Part 70 permit, the following source categories are exempted from the obligation to obtain a Part 70 permit:

(A) All sources in source categories that would be required to obtain a permit solely because they are subject to part 60, subpart AAA -- Standards of Performance for New Residential Wood Heaters; and

(B) All sources in source categories that would be required to obtain a permit solely because they are subject to part 61, subpart M -- National Emission Standard for Hazardous Air Pollutants for Asbestos, Section 61.145, Standard for Demolition and Renovation.

~~(c) Emissions units and covered sources (Part 70 sources).~~

~~(1) For major sources, Part 70 permits shall include all applicable requirements and state only requirements for all relevant emissions units in the major source.~~

~~(2) For any non-major source subject to this Subchapter, Part 70 permits shall include all applicable requirements which apply to emissions units that cause the source to be subject to the requirement to obtain a permit. [NOTE: 252:100-8-3(c)(1) is covered in 252:100-8-6(a) and (c)(2) was deleted.]~~

~~(d) Fugitive emissions. Fugitive emissions from a covered source shall be included in the permit application and the permit in the same manner as stack emissions, regardless of whether the source category in question is included in the list of sources contained in the definition of major source. [NOTE: Revised and moved to 252:100-8-5(c)(3)(A)]~~

~~(e) Insignificant activities.~~

~~(1) The insignificant activities and emissions levels shall be as follows:~~

~~(A) emissions will not exceed one pound (1 lb.) per hour~~

~~for any one criteria pollutant, and~~
~~(B) emissions of toxic air contaminants will not exceed the de minimis requirements set forth under 252:100-41-43(a)(5).~~
~~(2) In addition to the quantity thresholds in (1)(A) and (1)(B) "Insignificant Activity" also means any individual or combination of air emissions sources at a facility that have an aggregate potential to emit that does not increase the overall potential to emit of the entire facility for a given regulated pollutant by more than 10% above the "baseline" permitted limit which excludes the insignificant activities. Thus, insignificant activities may apply to original permit application, permit modifications/amendments, and/or permit renewals. The cumulative amount of activities claimed as insignificant during a Title V permit term shall not increase the potential to emit of the entire facility by more than 10% of the permit limit for a given pollutant from the date of permit issuance to the date of application for renewal. These insignificant activities cannot conflict with significant emission levels in any Title V program. Insignificant activities must be identified but not quantified (except to the extent necessary to demonstrate their insignificance) in the permit application. The Agency shall maintain a list of activities which are considered to be insignificant without quantification by the permittee. The Agency shall also maintain a list of activities which are determined to be trivial. "Trivial activity" means any individual or combination of air emissions units at a Part 70 source which are considered inconsequential as determined by the Agency. Trivial activities need not be identified in the permit application, amendment or renewal. [NOTE: Moved to 252:100-8-2]~~
~~(f) Applicability determinations. Any person may submit a request in writing that the Agency make a determination as to whether a particular source or installation, which that person operates or proposes to operate, is subject to the permit requirements of this rule. The request must contain such information as is believed sufficient for the Agency to make the requested determination. The Agency may request any additional information that it needs for purposes of making the determination. [NOTE: Moved to 252:100-8-1.2(c)]~~
~~(g) Covered sources. A covered source shall remain a Part 70 source until a federally enforceable permit is obtained which contains emission limitations and/or conditions to limit the operation of the facility to below that which would define it as a covered source pursuant to 252:100-8-3(a). [NOTE: Moved to 252:100-8-3(a)]~~

252:100-8-4. ~~Title V permits required~~ Requirements for construction and operating permits

(a) Construction permits.

(1) Construction permit required. No person shall cause or allow the construction or modification installation of any new

minor or major source facility that will require a Part 70 operating permit without first obtaining a DEQ-issued air quality construction permit to construct or modify the source. A construction permit is also required for any physical change that would be a modification under 252:100-8-7.2(b). [NOTE;

(a) (1) is from 252:100-7-15(a) (1)]

(2) Construction permit requirements. Construction permits and applications shall meet the applicable requirements of 252:100-8-1.8 and the applicable requirements of this Part. Applications and permits for sources subject to Part 9 or Part 11 of this Subchapter must also meet the applicable requirements contained therein. To be approved for a construction permit, a Part 70 source must demonstrate that the control technology to be applied is the best that is available for each pollutant that would cause the source to be defined as a major source.

(3) Requirement for case-by-case MACT determinations.

(A) Applicability. The requirement for case-by-case MACT determinations apply to any owner or operator who constructs or reconstructs a major source of hazardous air pollutants after June 29, 1998, unless the source has been specifically regulated or exempted from regulation under a subpart of 40 CFR Part 63, or the owner or operator has received all necessary air quality permits for such construction or reconstruction before June 29, 1998.

(B) Exclusions. The following sources are not subject to this subsection.

(i) Electric utility steam generating units unless and until these units are added to the source category list.

(ii) Stationary sources that are within a source category that has been deleted from the source category list.

(iii) Research and development activities as defined in 40 CFR § 63.41.

(C) MACT determinations. If Subject to this subsection, an owner or operator may not begin actual construction or reconstruction of a major source of HAP until obtaining from the DEQ an approved MACT determination in accordance with the following regulations: 40 CFR 63.41, 40 CFR 63.43 and 40 CFR 63.44, which are hereby incorporated by reference as they exist on July 1, 1997.

(b) Operating permits.

(1) Operating permits required. Except as provided in paragraphs subparagraphs ~~(1)~~ (A) and ~~(2)~~ (B) of this section, no Title V Part 70 source subject to this Chapter may operate after the time that it is required to file a timely application with the DEQ, except in compliance with a DEQ-issued permit.

(A) ~~(1)~~ If the owner or operator of a source subject to the requirement to obtain a permit submits a timely application for permit issuance or renewal, that source's failure to have a permit shall not be a violation of the requirement to

have such a permit until the DEQ takes final action on the application. This protection shall cease to apply if the applicant fails to submit, by the deadline specified in writing by the DEQ or ~~OAC 252:100-8-4~~ 252:100-8-5, any additional information identified as being reasonably required to process the application.

~~(B)-(2)~~ If the owner or operator of a source subject to this Subchapter files a timely application that the DEQ determines to be administratively incomplete due to the applicant's failure to timely provide additional information requested by the DEQ at the end of the DEQ's administrative completeness review period, the applicant loses the protection granted under paragraph ~~(A) -(1)~~ of this section, as a result of its failure to timely provide information requested by the DEQ, the ~~The~~ source's failure to have a permit shall be deemed a violation of this Subchapter.

~~(C)-(3)~~ Filing an operating permit application shall not affect the requirement, if any, that any a source have a construction preconstruction permit under Title I of the federal Clean Air Act.

(2) Duty to apply. For each Part 70 source, the owner or operator shall submit a timely and complete permit application on forms supplied by the ~~Division~~ DEQ in accordance with this section.

(3) Timely application. Sources that are subject to the operating permit program established by this Chapter as of the date the program is approved by EPA and becomes effective ~~(the "effective date")~~ March 6, 1996, shall file applications on the following schedules outlined in ~~OAC 252:100-8-5(b)-(2)~~ 252:100-8-4(b)(4). A timely application is one that is postmarked on or before the relevant date listed below. In the event a major source consists of operations under multiple SIC codes, the primary main activity shall form the basis for the initial permit application.

(4) Application submittal schedule. The following sources are subject to the operating permit program and shall submit initial permit applications according to the following schedule.

(A) No later than six months after the effective date of the federally approved interim state operating permit program September 5, 1996:

(i) Affected sources under the acid rain provisions of the federal Clean Air Act shall submit a permit application for at least the affected units at the site. Regardless of the effective date of the program and the requirement to file an application defined in this section, applications for initial Phase II acid rain permits shall be submitted to the DEQ no later than January 1, 1996, for sulfur dioxide, and by January 1, 1998, for nitrogen oxides, pursuant to the Act, §407.

(ii) Any owner or operator shall submit no less than one-

third of their total applications for major Part 70 sources located at sources classified by the following Source Standard Industrial Classification Codes and which belong to a single major industrial grouping other than 28 (Chemicals and allied products) or 29 (Petroleum refining and related industries):

- (I) Petroleum and Natural Gas, 1311;
- (II) Natural Gas Liquids, 1321;
- (III) Electric Services, 4911, 4961;
- (IV) Natural Gas Transmission, 4922;
- (V) Natural Gas Transmission and Distribution, 4923; and
- (VI) Petroleum Bulk Stations and Terminals, 5171.

(B) All remaining Part 70 sources identified in (b)(2)(4)(A)(ii) of this Subsection shall be subject to the operating permit program and shall submit initial permit applications no later than 12 months after the effective date of the federally approved interim state operating permit program March 5, 1997.

(C) No later than 12 months after the effective date of the federally approved interim state operating permit program March 5, 1997, any owner or operator shall submit their applications for major Part 70 sources located at sources classified by the following Standard Industrial Classification Codes:

- (i) Metals, 3312, 3315, 3321, 3379, 3341, 3351, 3411, 3412, 3432, 3466,
- (ii) Brick Plants, 3251, 3297,
- (iii) Commercial Printing, 2752, 2761.

(D) No later than 28 months after the effective date of the federally approved interim state operating permit program, July 5, 1998, any owner or operator shall submit their applications for major Part 70 sources located at sources classified by the following Standard Industrial Classification Codes:

- (i) Refineries, 2911;
- (ii) Cement Plants, 3241;
- (iii) Chemical/Carbon, 2819, 2821, 2851, 2861, 2869, 2891, 2895, 2899, 2999, 3053, 3086, 3089;
- (iv) Petroleum Transportation/Terminals/Storage, 4612, 4613;
- (v) Food Products, 2013, 2074, 2095.

(E) All remaining Part 70 sources shall be subject to the operating permit program and shall submit initial permit applications no later than 36 months after the effective date of the federally approved interim state operating permit program March 6, 1999.

(5) Newly regulated sources Application following effective date. A source that becomes subject to the operating permit program established by this Chapter at any time following the effective date shall file an administratively complete

operating permit application within 180 days of commencement of operation.

(6) Application acceptability. Notwithstanding the deadlines established in paragraph (4) paragraphs (1), (2), and (3) of this subsection, an application filed prior to the above deadlines following submission of the state program to EPA for approval shall be accepted for processing. For purposes of the 60 day administrative review period established in OAC 252:2-15, the official login date for any Part 70 operating permit application submitted according to the interim schedule in this subsection shall be the date on which the DEQ begins its administrative completeness review.

(7) 112(g) applications. A source that is required to meet the requirements under section 112(g) of the federal Clean Air Act, or to have a permit under a preconstruction review program under Title I of such Act, shall file an application to obtain an operating permit or permit amendment or modification within twelve months of commencing operation. Where an existing Part 70 operating permit would prohibit such construction or change in operation, the source must obtain a permit revision before commencing construction.

(8) Application for renewal. Sources subject to this Chapter shall file an application for renewal of an operating permit at least six months before the date of permit expiration, unless a longer period (not to exceed 18 months) is specified in the permit. Renewal periods greater than six months are subject to negotiation on a case-by-case basis.

(9) Phase II acid rain permits. Sources required to submit applications under the Acid Rain Program should shall submit these applications as required by 40 CFR 72.30(b)(2)(i) through (viii).

(10) Application completeness. See Uniform Permitting Rules, OAC 252:010-3-50 and 3-51 252:2-15-70 and the definition of administratively complete in 252:100-8-2.

[NOTE: 252:100-8-4(b)(2) through (10) from 252:100-8-5(b)(1) through (8)]

252:100-8-5. Permit applications

~~(a) Construction permit. Any new source or modified source which becomes subject to this Subchapter shall be required to obtain a construction permit in accordance with OAC 252:100-7 prior to commencement of construction.~~

~~(b) Duty to apply. For each Part 70 source, the owner or operator shall submit a timely and complete permit application on forms supplied by the Division in accordance with this section.~~

~~(1) Timely application. Sources that are subject to the operating permit program established by this Chapter as of the date the program is approved by EPA and becomes effective (the "effective date") shall file applications on the following schedules outlined in OAC 252:100-8-5(b)(2) 252:100-8-4(b)(2).~~

~~In the event a major source consists of operations under multiple SIC codes, the main activity shall form the basis for the initial permit application.~~

~~(2) Application submittal schedule. The following sources are subject to the operating permit program and shall submit initial permit applications according to the following schedule.~~

~~(A) No later than six months after the effective date of the federally approved interim state operating permit program:~~

~~(i) Affected sources under the acid rain provisions of the federal Clean Air Act shall submit a permit application for at least the affected units at the site. Regardless of the effective date of the program and the requirement to file an application defined in this section, applications for initial Phase II acid rain permits shall be submitted to the DEQ no later than January 1, 1996, for sulfur dioxide, and by January 1, 1998, for nitrogen oxides, pursuant to the Act, §407.~~

~~(ii) Any owner or operator shall submit no less than one-third of their total applications for major sources located at sources classified by the following Source Standard Industrial Classification Codes and which belong to a single major industrial grouping other than 28 (Chemicals and allied products) or 29 (Petroleum refining and related industries):~~

~~(I) Petroleum and Natural Gas, 1311,~~

~~(II) Natural Gas Liquids, 1321,~~

~~(III) Electric Services, 4911, 4961,~~

~~(IV) Natural Gas Transmission, 4922,~~

~~(V) Natural Gas Transmission and Distribution, 4923,
and~~

~~(VI) Petroleum Bulk Stations and Terminals, 5171.~~

~~(B) All remaining Part 70 sources identified in (b) (2) (A) (ii) of this Subsection shall be subject to the operating permit program and shall submit initial permit applications no later than 12 months after the effective date of the federally approved interim state operating permit program.~~

~~(C) No later than 12 months after the effective date of the federally approved interim state operating permit program, any owner or operator shall submit their applications for major sources located at sources classified by the following Standard Industrial Classification Codes:~~

~~(i) Metals, 3312, 3315, 3321, 3379, 3341, 3351, 3411,
3412, 3432, 3466,~~

~~(ii) Brick Plants, 3251, 3297,~~

~~(iii) Commercial Printing, 2752, 2761.~~

~~(D) No later than 28 months after the effective date of the federally approved interim state operating permit program, any owner or operator shall submit their applications for~~

major sources located at sources classified by the following Standard Industrial Classification Codes:

- ~~(i) Refineries, 2911;~~
- ~~(ii) Cement Plants, 3241;~~
- ~~(iii) Chemical/Carbon, 2819, 2821, 2851, 2861, 2869, 2891, 2895, 2899, 2999, 3053, 3086, 3089;~~
- ~~(iv) Petroleum Transportation/Terminals/Storage, 4612, 4613;~~
- ~~(v) Food Products, 2013, 2074, 2095.~~

~~(E) All remaining Part 70 sources shall be subject to the operating permit program and shall submit initial permit applications no later than 36 months after the effective date of the federally approved interim state operating permit program.~~

~~(3) Application following effective date. — A source that becomes subject to the operating permit program established by this Chapter at any time following the effective date shall file an administratively complete operating permit application within 180 days of commencement of operation.~~

~~(4) Application acceptability. Notwithstanding the deadlines established in paragraphs (1), (2), and (3) of this subsection, an application filed prior to the above deadlines following submission of the state program to EPA for approval shall be accepted for processing. For purposes of the 60 day administrative review period established in OAC 252:2-15, the official login date for any Part 70 operating permit submitted according to the interim schedule in this subsection shall be the date on which the DEQ begins its administrative completeness review.~~

~~(5) 112(g) applications. — A source that is required to meet the requirements under section 112(g) of the federal Clean Air Act, or to have a permit under a preconstruction review program under Title I of such Act, shall file an application to obtain an operating permit or permit amendment or modification within twelve months of commencing operation. Where an existing Part 70 operating permit would prohibit such construction or change in operation, the source must obtain a permit revision before commencing construction.~~

~~(6) Application for renewal. Sources subject to this Chapter shall file an application for renewal of an operating permit at least six months before the date of permit expiration, unless a longer period (not to exceed 18 months) is specified in the permit. Renewal periods greater than six months are subject to negotiation on a case by case basis.~~

~~(7) Phase II acid rain permits. — Sources required to submit applications under the Acid Rain Program should submit these applications as required by 40 CFR 72.30(b)(2)(i) through (viii).~~

~~(8) Application completeness. — See Uniform Permitting Rules, OAC 252:010-3-50 and 3-51.~~

[NOTE: 252:100-8-5(b)(1) through (9) moved to 252:100-8-4(b)]

~~(9) Application content for renewal of expiring permit. In submitting an application for renewal of a DEQ issued Part 70 operating permit, a source may identify terms and conditions in its previous permit that should remain unchanged and incorporate by reference those portions of its existing permit and the permit application and any permit amendment or modification applications that describe products, processes, operations, and emissions to which those terms and conditions apply. The source must identify specifically and list which portions of its previous permit and/or applications are incorporated by reference. In addition, a renewal application must contain:~~

- ~~(i) information specified in OAC 252:100-8-5(d) for those products, processes, operations, and emissions that:
 - ~~(I) are not addressed in the existing permit;~~
 - ~~(II) are subject to applicable requirements or state only requirements that are not addressed in the existing permit; or~~
 - ~~(III) as to which the source seeks permit terms and conditions that differ from those in the existing permit; and~~~~
- ~~(ii) a compliance plan and certification as required in 252:100-8-5(d)(8). [NOTE: 252:100-8-5(b)(9) moved to 252:100-8-7.1(b)]~~

~~(a)-(10) Confidential information.~~ If a source submits information to the DEQ under a claim of confidentiality, the source shall also submit a copy of such information directly to the Administrator, if the DEQ requests that the source do so.

~~(b)-(e) Duty to supplement or correct application.~~ Renumbered as OAC 252:100-6-50(f) See 252:100-6-50(e).

~~(c)-(d) Standard application form and required information.~~ Sources that are subject to the Part 70 permit program established by this Chapter shall file applications on the standard application form that the DEQ makes available for that purpose in accordance with OAC 252:2-15. The application must include information needed to determine the applicability of any applicable requirement, or state-only requirement, or to evaluate the fee amount required under the schedule approved pursuant to ~~OAC 252:100-8-9~~ 252:100-5-2.2(b)(2). The applicant shall submit the information called for by the application form for each emissions unit at the source to be permitted. The source must provide a list of any ~~such~~ insignificant activities that are exempted because of size or production rate. Trivial activities need not be listed. The standard application form and any attachments shall require that the following information be provided:

- (1) Identifying information, including company name and address (or plant name and address if different from the company name), owner's name and agent, and telephone number and names of plant site manager/contact.
- (2) A description of the source's processes and products (by

two-digit Standard Industrial Classification Code) including any associated with each alternate scenario identified by the source.

(3) The following emissions-related information:

(A) All emissions of pollutants for which the source is major, and all emissions (including fugitive emissions) of regulated air pollutants. The permit application shall describe all emissions of regulated air pollutants emitted from any emissions unit, except where such units are exempted under this subsection ~~(d)~~ (c) or OAC 252:100-8-3(b). ~~The source shall submit additional information related to the emissions of air pollutants sufficient to verify which requirements are applicable to the source, and other information necessary to determine the amount of any permit fees owed under the fee schedule approved pursuant to OAC 252:100-8-9.~~

(B) Identification and description of all points of emissions described in subparagraph ~~(d)~~ (c) (3) (A) of this section in sufficient detail to establish the basis for fees and applicability of the ~~federal Clean Air Act's~~ requirements.

(C) Emissions rates in tons per year and in such terms as are necessary to establish compliance consistent with the applicable standard.

(D) The following information to the extent it is needed to determine or regulate emissions:

- (i) fuels,
- (ii) fuel use,
- (iii) raw materials,
- (iv) production rates, and
- (v) operating schedules.

(E) Identification and description of air pollution control equipment and compliance monitoring devices or activities.

(F) Limitations on source operation affecting emissions or any work practice standards, where applicable, for all regulated pollutants at the covered source.

(G) Other information required by any applicable requirement, or state-only requirement (including information related to stack height limitations developed pursuant to section 123 of the ~~federal Clean Air Act~~).

(H) Calculations on which the information in items (A) through (G) of this paragraph is based.

(4) The following air pollution control requirements:

(A) Citation and description of all applicable requirements, and all state-only requirements, ~~and~~

(B) Description of or reference to any applicable test method for determining compliance with each applicable requirement and state-only requirement.

(5) Other specific information required under the DEQ's rules and statutes to implement and enforce other applicable requirements of the ~~federal Clean Air Act~~ or of this Chapter

or to determine the applicability of such requirements.

(6) An explanation of any proposed exemptions from otherwise applicable requirements and state-only requirements.

(7) Additional information as determined to be necessary by the DEQ to define alternative operating scenarios identified by the source pursuant to OAC 252:100-8-6(a)(9) or to define permit terms and conditions implementing ~~OAC 252:100-8-6(h)~~ 252:100-8-6(f) or OAC 252:100-8-6(a)(10).

(8) A compliance plan for all covered sources that contains all the following:

(A) A description of the compliance status of the source with respect to all applicable requirements and state-only requirements as follows:

~~(B) A description as follows:~~

(i) For applicable requirements, and state-only requirements, with which the source is in compliance, a statement that the source will continue to comply with such requirements.

(ii) For applicable requirements, and state-only requirements, that will become effective during the permit term, a statement that the source will meet such requirements on a timely basis shall satisfy this provision, unless a more detailed schedule is expressly required by the applicable requirement.

(iii) For requirements for which the source is not in compliance at the time of permit issuance, a narrative description of how the source will achieve compliance with such requirements.

~~(B)(C)~~ For sources not in complete compliance, a A compliance schedule as follows:

~~(i) For applicable requirements, and state only requirements, with which the source is in compliance, a statement that the source will continue to comply with such requirements.~~

~~(ii) For applicable requirements, and state only requirements, that will become effective during the permit term, a statement that the source will meet such requirements on a timely basis. A statement that the source will meet in a timely manner applicable requirements that become effective during the permit term shall satisfy this provision, unless a more detailed schedule is expressly required by the applicable requirement.~~

(i)-(iii) A schedule of compliance for sources that are not in compliance with all applicable requirements, and state-only requirements, at the time of permit issuance. Such a schedule shall include a schedule of remedial measures, including an enforceable sequence of actions with milestones, leading to compliance with any applicable requirements, and state-only requirements, for which the source will be in noncompliance at the time of

permit issuance. This compliance schedule shall resemble and be equivalent in stringency to that contained in any judicial consent decree or administrative order to which the source is subject. Any such schedule of compliance shall be supplemental to, and shall not sanction non-compliance with, the applicable requirements on which it is based.

~~(ii)-(D)~~ A schedule for submission of certified progress reports no less frequently than every 6 months ~~for sources required to have a schedule of compliance under OAC 252:100-8-5(d)(8)(C)(iii).~~

~~(C)-(E)~~ The compliance plan content requirements specified in this paragraph shall apply and be included in the acid rain portion of a compliance plan for an affected source, except as specifically superseded by regulations promulgated under Title IV of the ~~federal Clean Air Act~~ with regard to the schedule and method(s) the source will use to achieve compliance with the acid rain emissions limitations.

(9) Requirements for compliance certification, including the following:

(A) A certification of compliance with all applicable requirements, and state-only requirements, by a responsible official consistent with subsection ~~(e)~~ (d) of this section and section 114(a)(3) of the ~~federal Clean Air Act~~;

(B) A statement of methods used for determining compliance, including a description of monitoring, recordkeeping, and reporting requirements and test methods;

(C) A schedule for submission of compliance certifications during the permit term, which shall be submitted annually, or more frequently if required by an underlying applicable requirement, state-only requirements, or by the permitting authority; and

(D) A statement indicating the source's compliance status with any applicable enhanced monitoring and compliance certification requirements of the ~~federal Clean Air Act~~.

(10) The use of nationally-standardized forms for acid rain portions of permit applications and compliance plans, as required by regulations promulgated under Title IV of the ~~federal Clean Air Act~~.

~~(11) A list of any such units which satisfy the definition of either insignificant activities or de minimis emissions.~~

(d)-(e) **Certification.** Any application form, report, or compliance certification submitted pursuant to this Chapter shall contain certification by a responsible official of truth, accuracy, and completeness. This certification and any other certification required under this Chapter shall be signed by a responsible official and shall contain the following language: "I certify, based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete."

(e)-(f) **Number of application copies.** See Part 3 of OAC 252:2-15.

252:100-8-6. Permit content

(a) **Standard permit requirements.** ~~To the extent practicable, every Part 70 permits permit issued under this Chapter shall include all applicable requirements, and state-only requirements, (as defined in ~~OAC~~ 252:100-8-2) that apply to the permitted source at the time of issuance. Each permit shall include the following elements:~~

(1) **Emission limitations and standards.** The permit shall specify emissions limitations and standards that constitute applicable requirements, and state-only requirements, and shall include those operational ~~requirements~~ conditions and limitations necessary to assure compliance with all ~~applicable~~ such requirements.

(A) The permit shall specify and reference the origin of and authority for each term or condition, and identify any difference in form as compared to the applicable requirement, ~~and or~~ state-only requirement, upon which the term or condition is based.

(B) The permit shall state that, where an applicable requirement of the ~~federal Clean Air Act~~ is more stringent than an applicable requirement of regulations promulgated under Title IV of the ~~federal Clean Air Act~~, both provisions shall be incorporated into the permit and shall be enforceable by EPA.

(C) If an ~~applicable~~ the State implementation plan or an applicable requirement allows a source to comply through an alternative emission limit or means of compliance, a source may request that such an alternative limit or means of compliance be specified in its permit. Such an alternative emission limit or means of compliance shall be included in a source's permit upon a showing that it is quantifiable, accountable, enforceable, and based on replicable procedures. The source shall propose permit terms and conditions to satisfy these requirements in its application.

(2) **Permit duration.**

(A) **Operating Permits.** The permit shall specify a fixed term. The DEQ shall issue permits for any fixed period requested in the permit application, not to exceed five years, except as provided in subparagraphs (i) ~~(A)~~ and (ii) ~~(B)~~ of this paragraph:

(i) ~~(A)~~ Permits issued to affected sources shall in all cases have a fixed term of five years.

(ii) ~~(B)~~ Permits issued to solid waste incineration units combusting municipal waste subject to standards under section 129(e) of the ~~federal Clean Air Act~~ shall have a term not to exceed 12 years. Such permits shall be reviewed every five years.

(B) **Construction permits.** See 252:100-8-1.5.

(3) **Monitoring and related recordkeeping and reporting requirements.**

(A) ~~Each permit shall contain the following requirements~~

~~with respect to monitoring.~~ Monitoring requirements.

(i) All emissions monitoring and analysis procedures or test methods required under the applicable requirements, and state-only requirements, including any procedures and methods promulgated pursuant to sections 114(a)(3) or 504(b) of the ~~federal Clean Air Act~~;

(ii) Where ~~the~~ an applicable requirement, ~~and~~ or state-only requirement, does not require periodic testing or instrumental or non-instrumental monitoring (which may consist of recordkeeping designed to serve as monitoring), periodic monitoring during the relevant time period sufficient to yield reliable data ~~from the relevant time period~~ that are representative of the source's compliance with the permit, as reported pursuant to (a)(3)(C) of this section. Such monitoring requirements shall assure use of terms, test methods, units, averaging periods, and other statistical conventions consistent with the applicable requirement, or state-only requirement. Recordkeeping provisions may be sufficient to meet the requirements of this subparagraph.

(iii) As necessary, requirements concerning the use, maintenance, and, where appropriate, ~~and~~ installation of monitoring equipment or methods.

(iv) Provisions for the permittee to request the use of alternative test methods or analysis procedures, and provisions for the DEQ to approve or disapprove the request within 60 days.

(B) Recordkeeping requirements. ~~With respect to recordkeeping, the~~ The permit shall incorporate all applicable recordkeeping requirements and require, where applicable, the following:

(i) Records of required monitoring information that include the following:

(I) The date, place as defined in the permit, and time of sampling or measurements;

(II) The date(s) analyses were performed;

(III) The company or entity that performed the analyses;

(IV) The analytical techniques or methods used;

(V) The results of such analyses; and

(VI) The operating conditions ~~as~~ existing at the time of sampling or measurement.

(ii) Retention of records of all required monitoring data and support information for a period of at least five years from the date of the monitoring sample, measurement, report, or application. Support information includes all calibration and maintenance records and all original strip-chart recordings for continuous monitoring instrumentation, and copies of all reports required by the permit. Where appropriate, the permit may specify

that records may be maintained in computerized form.

(C) Reporting requirements. ~~With respect to reporting,~~
~~the~~ The permit shall incorporate all applicable reporting
requirements and require the following requirements:

(i) A permit issued under this ~~Chapter~~ Part shall require the permittee to submit a report of any required monitoring at least every six months. To the extent possible, the schedule for submission of such reports shall be timed to coincide with other periodic reports required by the permit, including the permittee's annual compliance certification. However, the reports may be submitted at any time within the reporting period, as stipulated in the permit.

(ii) Each report submitted under (C) (i) of this paragraph shall identify any exceedances from permit requirements since the previous report that have been monitored by the monitoring systems required under the permit, and any exceedances from the monitoring, recordkeeping and reporting requirements under the permit.

(iii) In addition to semiannual monitoring reports, each permittee shall be required to submit supplemental reports as follows:

(I) Any exceedance resulting from emergency or upset conditions as defined in ~~OAC 252:100-8-6(g)~~ 252:100-8-6(e) shall be reported within 24 hours of the date on which the permittee first becomes aware of the exceedance, if the permittee wishes to assert the affirmative defense authorized under said section, and the permittee shall submit a follow up written report within 10 working days of first becoming aware of the exceedance. The initial report such notice must contain a description of the emergency, any steps taken to mitigate emissions and corrective actions taken.

[NOTE: The underlined language is from 252:100-8-6(g) (3) (D)]

(II) Any exceedance that poses an imminent and substantial danger to public health, safety, or the environment shall be reported as soon as is practicable; but under no circumstance shall notification be more than 24 hours after exceedance.

(III) Any other exceedances that are identified in the permit as requiring more frequent reporting than the permittee's semiannual report shall be reported on the schedule specified in the permit.

(IV) All reports of exceedances shall identify the probable cause of the exceedances and any corrective actions or preventative measures taken.

(iv) Every report submitted under this subsection shall be certified by a responsible official, except that if a report of an exceedance required under (C) (iii) of this paragraph must be submitted within ten days of the

exceedance, the report may be submitted in the first instance without a certification if an appropriate certification is provided within ten days thereafter, together with any corrected or supplemental information required concerning the exceedance. Reports submitted shall be consistent with the requirements of OAC 252:100-9.

(4) **Risk management plans.** If the source is required to develop and register a risk management plan pursuant to section 112(r) of the ~~federal Clean Air Act~~, the permit need only specify that ~~it~~ the permittee will comply with the requirement to register such a plan. Although the requirement to have a risk management plan may be a term of the permit, the risk management plan contents are not part of the permit.

(5) **Title IV allowances.**

(A) No permit revision shall be required for increases in emissions that are authorized by allowances acquired pursuant to the acid rain program, provided that such increases do not require a permit revision under any other applicable requirement.

(B) No limit shall be placed on the number of allowances held by the source. The source may not, however, use allowances as a defense to noncompliance with any other applicable requirement.

(C) The permit shall prohibit emissions exceeding any allowance that the source lawfully holds under Title IV of the ~~federal Clean Air Act~~ or the regulations promulgated thereunder. Compliance with this paragraph will be determined on January 31st of any given year and be based on actual emissions and the number of allowances held for the previous calendar year.

(6) **Severability clause.** The permit shall include a severability clause to ensure the continued validity of the various permit requirements in the event of a challenge to any portions of the permit.

(7) **General requirements.** The permit shall include provisions stating the following:

(A) The permittee must comply with all conditions of the permit. Any permit noncompliance constitutes a violation of the Oklahoma Clean Air Act and is grounds for:

(i) enforcement action;

(ii) permit termination, revocation and reissuance, or modification; or

(iii) denial of a permit renewal application.

(B) It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit. However, nothing in this subsection shall be construed as precluding consideration of a need to halt or reduce activity as a mitigating factor in assessing penalties for noncompliance

if the health, safety, or environmental impacts of halting or reducing operations would be more serious than the impacts of continuing operations.

(C) The permit may be modified, revoked, reopened, and reissued, or terminated for cause. Except as provided under ~~OAC 252:100-8-7(e)(1)~~ 252:100-8-7.2(b)(1) for minor permit modifications, the filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or of a notification of planned changes or anticipated noncompliance does not stay any permit condition.

(D) The permit does not convey any property rights of any sort, or any exclusive privilege.

(E) The permittee shall furnish to the DEQ, upon receipt of a written request and within a reasonable time, any information that the DEQ may request to determine whether cause exists for modifying, reopening, or revoking and reissuing or terminating the permit or to determine compliance with the permit. Upon request, the permittee shall also furnish to the DEQ copies of records required to be kept by the permit. The permittee may make a claim of confidentiality pursuant to ~~OAC 252:100-8-5(b)(10)~~ 27A O.S. 1993 Supp. Section 2-5-105.18 for any information or records submitted under this paragraph.

(8) **Fees.** The permit shall provide that the permittee will pay fees to the DEQ consistent with the fee schedule established under ~~OAC 252:100-8-9~~ 252:100-5-2.2.

(9) **Emissions trading.** The permit shall provide that no permit revision shall be required under any approved economic incentives, marketable permits, emissions trading and other similar programs or processes for changes that are provided for in the permit.

(10) **Operating scenarios.** The permit shall include terms and conditions applicable to all operating scenarios described in the permit application and eligible for approval under applicable requirements, and state-only requirements. The permit shall authorize the permittee to make changes among operating scenarios authorized in the permit without notice, but shall require the permittee contemporaneously with making a change from one operating scenario to another to record in a log at the permitted facility the scenario under which it is operating.

(11) **Emissions averaging.** The permit shall include terms and conditions, if the permit applicant requests them, for the trading or averaging of emissions increases and decreases in the permitted facility, to the extent that the applicable requirements provide for trading or averaging such increases and decreases. Such terms and conditions shall include terms under subsections (a) and (c) of this section to determine compliance and shall satisfy all requirements of the applicable requirements authorizing such trading or averaging.

(b) **Federally enforceable requirements.**

(1) Except as provided in paragraph (b) (2) of this section, all terms and conditions in a permit issued under this section, including any provisions designed to limit a source's potential to emit, are enforceable by the DEQ, by EPA, and by citizens under section 304 of the ~~federal Clean Air Act~~.

(2) Notwithstanding paragraph (b) (1) of this section, the DEQ shall designate as not being federally enforceable under the ~~federal Clean Air Act~~ any terms and conditions included in the permit that are not required under the ~~federal Clean Air Act~~ or any of its applicable requirements, and such terms and conditions shall not be enforceable by EPA and citizens under section 304 of the ~~federal Clean Air Act~~.

(c) **Compliance requirements.** All permits issued under this ~~Chapter~~ Part shall contain the following elements with respect to compliance:

(1) Consistent with paragraph (a) (3) of this section, compliance certification, testing, monitoring, reporting, and recordkeeping requirements sufficient to assure compliance with the terms and conditions of the permit. Any document (including reports) required by a permit under this ~~Chapter~~ Part shall contain a certification by a responsible official as to the results of the required monitoring.

(2) Inspection and entry requirements that require that, upon presentation of credentials and other documents as may be required by law, the permittee shall allow authorized officials of the DEQ to perform the following ~~(subject to the permittee's right to seek confidential treatment pursuant to OAC 252:100-8-5(b)(10) for confidential information submitted to or obtained by the DEQ under this subsection):~~

(A) Enter upon the permittee's premises during reasonable/normal working hours where a source is located or emissions-related activity is conducted, or where records must be kept under the conditions of the permit;

(B) Have access to and copy, at reasonable times, any records that must be kept under the conditions of the permit;

(C) Inspect at reasonable times and using reasonable safety practices any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under the permit; and

(D) As authorized by the ~~federal Clean Air Act~~ Oklahoma Clean Air Act, sample or monitor at reasonable times substances or parameters for the purpose of assuring compliance with the permit.

(3) A schedule of compliance ~~if to the extent~~ required under ~~OAC 252:100-8-5(d)(8)(C)~~ 252:100-8-5(c)(8)(B).

(4) To the extent required under an applicable schedule of compliance and ~~OAC 252:100-8-5(d)(8)~~ 252:100-8-5(c)(8), progress reports, to be submitted semiannually, or more frequently if specified in the applicable requirement or by

the DEQ. Such progress reports shall contain the following:

(A) Dates for achieving the activities, milestones, or compliance required in the schedule of compliance, and dates when such activities, milestones or compliance were achieved; and

(B) An explanation of why any dates in the schedule of compliance were not or will not be met, and any preventive or corrective measures adopted.

(5) Requirements for compliance certification with terms and conditions contained in the permit that are federally enforceable, including emission limitations, standards, or work practices. Each permit shall specify:

(A) The frequency (which shall be annually unless the applicable requirement, ~~and~~ or state-only requirement, specifies submission more frequently) of submissions of compliance certifications;

(B) In accordance with paragraph (a) (3) of this section, a means for monitoring the compliance of the source with emissions limitations, standards, and work practices;

(C) A requirement that the compliance certification include the following:

(i) The identification of each term or condition of the permit that is the basis of the certification;

(ii) The permittee's current compliance status, as shown by monitoring data and other information available to the permittee;

(iii) Whether compliance was continuous or intermittent;

(iv) The method(s) used for determining the compliance status of the source, currently and over the reporting period as required by paragraph (a) (3) of this section; and

(v) Such other facts as the DEQ may require to determine the compliance status of the source;

(D) A requirement that all compliance certifications be submitted to EPA as well as to the DEQ;

(E) Such additional requirements as may be specified pursuant to sections 114(a) (3) and 504(b) of the ~~federal Clean Air Act~~; and

(6) Such other provisions as the DEQ may require.

~~(d) General permits.~~

~~(1) The DEQ may, after notice and opportunity for public participation, issue a general permit to any source category if it concludes that the category is appropriate for permitting on a generic basis. Any general permit shall comply with all requirements applicable to other Part 70 permits. No general permit may be issued for affected sources under the acid rain program unless otherwise provided in regulations promulgated under Title IV of the~~

~~federal Clean Air Act.~~

~~(2) A general permit may be issued for a source category based upon an application from a source within the source category or upon the DEQ's own initiative. The DEQ shall, following receipt of an application for a general permit, or upon a determination that issuance of a general permit for a category of sources may be appropriate, follow the same procedures for issuance of a general permit as for any other permit issued under this part.~~

~~(3) A general permit may be issued for the following purposes:~~

~~(A) to establish terms and conditions to implement applicable requirements, and state only requirements, for a source category;~~

~~(B) to establish terms and conditions to implement applicable requirements, and state only requirements, for specified categories of changes to permitted sources;~~

~~(C) to establish terms and conditions for new requirements that apply to sources with existing permits; and~~

~~(D) to establish federally enforceable caps on emissions from sources in a specified category.~~

~~(4) The DEQ may issue a general permit if it finds that:~~

~~(A) there are several permittees, permit applicants, or potential permit applicants who have the same or substantially similar operations, emissions, activities, or facilities;~~

~~(B) the permittees, permit applicants, or potential permit applicants emit the same types of regulated air pollutants;~~

~~(C) the operations, emissions, activities, or facilities are subject to the same or similar standards, limitations, and operating requirements; and~~

~~(D) the operations, emissions, activities, or facilities are subject to the same or similar monitoring requirements.~~

~~(5) A general permit issued under this section shall identify criteria by which sources may qualify for the general permit. After a general permit has been issued, any source may submit a request to be covered under the permit in the form of an application for authorization to operate under the general permit.~~

~~(A) Such application shall identify the source and provide information sufficient to demonstrate that it falls within the source category covered by the general permit, together with any additional information that may be specified in the general permit.~~

~~(B) See OAC 252.2-15 for Tier I permitting procedures and timelines for individual authorizations under general permits. The Agency shall act to approve or deny the application within 90 days of filing.~~

~~(C) A final action approving an authorization to operate~~

~~under a general permit shall not be subject to public comment or judicial review.~~

~~(6) A copy of the general permit, together with a list of sources approved for coverage under it, shall be kept on file for public review at the offices of the DEQ.~~

~~(7) A general permit issued under this section shall provide that any source approved for coverage under a general permit shall be entitled to the protection of the permit shield for all operations, activities, and emissions addressed by the general permit, unless and to the extent that it is subsequently determined that the source does not qualify for the conditions and terms of the general permit.~~

~~(8) If some, but not all, of a source's operations, activities, and emissions are eligible for coverage under one or more general permits, the source may apply for and receive coverage under the general permits for the operations, activities, and emissions that are so eligible. If the source is required under OAC 252.100-8-3 of this part to obtain a permit addressing the remainder of its operations, activities, and emissions, it may apply for and receive a permit that addresses specifically only those items not covered by general permits. In such a case, the source's permit shall identify all operations, activities, and emissions that are subject to general permits and incorporate those general permits by reference. Unless the permit specifically states otherwise, the permit shield shall apply to the terms and conditions of any general permits so incorporated by reference as well as to the terms and conditions specifically stated in the permit.~~

[NOTE: General permits was moved to 252:100-8-6.1]

~~(e) Temporary sources. The DEQ may issue a single permit authorizing emissions from similar operations by the same source owner or operator at multiple temporary locations. The operation must be temporary and involve at least one change of location during the term of the permit. No affected source shall be permitted as a temporary source. Permits for temporary sources shall include the following:~~

- ~~(1) Conditions that will assure compliance with all applicable requirements at all authorized locations;~~
- ~~(2) Requirements that the owner or operator notify the permitting authority at least ten days in advance of each change in location; and~~
- ~~(3) Conditions that assure compliance with all other provisions of this section. [NOTE: Moved to 252:100-8-6.2]~~

~~(d)(f) Permit shield.~~

~~(1) Each operating permit issued under this section Part shall include a "permit shield" provision, which shall state that compliance with the terms and conditions of the permit (including terms and conditions established for alternate operating scenarios, emissions trading, and emissions averaging, but excluding terms and conditions for which the permit shield is expressly prohibited under this Subchapter)~~

shall be deemed compliance with the applicable requirements identified and included in the permit.

(2) Upon request, the DEQ shall include in the permit or in a separate written finding issued with the permit a determination identifying specific requirements that do not apply to the source. The source shall specify in its application for such a determination the requirements for as ~~to~~ which the determination is requested. If the determination is issued in a separate finding, that finding shall be summarized in the permit. The permit shall state that the permit shield applies to any requirements so identified. A request for a determination to extend the shield to requirements deemed inapplicable to the source may be made either in the original permit application or in a subsequent application for a permit modification.

(3) A Part 70 permit that does not expressly state that a permit shield exists shall be presumed not to provide such a shield.

(4) Nothing in this section or in the permit shall alter or affect the following:

(A) the provisions of section 303 of the ~~federal Clean Air Act~~, including the authority of the EPA Administrator under that section;

(B) the liability of an owner or operator of a source for any violation of applicable requirements, ~~and or~~ or state-only requirements, prior to or at the time of permit issuance;

(C) the applicable requirements of the acid rain program, consistent with section 408(a) of the ~~federal Clean Air Act~~; or

(D) the ability of EPA to obtain information from a source pursuant to section 114 of the ~~federal Clean Air Act~~.

(e) ~~(g)~~ **Emergencies.**

(1) When used in this Subsection, "Emergency" means any situation arising from sudden and reasonably unforeseeable events beyond the control of the source, including acts of God, which situation requires immediate corrective action to restore normal operation, and that causes the source to exceed a technology-based emission limitation under the permit, due to unavoidable increases in emissions attributable to the emergency. An emergency shall not include noncompliance to the extent caused by improperly designed equipment, lack of ~~preventative~~ preventive maintenance, careless or improper operation, or operator error. Quantification of accidental releases shall be made by the best available method.

(2) An emergency constitutes an affirmative defense to an action brought for noncompliance with such technology-based emission limitations if the conditions of paragraph ~~(g)~~ (e) (3) of this section and the reporting requirements of 252:100-8-6(a) (3) (C) (iii) (I) are met.

(3) The affirmative defense of emergency shall be demonstrated through properly signed, contemporaneous

operating logs, or other relevant evidence that:

(A) An emergency occurred and that the permittee can identify the cause(s) of the emergency;

(B) The permitted facility was at the time being properly operated;

(C) During the period of the emergency the permittee took all reasonable steps to minimize levels of emissions that exceeded the emission standards, or other requirements in the permit, and.

~~(D) The permittee submitted notice of the emergency to the DEQ within 24 hours of the time when emission limitations were exceeded due to the emergency. Such notice must contain a description of the emergency, any steps taken to mitigate emissions, and corrective actions taken. [NOTE: Moved to 252:100-8-6(a)(3)(C)(iii)(I)]~~

(4) In any enforcement proceeding, the permittee seeking to establish the occurrence of an emergency has the burden of proof.

(5) The provision in this subsection is in addition to any emergency or upset provision contained in any applicable requirement or OAC 252:100-9.

~~(f)-(h) Operational flexibility. Any operating scenario allowed for in an applicable Part 70 permit may be implemented by the facility without the need for any permit revision or any notification to the permitting authority. It is incumbent upon the Part 70 permit applicant to apply for any reasonably anticipated alternative facility operating scenarios at the time of initial or renewal permit application.~~

(1) **Applicant's duty to apply for alternative scenarios.**

Any operating scenario allowed for in an applicable Part 70 permit may be implemented by the facility without the need for any permit revision or any notification to the permitting authority. It is incumbent upon the Part 70 permit applicant to apply for any reasonably anticipated alternative facility operating scenarios at the time of initial or renewal permit application.

(2) **Changes resulting in no emissions increases.** A permitted Part 70 source may make changes within the facility that:

(A) Are not modifications under any provision of Title I of the ~~federal Clean Air Act~~;

(B) Do not cause any hourly or annual permitted emission rate of any existing emissions unit to be exceeded; ~~or~~ and

(C) Result in a net Net change in emissions is of zero. ~~provided~~ Provided that the facility provides notifies the Administrator and the permitting authority DEQ and EPA in writing at least 7 days with written notification as required below in advance of the proposed changes, which shall be a minimum of 7 days, or such shorter time frame that permitting authority allows for emergencies [as defined in OAC 252:100-8-6(g)]. The source, permitting authority DEQ, and EPA shall attach each such notice to their copy of

the relevant permit. For each such change, the written notification required above shall include a brief description of the change within the permitted facility, the date on which the change will occur, any change in emissions, and any permit term or condition that is no longer applicable as a result of the change. The permit shield described in ~~OAC 252:100-8-6(f)~~ 252:100-8-6(d) does not apply to any change made pursuant to this subsection.

~~(3) Emissions trading in permit. A permitted source may rely on the authority of this section to trade increases and decreases in emissions within the facility, where the implementation plan provides for such emissions trades without a permit modification. In such a case, the advance written notice provided by the permittee shall identify the underlying authority authorizing the trading and shall state when the change will occur, the types and quantities of emissions to be traded, the permit terms or other applicable requirements, and state-only requirements, with which the source will comply through emissions trading, and such other information as may be required by the applicable requirement authorizing the emissions trade.~~

252:100-8-6.1 General permits

(a) Applicability.

(1) The DEQ may, after notice and opportunity for public participation, issue a general permit for to any source category if it concludes that the category is appropriate for permitting on a generic basis. Any general permit shall comply with all requirements applicable to other Part 70 permits. No general permit may be issued for affected sources under the acid rain program unless otherwise provided in regulations promulgated under Title IV of the federal Clean Air Act.

(2) A general permit may be issued for a source category based upon an application from a source within the source category or upon the DEQ's own initiative. The DEQ shall, following receipt of an application for a general permit, or upon a determination that issuance of a general permit for a category of sources may be appropriate, follow the same procedures for issuance of a general permit as for any other permit issued under this part.

(3) A general permit may be issued for the following purposes to establish:

(A) to establish terms Terms and conditions to implement applicable requirements, and state-only requirements, for a source category.

(B) to establish terms Terms and conditions to implement applicable requirements, and state-only requirements, for specified categories of changes to permitted sources.

(C) to establish terms Terms and conditions for new

requirements that apply to sources with existing permits, and.

(D) to establish federally enforceable Federally-enforceable caps on emissions from sources in a specified category.

(4) The DEQ may issue a general permit if it finds that:

(A) There ~~there~~ are several permittees, permit applicants, or potential permit applicants who: have the same or substantially similar operations, emissions, activities, or facilities;

(i) Have the same or substantially similar operations, emissions, activities, or facilities.

(ii) ~~(B) the permittees, permit applicants, or potential permit applicants emit~~ Emit the same types of regulated air pollutants.

~~(B) ~~(C) the~~ The operations, emissions, activities, or facilities are subject to the same or similar: standards, limitations, and operating requirements; and~~

(i) Standards, limitations, and operating requirements.

(ii) ~~(D) the operations, emissions, activities, or facilities are subject to the same or similar monitoring~~ Monitoring requirements.

[NOTE: 252:100-8-6.1(a) (1) through (4) was 252:100-8-6(d) (1) through (4)]

~~(5) ~~(8)~~ If some, but not all, of a source's operations, activities, and emissions are eligible for coverage under one or more general permits, the source may must apply for an individual Part 70 permit for all of its covered sources. and receive coverage under the general permits for the operations, activities, and emissions that are so eligible. If the source is required under OAC 252:100-8-3 of this part to obtain a permit addressing the remainder of its operations, activities, and emissions, it may apply for and receive a permit that addresses specifically only those items not covered by general permits. In such a case, the source's permit shall identify all operations, activities, and emissions that are subject to general permits and incorporate those general permits by reference. Unless the permit specifically states otherwise, the permit shall apply to the terms and conditions of any general permits so incorporated by reference as well as to the terms and conditions specifically stated in the permit.~~

[NOTE: Was 252:100-8-6(d) (8)]

(6) Facilities located in areas that are federally designated as non-attainment are not eligible for coverage under a general operating permit. [NOTE: From 252:100-10-5(h) (3)]

(7) Sites that are not in compliance with all applicable State and Federal air regulations are eligible for a general operating permit only if:

(A) They submit to DEQ an approvable compliance plan, and

(B) The facility submits to Tier II public review. [NOTE: From 252:100-10-5(h) (5)]

(8) Facilities with existing state operating permits are eligible for coverage under a general operating permit. [NOTE: From 252:100-10-5(h)(6)]

(9) Facilities existing prior to the effective date of any applicable standard that would have created specific quantifiable and enforceable emission rates are eligible for coverage under a general operating permit. [NOTE: From 252:100-10-5(h)(7)]

(b) Authorization.

(1)~~(5)~~ A general permit issued under this section shall identify criteria by which sources may qualify for the general permit. After a general permit has been issued, any source may submit a request to be covered under the permit in the form of an application for authorization to operate under the general permit. ~~(A)~~ Such application shall identify the source and provide information sufficient to demonstrate that it falls within the source category covered by the general permit, together with any additional information that may be specified in the general permit. [NOTE: Was 252:100-8-6(d)(5)]

(2)~~(B)~~ See OAC 252:2-15 for Tier I permitting procedures and timelines for individual authorizations under general permits. The Agency DEQ shall act to approve or deny the application within 90 days of filing. [NOTE: Was 252:100-8-6(d)(5)(B)]

(3)~~(C)~~ A final action approving an authorization to operate under a general permit shall not be subject to public comment or judicial review. [NOTE: Was 252:100-8-6(d)(5)(C)]

(4)(d) The DEQ will publish, at least monthly, an updated list of sources approved for inclusion under the general operating permit and any aggrieved person may petition the DEQ to review the approval of any stationary source for inclusion under a general operating permit within 30 days after publication of the list. [NOTE: From 252:100-10-3(d)]

(5)~~(6)~~ A copy of the general permit, together with a list of sources approved for coverage under it, shall be kept on file for public review at the offices of the DEQ. [NOTE: Was 252:100-8-6(d)(6)]

(c) Permit Shield. A general permit issued under this section shall provide that any source approved for coverage under a general permit shall be entitled to the protection of the permit shield for all operations, activities, and emissions addressed by the general permit, unless and to the extent that it is subsequently determined that the source does not qualify for the conditions and terms of the general permit. [NOTE: Was 252:100-8-6(d)(7)]

(d) Revisions

(1)~~(b)~~ If an owner or operator of a source(s) makes a change to a source covered by a general operating permit that affects any applicability information supplied in the general operating permit application, but the source is still eligible for coverage authorized to operate under a general operating

permit, the owner or operator must revise the general operating permit application and submit it to the DEQ within 60 days.

(2)(e) After coverage is granted to a particular source under the general permit, physical changes to the facility which result in the addition of equipment new to the facility, either as a replacement (except like-kind replacements) or net addition, will require a construction permit or a new authorization permit except as allowed in (d) (3) below. Any significant modification to a stationary source included under a general operating permit shall subject the source to a Tier II review.

(3)(e) If equipment new to the facility is newly purchased or is relocated from another facility where a permit was issued with enforceable emissions limits on that equipment, then authorization approval under the general operating permit shall be modified or amended to include an emissions limit for the newly purchased or relocated equipment. "Grandfathered" emissions sources at the facility will retain only the equipment descriptions as permit conditions. "Grandfathered" means a unit which that was in existence prior to the effective date of any applicable regulation which that would have created specific quantifiable and enforceable emissions rate limits.

(4)(f) For a general operating permit, if emissions change for any reason that subjects the facility to PSD permitting requirements, then the facility no longer qualifies for a general operating permit. However, the existing general operating permit will remain valid during the time period covered by the PSD construction permit until the facility receives a Part 70 site specific operating permit for the entire facility.

[NOTE: 252:100-8-6.1(d) (1) through (4) are from 252:100-10-5(b), (c), (e) and (f) respectively]

(e) Permit Content. Specific terms and conditions that which will make the applicable rules and requirements enforceable shall be stipulated in the general operating permit. [NOTE: From 252:100-10-5(h) (8)]

(f) Renewal of general operating permits.

(1) The DEQ will initiate the renewal process for a general operating permit at least 180 days prior to the permit's expiration date and will follow the requirements in 252:100-8-7(a).

(2) Owners or operators shall apply to renew an authorization at least 60 days prior to expiration of the existing authorization. Upon submittal of a timely and administratively complete application, the applicant may continue to operate until such time as the DEQ grants or denies coverage under the general operating permit.

252:100-8-6.2(e) Temporary sources. The DEQ may issue a single

permit authorizing emissions from similar operations by the same source owner or operator at multiple temporary locations. The operation must be temporary and involve at least one change of location during the term of the permit. No affected source shall be permitted as a temporary source. Permits for temporary sources shall include the following:

- (1) Conditions that will assure compliance with all applicable requirements at all authorized locations;
- (2) Requirements that the owner or operator notify the permitting authority at least ten days in advance of each change in location; and
- (3) Conditions that assure compliance with all other provisions of this section. [NOTE: 252:100-8-6.2 was moved from 252:100-8-6(e)]

252:100-8-6.3.(i) Special provisions for affected (acid rain) sources

(a)(1) Application binding until permit issuance or denial. A complete acid rain permit application is binding on the applicant and enforceable as a an acid rain permit until an acid rain permit is issued or denied. For applicable permitting procedures, see OAC 252:2-15.

(b)(2) Exemption petitions. Applicants with small units that burn low sulfur fuel or sources that retire a unit can petition to have such units exempted from certain permitting and monitoring requirements under the acid rain regulations.

(c)(3) Permit shield. The acid rain portion of every operating permit is covered by a permit shield. This shield assures that an applicant operating in accordance with a permit issued in accordance with Title IV of the ~~federal Clean Air Act~~, will be deemed to be operating in compliance with the Acid Rain Program.

(d)(4) Modifications. See 40 CFR 72.82.

(e)(5) Duration. Acid rain permits will have a term of five years commencing on the permits effective date. The DEQ may issue a permit with a future effective date.

(f)(6) Right of intervention. The Administrator may intervene as a matter of right in any administrative appeal involving an Acid Rain permit or denial of an Acid Rain permit.

(g)(7) Administrative appeal. The administrative appeal period shall be no more than 90 days following the issuance of the Acid Rain permit and the judicial appeal period shall be no more than 90 days following a final agency action.

(h)(8) Adoption of 40 CFR Part 72 by reference. ~~Owners or operators of sources subject to the acid rain provisions of the federal Clean Air Act shall comply with applicable provisions of 40 CFR Part 72, as published in the Federal Register on January 11, 1993, and on March 23, 1993, which is hereby adopted by reference as rules of the Environmental Quality Board. In such regulations, the term "permitting authority" shall mean the Oklahoma Department of Environmental Quality and the term "Administrator" shall mean the Administrator of the United States~~

Environmental Protection Agency. If the provisions or requirements of 40 CFR Part 72 conflict with this Chapter, the Part 72 provisions and requirements shall apply and take precedence.

~~(8) The Oklahoma Department of Environmental Quality DEQ hereby adopts and incorporates by reference the provisions of 40 CFR Part part 72, as published in the Federal Register on January 11, 1993, and on March 23, 1993 for purposes of implementing an acid rain program that meets the requirements of Title IV of the Clean Air Act. The term "permitting authority" shall mean the Oklahoma Department of Environmental Quality and the term "Administrator" shall mean the Administrator of the United States Environmental Protection Agency. If the provisions or requirements of 40 CFR Part part 72 conflict with or are not included in Oklahoma Administrative Code 252:100-8, the Part part 72 provisions and requirements shall apply and take precedence.~~

252:100-8-7. Permit issuance, renewal, reopenings, and revisions

(a) Action on application; issuance/denial criteria.

(1) **Criteria for issuance.** A permit, permit modification, or renewal may be issued only if the applicable requirements of 27A O.S.Supp. 1995, Section 2-14-101 et seq.; OAC 252:2-15; and this Chapter have been met and the DEQ has determined that the conditions of the permit provide for compliance with all applicable requirements and for applications subject to OAC 252:100-8-8, that the requirements of that section have been satisfied.

(2) **Draft permits and notice thereof.** See OAC 252:2-15. The draft permit shall be accompanied by a statement that sets forth the legal and factual basis for the draft permit conditions (including references to the applicable statutory or regulatory provisions).

(3) **EPA review.** See OAC 252:100-8-8.

(4) **DEQ final action.** See OAC 252:2-15, and OAC 252:100-8-8 when applicable.

(5) **Timeline for technical review and issuance.** See OAC 252:2-15-70 through 15-72. ~~Except as provided in paragraphs (A) and (B) of this paragraph, the The~~ DEQ shall take final action on each application for a permit within 18 months after beginning its technical review in accordance with 252:2-15-70 through 15-72 and OAC ~~252:100-8-5(b)(5)~~ 252:100-8-4(b)(7).

(6) **Action priorities.** See OAC ~~252:100-8-5(b)~~ 252:100-8-4(b)(2) through (10) and 252:100-8-7.1(b).

(7) **No issuance by default.** See 27A:2-5-112(D).

(b) **Requirement for a permit.** See OAC ~~252:100-8-4(b)~~ 252:100-8-4.

252:100-8-7.1.(e) Permit renewal and expiration

(a) Timely application for permit renewal.

(1) Applications for permit renewal after the transition

period, and for permits permit for new Part 70 sources or amendments, shall be considered timely if the applicant meets the requirements of this subsection.

(2) Stationary sources operating under permits issued by the DEQ under this Subchapter shall apply for permit reissuance at least 180 days before the expiration of the existing permit, unless the permit specifies that the application must be submitted sooner. The DEQ shall require in a permit that a reissuance application be submitted sooner if it determines that an earlier application is needed to minimize the possibility of expiration prior to reissuance. The DEQ may make the determination if it anticipates a relatively lengthy permit review process due to the complexity of the stationary source or anticipated involvement of the public. In no event shall the permit require application for reissuance sooner than eighteen months prior to the expiration of the permit.

[NOTE: Was 252:100-8-7(c) (5)]

(b)-(9) Application content for renewal of expiring permit. In submitting an application for renewal of a DEQ issued Part 70 operating permit, a source may identify and incorporate by reference terms and conditions in its previous permit and permit application(s) that should remain unchanged. terms and conditions in its previous permit that should remain unchanged and incorporate by reference those portions of its existing permit and the permit application and any permit amendment or modification applications that describe products, processes, operations, and emissions to which those terms and conditions apply. The source must identify specifically and list which portions of its previous permit and/or applications are incorporated by reference. In addition, a renewal application must contain:

(1)-(i) information specified in OAC 252:100-8-5(d) 252:100-8-5(c) for those products, processes, operations, and emissions that:

(A)-(I) That are not addressed in the existing permit;

(B)-(II) That are subject to applicable requirements, or state-only requirements that are not addressed in the existing permit; or

(C)-(III) For as to which the source seeks permit terms and conditions that differ from those in the existing permit; and

(2)-(ii) a compliance plan and certification as required in OAC 252:100-8-5(d)(8) 252:100-8-5(c)(8). [NOTE: Was 252:100-8-5(b)(9)]

(c)-(2) Issuance of renewal permit. Applications for permit renewal shall be subject to the same procedural requirements, including those for public participation, affected State comment, and EPA review, that apply to initial permit issuance under OAC 252:100-8-7(a).

(d) Expiration of permit.

~~(1)(3)~~ A source's right to operate shall terminate upon the expiration of its permit unless a timely and complete renewal application has been submitted at least 180 days before the date of expiration.

~~(2)(4)~~ If a timely and complete application for a permit renewal is submitted, but the DEQ fails to take final action to issue or deny the renewal permit before the end of the term of the previous permit, then the permit shall not expire until the renewal permit has been issued or denied, and any permit shield granted for the permit shall continue in effect during that time.

~~(5) Stationary sources operating under permits issued by the DEQ under this subchapter shall apply for permit reissuance at least 180 days before the expiration of the existing permit, unless the permit specifies that the application must be submitted sooner. The DEQ shall require in a permit that a reissuance application be submitted sooner if it determines that an earlier application is needed to minimize the possibility of expiration prior to reissuance. The DEQ may make the determination if it anticipates a relatively lengthy permit review process due to the complexity of the stationary source or anticipated involvement of the public. In no event shall the permit require application for reissuance sooner than eighteen months prior to the expiration of the permit.~~

[NOTE: Moved to 252:100-8-7.1(a)(2)]

252:100-8-7.2.(d) Administrative permit amendments and permit modifications

(a) Administrative permit amendments.

~~(1) When used in this subsection An "Administrative administrative permit amendment" means a permit revision that:~~

~~(A) Corrects typographical errors;~~

~~(B) Identifies a change in the name, address, or phone number of any person identified in the permit, or provides a similar minor administrative change at the source;~~

~~(C) Requires more or less frequent monitoring or reporting by the permittee;~~

~~(D) Allows for a change in ownership or operational control of a source where no other change in the permit is necessary, provided that a written agreement containing a specific date for transfer of permit responsibility, coverage, and liability between the current and new permittee has been submitted to the DEQ;~~

~~(E) Incorporates into the permit the requirements from preconstruction review permits issued by the DEQ under this Part OAC 252:100-7. Enhanced New Source Review (NSR) procedures apply to all major sources and all State Implementation Plan (SIP) minor source changes to majors.~~

~~(2) Administrative permit amendments for purposes of the acid rain portion of the permit shall be governed by regulations promulgated under Title IV of the federal Clean Air Act 40 CFR~~

Part 72.

(3) An administrative permit amendment shall be made by the DEQ in accordance with the following:

(A) The DEQ shall take final action on a request for an administrative permit amendment within 60 days from the date of receipt of such a request, and may incorporate the proposed changes without providing notice to the public or affected States provided that it designates any such permit revisions as having been made pursuant to this paragraph.

(B) The DEQ shall submit a copy of the revised permit to the Administrator upon the Administrator's request.

(C) The source may implement the changes addressed in the request for an administrative amendment immediately upon submittal of the request.

(4) The DEQ shall, upon taking final action granting a request for an administrative permit amendment, allow coverage by the permit shield in ~~OAC 252:100-8-6(f)~~ 252:100-8-6(d) for administrative permit amendments made pursuant to subparagraph ~~(d)(1)(E)~~ 252:100-8-7.2(a)(1)(E) of this section.

~~(b)(e)~~ **Permit modification.** A permit modification is any revision to an operating permit that cannot be accomplished under the program's provisions for administrative permit amendments under subsection ~~(d)~~ (a) of this section. A permit modification for purposes of the acid rain portion of the permit shall be governed by regulations promulgated under Title IV of the federal Clean Air Act 40 CFR Part 72.

(1) **Minor permit modification procedures.**

(A) **Criteria.**

(i) Minor permit modification procedures may be used only for those permit modifications that:

(I) Do not violate any applicable requirement, or state-only requirements;

(II) Do not involve significant changes to existing monitoring, reporting or recordkeeping requirements in the permit;

(III) Do not require or change a case-by-case determination of an emission limitation or other standard, or a source-specific determination for temporary sources of ambient impacts, or a visibility or increment analysis;

(IV) Do not seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement, or state-only requirement, and that which the source has assumed to avoid an some other applicable requirement, or state-only requirement, to which the source would otherwise be subject. Such terms and conditions include federally-enforceable emissions caps assumed to avoid classification as a modification under any provision of Title I and alternative emissions limits approved pursuant to regulations promulgated under §§112(i)(5)

of the federal Clean Air Act; and

(V) Are not modifications under any provision of Title I of the federal Clean Air Act.

(ii) Notwithstanding ~~OAC 252:100-8-7(e)(1)(A)(i)~~ 252:100-8-7.2(b)(1)(A)(i) and ~~OAC 252:100-8-7(e)(2)(A)~~ 252:100-8-7.2(b)(2)(A), minor permit modification procedures may be used for permit modifications involving the use of economic incentives, marketable permits, emissions trading, and other similar approaches, to the extent that such minor permit modification procedures are explicitly provided for in an applicable the State's implementation plan or in applicable requirements promulgated by EPA.

(B) **Application.** To use the minor permit modification procedures, a source shall submit an application requesting such use which shall meet the permit application requirements of Tier I under OAC 252:2-15 and shall include the following:

(i) A description of the change, the emissions resulting from the change, and any new applicable requirements, ~~and~~ or state-only requirements, that will apply if the change occurs;

(ii) The source's suggested modification language;

(iii) Certification by a responsible official, that the application and the proposed modification meet the criteria for use of minor permit modification procedures; and

(iv) Completed forms for any notices required by OAC 252:2-15 and, ~~regarding notice to EPA and affected states, as required under~~ subparagraph (C) of this paragraph.

(C) **EPA and affected state notification.** If the proposed minor modification is of a permit that underwent EPA review in accordance with OAC 252:100-8-8, the provisions of that section shall apply to the minor modification application unless waived by the Administrator.

(D) **Timetable for issuance.** Within 90 days of the DEQ's receipt of a complete application under OAC 252:2-15, the DEQ shall:

(i) Issue the minor permit modification as approved;

(ii) Deny the minor permit modification application; or

(iii) Determine that the requested modification does not meet the minor permit modification criteria and should be reviewed under the significant modification procedures or administrative amendment procedures.

(E) **Source's ability to make change.** Immediately after filing an application meeting the requirements of these minor permit modification procedures, the source is authorized to make the change or changes proposed in the application. After the source makes the change ~~allowed by the preceding sentence,~~ and until the DEQ takes any of the actions specified in (1)(D)(i) through (iii) of this section

subsection, the source must comply with both the applicable requirements and state-only requirements, governing the change and the proposed permit terms and conditions. During this period, the source need not comply with the existing terms and conditions it seeks to modify. However, if the source fails to comply with its proposed permit terms and conditions during this time period, the existing permit terms and conditions it seeks to modify may be enforced against it.

(F) Permit shield. The permit shield under ~~OAC 252:100-8-6(f)~~ 252:100-8-6(d) will not extend to minor permit modifications.

(G) Permittee's risk in commencing construction. The ~~permittee permittees~~ assumes the risk of losing any investment it makes toward implementing a modification prior to receiving a permit amendment authorizing the modification. The DEQ will not consider the possibility of the permittee suffering financial loss due to such investment when deciding whether to approve, deny, or approve in modified form a minor permit amendment.

(2) Significant modification procedures.

(A) Criteria. Significant modification procedures shall be used for applications requesting permit modifications that:

(i) Involve any significant changes in amendment to existing monitoring, reporting, or recordkeeping requirements in the permit;

(ii) Relax any reporting or recordkeeping requirements.

~~(iii)~~ (ii) Require any amendment to establish or amend a permit condition that Change any permit condition that is required to be based on a case-by-case determination of an emission limitation or other standard, on a source-specific determination of ambient impacts, or on a visibility or increment analysis;

~~(iv)~~ (iii) Seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement, and or state-only requirement, and that which the source has assumed to avoid an some other applicable requirement, and or state-only requirement, to which the source would otherwise be subject. Such terms and conditions include:

(I) A federally enforceable emissions cap assumed to avoid classification as a modification under any provision of Title I;

(II) An alternative emissions limit approved pursuant to regulations promulgated under section 112(i)(5) of the ~~federal Clean Air Act~~; and

~~(v)~~ (iv) Are modifications under any provision of Title I of the federal Clean Air Act; and,

~~(vi)~~ (v) Do not qualify as minor permit modifications or administrative amendments.

(B) Procedures for processing. Significant permit

modifications shall meet all requirements of these rules that are applicable to Tier II applications. The application for the modification shall describe the change, the emissions resulting from the change, and any new applicable requirements, ~~and or state-only requirements,~~ that will apply if the change occurs.

(C) **Issuance.** The DEQ shall complete review of significant permit modifications within nine months after receipt of a complete application, but shall be authorized to extend that date by up to three months for cause.

252:100-8-7.3. ~~(f)~~ **Reopening for cause**

(a) ~~(1)~~ **Mandatory reopening.** Each issued permit shall include provisions specifying the conditions under which the permit will be reopened prior to the expiration date of the permit. A permit shall be reopened and revised under any of the following circumstances:

(1) ~~(A)~~ Additional federal applicable requirements become applicable to a stationary source with a remaining permit term of three or more years. Such a reopening and amendment shall be completed not later than 18 months after promulgation of the federal applicable requirement. Reopening is allowed if an applicable requirement becomes effective and the original permit or any of its terms and conditions has been extended pursuant to the application shield provided at ~~OAC 252:100-8-7(e)(4)~~ 252:100-8-7.1(d)(2) beyond the 18-month timeframe for revision. No such reopening is required if the effective date of the requirement is later than the date on which the permit is due to expire.

(2) ~~(B)~~ Additional requirements (including excess emissions requirements) become applicable to an affected source under the acid rain program. Upon approval by the Administrator, ~~administrator~~, excess emissions offset plans shall be deemed to be incorporated into the permit.

(3) ~~(C)~~ The DEQ agency or the ~~administrator~~ EPA determines that the permit contains a material mistake or that inaccurate statements were made in establishing the emissions standards, limitations, or other terms or conditions of the permit.

(4) ~~(D)~~ The Administrator ~~administrator~~ or the DEQ agency determines that the permit must be revised or revoked to assure compliance with the applicable requirements.

(b) ~~(2)~~ **Discretionary reopening.** The DEQ agency may reopen and amend a permit when:

(1) ~~(A)~~ additional state-only requirements become applicable to a permitted stationary source, and the effective date of the requirement is at least 18 months prior to the date on which the permit is due to expire;

(2) ~~(B)~~ alterations or modifications to the permitted facility will result in or have the potential to result in significant alteration of the nature or quantity of regulated air pollutants to be emitted by the permittee;

~~(3)(C)~~ the DEQ agency receives information previously unavailable to the DEQ agency that shows that the terms and conditions of the permit do not accurately represent the actual circumstances relating to the permitted facility;

~~(4)(D)~~ a court of competent jurisdiction invalidates or modifies an Oklahoma or federal statute or rule or federal guideline upon which a condition of the permit is based; and

or

~~(5)(E)~~ an event occurs that is beyond the control of the permittee that necessitates modification of a compliance schedule in the permit.

~~(c)(3)~~ **Reopening procedures.** To reopen and amend a permit, the DEQ agency shall follow the procedures that apply to significant permit amendments under this chapter, unless the amendment can be made as an administrative amendment under ~~OAC 252:100-8-7(d)~~ 252:100-8-7.2(a). Mandatory reopenings under ~~OAC 252:100-8-7(f)(1)~~ 252:00-8-7.3(a) shall be made as expeditiously as practicable. In lieu of an application, the significant permit amendment process will commence when the DEQ agency gives the permittee written notice of its intent to amend the permit. The DEQ agency shall not issue the amendment, or make public notice of the amendment where public notice is required, until at least thirty days after the DEQ agency has given the permittee consents to less notice, or in the case of an emergency. In cases where public participation is required, only those portions of the permit that which the DEQ agency proposes to amend shall be open for public comment or consideration at a meeting or hearing.

~~(d)(g)~~ **Reopenings for cause by EPA.**

(1) If the Administrator finds that cause exists to terminate, modify, or revoke and reissue a permit, the Administrator shall notify the DEQ ~~permitting authority~~ and the permittee of such findings in writing.

(2) The DEQ ~~permitting authority~~ shall, within 90 days after receipt of such notification, forward to EPA a proposed determination of termination, modification, or revocation and reissuance, as appropriate. The Administrator may extend this 90-day period for an additional 90 days if he finds that a new or revised permit application is necessary or that the DEQ ~~permitting authority~~ must require the permittee to submit additional information.

(3) The Administrator will review the proposed determination from the DEQ ~~permitting authority~~ within 90 days of receipt.

(4) The DEQ ~~permitting authority~~ shall have 90 days from receipt of an EPA objection to resolve any objection that EPA makes and to terminate, modify, or revoke and reissue the permit in accordance with the Administrator's objection.

(5) If the DEQ ~~permitting authority~~ fails to submit a proposed determination pursuant to this subsection, or fails to resolve any objection pursuant to this subsection, the Administrator will terminate, modify, or revoke and reissue the permit after taking the following actions:

(A) Providing at least 30 days' notice to the permittee in writing of the reasons for any such action.

(B) Providing the permittee an opportunity for comment on the Administrator's proposed action and an opportunity for a hearing.

252:100-8-7.4.(h) Revocations

~~(a)(1)~~ **Revocation of a permit or authorization under a general permit** ~~Permit revocation without reissuance.~~ The DEQ agency may revoke permits or authorizations under a general permit and not reissue them when:

~~(1)(A)~~ there exists at the permitted facility unresolved noncompliance with applicable requirements or a condition of the permit or authorization, and the permittee refuses to undertake an enforceable schedule of compliance to resolve the noncompliance;

~~(2)(B)~~ the permittee fails to disclose fully the facts relevant to issuance of the permit or authorization or submits false or misleading information to the DEQ agency or the Administrator administrator;

~~(3)(C)~~ the permittee has failed to comply with any requirement under ~~OAC 252:100-9~~ 252:100-5 to pay fees; or

~~(4)(D)~~ the permittee has failed to pay a penalty owed pursuant to court order, consent decree, stipulation agreement, or schedule of compliance.

~~(b)(2)~~ **Revocation procedures.** The DEQ agency shall give notice to the permittee of its intention to revoke a permit without reissuance. This notice must state that within 30 days of the receipt of the notice the permittee may request a contested case hearing be held on the proposed action, except that the DEQ agency may provide less notice in case of an emergency. If the permittee requests a contested case hearing, the DEQ agency shall hold the hearing in accordance with the Oklahoma Administrative Procedures Act.

~~(i)~~ **Public participation.** See 27A O.S. Supp. 1995, §2-14-101 et seq. and OAC 252:2-15.

252:100-8-7.5.(j) Judicial review

Any final action in granting or denying an application for a permit, permit amendment or modification, or permit renewal shall be subject to judicial review in the court of appropriate jurisdiction upon an application filed by the applicant or permittee, or by any affected state or other person who participated in the public comment process. Except for authorizations under General Permits, judicial review is available to all affected parties for all final permit actions including minor modifications and administrative actions. If no public comment procedure was employed for the action under challenge, an application for review may be filed by the permittee or an affected state. The opportunity for judicial review provided for in this subsection shall be the exclusive

means for obtaining judicial review of any permit action.

(1) No application for judicial review may be filed more than 90 days following the final action on which review is sought, unless the grounds for review arose at a later time, in which case the application for review shall be filed within 90 days of the date on which the grounds for review first arose and review shall be limited to such later-arising grounds.

(2) Any application for judicial review shall be limited to issues that:

(A) were raised in ~~written~~ comments filed with the DEQ Agency or during a public hearing on the proposed permit action (if the grounds on which review is sought were known at that time), except that this restriction shall not apply if the person seeking review was not afforded an advance opportunity to comment on the challenged action; and

(B) are germane and material to the permit action at issue.

(3) For purposes of this section, "final action" shall include a failure by the DEQ Agency to take final action to grant or deny an application within the time specified in this Chapter.

252:100-8-8. Permit review by EPA and affected states

(a) **Applicability.** This section applies only to specific Tier II and III applications for Part 70 operating permits and permit actions that have not been waived from compliance with this section by the Administrator.

(b) **Format.** To the extent practicable, information provided to the EPA by applicants shall be in computer-readable format compatible with EPA's national database management system.

(c) **Recordkeeping.** The DEQ will keep for 5 years records required by this section and will submit to the Administrator such information as the Administrator may reasonably require to ascertain whether the State program complies with the requirements of the ~~federal Clean Air Act~~ or of this Chapter.

(d) **Transmission of Part 70 applications to EPA.**

For Part 70 Tier II and III applications subject to this section, the DEQ shall require an applicant upon filing to also provide a copy to the Administrator or the DEQ may submit a permit application summary form and any relevant portion of the permit application and compliance plan, in place thereof.

(e) **Transmittal of notice of draft permit to affected states.** See 27A O.S.Supp. 1995, § 2-5-112(E); 27A O.S.Supp. 1995, § 2-14-101 et seq.; and ~~0AC~~ 252:2-15.

(f) **Preparation and submittal of EPA review copy.**

(1) **Tier II applications.** For Tier II applications, the DEQ shall review public comments, revise the draft permit as appropriate and submit the revision to EPA for review no later than 60 days before the issuance deadline established in ~~0AC~~ 252:2-15-72 or, if none, by this Chapter.

(2) **Tier III applications.** For Tier III applications, the DEQ shall prepare a proposed permit according to 27A O.S.Supp.

1995, § 2-14-304, and submit it to EPA for review upon the publication of notice of an administrative permit hearing opportunity.

(g) **Notice of non-acceptance.** As part of the DEQ's submittal of a revised draft permit (Tier II) or a proposed permit (Tier III) to the Administrator, the DEQ shall notify the Administrator and any affected State in writing of any refusal by the DEQ to accept all recommendations for the revised draft permit or proposed permit that the affected State submitted during the review period. The notice will include the DEQ's reasons for not accepting any such recommendation. The DEQ is not required to accept recommendations that are not based on applicable requirements of the Oklahoma Clean Air Act or these rules.

(h) **EPA review and non-objection.** Upon receipt of notice from the EPA that it will not object to:

(1) A revised draft permit based on a Tier II application, the DEQ shall issue the permit.

(2) A proposed permit based on a Tier III application, the DEQ shall issue the proposed permit as final unless an administrative permit hearing has been timely and properly requested.

(i) **EPA review and objection.**

(1) **Timing.** Except as specified in paragraph 5 of this subsection, no permit for which an application must be transmitted to the Administrator under subsection (a) of this section shall be issued if the Administrator objects to its issuance in writing within 45 days of receipt of the revised draft permit (Tier I) or proposed permit (Tier III) and all necessary supporting information.

(2) **Form of objection.** An EPA objection shall include a statement of the Administrator's reasons for objection and a description of the terms and conditions that the permit must include to respond to the objections.

(3) **Additional grounds.** Failure of the DEQ to do any of the following also shall constitute grounds for an objection:

(A) Comply with subsections (d) or (e) of this section;

(B) Submit any information necessary to review adequately the revised draft permit (Tier II) or the proposed permit (Tier III); or

(C) Process the permit application according to the uniform permitting requirements of OAC 252:2-15.

(4) **Copy.** The Administrator will provide the permit applicant a copy of the objection.

(5) **DEQ response.** The DEQ shall consult with EPA and the applicant and shall either:

(A) **Amend permit.** Amend the permit and submit for approval an amended draft (Tier II) or proposed (Tier III) permit to EPA within 90 days after the date of EPA's objection, or

(B) **Give notice and issue.** Determine that one or more revisions sought by EPA are inconsistent with applicable state or federal statutes or regulations, inform EPA

accordingly within 90 days following the date of the Administrator's objection, decline to make those particular revisions and:

- (i) issue the amended or revised draft permit (Tier II) as final, or
- (ii) issue the proposed permit (Tier III) as final unless an administrative permit hearing has been timely and properly requested.

(6) **Failure of DEQ to respond.** If the DEQ fails, within 90 days after the date of the EPA objection, to amend and resubmit the draft permit or proposed permit in response to the objection, the Administrator will issue or deny the permit in accordance with the requirements of EPA's Part 70 regulations.

(j) **Public petitions to the Administrator.** If the Administrator does not object in writing under subsection (h) of this section, any person that meets the requirements of this subsection may petition the Administrator within 60 days after the expiration of the Administrator's 45-day review period to make such objection. Any such petition shall be based only on objections to the permit that the petitioner raised with reasonable specificity during the public comment period provided for in OAC 252:002-15, unless the petitioner demonstrates that it was impracticable to raise such objections within such period, or unless the grounds for such objection arose after such period. If the Administrator objects to the permit as a result of a petition filed under this subsection, the DEQ shall not issue the permit until EPA's objection has been resolved, except that a petition for review does not stay the effectiveness of a permit or its requirements if the permit was issued after the end of the 45-day review period and prior to an EPA objection. If the DEQ has issued a permit prior to receipt of an EPA objection under this subsection, the Administrator will modify, terminate, or revoke such permit, and shall do so consistent with the procedures in OAC 252:100-8-7 through 252:100-8-7.5 except in unusual circumstances. If the DEQ revokes the permit, it may thereafter issue only a revised permit that satisfies EPA's objection. In any case, the source will not be in violation of the requirement to have submitted a timely and complete application.

(k) **Effect on Tier III administrative permit hearing.** When a public petition or an EPA objection is registered on a proposed permit (Tier III) on which an administrative permit hearing has been requested in accordance with 27A O.S.Supp. 1995, Section 2-14-101 et seq., the DEQ may stay the evidentiary part of the hearing involving cross-examination until EPA objections are resolved or determined to be inconsistent with applicable laws.

~~252:100-8-9. Permit fees~~ [NOTE: The contents of this Section were moved to 252:100-5 and 252:100-8-1.7]

~~(a) Definitions. The following words and terms, when used in this Section, shall have the following meaning, unless the~~

context clearly indicates otherwise.

~~(1) "Actual emission" means the total amount of regulated pollutant (for fee calculation) emitted from a given facility during a particular calendar year, as determined by methods contained in OAC 252:100-8-9(d).~~

~~(2) "Allowable emissions" means the total amount of regulated pollutant (for fee calculation) emitted based on limits contained in a federally enforceable permit or potential to emit.~~

~~(3) "Emission inventory" means a compilation of the total of all point source, storage and process fugitive air emissions for all regulated pollutant (for fee calculation) at a given facility.~~

~~(4) "Consumer Price Index" means an index determined by the U.S. Department of Labor measuring the change in the cost of typical wage earner purchases of goods and services expressed as a percentage of the cost of these same goods and services in a base period.~~

~~(b) Fee required. The owners or operators of Part 70 sources shall pay annual fees that are sufficient to cover the part 70 program costs. The permitting authority shall ensure that any fee required by these rules will be used solely for part 70 program costs.~~

~~(c) Applicability. A Part 70 source shall be subject to fee requirements of this section on January 1, 1995, and as of this date shall no longer be subject to the major source annual operating fee specified in 252:100-7-4 (b) (1) (A).~~

~~(d) Fee schedule for Part 70 sources.~~

~~(1) Annual fees. The annual fee shall be calculated on a source specific basis and may be based on either actual or allowable emissions at the option of the owner or operator paying the fee as set forth in the facility emissions inventory. Fees shall be based on emission inventories submitted in the previous calendar year. (For example, fee invoiced during calendar year 1995 shall be based upon inventory data covering the calendar year 1993).~~

~~(A) Annual fees shall be determined according to the following.~~

- ~~(i) where only one basis for fee assessment, i.e. only actual, or only allowable is reflected by the inventory, that basis shall be used for invoicing, or~~
- ~~(ii) where both actual and allowable emission are reflected on the inventory, the lesser of the two shall be used.~~

~~(B) Annual fees shall be as follows:~~

- ~~(i) Effective January 1, 1995, the annual operating fee for Part 70 sources shall be \$15.19 per ton of regulated air pollutant.~~
- ~~(ii) The annual operating fee shall be adjusted automatically each year by the percentage, if any, by which the Consumer Price Index for the most recent calendar year ending before the beginning of such year~~

~~differs from the Consumer Price Index for the calendar year 1994. The Consumer Price Index for any calendar year is the average of the Consumer Price Index for all urban consumers published by the Department of Labor, as of the close of the twelve month period ending on August 31 of each calendar year.~~

~~(iii) Regulated pollutants (for fee calculation) in excess of 4,000 tons per year per pollutant for a part 70 source shall not be considered in the calculation of the annual fee.~~

~~(2) Permit processing fees. Permit processing fees shall be as follows:~~

~~(A) Initial Part 70 permit \$2,000.~~

~~(B) Renewal Part 70 permit \$1,000.~~

~~(C) Significant Part 70 Permit Mod. \$1,000.~~

~~(D) Minor Part 70 Permit Modification \$ 500.~~

~~(E) The Part 70 Temporary Permit \$1,000.~~

~~(F) Part 70 Temporary Source Relocation \$ 500.~~

~~(3) Payment. Fees will be paid by check or money order made payable to the Oklahoma Air Quality fund or upon delegation, to the appropriate reviewing agency. Fees are due and payable upon receipt of invoice. Fees shall be considered delinquent 30 days from the date of billing, at which time simple interest shall accrue at the rate of one and one half percent (1 1/2%) per month on any amount unpaid. The Department shall allow a grace period of one hundred and twenty days from the date of billing before issuing any administrative order and assessing a reasonable administrative fine in accordance with the provisions of the Oklahoma Clean Air Act, 27A O.S. 1993 Supp. Sec. 2-5-101 et seq., as amended.~~

~~(4) Emissions inventory. The owner or operator of any Part 70 source shall by April 1, 1994, and every succeeding year thereafter, submit a complete emission inventory on forms obtained from the Agency. These inventories, covering the previous calendar year, will be used for the purpose of calculating the annual operating fee. The methods of calculation to be utilized in the development of an emission inventory shall be in accordance with the methods described in OAC 252:100-7-4(c).~~

**PART 9. PREVENTION OF SIGNIFICANT DETERIORATION (PSD)
REQUIREMENTS FOR ATTAINMENT AREAS**

[NOTE: Was 252:100-7-30 through 37]

252:100-8-30. Applicability

The new source requirements of this Part, in addition to the requirements of ~~OAC 252:100-7-15 through 252:100-7-18 and 252:100-8~~, Parts 1, 3, 5, and 7 of this Subchapter, if applicable, shall apply to the construction of all major stationary sources and major modifications as specified in OAC

~~252:100-7-31 252:100-8-31 through 252:100-7-33 252:100-8-33,~~
following and are effective upon adoption of this Subchapter by
Oklahoma. Except that the requirements of this Part will not be
necessary for sources required to meet the permit requirements of
the United States Environmental Protection Agency under Title 40
Part 52.21 of the Code of Federal Regulations. Sources subject to
this Part are also subject to the operating permit provisions
contained in Part 5 of OAC 252:100-8, Operating Permit Program
~~(Part 70) Permits for Major TSP Facilities, or Part 7, Permits~~
for Part 70 Sources.

252:100-8-31. Definitions

The following words and terms when used in this Part shall have the following meaning, unless the context clearly indicates otherwise:

~~"Actual emission" means the actual rate of emissions of a pollutant from an emissions unit, as determined in accordance with the following:~~

~~(A) In general, actual emissions as of a particular date shall equal the average rate in tons per year at which the unit actually emitted the pollutant during a two year period which precedes the particular date and which is representative of normal source operation. The reviewing authority may allow the use of a different time period upon a determination that it is more representative of normal source operation. Actual emissions shall be calculated using the unit's actual operating hours, production rates, and types of materials processed, stored, or combusted during the selected time period. Actual emissions may also be determined by source tests, or by best engineering judgment in the absence of acceptable test data.~~

~~(B) The reviewing authority may presume that source specific allowable emissions for the unit are equivalent to the actual emissions of the unit.~~

~~(C) For any emissions unit which has not begun normal operations on the particular date, actual emissions shall equal the potential to emit of the unit on that date. [NOTE: in SC-1]~~

"Adverse impact on visibility" means visibility impairment which interferes with the management, protection, preservation or enjoyment of the visitor's visual experience of the Federal Class I area. This determination must be made by the DEQ Air Quality Division on a case-by-case basis taking into account the geographic extent, intensity, duration, frequency and time of visibility impairments, and how these factors correlate with:

(A) times of visitor use of the Federal Class I area; and

(B) the frequency and timing of natural conditions that reduce visibility. [NOTE from 252:100-7-36(a)]

~~"Allowable emissions" means the emission rate of a stationary source calculated using the maximum rated capacity of the source (unless the source is subject to enforceable limits which~~

~~restrict the operating rate, or hours of operation, or both) and the most stringent of the following:~~

~~(A) the applicable standards as set forth in 40 CFR Parts 60 and 61;~~

~~(B) the applicable State rule allowable emissions, or,~~

~~(C) the emissions rate specified as an enforceable permit condition. [NOTE: in SC-1]~~

"Baseline area" means any areas designated as attainment or unclassifiable in which the major source or major modification establishing the minor source baseline date would construct or would have an air quality impact equal to or greater than 1 ug/m³ (annual average) of the pollutant for which the minor source baseline date is established.

"Baseline concentration" means that ambient concentration level which exists in the baseline area at the time of the applicable minor source baseline date.

(A) A baseline concentration is determined for each pollutant for which a minor source baseline date is established and shall include:

(i) the actual emissions representative of sources in existence on the applicable minor source baseline date, except as provided in (B) of this definition.

(ii) the allowable emissions of major sources which commenced construction before the major source baseline date but were not in operation by the applicable minor source baseline date. (Effective May 11, 1991)

(B) The following will not be included in the baseline concentration and will affect the applicable maximum allowable increase(s):

(i) actual emissions from any major source on which construction commenced after the major source baseline date; and,

(ii) actual emissions increases and decreases at any source occurring after the minor source baseline date. (Effective May 11, 1991)

"Baseline date" means:

(A) for major sources,

(i) in the case of particulate matter and sulfur dioxide, January 6, 1975, and,

(ii) in the case of nitrogen dioxide, February 8, 1988; and,

(B) for minor sources, the earliest date after the trigger date on which a major source or major modification (subject to 40 CFR 52.21 or ~~OAC 252:100-7~~ 252:100-8, Part 5 9) submits a complete application. The trigger date is:

(i) in the case of particulate matter and sulfur dioxide, August 7, 1977, and

(ii) in the case of nitrogen oxides, February 8, 1988. (Effective May 11, 1991)

~~"Begin actual construction" means, in general, initiation of physical on site construction activities on an emissions unit which are of a permanent nature. Such activities include, but~~

are not limited to, installation of building supports and foundations, laying of underground pipework, and construction of permanent storage structures. With respect to a change in method of operation this term refers to those on site activities, other than preparatory activities, which mark the initiation of the change. [NOTE: in SC-1]

~~"Best available control technology" means the control technology to be applied for a major source or modification is the best that is available as determined by the Executive Director on a case basis taking into account energy, environmental, costs and economic impacts of alternate control systems. [NOTE: in SC-1]~~

~~"Building, structure, facility or installation" means all of the pollutant-emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person or persons under common control. Pollutant-emitting activities shall be considered as part of the same industrial grouping if they belong to the same "Major Group" (i.e., which have the same two-digit code) as described in the Standard Industrial Classification Manual, 1972 1987, as amended by the 1977 Supplement.~~

~~"Commence" as applied to construction of a major source or major modification means that the owner or operator has all necessary preconstruction approvals or permits and either has:~~
~~(A) begun, or caused to begin, a continuous program of actual on site construction of the source, to be completed within a reasonable time, or,~~
~~(B) entered into binding agreements or contractual obligations, which cannot be cancelled or modified without substantial loss to the owner or operator, to undertake a program of actual construction of the source to be completed within a reasonable time. [NOTE: in SC-1]~~

~~"Complete" in reference to an application for a permit, means that the application contains all the information necessary for processing the application. Designating an application complete for purposes of permit processing does not preclude the reviewing authority from requesting or accepting any additional information. [NOTE: in SC-1]~~

~~"Construction" means any physical change or change in the method of operation (including fabrication, erection, installation, demolition, or modification of an emissions unit) which would result in a change in actual emissions. [NOTE: in SC-1]~~

~~"Emissions unit" means any part of a source which emits or would have the potential to emit any pollutant subject to regulation. [NOTE: in SC-1]~~

~~"Federal land manager" means the Secretary of the department with authority over the Federal Class I area or his representative. [NOTE: Moved from 252:100-8-36(a)]~~

~~"Fugitive emissions" means those emissions which could not~~

reasonably pass through a stack, chimney, vent or other functionally equivalent opening. [NOTE: in SC-1]

~~"Innovative control technology" means any system of air pollution control that has not been adequately demonstrated in practice, but would have a substantial likelihood of achieving greater continuous emissions reduction than any control system in current practice or of achieving at least comparable reductions at lower cost in terms of energy, economics, or non air quality environmental impacts. [NOTE: in SC-1]~~

~~"Major modification" means any physical change in or change in the method of operation of a major source that would result in a significant net emissions increase of any pollutant subject to regulation.~~

~~(A) Any net emissions increase that is significant for volatile organic compounds shall be considered significant for ozone.~~

~~(B) A physical change or change in the method of operation shall not include:~~

~~(i) routine maintenance, repair and replacement.~~

~~(ii) use of an alternate fuel or raw material by reason of any order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation) or by reason of a natural gas curtailment plan pursuant to the Federal Power Act.~~

~~(iii) use of an alternate fuel by reason of an order or rule under Section 125 of the Federal Clean Air Act.~~

~~(iv) use of an alternate fuel at a steam generating unit to the extent that the fuel is generated from municipal solid waste.~~

~~(v) Use of an alternate fuel or raw material by a source which:~~

~~(I) the source was capable of accommodating before January 6, 1975, unless such change would be prohibited under any enforceable permit limitation which was established after January 6, 1975; or,~~

~~(II) the source is approved to use under any permit issued under 40 CFR 52.21 or OAC 252.100-7.~~

~~(vi) An increase in the hours of operation or in the production rate, unless such change would be prohibited under any enforceable permit limitation which was established after January 6, 1975.~~

~~(vii) Any change in source ownership. [NOTE: in SC-1]~~

~~"Major stationary source" means any source which meets any of the following conditions:~~

~~(A) Any of the following sources of air pollutants which emits, or has the potential to emit, 100 tons per year or more of any pollutant subject to regulation:~~

~~(i) carbon black plants (furnace process),~~

~~(ii) charcoal production plants,~~

~~(iii) chemical process plants,~~

~~(iv) coal cleaning plants (with thermal dryers),~~

- (v) coke oven batteries,
- (vi) fossil-fuel boilers (or ~~combustion~~ combination thereof) totaling more than 250 million BTU per hour heat input,
- (vii) fossil fuel-fired steam electric plants of more than 250 million BTU per hour heat input,
- (viii) fuel conversion plants,
- (ix) glass fiber processing plants,
- (x) hydrofluoric, sulfuric or nitric acid plants,
- (xi) iron and steel mill plants,
- (xii) kraft pulp mills,
- (xiii) lime plants,
- (xiv) municipal incinerators capable of charging more than 250 tons of refuse per day,
- (xv) petroleum refineries,
- (xvi) petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels,
- (xvii) phosphate rock processing plant,
- (xviii) portland cement plants,
- (xix) primary aluminum ore reduction plants,
- (xx) primary copper smelters,
- (xxi) primary lead smelters,
- (xxii) primary zinc smelters,
- (xxiii) secondary metal production plants,
- (xxiv) sintering plants,
- (xxv) sulfur recovery plants, or
- (xxvi) taconite ore processing plants.

(B) Any other source not on the list in (A) of this definition which emits, or has the potential to emit, 250 tons per year or more of any pollutant subject to regulation.

(C) Any physical change that would occur at a source not otherwise qualifying as a major source under (A) and (B) of this definition if the change would constitute a major source by itself.

(D) A major source that is major for volatile organic compounds shall be considered major for ozone.

"Natural conditions" mean naturally occurring phenomena against which any changes in visibility are measured in terms of visual range, contrast or coloration. [NOTE: From 252:100-8-36(a)]

~~"Necessary preconstruction approvals or permits" means these permits or approvals required under all applicable air quality control laws and rules. [NOTE: in SC-1]~~

"Net emissions increase" means:

(A) The amount by which the sum of the following exceeds zero:

- (i) any increase in actual emissions from a particular physical change or change in the method of operation at a source; and,
- (ii) any other increases and decreases in actual emissions at the source that are contemporaneous with the particular

change and are otherwise creditable.

(B) An increase or decrease in actual emissions is contemporaneous with the increase from the particular change only if it occurs within 3 years before the date that the increase from the particular change occurs.

(C) An increase or decrease in actual emissions is creditable only if the Executive Director has not relied on it in issuing a permit under ~~OAC 252:100-7, Part 3~~ 252:100-8, Part 9, which permit is in effect when the increase in actual emissions from the particular change occurs.

(D) An increase or decrease in actual emissions of sulfur dioxide, particulate matter, or nitrogen oxides which occurs before the applicable minor source baseline date is creditable only if it is required to be considered in calculating the amount of maximum allowable increases remaining available. (Effective May 11, 1991)

(E) An increase in actual emissions is creditable only to the extent that the new level of actual emissions exceeds the old level.

(F) A decrease in actual emissions is creditable only to the extent that:

(i) the old level of actual emissions or the old level of allowable emissions, whichever is lower, exceeds the new level of actual emissions;

(ii) it is enforceable at and after the time that actual construction on the particular change begins;

(iii) it has approximately the same qualitative significance for public health and welfare as that attributed to the increase from the particular change.

(G) An increase that results from a physical change at a source occurs when the emission unit on which construction occurred becomes operational and begins to emit a particular pollutant. Any replacement unit that requires shakedown becomes operational only after a reasonable shakedown period, not to exceed 180 days.

~~"Potential to emit" means the maximum capacity of a source to emit a pollutant under its physical and operational design. Any physical or operational limitation on the capacity of the source to emit a pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored or processed, shall be treated as part of its design if the limitation or the effect it would have on emissions is enforceable. Secondary emissions do not count in determining the potential to emit of a source. [NOTE: in SC-1]~~

~~"Secondary emissions" means emissions which occur as a result of the construction or operation of a major stationary source or modification, but do not come from the source or modification itself. For the purposes of OAC 252:100-7, Part 5 secondary emissions must be specific, well defined, quantifiable, and impact the same general areas as the source or modification which causes the secondary emissions. Secondary emissions may include,~~

but are not limited to:

- ~~(A) emissions from trains coming to or from the new or modified stationary source, and,~~
- ~~(B) emissions from any offsite support facility which would not otherwise be constructed or increase its emissions as a result of the construction or operation of the major source or modification. [NOTE: in SC-1]~~

"Significant" means:

(A) In reference to a net emissions increase or the potential of a source to emit any of the following pollutants, a rate of emissions that would equal or exceed any of the following rates:

- (i) carbon monoxide: 100 tons per year (tpy),
- (ii) nitrogen oxides: 40 tpy,
- (iii) sulfur dioxide: 40 tpy,
- (iv) particulate matter: 25 tpy of particulate matter emissions or 15 tpy of PM-10 emissions,
- (v) ozone: 40 tpy of volatile organic compounds,
- (vi) lead: 0.6 tpy,
- (vii) asbestos: 0.007 tpy,
- (viii) beryllium: 0.0004 tpy,
- (ix) mercury: 0.1 tpy,
- (x) vinyl chloride chloride: 1 tpy,
- (xi) fluorides: 3 tpy,
- (xii) sulfuric acid mist: 7 tpy,
- (xiii) hydrogen sulfide (H₂S): 10 tpy,
- (xiv) total reduced sulfur (including H₂S): 10 tpy, and
- (xv) reduced sulfur compounds (including H₂S): 10 tpy.

(B) Notwithstanding (A) of this definition, "significant" means any emissions rate or any net emissions increase associated with a major source or modification which would construct within 6 miles of a Class I area, and have an impact on such area equal to or greater than 1 ug/m³ (24-hour average).

~~"Stationary source" means any building, structure, facility or installation which emits or may emit any air pollutant subject to OAC 252:100. [NOTE: in SC-1]~~

"Visibility impairment" means any humanly perceptible reduction in visibility (visual range, contrast and coloration) from that which would have existed under natural conditions.

[NOTE: From 252:100-8-36(a)]

252:100-8-32. Source applicability determination

Proposed new sources and source modifications to which this Part 5 of ~~this Subchapter~~ is applicable are determined by size, geographical location and type of emitted pollutants.

(1) Size.

(A) Permit review will apply to sources and modifications that emit any regulated pollutant in major amounts. These quantities are specified in the definitions for major stationary source, major modification, potential to emit,

net emissions increase, significant and other associated definitions in 252:100-8-31 and 252:100-1.

(B) ~~When At such time that a particular source or modification becomes major solely by virtue of a relaxation in any enforceable permit limitation which was established after August 7, 1980, on the capacity of the source or modification otherwise to emit a pollutant, such as a restriction on hours of operation, then the requirements of OAC 252:100-7-15 through 252:100-7-18 and OAC 252:100-7, Part 7 252:100-8, Parts 1, 3, 5, 7 and 9 shall apply to that source or modification as though construction had not yet commenced on it.~~

(2) Location.

(A) Sources and modifications which are major in size and proposed for construction in an area which has been designated as attainment or unclassified for any applicable ambient air standard are subject to the ~~prevention of significant deterioration~~ PSD requirements.

(B) Those sources and modifications locating in an attainment or unclassified area but impacting on a nonattainment area may also be subject to the requirements for major sources affecting nonattainment areas in 252:100-8, Part 11 of OAC 252:100-7, Part 7.

252:100-8-33. Review, applicability and exemptions Exemptions

(a) Exemptions from PSD requirements. PSD requirements do not apply to a particular source or modification ~~do not apply~~ if:

- (1) It is a nonprofit health or educational institution.
- (2) The source is major by virtue of fugitive emissions, to the extent quantifiable, included in calculating the potential to emit and is a source other than one of the following categories:

- (A) ~~carbon black plants (furnace process),~~ One of the categories listed in (A) (i) through (xxvi) under the definition of "Major stationary source" in 252:100-8-31, or
- (B) ~~charcoal production plants,~~
- (C) ~~chemical process plants,~~
- (D) ~~coal cleaning plants (with thermal dryers),~~
- (E) ~~coke oven batteries,~~
- (F) ~~fossil fuel boilers (or combustion combination thereof) totaling more than 250 million BTU per hour heat input,~~
- (G) ~~fossil fuel fired steam electric plant of more than 250 million BTU per hour heat input,~~
- (H) ~~fuel conversion plants,~~
- (I) ~~glass fiber processing plants,~~
- (J) ~~hydrofluoric, sulfuric or nitric acid plants,~~
- (K) ~~iron and steel mills,~~
- (L) ~~kraft pulp mills,~~
- (M) ~~lime plants,~~
- (N) ~~municipal incinerators capable of charging more than 250 tons of refuse per day,~~

- ~~(O) petroleum refineries,~~
- ~~(P) petroleum storage and transfer units with a total storage exceeding 300,000 barrels,~~
- ~~(Q) phosphate rock processing plants,~~
- ~~(R) portland cement plants,~~
- ~~(S) primary aluminum ore reduction plants,~~
- ~~(T) primary copper smelters,~~
- ~~(U) primary lead smelters,~~
- ~~(V) primary zinc smelters,~~
- ~~(W) secondary metal production plants,~~
- ~~(X) sintering plants,~~
- ~~(Y) sulfur recovery plants,~~
- ~~(Z) taconite ore processing plants, or~~
- ~~(AA) A any other stationary source category which, as of August 7, 1980, is being regulated by federal New Source Performance Standards (NSPS) NSPS or National Emission Standards for Hazardous Air Pollutants (NESHAP) NESHAP.~~

(3) The source or modification is a portable stationary source which has previously received a permit under the PSD requirements and proposes to relocate to a temporary new location from which its emissions would not impact a Class I area or an area where an applicable increment is known to be violated.

(b) Exemption from air quality impact evaluation.

(1)(b) The requirements of ~~OAC 252:100-7-35~~ 252:100-8-35 are not applicable if the emissions, with respect to a particular pollutant, would be temporary and impact no Class I area and no area where an applicable increment is known to be violated.

(2)(e) The requirements of ~~OAC 252:100-7-35~~ 252:100-8-35 are not applicable to the emissions, with respect to a particular pollutant, to a modification of a major source that was in existence on March 1, 1978 if the net increase in allowable emissions of each regulated pollutant, after the application of best available control technology, would be less than 50 tons per year.

(c) Exemption from monitoring requirements.

(1)(d) The monitoring requirements of ~~OAC 252:100-7-35~~ 252:100-8-35 are not applicable for a particular pollutant if the emission increase of the pollutant from a new source or the net emissions increase of the pollutant from a modification would cause, in any area, air quality impacts less than the following listed amounts, or are pollutant concentrations that are not on the list.

- (A)(1) Carbon monoxide - 575 ug/m³, 8-hour average,
- (B)(2) Nitrogen dioxide - 14 ug/m³, annual average,
- (C)(3) Particulate matter - 10 ug/m³, TSP, 24-hour average, or 10 ug/m³ PM-10, 24-hour average,
- (D)(4) Sulfur dioxide - 13 ug/m³, 24-hour average,
- (E)(5) Ozone - see (N) ~~(14)~~ below,
- (F)(6) Lead - 0.1 ug/m³, 24-hour 3-month average,

- (G) ~~(7)~~ Mercury - 0.25 ug/m³, 24-hour average,
- (H) ~~(8)~~ Beryllium - 0.0005 0.001 ug/m³, 24-hour average,
- (I) ~~(9)~~ Fluorides - 0.25 ug/m³, 24-hour average,
- (J) ~~(10)~~ Vinyl chloride - 15 ug/m³, 24-hour average,
- (K) ~~(11)~~ Total reduced sulfur --10 ug/m³, 1-hour average,-
- (L) ~~(12)~~ Hydrogen sulfide - 0.04 0.2 ug/m³, 1-hour average,
or
- (M) ~~(13)~~ Reduced sulfur compounds - 10 ug/m³, 1-hour
average.
- (N) ~~(14)~~ No de minimis air quality level is provided for
ozone. However, any net increase of 100 tons per
year or more of volatile organic compounds subject
to PSD would be required to perform an ambient
impact analysis, including the gathering of
ambient air quality data.

(2) The requirements for air quality monitoring in OAC 252:100-7-35(b) through 252:100-7-35(d) 252:100-8-35(b), (c) and (d)(2) shall not apply to a particular source or modification that was subject to Federal 40 CFR 52.21 as in effect on June 19, 1978, if a permit application in accordance with OAC 252:100-7 is was submitted before June 8, 1981 and the Executive Director subsequently determines determined that the application as submitted was complete except for with respect to the requirements of OAC 252:100-7 other than those in OAC 252:100-7-35(b) through 252:100-7-35(d) 252:100-8-35(b), (c) and (d)(2) and with respect to the requirements for such analyses at 40 CFR 52.21 (m) (2) as in effect on June 19, 1978. Instead, the latter requirements in 40 CFR 52.21(m) (2) as in effect on June 19, 1978, shall apply to any such source or modification. [NOTE: was 252:100-7-33(f)]

(3) The requirements for air quality monitoring in OAC 252:100-7-35(b) through 252:100-7-35(d) 252:100-8-35(b), (c), and (d)(2) shall not apply to a particular source or modification that was not subject to 40 CFR 52.21 as in effect on June 19, 1978, if a permit application in accordance with OAC 252:100-7 is was submitted before June 8, 1981 and the Executive Director subsequently determines determined that the application as submitted was complete, except for with respect to the requirements in OAC 252:100-7-35(b) through 252:100-7-35(d) 252:100-8-35(b), (c) and (d)(2). [NOTE: was 252:100-7-33(g)]

(4) The Executive Director shall determine if the requirements for air quality monitoring of PM-10 in OAC 252:100-7-35(a) 252:100-8-35(a) through 252:100-7-35(d) 252:100-8-35(c) and 252:100-8-35(d)(2) may be waived for a particular source or modification when the owner or operator of the source or modification submits an application for a permit was submitted on or before June 1, 1988 and the Executive Director subsequently determines that the application, except with respect to for the requirements for monitoring particulate matter under OAC 252:100-7-35(a)

~~252:100-8-35(a) through 252:100-7-35(d)~~ 252:100-8-35(c) and 252:100-8-35(d)(2), was complete before that date. [NOTE: was 252:100-7-33(i)]

(5) ~~The requirements for air quality monitoring of PM-10 in OAC 252:100-7-35(b) 252:100-8-35(b), (c), (d)(2) and (d)(6) through 252:100-7-35(d) and 252:100-7-35(h) shall apply to a particular source or modification if the owner or operator of the source or modification submits an application for a permit was submitted after June 1, 1988 and no later than December 1, 1988. The data shall have been gathered over at least the period from February 1, 1988 to the date the application becomes otherwise complete in accordance with the provisions of OAC 252:100-7-33(b) 252:100-8-33(b)(1), except that if the Executive Director determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period (not to be less than 4 months), the data required by OAC 252:100-7-35(b) 252:100-8-35(b)(1) and 252:100-7-35(e) 252:100-8-35(c) shall have been gathered over that shorter period.~~ [NOTE was 252:100-7-33(j)]

~~(d)(e)~~ **Exemption from BACT requirements and monitoring requirements.** If a complete permit application for a source or modification was submitted before August 7, 1980 the requirements for best available control technology in ~~OAC 252:100-7-34~~ 252:100-8-34 and for monitoring in ~~OAC 252:100-7-35(a) 252:100-8-35(a) through 252:100-7-35(f) 252:100-8-35(c) and 252:100-8-35(d)(2) through 252:100-8-35(d)(4)~~ are not applicable. Instead, the federal requirements at 40 CFR 52.21 (j) and (n) as in effect on June 19, 1978 are applicable to any such source or modification.

~~(f)~~ The requirements for air quality monitoring in ~~OAC 252:100-7-35(b) through 252:100-7-35(d)~~ shall not apply to a particular source or modification that was subject to Federal 40 CFR 52.21 as in effect on June 19, 1978 if a permit application in accordance with OAC 252:100-7 is submitted before June 8, 1981 and the Executive Director subsequently determines that the application as submitted was complete with respect to the requirements of OAC 252:100-7 other than those in OAC 252:100-7-35(b) through 252:100-7-35(d) and with respect to the requirements for such analyses at 40 CFR 52.21 (m) (2) as in effect on June 19, 1978. Instead, the latter requirements shall apply to any such source or modification. [NOTE: Moved to 252:100-8-33(c)(2)]

~~(g)~~ The requirements for air quality monitoring in ~~OAC 252:100-7-35(b) through 252:100-7-35(d)~~ shall not apply to a particular source or modification that was not subject to 40 CFR 52.21 as in effect on June 19, 1978 if a permit application in accordance with OAC 252:100-7 is submitted before June 8, 1981 and the Executive Director subsequently determines that the application as submitted was complete, except with respect to the requirements in ~~OAC 252:100-7-35(b) through 252:100-7-35(d)~~. [NOTE: Moved to 252:100-8-33(c)(3)]

(e)(h) Exemption of modifications. As specified in the applicable definitions of OAC 252:100-7-31, 252:100-8-31 and 252:100-1, the requirements of OAC 252:100-7-252:100-8, Part 5 9 for PSD and 252:100-7-252:100-8, Part 7 11 for nonattainment areas are not applicable to a modification if the existing source was not major on August 7, 1980 unless the proposed addition to that existing minor source is major in its own right.

~~(i) The Executive Director shall determine if the requirements for air quality monitoring of PM 10 in OAC 252:100-7-35(a) through 252:100-7-35(d) may be waived for a particular source or modification when the owner or operator of the source or modification submits an application for a permit on or before June 1, 1988 and the Executive Director subsequently determines that the application, except with respect to the requirements for monitoring particulate matter under OAC 252:100-7-35(a) through 252:100-7-35(d), was complete before that date. [NOTE: Moved to 252:100-8-33(c)(4)]~~

~~(j) The requirements for air quality monitoring of PM 10 in OAC 252:100-7-35(b) through 252:100-7-35(d) and 252:100-7-35(h) shall apply to a particular source or modification if the owner or operator of the source or modification submits an application for a permit after June 1, 1988 and no later than December 1, 1988. The data shall have been gathered over at least the period from February 1, 1988 to the date the application becomes otherwise complete in accordance with the provisions of OAC 252:100-7-33(b), except that if the Executive Director determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period (not to be less than 4 months), the data required by OAC 252:100-7-35(b) and 252:100-7-35(c) shall have been gathered over that shorter period. [NOTE: Moved to 252:100-8-33(c)(5)]~~

~~(k) For any application that becomes complete, except as to the requirements of OAC 252:100-7-35(b) through 252:100-7-35(d) pertaining to monitoring of PM 10, after December 1, 1988 and no later than August 1, 1989, the data that OAC 252:100-7-35(b) and 252:100-7-35(c) require shall have been gathered over at least the period from August 1, 1988 to the date the application becomes otherwise complete, except that if the Executive Director determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period (not to be less than 4 months), the data that OAC 252:100-7-35(b) and 252:100-7-35(c) require shall have been gathered over that shorter period. [NOTE: Moved to 252:100-8-35(d)(3)(B)]~~

~~(l) With respect to any requirements for air quality monitoring of PM 10 under OAC 252:100-7-33(i) and 252:100-7-33(j), the owner or operator of the source or modification shall use a monitoring method approved by the Executive Director and shall estimate the ambient concentrations of PM 10 using the data collected by such approved monitoring method in accordance with estimating procedures approved by the Executive Director. [NOTE: Moved to 252:100-8-35(d)(1)]~~

~~(f)~~(m) Exemption from impact analyses. The requirements of OAC ~~252:100-7-35~~ 252:100-8-35 and ~~252:100-7-36~~ 252:100-8-36 do not apply to a source or modification with respect to any maximum allowable increase for nitrogen oxides if the owner or operator of the source or modification submitted a completed application for a permit before February 8, 1988.

~~(g)~~(n) Exemption from increment consumption. Excluded from increment consumption are the following cases:

- (1) Concentrations from an increase in emissions from any source converting from the use of petroleum products, natural gas, or both by reason of any order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation), or by reason of a natural gas curtailment plan pursuant to the Federal Power Act. Such exclusion is limited to five years after the effective date of the order or plan.
- (2) Emissions of particulate matter from construction or other temporary emission-related activities of new or modified sources.
- (3) A temporary increase of sulfur dioxide, particulate matter, or nitrogen oxides by order or authorized variance from any source.

252:100-8-34. Best available control ~~Control~~ technology

- (a) A new source must demonstrate that the control technology to be applied is the best that is available (i.e., BACT as defined herein for each regulated pollutant that it would have the potential to emit in significant amounts).
- (b) A major modification must demonstrate that the control technology to be applied is the best that is available for each regulated pollutant for which it would be a significant net emissions increase at the source. This requirement applies to each proposed emissions unit at which a net emissions increase in the pollutant would occur as a result of a physical change or change in the method of operation in the unit.
- (c) The determination of best available control technology shall be made on a case by case basis taking into account costs and energy, environmental and economic impacts.
- (d) For phased construction projects the determination of best available control technology shall be reviewed and modified at the discretion of the Executive Director at a reasonable time but no later than 18 months prior to commencement of construction of each independent phase of the project. At such time the owner or operator may be required to demonstrate the adequacy of any previous determination of best available control technology.

252:100-8-35. Air quality impact evaluation

- (a) Application contents. Any application for a permit shall contain, as the Executive Director determines appropriate, an evaluation of ambient air quality in the area that the source or modification would affect for each of the following pollutants:

- (1) for a new source, each regulated pollutant that it would have the potential to emit in a significant amount;
- (2) for a major modification, each regulated pollutant for which it would result in a significant net emissions increase.

(b) ~~Continuous monitoring data.~~ For visibility and any pollutant, other than volatile organic compounds, for which an ambient air quality standard does exist exists, the evaluation shall contain continuous air quality monitoring data gathered to determine whether emissions of that pollutant would cause or contribute to a violation of the applicable ambient air quality standard. For any such pollutant for which a standard does not exist, the monitoring data required shall be that which the Executive Director determines is necessary to assess the ambient air quality for that pollutant in that area. (Amended 7-9-87, effective 8-10-87)

(c) **Increment consumption.** The evaluation shall demonstrate that, as of the source's start-up date, the increase in emissions from that source, in conjunction with all other applicable emissions increases or reductions of that source, will not cause or contribute to any increase in ambient concentrations exceeding the remaining available PSD increment for the specified air contaminants as determined by the Executive Director.

(d) Monitoring.

(1) Monitoring method. With respect to any requirements for air quality monitoring of PM-10 under ~~OAC 252:100-7-33(i)~~ 252:100-8-33(c)(4) and 252:100-7-33(j) 252:100-8-33(c)(5), the owner or operator of the source or modification shall use a monitoring method approved by the Executive Director and shall estimate the ambient concentrations of PM-10 using the data collected by such approved monitoring method in accordance with estimating procedures approved by the Executive Director. [NOTE: was 252:100-7-33(1)]

(2)-(d) Monitoring period. The required monitoring data shall have been gathered for a time period of up to one year and shall represent the year preceding submission of the application. Ambient monitoring data collected for a time period shorter than one year (but no less than four months) or for a time period other than immediately preceding the application may be acceptable if such data are determined by the Executive Director to be within the time period that maximum pollutant concentrations would occur, and to be complete and adequate for determining whether the source or modification will cause or contribute to a violation of any applicable ambient air quality standard or consume more than the remaining available PSD increment.

(3)-(e) Monitoring period exceptions.

(A) For any application which becomes complete except as to the monitoring requirements of ~~OAC 252:100-7-35(b)~~ 252:100-8-35(b) through ~~252:100-7-35(d)~~ 252:100-8-35(c) and 252:100-8-35(d)(2), between June 8, 1981 and February 9, 1982, the data that ~~OAC 252:100-7-35(b)~~ 252:100-8-35(b) and ~~252:100-7-~~

~~35(e)~~ 252:100-8-35(c) require shall have been gathered over the period from February 9, 1981 to the date the application becomes otherwise complete, except that:

(i)~~(1)~~ If the source or modification would have been major for that pollutant under Federal 40 CFR 52.21 as in effect on June 19, 1978, any monitoring data shall have been gathered over the period required by those regulations.

(ii)~~(2)~~ If the Executive Director determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period, not to be less than four months, the data that ~~OAC 252:100-7-35(b)~~ 252:100-8-35(b) and ~~252:100-7-35(e)~~ 252:100-8-35(c) require shall have been gathered over that shorter period.

(iii)~~(3)~~ If the monitoring data would relate exclusively to ozone and would not have been required under Federal 40 CFR 52.21 as in effect on June 19, 1978, the Executive Director may waive the otherwise applicable requirements of ~~OAC 252:100-7-35(e)~~ 252:100-8-35(d) (3) (A) to the extent that the applicant shows that the monitoring data would be unrepresentative of air quality over a full year.

(B) For any application that becomes complete, except as to the requirements of ~~OAC 252:100-7-35(b)~~ 252:100-8-35(b), (c) and (d) (2) through 252:100-7-35(d) pertaining to monitoring of PM-10, after December 1, 1988 and no later than August 1, 1989, the data that ~~OAC 252:100-7-35(b)~~ 252:100-8-35(b) and (c) 252:100-7-35(e) require shall have been gathered over at least the period from August 1, 1988 to the date the application becomes otherwise complete, except that if the Executive Director determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period (not to be less than 4 months), the data that ~~OAC 252:100-7-35(b)~~ 252:100-8-35(b) and ~~252:100-7-35(e)~~ 252:100-8-35(c) require shall have been gathered over that shorter period. [NOTE: was 252:100-7-33(k)]

(4)~~(f)~~ **Ozone post-approval monitoring.** The application for a source or modification of volatile organic compounds which satisfies all conditions of ~~OAC 252:100-7-54~~ 252:100-8-54 may provide post-approval monitoring data for ozone in lieu of providing preconstruction data as required under ~~OAC 252:100-7-35~~ 252:100-8-35.

(5)~~(g)~~ **Post-construction monitoring.** The applicant for a permit for a new source or modification shall conduct, after construction, such ambient monitoring and visibility monitoring as the Executive Director determines necessary to determine the effect its emissions may have, or are having, on air quality in any area. (Amended 7-9-87, effective 8-10-87)

(6)~~(h)~~ **Monitoring system operation.** The operation of monitoring stations for any air quality monitoring required

under Part 5 9 of this Subchapter shall meet the requirements of 40 CFR 58 Appendix B.

(e) ~~(i)~~ **Air quality models.**

(1) Any air quality dispersion modeling that is required under Part 5 9 of this Subchapter for estimates of ambient concentrations shall be based on the applicable air quality models, data bases and other requirements specified in the Guidelines on Air Quality Models, OAQPS 1.2-080, U.S. Environmental Protection Agency, April, 1978 and subsequent revisions.

(2) Where an air quality impact model specified in the Guidelines on Air Quality Models is inappropriate, the model may be modified or another model substituted, as approved by the Executive Director. Methods like those outlined in the Workbook for the Comparison of Air Quality Models, U.S. Environmental Protection Agency, April, 1977 and subsequent revisions, can be used to determine the comparability of air quality models.

(f) ~~(j)~~ **Growth analysis.** Upon request of the Executive Director the permit application shall provide information on the nature and extent of any or all general commercial, residential, industrial and other growth which has occurred since August 7, 1977 in the area the source or modification would affect. The permit application shall also contain an analysis of the air quality impact projected for the area as a result of general commercial, residential and other growth associated with the source or modification.

(g) ~~(k)~~ **Visibility and other impacts analysis.** The permit application shall provide an analysis of the impairment to visibility, soils and vegetation as a result of the source or modification. The Executive Director may require monitoring of visibility in any Federal Class I area near the proposed new stationary source or major modification for such purposes and by such means as the Executive Director deems necessary and appropriate. (Amended 7-9-87, effective 8-10-87)

252:100-8-36. Source impacting Class I areas

~~(a) Definitions. The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:~~

~~(1) "Adverse impact on visibility" means visibility impairment which interferes with the management, protection, preservation or enjoyment of the visitor's visual experience of the Federal Class I area. This determination must be made by the Air Quality Division on a case by case basis taking into account the geographic extent, intensity, duration, frequency and time of visibility impairments, and how these factors correlate with:~~

- ~~(A) times of visitor use of the Federal Class I area; and~~
- ~~(B) the frequency and timing of natural conditions that reduce visibility. [NOTE: Moved to 252:100-8-31]~~

~~(2) "Federal land manager" means the Secretary of the department with authority over the Federal Class I area or his representative. [NOTE: Moved to 252:100-8-31]~~

~~(3) "Installation" means an identifiable piece of process equipment. (Amended 7-9-87, effective 8-10-87) [NOTE: in SC-1]~~

~~(4) "Natural conditions" mean naturally occurring phenomena against which any changes in visibility are measured in terms of visual range, contrast or coloration. [NOTE: Moved to 252:100-8-31]~~

~~(5) "Visibility impairment" means any humanly perceptible reduction in visibility (visual range, contrast and coloration) from that which would have existed under natural conditions. [NOTE: Moved to 252:100-8-31]~~

~~(a)(b)~~ **Permits issuance.** Permits may be issued at variance to the limitations imposed on a Class I area in compliance with the procedures and limitations established in State and Federal Clean Air Acts.

~~(b)(c)~~ **Impact analysis required.** The permit application for a proposed new source or modification will contain an analysis on the impairment of visibility and an assessment of any anticipated adverse impacts on soils and vegetation in the vicinity of the source resulting from construction of the source. The Executive Director shall notify the appropriate Federal Land Manager of the receipt of any such analysis and include a complete copy of the permit application. Any analysis performed by the Land Manager shall be considered by the Executive Director provided that the analysis is filed with the DEQ Air Quality Division within 30 days of receipt of the application by the Land Manager. Where the Executive Director finds that such an analysis does not demonstrate to the satisfaction of the Executive Director that an adverse impact on visibility will result in the Federal Class I area, the Executive Director will, in any notice of public hearing on the permit application, either explain his decision or give notice as to where the explanation can be obtained. Further, upon presentation of good and sufficient information, by a Federal federal Land land Manager manager, the Executive Director may deny the issuance of a permit for a source, emissions from which will adversely impact areas heretofore or hereafter categorized as Class I areas even though the emissions would not cause the increment for such Class I areas to be exceeded.

252:100-8-37. Innovative control technology

(a) An applicant for a permit for a proposed major source or modification may request the Executive Director in writing to approve a system of innovative control technology.

(b) The Executive Director may determine that the innovative control technology is permissible if:

(1) The proposed control system would not cause or contribute to an unreasonable risk to public health, welfare or safety in

its operation or function.

(2) The applicant agrees to achieve a level of continuous emissions reductions equivalent to that which would have been required for best available control technology under OAC ~~252:100-7-34~~ 252:100-8-34 by a date specified by the Executive Director. Such date shall not be later than 4 years from the time of start-up or 7 years from permit issuance.

(3) The source or modification would meet the requirements equivalent to those in OAC ~~252:100-7-15 through 252:100-7-18~~ Parts 1, 5 and 7 of this Subchapter and ~~252:100-7-36~~ 252:100-8-36 based on the emissions rate that the source employing the system of innovative control technology would be required to meet on the date specified by the Executive Director.

(4) The source or modification would not, before the date specified, cause or contribute to any violation of the applicable ambient air standards, or impact any Class I area or area where an applicable increment is known to be violated.

(5) All other applicable requirements including those for public review have been met.

(c) The Executive Director shall withdraw approval to employ a system of innovative control technology made under OAC ~~252:100-7-37~~ 252:100-8-37, if:

(1) The proposed system fails by the specified date to achieve the required continuous reduction rate; or,

(2) The proposed system fails before the specified date so as to contribute to an unreasonable risk to public health, welfare or safety; or,

(3) The Executive Director decides at any time that the proposed system is unlikely to achieve the required level of control or to protect the public health, welfare or safety.

(d) If a source or modification fails to meet the required level of continuous emissions reduction within the specified time period, or if the approval is withdrawn in accordance with OAC ~~252:100-7-37(e)~~ 252:100-8-37(c), the source or modification may be allowed up to an additional 3 years to meet the requirement for application of best available control technology through the use of a demonstrated system of control.

PART 11. MAJOR SOURCES AFFECTING NONATTAINMENT AREAS

252:100-8-50. Applicability

The new source requirements of this ~~Section~~ Part, in addition to the applicable requirements of OAC ~~252:100-7-15 through 252:100-7-18~~ and ~~OAC 252:100-8~~ Parts 1, 3, 5 and 7 of this Subchapter, shall apply to the construction of all major sources and major modifications affecting designated nonattainment areas as specified in OAC ~~252:100-7-51~~ 252:100-8-51 through ~~252:100-7-53~~ 252:100-8-53, and are effective upon adoption of this

~~Subchapter by Oklahoma. Except that the requirements of Part 7 of this Subchapter will not be necessary for sources required to meet the permit requirements of the United States Environmental Protection Agency under Title 40 Part 52.24 of the Code of Federal Regulations. Sources subject to this Part which are Part 70 sources are also subject to the provisions of OAC 252:100-8.~~

252:100-8-51. Definitions

The following words and terms, when used in this Part, shall have the following meaning, unless the context clearly indicates otherwise:

~~"Actual emissions" means the actual rate of emissions of a pollutant from an emissions unit, as determined in accordance with the following:~~

~~(A) In general, actual emissions as of a particular date shall equal the average rate in tons per year at which the unit actually emitted the pollutant during a two year period which precedes the operation. The reviewing authority may allow the use of a different time period upon a determination that it is more representative of normal source operation. Actual emissions shall be calculated using the unit's actual operating hours, production rates, and types of materials processed, stored, or combusted during the selected time period. Actual emissions may also be determined by source tests, or by best engineering judgment in the absence of acceptable test data.~~

~~(B) The reviewing authority may presume that source specific allowable emissions for the unit are equivalent to the actual emissions of the unit.~~

~~(C) For any emissions unit which has not begun normal operations on the particular date, actual emissions shall equal the potential to emit of the unit on that date. [NOTE: in SC-1]~~

~~"Allowable emissions" means the emission rate of a stationary source calculated using the maximum rated capacity of the source (unless the source is subject to enforceable limits which restrict the operating rate, or hours of operation, or both) and the most stringent of the following:~~

~~(A) the applicable standards as set forth in 40 CFR Parts 60 and 61;~~

~~(B) the applicable State rule allowable emissions; or,~~

~~(C) the emissions rate specified as an enforceable permit condition. [NOTE: in SC-1]~~

~~"Begin actual construction" means, in general, initiation of physical on site construction activities on an emissions unit which are of a permanent nature. Such activities include, but are not limited to, installation of building supports and foundations, laying of underground pipework, and construction of permanent storage structures. With respect to a change in method of operation, this term refers to those on site activities, other than preparatory activities, which mark the initiation of the~~

change. [NOTE: in SC-1]

~~"Building, structure, facility" means all of the pollutant emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person (or persons under common control). Pollutant emitting activities shall be considered as part of the same industrial grouping if they belong to the same "Major Group" (i.e., which have the same two digit code) as described in the Standard Industrial Classification Manual, 1972, as amended by the 1977 Supplement.~~

[NOTE: in SC-1]

~~"Commence" means, as applied to construction of a major stationary source or major modification, that the owner or operator has all necessary preconstruction approvals or permits and either has:~~

~~(A) begun, or caused to begin, a continuous program of actual on-site construction of the source, to be completed within a reasonable time; or,~~

~~(B) entered into binding agreements or contractual obligations, which cannot be cancelled or modified without substantial loss to the owner or operator, to undertake a program of actual construction of the source to be completed within a reasonable time. [NOTE: in SC-1]~~

~~"Construction" means any physical change or change in the method of operation (including fabrication, erection, installation, demolition, or modification of an emissions unit) which would result in a change in actual emissions. [NOTE: in SC-1]~~

~~"Emissions unit" means any part of a source which emits or would have the potential to emit any pollutant subject to regulation. [NOTE: in SC-1]~~

~~"Fugitive emissions" means those emissions which could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening. [NOTE: in SC-1]~~

~~"Installation" means an identifiable piece of process equipment. [NOTE: in SC-1]~~

~~"Lowest achievable emissions rate" means the control technology to be applied to a major source or modification which the Executive Director, on a case by case basis, determines is achievable for a source based on the lowest achievable emission rate achieved in practice by such category of source (i.e., lowest achievable emission rate as defined in the Federal Clean Air Act). [NOTE: in SC-1]~~

~~"Major modification" means any physical change in, or change in the method of operation of, a major source that would result in a significant net emissions increase of any pollutant subject to regulation.~~

~~(A) Any net emissions increase that is significant for volatile organic compounds shall be considered significant for ozone.~~

~~(B) A physical change or change in the method of operation~~

shall not include:

- ~~(i) routine maintenance, repair and replacement;~~
- ~~(ii) use of an alternate fuel or raw material by reason of any order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation) or by reason of a natural gas curtailment plan pursuant to the Federal Power Act;~~
- ~~(iii) use of an alternate fuel by reason of an order or rule under Section 125 of the Federal Clean Air Act;~~
- ~~(iv) use of an alternate fuel at a steam generating unit to the extent that the fuel is generated from municipal solid waste;~~
- ~~(v) Use of an alternate fuel or raw material by a source which:
 - ~~(I) the source was capable of accommodating before December 21, 1976, unless such change would be prohibited under any enforceable permit limitation which was established after December 21, 1976; or,~~
 - ~~(II) the source is approved to use under any permit issued under 40 CFR 52.21 or OAC 252:100-7.~~~~
- ~~(vi) An increase in the hours of operation or in the production rate unless such change would be prohibited under any enforceable permit limitation which was established after December 21, 1976, or~~
- ~~(vii) any change in source ownership. [NOTE: in SC-1]~~

~~"Major stationary source" means:~~

- ~~(A) any stationary source of air pollutants which emits, or has the potential to emit, 100 tons per year or more of any pollutant subject to regulation; or,~~
- ~~(B) any physical change that would occur at a source not qualifying under (A) of this definition as a major source, if the change would constitute a major source by itself.~~
- ~~(C) for ozone, a source that is major for volatile organic compounds shall be considered major. [NOTE: in SC-1]~~

~~"Necessary preconstruction approvals or permits" means those permits or approvals required under all air quality control laws and rules. [NOTE: in SC-1]~~

~~"Net emissions increase" means:~~

- ~~(A) The amount by which the sum of the following exceeds zero:
 - ~~(i) any increase in actual emissions from a particular physical change or change in the method of operation at a source; and,~~
 - ~~(ii) any other increases and decreases in actual emission at the source that are contemporaneous with the particular change and are otherwise creditable.~~~~
- ~~(B) An increase or decrease in actual emissions is contemporaneous with the increase from the particular change only if it occurs within 3 years before the date that the increase from the particular change occurs.~~
- ~~(C) An increase or decrease in actual emissions is creditable~~

~~only if the Executive Director has not relied on it in issuing a permit under OAC 252:100-7, Part 7, which permit is in effect when the increase in actual emissions from the particular change occurs.~~

~~(D) An increase in actual emissions is creditable only to the extent that the new level of actual emissions exceeds the old level.~~

~~(E) A decrease in actual emissions is creditable only to the extent that:~~

~~(i) the old level of actual emissions or the old level of allowable emissions, whichever is lower, exceeds the new level of actual emissions;~~

~~(ii) it is enforceable at and after the time that actual construction on the particular change begins;~~

~~(iii) the reviewing authority has not relied on it in issuing any permit under State air quality rules; and,~~

~~(iv) it has approximately the same qualitative significance for public health and welfare as that attributed to the increase from the particular change.~~

~~(F) An increase that results from a physical change at a source occurs when the emission unit on which construction occurred becomes operational and begins to emit a particular pollutant. Any replacement unit that requires shakedown becomes operational after a reasonable shakedown period, not to exceed 180 days. [NOTE: in SC-1]~~

~~"Potential to emit" means the maximum capacity of a source to emit a pollutant under its physical and operational design. Any physical or operational limitation on the capacity of the source to emit a pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored or processed, shall be treated as part of its design if the limitation or the effect it would have on emissions is enforceable. Secondary emissions do not count in determining the potential to emit of a source. [NOTE: in SC-1]~~

~~"Reconstruction" means the replacement of components of an existing source (which will then be treated as a new source for purposes of Part 7 of this Subchapter) to the extent that will be determined by the Executive Director based on:~~

~~(A) the fixed capital cost (the capital needed to provide all the depreciable components) of the new components exceeds 50% of the fixed capital cost of a comparable entirely new source; and,~~

~~(B) the estimated life of the source after the replacements is comparable to the life of an entirely new source; and,~~

~~(C) the extent to which the components being replaced cause or contribute to the emissions from the source. [NOTE: in SC-1]~~

~~"Resource recovery facility" means any facility at which solid waste is processed for the purpose of extracting, converting to energy, or otherwise separating and preparing solid waste for reuse. Energy conversion facilities must utilize solid waste to provide more than 50 percent of the heat input to be considered a~~

~~resource recovery facility under Part 7 of this Subchapter.~~

[NOTE: in SC-1]

~~"Secondary emissions" means emissions which occur as a result of the construction or operation of a major stationary source or modification, but do not come from the source or modification itself. For the purpose of OAC 252:100-7, Part 7, secondary emissions must be specific, well defined, quantifiable, and impact the same general areas as the source or modification which causes the secondary emissions. Secondary emissions may include, but are not limited to:~~

~~(A) emissions from trains coming to or from the new or modified stationary source; and,~~

~~(B) emissions from any offsite support facility which would not otherwise be constructed or increase its emissions as a result of the construction or operation of the major source or modification. [NOTE: in SC-1]~~

"Significant" means, in reference to a net emissions increase or the potential of a source to emit any of the following pollutants, a rate of emissions that would equal or exceed any of the following rates:

- (A) Carbon monoxide: 100 tons per year (tpy),
- (B) Nitrogen oxides: 40 tpy,
- (C) Sulfur dioxide: 40 tpy,
- (D) Particulate matter: 15 tpy of PM-10 emissions,
- (E) Ozone: 40 tpy of volatile organic compounds, or
- (F) Lead: 0.6 tpy.

~~"Stationary source" means any building, structure, facility or installation which emits or may emit any air pollutant subject to regulation. [NOTE: in SC-1]~~

252:100-8-52. Source applicability determination

Proposed new sources and source modifications to which Part 7 11 of this Subchapter are applicable are determined by size, geographical location and type of emitted pollutants:

(1) **Size.**

(A) Permit review will apply to sources and modifications that emit any regulated pollutant in major amounts. These quantities are specified in the definitions for major stationary source, major modification, potential to emit, net emissions increase, significant, and other associated definitions in 252:100-8-51 and 252:100-1.

(B) At such time that a particular source or modification becomes major solely by virtue of a relaxation in any enforceable permit limitation which was established after August 7, 1980 on the capacity of the source or modification otherwise to emit a pollutant, such as a restriction on hours of operation, then the requirements of ~~OAC 252:100-7-15 through 252:100-7-18 and Part 7~~ Parts 1, 3, 5, 7 and 11 of this Subchapter shall apply to that source or modification as though construction had not yet commenced on it.

(2) Location.

(A) Sources and modifications ~~which~~ that are major in size and proposed for construction in an area which has been designated as nonattainment for any applicable ambient air standard are subject to the requirements for the nonattainment area, if the source or modification is major for the nonattainment pollutant(s) of that area.

(B) In addition, the requirements of a PSD review (Part 5 of this Subchapter) would be applicable if any other regulated pollutant other than the nonattainment pollutant is emitted in significant amounts by that source or modification.

(3) Location in attainment or unclassifiable area but causing or contributing to NAAQS violation.

(A) A proposed major source or major modification that would locate in an area designated attainment or unclassifiable is considered to cause or contribute to a violation of the national ambient air quality standards when such source or modification would, as a minimum, exceed the following significance levels at any locality that does not or would not meet the applicable national standard:

Pollutant	Concentration, ug/m ³				
	Averaging Time (hours)				
	Annual	24	8	3	1
SO ₂	1.0	5		25	
PM-10	1.0	5			
NO ₂	1.0				
CO			500		2000

(B) Sources of volatile organic compounds located outside a designated ozone nonattainment area will be presumed to have no significant impact on the designated nonattainment area. If ambient monitoring indicates that the area of source location is in fact nonattainment, then the source may be granted its permit since the area has not yet been designated nonattainment.

(C) Sources locating in an attainment area but impacting on a nonattainment area above the significant levels listed in ~~OAC 252:100-7-52(3)~~ 252:100-8-52(3) are exempted from the condition of ~~OAC 252:100-7-54(4)(A)~~ 252:100-8-54(4)(A).

(D) The determination whether a source or modification will cause or contribute to a violation of an applicable ambient air standard for sulfur dioxide, particulate matter or carbon monoxide will be made on a case by case basis as of the proposed new source's start-up date by an atmospheric simulation model. For sources of nitrogen oxides the model can be used for an initial determination assuming all the nitric oxide emitted is oxidized to nitrogen dioxide by the time the plume reaches ground level, and the initial concentration estimates will be adjusted if adequate data

are available to account for the expected oxidation rate.
(E) The determination as to whether a source would cause or contribute to a violation of applicable ambient air standards will be made on a case by case basis as of the new source's start-up date. Therefore, if a designated nonattainment area is projected to be attainment as part of the state implementation plan control strategy by the new source start-up date, offsets would not be required if the new source would not cause a new violation.

(F) Sources causing a new violation of applicable ambient air standards as determined by the Executive Director but not contributing to an existing violation, will be approved if both of the following conditions are met:

(i) The new source is required to meet a more stringent emission limitations and/or the control of existing sources below allowable levels so that the new violation of ambient standards does not occur.

(ii) The new emission ~~limitation~~ limitations for the new source, as well as for any existing sources affected, are enforceable under the Oklahoma and Federal Clean Air Acts.

252:100-8-53. Exemptions

(a) Nonattainment area requirements do not apply to a particular source or modification locating in or impacting on a nonattainment area if:

(1) The source is major by virtue of fugitive emissions, to the extent quantifiable, included in calculating the potential to emit and is a source other than one of the following categories:

- (A) carbon black plants (furnace process),
- (B) charcoal production plants,
- (C) chemical process plants,
- (D) coal cleaning plants (with thermal dryers),
- (E) coke oven batteries,
- (F) fossil-fuel boilers (or ~~combustion~~ combination thereof) totaling more than 250 million BTU per hour heat input,
- (G) fossil fuel-fired steam electric plant of more than 250 million BTU per hour heat input,
- (H) fuel conversion plants,
- (I) glass fiber processing plants,
- (J) hydrofluoric, sulfuric or nitric acid plants,
- (K) iron and steel mills,
- (L) kraft pulp mills,
- (M) lime plants,
- (N) municipal incinerators capable of charging more than 250 tons of refuse per day,
- (O) petroleum refineries,
- (P) petroleum storage and transfer units with a total storage exceeding 300,000 barrels,
- (Q) phosphate rock processing plants,

- (R) portland cement plants,
- (S) primary aluminum ore reduction plants,
- (T) primary copper smelters,
- (U) primary lead smelters,
- (V) primary zinc smelters,
- (W) secondary metal production plants,
- (X) sintering plants,
- (Y) sulfur recovery plants,
- (Z) taconite ore processing plants, or
- (AA) any other stationary source category which, as of August 7, 1980, is being regulated by ~~federal New Source Performance Standards (NSPS)~~ NSPS or ~~National Emission Standards for Hazardous Air Pollutants (NESHAPS)~~ NESHAP.

(2) A source or modification was not subject to 40 CFR Part 51, Appendix S (emission offset interpretative ruling) as in effect on January 16, 1979 and the source:

- (A) obtained all final federal and state construction permits before August 7, 1980;
- (B) commenced construction within 18 months from August 7, 1980 or any earlier time required by the State Implementation Plan; and,
- (C) did not discontinue construction for a period of 18 months or more and completed construction within a reasonable time.

(b) Secondary emissions are excluded in determining the potential to emit (see definition of "potential to emit" in ~~OAC 252:100-7-51~~ 252:100-1). However, upon determination of the Executive Director, if a source is subject to the requirements on the basis of its direct emissions, the applicable requirements must also be met for secondary emissions but the source would be exempt from the conditions of ~~OAC 252:100-7-52(3)(F)~~ 252:100-8-52(3)(F) and ~~OAC 252:100-7-54(1)~~ 252:100-8-54(1) through ~~252:100-7-54(3)~~ 252:100-8-54(3). Also, the indirect impacts of mobile sources are excluded.

(c) As specified in the applicable definitions, the requirements of Part 5 9 for PSD and Part 7 11 for nonattainment areas of this Subchapter are not applicable to a modification if the existing source was not major on August 7, 1980 unless the proposed addition to the existing minor source is major in its own right.

252:100-8-54. Requirements for sources located in nonattainment areas

In the event a major source or modification would be constructed in an area designated as nonattainment for a pollutant for which the source or modification is major, approval shall be granted only if the following conditions are met:

- (1) The new source must demonstrate that it has applied control technology which the Executive Director, on a case by case basis, determines is achievable for a source based on the lowest achievable emission rate (LAER) achieved in practice by

such category of source (i.e., lowest achievable emission rate as defined in the ~~Federal Clean Air Act~~).

(2) If the Executive Director determines that imposition of an enforceable numerical emission standard is infeasible, due to technological or economic limitations on measurement methodology, a design, equipment, work practice or operational standard, or combination thereof, may be prescribed as the emission limitation rate.

(3) The owner or operator of the new source must demonstrate that all other major sources owned or operated by such person in Oklahoma are in compliance, or are meeting all steps on a schedule for compliance, with all applicable limitations and standards under Oklahoma and Federal Clean Air Acts.

(4) The owner or operator of the new source must demonstrate that upon commencing operations:

(A) the emissions from the proposed source and all other sources permitted in the area do not exceed the planned growth allowable for the area designated in the State Implementation Plan; or,

(B) the total allowable emissions from existing sources in the region and the emissions from the proposed source will be sufficiently less than the total emissions from existing sources allowed under the State Implementation Plan at the date of construction permit application so as to represent further progress toward attainment or maintenance of the ambient air quality standards in the problem area.

(5) The owner or operator may present with the application an analysis of alternate sites, sizes and production processes for such proposed source.

APPENDIX I. INSIGNIFICANT ACTIVITIES LIST

COMBUSTION EQUIPMENT

* Stationary reciprocating engines burning natural gas, gasoline, aircraft fuels, or diesel fuel which are either used exclusively for emergency power generation or for peaking power service not exceeding 500 hours/year

Space heaters, boilers, process heaters, and emergency flares less than or equal to 5 MMBTU/hr heat input (commercial natural gas).

Emissions from stationary internal combustion engines rated less than 50 hp output

Emissions from gas turbines with less than 215 kilowatt rating of electric output

STORAGE TANKS/DISTRIBUTION

* Emissions from fuel storage/dispensing equipment operated solely for facility owned vehicles if fuel throughput is not more than 2,175 gallons/day, averaged over a 30-day period

* Storage tanks with less than or equal to 10,000 gallons capacity that store volatile organic liquids with a true vapor pressure less than or equal to 1.0 psia at maximum storage temperature

* Bulk gasoline or other fuel distribution with a daily average throughput less than 2,175 gallons per day, including dispensing, averaged over a 30-day period

Gasoline, diesel fuel, aircraft fuel, and fuel oil handling facilities, equipment, and storage tanks except those subject to New Source Performance Standards and standards in 252:100-37-15, 39-30, 39-41, and 39-48, or with a capacity greater than 400 gallons

Emissions from condensate tanks with a design capacity of 400 gallons or less in ozone attainment areas

Emissions from crude oil and condensate marine and truck loading equipment operations at crude oil and natural gas production sites where the loading rate does not exceed 10,000 gallons per day averaged over a 30-day period

* Emissions from crude oil and condensate storage tanks with a capacity of less than or equal to 420,000 gallons that store crude oil and condensate prior to custody transfer

* Emissions from storage tanks constructed with a capacity less than 39,894 gallons which store VOC with a vapor pressure less than 1.5 psia at maximum storage temperature

ANALYSIS/LABORATORY ACTIVITIES

Additions or upgrades of instrumentation or control systems that result in emissions increases less than the pollutant quantities specified in 252:100-8-3(e)(1)

EQUIPMENT

Alkaline/phosphate washers and associated burners
Cold degreasing operations utilizing solvents that are denser than air

* Welding and soldering operations utilizing less than 100 pounds of solder and 53 tons per year of electrodes

Wood chipping operations not associated with the primary process operation

* Torch cutting and welding of under 200,000 tons of steel fabricated per year

REMIEDIATION

Site restoration and/or bioremediation activities of < 5 years expected duration

Hydrocarbon contaminated soil aeration pads utilized for soils excavated at the facility only

Emissions from the operation of groundwater remediation wells including but not limited to emissions from venting, pumping, and collecting activities subject to de minimis limits for air toxics (252:100-41-43) and HAPs (§112(b) of CAAA90)

SOLID WASTE

* Non-commercial water washing operations (less than 2,250 barrels/year) and drum crushing operations of empty barrels less than or equal to 55 gallons with less than three percent by volume of residual material

Hazardous waste and hazardous materials drum staging areas

Sanitary sewage collection and treatment facilities other than incinerators and Publicly Owned Treatment Works (POTW)
Stacks or vents for sanitary sewer plumbing traps are also included (i.e., lift station)

Emissions from landfills and land farms unless otherwise regulated by an applicable state or federal regulation

COATINGS

* Automobile body shops located in an ozone attainment area emitting less than 5 tons/year of volatile organic solvents

Electrophoretic-process coating application operations (i.e., paint bath positively charged, painted object negatively charged)

* Surface coating operations which do not exceed a combined total usage of more than 60 gallons/month of coatings, thinners, and clean-up solvents at any one emissions unit

MISCELLANEOUS

Exhaust systems for chemical, paint, and/or solvent storage rooms

or cabinets, including hazardous waste satellite (accumulation) areas
Hand wiping and spraying of solvents from containers with less than
1 liter capacity used for spot cleaning and/or degreasing in ozone
attainment areas

* Activities having the potential to emit no more than 5 TPY
(actual) of any criteria pollutant (see instructions in Title V
application)

* Appropriate records of hours, quantity, or capacity must be kept on the activity to verify its insignificance.

APPENDIX J. TRIVIAL ACTIVITIES LIST

TRIVIAL ACTIVITIES

THIS IS AN INTERIM LIST AWAITING EPA APPROVAL. Unless otherwise regulated, the list follows:

1. Lawn care (noncommercial)
2. Weed control (noncommercial)
3. Pest control (noncommercial)
4. Wood working (saw-cutting, staining & varnishing) (noncommercial)
5. Janitorial services
6. Sweeping (Floor Sweep)
7. Insulation installing or removal (non-asbestos)
8. Acid washing (maintenance cleaning)
9. Caustic washing (maintenance cleaning)
10. Abrasive blasting
11. Steam cleaning
12. Application of refractory & insulation (calcium silicate, etc.)
13. Welding, brazing, soldering for maintenance purposes
14. Use of adhesives for maintenance purposes
15. Grinding, cutting, sanding for maintenance purposes
16. Seal replacement (i.e., manhole gaskets)
17. Removal of basic sediment & water from collection/storage systems (i.e., clarifiers)
18. Roof coating, service, and repair
19. Hydraulic or hydrostatic testing
20. Plastic or fiberglass welding or repair
21. Paving of roads, parking lots, and other areas
22. Office emissions (photocopying, blueprint copying, photograph processes)
23. Outdoor recreational emissions (campfires, barbecue pits)
24. Open burning for the purpose of land management (must get permission from Air Quality Enforcement even though exempt from permitting)
25. Air conditioning or comfort ventilation systems, to include space heating, not regulated under Title VI of the Clean Air Act
26. Emissions from laundry care equipment processing bedding, clothing or other fabric items. These include dryers, extractors, & tumblers. NOT CLEANING OPERATIONS
27. USING PERCHLOROETHYLENE OR PETROLEUM SOLVENTS (i.e., dry cleaning) Surface coating for maintenance purposes such as roll/brush/pad coating, painting with aerosol cans, spray airless, and conventional spray painting
28. Emissions from lube oil, seal oil, or hydraulic fluid storage tanks and equipment as long as not emitting VOCs or HAPs
29. Lubricating pumps, sumps, and systems
30. Fuel storage tanks less than or equal to 10,000 gallons capacity having a true vapor pressure at storage conditions less than 1.5 psia. This includes Fuel Oils Nos. 2 - 6, Nos. 2-GO - 4-GO, Diesel Fuel Oils Nos. 2-D - 4-D, and Kerosene.
31. Storage and use of chemicals unless otherwise regulated by an applicable state or federal regulation. These chemicals include, but not limited to: alum, ammonia, biocides, corrosion inhibitors, dechlorination chemicals, inorganic salts, acids or bases to include caustic and sulfuric acid, coagulants, flocculants, precipitants, surfactants, anti-foam chemicals, sealing inhibitors, oxygen scavengers, phosphates, polyelectrolytes, limestone slurry, lime and lime slurry, flue gas desulfurization system slurry, and sulfur slurry; propane and acetylene under pressure
32. Mobile source emissions from cars, trucks, forklifts, courier vehicles, front loaders, graders, cranes, carts, hydrostatic and hydraulic testing equipment, maintenance trucks, helicopters, locomotives, marine vessels, portable generators moveable by hand, portable pumps, portable air compressors, portable welding machines, and portable fuel tanks
33. Other on and off road mobile sources (i.e. coal stacker & reclaimer)
34. Well servicing/workover rigs and associated equipment

35. Well drilling rigs and associated equipment
36. Aircraft ground support (AGE) equipment, including but not limited to portable power generators, lights, and HVAC support
37. Vehicle exhaust from maintenance or repair shops
38. Storage and use of products or equipment for maintaining motor vehicles operated at the site (including but not limited to antifreeze and fuel additives) not regulated under Title VI, CFC rules)
39. Analysis/laboratory activities emissions from the following: air contaminant detectors, air contaminant recorders, combustion controllers, combustion shut-off devices, product analyzers, laboratory analyzers, continuous emissions monitors, other analyzers (eq., water quality), and emissions associated with sampling activities. Also, emissions from bench scale laboratory equipment and laboratory equipment used exclusively for chemical and physical analysis, including assorted vacuum producing devices and vents but NOT lab fume hoods or vents
40. Emissions from non-contact cooling towers (cooling water that has not been in contact with other materials or fluids containing regulated air pollutants)
41. Emissions from tanks containing separated water produced from oil and gas operations
42. Water and wastewater treatment and transportation system
43. Pit, ponds, sumps, or wastewater conveyance facilities
44. Emissions from skimmer pits, oil/water separators, and maintenance of filter separators
45. Emissions from the removal of sludge or sediment from pits, ponds, sumps, or wastewater conveyance facilities
46. Site assessment work, including but not limited to, the evaluation of waste disposal or remediation sites
47. Emissions from fire or emergency response equipment and training to include use of fire control equipment including equipment for testing and training, engines used exclusively for firefighting, and open burning of materials or fuels associated with firefighting training. Buildings burned for firefighting training must adhere to NESHAP for Asbestos.
48. Emissions from instrument systems utilizing air or natural gas
49. Vent emissions from gas streams used as buffer or seal gas in rotating pump and compressor seals
50. Emissions from natural gas odorizing activities
51. Emissions from pneumatic starters on reciprocating engines, turbines, compressors, or other equipment
52. Emissions from pipeline maintenance pigging activities
53. Emissions from residential housing units, dormitories, and multifamily dwellings to include fuel burning for the purposes of heating except prohibited open burning
54. Woodworking utilized for hobby purposes or maintenance of grounds or buildings
55. Commercial gasoline dispensing stations, including those located within the physical boundaries of a Title V source, unless otherwise covered by applicable state and federal regulations
56. Sealing or cutting plastic film or foam with heat or wires
57. Carbon dioxide blasting equipment in degreasing or depainting
58. High pressure water depainting operations and aqueous industrial spray washers
59. Equipment used for inspection of metal products
60. Die casting machines
61. Foundry sand mold forming equipment to which no heat is applied, and from which no organics are emitted
62. Vacuum cleaning systems used exclusively for industrial, commercial, or residential housekeeping purposes, except those systems used to collect particulate matter subject to 252:100 and hazardous and/or toxic air contaminants
63. Industrial and/or municipal wastewater treatment processes (excluding combustion or incineration equipment), storage silos for dry material (sludges), composting, or grease trap waste handling or treatment
64. Outdoor kerosene heaters
65. Equipment used exclusively to mill or grind coatings and holding compounds where all materials

- charged are in paste form (unless HAP emission)
66. Gas flares or flares used solely to indicate danger to the public (e.g. road hazard)
 67. Maintenance, upkeep, and replacement types of activities, including those not altering the capacity of process, combustion or control equipment, and which do not increase regulated pollutant emissions unless subject to NESHAP or NSPS
 68. Emergency relief vents, stacks and ventilating systems except any with potential to emit vinyl chloride located at a facility where ethylene dichloride, vinyl chloride and/or polyvinyl chloride are produced or any emergency relief vents, stacks and ventilating systems for which a NESHAPs has not been established
 69. Herbicide and pesticide activities except for manufacturing and formulation for commercial sale
 70. Cold storage refrigerator equipment
 71. Equipment associated with electrical power transmission which do not involve fuel-burning activities using transformers and substations
 72. Industrial battery recharging and maintenance operations for batteries utilized within the facility only
 73. Warehouse activities including the storage of packaged raw materials and finished goods
 74. Lubricants and waxes used for machinery and other equipment lubrication and emission from lubricating oil or hydraulic fluid storage tanks and equipment
 75. Environmental field sampling operations
 76. Asbestos and lead renovation, demolition, and disposal operations (NESHAP Subpart M for Asbestos still applicable)
 77. Road sanding and salting operations
 78. Runway and aircraft de-icing activities, including de-icer storage tanks unless otherwise regulated
 79. Boiler water treatment operations
 80. Non-routine clean out of tanks, lift stations, and equipment for the purposes of worker entry or in preparation for maintenance or decommissions
 81. Sampling connections used exclusively to withdraw materials for testing and analysis, including air contaminant detectors and vent lines
 82. Equipment used exclusively for rolling, forging, pressing, spinning, drawing, or extruding either hot or cold metals unless their emissions exceed any applicable regulated amount
 83. Ozonization process or process equipment including ozone generation for water treatment processes
 84. Unpaved roadways and parking areas
 85. Machine blowdown with air for cleaning/maintenance
 86. Sanitary sewerage and storm water runoff collection systems
 87. Emissions from the blowdown of compressors or other vessels containing natural gas or liquid hydrocarbons for the purpose of maintenance due to emergency circumstances
 88. Covered cold solvent degreasers not subject to federal emission standards (e.g. NESHAPs or NSPS)
 89. Compressed gas cylinders and gases utilized for equipment calibration and testing
 90. Fire extinguishers and fire extinguishing systems
 91. Solid waste landfill operations
 92. Gravel, sand and dirt storage for use in on-site construction projects
 93. Ultrasonic cleaning operations which do not utilize volatile organic compounds
 94. Molten salt bath descaling operations
 95. Emissions from dredging pits, ponds, sumps, or other wastewater conveyance facilities
 96. Emissions from engine crankcase vents and equipment lubricating sumps
 97. Touch-up painting operations where paints/coatings are applied at less than one quart per hour
 98. Processes used for the curing of fiberglass or paint products.
 99. Emissions from components (e.g. valves, connectors, pump seals, etc.) additions regulated by a fugitive monitoring program where the total increase is less than one ton per year of any criteria pollutant or the de minimis set forth in 252:100-41-43. The

component additions must be identified in the next scheduled monitoring report required by the applicable requirements.

- 100. Fugitive emissions of jet fuels associated with aircraft fuel cell and fuel bladder repair
- 101. RCRA Solid Waste Management Units subject to 40 CFR Part 265, Subparts AA, BB, and CC
- 102. Operations previously determined to be de minimis pursuant to 252:100-7-2(b)(3) or 252:100-41-43(a)(5)
- 103. De minimis refrigerant releases
- 104. Deaerator units associated with boilers or hot water heating systems
- 105. Natural gas water heating systems for fixed vehicle wash racks
- 106. Storage tanks, reservoirs, and pumping and handling equipment of any size containing soaps, vegetable oil, grease, animal fat, and nonvolatile aqueous salt solutions, provided appropriate lids and covers are utilized
- 107. Equipment used to mix and package soaps, vegetable oil, grease, animal fat, and nonvolatile aqueous salt solutions, provided appropriate lids and covers are utilized
- 108. Equipment used exclusively to slaughter animals, but not including other equipment at slaughterhouses, such as rendering cookers, boilers, heating plants, incinerators, and electrical power generating
- 109. Electric or steam-heated drying ovens and autoclaves, but not the emissions from the articles or substances being processed in the ovens or autoclaves or the boilers delivering the steam
- 110. Carbon monoxide lasers, used only on metals and other materials which do not emit HAP in the process
- 111. Laser trimmers using dust collection to prevent fugitive emissions
- 112. Shock chambers
- 113. Humidity chambers
- 114. Solar simulators
- 115. Process water filtration systems and demineralizers
- 116. Demineralized water tanks and demineralizer vents
- 117. Fugitive emissions related to movement of passenger vehicles provided the emissions are not counted for applicability purposes or any required fugitive dust control plan or its equivalent is submitted

MINUTES
AIR QUALITY COUNCIL
October 21, 1997
Tulsa City County Health Department Auditorium
4616 East 15th Tulsa, Oklahoma

Council Members Present

William B. Breisch, Chairman
Meribeth Slagell
Gary Kilpatrick
J. William "Bill" Fishback
David Branecky
Sharon Myers

Staff Present

Larry Byrum
David Dyke
Dennis Doughty
Barbara Hoffinan
Scott Thomas
Linn Wainner
Joyce Sheedy
Jeanette Buttram
Morris Moffett
Myrna Bruce

Council Members Absent

Larry Canter, Vice-Chairman
Marilyn Andrews

Guests Present

**see attached list

PUBLIC MEETING

Notice of Public Meeting for October 21, 1997 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance door of the meeting room.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Mr. Fishback - aye; Ms. Slagell - aye; Mr. Kilpatrick - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye. Ms. Andrews and Dr. Canter were absent.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the October 21, 1997 Public Meeting/Hearing. Motion was made by Mr. Branecky to approve the Minutes and second to the motion was made by Ms. Myers. Roll call as follows: Mr. Fishback - aye; Ms. Slagell - abstain; Mr. Kilpatrick - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

Meeting Schedule - Mr. Breisch entertained motion to approve the 1998 Meeting Schedule as proposed. Ms. Myers made the motion with the second being made by Mr. Kilpatrick. Roll call as follows: Mr. Fishback - aye; Ms. Slagell - aye; Mr. Kilpatrick - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye. (*Note: Dates proposed were February 18, April 21, June 16, August 18, October 20, December 15*).

PUBLIC HEARING

OAC 252:100-5 REGISTRATION OF AIR CONTAMINANT SOURCE [AMENDED]

As protocol officer, Larry Byrum convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51 and Title 27A Oklahoma Statutes. Mr. Byrum called upon Jeanette Buttram to give staff position on the proposed changes to the rule.

After discussion and comments by Council and audience, Mr. Breisch stated that staff recommendation was to close the comment period as of October 21 and vote on SC 5, along with SC 7 and SC 8, at the next regularly scheduled meeting in December. He entertained motion as such.

Mr. Fishback wanted to be leave a portion of SC5 open for the subcommittee report discussion because the fees would have to be changed by the December meeting in order that the DEQ Board could take action.

Mr. Kilpatrick made motion that SC 5 be closed with the exception of consideration of the operating fee for Title V Part 70 sources remaining open. Mr. Fishback seconded the motion. With no other comments or discussion, Mr. Breisch asked for roll call. Roll call as follows: Mr. Fishback - aye; Ms. Slagell - aye; Mr. Kilpatrick - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-7 CONSTRUCTION PERMITS FOR MAJOR AND MINOR SOURCES; OPERATING AND RELOCATION PERMITS FOR MINOR SOURCES [AMENDED]

As protocol officer, Larry Byrum convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51 and Title 27A, Oklahoma Statutes. Mr. Byrum called upon Jeanette Buttram to give staff position on the proposed rule.

Ms. Buttram pointed out that staff was charged with not only simplifying and clarifying the rule, but also incorporating the new permit continuum which takes into account the environmental impact, emission levels, and source categories in Oklahoma. Ms. Buttram then pointed out the areas of change to the rule.

Mr. Byrum opened the floor for discussion. Kyle Arthur, representing the Small Business Assistance Panel, offered the Panel's support for the proposed changes. Ms. Barton, CASE, asked if the EPA representatives were satisfied with the proposed changes. EPA had no comment.

After discussion and comments from Council and audience, Mr. Breisch entertained motion to continue the hearing to the December 16 Air Quality Council meeting to be voted on along with SC 8 and SC 5. Ms. Slagell made that motion and second was by Mr. Kilpatrick. Roll call as follows: Mr. Fishback - aye; Ms. Slagell - aye; Mr. Kilpatrick - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-8 OPERATING PERMITS (PART 70) [AMENDED]

As protocol officer, Larry Byrum convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes. Mr. Byrum called upon Dr. Joyce Sheedy to give staff position on the proposed rule.

Dr. Sheedy stated that it was staff's objective to correct deficiencies listed in the approval of the interim Title V Program to incorporate case-by-case MACT requirements; to incorporate permit continuum; as well as to clarify, simplify, and streamline the rule. Dr. Sheedy advised that staff recommendation was that the hearing on the revisions be continued to Council's December 16 meeting.

Mr. Byrum opened the floor for discussion and comments. Ms. Barton complimented staff on the monumental task accomplished making these changes.

Mr. Breisch entertained motion to continue this item to the next meeting on December 16 and that the comment period would remain open. Ms. Myers made this motion with second being made by Mr. Branecky. Roll call as follows: Mr. Fishback - aye; Ms. Slagell - aye; Mr. Kilpatrick - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:10041-15 CONTROL OF EMISSIONS OF HAZARDOUS AND TOXIC AIR CONTAMMANTS PART 3: HAZARDOUS AIR CONTAMINANTS -15 NATIONAL EMISSION STANDARDS FOR HAZARDOUS AIR POLLUTANTS [AMENDED]

As protocol officer, Mr. Byrum convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 Code of Federal Regulations (CFR) Part 51, and Title 27A Oklahoma Statutes. Mr. Byrum called upon Dr. Joyce Sheedy to give staff recommendations.

Dr. Sheedy pointed out that the hearing on the proposed revisions to 252:100-41-15 was continued from the August 19, 1997 AQC meeting. She noted that revisions were made based on comments received. Dr. Sheedy outlined proposed changes to 252:100-41-15(a) as follows:

update the adoption of National Emission Standards for Hazardous Air Pollutants (NESHAP) by adopting by reference the NESHAP as found in 40 CFR Part 61 as they existed on 7/1/97 with the exception of the NESHAP which address radionuclides and are contained in Subparts B, H, I, K, Q, R, T, and W and Appendices D and E.

Changes to 252:100-41-15(b) were to adopt by reference the General provisions contained in 40 CFR Part 63, Subpart A and the all the Maximum Achievable Control Technology (MACT) standards as they existed on July 1, 1997.

She advised that adoption of this rule was necessary to obtain delegation of the Title III program and to enable Air Quality Division to include MACT standards in Title V permits. Staff recommended that the Council forward and recommend these provisions to the Environmental Quality Board to be adopted as both emergency and permanent.

Ms. Barton, CASE, felt that a summary of the rules would be advantageous to the public for better understanding to those who do not have copies of written text.

Mr. Breisch entertained a motion to recommend this rule to the Board. Mr. Kilpatrick moved to approve the proposed revisions to SC 41 and recommend them to the DEQ Board for both emergency and permanent adoption. Second was made by Ms. Slagell. With no further discussion, roll call was taken as follows: Mr. Fishback - aye; Ms. Slagell - aye; Mr. Kilpatrick - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

Mr. Fishback added a further note for the record pointing out staff's intentions to revisit annually around July 1 to provide an update of the appropriate NESHAP regulations. Byrum affirmed and pointed out that July 1 coincides with publication in the *Federal Register*.

PUBLIC HEARING

OAC 252:2-40 and OAC 252:2-41 UNIFORM PERMITTING PROCEDURES [AMENDED]

As protocol officer, Larry Byrum convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 Code of Federal Regulations Part 51, and Title 27A Oklahoma Statutes. Mr. Byrum called upon Ms. Barbara Hoffman to give staff recommendations.

Staff requested that the Council recommend the revisions to the Environmental Quality Board for adoption. Mr. Kilpatrick made motion to continue the hearing until the next regularly scheduled meeting on December 16. Second was made by Ms. Slagell. Roll call was taken as follows: Mr. Fishback - aye; Ms. Slagell - aye; Mr. Kilpatrick - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

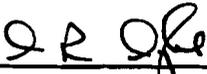

NEW BUSINESS - Mr. Byrum advised that a fax had been received from EnerCon Services dealing with a problem anticipated by those who worked on the Aerospace/ARACT rules. In the fax, EnerCon pointed out that at that time EPA had rules under NESHAP provision which could be in conflict with the State rules. He added that now industry petitioned to revisit these rules so that industry is not covered by two different rules that say two different things. Mr. Byrum suggested that a committee be formed with four people from the aerospace industry and four staff to handle most of the items administratively; then to bring any changes to the Council. He also pointed out that no action was required from Council at this time.

Nadine Barton recognized Mr. Byrum's years of service saying 'good luck'.

ADJOURNMENT: With no further business, meeting was adjourned with next meeting being held on December 16, 1997 at the Lincoln Plaza Office Park Burgundy Room, 4545 North Lincoln Boulevard, Oklahoma City, Oklahoma.

NOTE: The sign-in sheet and the hearing records are attached as an official part of these Minutes.

DEPARTMENT OF ENVIRONMENTAL QUALITY REGULAR MEETING
AIR QUALITY COUNCIL

TUESDAY, DECEMBER 16, 1997

1:00 P.M.

LINCOLN PLAZA OFFICE PARK BURGUNDY ROOM
4545 NORTH LINCOLN BOULEVARD
OKLAHOMA CITY, OKLAHOMA

MEETING/HEARING AGENDA

1. Call to Order Chairman
2. Roll Call Secretary
3. Approval of OCTOBER 21, 1997 Minutes Chairman
4. PUBLIC HEARING Staff
OAC 252:100-5-2.2(b) (2) PART 70 SOURCES ANNUAL OPERATING FEE [AMENDED]
Discussion by Council/Public; possible action by Council
5. PUBLIC HEARING Staff
OAC 252:100-8 OPERATING PERMITS (PART 70) [AMENDED]
Discussion by Council/Public; possible action by Council
6. PUBLIC HEARING Staff
OAC 252:100-17 INCINERATORS [AMENDED]
Discussion by Council/Public; possible action by Council
7. PUBLIC HEARING Staff
OAC 252:2-15-40 and 252:2-15-41 UNIFORM PERMITTING PROCEDURES [AMENDED]
Discussion by Council/Public; possible action by Council
8. ACTION ITEM Staff
OAC 252:100-5 REGISTRATION OF AIR CONTAMINANT SOURCES [AMENDED]
Discussion by Council/Public; possible action by Council
on amendments heard at public hearings on August 19, 1997
and October 21, 1997
9. ACTION ITEM Staff
OAC 252:100-7 CONSTRUCTION PERMITS FOR MAJOR AND MINOR SOURCES;
OPERATING AND RELOCATION PERMITS FOR MINOR SOURCES [AMENDED]
Discussion by Council/Public; possible action by Council
on amendments heard at public hearings on August 19, 1997
and October 21, 1997
10. NEW BUSINESS Chairman
Discussion/consideration of subjects/business arising within
the past 24 hours; possible action by Council
11. Adjournment Chairman
Next Regular Meeting WEDNESDAY, FEBRUARY 18, 1998
LINCOLN PLAZA OFFICE PARK BURGUNDY ROOM, 4545 N. Lincoln, Oklahoma City

Should you desire to attend but have a disability and need an accommodation,
please notify our Department three days in advance at (405) 290-8247.

December 1, 1997

MEMORANDUM

TO: Air Quality Council

FROM: David Dyke, Assistant Director
AIR QUALITY DIVISION *DD*

SUBJECT: Modifications to Subchapter 8

Agil, 10/16/97

Enclosed is a copy of the proposed draft modifications to Subchapter 8 Operating Permits (Part 70), that will be brought to public hearing on December 16, 1997. The hearing for Subchapter 8 was continued from the October 21, 1997, Air Quality Council meeting. The proposed amendments include: incorporation of the permit continuum by the introduction of general construction permits for Part 70 sources and general construction and operating permits for major facilities that are not subject to Part 70; the addition of the requirements for construction permits for Part 70 sources and construction and operating permits for major facilities not subject to Part 70; revision of the permit application processing fees by setting a fee for processing authorizations under a general permit; deletion of annual operating fees (which will be moved to Subchapter 5); incorporation by reference of federal rules governing case-by-case MACT determinations (40 CFR §§ 63.40, 63.41, 63.43 and 63.44); and revisions to meet the requirements set forth in the February 5, 1996, Federal Register for final approval of the Title V program. The proposed draft also includes revisions intended to simplify and clarify the rule. Material in the Subchapter was reorganized and in some cases reworded. It is proposed to add Appendix I, Insignificant Activities List and Appendix J, Trivial Activities List to the rules.

A few changes have been made to the proposed revisions since the October meeting. These include:

- Modification of the Insignificant Activities List and Trivial Activities List (Appendices I and J, respectively) in response to written comments received.
- Updating the adoption by reference in 252:100-8-6.3 of 40 CFR Part 72 (Acid Rain provisions) to include the October 24, 1997 revisions.

Enclosed in the packet are copies of the proposed revisions to Subchapter 8 and the proposed Appendices I and J.

Enclosures: 3

SUBCHAPTER 8
TABLE OF CONTENTS

PART 1.	GENERAL PROVISIONS	1
	252:100-8-1. Purpose	1
	252:100-8-1.1. Definitions	1
	252:100-8-1.2. Requirement for permits for Part 70 sources and major Non-Part 70 facilities	5
	252:100-8-1.3. Transfer of permit	6
	252:100-8-1.4. Duty to comply	6
	252:100-8-1.5. Cancellation or extension of a construction permit	6
	252:100-8-1.6. Stack height limitations	7
PART 3.	PERMIT APPLICATION FEES	11
	252:100-8-1.7. Permit application fees	11
PART 5.	PERMITS FOR MAJOR NON-PART 70 FACILITIES	12
	252:100-8-1.8. Major Non-Part 70 facility construction permit	12
	252:100-8-1.9. Major Non-Part 70 facility operating permit	13
PART 7.	PERMITS FOR PART 70 Sources	14
	252:100-8-2. Definitions	14
	252:100-8-3. Applicability	21
	252:100-8-4. Requirements for construction and operating permits	24
	252:100-8-5. Permit applications	27
	252:100-8-6. Permit content	34
	252:100-8-6.1. General permits	46
	252:100-8-6.2. Temporary sources	49
	252:100-8-6.3. Special provisions for affected (acid rain) sources	50
	252:100-8-7. Permit issuance	51
	252:100-8-7.1. Permit renewal and expiration	59
	252:100-8-7.2. Administrative permit amendments and permit modifications	60
	252:100-8-7.3. Reopening for cause	64
	252:100-8-7.4. Revocations	66
	252:100-8-7.5. Judicial review	66
	252:100-8-8. Permit review by EPA and affected states	67
PART 9.	PREVENTION OF SIGNIFICANT DETERIORATION (PSD) REQUIREMENTS FOR ATTAINMENT AREAS	71
	252:100-8-30. Applicability	71
	252:100-8-31. Definitions	72
	252:100-8-32. Source applicability determination	78
	252:100-8-33. Exemptions	79
	252:100-8-34. Best available control technology	84
	252:100-8-35. Air quality impact evaluation	84

252:100-8-36.	Source impacting Class I areas	87
252:100-8-37.	Innovative control technology	88
PART 11.	MAJOR SOURCES AFFECTING NONATTAINMENT AREAS	89
252:100-8-50.	Applicability	89
252:100-8-51.	Definitions	89
252:100-8-52.	Source applicability determination	94
252:100-8-53.	Exemptions	96
252:100-8-54.	Requirements for sources located in non- attainment areas	97

SUBCHAPTER 8. OPERATING PERMITS (PART 70) FOR PART 70 SOURCES AND MAJOR NON-PART 70 FACILITIES

PART 1. GENERAL PROVISIONS

[NOTE: Throughout this draft language that has been moved from other Sections and Subchapters is underlined once, new language is double underlined and deletions are struck out.]

252:100-8-1. Purpose

~~The purpose of this Subchapter is to provide for the promulgation and enforcement of the requirements necessary to meet Title V of the federal Clean Air Act (42 U.S.C. 7401, et seq.) and 40 CFR Part 70 by establishing a comprehensive state air quality permitting program for major sources of air contaminant emissions. Permits issued under this program will address all applicable air contaminant emissions and regulatory requirements in a single document. This Subchapter sets forth permit application fees and the substantive requirements for permits for Part 70 sources and major Non-Part 70 facilities.~~

252:100-8-1.1. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise. Except as specifically provided in this section, terms used in this Subchapter retain the meaning accorded them under the applicable requirements of the Act.

[NOTE: From 252:100-8-2]

"A stack in existence" means for purposes of 252:100-8-1:6 that the owner or operator had:

(A) begun, or caused to begin, a continuous program of physical on-site construction of the stack; or

(B) entered into binding agreements or contractual obligations, which could not be canceled or modified without substantial loss to the owner or operator, to undertake a program of construction of the stack to be completed in a reasonable time. [NOTE: From 252:100-7-16(b)]

"Act" means the federal Clean Air Act, as amended, 42 U.S.C. 7401 et seq. [NOTE: From 252:100-8-2]

"Administrator" means the Administrator administrator of the United States Environmental Protection Agency (EPA) or the Administrator's administrator's designee. [NOTE: From 252:100-8-2]

"Allowable emissions" means, for purposes of Parts 9 and 11 of this Subchapter, the emission rate of a stationary source calculated using the maximum rated capacity of the source (unless the source is subject to enforceable limits which restrict the operating rate, or hours of operation, or both) and the most stringent of the following:

(A) the applicable standards as set forth in 40 CFR Parts 60 and 61;

(B) the applicable State rule allowable emissions; or,

(C) the emissions rate specified as an enforceable permit condition. [NOTE: From 252:100-7-31 and 252:100-7-51]

"Begin actual construction" for purposes of Parts 9 and 11 of this Subchapter means, in general, initiation of physical on-site construction activities on an emissions unit which are of a permanent nature. Such activities include, but are not limited to, installation of building supports and foundations, laying of underground pipework, and construction of permanent storage structures. With respect to a change in method of operation this term refers to those on-site activities, other than preparatory activities, which mark the initiation of the change. [NOTE: From 252:100-7-31 and 252:100-7-51]

"Commence" for purposes of Parts 9 and 11 of this Subchapter means, as applied to construction of a major stationary source or major modification, that the owner or operator has all necessary preconstruction approvals or permits and either has:

(A) begun, or caused to begin, a continuous program of actual on-site construction of the source, to be completed within a reasonable time; or,

(B) entered into binding agreements or contractual obligations, which cannot be cancelled or modified without substantial loss to the owner or operator, to undertake a program of actual construction of the source to be completed within a reasonable time. [NOTE: From 252:100-7-31 and 252:100-7-51]

"Construction" means, for purposes of Parts 9 and 11 of this Subchapter, any physical change or change in the method of operation (including fabrication, erection, installation, demolition, or modification of an emissions unit) which would result in a change in actual emissions. [NOTE: From 252:100-7-31 and 252:100-7-51]

"Dispersion technique" means for purposes of 252:100-8-1.6 any technique which attempts to affect the concentration of a pollutant in the ambient air by using that portion of a stack which exceeds good engineering practice stack height; varying the rate of emission of a pollutant according to atmospheric conditions or ambient concentrations of that pollutant; or increasing final exhaust gas plume rise by manipulating source process parameters, exhaust gas parameters, stack parameters or combining exhaust gases from several existing stacks into one stack, or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise. The preceding sentence does not include:

(A) The reheating of a gas stream, following use of a pollution control system, for the purpose of returning the gas to the temperature at which it was originally discharged from the facility generating the gas stream.

(B) The merging of exhaust gas streams where:

(i) the source owner or operator documents that the facility was originally designed and constructed with such merged streams;

(ii) after July 8, 1985, such merging is part of a

change in operation at the facility that includes the installation of pollution controls and is accompanied by a net reduction in the allowable emissions of a pollutant. This exclusion from "dispersion technique" applicability shall apply only to the emission limitation for the pollutant affected by such change in operation;

or
(iii) before July 8, 1985, such merging was part of a change in operation at the facility that included the installation of emissions control equipment or was carried out for sound economic or engineering reasons. Where there was an increase in the emission limitation or, in the event that no emission limitation existed prior to the merging, there was an increase in the quantity of pollutants actually emitted prior to the merging, it shall be presumed that merging was primarily intended as a means of gaining emissions credit for greater dispersion. Before such credit can be allowed, the owner or operator must satisfactorily demonstrate that merging was not carried out for the primary purpose of gaining credit for greater dispersion.

(C) Manipulation of exhaust gas parameters, merging of exhaust gas streams from several existing stacks into one stack, or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise in those cases where the resulting allowable emissions of sulfur dioxide from the facility do not exceed 5,000 tons per year. [NOTE: From 252:100-7-16(b)]

"Emission limitations and emission standards" means for purposes of 252:100-8-1.6 a requirement requirements that which limits limit the quantity, rate or concentration of emissions of air pollutants on a continuous basis, including any requirements which that limit the level of opacity, prescribe equipment, set fuel specifications or prescribe operation or maintenance procedures for a source to assure continuous reduction. (Amended 7-9-87, effective 8-10-87) [NOTE: From 252:100-7-16(b)]

"Emissions unit" means, for purposes of Parts 9 and 11 of this Subchapter, any part of a source which emits or would have the potential to emit any pollutant subject to regulation. [NOTE: From 252:100-7-31 and 252:100-7-51]

"EPA" means the United States Environmental Protection Agency. [NOTE: From 252:100-8-2]

"Fugitive emissions" means, for purposes of Parts 9 and 11 of this Subchapter, those emissions which could not reasonably pass through a stack, chimney, vent or other functionally equivalent opening. [NOTE: From 252:100-7-31 and 252:100-7-51]

"Major Non-Part 70 facility" means any stationary facility which directly emits or has the potential to emit 100 tons per year or more of any air pollutant for which a rule or standard exists and is not subject to the Part 70 program.

"National Emission Standards for Hazardous Air Pollutants" or "NESHAP" means those standards found in 40 CFR Parts 61 and 63.

"Necessary preconstruction approvals or permits" means, for purposes of Parts 9 and 11 of this Subchapter, those permits or approvals required under all applicable air quality control laws and rules. [NOTE: From 252:100-7-31 and 252:100-7-51]

"New Source Performance Standards" or "NSPS" means those standards found in 40 CFR Part 60.

"Part 70 permit" (unless the context suggests otherwise) means any permit or group of permits covering a Part 70 source that is issued, renewed, amended, or revised pursuant to this Chapter. [NOTE: From 252:100-8-2]

"Part 70 program" means a program approved by the Administrator under 40 CFR Part 70. [NOTE: From 252:100-8-2]

"Part 70 source" means any source subject to the permitting requirements of Part 7 of this Chapter Subchapter, as provided in OAC 252:100-8-3(a) and 252:100-8-3(b). [NOTE: From 252:100-8-2]

"Potential to emit" means, for purposes of Parts 9 and 11 of this Subchapter, the maximum capacity of a source to emit a pollutant under its physical and operational design. Any physical or operational limitation on the capacity of the source to emit a pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored or processed, shall be treated as part of its design if the limitation or the effect it would have on emissions is enforceable. Secondary emissions do not count in determining the potential to emit of a source. [NOTE: From 252:100-7-31 and 252:100-7-51]

"Regulated air pollutant" means:

(A) any Any Volatile Organic Compound (VOC), as that term is defined at in 252:100-1-3, 252:100-37-2, or 252:100-39-2, or any Volatile Organic Solvent (VOS), as that term is defined in 252:100-37-2 and 252:100-39-2.

(B) Any Volatile Organic Solvent (VOS), as that term is defined at in 252:100-37-2 and 252:100-39-2.

(C) ~~(B)~~ any Any pollutant regulated under section 111 or 112 (except 112(r)) or the Federal Clean Air Act.

(D) ~~(C)~~ any Any pollutant for which a national primary ambient air quality standard has been promulgated except Carbon Monoxide under the Federal Clean Air Act.

(E) ~~(D)~~ any Any Toxic Air Contaminant as defined and regulated under OAC 252:100-41.

(F) ~~(E)~~ any Any other substance for which an air emission limitation or equipment standard is set by permit or rule.

"Secondary emissions" means, for purposes of Parts 9 and 11 of this Subchapter, emissions which occur as a result of the construction or operation of a major stationary source or modification, but do not come from the source or modification itself. For the purpose of OAC 252:100-7, Part 7, secondary emissions must be specific, well defined, quantifiable, and impact the same general areas as the source or modification which causes the secondary emissions. Secondary emissions may include, but are not limited to:

(A) emissions from trains coming to or from the new or

modified stationary source; and,

(B) emissions from any offsite support facility which would not otherwise be constructed or increase its emissions as a result of the construction or operation of the major source or modification. [NOTE: From 252:100-7-31 and 252:100-7-51]

"Stack" means for purposes of 252:100-8-1.6 any point in a source designed to emit solids, liquids or gases into the air, including a pipe or duct but not including flares. [NOTE: From 252:100-7-16(b)]

"Stationary source" means, for purposes of Parts 9 and 11 of this Subchapter, any building, structure, facility or installation which emits or may emit any air pollutant subject to OAC 252:100. [NOTE: From 252:100-7-31 and 252:100-7-51]

252:100-8-1.2. Requirement for permits for Part 70 sources and major Non-Part 70 facilities

(a) Permit required. Except as provided in this section, no person may commence construction or modification of any Part 70 Source or minor major Non-Part 70 source facility, or operate any new minor Part 70 source, or Non-Part 70 facility or relocate any minor source without obtaining a permit from the DEQ. For application and permitting procedures, see 252:100-6 and the Uniform Permitting Rules, 252:2-15. [NOTE: From 252:100-7-2(b)]

(b) Permit categories. Two types of construction and operating permits are available: general permit and individual permit.

(1) General permit.

(A) A general permit may be issued for an industry if there are a sufficient number of facilities that have the same or substantially similar operations, emissions and activities which are subject to the same standards, limitations and operating and monitoring requirements.

(B) Facilities may be eligible for authorization under a general permit if the following criteria are met:

(i) The facility has actual emissions of 100 tpy or more of any one regulated air pollutant emitted and/or is a Part 70 source.

(ii) The DEQ has issued a general permit for the industry.

(2) Individual permit. Facilities requiring permits under this Subchapter that do not qualify for a general permit shall obtain individual permits. An owner or operator may apply for an individual permit even if the facility qualifies for a general permit.

(c) Applicability determination. Any person may submit a request in writing that the Agency DEQ make a determination as to whether a particular source or installation, which that person operates or proposes to operate, is subject to the permit requirements of this rule Subchapter. The request must contain such sufficient information as is believed sufficient for the Agency DEQ to make the requested determination and the required fee. The Agency DEQ may request any additional information that it needs for purposes of making the determination. [NOTE: From

252:100-8-3(f)]

252:100-8-1.3. Transfer of permit

The Transfer transfer of a stationary source or a facility to a new owner or operator is not considered an increase in emissions and does not require new permits. However, any transfer shall be subject the new owner or operator to existing permit conditions and/or compliance schedules. Notification of such transfers shall be made promptly in writing to the DEQ. The transferor shall notify the AOD in writing no later than 10 days following the change in ownership. No new permit is required. Transfer of permits for Part 70 sources is an administrative permit amendment and covered in 252:100-8-7.2(a)(1)(D). [NOTE: From 252:100-7-2(c)(2)]

252:100-8-1.4. Failure Duty to comply with a construction permit

A violation of these limitations or conditions by the owner/operator shall subject the owner/operator to any or all enforcement penalties, including permit revocation, available under the Oklahoma Clean Air Act and Air Pollution Control Rules.

(a) An owner or operator who applies for a permit or authorization, upon notification of coverage, shall be bound by the terms and conditions therein. [NOTE: Based on 252:100-10-5(j)]

(b) An owner or operator who violates any condition of a permit or authorization is subject to enforcement under the Oklahoma Clean Air Act. [NOTE: 252:100-8-1.4(b) was based on 252:100-7-15(f)(3)]

252:100-8-1.5. Cancellation or extension of a construction permit or authorization under a general construction permit

(a) Cancellation of permit or authorization to construct or modify. A duly issued permit or authorization to construct or modify will terminate and become null and void (unless extended as provided in Subsection subsection (b) of this Section section) if the construction is not commenced within 18 months after of the date the permit or authorization was issued issuance date, or if work is suspended for more than 18 months after it has commenced.

(b) Extension of permit or authorization to construct or modify.

(1) Prior to the expiration date of the permit or authorization expiration date, a permittee may apply for extension of the permit or authorization by written request of the DEQ stating the reasons for the delay or suspension and providing justification for the extension. The DEQ may grant:

(A) One extension Extensions for terms of 18 months or less, or

(B) One extension of up to 36 months where the applicant is proposing to expand an already existing facility to accommodate the proposed new construction or the applicant has expended a significant amount of money (1% of total project cost as identified in the original application, not

including land cost) in preparation for meeting the definition of "commence construction" at the proposed site,
or

(C) One extension of up to 72 months will be granted to major industrial facilities (project cost greater than \$100,000,000.00), where the applicant proposes to construct at an existing site and demonstrates that the existing site was originally designed and constructed to accommodate the proposed new facilities. The applicant shall show a commitment to the site by having purchased land necessary to construct facilities covered by this extension and expended \$1,000,000.00 or more on engineering and/or site development.

(2) If construction has not commenced within three (3) years of the effective date of the original permit or authorization, the permittee must undertake and complete an appropriate available control technology review and an air quality analysis. This review must be approved by the DEQ before construction may commence.

(3) Upon formal request of any applicant whose permit has been denied for lack of increment, the DEQ may require any permittee under 252:100-8-1.5(b) (1) (B) or 252:100-8-1.5 (b) (1) (C), to furnish a complete air quality analysis and/or an appropriate available control technology review if such review is required in order to provide new or current information. [NOTE: 252:100-8-1.5 is from 252:100-7-15(g)]

252:100-8-1.6. Stack height limitations

(a) Stack height exclusion. Air quality modeling or ambient impact evaluation shall exclude the effect of that portion of the height of any stack which exceeds good engineering practice or the effect of any other dispersion techniques.

(b) Definitions. The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise: [NOTE: Definitions were moved to 252:100-8-1.1]

(1) ~~"A stack in existence"~~ means that the owner or operator had:

(A) ~~begun, or caused to begin, a continuous program of physical on site construction of the stack; or~~

(B) ~~entered into binding agreements or contractual obligations, which could not be canceled or modified without substantial loss to the owner or operator, to undertake a program of construction of the stack to be completed in a reasonable time.~~

(2) ~~"Dispersion technique"~~ means any technique which attempts to affect the concentration of a pollutant in the ambient air by using that portion of a stack which exceeds good engineering practice stack height; varying the rate of emission of a pollutant according to atmospheric conditions or ambient concentrations of that pollutant; or increasing final

~~exhaust gas plume rise by manipulating source process parameters, exhaust gas parameters, stack parameters or combining exhaust gases from several existing stacks into one stack, or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise. The preceding sentence does not include:~~

~~(A) The reheating of a gas stream, following use of a pollution control system, for the purpose of returning the gas to the temperature at which it was originally discharged from the facility generating the gas stream.~~

~~(B) The merging of exhaust gas streams where:~~

~~(i) the source owner or operator documents that the facility was originally designed and constructed with such merged streams;~~

~~(ii) after July 8, 1985, such merging is part of a change in operation at the facility that includes the installation of pollution controls and is accompanied by a net reduction in the allowable emissions of a pollutant. This exclusion from "dispersion technique" applicability shall apply only to the emission limitation for the pollutant affected by such change in operation; or~~

~~(iii) before July 8, 1985, such merging was part of a change in operation at the facility that included the installation of emissions control equipment or was carried out for sound economic or engineering reasons. Where there was an increase in the emission limitation or, in the event that no emission limitation existed prior to the merging, there was an increase in the quantity of pollutants actually emitted prior to the merging, it shall be presumed that merging was primarily intended as a means of gaining emissions credit for greater dispersion. Before such credit can be allowed, the owner or operator must satisfactorily demonstrate that merging was not carried out for the primary purpose of gaining credit for greater dispersion.~~

~~(C) Manipulation of exhaust gas parameters, merging of exhaust gas streams from several existing stacks into one stack, or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise in those cases where the resulting allowable emissions of sulfur dioxide from the facility do not exceed 5,000 tons per year.~~

~~(3) "Emission limitations and emission standards" means a requirement which limits the quantity, rate or concentration of emissions of air pollutants on a continuous basis, including any requirements which limit the level of opacity, prescribe equipment, set fuel specifications or prescribe operation or maintenance procedures for a source to assure continuous reduction. (Amended 7-9-87, effective 8-10-87)~~

~~(4) "Stack" means any point in a source designed to emit~~

~~solids, liquids or gases into the air, including a pipe or duct but not including flares.~~

(b)(e) Determination of good engineering practice (GEP) stack height. GEP shall be the greater of:

(1) 65 meters, measured from the ground-level elevation at the base of the stack; or

(2) The height under either OAC 252:100-7-16(e)(2)(A) or (B) 252:100-8-1.6(b)(2)(A) or (B):

(A) for stacks in existence on January 12, 1979 and for which the owner or operator had obtained all applicable permits or approvals required under OAC 252:100-7-252:100-8 or Federal 40 CFR Part 52,

$$H_g = 2.5H$$

provided the owner or operator can demonstrate that this equation was relied upon in establishing an emission limitation;

(B) for all other stacks,

$$H_g = H + 1.5L,$$

where: H_g = good engineering practice stack height, measured from the ground-level elevation at the base of the stack,

H = height of nearby structure(s) measured from the ground-level elevation at the base of the stack,

L = lesser dimension (height or projected width) of nearby structure(s), provided that the owner or operator may be required to verify such GEP stack height by the use of a field study or fluid model as the Executive Director shall determine; or

(3) The height demonstrated by a fluid model or a field study approved by the reviewing agency, which ensures that the emissions from a stack do not result in excessive concentrations of any air pollutant as a result of atmospheric downwash, wakes, or eddy effects created by the source itself, nearby structures, or nearby terrain features.

(c)(d) Nearby. A structure or terrain feature shall be considered to be nearby:

(1) For purposes of applying the formula in OAC 252:100-7-16(e), if that distance up to five times the lesser of the height or the width dimension of a structure, but not greater than 0.8 km (0.5 mile), and

(2) For conducting demonstrations under OAC 252:100-7-16(e)(2), if not greater than 0.8 km (0.5 mile), except that the portion of a terrain feature may be considered to be nearby which falls within a distance of up to 10 times the maximum height of the feature, not to exceed 2 miles if such

feature achieves a height at 0.8 km (0.5 mile) from the stack that is at least 40 percent of the GEP stack height determined by the formulae in OAC 252:100-7-16(e)(3) or 26 meters, whichever is greater, as measured from the base of the stack. The height of the structure or terrain feature is measured from the ground level elevation at the base of the stack.

(1) For the formulae in 252:100-8-1.6(b)(2). A structure or terrain feature shall be considered nearby if it is located within a distance of up to five times the lesser of the height or the width of a structure, but not more than 0.5 miles (0.8 km).

(2) For demonstration in 252:100-8-1.6(b)(3).

(A) A structure or terrain feature shall be considered nearby if located at a distance not greater than 0.5 mile (0.8 km), except that

(B) A portion of a terrain feature may be considered nearby if:

(i) It falls within a distance (not to exceed 2 miles) of up to 10 times the maximum height (Ht) of the feature, and

(ii) At a distance of 0.5 mile, the height of such feature is at least 40 percent of the GEP stack height determined by the formulae provided in 252:100-8-1.6(b)(2)(B) or 85.3 feet (26 meters), whichever is greater, as measured from the base of the stack.

(3) Measurement of height of structure or terrain. The height of the structure or terrain feature is measured from the ground-level elevation at the base of the stack.

(d)(e) Excessive concentrations. When utilized for the purpose of determining GEP stack height under OAC 252:100-7-16(e)(3) 252:100-8-1.6(b)(3), excessive concentrations shall be as follows:

(1) For sources seeking credit for stack height exceeding that calculated under OAC 252:100-7-16(e)(2) 262:100-8-1.6(b)(2), a maximum ground-level pollutant concentration from a stack due in whole or part to downwash, wakes, and eddy effects produced by nearby structures or nearby terrain features which is at least 40 percent in excess of the maximum concentration experienced in the absence of such downwash, wakes, or eddy effects and which, when combined with the impacts due to all sources, produces a concentration in excess of an ambient air quality standard. For sources subject to the prevention of significant deterioration program (Part 5.9 of this Subchapter or Federal 40 CFR 52.21), the same criteria apply except that a concurrent exceedance of a prevention of significant deterioration increment is experienced. In making demonstrations under this part, the allowable emission rate shall conform to the new source performance standard that is applicable to the source category unless the owner or operator can demonstrate that this emission rate is infeasible. Where such demonstrations are approved by the Executive Director, an alternative emission rate shall be established in

consultation with the owner or operator;

(2) For sources seeking credit after October 1, 1983, for increases in existing stack heights up to the heights established under ~~OAC 252:100-7-16(e)(2)~~ 252:100-8-1.6(b)(2) either:

(A) a maximum ground-level concentration due in whole or part to downwash, wakes or eddy effects as specified in ~~OAC 252:100-7-16(e)(2)~~ 252:100-8-1.6(b)(2), except that the emission rate specified by any applicable state implementation plan (or, in the absence of such a limit, the actual emission rate) shall be used, or

(B) the actual presence of a local nuisance caused by the existing stack, as determined by the Executive Director; and

(3) For sources seeking credit after January 12, 1979 for a stack height determined under ~~OAC 252:100-7-16(e)(1)~~ 252:100-8-1.6(b)(2) where the Executive Director requires the use of a field study or fluid model to verify GEP stack height, for sources seeking stack height credit after November 9, 1984 based on the aerodynamic influence of cooling towers, and for sources seeking stack height credit after December 31, 1970 based on the aerodynamic influence of structures not adequately represented by the formulae in ~~OAC 252:100-7-16(e)(1)~~ 252:100-8-1.6(b)(2), a maximum ground-level concentration due in whole or part to downwash, wakes or eddy effects that is at least 40 percent in excess of the maximum concentration experienced in the absence of such downwash, wakes or eddy effects. [NOTE: 252:100-8-1.6 was moved from 252:100-7-16]

PART 3. PERMIT APPLICATION FEES

252:100-8-1.7. Permit application fees

A permit application or a request for an applicability determination received after the effective date of this subsection will be assessed a one-time fee, which must accompany the application or request. Applications received without appropriate fees are administratively incomplete. Fees must be paid by check or money order made payable to the Oklahoma Air Quality Division in accordance with the following fee schedule:

(1) Applicability determination. \$100, to be credited against the construction or operating permit application fee, if a permit is required. If no permit is required, the fee will be retained to cover the cost of making the determination. [NOTE: Based on 252-7-3(c)]

(2) Construction permit application. \$2,000

(1) ~~Part 70 source construction permit \$2,000 [NOTE: from 252:100-7-3(b)(1)]~~

(3) Operating permit application.

(2) ~~Permit processing fees. Permit processing fees shall be as follows:~~

- (A) Major Non-Part 70 facility or Initial initial Part 70 permit - \$2,000.
 - (B) Authorization under a general permit - \$900
 - (C)-(B) Renewal Part 70 permit - \$1,000.
 - (D)-(C) Significant Part 70 Permit Mod. modification of Part 70 or major Non-Part 70 facility permit - \$1,000.
 - (E)-(D) Minor modification of Part 70 or major Non-Part 70 facility permit Permit Modification - \$ 500.
 - (E) The Part 70 Temporary Permit - \$1,000.
 - (F)-(F) Part 70 Temporary Source Relocation - \$ 500.
- [NOTE: 252:100-8-1.7(c) is from 252:100-8-9(d)(2)]

PART 5. PERMITS FOR MAJOR NON-PART 70 FACILITIES

252:100-8-1.8. Major Non-Part 70 facility construction permit

(a) Construction permit required. No person shall cause or allow the construction or modification installation of any new minor or major source Non-Part 70 facility without first obtaining a DEQ-issued air quality construction permit to construct or modify the source. A construction permit is also required for any modification to add a piece of equipment or a process that is subject to a NSPS or NESHAP or to increase actual emissions of any one regulated air pollutant by more than 5 TPY at an existing facility. [NOTE: from 252:100-7-15(a)(1)]

(b) Construction permit requirements.

(1) Content of construction permit application. An application for a construction permit shall provide data and information required by this Chapter and/or requested on the application from form available from the DEQ pursuant to the requirements of this Chapter. Such data and information shall include including but not be limited to: site information, process description, emission data and when required, BACT, modeling and sampling point data as follows:

(1) Site and process information. Site information, process description, emission data and, when required, BACT determination, modeling and sampling point data as follows:

(A) BACT determination. To be approved for a construction permit, a major Non-Part 70 facility source must demonstrate that the control technology to be applied is the best that is available for TSP (total suspended particulates). each pollutant controlled under air pollution control rules if such pollutant would cause the source to be defined as a major source. This determination will be made on a case by case basis taking into account energy, environmental, cost and economic impacts of alternative control systems;

(B) Modeling. Any air quality modeling or ambient impact evaluation that is required shall be prepared in accordance with procedures acceptable to the DEQ and accomplished by the applicant; and

(C) Sampling points. If required by the DEQ an application shall show how the new source will be equipped with sampling

ports, instrumentation to monitor and record emission data and other sampling and/or testing equipment. [NOTE: 252:100-8-1.8(b)(1) was taken from 252:100-7-15(b)]

(2) Public review participation. See 27A O.S. Supp. 1995, Section 2-14-101 et seq. and OAC 252:2-15. [NOTE: From 252:100-7-15(d)]

(c) Action on applications. See OAC 252:2-15, and Subchapter 6 of this Chapter.

(1) Review procedures. See OAC 252:2-15.

(2) Issuance or denial timelines. See Part 7 of OAC 252:2-15. [NOTE: 252:100-8-1.8(c) is from 252:100-7-15]

(d) Construction permit contents. The construction permit:

(1) Shall require the permittee to comply with all applicable air pollution rules, ~~federal new source performance standards (NSPS)~~ NSPS and National Emission Standards for Hazardous Air Pollutants (NESHAP) NESHAP, established in sections 111 and 112 of the Federal Clean Air Act.

(2) Shall prohibit the exceedance of ambient air quality standards contained in 252:100-3, and

(3) May establish permit conditions and limitations as necessary to assure compliance with all rules.

[NOTE: From 252:100-7-15(a)(2)]

252:100-8-1.9. Major Non-Part 70 facility operating permit

(a) Operating permit required.

(1) No person shall cause or authorize the operation of a new or modified major Non-Part 70 facility source for more than a 180-day period without applying for a DEQ permit to operate.

(2) No owner or operator shall cause or authorize the operation of a new major Non-Part 70 facility source if the DEQ denies or revokes a permit to operate. [NOTE: From 252:100-7-18(a)]

(b) Application Operating permit requirements.

(1) Content of operating permit application Application content. Application will shall be made on a form provided by the DEQ and. An application shall contain:

(A) The proposed operation start-up date, or phased dates when applicable.

(B) Revisions to the installation/construction, if any, that differed from the construction design and plan given in the permit application material, data and specifications.

(2) Performance testing. Before a permit to operate a new or modified major Non-Part 70 facility source is granted, the applicant, if required by the DEQ, shall demonstrate compliance with applicable standards by conducting ~~conduct~~ emission test(s) test in accordance with methods approved by the DEQ with the tests being made at the expense of the applicant. The DEQ may monitor performance tests conducted by the applicant and may also conduct emissions tests. The results of any required test must be provided to the DEQ along with supporting information as required. [NOTE: 252:100-8-1.9(b) is from 252:100-7-18(b)]

(3) Public participation. See 27A O.S.Supp. 1995, Section 2-14-101 et seq.

(c) Action on application.

(1) Review procedures. See 252:100-2-15 252:2-15.

(2) Issuance or denial timelines. See Part 7 of 252:2-15.

[NOTE: 252:100-8-1.9(c) is from 252:100-7-15(c)]

(d) Operating permit conditions.

(1) Emissions Emission limitations established and made a part of the construction permit are carried over, incorporated into and are made enforceable limitations of the subsequently issued operating permit.

(2) Permit limitations in adjustment of, or in addition to, the a minor source's facility's construction permit limitations may be made a condition of the minor source's facility's operating permit issuance. [NOTE: 252:100-8-1.9(d) is from 252:100-7-18(c)]

PART 7. PERMITS FOR PART 70 Sources

252:100-8-2. Definitions

The following words and terms, when used in this Subchapter Part, shall have the following meaning, unless the context clearly indicates otherwise. Except as specifically provided in this section, terms used in this Subchapter Part retain the meaning accorded them under the applicable requirements of the Act.

~~"Act" means the Clean Air Act, as amended, 42 U.S.C. 7401 et. seq.~~ [NOTE: Moved to 252:100-8-1.1]

~~"Administratively complete" means the same as defined at OAC 252:002-11: an application that provides:~~

(A) All information required under 252:100-8-5(c);

(B) A landowner affidavit as required by 252:2-15-20(b)(3);

(C) The appropriate application fees as required by 252:100-8-1.7; and

(D) Certification by the responsible official as required by 252:100-8-5(d)

~~"Administrator" means the administrator of the United States Environmental Protection Agency (EPA) or the administrator's designee.~~ [NOTE: Moved to 252:100-8-1.1]

~~"Affected source" means the same as the meaning given to it in the regulations promulgated under Title IV (acid rain) of the Act.~~

~~"Affected states" means:~~

~~(A) all states:~~

~~(i) That that are one of the following contiguous states: Arkansas, Colorado, Kansas, Missouri, New Mexico and Texas, and~~

~~(ii) That in the judgment of the DEQ Agency, may be directly affected by emissions from the facility seeking the permit, permit modification, or permit renewal being proposed; or~~

~~(B) all states that are within 50 miles of the permitted~~

source.

"Affected unit" means the same as the meaning given to it in the regulations promulgated under Title IV (acid rain) of the Act.

~~"Agency" means Air Quality Division of the Oklahoma Department of Environmental Quality.~~

"Applicable requirement" means all of the following as they apply to emissions units in a ~~part~~ Part 70 source subject to this Chapter (including requirements that have been promulgated or approved by EPA through rulemaking at the time of issuance but have future effective compliance dates):

(A) Any standard or other requirements provided for in the applicable implementation plan approved or promulgated by EPA through rulemaking under Title I of the Act that implements the relevant requirements of the Act, including any revisions to that plan promulgated in 40 C.F.R. Part 52;

(B) Any term or condition of any preconstruction permits issued pursuant to regulations approved or promulgated through rulemaking under Title I, including parts C or D, of the Act;

(C) Any standard or other requirement under section 111 of the Act, including section 111(d);

(D) Any standard or other requirement under section 112 of the Act, including any requirement concerning accident prevention under section 112(r)(7) of the Act, but not including the contents of any risk management plan required under 112(r) of the Act;

(E) Any standard or other requirement of the acid rain program under Title IV of the Act or the regulations promulgated thereunder;

(F) Any requirements established pursuant to section 504(b) or section 114(a)(3) of the Act;

(G) Any standard or other requirement governing solid waste incineration, under section 129 of the Act;

(H) Any standard or other requirement for consumer and commercial products, under section 183(e) of the Act;

(I) Any standard or other requirement for tank vessels, under section 183(f) of the Act;

(J) Any standard or other requirement of the regulations promulgated to protect stratospheric ozone under Title VI of the Act, unless the Administrator has determined that such requirements need not be contained in a Title V permit; and

(K) Any national ambient air quality standard or increment or visibility requirement under part C of Title I of the Act, but only as it would apply to temporary sources permitted pursuant to section 504(e) of the Act.

~~"Department" means the Department of Environmental Quality.~~

~~"Designated representative" means the same as the meaning given to it in section 402(26) of the Act and the regulations promulgated thereunder with respect to affected units, a responsible person or official authorized by the owner or operator of a unit to represent the owner or operator in matters pertaining to the holding, transfer, or disposition of allowances~~

allocated to a unit, and the submission of and compliance with permits, permit applications, and compliance plans for the unit.

"**Draft permit**" means the version of a permit for which the Agency DEQ offers public participation under ~~OAC 252:100-8-7(i)~~ 27A O.S.Supp. 1995, §2-14-101 et seq. and 252:100-2-15 or affected State review under OAC 252:100-8-8.

"**Emissions allowable under the permit**" means a federally enforceable permit term or condition determined at issuance to be required by an applicable requirement that establishes an emissions limit (including a work practice standard) or a federally enforceable emissions cap that the source has assumed to avoid an applicable requirement to which the source would otherwise be subject.

"**Emissions unit**" means any part or activity of a stationary source that emits or has the potential to emit any regulated air pollutant or any pollutant listed under section 112(b) of the Act. Fugitive emissions from valves, flanges, etc. associated with a specific unit process shall be identified with that specific emission unit. This term is not meant to alter or affect the definition of the term "unit" for purposes of Title IV of the Act.

~~"EPA" means the United States Environmental Protection Agency.~~
[NOTE: Moved to 252:100-8-1.1]

"**Final permit**" means the version of a part 70 permit issued by the Agency DEQ that has completed all review procedures required by OAC 252:100-8-7 through 252:100-8-7.5 and 252:100-8-8.

"**Fugitive emissions**" means those emissions of regulated air pollutants which could not reasonably pass through a stack, chimney, vent, or other functionally-equivalent opening.

"**General permit**" means a part 70 permit that meets the requirements of ~~OAC 252:100-8-6(d)~~ 252:100-8-6.1.

"**Insignificant activities**" means individual emissions units that are either on the list approved by the Administrator and contained in Appendix I, or whose actual calendar year emissions do not exceed:

- (A) 5 tons per year of any one criteria pollutant,
- (B) 2 tons per year for any one hazardous air pollutant (HAP) or 5 tons per year for an aggregate of two or more HAP's, or 20 percent of any threshold less than 10 tons per year for single HAP that the EPA may establish by rule, and
- (C) 0.6 tons per year for any one category A substance, 1.2 tons per year for any one category B substance or 6 tons per year for any one category C substance as defined in 252:100-41-40.

Any activity to which a State or federal applicable requirement applies is not insignificant even if it meets the criteria above or is included on the insignificant activities list.

"**MACT**" means maximum achievable control technology.

"**Major source**" means any stationary source (or any group of stationary sources that are located on one or more contiguous or adjacent properties, and are under common control of the same person (or persons under common control)) belonging to a single

major industrial grouping and that are is described in subparagraph (A), (B), or (C), ~~or (D)~~, of this definition. For the purposes of defining "major source," a stationary source or group of stationary sources shall be considered part of a single industrial grouping if all of the pollutant emitting activities at such source or group of sources on contiguous or adjacent properties belong to the same Major Group (i.e., all have the same two-digit primary SIC code) as described in the Standard Industrial Classification Manual, 1987.

(A) A major source under section 112 of the Act, which is defined as:

(i) For pollutants other than radionuclides, any stationary source or group of stationary sources located within a contiguous area and under common control that emits or has the potential to emit, in the aggregate, 10 tons per year ("tpy") or more of any hazardous air pollutant which has been listed pursuant to section 112(b) of the Act, 25 tpy or more of any combination of such hazardous air pollutants, or such lesser quantity as the Administrator may establish by rule. Notwithstanding the preceding sentence, emissions from any oil or gas exploration or production well (with its associated equipment) and emissions from any pipeline compressor or pump station shall not be aggregated with emissions from other similar units, whether or not such units are in a contiguous area or under common control, to determine whether such units or stations are major sources; or

(ii) For radionuclides, "major source" shall have the meaning specified by the Administrator by rule.

(B) A major stationary source of air pollutants, as defined in section 302 of the Act, that directly emits or has the potential to emit, 100 tpy or more of any regulated air pollutant (except ~~Total Suspended Particulates (TSP)~~ TSP) (including any major source of fugitive emissions of any such pollutant, as determined by rule by the Administrator). The fugitive emissions of a stationary source shall not be considered in determining whether it is a major stationary source for the purposes of section 302(j) of the Act, unless the source belongs to one of the following categories of stationary sources:

- (i) Coal cleaning plants (with thermal dryers);
- (ii) Kraft pulp mills;
- (iii) Portland cement plants;
- (iv) Primary zinc smelters;
- (v) Iron and steel mills;
- (vi) Primary aluminum ore reduction plants;
- (vii) Primary copper smelters;
- (viii) Municipal incinerators capable of charging more than 250 tons of refuse per day;
- (ix) Hydrofluoric, sulfuric, or nitric acid plants;
- (x) Petroleum refineries;
- (xi) Lime plants;

- (xii) Phosphate rock processing plants;
- (xiii) Coke oven batteries;
- (xiv) Sulfur recovery plants;
- (xv) Carbon black plants (furnace process);
- (xvi) Primary lead smelters;
- (xvii) Fuel conversion plants;
- (xviii) Sintering plants;
- (xix) Secondary metal production plants;
- (xx) Chemical process plants;
- (xxi) Fossil-fuel boilers (or combination thereof) totaling more than 250 million British thermal units per hour heat input;
- (xxii) Petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels;
- (xxiii) Taconite ore processing plants;
- (xxiv) Glass fiber processing plants;
- (xxv) Charcoal production plants;
- (xxvi) Fossil-fuel-fired steam electric plants of more than 250 million British thermal units per hour heat input; or
- (xxvii) All other stationary source categories regulated by a standard promulgated under section 111 or 112 of the Act, but only with respect to those air pollutants that have been regulated for that category.

(C) A major stationary source as defined in part D of Title I of the Act, including:

- (i) For ozone non-attainment areas, sources with the potential to emit 100 tpy or more of volatile organic compounds or oxides of nitrogen in areas classified as "marginal" or "moderate," 50 tpy or more in areas classified as "serious," 25 tpy or more in areas classified as "severe," and 10 tpy or more in areas classified as "extreme"; except that the references in this paragraph to 100, 50, 25, and 10 tpy of nitrogen oxides shall not apply with respect to any source for which the Administrator has made a finding, under section 182(f)(1) or (2) of the Act, that requirements under section 182(f) of the Act do not apply;
- (ii) For ozone transport regions established pursuant to section 184 of the Act, sources with the potential to emit 50 tpy or more of volatile organic compounds;
- (iii) For carbon monoxide non-attainment areas:-
 - (I) that are classified as "serious"; and
 - (II) in which stationary sources contribute significantly to carbon monoxide levels as determined under rules issued by the Administrator, sources with the potential to emit 50 tpy or more of carbon monoxide; and
- (iv) For particulate matter (PM-10) non-attainment areas classified as "serious," sources with the potential to emit 70 tpy or more of PM-10.

~~(D) Notwithstanding the source categories in (A) through (C)~~

~~of this definition, emissions from any oil or gas exploration or production well (with its associated equipment) and emissions from any pipeline compressor station or pump station shall not be aggregated with emissions from other similar units, whether or not such units are in a contiguous area or under common control, to determine whether such units or stations are major sources and in the case of any oil or gas exploration or production well (with its associated equipment), such emissions shall not be aggregated for any purpose under this definition.~~

"Maximum capacity" means the quantity of air contaminants that theoretically could be emitted by a stationary source without control devices based on the design capacity or maximum production capacity of the source and 8,760 hours of operation per year. In determining the maximum theoretical emissions of VOCs for a source, the design capacity or maximum production capacity shall include the use of raw materials, coatings and inks with the highest VOC content used in practice by the source.

~~"Part 70 permit" (unless the context suggests otherwise) means any permit or group of permits covering a part 70 source that is issued, renewed, amended, or revised pursuant to this Chapter. [NOTE: Moved to 252:100-8-1.1]~~

~~"Part 70 program" means a program approved by the Administrator under 40 C.F.R Part 70. [NOTE: Moved to 252:100-8-1.1]~~

~~"Part 70 source" means any source subject to the permitting requirements of this Chapter, as provided in OAC 252:100-8-3(a) and 252:100-8-3(b). [NOTE: Moved to 252:100-8-1.1]~~

"Permit" (unless the context suggests otherwise) means any permit or group of permits covering a part Part 70 source that is issued, renewed, amended, or revised pursuant to this Chapter.

"Permit modification" means a revision to a part Part 70 permit that meets the requirements of ~~OAC 252:100-8-7(e)~~ 252:100-8-7.2(b).

"Permit program costs" means all reasonable (direct and indirect) costs required to develop and administer a permit program, as set forth in ~~OAC 252:100-8-9~~ 252:100-5-2.2 (whether such costs are incurred by the DEQ Agency or other State or local agencies that do not issue permits directly, but that support permit issuance or administration).

"Permit revision" means any permit modification or administrative permit amendment.

~~"Permitting authority" means the Department of Environmental Quality/~~

"Potential to emit" means the maximum capacity of a stationary source to emit any air pollutant under its physical and operational design. Any physical or operational limitation on the capacity of a source to emit an air pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitation is enforceable by the Administrator. This term does

not alter or affect the use of this term for any other purposes under the Act, or the term "capacity factor" as used in Title IV of the Act or the regulations promulgated thereunder.

"Proposed permit" means the version of a permit that the DEQ Agency proposes to issue and forwards to the Administrator for review in compliance with OAC 252:100-8-8.

"Regulated air pollutant" means the following:

(A) Nitrogen oxides or any volatile organic ~~compounds~~ compound (VOC), including those substances defined in at OAC 252:100-1-3, 252:100-37-2, 252:100-39-2, or any Volatile Organic Solvent (VOS), as that term is defined in at OAC 252:100-37-2 and 252:100-39-2, or any organic material defined at in 252:100-37-2 except those specifically excluded in the EPA definition of VOC ~~per~~ in 40 CFR 51.100(s);

(B) Any pollutant for which a national ambient air quality standard has been promulgated;

(C) Any pollutant that is subject to any standard promulgated under section 111 of the Act;

(D) Any Class I or II ozone-depleting substance subject to a standard promulgated under or established by Title VI of the Act;

(E) Any pollutant subject to a standard promulgated under section 112 or other requirements established under section 112 of the Act (Hazardous Air Pollutants), including sections 112(g) (Modifications), (j) (Equivalent Emission Limitation by Permit, and (r) (Prevention of Accidental Releases), including the following:

(i) any pollutant subject to the requirements under section 112(j) of the Act. If the Administrator fails to promulgate a standard by the date established pursuant to section 112(e) of the Act (Schedule for Standards and Review), any pollutant for which a subject source would be major shall be considered to be regulated as to that source on the date 18 months after the applicable date established pursuant to section 112(e) of the Act; and,

(ii) any pollutant for which the requirements of section 112(g)(2) of the Act have been met, but only with respect to the individual source subject to the section 112(g)(2) requirement; or

(F) Any other substance for which an air emission limitation or equipment standard is set by an existing permit or regulation.

"Renewal" means the process by which a permit is reissued at the end of its term.

"Responsible official" means one of the following:

(A) For a corporation: a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation, or a duly authorized representative of such person if the representative is responsible for the overall operation of one or more manufacturing, production, or operating facilities

applying for or subject to a permit and either:

- (i) The facilities employ more than 250 persons or have gross annual sales or expenditures exceeding \$25 million (in second quarter 1980 dollars); or
 - (ii) The delegation of authority to such representatives is approved in advance by the ~~permitting authority~~ DEQ;
- (B) For the partnership or sole proprietorship: a general partner or the proprietor, respectively;
- (C) For a municipality, State, Federal, or other public agency: Either a principal executive officer or ranking elected official. For purposes of this Subchapter, a principal executive officer or installation commander of a Federal agency includes the chief executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., a Regional Administrator of EPA); or
- (D) For affected sources:
- (i) The designated representative in so far as actions, standards, requirements, or prohibitions under Title IV of the Act or the regulations promulgated thereunder are concerned; and
 - (ii) The designated representative for any other purposes under this Subchapter.

"Section 502(b)(10) changes" means changes that contravene an express permit term. Such changes do not include changes that would violate applicable requirements or contravene federally enforceable permit terms and conditions that are monitoring (including test methods), recordkeeping, reporting, or compliance certification requirements.

"Small unit" means a fossil fuel fired combustion device which serves a generator with a name plate capacity of 25 MWe or less.

"State-only requirement" means any standard or requirement pursuant to Oklahoma Clean Air Act (27A O.S. 1993 Supp. Sec. 2-5-101 et seq. as amended) that is not contained in the State Implementation Plan (SIP).

"State program" means a program approved by the Administrator under 40 CFR C.F.R Part 70.

"Stationary source" means any building, structure, facility, or installation that emits or may emit any regulated air pollutant or any pollutant listed under section 112(b) of the Act.

"Trivial activities" means any individual or combination of air emissions units that are considered inconsequential and are on a list approved by the Administrator and contained in Appendix J. Any activity to which a State or federal applicable requirement applies is not trivial even if included on the trivial activities list.

"Unit" means, for purposes of Title IV, a fossil fuel-fired combustion device.

252:100-8-3. Applicability

(a) **Covered sources.** Except as exempted from the requirement to

obtain a permit under subsection (b) of this Section and or elsewhere in this Subchapter Chapter, the following sources listed below are subject to the permitting requirements under this Subchapter Chapter. A covered source shall remain a Part 70 source until a federally enforceable permit is obtained which contains emission limitations and/or conditions to limit the operation of the facility to below that which would define it as a covered source pursuant to this section 252:100-8-3(a). [NOTE: The underlined language was formerly 252:100-8-3(g).]

- (1) Any major source (as defined in OAC 252:100-8-2);
- (2) Any source, ~~including an area source, subject to a NPS standard, limitation, or other requirement under section 111 of the Act;~~
- (3) Any source, including an area source, subject to a NESHAP standard or other requirement under section 112 of the Act, ~~except that a source is not required to obtain a permit solely because it is subject to regulations or requirements under section 112(r) of the Act;~~
- (4) Any affected source (as defined in OAC 252:100-8-2); and
- (5) Any source in a source category designated by the Administrator pursuant to 40 CFR C.F.R. §70.3.

(b) **Source category exemptions.**

(1) All sources listed in subsection (a) of this section that are not major sources, affected sources, or solid waste incineration units required to obtain a permit pursuant to section 129(e) of the Act, are exempt from the obligation to obtain a Part 70 permit unless required to do so by appropriate implementation of EPA administrative rulemaking for non-major sources. Any such exempt source may opt to apply for a permit under these rules and shall be issued a permit if the applicant otherwise satisfies all of the requirements of this Chapter.

(2) If the Administrator determines after appropriate rulemaking that an exemption is applicable to non-major sources when adopting standards or other requirements under section 111 or section 112 of the Act after July 21, 1992, then at that time the exemption will apply.

(3) Unless otherwise required to obtain a Part 70 permit, the following source categories are exempted from the obligation to obtain a Part 70 permit:

(A) All sources in source categories that would be required to obtain a permit solely because they are subject to part 60, subpart AAA -- Standards of Performance for New Residential Wood Heaters; and

(B) All sources in source categories that would be required to obtain a permit solely because they are subject to part 61, subpart M -- National Emission Standard for Hazardous Air Pollutants for Asbestos, Section 61.145, Standard for Demolition and Renovation.

~~(c) **Emissions units and covered sources (Part 70 sources).**~~

~~(1) For major sources, Part 70 permits shall include all applicable requirements and state only requirements for all~~

~~relevant emissions units in the major source.~~

~~(2) For any non major source subject to this Subchapter, Part 70 permits shall include all applicable requirements which apply to emissions units that cause the source to be subject to the requirement to obtain a permit. [NOTE: 252:100-8-3(c)(1) is covered in 252:100-8-6(a) and (c)(2) was deleted.]~~

~~(d) Fugitive emissions. Fugitive emissions from a covered source shall be included in the permit application and the permit in the same manner as stack emissions, regardless of whether the source category in question is included in the list of sources contained in the definition of major source. [NOTE: Revised and moved to 252:100-8-5(c)(3)(A)]~~

~~(e) Insignificant activities.~~

~~(1) The insignificant activities and emissions levels shall be as follows:~~

~~(A) emissions will not exceed one pound (1 lb.) per hour for any one criteria pollutant, and~~

~~(B) emissions of toxic air contaminants will not exceed the de minimis requirements set forth under 252:100-41-43(a)(5).~~

~~(2) In addition to the quantity thresholds in (1)(A) and (1)(B) "Insignificant Activity" also means any individual or combination of air emissions sources at a facility that have an aggregate potential to emit that does not increase the overall potential to emit of the entire facility for a given regulated pollutant by more than 10% above the "baseline" permitted limit which excludes the insignificant activities. Thus, insignificant activities may apply to original permit application, permit modifications/amendments, and/or permit renewals. The cumulative amount of activities claimed as insignificant during a Title V permit term shall not increase the potential to emit of the entire facility by more than 10% of the permit limit for a given pollutant from the date of permit issuance to the date of application for renewal. These insignificant activities cannot conflict with significant emission levels in any Title V program. Insignificant activities must be identified but not quantified (except to the extent necessary to demonstrate their insignificance) in the permit application. The Agency shall maintain a list of activities which are considered to be insignificant without quantification by the permittee. The Agency shall also maintain a list of activities which are determined to be trivial. "Trivial activity" means any individual or combination of air emissions units at a Part 70 source which are considered inconsequential as determined by the Agency. Trivial activities need not be identified in the permit application, amendment or renewal. [NOTE: Moved to 252:100-8-2]~~

~~(f) Applicability determinations. Any person may submit a request in writing that the Agency make a determination as to whether a particular source or installation, which that person operates or proposes to operate, is subject to the permit requirements of this rule. The request must contain such information as is believed sufficient for the Agency to make the~~

~~requested determination. The Agency may request any additional information that it needs for purposes of making the determination. [NOTE: Moved to 252:100-8-1.2(c)]~~

~~(g) Covered sources. A covered source shall remain a Part 70 source until a federally enforceable permit is obtained which contains emission limitations and/or conditions to limit the operation of the facility to below that which would define it as a covered source pursuant to 252:100-8-3(a). [NOTE: Moved to 252:100-8-3(a)]~~

252:100-8-4. ~~Title V permits required~~ Requirements for construction and operating permits

(a) Construction permits.

(1) Construction permit required. No person shall cause or allow the construction or modification installation of any new minor or major source facility that will require a Part 70 operating permit without first obtaining a DEQ-issued air quality construction permit to construct or modify the source. A construction permit is also required for any physical change that would be a modification under 252:100-8-7.2(b). [NOTE:

(a) (1) is from 252:100-7-15(a) (1)]

(2) Construction permit requirements. Construction permits and applications shall meet the applicable requirements of 252:100-8-1.8 and the applicable requirements of this Part. Applications and permits for sources subject to Part 9 or Part 11 of this Subchapter must also meet the applicable requirements contained therein. To be approved for a construction permit, a Part 70 source must demonstrate that the control technology to be applied is the best that is available for each pollutant that would cause the source to be defined as a major source.

(3) Requirement for case-by-case MACT determinations.

(A) Applicability. The requirement for case-by-case MACT determinations apply to any owner or operator who constructs or reconstructs a major source of hazardous air pollutants after June 29, 1998, unless the source has been specifically regulated or exempted from regulation under a subpart of 40 CFR Part 63, or the owner or operator has received all necessary air quality permits for such construction or reconstruction before June 29, 1998.

(B) Exclusions. The following sources are not subject to this subsection.

(i) Electric utility steam generating units unless and until these units are added to the source category list.

(ii) Stationary sources that are within a source category that has been deleted from the source category list.

(iii) Research and development activities as defined in 40 CFR § 63.41.

(C) MACT determinations. If subject to this subsection, an owner or operator may not begin actual construction or

reconstruction of a major source of HAP until obtaining from the DEQ an approved MACT determination in accordance with the following regulations: 40 CFR 63.41, 40 CFR 63.43 and 40 CFR 63.44, which are hereby incorporated by reference as they exist on July 1, 1997.

(b) Operating permits.

(1) Operating permits required. Except as provided in paragraphs subparagraphs ~~(1) (A)~~ and ~~(2) (B)~~ of this section, no Title V Part 70 source subject to this Chapter may operate after the time that it is required to file a timely application with the DEQ, except in compliance with a DEQ-issued permit.

~~(A) (1)~~ If the owner or operator of a source subject to the requirement to obtain a permit submits a timely application for permit issuance or renewal, that source's failure to have a permit shall not be a violation of the requirement to have such a permit until the DEQ takes final action on the application. This protection shall cease to apply if the applicant fails to submit, by the deadline specified in writing by the DEQ or OAC ~~252:100-8-4~~ ~~252:100-8-5~~, any additional information identified as being reasonably required to process the application.

~~(B) (2)~~ If the owner or operator of a source subject to this Subchapter files a timely application that the DEQ determines to be administratively incomplete due to the applicant's failure to timely provide additional information requested by the DEQ at the end of the DEQ's administrative completeness review period, the applicant loses the protection granted under paragraph ~~(A) (1)~~ of this section, as a result of its failure to timely provide information requested by the DEQ, the The source's failure to have a permit shall be deemed a violation of this Subchapter.

~~(C) (3)~~ Filing an operating permit application shall not affect the requirement, if any, that any a source have a construction preconstruction permit under Title I of the federal Clean Air Act.

(2) Duty to apply. For each Part 70 source, the owner or operator shall submit a timely and complete permit application on forms supplied by the ~~Division~~ DEQ in accordance with this section.

(3) Timely application. Sources that are subject to the operating permit program established by this Chapter as of the date the program is approved by EPA and becomes effective (the "effective date") March 6, 1996, shall file applications on the following schedules outlined in OAC ~~252:100-8-5(b) (2)~~ 252:100-8-4(b) (4). A timely application is one that is postmarked on or before the relevant date listed below. In the event a major source consists of operations under multiple SIC codes, the primary main activity shall form the basis for the initial permit application.

(4) Application submittal schedule. The following sources are subject to the operating permit program and shall submit

initial permit applications according to the following schedule.

(A) No later than ~~six months~~ after the effective date of the federally approved interim state operating permit program September 5, 1996:

(i) Affected sources under the acid rain provisions of the federal Clean Air Act shall submit a permit application for at least the affected units at the site. Regardless of the effective date of the program and the requirement to file an application defined in this section, applications for initial Phase II acid rain permits shall be submitted to the DEQ no later than January 1, 1996, for sulfur dioxide, and by January 1, 1998, for nitrogen oxides, pursuant to the Act, §407.

(ii) Any owner or operator shall submit no less than one-third of their total applications for ~~major~~ Part 70 sources located at sources classified by the following Source Standard Industrial Classification Codes and which belong to a single major industrial grouping other than 28 (Chemicals and allied products) or 29 (Petroleum refining and related industries):

(I) Petroleum and Natural Gas, 1311;

(II) Natural Gas Liquids, 1321;

(III) Electric Services, 4911, 4961;

(IV) Natural Gas Transmission, 4922;

(V) Natural Gas Transmission and Distribution, 4923; and

(VI) Petroleum Bulk Stations and Terminals, 5171.

(B) All remaining Part 70 sources identified in ~~(b)(2)(4)~~ (A) (ii) of this Subsection shall be subject to the operating permit program and shall submit initial permit applications no later than ~~12 months~~ after the effective date of the federally approved interim state operating permit program March 5, 1997.

(C) No later than ~~12 months~~ after the effective date of the federally approved interim state operating permit program March 5, 1997, any owner or operator shall submit their applications for ~~major~~ Part 70 sources located at sources classified by the following Standard Industrial Classification Codes:

(i) Metals, 3312, 3315, 3321, ~~3379~~, 3341, 3351, 3411, 3412, 3432, 3466,

(ii) Brick Plants, 3251, 3297,

(iii) Commercial Printing, 2752, 2761.

(D) No later than ~~28 months~~ after the effective date of the federally approved interim state operating permit program, July 5, 1998, any owner or operator shall submit their applications for ~~major~~ Part 70 sources located at sources classified by the following Standard Industrial Classification Codes:

(i) Refineries, 2911;

(ii) Cement Plants, 3241;

- (iii) Chemical/Carbon, 2819, 2821, 2851, 2861, 2869, 2891, 2895, 2899, 2999, 3053, 3086, 3089;
- (iv) Petroleum Transportation/Terminals/Storage, 4612, 4613;
- (v) Food Products, 2013, 2074, 2095.

(E) All remaining Part 70 sources shall be subject to the operating permit program and shall submit initial permit applications no later than 36 months after the effective date of the federally approved interim state operating permit program March 6, 1999.

(5) ~~Newly regulated sources Application following effective date.~~ A source that becomes subject to the operating permit program established by this Chapter at any time following the effective date shall file an administratively complete operating permit application within 180 days of commencement of operation.

(6) ~~Application acceptability.~~ Notwithstanding the deadlines established in paragraph (4) ~~paragraphs (1), (2), and (3)~~ of this subsection, an application filed prior to the above deadlines following submission of the state program to EPA for approval shall be accepted for processing. ~~For purposes of the 60 day administrative review period established in OAC 252:2-15, the official login date for any Part 70 operating permit application submitted according to the interim schedule in this subsection shall be the date on which the DEQ begins its administrative completeness review.~~

(7) ~~112(g) applications.~~ A source that is required to meet the requirements under section 112(g) of the federal Clean Air Act, or to have a permit under a preconstruction review program under Title I of such Act, shall file an application to obtain an operating permit or permit amendment or modification within twelve months of commencing operation. Where an existing Part 70 operating permit would prohibit such construction or change in operation, the source must obtain a permit revision before commencing construction.

(8) ~~Application for renewal.~~ Sources subject to this Chapter shall file an application for renewal of an operating permit at least six months before the date of permit expiration, unless a longer period (not to exceed 18 months) is specified in the permit. Renewal periods greater than six months are subject to negotiation on a case-by-case basis.

(9) ~~Phase II acid rain permits.~~ Sources required to submit applications under the Acid Rain Program ~~should~~ shall submit these applications as required by 40 CFR 72.30(b)(2)(i) through (viii).

(10) ~~Application completeness.~~ See Uniform Permitting Rules, ~~OAC 252:010-3-50 and 3-51 252:2-15-70 and the definition of administratively complete in 252:100-8-2.~~

[NOTE: 252:100-8-4(b)(2) through (10) from 252:100-8-5(b)(1) through (8)]

252:100-8-5. Permit applications

~~(a) Construction permit. Any new source or modified source which becomes subject to this Subchapter shall be required to obtain a construction permit in accordance with OAC 252:100-7 prior to commencement of construction.~~

~~(b) Duty to apply. For each Part 70 source, the owner or operator shall submit a timely and complete permit application on forms supplied by the Division in accordance with this section.~~

~~(1) Timely application. Sources that are subject to the operating permit program established by this Chapter as of the date the program is approved by EPA and becomes effective (the "effective date") shall file applications on the following schedules outlined in OAC 252:100-8-5(b)(2) 252:100-8-4(b)(2). In the event a major source consists of operations under multiple SIC codes, the main activity shall form the basis for the initial permit application.~~

~~(2) Application submittal schedule. The following sources are subject to the operating permit program and shall submit initial permit applications according to the following schedule.~~

~~(A) No later than six months after the effective date of the federally approved interim state operating permit program:~~

~~(i) Affected sources under the acid rain provisions of the federal Clean Air Act shall submit a permit application for at least the affected units at the site. Regardless of the effective date of the program and the requirement to file an application defined in this section, applications for initial Phase II acid rain permits shall be submitted to the DEQ no later than January 1, 1996, for sulfur dioxide, and by January 1, 1998, for nitrogen oxides, pursuant to the Act, §407.~~

~~(ii) Any owner or operator shall submit no less than one-third of their total applications for major sources located at sources classified by the following Source Standard Industrial Classification Codes and which belong to a single major industrial grouping other than 28 (Chemicals and allied products) or 29 (Petroleum refining and related industries):~~

~~(I) Petroleum and Natural Gas, 1311;~~

~~(II) Natural Gas Liquids, 1321;~~

~~(III) Electric Services, 4911, 4961;~~

~~(IV) Natural Gas Transmission, 4922;~~

~~(V) Natural Gas Transmission and Distribution, 4923;~~

~~and~~

~~(VI) Petroleum Bulk Stations and Terminals, 5171.~~

~~(B) All remaining Part 70 sources identified in (b)(2)(A)(ii) of this Subsection shall be subject to the operating permit program and shall submit initial permit applications no later than 12 months after the effective date of the federally approved interim state operating permit program.~~

~~(C) No later than 12 months after the effective date of the federally approved interim state operating permit program, any owner or operator shall submit their applications for major sources located at sources classified by the following Standard Industrial Classification Codes:~~

~~(i) Metals, 3312, 3315, 3321, 3379, 3341, 3351, 3411, 3412, 3432, 3466,~~

~~(ii) Brick Plants, 3251, 3297,~~

~~(iii) Commercial Printing, 2752, 2761.~~

~~(D) No later than 28 months after the effective date of the federally approved interim state operating permit program, any owner or operator shall submit their applications for major sources located at sources classified by the following Standard Industrial Classification Codes:~~

~~(i) Refineries, 2911,~~

~~(ii) Cement Plants, 3241,~~

~~(iii) Chemical/Carbon, 2819, 2821, 2851, 2861, 2869, 2891, 2895, 2899, 2999, 3053, 3086, 3089,~~

~~(iv) Petroleum Transportation/Terminals/Storage, 4612, 4613,~~

~~(v) Food Products, 2013, 2074, 2095.~~

~~(E) All remaining Part 70 sources shall be subject to the operating permit program and shall submit initial permit applications no later than 36 months after the effective date of the federally approved interim state operating permit program.~~

~~(3) Application following effective date. A source that becomes subject to the operating permit program established by this Chapter at any time following the effective date shall file an administratively complete operating permit application within 180 days of commencement of operation.~~

~~(4) Application acceptability. Notwithstanding the deadlines established in paragraphs (1), (2), and (3) of this subsection, an application filed prior to the above deadlines following submission of the state program to EPA for approval shall be accepted for processing. For purposes of the 60 day administrative review period established in OAC 252.2-15, the official login date for any Part 70 operating permit submitted according to the interim schedule in this subsection shall be the date on which the DEQ begins its administrative completeness review.~~

~~(5) 112(g) applications. A source that is required to meet the requirements under section 112(g) of the federal Clean Air Act, or to have a permit under a preconstruction review program under Title I of such Act, shall file an application to obtain an operating permit or permit amendment or modification within twelve months of commencing operation. Where an existing Part 70 operating permit would prohibit such construction or change in operation, the source must obtain a permit revision before commencing construction.~~

~~(6) Application for renewal. Sources subject to this Chapter shall file an application for renewal of an operating permit~~

~~at least six months before the date of permit expiration, unless a longer period (not to exceed 18 months) is specified in the permit. Renewal periods greater than six months are subject to negotiation on a case by case basis.~~

~~(7) Phase II acid rain permits. Sources required to submit applications under the Acid Rain Program should submit these applications as required by 40 CFR 72.30(b)(2)(i) through (viii).~~

~~(8) Application completeness. See Uniform Permitting Rules, OAC 252:010-3-50 and 3-51.~~

[NOTE: 252:100-8-5(b)(1) through (9) moved to 252:100-8-4(b)]

~~(9) Application content for renewal of expiring permit. In submitting an application for renewal of a DEQ issued Part 70 operating permit, a source may identify terms and conditions in its previous permit that should remain unchanged and incorporate by reference those portions of its existing permit and the permit application and any permit amendment or modification applications that describe products, processes, operations, and emissions to which those terms and conditions apply. The source must identify specifically and list which portions of its previous permit and/or applications are incorporated by reference. In addition, a renewal application must contain:~~

~~(i) information specified in OAC 252:100-8-5(d) for those products, processes, operations, and emissions that:~~

~~(I) are not addressed in the existing permit;~~

~~(II) are subject to applicable requirements or state-only requirements that are not addressed in the existing permit; or~~

~~(III) as to which the source seeks permit terms and conditions that differ from those in the existing permit; and~~

~~(ii) a compliance plan and certification as required in 252:100-8-5(d)(8). [NOTE: 252:100-8-5(b)(9) moved to 252:100-8-7.1(b)]~~

(a)~~(10)~~ **Confidential information.** If a source submits information to the DEQ under a claim of confidentiality, the source shall also submit a copy of such information directly to the Administrator, if the DEQ requests that the source do so.

(b)~~(e)~~ **Duty to supplement or correct application.** Renumbered as OAC 252:100-6-50(f) See 252:100-6-50(e).

(c)~~(d)~~ **Standard application form and required information.**

Sources that are subject to the Part 70 permit program established by this Chapter shall file applications on the standard application form that the DEQ makes available for that purpose in accordance with OAC 252:2-15. The application must include information needed to determine the applicability of any applicable requirement, or state-only requirement, or to evaluate the fee amount required under the schedule approved pursuant to OAC 252:100-8-9 252:100-5-2.2(b)(2). The applicant shall submit the information called for by the application form for each emissions unit at the source to be permitted. The source must

provide a list of any ~~such~~ insignificant activities that are exempted because of size or production rate. Trivial activities need not be listed. The standard application form and any attachments shall require that the following information be provided:

- (1) Identifying information, including company name and address (or plant name and address if different from the company name), owner's name and agent, and telephone number and names of plant site manager/contact.
- (2) A description of the source's processes and products (by two-digit Standard Industrial Classification Code) including any associated with each alternate scenario identified by the source.
- (3) The following emissions-related information:
 - (A) All emissions of pollutants for which the source is major, and all emissions (including fugitive emissions) of regulated air pollutants. The permit application shall describe all emissions of regulated air pollutants emitted from any emissions unit, except where such units are exempted under this subsection ~~(d)~~ (c) or OAC 252:100-8-3(b). ~~The source shall submit additional information related to the emissions of air pollutants sufficient to verify which requirements are applicable to the source, and other information necessary to determine the amount of any permit fees owed under the fee schedule approved pursuant to OAC 252:100-8-9.~~
 - (B) Identification and description of all points of emissions described in subparagraph ~~(d)~~ (c) (3) (A) of this section in sufficient detail to establish the basis for fees and applicability of the ~~federal Clean Air Act's~~ requirements.
 - (C) Emissions rates in tons per year and in such terms as are necessary to establish compliance consistent with the applicable standard.
 - (D) The following information to the extent it is needed to determine or regulate emissions:
 - (i) fuels,
 - (ii) fuel use,
 - (iii) raw materials,
 - (iv) production rates, and
 - (v) operating schedules.
 - (E) Identification and description of air pollution control equipment and compliance monitoring devices or activities.
 - (F) Limitations on source operation affecting emissions or any work practice standards, where applicable, for all regulated pollutants at the covered source.
 - (G) Other information required by any applicable requirement, or state-only requirement (including information related to stack height limitations developed pursuant to section 123 of the ~~federal Clean Air Act~~).
 - (H) Calculations on which the information in items (A) through (G) of this paragraph is based.

- (4) The following air pollution control requirements:
- (A) Citation and description of all applicable requirements, and all state-only requirements, and
 - (B) Description of or reference to any applicable test method for determining compliance with each applicable requirement and state-only requirement.
- (5) Other specific information required under the DEQ's rules and statutes to implement and enforce other applicable requirements of the ~~federal Clean Air Act~~ or of this Chapter or to determine the applicability of such requirements.
- (6) An explanation of any proposed exemptions from otherwise applicable requirements and state-only requirements.
- (7) Additional information as determined to be necessary by the DEQ to define alternative operating scenarios identified by the source pursuant to ~~OAC 252:100-8-6(a)(9)~~ or to define permit terms and conditions implementing ~~OAC 252:100-8-6(h)-252:100-8-6(f)~~ or ~~OAC 252:100-8-6(a)(10)~~.
- (8) A compliance plan for all covered sources that contains all the following:
- (A) A description of the compliance status of the source with respect to all applicable requirements and state-only requirements, as follows:
 - ~~(B) A description as follows:~~
 - (i) For applicable requirements, and state-only requirements, with which the source is in compliance, a statement that the source will continue to comply with such requirements.
 - (ii) For applicable requirements, and state-only requirements, that will become effective during the permit term, a statement that the source will meet such requirements on a timely basis shall satisfy this provision, unless a more detailed schedule is expressly required by the applicable requirement.
 - (iii) For requirements for which the source is not in compliance at the time of permit issuance, a narrative description of how the source will achieve compliance with such requirements.
 - (B)(C) For sources not in complete compliance, a A compliance schedule as follows:
 - ~~(i) For applicable requirements, and state only requirements, with which the source is in compliance, a statement that the source will continue to comply with such requirements.~~
 - ~~(ii) For applicable requirements, and state only requirements, that will become effective during the permit term, a statement that the source will meet such requirements on a timely basis. A statement that the source will meet in a timely manner applicable requirements that become effective during the permit term shall satisfy this provision, unless a more detailed schedule is expressly required by the applicable requirement.~~

~~(i)-(iii)~~ A schedule of compliance for sources that are not in compliance with all applicable requirements, and state-only requirements, at the time of permit issuance. Such a schedule shall include a schedule of remedial measures, including an enforceable sequence of actions with milestones, leading to compliance with any applicable requirements, and state-only requirements, for which the source will be in noncompliance at the time of permit issuance. This compliance schedule shall resemble and be equivalent in stringency to that contained in any judicial consent decree or administrative order to which the source is subject. Any such schedule of compliance shall be supplemental to, and shall not sanction non-compliance with, the applicable requirements on which it is based.

~~(ii)-(D)~~ A schedule for submission of certified progress reports no less frequently than every 6 months ~~for sources required to have a schedule of compliance under OAC 252.100-8-5(d)(8)(C)-(iii)~~.

~~(C)-(E)~~ The compliance plan content requirements specified in this paragraph shall apply and be included in the acid rain portion of a compliance plan for an affected source, except as specifically superseded by regulations promulgated under Title IV of the ~~federal Clean Air Act~~ with regard to the schedule and method(s) the source will use to achieve compliance with the acid rain emissions limitations.

(9) Requirements for compliance certification, including the following:

(A) A certification of compliance with all applicable requirements, and state-only requirements, by a responsible official consistent with subsection ~~(e)~~ (d) of this section and section 114(a)(3) of the ~~federal Clean Air Act~~;

(B) A statement of methods used for determining compliance, including a description of monitoring, recordkeeping, and reporting requirements and test methods;

(C) A schedule for submission of compliance certifications during the permit term, which shall be submitted annually, or more frequently if required by an underlying applicable requirement, state-only requirements, or by the permitting authority; and

(D) A statement indicating the source's compliance status with any applicable enhanced monitoring and compliance certification requirements of the ~~federal Clean Air Act~~.

(10) The use of nationally-standardized forms for acid rain portions of permit applications and compliance plans, as required by regulations promulgated under Title IV of the ~~federal Clean Air Act~~.

~~(11) A list of any such units which satisfy the definition of either insignificant activities or de minimis emissions.~~

(d) ~~(e)~~ Certification. Any application form, report, or compliance certification submitted pursuant to this Chapter shall contain certification by a responsible official of truth,

accuracy, and completeness. This certification and any other certification required under this Chapter shall be signed by a responsible official and shall contain the following language: "I certify, based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete."

(e) ~~(f)~~ **Number of application copies.** See Part 3 of OAC 252:2-15.

252:100-8-6. Permit content

(a) **Standard permit requirements.** ~~To the extent practicable, every Part 70 permits permit~~ issued under this Chapter shall include all applicable requirements, and state-only requirements, (as defined in OAC 252:100-8-2) that apply to the permitted source at the time of issuance. Each permit shall include the following elements:

(1) **Emission limitations and standards.** The permit shall specify emissions limitations and standards that constitute applicable requirements, and state-only requirements, and shall include those operational ~~requirements~~ conditions and limitations necessary to assure compliance with all applicable such requirements.

(A) The permit shall specify and reference the origin of and authority for each term or condition, and identify any difference in form as compared to the applicable requirement, ~~and~~ or state-only requirement, upon which the term or condition is based.

(B) The permit shall state that, where an applicable requirement of the ~~federal Clean Air Act~~ is more stringent than an applicable requirement of regulations promulgated under Title IV of the ~~federal Clean Air Act~~, both provisions shall be incorporated into the permit and shall be enforceable by EPA.

(C) If ~~an applicable~~ the State implementation plan or an applicable requirement allows a source to comply through an alternative emission limit or means of compliance, a source may request that such an alternative limit or means of compliance be specified in its permit. Such an alternative emission limit or means of compliance shall be included in a source's permit upon a showing that it is quantifiable, accountable, enforceable, and based on replicable procedures. The source shall propose permit terms and conditions to satisfy these requirements in its application.

(2) **Permit duration.**

(A) Operating Permits. The permit shall specify a fixed term. The DEQ shall issue permits for any fixed period requested in the permit application, not to exceed five years, except as provided in subparagraphs (i) ~~(A)~~ and (ii) ~~(B)~~ of this paragraph:

(i) ~~(A)~~ Permits issued to affected sources shall in all cases have a fixed term of five years.

(ii) ~~(B)~~ Permits issued to solid waste incineration units combusting municipal waste subject to standards

under section 129(e) of the ~~federal Clean Air Act~~ shall have a term not to exceed 12 years. Such permits shall be reviewed every five years.

(B) Construction permits. See 252:100-8-1.5.

(3) Monitoring and related recordkeeping and reporting requirements.

(A) ~~Each permit shall contain the following requirements with respect to monitoring.~~ Monitoring requirements.

(i) All emissions monitoring and analysis procedures or test methods required under the applicable requirements, and state-only requirements, including any procedures and methods promulgated pursuant to sections 114(a)(3) or 504(b) of the ~~federal Clean Air Act~~;

(ii) Where ~~the~~ an applicable requirement, ~~and~~ or state-only requirement, does not require periodic testing or instrumental or non-instrumental monitoring (which may consist of recordkeeping designed to serve as monitoring), periodic monitoring during the relevant time period sufficient to yield reliable data ~~from the relevant time period~~ that are representative of the source's compliance with the permit, as reported pursuant to (a)(3)(C) of this section. Such monitoring requirements shall assure use of terms, test methods, units, averaging periods, and other statistical conventions consistent with the applicable requirement, or state-only requirement. Recordkeeping provisions may be sufficient to meet the requirements of this subparagraph.

(iii) As necessary, requirements concerning the use, maintenance, and, where appropriate, ~~and~~ installation of monitoring equipment or methods.

(iv) Provisions for the permittee to request the use of alternative test methods or analysis procedures, and provisions for the DEQ to approve or disapprove the request within 60 days.

(B) Recordkeeping requirements. ~~With respect to recordkeeping, the~~ The permit shall incorporate all applicable recordkeeping requirements and require, where applicable, the following:

(i) Records of required monitoring information that include the following:

(I) The date, place as defined in the permit, and time of sampling or measurements;

(II) The date(s) analyses were performed;

(III) The company or entity that performed the analyses;

(IV) The analytical techniques or methods used;

(V) The results of such analyses; and

(VI) The operating conditions ~~as~~ existing at the time of sampling or measurement.

(ii) Retention of records of all required monitoring data and support information for a period of at least five

years from the date of the monitoring sample, measurement, report, or application. Support information includes all calibration and maintenance records and all original strip-chart recordings for continuous monitoring instrumentation, and copies of all reports required by the permit. Where appropriate, the permit may specify that records may be maintained in computerized form.

(C) Reporting requirements. ~~With respect to reporting,~~ the The permit shall incorporate all applicable reporting requirements and require the following requirements:

(i) A permit issued under this ~~Chapter Part~~ shall require the permittee to submit a report of any required monitoring at least every six months. To the extent possible, the schedule for submission of such reports shall be timed to coincide with other periodic reports required by the permit, including the permittee's annual compliance certification. However, the reports may be submitted at any time within the reporting period, as stipulated in the permit.

(ii) Each report submitted under (C) (i) of this paragraph shall identify any exceedances from permit requirements since the previous report that have been monitored by the monitoring systems required under the permit, and any exceedances from the monitoring, recordkeeping and reporting requirements under the permit.

(iii) In addition to semiannual monitoring reports, each permittee shall be required to submit supplemental reports as follows:

(I) Any exceedance resulting from emergency or upset conditions as defined in ~~OAC 252:100-8-6(g)~~ 252:100-8-6(e) shall be reported within 24 hours of the date on which the permittee first becomes aware of the exceedance, if the permittee wishes to assert the affirmative defense authorized under said section, and the permittee shall submit a follow up written report within 10 working days of first becoming aware of the exceedance. The initial report such notice must contain a description of the emergency, any steps taken to mitigate emissions and corrective actions taken.

[NOTE: The underlined language is from 252:100-8-6(g) (3) (D)]

(II) Any exceedance that poses an imminent and substantial danger to public health, safety, or the environment shall be reported as soon as is practicable; but under no circumstance shall notification be more than 24 hours after exceedance.

(III) Any other exceedances that are identified in the permit as requiring more frequent reporting than the permittee's semiannual report shall be reported on the schedule specified in the permit.

(IV) All reports of exceedances shall identify the probable cause of the exceedances and any corrective

actions or preventative measures taken.

(iv) Every report submitted under this subsection shall be certified by a responsible official, except that if a report of an exceedance required under (C)(iii) of this paragraph must be submitted within ten days of the exceedance, the report may be submitted in the first instance without a certification if an appropriate certification is provided within ten days thereafter, together with any corrected or supplemental information required concerning the exceedance. Reports submitted shall be consistent with the requirements of OAC 252:100-9.

(4) **Risk management plans.** If the source is required to develop and register a risk management plan pursuant to section 112(r) of the ~~federal Clean Air Act~~, the permit need only specify that ~~it~~ the permittee will comply with the requirement to register such a plan. Although the requirement to have a risk management plan may be a term of the permit, the risk management plan contents are not part of the permit.

(5) **Title IV allowances.**

(A) No permit revision shall be required for increases in emissions that are authorized by allowances acquired pursuant to the acid rain program, provided that such increases do not require a permit revision under any other applicable requirement.

(B) No limit shall be placed on the number of allowances held by the source. The source may not, however, use allowances as a defense to noncompliance with any other applicable requirement.

(C) The permit shall prohibit emissions exceeding any allowance that the source lawfully holds under Title IV of the ~~federal Clean Air Act~~ or the regulations promulgated thereunder. Compliance with this paragraph will be determined on January 31st of any given year and be based on actual emissions and the number of allowances held for the previous calendar year.

(6) **Severability clause.** The permit shall include a severability clause to ensure the continued validity of the various permit requirements in the event of a challenge to any portions of the permit.

(7) **General requirements.** The permit shall include provisions stating the following:

(A) The permittee must comply with all conditions of the permit. Any permit noncompliance constitutes a violation of the Oklahoma Clean Air Act and is grounds for:

(i) enforcement action;

(ii) permit termination, revocation and reissuance, or modification; or

(iii) denial of a permit renewal application.

(B) It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain

compliance with the conditions of this permit. However, nothing in this subsection shall be construed as precluding consideration of a need to halt or reduce activity as a mitigating factor in assessing penalties for noncompliance if the health, safety, or environmental impacts of halting or reducing operations would be more serious than the impacts of continuing operations.

(C) The permit may be modified, revoked, reopened, and reissued, or terminated for cause. Except as provided under ~~OAC 252:100-8-7(e)(1)~~ 252:100-8-7.2(b)(1) for minor permit modifications, the filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or of a notification of planned changes or anticipated noncompliance does not stay any permit condition.

(D) The permit does not convey any property rights of any sort, or any exclusive privilege.

(E) The permittee shall furnish to the DEQ, upon receipt of a written request and within a reasonable time, any information that the DEQ may request to determine whether cause exists for modifying, reopening, or revoking and reissuing or terminating the permit or to determine compliance with the permit. Upon request, the permittee shall also furnish to the DEQ copies of records required to be kept by the permit. The permittee may make a claim of confidentiality pursuant to ~~OAC 252:100-8-5(b)(10)~~ 27A O.S. 1993 Supp. Section 2-5-105.18 for any information or records submitted under this paragraph.

(8) **Fees.** The permit shall provide that the permittee will pay fees to the DEQ consistent with the fee schedule established under ~~OAC 252:100-8-9~~ 252:100-5-2.2.

(9) **Emissions trading.** The permit shall provide that no permit revision shall be required under any approved economic incentives, marketable permits, emissions trading and other similar programs or processes for changes that are provided for in the permit.

(10) **Operating scenarios.** The permit shall include terms and conditions applicable to all operating scenarios described in the permit application and eligible for approval under applicable requirements, and state-only requirements. The permit shall authorize the permittee to make changes among operating scenarios authorized in the permit without notice, but shall require the permittee contemporaneously with making a change from one operating scenario to another to record in a log at the permitted facility the scenario under which it is operating.

(11) **Emissions averaging.** The permit shall include terms and conditions, if the permit applicant requests them, for the trading or averaging of emissions increases and decreases in the permitted facility, to the extent that the applicable requirements provide for trading or averaging such increases and decreases. Such terms and conditions shall include terms

under subsections (a) and (c) of this section to determine compliance and shall satisfy all requirements of the applicable requirements authorizing such trading or averaging.

(b) **Federally enforceable requirements.**

(1) Except as provided in paragraph (b)(2) of this section, all terms and conditions in a permit issued under this section, including any provisions designed to limit a source's potential to emit, are enforceable by the DEQ, by EPA, and by citizens under section 304 of the ~~federal Clean Air Act~~.

(2) Notwithstanding paragraph (b)(1) of this section, the DEQ shall designate as not being federally enforceable under the ~~federal Clean Air Act~~ any terms and conditions included in the permit that are not required under the ~~federal Clean Air Act~~ or any of its applicable requirements, and such terms and conditions shall not be enforceable by EPA and citizens under section 304 of the ~~federal Clean Air Act~~.

(c) **Compliance requirements.** All permits issued under this ~~Chapter Part~~ shall contain the following elements with respect to compliance:

(1) Consistent with paragraph (a)(3) of this section, compliance certification, testing, monitoring, reporting, and recordkeeping requirements sufficient to assure compliance with the terms and conditions of the permit. Any document (including reports) required by a permit under this ~~Chapter Part~~ shall contain a certification by a responsible official as to the results of the required monitoring.

(2) Inspection and entry requirements that require that, upon presentation of credentials and other documents as may be required by law, the permittee shall allow authorized officials of the DEQ to perform the following ~~(subject to the permittee's right to seek confidential treatment pursuant to OAC 252:100-8-5(b)(10) for confidential information submitted to or obtained by the DEQ under this subsection):~~

(A) Enter upon the permittee's premises during reasonable/normal working hours where a source is located or emissions-related activity is conducted, or where records must be kept under the conditions of the permit;

(B) Have access to and copy, at reasonable times, any records that must be kept under the conditions of the permit;

(C) Inspect at reasonable times and using reasonable safety practices any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under the permit; and

(D) As authorized by the ~~federal Clean Air Act~~ Oklahoma Clean Air Act, sample or monitor at reasonable times substances or parameters for the purpose of assuring compliance with the permit.

(3) A schedule of compliance ~~if to the extent~~ required under ~~OAC 252:100-8-5(d)(8)(C)~~ 252:100-8-5(c)(8)(B).

(4) To the extent required under an applicable schedule of compliance and ~~OAC 252:100-8-5(d)(8)~~ 252:100-8-5(c)(8),

progress reports, to be submitted semiannually, or more frequently if specified in the applicable requirement or by the DEQ. Such progress reports shall contain the following:

(A) Dates for achieving the activities, milestones, or compliance required in the schedule of compliance, and dates when such activities, milestones or compliance were achieved; and

(B) An explanation of why any dates in the schedule of compliance were not or will not be met, and any preventive or corrective measures adopted.

(5) Requirements for compliance certification with terms and conditions contained in the permit that are federally enforceable, including emission limitations, standards, or work practices. Each permit shall specify:

(A) The frequency (which shall be annually unless the applicable requirement, ~~and~~ or state-only requirement, specifies submission more frequently) of submissions of compliance certifications;

(B) In accordance with paragraph (a)(3) of this section, a means for monitoring the compliance of the source with emissions limitations, standards, and work practices;

(C) A requirement that the compliance certification include the following:

(i) The identification of each term or condition of the permit that is the basis of the certification;

(ii) The permittee's current compliance status, as shown by monitoring data and other information available to the permittee;

(iii) Whether compliance was continuous or intermittent;

(iv) The method(s) used for determining the compliance status of the source, currently and over the reporting period as required by paragraph (a)(3) of this section; and

(v) Such other facts as the DEQ may require to determine the compliance status of the source;

(D) A requirement that all compliance certifications be submitted to EPA as well as to the DEQ;

(E) Such additional requirements as may be specified pursuant to sections 114(a)(3) and 504(b) of the federal Clean Air Act; and

(6) Such other provisions as the DEQ may require.

~~(d) General permits.~~

~~(1) The DEQ may, after notice and opportunity for public participation, issue a general permit to any source category if it concludes that the category is appropriate for permitting on a generic basis. Any general permit shall comply with all requirements applicable to other Part 70 permits. No general permit may be issued for affected sources under the acid rain program unless otherwise~~

~~provided in regulations promulgated under Title IV of the federal Clean Air Act.~~

~~(2) A general permit may be issued for a source category based upon an application from a source within the source category or upon the DEQ's own initiative. The DEQ shall, following receipt of an application for a general permit, or upon a determination that issuance of a general permit for a category of sources may be appropriate, follow the same procedures for issuance of a general permit as for any other permit issued under this part.~~

~~(3) A general permit may be issued for the following purposes:~~

~~(A) to establish terms and conditions to implement applicable requirements, and state only requirements, for a source category;~~

~~(B) to establish terms and conditions to implement applicable requirements, and state only requirements, for specified categories of changes to permitted sources;~~

~~(C) to establish terms and conditions for new requirements that apply to sources with existing permits; and~~

~~(D) to establish federally enforceable caps on emissions from sources in a specified category.~~

~~(4) The DEQ may issue a general permit if it finds that:~~

~~(A) there are several permittees, permit applicants, or potential permit applicants who have the same or substantially similar operations, emissions, activities, or facilities;~~

~~(B) the permittees, permit applicants, or potential permit applicants emit the same types of regulated air pollutants;~~

~~(C) the operations, emissions, activities, or facilities are subject to the same or similar standards, limitations, and operating requirements; and~~

~~(D) the operations, emissions, activities, or facilities are subject to the same or similar monitoring requirements.~~

~~(5) A general permit issued under this section shall identify criteria by which sources may qualify for the general permit. After a general permit has been issued, any source may submit a request to be covered under the permit in the form of an application for authorization to operate under the general permit.~~

~~(A) Such application shall identify the source and provide information sufficient to demonstrate that it falls within the source category covered by the general permit, together with any additional information that may be specified in the general permit.~~

~~(B) See OAC 252:2-15 for Tier I permitting procedures and timelines for individual authorizations under general permits. The Agency shall act to approve or deny the application within 90 days of filing.~~

~~(C) A final action approving an authorization to operate~~

~~under a general permit shall not be subject to public comment or judicial review.~~

~~(6) A copy of the general permit, together with a list of sources approved for coverage under it, shall be kept on file for public review at the offices of the DEQ.~~

~~(7) A general permit issued under this section shall provide that any source approved for coverage under a general permit shall be entitled to the protection of the permit shield for all operations, activities, and emissions addressed by the general permit, unless and to the extent that it is subsequently determined that the source does not qualify for the conditions and terms of the general permit.~~

~~(8) If some, but not all, of a source's operations, activities, and emissions are eligible for coverage under one or more general permits, the source may apply for and receive coverage under the general permits for the operations, activities, and emissions that are so eligible. If the source is required under OAC 252:100-8-3 of this part to obtain a permit addressing the remainder of its operations, activities, and emissions, it may apply for and receive a permit that addresses specifically only those items not covered by general permits. In such a case, the source's permit shall identify all operations, activities, and emissions that are subject to general permits and incorporate those general permits by reference. Unless the permit specifically states otherwise, the permit shield shall apply to the terms and conditions of any general permits so incorporated by reference as well as to the terms and conditions specifically stated in the permit.~~

[NOTE: General permits was moved to 252:100-8-6.1]

~~(e) Temporary sources. The DEQ may issue a single permit authorizing emissions from similar operations by the same source owner or operator at multiple temporary locations. The operation must be temporary and involve at least one change of location during the term of the permit. No affected source shall be permitted as a temporary source. Permits for temporary sources shall include the following:~~

~~(1) Conditions that will assure compliance with all applicable requirements at all authorized locations;~~

~~(2) Requirements that the owner or operator notify the permitting authority at least ten days in advance of each change in location; and~~

~~(3) Conditions that assure compliance with all other provisions of this section. [NOTE: Moved to 252:100-8-6.2]~~

~~(d) (f) Permit shield.~~

(1) Each operating permit issued under this section Part shall include a "permit shield" provision, which shall state that compliance with the terms and conditions of the permit (including terms and conditions established for alternate operating scenarios, emissions trading, and emissions averaging, but excluding terms and conditions for which the permit shield is expressly prohibited under this Subchapter) shall be deemed compliance with the applicable requirements

identified and included in the permit.

(2) Upon request, the DEQ shall include in the permit or in a separate written finding issued with the permit a determination identifying specific requirements that do not apply to the source. The source shall specify in its application for such a determination the requirements for as ~~to~~ which the determination is requested. If the determination is issued in a separate finding, that finding shall be summarized in the permit. The permit shall state that the permit shield applies to any requirements so identified. A request for a determination to extend the shield to requirements deemed inapplicable to the source may be made either in the original permit application or in a subsequent application for a permit modification.

(3) A Part 70 permit that does not expressly state that a permit shield exists shall be presumed not to provide such a shield.

(4) Nothing in this section or in the permit shall alter or affect the following:

(A) the provisions of section 303 of the ~~federal Clean Air Act~~, including the authority of the EPA Administrator under that section;

(B) the liability of an owner or operator of a source for any violation of applicable requirements, ~~and~~ or state-only requirements, prior to or at the time of permit issuance;

(C) the applicable requirements of the acid rain program, consistent with section 408(a) of the ~~federal Clean Air Act~~; or

(D) the ability of EPA to obtain information from a source pursuant to section 114 of the ~~federal Clean Air Act~~.

(e) ~~(g)~~ **Emergencies.**

(1) When used in this Subsection, "Emergency" means any situation arising from sudden and reasonably unforeseeable events beyond the control of the source, including acts of God, which situation requires immediate corrective action to restore normal operation, and that causes the source to exceed a technology-based emission limitation under the permit, due to unavoidable increases in emissions attributable to the emergency. An emergency shall not include noncompliance to the extent caused by improperly designed equipment, lack of ~~preventative~~ preventive maintenance, careless or improper operation, or operator error. Quantification of accidental releases shall be made by the best available method.

(2) An emergency constitutes an affirmative defense to an action brought for noncompliance with such technology-based emission limitations if the conditions of paragraph ~~(g)~~ (e) (3) of this section and the reporting requirements of 252:100-8-6(a)(3)(C)(iii)(I) are met.

(3) The affirmative defense of emergency shall be demonstrated through properly signed, contemporaneous operating logs, or other relevant evidence that:

(A) An emergency occurred and that the permittee can

identify the cause(s) of the emergency;

(B) The permitted facility was at the time being properly operated;

(C) During the period of the emergency the permittee took all reasonable steps to minimize levels of emissions that exceeded the emission standards, or other requirements in the permit, ~~and.~~

~~(D) The permittee submitted notice of the emergency to the DEQ within 24 hours of the time when emission limitations were exceeded due to the emergency. Such notice must contain a description of the emergency, any steps taken to mitigate emissions, and corrective actions taken. [NOTE: Moved to 252:100-8-6(a)(3)(C)(iii)(I)]~~

(4) In any enforcement proceeding, the permittee seeking to establish the occurrence of an emergency has the burden of proof.

(5) The provision in this subsection is in addition to any emergency or upset provision contained in any applicable requirement or OAC 252:100-9.

~~(f)(h) Operational flexibility. Any operating scenario allowed for in an applicable Part 70 permit may be implemented by the facility without the need for any permit revision or any notification to the permitting authority. It is incumbent upon the Part 70 permit applicant to apply for any reasonably anticipated alternative facility operating scenarios at the time of initial or renewal permit application.~~

(1) **Applicant's duty to apply for alternative scenarios.**

Any operating scenario allowed for in an applicable Part 70 permit may be implemented by the facility without the need for any permit revision or any notification to the permitting authority. It is incumbent upon the Part 70 permit applicant to apply for any reasonably anticipated alternative facility operating scenarios at the time of initial or renewal permit application.

(2) **Changes resulting in no emissions increases.** A permitted Part 70 source may make changes within the facility that:

(A) Are not modifications under any provision of Title I of the ~~federal Clean Air Act~~;

(B) Do not cause any hourly or annual permitted emission rate of any existing emissions unit to be exceeded; ~~or~~ and

(C) Result in a net Net change in emissions is of zero. ~~is of zero.~~ provided Provided that the facility provides notifies the Administrator and the permitting authority DEQ and EPA in writing at least 7 days with written notification as required below in advance of the proposed changes, which shall be a minimum of 7 days, or such shorter time frame that permitting authority allows for emergencies [as defined in OAC 252:100-8-6(g)]. The source, permitting authority DEQ, and EPA shall attach each such notice to their copy of the relevant permit. For each such change, the written notification required above shall include a brief description of the change within the permitted facility, the

date on which the change will occur, any change in emissions, and any permit term or condition that is no longer applicable as a result of the change. The permit shield described in ~~OAC 252:100-8-6(f)~~ 252:100-8-6(d) does not apply to any change made pursuant to this subsection.

~~(3) Emissions trading in permit. A permitted source may rely on the authority of this section to trade increases and decreases in emissions within the facility, where the implementation plan provides for such emissions trades without a permit modification. In such a case, the advance written notice provided by the permittee shall identify the underlying authority authorizing the trading and shall state when the change will occur, the types and quantities of emissions to be traded, the permit terms or other applicable requirements, and state only requirements, with which the source will comply through emissions trading, and such other information as may be required by the applicable requirement authorizing the emissions trade.~~

~~(i) Special provisions for affected (acid rain) sources~~

~~(1) Application binding until permit issuance or denial. A complete acid rain permit application is binding on the applicant and enforceable as an acid rain permit until an acid rain permit is issued or denied. For applicable permitting procedures, see OAC 252:2-15.~~

~~(2) Exemption petitions. Applicants with small units that burn low-sulfur fuel or sources that retire a unit can petition to have such units exempted from certain permitting and monitoring requirements under the acid rain regulations.~~

~~(3) Permit shield. The acid rain portion of every operating permit is covered by a permit shield. This shield assures that an applicant operating in accordance with a permit issued in accordance with Title IV of the federal Clean Air Act, will be deemed to be operating in compliance with the Acid Rain Program.~~

~~(4) Modifications. See 40 CFR 72.82.~~

~~(5) Duration. Acid rain permits will have a term of five years commencing on the permits effective date. The DEQ may issue a permit with a future effective date.~~

~~(6) Right of intervention. The Administrator may intervene as a matter of right in any administrative appeal involving an Acid Rain permit or denial of an Acid Rain permit.~~

~~(7) Administrative appeal. The administrative appeal period shall be no more than 90 days following the issuance of the Acid Rain permit and the judicial appeal period shall be no more than 90 days following a final agency action.~~

~~(8) Adoption of 40 CFR Part 72 by reference. Owners or operators of sources subject to the acid rain provisions of the federal Clean Air Act shall comply with applicable provisions of 40 CFR Part 72, as published in the Federal Register on January 11, 1993, and on March 23, 1993, which is hereby adopted by reference as rules of the Environmental Quality Board. In such regulations, the term "permitting~~

authority" shall mean the Oklahoma Department of Environmental Quality and the term "Administrator" shall mean the Administrator of the United States Environmental Protection Agency. If the provisions or requirements of 40 CFR Part 72 conflict with this Chapter, the Part 72 provisions and requirements shall apply and take precedence.

(8) The Oklahoma Department of Environmental Quality hereby adopts and incorporates by reference the provisions of 40 CFR part 72, as published in the Federal Register on January 11, 1993, and on March 23, 1993 for purposes of implementing an acid rain program that meets the requirements of Title IV of the Clean Air Act. The term "permitting authority" shall mean the Oklahoma Department of Environmental Quality and the term "Administrator" shall mean the Administrator of the United States Environmental Protection Agency. If the provisions or requirements of 40 CFR part 72 conflict with or are not included in Oklahoma Administrative Code 252:100-8, the part 72 provisions and requirements shall apply and take precedence. [NOTE: Moved to 252:100-8-6.3]

252:100-8-6.1 General permits

(a) Applicability.

(1) The DEQ may, after notice and opportunity for public participation, issue a general permit for to any source category if it concludes that the category is appropriate for permitting on a generic basis. Any general permit shall comply with all requirements applicable to other Part 70 permits. No general permit may be issued for affected sources under the acid rain program unless otherwise provided in regulations promulgated under Title IV of the federal Clean Air Act.

(2) A general permit may be issued for a source category based upon an application from a source within the source category or upon the DEQ's own initiative. The DEQ shall, following receipt of an application for a general permit, or upon a determination that issuance of a general permit for a category of sources may be appropriate, follow the same procedures for issuance of a general permit as for any other permit issued under this part.

(3) A general permit may be issued for the following purposes to establish:

(A) to establish terms Terms and conditions to implement applicable requirements, and state-only requirements, for a source category.

(B) to establish terms Terms and conditions to implement applicable requirements, and state-only requirements, for specified categories of changes to permitted sources.

(C) to establish terms Terms and conditions for new requirements that apply to sources with existing permits, and.

(D) to establish federally enforceable Federally-

enforceable caps on emissions from sources in a specified category.

- (4) The DEQ may issue a general permit if it finds that:
- (A) There there are several permittees, permit applicants, or potential permit applicants who: have the same or substantially similar operations, emissions, activities, or facilities;
 - (i) Have the same or substantially similar operations, emissions, activities, or facilities.
 - (ii) ~~(B) the permittees, permit applicants, or potential permit applicants emit~~ Emit the same types of regulated air pollutants.
 - (B) ~~(C) the~~ The operations, emissions, activities, or facilities are subject to the same or similar: standards, limitations, and operating requirements; and
 - (i) Standards, limitations, and operating requirements.
 - (ii) ~~(D) the operations, emissions, activities, or facilities are subject to the same or similar monitoring~~ Monitoring requirements.

[NOTE: 252:100-8-6.1(a) (1) through (4) was 252:100-8-6(d) (1) through (4)]

~~(5)(8)~~ If some, but not all, of a source's operations, activities, and emissions are eligible for coverage under one or more general permits, the source may must apply for an individual Part 70 permit for all of its covered sources, and receive coverage under the general permits for the operations, activities, and emissions that are so eligible. If the source is required under OAC 252:100-8-3 of this part to obtain a permit addressing the remainder of its operations, activities, and emissions, it may apply for and receive a permit that addresses specifically only those items not covered by general permits. In such a case, the source's permit shall identify all operations, activities, and emissions that are subject to general permits and incorporate those general permits by reference. Unless the permit specifically states otherwise, the permit shield shall apply to the terms and conditions of any general permits so incorporated by reference as well as to the terms and conditions specifically stated in the permit.

[NOTE: Was 252:100-8-6(d) (8)]

(6) Facilities located in areas that are federally designated as non-attainment are not eligible for coverage under a general operating permit. [NOTE: From 252:100-10-5(h) (3)]

(7) Sites that are not in compliance with all applicable State and Federal air regulations are eligible for a general operating permit only if:

(A) They submit to DEQ an approvable compliance plan, and

(B) The facility submits to Tier II public review. [NOTE: From 252:100-10-5(h) (5)]

(8) Facilities with existing state operating permits are eligible for coverage under a general operating permit:

[NOTE: From 252:100-10-5(h) (6)]

(9) Facilities existing prior to the effective date of any

applicable standard that would have created specific quantifiable and enforceable emission rates are eligible for coverage under a general operating permit. [NOTE: From 252:100-10-5(h)(7)]

(b) Authorization.

(1)(5) A general permit issued under this section shall identify criteria by which sources may qualify for the general permit. After a general permit has been issued, any source may submit a request to be covered under the permit in the form of an application for authorization to operate under the general permit. (A) Such application shall identify the source and provide information sufficient to demonstrate that it falls within the source category covered by the general permit, together with any additional information that may be specified in the general permit. [NOTE: Was 252:100-8-6(d)(5)]

(2)(B) See OAC 252:2-15 for Tier I permitting procedures and timelines for individual authorizations under general permits. The Agency DEQ shall act to approve or deny the application within 90 days of filing. [NOTE: Was 252:100-8-6(d)(5)(B)]

(3)(C) A final action approving an authorization to operate under a general permit shall not be subject to public comment or judicial review. [NOTE: Was 252:100-8-6(d)(5)(C)]

(4)(d) The DEQ will publish, at least monthly, an updated list of sources approved for inclusion under the general operating permit and any aggrieved person may petition the DEQ to review the approval of any stationary source for inclusion under a general operating permit within 30 days after publication of the list. [NOTE: From 252:100-10-3(d)]

(5)(6) A copy of the general permit, together with a list of sources approved for coverage under it, shall be kept on file for public review at the offices of the DEQ. [NOTE: Was 252:100-8-6(d)(6)]

(c) Permit Shield. A general permit issued under this section shall provide that any source approved for coverage under a general permit shall be entitled to the protection of the permit shield for all operations, activities, and emissions addressed by the general permit, unless and to the extent that it is subsequently determined that the source does not qualify for the conditions and terms of the general permit. [NOTE: Was 252:100-8-6(d)(7)]

(d) Revisions

(1)(b) If an owner or operator of a source(s) makes a change to a source covered by a general operating permit that affects any applicability information supplied in the general operating permit application, but the source is still eligible for coverage authorized to operate under a general operating permit, the owner or operator must revise the general operating permit application and submit it to the DEQ within 60 days.

(2)(e) After coverage is granted to a particular source under the general permit, physical changes to the facility which

result in the addition of equipment new to the facility, either as a replacement (except like-kind replacements) or net addition, will require a construction permit or a new authorization permit except as allowed in (d) (3) below. Any significant modification to a stationary source included under a general operating permit shall subject the source to a Tier II review.

(3)(e) If equipment new to the facility is newly purchased or is relocated from another facility where a permit was issued with enforceable emissions limits on that equipment, then authorization approval under the general operating permit shall be modified or amended to include an emissions limit for the newly purchased or relocated equipment. "Grandfathered" emissions sources at the facility will retain only the equipment descriptions as permit conditions. "Grandfathered" means a unit which that was in existence prior to the effective date of any applicable regulation which that would have created specific quantifiable and enforceable emissions rate limits.

(4)(f) For a general operating permit, if emissions change for any reason that subjects the facility to PSD permitting requirements, then the facility no longer qualifies for a general operating permit. However, the existing general operating permit will remain valid during the time period covered by the PSD construction permit until the facility receives a Part 70 site specific operating permit for the entire facility.

[NOTE: 252:100-8-6.1(d) (1) through (4) are from 252:100-10-5(b), (c), (e) and (f) respectively]

(e) Permit Content. Specific terms and conditions that which will make the applicable rules and requirements enforceable shall be stipulated in the general operating permit. [NOTE: From 252:100-10-5(h) (8)]

(f) Renewal of general operating permits.

(1) The DEQ will initiate the renewal process for a general operating permit at least 180 days prior to the permit's expiration date and will follow the requirements in 252:100-8-7(a).

(2) Owners or operators shall apply to renew an authorization at least 60 days prior to expiration of the existing authorization. Upon submittal of a timely and administratively complete application, the applicant may continue to operate until such time as the DEQ grants or denies coverage under the general operating permit.

252:100-8-6.2(e) Temporary sources. The DEQ may issue a single permit authorizing emissions from similar operations by the same source owner or operator at multiple temporary locations. The operation must be temporary and involve at least one change of location during the term of the permit. No affected source shall be permitted as a temporary source. Permits for temporary sources shall include the following:

- (1) Conditions that will assure compliance with all applicable requirements at all authorized locations;
- (2) Requirements that the owner or operator notify the permitting authority at least ten days in advance of each change in location; and
- (3) Conditions that assure compliance with all other provisions of this section. [NOTE: 252:100-8-6.2 was moved from 252:100-8-6(e)]

252:100-8-6.3. ~~(i)~~ Special provisions for affected (acid rain) sources

~~(a)(1)~~ Application binding until permit issuance or denial. A complete acid rain permit application is binding on the applicant and enforceable as a an acid rain permit until an acid rain permit is issued or denied. For applicable permitting procedures, see OAC 252:2-15.

~~(b)(2)~~ Exemption petitions. Applicants with small units that burn low sulfur fuel or sources that retire a unit can petition to have such units exempted from certain permitting and monitoring requirements under the acid rain regulations.

~~(c)(3)~~ Permit shield. The acid rain portion of every operating permit is covered by a permit shield. This shield assures that an applicant operating in accordance with a permit issued in accordance with Title IV of the federal Clean Air Act, will be deemed to be operating in compliance with the Acid Rain Program.

~~(d)(4)~~ Modifications. See 40 CFR 72.82.

~~(e)(5)~~ Duration. Acid rain permits will have a term of five years commencing on the permits effective date. The DEQ may issue a permit with a future effective date.

~~(f)(6)~~ Right of intervention. The Administrator may intervene as a matter of right in any administrative appeal involving an Acid Rain permit or denial of an Acid Rain permit.

~~(g)(7)~~ Administrative appeal. The administrative appeal period shall be no more than 90 days following the issuance of the Acid Rain permit and the judicial appeal period shall be no more than 90 days following a final agency action.

~~(h)(8)~~ Adoption of 40 CFR Part 72 by reference. Owners or operators of sources subject to the acid rain provisions of the federal Clean Air Act shall comply with applicable provisions of 40 CFR Part 72, as published in the Federal Register on January 11, 1993, and on March 23, 1993, which is hereby adopted by reference as rules of the Environmental Quality Board. In such regulations, the term "permitting authority" shall mean the Oklahoma Department of Environmental Quality and the term "Administrator" shall mean the Administrator of the United States Environmental Protection Agency. If the provisions or requirements of 40 CFR Part 72 conflict with this Chapter, the Part 72 provisions and requirements shall apply and take precedence.

~~(8)~~ The Oklahoma Department of Environmental Quality DEQ hereby adopts and incorporates by reference the provisions of 40 CFR Part part 72, as published in the Federal Register on January 11,

1993, and on March 23, 1993, and on October 24, 1997, for purposes of implementing an acid rain program that meets the requirements of Title IV of the Clean Air Act. The term "permitting authority" shall mean the Oklahoma Department of Environmental Quality and the term "Administrator" shall mean the Administrator of the United States Environmental Protection Agency. If the provisions or requirements of 40 CFR Part part 72 conflict with or are not included in Oklahoma Administrative Code 252:100-8, the Part part 72 provisions and requirements shall apply and take precedence.

[NOTE: 252:100-8-6.3 was moved from 252:100-8-6(i)]

252:100-8-7. ~~Permit issuance, renewal, reopenings, and revisions~~

(a) ~~Action on application; issuance/denial criteria.~~

(1) ~~Criteria for issuance.~~ A permit, permit modification, or renewal may be issued only if the applicable requirements of 27A O.S.Supp. 1995, ~~Section 2-14-101 et seq.~~; ~~OAC 252:2-15;~~ and this Chapter have been met and the DEQ has determined that the conditions of the permit provide for compliance with all applicable requirements and for applications subject to ~~OAC 252:100-8-8,~~ that the requirements of that section have been satisfied.

(2) ~~Draft permits and notice thereof.~~ See ~~OAC 252:2-15.~~ The draft permit shall be accompanied by a statement that sets forth the legal and factual basis for the draft permit conditions (including references to the applicable statutory or regulatory provisions).

(3) ~~EPA review.~~ See ~~OAC 252:100-8-8.~~

(4) ~~DEQ final action.~~ See ~~OAC 252:2-15,~~ and ~~OAC 252:100-8-8~~ when applicable.

(5) ~~Timeline for technical review and issuance.~~ See ~~OAC 252:2-15-70 through 15-72.~~ Except as provided in paragraphs (A) and (B) of this paragraph, the The DEQ shall take final action on each application for a permit within 18 months after beginning its technical review in accordance with ~~252:2-15-70 through 15-72 and OAC 252:100-8-5(b)(5) 252:100-8-4(b)(7).~~

(6) ~~Action priorities.~~ See ~~OAC 252:100-8-5(b) 252:100-8-4(b)(2) through (10) and 252:100-8-7.1(a).~~

(7) ~~No issuance by default.~~ See ~~27A:2-5-112(D).~~

(b) ~~Requirement for a permit.~~ See ~~OAC 252:100-8-4(b) 252:100-8-4.~~

~~(c) Permit renewal and expiration.~~

(1) ~~Applications for permit renewal after the transition period, and for permit for new Part 70 sources or amendments, shall be considered timely if the applicant meets the requirements of this subsection. [NOTE: Moved to 252:100-8-7.1(a)(1)]~~

(2) ~~Applications for permit renewal shall be subject to the same procedural requirements, including those for public participation, affected State comment, and EPA review, that apply to initial permit issuance under OAC 252:100-8-7(a).~~

[NOTE: Moved to 252:100-8-7.1(c)]

~~(3) A source's right to operate shall terminate upon the expiration of its permit unless a timely and complete renewal application has been submitted at least 180 days before the date of expiration. [NOTE: Moved to 252:100-8-7.1(d)(1)]~~

~~(4) If a timely and complete application for a permit renewal is submitted, but the DEQ fails to take final action to issue or deny the renewal permit before the end of the term of the previous permit, then the permit shall not expire until the renewal permit has been issued or denied, and any permit shield granted for the permit shall continue in effect during that time. [NOTE: Moved to 252:100-8-7.1(d)(2)]~~

~~(5) Stationary sources operating under permits issued by the DEQ under this subchapter shall apply for permit reissuance at least 180 days before the expiration of the existing permit, unless the permit specifies that the application must be submitted sooner. The DEQ shall require in a permit that a reissuance application be submitted sooner if it determines that an earlier application is needed to minimize the possibility of expiration prior to reissuance. The DEQ may make the determination if it anticipates a relatively lengthy permit review process due to the complexity of the stationary source or anticipated involvement of the public. In no event shall the permit require application for reissuance sooner than eighteen months prior to the expiration of the permit. [NOTE: Moved to 252:100-8-7.1(a)(2)]~~

~~(d) Administrative permit amendments.~~

~~(1) When used in this subsection "Administrative permit amendment" means a permit revision that:~~

~~(A) Corrects typographical errors;~~

~~(B) Identifies a change in the name, address, or phone number of any person identified in the permit, or provides a similar minor administrative change at the source;~~

~~(C) Requires more or less frequent monitoring or reporting by the permittee;~~

~~(D) Allows for a change in ownership or operational control of a source where no other change in the permit is necessary, provided that a written agreement containing a specific date for transfer of permit responsibility, coverage, and liability between the current and new permittee has been submitted to the DEQ;~~

~~(E) Incorporates into the permit the requirements from preconstruction review permits issued by the DEQ under OAC 252:100-7. Enhanced New Source Review (NSR) procedures apply to all major sources and all State Implementation Plan (SIP) minor source changes to majors.~~

~~(2) Administrative permit amendments for purposes of the acid rain portion of the permit shall be governed by regulations promulgated under Title IV of the federal Clean Air Act.~~

~~(3) An administrative permit amendment shall be made by the DEQ in accordance with the following:~~

~~(A) The DEQ shall take final action on a request for an~~

~~administrative permit amendment within 60 days from the date of receipt of such a request, and may incorporate the proposed changes without providing notice to the public or affected States provided that it designates any such permit revisions as having been made pursuant to this paragraph.~~

~~(B) The DEQ shall submit a copy of the revised permit to the Administrator upon the Administrator's request.~~

~~(C) The source may implement the changes addressed in the request for an administrative amendment immediately upon submittal of the request.~~

~~(4) The DEQ shall, upon taking final action granting a request for an administrative permit amendment, allow coverage by the permit shield in OAC 252:100-8-6(f) for administrative permit amendments made pursuant to subparagraph (d)(1)(E) of this section.~~

[NOTE: 252:100-8-7(d) was moved to 252:100-8-7.2(a)]

~~(e) Permit modification. A permit modification is any revision to an operating permit that cannot be accomplished under the program's provisions for administrative permit amendments under subsection (d) of this section. A permit modification for purposes of the acid rain portion of the permit shall be governed by regulations promulgated under Title IV of the federal Clean Air Act.~~

~~(1) Minor permit modification procedures.~~

~~(A) Criteria.~~

~~(i) Minor permit modification procedures may be used only for those permit modifications that:~~

~~(I) Do not violate any applicable requirement, or state only requirements;~~

~~(II) Do not involve significant changes to existing monitoring, reporting or recordkeeping requirements in the permit;~~

~~(III) Do not require or change a case by case determination of an emission limitation or other standard, or a source specific determination for temporary sources of ambient impacts, or a visibility or increment analysis;~~

~~(IV) Do not seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement, or state only requirement, and that the source has assumed to avoid an applicable requirement, or state only requirement, to which the source would otherwise be subject. Such terms and conditions include federally enforceable emissions caps assumed to avoid classification as a modification under any provision of Title I and alternative emissions limits approved pursuant to regulations promulgated under §§112(i)(5) of the federal Clean Air Act; and~~

~~(V) Are not modifications under any provision of Title I of the federal Clean Air Act.~~

~~(ii) Notwithstanding OAC 252:100-8-7(c)(1)(A)(i) and OAC~~

~~252:100-8-7(c)(2)(A), minor permit modification procedures may be used for permit modifications involving the use of economic incentives, marketable permits, emissions trading, and other similar approaches, to the extent that such minor permit modification procedures are explicitly provided for in an applicable implementation plan or in applicable requirements promulgated by EPA.~~

~~(B) Application. To use the minor permit modification procedures, a source shall submit an application requesting such use which shall meet the permit application requirements of Tier I under OAC 252:2-15 and shall include the following:~~

~~(i) A description of the change, the emissions resulting from the change, and any new applicable requirements, and state only requirements, that will apply if the change occurs;~~

~~(ii) The source's suggested modification language;~~

~~(iii) Certification by a responsible official, that the application and the proposed modification meet the criteria for use of minor permit modification procedures; and~~

~~(iv) Completed forms for any notices required by OAC 252:2-15 and, regarding notice to EPA and affected states, as required under subparagraph (C) of this paragraph.~~

~~(C) EPA and affected state notification. If the proposed minor modification is of a permit that underwent EPA review in accordance with OAC 252:100-8-8, the provisions of that section shall apply to the minor modification application unless waived by the Administrator.~~

~~(D) Timetable for issuance. Within 90 days of the DEQ's receipt of a complete application under OAC 252:2-15 the DEQ shall:~~

~~(i) Issue the minor permit modification as approved;~~

~~(ii) Deny the minor permit modification application; or~~

~~(iii) Determine that the requested modification does not meet the minor permit modification criteria and should be reviewed under the significant modification procedures or administrative amendment procedures.~~

~~(E) Source's ability to make change. Immediately after filing an application meeting the requirements of these minor permit modification procedures, the source is authorized to make the change or changes proposed in the application. After the source makes the change allowed by the preceding sentence, and until the DEQ takes any of the actions specified in (1)(D)(i) through (iii) of this section, the source must comply with both the applicable requirements and state only requirements, governing the change and the proposed permit terms and conditions. During this period, the source need not comply with the existing terms and conditions it seeks to modify. However, if the source fails to comply with its proposed permit terms and~~

~~conditions during this time period, the existing permit terms and conditions it seeks to modify may be enforced against it.~~

~~(F) Permit shield. The permit shield under OAC 252.100-8-6(f) will not extend to minor permit modifications.~~

~~(G) Permittee's risk in commencing construction. The permittee assumes the risk of losing any investment it makes toward implementing a modification prior to receiving a permit amendment authorizing the modification. The DEQ will not consider the possibility of the permittee suffering financial loss due to such investment when deciding whether to approve, deny, or approve in modified form a minor permit amendment.~~

~~(2) Significant modification procedures.~~

~~(A) Criteria. Significant modification procedures shall be used for applications requesting permit modifications that:~~

~~(i) Involve any significant amendment to existing monitoring, reporting, or recordkeeping requirements in the permit;~~

~~(ii) Require any amendment to establish or amend a permit condition that is required to be based on a case by case determination of an emission limitation or other standard, on a source specific determination of ambient impacts, or on a visibility or increment analysis;~~

~~(iii) Seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement, and state only requirement, and that the source has assumed to avoid an applicable requirement, and state only requirement, to which the source would otherwise be subject. Such terms and conditions include:~~

~~(I) A federally enforceable emissions cap assumed to avoid classification as a modification under any provision of Title I;~~

~~(II) An alternative emissions limit approved pursuant to regulations promulgated under section 112(i)(5) of the federal Clean Air Act; and~~

~~(iv) Are modifications under any provision of Title I of the federal Clean Air Act; and,~~

~~(v) Do not qualify as minor permit modifications or administrative amendments.~~

~~(B) Procedures for processing. Significant permit modifications shall meet all requirements of these rules that are applicable to Tier II applications. The application for the modification shall describe the change, the emissions resulting from the change, and any new applicable requirements, and state only requirements, that will apply if the change occurs.~~

~~(C) Issuance. The DEQ shall complete review of significant permit modifications within nine months after receipt of a complete application, but shall be authorized to extend that date by up to three months for cause.~~

[NOTE: 252:100-8-7(e) was moved to 252:100-8-7.2(b)]

~~(f) Reopening for cause.~~

~~(1) Mandatory reopening.~~ Each issued permit shall include provisions specifying the conditions under which the permit will be reopened prior to the expiration date of the permit. A permit shall be reopened and revised under any of the following circumstances:

~~(A) Additional federal applicable requirements become applicable to a stationary source with a remaining permit term of three or more years. Such a reopening and amendment shall be completed not later than 18 months after promulgation of the federal applicable requirement. Reopening is allowed if an applicable requirement becomes effective and the original permit or any of its terms and conditions has been extended pursuant to the application shield provided at OAC 252:100-8-7(c)(4) beyond the 18-month timeframe for revision. No such reopening is required if the effective date of the requirement is later than the date on which the permit is due to expire.~~

~~(B) Additional requirements (including excess emissions requirements) become applicable to an affected source under the acid rain program. Upon approval by the administrator, excess emissions offset plans shall be deemed to be incorporated into the permit.~~

~~(C) The agency or the administrator determines that the permit contains a material mistake or that inaccurate statements were made in establishing the emissions standards, limitations, or other terms or conditions of the permit.~~

~~(D) The administrator or the agency determines that the permit must be revised or revoked to assure compliance with the applicable requirements.~~

~~(2) Discretionary reopening.~~ The agency may reopen and amend a permit when:

~~(A) additional state only requirements become applicable to a permitted stationary source, and the effective date of the requirement is at least 18 months prior to the date on which the permit is due to expire;~~

~~(B) alterations or modifications to the permitted facility will result in or have the potential to result in significant alteration of the nature or quantity of regulated air pollutants to be emitted by the permittee;~~

~~(C) the agency receives information previously unavailable to the agency that shows that the terms and conditions of the permit do not accurately represent the actual circumstances relating to the permitted facility;~~

~~(D) a court of competent jurisdiction invalidates or modifies an Oklahoma or federal statute or rule or federal guideline upon which a condition of the permit is based; and~~

~~(E) an event occurs that is beyond the control of the permittee that necessitates modification of a compliance schedule in the permit.~~

~~(3) Reopening procedures. To reopen and amend a permit, the agency shall follow the procedures that apply to significant permit amendments under this chapter, unless the amendment can be made as an administrative amendment under OAC 252:100-8-7(d). Mandatory reopenings under OAC 252:100-8-7(f)(1) shall be made as expeditiously as practicable. In lieu of an application, the significant permit amendment process will commence when the agency gives the permittee written notice of its intent to amend the permit. The agency shall not issue the amendment, or make public notice of the amendment where public notice is required, until at least thirty days after the agency has given the permittee consents to less notice, or in the case of an emergency. In cases where public participation is required, only those portions of the permit which the agency proposes to amend shall be open for public comment or consideration at a meeting or hearing.~~

[NOTE: 252:100-8-7(f) was moved to 252:100-8-7.3(a), (b) and (c)]

~~(g) Reopenings for cause by EPA.~~

~~(1) If the Administrator finds that cause exists to terminate, modify, or revoke and reissue a permit, the Administrator shall notify the permitting authority and the permittee of such findings in writing.~~

~~(2) The permitting authority shall, within 90 days after receipt of such notification, forward to EPA a proposed determination of termination, modification, or revocation and reissuance, as appropriate. The Administrator may extend this 90 day period for an additional 90 days if he finds that a new or revised permit application is necessary or that the permitting authority must require the permittee to submit additional information.~~

~~(3) The Administrator will review the proposed determination from the permitting authority within 90 days of receipt.~~

~~(4) The permitting authority shall have 90 days from receipt of an EPA objection to resolve any objection that EPA makes and to terminate, modify, or revoke and reissue the permit in accordance with the Administrator's objection.~~

~~(5) If the permitting authority fails to submit a proposed determination pursuant to this subsection, or fails to resolve any objection pursuant to this subsection, the Administrator will terminate, modify, or revoke and reissue the permit after taking the following actions:~~

~~(A) Providing at least 30 days' notice to the permittee in writing of the reasons for any such action.~~

~~(B) Providing the permittee an opportunity for comment on the Administrator's proposed action and an opportunity for a hearing.~~

[NOTE: 252:100-8-7(g) was moved to 252:100-8-7.3(d)]

~~(h) Revocations.~~

~~(1) Permit revocation without reissuance. The agency may revoke permits and not reissue them when:~~

~~(A) there exists at the permitted facility unresolved~~

~~noncompliance with applicable requirements or a condition of the permit, and the permittee refuses to undertake an enforceable schedule of compliance to resolve the noncompliance;~~

~~(B) the permittee fails to disclose fully the facts relevant to issuance of the permit or submits false or misleading information to the agency or the administrator;~~
~~(C) the permittee has failed to comply with any requirement under OAC 252:100-9 to pay fees; or~~
~~(D) the permittee has failed to pay a penalty owed pursuant to court order, consent decree, stipulation agreement, or schedule of compliance.~~

~~(2) Revocation procedures. The agency shall give notice to the permittee of its intention to revoke a permit without reissuance. This notice must state that within 30 days of the receipt of the notice the permittee may request a contested case hearing be held on the proposed action, except that the agency may provide less notice in case of an emergency. If the permittee requests a contested case hearing, the agency shall hold the hearing in accordance with the Oklahoma Administrative Procedures Act.~~

[NOTE: 252:100-8-7(h) was moved to 252:100-8-7.4]

~~(i) Public participation. See 27A O.S.Supp. 1995, § 2-14-101 et seq. and OAC 252:2-15.~~

~~(j) Judicial review. Any final action in granting or denying an application for a permit, permit amendment or modification, or permit renewal shall be subject to judicial review in the court of appropriate jurisdiction upon an application filed by the applicant or permittee, or by any affected state or other person who participated in the public comment process. Except for authorizations under General Permits, judicial review is available to all affected parties for all final permit actions including minor modifications and administrative actions. If no public comment procedure was employed for the action under challenge, an application for review may be filed by the permittee or an affected state. The opportunity for judicial review provided for in this subsection shall be the exclusive means for obtaining judicial review of any permit action.~~

~~(1) No application for judicial review may be filed more than 90 days following the final action on which review is sought, unless the grounds for review arose at a later time, in which case the application for review shall be filed within 90 days of the date on which the grounds for review first arose and review shall be limited to such later arising grounds.~~

~~(2) Any application for judicial review shall be limited to issues that:~~

~~(A) were raised in written comments filed with the Agency or during a public hearing on the proposed permit action (if the grounds on which review is sought were known at that time), except that this restriction shall not apply if the person seeking review was not afforded an advance opportunity to comment on the challenged action; and~~

~~(B) are germane and material to the permit action at issue.~~
~~(3) For purposes of this section, "final action" shall include a failure by the Agency to take final action to grant or deny an application within the time specified in this Chapter.~~

[NOTE: 252:100-8-7(j) was moved to 252:100-8-7.5]

252:100-8-7.1.(e) Permit renewal and expiration

(a) Timely application for permit renewal.

(1) Applications for permit renewal after the transition period, and for permits permit for new Part 70 sources or amendments, shall be considered timely if the applicant meets the requirements of this subsection. [NOTE: Was 252:100-8-7(c)(1)]

(2) Stationary sources operating under permits issued by the DEQ under this Subchapter subchapter shall apply for permit reissuance at least 180 days before the expiration of the existing permit, unless the permit specifies that the application must be submitted sooner. The DEQ shall require in a permit that a reissuance application be submitted sooner if it determines that an earlier application is needed to minimize the possibility of expiration prior to reissuance. The DEQ may make the determination if it anticipates a relatively lengthy permit review process due to the complexity of the stationary source or anticipated involvement of the public. In no event shall the permit require application for reissuance sooner than eighteen months prior to the expiration of the permit. [NOTE: Was 252:100-8-7(c)(5)]

(b)(9) Application content for renewal of expiring permit. In submitting an application for renewal of a DEQ-issued Part 70 operating permit, a source may identify and incorporate by reference terms and conditions in its previous permit and permit application(s) that should remain unchanged. terms and conditions in its previous permit that should remain unchanged and incorporate by reference those portions of its existing permit and the permit application and any permit amendment or modification applications that describe products, processes, operations, and emissions to which those terms and conditions apply. The source must identify specifically and list which portions of its previous permit and/or applications are incorporated by reference. In addition, a renewal application must contain:

(1)(i) information specified in OAC 252:100-8-5(d) 252:100-8-5(c) for those products, processes, operations, and emissions that:

(A)(I) That are not addressed in the existing permit;

(B)(II) That are subject to applicable requirements, or state-only requirements that are not addressed in the existing permit; or

(C)(III) For as to which the source seeks permit terms and conditions that differ from those in the existing permit; and

~~(2)(ii)~~ a compliance plan and certification as required in ~~OAC 252:100-8-5(d)(8)~~ 252:100-8-5(c)(8). [NOTE: Was 252:100-8-5(b)(9)]

(c)(2) Issuance of renewal permit. Applications for permit renewal shall be subject to the same procedural requirements, including those for public participation, affected State comment, and EPA review, that apply to initial permit issuance under OAC 252:100-8-7(a). [NOTE: Was 252:100-8-7(c)(2)]

(d) Expiration of permit.

~~(1)(3)~~ A source's right to operate shall terminate upon the expiration of its permit unless a timely and complete renewal application has been submitted at least 180 days before the date of expiration. [NOTE: Was 252:100-8-7(c)(3)]

~~(2)(4)~~ If a timely and complete application for a permit renewal is submitted, but the DEQ fails to take final action to issue or deny the renewal permit before the end of the term of the previous permit, then the permit shall not expire until the renewal permit has been issued or denied, and any permit shield granted for the permit shall continue in effect during that time. [NOTE: Was 252:100-8-7(c)(4)]

~~(5)~~ Stationary sources operating under permits issued by the DEQ under this subchapter shall apply for permit reissuance at least 180 days before the expiration of the existing permit, unless the permit specifies that the application must be submitted sooner. The DEQ shall require in a permit that a reissuance application be submitted sooner if it determines that an earlier application is needed to minimize the possibility of expiration prior to reissuance. The DEQ may make the determination if it anticipates a relatively lengthy permit review process due to the complexity of the stationary source or anticipated involvement of the public. In no event shall the permit require application for reissuance sooner than eighteen months prior to the expiration of the permit. [NOTE: Moved to 252:100-8-7.1(a)(2)]

252:100-8-7.2.(d) Administrative permit amendments and permit modifications

(a) Administrative permit amendments.

(1) When used in this subsection An "Administrative administrative permit amendment" means a permit revision that:

(A) Corrects typographical errors;

(B) Identifies a change in the name, address, or phone number of any person identified in the permit, or provides a similar minor administrative change at the source;

(C) Requires more or less frequent monitoring or reporting by the permittee;

(D) Allows for a change in ownership or operational control of a source where no other change in the permit is necessary, provided that a written agreement containing a specific date for transfer of permit responsibility, coverage, and liability between the current and new permittee has been submitted to the DEQ;

(E) Incorporates into the permit the requirements from preconstruction review permits issued by the DEQ under this Part OAC 252:100-7. Enhanced New Source Review (NSR) procedures apply to all major sources and all State Implementation Plan (SIP) minor source changes to majors.

(2) Administrative permit amendments for purposes of the acid rain portion of the permit shall be governed by regulations promulgated under Title IV of the federal Clean Air Act 40 CFR Part 72.

(3) An administrative permit amendment shall be made by the DEQ in accordance with the following:

(A) The DEQ shall take final action on a request for an administrative permit amendment within 60 days from the date of receipt of such a request, and may incorporate the proposed changes without providing notice to the public or affected States provided that it designates any such permit revisions as having been made pursuant to this paragraph.

(B) The DEQ shall submit a copy of the revised permit to the Administrator upon the Administrator's request.

(C) The source may implement the changes addressed in the request for an administrative amendment immediately upon submittal of the request.

(4) The DEQ shall, upon taking final action granting a request for an administrative permit amendment, allow coverage by the permit shield in ~~OAC 252:100-8-6(f)~~ 252:100-8-6(d) for administrative permit amendments made pursuant to subparagraph ~~(d)(1)-(E)~~ 252:100-8-7.2(a)(1)(E) of this section. [NOTE: 252:100-8-7.2(a) was 252:100-8-7(d)]

~~(b)(e)~~ Permit modification. A permit modification is any revision to an operating permit that cannot be accomplished under the program's provisions for administrative permit amendments under subsection ~~(d)~~ (a) of this section. A permit modification for purposes of the acid rain portion of the permit shall be governed by regulations promulgated under Title IV of the federal Clean Air Act 40 CFR Part 72.

(1) Minor permit modification procedures.

(A) Criteria.

(i) Minor permit modification procedures may be used only for those permit modifications that:

(I) Do not violate any applicable requirement, or state-only requirements;

(II) Do not involve significant changes to existing monitoring, reporting or recordkeeping requirements in the permit;

(III) Do not require or change a case-by-case determination of an emission limitation or other standard, or a source-specific determination for temporary sources of ambient impacts, or a visibility or increment analysis;

(IV) Do not seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement, or state-only

requirement, and that which the source has assumed to avoid an some other applicable requirement, or state-only requirement, to which the source would otherwise be subject. Such terms and conditions include federally-enforceable emissions caps assumed to avoid classification as a modification under any provision of Title I and alternative emissions limits approved pursuant to regulations promulgated under §§112(i)(5) of the federal Clean Air Act; and

(V) Are not modifications under any provision of Title I of the federal Clean Air Act.

(ii) Notwithstanding OAC 252:100-8-7(e)(1)(A)(i) 252:100-8-7.2(b)(1)(A)(i) and OAC 252:100-8-7(e)(2)(A) 252:100-8-7.2(b)(2)(A), minor permit modification procedures may be used for permit modifications involving the use of economic incentives, marketable permits, emissions trading, and other similar approaches, to the extent that such minor permit modification procedures are explicitly provided for in an applicable the State's implementation plan or in applicable requirements promulgated by EPA.

(B) Application. To use the minor permit modification procedures, a source shall submit an application requesting such use which shall meet the permit application requirements of Tier I under OAC 252:2-15 and shall include the following:

(i) A description of the change, the emissions resulting from the change, and any new applicable requirements, and or state-only requirements, that will apply if the change occurs;

(ii) The source's suggested modification language;

(iii) Certification by a responsible official, that the application and the proposed modification meet the criteria for use of minor permit modification procedures; and

(iv) Completed forms for any notices required by OAC 252:2-15 and, regarding notice to EPA and affected states, as required under subparagraph (C) of this paragraph.

(C) EPA and affected state notification. If the proposed minor modification is of a permit that underwent EPA review in accordance with OAC 252:100-8-8, the provisions of that section shall apply to the minor modification application unless waived by the Administrator.

(D) Timetable for issuance. Within 90 days of the DEQ's receipt of a complete application under OAC 252:2-15, the DEQ shall:

(i) Issue the minor permit modification as approved;

(ii) Deny the minor permit modification application; or

(iii) Determine that the requested modification does not meet the minor permit modification criteria and should be reviewed under the significant modification procedures or administrative amendment procedures.

(E) Source's ability to make change. Immediately after filing an application meeting the requirements of these minor permit modification procedures, the source is authorized to make the change or changes proposed in the application. After the source makes the change allowed by the preceding sentence, and until the DEQ takes any of the actions specified in (1)(D)(i) through (iii) of this section subsection, the source must comply with both the applicable requirements and state-only requirements, governing the change and the proposed permit terms and conditions. During this period, the source need not comply with the existing terms and conditions it seeks to modify. However, if the source fails to comply with its proposed permit terms and conditions during this time period, the existing permit terms and conditions it seeks to modify may be enforced against it.

(F) Permit shield. The permit shield under ~~OAC 252:100-8-6(f)~~ 252:100-8-6(d) will not extend to minor permit modifications.

(G) Permittee's risk in commencing construction. The permittee ~~permittees~~ assumes the risk of losing any investment it makes toward implementing a modification prior to receiving a permit amendment authorizing the modification. The DEQ will not consider the possibility of the permittee suffering financial loss due to such investment when deciding whether to approve, deny, or approve in modified form a minor permit amendment.

(2) Significant modification procedures.

(A) Criteria. Significant modification procedures shall be used for applications requesting permit modifications that:

(i) Involve any significant changes in amendment to existing monitoring, reporting, or recordkeeping requirements in the permit;

(ii) Relax any reporting or recordkeeping requirements.

(iii)-(ii) Require any amendment to establish or amend a permit condition that Change any permit condition that is required to be based on a case-by-case determination of an emission limitation or other standard, on a source-specific determination of ambient impacts, or on a visibility or increment analysis;

(iv)-(iii) Seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement, and or state-only requirement, and that which the source has assumed to avoid an some other applicable requirement, and or state-only requirement, to which the source would otherwise be subject. Such terms and conditions include:

(I) A federally enforceable emissions cap assumed to avoid classification as a modification under any provision of Title I;

(II) An alternative emissions limit approved pursuant to regulations promulgated under section 112(i)(5) of

~~the federal Clean Air Act; and~~
~~(v)-(iv)~~ Are modifications under any provision of Title I of the federal Clean Air Act; and,
~~(vi)-(v)~~ Do not qualify as minor permit modifications or administrative amendments.

(B) Procedures for processing. Significant permit modifications shall meet all requirements of these rules that are applicable to Tier II applications. The application for the modification shall describe the change, the emissions resulting from the change, and any new applicable requirements, and or state-only requirements, that will apply if the change occurs.

(C) Issuance. The DEQ shall complete review of significant permit modifications within nine months after receipt of a complete application, but shall be authorized to extend that date by up to three months for cause.

[NOTE: 252:100--8-7.2(b) was 252:100-8-7(e)]

252:100-8-7.3.(f) Reopening for cause

(a)-(1) Mandatory reopening. Each issued permit shall include provisions specifying the conditions under which the permit will be reopened prior to the expiration date of the permit. A permit shall be reopened and revised under any of the following circumstances:

(1)-(A) Additional federal applicable requirements become applicable to a stationary source with a remaining permit term of three or more years. Such a reopening and amendment shall be completed not later than 18 months after promulgation of the federal applicable requirement. Reopening is allowed if an applicable requirement becomes effective and the original permit or any of its terms and conditions has been extended pursuant to the application shield provided at OAC 252:100-8-7(e)-(4) 252:100-8-7.1(d)(2) beyond the 18-month timeframe for revision. No such reopening is required if the effective date of the requirement is later than the date on which the permit is due to expire.

(2)-(B) Additional requirements (including excess emissions requirements) become applicable to an affected source under the acid rain program. Upon approval by the Administrator, administrator, excess emissions offset plans shall be deemed to be incorporated into the permit.

(3)-(C) The DEQ agency or the administrator EPA determines that the permit contains a material mistake or that inaccurate statements were made in establishing the emissions standards, limitations, or other terms or conditions of the permit.

(4)-(D) The Administrator administrator or the DEQ agency determines that the permit must be revised or revoked to assure compliance with the applicable requirements.

(b)-(2) Discretionary reopening. The DEQ agency may reopen and amend a permit when:

(1)-(A) additional state-only requirements become applicable to a permitted stationary source, and the effective date of the

requirement is at least 18 months prior to the date on which the permit is due to expire;

(2)~~(B)~~ alterations or modifications to the permitted facility will result in or have the potential to result in significant alteration of the nature or quantity of regulated air pollutants to be emitted by the permittee;

(3)~~(C)~~ the DEQ agency receives information previously unavailable to the DEQ agency that shows that the terms and conditions of the permit do not accurately represent the actual circumstances relating to the permitted facility;

(4)~~(D)~~ a court of competent jurisdiction invalidates or modifies an Oklahoma or federal statute or rule or federal guideline upon which a condition of the permit is based; and
or

(5)~~(E)~~ an event occurs that is beyond the control of the permittee that necessitates modification of a compliance schedule in the permit.

(c)~~(3)~~ Reopening procedures. To reopen and amend a permit, the DEQ agency shall follow the procedures that apply to significant permit amendments under this chapter, unless the amendment can be made as an administrative amendment under OAC ~~252:100-8-7(d)~~ 252:100-8-7.2(a). Mandatory reopenings under OAC ~~252:100-8-7(f)(1)~~ 252:00-8-7.3(a) shall be made as expeditiously as practicable. In lieu of an application, the significant permit amendment process will commence when the DEQ agency gives the permittee written notice of its intent to amend the permit. The DEQ agency shall not issue the amendment, or make public notice of the amendment where public notice is required, until at least thirty days after the DEQ agency has given the permittee consents to less notice, or in the case of an emergency. In cases where public participation is required, only those portions of the permit that ~~which~~ the DEQ agency proposes to amend shall be open for public comment or consideration at a meeting or hearing.

[NOTE: 252:100-8-7.3(a), (b), and (c) were 252:100-8-7(f)]

(d)~~(c)~~ Reopenings for cause by EPA.

(1) If the Administrator finds that cause exists to terminate, modify, or revoke and reissue a permit, the Administrator shall notify the DEQ permitting authority and the permittee of such findings in writing.

(2) The DEQ permitting authority shall, within 90 days after receipt of such notification, forward to EPA a proposed determination of termination, modification, or revocation and reissuance, as appropriate. The Administrator may extend this 90-day period for an additional 90 days if he finds that a new or revised permit application is necessary or that the DEQ permitting authority must require the permittee to submit additional information.

(3) The Administrator will review the proposed determination from the DEQ permitting authority within 90 days of receipt.

(4) The DEQ permitting authority shall have 90 days from receipt of an EPA objection to resolve any objection that EPA makes and to terminate, modify, or revoke and reissue the

permit in accordance with the Administrator's objection.
(5) If the DEQ permitting authority fails to submit a proposed determination pursuant to this subsection, or fails to resolve any objection pursuant to this subsection, the Administrator will terminate, modify, or revoke and reissue the permit after taking the following actions:

- (A) Providing at least 30 days' notice to the permittee in writing of the reasons for any such action.
- (B) Providing the permittee an opportunity for comment on the Administrator's proposed action and an opportunity for a hearing.

[NOTE: 252:100-8-7.3(d) was 252:100-8-7(g)]

252:100-8-7.4.(h) Revocations

(a)(1) Revocation of a permit or authorization under a general permit Permit revocation without reissuance. The DEQ agency may revoke permits or authorizations under a general permit and not reissue them when:

- (1)(A) there exists at the permitted facility unresolved noncompliance with applicable requirements or a condition of the permit or authorization, and the permittee refuses to undertake an enforceable schedule of compliance to resolve the noncompliance;
- (2)(B) the permittee fails to disclose fully the facts relevant to issuance of the permit or authorization or submits false or misleading information to the DEQ agency or the Administrator administrator;
- (3)(C) the permittee has failed to comply with any requirement under ~~OAC 252:100-9~~ 252:100-5 to pay fees; or
- (4)(D) the permittee has failed to pay a penalty owed pursuant to court order, consent decree, stipulation agreement, or schedule of compliance.

(b)(2) Revocation procedures. The DEQ agency shall give notice to the permittee of its intention to revoke a permit without reissuance. This notice must state that within 30 days of the receipt of the notice the permittee may request a contested case hearing be held on the proposed action, except that the DEQ agency may provide less notice in case of an emergency. If the permittee requests a contested case hearing, the DEQ agency shall hold the hearing in accordance with the Oklahoma Administrative Procedures Act.

[NOTE: 252:100-8-7.4 was 252:100-8-7(h)]

252:100-8-7.5.(j) Judicial review

Any final action in granting or denying an application for a permit, permit amendment or modification, or permit renewal shall be subject to judicial review in the court of appropriate jurisdiction upon an application filed by the applicant or permittee, or by any affected state or other person who participated in the public comment process. Except for authorizations under General Permits, judicial review is available to all affected parties for all final permit actions

including minor modifications and administrative actions. If no public comment procedure was employed for the action under challenge, an application for review may be filed by the permittee or an affected state. The opportunity for judicial review provided for in this subsection shall be the exclusive means for obtaining judicial review of any permit action.

(1) No application for judicial review may be filed more than 90 days following the final action on which review is sought, unless the grounds for review arose at a later time, in which case the application for review shall be filed within 90 days of the date on which the grounds for review first arose and review shall be limited to such later-arising grounds.

(2) Any application for judicial review shall be limited to issues that:

(A) were raised in written comments filed with the DEQ Agency or during a public hearing on the proposed permit action (if the grounds on which review is sought were known at that time), except that this restriction shall not apply if the person seeking review was not afforded an advance opportunity to comment on the challenged action; and

(B) are germane and material to the permit action at issue.

(3) For purposes of this section, "final action" shall include a failure by the DEQ Agency to take final action to grant or deny an application within the time specified in this Chapter.

[NOTE: 252:100-8-7.5 was 252:100-8-7(j)]

252:100-8-8. Permit review by EPA and affected states

(a) **Applicability.** This section applies only to specific Tier II and III applications for Part 70 operating permits and permit actions that have not been waived from compliance with this section by the Administrator.

(b) **Format.** To the extent practicable, information provided to the EPA by applicants shall be in computer-readable format compatible with EPA's national database management system.

(c) **Recordkeeping.** The DEQ will keep for 5 years records required by this section and will submit to the Administrator such information as the Administrator may reasonably require to ascertain whether the State program complies with the requirements of the ~~federal Clean Air Act~~ or of this Chapter.

(d) **Transmission of Part 70 applications to EPA.**

For Part 70 Tier II and III applications subject to this section, the DEQ shall require an applicant upon filing to also provide a copy to the Administrator or the DEQ may submit a permit application summary form and any relevant portion of the permit application and compliance plan, in place thereof.

(e) **Transmittal of notice of draft permit to affected states.** See 27A O.S.Supp. 1995, § 2-5-112(E); 27A O.S.Supp. 1995, § 2-14-101 et seq.; and OAC 252:2-15.

(f) **Preparation and submittal of EPA review copy.**

(1) **Tier II applications.** For Tier II applications, the DEQ shall review public comments, revise the draft permit as

appropriate and submit the revision to EPA for review no later than 60 days before the issuance deadline established in OAC 252:2-15-72 or, if none, by this Chapter.

(2) **Tier III applications.** For Tier III applications, the DEQ shall prepare a proposed permit according to 27A O.S.Supp. 1995, § 2-14-304, and submit it to EPA for review upon the publication of notice of an administrative permit hearing opportunity.

(g) **Notice of non-acceptance.** As part of the DEQ's submittal of a revised draft permit (Tier II) or a proposed permit (Tier III) to the Administrator, the DEQ shall notify the Administrator and any affected State in writing of any refusal by the DEQ to accept all recommendations for the revised draft permit or proposed permit that the affected State submitted during the review period. The notice will include the DEQ's reasons for not accepting any such recommendation. The DEQ is not required to accept recommendations that are not based on applicable requirements of the Oklahoma Clean Air Act or these rules.

(h) **EPA review and non-objection.** Upon receipt of notice from the EPA that it will not object to:

(1) A revised draft permit based on a Tier II application, the DEQ shall issue the permit.

(2) A proposed permit based on a Tier III application, the DEQ shall issue the proposed permit as final unless an administrative permit hearing has been timely and properly requested.

(i) **EPA review and objection.**

(1) **Timing.** Except as specified in paragraph 5 of this subsection, no permit for which an application must be transmitted to the Administrator under subsection (a) of this section shall be issued if the Administrator objects to its issuance in writing within 45 days of receipt of the revised draft permit (Tier I) or proposed permit (Tier III) and all necessary supporting information.

(2) **Form of objection.** An EPA objection shall include a statement of the Administrator's reasons for objection and a description of the terms and conditions that the permit must include to respond to the objections.

(3) **Additional grounds.** Failure of the DEQ to do any of the following also shall constitute grounds for an objection:

(A) Comply with subsections (d) or (e) of this section;

(B) Submit any information necessary to review adequately the revised draft permit (Tier II) or the proposed permit (Tier III); or

(C) Process the permit application according to the uniform permitting requirements of OAC 252:2-15.

(4) **Copy.** The Administrator will provide the permit applicant a copy of the objection.

(5) **DEQ response.** The DEQ shall consult with EPA and the applicant and shall either:

(A) **Amend permit.** Amend the permit and submit for approval an amended draft (Tier II) or proposed (Tier III) permit to

EPA within 90 days after the date of EPA's objection, or
(B) **Give notice and issue.** Determine that one or more revisions sought by EPA are inconsistent with applicable state or federal statutes or regulations, inform EPA accordingly within 90 days following the date of the Administrator's objection, decline to make those particular revisions and:

- (i) issue the amended or revised draft permit (Tier II) as final, or
- (ii) issue the proposed permit (Tier III) as final unless an administrative permit hearing has been timely and properly requested.

(6) **Failure of DEQ to respond.** If the DEQ fails, within 90 days after the date of the EPA objection, to amend and resubmit the draft permit or proposed permit in response to the objection, the Administrator will issue or deny the permit in accordance with the requirements of EPA's Part 70 regulations.

(j) **Public petitions to the Administrator.** If the Administrator does not object in writing under subsection (h) of this section, any person that meets the requirements of this subsection may petition the Administrator within 60 days after the expiration of the Administrator's 45-day review period to make such objection. Any such petition shall be based only on objections to the permit that the petitioner raised with reasonable specificity during the public comment period provided for in OAC 252:002-15, unless the petitioner demonstrates that it was impracticable to raise such objections within such period, or unless the grounds for such objection arose after such period. If the Administrator objects to the permit as a result of a petition filed under this subsection, the DEQ shall not issue the permit until EPA's objection has been resolved, except that a petition for review does not stay the effectiveness of a permit or its requirements if the permit was issued after the end of the 45-day review period and prior to an EPA objection. If the DEQ has issued a permit prior to receipt of an EPA objection under this subsection, the Administrator will modify, terminate, or revoke such permit, and shall do so consistent with the procedures in OAC 252:100-8-7 through 252:100-8-7.5 except in unusual circumstances. If the DEQ revokes the permit, it may thereafter issue only a revised permit that satisfies EPA's objection. In any case, the source will not be in violation of the requirement to have submitted a timely and complete application.

(k) **Effect on Tier III administrative permit hearing.** When a public petition or an EPA objection is registered on a proposed permit (Tier III) on which an administrative permit hearing has been requested in accordance with 27A O.S.Supp. 1995, Section 2-14-101 et seq., the DEQ may stay the evidentiary part of the hearing involving cross-examination until EPA objections are resolved or determined to be inconsistent with applicable laws.

~~252:100-8-9. Permit fees~~ [NOTE: The contents of this Section

were moved to 252:100-5 and 252:100-8-1.7]

~~(a) Definitions.~~ The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

~~(1) "Actual emission" means the total amount of regulated pollutant (for fee calculation) emitted from a given facility during a particular calendar year, as determined by methods contained in OAC 252:100-8-9(d).~~

~~(2) "Allowable emissions" means the total amount of regulated pollutant (for fee calculation) emitted based on limits contained in a federally enforceable permit or potential to emit.~~

~~(3) "Emission inventory" means a compilation of the total of all point source, storage and process fugitive air emissions for all regulated pollutant (for fee calculation) at a given facility.~~

~~(4) "Consumer Price Index" means an index determined by the U.S. Department of Labor measuring the change in the cost of typical wage earner purchases of goods and services expressed as a percentage of the cost of these same goods and services in a base period.~~

~~(b) Fee required.~~ The owners or operators of Part 70 sources shall pay annual fees that are sufficient to cover the part 70 program costs. The permitting authority shall ensure that any fee required by these rules will be used solely for part 70 program costs.

~~(c) Applicability.~~ A Part 70 source shall be subject to fee requirements of this section on January 1, 1995, and as of this date shall no longer be subject to the major source annual operating fee specified in 252:100-7-4 (b) (1) (A).

~~(d) Fee schedule for Part 70 sources.~~

~~(1) Annual fees.~~ The annual fee shall be calculated on a source specific basis and may be based on either actual or allowable emissions at the option of the owner or operator paying the fee as set forth in the facility emissions inventory. Fees shall be based on emission inventories submitted in the previous calendar year. (For example, fee invoiced during calendar year 1995 shall be based upon inventory data covering the calendar year 1993).

~~(A) Annual fees shall be determined according to the following:~~

- ~~(i) where only one basis for fee assessment, i.e. only actual, or only allowable is reflected by the inventory, that basis shall be used for invoicing; or~~
- ~~(ii) where both actual and allowable emission are reflected on the inventory, the lesser of the two shall be used.~~

~~(B) Annual fees shall be as follows:~~

- ~~(i) Effective January 1, 1995, the annual operating fee for Part 70 sources shall be \$15.19 per ton of regulated air pollutant.~~
- ~~(ii) The annual operating fee shall be adjusted automatically each year by the percentage, if any, by~~

~~which the Consumer Price Index for the most recent calendar year ending before the beginning of such year differs from the Consumer Price Index for the calendar year 1994. The Consumer Price Index for any calendar year is the average of the Consumer Price Index for all urban consumers published by the Department of Labor, as of the close of the twelve month period ending on August 31 of each calendar year.~~

~~(iii) Regulated pollutants (for fee calculation) in excess of 4,000 tons per year per pollutant for a part 70 source shall not be considered in the calculation of the annual fee.~~

~~(2) Permit processing fees. Permit processing fees shall be as follows:~~

~~(A) Initial Part 70 permit \$2,000.~~

~~(B) Renewal Part 70 permit \$1,000.~~

~~(C) Significant Part 70 Permit Mod. \$1,000.~~

~~(D) Minor Part 70 Permit Modification \$ 500.~~

~~(E) The Part 70 Temporary Permit \$1,000.~~

~~(F) Part 70 Temporary Source Relocation \$ 500.~~

~~(3) Payment. Fees will be paid by check or money order made payable to the Oklahoma Air Quality fund or upon delegation, to the appropriate reviewing agency. Fees are due and payable upon receipt of invoice. Fees shall be considered delinquent 30 days from the date of billing, at which time simple interest shall accrue at the rate of one and one half percent (1 1/2%) per month on any amount unpaid. The Department shall allow a grace period of one hundred and twenty days from the date of billing before issuing any administrative order and assessing a reasonable administrative fine in accordance with the provisions of the Oklahoma Clean Air Act, 27A O.S. 1993 Supp. Sec. 2 5 101 et seq., as amended.~~

~~(4) Emissions inventory. The owner or operator of any Part 70 source shall by April 1, 1994, and every succeeding year thereafter, submit a complete emission inventory on forms obtained from the Agency. These inventories, covering the previous calendar year, will be used for the purpose of calculating the annual operating fee. The methods of calculation to be utilized in the development of an emission inventory shall be in accordance with the methods described in OAC 252:100-7-4(e).~~

PART 9. PREVENTION OF SIGNIFICANT DETERIORATION (PSD)
REQUIREMENTS FOR ATTAINMENT AREAS

[NOTE: Was 252:100-7-30 through 37]

252:100-8-30. Applicability

The new source requirements of this Part, in addition to the requirements of OAC 252:100-7-15 through 252:100-7-18 and 252:100-8, Parts 1, 3, 5, and 7 of this Subchapter, if applicable, shall apply to the construction of all major

stationary sources and major modifications as specified in OAC 252:100-7-31 252:100-8-31 through 252:100-7-33 252:100-8-33. following and are effective upon adoption of this Subchapter by Oklahoma. Except that the requirements of this Part will not be necessary for sources required to meet the permit requirements of the United States Environmental Protection Agency under Title 40 Part 52.21 of the Code of Federal Regulations. Sources subject to this Part are also subject to the operating permit provisions contained in Part 5 of OAC 252:100-8, Operating Permit Program (Part 70) Permits for Major TSP Facilities, or Part 7, Permits for Part 70 Sources.

252:100-8-31. Definitions

The following words and terms when used in this Part shall have the following meaning, unless the context clearly indicates otherwise:

"Actual emission" means the actual rate of emissions of a pollutant from an emissions unit, as determined in accordance with the following:

(A) In general, actual emissions as of a particular date shall equal the average rate in tons per year at which the unit actually emitted the pollutant during a two-year period which precedes the particular date and which is representative of normal source operation. The reviewing authority may allow the use of a different time period upon a determination that it is more representative of normal source operation. Actual emissions shall be calculated using the unit's actual operating hours, production rates, and types of materials processed, stored, or combusted during the selected time period. Actual emissions may also be determined by source tests, or by best engineering judgment in the absence of acceptable test data.

(B) The reviewing authority may presume that source-specific allowable emissions for the unit are equivalent to the actual emissions of the unit.

(C) For any emissions unit which has not begun normal operations on the particular date, actual emissions shall equal the potential to emit of the unit on that date.

"Adverse impact on visibility" means visibility impairment which interferes with the management, protection, preservation or enjoyment of the visitor's visual experience of the Federal Class I area. This determination must be made by the ~~DEQ Air Quality Division~~ on a case-by-case basis taking into account the geographic extent, intensity, duration, frequency and time of visibility impairments, and how these factors correlate with:

(A) times of visitor use of the Federal Class I area; and

(B) the frequency and timing of natural conditions that reduce visibility. [NOTE: From 252:100-7-36(a)]

"Allowable emissions" means the emission rate of a stationary source calculated using the maximum rated capacity of the source (unless the source is subject to enforceable limits which restrict the operating rate, or hours of operation, or both) and

the most stringent of the following:

(A) the applicable standards as set forth in 40 CFR Parts 60 and 61;

(B) the applicable State rule allowable emissions; or,

(C) the emissions rate specified as an enforceable permit condition. [NOTE: Moved to 252:100-8-1.1]

"Baseline area" means any areas designated as attainment or unclassifiable in which the major source or major modification establishing the minor source baseline date would construct or would have an air quality impact equal to or greater than 1 ug/m³ (annual average) of the pollutant for which the minor source baseline date is established.

"Baseline concentration" means that ambient concentration level which exists in the baseline area at the time of the applicable minor source baseline date.

(A) A baseline concentration is determined for each pollutant for which a minor source baseline date is established and shall include:

(i) the actual emissions representative of sources in existence on the applicable minor source baseline date, except as provided in (B) of this definition.

(ii) the allowable emissions of major sources which commenced construction before the major source baseline date but were not in operation by the applicable minor source baseline date. (Effective May 11, 1991)

(B) The following will not be included in the baseline concentration and will affect the applicable maximum allowable increase(s):

(i) actual emissions from any major source on which construction commenced after the major source baseline date; and,

(ii) actual emissions increases and decreases at any source occurring after the minor source baseline date. (Effective May 11, 1991)

"Baseline date" means:

(A) for major sources,

(i) in the case of particulate matter and sulfur dioxide, January 6, 1975, and,

(ii) in the case of nitrogen dioxide, February 8, 1988; and,

(B) for minor sources, the earliest date after the trigger date on which a major source or major modification (subject to 40 CFR 52.21 or OAC 252:100-7 252:100-8, Part 5 9) submits a complete application. The trigger date is:

(i) in the case of particulate matter and sulfur dioxide, August 7, 1977, and

(ii) in the case of nitrogen oxides, February 8, 1988.

(Effective May 11, 1991)

"Begin actual construction" means, in general, initiation of physical on-site construction activities on an emissions unit which are of a permanent nature. Such activities include, but are not limited to, installation of building supports and foundations, laying of underground pipework, and construction of

permanent storage structures. With respect to a change in method of operation this term refers to those on site activities, other than preparatory activities, which mark the initiation of the change. [NOTE: Moved to 252:100-8-1.1]

"Best available control technology" means the control technology to be applied for a major source or modification is the best that is available as determined by the Executive Director on a case basis taking into account energy, environmental, costs and economic impacts of alternate control systems.

"Building, structure, facility or installation" means all of the pollutant-emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person or persons under common control. Pollutant-emitting activities shall be considered as part of the same industrial grouping if they belong to the same "Major Group" (i.e., which have the same two-digit code) as described in the Standard Industrial Classification Manual, 1972 1987, as amended by the 1977 Supplement.

"Commence" as applied to construction of a major source or major modification means that the owner or operator has all necessary preconstruction approvals or permits and either has:
(A) begun, or caused to begin, a continuous program of actual on-site construction of the source, to be completed within a reasonable time; or,
(B) entered into binding agreements or contractual obligations, which cannot be cancelled or modified without substantial loss to the owner or operator, to undertake a program of actual construction of the source to be completed within a reasonable time. [NOTE: Moved to 252:100-8-1.1]

"Complete" in reference to an application for a permit, means that the application contains all the information necessary for processing the application. Designating an application complete for purposes of permit processing does not preclude the reviewing authority from requesting or accepting any additional information.

"Construction" means any physical change or change in the method of operation (including fabrication, erection, installation, demolition, or modification of an emissions unit) which would result in a change in actual emissions. [NOTE: Moved to 252:100-8-1.1]

"Emissions unit" means any part of a source which emits or would have the potential to emit any pollutant subject to regulation. [NOTE: Moved to 252:100-8-1.1]

"Federal land manager" means the Secretary of the department with authority over the Federal Class I area or his representative. [NOTE: Moved from 252:100-8-36(a)]

"Fugitive emissions" means those emissions which could not reasonably pass through a stack, chimney, vent or other functionally equivalent opening. [NOTE: Moved to 252:100-8-1.1]

"Innovative control technology" means any system of air

pollution control that has not been adequately demonstrated in practice, but would have a substantial likelihood of achieving greater continuous emissions reduction than any control system in current practice or of achieving at least comparable reductions at lower cost in terms of energy, economics, or non-air quality environmental impacts.

"Major modification" means any physical change in or change in the method of operation of a major source that would result in a significant net emissions increase of any pollutant subject to regulation.

(A) Any net emissions increase that is significant for volatile organic compounds shall be considered significant for ozone.

(B) A physical change or change in the method of operation shall not include:

(i) routine maintenance, repair and replacement.

(ii) use of an alternate fuel or raw material by reason of any order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation) or by reason of a natural gas curtailment plan pursuant to the Federal Power Act.

(iii) use of an alternate fuel by reason of an order or rule under Section 125 of the Federal Clean Air Act.

(iv) use of an alternate fuel at a steam generating unit to the extent that the fuel is generated from municipal solid waste.

(v) Use of an alternate fuel or raw material by a source which:

(I) the source was capable of accommodating before January 6, 1975, unless such change would be prohibited under any enforceable permit limitation which was established after January 6, 1975; or,

(II) the source is approved to use under any permit issued under 40 CFR 52.21 or OAC 252:100-7.

(vi) An increase in the hours of operation or in the production rate, unless such change would be prohibited under any enforceable permit limitation which was established after January 6, 1975.

(vii) Any change in source ownership.

"Major stationary source" means any source which meets any of the following conditions:

(A) Any of the following sources of air pollutants which emits, or has the potential to emit, 100 tons per year or more of any pollutant subject to regulation:

(i) carbon black plants (furnace process),

(ii) charcoal production plants,

(iii) chemical process plants,

(iv) coal cleaning plants (with thermal dryers),

(v) coke oven batteries,

(vi) fossil-fuel boilers (or combustion combination thereof) totaling more than 250 million BTU per hour heat input,

- (vii) fossil fuel-fired steam electric plants of more than 250 million BTU per hour heat input,
- (viii) fuel conversion plants,
- (ix) glass fiber processing plants,
- (x) hydrofluoric, sulfuric or nitric acid plants,
- (xi) iron and steel mill plants,
- (xii) kraft pulp mills,
- (xiii) lime plants,
- (xiv) municipal incinerators capable of charging more than 250 tons of refuse per day,
- (xv) petroleum refineries,
- (xvi) petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels,
- (xvii) phosphate rock processing plant,
- (xviii) portland cement plants,
- (xix) primary aluminum ore reduction plants,
- (xx) primary copper smelters,
- (xxi) primary lead smelters,
- (xxii) primary zinc smelters,
- (xxiii) secondary metal production plants,
- (xxiv) sintering plants,
- (xxv) sulfur recovery plants, or
- (xxvi) taconite ore processing plants.

(B) Any other source not on the list in (A) of this definition which emits, or has the potential to emit, 250 tons per year or more of any pollutant subject to regulation.

(C) Any physical change that would occur at a source not otherwise qualifying as a major source under (A) and (B) of this definition if the change would constitute a major source by itself.

(D) A major source that is major for volatile organic compounds shall be considered major for ozone.

"Natural conditions" mean naturally occurring phenomena against which any changes in visibility are measured in terms of visual range, contrast or coloration. [NOTE: From 252:100-8-36(a)]

~~"Necessary preconstruction approvals or permits" means those permits or approvals required under all applicable air quality control laws and rules. [NOTE: Moved to 252:100-8-1.1]~~

"Net emissions increase" means:

(A) The amount by which the sum of the following exceeds zero:

- (i) any increase in actual emissions from a particular physical change or change in the method of operation at a source; and,
- (ii) any other increases and decreases in actual emissions at the source that are contemporaneous with the particular change and are otherwise creditable.

(B) An increase or decrease in actual emissions is contemporaneous with the increase from the particular change only if it occurs within 3 years before the date that the increase from the particular change occurs.

(C) An increase or decrease in actual emissions is creditable only if the Executive Director has not relied on it in issuing a permit under OAC 252:100-7, Part 3 252:100-8, Part 9, which permit is in effect when the increase in actual emissions from the particular change occurs.

(D) An increase or decrease in actual emissions of sulfur dioxide, particulate matter, or nitrogen oxides which occurs before the applicable minor source baseline date is creditable only if it is required to be considered in calculating the amount of maximum allowable increases remaining available.

(Effective May 11, 1991)

(E) An increase in actual emissions is creditable only to the extent that the new level of actual emissions exceeds the old level.

(F) A decrease in actual emissions is creditable only to the extent that:

(i) the old level of actual emissions or the old level of allowable emissions, whichever is lower, exceeds the new level of actual emissions;

(ii) it is enforceable at and after the time that actual construction on the particular change begins;

(iii) it has approximately the same qualitative significance for public health and welfare as that attributed to the increase from the particular change.

(G) An increase that results from a physical change at a source occurs when the emission unit on which construction occurred becomes operational and begins to emit a particular pollutant. Any replacement unit that requires shakedown becomes operational only after a reasonable shakedown period, not to exceed 180 days.

"Potential to emit" means the maximum capacity of a source to emit a pollutant under its physical and operational design. Any physical or operational limitation on the capacity of the source to emit a pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored or processed, shall be treated as part of its design if the limitation or the effect it would have on emissions is enforceable. Secondary emissions do not count in determining the potential to emit of a source. [NOTE: Moved to 252:100-8-1.1]

"Secondary emissions" means emissions which occur as a result of the construction or operation of a major stationary source or modification, but do not come from the source or modification itself. For the purposes of OAC 252:100-7, Part 5 secondary emissions must be specific, well defined, quantifiable, and impact the same general areas as the source or modification which causes the secondary emissions. Secondary emissions may include, but are not limited to:

(A) emissions from trains coming to or from the new or modified stationary source; and,

(B) emissions from any offsite support facility which would not otherwise be constructed or increase its emissions as a

~~result of the construction or operation of the major source or modification.~~ [NOTE: Moved to 252:100-8-1.1]

"Significant" means:

(A) In reference to a net emissions increase or the potential of a source to emit any of the following pollutants, a rate of emissions that would equal or exceed any of the following rates:

- (i) carbon monoxide: 100 tons per year (tpy),
- (ii) nitrogen oxides: 40 tpy,
- (iii) sulfur dioxide: 40 tpy,
- (iv) particulate matter: 25 tpy of particulate matter emissions or 15 tpy of PM-10 emissions,
- (v) ozone: 40 tpy of volatile organic compounds,
- (vi) lead: 0.6 tpy,
- (vii) asbestos: 0.007 tpy,
- (viii) beryllium: 0.0004 tpy,
- (ix) mercury: 0.1 tpy,
- (x) vinyl chloride Chloride: 1 tpy,
- (xi) fluorides: 3 tpy,
- (xii) sulfuric acid mist: 7 tpy,
- (xiii) hydrogen sulfide (H₂S): 10 tpy,
- (xiv) total reduced sulfur (including H₂S): 10 tpy, and
- (xv) reduced sulfur compounds (including H₂S): 10 tpy.

(B) Notwithstanding (A) of this definition, "significant" means any emissions rate or any net emissions increase associated with a major source or modification which would construct within 6 miles of a Class I area, and have an impact on such area equal to or greater than 1 ug/m³ (24-hour average).

"Stationary source" means any building, structure, facility or installation which emits or may emit any air pollutant subject to OAC 252:100. [NOTE: Moved to 252:100-8-1.1]

"Visibility impairment" means any humanly perceptible reduction in visibility (visual range, contrast and coloration) from that which would have existed under natural conditions.

[NOTE: From 252:100-8-36(a)]

252:100-8-32. Source applicability determination

Proposed new sources and source modifications to which this Part 5 of this Subchapter is applicable are determined by size, geographical location and type of emitted pollutants.

(1) Size.

(A) Permit review will apply to sources and modifications that emit any regulated pollutant in major amounts. These quantities are specified in the definitions for major stationary source, major modification, potential to emit, net emissions increase, significant and other associated definitions in 252:100-8-31, 252:100-8-1.1, and 252:100-1.

(B) When at such time that a particular source or modification becomes major solely by virtue of a relaxation in any enforceable permit limitation which was established after August 7, 1980, on the capacity of the source or

modification otherwise to emit a pollutant, such as a restriction on hours of operation, then the requirements of OAC 252:100-7-15 through 252:100-7-18 and OAC 252:100-7-Part 7 252:100-8, Parts 1, 3, 5, 7 and 9 shall apply to that source or modification as though construction had not yet commenced on it.

(2) Location.

(A) Sources and modifications which are major in size and proposed for construction in an area which has been designated as attainment or unclassified for any applicable ambient air standard are subject to the prevention of significant deterioration PSD requirements.

(B) Those sources and modifications locating in an attainment or unclassified area but impacting on a nonattainment area may also be subject to the requirements for major sources affecting nonattainment areas in 252:100-8, Part 11 of OAC 252:100-7, Part 7.

252:100-8-33. Review, applicability and exemptions Exemptions

(a) Exemptions from PSD requirements. PSD requirements do not apply to a particular source or modification do not apply if:

(1) It is a nonprofit health or educational institution.

(2) The source is major by virtue of fugitive emissions, to the extent quantifiable, included in calculating the potential to emit and is a source other than one of the following categories:

(A) carbon black plants (furnace process), One of the categories listed in (A) (i) through (xxvi) under the definition of "Major stationary source" in 252:100-8-31, or

(B) charcoal production plants,

(C) chemical process plants,

(D) coal cleaning plants (with thermal dryers),

(E) coke oven batteries,

(F) fossil fuel boilers (or combustion combination thereof) totaling more than 250 million BTU per hour heat input,

(G) fossil fuel fired steam electric plant of more than 250 million BTU per hour heat input,

(H) fuel conversion plants,

(I) glass fiber processing plants,

(J) hydrofluoric, sulfuric or nitric acid plants,

(K) iron and steel mills,

(L) kraft pulp mills,

(M) lime plants,

(N) municipal incinerators capable of charging more than 250 tons of refuse per day,

(O) petroleum refineries,

(P) petroleum storage and transfer units with a total storage exceeding 300,000 barrels,

(Q) phosphate rock processing plants,

(R) portland cement plants,

(S) primary aluminum ore reduction plants,

(T) primary copper smelters,

- ~~(U)~~ primary lead smelters,
- ~~(V)~~ primary zinc smelters,
- ~~(W)~~ secondary metal production plants,
- ~~(X)~~ sintering plants,
- ~~(Y)~~ sulfur recovery plants,
- ~~(Z)~~ taconite ore processing plants, or
- ~~(AA)~~ A any other stationary source category which, as of August 7, 1980, is being regulated by federal New Source Performance Standards (NSPS) NSPS or National Emission Standards for Hazardous Air Pollutants (NESHAPS) NESHAP.

(3) The source or modification is a A portable stationary source which has previously received a permit under the PSD requirements and proposes to relocate to a temporary new location from which its emissions would not impact a Class I area or an area where an applicable increment is known to be violated.

(b) Exemption from air quality impact evaluation.

(1)(b) The requirements of OAC 252:100-7-35 252:100-8-35 are not applicable if the emissions, with respect to a particular pollutant, would be temporary and impact no Class I area and no area where an applicable increment is known to be violated.

(2)(e) The requirements of OAC 252:100-7-35 252:100-8-35 are not applicable to the emissions, with respect to a particular pollutant, to a modification of a major source that was in existence on March 1, 1978 if the net increase in allowable emissions of each regulated pollutant, after the application of best available control technology, would be less than 50 tons per year. [NOTE: 252:100-8-33(b) (2) was 252:100-8-33(c)]

(c) Exemption from monitoring requirements.

(1)(d) The monitoring requirements of OAC 252:100-7-35 252:100-8-35 are not applicable for a particular pollutant if the emission increase of the pollutant from a new source or the net emissions increase of the pollutant from a modification would cause, in any area, air quality impacts less than the following listed amounts, or are pollutant concentrations that are not on the list.

- ~~(A)~~(1) Carbon monoxide - 575 ug/m³, 8-hour average,
- ~~(B)~~(2) Nitrogen dioxide - 14 ug/m³, annual average,
- ~~(C)~~(3) Particulate matter - 10 ug/m³, TSP, 24-hour average, or 10 ug/m³ PM-10, 24-hour average,
- ~~(D)~~(4) Sulfur dioxide -13 ug/m³, 24-hour average,
- ~~(E)~~(5) Ozone - see (N) ~~(14)~~ below,
- ~~(F)~~(6) Lead - 0.1 ug/m³, 24-hour 3-month average,
- ~~(G)~~(7) Mercury - 0.25 ug/m³, 24-hour average,
- ~~(H)~~(8) Beryllium - 0.0005 0.001 ug/m³, 24-hour average,
- ~~(I)~~(9) Fluorides - 0.25 ug/m³, 24-hour average,
- ~~(J)~~(10) Vinyl chloride - 15 ug/m³, 24-hour average,
- ~~(K)~~(11) Total reduced sulfur - 10 ug/m³, 1-hour average,
- ~~(L)~~(12) Hydrogen sulfide - 0.04 0.2 ug/m³, 1-hour average, or
- ~~(M)~~(13) Reduced sulfur compounds - 10 ug/m³, 1-hour

average.

(N) (14) No de minimis air quality level is provided for ozone. However, any net increase of 100 tons per year or more of volatile organic compounds subject to PSD would be required to perform an ambient impact analysis, including the gathering of ambient air quality data. [NOTE: 252:100-8-33(c) (1) was 252:100-8-33(d)]

(2) The requirements for air quality monitoring in OAC 252:100-7-35(b) through 252:100-7-35(d) 252:100-8-35(b), (c) and (d) (2) shall not apply to a particular source or modification that was subject to Federal 40 CFR 52.21 as in effect on June 19, 1978, if a permit application in accordance with OAC 252:100-7-35(b) through 252:100-7-35(d) 252:100-8-35(b), (c) and (d) (2) and with respect to the requirements for such analyses at 40 CFR 52.21 (m) (2) as in effect on June 19, 1978. Instead, the latter requirements in 40 CFR 52.21(m) (2) as in effect on June 19, 1978, shall apply to any such source or modification. [NOTE: was 252:100-7-33(f)]

(3) The requirements for air quality monitoring in OAC 252:100-7-35(b) through 252:100-7-35(d) 252:100-8-35(b), (c), and (d) (2) shall not apply to a particular source or modification that was not subject to 40 CFR 52.21 as in effect on June 19, 1978, if a permit application in accordance with OAC 252:100-7-35(b) through 252:100-7-35(d) 252:100-8-35(b), (c) and (d) (2). [NOTE: was 252:100-7-33(g)]

(4) The Executive Director shall determine if the requirements for air quality monitoring of PM-10 in OAC 252:100-7-35(a) 252:100-8-35(a) through 252:100-7-35(d) 252:100-8-35(c) and 252:100-8-35(d) (2) may be waived for a particular source or modification when the owner or operator of the source or modification submits an application for a permit was submitted on or before June 1, 1988 and the Executive Director subsequently determines that the application, except with respect to for the requirements for monitoring particulate matter under OAC 252:100-7-35(a) 252:100-8-35(a) through 252:100-7-35(d) 252:100-8-35(c) and 252:100-8-35(d) (2), was complete before that date. [NOTE: was 252:100-7-33(i)]

(5) The requirements for air quality monitoring of PM-10 in OAC 252:100-7-35(b) 252:100-8-35(b), (c), (d) (2) and (d) (6) through 252:100-7-35(d) and 252:100-7-35(h) shall apply to a particular source or modification if the owner or operator of the source or modification submits an application for a permit

was submitted after June 1, 1988 and no later than December 1, 1988. The data shall have been gathered over at least the period from February 1, 1988 to the date the application becomes otherwise complete in accordance with the provisions of ~~OAC 252:100-7-33(b)~~ 252:100-8-33(b) (1), except that if the Executive Director determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period (not to be less than 4 months), the data required by ~~OAC 252:100-7-35(b)~~ 252:100-8-35(b) (1) and ~~252:100-7-35(e)~~ 252:100-8-35(c) shall have been gathered over that shorter period. [NOTE was 252:100-7-33(j)]

~~(d)(e)~~ **Exemption from BACT requirements and monitoring requirements.** If a complete permit application for a source or modification was submitted before August 7, 1980 the requirements for best available control technology in ~~OAC 252:100-7-34~~ 252:100-8-34 and for monitoring in ~~OAC 252:100-7-35(a)~~ 252:100-8-35(a) through ~~252:100-7-35(f)~~ 252:100-8-35(c) and 252:100-8-35(d) (2) through 252:100-8-35(d) (4) are not applicable. Instead, the federal requirements at 40 CFR 52.21 (j) and (n) as in effect on June 19, 1978 are applicable to any such source or modification. [NOTE: was 252:100-8-33(e)]

~~(f)~~ The requirements for air quality monitoring in ~~OAC 252:100-7-35(b)~~ through ~~252:100-7-35(d)~~ shall not apply to a particular source or modification that was subject to Federal 40 CFR 52.21 as in effect on June 19, 1978 if a permit application in accordance with ~~OAC 252:100-7~~ is submitted before June 8, 1981 and the Executive Director subsequently determines that the application as submitted was complete with respect to the requirements of ~~OAC 252:100-7~~ other than those in ~~OAC 252:100-7-35(b)~~ through ~~252:100-7-35(d)~~ and with respect to the requirements for such analyses at 40 CFR 52.21 (m) (2) as in effect on June 19, 1978. Instead, the latter requirements shall apply to any such source or modification. [NOTE: Moved to 252:100-8-33(c) (2)]

~~(g)~~ The requirements for air quality monitoring in ~~OAC 252:100-7-35(b)~~ through ~~252:100-7-35(d)~~ shall not apply to a particular source or modification that was not subject to 40 CFR 52.21 as in effect on June 19, 1978 if a permit application in accordance with ~~OAC 252:100-7~~ is submitted before June 8, 1981 and the Executive Director subsequently determines that the application as submitted was complete, except with respect to the requirements in ~~OAC 252:100-7-35(b)~~ through ~~252:100-7-35(d)~~. [NOTE: Moved to 252:100-8-33(c) (3)]

~~(e)(h)~~ **Exemption of modifications.** As specified in the applicable definitions of ~~OAC 252:100-7-31~~ 252:100-8-31 and 252:100-1, the requirements of ~~OAC 252:100-7~~ 252:100-8, Part 5 9 for PSD and ~~252:100-7~~ 252:100-8, Part 7 11 for nonattainment areas are not applicable to a modification if the existing source was not major on August 7, 1980 unless the proposed addition to that existing minor source is major in its own right. [Note: was 252:100-8-33(h)]

~~(i)~~ The Executive Director shall determine if the requirements

~~for air quality monitoring of PM 10 in OAC 252:100 7 35(a) through 252:100 7 35(d) may be waived for a particular source or modification when the owner or operator of the source or modification submits an application for a permit on or before June 1, 1988 and the Executive Director subsequently determines that the application, except with respect to the requirements for monitoring particulate matter under OAC 252:100 7 35(a) through 252:100 7 35(d), was complete before that date. [NOTE: Moved to 252:100-8-33(c) (4)]~~

~~(j) The requirements for air quality monitoring of PM 10 in OAC 252:100 7 35(b) through 252:100 7 35(d) and 252:100 7 35(h) shall apply to a particular source or modification if the owner or operator of the source or modification submits an application for a permit after June 1, 1988 and no later than December 1, 1988. The data shall have been gathered over at least the period from February 1, 1988 to the date the application becomes otherwise complete in accordance with the provisions of OAC 252:100 7 33(b), except that if the Executive Director determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period (not to be less than 4 months), the data required by OAC 252:100 7 35(b) and 252:100 7 35(c) shall have been gathered over that shorter period. [NOTE: Moved to 252:100-8-33(c) (5)]~~

~~(k) For any application that becomes complete, except as to the requirements of OAC 252:100 7 35(b) through 252:100 7 35(d) pertaining to monitoring of PM 10, after December 1, 1988 and no later than August 1, 1989, the data that OAC 252:100 7 35(b) and 252:100 7 35(c) require shall have been gathered over at least the period from August 1, 1988 to the date the application becomes otherwise complete, except that if the Executive Director determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period (not to be less than 4 months), the data that OAC 252:100 7 35(b) and 252:100 7 35(c) require shall have been gathered over that shorter period. [NOTE: Moved to 252:100-8-35(d) (3) (B)]~~

~~(l) With respect to any requirements for air quality monitoring of PM 10 under OAC 252:100 7 33(i) and 252:100 7 33(j), the owner or operator of the source or modification shall use a monitoring method approved by the Executive Director and shall estimate the ambient concentrations of PM 10 using the data collected by such approved monitoring method in accordance with estimating procedures approved by the Executive Director. [NOTE: Moved to 252:100-8-35(d) (1)]~~

~~(f) (m) **Exemption from impact analyses.** The requirements of OAC 252:100 7 35 252:100-8-35 and 252:100 7 36 252:100-8-36 do not apply to a source or modification with respect to any maximum allowable increase for nitrogen oxides if the owner or operator of the source or modification submitted a completed application for a permit before February 8, 1988. [NOTE: was 252:100-8-33(m)]~~

~~(g) (n) **Exemption from increment consumption.** Excluded from increment consumption are the following cases:~~

- ~~(1) Concentrations from an increase in emissions from any~~

source converting from the use of petroleum products, natural gas; or both by reason of any order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation), or by reason of a natural gas curtailment plan pursuant to the Federal Power Act. Such exclusion is limited to five years after the effective date of the order or plan.

(2) Emissions of particulate matter from construction or other temporary emission-related activities of new or modified sources.

(3) A temporary increase of sulfur dioxide, particulate matter, or nitrogen oxides by order or authorized variance from any source. [NOTE: was 252:100-8-33(n)]

252:100-8-34. Best available control Control technology

(a) A new source must demonstrate that the control technology to be applied is the best that is available (i.e., BACT as defined herein for each regulated pollutant that it would have the potential to emit in significant amounts).

(b) A major modification must demonstrate that the control technology to be applied is the best that is available for each regulated pollutant for which it would be a significant net emissions increase at the source. This requirement applies to each proposed emissions unit at which a net emissions increase in the pollutant would occur as a result of a physical change or change in the method of operation in the unit.

(c) The determination of best available control technology shall be made on a case by case basis taking into account costs and energy, environmental and economic impacts.

(d) For phased construction projects the determination of best available control technology shall be reviewed and modified at the discretion of the Executive Director at a reasonable time but no later than 18 months prior to commencement of construction of each independent phase of the project. At such time the owner or operator may be required to demonstrate the adequacy of any previous determination of best available control technology.

252:100-8-35. Air quality impact evaluation

(a) Application contents. Any application for a permit shall contain, as the Executive Director determines appropriate, an evaluation of ambient air quality in the area that the source or modification would affect for each of the following pollutants:

(1) for a new source, each regulated pollutant that it would have the potential to emit in a significant amount;

(2) for a major modification, each regulated pollutant for which it would result in a significant net emissions increase.

(b) Continuous monitoring data. For visibility and any pollutant, other than volatile organic compounds, for which an ambient air quality standard ~~does exist~~ exists, the evaluation shall contain continuous air quality monitoring data gathered to determine whether emissions of that pollutant would cause or contribute to a violation of the applicable ambient air quality

standard. For any such pollutant for which a standard does not exist, the monitoring data required shall be that which the Executive Director determines is necessary to assess the ambient air quality for that pollutant in that area. (Amended 7-9-87, effective 8-10-87)

(c) Increment consumption. The evaluation shall demonstrate that, as of the source's start-up date, the increase in emissions from that source, in conjunction with all other applicable emissions increases or reductions of that source, will not cause or contribute to any increase in ambient concentrations exceeding the remaining available PSD increment for the specified air contaminants as determined by the Executive Director.

(d) Monitoring.

(1) Monitoring method. With respect to any requirements for air quality monitoring of PM-10 under ~~OAC 252:100-7-33(i)~~ 252:100-8-33(c)(4) and ~~252:100-7-33(j)~~ 252:100-8-33(c)(5), the owner or operator of the source or modification shall use a monitoring method approved by the Executive Director and shall estimate the ambient concentrations of PM-10 using the data collected by such approved monitoring method in accordance with estimating procedures approved by the Executive Director. [NOTE: was 252:100-7-33(1)]

(2)~~(d)~~ Monitoring period. The required monitoring data shall have been gathered for a time period of up to one year and shall represent the year preceding submission of the application. Ambient monitoring data collected for a time period shorter than one year (but no less than four months) or for a time period other than immediately preceding the application may be acceptable if such data are determined by the Executive Director to be within the time period that maximum pollutant concentrations would occur, and to be complete and adequate for determining whether the source or modification will cause or contribute to a violation of any applicable ambient air quality standard or consume more than the remaining available PSD increment. [NOTE: 252:100-8-35(d)(2) was 252:100-8-35(d)]

(3)~~(e)~~ Monitoring period exceptions.

(A) For any application which becomes complete except as to the monitoring requirements of ~~OAC 252:100-7-35(b)~~ 252:100-8-35(b) through ~~252:100-7-35(d)~~ 252:100-8-35(c) and 252:100-8-35(d)(2), between June 8, 1981 and February 9, 1982, the data that ~~OAC 252:100-7-35(b)~~ 252:100-8-35(b) and ~~252:100-7-35(e)~~ 252:100-8-35(c) require shall have been gathered over the period from February 9, 1981 to the date the application becomes otherwise complete, except that:

(i)~~(1)~~ If the source or modification would have been major for that pollutant under Federal 40 CFR 52.21 as in effect on June 19, 1978, any monitoring data shall have been gathered over the period required by those regulations.

(ii)~~(2)~~ If the Executive Director determines that a complete and adequate analysis can be accomplished with

monitoring data over a shorter period, not to be less than four months, the data that ~~OAC 252:100-7-35(b)~~ 252:100-8-35(b) and ~~252:100-7-35(e)~~ 252:100-8-35(c) require shall have been gathered over that shorter period.

(iii)(3) If the monitoring data would relate exclusively to ozone and would not have been required under Federal 40 CFR 52.21 as in effect on June 19, 1978, the Executive Director may waive the otherwise applicable requirements of ~~OAC 252:100-7-35(e)~~ 252:100-8-35(d)(3)(A) to the extent that the applicant shows that the monitoring data would be unrepresentative of air quality over a full year. [NOTE: 252:100-8-35(d)(3)(A) was 252:100-8-35(e)]

(B) For any application that becomes complete, except as to the requirements of ~~OAC 252:100-7-35(b)~~ 252:100-8-35(b), (c) and (d)(2) through ~~252:100-7-35(d)~~ pertaining to monitoring of PM-10, after December 1, 1988 and no later than August 1, 1989, the data that ~~OAC 252:100-7-35(b)~~ 252:100-8-35(b) and (c) ~~252:100-7-35(e)~~ require shall have been gathered over at least the period from August 1, 1988 to the date the application becomes otherwise complete, except that if the Executive Director determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period(not to be less than 4 months), the data that ~~OAC 252:100-7-35(b)~~ 252:100-8-35(b) and ~~252:100-7-35(e)~~ 252:100-8-35(c) require shall have been gathered over that shorter period. [NOTE: was 252:100-7-33(k)]

(4)(f) Ozone post-approval monitoring. The application for a source or modification of volatile organic compounds which satisfies all conditions of ~~OAC 252:100-7-54~~ 252:100-8-54 may provide post-approval monitoring data for ozone in lieu of providing preconstruction data as required under ~~OAC 252:100-7-35~~ 252:100-8-35. [NOTE:was 252:100-8-35(f)]

(5)(g) Post-construction monitoring. The applicant for a permit for a new source or modification shall conduct, after construction, such ambient monitoring and visibility monitoring as the Executive Director determines necessary to determine the effect its emissions may have, or are having, on air quality in any area. (Amended 7-9-87, effective 8-10-87) [NOTE: was 252:100-8-35(g)]

(6)(h) Monitoring system operation. The operation of monitoring stations for any air quality monitoring required under Part 5 9 of this Subchapter shall meet the requirements of 40 CFR 58 Appendix B. [NOTE: was 252:100-8-35(h)]

(e)(i) Air quality models.

(1) Any air quality dispersion modeling that is required under Part 5 9 of this Subchapter for estimates of ambient concentrations shall be based on the applicable air quality models, data bases and other requirements specified in the Guidelines on Air Quality Models, OAQPS 1.2-080, U.S. Environmental Protection Agency, April, 1978 and subsequent

revisions.

(2) Where an air quality impact model specified in the Guidelines on Air Quality Models is inappropriate, the model may be modified or another model substituted, as approved by the Executive Director. Methods like those outlined in the Workbook for the Comparison of Air Quality Models, U.S. Environmental Protection Agency, April, 1977 and subsequent revisions, can be used to determine the comparability of air quality models. [NOTE: 252:100-8-35(e) was 252:100-8-35(i)]

~~(f)-(j)~~ Growth analysis. Upon request of the Executive Director the permit application shall provide information on the nature and extent of any or all general commercial, residential, industrial and other growth which has occurred since August 7, 1977 in the area the source or modification would affect. The permit application shall also contain an analysis of the air quality impact projected for the area as a result of general commercial, residential and other growth associated with the source or modification. [NOTE: was 252:100-8-35(j)]

~~(g)-(k)~~ Visibility and other impacts analysis. The permit application shall provide an analysis of the impairment to visibility, soils and vegetation as a result of the source or modification. The Executive Director may require monitoring of visibility in any Federal Class I area near the proposed new stationary source or major modification for such purposes and by such means as the Executive Director deems necessary and appropriate. (Amended 7-9-87, effective 8-10-87) [NOTE: was 252:100-8-35(k)]

252:100-8-36. Source impacting Class I areas

~~(a) Definitions. The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:~~

~~(1) "Adverse impact on visibility" means visibility impairment which interferes with the management, protection, preservation or enjoyment of the visitor's visual experience of the Federal Class I area. This determination must be made by the Air Quality Division on a case by case basis taking into account the geographic extent, intensity, duration, frequency and time of visibility impairments, and how these factors correlate with:~~

~~(A) times of visitor use of the Federal Class I area; and~~

~~(B) the frequency and timing of natural conditions that reduce visibility. [NOTE: Moved to 252:100-8-31].~~

~~(2) "Federal land manager" means the Secretary of the department with authority over the Federal Class I area or his representative. [NOTE: Moved to 252:100-8-31]~~

~~(3) "Installation" means an identifiable piece of process equipment. (Amended 7-9-87, effective 8-10-87) [NOTE: in SC-1]~~

~~(4) "Natural conditions" mean naturally occurring phenomena against which any changes in visibility are measured in terms of visual range, contrast or coloration. [NOTE: Moved to~~

252:100-8-31]

~~(5) "Visibility impairment" means any humanly perceptible reduction in visibility (visual range, contrast and coloration) from that which would have existed under natural conditions. [NOTE: Moved to 252:100-8-31]~~

~~(a)(b) Permits issuance. Permits may be issued at variance to the limitations imposed on a Class I area in compliance with the procedures and limitations established in State and Federal Clean Air Acts. [NOTE: was 252:100-8-36(b)]~~

~~(b)(c) Impact analysis required. The permit application for a proposed new source or modification will contain an analysis on the impairment of visibility and an assessment of any anticipated adverse impacts on soils and vegetation in the vicinity of the source resulting from construction of the source. The Executive Director shall notify the appropriate Federal Land Manager of the receipt of any such analysis and include a complete copy of the permit application. Any analysis performed by the Land Manager shall be considered by the Executive Director provided that the analysis is filed with the DEQ Air Quality Division within 30 days of receipt of the application by the Land Manager. Where the Executive Director finds that such an analysis does not demonstrate to the satisfaction of the Executive Director that an adverse impact on visibility will result in the Federal Class I area, the Executive Director will, in any notice of public hearing on the permit application, either explain his decision or give notice as to where the explanation can be obtained. Further, upon presentation of good and sufficient information, by a Federal federal Land land Manager manager, the Executive Director may deny the issuance of a permit for a source, emissions from which will adversely impact areas heretofore or hereafter categorized as Class I areas even though the emissions would not cause the increment for such Class I areas to be exceeded. [NOTE: was 252:100-8-36(c)]~~

252:100-8-37. Innovative control technology

~~(a) An applicant for a permit for a proposed major source or modification may request the Executive Director in writing to approve a system of innovative control technology.~~

~~(b) The Executive Director may determine that the innovative control technology is permissible if:~~

~~(1) The proposed control system would not cause or contribute to an unreasonable risk to public health, welfare or safety in its operation or function.~~

~~(2) The applicant agrees to achieve a level of continuous emissions reductions equivalent to that which would have been required for best available control technology under OAC ~~252:100-7-34~~ 252:100-8-34 by a date specified by the Executive Director. Such date shall not be later than 4 years from the time of start-up or 7 years from permit issuance.~~

~~(3) The source or modification would meet the requirements equivalent to those in OAC ~~252:100-7-15~~ through ~~252:100-7-18~~ Parts 1, 5 and 7 of this Subchapter and ~~252:100-7-36~~ 252:100-~~

8-36 based on the emissions rate that the source employing the system of innovative control technology would be required to meet on the date specified by the Executive Director.

(4) The source or modification would not, before the date specified, cause or contribute to any violation of the applicable ambient air standards, or impact any Class I area or area where an applicable increment is known to be violated.

(5) All other applicable requirements including those for public review have been met.

(c) The Executive Director shall withdraw approval to employ a system of innovative control technology made under ~~OAC 252:100-7-37~~ 252:100-8-37, if:

(1) The proposed system fails by the specified date to achieve the required continuous reduction rate; or,

(2) The proposed system fails before the specified date so as to contribute to an unreasonable risk to public health, welfare or safety; or,

(3) The Executive Director decides at any time that the proposed system is unlikely to achieve the required level of control or to protect the public health, welfare or safety.

(d) If a source or modification fails to meet the required level of continuous emissions reduction within the specified time period, or if the approval is withdrawn in accordance with ~~OAC 252:100-7-37(e)~~ 252:100-8-37(c), the source or modification may be allowed up to an additional 3 years to meet the requirement for application of best available control technology through the use of a demonstrated system of control.

PART 11. MAJOR SOURCES AFFECTING NONATTAINMENT AREAS

252:100-8-50. Applicability

The new source requirements of this Section Part, in addition to the applicable requirements of ~~OAC 252:100-7-15 through 252:100-7-18~~ and ~~OAC 252:100-8-Parts 1, 3, 5 and 7~~ of this Subchapter, shall apply to the construction of all major sources and major modifications affecting designated nonattainment areas as specified in ~~OAC 252:100-7-51~~ 252:100-8-51 through ~~252:100-7-53~~ 252:100-8-53., and are effective upon adoption of this Subchapter by Oklahoma. Except that the requirements of Part 7 of this Subchapter will not be necessary for sources required to meet the permit requirements of the United States Environmental Protection Agency under Title 40 Part 52.24 of the Code of Federal Regulations. Sources subject to this Part which are Part 70 sources are also subject to the provisions of ~~OAC 252:100-8-~~

252:100-8-51. Definitions

The following words and terms, when used in this Part, shall have the following meaning, unless the context clearly indicates otherwise:

"Actual emissions" means the actual rate of emissions of a pollutant from an emissions unit, as determined in accordance with the following:

(A) In general, actual emissions as of a particular date shall equal the average rate in tons per year at which the unit actually emitted the pollutant during a two-year period which precedes the operation. The reviewing authority may allow the use of a different time period upon a determination that it is more representative of normal source operation. Actual emissions shall be calculated using the unit's actual operating hours, production rates, and types of materials processed, stored, or combusted during the selected time period. Actual emissions may also be determined by source tests, or by best engineering judgment in the absence of acceptable test data.

(B) The reviewing authority may presume that source-specific allowable emissions for the unit are equivalent to the actual emissions of the unit.

(C) For any emissions unit which has not begun normal operations on the particular date, actual emissions shall equal the potential to emit of the unit on that date.

~~"Allowable emissions" means the emission rate of a stationary source calculated using the maximum rated capacity of the source (unless the source is subject to enforceable limits which restrict the operating rate, or hours of operation, or both) and the most stringent of the following:~~

~~(A) the applicable standards as set forth in 40 CFR Parts 60 and 61;~~

~~(B) the applicable State rule allowable emissions; or,~~

~~(C) the emissions rate specified as an enforceable permit condition. [NOTE: Moved to 252:100-8-1.1]~~

~~"Begin actual construction" means, in general, initiation of physical on site construction activities on an emissions unit which are of a permanent nature. Such activities include, but are not limited to, installation of building supports and foundations, laying of underground pipework, and construction of permanent storage structures. With respect to a change in method of operation, this term refers to those on site activities, other than preparatory activities, which mark the initiation of the change. [NOTE: Moved to 252:100-8-1.1]~~

~~"Building, structure, facility" means all of the pollutant-emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person (or persons under common control). Pollutant-emitting activities shall be considered as part of the same industrial grouping if they belong to the same "Major Group" (i.e., which have the same two digit code) as described in the Standard Industrial Classification Manual, 1972, as amended by the 1977 Supplement.~~

~~"Commence" means, as applied to construction of a major stationary source or major modification, that the owner or operator has all necessary preconstruction approvals or permits~~

and either has:

(A) begun, or caused to begin, a continuous program of actual on-site construction of the source, to be completed within a reasonable time; or,

(B) entered into binding agreements or contractual obligations, which cannot be cancelled or modified without substantial loss to the owner or operator, to undertake a program of actual construction of the source to be completed within a reasonable time. [NOTE: Moved to 252:100-8-1.1]

"Construction" means any physical change or change in the method of operation (including fabrication, erection, installation, demolition, or modification of an emissions unit) which would result in a change in actual emissions. [NOTE: Moved to 252:100-8-1.1]

"Emissions unit" means any part of a source which emits or would have the potential to emit any pollutant subject to regulation. [NOTE: Moved to 252:100-8-1.1]

"Fugitive emissions" means those emissions which could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening. [NOTE: Moved to 252:100-8-1.1]

"Installation" means an identifiable piece of process equipment.

"Lowest achievable emissions rate" means the control technology to be applied to a major source or modification which the Executive Director, on a case by case basis, determines is achievable for a source based on the lowest achievable emission rate achieved in practice by such category of source (i.e., lowest achievable emission rate as defined in the Federal Clean Air Act).

"Major modification" means any physical change in, or change in the method of operation of, a major source that would result in a significant net emissions increase of any pollutant subject to regulation.

(A) Any net emissions increase that is significant for volatile organic compounds shall be considered significant for ozone.

(B) A physical change or change in the method of operation shall not include:

(i) routine maintenance, repair and replacement;

(ii) use of an alternate fuel or raw material by reason of any order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation) or by reason of a natural gas curtailment plan pursuant to the Federal Power Act;

(iii) use of an alternate fuel by reason of an order or rule under Section 125 of the Federal Clean Air Act;

(iv) use of an alternate fuel at a steam generating unit to the extent that the fuel is generated from municipal solid waste;

(v) Use of an alternate fuel or raw material by a source which:

(I) the source was capable of accommodating before

- December 21, 1976, unless such change would be prohibited under any enforceable permit limitation which was established after December 21, 1976; or,
(II) the source is approved to use under any permit issued under 40 CFR 52.21 or OAC 252:100-7;
(vi) An increase in the hours of operation or in the production rate unless such change would be prohibited under any enforceable permit limitation which was established after December 21, 1976, or
(vii) any change in source ownership.

"Major stationary source" means:

- (A) any stationary source of air pollutants which emits, or has the potential to emit, 100 tons per year or more of any pollutant subject to regulation; or,
(B) any physical change that would occur at a source not qualifying under (A) of this definition as a major source, if the change would constitute a major source by itself.
(C) for ozone, a source that is major for volatile organic compounds shall be considered major.

~~**"Necessary preconstruction approvals or permits" means those permits or approvals required under all air quality control laws and rules.**~~ [NOTE: Moved to 252:100-8-1.1]

"Net emissions increase" means:

- (A) The amount by which the sum of the following exceeds zero:
(i) any increase in actual emissions from a particular physical change or change in the method of operation at a source; and,
(ii) any other increases and decreases in actual emission at the source that are contemporaneous with the particular change and are otherwise creditable.
(B) An increase or decrease in actual emissions is contemporaneous with the increase from the particular change only if it occurs within 3 years before the date that the increase from the particular change occurs.
(C) An increase or decrease in actual emissions is creditable only if the Executive Director has not relied on it in issuing a permit under OAC 252:100-7, Part 7, which permit is in effect when the increase in actual emissions from the particular change occurs.
(D) An increase in actual emissions is creditable only to the extent that the new level of actual emissions exceeds the old level.
(E) A decrease in actual emissions is creditable only to the extent that:
(i) the old level of actual emissions or the old level of allowable emissions, whichever is lower, exceeds the new level of actual emissions;
(ii) it is enforceable at and after the time that actual construction on the particular change begins;
(iii) the reviewing authority has not relied on it in issuing any permit under State air quality rules; and,

(iv) it has approximately the same qualitative significance for public health and welfare as that attributed to the increase from the particular change.

(F) An increase that results from a physical change at a source occurs when the emission unit on which construction occurred becomes operational and begins to emit a particular pollutant. Any replacement unit that requires shakedown becomes operational after a reasonable shakedown period, not to exceed 180 days.

"Potential to emit" means the maximum capacity of a source to emit a pollutant under its physical and operational design. Any physical or operational limitation on the capacity of the source to emit a pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored or processed, shall be treated as part of its design if the limitation or the effect it would have on emissions is enforceable. Secondary emissions do not count in determining the potential to emit of a source. [NOTE: Moved to 252:100-8-1.1]

"Reconstruction" means the replacement of components of an existing source (which will then be treated as a new source for purposes of Part 7 of this Subchapter) to the extent that will be determined by the Executive Director based on:

(A) the fixed capital cost (the capital needed to provide all the depreciable components) of the new components exceeds 50% of the fixed capital cost of a comparable entirely new source; and,

(B) the estimated life of the source after the replacements is comparable to the life of an entirely new source; and,

(C) the extent to which the components being replaced cause or contribute to the emissions from the source.

"Resource recovery facility" means any facility at which solid waste is processed for the purpose of extracting, converting to energy, or otherwise separating and preparing solid waste for reuse. Energy conversion facilities must utilize solid waste to provide more than 50 percent of the heat input to be considered a resource recovery facility under Part 7 of this Subchapter.

"Secondary emissions" means emissions which occur as a result of the construction or operation of a major stationary source or modification, but do not come from the source or modification itself. For the purpose of OAC 252:100-7, Part 7, secondary emissions must be specific, well defined, quantifiable, and impact the same general areas as the source or modification which causes the secondary emissions. Secondary emissions may include, but are not limited to:

(A) emissions from trains coming to or from the new or modified stationary source; and,

(B) emissions from any offsite support facility which would not otherwise be constructed or increase its emissions as a result of the construction or operation of the major source or modification. [NOTE: Moved to 252:100-8-1.1]

"Significant" means, in reference to a net emissions increase

or the potential of a source to emit any of the following pollutants, a rate of emissions that would equal or exceed any of the following rates:

- (A) Carbon monoxide: 100 tons per year (tpy),
- (B) Nitrogen oxides: 40 tpy,
- (C) Sulfur dioxide: 40 tpy,
- (D) Particulate matter: 15 tpy of PM-10 emissions,
- (E) Ozone: 40 tpy of volatile organic compounds, or
- (F) Lead: 0.6 tpy.

"Stationary source" means any building, structure, facility or installation which emits or may emit any air pollutant subject to regulation. [NOTE: Moved to 252:100-8-1.1]

252:100-8-52. Source applicability determination

Proposed new sources and source modifications to which Part 7 11 of this Subchapter are applicable are determined by size, geographical location and type of emitted pollutants:

(1) Size.

(A) Permit review will apply to sources and modifications that emit any regulated pollutant in major amounts. These quantities are specified in the definitions for major stationary source, major modification, potential to emit, net emissions increase, significant, and other associated definitions in 252:100-8-51, 252:100-8-1.1, and 252:100-1.

(B) At such time that a particular source or modification becomes major solely by virtue of a relaxation in any enforceable permit limitation which was established after August 7, 1980 on the capacity of the source or modification otherwise to emit a pollutant, such as a restriction on hours of operation, then the requirements of ~~OAC 252:100-7-15 through 252:100-7-18~~ and Part 7 Parts 1, 3, 5, 7 and 11 of this Subchapter shall apply to that source or modification as though construction had not yet commenced on it.

(2) Location.

(A) Sources and modifications which that are major in size and proposed for construction in an area which has been designated as nonattainment for any applicable ambient air standard are subject to the requirements for the nonattainment area, if the source or modification is major for the nonattainment pollutant(s) of that area.

(B) In addition, the requirements of a PSD review (Part 5 of this Subchapter) would be applicable if any other regulated pollutant other than the nonattainment pollutant is emitted in significant amounts by that source or modification.

(3) Location in attainment or unclassifiable area but causing or contributing to NAAQS violation.

(A) A proposed major source or major modification that would locate in an area designated attainment or unclassifiable is considered to cause or contribute to a violation of the national ambient air quality standards when

such source or modification would, as a minimum, exceed the following significance levels at any locality that does not or would not meet the applicable national standard:

<u>Pollutant</u>	<u>Concentration, ug/m³</u>				
	<u>Averaging Time (hours)</u>				
	<u>Annual</u>	<u>24</u>	<u>8</u>	<u>3</u>	<u>1</u>
<u>SO₂</u>	<u>1.0</u>	<u>5</u>		<u>25</u>	
<u>PM-10</u>	<u>1.0</u>	<u>5</u>			
<u>NO₂</u>	<u>1.0</u>				
<u>CO</u>			<u>500</u>		<u>2000</u>

(B) Sources of volatile organic compounds located outside a designated ozone nonattainment area will be presumed to have no significant impact on the designated nonattainment area. If ambient monitoring indicates that the area of source location is in fact nonattainment, then the source may be granted its permit since the area has not yet been designated nonattainment.

(C) Sources locating in an attainment area but impacting on a nonattainment area above the significant levels listed in OAC 252:100-7-52(3) 252:100-8-52(3) are exempted from the condition of OAC 252:100-7-54(4)(A) 252:100-8-54(4)(A).

(D) The determination whether a source or modification will cause or contribute to a violation of an applicable ambient air standard for sulfur dioxide, particulate matter or carbon monoxide will be made on a case by case basis as of the proposed new source's start-up date by an atmospheric simulation model. For sources of nitrogen oxides the model can be used for an initial determination assuming all the nitric oxide emitted is oxidized to nitrogen dioxide by the time the plume reaches ground level, and the initial concentration estimates will be adjusted if adequate data are available to account for the expected oxidation rate.

(E) The determination as to whether a source would cause or contribute to a violation of applicable ambient air standards will be made on a case by case basis as of the new source's start-up date. Therefore, if a designated nonattainment area is projected to be attainment as part of the state implementation plan control strategy by the new source start-up date, offsets would not be required if the new source would not cause a new violation.

(F) Sources causing a new violation of applicable ambient air standards as determined by the Executive Director but not contributing to an existing violation, will be approved if both of the following conditions are met:

(i) The new source is required to meet a more stringent emission limitations and/or the control of existing sources below allowable levels so that the new violation of ambient standards does not occur.

(ii) The new emission limitation limitations for the new

source, as well as for any existing sources affected, are enforceable under the Oklahoma and Federal Clean Air Acts.

252:100-8-53. Exemptions

(a) Nonattainment area requirements do not apply to a particular source or modification locating in or impacting on a nonattainment area if:

(1) The source is major by virtue of fugitive emissions, to the extent quantifiable, included in calculating the potential to emit and is a source other than one of the following categories:

- (A) carbon black plants (furnace process),
- (B) charcoal production plants,
- (C) chemical process plants,
- (D) coal cleaning plants (with thermal dryers),
- (E) coke oven batteries,
- (F) fossil-fuel boilers (or ~~combustion~~ combination thereof) totaling more than 250 million BTU per hour heat input,
- (G) fossil fuel-fired steam electric plant of more than 250 million BTU per hour heat input,
- (H) fuel conversion plants,
- (I) glass fiber processing plants,
- (J) hydrofluoric, sulfuric or nitric acid plants,
- (K) iron and steel mills,
- (L) kraft pulp mills,
- (M) lime plants,
- (N) municipal incinerators capable of charging more than 250 tons of refuse per day,
- (O) petroleum refineries,
- (P) petroleum storage and transfer units with a total storage exceeding 300,000 barrels,
- (Q) phosphate rock processing plants,
- (R) portland cement plants,
- (S) primary aluminum ore reduction plants,
- (T) primary copper smelters,
- (U) primary lead smelters,
- (V) primary zinc smelters,
- (W) secondary metal production plants,
- (X) sintering plants,
- (Y) sulfur recovery plants,
- (Z) taconite ore processing plants, or
- (AA) any other stationary source category which, as of August 7, 1980, is being regulated by federal New Source Performance Standards (NSPS) NSPS or National Emission Standards for Hazardous Air Pollutants (~~NESHAPS~~) NESHAP.

(2) A source or modification was not subject to 40 CFR Part 51, Appendix S (emission offset interpretative ruling) as in effect on January 16, 1979 and the source:

- (A) obtained all final federal and state construction

permits before August 7, 1980;

(B) commenced construction within 18 months from August 7, 1980 or any earlier time required by the State Implementation Plan; and,

(C) did not discontinue construction for a period of 18 months or more and completed construction within a reasonable time.

(b) Secondary emissions are excluded in determining the potential to emit (see definition of "potential to emit" in OAC ~~252:100-7-51~~ 252:100-8-1.1). However, upon determination of the Executive Director, if a source is subject to the requirements on the basis of its direct emissions, the applicable requirements must also be met for secondary emissions but the source would be exempt from the conditions of OAC ~~252:100-7-52(3)(F)~~ 252:100-8-52(3)(F) and OAC ~~252:100-7-54(1)~~ 252:100-8-54(1) through ~~252:100-7-54(3)~~ 252:100-8-54(3). Also, the indirect impacts of mobile sources are excluded.

(c) As specified in the applicable definitions, the requirements of Part 5 9 for PSD and Part 7 11 for nonattainment areas of this Subchapter are not applicable to a modification if the existing source was not major on August 7, 1980 unless the proposed addition to the existing minor source is major in its own right.

252:100-8-54. Requirements for sources located in nonattainment areas

In the event a major source or modification would be constructed in an area designated as nonattainment for a pollutant for which the source or modification is major, approval shall be granted only if the following conditions are met:

(1) The new source must demonstrate that it has applied control technology which the Executive Director, on a case by case basis, determines is achievable for a source based on the lowest achievable emission rate (LAER) achieved in practice by such category of source (i.e., lowest achievable emission rate as defined in the Federal Clean Air Act).

(2) If the Executive Director determines that imposition of an enforceable numerical emission standard is infeasible, due to technological or economic limitations on measurement methodology, a design, equipment, work practice or operational standard, or combination thereof, may be prescribed as the emission limitation rate.

(3) The owner or operator of the new source must demonstrate that all other major sources owned or operated by such person in Oklahoma are in compliance, or are meeting all steps on a schedule for compliance, with all applicable limitations and standards under Oklahoma and Federal Clean Air Acts.

(4) The owner or operator of the new source must demonstrate that upon commencing operations:

(A) the emissions from the proposed source and all other sources permitted in the area do not exceed the planned growth allowable for the area designated in the State Implementation Plan; or,

- (B) the total allowable emissions from existing sources in the region and the emissions from the proposed source will be sufficiently less than the total emissions from existing sources allowed under the State Implementation Plan at the date of construction permit application so as to represent further progress toward attainment or maintenance of the ambient air quality standards in the problem area.
- (5) The owner or operator may present with the application an analysis of alternate sites, sizes and production processes for such proposed source.

APPENDIX I. INSIGNIFICANT ACTIVITIES LIST

Any Activity to which a State of federal applicable requirement applies is not insignificant even if it is included on this list.

COMBUSTION EQUIPMENT

* Stationary reciprocating engines burning natural gas, gasoline, aircraft fuels, or diesel fuel which are either used exclusively for emergency power generation or for peaking power service not exceeding 500 hours/year

Space heaters, boilers, process heaters, and emergency flares less than or equal to 5 MMBTU/hr heat input (commercial natural gas).

Emissions from stationary internal combustion engines rated less than 50 hp output

Emissions from gas turbines with less than 215 kilowatt rating of electric output

STORAGE TANKS/DISTRIBUTION

* Emissions from fuel storage/dispensing equipment operated solely for facility owned vehicles if fuel throughput is not more than 2,175 gallons/day, averaged over a 30-day period

* Storage tanks with less than or equal to 10,000 gallons capacity that store volatile organic liquids with a true vapor pressure less than or equal to 1.0 psia at maximum storage temperature

* Bulk gasoline or other fuel distribution with a daily average throughput less than 2,175 gallons per day, including dispensing, averaged over a 30-day period

Gasoline and aircraft fuel handling facilities, equipment, and storage tanks except those subject to New Source Performance Standards and standards in 252:100-37-15, 39-30, 39-41, and 39-48

Emissions from condensate tanks with a design capacity of 400 gallons or less in ozone attainment areas

Emissions from crude oil and condensate marine and truck loading equipment operations at crude oil and natural gas production sites where the loading rate does not exceed 10,000 gallons per day averaged over a 30-day period

* Emissions from crude oil and condensate storage tanks with a capacity of less than or equal to 420,000 gallons that store crude oil and condensate prior to custody transfer

* Emissions from storage tanks constructed with a capacity less than 39,894 gallons which store VOC with a vapor pressure less than 1.5 psia at maximum storage temperature

ANALYSIS/LABORATORY ACTIVITIES

Additions or upgrades of instrumentation or control systems that result in emissions increases less than the pollutant quantities specified in 252:100-8-3(e)(1)

EQUIPMENT

Alkaline/phosphate washers and associated burners
Cold degreasing operations utilizing solvents that are denser than air

* Welding and soldering operations utilizing less than 100 pounds of solder and 53 tons per year of electrodes

Wood chipping operations not associated with the primary process operation

* Torch cutting and welding of under 200,000 tons of steel fabricated per year

REMEDIATION

Site restoration and/or bioremediation activities of < 5 years expected duration

Hydrocarbon contaminated soil aeration pads utilized for soils excavated at the facility only

Emissions from the operation of groundwater remediation wells including but not limited to emissions from venting, pumping, and collecting activities subject to de minimis limits for air toxics (252:100-41-43) and HAPs (§112(b) of CAAA90)

SOLID WASTE

* Non-commercial water washing operations (less than 2,250 barrels/year) and drum crushing operations of empty barrels less than or equal to 55 gallons with less than three percent by volume of residual material

Hazardous waste and hazardous materials drum staging areas

Sanitary sewage collection and treatment facilities other than incinerators and Publicly Owned Treatment Works (POTW)
Stacks or vents for sanitary sewer plumbing traps are also included (i.e., lift station)

Emissions from landfills and land farms unless otherwise regulated by an applicable state or federal regulation

COATINGS

* Automobile body shops located in an ozone attainment area emitting less than 5 tons/year of volatile organic solvents

Electrophoretic-process coating application operations (i.e., paint bath positively charged, painted object negatively charged)

* Surface coating operations which do not exceed a combined total usage of more than 60 gallons/month of coatings, thinners, and clean-up solvents at any one emissions unit

MISCELLANEOUS

Exhaust systems for chemical, paint, and/or solvent storage rooms or cabinets, including hazardous waste satellite (accumulation) areas
Hand wiping and spraying of solvents from containers with less than 1 liter capacity used for spot cleaning and/or degreasing in ozone attainment areas

* Activities having the potential to emit no more than 5 TPY (actual) of any criteria pollutant (see instructions in Title V application)

* Appropriate records of hours, quantity, or capacity must be kept on the activity to verify its insignificance.

APPENDIX J. TRIVIAL ACTIVITIES LIST

Any activity to which a State of federal applicable requirement applies is not trivial even if it is included on this list.

AGRICULTURAL

Lawn care (noncommercial)
Weed control (noncommercial)
Pest control (noncommercial)
Herbicide and pesticide activities except for manufacturing and formulation for commercial sale

ANALYSIS/TESTING

Hydraulic or hydrostatic testing
Analysis/laboratory activities emissions from the following: air contaminant detectors, air contaminant recorders, combustion controllers, combustion shut-off devices, product analyzers, laboratory analyzers, continuous emissions monitors, other analyzers (eq., water quality), and emissions associated with sampling activities. Also, emissions from bench scale laboratory equipment and laboratory equipment used exclusively for chemical and physical analysis, including assorted vacuum producing devices and vents but NOT lab fume hoods or vents
Site assessment work, including but not limited to, the evaluation of waste disposal or remediation sites
Emissions from instrument systems utilizing air or natural gas
Environmental field sampling operations
Sampling connections used exclusively to withdraw materials for testing and analysis, including air contaminant detectors and vent lines
Compressed gas cylinders and gases utilized for equipment calibration and testing

ANIMALS

Equipment used to mix and package soaps, vegetable oil, grease, animal fat, and nonvolatile aqueous salt solutions, provided appropriate lids and covers are utilized
Equipment used exclusively to slaughter animals, but not including other equipment at slaughterhouses, such as rendering cookers, boilers, heating plants, incinerators, and electrical power generating

BATTERY CHARGING

Industrial battery recharging and maintenance operations for batteries utilized within the facility only

BLOWDOWNS

Emissions from the blowdown of compressors or other vessels containing natural gas or liquid hydrocarbons for the purpose of maintenance due to emergency circumstances

CLEANING

Acid washing (maintenance cleaning)

Caustic washing (maintenance cleaning)

Abrasive blasting

Steam cleaning

Carbon dioxide blasting equipment in degreasing or depainting

High pressure water depainting operations and aqueous industrial spray washers

Vacuum cleaning systems used exclusively for industrial, commercial, or residential housekeeping purposes, except those systems used to collect particulate matter subject to 252:100 and hazardous and/or toxic air contaminants

Ultrasonic cleaning operations which do not utilize volatile organic compounds

Molten salt bath descaling operations

Natural gas water heating systems for fixed vehicle wash racks

COOLING TOWERS/BOILER WATER

Emissions from non-contact cooling towers (cooling water that has not been in contact with other materials or fluids containing regulated air pollutants)

Boiler water treatment operations

Deaerator units associated with boilers or hot water heating systems

Process water filtration systems and demineralizers

Demineralized water tanks and demineralizer vents

ELECTRIC POWER

Equipment associated with electrical power transmission which do not involve fuel-burning activities using transformers and substations

Electric or steam-heated drying ovens and autoclaves, but not the emissions from the articles or substances being processed in the ovens or autoclaves or the boilers delivering the steam

FIREFIGHTING

Emissions from fire or emergency response equipment and training to include use of fire control equipment including equipment for testing and training, engines used exclusively for firefighting, and open burning of materials or fuels associated with firefighting training. Buildings burned for firefighting training must still adhere to NESHAP for Asbestos.

Fire extinguishers and fire extinguishing systems

FUGITIVE EMISSIONS

Seal replacement (i.e., manhole gaskets)

Roof coating, service, and repair

Paving of roads, parking lots, and other areas

Vent emissions from gas streams used as buffer or seal gas in rotating pump and compressor seals

Emissions from natural gas odorizing activities

Emissions from pneumatic starters on reciprocating engines.

turbines, compressors, or other equipment

Gas flares or flares used solely to indicate danger to the public (e.g. road hazard)

Warehouse activities including the storage of packaged raw materials and finished goods

Non-routine clean out of tanks, lift stations, and equipment for the purposes of worker entry or in preparation for maintenance or decommissions

Unpaved roadways and parking areas

Gravel, sand and dirt storage for use in on-site construction projects

VOC fugitive emissions from component additions (e.g. valves, flanges, connectors, pump seals, compressor seals, etc.) regulated by a fugitive monitoring program where the total increase is less than one ton per year of any criteria pollutant or the de minimis set forth in 252:100-41-43. The component additions must be identified in the next scheduled monitoring report required by the applicable requirements. VOC fugitive emissions from component additions (e.g. valves, flanges, connectors, pump seals, compressor seals, etc.) not regulated by a fugitive monitoring program provided that no applicable requirement is triggered when components are added.

Fugitive emissions of jet fuels associated with aircraft fuel cell and fuel bladder repair

Fugitive emissions related to movement of passenger vehicles provided the emissions are not counted for applicability purposes or any required fugitive dust control plan or its equivalent is submitted

INSULATION

Insulation installing or removal (non-asbestos)

Application of refractory & insulation (calcium silicate, etc.)

LUBRICATING

Lubricating pumps, sumps, and systems

Emissions from engine crankcase vents and equipment lubricating sumps

MAINTENANCE

Welding, brazing, soldering for maintenance purposes

Use of adhesives for maintenance purposes

Grinding, cutting, sanding for maintenance purposes

Emissions from pipeline maintenance pigging activities

Maintenance, upkeep, and replacement types of activities, including those not altering the capacity of process, combustion or control equipment, and which do not increase regulated pollutant emissions unless subject to NESHAP or NSPS

METALS

Equipment used for inspection of metal products

Die casting machines

Foundry sand mold forming equipment to which no heat is applied, and from which no organics are emitted

Equipment used exclusively to mill or grind coatings and holding compounds where all materials charged are in paste form (unless HAP emission)

Equipment used exclusively for rolling, forging, pressing, spinning, drawing, or extruding either hot or cold metals unless their emissions exceed any applicable regulated amount

Carbon monoxide lasers, used only on metals and other materials which do not emit HAP in the process

MISCELLANEOUS

Operations previously determined to be de minimis pursuant to 252:100-7-2(b)(3) or 252:100-41-43(a)(5)

Laser trimmers using dust collection to prevent fugitive emissions

Shock chambers

Humidity chambers

Solar simulators

MOBILE SOURCES

Mobile source emissions from cars, trucks, forklifts, courier vehicles, front loaders, graders, cranes, carts, hydrostatic and hydraulic testing equipment, maintenance trucks, helicopters, locomotives, marine vessels, portable generators moveable by hand, portable pumps, portable air compressors, portable welding machines, and portable fuel tanks

Other on and off road mobile sources (i.e. coal stacker & reclaimer)

Well servicing/workover rigs and associated equipment

Well drilling rigs and associated equipment

Aircraft ground support (AGE) equipment, including but not limited to portable power generators, lights, and HVAC support

Vehicle exhaust from maintenance or repair shops

Road sanding and salting operations

OFFICE AND JANITORIAL

Janitorial services

Sweeping (Floor Sweep)

Office emissions (photocopying, blueprint copying, photograph processes)

OUTDOOR RECREATION

Outdoor recreational emissions (campfires, barbecue pits)

Open burning for the purpose of land management (must get permission from Air Quality Enforcement even though exempt from permitting)

Outdoor kerosene heaters

PLASTICS/FIBERGLASS

Plastic or fiberglass welding or repair

Sealing or cutting plastic film or foam with heat or wires

Processes used for the curing of fiberglass or paint products

REFRIGERANTS

Cold storage refrigerator equipment
De minimis refrigerant releases

RESIDENTIAL

Air conditioning or comfort ventilation systems not regulated under Title VI of the Clean Air Act

Emissions from residential housing units, dormitories, and multifamily dwellings to include fuel burning for the purposes of heating except prohibited open burning

SOLID WASTE

Solid waste landfill operations
RCRA Solid Waste Management Units subject to 40 CFR Part 265, Subparts AA, BB, and CC

SOLVENT

Emissions from laundry care equipment processing bedding, clothing or other fabric items. These include dryers, extractors, & tumblers. NOT CLEANING OPERATIONS USING PERCHLOROETHYLENE OR PETROLEUM SOLVENTS (i.e., dry cleaning)

Covered cold solvent degreasers not subject to federal emission standards (e.g. NESHAP or NSPS)

STORAGE TANKS/DISTRIBUTION

Emissions from lube oil, seal oil, or hydraulic fluid storage tanks and equipment as long as not emitting VOCs or HAPs

Storage and use of chemicals unless otherwise regulated by an applicable state or federal regulation. These chemicals include, but not limited to: alum, ammonia, biocides, corrosion inhibitors, dechlorination chemicals, inorganic salts, acids or bases to include caustic and sulfuric acid, coagulants, flocculants, precipitants, surfactants, anti-foam chemicals, sealing inhibitors, oxygen scavengers, phosphates, polyelectrolytes, limestone slurry, lime and lime slurry, flue gas desulfurization system slurry, and sulfur slurry; propane and acetylene under pressure

Storage and use of products or equipment for maintaining motor vehicles operated at the site (including but not limited to antifreeze and fuel additives) not regulated under Title VI, CFC rules)

Emissions from tanks containing separated water produced from oil and gas operations

Commercial gasoline dispensing stations, including those located within the physical boundaries of a Title V source

Lubricants and waxes used for machinery and other equipment lubrication and emission from lubricating oil or hydraulic fluid storage tanks and equipment

Runway and aircraft de-icing activities, including de-icer storage tanks unless otherwise regulated

Storage tanks, reservoirs, and pumping and handling equipment of

any size containing soaps, vegetable oil, grease; animal fat, and nonvolatile aqueous salt solutions, provided appropriate lids and covers are utilized

SURFACE COATING

Surface coating for maintenance purposes such as roll/brush/pad coating, painting with aerosol cans, spray airless, and conventional spray painting

Touch-up painting operations where paints/coatings are applied at less than one quart per hour

WASTEWATER

Removal of basic sediment & water from collection/storage systems (i.e., clarifiers)

Water and wastewater treatment and transportation system

Pit, ponds, sumps, or wastewater conveyance facilities

Emissions from skimmer pits, oil/water separators, and maintenance of filter separators

Emissions from the removal of sludge or sediment from pits, ponds, sumps, or wastewater conveyance facilities

Industrial and/or municipal wastewater treatment processes (excluding combustion or incineration equipment), storage silos for dry material(sludges), composting, or grease trap waste handling or treatment

Ozonization process or process equipment including ozone generation for water treatment processes

Sanitary sewerage and storm water runoff collection systems

Emissions from dredging pits, ponds, sumps, or other wastewater conveyance facilities

WOODWORKING

Wood working (saw-cutting, staining & varnishing) (noncommercial)

Woodworking utilized for hobby purposes or maintenance of grounds or buildings

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL

RECEIVED

DEC 08 1997

OKLAHOMA SECRETARY
OF STATE
and # 14
97-

INTENDED RULEMAKING ACTION: Notice of proposed PERMANENT rulemaking.

PROPOSED RULES: 252:100, Air Pollution Control: Subchapter 5, Registration of Air Contaminant Sources [AMENDED]; Subchapter 7, Construction Permits for Major and Minor Sources; Operating and Relocation Permits for Minor Sources [AMENDED].

SUMMARY: The proposed amendments to Subchapter 5 include moving the requirements to file an emission inventory from Subchapter 7 to Subchapter 5, moving the requirements to pay annual operating fees from Subchapters 7 and 8 to Subchapter 5, and revising the annual operating fees for minor facilities, non-Part 70 sources and Part 70 sources. The proposed amendments to Subchapter 5 are designed to simplify and clarify the rules. The proposed amendments to Subchapter 7 are necessary to incorporate a new permit classification system into the Air Quality program. The proposed changes include: remove any requirements for Part 70 sources and major facilities (which will be moved to Subchapter 8); define and exempt "de minimis" facilities from the requirements of Subchapter 7; revise minor permit application fees; and introduce two new types of construction and operating permits, permit by rule and general permit.

AUTHORITY: Environmental Quality Board, 27A O.S. Supp. 1993, §§ 2-2-101 and 2-5-101 et seq., Oklahoma Clean Air Act.

COMMENT PERIOD: The period for written comments closed on October 15, 1997. Oral comments may be made before the Environmental Quality Board at their meeting on Tuesday, January 27, 1998 - 9:30 a.m., in Chickasha.

PUBLIC HEARINGS: Subchapter 5 and Subchapter 7 were presented to the Air Quality Council August 19, 1997 and October 21, 1997. Before the Environmental Quality Board at their meeting on Tuesday, January 27, 1998 - 9:30 a.m., in Chickasha.

COPIES OF PROPOSED RULES: Copies of the rules are available for review at the Air Quality Division office at the address listed below or may be obtained from the contact person.

RULE IMPACT STATEMENT: The rule impact statements may be obtained from the Air Quality Division at the address below:

CONTACT PERSON: Jeanette Buttram, Department of Environmental Quality, Air Quality Division, 4545 N. Lincoln Blvd., Suite 250, Oklahoma City, Oklahoma 73105-3483; (405) 290-8247.

ADDITIONAL INFORMATION: With the exception of 252:100-5-2.2(b)(2), which establishes the annual operating fees for Part 70 sources, the hearing record for Subchapter 5 and the hearing record for Subchapter 7 were closed during the council meeting on October 21, 1997. A vote on whether to recommend the revised rules to the Environmental Quality Board was taken at the Air Quality Council meeting on December 16, 1997.

PERSONS WITH DISABILITIES: Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 290-8247.

**RECENT RULE REVISIONS MADE IN
RESPONSE TO COMMENTS**

SUBCHAPTER 8. OPERATING PERMITS ~~(PART 70)~~ FOR PART 70 SOURCES

PART 1. GENERAL PROVISIONS

[NOTE: Throughout this draft language that has been moved from other Sections and Subchapters is underlined once, new language is double underlined and deletions are struck out.]

252:100-8-1. Purpose

~~The purpose of this Subchapter is to provide for the promulgation and enforcement of the requirements necessary to meet Title V of the federal Clean Air Act (42 U.S.C. 7401, et seq.) and 40 CFR Part 70 by establishing a comprehensive state air quality permitting program for major sources of air contaminant emissions. Permits issued under this program will address all applicable air contaminant emissions and regulatory requirements in a single document. This Subchapter sets forth permit application fees and the substantive requirements for permits for Part 70 sources.~~

252:100-8-1.1. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise. Except as specifically provided in this section, terms used in this Subchapter retain the meaning accorded them under the applicable requirements of the Act.

[NOTE: From 252:100-8-2]

"A stack in existence" means for purposes of 252:100-8-1.5 that the owner or operator had:

- (A) begun, or caused to begin, a continuous program of physical on-site construction of the stack; or
- (B) entered into binding agreements or contractual obligations, which could not be canceled or modified without substantial loss to the owner or operator, to undertake a program of construction of the stack to be completed in a reasonable time. [NOTE: From 252:100-7-16(b)]

"Act" means the federal Clean Air Act, as amended, 42 U.S.C. 7401 et. seq. [NOTE: From 252:100-8-2]

"Administrator" means the Administrator ~~administrator~~ of the United States Environmental Protection Agency (EPA) or the Administrator's ~~administrator's~~ designee. [NOTE: From 252:100-8-2]

"Allowable emissions" means, for purposes of Parts 7 and 9 of this Subchapter, the emission rate of a stationary source calculated using the maximum rated capacity of the source (unless the source is subject to enforceable limits which restrict the operating rate, or hours of operation, or both) and the most stringent of the following:

- (A) the applicable standards as set forth in 40 CFR Parts 60 and 61;
- (B) the applicable State rule allowable emissions; or,
- (C) the emissions rate specified as an enforceable permit

condition. {NOTE: From 252:100-7-31 and 252:100-7-51}

"Begin actual construction" for purposes of Parts 7 and 9 of this Subchapter means, in general, initiation of physical on-site construction activities on an emissions unit which are of a permanent nature. Such activities include, but are not limited to, installation of building supports and foundations, laying of underground pipework, and construction of permanent storage structures. With respect to a change in method of operation this term refers to those on-site activities, other than preparatory activities, which mark the initiation of the change. [NOTE: From 252:100-7-31 and 252:100-7-51]

"Commence" for purposes of Parts 7 and 9 of this Subchapter means, as applied to construction of a major stationary source or major modification, that the owner or operator has all necessary preconstruction approvals or permits and either has:

(A) begun, or caused to begin, a continuous program of actual on-site construction of the source, to be completed within a reasonable time; or,

(B) entered into binding agreements or contractual obligations, which cannot be cancelled or modified without substantial loss to the owner or operator, to undertake a program of actual construction of the source to be completed within a reasonable time. [NOTE: From 252:100-7-31 and 252:100-7-51]

"Construction" means, for purposes of Parts 7 and 9 of this Subchapter, any physical change or change in the method of operation (including fabrication, erection, installation, demolition, or modification of an emissions unit) which would result in a change in actual emissions. [NOTE: From 252:100-7-31 and 252:100-7-51]

"Dispersion technique" means for purposes of 252:100-8-1.5 any technique which attempts to affect the concentration of a pollutant in the ambient air by using that portion of a stack which exceeds good engineering practice stack height; varying the rate of emission of a pollutant according to atmospheric conditions or ambient concentrations of that pollutant; or increasing final exhaust gas plume rise by manipulating source process parameters, exhaust gas parameters, stack parameters or combining exhaust gases from several existing stacks into one stack, or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise. The preceding sentence does not include:

(A) The reheating of a gas stream, following use of a pollution control system, for the purpose of returning the gas to the temperature at which it was originally discharged from the facility generating the gas stream.

(B) The merging of exhaust gas streams where:

(i) the source owner or operator documents that the facility was originally designed and constructed with such merged streams;

(ii) after July 8, 1985, such merging is part of a change in operation at the facility that includes the

installation of pollution controls and is accompanied by a net reduction in the allowable emissions of a pollutant. This exclusion from "dispersion technique" applicability shall apply only to the emission limitation for the pollutant affected by such change in operation;

or

(iii) before July 8, 1985, such merging was part of a change in operation at the facility that included the installation of emissions control equipment or was carried out for sound economic or engineering reasons. Where there was an increase in the emission limitation or, in the event that no emission limitation existed prior to the merging, there was an increase in the quantity of pollutants actually emitted prior to the merging, it shall be presumed that merging was primarily intended as a means of gaining emissions credit for greater dispersion. Before such credit can be allowed, the owner or operator must satisfactorily demonstrate that merging was not carried out for the primary purpose of gaining credit for greater dispersion.

(C) Manipulation of exhaust gas parameters, merging of exhaust gas streams from several existing stacks into one stack, or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise in those cases where the resulting allowable emissions of sulfur dioxide from the facility do not exceed 5,000 tons per year. [NOTE: From 252:100-7-16(b)]

"Emission limitations and emission standards" means for purposes of 252:100-8-1.5 a requirement requirements that which limits limit the quantity, rate or concentration of emissions of air pollutants on a continuous basis, including any requirements which that limit the level of opacity, prescribe equipment, set fuel specifications or prescribe operation or maintenance procedures for a source to assure continuous reduction. (Amended 7-9-87, effective 8-10-87) [NOTE: From 252:100-7-16(b)]

"Emissions unit" means, for purposes of Parts 7 and 9 of this Subchapter, any part of a source which emits or would have the potential to emit any pollutant subject to regulation. [NOTE: From 252:100-7-31 and 252:100-7-51]

"EPA" means the United States Environmental Protection Agency. [NOTE: From 252:100-8-2]

"Fugitive emissions" means, for purposes of Parts 7 and 9 of this Subchapter, those emissions which could not reasonably pass through a stack, chimney, vent or other functionally equivalent opening. [NOTE: From 252:100-7-31 and 252:100-7-51]

"National Emission Standards for Hazardous Air Pollutants" or "NESHAP" means those standards found in 40 CFR Parts 61 and 63.

"Necessary preconstruction approvals or permits" means, for purposes of Parts 7 and 9 of this Subchapter, those permits or approvals required under all applicable air quality control laws and rules. [NOTE: From 252:100-7-31 and 252:100-7-51]

"New Source Performance Standards" or "NSPS" means those

standards found in 40 CFR Part 60.

"Part 70 permit" (unless the context suggests otherwise) means any permit or group of permits covering a Part 70 source that is issued, renewed, amended, or revised pursuant to this Chapter. [NOTE: From 252:100-8-2]

"Part 70 program" means a program approved by the Administrator under 40 CFR Part 70. [NOTE: From 252:100-8-2]

"Part 70 source" means any source subject to the permitting requirements of Part 5 of this Chapter Subchapter, as provided in OAC 252:100-8-3(a) and 252:100-8-3(b). [NOTE: From 252:100-8-2]

"Potential to emit" means, for purposes of Parts 7 and 9 of this Subchapter, the maximum capacity of a source to emit a pollutant under its physical and operational design. Any physical or operational limitation on the capacity of the source to emit a pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored or processed, shall be treated as part of its design if the limitation or the effect it would have on emissions is enforceable. Secondary emissions do not count in determining the potential to emit of a source. [NOTE: From 252:100-7-31 and 252:100-7-51]

"Secondary emissions" means, for purposes of Parts 7 and 9 of this Subchapter, emissions which occur as a result of the construction or operation of a major stationary source or modification, but do not come from the source or modification itself. For the purpose of OAC 252:100-7, 252:100-8, Part 7 9, secondary emissions must be specific, well defined, quantifiable, and impact the same general areas as the source or modification which causes the secondary emissions. Secondary emissions may include, but are not limited to:

(A) emissions from trains coming to or from the new or modified stationary source; and,

(B) emissions from any offsite support facility which would not otherwise be constructed or increase its emissions as a result of the construction or operation of the major source or modification. [NOTE: From 252:100-7-31 and 252:100-7-51]

"Stack" means for purposes of 252:100-8-1.5 any point in a source designed to emit solids, liquids or gases into the air, including a pipe or duct but not including flares. [NOTE: From 252:100-7-16(b)]

"Stationary source" means, for purposes of Parts 7 and 9 of this Subchapter, any building, structure, facility or installation which emits or may emit any air pollutant subject to OAC 252:100. [NOTE: From 252:100-7-31 and 252:100-7-51]

252:100-8-1.2. General information

(a) Permit categories. Two types of construction and operating permits are available: general permit and individual permit.

(1) General permit.

(A) A general permit may be issued for an industry if there are a sufficient number of facilities that have the same or substantially similar operations, emissions and activities

which are subject to the same standards, limitations and operating and monitoring requirements.

(B) Facilities may be eligible for authorization under a general permit if the following criteria are met:

(i) The facility has actual emissions of 100 tpy or more of any one regulated air pollutant emitted and/or is a Part 70 source.

(ii) The DEQ has issued a general permit for the industry.

(2) Individual permit. Facilities requiring permits under this Subchapter that do not qualify for a general permit shall obtain individual permits. An owner or operator may apply for an individual permit even if the facility qualifies for a general permit.

(b) Applicability determination. Any person may submit a request in writing that the Agency DEQ make a determination as to whether a particular source or installation, which that person operates or proposes to operate, is subject to the permit requirements of this rule Subchapter. The request must contain such sufficient information as is believed sufficient for the Agency DEQ to make the requested determination and the required fee. The Agency DEQ may request any additional information that it needs for purposes of making the determination. [NOTE: From 252:100-8-3(f)]

252:100-8-1.3. Failure ~~Duty~~ to comply with a construction permit

~~A violation of these limitations or conditions by the owner/operator shall subject the owner/operator to any or all enforcement penalties, including permit revocation, available under the Oklahoma Clean Air Act and Air Pollution Control Rules.~~

(a) An owner or operator who applies for a permit or authorization, upon notification of coverage, shall be bound by the terms and conditions therein. [NOTE: Based on 252:100-10-5(j)]

(b) An owner or operator who violates any condition of a permit or authorization is subject to enforcement under the Oklahoma Clean Air Act. [NOTE: 252:100-8-1.3(b) was based on 252:100-7-15(f) (3)]

252:100-8-1.4. Cancellation or extension of a construction permit or authorization under a general construction permit

(a) Cancellation of permit or authorization to construct or modify. A duly issued permit or authorization to construct or modify will terminate and become null and void (unless extended as provided in Subsection subsection (b) of this Section section) if the construction is not commenced within 18 months after of the date the permit or authorization was issued issuance date, or if work is suspended for more than 18 months after it has commenced.

(b) Extension of permit or authorization to construct or modify.

(1) Prior to the expiration date of the permit or authorization expiration date, a permittee may apply for

extension of the permit or authorization by written request of the DEQ stating the reasons for the delay or suspension and providing justification for the extension. The DEQ may grant:

(A) One extension Extensions for terms of 18 months or less, or

(B) One extension of up to 36 months where the applicant is proposing to expand an already existing facility to accommodate the proposed new construction or the applicant has expended a significant amount of money (1% of total project cost as identified in the original application, not including land cost) in preparation for meeting the definition of "commence construction" at the proposed site., or

(C) One extension of up to 72 months will be granted to major industrial facilities (project cost greater than \$100,000,000.00), where the applicant proposes to construct at an existing site and demonstrates that the existing site was originally designed and constructed to accommodate the proposed new facilities. The applicant shall show a commitment to the site by having purchased land necessary to construct facilities covered by this extension and expended \$1,000,000.00 or more on engineering and/or site development.

(2) If construction has not commenced within three (3) years of the effective date of the original permit or authorization, the permittee must undertake and complete an appropriate available control technology review and an air quality analysis. This review must be approved by the DEQ before construction may commence.

(3) Upon formal request of any applicant whose permit has been denied for lack of increment, the DEQ may require any permittee under 252:100:8-1.4(b)(1)(B) or 252:100-8-1.4(b)(1)(C), to furnish a complete air quality analysis and/or an appropriate available control technology review if such review is required in order to provide new or current information. [NOTE: 252:100-8-1.4 is from 252:100-7-15(g)]

252:100-8-1.5. Stack height limitations

(a) Stack height exclusion. Air quality modeling or ambient impact evaluation shall exclude the effect of that portion of the height of any stack which exceeds good engineering practice or the effect of any other dispersion techniques.

(b) Definitions. The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise: [NOTE: Definitions were moved to 252:100-8-1.1]

(1) "A stack in existence" means that the owner or operator had:

(A) begun, or caused to begin, a continuous program of physical on site construction of the stack; or

(B) entered into binding agreements or contractual obligations, which could not be canceled or modified without

~~substantial loss to the owner or operator, to undertake a program of construction of the stack to be completed in a reasonable time.~~

~~(2) "Dispersion technique" means any technique which attempts to affect the concentration of a pollutant in the ambient air by using that portion of a stack which exceeds good engineering practice stack height; varying the rate of emission of a pollutant according to atmospheric conditions or ambient concentrations of that pollutant; or increasing final exhaust gas plume rise by manipulating source process parameters, exhaust gas parameters, stack parameters or combining exhaust gases from several existing stacks into one stack, or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise. The preceding sentence does not include:~~

~~(A) The reheating of a gas stream, following use of a pollution control system, for the purpose of returning the gas to the temperature at which it was originally discharged from the facility generating the gas stream.~~

~~(B) The merging of exhaust gas streams where:~~

~~(i) the source owner or operator documents that the facility was originally designed and constructed with such merged streams;~~

~~(ii) after July 8, 1985, such merging is part of a change in operation at the facility that includes the installation of pollution controls and is accompanied by a net reduction in the allowable emissions of a pollutant. This exclusion from "dispersion technique" applicability shall apply only to the emission limitation for the pollutant affected by such change in operation; or~~

~~(iii) before July 8, 1985, such merging was part of a change in operation at the facility that included the installation of emissions control equipment or was carried out for sound economic or engineering reasons. Where there was an increase in the emission limitation or, in the event that no emission limitation existed prior to the merging, there was an increase in the quantity of pollutants actually emitted prior to the merging, it shall be presumed that merging was primarily intended as a means of gaining emissions credit for greater dispersion. Before such credit can be allowed, the owner or operator must satisfactorily demonstrate that merging was not carried out for the primary purpose of gaining credit for greater dispersion.~~

~~(C) Manipulation of exhaust gas parameters, merging of exhaust gas streams from several existing stacks into one stack, or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise in those cases where the resulting allowable emissions of sulfur dioxide from the facility do not exceed 5,000 tons per~~

year.

~~(3) "Emission limitations and emission standards" means a requirement which limits the quantity, rate or concentration of emissions of air pollutants on a continuous basis, including any requirements which limit the level of opacity, prescribe equipment, set fuel specifications or prescribe operation or maintenance procedures for a source to assure continuous reduction. (Amended 7-9-87, effective 8-10-87)~~

~~(4) "Stack" means any point in a source designed to emit solids, liquids or gases into the air, including a pipe or duct but not including flares.~~

(b)(c) Determination of good engineering practice (GEP) stack height. GEP shall be the greater of:

(1) 65 meters, measured from the ground-level elevation at the base of the stack; or

(2) The height under either ~~0AC 252:100-7-16(e)(2)(A) or (B)~~ 252:100-8-1.5(b)(2)(A) or (B):

(A) for stacks in existence on January 12, 1979 and for which the owner or operator had obtained all applicable permits or approvals required under ~~0AC 252:100-7-252:100-8~~ or Federal 40 CFR Part 52,

$$H_g = 2.5H$$

provided the owner or operator can demonstrate that this equation was relied upon in establishing an emission limitation;

(B) for all other stacks,

$$H_g = H + 1.5L,$$

where: H_g = good engineering practice stack height, measured from the ground-level elevation at the base of the stack,

H = height of nearby structure(s) measured from the ground-level elevation at the base of the stack,

L = lesser dimension (height or projected width) of nearby structure(s), provided that the owner or operator may be required to verify such GEP stack height by the use of a field study or fluid model as the Executive Director shall determine; or

(3) The height demonstrated by a fluid model or a field study approved by the reviewing agency, which ensures that the emissions from a stack do not result in excessive concentrations of any air pollutant as a result of atmospheric downwash, wakes, or eddy effects created by the source itself, nearby structures, or nearby terrain features.

(c)(d) Nearby. A structure or terrain feature shall be considered to be nearby:

~~(1) For purposes of applying the formula in OAC 252:100-7-16(e), if that distance up to five times the lesser of the height or the width dimension of a structure, but not greater than 0.8 km (0.5 mile), and~~

~~(2) For conducting demonstrations under OAC 252:100-7-16(e)(2), if not greater than 0.8 km (0.5 mile), except that the portion of a terrain feature may be considered to be nearby which falls within a distance of up to 10 times the maximum height of the feature, not to exceed 2 miles if such feature achieves a height at 0.8 km (0.5 mile) from the stack that is at least 40 percent of the GEP stack height determined by the formulae in OAC 252:100-7-16(e)(3) or 26 meters, whichever is greater, as measured from the base of the stack. The height of the structure or terrain feature is measured from the ground level elevation at the base of the stack.~~

(1) For the formulae in 252:100-8-1.5(b)(2). A structure or terrain feature shall be considered nearby if it is located within a distance of up to five times the lesser of the height or the width of a structure, but not more than 0.5 miles (0.8 km).

(2) For demonstration in 252:100-8-1.5(b)(3).

(A) A structure or terrain feature shall be considered nearby if located at a distance not greater than 0.5 mile (0.8 km), except that

(B) A portion of a terrain feature may be considered nearby if:

(i) It falls within a distance (not to exceed 2 miles) of up to 10 times the maximum height (Ht) of the feature, and

(ii) At a distance of 0.5 mile, the height of such feature is at least 40 percent of the GEP stack height determined by the formulae provided in 252:100-8-1.5(b)(2)(B) or 85.3 feet (26 meters), whichever is greater, as measured from the base of the stack.

(3) Measurement of height of structure or terrain. The height of the structure or terrain feature is measured from the ground-level elevation at the base of the stack.

~~(d)-(e) Excessive concentrations. When utilized for the purpose of determining GEP stack height under OAC 252:100-7-16(e)(3) 252:100-8-1.5(b)(3), excessive concentrations shall be as follows:~~

(1) For sources seeking credit for stack height exceeding that calculated under ~~OAC 252:100-7-16(e)(2)~~ 262:100-8-1.5(b)(2), a maximum ground-level pollutant concentration from a stack due in whole or part to downwash, wakes, and eddy effects produced by nearby structures or nearby terrain features which is at least 40 percent in excess of the maximum concentration experienced in the absence of such downwash, wakes, or eddy effects and which, when combined with the impacts due to all sources, produces a concentration in excess of an ambient air quality standard. For sources subject to the prevention of significant deterioration program (Part 5 7

of this Subchapter or Federal 40 CFR 52.21), the same criteria apply except that a concurrent exceedance of a prevention of significant deterioration increment is experienced. In making demonstrations under this part, the allowable emission rate shall conform to the new source performance standard that is applicable to the source category unless the owner or operator can demonstrate that this emission rate is infeasible. Where such demonstrations are approved by the Executive Director, an alternative emission rate shall be established in consultation with the owner or operator;

(2) For sources seeking credit after October 1, 1983, for increases in existing stack heights up to the heights established under ~~OAC 252:100-7-16(e)(2)~~ 252:100-8-1.5(b)(2) either:

(A) a maximum ground-level concentration due in whole or part to downwash, wakes or eddy effects as specified in ~~OAC 252:100-7-16(e)(2)~~ 252:100-8-1.5(b)(2), except that the emission rate specified by any applicable state implementation plan (or, in the absence of such a limit, the actual emission rate) shall be used, or

(B) the actual presence of a local nuisance caused by the existing stack, as determined by the Executive Director; and

(3) For sources seeking credit after January 12, 1979 for a stack height determined under ~~OAC 252:100-7-16(e)(1)~~ 252:100-8-1.5(b)(2) where the Executive Director requires the use of a field study or fluid model to verify GEP stack height, for sources seeking stack height credit after November 9, 1984 based on the aerodynamic influence of cooling towers, and for sources seeking stack height credit after December 31, 1970 based on the aerodynamic influence of structures not adequately represented by the formulae in ~~OAC 252:100-7-16(e)(1)~~ 252:100-8-1.5(b)(2), a maximum ground-level concentration due in whole or part to downwash, wakes or eddy effects that is at least 40 percent in excess of the maximum concentration experienced in the absence of such downwash, wakes or eddy effects. [NOTE: 252:100-8-1.5 was moved from 252:100-7-16]

PART 3. PERMIT APPLICATION FEES

252:100-8-1.7. Permit application fees

A permit application or a request for an applicability determination received after the effective date of this subsection will be assessed a one-time fee, which must accompany the application or request. Applications received without appropriate fees are administratively incomplete. Fees must be paid by check or money order made payable to the Oklahoma Air Quality Division in accordance with the following fee schedule:

(1) **Applicability determination.** \$100, to be credited against the construction or operating permit application fee, if a permit is required. If no permit is required, the fee

will be retained to cover the cost of making the determination. [NOTE: Based on 252-7-3(c)]

(2) Construction permit application. The fee is \$2,000.

~~(1) Part 70 source construction permit \$2,000 [NOTE: from 252:100-7-3(b)(1)]~~

(3) Operating permit application.

~~(2) Permit processing fees. Permit processing fees shall be as follows:~~

(A) Initial Part 70 permit -\$2,000.

(B) Authorization under a general permit - \$900

~~(C)(B) Renewal Part 70 permit - \$1,000.~~

~~(D)(C) Significant Part 70 Permit Mod. modification of Part 70 permit - \$1,000.~~

~~(E)(D) Minor modification of Part 70 permit Permit Modification - \$500.~~

~~(E) The Part 70 Temporary Permit \$1,000.~~

~~(F)(F) Part 70 Temporary Source Relocation - \$ 500.~~

[NOTE: 252:100-8-1.7(c) is from 252:100-8-9(d)(2)]

PART 5. PERMITS FOR PART 70 Sources

252:100-8-2. Definitions

The following words and terms, when used in this Subchapter Part, shall have the following meaning, unless the context clearly indicates otherwise. Except as specifically provided in this section, terms used in this Subchapter Part retain the meaning accorded them under the applicable requirements of the Act.

~~"Act" means the Clean Air Act, as amended, 42 U.S.C. 7401 et. seq. [NOTE: Moved to 252:100-8-1.1]~~

~~"Administratively complete" means the same as defined at OAC 252:002-11. an application that provides:~~

(A) All information required under 252:100-8-5(c), (d), or (e);

(B) A landowner affidavit as required by 252:2-15-20(b)(3);

(C) The appropriate application fees as required by 252:100-8-1.7; and

(D) Certification by the responsible official as required by 252:100-8-5(f).

~~"Administrator" means the administrator of the United States Environmental Protection Agency (EPA) or the administrator's designee. [NOTE: Moved to 252:100-8-1.1]~~

~~"Affected source" means the same as the meaning given to it in the regulations promulgated under Title IV (acid rain) of the Act.~~

~~"Affected states" means:~~

(A) all states:

(i) That ~~that~~ are one of the following contiguous states: Arkansas, Colorado, Kansas, Missouri, New Mexico and Texas, and

(ii) That in the judgment of the DEQ Agency, may be directly

affected by emissions from the facility seeking the permit, permit modification, or permit renewal being proposed; or
(B) all states that are within 50 miles of the permitted source.

"Affected unit" means the same as the meaning given to it in the regulations promulgated under Title IV (acid rain) of the Act.

~~"Agency" means Air Quality Division of the Oklahoma Department of Environmental Quality.~~

"Applicable requirement" means all of the following as they apply to emissions units in a ~~part~~ Part 70 source subject to this Chapter (including requirements that have been promulgated or approved by EPA through rulemaking at the time of issuance but have future effective compliance dates):

(A) Any standard or other requirements provided for in the applicable implementation plan approved or promulgated by EPA through rulemaking under Title I of the Act that implements the relevant requirements of the Act, including any revisions to that plan promulgated in 40 ~~C.F.R.~~ CFR Part 52;

(B) Any term or condition of any preconstruction permits issued pursuant to regulations approved or promulgated through rulemaking under Title I, including parts C or D, of the Act;

(C) Any standard or other requirement under section 111 of the Act, including section 111(d);

(D) Any standard or other requirement under section 112 of the Act, including any requirement concerning accident prevention under section 112(r)(7) of the Act, but not including the contents of any risk management plan required under 112(r) of the Act;

(E) Any standard or other requirement of the acid rain program under Title IV of the Act or the regulations promulgated thereunder;

(F) Any requirements established pursuant to section 504(b) or section 114(a)(3) of the Act;

(G) Any standard or other requirement governing solid waste incineration, under section 129 of the Act;

(H) Any standard or other requirement for consumer and commercial products, under section 183(e) of the Act;

(I) Any standard or other requirement for tank vessels, under section 183(f) of the Act;

(J) Any standard or other requirement of the regulations promulgated to protect stratospheric ozone under Title VI of the Act, unless the Administrator has determined that such requirements need not be contained in a Title V permit; and

(K) Any national ambient air quality standard or increment or visibility requirement under part C of Title I of the Act, but only as it would apply to temporary sources permitted pursuant to section 504(e) of the Act.

~~"Department" means the Department of Environmental Quality.~~

~~"Designated representative" means the same as the meaning given to it in section 402(26) of the Act and the regulations promulgated thereunder with respect to affected units, a~~

responsible person or official authorized by the owner or operator of a unit to represent the owner or operator in matters pertaining to the holding, transfer, or disposition of allowances allocated to a unit, and the submission of and compliance with permits, permit applications, and compliance plans for the unit.

"Draft permit" means the version of a permit for which the Agency DEQ offers public participation under ~~OAC 252:100-8-7(i)~~ 27A O.S.Supp. 1995, §2-14-101 et seq. and 252:100-2-15 or affected State review under OAC 252:100-8-8.

"Emissions allowable under the permit" means a federally enforceable permit term or condition determined at issuance to be required by an applicable requirement that establishes an emissions limit (including a work practice standard) or a federally enforceable emissions cap that the source has assumed to avoid an applicable requirement to which the source would otherwise be subject.

"Emissions unit" means any part or activity of a stationary source that emits or has the potential to emit any regulated air pollutant or any pollutant listed under section 112(b) of the Act. Fugitive emissions from valves, flanges, etc. associated with a specific unit process shall be identified with that specific emission unit. This term is not meant to alter or affect the definition of the term "unit" for purposes of Title IV of the Act.

~~"EPA" means the United States Environmental Protection Agency.~~
[NOTE: Moved to 252:100-8-1.1]

"Final permit" means the version of a part 70 permit issued by the Agency DEQ that has completed all review procedures required by OAC 252:100-8-7 through 252:100-8-7.5 and 252:100-8-8.

"Fugitive emissions" means those emissions of regulated air pollutants which could not reasonably pass through a stack, chimney, vent, or other functionally-equivalent opening.

"General permit" means a part 70 permit that meets the requirements of ~~OAC 252:100-8-6(d)~~ 252:100-8-6.1.

"Insignificant activities" means individual emissions units that are either on the list approved by the Administrator and contained in Appendix I, or whose actual calendar year emissions do not exceed any of the limits in (A) through (C) of this definitions. Any activity to which a State or federal applicable requirement applies is not insignificant even if it meets the criteria below or is included on the insignificant activities list.

(A) 5 tons per year of any one criteria pollutant.

(B) 2 tons per year for any one hazardous air pollutant (HAP) or 5 tons per year for an aggregate of two or more HAP's, or 20 percent of any threshold less than 10 tons per year for single HAP that the EPA may establish by rule.

(C) 0.6 tons per year for any one category A substance, 1.2 tons per year for any one category B substance or 6 tons per year for any one category C substance as defined in 252:100-41-40.

"MACT" means maximum achievable control technology.

"Major source" means any stationary source (or any group of stationary sources that are located on one or more contiguous or adjacent properties, and are under common control of the same person (or persons under common control)) belonging to a single major industrial grouping and that ~~are~~ is described in subparagraph (A), (B), or (C), ~~or~~ (D), of this definition. For the purposes of defining "major source," a stationary source or group of stationary sources shall be considered part of a single industrial grouping if all of the pollutant emitting activities at such source or group of sources on contiguous or adjacent properties belong to the same Major Group (i.e., all have the same two-digit primary SIC code) as described in the Standard Industrial Classification Manual, 1987.

(A) A major source under section 112 of the Act, which is defined as:

(i) For pollutants other than radionuclides, any stationary source or group of stationary sources located within a contiguous area and under common control that emits or has the potential to emit, in the aggregate, 10 tons per year ("tpy") or more of any hazardous air pollutant which has been listed pursuant to section 112(b) of the Act, 25 tpy or more of any combination of such hazardous air pollutants, or such lesser quantity as the Administrator may establish by rule. Notwithstanding the preceding sentence, emissions from any oil or gas exploration or production well (with its associated equipment) and emissions from any pipeline compressor or pump station shall not be aggregated with emissions from other similar units, whether or not such units are in a contiguous area or under common control, to determine whether such units or stations are major sources; or.

(ii) For radionuclides, "major source" shall have the meaning specified by the Administrator by rule.

(B) A major stationary source of air pollutants, as defined in section 302 of the Act, that directly emits or has the potential to emit, 100 tpy or more of any regulated air pollutant (except ~~Total Suspended Particulates (TSP)~~ TSP) (including any major source of fugitive emissions of any such pollutant, as determined by rule by the Administrator). The fugitive emissions of a stationary source shall not be considered in determining whether it is a major stationary source for the purposes of section 302(j) of the Act, unless the source belongs to one of the following categories of stationary sources:

- (i) Coal cleaning plants (with thermal dryers);
- (ii) Kraft pulp mills;
- (iii) Portland cement plants;
- (iv) Primary zinc smelters;
- (v) Iron and steel mills;
- (vi) Primary aluminum ore reduction plants;
- (vii) Primary copper smelters;
- (viii) Municipal incinerators capable of charging more

than 250 tons of refuse per day;

- (ix) Hydrofluoric, sulfuric, or nitric acid plants;
- (x) Petroleum refineries;
- (xi) Lime plants;
- (xii) Phosphate rock processing plants;
- (xiii) Coke oven batteries;
- (xiv) Sulfur recovery plants;
- (xv) Carbon black plants (furnace process);
- (xvi) Primary lead smelters;
- (xvii) Fuel conversion plants;
- (xviii) Sintering plants;
- (xix) Secondary metal production plants;
- (xx) Chemical process plants;
- (xxi) Fossil-fuel boilers (or combination thereof)

totaling more than 250 million British thermal units per hour heat input;

- (xxii) Petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels;
- (xxiii) Taconite ore processing plants;
- (xxiv) Glass fiber processing plants;
- (xxv) Charcoal production plants;
- (xxvi) Fossil-fuel-fired steam electric plants of more than 250 million British thermal units per hour heat input;

or

- (xxvii) All other stationary source categories regulated by a standard promulgated under section 111 or 112 of the Act, but only with respect to those air pollutants that have been regulated for that category.

(C) A major stationary source as defined in part D of Title I of the Act, including:

- (i) For ozone non-attainment areas, sources with the potential to emit 100 tpy or more of volatile organic compounds or oxides of nitrogen in areas classified as "marginal" or "moderate," 50 tpy or more in areas classified as "serious," 25 tpy or more in areas classified as "severe," and 10 tpy or more in areas classified as "extreme"; except that the references in this paragraph to 100, 50, 25, and 10 tpy of nitrogen oxides shall not apply with respect to any source for which the Administrator has made a finding, under section 182(f)(1) or (2) of the Act, that requirements under section 182(f) of the Act do not apply;
- (ii) For ozone transport regions established pursuant to section 184 of the Act, sources with the potential to emit 50 tpy or more of volatile organic compounds;
- (iii) For carbon monoxide non-attainment areas:
 - (I) that are classified as "serious"; and
 - (II) in which stationary sources contribute significantly to carbon monoxide levels as determined under rules issued by the Administrator, sources with the potential to emit 50 tpy or more of carbon monoxide; and
- (iv) For particulate matter (PM-10) non-attainment areas

classified as "serious," sources with the potential to emit 70 tpy or more of PM-10.

~~(D) Notwithstanding the source categories in (A) through (C) of this definition, emissions from any oil or gas exploration or production well (with its associated equipment) and emissions from any pipeline compressor station or pump station shall not be aggregated with emissions from other similar units, whether or not such units are in a contiguous area or under common control, to determine whether such units or stations are major sources and in the case of any oil or gas exploration or production well (with its associated equipment), such emissions shall not be aggregated for any purpose under this definition.~~

"Maximum capacity" means the quantity of air contaminants that theoretically could be emitted by a stationary source without control devices based on the design capacity or maximum production capacity of the source and 8,760 hours of operation per year. In determining the maximum theoretical emissions of VOCs for a source, the design capacity or maximum production capacity shall include the use of raw materials, coatings and inks with the highest VOC content used in practice by the source.

~~"Part 70 permit" (unless the context suggests otherwise) means any permit or group of permits covering a part 70 source that is issued, renewed, amended, or revised pursuant to this Chapter. [NOTE: Moved to 252:100-8-1.1]~~

~~"Part 70 program" means a program approved by the Administrator under 40 C.F.R Part 70. [NOTE: Moved to 252:100-8-1.1]~~

~~"Part 70 source" means any source subject to the permitting requirements of this Chapter, as provided in OAC 252:100-8-3(a) and 252:100-8-3(b). [NOTE: Moved to 252:100-8-1.1]~~

"Permit" (unless the context suggests otherwise) means any permit or group of permits covering a part Part 70 source that is issued, renewed, amended, or revised pursuant to this Chapter.

"Permit modification" means a revision to a part Part 70 construction or operating permit that meets the requirements of ~~OAC 252:100-8-7(e)~~ 252:100-8-7.2(b).

"Permit program costs" means all reasonable (direct and indirect) costs required to develop and administer a permit program, as set forth in ~~OAC 252:100-8-9~~ 252:100-5-2.2 (whether such costs are incurred by the DEQ Agency or other State or local agencies that do not issue permits directly, but that support permit issuance or administration).

"Permit revision" means any permit modification or administrative permit amendment.

~~"Permitting authority" means the Department of Environmental Quality.~~

"Potential to emit" means the maximum capacity of a stationary source to emit any air pollutant under its physical and operational design. Any physical or operational limitation on the capacity of a source to emit an air pollutant, including air pollution control equipment and restrictions on hours of

operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitation is enforceable by the Administrator. This term does not alter or affect the use of this term for any other purposes under the Act, or the term "capacity factor" as used in Title IV of the Act or the regulations promulgated thereunder.

"Proposed permit" means the version of a permit that the DEQ Agency proposes to issue and forwards to the Administrator for review in compliance with ~~OAC~~ 252:100-8-8.

"Regulated air pollutant" means the following:

(A) Nitrogen oxides or any volatile organic ~~compounds~~ compound (VOC), including those substances defined in ~~at~~ ~~OAC~~ 252:100-1-3, 252:100-37-2, 252:100-39-2, or any Volatile Organic Solvent (VOS), as that term is defined in ~~at~~ ~~OAC~~ 252:100-37-2 and 252:100-39-2, or any organic material defined ~~at~~ in 252:100-37-2 except those specifically excluded in the EPA definition of VOC ~~per~~ in 40 CFR 51.100(s);

(B) Any pollutant for which a national ambient air quality standard has been promulgated;

(C) Any pollutant that is subject to any standard promulgated under section 111 of the Act;

(D) Any Class I or II ozone-depleting substance subject to a standard promulgated under or established by Title VI of the Act;

(E) Any pollutant subject to a standard promulgated under section 112 or other requirements established under section 112 of the Act (Hazardous Air Pollutants), including sections 112(g) (Modifications), (j) (Equivalent Emission Limitation by Permit, and (r) (Prevention of Accidental Releases), including the following:

(i) any pollutant subject to the requirements under section 112(j) of the Act. If the Administrator fails to promulgate a standard by the date established pursuant to section 112(e) of the Act (Schedule for Standards and Review), any pollutant for which a subject source would be major shall be considered to be regulated as to that source on the date 18 months after the applicable date established pursuant to section 112(e) of the Act; and,

(ii) any pollutant for which the requirements of section 112(g)(2) of the Act have been met, but only with respect to the individual source subject to the section 112(g)(2) requirement; or

(F) Any other substance for which an air emission limitation or equipment standard is set by an existing permit or regulation.

"Renewal" means the process by which a permit is reissued at the end of its term.

"Responsible official" means one of the following:

(A) For a corporation: a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation, or a

duly authorized representative of such person if the representative is responsible for the overall operation of one or more manufacturing, production, or operating facilities applying for or subject to a permit and either:

(i) The facilities employ more than 250 persons or have gross annual sales or expenditures exceeding \$25 million (in second quarter 1980 dollars); or

(ii) The delegation of authority to such representatives is approved in advance by the ~~permitting authority~~ DEQ;

(B) For the partnership or sole proprietorship: a general partner or the proprietor, respectively;

(C) For a municipality, State, Federal, or other public agency: Either a principal executive officer or ranking elected official. For purposes of this Subchapter, a principal executive officer or installation commander of a Federal agency includes the chief executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., a Regional Administrator of EPA); or

(D) For affected sources:

(i) The designated representative in so far as actions, standards, requirements, or prohibitions under Title IV of the Act or the regulations promulgated thereunder are concerned; and

(ii) The designated representative for any other purposes under this Subchapter.

"Section 502(b)(10) changes" means changes that contravene an express permit term. Such changes do not include changes that would violate applicable requirements or contravene federally enforceable permit terms and conditions that are monitoring (including test methods), recordkeeping, reporting, or compliance certification requirements.

"Small unit" means a fossil fuel fired combustion device which serves a generator with a name plate capacity of 25 MWe or less.

"State-only requirement" means any standard or requirement pursuant to Oklahoma Clean Air Act (27A O.S. 1993 Supp. Sec. 2-5-101 et seq. as amended) that is not contained in the State Implementation Plan (SIP).

"State program" means a program approved by the Administrator under 40 CFR ~~C.F.R.~~ Part 70.

"Stationary source" means any building, structure, facility, or installation that emits or may emit any regulated air pollutant or any pollutant listed under section 112(b) of the Act.

"Trivial activities" means any individual or combination of air emissions units that are considered inconsequential and are on a list approved by the Administrator and contained in Appendix J. Any activity to which a State or federal applicable requirement applies is not trivial even if included on the trivial activities list.

"Unit" means, for purposes of Title IV, a fossil fuel-fired combustion device.

252:100-8-3: Applicability

(a) **Covered sources.** Except as exempted from the requirement to obtain a permit under subsection (b) of this Section ~~and or~~ elsewhere in this Subchapter Chapter, the following sources listed below are subject to the permitting requirements under this Subchapter Chapter. A covered source shall remain a Part 70 source until a federally enforceable permit is obtained which contains emission limitations and/or conditions to limit the operation of the facility to below that which would define it as a covered source pursuant to this section 252:100-8-3(a). [NOTE: The underlined language was formerly 252:100-8-3(g).]

- (1) Any major source (as defined in OAC 252:100-8-2);
- (2) Any source, ~~including an area source, subject to a NSPS standard, limitation, or other requirement under section 111 of the Act;~~
- (3) Any source, including an area source, subject to a NESHAP standard or other requirement under section 112 of the Act, except that a source is not required to obtain a permit solely because it is subject to regulations or requirements under section 112(r) of the Act;
- (4) Any affected source (as defined in OAC 252:100-8-2); and
- (5) Any source in a source category designated by the Administrator pursuant to 40 CFR C.F.R. §70.3-; and
- (6) Any major source required to have a permit under Parts 7 or 9 of this Subchapter.

(b) **Source category exemptions.**

(1) All sources listed in subsection (a) of this section that are not major sources, affected sources, or solid waste incineration units required to obtain a permit pursuant to section 129(e) of the Act, are exempt from the obligation to obtain a Part 70 permit unless required to do so by appropriate implementation of EPA administrative rulemaking for non-major sources. Any such exempt source may opt to apply for a permit under these rules and shall be issued a permit if the applicant otherwise satisfies all of the requirements of this Chapter.

(2) If the Administrator determines after appropriate rulemaking that an exemption is applicable to non-major sources when adopting standards or other requirements under section 111 or section 112 of the Act after July 21, 1992, then at that time the exemption will apply.

(3) Unless otherwise required to obtain a Part 70 permit, the following source categories are exempted from the obligation to obtain a Part 70 permit:

(A) All sources in source categories that would be required to obtain a permit solely because they are subject to part 60, subpart AAA -- Standards of Performance for New Residential Wood Heaters; and

(B) All sources in source categories that would be required to obtain a permit solely because they are subject to part 61, subpart M -- National Emission Standard for Hazardous Air Pollutants for Asbestos, Section 61.145, Standard for

Demolition and Renovation.

~~(c) Emissions units and covered sources (Part 70 sources).~~

~~(1) For major sources, Part 70 permits shall include all applicable requirements and state only requirements for all relevant emissions units in the major source.~~

~~(2) For any non major source subject to this Subchapter, Part 70 permits shall include all applicable requirements which apply to emissions units that cause the source to be subject to the requirement to obtain a permit. [NOTE: 252:100-8-3(c)(1) is covered in 252:100-8-6(a) and (c)(2) was deleted.]~~

~~(d) Fugitive emissions. Fugitive emissions from a covered source shall be included in the permit application and the permit in the same manner as stack emissions, regardless of whether the source category in question is included in the list of sources contained in the definition of major source. [NOTE: Revised and moved to 252:100-8-5(c)(3)(A)]~~

~~(e) Insignificant activities.~~

~~(1) The insignificant activities and emissions levels shall be as follows:~~

~~(A) emissions will not exceed one pound (1 lb.) per hour for any one criteria pollutant, and~~

~~(B) emissions of toxic air contaminants will not exceed the de minimis requirements set forth under 252:100-41-43(a)(5).~~

~~(2) In addition to the quantity thresholds in (1)(A) and (1)(B) "Insignificant Activity" also means any individual or combination of air emissions sources at a facility that have an aggregate potential to emit that does not increase the overall potential to emit of the entire facility for a given regulated pollutant by more than 10% above the "baseline" permitted limit which excludes the insignificant activities. Thus, insignificant activities may apply to original permit application, permit modifications/amendments, and/or permit renewals. The cumulative amount of activities claimed as insignificant during a Title V permit term shall not increase the potential to emit of the entire facility by more than 10% of the permit limit for a given pollutant from the date of permit issuance to the date of application for renewal. These insignificant activities cannot conflict with significant emission levels in any Title V program. Insignificant activities must be identified but not quantified (except to the extent necessary to demonstrate their insignificance) in the permit application. The Agency shall maintain a list of activities which are considered to be insignificant without quantification by the permittee. The Agency shall also maintain a list of activities which are determined to be trivial. "Trivial activity" means any individual or combination of air emissions units at a Part 70 source which are considered inconsequential as determined by the Agency. Trivial activities need not be identified in the permit application, amendment or renewal. [NOTE: Moved to 252:100-8-2]~~

~~(f) Applicability determinations. Any person may submit a request in writing that the Agency make a determination as to~~

~~whether a particular source or installation, which that person operates or proposes to operate, is subject to the permit requirements of this rule. The request must contain such information as is believed sufficient for the Agency to make the requested determination. The Agency may request any additional information that it needs for purposes of making the determination. [NOTE: Moved to 252:100-8-1.2(c)]~~

~~(g) Covered sources. A covered source shall remain a Part 70 source until a federally enforceable permit is obtained which contains emission limitations and/or conditions to limit the operation of the facility to below that which would define it as a covered source pursuant to 252:100-8-3(a). [NOTE: Moved to 252:100-8-3(a)]~~

252:100-8-4. Title V permits required Requirements for construction and operating permits

(a) Construction permits.

(1) Construction permit required. No person shall cause or allow the construction or modification installation of any new minor or major source facility that will require a Part 70 operating permit without first obtaining a DEQ-issued air quality construction permit to construct or modify the source. A construction permit is also required for any physical change that would be a modification under 252:100-8-7.2(b). In addition to the requirements of this Part, sources subject to Part 7 or Part 9 of this Subchapter must also meet the applicable requirements contained therein. [NOTE: (a)(1) is from 252:100-7-15(a)(1)]

(2) Requirement for case-by-case MACT determinations.

(A) Applicability. The requirement for case-by-case MACT determinations apply to any owner or operator who constructs or reconstructs a major source of hazardous air pollutants after June 29, 1998, unless the source has been specifically regulated or exempted from regulation under a subpart of 40 CFR Part 63, or the owner or operator has received all necessary air quality permits for such construction or reconstruction before June 29, 1998.

(B) Exclusions. The following sources are not subject to this subsection.

(i) Electric utility steam generating units unless and until these units are added to the source category list.

(ii) Stationary sources that are within a source category that has been deleted from the source category list.

(iii) Research and development activities as defined in 40 CFR § 63.41.

(C) MACT determinations. If subject to this subsection, an owner or operator may not begin actual construction or reconstruction of a major source of HAP until obtaining from the DEQ an approved MACT determination in accordance with the following regulations: 40 CFR 63.41, 40 CFR 63.43 and 40 CFR 63.44, which are hereby incorporated by reference as they exist on July 1, 1997.

(b) Operating permits.

(1) Operating permits required. Except as provided in paragraphs subparagraphs ~~(1)~~ (A) and ~~(2)~~ (B) of this section, no Title V Part 70 source subject to this Chapter may operate after the time that it is required to file a timely application with the DEQ, except in compliance with a DEQ-issued permit.

~~(A)~~ (1) If the owner or operator of a source subject to the requirement to obtain a permit submits a timely application for permit issuance or renewal, that source's failure to have a permit shall not be a violation of the requirement to have such a permit until the DEQ takes final action on the application. This protection shall cease to apply if the applicant fails to submit, by the deadline specified in writing by the DEQ or ~~OAC 252:100-8-4~~ ~~252:100-8-5~~, any additional information identified as being reasonably required to process the application.

~~(B)~~ (2) If the owner or operator of a source subject to this Subchapter files a timely application that the DEQ determines to be administratively incomplete due to the applicant's failure to timely provide additional information requested by the DEQ at the end of the DEQ's administrative completeness review period, the applicant loses the protection granted under paragraph (A) (1) of this section. as a result of its failure to timely provide information requested by the DEQ, the ~~The~~ source's failure to have a permit shall be deemed a violation of this Subchapter.

~~(C)~~ (3) Filing an operating permit application shall not affect the requirement, if any, that any a source have a construction ~~preconstruction~~ permit under Title I of the ~~federal Clean Air Act~~.

(2) Duty to apply. For each Part 70 source, the owner or operator shall submit a timely and complete permit application on forms supplied by the ~~Division~~ DEQ in accordance with this section.

(3) Timely application. Sources that are subject to the operating permit program established by this Chapter as of ~~the date the program is approved by EPA and becomes effective (the "effective date")~~ March 6, 1996, shall file applications on the following schedules outlined in ~~OAC 252:100-8-5(b)(2)~~ ~~252:100-8-4(b)(4)~~. A timely application is one that is postmarked on or before the relevant date listed below. In the event a major source consists of operations under multiple SIC codes, the primary main activity shall form the basis for the initial permit application.

(4) Application submittal schedule. The following sources are subject to the operating permit program and shall submit initial permit applications according to the following schedule.

(A) No later than six months after the effective date of the federally approved interim state operating permit program September 5, 1996:

(i) Affected sources under the acid rain provisions of the federal Clean Air Act shall submit a permit application for at least the affected units at the site. Regardless of the effective date of the program and the requirement to file an application defined in this section, applications for initial Phase II acid rain permits shall be submitted to the DEQ no later than January 1, 1996, for sulfur dioxide, and by January 1, 1998, for nitrogen oxides, pursuant to the Act, §407.

(ii) Any owner or operator shall submit no less than one-third of their total applications for major Part 70 sources located at sources classified by the following Source Standard Industrial Classification Codes and which belong to a single major industrial grouping other than 28 (Chemicals and allied products) or 29 (Petroleum refining and related industries):

- (I) Petroleum and Natural Gas, 1311;
- (II) Natural Gas Liquids, 1321;
- (III) Electric Services, 4911, 4961;
- (IV) Natural Gas Transmission, 4922;
- (V) Natural Gas Transmission and Distribution, 4923; and
- (VI) Petroleum Bulk Stations and Terminals, 5171.

(B) All remaining Part 70 sources identified in (b)(2)(4)(A)(ii) of this Subsection shall be subject to the operating permit program and shall submit initial permit applications no later than 12 months after the effective date of the federally approved interim state operating permit program March 5, 1997.

(C) No later than 12 months after the effective date of the federally approved interim state operating permit program March 5, 1997, any owner or operator shall submit their applications for major Part 70 sources located at sources classified by the following Standard Industrial Classification Codes:

- (i) Metals, 3312, 3315, 3321, 3379, 3341, 3351, 3411, 3412, 3432, 3466,
- (ii) Brick Plants, 3251, 3297,
- (iii) Commercial Printing, 2752, 2761.

(D) No later than 28 months after the effective date of the federally approved interim state operating permit program, July 5, 1998, any owner or operator shall submit their applications for major Part 70 sources located at sources classified by the following Standard Industrial Classification Codes:

- (i) Refineries, 2911;
- (ii) Cement Plants, 3241;
- (iii) Chemical/Carbon, 2819, 2821, 2851, 2861, 2869, 2891, 2895, 2899, 2999, 3053, 3086, 3089;
- (iv) Petroleum Transportation/Terminals/Storage, 4612, 4613;
- (v) Food Products, 2013, 2074, 2095.

(E) All remaining Part 70 sources shall be subject to the operating permit program and shall submit initial permit applications no later than 36 months after the effective date of the federally approved interim state operating permit program March 6, 1999.

(5) ~~Newly regulated sources Application following effective date.~~ A source that becomes subject to the operating permit program established by this Chapter at any time following the effective date shall file an administratively complete operating permit application within 180 days of commencement of operation.

(6) ~~Application acceptability.~~ Notwithstanding the deadlines established in ~~paragraph (4) paragraphs (1), (2), and (3)~~ of this subsection, an application filed prior to the above deadlines following submission of the state program to EPA for approval shall be accepted for processing. ~~For purposes of the 60 day administrative review period established in OAC 252:2-15, the official login date for any Part 70 operating permit application submitted according to the interim schedule in this subsection shall be the date on which the DEQ begins its administrative completeness review.~~

(7) ~~112(g) applications.~~ A source that is required to meet the requirements under section 112(g) of the federal Clean Air Act, or to have a permit under a preconstruction review program under Title I of such Act, shall file an application to obtain an operating permit or permit amendment or modification within twelve months of commencing operation. Where an existing Part 70 operating permit would prohibit such construction or change in operation, the source must obtain a construction permit ~~revision~~ before commencing construction.

(8) ~~Application for renewal.~~ Sources subject to this Chapter shall file an application for renewal of an operating permit at least six months before the date of permit expiration, unless a longer period (not to exceed 18 months) is specified in the permit. Renewal periods greater than six months are subject to negotiation on a case-by-case basis.

(9) ~~Phase II acid rain permits.~~ Sources required to submit applications under the Acid Rain Program ~~should~~ shall submit these applications as required by 40 CFR 72.30(b)(2)(i) through (viii).

(10) ~~Application completeness.~~ See Uniform Permitting Rules, ~~OAC 252:010-3-50 and 3-51~~ 252:2-15-70 and the definition of administratively complete in 252:100-8-2.

[NOTE: 252:100-8-4(b)(2) through (10) from 252:100-8-5(b)(1) through (8)]

252:100-8-5. Permit applications

~~(a) Construction permit.~~ Any new source or modified source which becomes subject to this Subchapter shall be required to obtain a construction permit in accordance with OAC 252:100-7 prior to commencement of construction.

~~(b) Duty to apply.~~ For each Part 70 source, the owner or

~~operator shall submit a timely and complete permit application on forms supplied by the Division in accordance with this section.~~

~~(1) Timely application. Sources that are subject to the operating permit program established by this Chapter as of the date the program is approved by EPA and becomes effective (the "effective date") shall file applications on the following schedules outlined in OAC 252:100-8-5(b)(2) 252:100-8-4(b)(2). In the event a major source consists of operations under multiple SIC codes, the main activity shall form the basis for the initial permit application.~~

~~(2) Application submittal schedule. The following sources are subject to the operating permit program and shall submit initial permit applications according to the following schedule.~~

~~(A) No later than six months after the effective date of the federally approved interim state operating permit program:~~

~~(i) Affected sources under the acid rain provisions of the federal Clean Air Act shall submit a permit application for at least the affected units at the site. Regardless of the effective date of the program and the requirement to file an application defined in this section, applications for initial Phase II acid rain permits shall be submitted to the DEQ no later than January 1, 1996, for sulfur dioxide, and by January 1, 1998, for nitrogen oxides, pursuant to the Act, §407.~~

~~(ii) Any owner or operator shall submit no less than one-third of their total applications for major sources located at sources classified by the following Source Standard Industrial Classification Codes and which belong to a single major industrial grouping other than 28 (Chemicals and allied products) or 29 (Petroleum refining and related industries):~~

- ~~(I) Petroleum and Natural Gas, 1311;~~
- ~~(II) Natural Gas Liquids, 1321;~~
- ~~(III) Electric Services, 4911, 4961;~~
- ~~(IV) Natural Gas Transmission, 4922;~~
- ~~(V) Natural Gas Transmission and Distribution, 4923;~~
- ~~and~~
- ~~(VI) Petroleum Bulk Stations and Terminals, 5171.~~

~~(B) All remaining Part 70 sources identified in (b)(2)(A)(ii) of this Subsection shall be subject to the operating permit program and shall submit initial permit applications no later than 12 months after the effective date of the federally approved interim state operating permit program.~~

~~(C) No later than 12 months after the effective date of the federally approved interim state operating permit program, any owner or operator shall submit their applications for major sources located at sources classified by the following Standard Industrial Classification Codes:~~

~~(i) Metals, 3312, 3315, 3321, 3379, 3341, 3351, 3411, 3412, 3432, 3466,~~

~~(ii) Brick Plants, 3251, 3297,~~

~~(iii) Commercial Printing, 2752, 2761.~~

~~(D) No later than 28 months after the effective date of the federally approved interim state operating permit program, any owner or operator shall submit their applications for major sources located at sources classified by the following Standard Industrial Classification Codes:~~

~~(i) Refineries, 2911,~~

~~(ii) Cement Plants, 3241,~~

~~(iii) Chemical/Carbon, 2819, 2821, 2851, 2861, 2869, 2891, 2895, 2899, 2999, 3053, 3086, 3089,~~

~~(iv) Petroleum Transportation/Terminals/Storage, 4612, 4613,~~

~~(v) Food Products, 2013, 2074, 2095.~~

~~(E) All remaining Part 70 sources shall be subject to the operating permit program and shall submit initial permit applications no later than 36 months after the effective date of the federally approved interim state operating permit program.~~

~~(3) Application following effective date. A source that becomes subject to the operating permit program established by this Chapter at any time following the effective date shall file an administratively complete operating permit application within 180 days of commencement of operation.~~

~~(4) Application acceptability. Notwithstanding the deadlines established in paragraphs (1), (2), and (3) of this subsection, an application filed prior to the above deadlines following submission of the state program to EPA for approval shall be accepted for processing. For purposes of the 60 day administrative review period established in OAC 252.2 15, the official login date for any Part 70 operating permit submitted according to the interim schedule in this subsection shall be the date on which the DEQ begins its administrative completeness review.~~

~~(5) 112(g) applications. A source that is required to meet the requirements under section 112(g) of the federal Clean Air Act, or to have a permit under a preconstruction review program under Title I of such Act, shall file an application to obtain an operating permit or permit amendment or modification within twelve months of commencing operation. Where an existing Part 70 operating permit would prohibit such construction or change in operation, the source must obtain a permit revision before commencing construction.~~

~~(6) Application for renewal. Sources subject to this Chapter shall file an application for renewal of an operating permit at least six months before the date of permit expiration, unless a longer period (not to exceed 18 months) is specified in the permit. Renewal periods greater than six months are subject to negotiation on a case by case basis.~~

~~(7) Phase II acid rain permits. Sources required to submit~~

applications under the Acid Rain Program should submit these applications as required by 40 CFR 72.30(b)(2)(i) through (viii).

~~(8) Application completeness. See Uniform Permitting Rules, OAC 252:010-3-50 and 3-51.~~

[NOTE: 252:100-8-5(b)(1) through (9) moved to 252:100-8-4(b)]

~~(9) Application content for renewal of expiring permit. In submitting an application for renewal of a DEQ issued Part 70 operating permit, a source may identify terms and conditions in its previous permit that should remain unchanged and incorporate by reference those portions of its existing permit and the permit application and any permit amendment or modification applications that describe products, processes, operations, and emissions to which those terms and conditions apply. The source must identify specifically and list which portions of its previous permit and/or applications are incorporated by reference. In addition, a renewal application must contain:~~

- ~~(i) information specified in OAC 252:100-8-5(d) for those products, processes, operations, and emissions that:
 - ~~(I) are not addressed in the existing permit;~~
 - ~~(II) are subject to applicable requirements or state only requirements that are not addressed in the existing permit; or~~
 - ~~(III) as to which the source seeks permit terms and conditions that differ from those in the existing permit; and~~~~

~~(ii) a compliance plan and certification as required in 252:100-8-5(d)(8). [NOTE: 252:100-8-5(b)(9) moved to 252:100-8-7.1(b)]~~

(a)-(10) Confidential information. If a source submits information to the DEQ under a claim of confidentiality, the source shall also submit a copy of such information directly to the Administrator, if the DEQ requests that the source do so.

(b)-(e) Duty to supplement or correct application. Renumbered as ~~OAC 252:100-6-50(f)~~ See 252:100-6-50(e).

(c)-(d) Standard application form and required information.

Sources that are subject to the Part 70 permit program established by this Chapter shall file applications on the standard application form that the DEQ makes available for that purpose in accordance with OAC 252:2-15. The application must include information needed to determine the applicability of any applicable requirement, or state-only requirement, or to evaluate the fee amount required under the schedule approved pursuant to ~~OAC 252:100-8-9~~ 252:100-5-2.2(b)(2). The applicant shall submit the information called for by the application form for each emissions unit at the source to be permitted. The source must provide a list of any such insignificant activities that are exempted because of size or production rate. Trivial activities need not be listed. The standard application form and any attachments shall require that the following information required by 252:100-8-5(d) and/or 252:100-8-5(e) be provided.

(d) Construction permit applications.

(1) An application for a construction permit shall provide data and information required by this Chapter and/or requested on the application from form available from the DEQ pursuant to the requirements of this Chapter. Such data and information shall include ~~including~~ but not be limited to: site information, process description, emission data and when required, BACT, modeling and sampling point data as follows:

(A) BACT determination. To be approved for a construction permit, a major source must demonstrate that the control technology to be applied is the best that is available for each pollutant that would cause the source to be defined as a major source. This determination will be made on a case by case basis taking into account energy, environmental, cost and economic impacts of alternative control systems.

(B) Modeling. Any air quality modeling or ambient impact evaluation that is required shall be prepared in accordance with procedures acceptable to the DEQ and accomplished by the applicant.

(C) Sampling points. If required by the DEQ an application shall show how the new source will be equipped with sampling ports, instrumentation to monitor and record emission data and other sampling and/or testing equipment. [NOTE: 252:100-8-1.4(b)(1) was taken from 252:100-7-15(b)]

(2) Construction permit applications for new sources must also include the requirements for operating permits contained in 252:100-8-5(e) to the extent they are applicable.

(e) Operating permit applications.

(1) Identifying information, including company name and address (or plant name and address if different from the company name), owner's name and agent, and telephone number and names of plant site manager/contact.

(2) A description of the source's processes and products (by two-digit Standard Industrial Classification Code) including any associated with each alternate scenario identified by the source.

(3) The following emissions-related information:

(A) All emissions of pollutants for which the source is major, and all emissions (including fugitive emissions) of regulated air pollutants. The permit application shall describe all emissions of regulated air pollutants emitted from any emissions unit, except where such units are exempted under this subsection ~~(d)~~ 252:100-8-5(c) or OAC 252:100-8-3(b). ~~The source shall submit additional information related to the emissions of air pollutants sufficient to verify which requirements are applicable to the source, and other information necessary to determine the amount of any permit fees owed under the fee schedule approved pursuant to OAC 252:100-8-9.~~

(B) Identification and description of all points of emissions described in subparagraph ~~(d)~~ (e) (3) (A) of this section in sufficient detail to establish the basis for fees

and applicability of the ~~federal Clean Air Act's~~ requirements.

(C) Emissions rates in tons per year and in such terms as are necessary to establish compliance consistent with the applicable standard.

(D) The following information to the extent it is needed to determine or regulate emissions:

- (i) fuels,
- (ii) fuel use,
- (iii) raw materials,
- (iv) production rates, and
- (v) operating schedules.

(E) Identification and description of air pollution control equipment and compliance monitoring devices or activities.

(F) Limitations on source operation affecting emissions or any work practice standards, where applicable, for all regulated pollutants at the covered source.

(G) Other information required by any applicable requirement, or state-only requirement (including information related to stack height limitations developed pursuant to section 123 of the ~~federal Clean Air Act~~).

(H) Calculations on which the information in items (A) through (G) of this paragraph is based.

(4) The following air pollution control requirements:

(A) Citation and description of all applicable requirements, and all state-only requirements, and

(B) Description of or reference to any applicable test method for determining compliance with each applicable requirement and state-only requirement.

(5) Other specific information required under the DEQ's rules and statutes to implement and enforce other applicable requirements of the ~~federal Clean Air Act~~ or of this Chapter or to determine the applicability of such requirements.

(6) An explanation of any proposed exemptions from otherwise applicable requirements and state-only requirements.

(7) Additional information as determined to be necessary by the DEQ to define alternative operating scenarios identified by the source pursuant to OAC 252:100-8-6(a)(9) or to define permit terms and conditions implementing ~~OAC 252:100-8-6(h)~~ 252:100-8-6(f) or OAC 252:100-8-6(a)(10).

(8) A compliance plan for all covered sources that contains all the following:

(A) A description of the compliance status of the source with respect to all applicable requirements and state-only requirements, as follows:

~~(B) A description as follows:~~

(i) For applicable requirements, and state-only requirements, with which the source is in compliance, a statement that the source will continue to comply with such requirements.

(ii) For applicable requirements, and state-only requirements, that will become effective during the permit term,

a statement that the source will meet such requirements on a timely basis shall satisfy this provision, unless a more detailed schedule is expressly required by the applicable requirement.

(iii) For requirements for which the source is not in compliance at the time of permit issuance, a narrative description of how the source will achieve compliance with such requirements.

(B)(C) For sources not in complete compliance, a A compliance schedule as follows:

~~(i) For applicable requirements, and state only requirements, with which the source is in compliance, a statement that the source will continue to comply with such requirements.~~

~~(ii) For applicable requirements, and state only requirements, that will become effective during the permit term, a statement that the source will meet such requirements on a timely basis. A statement that the source will meet in a timely manner applicable requirements that become effective during the permit term shall satisfy this provision, unless a more detailed schedule is expressly required by the applicable requirement.~~

(i)-(iii) A schedule of compliance for sources that are not in compliance with all applicable requirements, and state-only requirements, at the time of permit issuance. Such a schedule shall include a schedule of remedial measures, including an enforceable sequence of actions with milestones, leading to compliance with any applicable requirements, and state-only requirements, for which the source will be in noncompliance at the time of permit issuance. This compliance schedule shall resemble and be equivalent in stringency to that contained in any judicial consent decree or administrative order to which the source is subject. Any such schedule of compliance shall be supplemental to, and shall not sanction non-compliance with, the applicable requirements on which it is based.

(ii)-(D) A schedule for submission of certified progress reports no less frequently than every 6 months ~~for sources required to have a schedule of compliance under OAC 252.100-8-5(d)(8)(C)(iii).~~

(C)(E) The compliance plan content requirements specified in this paragraph shall apply and be included in the acid rain portion of a compliance plan for an affected source, except as specifically superseded by regulations promulgated under Title IV of the ~~federal Clean Air Act~~ with regard to the schedule and method(s) the source will use to achieve compliance with the acid rain emissions limitations.

(9) Requirements for compliance certification, including the following:

(A) A certification of compliance with all applicable

requirements, and state-only requirements, by a responsible official consistent with subsection ~~(e)~~ (f) of this section and section 114(a)(3) of the ~~federal Clean Air Act~~;

(B) A statement of methods used for determining compliance, including a description of monitoring, recordkeeping, and reporting requirements and test methods;

(C) A schedule for submission of compliance certifications during the permit term, which shall be submitted annually, or more frequently if required by an underlying applicable requirement, state-only requirements, or by the permitting authority; and

(D) A statement indicating the source's compliance status with any applicable enhanced monitoring and compliance certification requirements of the ~~federal Clean Air Act~~.

(10) The use of nationally-standardized forms for acid rain portions of permit applications and compliance plans, as required by regulations promulgated under Title IV of the ~~federal Clean Air Act~~.

~~(11) A list of any such units which satisfy the definition of either insignificant activities or de minimis emissions.~~

(f) ~~(e)~~ **Certification.** Any application form, report, or compliance certification submitted pursuant to this Chapter shall contain certification by a responsible official of truth, accuracy, and completeness. This certification and any other certification required under this Chapter shall be signed by a responsible official and shall contain the following language: "I certify, based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete."

(g) ~~(f)~~ **Number of application copies.** See Part 3 of OAC 252:2-15.

252:100-8-6. Permit content

(a) **Standard permit requirements.** ~~To the extent practicable, every~~ Part 70 permits ~~permit~~ issued under this Chapter shall include all applicable requirements, and state-only requirements, (as defined in OAC 252:100-8-2) that apply to the permitted source at the time of issuance. Each permit shall include the following elements:

(1) **Emission limitations and standards.** The permit shall specify emissions limitations and standards that constitute applicable requirements, and state-only requirements, and shall include those operational ~~requirements~~ conditions and limitations necessary to assure compliance with all applicable such requirements.

(A) The permit shall specify and reference the origin of and authority for each term or condition, and identify any difference in form as compared to the applicable requirement, ~~and~~ or state-only requirement, upon which the term or condition is based.

(B) The permit shall state that, where an applicable requirement of the ~~federal Clean Air Act~~ is more stringent than an applicable requirement of regulations promulgated

under Title IV of the ~~federal Clean Air Act~~, both provisions shall be incorporated into the permit and shall be enforceable by EPA.

(C) If an ~~applicable~~ the State implementation plan or an applicable requirement allows a source to comply through an alternative emission limit or means of compliance, a source may request that such an alternative limit or means of compliance be specified in its permit. Such an alternative emission limit or means of compliance shall be included in a source's permit upon a showing that it is quantifiable, accountable, enforceable, and based on replicable procedures. The source shall propose permit terms and conditions to satisfy these requirements in its application.

(2) **Permit duration.**

(A) Operating Permits. The permit shall specify a fixed term. The DEQ shall issue permits for any fixed period requested in the permit application, not to exceed five years, except as provided in subparagraphs (i) ~~(A)~~ and (ii) ~~(B)~~ of this paragraph:

(i) ~~(A)~~ Permits issued to affected sources shall in all cases have a fixed term of five years.

(ii) ~~(B)~~ Permits issued to solid waste incineration units combusting municipal waste subject to standards under section 129(e) of the ~~federal Clean Air Act~~ shall have a term not to exceed 12 years. Such permits shall be reviewed every five years.

(B) Construction permits. See 252:100-8-1.4.

(3) **Monitoring and related recordkeeping and reporting requirements.**

~~(A) Each permit shall contain the following requirements with respect to monitoring:~~ Monitoring requirements.

(i) All emissions monitoring and analysis procedures or test methods required under ~~the~~ applicable requirements, and state-only requirements, including any procedures and methods promulgated pursuant to sections 114(a)(3) or 504(b) of the ~~federal Clean Air Act~~;

(ii) Where ~~the~~ an applicable requirement, ~~and~~ or state-only requirement, ~~does not require periodic testing or instrumental or non-instrumental monitoring (which may consist of recordkeeping designed to serve as monitoring), periodic monitoring during the relevant time period sufficient to yield reliable data from the relevant time period~~ that are representative of the source's compliance with the permit, as reported pursuant to (a)(3)(C) of this section. Such monitoring requirements shall assure use of terms, test methods, units, averaging periods, and other statistical conventions consistent with the applicable requirement, ~~or~~ or state-only requirement. Recordkeeping provisions may be sufficient to meet the requirements of this subparagraph.

(iii) As necessary, requirements concerning the use,

maintenance, and, where appropriate, and installation of monitoring equipment or methods.

(iv) Provisions for the permittee to request the use of alternative test methods or analysis procedures, and provisions for the DEQ to approve or disapprove the request within 60 days.

(B) Recordkeeping requirements. ~~With respect to recordkeeping, the~~ The permit shall incorporate all applicable recordkeeping requirements and require, where applicable, the following:

(i) Records of required monitoring information that include the following:

(I) The date, place as defined in the permit, and time of sampling or measurements;

(II) The date(s) analyses were performed;

(III) The company or entity that performed the analyses;

(IV) The analytical techniques or methods used;

(V) The results of such analyses; and

(VI) The operating conditions ~~as~~ existing at the time of sampling or measurement.

(ii) Retention of records of all required monitoring data and support information for a period of at least five years from the date of the monitoring sample, measurement, report, or application. Support information includes all calibration and maintenance records and all original strip-chart recordings for continuous monitoring instrumentation, and copies of all reports required by the permit. Where appropriate, the permit may specify that records may be maintained in computerized form.

(C) Reporting requirements. ~~With respect to reporting, the~~ The permit shall incorporate all applicable reporting requirements and require the following requirements:

(i) A permit issued under this ~~Chapter~~ Part shall require the permittee to submit a report of any required monitoring at least every six months. To the extent possible, the schedule for submission of such reports shall be timed to coincide with other periodic reports required by the permit, including the permittee's annual compliance certification. However, the reports may be submitted at any time within the reporting period, as stipulated in the permit.

(ii) Each report submitted under (C) (i) of this paragraph shall identify any exceedances from permit requirements since the previous report that have been monitored by the monitoring systems required under the permit, and any exceedances from the monitoring, recordkeeping and reporting requirements under the permit.

(iii) In addition to semiannual monitoring reports, each permittee shall be required to submit supplemental reports as follows:

(I) Any exceedance resulting from emergency or upset

conditions as defined in ~~OAC 252:100-8-6(g)~~ 252:100-8-6(e) shall be reported within 24 hours of the date on which the permittee first becomes aware of the exceedance, if the permittee wishes to assert the affirmative defense authorized under said section, and the permittee shall submit a follow up written report within 10 working days of first becoming aware of the exceedance. The initial report Such notice must contain a description of the emergency, any steps taken to mitigate emissions and corrective actions taken.

[NOTE: The underlined language is from 252:100-8-6(g) (3) (D)]

(II) Any exceedance that poses an imminent and substantial danger to public health, safety, or the environment shall be reported as soon as is practicable; but under no circumstance shall notification be more than 24 hours after exceedance.

(III) Any other exceedances that are identified in the permit as requiring more frequent reporting than the permittee's semiannual report shall be reported on the schedule specified in the permit.

(IV) All reports of exceedances shall identify the probable cause of the exceedances and any corrective actions or preventative measures taken.

(iv) Every report submitted under this subsection shall be certified by a responsible official, except that if a report of an exceedance required under (C) (iii) of this paragraph must be submitted within ten days of the exceedance, the report may be submitted in the first instance without a certification if an appropriate certification is provided within ten days thereafter, together with any corrected or supplemental information required concerning the exceedance. Reports submitted shall be consistent with the requirements of OAC 252:100-9.

(4) **Risk management plans.** If the source is required to develop and register a risk management plan pursuant to section 112(r) of the ~~federal Clean Air Act~~, the permit need only specify that the permittee will comply with the requirement to register such a plan. Although the requirement to have a risk management plan may be a term of the permit, the risk management plan contents are not part of the permit.

(5) **Title IV allowances.**

(A) No permit revision shall be required for increases in emissions that are authorized by allowances acquired pursuant to the acid rain program, provided that such increases do not require a permit revision under any other applicable requirement.

(B) No limit shall be placed on the number of allowances held by the source. The source may not, however, use allowances as a defense to noncompliance with any other applicable requirement.

(C) The permit shall prohibit emissions exceeding any allowance that the source lawfully holds under Title IV of the ~~federal Clean Air Act~~ or the regulations promulgated thereunder. Compliance with this paragraph will be determined on January 31st of any given year and be based on actual emissions and the number of allowances held for the previous calendar year.

(6) **Severability clause.** The permit shall include a severability clause to ensure the continued validity of the various permit requirements in the event of a challenge to any portions of the permit.

(7) **General requirements.** The permit shall include provisions stating the following:

(A) The permittee must comply with all conditions of the permit. Any permit noncompliance constitutes a violation of the Oklahoma Clean Air Act and is grounds for:

- (i) enforcement action;
- (ii) permit termination, revocation and reissuance, or modification; or
- (iii) denial of a permit renewal application.

(B) It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit. However, nothing in this subsection shall be construed as precluding consideration of a need to halt or reduce activity as a mitigating factor in assessing penalties for noncompliance if the health, safety, or environmental impacts of halting or reducing operations would be more serious than the impacts of continuing operations.

(C) The permit may be modified, revoked, reopened, and reissued, or terminated for cause. Except as provided under ~~OAC 252:100-8-7(e)(1)~~ 252:100-8-7.2(b)(1) for minor permit modifications, the filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or of a notification of planned changes or anticipated noncompliance does not stay any permit condition.

(D) The permit does not convey any property rights of any sort, or any exclusive privilege.

(E) The permittee shall furnish to the DEQ, upon receipt of a written request and within a reasonable time, any information that the DEQ may request to determine whether cause exists for modifying, reopening, or revoking and reissuing or terminating the permit or to determine compliance with the permit. Upon request, the permittee shall also furnish to the DEQ copies of records required to be kept by the permit. The permittee may make a claim of confidentiality pursuant to ~~OAC 252:100-8-5(b)(10)~~ 27A O.S. 1993 Supp. Section 2-5-105.18 for any information or records submitted under this paragraph.

(8) **Fees.** The permit shall provide that the permittee will

pay fees to the DEQ consistent with the fee schedule established under ~~OAC 252:100-8-9~~ 252:100-5-2.2.

(9) **Emissions trading.** The permit shall provide that no permit revision shall be required under any approved economic incentives, marketable permits, emissions trading and other similar programs or processes for changes that are provided for in the permit.

(10) **Operating scenarios.** The permit shall include terms and conditions applicable to all operating scenarios described in the permit application and eligible for approval under applicable requirements, and state-only requirements. The permit shall authorize the permittee to make changes among operating scenarios authorized in the permit without notice, but shall require the permittee contemporaneously with making a change from one operating scenario to another to record in a log at the permitted facility the scenario under which it is operating.

(11) **Emissions averaging.** The permit shall include terms and conditions, if the permit applicant requests them, for the trading or averaging of emissions increases and decreases in the permitted facility, to the extent that the applicable requirements provide for trading or averaging such increases and decreases. Such terms and conditions shall include terms under subsections (a) and (c) of this section to determine compliance and shall satisfy all requirements of the applicable requirements authorizing such trading or averaging.

(b) **Federally enforceable requirements.**

(1) Except as provided in paragraph (b)(2) of this section, all terms and conditions in a permit issued under this section, including any provisions designed to limit a source's potential to emit, are enforceable by the DEQ, by EPA, and by citizens under section 304 of the ~~federal Clean Air Act~~.

(2) Notwithstanding paragraph (b)(1) of this section, the DEQ shall designate as not being federally enforceable under the ~~federal Clean Air Act~~ any terms and conditions included in the permit that are not required under the ~~federal Clean Air Act~~ or any of its applicable requirements, and such terms and conditions shall not be enforceable by EPA and citizens under section 304 of the ~~federal Clean Air Act~~.

(c) **Compliance requirements.** All permits issued under this ~~Chapter Part~~ shall contain the following elements with respect to compliance:

(1) Consistent with paragraph (a)(3) of this section, compliance certification, testing, monitoring, reporting, and recordkeeping requirements sufficient to assure compliance with the terms and conditions of the permit. Any document (including reports) required by a permit under this ~~Chapter Part~~ shall contain a certification by a responsible official as to the results of the required monitoring.

(2) Inspection and entry requirements that require that, upon presentation of credentials and other documents as may be required by law, the permittee shall allow authorized

officials of the DEQ to perform the following ~~(subject to the permittee's right to seek confidential treatment pursuant to OAC 252:100-8-5(b)(10) for confidential information submitted to or obtained by the DEQ under this subsection):~~

(A) Enter upon the permittee's premises during reasonable/normal working hours where a source is located or emissions-related activity is conducted, or where records must be kept under the conditions of the permit;

(B) Have access to and copy, at reasonable times, any records that must be kept under the conditions of the permit;

(C) Inspect at reasonable times and using reasonable safety practices any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under the permit; and

(D) As authorized by the ~~federal Clean Air~~ Oklahoma Clean Air Act, sample or monitor at reasonable times substances or parameters for the purpose of assuring compliance with the permit.

(3) A schedule of compliance if to the extent required under ~~OAC 252:100-8-5(d)(8)(C)~~ 252:100-8-5(e)(8)(B).

(4) To the extent required under an applicable schedule of compliance and ~~OAC 252:100-8-5(d)(8)~~ 252:100-8-5(e)(8), progress reports, to be submitted semiannually, or more frequently if specified in the applicable requirement or by the DEQ. Such progress reports shall contain the following:

(A) Dates for achieving the activities, milestones, or compliance required in the schedule of compliance, and dates when such activities, milestones or compliance were achieved; and

(B) An explanation of why any dates in the schedule of compliance were not or will not be met, and any preventive or corrective measures adopted.

(5) Requirements for compliance certification with terms and conditions contained in the permit that are federally enforceable, including emission limitations, standards, or work practices. Each permit shall specify:

(A) The frequency (which shall be annually unless the applicable requirement, ~~and~~ or state-only requirement, specifies submission more frequently) of submissions of compliance certifications;

(B) In accordance with paragraph (a)(3) of this section, a means for monitoring the compliance of the source with emissions limitations, standards, and work practices;

(C) A requirement that the compliance certification include the following:

(i) The identification of each term or condition of the permit that is the basis of the certification;

(ii) The permittee's current compliance status, as shown by monitoring data and other information

available to the permittee;

(iii) Whether compliance was continuous or intermittent;

(iv) The method(s) used for determining the compliance status of the source, currently and over the reporting period as required by paragraph (a) (3) of this section; and

(v) Such other facts as the DEQ may require to determine the compliance status of the source;

(D) A requirement that all compliance certifications be submitted to EPA as well as to the DEQ;

(E) Such additional requirements as may be specified pursuant to sections 114(a) (3) and 504(b) of the ~~federal Clean Air Act~~; and

(6) Such other provisions as the DEQ may require.

~~(d) General permits.~~

~~(1) The DEQ may, after notice and opportunity for public participation, issue a general permit to any source category if it concludes that the category is appropriate for permitting on a generic basis. Any general permit shall comply with all requirements applicable to other Part 70 permits. No general permit may be issued for affected sources under the acid rain program unless otherwise provided in regulations promulgated under Title IV of the federal Clean Air Act.~~

~~(2) A general permit may be issued for a source category based upon an application from a source within the source category or upon the DEQ's own initiative. The DEQ shall, following receipt of an application for a general permit, or upon a determination that issuance of a general permit for a category of sources may be appropriate, follow the same procedures for issuance of a general permit as for any other permit issued under this part.~~

~~(3) A general permit may be issued for the following purposes:~~

~~(A) to establish terms and conditions to implement applicable requirements, and state only requirements, for a source category;~~

~~(B) to establish terms and conditions to implement applicable requirements, and state only requirements, for specified categories of changes to permitted sources;~~

~~(C) to establish terms and conditions for new requirements that apply to sources with existing permits; and~~

~~(D) to establish federally enforceable caps on emissions from sources in a specified category.~~

~~(4) The DEQ may issue a general permit if it finds that:~~

~~(A) there are several permittees, permit applicants, or potential permit applicants who have the same or substantially similar operations, emissions, activities, or facilities;~~

- ~~(B) the permittees, permit applicants, or potential permit applicants emit the same types of regulated air pollutants;~~
- ~~(C) the operations, emissions, activities, or facilities are subject to the same or similar standards, limitations, and operating requirements; and~~
- ~~(D) the operations, emissions, activities, or facilities are subject to the same or similar monitoring requirements.~~
- ~~(5) A general permit issued under this section shall identify criteria by which sources may qualify for the general permit. After a general permit has been issued, any source may submit a request to be covered under the permit in the form of an application for authorization to operate under the general permit.~~
- ~~(A) Such application shall identify the source and provide information sufficient to demonstrate that it falls within the source category covered by the general permit, together with any additional information that may be specified in the general permit.~~
- ~~(B) See OAC 252:2-15 for Tier I permitting procedures and timelines for individual authorizations under general permits. The Agency shall act to approve or deny the application within 90 days of filing.~~
- ~~(C) A final action approving an authorization to operate under a general permit shall not be subject to public comment or judicial review.~~
- ~~(6) A copy of the general permit, together with a list of sources approved for coverage under it, shall be kept on file for public review at the offices of the DEQ.~~
- ~~(7) A general permit issued under this section shall provide that any source approved for coverage under a general permit shall be entitled to the protection of the permit shield for all operations, activities, and emissions addressed by the general permit, unless and to the extent that it is subsequently determined that the source does not qualify for the conditions and terms of the general permit.~~
- ~~(8) If some, but not all, of a source's operations, activities, and emissions are eligible for coverage under one or more general permits, the source may apply for and receive coverage under the general permits for the operations, activities, and emissions that are so eligible. If the source is required under OAC 252:100-8-3 of this part to obtain a permit addressing the remainder of its operations, activities, and emissions, it may apply for and receive a permit that addresses specifically only those items not covered by general permits. In such a case, the source's permit shall identify all operations, activities, and emissions that are subject to general permits and incorporate those general permits by reference. Unless the permit specifically states otherwise, the permit shield shall apply to the terms and conditions of any general permits so incorporated by reference as well as to the terms and conditions specifically stated in the permit.~~

[NOTE: General permits was moved to 252:100-8-6.1]

~~(e) Temporary sources.~~ The DEQ may issue a single permit authorizing emissions from similar operations by the same source owner or operator at multiple temporary locations. The operation must be temporary and involve at least one change of location during the term of the permit. No affected source shall be permitted as a temporary source. Permits for temporary sources shall include the following:

- ~~(1) Conditions that will assure compliance with all applicable requirements at all authorized locations;~~
- ~~(2) Requirements that the owner or operator notify the permitting authority at least ten days in advance of each change in location; and~~
- ~~(3) Conditions that assure compliance with all other provisions of this section. [NOTE: Moved to 252:100-8-6.2]~~

(d) ~~(f)~~ Permit shield.

(1) Each operating permit issued under this section Part shall include a "permit shield" provision, which shall state that compliance with the terms and conditions of the permit (including terms and conditions established for alternate operating scenarios, emissions trading, and emissions averaging, but excluding terms and conditions for which the permit shield is expressly prohibited under this Subchapter) shall be deemed compliance with the applicable requirements identified and included in the permit.

(2) Upon request, the DEQ shall include in the permit or in a separate written finding issued with the permit a determination identifying specific requirements that do not apply to the source. The source shall specify in its application for such a determination the requirements for ~~as~~ to which the determination is requested. If the determination is issued in a separate finding, that finding shall be summarized in the permit. The permit shall state that the permit shield applies to any requirements so identified. A request for a determination to extend the shield to requirements deemed inapplicable to the source may be made either in the original permit application or in a subsequent application for a permit modification.

(3) A Part 70 permit that does not expressly state that a permit shield exists shall be presumed not to provide such a shield.

(4) Nothing in this section or in the permit shall alter or affect the following:

- (A) the provisions of section 303 of the ~~federal Clean Air Act~~, including the authority of the EPA Administrator under that section;
- (B) the liability of an owner or operator of a source for any violation of applicable requirements, ~~and~~ or state-only requirements, prior to or at the time of permit issuance;
- (C) the applicable requirements of the acid rain program, consistent with section 408(a) of the ~~federal Clean Air Act~~;
- or
- (D) the ability of EPA to obtain information from a source

pursuant to section 114 of the ~~federal Clean Air Act.~~

(e) ~~(g)~~ **Emergencies.**

(1) When used in this Subsection, "Emergency" means any situation arising from sudden and reasonably unforeseeable events beyond the control of the source, including acts of God, which situation requires immediate corrective action to restore normal operation, and that causes the source to exceed a technology-based emission limitation under the permit, due to unavoidable increases in emissions attributable to the emergency. An emergency shall not include noncompliance to the extent caused by improperly designed equipment, lack of ~~preventative~~ preventive maintenance, careless or improper operation, or operator error. Quantification of accidental releases shall be made by the best available method.

(2) An emergency constitutes an affirmative defense to an action brought for noncompliance with such technology-based emission limitations if the conditions of paragraph ~~(g)~~ (e) (3) of this section and the reporting requirements of 252:100-8-6(a) (3) (C) (iii) (I) are met.

(3) The affirmative defense of emergency shall be demonstrated through properly signed, contemporaneous operating logs, or other relevant evidence that:

(A) An emergency occurred and that the permittee can identify the cause(s) of the emergency;

(B) The permitted facility was at the time being properly operated;

(C) During the period of the emergency the permittee took all reasonable steps to minimize levels of emissions that exceeded the emission standards, or other requirements in the permit; and,

~~(D) The permittee submitted notice of the emergency to the DEQ within 24 hours of the time when emission limitations were exceeded due to the emergency. Such notice must contain a description of the emergency, any steps taken to mitigate emissions, and corrective actions taken. [NOTE: Moved to 252:100-8-6(a) (3) (C) (iii) (I)]~~

(4) In any enforcement proceeding, the permittee seeking to establish the occurrence of an emergency has the burden of proof.

(5) The provision in this subsection is in addition to any emergency or upset provision contained in any applicable requirement or OAC 252:100-9.

(f) ~~(h)~~ **Operational flexibility.** ~~Any operating scenario allowed for in an applicable Part 70 permit may be implemented by the facility without the need for any permit revision or any notification to the permitting authority. It is incumbent upon the Part 70 permit applicant to apply for any reasonably anticipated alternative facility operating scenarios at the time of initial or renewal permit application.~~

(1) **Applicant's duty to apply for alternative scenarios.**

Any operating scenario allowed for in an applicable Part 70 permit may be implemented by the facility without the need for

any permit revision or any notification to the permitting authority. It is incumbent upon the Part 70 permit applicant to apply for any reasonably anticipated alternative facility operating scenarios at the time of initial or renewal permit application.

(2) ~~Changes resulting in no emissions increases.~~ A permitted Part 70 source may make changes within the facility that:

(A) ~~Are not modifications under any provision of Title I of the federal Clean Air Act;~~

(B) ~~Do not cause any hourly or annual permitted emission rate of any existing emissions unit to be exceeded; ~~or~~ and~~

(C) ~~Result in a net Net change in emissions is of zero.~~ Result in a net change in emissions is of zero, provided Provided that the facility provides notifies the Administrator and the permitting authority DEQ and EPA in writing at least 7 days with written notification as required below in advance of the proposed changes, which shall be a minimum of 7 days, or such shorter time frame that permitting authority allows for emergencies [as defined in ~~OAC 252:100-8-6(g)~~]. The source, permitting authority DEQ, and EPA shall attach each such notice to their copy of the relevant permit. For each such change, the written notification required above shall include a brief description of the change within the permitted facility, the date on which the change will occur, any change in emissions, and any permit term or condition that is no longer applicable as a result of the change. The permit shield described in ~~OAC 252:100-8-6(f)~~ 252:100-8-6(d) does not apply to any change made pursuant to this subsection.

~~(3) Emissions trading in permit. A permitted source may rely on the authority of this section to trade increases and decreases in emissions within the facility, where the implementation plan provides for such emissions trades without a permit modification. In such a case, the advance written notice provided by the permittee shall identify the underlying authority authorizing the trading and shall state when the change will occur, the types and quantities of emissions to be traded, the permit terms or other applicable requirements, and state only requirements, with which the source will comply through emissions trading, and such other information as may be required by the applicable requirement authorizing the emissions trade.~~

~~(i) Special provisions for affected (acid rain) sources~~

~~(1) Application binding until permit issuance or denial. A complete acid rain permit application is binding on the applicant and enforceable as an acid rain permit until an acid rain permit is issued or denied. For applicable permitting procedures, see OAC 252:2-15.~~

~~(2) Exemption petitions. Applicants with small units that burn low sulfur fuel or sources that retire a unit can petition to have such units exempted from certain permitting and monitoring requirements under the acid rain regulations.~~

~~(3) Permit shield. The acid rain portion of every operating~~

~~permit is covered by a permit shield. This shield assures that an applicant operating in accordance with a permit issued in accordance with Title IV of the federal Clean Air Act, will be deemed to be operating in compliance with the Acid Rain Program.~~

~~(4) Modifications. See 40 CFR 72.82.~~

~~(5) Duration. Acid rain permits will have a term of five years commencing on the permits effective date. The DEQ may issue a permit with a future effective date.~~

~~(6) Right of intervention. The Administrator may intervene as a matter of right in any administrative appeal involving an Acid Rain permit or denial of an Acid Rain permit.~~

~~(7) Administrative appeal. The administrative appeal period shall be no more than 90 days following the issuance of the Acid Rain permit and the judicial appeal period shall be no more than 90 days following a final agency action.~~

~~(8) Adoption of 40 CFR Part 72 by reference. Owners or operators of sources subject to the acid rain provisions of the federal Clean Air Act shall comply with applicable provisions of 40 CFR Part 72, as published in the Federal Register on January 11, 1993, and on March 23, 1993, which is hereby adopted by reference as rules of the Environmental Quality Board. In such regulations, the term "permitting authority" shall mean the Oklahoma Department of Environmental Quality and the term "Administrator" shall mean the Administrator of the United States Environmental Protection Agency. If the provisions or requirements of 40 CFR Part 72 conflict with this Chapter, the Part 72 provisions and requirements shall apply and take precedence.~~

~~(8) The Oklahoma Department of Environmental Quality hereby adopts and incorporates by reference the provisions of 40 CFR part 72, as published in the Federal Register on January 11, 1993, and on March 23, 1993 for purposes of implementing an acid rain program that meets the requirements of Title IV of the Clean Air Act. The term "permitting authority" shall mean the Oklahoma Department of Environmental Quality and the term "Administrator" shall mean the Administrator of the United States Environmental Protection Agency. If the provisions or requirements of 40 CFR part 72 conflict with or are not included in Oklahoma Administrative Code 252:100-8, the part 72 provisions and requirements shall apply and take precedence. [NOTE: Moved to 252:100-8-6.3]~~

252:100-8-6.1 General permits

(a) Applicability.

(1) The DEQ may, after notice and opportunity for public participation, issue a general permit for to any source category if it concludes that the category is appropriate for permitting on a generic basis. Any general permit shall comply with all requirements applicable to other Part 70 permits. No general permit may be issued for affected sources under the acid rain program unless otherwise

provided in regulations promulgated under Title IV of the federal Clean Air Act.

(2) A general permit may be issued for a source category based upon an application from a source within the source category or upon the DEQ's own initiative. The DEQ shall, following receipt of an application for a general permit, or upon a determination that issuance of a general permit for a category of sources may be appropriate, follow the same procedures for issuance of a general permit as for any other permit issued under this part.

(3) A general permit may be issued for the following purposes to establish:

(A) ~~to establish terms~~ Terms and conditions to implement applicable requirements, and state-only requirements, for a source category.

(B) ~~to establish terms~~ Terms and conditions to implement applicable requirements, and state-only requirements, for specified categories of changes to permitted sources.

(C) ~~to establish terms~~ Terms and conditions for new requirements that apply to sources with existing permits, and.

(D) ~~to establish federally enforceable~~ Federally-enforceable caps on emissions from sources in a specified category.

(4) The DEQ may issue a general permit if it finds that:

(A) ~~There there~~ are several permittees, permit applicants, or potential permit applicants who: ~~have the same or substantially similar operations, emissions, activities, or facilities;~~

(i) ~~Have the same or substantially similar operations, emissions, activities, or facilities.~~

(ii) ~~(B) the permittees, permit applicants, or potential permit applicants emit~~ Emit the same types of regulated air pollutants.

(B) ~~(C) the~~ The operations, emissions, activities, or facilities are subject to the same or similar: ~~standards, limitations, and operating requirements; and~~

(i) ~~Standards, limitations, and operating requirements.~~

(ii) ~~(D) the operations, emissions, activities, or facilities are subject to the same or similar monitoring~~ Monitoring requirements.

[NOTE: 252:100-8-6.1(a)(1) through (4) was 252:100-8-6(d)(1) through (4)]

(5) ~~(8)~~ If some, but not all, of a source's operations, activities, and emissions are eligible for coverage under one or more general permits, the source ~~may~~ must apply for an individual Part 70 permit for all of its covered sources, and ~~receive coverage under the general permits for the operations, activities, and emissions that are so eligible. If the source is required under OAC 252:100-8-3 of this part to obtain a permit addressing the remainder of its operations, activities,~~

and emissions, it may apply for and receive a permit that addresses specifically only those items not covered by general permits. In such a case, the source's permit shall identify all operations, activities, and emissions that are subject to general permits and incorporate those general permits by reference. Unless the permit specifically states otherwise, the permit shall apply to the terms and conditions of any general permits so incorporated by reference as well as to the terms and conditions specifically stated in the permit.

[NOTE: Was 252:100-8-6(d)(8)]

(6) Facilities located in areas that are federally designated as non-attainment are not eligible for coverage under a general operating permit. [NOTE: From 252:100-10-5(h)(3)]

(7) Sites that are not in compliance with all applicable State and Federal air regulations are eligible for a general operating permit only if:

(A) They submit to DEQ an approvable compliance plan, and

(B) The facility submits to Tier II public review. [NOTE: From 252:100-10-5(h)(5)]

(8) Facilities with existing state operating permits are eligible for coverage under a general operating permit.

[NOTE: From 252:100-10-5(h)(6)]

(9) Facilities existing prior to the effective date of any applicable standard that would have created specific quantifiable and enforceable emission rates are eligible for coverage under a general operating permit. [NOTE: From 252:100-10-5(h)(7)]

(b) Authorization.

(1)(5) A general permit issued under this section shall identify criteria by which sources may qualify for the general permit. After a general permit has been issued, any source may submit a request to be covered under the permit in the form of an application for authorization to operate under the general permit. (A) Such application shall identify the source and provide information sufficient to demonstrate that it falls within the source category covered by the general permit, together with any additional information that may be specified in the general permit. [NOTE: Was 252:100-8-6(d)(5)]

(2)(B) See OAC 252:2-15 for Tier I permitting procedures and timelines for individual authorizations under general permits. The Agency DEQ shall act to approve or deny the application within 90 days of filing. [NOTE: Was 252:100-8-6(d)(5)(B)]

(3)(C) A final action approving an authorization to operate under a general permit shall not be subject to public comment or judicial review. [NOTE: Was 252:100-8-6(d)(5)(C)]

(4)(d) The DEQ will publish, at least monthly, an updated list of sources approved for inclusion under the general operating permit and any aggrieved person may petition the DEQ to review the approval of any stationary source for inclusion under a general operating permit within 30 days after publication of the list. [NOTE: From 252:100-10-3(d)]

(5)(6) A copy of the general permit, together with a list of sources approved for coverage under it, shall be kept on file for public review at the offices of the DEQ. [NOTE: Was 252:100-8-6(d)(6)]

(c) Permit Shield. A general permit issued under this section shall provide that any source approved for coverage under a general permit shall be entitled to the protection of the permit shield for all operations, activities, and emissions addressed by the general permit, unless and to the extent that it is subsequently determined that the source does not qualify for the conditions and terms of the general permit. [NOTE: Was 252:100-8-6(d)(7)]

(d) Revisions

(1)(b) If an owner or operator of a source(s) makes a change to a source covered by a general operating permit that affects any applicability information supplied in the general operating permit application, but the source is still eligible for coverage authorized to operate under a general operating permit, the owner or operator must revise the general operating permit application and submit it to the DEQ within 60 days.

(2)(e) After coverage is granted to a particular source under the general permit, physical changes to the facility which result in the addition of equipment new to the facility, either as a replacement (except like-kind replacements) or net addition, will require a construction permit or a new authorization permit except as allowed in (d)(3) below. Any significant modification to a stationary source included under a general operating permit shall subject the source to a Tier II review.

(3)(e) If equipment new to the facility is newly purchased or is relocated from another facility where a permit was issued with enforceable emissions limits on that equipment, then authorization approval under the general operating permit shall be modified or amended to include an emissions limit for the newly purchased or relocated equipment. "Grandfathered" emissions sources at the facility will retain only the equipment descriptions as permit conditions. "Grandfathered" means a unit which that was in existence prior to the effective date of any applicable regulation which that would have created specific quantifiable and enforceable emissions rate limits.

(4)(f) For a general operating permit, if emissions change for any reason that subjects the facility to PSD permitting requirements, then the facility no longer qualifies for a general operating permit. However, the existing general operating permit will remain valid during the time period covered by the PSD construction permit until the facility receives a Part 70 site specific operating permit for the entire facility.

[NOTE: 252:100-8-6.1(d)(1) through (4) are from 252:100-10-5(b), (c), (e) and (f) respectively]

(e) Permit Content. Specific terms and conditions that which will make the applicable rules and requirements enforceable shall be stipulated in the general operating permit. [NOTE: From 252:100-10-5(h)(8)]

(f) Renewal of general operating permits.

(1) The DEQ will initiate the renewal process for a general operating permit at least 180 days prior to the permit's expiration date and will follow the requirements in 252:100-8-7(a).

(2) Owners or operators shall apply to renew an authorization at least 60 days prior to expiration of the existing authorization. Upon submittal of a timely and administratively complete application, the applicant may continue to operate until such time as the DEQ grants or denies coverage under the general operating permit.

252:100-8-6.2(e) Temporary sources. The DEQ may issue a single permit authorizing emissions from similar operations by the same source owner or operator at multiple temporary locations. The operation must be temporary and involve at least one change of location during the term of the permit. No affected source shall be permitted as a temporary source. Permits for temporary sources shall include the following:

(1) Conditions that will assure compliance with all applicable requirements at all authorized locations;

(2) Requirements that the owner or operator notify the permitting authority at least ten days in advance of each change in location; and

(3) Conditions that assure compliance with all other provisions of this section. [NOTE: 252:100-8-6.2 was moved from 252:100-8-6(e)]

252:100-8-6.3.(i) Special provisions for affected (acid rain) sources

(a)(1) Application binding until permit issuance or denial. A complete acid rain permit application is binding on the applicant and enforceable as a an acid rain permit until an acid rain permit is issued or denied. For applicable permitting procedures, see OAC 252:2-15.

(b)(2) Exemption petitions. Applicants with small units that burn low sulfur fuel or sources that retire a unit can petition to have such units exempted from certain permitting and monitoring requirements under the acid rain regulations.

(c)(3) Permit shield. The acid rain portion of every operating permit is covered by a permit shield. This shield assures that an applicant operating in accordance with a permit issued in accordance with Title IV of the federal Clean Air Act, will be deemed to be operating in compliance with the Acid Rain Program.

(d)(4) Modifications. See 40 CFR 72.82.

(e)(5) Duration. Acid rain permits will have a term of five years commencing on the permits effective date. The DEQ may issue a permit with a future effective date.

(f)(6) Right of intervention. The Administrator may intervene as a matter of right in any administrative appeal involving an Acid Rain permit or denial of an Acid Rain permit.

(g)(7) Administrative appeal. The administrative appeal period shall be no more than 90 days following the issuance of the Acid Rain permit and the judicial appeal period shall be no more than 90 days following a final agency action.

(h)(8) Adoption of 40 CFR Part 72 by reference. ~~Owners or operators of sources subject to the acid rain provisions of the federal Clean Air Act shall comply with applicable provisions of 40 CFR Part 72, as published in the Federal Register on January 11, 1993, and on March 23, 1993, which is hereby adopted by reference as rules of the Environmental Quality Board. In such regulations, the term "permitting authority" shall mean the Oklahoma Department of Environmental Quality and the term "Administrator" shall mean the Administrator of the United States Environmental Protection Agency. If the provisions or requirements of 40 CFR Part 72 conflict with this Chapter, the Part 72 provisions and requirements shall apply and take precedence.~~

~~(8) The Oklahoma Department of Environmental Quality DEQ hereby adopts and incorporates by reference the provisions of 40 CFR Part part 72, as published in the Federal Register on January 11, 1993, and on March 23, 1993, and on October 24, 1997, for purposes of implementing an acid rain program that meets the requirements of Title IV of the Clean Air Act. The term "permitting authority" shall mean the Oklahoma Department of Environmental Quality and the term "Administrator" shall mean the Administrator of the United States Environmental Protection Agency. If the provisions or requirements of 40 CFR Part part 72 conflict with or are not included in Oklahoma Administrative Code 252:100-8, the Part part 72 provisions and requirements shall apply and take precedence.~~

[NOTE: 252:100-8-6.3 was moved from 252:100-8-6(i)]

252:100-8-7. Permit issuance, ~~renewal, reopenings, and revisions~~

~~(a) Action on application; issuance/denial criteria.~~

~~(1)(a) Criteria for issuance.~~ A permit, permit modification, or renewal may be issued only if the applicable requirements of 27A O.S.Supp. 1995, Section 2-14-101 et seq.; OAC 252:2-15; and this Chapter have been met and the DEQ has determined that the conditions of the permit provide for compliance with all applicable requirements and for applications subject to OAC 252:100-8-8, that the requirements of that section have been satisfied.

~~(2)(b) Draft permits and notice thereof.~~ See OAC 252:2-15. The draft permit shall be accompanied by a statement that sets forth the legal and factual basis for the draft permit conditions (including references to the applicable statutory or regulatory provisions).

~~(3)(c) EPA review.~~ See OAC 252:100-8-8.

~~(4)(d) DEQ final action. See OAC 252:2-15, and OAC 252:100-8-8 when applicable.~~

~~(5)(e) Timeline for technical review and issuance. See OAC 252:2-15-70 through 15-72. Except as provided in paragraphs (A) and (B) of this paragraph, the The DEQ shall take final action on each application for a permit within 18 months after beginning its technical review in accordance with 252:2-15-70 through 15-72 and OAC ~~252:100-8-5(b)(5)~~ 252:100-8-4(b)(7).~~

~~(6)(f) Action priorities. See OAC ~~252:100-8-5(b)~~ 252:100-8-4(b)(2) through (10) and 252:100-8-7.1(a).~~

~~(7)(g) No issuance by default. See 27A:2-5-112(D).~~

~~(b) Requirement for a permit. See OAC 252:100-8-4(b).~~

~~(c) Permit renewal and expiration.~~

~~(1) Applications for permit renewal after the transition period, and for permit for new Part 70 sources or amendments, shall be considered timely if the applicant meets the requirements of this subsection. [NOTE: Moved to 252:100-8-7.1(a)(1)]~~

~~(2) Applications for permit renewal shall be subject to the same procedural requirements, including those for public participation, affected State comment, and EPA review, that apply to initial permit issuance under OAC 252:100-8-7(a). [NOTE: Moved to 252:100-8-7.1(c)]~~

~~(3) A source's right to operate shall terminate upon the expiration of its permit unless a timely and complete renewal application has been submitted at least 180 days before the date of expiration. [NOTE: Moved to 252:100-8-7.1(d)(1)]~~

~~(4) If a timely and complete application for a permit renewal is submitted, but the DEQ fails to take final action to issue or deny the renewal permit before the end of the term of the previous permit, then the permit shall not expire until the renewal permit has been issued or denied, and any permit shield granted for the permit shall continue in effect during that time. [NOTE: Moved to 252:100-8-7.1(d)(2)]~~

~~(5) Stationary sources operating under permits issued by the DEQ under this subchapter shall apply for permit reissuance at least 180 days before the expiration of the existing permit, unless the permit specifies that the application must be submitted sooner. The DEQ shall require in a permit that a reissuance application be submitted sooner if it determines that an earlier application is needed to minimize the possibility of expiration prior to reissuance. The DEQ may make the determination if it anticipates a relatively lengthy permit review process due to the complexity of the stationary source or anticipated involvement of the public. In no event shall the permit require application for reissuance sooner than eighteen months prior to the expiration of the permit. [NOTE: Moved to 252:100-8-7.1(a)(2)]~~

~~(d) Administrative permit amendments.~~

~~(1) When used in this subsection "Administrative permit amendment" means a permit revision that:~~

~~(A) Corrects typographical errors;~~

~~(B) Identifies a change in the name, address, or phone number of any person identified in the permit, or provides a similar minor administrative change at the source;~~

~~(C) Requires more or less frequent monitoring or reporting by the permittee;~~

~~(D) Allows for a change in ownership or operational control of a source where no other change in the permit is necessary, provided that a written agreement containing a specific date for transfer of permit responsibility, coverage, and liability between the current and new permittee has been submitted to the DEQ;~~

~~(E) Incorporates into the permit the requirements from preconstruction review permits issued by the DEQ under OAC 252:100-7. Enhanced New Source Review (NSR) procedures apply to all major sources and all State Implementation Plan (SIP) minor source changes to majors.~~

~~(2) Administrative permit amendments for purposes of the acid rain portion of the permit shall be governed by regulations promulgated under Title IV of the federal Clean Air Act.~~

~~(3) An administrative permit amendment shall be made by the DEQ in accordance with the following:~~

~~(A) The DEQ shall take final action on a request for an administrative permit amendment within 60 days from the date of receipt of such a request, and may incorporate the proposed changes without providing notice to the public or affected States provided that it designates any such permit revisions as having been made pursuant to this paragraph.~~

~~(B) The DEQ shall submit a copy of the revised permit to the Administrator upon the Administrator's request.~~

~~(C) The source may implement the changes addressed in the request for an administrative amendment immediately upon submittal of the request.~~

~~(4) The DEQ shall, upon taking final action granting a request for an administrative permit amendment, allow coverage by the permit shield in OAC 252:100-8-6(f) for administrative permit amendments made pursuant to subparagraph (d)(1)(E) of this section.~~

[NOTE: 252:100-8-7(d) was moved to 252:100-8-7.2(a)]

~~(e) Permit modification. A permit modification is any revision to an operating permit that cannot be accomplished under the program's provisions for administrative permit amendments under subsection (d) of this section. A permit modification for purposes of the acid rain portion of the permit shall be governed by regulations promulgated under Title IV of the federal Clean Air Act.~~

~~(1) Minor permit modification procedures.~~

~~(A) Criteria.~~

~~(i) Minor permit modification procedures may be used only for those permit modifications that:~~

~~(I) Do not violate any applicable requirement, or state only requirements;~~

~~(II) Do not involve significant changes to existing~~

- ~~monitoring, reporting or recordkeeping requirements in the permit;~~
- ~~(III) Do not require or change a case by case determination of an emission limitation or other standard, or a source specific determination for temporary sources of ambient impacts, or a visibility or increment analysis;~~
- ~~(IV) Do not seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement, or state only requirement, and that the source has assumed to avoid an applicable requirement, or state only requirement, to which the source would otherwise be subject. Such terms and conditions include federally enforceable emissions caps assumed to avoid classification as a modification under any provision of Title I and alternative emissions limits approved pursuant to regulations promulgated under §§112(i)(5) of the federal Clean Air Act; and~~
- ~~(V) Are not modifications under any provision of Title I of the federal Clean Air Act.~~
- ~~(ii) Notwithstanding OAC 252:100-8-7(e)(1)(A)(i) and OAC 252:100-8-7(e)(2)(A), minor permit modification procedures may be used for permit modifications involving the use of economic incentives, marketable permits, emissions trading, and other similar approaches, to the extent that such minor permit modification procedures are explicitly provided for in an applicable implementation plan or in applicable requirements promulgated by EPA.~~
- ~~(B) Application. To use the minor permit modification procedures, a source shall submit an application requesting such use which shall meet the permit application requirements of Tier I under OAC 252:2-15 and shall include the following:~~
- ~~(i) A description of the change, the emissions resulting from the change, and any new applicable requirements, and state only requirements, that will apply if the change occurs;~~
- ~~(ii) The source's suggested modification language;~~
- ~~(iii) Certification by a responsible official, that the application and the proposed modification meet the criteria for use of minor permit modification procedures; and~~
- ~~(iv) Completed forms for any notices required by OAC 252:2-15 and, regarding notice to EPA and affected states, as required under subparagraph (C) of this paragraph.~~
- ~~(C) EPA and affected state notification. If the proposed minor modification is of a permit that underwent EPA review in accordance with OAC 252:100-8-8, the provisions of that section shall apply to the minor modification application unless waived by the Administrator.~~

~~(D) Timetable for issuance. Within 90 days of the DEQ's receipt of a complete application under OAC 252:2-15 the DEQ shall:~~

- ~~(i) Issue the minor permit modification as approved;~~
- ~~(ii) Deny the minor permit modification application; or~~
- ~~(iii) Determine that the requested modification does not meet the minor permit modification criteria and should be reviewed under the significant modification procedures or administrative amendment procedures.~~

~~(E) Source's ability to make change. Immediately after filing an application meeting the requirements of these minor permit modification procedures, the source is authorized to make the change or changes proposed in the application. After the source makes the change allowed by the preceding sentence, and until the DEQ takes any of the actions specified in (1) (D) (i) through (iii) of this section, the source must comply with both the applicable requirements and state only requirements, governing the change and the proposed permit terms and conditions. During this period, the source need not comply with the existing terms and conditions it seeks to modify. However, if the source fails to comply with its proposed permit terms and conditions during this time period, the existing permit terms and conditions it seeks to modify may be enforced against it.~~

~~(F) Permit shield. The permit shield under OAC 252:100-8-6(f) will not extend to minor permit modifications.~~

~~(G) Permittee's risk in commencing construction. The permittee assumes the risk of losing any investment it makes toward implementing a modification prior to receiving a permit amendment authorizing the modification. The DEQ will not consider the possibility of the permittee suffering financial loss due to such investment when deciding whether to approve, deny, or approve in modified form a minor permit amendment.~~

~~(2) Significant modification procedures.~~

~~(A) Criteria. Significant modification procedures shall be used for applications requesting permit modifications that:~~

- ~~(i) Involve any significant amendment to existing monitoring, reporting, or recordkeeping requirements in the permit;~~
- ~~(ii) Require any amendment to establish or amend a permit condition that is required to be based on a case by case determination of an emission limitation or other standard, on a source specific determination of ambient impacts, or on a visibility or increment analysis;~~
- ~~(iii) Seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement, and state only requirement, and that the source has assumed to avoid an applicable requirement, and state only requirement, to which the source would otherwise be subject. Such terms and~~

conditions include:

- ~~(I) A federally enforceable emissions cap assumed to avoid classification as a modification under any provision of Title I;~~
- ~~(II) An alternative emissions limit approved pursuant to regulations promulgated under section 112(i)(5) of the federal Clean Air Act; and~~
- ~~(iv) Are modifications under any provision of Title I of the federal Clean Air Act; and,~~
- ~~(v) Do not qualify as minor permit modifications or administrative amendments.~~

~~(B) Procedures for processing. Significant permit modifications shall meet all requirements of these rules that are applicable to Tier II applications. The application for the modification shall describe the change, the emissions resulting from the change, and any new applicable requirements, and state only requirements, that will apply if the change occurs.~~

~~(C) Issuance. The DEQ shall complete review of significant permit modifications within nine months after receipt of a complete application, but shall be authorized to extend that date by up to three months for cause.~~

[NOTE: 252:100-8-7(e) was moved to 252:100-8-7.2(b)]

~~(f) Reopening for cause.~~

~~(1) Mandatory reopening. Each issued permit shall include provisions specifying the conditions under which the permit will be reopened prior to the expiration date of the permit. A permit shall be reopened and revised under any of the following circumstances:~~

~~(A) Additional federal applicable requirements become applicable to a stationary source with a remaining permit term of three or more years. Such a reopening and amendment shall be completed not later than 18 months after promulgation of the federal applicable requirement. Reopening is allowed if an applicable requirement becomes effective and the original permit or any of its terms and conditions has been extended pursuant to the application shield provided at OAC 252:100-8-7(e)(4) beyond the 18 month timeframe for revision. No such reopening is required if the effective date of the requirement is later than the date on which the permit is due to expire.~~

~~(B) Additional requirements (including excess emissions requirements) become applicable to an affected source under the acid rain program. Upon approval by the administrator, excess emissions offset plans shall be deemed to be incorporated into the permit.~~

~~(C) The agency or the administrator determines that the permit contains a material mistake or that inaccurate statements were made in establishing the emissions standards, limitations, or other terms or conditions of the permit.~~

~~(D) The administrator or the agency determines that the~~

~~permit must be revised or revoked to assure compliance with the applicable requirements.~~

~~(2) Discretionary reopening. The agency may reopen and amend a permit when:~~

~~(A) additional state only requirements become applicable to a permitted stationary source, and the effective date of the requirement is at least 18 months prior to the date on which the permit is due to expire;~~

~~(B) alterations or modifications to the permitted facility will result in or have the potential to result in significant alteration of the nature or quantity of regulated air pollutants to be emitted by the permittee;~~

~~(C) the agency receives information previously unavailable to the agency that shows that the terms and conditions of the permit do not accurately represent the actual circumstances relating to the permitted facility;~~

~~(D) a court of competent jurisdiction invalidates or modifies an Oklahoma or federal statute or rule or federal guideline upon which a condition of the permit is based; and~~

~~(E) an event occurs that is beyond the control of the permittee that necessitates modification of a compliance schedule in the permit.~~

~~(3) Reopening procedures. To reopen and amend a permit, the agency shall follow the procedures that apply to significant permit amendments under this chapter, unless the amendment can be made as an administrative amendment under OAC 252:100-8-7(d). Mandatory reopenings under OAC 252:100-8-7(f)(1) shall be made as expeditiously as practicable. In lieu of an application, the significant permit amendment process will commence when the agency gives the permittee written notice of its intent to amend the permit. The agency shall not issue the amendment, or make public notice of the amendment where public notice is required, until at least thirty days after the agency has given the permittee consents to less notice, or in the case of an emergency. In cases where public participation is required, only those portions of the permit which the agency proposes to amend shall be open for public comment or consideration at a meeting or hearing.~~

[NOTE: 252:100-8-7(f) was moved to 252:100-8-7.3(a), (b) and (c)]

~~(g) Reopenings for cause by EPA.~~

~~(1) If the Administrator finds that cause exists to terminate, modify, or revoke and reissue a permit, the Administrator shall notify the permitting authority and the permittee of such findings in writing.~~

~~(2) The permitting authority shall, within 90 days after receipt of such notification, forward to EPA a proposed determination of termination, modification, or revocation and reissuance, as appropriate. The Administrator may extend this 90 day period for an additional 90 days if he finds that a new or revised permit application is necessary or that the permitting authority must require the permittee to submit~~

additional information.

~~(3) The Administrator will review the proposed determination from the permitting authority within 90 days of receipt.~~

~~(4) The permitting authority shall have 90 days from receipt of an EPA objection to resolve any objection that EPA makes and to terminate, modify, or revoke and reissue the permit in accordance with the Administrator's objection.~~

~~(5) If the permitting authority fails to submit a proposed determination pursuant to this subsection, or fails to resolve any objection pursuant to this subsection, the Administrator will terminate, modify, or revoke and reissue the permit after taking the following actions:~~

~~(A) Providing at least 30 days' notice to the permittee in writing of the reasons for any such action.~~

~~(B) Providing the permittee an opportunity for comment on the Administrator's proposed action and an opportunity for a hearing.~~

[NOTE: 252:100-8-7(g) was moved to 252:100-8-7.3(d)]

~~(h) Revocations.~~

~~(1) Permit revocation without reissuance. The agency may revoke permits and not reissue them when:~~

~~(A) there exists at the permitted facility unresolved noncompliance with applicable requirements or a condition of the permit, and the permittee refuses to undertake an enforceable schedule of compliance to resolve the noncompliance;~~

~~(B) the permittee fails to disclose fully the facts relevant to issuance of the permit or submits false or misleading information to the agency or the administrator;~~

~~(C) the permittee has failed to comply with any requirement under OAC 252:100-9 to pay fees; or~~

~~(D) the permittee has failed to pay a penalty owed pursuant to court order, consent decree, stipulation agreement, or schedule of compliance.~~

~~(2) Revocation procedures. The agency shall give notice to the permittee of its intention to revoke a permit without reissuance. This notice must state that within 30 days of the receipt of the notice the permittee may request a contested case hearing be held on the proposed action, except that the agency may provide less notice in case of an emergency. If the permittee requests a contested case hearing, the agency shall hold the hearing in accordance with the Oklahoma Administrative Procedures Act.~~

[NOTE: 252:100-8-7(h) was moved to 252:100-8-7.4]

~~(i) Public participation. See 27A O.S.Supp. 1995, § 2-14-101 et seq. and OAC 252:2-15.~~

~~(j) Judicial review. Any final action in granting or denying an application for a permit, permit amendment or modification, or permit renewal shall be subject to judicial review in the court of appropriate jurisdiction upon an application filed by the applicant or permittee, or by any affected state or other person who participated in the public comment process. Except for~~

~~authorizations under General Permits, judicial review is available to all affected parties for all final permit actions including minor modifications and administrative actions. If no public comment procedure was employed for the action under challenge, an application for review may be filed by the permittee or an affected state. The opportunity for judicial review provided for in this subsection shall be the exclusive means for obtaining judicial review of any permit action.~~

~~(1) No application for judicial review may be filed more than 90 days following the final action on which review is sought, unless the grounds for review arose at a later time, in which case the application for review shall be filed within 90 days of the date on which the grounds for review first arose and review shall be limited to such later arising grounds.~~

~~(2) Any application for judicial review shall be limited to issues that:~~

~~(A) were raised in written comments filed with the Agency or during a public hearing on the proposed permit action (if the grounds on which review is sought were known at that time), except that this restriction shall not apply if the person seeking review was not afforded an advance opportunity to comment on the challenged action; and~~

~~(B) are germane and material to the permit action at issue.~~

~~(3) For purposes of this section, "final action" shall include a failure by the Agency to take final action to grant or deny an application within the time specified in this Chapter.~~

[NOTE: 252:100-8-7(j) was moved to 252:100-8-7.5]

252:100-8-7.1.(e) Permit renewal and expiration

(a) Timely application for permit renewal.

(1) Applications for permit renewal after the transition period, and for permits permit for new Part 70 sources or amendments, shall be considered timely if the applicant meets the requirements of this subsection. [NOTE: Was 252:100-8-7(c)(1)]

(2) Stationary sources operating under permits issued by the DEQ under this Subchapter subchapter shall apply for permit reissuance at least 180 days before the expiration of the existing permit, unless the permit specifies that the application must be submitted sooner. The DEQ shall require in a permit that a reissuance application be submitted sooner if it determines that an earlier application is needed to minimize the possibility of expiration prior to reissuance. The DEQ may make the determination if it anticipates a relatively lengthy permit review process due to the complexity of the stationary source or anticipated involvement of the public. In no event shall the permit require application for reissuance sooner than eighteen months prior to the expiration of the permit. [NOTE: Was 252:100-8-7(c)(5)]

(b)(9) Application content for renewal of expiring permit. In submitting an application for renewal of a DEQ issued Part 70

operating permit, a source may identify and incorporate by reference terms and conditions in its previous permit and permit application(s) that should remain unchanged. terms and conditions in its previous permit that should remain unchanged and incorporate by reference those portions of its existing permit and the permit application and any permit amendment or modification applications that describe products, processes, operations, and emissions to which those terms and conditions apply. The source must identify specifically and list which portions of its previous permit and/or applications are incorporated by reference. In addition, a renewal application must contain:

(1)(i) information specified in OAC 252:100-8-5(d) 252:100-8-5(e) for those products, processes, operations, and emissions that:

(A)(I) That are not addressed in the existing permit;

(B)(II) That are subject to applicable requirements, or state-only requirements that are not addressed in the existing permit; or

(C)(III) For as to which the source seeks permit terms and conditions that differ from those in the existing permit; and

(2)(ii) a compliance plan and certification as required in OAC 252:100-8-5(d)(8) 252:100-8-5(e)(8) and (9). [NOTE: Was 252:100-8-5(b)(9)]

(c)(2) Issuance of renewal permit. Applications for permit renewal shall be subject to the same procedural requirements, including those for public participation, affected State comment, and EPA review, that apply to initial permit issuance under OAC 252:100-8-7(a). [NOTE: Was 252:100-8-7(c)(2)]

(d) Expiration of permit.

(1)(3) A source's right to operate shall terminate upon the expiration of its permit unless a timely and complete renewal application has been submitted at least 180 days before the date of expiration. [NOTE: Was 252:100-8-7(c)(3)]

(2)(4) If a timely and complete application for a permit renewal is submitted, but the DEQ fails to take final action to issue or deny the renewal permit before the end of the term of the previous permit, then the permit shall not expire until the renewal permit has been issued or denied, and any permit shield granted for the permit shall continue in effect during that time. [NOTE: Was 252:100-8-7(c)(4)]

(5) Stationary sources operating under permits issued by the DEQ under this subchapter shall apply for permit reissuance at least 180 days before the expiration of the existing permit, unless the permit specifies that the application must be submitted sooner. The DEQ shall require in a permit that a reissuance application be submitted sooner if it determines that an earlier application is needed to minimize the possibility of expiration prior to reissuance. The DEQ may make the determination if it anticipates a relatively lengthy permit review process due to the complexity of the stationary

source or anticipated involvement of the public. In no event shall the permit require application for reissuance sooner than eighteen months prior to the expiration of the permit.
[NOTE: Moved to 252:100-8-7.1(a)(2)]

252:100-8-7.2.(d) Administrative permit amendments and permit modifications

(a) Administrative permit amendments.

(1) When used in this subsection An "Administrative administrative permit amendment" means a permit revision that:

(A) Corrects typographical errors;

(B) Identifies a change in the name, address, or phone number of any person identified in the permit, or provides a similar minor administrative change at the source;

(C) Requires more or less frequent monitoring or reporting by the permittee;

(D) Allows for a change in ownership or operational control of a source where no other change in the permit is necessary, provided that a written agreement containing a specific date for transfer of permit responsibility, coverage, and liability between the current and new permittee has been submitted to the DEQ;

(E) Incorporates into the permit the requirements from preconstruction review permits issued by the DEQ under this Part OAC 252:100-7. Enhanced New Source Review (NSR) procedures apply to all major sources and all State Implementation Plan (SIP) minor source changes to majors.

(2) Administrative permit amendments for purposes of the acid rain portion of the permit shall be governed by regulations promulgated under Title IV of the federal Clean Air Act 40 CFR Part 72.

(3) An administrative permit amendment shall be made by the DEQ in accordance with the following:

(A) The DEQ shall take final action on a request for an administrative permit amendment within 60 days from the date of receipt of such a request, and may incorporate the proposed changes without providing notice to the public or affected States provided that it designates any such permit revisions as having been made pursuant to this paragraph.

(B) The DEQ shall submit a copy of the revised permit to the Administrator upon the Administrator's request.

(C) The source may implement the changes addressed in the request for an administrative amendment immediately upon submittal of the request.

(4) The DEQ shall, upon taking final action granting a request for an administrative permit amendment, allow coverage by the permit shield in ~~OAC 252:100-8-6(f)~~ 252:100-8-6(d) for administrative permit amendments made pursuant to subparagraph ~~(d)(1)(E)~~ 252:100-8-7.2(a)(1)(E) of this section. [NOTE: 252:100-8-7.2(a) was 252:100-8-7(d)]

~~(b)(e) Permit modification.~~ A permit modification is any revision to an operating a permit that cannot be accomplished

under the program's provisions for administrative permit amendments under subsection (d) (a) of this section. A permit modification for purposes of the acid rain portion of the permit shall be governed by regulations promulgated under Title IV of the federal Clean Air Act 40 CFR Part 72.

(1) Minor permit modification procedures.

(A) Criteria.

(i) Minor permit modification procedures may be used only for those permit modifications that:

(I) Do not violate any applicable requirement, or state-only requirements;

(II) Do not involve significant changes to existing monitoring, reporting or recordkeeping requirements in the permit;

(III) Do not require or change a case-by-case determination of an emission limitation or other standard, or a source-specific determination for temporary sources of ambient impacts, or a visibility or increment analysis;

(IV) Do not seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement, or state-only requirement, and that which the source has assumed to avoid an some other applicable requirement, or state-only requirement, to which the source would otherwise be subject. Such terms and conditions include federally-enforceable emissions caps assumed to avoid classification as a modification under any provision of Title I and alternative emissions limits approved pursuant to regulations promulgated under §§112(i) (5) of the federal Clean Air Act; and

(V) Are not modifications under any provision of Title I of the federal Clean Air Act.

(ii) Notwithstanding OAC 252:100-8-7(e)(1)(A)(i) 252:100-8-7.2(b)(1)(A)(i) and OAC 252:100-8-7(e)(2)(A) 252:100-8-7.2(b)(2)(A), minor permit modification procedures may be used for permit modifications involving the use of economic incentives, marketable permits, emissions trading, and other similar approaches, to the extent that such minor permit modification procedures are explicitly provided for in an applicable the State's implementation plan or in applicable requirements promulgated by EPA.

(B) Application. To use the minor permit modification procedures, a source shall submit an application requesting such use which shall meet the permit application requirements of Tier I under OAC 252:2-15 and shall include the following:

(i) A description of the change, the emissions resulting from the change, and any new applicable requirements, and or state-only requirements, that will apply if the change occurs;

(ii) The source's suggested modification language;

(iii) Certification by a responsible official, that the application and the proposed modification meet the criteria for use of minor permit modification procedures; and

(iv) Completed forms for any notices required by OAC 252:2-15 and, ~~regarding notice to EPA and affected states, as required under~~ subparagraph (C) of this paragraph.

(C) EPA and affected state notification. If the proposed minor modification is of a permit that underwent EPA review in accordance with OAC 252:100-8-8, the provisions of that section shall apply to the minor modification application unless waived by the Administrator.

(D) Timetable for issuance. Within 90 days of the DEQ's receipt of a complete application under OAC 252:2-15, the DEQ shall:

(i) Issue the minor permit modification as approved;

(ii) Deny the minor permit modification application; or

(iii) Determine that the requested modification does not meet the minor permit modification criteria and should be reviewed under the significant modification procedures or administrative amendment procedures.

(E) Source's ability to make change. Immediately after filing an application meeting the requirements of these minor permit modification procedures, the source is authorized to make the change or changes proposed in the application. After the source makes the change allowed by ~~the preceding sentence,~~ and until the DEQ takes any of the actions specified in (1)(D)(i) through (iii) of this section subsection, the source must comply with ~~both~~ the applicable requirements and state-only requirements, governing the change and the proposed permit terms and conditions. During this period, the source need not comply with the existing terms and conditions it seeks to modify. However, if the source fails to comply with its proposed permit terms and conditions during this time period, the existing permit terms and conditions it seeks to modify may be enforced against it.

(F) Permit shield. The permit shield under ~~OAC 252:100-8-6(f)~~ 252:100-8-6(d) will not extend to minor permit modifications.

(G) Permittee's risk in commencing construction. The ~~permittee permittees~~ assumes the risk of losing any investment it makes toward implementing a modification prior to receiving a permit amendment authorizing the modification. The DEQ will not consider the possibility of the permittee suffering financial loss due to such investment when deciding whether to approve, deny, or approve in modified form a minor permit amendment.

(2) Significant modification procedures.

(A) Criteria. Significant modification procedures shall be used for applications requesting permit modifications that:

(i) Involve any significant changes in amendment to existing monitoring, reporting, or recordkeeping requirements in the permit;.
(ii) Relax any reporting or recordkeeping requirements.
(iii)-(ii) Require any amendment to establish or amend a permit condition that Change any permit condition that is required to be based on a case-by-case determination of an emission limitation or other standard, on a source-specific determination of ambient impacts, or on a visibility or increment analysis;
(iv)-(iii) Seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement, and or state-only requirement, and that which the source has assumed to avoid an some other applicable requirement, and or state-only requirement, to which the source would otherwise be subject. Such terms and conditions include:

(I) A federally enforceable emissions cap assumed to avoid classification as a modification under any provision of Title I;

(II) An alternative emissions limit approved pursuant to regulations promulgated under section 112(i)(5) of the federal Clean Air Act; and

(v)-(iv) Are modifications under any provision of Title I of the federal Clean Air Act; and,

(vi)-(v) Do not qualify as minor permit modifications or administrative amendments.

(B) Procedures for processing. Significant permit modifications shall meet all requirements of these rules that are applicable to Tier II applications. The application for the modification shall describe the change, the emissions resulting from the change, and any new applicable requirements, and or state-only requirements, that will apply if the change occurs.

(C) Issuance. The DEQ shall complete review of significant permit modifications within nine months after receipt of a complete application, but shall be authorized to extend that date by up to three months for cause.

[NOTE: 252:100--8-7.2(b) was 252:100-8-7(e)]

252:100-8-7.3.(f) Reopening of operating permits for cause

(a)-(1) Mandatory reopening. Each issued permit shall include provisions specifying the conditions under which the permit will be reopened prior to the expiration date of the permit. A permit shall be reopened and revised under any of the following circumstances:

(1)-(A) Additional federal applicable requirements become applicable to a stationary source with a remaining permit term of three or more years. Such a reopening and amendment shall be completed not later than 18 months after promulgation of the federal applicable requirement. Reopening is allowed if an applicable requirement becomes effective and the original

permit or any of its terms and conditions has been extended pursuant to the application shield provided at ~~OAC 252:100-8-7(e)(4)~~ 252:100-8-7.1(d)(2) beyond the 18-month timeframe for revision. No such reopening is required if the effective date of the requirement is later than the date on which the permit is due to expire.

(2)(B) Additional requirements (including excess emissions requirements) become applicable to an affected source under the acid rain program. Upon approval by the Administrator, ~~administrator~~, excess emissions offset plans shall be deemed to be incorporated into the permit.

(3)(C) The DEQ agency or the administrator EPA determines that the permit contains a material mistake or that inaccurate statements were made in establishing the emissions standards, limitations, or other terms or conditions of the permit.

(4)(D) The Administrator ~~administrator~~ or the DEQ agency determines that the permit must be revised or revoked to assure compliance with the applicable requirements.

(b)(2) Discretionary reopening. The DEQ agency may reopen and amend a permit when:

(1)(A) additional state-only requirements become applicable to a permitted stationary source, and the effective date of the requirement is at least 18 months prior to the date on which the permit is due to expire;

(2)(B) alterations or modifications to the permitted facility will result in or have the potential to result in significant alteration of the nature or quantity of regulated air pollutants to be emitted by the permittee;

(3)(C) the DEQ agency receives information previously unavailable to the DEQ agency that shows that the terms and conditions of the permit do not accurately represent the actual circumstances relating to the permitted facility;

(4)(D) a court of competent jurisdiction invalidates or modifies an Oklahoma or federal statute or rule or federal guideline upon which a condition of the permit is based; and
or

(5)(E) an event occurs that is beyond the control of the permittee that necessitates modification of a compliance schedule in the permit.

(c)(3) Reopening procedures. To reopen and amend a permit, the DEQ agency shall follow the procedures that apply to significant permit amendments modifications under this chapter Subchapter, unless the amendment can be made as an administrative amendment under ~~OAC 252:100-8-7(d)~~ 252:100-8-7.2(a). Mandatory reopenings under ~~OAC 252:100-8-7(f)(1)~~ 252:00-8-7.3(a) shall be made as expeditiously as practicable. In lieu of an application, the significant permit amendment modification process will commence when the DEQ agency gives the permittee written notice of its intent to amend the permit. The DEQ agency shall not issue the amendment, or make public notice of the amendment where public notice is required, until at least thirty days after the DEQ agency has given the permittee written notice of its intent to

amend the permit, unless the permittee consents to less notice, or in the case of an emergency. In cases where public participation is required, only those portions of the permit that which the DEQ agency proposes to amend shall be open for public comment or consideration at a meeting or hearing.

[NOTE: 252:100-8-7.3(a), (b), and (c) were 252:100-8-7(f)]

(d)-(e) Reopenings for cause by EPA.

(1) If the Administrator finds that cause exists to terminate, modify, or revoke and reissue a permit, the Administrator shall notify the DEQ permitting authority and the permittee of such findings in writing.

(2) The DEQ permitting authority shall, within 90 days after receipt of such notification, forward to EPA a proposed determination of termination, modification, or revocation and reissuance, as appropriate. The Administrator may extend this 90-day period for an additional 90 days if he finds that a new or revised permit application is necessary or that the DEQ permitting authority must require the permittee to submit additional information.

(3) The Administrator will review the proposed determination from the DEQ permitting authority within 90 days of receipt.

(4) The DEQ permitting authority shall have 90 days from receipt of an EPA objection to resolve any objection that EPA makes and to terminate, modify, or revoke and reissue the permit in accordance with the Administrator's objection.

(5) If the DEQ permitting authority fails to submit a proposed determination pursuant to this subsection, or fails to resolve any objection pursuant to this subsection, the Administrator will terminate, modify, or revoke and reissue the permit after taking the following actions:

(A) Providing at least 30 days' notice to the permittee in writing of the reasons for any such action.

(B) Providing the permittee an opportunity for comment on the Administrator's proposed action and an opportunity for a hearing.

[NOTE: 252:100-8-7.3(d) was 252:100-8-7(g)]

252:100-8-7.4.(h) Revocations of operating permits

(a)-(1) Revocation of a permit or authorization under a general permit Permit revocation without reissuance. The DEQ agency may revoke permits or authorizations under a general permit and not reissue them when:

(1)-(A) there exists at the permitted facility unresolved noncompliance with applicable requirements or a condition of the permit or authorization, and the permittee refuses to undertake an enforceable schedule of compliance to resolve the noncompliance;

(2)-(B) the permittee fails to disclose fully the facts relevant to issuance of the permit or authorization or submits false or misleading information to the DEQ agency or the Administrator administrator;

(3)-(C) the permittee has failed to comply with any requirement

under ~~OAC 252:100-9~~ 252:100-5 to pay fees; or
(4)(D) the permittee has failed to pay a penalty owed pursuant
to court order, consent decree, stipulation agreement, or
schedule of compliance.

(b)(2) Revocation procedures. The DEQ agency shall give notice
to the permittee of its intention to revoke a permit without
reissuance. This notice must state that within 30 days of the
receipt of the notice the permittee may request a contested case
hearing be held on the proposed action, except that the DEQ
agency may provide less notice in case of an emergency. If the
permittee requests a contested case hearing, the DEQ agency shall
hold the hearing in accordance with the Oklahoma Administrative
Procedures Act.

[NOTE: 252:100-8-7.4 was 252:100-8-7(h)]

252:100-8-7.5.(j) Judicial review

Any final action in granting or denying an application for a
permit, permit amendment or modification, or permit renewal shall
be subject to judicial review in the court of appropriate
jurisdiction upon an application filed by the applicant or
permittee, or by any affected state or other person who
participated in the public comment process. Except for
authorizations under General Permits, judicial review is
available to all affected parties for all final permit actions
including minor modifications and administrative actions. If no
public comment procedure was employed for the action under
challenge, an application for review may be filed by the
permittee or an affected state. The opportunity for judicial
review provided for in this subsection shall be the exclusive
means for obtaining judicial review of any permit action.

(1) No application for judicial review may be filed more than
90 days following the final action on which review is sought,
unless the grounds for review arose at a later time, in which
case the application for review shall be filed within 90 days
of the date on which the grounds for review first arose and
review shall be limited to such later-arising grounds.

(2) Any application for judicial review shall be limited to
issues that:

(A) were raised in written comments filed with the DEQ
Agency or during a public hearing on the proposed permit
action (if the grounds on which review is sought were known
at that time), except that this restriction shall not apply
if the person seeking review was not afforded an advance
opportunity to comment on the challenged action; and

(B) are germane and material to the permit action at issue.

(3) For purposes of this section, "final action" shall
include a failure by the DEQ Agency to take final action to
grant or deny an application within the time specified in this
Chapter.

[NOTE: 252:100-8-7.5 was 252:100-8-7(j)]

252:100-8-8. Permit review by EPA and affected states

(a) **Applicability.** This section applies only to specific Tier II and III applications for Part 70 construction and/or operating permits and permit actions that have not been waived from compliance with this section by the Administrator.

(b) **Format.** To the extent practicable, information provided to the EPA by applicants shall be in computer-readable format compatible with EPA's national database management system.

(c) **Recordkeeping.** The DEQ will keep for 5 years records required by this section and will submit to the Administrator such information as the Administrator may reasonably require to ascertain whether the State program complies with the requirements of the ~~federal Clean Air Act~~ or of this Chapter.

(d) **Transmission of Part 70 applications to EPA.**

For Part 70 Tier II and III applications subject to this section, the DEQ shall require an applicant upon filing to also provide a copy to the Administrator or the DEQ may submit a permit application summary form and any relevant portion of the permit application and compliance plan, in place thereof.

(e) **Transmittal of notice of draft permit to affected states.** See 27A O.S.Supp. 1995, § 2-5-112(E); 27A O.S.Supp. 1995, § 2-14-101 et seq.; and OAC 252:2-15.

(f) **Preparation and submittal of EPA review copy.**

(1) **Tier II applications.** For Tier II applications, the DEQ shall review public comments, revise the draft permit as appropriate and submit the revision to EPA for review no later than 60 days before the issuance deadline established in OAC 252:2-15-72 or, if none, by this Chapter.

(2) **Tier III applications.** For Tier III applications, the DEQ shall prepare a proposed permit according to 27A O.S.Supp. 1995, § 2-14-304, and submit it to EPA for review upon the publication of notice of an administrative permit hearing opportunity.

(g) **Notice of non-acceptance.** As part of the DEQ's submittal of a revised draft permit (Tier II) or a proposed permit (Tier III) to the Administrator, the DEQ shall notify the Administrator and any affected State in writing of any refusal by the DEQ to accept all recommendations for the revised draft permit or proposed permit that the affected State submitted during the review period. The notice will include the DEQ's reasons for not accepting any such recommendation. The DEQ is not required to accept recommendations that are not based on applicable requirements of the Oklahoma Clean Air Act or these rules.

(h) **EPA review and non-objection.** Upon receipt of notice from the EPA that it will not object to:

(1) A revised draft permit based on a Tier II application, the DEQ shall issue the permit.

(2) A proposed permit based on a Tier III application, the DEQ shall issue the proposed permit as final unless an administrative permit hearing has been timely and properly requested.

(i) **EPA review and objection.**

(1) **Timing.** Except as specified in paragraph 5 of this

subsection, no permit for which an application must be transmitted to the Administrator under subsection (a) of this section shall be issued if the Administrator objects to its issuance in writing within 45 days of receipt of the revised draft permit (Tier I) or proposed permit (Tier III) and all necessary supporting information.

(2) **Form of objection.** An EPA objection shall include a statement of the Administrator's reasons for objection and a description of the terms and conditions that the permit must include to respond to the objections.

(3) **Additional grounds.** Failure of the DEQ to do any of the following also shall constitute grounds for an objection:

(A) Comply with subsections (d) or (e) of this section;

(B) Submit any information necessary to review adequately the revised draft permit (Tier II) or the proposed permit (Tier III); or

(C) Process the permit application according to the uniform permitting requirements of OAC 252:2-15.

(4) **Copy.** The Administrator will provide the permit applicant a copy of the objection.

(5) **DEQ response.** The DEQ shall consult with EPA and the applicant and shall either:

(A) **Amend permit.** Amend the permit and submit for approval an amended draft (Tier II) or proposed (Tier III) permit to EPA within 90 days after the date of EPA's objection, or

(B) **Give notice and issue.** Determine that one or more revisions sought by EPA are inconsistent with applicable state or federal statutes or regulations, inform EPA accordingly within 90 days following the date of the Administrator's objection, decline to make those particular revisions and:

(i) issue the amended or revised draft permit (Tier II) as final, or

(ii) issue the proposed permit (Tier III) as final unless an administrative permit hearing has been timely and properly requested.

(6) **Failure of DEQ to respond.** If the DEQ fails, within 90 days after the date of the EPA objection, to amend and resubmit the draft permit or proposed permit in response to the objection, the Administrator will issue or deny the permit in accordance with the requirements of EPA's Part 70 regulations.

(j) **Public petitions to the Administrator.** If the Administrator does not object in writing under subsection (h) of this section, any person that meets the requirements of this subsection may petition the Administrator within 60 days after the expiration of the Administrator's 45-day review period to make such objection. Any such petition shall be based only on objections to the permit that the petitioner raised with reasonable specificity during the public comment period provided for in OAC 252:002-15, unless the petitioner demonstrates that it was impracticable to raise such objections within such period, or unless the grounds for such

objection arose after such period. If the Administrator objects to the permit as a result of a petition filed under this subsection, the DEQ shall not issue the permit until EPA's objection has been resolved, except that a petition for review does not stay the effectiveness of a permit or its requirements if the permit was issued after the end of the 45-day review period and prior to an EPA objection. If the DEQ has issued a permit prior to receipt of an EPA objection under this subsection, the Administrator will modify, terminate, or revoke such permit, and shall do so consistent with the procedures in OAC 252:100-8-7 through 252:100-8-7.5 except in unusual circumstances. If the DEQ revokes the permit, it may thereafter issue only a revised permit that satisfies EPA's objection. In any case, the source will not be in violation of the requirement to have submitted a timely and complete application.

(k) **Effect on Tier III administrative permit hearing.** When a public petition or an EPA objection is registered on a proposed permit (Tier III) on which an administrative permit hearing has been requested in accordance with 27A O.S.Supp. 1995, Section 2-14-101 et seq., the DEQ may stay the evidentiary part of the hearing involving cross-examination until EPA objections are resolved or determined to be inconsistent with applicable laws.

~~252:100-8-9. Permit fees~~ [NOTE: The contents of this Section were moved to 252:100-5 and 252:100-8-1.7]

~~(a) Definitions.~~ The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

~~(1) "Actual emission"~~ means the total amount of regulated pollutant (for fee calculation) emitted from a given facility during a particular calendar year, as determined by methods contained in OAC ~~252:100-8-9(d)~~.

~~(2) "Allowable emissions"~~ means the total amount of regulated pollutant (for fee calculation) emitted based on limits contained in a federally enforceable permit or potential to emit.

~~(3) "Emission inventory"~~ means a compilation of the total of all point source, storage and process fugitive air emissions for all regulated pollutant (for fee calculation) at a given facility.

~~(4) "Consumer Price Index"~~ means an index determined by the U.S. Department of Labor measuring the change in the cost of typical wage earner purchases of goods and services expressed as a percentage of the cost of these same goods and services in a base period.

~~(b) Fee required.~~ The owners or operators of Part 70 sources shall pay annual fees that are sufficient to cover the part 70 program costs. The permitting authority shall ensure that any fee required by these rules will be used solely for part 70 program costs.

~~(c) Applicability.~~ A Part 70 source shall be subject to fee requirements of this section on January 1, 1995, and as of this date shall no longer be subject to the major source annual

~~operating fee specified in 252.100-7-4 (b) (1) (A).~~

~~(d) Fee schedule for Part 70 sources.~~

~~(1) Annual fees. The annual fee shall be calculated on a source specific basis and may be based on either actual or allowable emissions at the option of the owner or operator paying the fee as set forth in the facility emissions inventory. Fees shall be based on emission inventories submitted in the previous calendar year. (For example, fee invoiced during calendar year 1995 shall be based upon inventory data covering the calendar year 1993).~~

~~(A) Annual fees shall be determined according to the following:~~

~~(i) where only one basis for fee assessment, i.e. only actual, or only allowable is reflected by the inventory, that basis shall be used for invoicing; or~~

~~(ii) where both actual and allowable emission are reflected on the inventory, the lesser of the two shall be used.~~

~~(B) Annual fees shall be as follows:~~

~~(i) Effective January 1, 1995, the annual operating fee for Part 70 sources shall be \$15.19 per ton of regulated air pollutant.~~

~~(ii) The annual operating fee shall be adjusted automatically each year by the percentage, if any, by which the Consumer Price Index for the most recent calendar year ending before the beginning of such year differs from the Consumer Price Index for the calendar year 1994. The Consumer Price Index for any calendar year is the average of the Consumer Price Index for all urban consumers published by the Department of Labor, as of the close of the twelve month period ending on August 31 of each calendar year.~~

~~(iii) Regulated pollutants (for fee calculation) in excess of 4,000 tons per year per pollutant for a part 70 source shall not be considered in the calculation of the annual fee.~~

~~(2) Permit processing fees. Permit processing fees shall be as follows:~~

~~(A) Initial Part 70 permit \$2,000.~~

~~(B) Renewal Part 70 permit \$1,000.~~

~~(C) Significant Part 70 Permit Mod. \$1,000.~~

~~(D) Minor Part 70 Permit Modification \$ 500.~~

~~(E) The Part 70 Temporary Permit \$1,000.~~

~~(F) Part 70 Temporary Source Relocation \$ 500.~~

~~(3) Payment. Fees will be paid by check or money order made payable to the Oklahoma Air Quality fund or upon delegation, to the appropriate reviewing agency. Fees are due and payable upon receipt of invoice. Fees shall be considered delinquent 30 days from the date of billing, at which time simple interest shall accrue at the rate of one and one half percent (1 1/2%) per month on any amount unpaid. The Department shall allow a grace period of one hundred and twenty days from the~~

~~date of billing before issuing any administrative order and assessing a reasonable administrative fine in accordance with the provisions of the Oklahoma Clean Air Act, 27A O.S. 1993 Supp. Sec. 2 5 101 et seq., as amended.~~

~~(4) Emissions inventory. The owner or operator of any Part 70 source shall by April 1, 1994, and every succeeding year thereafter, submit a complete emission inventory on forms obtained from the Agency. These inventories, covering the previous calendar year, will be used for the purpose of calculating the annual operating fee. The methods of calculation to be utilized in the development of an emission inventory shall be in accordance with the methods described in OAC 252:100-7-4(e).~~

PART 7. PREVENTION OF SIGNIFICANT DETERIORATION (PSD)
REQUIREMENTS FOR ATTAINMENT AREAS

[NOTE: Was 252:100-7-30 through 37]

252:100-8-30. Applicability

The new source requirements of this Part, in addition to the requirements of OAC 252:100-7-15 through 252:100-7-18 and 252:100-8, Parts 1, 3, and 5 of this Subchapter, shall apply to the construction of all major stationary sources and major modifications as specified in OAC 252:100-7-31 252:100-8-31 through 252:100-7-33 252:100-8-33, following and are effective upon adoption of this Subchapter by Oklahoma. Except that the requirements of this Part will not be necessary for sources required to meet the permit requirements of the United States Environmental Protection Agency under Title 40 Part 52.21 of the Code of Federal Regulations. Sources subject to this Part are also subject to the operating permit provisions contained in Part 5 of OAC 252:100-8.

252:100-8-31. Definitions

The following words and terms when used in this Part shall have the following meaning, unless the context clearly indicates otherwise:

"Actual emission" means the actual rate of emissions of a pollutant from an emissions unit, as determined in accordance with the following:

(A) In general, actual emissions as of a particular date shall equal the average rate in tons per year at which the unit actually emitted the pollutant during a two-year period which precedes the particular date and which is representative of normal source operation. The reviewing authority may allow the use of a different time period upon a determination that it is more representative of normal source operation. Actual emissions shall be calculated using the unit's actual operating hours, production rates, and types of materials processed, stored, or combusted during the selected time period. Actual emissions may also be determined by source

tests, or by best engineering judgment in the absence of acceptable test data.

(B) The reviewing authority may presume that source-specific allowable emissions for the unit are equivalent to the actual emissions of the unit.

(C) For any emissions unit which has not begun normal operations on the particular date, actual emissions shall equal the potential to emit of the unit on that date.

"Adverse impact on visibility" means visibility impairment which interferes with the management, protection, preservation or enjoyment of the visitor's visual experience of the Federal Class I area. This determination must be made by the DEQ Air Quality Division on a case-by-case basis taking into account the geographic extent, intensity, duration, frequency and time of visibility impairments, and how these factors correlate with:

(A) times of visitor use of the Federal Class I area; and

(B) the frequency and timing of natural conditions that reduce visibility. [NOTE: From 252:100-7-36(a)]

~~"Allowable emissions" means the emission rate of a stationary source calculated using the maximum rated capacity of the source (unless the source is subject to enforceable limits which restrict the operating rate, or hours of operation, or both) and the most stringent of the following:~~

~~(A) the applicable standards as set forth in 40 CFR Parts 60 and 61;~~

~~(B) the applicable State rule allowable emissions; or,~~

~~(C) the emissions rate specified as an enforceable permit condition. [NOTE: Moved to 252:100-8-1.1]~~

"Baseline area" means any areas designated as attainment or unclassifiable in which the major source or major modification establishing the minor source baseline date would construct or would have an air quality impact equal to or greater than 1 ug/m³ (annual average) of the pollutant for which the minor source baseline date is established.

"Baseline concentration" means that ambient concentration level which exists in the baseline area at the time of the applicable minor source baseline date.

(A) A baseline concentration is determined for each pollutant for which a minor source baseline date is established and shall include:

(i) the actual emissions representative of sources in existence on the applicable minor source baseline date, except as provided in (B) of this definition.

(ii) the allowable emissions of major sources which commenced construction before the major source baseline date but were not in operation by the applicable minor source baseline date. (Effective May 11, 1991)

(B) The following will not be included in the baseline concentration and will affect the applicable maximum allowable increase(s):

(i) actual emissions from any major source on which construction commenced after the major source baseline date;

and;

(ii) actual emissions increases and decreases at any source occurring after the minor source baseline date. (Effective May 11, 1991)

"Baseline date" means:

(A) for major sources,

(i) in the case of particulate matter and sulfur dioxide, January 6, 1975, and,

(ii) in the case of nitrogen dioxide, February 8, 1988; and,

(B) for minor sources, the earliest date after the trigger date on which a major source or major modification (subject to 40 CFR 52.21 or OAC 252:100-7 252:100-8, Part 5 7) submits a complete application. The trigger date is:

(i) in the case of particulate matter and sulfur dioxide, August 7, 1977, and

(ii) in the case of nitrogen oxides, February 8, 1988.

(Effective May 11, 1991)

"Begin actual construction" means, in general, initiation of physical on site construction activities on an emissions unit which are of a permanent nature. Such activities include, but are not limited to, installation of building supports and foundations, laying of underground pipework, and construction of permanent storage structures. With respect to a change in method of operation this term refers to those on site activities, other than preparatory activities, which mark the initiation of the change. [NOTE: Moved to 252:100-8-1.1]

"Best available control technology" means the control technology to be applied for a major source or modification is the best that is available as determined by the Executive Director on a case-by-case basis taking into account energy, environmental, costs and economic impacts of alternate control systems.

"Building, structure, facility or installation" means all of the pollutant-emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person or persons under common control. Pollutant-emitting activities shall be considered as part of the same industrial grouping if they belong to the same "Major Group" (i.e., which have the same two-digit code) as described in the Standard Industrial Classification Manual, 1972, as amended by the 1977 Supplement.

"Commence" as applied to construction of a major source or major modification means that the owner or operator has all necessary preconstruction approvals or permits and either has:
(A) begun, or caused to begin, a continuous program of actual on site construction of the source, to be completed within a reasonable time; or,
(B) entered into binding agreements or contractual obligations, which cannot be cancelled or modified without substantial loss to the owner or operator, to undertake a program of actual construction of the source to be completed within a reasonable time. [NOTE: Moved to 252:100-8-1.1]

"Complete" in reference to an application for a permit, means that the application contains all the information necessary for processing the application. Designating an application complete for purposes of permit processing does not preclude the reviewing authority from requesting or accepting any additional information.

"Construction" means any physical change or change in the method of operation (including fabrication, erection, installation, demolition, or modification of an emissions unit) which would result in a change in actual emissions. [NOTE: Moved to 252:100-8-1.1]

"Emissions unit" means any part of a source which emits or would have the potential to emit any pollutant subject to regulation. [NOTE: Moved to 252:100-8-1.1]

"Federal land manager" means the Secretary of the department with authority over the Federal Class I area or his representative. [NOTE: Moved from 252:100-8-36(a)]

"Fugitive emissions" means those emissions which could not reasonably pass through a stack, chimney, vent or other functionally equivalent opening. [NOTE: Moved to 252:100-8-1.1]

"Innovative control technology" means any system of air pollution control that has not been adequately demonstrated in practice, but would have a substantial likelihood of achieving greater continuous emissions reduction than any control system in current practice or of achieving at least comparable reductions at lower cost in terms of energy, economics, or non-air quality environmental impacts.

"Major modification" means any physical change in or change in the method of operation of a major source that would result in a significant net emissions increase of any pollutant subject to regulation.

(A) Any net emissions increase that is significant for volatile organic compounds shall be considered significant for ozone.

(B) A physical change or change in the method of operation shall not include:

(i) routine maintenance, repair and replacement.

(ii) use of an alternate fuel or raw material by reason of any order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation) or by reason of a natural gas curtailment plan pursuant to the Federal Power Act.

(iii) use of an alternate fuel by reason of an order or rule under Section 125 of the Federal Clean Air Act.

(iv) use of an alternate fuel at a steam generating unit to the extent that the fuel is generated from municipal solid waste.

(v) Use of an alternate fuel or raw material by a source which:

(I) the source was capable of accommodating before January 6, 1975, unless such change would be prohibited under any enforceable permit limitation which was

established after January 6, 1975; or,

(II) the source is approved to use under any permit issued under 40 CFR 52.21 or OAC ~~252:100-7~~ 252:100-8.

(vi) An increase in the hours of operation or in the production rate, unless such change would be prohibited under any enforceable permit limitation which was established after January 6, 1975.

(vii) Any change in source ownership.

"Major stationary source" means any source which meets any of the following conditions:

(A) Any of the following sources of air pollutants which emits, or has the potential to emit, 100 tons per year or more of any pollutant subject to regulation:

(i) carbon black plants (furnace process),

(ii) charcoal production plants,

(iii) chemical process plants,

(iv) coal cleaning plants (with thermal dryers),

(v) coke oven batteries,

(vi) fossil-fuel boilers (or ~~combustion~~ combination thereof) totaling more than 250 million BTU per hour heat input,

(vii) fossil fuel-fired steam electric plants of more than 250 million BTU per hour heat input,

(viii) fuel conversion plants,

(ix) glass fiber processing plants,

(x) hydrofluoric, sulfuric or nitric acid plants,

(xi) iron and steel mill plants,

(xii) kraft pulp mills,

(xiii) lime plants,

(xiv) municipal incinerators capable of charging more than 250 tons of refuse per day,

(xv) petroleum refineries,

(xvi) petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels,

(xvii) phosphate rock processing plant,

(xviii) portland cement plants,

(xix) primary aluminum ore reduction plants,

(xx) primary copper smelters,

(xxi) primary lead smelters,

(xxii) primary zinc smelters,

(xxiii) secondary metal production plants,

(xxiv) sintering plants,

(xxv) sulfur recovery plants, or

(xxvi) taconite ore processing plants.

(B) Any other source not on the list in (A) of this definition which emits, or has the potential to emit, 250 tons per year or more of any pollutant subject to regulation.

(C) Any physical change that would occur at a source not otherwise qualifying as a major source under (A) and (B) of this definition if the change would constitute a major source by itself.

(D) A major source that is major for volatile organic compounds shall be considered major for ozone.

"Natural conditions" mean naturally occurring phenomena against which any changes in visibility are measured in terms of visual range, contrast or coloration. [NOTE: From 252:100-8-36(a)]

~~"Necessary preconstruction approvals or permits" means those permits or approvals required under all applicable air quality control laws and rules. [NOTE: Moved to 252:100-8-1.1]~~

"Net emissions increase" means:

(A) The amount by which the sum of the following exceeds zero:

(i) any increase in actual emissions from a particular physical change or change in the method of operation at a source; and,

(ii) any other increases and decreases in actual emissions at the source that are contemporaneous with the particular change and are otherwise creditable.

(B) An increase or decrease in actual emissions is contemporaneous with the increase from the particular change only if it occurs within 3 years before the date that the increase from the particular change occurs.

(C) An increase or decrease in actual emissions is creditable only if the Executive Director has not relied on it in issuing a permit under ~~OAC 252:100-7, Part 3 252:100-8, Part 7~~, which permit is in effect when the increase in actual emissions from the particular change occurs.

(D) An increase or decrease in actual emissions of sulfur dioxide, particulate matter, or nitrogen oxides which occurs before the applicable minor source baseline date is creditable only if it is required to be considered in calculating the amount of maximum allowable increases remaining available. (Effective May 11, 1991)

(E) An increase in actual emissions is creditable only to the extent that the new level of actual emissions exceeds the old level.

(F) A decrease in actual emissions is creditable only to the extent that:

(i) the old level of actual emissions or the old level of allowable emissions, whichever is lower, exceeds the new level of actual emissions;

(ii) it is enforceable at and after the time that actual construction on the particular change begins;

(iii) it has approximately the same qualitative significance for public health and welfare as that attributed to the increase from the particular change.

(G) An increase that results from a physical change at a source occurs when the emission unit on which construction occurred becomes operational and begins to emit a particular pollutant. Any replacement unit that requires shakedown becomes operational only after a reasonable shakedown period, not to exceed 180 days.

"Potential to emit" means the maximum capacity of a source to emit a pollutant under its physical and operational design. Any

physical or operational limitation on the capacity of the source to emit a pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored or processed, shall be treated as part of its design if the limitation or the effect it would have on emissions is enforceable. Secondary emissions do not count in determining the potential to emit of a source. [NOTE: Moved to 252:100-8-1.1]

"Secondary emissions" means emissions which occur as a result of the construction or operation of a major stationary source or modification, but do not come from the source or modification itself. For the purposes of OAC 252:100-7, Part 5 secondary emissions must be specific, well defined, quantifiable, and impact the same general areas as the source or modification which causes the secondary emissions. Secondary emissions may include, but are not limited to:

(A) emissions from trains coming to or from the new or modified stationary source; and,

(B) emissions from any offsite support facility which would not otherwise be constructed or increase its emissions as a result of the construction or operation of the major source or modification. [NOTE: Moved to 252:100-8-1.1]

"Significant" means:

(A) In reference to a net emissions increase or the potential of a source to emit any of the following pollutants, a rate of emissions that would equal or exceed any of the following rates:

(i) carbon monoxide: 100 tons per year (tpy),

(ii) nitrogen oxides: 40 tpy,

(iii) sulfur dioxide: 40 tpy,

(iv) particulate matter: 25 tpy of particulate matter emissions or 15 tpy of PM-10 emissions,

(v) ozone: 40 tpy of volatile organic compounds,

(vi) lead: 0.6 tpy,

(vii) asbestos: 0.007 tpy,

(viii) beryllium: 0.0004 tpy,

(ix) mercury: 0.1 tpy,

(x) vinyl chloride Chloride: 1 tpy,

(xi) fluorides: 3 tpy,

(xii) sulfuric acid mist: 7 tpy,

(xiii) hydrogen sulfide (H₂S): 10 tpy,

(xiv) total reduced sulfur (including H₂S): 10 tpy, and

(xv) reduced sulfur compounds (including H₂S): 10 tpy.

(B) Notwithstanding (A) of this definition, "significant" means any emissions rate or any net emissions increase associated with a major source or modification which would construct within 6 miles of a Class I area, and have an impact on such area equal to or greater than 1 ug/m³ (24-hour average).

"Stationary source" means any building, structure, facility or installation which emits or may emit any air pollutant subject to OAC 252:100. [NOTE: Moved to 252:100-8-1.1]

"Visibility impairment" means any humanly perceptible reduction in visibility (visual range, contrast and coloration) from that which would have existed under natural conditions.

[NOTE: From 252:100-8-36(a)]

252:100-8-32. Source applicability determination

Proposed new sources and source modifications to which this Part 5 of this Subchapter is applicable are determined by size, geographical location and type of emitted pollutants.

(1) Size.

(A) Permit review will apply to sources and modifications that emit any regulated pollutant in major amounts. These quantities are specified in the definitions for major stationary source, major modification, potential to emit, net emissions increase, significant and other associated definitions in 252:100-8-31, 252:100-8-1.1, and 252:100-1.

(B) When At such time that a particular source or modification becomes major solely by virtue of a relaxation in any enforceable permit limitation which was established after August 7, 1980, on the capacity of the source or modification otherwise to emit a pollutant, such as a restriction on hours of operation, then the requirements of OAC 252:100-7-15 through 252:100-7-18 and OAC 252:100-7, Part 7 252:100-8, Parts 1, 3, 5, and 7 shall apply to that source or modification as though construction had not yet commenced on it.

(2) Location.

(A) Sources and modifications which are major in size and proposed for construction in an area which has been designated as attainment or unclassified for any applicable ambient air standard are subject to the prevention of significant deterioration PSD requirements.

(B) Those sources and modifications locating in an attainment or unclassified area but impacting on a nonattainment area may also be subject to the requirements for major sources affecting nonattainment areas in 252:100-8, Part 9 of OAC 252:100-7, Part 7.

252:100-8-33. Review, applicability and exemptions Exemptions

(a) Exemptions from PSD requirements. PSD requirements do not apply to a particular source or modification do not apply if:

(1) It is a nonprofit health or educational institution.

(2) The source is major by virtue of fugitive emissions, to the extent quantifiable, included in calculating the potential to emit and is a source other than one of the following categories:

(A) carbon black plants (furnace process), One of the categories listed in (A)(i) through (xxvi) under the definition of "Major stationary source" in 252:100-8-31, or

(B) charcoal production plants,

(C) chemical process plants,

(D) coal cleaning plants (with thermal dryers),

- ~~(E) coke oven batteries,~~
- ~~(F) fossil fuel boilers (or combustion combination thereof) totaling more than 250 million BTU per hour heat input,~~
- ~~(G) fossil fuel fired steam electric plant of more than 250 million BTU per hour heat input,~~
- ~~(H) fuel conversion plants,~~
- ~~(I) glass fiber processing plants,~~
- ~~(J) hydrofluoric, sulfuric or nitric acid plants,~~
- ~~(K) iron and steel mills,~~
- ~~(L) kraft pulp mills,~~
- ~~(M) lime plants,~~
- ~~(N) municipal incinerators capable of charging more than 250 tons of refuse per day,~~
- ~~(O) petroleum refineries,~~
- ~~(P) petroleum storage and transfer units with a total storage exceeding 300,000 barrels,~~
- ~~(Q) phosphate rock processing plants,~~
- ~~(R) portland cement plants,~~
- ~~(S) primary aluminum ore reduction plants,~~
- ~~(T) primary copper smelters,~~
- ~~(U) primary lead smelters,~~
- ~~(V) primary zinc smelters,~~
- ~~(W) secondary metal production plants,~~
- ~~(X) sintering plants,~~
- ~~(Y) sulfur recovery plants,~~
- ~~(Z) taconite ore processing plants, or~~
- ~~(AA) A any other stationary source category which, as of August 7, 1980, is being regulated by federal New Source Performance Standards (NSPS) NSPS or National Emission Standards for Hazardous Air Pollutants (NESHAPS) NESHAP.~~

(3) The source or modification is a A portable stationary source which has previously received a permit under the PSD requirements and proposes to relocate to a temporary new location from which its emissions would not impact a Class I area or an area where an applicable increment is known to be violated.

(b) Exemption from air quality impact evaluation.

(1)(b) The requirements of OAC 252:100-7-35 252:100-8-35 are not applicable if the emissions, with respect to a particular pollutant, would be temporary and impact no Class I area and no area where an applicable increment is known to be violated.

(2)(c) The requirements of OAC 252:100-7-35 252:100-8-35 are not applicable to the emissions, with respect to a particular pollutant, to a modification of a major source that was in existence on March 1, 1978 if the net increase in allowable emissions of each regulated pollutant, after the application of best available control technology, would be less than 50 tons per year. [NOTE: 252:100-8-33(b) (2) was 252:100-8-33(c)]

(c) Exemption from monitoring requirements.

(1)(d) The monitoring requirements of OAC 252:100-7-35 252:100-8-35 are not applicable for a particular pollutant if

the emission increase of the pollutant from a new source or the net emissions increase of the pollutant from a modification would cause, in any area, air quality impacts less than the following listed amounts, or are pollutant concentrations that are not on the list.

- (A) (1) Carbon monoxide - 575 ug/m³, 8-hour average,
- (B) (2) Nitrogen dioxide - 14 ug/m³, annual average,
- (C) (3) Particulate matter - 10 ug/m³, TSP, 24-hour average, or 10 ug/m³ PM-10, 24-hour average,
- (D) (4) Sulfur dioxide - 13 ug/m³, 24-hour average,
- (E) (5) Ozone - see (N) (14) below,
- (F) (6) Lead - 0.1 ug/m³, 24-hour 3-month average,
- (G) (7) Mercury - 0.25 ug/m³, 24-hour average,
- (H) (8) Beryllium - 0.0005 0.001 ug/m³, 24-hour average,
- (I) (9) Fluorides - 0.25 ug/m³, 24-hour average,
- (J) (10) Vinyl chloride - 15 ug/m³, 24-hour average,
- (K) (11) Total reduced sulfur - 10 ug/m³, 1-hour average,
- (L) (12) Hydrogen sulfide - 0.04 0.2 ug/m³, 1-hour average, or
- (M) (13) Reduced sulfur compounds - 10 ug/m³, 1-hour average.
- (N) (14) No de minimis air quality level is provided for ozone. However, any net increase of 100 tons per year or more of volatile organic compounds subject to PSD would be required to perform an ambient impact analysis, including the gathering of ambient air quality data. [NOTE: 252:100-8-33(c) (1) was 252:100-8-33(d)]

(2) The requirements for air quality monitoring in OAC 252:100-7-35(b) through 252:100-7-35(d) 252:100-8-35(b), (c) and (d) (2) shall not apply to a particular source or modification that was subject to Federal 40 CFR 52.21 as in effect on June 19, 1978, if a permit application in accordance with OAC 252:100-7 is was submitted before June 8, 1981 and the Executive Director subsequently determines determined that the application as submitted was complete except for with respect to the requirements of OAC 252:100-7 other than those in OAC 252:100-7-35(b) through 252:100-7-35(d) 252:100-8-35(b), (c) and (d) (2) and with respect to the requirements for such analyses at 40 CFR 52.21 (m) (2) as in effect on June 19, 1978. Instead, the latter requirements in 40 CFR 52.21(m) (2) as in effect on June 19, 1978, shall apply to any such source or modification. [NOTE: was 252:100-7-33(f)]

(3) The requirements for air quality monitoring in OAC 252:100-7-35(b) through 252:100-7-35(d) 252:100-8-35(b), (c), and (d) (2) shall not apply to a particular source or modification that was not subject to 40 CFR 52.21 as in effect on June 19, 1978, if a permit application in accordance with OAC 252:100-7 is was submitted before June 8, 1981 and the Executive Director subsequently determines determined that the application as submitted was complete, except for with respect to the requirements in OAC 252:100-7-35(b) through 252:100-7-

~~35(d)~~ 252:100-8-35(b), (c) and (d)(2). [NOTE: was 252:100-7-33(g)]

(4) The Executive Director shall determine if the requirements for air quality monitoring of PM-10 in OAC ~~252:100 7 35(a)~~ 252:100-8-35(a) through 252:100 7 35(d) ~~252:100-8-35(c)~~ and 252:100-8-35(d)(2) may be waived for a particular source or modification when the owner or operator of the source or modification submits an application for a permit was submitted on or before June 1, 1988 and the Executive Director subsequently determines ~~determined~~ that the application, except with respect to for the requirements for monitoring particulate matter under OAC ~~252:100 7 35(a)~~ 252:100-8-35(a) through ~~252:100 7 35(d)~~ 252:100-8-35(c) and 252:100-8-35(d)(2), was complete before that date. [NOTE: was 252:100-7-33(i)]

(5) The requirements for air quality monitoring of PM-10 in OAC ~~252:100 7 35(b)~~ 252:100-8-35(b), (c), (d)(2) and (d)(6) through ~~252:100 7 35(d)~~ and ~~252:100 7 35(h)~~ shall apply to a particular source or modification if the owner or operator of the source or modification submits an application for a permit was submitted after June 1, 1988 and no later than December 1, 1988. The data shall have been gathered over at least the period from February 1, 1988 to the date the application becomes otherwise complete in accordance with the provisions of OAC ~~252:100 7 33(b)~~ 252:100-8-33(b)(1), except that if the Executive Director determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period (not to be less than 4 months), the data required by OAC ~~252:100 7 35(b)~~ 252:100-8-35(b)(1) and ~~252:100 7 35(e)~~ 252:100-8-35(c) shall have been gathered over that shorter period. [NOTE was 252:100-7-33(j)]

(d)(e) Exemption from BACT requirements and monitoring requirements. If a complete permit application for a source or modification was submitted before August 7, 1980 the requirements for best available control technology in OAC ~~252:100 7 34~~ 252:100-8-34 and for monitoring in OAC ~~252:100 7 35(a)~~ 252:100-8-35(a) through ~~252:100 7 35(f)~~ 252:100-8-35(c) and 252:100-8-35(d)(2) through 252:100-8-35(d)(4) are not applicable. Instead, the federal requirements at 40 CFR 52.21 (j) and (n) as in effect on June 19, 1978 are applicable to any such source or modification. [NOTE: was 252:100-8-33(e)]

(f) The requirements for air quality monitoring in OAC ~~252:100 7 35(b)~~ through ~~252:100 7 35(d)~~ shall not apply to a particular source or modification that was subject to Federal 40 CFR 52.21 as in effect on June 19, 1978 if a permit application in accordance with OAC 252:100 7 is submitted before June 8, 1981 and the Executive Director subsequently determines that the application as submitted was complete with respect to the requirements of OAC 252:100 7 other than those in OAC ~~252:100 7 35(b)~~ through ~~252:100 7 35(d)~~ and with respect to the requirements for such analyses at 40 CFR 52.21 (m) (2) as in effect on June 19, 1978. Instead, the latter requirements shall

~~apply to any such source or modification. [NOTE: Moved to 252:100-8-33(c)(2)]~~

~~(g) The requirements for air quality monitoring in OAC 252:100-7 35(b) through 252:100 7 35(d) shall not apply to a particular source or modification that was not subject to 40 CFR 52.21 as in effect on June 19, 1978 if a permit application in accordance with OAC 252:100 7 is submitted before June 8, 1981 and the Executive Director subsequently determines that the application as submitted was complete, except with respect to the requirements in OAC 252:100 7 35(b) through 252:100 7 35(d).~~

~~[NOTE: Moved to 252:100-8-33(c)(3)]~~

~~(e)(h) Exemption of modifications. As specified in the applicable definitions of OAC 252:100 7 31 252:100-8-31, 252:100-8-1.1, and 252:100-1, the requirements of OAC 252:100 7 252:100-8, Part 5 7 for PSD and 252:100 7 252:100-8, Part 7 9 for nonattainment areas are not applicable to a modification if the existing source was not major on August 7, 1980 unless the proposed addition to that existing minor source is major in its own right. [Note: was 252:100-8-33(h)]~~

~~(i) The Executive Director shall determine if the requirements for air quality monitoring of PM 10 in OAC 252:100 7 35(a) through 252:100 7 35(d) may be waived for a particular source or modification when the owner or operator of the source or modification submits an application for a permit on or before June 1, 1988 and the Executive Director subsequently determines that the application, except with respect to the requirements for monitoring particulate matter under OAC 252:100 7 35(a) through 252:100 7 35(d), was complete before that date. [NOTE: Moved to 252:100-8-33(c)(4)]~~

~~(j) The requirements for air quality monitoring of PM 10 in OAC 252:100 7 35(b) through 252:100 7 35(d) and 252:100 7 35(h) shall apply to a particular source or modification if the owner or operator of the source or modification submits an application for a permit after June 1, 1988 and no later than December 1, 1988. The data shall have been gathered over at least the period from February 1, 1988 to the date the application becomes otherwise complete in accordance with the provisions of OAC 252:100 7 33(b), except that if the Executive Director determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period (not to be less than 4 months), the data required by OAC 252:100 7 35(b) and 252:100 7 35(c) shall have been gathered over that shorter period. [NOTE: Moved to 252:100-8-33(c)(5)]~~

~~(k) For any application that becomes complete, except as to the requirements of OAC 252:100 7 35(b) through 252:100 7 35(d) pertaining to monitoring of PM 10, after December 1, 1988 and no later than August 1, 1989, the data that OAC 252:100 7 35(b) and 252:100 7 35(e) require shall have been gathered over at least the period from August 1, 1988 to the date the application becomes otherwise complete, except that if the Executive Director determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period(not to be~~

less than 4 months), the data that OAC 252:100-7-35(b) and 252:100-7-35(e) require shall have been gathered over that shorter period. (NOTE: Moved to 252:100-8-35(d)(3)(B))

(l) With respect to any requirements for air quality monitoring of PM 10 under OAC 252:100-7-33(i) and 252:100-7-33(j), the owner or operator of the source or modification shall use a monitoring method approved by the Executive Director and shall estimate the ambient concentrations of PM 10 using the data collected by such approved monitoring method in accordance with estimating procedures approved by the Executive Director. [NOTE: Moved to 252:100-8-35(d)(1)]

(f)-(m) Exemption from impact analyses. The requirements of OAC 252:100-7-35 252:100-8-35 and 252:100-7-36 252:100-8-36 do not apply to a source or modification with respect to any maximum allowable increase for nitrogen oxides if the owner or operator of the source or modification submitted a completed application for a permit before February 8, 1988. [NOTE: was 252:100-8-33(m)]

(g)-(n) Exemption from increment consumption. Excluded from increment consumption are the following cases:

(1) Concentrations from an increase in emissions from any source converting from the use of petroleum products, natural gas, or both by reason of any order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation), or by reason of a natural gas curtailment plan pursuant to the Federal Power Act. Such exclusion is limited to five years after the effective date of the order or plan.

(2) Emissions of particulate matter from construction or other temporary emission-related activities of new or modified sources.

(3) A temporary increase of sulfur dioxide, particulate matter, or nitrogen oxides by order or authorized variance from any source. [NOTE: was 252:100-8-33(n)]

252:100-8-34. Best available control ~~Control~~ technology

(a) A new source must demonstrate that the control technology to be applied is the best that is available (i.e., BACT as defined herein for each regulated pollutant that it would have the potential to emit in significant amounts).

(b) A major modification must demonstrate that the control technology to be applied is the best that is available for each regulated pollutant for which it would be a significant net emissions increase at the source. This requirement applies to each proposed emissions unit at which a net emissions increase in the pollutant would occur as a result of a physical change or change in the method of operation in the unit.

(c) The determination of best available control technology shall be made on a case by case basis taking into account costs and energy, environmental and economic impacts.

(d) For phased construction projects the determination of best available control technology shall be reviewed and modified at the discretion of the Executive Director at a reasonable time

but no later than 18 months prior to commencement of construction of each independent phase of the project. At such time the owner or operator may be required to demonstrate the adequacy of any previous determination of best available control technology.

252:100-8-35. Air quality impact evaluation

(a) Application contents. Any application for a permit shall contain, as the Executive Director determines appropriate, an evaluation of ambient air quality in the area that the source or modification would affect for each of the following pollutants:

- (1) for a new source, each regulated pollutant that it would have the potential to emit in a significant amount;
- (2) for a major modification, each regulated pollutant for which it would result in a significant net emissions increase.

(b) Continuous monitoring data. For visibility and any pollutant, other than volatile organic compounds, for which an ambient air quality standard does exist exists, the evaluation shall contain continuous air quality monitoring data gathered to determine whether emissions of that pollutant would cause or contribute to a violation of the applicable ambient air quality standard. For any such pollutant for which a standard does not exist, the monitoring data required shall be that which the Executive Director determines is necessary to assess the ambient air quality for that pollutant in that area. (Amended 7-9-87, effective 8-10-87)

(c) Increment consumption. The evaluation shall demonstrate that, as of the source's start-up date, the increase in emissions from that source, in conjunction with all other applicable emissions increases or reductions of that source, will not cause or contribute to any increase in ambient concentrations exceeding the remaining available PSD increment for the specified air contaminants as determined by the Executive Director.

(d) Monitoring.

(1) Monitoring method. With respect to any requirements for air quality monitoring of PM-10 under ~~OAC 252:100-7-33(i)~~ 252:100-8-33(c)(4) and ~~252:100-7-33(j)~~ 252:100-8-33(c)(5), the owner or operator of the source or modification shall use a monitoring method approved by the Executive Director and shall estimate the ambient concentrations of PM-10 using the data collected by such approved monitoring method in accordance with estimating procedures approved by the Executive Director. [NOTE: was 252:100-7-33(1)]

(2)~~(d)~~ Monitoring period. The required monitoring data shall have been gathered for a time period of up to one year and shall represent the year preceding submission of the application. Ambient monitoring data collected for a time period shorter than one year (but no less than four months) or for a time period other than immediately preceding the application may be acceptable if such data are determined by the Executive Director to be within the time period that maximum pollutant concentrations would occur, and to be complete and adequate for determining whether the source or

modification will cause or contribute to a violation of any applicable ambient air quality standard or consume more than the remaining available PSD increment. [NOTE: 252:100-8-35(d) (2) was 252:100-8-35(d)]

(3) ~~(e)~~ Monitoring period exceptions.

(A) For any application which becomes complete except as to the monitoring requirements of ~~OAC 252:100-7-35(b)~~ 252:100-8-35(b) through ~~252:100-7-35(d)~~ 252:100-8-35(c) and 252:100-8-35(d) (2), between June 8, 1981 and February 9, 1982, the data that ~~OAC 252:100-7-35(b)~~ 252:100-8-35(b) and ~~252:100-7-35(e)~~ 252:100-8-35(c) require shall have been gathered over the period from February 9, 1981 to the date the application becomes otherwise complete, except that:

(i) ~~(1)~~ If the source or modification would have been major for that pollutant under Federal 40 CFR 52.21 as in effect on June 19, 1978, any monitoring data shall have been gathered over the period required by those regulations.

(ii) ~~(2)~~ If the Executive Director determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period, not to be less than four months, the data that ~~OAC 252:100-7-35(b)~~ 252:100-8-35(b) and ~~252:100-7-35(e)~~ 252:100-8-35(c) require shall have been gathered over that shorter period.

(iii) ~~(3)~~ If the monitoring data would relate exclusively to ozone and would not have been required under Federal 40 CFR 52.21 as in effect on June 19, 1978, the Executive Director may waive the otherwise applicable requirements of ~~OAC 252:100-7-35(e)~~ 252:100-8-35(d) (3) (A) to the extent that the applicant shows that the monitoring data would be unrepresentative of air quality over a full year. [NOTE: 252:100-8-35(d) (3) (A) was 252:100-8-35(e)]

(B) For any application that becomes complete, except as to the requirements of ~~OAC 252:100-7-35(b)~~ 252:100-8-35(b), (c) and (d) (2) through ~~252:100-7-35(d)~~ pertaining to monitoring of PM-10, after December 1, 1988 and no later than August 1, 1989, the data that ~~OAC 252:100-7-35(b)~~ 252:100-8-35(b) and (c) ~~252:100-7-35(e)~~ require shall have been gathered over at least the period from August 1, 1988 to the date the application becomes otherwise complete, except that if the Executive Director determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period (not to be less than 4 months), the data that ~~OAC 252:100-7-35(b)~~ 252:100-8-35(b) and ~~252:100-7-35(e)~~ 252:100-8-35(c) require shall have been gathered over that shorter period. [NOTE: was 252:100-7-33(k)]

(4) ~~(f)~~ Ozone post-approval monitoring. The application for a source or modification of volatile organic compounds which satisfies all conditions of ~~OAC 252:100-7-54~~ 252:100-8-54 may provide post-approval monitoring data for ozone in lieu of

providing preconstruction data as required under OAC 252:100-7-35 252:100-8-35. [NOTE: was 252:100-8-35(f)]

(5)(g) Post-construction monitoring. The applicant for a permit for a new source or modification shall conduct, after construction, such ambient monitoring and visibility monitoring as the Executive Director determines necessary to determine the effect its emissions may have, or are having, on air quality in any area. (Amended 7-9-87, effective 8-10-87) [NOTE: was 252:100-8-35(g)]

(6)(h) Monitoring system operation. The operation of monitoring stations for any air quality monitoring required under Part 5 7 of this Subchapter shall meet the requirements of 40 CFR 58 Appendix B. [NOTE: was 252:100-8-35(h)]

(e)(i) Air quality models.

(1) Any air quality dispersion modeling that is required under Part 5 7 of this Subchapter for estimates of ambient concentrations shall be based on the applicable air quality models, data bases and other requirements specified in the Guidelines on Air Quality Models, OAOPS 1.2-080, U.S. Environmental Protection Agency, April, 1978 and subsequent revisions.

(2) Where an air quality impact model specified in the Guidelines on Air Quality Models is inappropriate, the model may be modified or another model substituted, as approved by the Executive Director. Methods like those outlined in the Workbook for the Comparison of Air Quality Models, U.S. Environmental Protection Agency, April, 1977 and subsequent revisions, can be used to determine the comparability of air quality models. [NOTE: 252:100-8-35(e) was 252:100-8-35(i)]

(f)(j) Growth analysis. Upon request of the Executive Director the permit application shall provide information on the nature and extent of any or all general commercial, residential, industrial and other growth which has occurred since August 7, 1977 in the area the source or modification would affect. The permit application shall also contain an analysis of the air quality impact projected for the area as a result of general commercial, residential and other growth associated with the source or modification. [NOTE: was 252:100-8-35(j)]

(g)(k) Visibility and other impacts analysis. The permit application shall provide an analysis of the impairment to visibility, soils and vegetation as a result of the source or modification. The Executive Director may require monitoring of visibility in any Federal Class I area near the proposed new stationary source or major modification for such purposes and by such means as the Executive Director deems necessary and appropriate. (Amended 7-9-87, effective 8-10-87) [NOTE: was 252:100-8-35(k)]

252:100-8-36. Source impacting Class I areas

(a) Definitions. The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

~~(1) "Adverse impact on visibility" means visibility impairment which interferes with the management, protection, preservation or enjoyment of the visitor's visual experience of the Federal Class I area. This determination must be made by the Air Quality Division on a case by case basis taking into account the geographic extent, intensity, duration, frequency and time of visibility impairments, and how these factors correlate with:~~

~~(A) times of visitor use of the Federal Class I area; and
(B) the frequency and timing of natural conditions that reduce visibility. [NOTE: Moved to 252:100-8-31]~~

~~(2) "Federal land manager" means the Secretary of the department with authority over the Federal Class I area or his representative. [NOTE: Moved to 252:100-8-31]~~

~~(3) "Installation" means an identifiable piece of process equipment. (Amended 7-9-87, effective 8-10-87) [NOTE: in SC-1]~~

~~(4) "Natural conditions" mean naturally occurring phenomena against which any changes in visibility are measured in terms of visual range, contrast or coloration. [NOTE: Moved to 252:100-8-31]~~

~~(5) "Visibility impairment" means any humanly perceptible reduction in visibility (visual range, contrast and coloration) from that which would have existed under natural conditions. [NOTE: Moved to 252:100-8-31]~~

~~(a)-(b) Permits issuance. Permits may be issued at variance to the limitations imposed on a Class I area in compliance with the procedures and limitations established in State and Federal Clean Air Acts. [NOTE: was 252:100-8-36(b)]~~

~~(b)-(e) Impact analysis required. The permit application for a proposed new source or modification will contain an analysis on the impairment of visibility and an assessment of any anticipated adverse impacts on soils and vegetation in the vicinity of the source resulting from construction of the source. The Executive Director shall notify the appropriate Federal Land Manager of the receipt of any such analysis and include a complete copy of the permit application. Any analysis performed by the Land Manager shall be considered by the Executive Director provided that the analysis is filed with the DEQ Air Quality Division within 30 days of receipt of the application by the Land Manager. Where the Executive Director finds that such an analysis does not demonstrate to the satisfaction of the Executive Director that an adverse impact on visibility will result in the Federal Class I area, the Executive Director will, in any notice of public hearing on the permit application, either explain his decision or give notice as to where the explanation can be obtained. Further, upon presentation of good and sufficient information, by a Federal federal Land land Manager manager, the Executive Director may deny the issuance of a permit for a source, emissions from which will adversely impact areas heretofore or hereafter categorized as Class I areas even though the emissions would not cause the increment for such Class I areas to be~~

exceeded. [NOTE: was 252:100-8-36(c)]

252:100-8-37. Innovative control technology

(a) An applicant for a permit for a proposed major source or modification may request the Executive Director in writing to approve a system of innovative control technology.

(b) The Executive Director may determine that the innovative control technology is permissible if:

(1) The proposed control system would not cause or contribute to an unreasonable risk to public health, welfare or safety in its operation or function.

(2) The applicant agrees to achieve a level of continuous emissions reductions equivalent to that which would have been required for best available control technology under OAC ~~252:100-7-34~~ 252:100-8-34 by a date specified by the Executive Director. Such date shall not be later than 4 years from the time of start-up or 7 years from permit issuance.

(3) The source or modification would meet the requirements equivalent to those in OAC ~~252:100-7-15 through 252:100-7-18~~ Parts 1 and 5 of this Subchapter and ~~252:100-7-36~~ 252:100-8-36 based on the emissions rate that the source employing the system of innovative control technology would be required to meet on the date specified by the Executive Director.

(4) The source or modification would not, before the date specified, cause or contribute to any violation of the applicable ambient air standards, or impact any Class I area or area where an applicable increment is known to be violated.

(5) All other applicable requirements including those for public review have been met.

(c) The Executive Director shall withdraw approval to employ a system of innovative control technology made under OAC ~~252:100-7-37~~ 252:100-8-37, if:

(1) The proposed system fails by the specified date to achieve the required continuous reduction rate; or,

(2) The proposed system fails before the specified date so as to contribute to an unreasonable risk to public health, welfare or safety; or,

(3) The Executive Director decides at any time that the proposed system is unlikely to achieve the required level of control or to protect the public health, welfare or safety.

(d) If a source or modification fails to meet the required level of continuous emissions reduction within the specified time period, or if the approval is withdrawn in accordance with OAC ~~252:100-7-37(e)~~ 252:100-8-37(c), the source or modification may be allowed up to an additional 3 years to meet the requirement for application of best available control technology through the use of a demonstrated system of control.

PART 9. MAJOR SOURCES AFFECTING NONATTAINMENT AREAS

252:100-8-50. Applicability

The new source requirements of this Section Part, in addition to the applicable requirements of OAC 252:100-7-15 through 252:100-7-18 and OAC 252:100-8 Parts 1, 3, and 5 of this Subchapter, shall apply to the construction of all major sources and major modifications affecting designated nonattainment areas as specified in OAC 252:100-7-51 252:100-8-51 through 252:100-7-53 252:100-8-53., and are effective upon adoption of this Subchapter by Oklahoma. Except that the requirements of Part 7 of this Subchapter will not be necessary for sources required to meet the permit requirements of the United States Environmental Protection Agency under Title 40 Part 52.24 of the Code of Federal Regulations. Sources subject to this Part which are Part 70 sources are also subject to the provisions of OAC 252:100-8.

252:100-8-51. Definitions

The following words and terms, when used in this Part, shall have the following meaning, unless the context clearly indicates otherwise:

"Actual emissions" means the actual rate of emissions of a pollutant from an emissions unit, as determined in accordance with the following:

(A) In general, actual emissions as of a particular date shall equal the average rate in tons per year at which the unit actually emitted the pollutant during a two-year period which precedes the operation. The reviewing authority may allow the use of a different time period upon a determination that it is more representative of normal source operation. Actual emissions shall be calculated using the unit's actual operating hours, production rates, and types of materials processed, stored, or combusted during the selected time period. Actual emissions may also be determined by source tests, or by best engineering judgment in the absence of acceptable test data.

(B) The reviewing authority may presume that source-specific allowable emissions for the unit are equivalent to the actual emissions of the unit.

(C) For any emissions unit which has not begun normal operations on the particular date, actual emissions shall equal the potential to emit of the unit on that date.

"Allowable emissions" means the emission rate of a stationary source calculated using the maximum rated capacity of the source (unless the source is subject to enforceable limits which restrict the operating rate, or hours of operation, or both) and the most stringent of the following:

(A) the applicable standards as set forth in 40 CFR Parts 60 and 61;

(B) the applicable State rule allowable emissions; or,

(C) the emissions rate specified as an enforceable permit condition. [NOTE: Moved to 252:100-8-1.1]

"Begin actual construction" means, in general, initiation of physical on site construction activities on an emissions unit

which are of a permanent nature. Such activities include, but are not limited to, installation of building supports and foundations, laying of underground pipework, and construction of permanent storage structures. With respect to a change in method of operation, this term refers to those on site activities, other than preparatory activities, which mark the initiation of the change. [NOTE: Moved to 252:100-8-1.1]

"Building, structure, facility" means all of the pollutant-emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person (or persons under common control). Pollutant-emitting activities shall be considered as part of the same industrial grouping if they belong to the same "Major Group" (i.e., which have the same two digit code) as described in the Standard Industrial Classification Manual, 1972, as amended by the 1977 Supplement.

"Commence" means, as applied to construction of a major stationary source or major modification, that the owner or operator has all necessary preconstruction approvals or permits and either has:

(A) begun, or caused to begin, a continuous program of actual on site construction of the source, to be completed within a reasonable time; or,

(B) entered into binding agreements or contractual obligations, which cannot be cancelled or modified without substantial loss to the owner or operator, to undertake a program of actual construction of the source to be completed within a reasonable time. [NOTE: Moved to 252:100-8-1.1]

"Construction" means any physical change or change in the method of operation (including fabrication, erection, installation, demolition, or modification of an emissions unit) which would result in a change in actual emissions. [NOTE: Moved to 252:100-8-1.1]

"Emissions unit" means any part of a source which emits or would have the potential to emit any pollutant subject to regulation. [NOTE: Moved to 252:100-8-1.1]

"Fugitive emissions" means those emissions which could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening. [NOTE: Moved to 252:100-8-1.1]

"Installation" means an identifiable piece of process equipment.

"Lowest achievable emissions rate" means the control technology to be applied to a major source or modification which the Executive Director, on a case by case basis, determines is achievable for a source based on the lowest achievable emission rate achieved in practice by such category of source (i.e., lowest achievable emission rate as defined in the Federal Clean Air Act).

"Major modification" means any physical change in, or change in the method of operation of, a major source that would result in a significant net emissions increase of any pollutant subject to regulation.

(A) Any net emissions increase that is significant for volatile organic compounds shall be considered significant for ozone.

(B) A physical change or change in the method of operation shall not include:

(i) routine maintenance, repair and replacement;

(ii) use of an alternate fuel or raw material by reason of any order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation) or by reason of a natural gas curtailment plan pursuant to the Federal Power Act;

(iii) use of an alternate fuel by reason of an order or rule under Section 125 of the Federal Clean Air Act;

(iv) use of an alternate fuel at a steam generating unit to the extent that the fuel is generated from municipal solid waste;

(v) Use of an alternate fuel or raw material by a source which:

(I) the source was capable of accommodating before December 21, 1976, unless such change would be prohibited under any enforceable permit limitation which was established after December 21, 1976; or,

(II) the source is approved to use under any permit issued under 40 CFR 52.21 or OAC 252:100-7 or 8.

(vi) An increase in the hours of operation or in the production rate unless such change would be prohibited under any enforceable permit limitation which was established after December 21, 1976, or

(vii) any change in source ownership.

"Major stationary source" means:

(A) any stationary source of air pollutants which emits, or has the potential to emit, 100 tons per year or more of any pollutant subject to regulation; or,

(B) any physical change that would occur at a source not qualifying under (A) of this definition as a major source, if the change would constitute a major source by itself.

(C) for ozone, a source, that is major for volatile organic compounds shall be considered major.

~~**"Necessary preconstruction approvals or permits" means those permits or approvals required under all air quality control laws and rules. [NOTE: Moved to 252:100-8-1.1]**~~

"Net emissions increase" means:

(A) The amount by which the sum of the following exceeds zero:

(i) any increase in actual emissions from a particular physical change or change in the method of operation at a source; and,

(ii) any other increases and decreases in actual emission at the source that are contemporaneous with the particular change and are otherwise creditable.

(B) An increase or decrease in actual emissions is contemporaneous with the increase from the particular change

only if it occurs within 3 years before the date that the increase from the particular change occurs.

(C) An increase or decrease in actual emissions is creditable only if the Executive Director has not relied on it in issuing a permit under OAC 252:100-7 252:100-8, Part 7 9, which permit is in effect when the increase in actual emissions from the particular change occurs.

(D) An increase in actual emissions is creditable only to the extent that the new level of actual emissions exceeds the old level.

(E) A decrease in actual emissions is creditable only to the extent that:

(i) the old level of actual emissions or the old level of allowable emissions, whichever is lower, exceeds the new level of actual emissions;

(ii) it is enforceable at and after the time that actual construction on the particular change begins;

(iii) the reviewing authority has not relied on it in issuing any permit under State air quality rules; and,

(iv) it has approximately the same qualitative significance for public health and welfare as that attributed to the increase from the particular change.

(F) An increase that results from a physical change at a source occurs when the emission unit on which construction occurred becomes operational and begins to emit a particular pollutant. Any replacement unit that requires shakedown becomes operational after a reasonable shakedown period, not to exceed 180 days.

"Potential to emit" means the maximum capacity of a source to emit a pollutant under its physical and operational design. Any physical or operational limitation on the capacity of the source to emit a pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored or processed, shall be treated as part of its design if the limitation or the effect it would have on emissions is enforceable. Secondary emissions do not count in determining the potential to emit of a source. [NOTE: Moved to 252:100-8-1.1]

"Reconstruction" means the replacement of components of an existing source (which will then be treated as a new source for purposes of Part 7 9 of this Subchapter) to the extent that will be determined by the Executive Director based on:

(A) The fixed capital cost (the capital needed to provide all the depreciable components) of the new components exceeds 50% of the fixed capital cost of a comparable entirely new source; and,

(B) The estimated life of the source after the replacements is comparable to the life of an entirely new source; and,

(C) the extent to which the components being replaced cause or contribute to the emissions from the source.

"Resource recovery facility" means any facility at which solid waste is processed for the purpose of extracting, converting to

energy, or otherwise separating and preparing solid waste for reuse. Energy conversion facilities must utilize solid waste to provide more than 50 percent of the heat input to be considered a resource recovery facility under Part 7 9 of this Subchapter.

"Secondary emissions" means emissions which occur as a result of the construction or operation of a major stationary source or modification, but do not come from the source or modification itself. For the purpose of OAC 252:100 7, Part 7, secondary emissions must be specific, well defined, quantifiable, and impact the same general areas as the source or modification which causes the secondary emissions. Secondary emissions may include, but are not limited to:

(A) emissions from trains coming to or from the new or modified stationary source; and,

(B) emissions from any offsite support facility which would not otherwise be constructed or increase its emissions as a result of the construction or operation of the major source or modification. [NOTE: Moved to 252:100-8-1.1]

"Significant" means, in reference to a net emissions increase or the potential of a source to emit any of the following pollutants, a rate of emissions that would equal or exceed any of the following rates:

(A) Carbon monoxide: 100 tons per year (tpy),

(B) Nitrogen oxides: 40 tpy,

(C) Sulfur dioxide: 40 tpy,

(D) Particulate matter: 15 tpy of PM-10 emissions,

(E) Ozone: 40 tpy of volatile organic compounds, or

(F) Lead: 0.6 tpy.

"Stationary source" means any building, structure, facility or installation which emits or may emit any air pollutant subject to regulation. [NOTE: Moved to 252:100-8-1.1]

252:100-8-52. Source applicability determination

Proposed new sources and source modifications to which Part 7 11 of this Subchapter are applicable are determined by size, geographical location and type of emitted pollutants:

(1) Size.

(A) Permit review will apply to sources and modifications that emit any regulated pollutant in major amounts. These quantities are specified in the definitions for major stationary source, major modification, potential to emit, net emissions increase, significant, and other associated definitions in 252:100-8-51, 252:100-8-1.1, and 252:100-1.

(B) At such time that a particular source or modification becomes major solely by virtue of a relaxation in any enforceable permit limitation which was established after August 7, 1980 on the capacity of the source or modification otherwise to emit a pollutant, such as a restriction on hours of operation, then the requirements of OAC 252:100 7-15 through 252:100 7 18 and Part 7 Parts 1, 3, 5, and 9 of this Subchapter shall apply to that source or modification as though construction had not yet commenced on it.

(2) Location.

(A) Sources and modifications which that are major in size and proposed for construction in an area which has been designated as nonattainment for any applicable ambient air standard are subject to the requirements for the nonattainment area, if the source or modification is major for the nonattainment pollutant(s) of that area.

(B) In addition, the requirements of a PSD review (Part 5 7 of this Subchapter) would be applicable if any other regulated pollutant other than the nonattainment pollutant is emitted in significant amounts by that source or modification.

(3) Location in attainment or unclassifiable area but causing or contributing to NAAQS violation.

(A) A proposed major source or major modification that would locate in an area designated attainment or unclassifiable is considered to cause or contribute to a violation of the national ambient air quality standards when such source or modification would, as a minimum, exceed the following significance levels at any locality that does not or would not meet the applicable national standard:

<u>Pollutant</u>	<u>Concentration, ug/m³</u>				
	<u>Averaging Time (hours)</u>	<u>24</u>	<u>8</u>	<u>3</u>	<u>1</u>
<u>SO₂</u>	<u>1.0</u>	<u>5</u>		<u>25</u>	
<u>PM-10</u>	<u>1.0</u>	<u>5</u>			
<u>NO₂</u>	<u>1.0</u>				
<u>CO</u>			<u>500</u>		<u>2000</u>

(B) Sources of volatile organic compounds located outside a designated ozone nonattainment area will be presumed to have no significant impact on the designated nonattainment area. If ambient monitoring indicates that the area of source location is in fact nonattainment, then the source may be granted its permit since the area has not yet been designated nonattainment.

(C) Sources locating in an attainment area but impacting on a nonattainment area above the significant levels listed in ~~OAC 252:100-7-52(3)~~ 252:100-8-52(3) are exempted from the condition of ~~OAC 252:100-7-54(4)(A)~~ 252:100-8-54(4)(A).

(D) The determination whether a source or modification will cause or contribute to a violation of an applicable ambient air standard for sulfur dioxide, particulate matter or carbon monoxide will be made on a case by case basis as of the proposed new source's start-up date by an atmospheric simulation model. For sources of nitrogen oxides the model can be used for an initial determination assuming all the nitric oxide emitted is oxidized to nitrogen dioxide by the time the plume reaches ground level, and the initial concentration estimates will be adjusted if adequate data

are available to account for the expected oxidation rate.

(E) The determination as to whether a source would cause or contribute to a violation of applicable ambient air standards will be made on a case by case basis as of the new source's start-up date. Therefore, if a designated nonattainment area is projected to be attainment as part of the state implementation plan control strategy by the new source start-up date, offsets would not be required if the new source would not cause a new violation.

(F) Sources causing a new violation of applicable ambient air standards as determined by the Executive Director but not contributing to an existing violation, will be approved if both of the following conditions are met:

(i) The new source is required to meet a more stringent emission limitations and/or the control of existing sources below allowable levels so that the new violation of ambient standards does not occur.

(ii) The new emission limitations for the new source, as well as for any existing sources affected, are enforceable under the Oklahoma and Federal Clean Air Acts.

252:100-8-53. Exemptions

(a) Nonattainment area requirements do not apply to a particular source or modification locating in or impacting on a nonattainment area if:

(1) The source is major by virtue of fugitive emissions, to the extent quantifiable, included in calculating the potential to emit and is a source other than one of the following categories:

(A) carbon black plants (furnace process),

(B) charcoal production plants,

(C) chemical process plants,

(D) coal cleaning plants (with thermal dryers),

(E) coke oven batteries,

(F) fossil-fuel boilers (or ~~combustion~~ combination thereof) totaling more than 250 million BTU per hour heat input,

(G) fossil fuel-fired steam electric plant of more than 250 million BTU per hour heat input,

(H) fuel conversion plants,

(I) glass fiber processing plants,

(J) hydrofluoric, sulfuric or nitric acid plants,

(K) iron and steel mills,

(L) kraft pulp mills,

(M) lime plants,

(N) municipal incinerators capable of charging more than 250 tons of refuse per day,

(O) petroleum refineries,

(P) petroleum storage and transfer units with a total storage exceeding 300,000 barrels,

(Q) phosphate rock processing plants,

(R) portland cement plants,

- (S) primary aluminum ore reduction plants,
- (T) primary copper smelters,
- (U) primary lead smelters,
- (V) primary zinc smelters,
- (W) secondary metal production plants,
- (X) sintering plants,
- (Y) sulfur recovery plants,
- (Z) taconite ore processing plants, or
- (AA) any other stationary source category which, as of August 7, 1980, is being regulated by federal New Source Performance Standards (NSPS) NSPS or National Emission Standards for Hazardous Air Pollutants (NESHAPS) NESHAP.

(2) A source or modification was not subject to 40 CFR Part 51, Appendix S (emission offset interpretative ruling) as in effect on January 16, 1979 and the source:

- (A) Obtained all final federal and state construction permits before August 7, 1980;
- (B) Commenced construction within 18 months from August 7, 1980 or any earlier time required by the State Implementation Plan; and,
- (C) Did not discontinue construction for a period of 18 months or more and completed construction within a reasonable time.

(b) Secondary emissions are excluded in determining the potential to emit (see definition of "potential to emit" in OAC ~~252:100-7-51~~ 252:100-8-1.1). However, upon determination of the Executive Director, if a source is subject to the requirements on the basis of its direct emissions, the applicable requirements must also be met for secondary emissions but the source would be exempt from the conditions of OAC ~~252:100-7-52(3)(F)~~ 252:100-8-52(3)(F) and OAC ~~252:100-7-54(1)~~ 252:100-8-54(1) through ~~252:100-7-54(3)~~ 252:100-8-54(3). Also, the indirect impacts of mobile sources are excluded.

(c) As specified in the applicable definitions, the requirements of Part 5 7 for PSD and Part 7 9 for nonattainment areas of this Subchapter are not applicable to a modification if the existing source was not major on August 7, 1980 unless the proposed addition to the existing minor source is major in its own right.

252:100-8-54. Requirements for sources located in nonattainment areas

In the event a major source or modification would be constructed in an area designated as nonattainment for a pollutant for which the source or modification is major, approval shall be granted only if the following conditions are met:

- (1) The new source must demonstrate that it has applied control technology which the Executive Director, on a case by case basis, determines is achievable for a source based on the lowest achievable emission rate (LAER) achieved in practice by such category of source (i.e., lowest achievable emission rate as defined in the Federal Clean Air Act).
- (2) If the Executive Director determines that imposition of

an enforceable numerical emission standard is infeasible, due to technological or economic limitations on measurement methodology, a design, equipment, work practice or operational standard, or combination thereof, may be prescribed as the emission limitation rate.

(3) The owner or operator of the new source must demonstrate that all other major sources owned or operated by such person in Oklahoma are in compliance, or are meeting all steps on a schedule for compliance, with all applicable limitations and standards under Oklahoma and Federal Clean Air Acts.

(4) The owner or operator of the new source must demonstrate that upon commencing operations:

(A) The emissions from the proposed source and all other sources permitted in the area do not exceed the planned growth allowable for the area designated in the State Implementation Plan; or;

(B) The total allowable emissions from existing sources in the region and the emissions from the proposed source will be sufficiently less than the total emissions from existing sources allowed under the State Implementation Plan at the date of construction permit application so as to represent further progress toward attainment or maintenance of the ambient air quality standards in the problem area.

(5) The owner or operator may present with the application an analysis of alternate sites, sizes and production processes for such proposed source.

APPENDIX J. TRIVIAL ACTIVITIES LIST

Any activity to which a State of federal applicable requirement applies is not trivial even if it is included on this list.

AGRICULTURAL

Lawn care (noncommercial)
Weed control (noncommercial)
Pest control (noncommercial)
Herbicide and pesticide activities except for manufacturing and formulation for commercial sale

ANALYSIS/TESTING

Hydraulic or hydrostatic testing
Analysis/laboratory activities emissions from the following: air contaminant detectors, air contaminant recorders, combustion controllers, combustion shut-off devices, product analyzers, laboratory analyzers, continuous emissions monitors, other analyzers (eg., water quality), and emissions associated with sampling activities. Also, emissions from bench scale laboratory equipment and laboratory equipment used exclusively for chemical and physical analysis, including assorted vacuum producing devices and vents but NOT lab fume hoods or vents
Site assessment work, including but not limited to, the evaluation of waste disposal or remediation sites
Emissions from instrument systems utilizing air or natural gas
Environmental field sampling operations
Sampling connections used exclusively to withdraw materials for testing and analysis, including air contaminant detectors and vent lines
Compressed gas cylinders and gases utilized for equipment calibration and testing

ANIMALS

Equipment used to mix and package soaps, vegetable oil, grease, animal fat, and nonvolatile aqueous salt solutions, provided appropriate lids and covers are utilized
Equipment used exclusively to slaughter animals, but not including other equipment at slaughterhouses, such as rendering cookers, boilers, heating plants, incinerators, and electrical power generating

BATTERY CHARGING

Industrial battery recharging and maintenance operations for batteries utilized within the facility only

BLOWDOWNS

Emissions from the ~~blowdown~~ depressurization during startup, shut down, maintenance or emergencies of compressors or other vessels containing natural gas or liquid hydrocarbons for the purpose of maintenance due to emergency circumstances

CLEANING

Acid washing (maintenance cleaning)
Caustic washing (maintenance cleaning)
Abrasive blasting
Steam cleaning
Carbon dioxide blasting equipment in degreasing or depainting
High pressure water depainting operations and aqueous industrial spray washers
Vacuum cleaning systems used exclusively for industrial, commercial, or residential housekeeping purposes, except those systems used to collect particulate matter subject to 252:100 and hazardous and/or toxic air contaminants
Ultrasonic cleaning operations which do not utilize volatile organic compounds
Molten salt bath descaling operations
Natural gas water heating systems for fixed vehicle wash racks

COOLING TOWERS/BOILER WATER

Emissions from non-contact cooling towers (cooling water that has not been in contact with other materials or fluids containing regulated air pollutants)
Boiler water treatment operations
Deaerator units associated with boilers or hot water heating systems
Process water filtration systems and demineralizers
Demineralized water tanks and demineralizer vents

ELECTRIC POWER

Equipment associated with electrical power transmission which do not involve fuel-burning activities using transformers and substations
Electric or steam-heated drying ovens and autoclaves, but not the emissions from the articles or substances being processed in the ovens or autoclaves or the boilers delivering the steam

FIREFIGHTING

Emissions from fire or emergency response equipment and training to include use of fire control equipment including equipment for testing and training, engines used exclusively for firefighting, and open burning of materials or fuels associated with firefighting training. Buildings burned for firefighting training must still adhere to NESHAP for Asbestos.
Fire extinguishers and fire extinguishing systems

FUGITIVE EMISSIONS

Seal replacement (i.e., manhole gaskets)
Roof coating, service, and repair
Paving of roads, parking lots, and other areas
Vent emissions from gas streams used as buffer or seal gas in rotating pump and compressor seals
Emissions from natural gas odorizing activities
Emissions from pneumatic starters on reciprocating engines.

turbines, compressors, or other equipment

Gas flares or flares used solely to indicate danger to the public (e.g. road hazard)

Warehouse activities including the storage of packaged raw materials and finished goods

Non-routine clean out of tanks, lift stations, and equipment for the purposes of worker entry or in preparation for maintenance or decommissions

Unpaved roadways and parking areas

Gravel, sand and dirt storage for use in on-site construction projects

VOC fugitive emissions from component additions (e.g. valves, flanges, connectors, pump seals, compressor seals, etc.) regulated by a fugitive monitoring program where the total increase is less than one ton per year of any criteria pollutant or the de minimis set forth in 252:100-41-43. The component additions must be identified in the next scheduled monitoring report required by the applicable requirements. VOC fugitive emissions from component additions (e.g. valves, flanges, connectors, pump seals, compressor seals, etc.) not regulated by a fugitive monitoring program provided that no applicable requirement is triggered when components are added.

Fugitive emissions of jet fuels associated with aircraft fuel cell and fuel bladder repair

Fugitive emissions related to movement of passenger vehicles provided the emissions are not counted for applicability purposes or any required fugitive dust control plan or its equivalent is submitted

INSULATION

Insulation installing or removal (non-asbestos)

Application of refractory & insulation (calcium silicate, etc.)

LUBRICATING

Lubricating pumps, sumps, and systems

Emissions from engine crankcase vents and equipment lubricating sumps

MAINTENANCE

Welding, brazing, soldering for maintenance purposes

Use of adhesives for maintenance purposes

Grinding, cutting, sanding for maintenance purposes

Emissions from pipeline maintenance pigging activities

Maintenance, upkeep, and replacement types of activities, including those not altering the capacity of process, combustion or control equipment, and which do not increase regulated pollutant emissions unless subject to NESHAP or NSPS

METALS

Equipment used for inspection of metal products

Die casting machines

Foundry sand mold forming equipment to which no heat is applied, and from which no organics are emitted

Equipment used exclusively to mill or grind coatings and holding compounds where all materials charged are in paste form (unless HAP emission)

Equipment used exclusively for rolling, forging, pressing, spinning, drawing, or extruding either hot or cold metals unless their emissions exceed any applicable regulated amount

Carbon monoxide lasers, used only on metals and other materials which do not emit HAP in the process

MISCELLANEOUS

Operations previously determined to be de minimis pursuant to 252:100-7-2(b)(3) or 252:100-41-43(a)(5)

Laser trimmers using dust collection to prevent fugitive emissions

Shock chambers

Humidity chambers

Solar simulators

MOBILE SOURCES

Mobile source emissions from cars, trucks, forklifts, courier vehicles, front loaders, graders, cranes, carts, hydrostatic and hydraulic testing equipment, maintenance trucks, helicopters, locomotives, marine vessels, portable generators moveable by hand, portable pumps, portable air compressors, portable welding machines, and portable fuel tanks

Other on and off road mobile sources (i.e. coal stacker & reclaimer)

Well servicing/workover rigs and associated equipment

Well drilling rigs and associated equipment

Aircraft ground support (AGE) equipment, including but not limited to portable power generators, lights, and HVAC support

Vehicle exhaust from maintenance or repair shops

Road sanding and salting operations

OFFICE AND JANITORIAL

Janitorial services

Sweeping (Floor Sweep)

Office emissions (photocopying, blueprint copying, photograph processes)

OUTDOOR RECREATION

Outdoor recreational emissions (campfires, barbecue pits)

Open burning for the purpose of land management (must get permission from Air Quality Enforcement even though exempt from permitting)

Outdoor kerosene heaters

PLASTICS/FIBERGLASS

Plastic or fiberglass welding or repair

Sealing or cutting plastic film or foam with heat or wires

Processes used for the curing of fiberglass or paint products

REFRIGERANTS

Cold storage refrigerator equipment
De minimis refrigerant releases

RESIDENTIAL

Air conditioning or comfort ventilation systems not regulated under Title VI of the Clean Air Act

Emissions from residential housing units, dormitories, and multifamily dwellings to include fuel burning for the purposes of heating except prohibited open burning

SOLID WASTE

Solid waste landfill operations
RCRA Solid Waste Management Units subject to 40 CFR Part 265, Subparts AA, BB, and CC

SOLVENT

Emissions from laundry care equipment processing bedding, clothing or other fabric items. These include dryers, extractors, & tumblers. NOT CLEANING OPERATIONS USING PERCHLOROETHYLENE OR PETROLEUM SOLVENTS (i.e., dry cleaning)

Covered cold solvent degreasers not subject to federal emission standards (e.g. NESHAP or NSPS)

STORAGE TANKS/DISTRIBUTION

Emissions from lube oil, seal oil, or hydraulic fluid storage tanks and equipment as long as not emitting VOCs or HAPs

Storage and use of chemicals unless otherwise regulated by an applicable state or federal regulation. These chemicals include, but not limited to: alum, ammonia, biocides, corrosion inhibitors, dechlorination chemicals, inorganic salts, acids or bases to include caustic and sulfuric acid, coagulants, flocculants, precipitants, surfactants, anti-foam chemicals, sealing inhibitors, oxygen scavengers, phosphates, polyelectrolytes, limestone slurry, lime and lime slurry, flue gas desulfurization system slurry, and sulfur slurry; propane and acetylene under pressure

Storage and use of products or equipment for maintaining motor vehicles operated at the site (including but not limited to antifreeze and fuel additives) not regulated under Title VI, CFC rules)

Emissions from tanks containing separated water produced from oil and gas operations

Commercial gasoline dispensing stations, including those located within the physical boundaries of a Title V source

Lubricants and waxes used for machinery and other equipment lubrication and emission from lubricating oil or hydraulic fluid storage tanks and equipment

Runway and aircraft de-icing activities, including de-icer storage tanks unless otherwise regulated

Storage tanks, reservoirs, and pumping and handling equipment of

any size containing soaps, vegetable oil, grease, animal fat, and nonvolatile aqueous salt solutions, provided appropriate lids and covers are utilized

SURFACE COATING

Surface coating for maintenance purposes such as roll/brush/pad coating, painting with aerosol cans, spray airless, and conventional spray painting

Touch-up painting operations where paints/coatings are applied at less than one quart per hour

WASTEWATER

Removal of basic sediment & water from collection/storage systems (i.e., clarifiers)

Water and wastewater treatment and transportation system

Pit, ponds, sumps, or wastewater conveyance facilities

Emissions from skimmer pits, oil/water separators, and maintenance of filter separators

Emissions from the removal of sludge or sediment from pits, ponds, sumps, or wastewater conveyance facilities

Industrial and/or municipal wastewater treatment processes (excluding combustion or incineration equipment), storage silos for dry material (sludges), composting, or grease trap waste handling or treatment

Ozonization process or process equipment including ozone generation for water treatment processes

Sanitary sewerage and storm water runoff collection systems

Emissions from dredging pits, ponds, sumps, or other wastewater conveyance facilities

WOODWORKING

Wood working (saw-cutting, staining & varnishing) (noncommercial)

Woodworking utilized for hobby purposes or maintenance of grounds or buildings

PUBLIC MEETING

Notice of Public Meeting for December 16, 1997 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance door of the meeting room.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Mr. Kilpatrick - aye; Ms. Slagell - aye; Mr. Fishback - aye; Dr. Canter - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye. Ms. Andrews was absent during the hearing session.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the October 21, 1997 Public Meeting/Hearing. Motion was made by Mr. Kilpatrick to approve the Minutes as presented and second to the motion was made by Mr. Branecky. Roll call as follows: Mr. Kilpatrick - aye; Ms. Slagell - aye; Mr. Fishback - aye; Dr. Canter - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-5-2.2(B)(2) PART 70 SOURCES ANNUAL OPERATING FEE [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51 and Title 27A Oklahoma Statutes, Section 2-5-101 through 2-5-118.. Mr. Dyke called upon Jeanette Buttram to give staff position on the proposed changes to the rule.

Ms. Buttram advised that staff's recommendation was that the annual operating fee billed in 1998 for Part 70 sources be adjusted by the Consumer Price Index as specified in the existing rule which would render a 2.2 % increase from \$16.03 to \$16.39 per ton. She also pointed out staff's intention to bring before the Council any proposed adjustments to the fee on an annual basis.

Dr. Canter introduced the committee's report *Title V Fee Committee Findings and Recommendations* dated December 15, 1997 into the record. Members of this committee were Dr. Canter, Mr. Fishback, and Mr. Branecky. The full report is made an official part of these Minutes. Mr. Kilpatrick made motion to accept the committee's report and second was made by Mr. Fishback. With discussion that perhaps Mr. Fishback should not make the second since he was on the committee, Ms. Myers made the second. Roll call as follows: Mr. Kilpatrick - aye; Ms. Slagell - aye; Mr. Fishback - aye; Dr. Canter - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

Ms. Myers made additional motion to leave the fees as stated for 1998 with only the Consumer Price Index increase from \$16.03 to \$16.39. Mr. Fishback made the second. Mr. Doughty, staff attorney, mentioned that Council is recommending no action; therefore, this portion of the rule would not go before the Environmental Quality Board specifically. Roll call was as follows: Mr. Kilpatrick - aye; Ms. Slagell - aye; Mr. Fishback - aye; Dr. Canter - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-8 OPERATING PERMITS (PART 70) [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Section 2-5-101 through Section 2-5-118. Mr. Dyke stated that since there was extensive discussion in the briefing session regarding continuation of this subchapter to a later date, Dr. Joyce Sheedy would stand ready to discuss staff proposal for the rule.

Mr. Kilpatrick made motion to continue the hearing to January 9, 1998 at 1:00. Mr. Branecky made the second. Roll call as follows: Mr. Kilpatrick - aye; Ms. Slagell - aye; Mr. Fishback - aye; Dr. Canter - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-17 INCINERATORS [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51

and Title 27A Oklahoma Statutes, Section 2-5-101 through Section 2-5-118. Mr. Dyke called upon Michelle Martinez to give staff position on the proposed changes to the rule. Staff's recommendation was for approval as both emergency and permanent adoption.

Mr. Kilpatrick made motion to continue this hearing until January 9, 1998 at 1:00 p.m. Second was made by Ms. Slagell. During discussion, it was noted that continuing this hearing to February would cause the rule to be adopted by the Board as an emergency rule only, which could possibly put the State Plan at risk. Roll call as follows: Mr. Kilpatrick - aye; Ms. Slagell - aye; Mr. Fishback - no; Dr. Canter - no; Ms. Myers - no; Mr. Branecky - no; Mr. Breisch - no.

After this discussion, Mr. Branecky made motion that Council accept Subchapter 17 as amended and recommend to the Environmental Quality Board for both emergency and permanent adoption. Ms. Myers made the second. Roll call as follows: Mr. Kilpatrick - no; Ms. Slagell - no; Mr. Fishback - aye; Dr. Canter - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:2-40 and OAC 252:2-41 UNIFORM PERMITTING PROCEDURES [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 Code of Federal Regulations Part 51, and Title 27A Oklahoma Statutes, Section 2-5-101 through Section 2-5-118. Mr. Dyke called upon Ms. Barbara Hoffman to give staff recommendations.

Staff requested that the Council recommend the revisions to the Environmental Quality Board for adoption as a permanent rule. After discussion, Ms. Myers made motion to approve the rule as amended and recommend to the Environmental Quality Board for permanent adoption. Mr. Branecky made the second. Roll call as follows: Mr. Kilpatrick - no; Ms. Slagell - aye; Mr. Fishback - aye; Dr. Canter - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

OLD BUSINESS

OAC 252:100-5 REGISTRATION OF AIR CONTAMINANT SOURCE [AMENDED]

Mr. Dyke called upon Jeanette Buttram to give staff position on the proposed changes to this rule. After summarizing the changes, Ms. Buttram stated staff's recommendation was that Subchapter 5 be approved by Council and forwarded to the Environmental Quality Board at the same time that Subchapter 8 is approved.

Mr. Branecky moved that Council continue this hearing to January 9, 1998; and Ms. Myers made the second. Roll call as follows: Mr. Kilpatrick - aye; Ms. Slagell - aye; Mr. Fishback - aye; Dr. Canter - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

**OAC 252:100-7 CONSTRUCTION PERMITS FOR MAJOR AND MINOR SOURCES;
OPERATING AND RELOCATION PERMITS FOR MINOR SOURCES [AMENDED]**

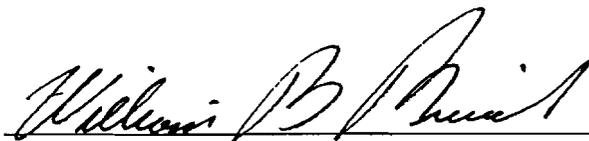

Mr. Dyke called upon Jeanette Buttram to give staff position on the proposed rule. After summarizing the changes, Ms. Buttram stated that staff recommended that Subchapter 7 be approved by Council at the same time that Subchapter 8 is approved.

Mr. Kilpatrick moved that Council continue the hearing on to the January 9, 1998 meeting. Second to the motion was made by Ms. Myers. Roll call as follows: Mr. Kilpatrick – aye; Ms. Slagell – aye; Mr. Fishback – aye; Dr. Canter – aye; Ms. Myers – aye; Mr. Branecky - aye; Mr. Breisch - aye.

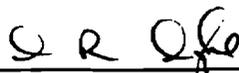

NEW BUSINESS Dr. Canter stated that no one member of the public could claim to represent all of the public, and that he believes Council hearings provide the proper forum to hear comments from the public on proposed rules. While it is sometimes difficult to decide what rule changes requested at hearings by AQD staff or the public are substantive, Dr. Canter said he resented the implication that the public was not given adequate opportunity to comment on Subchapter 17, since it had been presented at two Council meetings.

ADJOURNMENT With no further business, meeting was adjourned and an additional meeting scheduled for January 9, 1998 at the Lincoln Plaza Office Park Burgundy Room, 4545 North Lincoln Boulevard, Oklahoma City, Oklahoma.

NOTE: The sign-in sheet and the hearing records are attached as an official part of these Minutes.

MEMORANDUM

TO: Air Quality Council

FROM: David R. Dyke, Interim Director
AIR QUALITY DIVISION 

SUBJECT: Modifications to Subchapter 8

Enclosed is a copy of the proposed draft modifications to OAC 252:100-8 OPERATING PERMITS (PART 70), that will be brought to public hearing on January 9, 1998. The hearing for Subchapter 8 was continued from the October 21, 1997 and December 16, 1997 Air Quality Council meetings. The revisions proposed at the October 21, 1997 meeting included: incorporation of the permit continuum by the introduction of general construction permits for Part 70 sources and general construction and operating permits for major facilities that are not subject to Part 70; the addition of the requirements for construction permits for Part 70 sources and construction and operating permits for major facilities not subject to Part 70; revision of the permit application processing fees by setting a fee for processing authorizations under a general permit; deletion of annual operating fees (which will be moved to Subchapter 5); incorporation by reference of federal rules governing case-by-case MACT determinations (40 CFR §§ 63.40, 63.41, 63.43 and 63.44); and revisions to meet the requirements set forth in the February 5, 1996 Federal Register for final approval of the Title V program. The proposed draft also includes revisions intended to simplify and clarify the rule. Material in the Subchapter was reorganized and in some cases reworded. It is proposed to add Appendix I, Insignificant Activities List and Appendix J, Trivial Activities List to the rules.

Additional revisions which were proposed in the December 1, 1997 Draft for the December 16, 1997 meeting included:

Modification of the Insignificant Activities List and Trivial Activities List (Appendices I and J, respectively) in response to written comments received.

Updating the adoption by reference in 252:100-8-6.3 of 40 CFR Part 72 (Acid Rain provisions) to include the October 24, 1997 revisions.

Additional revisions were proposed at the December 16, 1997 meeting. The result of these revisions was to remove permitting requirements for facilities which are major for total particulate matter only and are not subject to Part 70, or PSD from Subchapter 8. Under the latest proposed revisions, these sources will be handled as minor facilities or de minimis facilities. Although it required quite a number of changes to accomplish this, the majority of the changes were not substantive. Enclosed is a list of the substantive revisions that were included in the 12-16-97 Draft and are also in the 1-9-98 Draft which is enclosed. Some of these changes are in actuality clarifications and not substantive.

A revision was also made to Appendix J under Blowdowns to allow depressurization during startup, shut down, maintenance or emergencies of compressors or other vessels containing natural gas or liquid hydrocarbons for the purpose of maintenance due to emergency circumstances to be considered trivial activities.

Staff recommends that the proposed rule be recommended to the Department of Environmental Quality Board for permanent and emergency adoption.

Enclosures: 4

SUBSTANTIVE OR CLARIFYING REVISIONS TO 252:100-8

Following is a list of changes that were made to the proposed rule after the 12/1/97 Draft. These revisions are included in the 12/16/97 Draft and the 1/9/98 Draft (which is identical to the 12/16/97 Draft). Page numbers referenced below are for the 12/16/97 and 1/9/98 Drafts.

1. Part 5. Permits for Major Non-Part 70 Facilities was deleted. There will now be three types of sources: Part 70 sources, minor facilities and de minimis facilities. Sources major for total PM and not subject to Part 70 will be either minor facilities or de minimis facilities.
2. 252:100-8-1.1. Definitions. The definition for "major Non-Part 70 facility" was deleted.
3. 252:100-8-1.2(a) Permit required, was deleted. Each Part in the 1/9/98 draft rule contains the requirement for permits for the sources covered by that Part.
4. 252:100-8-2. The definition for "Permit modification" was revised to make it clear that it includes modifications for both construction and operating permits.
5. 252:100-8-3(a) Covered sources on page 19 was revised by the addition of paragraph (6) to make it clear that any source that is permitted under Part 7 for PSD or Part 9 for Nonattainment Areas is a Part 70 source and subject to the Title V operating permit program.
6. 252:100-8-4(b)(7) 112(g) applications, page 24, was revised to make clear that a construction permit will be required for the preconstruction review required for 112(g) applications that have Part 70 operating permits.
7. 252:100-8-5(d) Construction permit applications, page 28, was added. This new subsection contains the requirements for construction permit applications that were contained in "Part 5. Permits for Major Non-Part 70 Facilities" and referenced in "252:100-8-4(a)(2) Construction permit requirements," both of which were deleted.
8. 252:100-8-7.2(b) Permit modification, page 58, was revised to make clear that the modification procedures apply to construction permits as well as operating permits.
9. The heading for 252:100-8-7.3, on page 61, was revised to make clear that this section applies only to operating permits.
10. 252:100-8-7.3(c) Reopening procedures, page 62, was revised by replacing "amendments" with "modifications" to make clear that the procedures to be followed are those for significant modifications. Also language that was inadvertently omitted was reinserted. This language is double underlined in the 1/9/98 Draft.
11. 252:100-8-7.4. Revocations was revised to make clear that this section applies only to operating permits.
12. 252:100-8-8(a) Applicability, page 63, was revised to make clear that EPA and affected states review also apply to construction permits.

SUBCHAPTER 8. OPERATING PERMITS ~~(PART 70)~~ FOR PART 70 SOURCES

PART 1. GENERAL PROVISIONS

[NOTE: Throughout this draft language that has been moved from other Sections and Subchapters is underlined once, new language is double underlined and deletions are struck out.]

252:100-8-1. Purpose

~~The purpose of this Subchapter is to provide for the promulgation and enforcement of the requirements necessary to meet Title V of the federal Clean Air Act (42 U.S.C. 7401, et seq.) and 40 CFR Part 70 by establishing a comprehensive state air quality permitting program for major sources of air contaminant emissions. Permits issued under this program will address all applicable air contaminant emissions and regulatory requirements in a single document. This Subchapter sets forth permit application fees and the substantive requirements for permits for Part 70 sources.~~

252:100-8-1.1. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise. Except as specifically provided in this section, terms used in this Subchapter retain the meaning accorded them under the applicable requirements of the Act.

[NOTE: From 252:100-8-2]

"A stack in existence" means for purposes of 252:100-8-1.5 that the owner or operator had:

(A) begun, or caused to begin, a continuous program of physical on-site construction of the stack; or

(B) entered into binding agreements or contractual obligations, which could not be canceled or modified without substantial loss to the owner or operator, to undertake a program of construction of the stack to be completed in a reasonable time. [NOTE: From 252:100-7-16(b)]

"Act" means the federal Clean Air Act, as amended, 42 U.S.C. 7401 et. seq. [NOTE: From 252:100-8-2]

"Administrator" means the Administrator ~~administrator~~ of the United States Environmental Protection Agency (EPA) or the Administrator's ~~administrator's~~ designee. [NOTE: From 252:100-8-2]

"Allowable emissions" means, for purposes of Parts 7 and 9 of this Subchapter, the emission rate of a stationary source calculated using the maximum rated capacity of the source (unless the source is subject to enforceable limits which restrict the operating rate, or hours of operation, or both) and the most stringent of the following:

(A) the applicable standards as set forth in 40 CFR Parts 60 and 61;

(B) the applicable State rule allowable emissions; or,

(C) the emissions rate specified as an enforceable permit

condition. {NOTE: From 252:100-7-31 and 252:100-7-51}

"Begin actual construction" for purposes of Parts 7 and 9 of this Subchapter means, in general, initiation of physical on-site construction activities on an emissions unit which are of a permanent nature. Such activities include, but are not limited to, installation of building supports and foundations, laying of underground pipework, and construction of permanent storage structures. With respect to a change in method of operation this term refers to those on-site activities, other than preparatory activities, which mark the initiation of the change. [NOTE: From 252:100-7-31 and 252:100-7-51]

"Commence" for purposes of Parts 7 and 9 of this Subchapter means, as applied to construction of a major stationary source or major modification, that the owner or operator has all necessary preconstruction approvals or permits and either has:

(A) begun, or caused to begin, a continuous program of actual on-site construction of the source, to be completed within a reasonable time; or,

(B) entered into binding agreements or contractual obligations, which cannot be cancelled or modified without substantial loss to the owner or operator, to undertake a program of actual construction of the source to be completed within a reasonable time. [NOTE: From 252:100-7-31 and 252:100-7-51]

"Construction" means, for purposes of Parts 7 and 9 of this Subchapter, any physical change or change in the method of operation (including fabrication, erection, installation, demolition, or modification of an emissions unit) which would result in a change in actual emissions. [NOTE: From 252:100-7-31 and 252:100-7-51]

"Dispersion technique" means for purposes of 252:100-8-1.5 any technique which attempts to affect the concentration of a pollutant in the ambient air by using that portion of a stack which exceeds good engineering practice stack height; varying the rate of emission of a pollutant according to atmospheric conditions or ambient concentrations of that pollutant; or increasing final exhaust gas plume rise by manipulating source process parameters, exhaust gas parameters, stack parameters or combining exhaust gases from several existing stacks into one stack, or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise. The preceding sentence does not include:

(A) The reheating of a gas stream, following use of a pollution control system, for the purpose of returning the gas to the temperature at which it was originally discharged from the facility generating the gas stream.

(B) The merging of exhaust gas streams where:

(i) the source owner or operator documents that the facility was originally designed and constructed with such merged streams;

(ii) after July 8, 1985, such merging is part of a change in operation at the facility that includes the

installation of pollution controls and is accompanied by a net reduction in the allowable emissions of a pollutant. This exclusion from "dispersion technique" applicability shall apply only to the emission limitation for the pollutant affected by such change in operation;
or

(iii) before July 8, 1985, such merging was part of a change in operation at the facility that included the installation of emissions control equipment or was carried out for sound economic or engineering reasons. Where there was an increase in the emission limitation or, in the event that no emission limitation existed prior to the merging, there was an increase in the quantity of pollutants actually emitted prior to the merging, it shall be presumed that merging was primarily intended as a means of gaining emissions credit for greater dispersion. Before such credit can be allowed, the owner or operator must satisfactorily demonstrate that merging was not carried out for the primary purpose of gaining credit for greater dispersion.

(C) Manipulation of exhaust gas parameters, merging of exhaust gas streams from several existing stacks into one stack, or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise in those cases where the resulting allowable emissions of sulfur dioxide from the facility do not exceed 5,000 tons per year. [NOTE: From 252:100-7-16(b)]

"Emission limitations and emission standards" means for purposes of 252:100-8-1.5 a requirement requirements that which limits limit the quantity, rate or concentration of emissions of air pollutants on a continuous basis, including any requirements which that limit the level of opacity, prescribe equipment, set fuel specifications or prescribe operation or maintenance procedures for a source to assure continuous reduction. (Amended 7-9-87, effective 8-10-87) [NOTE: From 252:100-7-16(b)]

"Emissions unit" means, for purposes of Parts 7 and 9 of this Subchapter, any part of a source which emits or would have the potential to emit any pollutant subject to regulation. [NOTE: From 252:100-7-31 and 252:100-7-51]

"EPA" means the United States Environmental Protection Agency. [NOTE: From 252:100-8-2]

"Fugitive emissions" means, for purposes of Parts 7 and 9 of this Subchapter, those emissions which could not reasonably pass through a stack, chimney, vent or other functionally equivalent opening. [NOTE: From 252:100-7-31 and 252:100-7-51]

"National Emission Standards for Hazardous Air Pollutants" or "NESHAP" means those standards found in 40 CFR Parts 61 and 63.

"Necessary preconstruction approvals or permits" means, for purposes of Parts 7 and 9 of this Subchapter, those permits or approvals required under all applicable air quality control laws and rules. [NOTE: From 252:100-7-31 and 252:100-7-51]

"New Source Performance Standards" or "NSPS" means those

standards found in 40 CFR Part 60.

"Part 70 permit" (unless the context suggests otherwise) means any permit or group of permits covering a Part ~~part~~ 70 source that is issued, renewed, amended, or revised pursuant to this Chapter. [NOTE: From 252:100-8-2]

"Part 70 program" means a program approved by the Administrator under 40 CFR Part 70. [NOTE: From 252:100-8-2]

"Part 70 source" means any source subject to the permitting requirements of Part 5 of this Chapter Subchapter, as provided in OAC 252:100-8-3(a) and 252:100-8-3(b). [NOTE: From 252:100-8-2]

"Potential to emit" means, for purposes of Parts 7 and 9 of this Subchapter, the maximum capacity of a source to emit a pollutant under its physical and operational design. Any physical or operational limitation on the capacity of the source to emit a pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored or processed, shall be treated as part of its design if the limitation or the effect it would have on emissions is enforceable. Secondary emissions do not count in determining the potential to emit of a source. [NOTE: From 252:100-7-31 and 252:100-7-51]

"Secondary emissions" means, for purposes of Parts 7 and 9 of this Subchapter, emissions which occur as a result of the construction or operation of a major stationary source or modification, but do not come from the source or modification itself. For the purpose of OAC 252:100-7, 252:100-8, Part 7 9, secondary emissions must be specific, well defined, quantifiable, and impact the same general areas as the source or modification which causes the secondary emissions. Secondary emissions may include, but are not limited to:

(A) emissions from trains coming to or from the new or modified stationary source; and,

(B) emissions from any offsite support facility which would not otherwise be constructed or increase its emissions as a result of the construction or operation of the major source or modification. [NOTE: From 252:100-7-31 and 252:100-7-51]

"Stack" means for purposes of 252:100-8-1.5 any point in a source designed to emit solids, liquids or gases into the air, including a pipe or duct but not including flares. [NOTE: From 252:100-7-16(b)]

"Stationary source" means, for purposes of Parts 7 and 9 of this Subchapter, any building, structure, facility or installation which emits or may emit any air pollutant subject to OAC 252:100. [NOTE: From 252:100-7-31 and 252:100-7-51]

252:100-8-1.2. General information

(a) Permit categories. Two types of construction and operating permits are available: general permit and individual permit.

(1) General permit.

(A) A general permit may be issued for an industry if there are a sufficient number of facilities that have the same or substantially similar operations, emissions and activities

which are subject to the same standards, limitations and operating and monitoring requirements.

(B) Facilities may be eligible for authorization under a general permit if the following criteria are met:

(i) The facility has actual emissions of 100 tpy or more of any one regulated air pollutant emitted and/or is a Part 70 source.

(ii) The DEQ has issued a general permit for the industry.

(2) Individual permit. Facilities requiring permits under this Subchapter that do not qualify for a general permit shall obtain individual permits. An owner or operator may apply for an individual permit even if the facility qualifies for a general permit.

(b) Applicability determination. Any person may submit a request in writing that the Agency DEQ make a determination as to whether a particular source or installation, which that person operates or proposes to operate, is subject to the permit requirements of this rule Subchapter. The request must contain such sufficient information as is believed sufficient for the Agency DEQ to make the requested determination and the required fee. The Agency DEQ may request any additional information that it needs for purposes of making the determination. [NOTE: From 252:100-8-3(f)]

252:100-8-1.3. Failure Duty to comply with a construction permit

A violation of these limitations or conditions by the owner/operator shall subject the owner/operator to any or all enforcement penalties, including permit revocation, available under the Oklahoma Clean Air Act and Air Pollution Control Rules.

(a) An owner or operator who applies for a permit or authorization, upon notification of coverage, shall be bound by the terms and conditions therein. [NOTE: Based on 252:100-10-5(j)]

(b) An owner or operator who violates any condition of a permit or authorization is subject to enforcement under the Oklahoma Clean Air Act. [NOTE: 252:100-8-1.3(b) was based on 252:100-7-15(f)(3)]

252:100-8-1.4. Cancellation or extension of a construction permit or authorization under a general construction permit

(a) Cancellation of permit or authorization to construct or modify. A duly issued permit or authorization to construct or modify will terminate and become null and void (unless extended as provided in Subsection subsection (b) of this Section section) if the construction is not commenced within 18 months after of the date the permit or authorization was issued issuance date, or if work is suspended for more than 18 months after it has commenced.

(b) Extension of permit or authorization to construct or modify.

(1) Prior to the expiration date of the permit or authorization expiration date, a permittee may apply for

extension of the permit or authorization by written request of the DEQ stating the reasons for the delay or suspension and providing justification for the extension. The DEQ may grant:

(A) One extension Extensions for terms of 18 months or less, or

(B) One extension of up to 36 months where the applicant is proposing to expand an already existing facility to accommodate the proposed new construction or the applicant has expended a significant amount of money (1% of total project cost as identified in the original application, not including land cost) in preparation for meeting the definition of "commence construction" at the proposed site, or

(C) One extension of up to 72 months will be granted to major industrial facilities (project cost greater than \$100,000,000.00), where the applicant proposes to construct at an existing site and demonstrates that the existing site was originally designed and constructed to accommodate the proposed new facilities. The applicant shall show a commitment to the site by having purchased land necessary to construct facilities covered by this extension and expended \$1,000,000.00 or more on engineering and/or site development.

(2) If construction has not commenced within three (3) years of the effective date of the original permit or authorization, the permittee must undertake and complete an appropriate available control technology review and an air quality analysis. This review must be approved by the DEQ before construction may commence.

(3) Upon formal request of any applicant whose permit has been denied for lack of increment, the DEQ may require any permittee under 252:100:8-1.4(b) (1) (B) or 252:100-8-1.4 (b) (1) (C), to furnish a complete air quality analysis and/or an appropriate available control technology review if such review is required in order to provide new or current information. [NOTE: 252:100-8-1.4 is from 252:100-7-15(g)]

252:100-8-1.5. Stack height limitations

(a) Stack height exclusion. Air quality modeling or ambient impact evaluation shall exclude the effect of that portion of the height of any stack which exceeds good engineering practice or the effect of any other dispersion techniques.

(b) Definitions. The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise. [NOTE: Definitions were moved to 252:100-8-1.1]

(1) "A stack in existence" means that the owner or operator had:

(A) begun, or caused to begin, a continuous program of physical on site construction of the stack, or

(B) entered into binding agreements or contractual obligations, which could not be canceled or modified without

~~substantial loss to the owner or operator, to undertake a program of construction of the stack to be completed in a reasonable time.~~

~~(2) "Dispersion technique" means any technique which attempts to affect the concentration of a pollutant in the ambient air by using that portion of a stack which exceeds good engineering practice stack height; varying the rate of emission of a pollutant according to atmospheric conditions or ambient concentrations of that pollutant; or increasing final exhaust gas plume rise by manipulating source process parameters, exhaust gas parameters, stack parameters or combining exhaust gases from several existing stacks into one stack, or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise. The preceding sentence does not include:~~

~~(A) The reheating of a gas stream, following use of a pollution control system, for the purpose of returning the gas to the temperature at which it was originally discharged from the facility generating the gas stream.~~

~~(B) The merging of exhaust gas streams where:~~

~~(i) the source owner or operator documents that the facility was originally designed and constructed with such merged streams;~~

~~(ii) after July 8, 1985, such merging is part of a change in operation at the facility that includes the installation of pollution controls and is accompanied by a net reduction in the allowable emissions of a pollutant. This exclusion from "dispersion technique" applicability shall apply only to the emission limitation for the pollutant affected by such change in operation; or~~

~~(iii) before July 8, 1985, such merging was part of a change in operation at the facility that included the installation of emissions control equipment or was carried out for sound economic or engineering reasons. Where there was an increase in the emission limitation or, in the event that no emission limitation existed prior to the merging, there was an increase in the quantity of pollutants actually emitted prior to the merging, it shall be presumed that merging was primarily intended as a means of gaining emissions credit for greater dispersion. Before such credit can be allowed, the owner or operator must satisfactorily demonstrate that merging was not carried out for the primary purpose of gaining credit for greater dispersion.~~

~~(C) Manipulation of exhaust gas parameters, merging of exhaust gas streams from several existing stacks into one stack, or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise in those cases where the resulting allowable emissions of sulfur dioxide from the facility do not exceed 5,000 tons per~~

year.

~~(3) "Emission limitations and emission standards" means a requirement which limits the quantity, rate or concentration of emissions of air pollutants on a continuous basis, including any requirements which limit the level of opacity, prescribe equipment, set fuel specifications or prescribe operation or maintenance procedures for a source to assure continuous reduction. (Amended 7-9-87, effective 8-10-87)~~

~~(4) "Stack" means any point in a source designed to emit solids, liquids or gases into the air, including a pipe or duct but not including flares.~~

(b)(e) Determination of good engineering practice (GEP) stack height. GEP shall be the greater of:

(1) 65 meters, measured from the ground-level elevation at the base of the stack; or

(2) The height under either OAC 252:100-7-16(e)(2)(A) or (B) 252:100-8-1.5(b)(2)(A) or (B):

(A) for stacks in existence on January 12, 1979 and for which the owner or operator had obtained all applicable permits or approvals required under OAC 252:100-7-252:100-8 or Federal 40 CFR Part 52,

$$H_g = 2.5H$$

provided the owner or operator can demonstrate that this equation was relied upon in establishing an emission limitation;

(B) for all other stacks,

$$H_g = H + 1.5L,$$

where: H_g = good engineering practice stack height, measured from the ground-level elevation at the base of the stack,
 H = height of nearby structure(s) measured from the ground-level elevation at the base of the stack,
 L = lesser dimension (height or projected width) of nearby structure(s), provided that the owner or operator may be required to verify such GEP stack height by the use of a field study or fluid model as the Executive Director shall determine; or

(3) The height demonstrated by a fluid model or a field study approved by the reviewing agency, which ensures that the emissions from a stack do not result in excessive concentrations of any air pollutant as a result of atmospheric downwash, wakes, or eddy effects created by the source itself, nearby structures, or nearby terrain features.

(c)(d) Nearby. A structure or terrain feature shall be considered to be nearby:

(1) For purposes of applying the formula in OAC 252:100-7-16(e), if that distance up to five times the lesser of the height or the width dimension of a structure, but not greater than 0.8 km (0.5 mile), and

(2) For conducting demonstrations under OAC 252:100-7-16(e)(2), if not greater than 0.8 km (0.5 mile), except that the portion of a terrain feature may be considered to be nearby which falls within a distance of up to 10 times the maximum height of the feature, not to exceed 2 miles if such feature achieves a height at 0.8 km (0.5 mile) from the stack that is at least 40 percent of the GEP stack height determined by the formulae in OAC 252:100-7-16(e)(3) or 26 meters, whichever is greater, as measured from the base of the stack. The height of the structure or terrain feature is measured from the ground level elevation at the base of the stack.

(1) For the formulae in 252:100-8-1.5(b)(2). A structure or terrain feature shall be considered nearby if it is located within a distance of up to five times the lesser of the height or the width of a structure, but not more than 0.5 miles (0.8 km).

(2) For demonstration in 252:100-8-1.5(b)(3).

(A) A structure or terrain feature shall be considered nearby if located at a distance not greater than 0.5 mile (0.8 km), except that

(B) A portion of a terrain feature may be considered nearby if:

(i) It falls within a distance (not to exceed 2 miles) of up to 10 times the maximum height (Ht) of the feature, and

(ii) At a distance of 0.5 mile, the height of such feature is at least 40 percent of the GEP stack height determined by the formulae provided in 252:100-8-1.5(b)(2)(B) or 85.3 feet (26 meters), whichever is greater, as measured from the base of the stack.

(3) Measurement of height of structure or terrain. The height of the structure or terrain feature is measured from the ground-level elevation at the base of the stack.

(d)-(e) Excessive concentrations. When utilized for the purpose of determining GEP stack height under OAC 252:100-7-16(e)(3) 252:100-8-1.5(b)(3), excessive concentrations shall be as follows:

(1) For sources seeking credit for stack height exceeding that calculated under OAC 252:100-7-16(e)(2) 262:100-8-1.5(b)(2), a maximum ground-level pollutant concentration from a stack due in whole or part to downwash, wakes, and eddy effects produced by nearby structures or nearby terrain features which is at least 40 percent in excess of the maximum concentration experienced in the absence of such downwash, wakes, or eddy effects and which, when combined with the impacts due to all sources, produces a concentration in excess of an ambient air quality standard. For sources subject to the prevention of significant deterioration program (Part 5 7

of this Subchapter or Federal 40 CFR 52.21), the same criteria apply except that a concurrent exceedance of a prevention of significant deterioration increment is experienced. In making demonstrations under this part, the allowable emission rate shall conform to the new source performance standard that is applicable to the source category unless the owner or operator can demonstrate that this emission rate is infeasible. Where such demonstrations are approved by the Executive Director, an alternative emission rate shall be established in consultation with the owner or operator;

(2) For sources seeking credit after October 1, 1983, for increases in existing stack heights up to the heights established under ~~OAC 252:100-7-16(e)(2)~~ 252:100-8-1.5(b)(2) either:

(A) a maximum ground-level concentration due in whole or part to downwash, wakes or eddy effects as specified in ~~OAC 252:100-7-16(e)(2)~~ 252:100-8-1.5(b)(2), except that the emission rate specified by any applicable state implementation plan (or, in the absence of such a limit, the actual emission rate) shall be used, or

(B) the actual presence of a local nuisance caused by the existing stack, as determined by the Executive Director; and

(3) For sources seeking credit after January 12, 1979 for a stack height determined under ~~OAC 252:100-7-16(e)(1)~~ 252:100-8-1.5(b)(2) where the Executive Director requires the use of a field study or fluid model to verify GEP stack height, for sources seeking stack height credit after November 9, 1984 based on the aerodynamic influence of cooling towers, and for sources seeking stack height credit after December 31, 1970 based on the aerodynamic influence of structures not adequately represented by the formulae in ~~OAC 252:100-7-16(e)(1)~~ 252:100-8-1.5(b)(2), a maximum ground-level concentration due in whole or part to downwash, wakes or eddy effects that is at least 40 percent in excess of the maximum concentration experienced in the absence of such downwash, wakes or eddy effects. [NOTE: 252:100-8-1.5 was moved from 252:100-7-16]

PART 3. PERMIT APPLICATION FEES

252:100-8-1.7. Permit application fees

A permit application or a request for an applicability determination received after the effective date of this subsection will be assessed a one-time fee, which must accompany the application or request. Applications received without appropriate fees are administratively incomplete. Fees must be paid by check or money order made payable to the Oklahoma Air Quality Division in accordance with the following fee schedule:

(1) **Applicability determination.** \$100, to be credited against the construction or operating permit application fee, if a permit is required. If no permit is required, the fee

will be retained to cover the cost of making the determination. [NOTE: Based on 252-7-3(c)]

(2) Construction permit application. The fee is \$2,000.

~~(1) Part 70 source construction permit - \$2,000~~ [NOTE: from 252:100-7-3(b)(1)]

(3) Operating permit application.

~~(2) Permit processing fees. Permit processing fees shall be as follows:~~

(A) Initial Part 70 permit - \$2,000.

(B) Authorization under a general permit - \$900

~~(C)(B) Renewal Part 70 permit - \$1,000.~~

~~(D)(C) Significant Part 70 Permit Mod. modification of Part 70 permit - \$1,000.~~

~~(E)(D) Minor modification of Part 70 permit Permit Modification - \$500.~~

~~(E) The Part 70 Temporary Permit - \$1,000.~~

~~(F)(F) Part 70 Temporary Source Relocation - \$ 500.~~

[NOTE: 252:100-8-1.7(c) is from 252:100-8-9(d)(2)]

PART 5. PERMITS FOR PART 70 Sources

252:100-8-2. Definitions

The following words and terms, when used in this Subchapter Part, shall have the following meaning, unless the context clearly indicates otherwise. Except as specifically provided in this section, terms used in this Subchapter Part retain the meaning accorded them under the applicable requirements of the Act.

~~"Act" means the Clean Air Act, as amended, 42 U.S.C. 7401 et. seq.~~ [NOTE: Moved to 252:100-8-1.1]

~~"Administratively complete" means the same as defined at OAC 252:002-11. an application that provides:~~

(A) All information required under 252:100-8-5(c), (d), or (e);

(B) A landowner affidavit as required by 252:2-15-20(b)(3);

(C) The appropriate application fees as required by 252:100-8-1.7; and

(D) Certification by the responsible official as required by 252:100-8-5(f).

~~"Administrator" means the administrator of the United States Environmental Protection Agency (EPA) or the administrator's designee.~~ [NOTE: Moved to 252:100-8-1.1]

"Affected source" means the same as the meaning given to it in the regulations promulgated under Title IV (acid rain) of the Act.

"Affected states" means:

(A) all states:

(i) That ~~that~~ are one of the following contiguous states: Arkansas, Colorado, Kansas, Missouri, New Mexico and Texas, and

(ii) That in the judgment of the DEQ Agency, may be directly

affected by emissions from the facility seeking the permit, permit modification, or permit renewal being proposed; or (B) all states that are within 50 miles of the permitted source.

"Affected unit" means the same as the meaning given to it in the regulations promulgated under Title IV (acid rain) of the Act.

~~"Agency" means Air Quality Division of the Oklahoma Department of Environmental Quality.~~

"Applicable requirement" means all of the following as they apply to emissions units in a ~~part~~ Part 70 source subject to this Chapter (including requirements that have been promulgated or approved by EPA through rulemaking at the time of issuance but have future effective compliance dates):

- (A) Any standard or other requirements provided for in the applicable implementation plan approved or promulgated by EPA through rulemaking under Title I of the Act that implements the relevant requirements of the Act, including any revisions to that plan promulgated in 40 ~~C.F.R.~~ CFR Part 52;
- (B) Any term or condition of any preconstruction permits issued pursuant to regulations approved or promulgated through rulemaking under Title I, including parts C or D, of the Act;
- (C) Any standard or other requirement under section 111 of the Act, including section 111(d);
- (D) Any standard or other requirement under section 112 of the Act, including any requirement concerning accident prevention under section 112(r)(7) of the Act, but not including the contents of any risk management plan required under 112(r) of the Act;
- (E) Any standard or other requirement of the acid rain program under Title IV of the Act or the regulations promulgated thereunder;
- (F) Any requirements established pursuant to section 504(b) or section 114(a)(3) of the Act;
- (G) Any standard or other requirement governing solid waste incineration, under section 129 of the Act;
- (H) Any standard or other requirement for consumer and commercial products, under section 183(e) of the Act;
- (I) Any standard or other requirement for tank vessels, under section 183(f) of the Act;
- (J) Any standard or other requirement of the regulations promulgated to protect stratospheric ozone under Title VI of the Act, unless the Administrator has determined that such requirements need not be contained in a Title V permit; and
- (K) Any national ambient air quality standard or increment or visibility requirement under part C of Title I of the Act, but only as it would apply to temporary sources permitted pursuant to section 504(e) of the Act.

~~"Department" means the Department of Environmental Quality.~~

~~"Designated representative" means the same as the meaning given to it in section 402(26) of the Act and the regulations promulgated thereunder with respect to affected units, a~~

responsible person or official authorized by the owner or operator of a unit to represent the owner or operator in matters pertaining to the holding, transfer, or disposition of allowances allocated to a unit, and the submission of and compliance with permits, permit applications, and compliance plans for the unit.

"Draft permit" means the version of a permit for which the Agency DEQ offers public participation under ~~OAC 252:100-8-7(i)~~ 27A O.S.Supp. 1995, §2-14-101 et seq. and 252:100-2-15 or affected State review under OAC 252:100-8-8.

"Emissions allowable under the permit" means a federally enforceable permit term or condition determined at issuance to be required by an applicable requirement that establishes an emissions limit (including a work practice standard) or a federally enforceable emissions cap that the source has assumed to avoid an applicable requirement to which the source would otherwise be subject.

"Emissions unit" means any part or activity of a stationary source that emits or has the potential to emit any regulated air pollutant or any pollutant listed under section 112(b) of the Act. Fugitive emissions from valves, flanges, etc. associated with a specific unit process shall be identified with that specific emission unit. This term is not meant to alter or affect the definition of the term "unit" for purposes of Title IV of the Act.

~~"EPA" means the United States Environmental Protection Agency.~~
[NOTE: Moved to 252:100-8-1.1]

"Final permit" means the version of a part 70 permit issued by the Agency DEQ that has completed all review procedures required by OAC 252:100-8-7 through 252:100-8-7.5 and 252:100-8-8.

"Fugitive emissions" means those emissions of regulated air pollutants which could not reasonably pass through a stack, chimney, vent, or other functionally-equivalent opening.

"General permit" means a part 70 permit that meets the requirements of ~~OAC 252:100-8-6(d)~~ 252:100-8-6.1.

"Insignificant activities" means individual emissions units that are either on the list approved by the Administrator and contained in Appendix I, or whose actual calendar year emissions do not exceed any of the limits in (A) through (C) of this definitions. Any activity to which a State or federal applicable requirement applies is not insignificant even if it meets the criteria below or is included on the insignificant activities list.

(A) 5 tons per year of any one criteria pollutant.

(B) 2 tons per year for any one hazardous air pollutant (HAP) or 5 tons per year for an aggregate of two or more HAP's, or 20 percent of any threshold less than 10 tons per year for single HAP that the EPA may establish by rule.

(C) 0.6 tons per year for any one category A substance, 1.2 tons per year for any one category B substance or 6 tons per year for any one category C substance as defined in 252:100-41-40.

"MACT" means maximum achievable control technology.

"Major source" means any stationary source (or any group of stationary sources that are located on one or more contiguous or adjacent properties, and are under common control of the same person (or persons under common control)) belonging to a single major industrial grouping and that are is described in subparagraph (A), (B), or (C), ~~or (D)~~, of this definition. For the purposes of defining "major source," a stationary source or group of stationary sources shall be considered part of a single industrial grouping if all of the pollutant emitting activities at such source or group of sources on contiguous or adjacent properties belong to the same Major Group (i.e., all have the same two-digit primary SIC code) as described in the Standard Industrial Classification Manual, 1987.

(A) A major source under section 112 of the Act, which is defined as:

(i) For pollutants other than radionuclides, any stationary source or group of stationary sources located within a contiguous area and under common control that emits or has the potential to emit, in the aggregate, 10 tons per year ("tpy") or more of any hazardous air pollutant which has been listed pursuant to section 112(b) of the Act, 25 tpy or more of any combination of such hazardous air pollutants, or such lesser quantity as the Administrator may establish by rule. Notwithstanding the preceding sentence, emissions from any oil or gas exploration or production well (with its associated equipment) and emissions from any pipeline compressor or pump station shall not be aggregated with emissions from other similar units, whether or not such units are in a contiguous area or under common control, to determine whether such units or stations are major sources; or.

(ii) For radionuclides, "major source" shall have the meaning specified by the Administrator by rule.

(B) A major stationary source of air pollutants, as defined in section 302 of the Act, that directly emits or has the potential to emit, 100 tpy or more of any regulated air pollutant (except ~~Total Suspended Particulates (TSP)~~ TSP) (including any major source of fugitive emissions of any such pollutant, as determined by rule by the Administrator). The fugitive emissions of a stationary source shall not be considered in determining whether it is a major stationary source for the purposes of section 302(j) of the Act, unless the source belongs to one of the following categories of stationary sources:

- (i) Coal cleaning plants (with thermal dryers);
- (ii) Kraft pulp mills;
- (iii) Portland cement plants;
- (iv) Primary zinc smelters;
- (v) Iron and steel mills;
- (vi) Primary aluminum ore reduction plants;
- (vii) Primary copper smelters;
- (viii) Municipal incinerators capable of charging more

than 250 tons of refuse per day;

- (ix) Hydrofluoric, sulfuric, or nitric acid plants;
- (x) Petroleum refineries;
- (xi) Lime plants;
- (xii) Phosphate rock processing plants;
- (xiii) Coke oven batteries;
- (xiv) Sulfur recovery plants;
- (xv) Carbon black plants (furnace process);
- (xvi) Primary lead smelters;
- (xvii) Fuel conversion plants;
- (xviii) Sintering plants;
- (xix) Secondary metal production plants;
- (xx) Chemical process plants;
- (xxi) Fossil-fuel boilers (or combination thereof) totaling more than 250 million British thermal units per hour heat input;
- (xxii) Petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels;
- (xxiii) Taconite ore processing plants;
- (xxiv) Glass fiber processing plants;
- (xxv) Charcoal production plants;
- (xxvi) Fossil-fuel-fired steam electric plants of more than 250 million British thermal units per hour heat input;

or

- (xxvii) All other stationary source categories regulated by a standard promulgated under section 111 or 112 of the Act, but only with respect to those air pollutants that have been regulated for that category.

(C) A major stationary source as defined in part D of Title I of the Act, including:

- (i) For ozone non-attainment areas, sources with the potential to emit 100 tpy or more of volatile organic compounds or oxides of nitrogen in areas classified as "marginal" or "moderate," 50 tpy or more in areas classified as "serious," 25 tpy or more in areas classified as "severe," and 10 tpy or more in areas classified as "extreme"; except that the references in this paragraph to 100, 50, 25, and 10 tpy of nitrogen oxides shall not apply with respect to any source for which the Administrator has made a finding, under section 182(f)(1) or (2) of the Act, that requirements under section 182(f) of the Act do not apply;
- (ii) For ozone transport regions established pursuant to section 184 of the Act, sources with the potential to emit 50 tpy or more of volatile organic compounds;
- (iii) For carbon monoxide non-attainment areas:
 - (I) that are classified as "serious"; and
 - (II) in which stationary sources contribute significantly to carbon monoxide levels as determined under rules issued by the Administrator, sources with the potential to emit 50 tpy or more of carbon monoxide; and
- (iv) For particulate matter (PM-10) non-attainment areas

classified as "serious," sources with the potential to emit 70 tpy or more of PM-10.

~~(D) Notwithstanding the source categories in (A) through (C) of this definition, emissions from any oil or gas exploration or production well (with its associated equipment) and emissions from any pipeline compressor station or pump station shall not be aggregated with emissions from other similar units, whether or not such units are in a contiguous area or under common control, to determine whether such units or stations are major sources and in the case of any oil or gas exploration or production well (with its associated equipment), such emissions shall not be aggregated for any purpose under this definition.~~

"Maximum capacity" means the quantity of air contaminants that theoretically could be emitted by a stationary source without control devices based on the design capacity or maximum production capacity of the source and 8,760 hours of operation per year. In determining the maximum theoretical emissions of VOCs for a source, the design capacity or maximum production capacity shall include the use of raw materials, coatings and inks with the highest VOC content used in practice by the source.

~~"Part 70 permit" (unless the context suggests otherwise) means any permit or group of permits covering a part 70 source that is issued, renewed, amended, or revised pursuant to this Chapter.~~
[NOTE: Moved to 252:100-8-1.1]

~~"Part 70 program" means a program approved by the Administrator under 40 C.F.R Part 70.~~ [NOTE: Moved to 252:100-8-1.1]

~~"Part 70 source" means any source subject to the permitting requirements of this Chapter, as provided in OAC 252:100-8-3(a) and 252:100-8-3(b).~~ [NOTE: Moved to 252:100-8-1.1]

"Permit" (unless the context suggests otherwise) means any permit or group of permits covering a part Part 70 source that is issued, renewed, amended, or revised pursuant to this Chapter.

"Permit modification" means a revision to a part Part 70 construction or operating permit that meets the requirements of ~~OAC 252:100-8-7(e)~~ 252:100-8-7.2(b).

"Permit program costs" means all reasonable (direct and indirect) costs required to develop and administer a permit program, as set forth in ~~OAC 252:100-8-9~~ 252:100-5-2.2 (whether such costs are incurred by the DEQ Agency or other State or local agencies that do not issue permits directly, but that support permit issuance or administration).

"Permit revision" means any permit modification or administrative permit amendment.

~~"Permitting authority" means the Department of Environmental Quality.~~

"Potential to emit" means the maximum capacity of a stationary source to emit any air pollutant under its physical and operational design. Any physical or operational limitation on the capacity of a source to emit an air pollutant, including air pollution control equipment and restrictions on hours of

operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitation is enforceable by the Administrator. This term does not alter or affect the use of this term for any other purposes under the Act, or the term "capacity factor" as used in Title IV of the Act or the regulations promulgated thereunder.

"Proposed permit" means the version of a permit that the DEO Agency proposes to issue and forwards to the Administrator for review in compliance with ~~OAC~~ 252:100-8-8.

"Regulated air pollutant" means the following:

(A) Nitrogen oxides or any volatile organic ~~compounds~~ compound (VOC), including those substances defined in at ~~OAC~~ 252:100-1-3, 252:100-37-2, 252:100-39-2, or any Volatile Organic Solvent (VOS), as that term is defined in at ~~OAC~~ 252:100-37-2 and 252:100-39-2, or any organic material defined at in 252:100-37-2 except those specifically excluded in the EPA definition of VOC ~~per~~ in 40 CFR 51.100(s);

(B) Any pollutant for which a national ambient air quality standard has been promulgated;

(C) Any pollutant that is subject to any standard promulgated under section 111 of the Act;

(D) Any Class I or II ozone-depleting substance subject to a standard promulgated under or established by Title VI of the Act;

(E) Any pollutant subject to a standard promulgated under section 112 or other requirements established under section 112 of the Act (Hazardous Air Pollutants), including sections 112(g) (Modifications), (j) (Equivalent Emission Limitation by Permit, and (r) (Prevention of Accidental Releases), including the following:

(i) any pollutant subject to the requirements under section 112(j) of the Act. If the Administrator fails to promulgate a standard by the date established pursuant to section 112(e) of the Act (Schedule for Standards and Review), any pollutant for which a subject source would be major shall be considered to be regulated as to that source on the date 18 months after the applicable date established pursuant to section 112(e) of the Act; and,

(ii) any pollutant for which the requirements of section 112(g)(2) of the Act have been met, but only with respect to the individual source subject to the section 112(g)(2) requirement; or

(F) Any other substance for which an air emission limitation or equipment standard is set by an existing permit or regulation.

"Renewal" means the process by which a permit is reissued at the end of its term.

"Responsible official" means one of the following:

(A) For a corporation: a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation, or a

duly authorized representative of such person if the representative is responsible for the overall operation of one or more manufacturing, production, or operating facilities applying for or subject to a permit and either:

- (i) The facilities employ more than 250 persons or have gross annual sales or expenditures exceeding \$25 million (in second quarter 1980 dollars); or
- (ii) The delegation of authority to such representatives is approved in advance by the ~~permitting authority~~ DEQ;
- (B) For the partnership or sole proprietorship: a general partner or the proprietor, respectively;
- (C) For a municipality, State, Federal, or other public agency: Either a principal executive officer or ranking elected official. For purposes of this Subchapter, a principal executive officer or installation commander of a Federal agency includes the chief executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., a Regional Administrator of EPA); or
- (D) For affected sources:
 - (i) The designated representative in so far as actions, standards, requirements, or prohibitions under Title IV of the Act or the regulations promulgated thereunder are concerned; and
 - (ii) The designated representative for any other purposes under this Subchapter.

"Section 502(b)(10) changes" means changes that contravene an express permit term. Such changes do not include changes that would violate applicable requirements or contravene federally enforceable permit terms and conditions that are monitoring (including test methods), recordkeeping, reporting, or compliance certification requirements.

"Small unit" means a fossil fuel fired combustion device which serves a generator with a name plate capacity of 25 MWe or less.

"State-only requirement" means any standard or requirement pursuant to Oklahoma Clean Air Act (27A O.S. 1993 Supp. Sec. 2-5-101 et seq. as amended) that is not contained in the State Implementation Plan (SIP).

"State program" means a program approved by the Administrator under 40 CFR C.F.R Part 70.

"Stationary source" means any building, structure, facility, or installation that emits or may emit any regulated air pollutant or any pollutant listed under section 112(b) of the Act.

"Trivial activities" means any individual or combination of air emissions units that are considered inconsequential and are on a list approved by the Administrator and contained in Appendix J. Any activity to which a State or federal applicable requirement applies is not trivial even if included on the trivial activities list.

"Unit" means, for purposes of Title IV, a fossil fuel-fired combustion device.

252:100-8-3. **Applicability**

(a) **Covered sources.** Except as exempted from the requirement to obtain a permit under subsection (b) of this Section and or elsewhere in this Subchapter Chapter, the following sources listed below are subject to the permitting requirements under this Subchapter Chapter. A covered source shall remain a Part 70 source until a federally enforceable permit is obtained which contains emission limitations and/or conditions to limit the operation of the facility to below that which would define it as a covered source pursuant to this section 252:100-8-3(a). [NOTE: The underlined language was formerly 252:100-8-3(g).]

(1) Any major source (as defined in OAC 252:100-8-2);

(2) Any source, ~~including an area source, subject to a NPS standard, limitation, or other requirement under section 111 of the Act;~~

(3) Any source, including an area source, subject to a NESHAP standard or other requirement under section 112 of the Act, except that a source is not required to obtain a permit solely because it is subject to regulations or requirements under section 112(r) of the Act;

(4) Any affected source (as defined in OAC 252:100-8-2); and

(5) Any source in a source category designated by the Administrator pursuant to 40 CFR C.F.R. §70.3; and

(6) Any major source required to have a permit under Parts 7 or 9 of this Subchapter.

(b) **Source category exemptions.**

(1) All sources listed in subsection (a) of this section that are not major sources, affected sources, or solid waste incineration units required to obtain a permit pursuant to section 129(e) of the Act, are exempt from the obligation to obtain a Part 70 permit unless required to do so by appropriate implementation of EPA administrative rulemaking for non-major sources. Any such exempt source may opt to apply for a permit under these rules and shall be issued a permit if the applicant otherwise satisfies all of the requirements of this Chapter.

(2) If the Administrator determines after appropriate rulemaking that an exemption is applicable to non-major sources when adopting standards or other requirements under section 111 or section 112 of the Act after July 21, 1992, then at that time the exemption will apply.

(3) Unless otherwise required to obtain a Part 70 permit, the following source categories are exempted from the obligation to obtain a Part 70 permit:

(A) All sources in source categories that would be required to obtain a permit solely because they are subject to part 60, subpart AAA -- Standards of Performance for New Residential Wood Heaters; and

(B) All sources in source categories that would be required to obtain a permit solely because they are subject to part 61, subpart M -- National Emission Standard for Hazardous Air Pollutants for Asbestos, Section 61.145, Standard for

Demolition and Renovation.

~~(c) Emissions units and covered sources (Part 70 sources).~~

~~(1) For major sources, Part 70 permits shall include all applicable requirements and state only requirements for all relevant emissions units in the major source.~~

~~(2) For any non major source subject to this Subchapter, Part 70 permits shall include all applicable requirements which apply to emissions units that cause the source to be subject to the requirement to obtain a permit. [NOTE: 252:100-8-3(c)(1) is covered in 252:100-8-6(a) and (c)(2) was deleted.]~~

~~(d) Fugitive emissions. Fugitive emissions from a covered source shall be included in the permit application and the permit in the same manner as stack emissions, regardless of whether the source category in question is included in the list of sources contained in the definition of major source. [NOTE: Revised and moved to 252:100-8-5(c)(3)(A)]~~

~~(e) Insignificant activities.~~

~~(1) The insignificant activities and emissions levels shall be as follows:~~

~~(A) emissions will not exceed one pound (1 lb.) per hour for any one criteria pollutant, and~~

~~(B) emissions of toxic air contaminants will not exceed the de minimis requirements set forth under 252:100 41 43(a)(5).~~

~~(2) In addition to the quantity thresholds in (1)(A) and (1)(B) "Insignificant Activity" also means any individual or combination of air emissions sources at a facility that have an aggregate potential to emit that does not increase the overall potential to emit of the entire facility for a given regulated pollutant by more than 10% above the "baseline" permitted limit which excludes the insignificant activities. Thus, insignificant activities may apply to original permit application, permit modifications/amendments, and/or permit renewals. The cumulative amount of activities claimed as insignificant during a Title V permit term shall not increase the potential to emit of the entire facility by more than 10% of the permit limit for a given pollutant from the date of permit issuance to the date of application for renewal. These insignificant activities cannot conflict with significant emission levels in any Title V program. Insignificant activities must be identified but not quantified (except to the extent necessary to demonstrate their insignificance) in the permit application. The Agency shall maintain a list of activities which are considered to be insignificant without quantification by the permittee. The Agency shall also maintain a list of activities which are determined to be trivial. "Trivial activity" means any individual or combination of air emissions units at a Part 70 source which are considered inconsequential as determined by the Agency. Trivial activities need not be identified in the permit application, amendment or renewal. [NOTE: Moved to 252:100-8-2]~~

~~(f) Applicability determinations. Any person may submit a request in writing that the Agency make a determination as to~~

whether a particular source or installation, which that person operates or proposes to operate, is subject to the permit requirements of this rule. The request must contain such information as is believed sufficient for the Agency to make the requested determination. The Agency may request any additional information that it needs for purposes of making the determination. [NOTE: Moved to 252:100-8-1.2(c)]

~~(g) Covered sources.~~ A covered source shall remain a Part 70 source until a federally enforceable permit is obtained which contains emission limitations and/or conditions to limit the operation of the facility to below that which would define it as a covered source pursuant to 252:100-8-3(a). [NOTE: Moved to 252:100-8-3(a)]

252:100-8-4. ~~Title V permits required~~ Requirements for construction and operating permits

(a) Construction permits.

(1) Construction permit required. No person shall cause or allow the construction or ~~modification~~ installation of any new ~~minor or major source~~ facility that will require a Part 70 operating permit without first obtaining a DEQ-issued air quality construction permit to construct or modify the source. A construction permit is also required for any physical change that would be a modification under 252:100-8-7.2(b). In addition to the requirements of this Part, sources subject to Part 7 or Part 9 of this Subchapter must also meet the applicable requirements contained therein. [NOTE: (a)(1) is from 252:100-7-15(a)(1)]

(2) Requirement for case-by-case MACT determinations.

(A) Applicability. The requirement for case-by-case MACT determinations apply to any owner or operator who constructs or reconstructs a major source of hazardous air pollutants after June 29, 1998, unless the source has been specifically regulated or exempted from regulation under a subpart of 40 CFR Part 63, or the owner or operator has received all necessary air quality permits for such construction or reconstruction before June 29, 1998.

(B) Exclusions. The following sources are not subject to this subsection.

(i) Electric utility steam generating units unless and until these units are added to the source category list.

(ii) Stationary sources that are within a source category that has been deleted from the source category list.

(iii) Research and development activities as defined in 40 CFR § 63.41.

(C) MACT determinations. If subject to this subsection, an owner or operator may not begin actual construction or reconstruction of a major source of HAP until obtaining from the DEQ an approved MACT determination in accordance with the following regulations: 40 CFR 63.41, 40 CFR 63.43 and 40 CFR 63.44, which are hereby incorporated by reference as they exist on July 1, 1997.

(b) Operating permits.

(1) Operating permits required. Except as provided in paragraphs subparagraphs (1) (A) and (2) (B) of this section, no Title V Part 70 source subject to this Chapter may operate after the time that it is required to file a timely application with the DEQ, except in compliance with a DEQ-issued permit.

(A)(1) If the owner or operator of a source subject to the requirement to obtain a permit submits a timely application for permit issuance or renewal, that source's failure to have a permit shall not be a violation of the requirement to have such a permit until the DEQ takes final action on the application. This protection shall cease to apply if the applicant fails to submit, by the deadline specified in writing by the DEQ or OAC 252:100-8-4 252:100-8-5, any additional information identified as being reasonably required to process the application.

(B)(2) If the owner or operator of a source subject to this Subchapter files a timely application that the DEQ determines to be administratively incomplete due to the applicant's failure to timely provide additional information requested by the DEQ at the end of the DEQ's administrative completeness review period, the applicant loses the protection granted under paragraph (A) (1) of this section, as a result of its failure to timely provide information requested by the DEQ, the The source's failure to have a permit shall be deemed a violation of this Subchapter.

(C)(3) Filing an operating permit application shall not affect the requirement, if any, that any a source have a construction preconstruction permit under Title I of the federal Clean Air Act.

(2) Duty to apply. For each Part 70 source, the owner or operator shall submit a timely and complete permit application on forms supplied by the Division DEQ in accordance with this section.

(3) Timely application. Sources that are subject to the operating permit program established by this Chapter as of the date the program is approved by EPA and becomes effective (the "effective date") March 6, 1996, shall file applications on the following schedules outlined in OAC 252:100-8-5(b)(2) 252:100-8-4(b)(4). A timely application is one that is postmarked on or before the relevant date listed below. In the event a major source consists of operations under multiple SIC codes, the primary main activity shall form the basis for the initial permit application.

(4) Application submittal schedule. The following sources are subject to the operating permit program and shall submit initial permit applications according to the following schedule.

(A) No later than six months after the effective date of the federally approved interim state operating permit program September 5, 1996:

(i) Affected sources under the acid rain provisions of the federal Clean Air Act shall submit a permit application for at least the affected units at the site. Regardless of the effective date of the program and the requirement to file an application defined in this section, applications for initial Phase II acid rain permits shall be submitted to the DEQ no later than January 1, 1996, for sulfur dioxide, and by January 1, 1998, for nitrogen oxides, pursuant to the Act, §407.

(ii) Any owner or operator shall submit no less than one-third of their total applications for major Part 70 sources located at sources classified by the following Source Standard Industrial Classification Codes and which belong to a single major industrial grouping other than 28 (Chemicals and allied products) or 29 (Petroleum refining and related industries):

(I) Petroleum and Natural Gas, 1311;

(II) Natural Gas Liquids, 1321;

(III) Electric Services, 4911, 4961;

(IV) Natural Gas Transmission, 4922;

(V) Natural Gas Transmission and Distribution, 4923; and

(VI) Petroleum Bulk Stations and Terminals, 5171.

(B) All remaining Part 70 sources identified in (b)-(2)-(4)(A)(ii) of this Subsection shall be subject to the operating permit program and shall submit initial permit applications no later than 12 months after the effective date of the federally approved interim state operating permit program March 5, 1997.

(C) No later than 12 months after the effective date of the federally approved interim state operating permit program March 5, 1997, any owner or operator shall submit their applications for major Part 70 sources located at sources classified by the following Standard Industrial Classification Codes:

(i) Metals, 3312, 3315, 3321, 3379, 3341, 3351, 3411, 3412, 3432, 3466,

(ii) Brick Plants, 3251, 3297,

(iii) Commercial Printing, 2752, 2761.

(D) No later than 28 months after the effective date of the federally approved interim state operating permit program, July 5, 1998, any owner or operator shall submit their applications for major Part 70 sources located at sources classified by the following Standard Industrial Classification Codes:

(i) Refineries, 2911;

(ii) Cement Plants, 3241;

(iii) Chemical/Carbon, 2819, 2821, 2851, 2861, 2869, 2891, 2895, 2899, 2999, 3053, 3086, 3089;

(iv) Petroleum Transportation/Terminals/Storage, 4612, 4613;

(v) Food Products, 2013, 2074, 2095.

(E) All remaining Part 70 sources shall be subject to the operating permit program and shall submit initial permit applications no later than 36 months after the effective date of the federally approved interim state operating permit program March 6, 1999.

(5) Newly regulated sources Application following effective date. A source that becomes subject to the operating permit program established by this Chapter at any time following the effective date shall file an administratively complete operating permit application within 180 days of commencement of operation.

(6) Application acceptability. Notwithstanding the deadlines established in paragraph (4) paragraphs (1), (2), and (3) of this subsection, an application filed prior to the above deadlines following submission of the state program to EPA for approval shall be accepted for processing. ~~For purposes of the 60 day administrative review period established in OAC 252:2-15, the official login date for any Part 70 operating permit application submitted according to the interim schedule in this subsection shall be the date on which the DEQ begins its administrative completeness review.~~

(7) 112(g) applications. A source that is required to meet the requirements under section 112(g) of the federal Clean Air Act, or to have a permit under a preconstruction review program under Title I of such Act, shall file an application to obtain an operating permit or permit amendment or modification within twelve months of commencing operation. Where an existing Part 70 operating permit would prohibit such construction or change in operation, the source must obtain a construction permit revision before commencing construction.

(8) Application for renewal. Sources subject to this Chapter shall file an application for renewal of an operating permit at least six months before the date of permit expiration, unless a longer period (not to exceed 18 months) is specified in the permit. Renewal periods greater than six months are subject to negotiation on a case-by-case basis.

(9) Phase II acid rain permits. Sources required to submit applications under the Acid Rain Program ~~should~~ shall submit these applications as required by 40 CFR 72.30(b)(2)(i) through (viii).

(10) Application completeness. See Uniform Permitting Rules, ~~OAC 252:010-3-50 and 3-51~~ 252:2-15-70 and the definition of administratively complete in 252:100-8-2.

[NOTE: 252:100-8-4(b)(2) through (10) from 252:100-8-5(b)(1) through (8)]

252:100-8-5. Permit applications

~~(a) Construction permit.~~ Any new source or modified source which becomes subject to this Subchapter shall be required to obtain a construction permit in accordance with OAC 252:100-7 prior to commencement of construction.

~~(b) Duty to apply.~~ For each Part 70 source, the owner or

~~operator shall submit a timely and complete permit application on forms supplied by the Division in accordance with this section.~~

~~(1) Timely application. Sources that are subject to the operating permit program established by this Chapter as of the date the program is approved by EPA and becomes effective (the "effective date") shall file applications on the following schedules outlined in OAC 252:100-8-5(b)(2) 252:100-8-4(b)(2). In the event a major source consists of operations under multiple SIC codes, the main activity shall form the basis for the initial permit application.~~

~~(2) Application submittal schedule. The following sources are subject to the operating permit program and shall submit initial permit applications according to the following schedule.~~

~~(A) No later than six months after the effective date of the federally approved interim state operating permit program:~~

~~(i) Affected sources under the acid rain provisions of the federal Clean Air Act shall submit a permit application for at least the affected units at the site. Regardless of the effective date of the program and the requirement to file an application defined in this section, applications for initial Phase II acid rain permits shall be submitted to the DEQ no later than January 1, 1996, for sulfur dioxide, and by January 1, 1998, for nitrogen oxides, pursuant to the Act, §407.~~

~~(ii) Any owner or operator shall submit no less than one-third of their total applications for major sources located at sources classified by the following Source Standard Industrial Classification Codes and which belong to a single major industrial grouping other than 28 (Chemicals and allied products) or 29 (Petroleum refining and related industries):~~

~~(I) Petroleum and Natural Gas, 1311;~~

~~(II) Natural Gas Liquids, 1321;~~

~~(III) Electric Services, 4911, 4961;~~

~~(IV) Natural Gas Transmission, 4922;~~

~~(V) Natural Gas Transmission and Distribution, 4923;~~

~~and~~

~~(VI) Petroleum Bulk Stations and Terminals, 5171.~~

~~(B) All remaining Part 70 sources identified in (b)(2)(A)(ii) of this Subsection shall be subject to the operating permit program and shall submit initial permit applications no later than 12 months after the effective date of the federally approved interim state operating permit program.~~

~~(C) No later than 12 months after the effective date of the federally approved interim state operating permit program, any owner or operator shall submit their applications for major sources located at sources classified by the following Standard Industrial Classification Codes:~~

~~(i) Metals, 3312, 3315, 3321, 3379, 3341, 3351, 3411, 3412, 3432, 3466,~~

~~(ii) Brick Plants, 3251, 3297,~~

~~(iii) Commercial Printing, 2752, 2761.~~

~~(D) No later than 28 months after the effective date of the federally approved interim state operating permit program, any owner or operator shall submit their applications for major sources located at sources classified by the following Standard Industrial Classification Codes:~~

~~(i) Refineries, 2911;~~

~~(ii) Cement Plants, 3241;~~

~~(iii) Chemical/Carbon, 2819, 2821, 2851, 2861, 2869, 2891, 2895, 2899, 2999, 3053, 3086, 3089;~~

~~(iv) Petroleum Transportation/Terminals/Storage, 4612, 4613;~~

~~(v) Food Products, 2013, 2074, 2095.~~

~~(E) All remaining Part 70 sources shall be subject to the operating permit program and shall submit initial permit applications no later than 36 months after the effective date of the federally approved interim state operating permit program.~~

~~(3) Application following effective date. A source that becomes subject to the operating permit program established by this Chapter at any time following the effective date shall file an administratively complete operating permit application within 180 days of commencement of operation.~~

~~(4) Application acceptability. Notwithstanding the deadlines established in paragraphs (1), (2), and (3) of this subsection, an application filed prior to the above deadlines following submission of the state program to EPA for approval shall be accepted for processing. For purposes of the 60 day administrative review period established in OAC 252:2-15, the official login date for any Part 70 operating permit submitted according to the interim schedule in this subsection shall be the date on which the DEQ begins its administrative completeness review.~~

~~(5) 112(g) applications. A source that is required to meet the requirements under section 112(g) of the federal Clean Air Act, or to have a permit under a preconstruction review program under Title I of such Act, shall file an application to obtain an operating permit or permit amendment or modification within twelve months of commencing operation. Where an existing Part 70 operating permit would prohibit such construction or change in operation, the source must obtain a permit revision before commencing construction.~~

~~(6) Application for renewal. Sources subject to this Chapter shall file an application for renewal of an operating permit at least six months before the date of permit expiration, unless a longer period (not to exceed 18 months) is specified in the permit. Renewal periods greater than six months are subject to negotiation on a case by case basis.~~

~~(7) Phase II acid rain permits. Sources required to submit~~

~~applications under the Acid Rain Program should submit these applications as required by 40 CFR 72.30(b)(2)(i) through (viii).~~

~~(8) Application completeness. See Uniform Permitting Rules, OAC 252:010-3-50 and 3-51.~~

[NOTE: 252:100-8-5(b)(1) through (9) moved to 252:100-8-4(b)]

~~(9) Application content for renewal of expiring permit. In submitting an application for renewal of a DEQ issued Part 70 operating permit, a source may identify terms and conditions in its previous permit that should remain unchanged and incorporate by reference those portions of its existing permit and the permit application and any permit amendment or modification applications that describe products, processes, operations, and emissions to which those terms and conditions apply. The source must identify specifically and list which portions of its previous permit and/or applications are incorporated by reference. In addition, a renewal application must contain:~~

~~(i) information specified in OAC 252:100-8-5(d) for those products, processes, operations, and emissions that:~~

~~(I) are not addressed in the existing permit;~~

~~(II) are subject to applicable requirements or state only requirements that are not addressed in the existing permit; or~~

~~(III) as to which the source seeks permit terms and conditions that differ from those in the existing permit; and~~

~~(ii) a compliance plan and certification as required in 252:100-8-5(d)(8). [NOTE: 252:100-8-5(b)(9) moved to 252:100-8-7.1(b)]~~

~~(a)(10) Confidential information. If a source submits information to the DEQ under a claim of confidentiality, the source shall also submit a copy of such information directly to the Administrator, if the DEQ requests that the source do so.~~

~~(b)(e) Duty to supplement or correct application. Renumbered as OAC 252:100-6-50(f) See 252:100-6-50(e).~~

~~(c)(d) Standard application form and required information.~~

Sources that are subject to the Part 70 permit program established by this Chapter shall file applications on the standard application form that the DEQ makes available for that purpose in accordance with OAC 252:2-15. The application must include information needed to determine the applicability of any applicable requirement, or state-only requirement, or to evaluate the fee amount required under the schedule approved pursuant to OAC ~~252:100-8-9~~ 252:100-5-2.2(b)(2). The applicant shall submit the information called for by the application form for each emissions unit at the source to be permitted. The source must provide a list of any ~~such~~ insignificant activities that are exempted because of size or production rate. Trivial activities need not be listed. The standard application form and any attachments shall require that the following information required by 252:100-8-5(d) and/or 252:100-8-5(e) be provided+.

(d) Construction permit applications.

(1) An application for a construction permit shall provide data and information required by this Chapter and/or requested on the application from form available from the DEQ pursuant to the requirements of this Chapter. Such data and information shall include including but not be limited to: site information, process description, emission data and when required, BACT, modeling and sampling point data as follows:

(A) BACT determination. To be approved for a construction permit, a major source must demonstrate that the control technology to be applied is the best that is available for each pollutant that would cause the source to be defined as a major source. This determination will be made on a case by case basis taking into account energy, environmental, cost and economic impacts of alternative control systems.

(B) Modeling. Any air quality modeling or ambient impact evaluation that is required shall be prepared in accordance with procedures acceptable to the DEQ and accomplished by the applicant.

(C) Sampling points. If required by the DEQ an application shall show how the new source will be equipped with sampling ports, instrumentation to monitor and record emission data and other sampling and/or testing equipment. [NOTE: 252:100-8-1.4(b)(1) was taken from 252:100-7-15(b)]

(2) Construction permit applications for new sources must also include the requirements for operating permits contained in 252:100-8-5(e) to the extent they are applicable.

(e) Operating permit applications.

(1) Identifying information, including company name and address (or plant name and address if different from the company name), owner's name and agent, and telephone number and names of plant site manager/contact.

(2) A description of the source's processes and products (by two-digit Standard Industrial Classification Code) including any associated with each alternate scenario identified by the source.

(3) The following emissions-related information:

(A) All emissions of pollutants for which the source is major, and all emissions (including fugitive emissions) of regulated air pollutants. The permit application shall describe all emissions of regulated air pollutants emitted from any emissions unit, except where such units are exempted under this subsection ~~(d)~~ 252:100-8-5(c) or OAC 252:100-8-3(b). ~~The source shall submit additional information related to the emissions of air pollutants sufficient to verify which requirements are applicable to the source, and other information necessary to determine the amount of any permit fees owed under the fee schedule approved pursuant to OAC 252:100-8-9.~~

(B) Identification and description of all points of emissions described in subparagraph ~~(d)~~ (e) (3) (A) of this section in sufficient detail to establish the basis for fees

and applicability of the ~~federal Clean Air Act's~~ requirements.

(C) Emissions rates in tons per year and in such terms as are necessary to establish compliance consistent with the applicable standard.

(D) The following information to the extent it is needed to determine or regulate emissions:

- (i) fuels,
- (ii) fuel use,
- (iii) raw materials,
- (iv) production rates, and
- (v) operating schedules.

(E) Identification and description of air pollution control equipment and compliance monitoring devices or activities.

(F) Limitations on source operation affecting emissions or any work practice standards, where applicable, for all regulated pollutants at the covered source.

(G) Other information required by any applicable requirement, or state-only requirement (including information related to stack height limitations developed pursuant to section 123 of the ~~federal Clean Air Act~~).

(H) Calculations on which the information in items (A) through (G) of this paragraph is based.

(4) The following air pollution control requirements:

(A) Citation and description of all applicable requirements, and all state-only requirements, ~~and~~

(B) Description of or reference to any applicable test method for determining compliance with each applicable requirement and state-only requirement.

(5) Other specific information required under the DEQ's rules and statutes to implement and enforce other applicable requirements of the ~~federal Clean Air Act~~ or of this Chapter or to determine the applicability of such requirements.

(6) An explanation of any proposed exemptions from otherwise applicable requirements and state-only requirements.

(7) Additional information as determined to be necessary by the DEQ to define alternative operating scenarios identified by the source pursuant to ~~0AC 252:100-8-6(a)(9)~~ or to define permit terms and conditions implementing ~~0AC 252:100-8-6(h)~~ 252:100-8-6(f) or ~~0AC 252:100-8-6(a)(10)~~.

(8) A compliance plan for all covered sources that contains all the following:

(A) A description of the compliance status of the source with respect to all applicable requirements and state-only requirements, as follows:

~~(B) A description as follows:~~

(i) For applicable requirements, and state-only requirements, with which the source is in compliance, a statement that the source will continue to comply with such requirements.

(ii) For applicable requirements, and state-only requirements, that will become effective during the permit term,

a statement that the source will meet such requirements on a timely basis shall satisfy this provision, unless a more detailed schedule is expressly required by the applicable requirement.

(iii) For requirements for which the source is not in compliance at the time of permit issuance, a narrative description of how the source will achieve compliance with such requirements.

~~(B)(C)~~ For sources not in complete compliance, a A compliance schedule as follows:

~~(i) For applicable requirements, and state only requirements, with which the source is in compliance, a statement that the source will continue to comply with such requirements.~~

~~(ii) For applicable requirements, and state only requirements, that will become effective during the permit term, a statement that the source will meet such requirements on a timely basis. A statement that the source will meet in a timely manner applicable requirements that become effective during the permit term shall satisfy this provision, unless a more detailed schedule is expressly required by the applicable requirement.~~

~~(i)(iii)~~ A schedule of compliance for sources that are not in compliance with all applicable requirements, and state-only requirements, at the time of permit issuance. Such a schedule shall include a schedule of remedial measures, including an enforceable sequence of actions with milestones, leading to compliance with any applicable requirements, and state-only requirements, for which the source will be in noncompliance at the time of permit issuance. This compliance schedule shall resemble and be equivalent in stringency to that contained in any judicial consent decree or administrative order to which the source is subject. Any such schedule of compliance shall be supplemental to, and shall not sanction non-compliance with, the applicable requirements on which it is based.

~~(ii)(D)~~ A schedule for submission of certified progress reports no less frequently than every 6 months ~~for sources required to have a schedule of compliance under OAC 252:100-8-5(d)(8)(C)(iii).~~

~~(C)(E)~~ The compliance plan content requirements specified in this paragraph shall apply and be included in the acid rain portion of a compliance plan for an affected source, except as specifically superseded by regulations promulgated under Title IV of the ~~federal Clean Air Act~~ with regard to the schedule and method(s) the source will use to achieve compliance with the acid rain emissions limitations.

(9) Requirements for compliance certification, including the following:

(A) A certification of compliance with all applicable

requirements, and state-only requirements, by a responsible official consistent with subsection ~~(e)~~ (f) of this section and section 114(a)(3) of the ~~federal Clean Air Act~~;

(B) A statement of methods used for determining compliance, including a description of monitoring, recordkeeping, and reporting requirements and test methods;

(C) A schedule for submission of compliance certifications during the permit term, which shall be submitted annually, or more frequently if required by an underlying applicable requirement, state-only requirements, or by the permitting authority; and

(D) A statement indicating the source's compliance status with any applicable enhanced monitoring and compliance certification requirements of the ~~federal Clean Air Act~~.

(10) The use of nationally-standardized forms for acid rain portions of permit applications and compliance plans, as required by regulations promulgated under Title IV of the ~~federal Clean Air Act~~.

~~(11) A list of any such units which satisfy the definition of either insignificant activities or de minimis emissions.~~

(f)~~(e)~~ **Certification.** Any application form, report, or compliance certification submitted pursuant to this Chapter shall contain certification by a responsible official of truth, accuracy, and completeness. This certification and any other certification required under this Chapter shall be signed by a responsible official and shall contain the following language: "I certify, based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete."

(g)~~(f)~~ **Number of application copies.** See Part 3 of OAC 252:2-15.

252:100-8-6. Permit content

(a) **Standard permit requirements.** ~~To the extent practicable, every~~ Part 70 permits ~~permit~~ issued under this Chapter shall include all applicable requirements, and state-only requirements, (as defined in OAC 252:100-8-2) that apply to the permitted source at the time of issuance. Each permit shall include the following elements:

(1) **Emission limitations and standards.** The permit shall specify emissions limitations and standards that constitute applicable requirements, and state-only requirements, and shall include those operational ~~requirements~~ conditions and limitations necessary to assure compliance with all applicable such requirements.

(A) The permit shall specify and reference the origin of and authority for each term or condition, and identify any difference in form as compared to the applicable requirement, ~~and~~ or state-only requirement, upon which the term or condition is based.

(B) The permit shall state that, where an applicable requirement of the ~~federal Clean Air Act~~ is more stringent than an applicable requirement of regulations promulgated

under Title IV of the ~~federal Clean Air~~ Act, both provisions shall be incorporated into the permit and shall be enforceable by EPA.

(C) If an ~~applicable~~ the State implementation plan or an applicable requirement allows a source to comply through an alternative emission limit or means of compliance, a source may request that such an alternative limit or means of compliance be specified in its permit. Such an alternative emission limit or means of compliance shall be included in a source's permit upon a showing that it is quantifiable, accountable, enforceable, and based on replicable procedures. The source shall propose permit terms and conditions to satisfy these requirements in its application.

(2) **Permit duration.**

(A) Operating Permits. The permit shall specify a fixed term. The DEQ shall issue permits for any fixed period requested in the permit application, not to exceed five years, except as provided in subparagraphs (i) ~~(A)~~ and (ii) ~~(B)~~ of this paragraph:

(i) ~~(A)~~ Permits issued to affected sources shall in all cases have a fixed term of five years.

(ii) ~~(B)~~ Permits issued to solid waste incineration units combusting municipal waste subject to standards under section 129(e) of the ~~federal Clean Air~~ Act shall have a term not to exceed 12 years. Such permits shall be reviewed every five years.

(B) Construction permits. See 252:100-8-1.4.

(3) **Monitoring and related recordkeeping and reporting requirements.**

~~(A) Each permit shall contain the following requirements with respect to monitoring:~~ Monitoring requirements.

(i) All emissions monitoring and analysis procedures or test methods required under ~~the applicable requirements,~~ and state-only requirements, including any procedures and methods promulgated pursuant to sections 114(a)(3) or 504(b) of the ~~federal Clean Air~~ Act;

(ii) Where ~~the an~~ an applicable requirement, ~~and or~~ or state-only requirement, does not require periodic testing or instrumental or non-instrumental monitoring (which may consist of recordkeeping designed to serve as monitoring), periodic monitoring during the relevant time period sufficient to yield reliable data ~~from the relevant time period~~ that are representative of the source's compliance with the permit, as reported pursuant to (a)(3)(C) of this section. Such monitoring requirements shall assure use of terms, test methods, units, averaging periods, and other statistical conventions consistent with the applicable requirement, or state-only requirement. Recordkeeping provisions may be sufficient to meet the requirements of this subparagraph.

(iii) As necessary, requirements concerning the use,

maintenance, and, where appropriate, and installation of monitoring equipment or methods.

(iv) Provisions for the permittee to request the use of alternative test methods or analysis procedures, and provisions for the DEQ to approve or disapprove the request within 60 days.

(B) Recordkeeping requirements. ~~With respect to recordkeeping, the~~ The permit shall incorporate all applicable recordkeeping requirements and require, where applicable, the following:

(i) Records of required monitoring information that include the following:

- (I) The date, place as defined in the permit, and time of sampling or measurements;
- (II) The date(s) analyses were performed;
- (III) The company or entity that performed the analyses;
- (IV) The analytical techniques or methods used;
- (V) The results of such analyses; and
- (VI) The operating conditions ~~as~~ existing at the time of sampling or measurement.

(ii) Retention of records of all required monitoring data and support information for a period of at least five years from the date of the monitoring sample, measurement, report, or application. Support information includes all calibration and maintenance records and all original strip-chart recordings for continuous monitoring instrumentation, and copies of all reports required by the permit. Where appropriate, the permit may specify that records may be maintained in computerized form.

(C) Reporting requirements. ~~With respect to reporting, the~~ The permit shall incorporate all applicable reporting requirements and require the following requirements:

(i) A permit issued under this ~~Chapter~~ Part shall require the permittee to submit a report of any required monitoring at least every six months. To the extent possible, the schedule for submission of such reports shall be timed to coincide with other periodic reports required by the permit, including the permittee's annual compliance certification. However, the reports may be submitted at any time within the reporting period, as stipulated in the permit.

(ii) Each report submitted under (C) (i) of this paragraph shall identify any exceedances from permit requirements since the previous report that have been monitored by the monitoring systems required under the permit, and any exceedances from the monitoring, recordkeeping and reporting requirements under the permit.

(iii) In addition to semiannual monitoring reports, each permittee shall be required to submit supplemental reports as follows:

- (I) Any exceedance resulting from emergency or upset

conditions as defined in ~~OAC 252:100-8-6(g)~~ 252:100-8-6(e) shall be reported within 24 hours of the date on which the permittee first becomes aware of the exceedance, if the permittee wishes to assert the affirmative defense authorized under said section, and the permittee shall submit a follow up written report within 10 working days of first becoming aware of the exceedance. The initial report such notice must contain a description of the emergency, any steps taken to mitigate emissions and corrective actions taken.

[NOTE: The underlined language is from 252:100-8-6(g)(3)(D)]

(II) Any exceedance that poses an imminent and substantial danger to public health, safety, or the environment shall be reported as soon as is practicable; but under no circumstance shall notification be more than 24 hours after exceedance.

(III) Any other exceedances that are identified in the permit as requiring more frequent reporting than the permittee's semiannual report shall be reported on the schedule specified in the permit.

(IV) All reports of exceedances shall identify the probable cause of the exceedances and any corrective actions or preventative measures taken.

(iv) Every report submitted under this subsection shall be certified by a responsible official, except that if a report of an exceedance required under (C)(iii) of this paragraph must be submitted within ten days of the exceedance, the report may be submitted in the first instance without a certification if an appropriate certification is provided within ten days thereafter, together with any corrected or supplemental information required concerning the exceedance. Reports submitted shall be consistent with the requirements of ~~OAC 252:100-9~~.

(4) **Risk management plans.** If the source is required to develop and register a risk management plan pursuant to section 112(r) of the ~~federal Clean Air Act~~, the permit need only specify that ~~it~~ the permittee will comply with the requirement to register such a plan. Although the requirement to have a risk management plan may be a term of the permit, the risk management plan contents are not part of the permit.

(5) **Title IV allowances.**

(A) No permit revision shall be required for increases in emissions that are authorized by allowances acquired pursuant to the acid rain program, provided that such increases do not require a permit revision under any other applicable requirement.

(B) No limit shall be placed on the number of allowances held by the source. The source may not, however, use allowances as a defense to noncompliance with any other applicable requirement.

(C) The permit shall prohibit emissions exceeding any allowance that the source lawfully holds under Title IV of the ~~federal Clean Air Act~~ or the regulations promulgated thereunder. Compliance with this paragraph will be determined on January 31st of any given year and be based on actual emissions and the number of allowances held for the previous calendar year.

(6) **Severability clause.** The permit shall include a severability clause to ensure the continued validity of the various permit requirements in the event of a challenge to any portions of the permit.

(7) **General requirements.** The permit shall include provisions stating the following:

(A) The permittee must comply with all conditions of the permit. Any permit noncompliance constitutes a violation of the Oklahoma Clean Air Act and is grounds for:

(i) enforcement action;

(ii) permit termination, revocation and reissuance, or modification; or

(iii) denial of a permit renewal application.

(B) It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit. However, nothing in this subsection shall be construed as precluding consideration of a need to halt or reduce activity as a mitigating factor in assessing penalties for noncompliance if the health, safety, or environmental impacts of halting or reducing operations would be more serious than the impacts of continuing operations.

(C) The permit may be modified, revoked, reopened, and reissued, or terminated for cause. Except as provided under ~~OAC 252:100-8-7(e)(1)~~ 252:100-8-7.2(b)(1) for minor permit modifications, the filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or of a notification of planned changes or anticipated noncompliance does not stay any permit condition.

(D) The permit does not convey any property rights of any sort, or any exclusive privilege.

(E) The permittee shall furnish to the DEQ, upon receipt of a written request and within a reasonable time, any information that the DEQ may request to determine whether cause exists for modifying, reopening, or revoking and reissuing or terminating the permit or to determine compliance with the permit. Upon request, the permittee shall also furnish to the DEQ copies of records required to be kept by the permit. The permittee may make a claim of confidentiality pursuant to ~~OAC 252:100-8-5(b)(10)~~ 27A O.S. 1993 Supp. Section 2-5-105.18 for any information or records submitted under this paragraph.

(8) **Fees.** The permit shall provide that the permittee will

pay fees to the DEQ consistent with the fee schedule established under ~~OAC 252:100-8-9~~ 252:100-5-2.2.

(9) **Emissions trading.** The permit shall provide that no permit revision shall be required under any approved economic incentives, marketable permits, emissions trading and other similar programs or processes for changes that are provided for in the permit.

(10) **Operating scenarios.** The permit shall include terms and conditions applicable to all operating scenarios described in the permit application and eligible for approval under applicable requirements, and state-only requirements. The permit shall authorize the permittee to make changes among operating scenarios authorized in the permit without notice, but shall require the permittee contemporaneously with making a change from one operating scenario to another to record in a log at the permitted facility the scenario under which it is operating.

(11) **Emissions averaging.** The permit shall include terms and conditions, if the permit applicant requests them, for the trading or averaging of emissions increases and decreases in the permitted facility, to the extent that the applicable requirements provide for trading or averaging such increases and decreases. Such terms and conditions shall include terms under subsections (a) and (c) of this section to determine compliance and shall satisfy all requirements of the applicable requirements authorizing such trading or averaging.

(b) **Federally enforceable requirements.**

(1) Except as provided in paragraph (b)(2) of this section, all terms and conditions in a permit issued under this section, including any provisions designed to limit a source's potential to emit, are enforceable by the DEQ, by EPA, and by citizens under section 304 of the ~~federal Clean Air Act~~.

(2) Notwithstanding paragraph (b)(1) of this section, the DEQ shall designate as not being federally enforceable under the ~~federal Clean Air Act~~ any terms and conditions included in the permit that are not required under the ~~federal Clean Air Act~~ or any of its applicable requirements, and such terms and conditions shall not be enforceable by EPA and citizens under section 304 of the ~~federal Clean Air Act~~.

(c) **Compliance requirements.** All permits issued under this ~~Chapter Part~~ shall contain the following elements with respect to compliance:

(1) Consistent with paragraph (a)(3) of this section, compliance certification, testing, monitoring, reporting, and recordkeeping requirements sufficient to assure compliance with the terms and conditions of the permit. Any document (including reports) required by a permit under this ~~Chapter Part~~ shall contain a certification by a responsible official as to the results of the required monitoring.

(2) Inspection and entry requirements that require that, upon presentation of credentials and other documents as may be required by law, the permittee shall allow authorized

officials of the DEQ to perform the following (~~subject to the permittee's right to seek confidential treatment pursuant to OAC 252:100-8-5(b)(10) for confidential information submitted to or obtained by the DEQ under this subsection~~):

(A) Enter upon the permittee's premises during reasonable/normal working hours where a source is located or emissions-related activity is conducted, or where records must be kept under the conditions of the permit;

(B) Have access to and copy, at reasonable times, any records that must be kept under the conditions of the permit;

(C) Inspect at reasonable times and using reasonable safety practices any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under the permit; and

(D) As authorized by the ~~federal Clean Air~~ Oklahoma Clean Air Act, sample or monitor at reasonable times substances or parameters for the purpose of assuring compliance with the permit .

(3) A schedule of compliance if to the extent required under ~~OAC 252:100-8-5(d)(8)(C)~~ 252:100-8-5(e)(8)(B).

(4) To the extent required under an applicable schedule of compliance and ~~OAC 252:100-8-5(d)(8)~~ 252:100-8-5(e)(8), progress reports, to be submitted semiannually, or more frequently if specified in the applicable requirement or by the DEQ. Such progress reports shall contain the following:

(A) Dates for achieving the activities, milestones, or compliance required in the schedule of compliance, and dates when such activities, milestones or compliance were achieved; and

(B) An explanation of why any dates in the schedule of compliance were not or will not be met, and any preventive or corrective measures adopted.

(5) Requirements for compliance certification with terms and conditions contained in the permit that are federally enforceable, including emission limitations, standards, or work practices. Each permit shall specify:

(A) The frequency (which shall be annually unless the applicable requirement, and or state-only requirement, specifies submission more frequently) of submissions of compliance certifications;

(B) In accordance with paragraph (a)(3) of this section, a means for monitoring the compliance of the source with emissions limitations, standards, and work practices;

(C) A requirement that the compliance certification include the following:

(i) The identification of each term or condition of the permit that is the basis of the certification;

(ii) The permittee's current compliance status, as shown by monitoring data and other information

available to the permittee;

(iii) Whether compliance was continuous or intermittent;

(iv) The method(s) used for determining the compliance status of the source, currently and over the reporting period as required by paragraph (a)(3) of this section; and

(v) Such other facts as the DEQ may require to determine the compliance status of the source;

(D) A requirement that all compliance certifications be submitted to EPA as well as to the DEQ;

(E) Such additional requirements as may be specified pursuant to sections 114(a)(3) and 504(b) of the ~~federal Clean Air Act~~; and

(6) Such other provisions as the DEQ may require.

~~(d) General permits.~~

~~(1) The DEQ may, after notice and opportunity for public participation, issue a general permit to any source category if it concludes that the category is appropriate for permitting on a generic basis. Any general permit shall comply with all requirements applicable to other Part 70 permits. No general permit may be issued for affected sources under the acid rain program unless otherwise provided in regulations promulgated under Title IV of the federal Clean Air Act.~~

~~(2) A general permit may be issued for a source category based upon an application from a source within the source category or upon the DEQ's own initiative. The DEQ shall, following receipt of an application for a general permit, or upon a determination that issuance of a general permit for a category of sources may be appropriate, follow the same procedures for issuance of a general permit as for any other permit issued under this part.~~

~~(3) A general permit may be issued for the following purposes:~~

~~(A) to establish terms and conditions to implement applicable requirements, and state only requirements, for a source category;~~

~~(B) to establish terms and conditions to implement applicable requirements, and state only requirements, for specified categories of changes to permitted sources;~~

~~(C) to establish terms and conditions for new requirements that apply to sources with existing permits; and~~

~~(D) to establish federally enforceable caps on emissions from sources in a specified category.~~

~~(4) The DEQ may issue a general permit if it finds that:~~

~~(A) there are several permittees, permit applicants, or potential permit applicants who have the same or substantially similar operations, emissions, activities, or facilities;~~

~~(B) the permittees, permit applicants, or potential permit applicants emit the same types of regulated air pollutants,~~
~~(C) the operations, emissions, activities, or facilities are subject to the same or similar standards, limitations, and operating requirements; and~~

~~(D) the operations, emissions, activities, or facilities are subject to the same or similar monitoring requirements.~~

~~(5) A general permit issued under this section shall identify criteria by which sources may qualify for the general permit. After a general permit has been issued, any source may submit a request to be covered under the permit in the form of an application for authorization to operate under the general permit.~~

~~(A) Such application shall identify the source and provide information sufficient to demonstrate that it falls within the source category covered by the general permit, together with any additional information that may be specified in the general permit.~~

~~(B) See OAC 252:2 15 for Tier I permitting procedures and timelines for individual authorizations under general permits. The Agency shall act to approve or deny the application within 90 days of filing.~~

~~(C) A final action approving an authorization to operate under a general permit shall not be subject to public comment or judicial review.~~

~~(6) A copy of the general permit, together with a list of sources approved for coverage under it, shall be kept on file for public review at the offices of the DEQ.~~

~~(7) A general permit issued under this section shall provide that any source approved for coverage under a general permit shall be entitled to the protection of the permit shield for all operations, activities, and emissions addressed by the general permit, unless and to the extent that it is subsequently determined that the source does not qualify for the conditions and terms of the general permit.~~

~~(8) If some, but not all, of a source's operations, activities, and emissions are eligible for coverage under one or more general permits, the source may apply for and receive coverage under the general permits for the operations, activities, and emissions that are so eligible. If the source is required under OAC 252:100 8 3 of this part to obtain a permit addressing the remainder of its operations, activities, and emissions, it may apply for and receive a permit that addresses specifically only those items not covered by general permits. In such a case, the source's permit shall identify all operations, activities, and emissions that are subject to general permits and incorporate those general permits by reference. Unless the permit specifically states otherwise, the permit shield shall apply to the terms and conditions of any general permits so incorporated by reference as well as to the terms and conditions specifically stated in the permit.~~

[NOTE: General permits was moved to 252:100-8-6.1]

~~(c) Temporary sources. The DEQ may issue a single permit authorizing emissions from similar operations by the same source owner or operator at multiple temporary locations. The operation must be temporary and involve at least one change of location during the term of the permit. No affected source shall be permitted as a temporary source. Permits for temporary sources shall include the following:~~

- ~~(1) Conditions that will assure compliance with all applicable requirements at all authorized locations;~~
- ~~(2) Requirements that the owner or operator notify the permitting authority at least ten days in advance of each change in location; and~~
- ~~(3) Conditions that assure compliance with all other provisions of this section. [NOTE: Moved to 252:100-8-6.2]~~

(d) (f) Permit shield.

(1) Each operating permit issued under this section Part shall include a "permit shield" provision, which shall state that compliance with the terms and conditions of the permit (including terms and conditions established for alternate operating scenarios, emissions trading, and emissions averaging, but excluding terms and conditions for which the permit shield is expressly prohibited under this Subchapter) shall be deemed compliance with the applicable requirements identified and included in the permit.

(2) Upon request, the DEQ shall include in the permit or in a separate written finding issued with the permit a determination identifying specific requirements that do not apply to the source. The source shall specify in its application for such a determination the requirements for ~~as~~ to which the determination is requested. If the determination is issued in a separate finding, that finding shall be summarized in the permit. The permit shall state that the permit shield applies to any requirements so identified. A request for a determination to extend the shield to requirements deemed inapplicable to the source may be made either in the original permit application or in a subsequent application for a permit modification.

(3) A Part 70 permit that does not expressly state that a permit shield exists shall be presumed not to provide such a shield.

(4) Nothing in this section or in the permit shall alter or affect the following:

- (A) the provisions of section 303 of the ~~federal Clean Air Act~~, including the authority of the ~~EPA Administrator~~ under that section;
- (B) the liability of an owner or operator of a source for any violation of applicable requirements, ~~and~~ or state-only requirements, prior to or at the time of permit issuance;
- (C) the applicable requirements of the acid rain program, consistent with section 408(a) of the ~~federal Clean Air Act~~;
- or
- (D) the ability of EPA to obtain information from a source

pursuant to section 114 of the federal Clean Air Act.

(e) ~~(g)~~ **Emergencies.**

(1) When used in this Subsection, "Emergency" means any situation arising from sudden and reasonably unforeseeable events beyond the control of the source, including acts of God, which situation requires immediate corrective action to restore normal operation, and that causes the source to exceed a technology-based emission limitation under the permit, due to unavoidable increases in emissions attributable to the emergency. An emergency shall not include noncompliance to the extent caused by improperly designed equipment, lack of ~~preventative~~ preventive maintenance, careless or improper operation, or operator error. Quantification of accidental releases shall be made by the best available method.

(2) An emergency constitutes an affirmative defense to an action brought for noncompliance with such technology-based emission limitations if the conditions of paragraph ~~(g)~~ (e) (3) of this section and the reporting requirements of 252:100-8-6(a) (3) (C) (iii) (I) are met.

(3) The affirmative defense of emergency shall be demonstrated through properly signed, contemporaneous operating logs, or other relevant evidence that:

(A) An emergency occurred and that the permittee can identify the cause(s) of the emergency;

(B) The permitted facility was at the time being properly operated;

(C) During the period of the emergency the permittee took all reasonable steps to minimize levels of emissions that exceeded the emission standards, or other requirements in the permit, ~~and,~~

~~(D) The permittee submitted notice of the emergency to the DEQ within 24 hours of the time when emission limitations were exceeded due to the emergency. Such notice must contain a description of the emergency, any steps taken to mitigate emissions, and corrective actions taken. [NOTE: Moved to 252:100-8-6(a) (3) (C) (iii) (I)]~~

(4) In any enforcement proceeding, the permittee seeking to establish the occurrence of an emergency has the burden of proof.

(5) The provision in this subsection is in addition to any emergency or upset provision contained in any applicable requirement or OAC 252:100-9.

(f) ~~(h)~~ **Operational flexibility.** ~~Any operating scenario allowed for in an applicable Part 70 permit may be implemented by the facility without the need for any permit revision or any notification to the permitting authority. It is incumbent upon the Part 70 permit applicant to apply for any reasonably anticipated alternative facility operating scenarios at the time of initial or renewal permit application.~~

(1) **Applicant's duty to apply for alternative scenarios.**

Any operating scenario allowed for in an applicable Part 70 permit may be implemented by the facility without the need for

any permit revision or any notification to the permitting authority. It is incumbent upon the Part 70 permit applicant to apply for any reasonably anticipated alternative facility operating scenarios at the time of initial or renewal permit application.

(2) **Changes resulting in no emissions increases.** A permitted Part 70 source may make changes within the facility that:

(A) Are not modifications under any provision of Title I of the federal Clean Air Act;

(B) Do not cause any hourly or annual permitted emission rate of any existing emissions unit to be exceeded; ~~or~~ and

(C) Result in a net ~~Net~~ change in emissions is of zero ~~is~~ provided ~~Provided~~ that the facility provides ~~notifies~~ the Administrator and the permitting authority ~~DEQ and EPA~~ in writing at least 7 days ~~with written notification as required below~~ in advance of the proposed changes, which shall be a minimum of 7 days, or such shorter time frame that permitting authority allows for emergencies [as defined in OAC 252:100-8-6(g)]. The source, permitting authority ~~DEQ~~, and EPA shall attach each such notice to their copy of the relevant permit. For each such change, the written notification required above shall include a brief description of the change within the permitted facility, the date on which the change will occur, any change in emissions, and any permit term or condition that is no longer applicable as a result of the change. The permit shield described in ~~OAC 252:100-8-6(f)~~ 252:100-8-6(d) does not apply to any change made pursuant to this subsection.

~~(3) Emissions trading in permit.~~ A permitted source may rely on the authority of this section to trade increases and decreases in emissions within the facility, where the implementation plan provides for such emissions trades without a permit modification. In such a case, the advance written notice provided by the permittee shall identify the underlying authority authorizing the trading and shall state when the change will occur, the types and quantities of emissions to be traded, the permit terms or other applicable requirements, and state only requirements, with which the source will comply through emissions trading, and such other information as may be required by the applicable requirement authorizing the emissions trade.

~~(i) Special provisions for affected (acid rain) sources~~

~~(1) Application binding until permit issuance or denial.~~ A complete acid rain permit application is binding on the applicant and enforceable as an acid rain permit until an acid rain permit is issued or denied. For applicable permitting procedures, see OAC 252:2-15.

~~(2) Exemption petitions.~~ Applicants with small units that burn low sulfur fuel or sources that retire a unit can petition to have such units exempted from certain permitting and monitoring requirements under the acid rain regulations.

~~(3) Permit shield.~~ The acid rain portion of every operating

~~permit is covered by a permit shield. This shield assures that an applicant operating in accordance with a permit issued in accordance with Title IV of the federal Clean Air Act, will be deemed to be operating in compliance with the Acid Rain Program.~~

~~(4) Modifications. See 40 CFR 72.82.~~

~~(5) Duration. Acid rain permits will have a term of five years commencing on the permits effective date. The DEQ may issue a permit with a future effective date.~~

~~(6) Right of intervention. The Administrator may intervene as a matter of right in any administrative appeal involving an Acid Rain permit or denial of an Acid Rain permit.~~

~~(7) Administrative appeal. The administrative appeal period shall be no more than 90 days following the issuance of the Acid Rain permit and the judicial appeal period shall be no more than 90 days following a final agency action.~~

~~(8) Adoption of 40 CFR Part 72 by reference. Owners or operators of sources subject to the acid rain provisions of the federal Clean Air Act shall comply with applicable provisions of 40 CFR Part 72, as published in the Federal Register on January 11, 1993, and on March 23, 1993, which is hereby adopted by reference as rules of the Environmental Quality Board. In such regulations, the term "permitting authority" shall mean the Oklahoma Department of Environmental Quality and the term "Administrator" shall mean the Administrator of the United States Environmental Protection Agency. If the provisions or requirements of 40 CFR Part 72 conflict with this Chapter, the Part 72 provisions and requirements shall apply and take precedence.~~

~~(8) The Oklahoma Department of Environmental Quality hereby adopts and incorporates by reference the provisions of 40 CFR part 72, as published in the Federal Register on January 11, 1993, and on March 23, 1993 for purposes of implementing an acid rain program that meets the requirements of Title IV of the Clean Air Act. The term "permitting authority" shall mean the Oklahoma Department of Environmental Quality and the term "Administrator" shall mean the Administrator of the United States Environmental Protection Agency. If the provisions or requirements of 40 CFR part 72 conflict with or are not included in Oklahoma Administrative Code 252:100-8, the part 72 provisions and requirements shall apply and take precedence. [NOTE: Moved to 252:100-8-6.3]~~

252:100-8-6.1 General permits

(a) Applicability.

(1) The DEQ may, after notice and opportunity for public participation, issue a general permit for to any source category if it concludes that the category is appropriate for permitting on a generic basis. Any general permit shall comply with all requirements applicable to other Part 70 permits. No general permit may be issued for affected sources under the acid rain program unless otherwise

provided in regulations promulgated under Title IV of the federal Clean Air Act.

(2) A general permit may be issued for a source category based upon an application from a source within the source category or upon the DEQ's own initiative. The DEQ shall, following receipt of an application for a general permit, or upon a determination that issuance of a general permit for a category of sources may be appropriate, follow the same procedures for issuance of a general permit as for any other permit issued under this part.

(3) A general permit may be issued for the following purposes to establish:

(A) ~~to establish terms~~ Terms and conditions to implement applicable requirements, and state-only requirements, for a source category.

(B) ~~to establish terms~~ Terms and conditions to implement applicable requirements, and state-only requirements, for specified categories of changes to permitted sources.

(C) ~~to establish terms~~ Terms and conditions for new requirements that apply to sources with existing permits, and.

(D) ~~to establish federally enforceable~~ Federally-enforceable caps on emissions from sources in a specified category.

(4) The DEQ may issue a general permit if it finds that:

(A) ~~There there~~ are several permittees, permit applicants, or potential permit applicants who: have the same or substantially similar operations, emissions, activities, or facilities;

(i) Have the same or substantially similar operations, emissions, activities, or facilities.

(ii) ~~(B) the permittees, permit applicants, or potential permit applicants emit~~ Emit the same types of regulated air pollutants.

(B) ~~(C) the~~ The operations, emissions, activities, or facilities are subject to the same or similar: standards, limitations, and operating requirements; and

(i) Standards, limitations, and operating requirements.

(ii) ~~(D) the operations, emissions, activities, or facilities are subject to the same or similar monitoring~~ Monitoring requirements.

[NOTE: 252:100-8-6.1(a) (1) through (4) was 252:100-8-6(d) (1) through (4)]

~~(5) ~~(8)~~ If some, but not all, of a source's operations, activities, and emissions are eligible for coverage under one or more general permits, the source may must apply for an individual Part 70 permit for all of its covered sources, and receive coverage under the general permits for the operations, activities, and emissions that are so eligible. If the source is required under OAC 252:100-8-3 of this part to obtain a permit addressing the remainder of its operations, activities,~~

and emissions, it may apply for and receive a permit that addresses specifically only those items not covered by general permits. In such a case, the source's permit shall identify all operations, activities, and emissions that are subject to general permits and incorporate those general permits by reference. Unless the permit specifically states otherwise, the permit shall apply to the terms and conditions of any general permits so incorporated by reference as well as to the terms and conditions specifically stated in the permit.

[NOTE: Was 252:100-8-6(d) (8)]

(6) Facilities located in areas that are federally designated as non-attainment are not eligible for coverage under a general operating permit. [NOTE: From 252:100-10-5(h) (3)]

(7) Sites that are not in compliance with all applicable State and Federal air regulations are eligible for a general operating permit only if:

(A) They submit to DEQ an approvable compliance plan, and

(B) The facility submits to Tier II public review. [NOTE: From 252:100-10-5(h) (5)]

(8) Facilities with existing state operating permits are eligible for coverage under a general operating permit.

[NOTE: From 252:100-10-5(h) (6)]

(9) Facilities existing prior to the effective date of any applicable standard that would have created specific quantifiable and enforceable emission rates are eligible for coverage under a general operating permit. [NOTE: From 252:100-10-5(h) (7)]

(b) Authorization.

(1)-(5) A general permit issued under this section shall identify criteria by which sources may qualify for the general permit. After a general permit has been issued, any source may submit a request to be covered under the permit in the form of an application for authorization to operate under the general permit. (A) Such application shall identify the source and provide information sufficient to demonstrate that it falls within the source category covered by the general permit, together with any additional information that may be specified in the general permit. [NOTE: Was 252:100-8-6(d) (5)]

(2)-(B) See OAC 252:2-15 for Tier I permitting procedures and timelines for individual authorizations under general permits. The Agency DEQ shall act to approve or deny the application within 90 days of filing. [NOTE: Was 252:100-8-6(d) (5) (B)]

(3)-(C) A final action approving an authorization to operate under a general permit shall not be subject to public comment or judicial review. [NOTE: Was 252:100-8-6(d) (5) (C)]

(4)-(d) The DEQ will publish, at least monthly, an updated list of sources approved for inclusion under the general operating permit and any aggrieved person may petition the DEQ to review the approval of any stationary source for inclusion under a general operating permit within 30 days after publication of the list. [NOTE: From 252:100-10-3(d)]

(5)-(6) A copy of the general permit, together with a list of sources approved for coverage under it, shall be kept on file for public review at the offices of the DEQ. [NOTE: Was 252:100-8-6(d)(6)]

(c) Permit Shield. A general permit issued under this section shall provide that any source approved for coverage under a general permit shall be entitled to the protection of the permit shield for all operations, activities, and emissions addressed by the general permit, unless and to the extent that it is subsequently determined that the source does not qualify for the conditions and terms of the general permit. [NOTE: Was 252:100-8-6(d)(7)]

(d) Revisions

(1)-(b) If an owner or operator of a source(s) makes a change to a source covered by a general operating permit that affects any applicability information supplied in the general operating permit application, but the source is still eligible for coverage authorized to operate under a general operating permit, the owner or operator must revise the general operating permit application and submit it to the DEQ within 60 days.

(2)-(e) After coverage is granted to a particular source under the general permit, physical changes to the facility which result in the addition of equipment new to the facility, either as a replacement (except like-kind replacements) or net addition, will require a construction permit or a new authorization permit except as allowed in (d)-(3) below. Any significant modification to a stationary source included under a general operating permit shall subject the source to a Tier II review.

(3)-(e) If equipment new to the facility is newly purchased or is relocated from another facility where a permit was issued with enforceable emissions limits on that equipment, then authorization approval under the general operating permit shall be modified or amended to include an emissions limit for the newly purchased or relocated equipment. "Grandfathered" emissions sources at the facility will retain only the equipment descriptions as permit conditions. "Grandfathered" means a unit which that was in existence prior to the effective date of any applicable regulation which that would have created specific quantifiable and enforceable emissions rate limits.

(4)-(f) For a general operating permit, if emissions change for any reason that subjects the facility to PSD permitting requirements, then the facility no longer qualifies for a general operating permit. However, the existing general operating permit will remain valid during the time period covered by the PSD construction permit until the facility receives a Part 70 site specific operating permit for the entire facility.

[NOTE: 252:100-8-6.1(d)(1) through (4) are from 252:100-10-5(b), (c), (e) and (f) respectively]

(e) Permit Content. Specific terms and conditions that which will make the applicable rules and requirements enforceable shall be stipulated in the general operating permit. [NOTE: From 252:100-10-5(h)(8)]

(f) Renewal of general operating permits.

(1) The DEQ will initiate the renewal process for a general operating permit at least 180 days prior to the permit's expiration date and will follow the requirements in 252:100-8-7(a).

(2) Owners or operators shall apply to renew an authorization at least 60 days prior to expiration of the existing authorization. Upon submittal of a timely and administratively complete application, the applicant may continue to operate until such time as the DEQ grants or denies coverage under the general operating permit.

252:100-8-6.2(e) Temporary sources. The DEQ may issue a single permit authorizing emissions from similar operations by the same source owner or operator at multiple temporary locations. The operation must be temporary and involve at least one change of location during the term of the permit. No affected source shall be permitted as a temporary source. Permits for temporary sources shall include the following:

(1) Conditions that will assure compliance with all applicable requirements at all authorized locations;

(2) Requirements that the owner or operator notify the permitting authority at least ten days in advance of each change in location; and

(3) Conditions that assure compliance with all other provisions of this section. [NOTE: 252:100-8-6.2 was moved from 252:100-8-6(e)]

252:100-8-6.3.(i) Special provisions for affected (acid rain) sources

(a)(1) Application binding until permit issuance or denial. A complete acid rain permit application is binding on the applicant and enforceable as a ~~an acid rain~~ permit until an acid rain permit is issued or denied. For applicable permitting procedures, see OAC 252:2-15.

(b)(2) Exemption petitions. Applicants with small units that burn low sulfur fuel or sources that retire a unit can petition to have such units exempted from certain permitting and monitoring requirements under the acid rain regulations.

(c)(3) Permit shield. The acid rain portion of every operating permit is covered by a permit shield. This shield assures that an applicant operating in accordance with a permit issued in accordance with Title IV of the ~~federal Clean Air Act~~, will be deemed to be operating in compliance with the Acid Rain Program.

(d)(4) Modifications. See 40 CFR 72.82.

(e)(5) Duration. Acid rain permits will have a term of five years commencing on the permits effective date. The DEQ may issue a permit with a future effective date.

(f)(6) Right of intervention. The Administrator may intervene as a matter of right in any administrative appeal involving an Acid Rain permit or denial of an Acid Rain permit.

(g)(7) Administrative appeal. The administrative appeal period shall be no more than 90 days following the issuance of the Acid Rain permit and the judicial appeal period shall be no more than 90 days following a final agency action.

(h)(8) Adoption of 40 CFR Part 72 by reference. Owners or operators of sources subject to the acid rain provisions of the federal Clean Air Act shall comply with applicable provisions of 40 CFR Part 72, as published in the Federal Register on January 11, 1993, and on March 23, 1993, which is hereby adopted by reference as rules of the Environmental Quality Board. In such regulations, the term "permitting authority" shall mean the Oklahoma Department of Environmental Quality and the term "Administrator" shall mean the Administrator of the United States Environmental Protection Agency. If the provisions or requirements of 40 CFR Part 72 conflict with this Chapter, the Part 72 provisions and requirements shall apply and take precedence.

(8) The Oklahoma Department of Environmental Quality DEQ hereby adopts and incorporates by reference the provisions of 40 CFR Part part 72, as published in the Federal Register on January 11, 1993, and on March 23, 1993, and on October 24, 1997, for purposes of implementing an acid rain program that meets the requirements of Title IV of the Clean Air Act. The term "permitting authority" shall mean the Oklahoma Department of Environmental Quality and the term "Administrator" shall mean the Administrator of the United States Environmental Protection Agency. If the provisions or requirements of 40 CFR Part part 72 conflict with or are not included in Oklahoma Administrative Code 252:100-8, the Part part 72 provisions and requirements shall apply and take precedence.

[NOTE: 252:100-8-6.3 was moved from 252:100-8-6(i)]

252:100-8-7. Permit issuance, renewal, reopenings, and revisions

~~(a) Action on application; issuance/denial criteria.~~

~~(1)(a) Criteria for issuance.~~ A permit, permit modification, or renewal may be issued only if the applicable requirements of 27A O.S.Supp. 1995, Section 2-14-101 et seq.; OAC 252:2-15; and this Chapter have been met and the DEQ has determined that the conditions of the permit provide for compliance with all applicable requirements and for applications subject to OAC 252:100-8-8, that the requirements of that section have been satisfied.

~~(2)(b) Draft permits and notice thereof.~~ See OAC 252:2-15. The draft permit shall be accompanied by a statement that sets forth the legal and factual basis for the draft permit conditions (including references to the applicable statutory or regulatory provisions).

~~(3)(c) EPA review.~~ See OAC 252:100-8-8.

- ~~(4)(d) DEQ final action. See OAC 252:2-15, and OAC 252:100-8-8 when applicable.~~
- ~~(5)(e) Timeline for technical review and issuance. See OAC 252:2-15-70 through 15-72. Except as provided in paragraphs (A) and (B) of this paragraph, the The DEQ shall take final action on each application for a permit within 18 months after beginning its technical review in accordance with 252:2-15-70 through 15-72 and OAC 252:100-8-5(b)(5) 252:100-8-4(b)(7).~~
- ~~(6)(f) Action priorities. See OAC ~~252:100-8-5(b)~~ 252:100-8-4(b)(2) through (10) and 252:100-8-7.1(a).~~
- ~~(7)(g) No issuance by default. See 27A:2-5-112(D).~~
- ~~(b) Requirement for a permit. See OAC 252:100-8-4(b).~~
- ~~(c) Permit renewal and expiration.~~
- ~~(1) Applications for permit renewal after the transition period, and for permit for new Part 70 sources or amendments, shall be considered timely if the applicant meets the requirements of this subsection. [NOTE: Moved to 252:100-8-7.1(a)(1)]~~
- ~~(2) Applications for permit renewal shall be subject to the same procedural requirements, including those for public participation, affected State comment, and EPA review, that apply to initial permit issuance under OAC 252:100-8-7(a). [NOTE: Moved to 252:100-8-7.1(c)]~~
- ~~(3) A source's right to operate shall terminate upon the expiration of its permit unless a timely and complete renewal application has been submitted at least 180 days before the date of expiration. [NOTE: Moved to 252:100-8-7.1(d)(1)]~~
- ~~(4) If a timely and complete application for a permit renewal is submitted, but the DEQ fails to take final action to issue or deny the renewal permit before the end of the term of the previous permit, then the permit shall not expire until the renewal permit has been issued or denied, and any permit shield granted for the permit shall continue in effect during that time. [NOTE: Moved to 252:100-8-7.1(d)(2)]~~
- ~~(5) Stationary sources operating under permits issued by the DEQ under this subchapter shall apply for permit reissuance at least 180 days before the expiration of the existing permit, unless the permit specifies that the application must be submitted sooner. The DEQ shall require in a permit that a reissuance application be submitted sooner if it determines that an earlier application is needed to minimize the possibility of expiration prior to reissuance. The DEQ may make the determination if it anticipates a relatively lengthy permit review process due to the complexity of the stationary source or anticipated involvement of the public. In no event shall the permit require application for reissuance sooner than eighteen months prior to the expiration of the permit. [NOTE: Moved to 252:100-8-7.1(a)(2)]~~
- ~~(d) Administrative permit amendments.~~
- ~~(1) When used in this subsection "Administrative permit amendment" means a permit revision that:~~
- ~~(A) Corrects typographical errors;~~

- ~~(B) Identifies a change in the name, address, or phone number of any person identified in the permit, or provides a similar minor administrative change at the source;~~
- ~~(C) Requires more or less frequent monitoring or reporting by the permittee;~~
- ~~(D) Allows for a change in ownership or operational control of a source where no other change in the permit is necessary, provided that a written agreement containing a specific date for transfer of permit responsibility, coverage, and liability between the current and new permittee has been submitted to the DEQ;~~
- ~~(E) Incorporates into the permit the requirements from preconstruction review permits issued by the DEQ under OAC 252:100-7. Enhanced New Source Review (NSR) procedures apply to all major sources and all State Implementation Plan (SIP) minor source changes to majors.~~
- ~~(2) Administrative permit amendments for purposes of the acid rain portion of the permit shall be governed by regulations promulgated under Title IV of the federal Clean Air Act.~~
- ~~(3) An administrative permit amendment shall be made by the DEQ in accordance with the following:
 - ~~(A) The DEQ shall take final action on a request for an administrative permit amendment within 60 days from the date of receipt of such a request, and may incorporate the proposed changes without providing notice to the public or affected States provided that it designates any such permit revisions as having been made pursuant to this paragraph.~~
 - ~~(B) The DEQ shall submit a copy of the revised permit to the Administrator upon the Administrator's request.~~
 - ~~(C) The source may implement the changes addressed in the request for an administrative amendment immediately upon submittal of the request.~~~~
- ~~(4) The DEQ shall, upon taking final action granting a request for an administrative permit amendment, allow coverage by the permit shield in OAC 252:100-8-6(f) for administrative permit amendments made pursuant to subparagraph (d)(1)(E) of this section.~~

[NOTE: 252:100-8-7(d) was moved to 252:100-8-7.2(a)]

~~(c) Permit modification. A permit modification is any revision to an operating permit that cannot be accomplished under the program's provisions for administrative permit amendments under subsection (d) of this section. A permit modification for purposes of the acid rain portion of the permit shall be governed by regulations promulgated under Title IV of the federal Clean Air Act.~~

~~(1) Minor permit modification procedures.~~

~~(A) Criteria.~~

- ~~(i) Minor permit modification procedures may be used only for those permit modifications that:
 - ~~(I) Do not violate any applicable requirement, or state only requirements;~~
 - ~~(II) Do not involve significant changes to existing~~~~

~~monitoring, reporting or recordkeeping requirements in the permit;~~

~~(III) Do not require or change a case by case determination of an emission limitation or other standard, or a source specific determination for temporary sources of ambient impacts, or a visibility or increment analysis;~~

~~(IV) Do not seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement, or state only requirement, and that the source has assumed to avoid an applicable requirement, or state only requirement, to which the source would otherwise be subject. Such terms and conditions include federally enforceable emissions caps assumed to avoid classification as a modification under any provision of Title I and alternative emissions limits approved pursuant to regulations promulgated under §§112(i)(5) of the Federal Clean Air Act; and~~

~~(V) Are not modifications under any provision of Title I of the Federal Clean Air Act.~~

~~(ii) Notwithstanding OAC 252:100-8-7(e)(1)(A)(i) and OAC 252:100-8-7(e)(2)(A), minor permit modification procedures may be used for permit modifications involving the use of economic incentives, marketable permits, emissions trading, and other similar approaches, to the extent that such minor permit modification procedures are explicitly provided for in an applicable implementation plan or in applicable requirements promulgated by EPA.~~

~~(B) Application. To use the minor permit modification procedures, a source shall submit an application requesting such use which shall meet the permit application requirements of Tier I under OAC 252:2-15 and shall include the following:~~

~~(i) A description of the change, the emissions resulting from the change, and any new applicable requirements, and state only requirements, that will apply if the change occurs;~~

~~(ii) The source's suggested modification language;~~

~~(iii) Certification by a responsible official, that the application and the proposed modification meet the criteria for use of minor permit modification procedures; and~~

~~(iv) Completed forms for any notices required by OAC 252:2-15 and, regarding notice to EPA and affected states, as required under subparagraph (C) of this paragraph.~~

~~(C) EPA and affected state notification. If the proposed minor modification is of a permit that underwent EPA review in accordance with OAC 252:100-8-8, the provisions of that section shall apply to the minor modification application unless waived by the Administrator.~~

~~(D) Timetable for issuance. Within 90 days of the DEQ's receipt of a complete application under OAC 252:2-15 the DEQ shall:~~

- ~~(i) Issue the minor permit modification as approved;~~
- ~~(ii) Deny the minor permit modification application; or~~
- ~~(iii) Determine that the requested modification does not meet the minor permit modification criteria and should be reviewed under the significant modification procedures or administrative amendment procedures.~~

~~(E) Source's ability to make change. Immediately after filing an application meeting the requirements of these minor permit modification procedures, the source is authorized to make the change or changes proposed in the application. After the source makes the change allowed by the preceding sentence, and until the DEQ takes any of the actions specified in (1)(D)(i) through (iii) of this section, the source must comply with both the applicable requirements and state only requirements, governing the change and the proposed permit terms and conditions. During this period, the source need not comply with the existing terms and conditions it seeks to modify. However, if the source fails to comply with its proposed permit terms and conditions during this time period, the existing permit terms and conditions it seeks to modify may be enforced against it.~~

~~(F) Permit shield. The permit shield under OAC 252:100-8-6(f) will not extend to minor permit modifications.~~

~~(G) Permittee's risk in commencing construction. The permittee assumes the risk of losing any investment it makes toward implementing a modification prior to receiving a permit amendment authorizing the modification. The DEQ will not consider the possibility of the permittee suffering financial loss due to such investment when deciding whether to approve, deny, or approve in modified form a minor permit amendment.~~

~~(2) Significant modification procedures.~~

~~(A) Criteria. Significant modification procedures shall be used for applications requesting permit modifications that:~~

- ~~(i) Involve any significant amendment to existing monitoring, reporting, or recordkeeping requirements in the permit;~~
- ~~(ii) Require any amendment to establish or amend a permit condition that is required to be based on a case by case determination of an emission limitation or other standard, on a source specific determination of ambient impacts, or on a visibility or increment analysis;~~
- ~~(iii) Seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement, and state only requirement, and that the source has assumed to avoid an applicable requirement, and state only requirement, to which the source would otherwise be subject. Such terms and~~

~~conditions include:~~

~~(I) A federally enforceable emissions cap assumed to avoid classification as a modification under any provision of Title I;~~

~~(II) An alternative emissions limit approved pursuant to regulations promulgated under section 112(i)(5) of the federal Clean Air Act; and~~

~~(iv) Are modifications under any provision of Title I of the federal Clean Air Act; and,~~

~~(v) Do not qualify as minor permit modifications or administrative amendments.~~

~~(B) Procedures for processing. Significant permit modifications shall meet all requirements of these rules that are applicable to Tier II applications. The application for the modification shall describe the change, the emissions resulting from the change, and any new applicable requirements, and state only requirements, that will apply if the change occurs.~~

~~(C) Issuance. The DEQ shall complete review of significant permit modifications within nine months after receipt of a complete application, but shall be authorized to extend that date by up to three months for cause.~~

[NOTE: 252:100-8-7(e) was moved to 252:100-8-7.2(b)]

~~(f) Reopening for cause.~~

~~(1) Mandatory reopening. Each issued permit shall include provisions specifying the conditions under which the permit will be reopened prior to the expiration date of the permit. A permit shall be reopened and revised under any of the following circumstances:~~

~~(A) Additional federal applicable requirements become applicable to a stationary source with a remaining permit term of three or more years. Such a reopening and amendment shall be completed not later than 18 months after promulgation of the federal applicable requirement. Reopening is allowed if an applicable requirement becomes effective and the original permit or any of its terms and conditions has been extended pursuant to the application shield provided at OAC 252:100-8-7(e)(4) beyond the 18-month timeframe for revision. No such reopening is required if the effective date of the requirement is later than the date on which the permit is due to expire.~~

~~(B) Additional requirements (including excess emissions requirements) become applicable to an affected source under the acid rain program. Upon approval by the administrator, excess emissions offset plans shall be deemed to be incorporated into the permit.~~

~~(C) The agency or the administrator determines that the permit contains a material mistake or that inaccurate statements were made in establishing the emissions standards, limitations, or other terms or conditions of the permit.~~

~~(D) The administrator or the agency determines that the~~

~~permit must be revised or revoked to assure compliance with the applicable requirements.~~

~~(2) Discretionary reopening. The agency may reopen and amend a permit when:~~

~~(A) additional state only requirements become applicable to a permitted stationary source, and the effective date of the requirement is at least 18 months prior to the date on which the permit is due to expire;~~

~~(B) alterations or modifications to the permitted facility will result in or have the potential to result in significant alteration of the nature or quantity of regulated air pollutants to be emitted by the permittee;~~

~~(C) the agency receives information previously unavailable to the agency that shows that the terms and conditions of the permit do not accurately represent the actual circumstances relating to the permitted facility;~~

~~(D) a court of competent jurisdiction invalidates or modifies an Oklahoma or federal statute or rule or federal guideline upon which a condition of the permit is based; and~~

~~(E) an event occurs that is beyond the control of the permittee that necessitates modification of a compliance schedule in the permit.~~

~~(3) Reopening procedures. To reopen and amend a permit, the agency shall follow the procedures that apply to significant permit amendments under this chapter, unless the amendment can be made as an administrative amendment under OAC 252:100-8-7(d). Mandatory reopenings under OAC 252:100-8-7(f)(1) shall be made as expeditiously as practicable. In lieu of an application, the significant permit amendment process will commence when the agency gives the permittee written notice of its intent to amend the permit. The agency shall not issue the amendment, or make public notice of the amendment where public notice is required, until at least thirty days after the agency has given the permittee consents to less notice, or in the case of an emergency. In cases where public participation is required, only those portions of the permit which the agency proposes to amend shall be open for public comment or consideration at a meeting or hearing.~~

[NOTE: 252:100-8-7(f) was moved to 252:100-8-7.3(a), (b) and (c)]

~~(g) Reopenings for cause by EPA.~~

~~(1) If the Administrator finds that cause exists to terminate, modify, or revoke and reissue a permit, the Administrator shall notify the permitting authority and the permittee of such findings in writing.~~

~~(2) The permitting authority shall, within 90 days after receipt of such notification, forward to EPA a proposed determination of termination, modification, or revocation and reissuance, as appropriate. The Administrator may extend this 90 day period for an additional 90 days if he finds that a new or revised permit application is necessary or that the permitting authority must require the permittee to submit~~

~~additional information.~~

~~(3) The Administrator will review the proposed determination from the permitting authority within 90 days of receipt.~~

~~(4) The permitting authority shall have 90 days from receipt of an EPA objection to resolve any objection that EPA makes and to terminate, modify, or revoke and reissue the permit in accordance with the Administrator's objection.~~

~~(5) If the permitting authority fails to submit a proposed determination pursuant to this subsection, or fails to resolve any objection pursuant to this subsection, the Administrator will terminate, modify, or revoke and reissue the permit after taking the following actions:~~

~~(A) Providing at least 30 days' notice to the permittee in writing of the reasons for any such action.~~

~~(B) Providing the permittee an opportunity for comment on the Administrator's proposed action and an opportunity for a hearing.~~

[NOTE: 252:100-8-7(g) was moved to 252:100-8-7.3(d)]

~~(h) Revocations.~~

~~(1) Permit revocation without reissuance. The agency may revoke permits and not reissue them when:~~

~~(A) there exists at the permitted facility unresolved noncompliance with applicable requirements or a condition of the permit, and the permittee refuses to undertake an enforceable schedule of compliance to resolve the noncompliance;~~

~~(B) the permittee fails to disclose fully the facts relevant to issuance of the permit or submits false or misleading information to the agency or the administrator;~~

~~(C) the permittee has failed to comply with any requirement under OAC 252:100-9 to pay fees; or~~

~~(D) the permittee has failed to pay a penalty owed pursuant to court order, consent decree, stipulation agreement, or schedule of compliance.~~

~~(2) Revocation procedures. The agency shall give notice to the permittee of its intention to revoke a permit without reissuance. This notice must state that within 30 days of the receipt of the notice the permittee may request a contested case hearing be held on the proposed action, except that the agency may provide less notice in case of an emergency. If the permittee requests a contested case hearing, the agency shall hold the hearing in accordance with the Oklahoma Administrative Procedures Act.~~

[NOTE: 252:100-8-7(h) was moved to 252:100-8-7.4]

~~(i) Public participation. See 27A O.S.Supp. 1995, § 2-14-101 et seq. and OAC 252:2-15.~~

~~(j) Judicial review. Any final action in granting or denying an application for a permit, permit amendment or modification, or permit renewal shall be subject to judicial review in the court of appropriate jurisdiction upon an application filed by the applicant or permittee, or by any affected state or other person who participated in the public comment process. Except for~~

authorizations under General Permits, judicial review is available to all affected parties for all final permit actions including minor modifications and administrative actions. If no public comment procedure was employed for the action under challenge, an application for review may be filed by the permittee or an affected state. The opportunity for judicial review provided for in this subsection shall be the exclusive means for obtaining judicial review of any permit action.

~~(1) No application for judicial review may be filed more than 90 days following the final action on which review is sought, unless the grounds for review arose at a later time, in which case the application for review shall be filed within 90 days of the date on which the grounds for review first arose and review shall be limited to such later arising grounds.~~

~~(2) Any application for judicial review shall be limited to issues that:~~

~~(A) were raised in written comments filed with the Agency or during a public hearing on the proposed permit action (if the grounds on which review is sought were known at that time), except that this restriction shall not apply if the person seeking review was not afforded an advance opportunity to comment on the challenged action; and~~

~~(B) are germane and material to the permit action at issue.~~

~~(3) For purposes of this section, "final action" shall include a failure by the Agency to take final action to grant or deny an application within the time specified in this Chapter.~~

[NOTE: 252:100-8-7(j) was moved to 252:100-8-7.5]

252:100-8-7.1.(e) Permit renewal and expiration

(a) Timely application for permit renewal.

(1) Applications for permit renewal after the transition period, and for permits permit for new Part 70 sources or amendments, shall be considered timely if the applicant meets the requirements of this subsection. [NOTE: Was 252:100-8-7(c) (1)]

(2) Stationary sources operating under permits issued by the DEQ under this Subchapter subchapter shall apply for permit reissuance at least 180 days before the expiration of the existing permit, unless the permit specifies that the application must be submitted sooner. The DEQ shall require in a permit that a reissuance application be submitted sooner if it determines that an earlier application is needed to minimize the possibility of expiration prior to reissuance. The DEQ may make the determination if it anticipates a relatively lengthy permit review process due to the complexity of the stationary source or anticipated involvement of the public. In no event shall the permit require application for reissuance sooner than eighteen months prior to the expiration of the permit. [NOTE: Was 252:100-8-7(c) (5)]

~~(b) (9) Application content for renewal of expiring permit. In submitting an application for renewal of a DEQ issued Part 70~~

operating permit, a source may identify and incorporate by reference terms and conditions in its previous permit and permit application(s) that should remain unchanged. terms and conditions in its previous permit that should remain unchanged and incorporate by reference those portions of its existing permit and the permit application and any permit amendment or modification applications that describe products, processes, operations, and emissions to which those terms and conditions apply. The source must identify specifically and list which portions of its previous permit and/or applications are incorporated by reference. In addition, a renewal application must contain:

(1)(i) information specified in OAC 252:100-8-5(d) 252:100-8-5(e) for those products, processes, operations, and emissions that:

(A)(I) That are not addressed in the existing permit;

(B)(II) That are subject to applicable requirements, or state-only requirements that are not addressed in the existing permit; or

(C)(III) For as to which the source seeks permit terms and conditions that differ from those in the existing permit;
and

(2)(ii) a compliance plan and certification as required in OAC 252:100-8-5(d)(8) 252:100-8-5(e)(8) and (9). [NOTE: Was 252:100-8-5(b)(9)]

(c)(2) Issuance of renewal permit. Applications for permit renewal shall be subject to the same procedural requirements, including those for public participation, affected State comment, and EPA review, that apply to initial permit issuance under OAC 252:100-8-7(a). [NOTE: Was 252:100-8-7(c)(2)]

(d) Expiration of permit.

(1)(3) A source's right to operate shall terminate upon the expiration of its permit unless a timely and complete renewal application has been submitted at least 180 days before the date of expiration. [NOTE: Was 252:100-8-7(c)(3)]

(2)(4) If a timely and complete application for a permit renewal is submitted, but the DEQ fails to take final action to issue or deny the renewal permit before the end of the term of the previous permit, then the permit shall not expire until the renewal permit has been issued or denied, and any permit shield granted for the permit shall continue in effect during that time. [NOTE: Was 252:100-8-7(c)(4)]

(5) Stationary sources operating under permits issued by the DEQ under this subchapter shall apply for permit reissuance at least 180 days before the expiration of the existing permit, unless the permit specifies that the application must be submitted sooner. The DEQ shall require in a permit that a reissuance application be submitted sooner if it determines that an earlier application is needed to minimize the possibility of expiration prior to reissuance. The DEQ may make the determination if it anticipates a relatively lengthy permit review process due to the complexity of the stationary

source or anticipated involvement of the public. In no event shall the permit require application for reissuance sooner than eighteen months prior to the expiration of the permit. [NOTE: Moved to 252:100-8-7.1(a)(2)]

252:100-8-7.2.(d) Administrative permit amendments and permit modifications

(a) Administrative permit amendments.

(1) When used in this subsection An "Administrative administrative permit amendment" means a permit revision that:

(A) Corrects typographical errors;

(B) Identifies a change in the name, address, or phone number of any person identified in the permit, or provides a similar minor administrative change at the source;

(C) Requires more or less frequent monitoring or reporting by the permittee;

(D) Allows for a change in ownership or operational control of a source where no other change in the permit is necessary, provided that a written agreement containing a specific date for transfer of permit responsibility, coverage, and liability between the current and new permittee has been submitted to the DEQ;

(E) Incorporates into the permit the requirements from preconstruction review permits issued by the DEQ under this Part OAC 252:100-7. Enhanced New Source Review (NSR) procedures apply to all major sources and all State Implementation Plan (SIP) minor source changes to majors.

(2) Administrative permit amendments for purposes of the acid rain portion of the permit shall be governed by regulations promulgated under Title IV of the federal Clean Air Act 40 CFR Part 72.

(3) An administrative permit amendment shall be made by the DEQ in accordance with the following:

(A) The DEQ shall take final action on a request for an administrative permit amendment within 60 days from the date of receipt of such a request, and may incorporate the proposed changes without providing notice to the public or affected States provided that it designates any such permit revisions as having been made pursuant to this paragraph.

(B) The DEQ shall submit a copy of the revised permit to the Administrator upon the Administrator's request.

(C) The source may implement the changes addressed in the request for an administrative amendment immediately upon submittal of the request.

(4) The DEQ shall, upon taking final action granting a request for an administrative permit amendment, allow coverage by the permit shield in OAC 252:100-8-6(f) 252:100-8-6(d) for administrative permit amendments made pursuant to subparagraph (d)(1)(E) 252:100-8-7.2(a)(1)(E) of this section. [NOTE: 252:100-8-7.2(a) was 252:100-8-7(d)]

(b)(e) Permit modification. A permit modification is any revision to an operating a permit that cannot be accomplished

under the program's provisions for administrative permit amendments under subsection (d) (a) of this section. A permit modification for purposes of the acid rain portion of the permit shall be governed by regulations promulgated under Title IV of the federal Clean Air Act 40 CFR Part 72.

(1) Minor permit modification procedures.

(A) Criteria.

(i) Minor permit modification procedures may be used only for those permit modifications that:

(I) Do not violate any applicable requirement, or state-only requirements;

(II) Do not involve significant changes to existing monitoring, reporting or recordkeeping requirements in the permit;

(III) Do not require or change a case-by-case determination of an emission limitation or other standard, or a source-specific determination for temporary sources of ambient impacts, or a visibility or increment analysis;

(IV) Do not seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement, or state-only requirement, and that which the source has assumed to avoid an some other applicable requirement, or state-only requirement, to which the source would otherwise be subject. Such terms and conditions include federally-enforceable emissions caps assumed to avoid classification as a modification under any provision of Title I and alternative emissions limits approved pursuant to regulations promulgated under §§112(i) (5) of the federal Clean Air Act; and

(V) Are not modifications under any provision of Title I of the federal Clean Air Act.

(ii) Notwithstanding ~~OAC 252:100-8-7(e)(1)(A)(i)~~ 252:100-8-7.2(b)(1)(A)(i) and ~~OAC 252:100-8-7(e)(2)(A)~~ 252:100-8-7.2(b)(2)(A), minor permit modification procedures may be used for permit modifications involving the use of economic incentives, marketable permits, emissions trading, and other similar approaches, to the extent that such minor permit modification procedures are explicitly provided for in an applicable the State's implementation plan or in applicable requirements promulgated by EPA.

(B) Application. To use the minor permit modification procedures, a source shall submit an application requesting such use which shall meet the permit application requirements of Tier I under OAC 252:2-15 and shall include the following:

(i) A description of the change, the emissions resulting from the change, and any new applicable requirements, and or state-only requirements, that will apply if the change occurs;

(ii) The source's suggested modification language;

(iii) Certification by a responsible official, that the application and the proposed modification meet the criteria for use of minor permit modification procedures; and

(iv) Completed forms for any notices required by OAC 252:2-15 and, ~~regarding notice to EPA and affected states, as required under subparagraph (C) of this paragraph.~~

(C) EPA and affected state notification. If the proposed minor modification is of a permit that underwent EPA review in accordance with OAC 252:100-8-8, the provisions of that section shall apply to the minor modification application unless waived by the Administrator.

(D) Timetable for issuance. Within 90 days of the DEQ's receipt of a complete application under OAC 252:2-15, the DEQ shall:

(i) Issue the minor permit modification as approved;

(ii) Deny the minor permit modification application; or

(iii) Determine that the requested modification does not meet the minor permit modification criteria and should be reviewed under the significant modification procedures or administrative amendment procedures.

(E) Source's ability to make change. Immediately after filing an application meeting the requirements of these minor permit modification procedures, the source is authorized to make the change or changes proposed in the application. After the source makes the change allowed by the preceding sentence, and until the DEQ takes any of the actions specified in (1)(D)(i) through (iii) of this section subsection, the source must comply with both the applicable requirements and state-only requirements, governing the change and the proposed permit terms and conditions. During this period, the source need not comply with the existing terms and conditions it seeks to modify. However, if the source fails to comply with its proposed permit terms and conditions during this time period, the existing permit terms and conditions it seeks to modify may be enforced against it.

(F) Permit shield. The permit shield under OAC ~~252:100-8-6(f)~~ 252:100-8-6(d) will not extend to minor permit modifications.

(G) Permittee's risk in commencing construction. The permittee ~~permittees~~ assumes the risk of losing any investment it makes toward implementing a modification prior to receiving a permit amendment authorizing the modification. The DEQ will not consider the possibility of the permittee suffering financial loss due to such investment when deciding whether to approve, deny, or approve in modified form a minor permit amendment.

(2) Significant modification procedures.

(A) Criteria. Significant modification procedures shall be used for applications requesting permit modifications that:

(i) Involve any significant changes in amendment to existing monitoring, reporting, or recordkeeping requirements in the permit;
(ii) Relax any reporting or recordkeeping requirements.
(iii)-(ii) Require any amendment to establish or amend a permit condition that Change any permit condition that is required to be based on a case-by-case determination of an emission limitation or other standard, on a source-specific determination of ambient impacts, or on a visibility or increment analysis;
(iv)-(iii) Seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement, and or state-only requirement, and that which the source has assumed to avoid an some other applicable requirement, and or state-only requirement, to which the source would otherwise be subject. Such terms and conditions include:

(I) A federally enforceable emissions cap assumed to avoid classification as a modification under any provision of Title I;

(II) An alternative emissions limit approved pursuant to regulations promulgated under section 112(i)(5) of the federal Clean Air Act; and

(v)-(iv) Are modifications under any provision of Title I of the federal Clean Air Act; and,

(vi)-(v) Do not qualify as minor permit modifications or administrative amendments.

(B) Procedures for processing. Significant permit modifications shall meet all requirements of these rules that are applicable to Tier II applications. The application for the modification shall describe the change, the emissions resulting from the change, and any new applicable requirements, and or state-only requirements, that will apply if the change occurs.

(C) Issuance. The DEQ shall complete review of significant permit modifications within nine months after receipt of a complete application, but shall be authorized to extend that date by up to three months for cause.

[NOTE: 252:100--8-7.2(b) was 252:100-8-7(e)]

252:100-8-7.3.(f) Reopening of operating permits for cause
(a)-(1) Mandatory reopening. Each issued permit shall include provisions specifying the conditions under which the permit will be reopened prior to the expiration date of the permit. A permit shall be reopened and revised under any of the following circumstances:

(1)-(A) Additional federal applicable requirements become applicable to a stationary source with a remaining permit term of three or more years. Such a reopening and amendment shall be completed not later than 18 months after promulgation of the federal applicable requirement. Reopening is allowed if an applicable requirement becomes effective and the original

permit or any of its terms and conditions has been extended pursuant to the application shield provided at ~~OAC 252:100-8-7(e)(4)~~ 252:100-8-7.1(d)(2) beyond the 18-month timeframe for revision. No such reopening is required if the effective date of the requirement is later than the date on which the permit is due to expire.

(2)(B) Additional requirements (including excess emissions requirements) become applicable to an affected source under the acid rain program. Upon approval by the ~~Administrator~~, administrator, excess emissions offset plans shall be deemed to be incorporated into the permit.

(3)(C) The ~~DEQ agency~~ or the ~~administrator~~ EPA determines that the permit contains a material mistake or that inaccurate statements were made in establishing the emissions standards, limitations, or other terms or conditions of the permit.

(4)(D) The ~~Administrator~~ administrator or the ~~DEQ agency~~ determines that the permit must be revised or revoked to assure compliance with the applicable requirements.

(b)(2) Discretionary reopening. The ~~DEQ agency~~ may reopen and amend a permit when:

(1)(A) additional state-only requirements become applicable to a permitted stationary source, and the effective date of the requirement is at least 18 months prior to the date on which the permit is due to expire;

(2)(B) alterations or modifications to the permitted facility will result in or have the potential to result in significant alteration of the nature or quantity of regulated air pollutants to be emitted by the permittee;

(3)(C) the ~~DEQ agency~~ receives information previously unavailable to the ~~DEQ agency~~ that shows that the terms and conditions of the permit do not accurately represent the actual circumstances relating to the permitted facility;

(4)(D) a court of competent jurisdiction invalidates or modifies an Oklahoma or federal statute or rule or federal guideline upon which a condition of the permit is based; and

or
(5)(E) an event occurs that is beyond the control of the permittee that necessitates modification of a compliance schedule in the permit.

(c)(3) Reopening procedures. To reopen and amend a permit, the ~~DEQ agency~~ shall follow the procedures that apply to significant permit amendments modifications under this ~~chapter~~ Subchapter, unless the amendment can be made as an administrative amendment under ~~OAC 252:100-8-7(d)~~ 252:100-8-7.2(a). Mandatory reopenings under ~~OAC 252:100-8-7(f)(1)~~ 252:00-8-7.3(a) shall be made as expeditiously as practicable. In lieu of an application, the significant permit amendment modification process will commence when the ~~DEQ agency~~ gives the permittee written notice of its intent to amend the permit. The ~~DEQ agency~~ shall not issue the amendment, or make public notice of the amendment where public notice is required, until at least thirty days after the ~~DEQ agency~~ has given the permittee written notice of its intent to

amend the permit, unless the permittee consents to less notice, or in the case of an emergency. In cases where public participation is required, only those portions of the permit that which the DEQ agency proposes to amend shall be open for public comment or consideration at a meeting or hearing.

[NOTE: 252:100-8-7.3(a), (b), and (c) were 252:100-8-7(f)]

(d)-(g) Reopenings for cause by EPA.

(1) If the Administrator finds that cause exists to terminate, modify, or revoke and reissue a permit, the Administrator shall notify the DEQ permitting authority and the permittee of such findings in writing.

(2) The DEQ permitting authority shall, within 90 days after receipt of such notification, forward to EPA a proposed determination of termination, modification, or revocation and reissuance, as appropriate. The Administrator may extend this 90-day period for an additional 90 days if he finds that a new or revised permit application is necessary or that the DEQ permitting authority must require the permittee to submit additional information.

(3) The Administrator will review the proposed determination from the DEQ permitting authority within 90 days of receipt.

(4) The DEQ permitting authority shall have 90 days from receipt of an EPA objection to resolve any objection that EPA makes and to terminate, modify, or revoke and reissue the permit in accordance with the Administrator's objection.

(5) If the DEQ permitting authority fails to submit a proposed determination pursuant to this subsection, or fails to resolve any objection pursuant to this subsection, the Administrator will terminate, modify, or revoke and reissue the permit after taking the following actions:

(A) Providing at least 30 days' notice to the permittee in writing of the reasons for any such action.

(B) Providing the permittee an opportunity for comment on the Administrator's proposed action and an opportunity for a hearing.

[NOTE: 252:100-8-7.3(d) was 252:100-8-7(g)]

252:100-8-7.4.(h) Revocations of operating permits

(a)-(i) Revocation of a permit or authorization under a general permit Permit revocation without reissuance. The DEQ agency may revoke permits or authorizations under a general permit and not reissue them when:

(1)-(A) there exists at the permitted facility unresolved noncompliance with applicable requirements or a condition of the permit or authorization, and the permittee refuses to undertake an enforceable schedule of compliance to resolve the noncompliance;

(2)-(B) the permittee fails to disclose fully the facts relevant to issuance of the permit or authorization or submits false or misleading information to the DEQ agency or the Administrator administrator;

(3)-(C) the permittee has failed to comply with any requirement

under OAC ~~252:100-9~~ 252:100-5 to pay fees; or
(4) ~~(D)~~ the permittee has failed to pay a penalty owed pursuant
to court order, consent decree, stipulation agreement, or
schedule of compliance.

(b) ~~(2)~~ Revocation procedures. The DEQ agency shall give notice
to the permittee of its intention to revoke a permit without
reissuance. This notice must state that within 30 days of the
receipt of the notice the permittee may request a contested case
hearing be held on the proposed action, except that the DEQ
agency may provide less notice in case of an emergency. If the
permittee requests a contested case hearing, the DEQ agency shall
hold the hearing in accordance with the Oklahoma Administrative
Procedures Act.

[NOTE: 252:100-8-7.4 was 252:100-8-7(h)]

252:100-8-7.5. ~~(i)~~ Judicial review

Any final action in granting or denying an application for a
permit, permit amendment or modification, or permit renewal shall
be subject to judicial review in the court of appropriate
jurisdiction upon an application filed by the applicant or
permittee, or by any affected state or other person who
participated in the public comment process. Except for
authorizations under General Permits, judicial review is
available to all affected parties for all final permit actions
including minor modifications and administrative actions. If no
public comment procedure was employed for the action under
challenge, an application for review may be filed by the
permittee or an affected state. The opportunity for judicial
review provided for in this subsection shall be the exclusive
means for obtaining judicial review of any permit action.

(1) No application for judicial review may be filed more than
90 days following the final action on which review is sought,
unless the grounds for review arose at a later time, in which
case the application for review shall be filed within 90 days
of the date on which the grounds for review first arose and
review shall be limited to such later-arising grounds.

(2) Any application for judicial review shall be limited to
issues that:

(A) were raised in written comments filed with the DEQ
Agency or during a public hearing on the proposed permit
action (if the grounds on which review is sought were known
at that time), except that this restriction shall not apply
if the person seeking review was not afforded an advance
opportunity to comment on the challenged action; and

(B) are germane and material to the permit action at issue.

(3) For purposes of this section, "final action" shall
include a failure by the DEQ Agency to take final action to
grant or deny an application within the time specified in this
Chapter.

[NOTE: 252:100-8-7.5 was 252:100-8-7(j)]

252:100-8-8. Permit review by EPA and affected states

(a) **Applicability.** This section applies only to specific Tier II and III applications for Part 70 construction and/or operating permits and permit actions that have not been waived from compliance with this section by the Administrator.

(b) **Format.** To the extent practicable, information provided to the EPA by applicants shall be in computer-readable format compatible with EPA's national database management system.

(c) **Recordkeeping.** The DEQ will keep for 5 years records required by this section and will submit to the Administrator such information as the Administrator may reasonably require to ascertain whether the State program complies with the requirements of the ~~federal Clean Air Act~~ or of this Chapter.

(d) **Transmission of Part 70 applications to EPA.**

For Part 70 Tier II and III applications subject to this section, the DEQ shall require an applicant upon filing to also provide a copy to the Administrator or the DEQ may submit a permit application summary form and any relevant portion of the permit application and compliance plan, in place thereof.

(e) **Transmittal of notice of draft permit to affected states.** See 27A O.S.Supp. 1995, § 2-5-112(E); 27A O.S.Supp. 1995, § 2-14-101 et seq.; and ~~OAC~~ 252:2-15.

(f) **Preparation and submittal of EPA review copy.**

(1) **Tier II applications.** For Tier II applications, the DEQ shall review public comments, revise the draft permit as appropriate and submit the revision to EPA for review no later than 60 days before the issuance deadline established in ~~OAC~~ 252:2-15-72 or, if none, by this Chapter.

(2) **Tier III applications.** For Tier III applications, the DEQ shall prepare a proposed permit according to 27A O.S.Supp. 1995, § 2-14-304, and submit it to EPA for review upon the publication of notice of an administrative permit hearing opportunity.

(g) **Notice of non-acceptance.** As part of the DEQ's submittal of a revised draft permit (Tier II) or a proposed permit (Tier III) to the Administrator, the DEQ shall notify the Administrator and any affected State in writing of any refusal by the DEQ to accept all recommendations for the revised draft permit or proposed permit that the affected State submitted during the review period. The notice will include the DEQ's reasons for not accepting any such recommendation. The DEQ is not required to accept recommendations that are not based on applicable requirements of the Oklahoma Clean Air Act or these rules.

(h) **EPA review and non-objection.** Upon receipt of notice from the EPA that it will not object to:

(1) A revised draft permit based on a Tier II application, the DEQ shall issue the permit.

(2) A proposed permit based on a Tier III application, the DEQ shall issue the proposed permit as final unless an administrative permit hearing has been timely and properly requested.

(i) **EPA review and objection.**

(1) **Timing.** Except as specified in paragraph 5 of this

subsection, no permit for which an application must be transmitted to the Administrator under subsection (a) of this section shall be issued if the Administrator objects to its issuance in writing within 45 days of receipt of the revised draft permit (Tier I) or proposed permit (Tier III) and all necessary supporting information.

(2) **Form of objection.** An EPA objection shall include a statement of the Administrator's reasons for objection and a description of the terms and conditions that the permit must include to respond to the objections.

(3) **Additional grounds.** Failure of the DEQ to do any of the following also shall constitute grounds for an objection:

(A) Comply with subsections (d) or (e) of this section;

(B) Submit any information necessary to review adequately the revised draft permit (Tier II) or the proposed permit (Tier III); or

(C) Process the permit application according to the uniform permitting requirements of ~~OAC~~ 252:2-15.

(4) **Copy.** The Administrator will provide the permit applicant a copy of the objection.

(5) **DEQ response.** The DEQ shall consult with EPA and the applicant and shall either:

(A) **Amend permit.** Amend the permit and submit for approval an amended draft (Tier II) or proposed (Tier III) permit to EPA within 90 days after the date of EPA's objection, or

(B) **Give notice and issue.** Determine that one or more revisions sought by EPA are inconsistent with applicable state or federal statutes or regulations, inform EPA accordingly within 90 days following the date of the Administrator's objection, decline to make those particular revisions and:

(i) issue the amended or revised draft permit (Tier II) as final, or

(ii) issue the proposed permit (Tier III) as final unless an administrative permit hearing has been timely and properly requested.

(6) **Failure of DEQ to respond.** If the DEQ fails, within 90 days after the date of the EPA objection, to amend and resubmit the draft permit or proposed permit in response to the objection, the Administrator will issue or deny the permit in accordance with the requirements of EPA's Part 70 regulations.

(j) **Public petitions to the Administrator.** If the Administrator does not object in writing under subsection (h) of this section, any person that meets the requirements of this subsection may petition the Administrator within 60 days after the expiration of the Administrator's 45-day review period to make such objection. Any such petition shall be based only on objections to the permit that the petitioner raised with reasonable specificity during the public comment period provided for in ~~OAC~~ 252:002-15, unless the petitioner demonstrates that it was impracticable to raise such objections within such period, or unless the grounds for such

objection arose after such period. If the Administrator objects to the permit as a result of a petition filed under this subsection, the DEQ shall not issue the permit until EPA's objection has been resolved, except that a petition for review does not stay the effectiveness of a permit or its requirements if the permit was issued after the end of the 45-day review period and prior to an EPA objection. If the DEQ has issued a permit prior to receipt of an EPA objection under this subsection, the Administrator will modify, terminate, or revoke such permit, and shall do so consistent with the procedures in OAC 252:100-8-7 through 252:100-8-7.5 except in unusual circumstances. If the DEQ revokes the permit, it may thereafter issue only a revised permit that satisfies EPA's objection. In any case, the source will not be in violation of the requirement to have submitted a timely and complete application.

(k) **Effect on Tier III administrative permit hearing.** When a public petition or an EPA objection is registered on a proposed permit (Tier III) on which an administrative permit hearing has been requested in accordance with 27A O.S.Supp. 1995, Section 2-14-101 et seq., the DEQ may stay the evidentiary part of the hearing involving cross-examination until EPA objections are resolved or determined to be inconsistent with applicable laws.

~~252:100-8-9. Permit fees~~ [NOTE: The contents of this Section were moved to 252:100-5 and 252:100-8-1.7]

~~(a) Definitions. The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:~~

~~(1) "Actual emission" means the total amount of regulated pollutant (for fee calculation) emitted from a given facility during a particular calendar year, as determined by methods contained in OAC 252:100-8-9(d).~~

~~(2) "Allowable emissions" means the total amount of regulated pollutant (for fee calculation) emitted based on limits contained in a federally enforceable permit or potential to emit.~~

~~(3) "Emission inventory" means a compilation of the total of all point source, storage and process fugitive air emissions for all regulated pollutant (for fee calculation) at a given facility.~~

~~(4) "Consumer Price Index" means an index determined by the U.S. Department of Labor measuring the change in the cost of typical wage earner purchases of goods and services expressed as a percentage of the cost of these same goods and services in a base period.~~

~~(b) Fee required. The owners or operators of Part 70 sources shall pay annual fees that are sufficient to cover the part 70 program costs. The permitting authority shall ensure that any fee required by these rules will be used solely for part 70 program costs.~~

~~(c) Applicability. A Part 70 source shall be subject to fee requirements of this section on January 1, 1995, and as of this date shall no longer be subject to the major source annual~~

~~operating fee specified in 252:100-7-4 (b) (1) (A).~~

~~(d) Fee schedule for Part 70 sources.~~

~~(1) Annual fees. The annual fee shall be calculated on a source specific basis and may be based on either actual or allowable emissions at the option of the owner or operator paying the fee as set forth in the facility emissions inventory. Fees shall be based on emission inventories submitted in the previous calendar year. (For example, fee invoiced during calendar year 1995 shall be based upon inventory data covering the calendar year 1993).~~

~~(A) Annual fees shall be determined according to the following:~~

~~(i) where only one basis for fee assessment, i.e. only actual, or only allowable is reflected by the inventory, that basis shall be used for invoicing; or~~

~~(ii) where both actual and allowable emission are reflected on the inventory, the lesser of the two shall be used.~~

~~(B) Annual fees shall be as follows:~~

~~(i) Effective January 1, 1995, the annual operating fee for Part 70 sources shall be \$15.19 per ton of regulated air pollutant.~~

~~(ii) The annual operating fee shall be adjusted automatically each year by the percentage, if any, by which the Consumer Price Index for the most recent calendar year ending before the beginning of such year differs from the Consumer Price Index for the calendar year 1994. The Consumer Price Index for any calendar year is the average of the Consumer Price Index for all urban consumers published by the Department of Labor, as of the close of the twelve month period ending on August 31 of each calendar year.~~

~~(iii) Regulated pollutants (for fee calculation) in excess of 4,000 tons per year per pollutant for a part 70 source shall not be considered in the calculation of the annual fee.~~

~~(2) Permit processing fees. Permit processing fees shall be as follows:~~

~~(A) Initial Part 70 permit \$2,000.~~

~~(B) Renewal Part 70 permit \$1,000.~~

~~(C) Significant Part 70 Permit Mod. \$1,000.~~

~~(D) Minor Part 70 Permit Modification \$ 500.~~

~~(E) The Part 70 Temporary Permit \$1,000.~~

~~(F) Part 70 Temporary Source Relocation \$ 500.~~

~~(3) Payment. Fees will be paid by check or money order made payable to the Oklahoma Air Quality fund or upon delegation, to the appropriate reviewing agency. Fees are due and payable upon receipt of invoice. Fees shall be considered delinquent 30 days from the date of billing, at which time simple interest shall accrue at the rate of one and one half percent (1 1/2%) per month on any amount unpaid. The Department shall allow a grace period of one hundred and twenty days from the~~

~~date of billing before issuing any administrative order and assessing a reasonable administrative fine in accordance with the provisions of the Oklahoma Clean Air Act, 27A O.S. 1993 Supp. Sec. 2-5-101 et seq., as amended.~~

~~(4) Emissions inventory. The owner or operator of any Part 70 source shall by April 1, 1994, and every succeeding year thereafter, submit a complete emission inventory on forms obtained from the Agency. These inventories, covering the previous calendar year, will be used for the purpose of calculating the annual operating fee. The methods of calculation to be utilized in the development of an emission inventory shall be in accordance with the methods described in OAC 252:100-7-4(e).~~

PART 7. PREVENTION OF SIGNIFICANT DETERIORATION (PSD)
REQUIREMENTS FOR ATTAINMENT AREAS

[NOTE: Was 252:100-7-30 through 37]

252:100-8-30. Applicability

The new source requirements of this Part, in addition to the requirements of OAC 252:100-7-15 through 252:100-7-18 and 252:100-8, Parts 1, 3, and 5 of this Subchapter, shall apply to the construction of all major stationary sources and major modifications as specified in OAC 252:100-7-31 252:100-8-31 through 252:100-7-33 252:100-8-33. following and are effective upon adoption of this Subchapter by Oklahoma. Except that the requirements of this Part will not be necessary for sources required to meet the permit requirements of the United States Environmental Protection Agency under Title 40 Part 52.21 of the Code of Federal Regulations. Sources subject to this Part are also subject to the operating permit provisions contained in Part 5 of OAC 252:100-8.

252:100-8-31. Definitions

The following words and terms when used in this Part shall have the following meaning, unless the context clearly indicates otherwise:

"Actual emission" means the actual rate of emissions of a pollutant from an emissions unit, as determined in accordance with the following:

(A) In general, actual emissions as of a particular date shall equal the average rate in tons per year at which the unit actually emitted the pollutant during a two-year period which precedes the particular date and which is representative of normal source operation. The reviewing authority may allow the use of a different time period upon a determination that it is more representative of normal source operation. Actual emissions shall be calculated using the unit's actual operating hours, production rates, and types of materials processed, stored, or combusted during the selected time period. Actual emissions may also be determined by source

tests, or by best engineering judgment in the absence of acceptable test data.

(B) The reviewing authority may presume that source-specific allowable emissions for the unit are equivalent to the actual emissions of the unit.

(C) For any emissions unit which has not begun normal operations on the particular date, actual emissions shall equal the potential to emit of the unit on that date.

"Adverse impact on visibility" means visibility impairment which interferes with the management, protection, preservation or enjoyment of the visitor's visual experience of the Federal Class I area. This determination must be made by the DEQ Air Quality Division on a case-by-case basis taking into account the geographic extent, intensity, duration, frequency and time of visibility impairments, and how these factors correlate with:

(A) times of visitor use of the Federal Class I area; and

(B) the frequency and timing of natural conditions that reduce visibility. [NOTE: From 252:100-7-36(a)]

"Allowable emissions" means the emission rate of a stationary source calculated using the maximum rated capacity of the source (unless the source is subject to enforceable limits which restrict the operating rate, or hours of operation, or both) and the most stringent of the following:

(A) the applicable standards as set forth in 40 CFR Parts 60 and 61;

(B) the applicable State rule allowable emissions; or,

(C) the emissions rate specified as an enforceable permit condition. [NOTE: Moved to 252:100-8-1.1]

"Baseline area" means any areas designated as attainment or unclassifiable in which the major source or major modification establishing the minor source baseline date would construct or would have an air quality impact equal to or greater than 1 ug/m³ (annual average) of the pollutant for which the minor source baseline date is established.

"Baseline concentration" means that ambient concentration level which exists in the baseline area at the time of the applicable minor source baseline date.

(A) A baseline concentration is determined for each pollutant for which a minor source baseline date is established and shall include:

(i) the actual emissions representative of sources in existence on the applicable minor source baseline date, except as provided in (B) of this definition.

(ii) the allowable emissions of major sources which commenced construction before the major source baseline date but were not in operation by the applicable minor source baseline date. (Effective May 11, 1991)

(B) The following will not be included in the baseline concentration and will affect the applicable maximum allowable increase(s):

(i) actual emissions from any major source on which construction commenced after the major source baseline date;

and,

(ii) actual emissions increases and decreases at any source occurring after the minor source baseline date. (Effective May 11, 1991)

"Baseline date" means:

(A) for major sources,

(i) in the case of particulate matter and sulfur dioxide, January 6, 1975, and,

(ii) in the case of nitrogen dioxide, February 8, 1988; and,

(B) for minor sources, the earliest date after the trigger date on which a major source or major modification (subject to 40 CFR 52.21 or OAC 252:100-7 252:100-8, Part 5 7) submits a complete application. The trigger date is:

(i) in the case of particulate matter and sulfur dioxide, August 7, 1977, and

(ii) in the case of nitrogen oxides, February 8, 1988.

(Effective May 11, 1991)

"Begin actual construction" means, in general, initiation of physical on site construction activities on an emissions unit which are of a permanent nature. Such activities include, but are not limited to, installation of building supports and foundations, laying of underground pipework, and construction of permanent storage structures. With respect to a change in method of operation this term refers to those on site activities, other than preparatory activities, which mark the initiation of the change. [NOTE: Moved to 252:100-8-1.1]

"Best available control technology" means the control technology to be applied for a major source or modification is the best that is available as determined by the Executive Director on a case-by-case basis taking into account energy, environmental, costs and economic impacts of alternate control systems.

"Building, structure, facility or installation" means all of the pollutant-emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person or persons under common control. Pollutant-emitting activities shall be considered as part of the same industrial grouping if they belong to the same "Major Group" (i.e., which have the same two-digit code) as described in the Standard Industrial Classification Manual, 1972, as amended by the 1977 Supplement.

"Commence" as applied to construction of a major source or major modification means that the owner or operator has all necessary preconstruction approvals or permits and either has:
(A) begun, or caused to begin, a continuous program of actual on site construction of the source, to be completed within a reasonable time; or,
(B) entered into binding agreements or contractual obligations, which cannot be cancelled or modified without substantial loss to the owner or operator, to undertake a program of actual construction of the source to be completed within a reasonable time. [NOTE: Moved to 252:100-8-1.1]

"Complete" in reference to an application for a permit, means that the application contains all the information necessary for processing the application. Designating an application complete for purposes of permit processing does not preclude the reviewing authority from requesting or accepting any additional information.

"Construction" means any physical change or change in the method of operation (including fabrication, erection, installation, demolition, or modification of an emissions unit) which would result in a change in actual emissions. [NOTE: Moved to 252:100-8-1.1]

"Emissions unit" means any part of a source which emits or would have the potential to emit any pollutant subject to regulation. [NOTE: Moved to 252:100-8-1.1]

"Federal land manager" means the Secretary of the department with authority over the Federal Class I area or his representative. [NOTE: Moved from 252:100-8-36(a)]

"Fugitive emissions" means those emissions which could not reasonably pass through a stack, chimney, vent or other functionally equivalent opening. [NOTE: Moved to 252:100-8-1.1]

"Innovative control technology" means any system of air pollution control that has not been adequately demonstrated in practice, but would have a substantial likelihood of achieving greater continuous emissions reduction than any control system in current practice or of achieving at least comparable reductions at lower cost in terms of energy, economics, or non-air quality environmental impacts.

"Major modification" means any physical change in or change in the method of operation of a major source that would result in a significant net emissions increase of any pollutant subject to regulation.

(A) Any net emissions increase that is significant for volatile organic compounds shall be considered significant for ozone.

(B) A physical change or change in the method of operation shall not include:

(i) routine maintenance, repair and replacement.

(ii) use of an alternate fuel or raw material by reason of any order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation) or by reason of a natural gas curtailment plan pursuant to the Federal Power Act.

(iii) use of an alternate fuel by reason of an order or rule under Section 125 of the Federal Clean Air Act.

(iv) use of an alternate fuel at a steam generating unit to the extent that the fuel is generated from municipal solid waste.

(v) Use of an alternate fuel or raw material by a source which:

(I) the source was capable of accommodating before January 6, 1975, unless such change would be prohibited under any enforceable permit limitation which was

- established after January 6, 1975; or,
(II) the source is approved to use under any permit
issued under 40 CFR 52.21 or ~~OAC 252:100-7~~ 252:100-8.
(vi) An increase in the hours of operation or in the
production rate, unless such change would be prohibited
under any enforceable permit limitation which was
established after January 6, 1975.
(vii) Any change in source ownership.

"Major stationary source" means any source which meets any of
the following conditions:

(A) Any of the following sources of air pollutants which
emits, or has the potential to emit, 100 tons per year or more
of any pollutant subject to regulation:

- (i) carbon black plants (furnace process),
- (ii) charcoal production plants,
- (iii) chemical process plants,
- (iv) coal cleaning plants (with thermal dryers),
- (v) coke oven batteries,
- (vi) fossil-fuel boilers (or ~~combustion~~ combination thereof)
totaling more than 250 million BTU per hour heat input,
- (vii) fossil fuel-fired steam electric plants of more than
250 million BTU per hour heat input,
- (viii) fuel conversion plants,
- (ix) glass fiber processing plants,
- (x) hydrofluoric, sulfuric or nitric acid plants,
- (xi) iron and steel mill plants,
- (xii) kraft pulp mills,
- (xiii) lime plants,
- (xiv) municipal incinerators capable of charging more than
250 tons of refuse per day,
- (xv) petroleum refineries,
- (xvi) petroleum storage and transfer units with a total
storage capacity exceeding 300,000 barrels,
- (xvii) phosphate rock processing plant,
- (xviii) portland cement plants,
- (xix) primary aluminum ore reduction plants,
- (xx) primary copper smelters,
- (xxi) primary lead smelters,
- (xxii) primary zinc smelters,
- (xxiii) secondary metal production plants,
- (xxiv) sintering plants,
- (xxv) sulfur recovery plants, or
- (xxvi) taconite ore processing plants.

(B) Any other source not on the list in (A) of this
definition which emits, or has the potential to emit, 250 tons
per year or more of any pollutant subject to regulation.

(C) Any physical change that would occur at a source not
otherwise qualifying as a major source under (A) and (B) of
this definition if the change would constitute a major source
by itself.

(D) A major source that is major for volatile organic
compounds shall be considered major for ozone.

"Natural conditions" mean naturally occurring phenomena against which any changes in visibility are measured in terms of visual range, contrast or coloration. [NOTE: From 252:100-8-36(a)]

~~"Necessary preconstruction approvals or permits" means those permits or approvals required under all applicable air quality control laws and rules. [NOTE: Moved to 252:100-8-1.1]~~

"Net emissions increase" means:

(A) The amount by which the sum of the following exceeds zero:

(i) any increase in actual emissions from a particular physical change or change in the method of operation at a source; and,

(ii) any other increases and decreases in actual emissions at the source that are contemporaneous with the particular change and are otherwise creditable.

(B) An increase or decrease in actual emissions is contemporaneous with the increase from the particular change only if it occurs within 3 years before the date that the increase from the particular change occurs.

(C) An increase or decrease in actual emissions is creditable only if the Executive Director has not relied on it in issuing a permit under OAC 252:100-7, Part 3 252:100-8, Part 7, which permit is in effect when the increase in actual emissions from the particular change occurs.

(D) An increase or decrease in actual emissions of sulfur dioxide, particulate matter, or nitrogen oxides which occurs before the applicable minor source baseline date is creditable only if it is required to be considered in calculating the amount of maximum allowable increases remaining available. (Effective May 11, 1991)

(E) An increase in actual emissions is creditable only to the extent that the new level of actual emissions exceeds the old level.

(F) A decrease in actual emissions is creditable only to the extent that:

(i) the old level of actual emissions or the old level of allowable emissions, whichever is lower, exceeds the new level of actual emissions;

(ii) it is enforceable at and after the time that actual construction on the particular change begins;

(iii) it has approximately the same qualitative significance for public health and welfare as that attributed to the increase from the particular change.

(G) An increase that results from a physical change at a source occurs when the emission unit on which construction occurred becomes operational and begins to emit a particular pollutant. Any replacement unit that requires shakedown becomes operational only after a reasonable shakedown period, not to exceed 180 days.

"Potential to emit" means the maximum capacity of a source to emit a pollutant under its physical and operational design. Any

~~physical or operational limitation on the capacity of the source to emit a pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored or processed, shall be treated as part of its design if the limitation or the effect it would have on emissions is enforceable. Secondary emissions do not count in determining the potential to emit of a source. [NOTE: Moved to 252:100-8-1.1]~~

~~"Secondary emissions" means emissions which occur as a result of the construction or operation of a major stationary source or modification, but do not come from the source or modification itself. For the purposes of OAC 252:100 7, Part 5 secondary emissions must be specific, well defined, quantifiable, and impact the same general areas as the source or modification which causes the secondary emissions. Secondary emissions may include, but are not limited to:~~

~~(A) emissions from trains coming to or from the new or modified stationary source; and,~~

~~(B) emissions from any offsite support facility which would not otherwise be constructed or increase its emissions as a result of the construction or operation of the major source or modification. [NOTE: Moved to 252:100-8-1.1]~~

~~"Significant" means:~~

~~(A) In reference to a net emissions increase or the potential of a source to emit any of the following pollutants, a rate of emissions that would equal or exceed any of the following rates:~~

~~(i) carbon monoxide: 100 tons per year (tpy),~~

~~(ii) nitrogen oxides: 40 tpy,~~

~~(iii) sulfur dioxide: 40 tpy,~~

~~(iv) particulate matter: 25 tpy of particulate matter emissions or 15 tpy of PM-10 emissions,~~

~~(v) ozone: 40 tpy of volatile organic compounds,~~

~~(vi) lead: 0.6 tpy,~~

~~(vii) asbestos: 0.007 tpy,~~

~~(viii) beryllium: 0.0004 tpy,~~

~~(ix) mercury: 0.1 tpy,~~

~~(x) vinyl chloride Chloride: 1 tpy,~~

~~(xi) fluorides: 3 tpy,~~

~~(xii) sulfuric acid mist: 7 tpy,~~

~~(xiii) hydrogen sulfide (H₂S): 10 tpy,~~

~~(xiv) total reduced sulfur (including H₂S): 10 tpy, and~~

~~(xv) reduced sulfur compounds (including H₂S): 10 tpy.~~

~~(B) Notwithstanding (A) of this definition, "significant" means any emissions rate or any net emissions increase associated with a major source or modification which would construct within 6 miles of a Class I area, and have an impact on such area equal to or greater than 1 ug/m³ (24-hour average).~~

~~"Stationary source" means any building, structure, facility or installation which emits or may emit any air pollutant subject to OAC 252:100. [NOTE: Moved to 252:100-8-1.1]~~

"Visibility impairment" means any humanly perceptible reduction in visibility (visual range, contrast and coloration) from that which would have existed under natural conditions.
[NOTE: From 252:100-8-36(a)]

252:100-8-32. Source applicability determination

Proposed new sources and source modifications to which this Part 5 of this Subchapter is applicable are determined by size, geographical location and type of emitted pollutants.

(1) Size.

(A) Permit review will apply to sources and modifications that emit any regulated pollutant in major amounts. These quantities are specified in the definitions for major stationary source, major modification, potential to emit, net emissions increase, significant and other associated definitions in 252:100-8-31, 252:100-8-1.1, and 252:100-1.

(B) ~~When At such time that a particular source or modification becomes major solely by virtue of a relaxation in any enforceable permit limitation which was established after August 7, 1980, on the capacity of the source or modification otherwise to emit a pollutant, such as a restriction on hours of operation, then the requirements of OAC 252:100-7-15 through 252:100-7-18 and OAC 252:100-7, Part 7~~ 252:100-8, Parts 1, 3, 5, and 7 shall apply to that source or modification as though construction had not yet commenced on it.

(2) Location.

(A) Sources and modifications which are major in size and proposed for construction in an area which has been designated as attainment or unclassified for any applicable ambient air standard are subject to the ~~prevention of significant deterioration~~ PSD requirements.

(B) Those sources and modifications locating in an attainment or unclassified area but impacting on a nonattainment area may also be subject to the requirements for major sources affecting nonattainment areas in 252:100-8, Part 9 of OAC 252:100-7, Part 7.

252:100-8-33. Review, applicability and exemptions Exemptions

(a) ~~Exemptions from PSD requirements.~~ PSD requirements do not apply to a particular source or modification ~~do not apply~~ if:

(1) It is a nonprofit health or educational institution.

(2) The source is major by virtue of fugitive emissions, to the extent quantifiable, included in calculating the potential to emit and is a source other than one of the following categories:

(A) ~~carbon black plants (furnace process), One of the categories listed in (A) (i) through (xxvi) under the definition of "Major stationary source" in 252:100-8-31, or~~

(B) ~~charcoal production plants,~~

(C) ~~chemical process plants,~~

(D) ~~coal cleaning plants (with thermal dryers),~~

- ~~(E) coke oven batteries,~~
- ~~(F) fossil fuel boilers (or combustion combination thereof) totaling more than 250 million BTU per hour heat input,~~
- ~~(G) fossil fuel fired steam electric plant of more than 250 million BTU per hour heat input,~~
- ~~(H) fuel conversion plants,~~
- ~~(I) glass fiber processing plants,~~
- ~~(J) hydrofluoric, sulfuric or nitric acid plants,~~
- ~~(K) iron and steel mills,~~
- ~~(L) kraft pulp mills,~~
- ~~(M) lime plants,~~
- ~~(N) municipal incinerators capable of charging more than 250 tons of refuse per day,~~
- ~~(O) petroleum refineries,~~
- ~~(P) petroleum storage and transfer units with a total storage exceeding 300,000 barrels,~~
- ~~(Q) phosphate rock processing plants,~~
- ~~(R) portland cement plants,~~
- ~~(S) primary aluminum ore reduction plants,~~
- ~~(T) primary copper smelters,~~
- ~~(U) primary lead smelters,~~
- ~~(V) primary zinc smelters,~~
- ~~(W) secondary metal production plants,~~
- ~~(X) sintering plants,~~
- ~~(Y) sulfur recovery plants,~~
- ~~(Z) taconite ore processing plants, or~~
- ~~(AA) A any other stationary source category which, as of August 7, 1980, is being regulated by federal New Source Performance Standards (NSPS) NSPS or National Emission Standards for Hazardous Air Pollutants (NESHAPS) NESHAP.~~

(3) The source or modification is a A portable stationary source which has previously received a permit under the PSD requirements and proposes to relocate to a temporary new location from which its emissions would not impact a Class I area or an area where an applicable increment is known to be violated.

(b) Exemption from air quality impact evaluation.

(1)(b) The requirements of OAC 252:100-7-35 252:100-8-35 are not applicable if the emissions, with respect to a particular pollutant, would be temporary and impact no Class I area and no area where an applicable increment is known to be violated.

(2)(e) The requirements of OAC 252:100-7-35 252:100-8-35 are not applicable to the emissions, with respect to a particular pollutant, to a modification of a major source that was in existence on March 1, 1978 if the net increase in allowable emissions of each regulated pollutant, after the application of best available control technology, would be less than 50 tons per year. [NOTE: 252:100-8-33(b) (2) was 252:100-8-33(c)]

(c) Exemption from monitoring requirements.

(1)(d) The monitoring requirements of OAC 252:100-7-35 252:100-8-35 are not applicable for a particular pollutant if

the emission increase of the pollutant from a new source or the net emissions increase of the pollutant from a modification would cause, in any area, air quality impacts less than the following listed amounts, or are pollutant concentrations that are not on the list.

- (A) (1) Carbon monoxide - 575 ug/m³, 8-hour average,
- (B) (2) Nitrogen dioxide - 14 ug/m³, annual average,
- (C) (3) Particulate matter - 10 ug/m³, TSP, 24-hour average, or 10 ug/m³ PM-10, 24-hour average,
- (D) (4) Sulfur dioxide - 13 ug/m³, 24-hour average,
- (E) (5) Ozone - see (N) (14) below,
- (F) (6) Lead - 0.1 ug/m³, 24-hour 3-month average,
- (G) (7) Mercury - 0.25 ug/m³, 24-hour average,
- (H) (8) Beryllium - 0.0005 0.001 ug/m³, 24-hour average,
- (I) (9) Fluorides - 0.25 ug/m³, 24-hour average,
- (J) (10) Vinyl chloride - 15 ug/m³, 24-hour average,
- (K) (11) Total reduced sulfur - 10 ug/m³, 1-hour average,
- (L) (12) Hydrogen sulfide - 0.04 0.2 ug/m³, 1-hour average, or
- (M) (13) Reduced sulfur compounds - 10 ug/m³, 1-hour average.
- (N) (14) No de minimis air quality level is provided for ozone. However, any net increase of 100 tons per year or more of volatile organic compounds subject to PSD would be required to perform an ambient impact analysis, including the gathering of ambient air quality data. [NOTE: 252:100-8-33(c) (1) was 252:100-8-33(d)]

(2) The requirements for air quality monitoring in OAC 252:100 7 35(b) through 252:100 7 35(d) 252:100-8-35(b), (c) and (d) (2) shall not apply to a particular source or modification that was subject to Federal 40 CFR 52.21 as in effect on June 19, 1978, if a permit application in accordance with OAC 252:100 7 is was submitted before June 8, 1981 and the Executive Director subsequently determines determined that the application as submitted was complete except for with respect to the requirements of OAC 252:100 7 other than those in OAC 252:100 7 35(b) through 252:100 7 35(d) 252:100-8-35(b), (c) and (d) (2) and with respect to the requirements for such analyses at 40 CFR 52.21 (m) (2) as in effect on June 19, 1978. Instead, the latter requirements in 40 CFR 52.21(m) (2) as in effect on June 19, 1978, shall apply to any such source or modification. [NOTE: was 252:100-7-33(f)]

(3) The requirements for air quality monitoring in OAC 252:100 7 35(b) through 252:100 7 35(d) 252:100-8-35(b), (c), and (d) (2) shall not apply to a particular source or modification that was not subject to 40 CFR 52.21 as in effect on June 19, 1978, if a permit application in accordance with OAC 252:100 7 is was submitted before June 8, 1981 and the Executive Director subsequently determines determined that the application as submitted was complete, except for with respect to the requirements in OAC 252:100 7 35(b) through 252:100 7-

~~35(d)~~ 252:100-8-35(b), (c) and (d)(2). [NOTE: was 252:100-7-33(g)]

(4) The Executive Director shall determine if the requirements for air quality monitoring of PM-10 in OAC ~~252:100-7-35(a)~~ 252:100-8-35(a) through ~~252:100-7-35(d)~~ 252:100-8-35(c) and 252:100-8-35(d)(2) may be waived for a particular source or modification when the owner or operator of the source or modification submits an application for a permit was submitted on or before June 1, 1988 and the Executive Director subsequently determines determined that the application, except with respect to for the requirements for monitoring particulate matter under OAC ~~252:100-7-35(a)~~ 252:100-8-35(a) through ~~252:100-7-35(d)~~ 252:100-8-35(c) and 252:100-8-35(d)(2), was complete before that date. [NOTE: was 252:100-7-33(i)]

(5) The requirements for air quality monitoring of PM-10 in OAC ~~252:100-7-35(b)~~ 252:100-8-35(b), (c), (d)(2) and (d)(6) through ~~252:100-7-35(d)~~ and ~~252:100-7-35(h)~~ shall apply to a particular source or modification if the owner or operator of the source or modification submits an application for a permit was submitted after June 1, 1988 and no later than December 1, 1988. The data shall have been gathered over at least the period from February 1, 1988 to the date the application becomes otherwise complete in accordance with the provisions of OAC ~~252:100-7-33(b)~~ 252:100-8-33(b)(1), except that if the Executive Director determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period (not to be less than 4 months), the data required by OAC ~~252:100-7-35(b)~~ 252:100-8-35(b)(1) and ~~252:100-7-35(e)~~ 252:100-8-35(c) shall have been gathered over that shorter period. [NOTE was 252:100-7-33(j)]

~~(d)(e)~~ Exemption from BACT requirements and monitoring requirements. If a complete permit application for a source or modification was submitted before August 7, 1980 the requirements for best available control technology in OAC ~~252:100-7-34~~ 252:100-8-34 and for monitoring in OAC ~~252:100-7-35(a)~~ 252:100-8-35(a) through ~~252:100-7-35(f)~~ 252:100-8-35(c) and 252:100-8-35(d)(2) through 252:100-8-35(d)(4) are not applicable. Instead, the federal requirements at 40 CFR 52.21 (j) and (n) as in effect on June 19, 1978 are applicable to any such source or modification. [NOTE: was 252:100-8-33(e)]

~~(f)~~ The requirements for air quality monitoring in OAC ~~252:100-7-35(b)~~ through ~~252:100-7-35(d)~~ shall not apply to a particular source or modification that was subject to Federal 40 CFR 52.21 as in effect on June 19, 1978 if a permit application in accordance with OAC 252:100-7 is submitted before June 8, 1981 and the Executive Director subsequently determines that the application as submitted was complete with respect to the requirements of OAC 252:100-7 other than those in OAC ~~252:100-7-35(b)~~ through ~~252:100-7-35(d)~~ and with respect to the requirements for such analyses at 40 CFR 52.21 (m) (2) as in effect on June 19, 1978. Instead, the latter requirements shall

~~apply to any such source or modification.~~ [NOTE: Moved to 252:100-8-33(c)(2)]

~~(g) The requirements for air quality monitoring in OAC 252:100-7-35(b) through 252:100-7-35(d) shall not apply to a particular source or modification that was not subject to 40 CFR 52.21 as in effect on June 19, 1978 if a permit application in accordance with OAC 252:100-7 is submitted before June 8, 1981 and the Executive Director subsequently determines that the application as submitted was complete, except with respect to the requirements in OAC 252:100-7-35(b) through 252:100-7-35(d).~~

[NOTE: Moved to 252:100-8-33(c)(3)]

~~(e)(h) Exemption of modifications.~~ As specified in the applicable definitions of OAC 252:100-7-31, 252:100-8-1.1, and 252:100-1, the requirements of OAC 252:100-7-35(a) through 252:100-8, Part 5-7 for PSD and 252:100-7-35(b) through 252:100-8, Part 7-9 for nonattainment areas are not applicable to a modification if the existing source was not major on August 7, 1980 unless the proposed addition to that existing minor source is major in its own right. [Note: was 252:100-8-33(h)]

~~(i) The Executive Director shall determine if the requirements for air quality monitoring of PM 10 in OAC 252:100-7-35(a) through 252:100-7-35(d) may be waived for a particular source or modification when the owner or operator of the source or modification submits an application for a permit on or before June 1, 1988 and the Executive Director subsequently determines that the application, except with respect to the requirements for monitoring particulate matter under OAC 252:100-7-35(a) through 252:100-7-35(d), was complete before that date.~~ [NOTE: Moved to 252:100-8-33(c)(4)]

~~(j) The requirements for air quality monitoring of PM 10 in OAC 252:100-7-35(b) through 252:100-7-35(d) and 252:100-7-35(h) shall apply to a particular source or modification if the owner or operator of the source or modification submits an application for a permit after June 1, 1988 and no later than December 1, 1988. The data shall have been gathered over at least the period from February 1, 1988 to the date the application becomes otherwise complete in accordance with the provisions of OAC 252:100-7-33(b), except that if the Executive Director determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period (not to be less than 4 months), the data required by OAC 252:100-7-35(b) and 252:100-7-35(c) shall have been gathered over that shorter period.~~ [NOTE: Moved to 252:100-8-33(c)(5)]

~~(k) For any application that becomes complete, except as to the requirements of OAC 252:100-7-35(b) through 252:100-7-35(d) pertaining to monitoring of PM 10, after December 1, 1988 and no later than August 1, 1989, the data that OAC 252:100-7-35(b) and 252:100-7-35(e) require shall have been gathered over at least the period from August 1, 1988 to the date the application becomes otherwise complete, except that if the Executive Director determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period (not to be~~

less than 4 months), the data that OAC 252:100-7-35(b) and 252:100-7-35(c) require shall have been gathered over that shorter period. {NOTE: Moved to 252:100-8-35(d)(3)(B)}

(l) With respect to any requirements for air quality monitoring of PM 10 under OAC 252:100-7-33(i) and 252:100-7-33(j), the owner or operator of the source or modification shall use a monitoring method approved by the Executive Director and shall estimate the ambient concentrations of PM 10 using the data collected by such approved monitoring method in accordance with estimating procedures approved by the Executive Director. [NOTE: Moved to 252:100-8-35(d)(1)]

(f)-(m) Exemption from impact analyses. The requirements of OAC 252:100-7-35 252:100-8-35 and 252:100-7-36 252:100-8-36 do not apply to a source or modification with respect to any maximum allowable increase for nitrogen oxides if the owner or operator of the source or modification submitted a completed application for a permit before February 8, 1988. [NOTE: was 252:100-8-33(m)]

(g)-(n) Exemption from increment consumption. Excluded from increment consumption are the following cases:

(1) Concentrations from an increase in emissions from any source converting from the use of petroleum products, natural gas, or both by reason of any order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation), or by reason of a natural gas curtailment plan pursuant to the Federal Power Act. Such exclusion is limited to five years after the effective date of the order or plan.

(2) Emissions of particulate matter from construction or other temporary emission-related activities of new or modified sources.

(3) A temporary increase of sulfur dioxide, particulate matter, or nitrogen oxides by order or authorized variance from any source. [NOTE: was 252:100-8-33(n)]

252:100-8-34. Best available control ~~Control~~ technology

(a) A new source must demonstrate that the control technology to be applied is the best that is available (i.e., BACT as defined herein for each regulated pollutant that it would have the potential to emit in significant amounts).

(b) A major modification must demonstrate that the control technology to be applied is the best that is available for each regulated pollutant for which it would be a significant net emissions increase at the source. This requirement applies to each proposed emissions unit at which a net emissions increase in the pollutant would occur as a result of a physical change or change in the method of operation in the unit.

(c) The determination of best available control technology shall be made on a case by case basis taking into account costs and energy, environmental and economic impacts.

(d) For phased construction projects the determination of best available control technology shall be reviewed and modified at the discretion of the Executive Director at a reasonable time

but no later than 18 months prior to commencement of construction of each independent phase of the project. At such time the owner or operator may be required to demonstrate the adequacy of any previous determination of best available control technology.

252:100-8-35. Air quality impact evaluation

(a) Application contents. Any application for a permit shall contain, as the Executive Director determines appropriate, an evaluation of ambient air quality in the area that the source or modification would affect for each of the following pollutants:

- (1) for a new source, each regulated pollutant that it would have the potential to emit in a significant amount;
- (2) for a major modification, each regulated pollutant for which it would result in a significant net emissions increase.

(b) Continuous monitoring data. For visibility and any pollutant, other than volatile organic compounds, for which an ambient air quality standard ~~does exist~~ exists, the evaluation shall contain continuous air quality monitoring data gathered to determine whether emissions of that pollutant would cause or contribute to a violation of the applicable ambient air quality standard. For any such pollutant for which a standard does not exist, the monitoring data required shall be that which the Executive Director determines is necessary to assess the ambient air quality for that pollutant in that area. (Amended 7-9-87, effective 8-10-87)

(c) Increment consumption. The evaluation shall demonstrate that, as of the source's start-up date, the increase in emissions from that source, in conjunction with all other applicable emissions increases or reductions of that source, will not cause or contribute to any increase in ambient concentrations exceeding the remaining available PSD increment for the specified air contaminants as determined by the Executive Director.

(d) Monitoring.

(1) Monitoring method. With respect to any requirements for air quality monitoring of PM-10 under ~~OAC 252:100-7-33(i)~~ 252:100-8-33(c)(4) and ~~252:100-7-33(j)~~ 252:100-8-33(c)(5), the owner or operator of the source or modification shall use a monitoring method approved by the Executive Director and shall estimate the ambient concentrations of PM-10 using the data collected by such approved monitoring method in accordance with estimating procedures approved by the Executive Director. [NOTE: was 252:100-7-33(1)]

(2) ~~(d)~~ Monitoring period. The required monitoring data shall have been gathered for a time period of up to one year and shall represent the year preceding submission of the application. Ambient monitoring data collected for a time period shorter than one year (but no less than four months) or for a time period other than immediately preceding the application may be acceptable if such data are determined by the Executive Director to be within the time period that maximum pollutant concentrations would occur, and to be complete and adequate for determining whether the source or

modification will cause or contribute to a violation of any applicable ambient air quality standard or consume more than the remaining available PSD increment. [NOTE: 252:100-8-35(d)(2) was 252:100-8-35(d)]

(3)(e) Monitoring period exceptions.

(A) For any application which becomes complete except as to the monitoring requirements of ~~OAC 252:100-7-35(b)~~ 252:100-8-35(b) through ~~252:100-7-35(d)~~ 252:100-8-35(c) and 252:100-8-35(d)(2), between June 8, 1981 and February 9, 1982, the data that ~~OAC 252:100-7-35(b)~~ 252:100-8-35(b) and ~~252:100-7-35(e)~~ 252:100-8-35(c) require shall have been gathered over the period from February 9, 1981 to the date the application becomes otherwise complete, except that:

(i)(1) If the source or modification would have been major for that pollutant under Federal 40 CFR 52.21 as in effect on June 19, 1978, any monitoring data shall have been gathered over the period required by those regulations.

(ii)(2) If the Executive Director determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period, not to be less than four months, the data that ~~OAC 252:100-7-35(b)~~ 252:100-8-35(b) and ~~252:100-7-35(e)~~ 252:100-8-35(c) require shall have been gathered over that shorter period.

(iii)(3) If the monitoring data would relate exclusively to ozone and would not have been required under Federal 40 CFR 52.21 as in effect on June 19, 1978, the Executive Director may waive the otherwise applicable requirements of ~~OAC 252:100-7-35(e)~~ 252:100-8-35(d)(3)(A) to the extent that the applicant shows that the monitoring data would be unrepresentative of air quality over a full year. [NOTE: 252:100-8-35(d)(3)(A) was 252:100-8-35(e)]

(B) For any application that becomes complete, except as to the requirements of ~~OAC 252:100-7-35(b)~~ 252:100-8-35(b), (c) and (d)(2) through ~~252:100-7-35(d)~~ pertaining to monitoring of PM-10, after December 1, 1988 and no later than August 1, 1989, the data that ~~OAC 252:100-7-35(b)~~ 252:100-8-35(b) and (c) ~~252:100-7-35(e)~~ require shall have been gathered over at least the period from August 1, 1988 to the date the application becomes otherwise complete, except that if the Executive Director determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period (not to be less than 4 months), the data that ~~OAC 252:100-7-35(b)~~ 252:100-8-35(b) and ~~252:100-7-35(e)~~ 252:100-8-35(c) require shall have been gathered over that shorter period. [NOTE: was 252:100-7-33(k)]

(4)(f) Ozone post-approval monitoring. The application for a source or modification of volatile organic compounds which satisfies all conditions of ~~OAC 252:100-7-54~~ 252:100-8-54 may provide post-approval monitoring data for ozone in lieu of

providing preconstruction data as required under ~~0AC 252:100-7-35~~ 252:100-8-35. [NOTE: was 252:100-8-35(f)]

~~(5)(g)~~ **Post-construction monitoring.** The applicant for a permit for a new source or modification shall conduct, after construction, such ambient monitoring and visibility monitoring as the Executive Director determines necessary to determine the effect its emissions may have, or are having, on air quality in any area. (Amended 7-9-87, effective 8-10-87) [NOTE: was 252:100-8-35(g)]

~~(6)(h)~~ **Monitoring system operation.** The operation of monitoring stations for any air quality monitoring required under Part 5 7 of this Subchapter shall meet the requirements of 40 CFR 58 Appendix B. [NOTE: was 252:100-8-35(h)]

~~(e)(i)~~ **Air quality models.**

(1) Any air quality dispersion modeling that is required under Part 5 7 of this Subchapter for estimates of ambient concentrations shall be based on the applicable air quality models, data bases and other requirements specified in the Guidelines on Air Quality Models, OAQPS 1.2-080, U.S. Environmental Protection Agency, April, 1978 and subsequent revisions.

(2) Where an air quality impact model specified in the Guidelines on Air Quality Models is inappropriate, the model may be modified or another model substituted, as approved by the Executive Director. Methods like those outlined in the Workbook for the Comparison of Air Quality Models, U.S. Environmental Protection Agency, April, 1977 and subsequent revisions, can be used to determine the comparability of air quality models. [NOTE: 252:100-8-35(e) was 252:100-8-35(i)]

~~(f)(j)~~ **Growth analysis.** Upon request of the Executive Director the permit application shall provide information on the nature and extent of any or all general commercial, residential, industrial and other growth which has occurred since August 7, 1977 in the area the source or modification would affect. The permit application shall also contain an analysis of the air quality impact projected for the area as a result of general commercial, residential and other growth associated with the source or modification. [NOTE: was 252:100-8-35(j)]

~~(g)(k)~~ **Visibility and other impacts analysis.** The permit application shall provide an analysis of the impairment to visibility, soils and vegetation as a result of the source or modification. The Executive Director may require monitoring of visibility in any Federal Class I area near the proposed new stationary source or major modification for such purposes and by such means as the Executive Director deems necessary and appropriate. (Amended 7-9-87, effective 8-10-87) {NOTE: was 252:100-8-35(k)}

252:100-8-36. Source impacting Class I areas

~~(a) Definitions.~~ The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:

~~(1) "Adverse impact on visibility" means visibility impairment which interferes with the management, protection, preservation or enjoyment of the visitor's visual experience of the Federal Class I area. This determination must be made by the Air Quality Division on a case by case basis taking into account the geographic extent, intensity, duration, frequency and time of visibility impairments, and how these factors correlate with:~~

~~(A) times of visitor use of the Federal Class I area; and
(B) the frequency and timing of natural conditions that reduce visibility. [NOTE: Moved to 252:100-8-31]~~

~~(2) "Federal land manager" means the Secretary of the department with authority over the Federal Class I area or his representative. [NOTE: Moved to 252:100-8-31]~~

~~(3) "Installation" means an identifiable piece of process equipment. (Amended 7-9-87, effective 8-10-87) [NOTE: in SC-1]~~

~~(4) "Natural conditions" mean naturally occurring phenomena against which any changes in visibility are measured in terms of visual range, contrast or coloration. [NOTE: Moved to 252:100-8-31]~~

~~(5) "Visibility impairment" means any humanly perceptible reduction in visibility (visual range, contrast and coloration) from that which would have existed under natural conditions. [NOTE: Moved to 252:100-8-31]~~

~~(a)(b) Permits issuance. Permits may be issued at variance to the limitations imposed on a Class I area in compliance with the procedures and limitations established in State and Federal Clean Air Acts. [NOTE: was 252:100-8-36(b)]~~

~~(b)(e) Impact analysis required. The permit application for a proposed new source or modification will contain an analysis on the impairment of visibility and an assessment of any anticipated adverse impacts on soils and vegetation in the vicinity of the source resulting from construction of the source. The Executive Director shall notify the appropriate Federal Land Manager of the receipt of any such analysis and include a complete copy of the permit application. Any analysis performed by the Land Manager shall be considered by the Executive Director provided that the analysis is filed with the DEQ Air Quality Division within 30 days of receipt of the application by the Land Manager. Where the Executive Director finds that such an analysis does not demonstrate to the satisfaction of the Executive Director that an adverse impact on visibility will result in the Federal Class I area, the Executive Director will, in any notice of public hearing on the permit application, either explain his decision or give notice as to where the explanation can be obtained. Further, upon presentation of good and sufficient information, by a Federal federal Land land Manager manager, the Executive Director may deny the issuance of a permit for a source, emissions from which will adversely impact areas heretofore or hereafter categorized as Class I areas even though the emissions would not cause the increment for such Class I areas to be~~

exceeded. [NOTE: was 252:100-8-36(c)]

252:100-8-37. Innovative control technology

(a) An applicant for a permit for a proposed major source or modification may request the Executive Director in writing to approve a system of innovative control technology.

(b) The Executive Director may determine that the innovative control technology is permissible if:

(1) The proposed control system would not cause or contribute to an unreasonable risk to public health, welfare or safety in its operation or function.

(2) The applicant agrees to achieve a level of continuous emissions reductions equivalent to that which would have been required for best available control technology under OAC ~~252:100-7-34~~ 252:100-8-34 by a date specified by the Executive Director. Such date shall not be later than 4 years from the time of start-up or 7 years from permit issuance.

(3) The source or modification would meet the requirements equivalent to those in OAC ~~252:100-7-15~~ through ~~252:100-7-18~~ Parts 1 and 5 of this Subchapter and ~~252:100-7-36~~ 252:100-8-36 based on the emissions rate that the source employing the system of innovative control technology would be required to meet on the date specified by the Executive Director.

(4) The source or modification would not, before the date specified, cause or contribute to any violation of the applicable ambient air standards, or impact any Class I area or area where an applicable increment is known to be violated.

(5) All other applicable requirements including those for public review have been met.

(c) The Executive Director shall withdraw approval to employ a system of innovative control technology made under OAC ~~252:100-7-37~~ 252:100-8-37, if:

(1) The proposed system fails by the specified date to achieve the required continuous reduction rate; or,

(2) The proposed system fails before the specified date so as to contribute to an unreasonable risk to public health, welfare or safety; or,

(3) The Executive Director decides at any time that the proposed system is unlikely to achieve the required level of control or to protect the public health, welfare or safety.

(d) If a source or modification fails to meet the required level of continuous emissions reduction within the specified time period, or if the approval is withdrawn in accordance with OAC ~~252:100-7-37(e)~~ 252:100-8-37(c), the source or modification may be allowed up to an additional 3 years to meet the requirement for application of best available control technology through the use of a demonstrated system of control.

PART 9. MAJOR SOURCES AFFECTING NONATTAINMENT AREAS

252:100-8-50. Applicability

The new source requirements of this Section Part, in addition to the applicable requirements of OAC 252:100-7-15 through 252:100-7-18 and OAC 252:100-8 Parts 1, 3, and 5 of this Subchapter, shall apply to the construction of all major sources and major modifications affecting designated nonattainment areas as specified in OAC 252:100-7-51 252:100-8-51 through 252:100-7-53 252:100-8-53., and are effective upon adoption of this Subchapter by Oklahoma. Except that the requirements of Part 7 of this Subchapter will not be necessary for sources required to meet the permit requirements of the United States Environmental Protection Agency under Title 40 Part 52.24 of the Code of Federal Regulations. Sources subject to this Part which are Part 70 sources are also subject to the provisions of OAC 252:100-8.

252:100-8-51. Definitions

The following words and terms, when used in this Part, shall have the following meaning, unless the context clearly indicates otherwise:

"Actual emissions" means the actual rate of emissions of a pollutant from an emissions unit, as determined in accordance with the following:

(A) In general, actual emissions as of a particular date shall equal the average rate in tons per year at which the unit actually emitted the pollutant during a two-year period which precedes the operation. The reviewing authority may allow the use of a different time period upon a determination that it is more representative of normal source operation. Actual emissions shall be calculated using the unit's actual operating hours, production rates, and types of materials processed, stored, or combusted during the selected time period. Actual emissions may also be determined by source tests, or by best engineering judgment in the absence of acceptable test data.

(B) The reviewing authority may presume that source-specific allowable emissions for the unit are equivalent to the actual emissions of the unit.

(C) For any emissions unit which has not begun normal operations on the particular date, actual emissions shall equal the potential to emit of the unit on that date.

"Allowable emissions" means the emission rate of a stationary source calculated using the maximum rated capacity of the source (unless the source is subject to enforceable limits which restrict the operating rate, or hours of operation, or both) and the most stringent of the following:

(A) the applicable standards as set forth in 40 CFR Parts 60 and 61;

(B) the applicable State rule allowable emissions; or,

(C) the emissions rate specified as an enforceable permit condition. [NOTE: Moved to 252:100-8-1.1]

"Begin actual construction" means, in general, initiation of physical on site construction activities on an emissions unit

which are of a permanent nature. Such activities include, but are not limited to, installation of building supports and foundations, laying of underground pipework, and construction of permanent storage structures. With respect to a change in method of operation, this term refers to those on site activities, other than preparatory activities, which mark the initiation of the change. [NOTE: Moved to 252:100-8-1.1]

"Building, structure, facility" means all of the pollutant-emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person (or persons under common control). Pollutant-emitting activities shall be considered as part of the same industrial grouping if they belong to the same "Major Group" (i.e., which have the same two digit code) as described in the Standard Industrial Classification Manual, 1972, as amended by the 1977 Supplement.

"Commence" means, as applied to construction of a major stationary source or major modification, that the owner or operator has all necessary preconstruction approvals or permits and either has:

(A) begun, or caused to begin, a continuous program of actual on site construction of the source, to be completed within a reasonable time; or,

(B) entered into binding agreements or contractual obligations, which cannot be cancelled or modified without substantial loss to the owner or operator, to undertake a program of actual construction of the source to be completed within a reasonable time. [NOTE: Moved to 252:100-8-1.1]

"Construction" means any physical change or change in the method of operation (including fabrication, erection, installation, demolition, or modification of an emissions unit) which would result in a change in actual emissions. [NOTE: Moved to 252:100-8-1.1]

"Emissions unit" means any part of a source which emits or would have the potential to emit any pollutant subject to regulation. [NOTE: Moved to 252:100-8-1.1]

"Fugitive emissions" means those emissions which could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening. [NOTE: Moved to 252:100-8-1.1]

"Installation" means an identifiable piece of process equipment.

"Lowest achievable emissions rate" means the control technology to be applied to a major source or modification which the Executive Director, on a case by case basis, determines is achievable for a source based on the lowest achievable emission rate achieved in practice by such category of source (i.e., lowest achievable emission rate as defined in the Federal Clean Air Act).

"Major modification" means any physical change in, or change in the method of operation of, a major source that would result in a significant net emissions increase of any pollutant subject to regulation.

(A) Any net emissions increase that is significant for volatile organic compounds shall be considered significant for ozone.

(B) A physical change or change in the method of operation shall not include:

(i) routine maintenance, repair and replacement;

(ii) use of an alternate fuel or raw material by reason of any order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation) or by reason of a natural gas curtailment plan pursuant to the Federal Power Act;

(iii) use of an alternate fuel by reason of an order or rule under Section 125 of the Federal Clean Air Act;

(iv) use of an alternate fuel at a steam generating unit to the extent that the fuel is generated from municipal solid waste;

(v) Use of an alternate fuel or raw material by a source which:

(I) the source was capable of accommodating before December 21, 1976, unless such change would be prohibited under any enforceable permit limitation which was established after December 21, 1976; or,

(II) the source is approved to use under any permit issued under 40 CFR 52.21 or OAC 252:100-7 or 8.

(vi) An increase in the hours of operation or in the production rate unless such change would be prohibited under any enforceable permit limitation which was established after December 21, 1976, or

(vii) any change in source ownership.

"Major stationary source" means:

(A) any stationary source of air pollutants which emits, or has the potential to emit, 100 tons per year or more of any pollutant subject to regulation; or,

(B) any physical change that would occur at a source not qualifying under (A) of this definition as a major source, if the change would constitute a major source by itself.

(C) for ozone, a source that is major for volatile organic compounds shall be considered major.

~~"Necessary preconstruction approvals or permits" means those permits or approvals required under all air quality control laws and rules. [NOTE: Moved to 252:100-8-1.1]~~

"Net emissions increase" means:

(A) The amount by which the sum of the following exceeds zero:

(i) any increase in actual emissions from a particular physical change or change in the method of operation at a source; and,

(ii) any other increases and decreases in actual emission at the source that are contemporaneous with the particular change and are otherwise creditable.

(B) An increase or decrease in actual emissions is contemporaneous with the increase from the particular change

only if it occurs within 3 years before the date that the increase from the particular change occurs.

(C) An increase or decrease in actual emissions is creditable only if the Executive Director has not relied on it in issuing a permit under OAC 252:100-7 252:100-8, Part 7 9, which permit is in effect when the increase in actual emissions from the particular change occurs.

(D) An increase in actual emissions is creditable only to the extent that the new level of actual emissions exceeds the old level.

(E) A decrease in actual emissions is creditable only to the extent that:

- (i) the old level of actual emissions or the old level of allowable emissions, whichever is lower, exceeds the new level of actual emissions;
- (ii) it is enforceable at and after the time that actual construction on the particular change begins;
- (iii) the reviewing authority has not relied on it in issuing any permit under State air quality rules; and,
- (iv) it has approximately the same qualitative significance for public health and welfare as that attributed to the increase from the particular change.

(F) An increase that results from a physical change at a source occurs when the emission unit on which construction occurred becomes operational and begins to emit a particular pollutant. Any replacement unit that requires shakedown becomes operational after a reasonable shakedown period, not to exceed 180 days.

"Potential to emit" means the maximum capacity of a source to emit a pollutant under its physical and operational design. Any physical or operational limitation on the capacity of the source to emit a pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored or processed, shall be treated as part of its design if the limitation or the effect it would have on emissions is enforceable. Secondary emissions do not count in determining the potential to emit of a source. [NOTE: Moved to 252:100-8-1.1]

"Reconstruction" means the replacement of components of an existing source (which will then be treated as a new source for purposes of Part 7 9 of this Subchapter) to the extent that will be determined by the Executive Director based on:

- (A) The fixed capital cost (the capital needed to provide all the depreciable components) of the new components exceeds 50% of the fixed capital cost of a comparable entirely new source; and,
- (B) The estimated life of the source after the replacements is comparable to the life of an entirely new source; and,
- (C) the extent to which the components being replaced cause or contribute to the emissions from the source.

"Resource recovery facility" means any facility at which solid waste is processed for the purpose of extracting, converting to

energy, or otherwise separating and preparing solid waste for reuse. Energy conversion facilities must utilize solid waste to provide more than 50 percent of the heat input to be considered a resource recovery facility under Part 7 9 of this Subchapter.

"Secondary emissions" means emissions which occur as a result of the construction or operation of a major stationary source or modification, but do not come from the source or modification itself. For the purpose of OAC 252:100-7, Part 7, secondary emissions must be specific, well defined, quantifiable, and impact the same general areas as the source or modification which causes the secondary emissions. Secondary emissions may include, but are not limited to:

(A) emissions from trains coming to or from the new or modified stationary source; and,

(B) emissions from any offsite support facility which would not otherwise be constructed or increase its emissions as a result of the construction or operation of the major source or modification. [NOTE: Moved to 252:100-8-1.1]

"Significant" means, in reference to a net emissions increase or the potential of a source to emit any of the following pollutants, a rate of emissions that would equal or exceed any of the following rates:

(A) Carbon monoxide: 100 tons per year (tpy),

(B) Nitrogen oxides: 40 tpy,

(C) Sulfur dioxide: 40 tpy,

(D) Particulate matter: 15 tpy of PM-10 emissions,

(E) Ozone: 40 tpy of volatile organic compounds, or

(F) Lead: 0.6 tpy.

"Stationary source" means any building, structure, facility or installation which emits or may emit any air pollutant subject to regulation. [NOTE: Moved to 252:100-8-1.1]

252:100-8-52. Source applicability determination

Proposed new sources and source modifications to which Part 7 11 of this Subchapter are applicable are determined by size, geographical location and type of emitted pollutants:

(1) Size.

(A) Permit review will apply to sources and modifications that emit any regulated pollutant in major amounts. These quantities are specified in the definitions for major stationary source, major modification, potential to emit, net emissions increase, significant, and other associated definitions in 252:100-8-51, 252:100-8-1.1, and 252:100-1.

(B) At such time that a particular source or modification becomes major solely by virtue of a relaxation in any enforceable permit limitation which was established after August 7, 1980 on the capacity of the source or modification otherwise to emit a pollutant, such as a restriction on hours of operation, then the requirements of OAC 252:100-7-15 through 252:100-7-18 and Part 7 Parts 1, 3, 5, and 9 of this Subchapter shall apply to that source or modification as though construction had not yet commenced on it.

(2) Location.

(A) Sources and modifications which that are major in size and proposed for construction in an area which has been designated as nonattainment for any applicable ambient air standard are subject to the requirements for the nonattainment area, if the source or modification is major for the nonattainment pollutant(s) of that area.

(B) In addition, the requirements of a PSD review (Part 5 7 of this Subchapter) would be applicable if any other regulated pollutant other than the nonattainment pollutant is emitted in significant amounts by that source or modification.

(3) Location in attainment or unclassifiable area but causing or contributing to NAAQS violation.

(A) A proposed major source or major modification that would locate in an area designated attainment or unclassifiable is considered to cause or contribute to a violation of the national ambient air quality standards when such source or modification would, as a minimum, exceed the following significance levels at any locality that does not or would not meet the applicable national standard:

Pollutant	Concentration, ug/m ³				
	Averaging Time (hours)				
	Annual	24	8	3	1
SO ₂	1.0	5		25	
PM-10	1.0	5			
NO ₂	1.0				
CO			500		2000

(B) Sources of volatile organic compounds located outside a designated ozone nonattainment area will be presumed to have no significant impact on the designated nonattainment area. If ambient monitoring indicates that the area of source location is in fact nonattainment, then the source may be granted its permit since the area has not yet been designated nonattainment.

(C) Sources locating in an attainment area but impacting on a nonattainment area above the significant levels listed in ~~OAC 252:100-7-52(3)~~ 252:100-8-52(3) are exempted from the condition of ~~OAC 252:100-7-54(4)(A)~~ 252:100-8-54(4)(A).

(D) The determination whether a source or modification will cause or contribute to a violation of an applicable ambient air standard for sulfur dioxide, particulate matter or carbon monoxide will be made on a case by case basis as of the proposed new source's start-up date by an atmospheric simulation model. For sources of nitrogen oxides the model can be used for an initial determination assuming all the nitric oxide emitted is oxidized to nitrogen dioxide by the time the plume reaches ground level, and the initial concentration estimates will be adjusted if adequate data

are available to account for the expected oxidation rate.
(E) The determination as to whether a source would cause or contribute to a violation of applicable ambient air standards will be made on a case by case basis as of the new source's start-up date. Therefore, if a designated nonattainment area is projected to be attainment as part of the state implementation plan control strategy by the new source start-up date, offsets would not be required if the new source would not cause a new violation.

(F) Sources causing a new violation of applicable ambient air standards as determined by the Executive Director but not contributing to an existing violation, will be approved if both of the following conditions are met:

(i) The new source is required to meet a more stringent emission limitations and/or the control of existing sources below allowable levels so that the new violation of ambient standards does not occur.

(ii) The new emission limitation limitations for the new source, as well as for any existing sources affected, are enforceable under the Oklahoma and Federal Clean Air Acts.

252:100-8-53. Exemptions

(a) Nonattainment area requirements do not apply to a particular source or modification locating in or impacting on a nonattainment area if:

(1) The source is major by virtue of fugitive emissions, to the extent quantifiable, included in calculating the potential to emit and is a source other than one of the following categories:

- (A) carbon black plants (furnace process),
- (B) charcoal production plants,
- (C) chemical process plants,
- (D) coal cleaning plants (with thermal dryers),
- (E) coke oven batteries,
- (F) fossil-fuel boilers (or ~~combustion~~ combination thereof) totaling more than 250 million BTU per hour heat input,
- (G) fossil fuel-fired steam electric plant of more than 250 million BTU per hour heat input,
- (H) fuel conversion plants,
- (I) glass fiber processing plants,
- (J) hydrofluoric, sulfuric or nitric acid plants,
- (K) iron and steel mills,
- (L) kraft pulp mills,
- (M) lime plants,
- (N) municipal incinerators capable of charging more than 250 tons of refuse per day,
- (O) petroleum refineries,
- (P) petroleum storage and transfer units with a total storage exceeding 300,000 barrels,
- (Q) phosphate rock processing plants,
- (R) portland cement plants,

- (S) primary aluminum ore reduction plants,
 - (T) primary copper smelters,
 - (U) primary lead smelters,
 - (V) primary zinc smelters,
 - (W) secondary metal production plants,
 - (X) sintering plants,
 - (Y) sulfur recovery plants,
 - (Z) taconite ore processing plants, or
 - (AA) any other stationary source category which, as of August 7, 1980, is being regulated by ~~federal New Source Performance Standards (NSPS)~~ NSPS or ~~National Emission Standards for Hazardous Air Pollutants (NESHAP)~~ NESHAP.
- (2) A source or modification was not subject to 40 CFR Part 51, Appendix S (emission offset interpretative ruling) as in effect on January 16, 1979 and the source:
- (A) Obtained all final federal and state construction permits before August 7, 1980;
 - (B) Commenced construction within 18 months from August 7, 1980 or any earlier time required by the State Implementation Plan; and,
 - (C) Did not discontinue construction for a period of 18 months or more and completed construction within a reasonable time.

(b) Secondary emissions are excluded in determining the potential to emit (see definition of "potential to emit" in ~~0AC 252:100-7-51~~ 252:100-8-1.1). However, upon determination of the Executive Director, if a source is subject to the requirements on the basis of its direct emissions, the applicable requirements must also be met for secondary emissions but the source would be exempt from the conditions of ~~0AC 252:100-7-52(3)(F)~~ 252:100-8-52(3)(F) and ~~0AC 252:100-7-54(1)~~ 252:100-8-54(1) through ~~252:100-7-54(3)~~ 252:100-8-54(3). Also, the indirect impacts of mobile sources are excluded.

(c) As specified in the applicable definitions, the requirements of Part 5 7 for PSD and Part 7 9 for nonattainment areas of this Subchapter are not applicable to a modification if the existing source was not major on August 7, 1980 unless the proposed addition to the existing minor source is major in its own right.

252:100-8-54. Requirements for sources located in nonattainment areas

In the event a major source or modification would be constructed in an area designated as nonattainment for a pollutant for which the source or modification is major, approval shall be granted only if the following conditions are met:

- (1) The new source must demonstrate that it has applied control technology which the Executive Director, on a case by case basis, determines is achievable for a source based on the lowest achievable emission rate (LAER) achieved in practice by such category of source (i.e., lowest achievable emission rate as defined in the ~~Federal Clean Air Act~~).
- (2) If the Executive Director determines that imposition of

an enforceable numerical emission standard is infeasible, due to technological or economic limitations on measurement methodology, a design, equipment, work practice or operational standard, or combination thereof, may be prescribed as the emission limitation rate.

(3) The owner or operator of the new source must demonstrate that all other major sources owned or operated by such person in Oklahoma are in compliance, or are meeting all steps on a schedule for compliance, with all applicable limitations and standards under Oklahoma and Federal Clean Air Acts.

(4) The owner or operator of the new source must demonstrate that upon commencing operations:

(A) The emissions from the proposed source and all other sources permitted in the area do not exceed the planned growth allowable for the area designated in the State Implementation Plan; or,

(B) The total allowable emissions from existing sources in the region and the emissions from the proposed source will be sufficiently less than the total emissions from existing sources allowed under the State Implementation Plan at the date of construction permit application so as to represent further progress toward attainment or maintenance of the ambient air quality standards in the problem area.

(5) The owner or operator may present with the application an analysis of alternate sites, sizes and production processes for such proposed source.

APPENDIX I. INSIGNIFICANT ACTIVITIES LIST

Any Activity to which a State of federal applicable requirement applies is not insignificant even if it is included on this list.

COMBUSTION EQUIPMENT

* Stationary reciprocating engines burning natural gas, gasoline, aircraft fuels, or diesel fuel which are either used exclusively for emergency power generation or for peaking power service not exceeding 500 hours/year

Space heaters, boilers, process heaters, and emergency flares less than or equal to 5 MMBTU/hr heat input (commercial natural gas).

Emissions from stationary internal combustion engines rated less than 50 hp output

Emissions from gas turbines with less than 215 kilowatt rating of electric output

STORAGE TANKS/DISTRIBUTION

* Emissions from fuel storage/dispensing equipment operated solely for facility owned vehicles if fuel throughput is not more than 2,175 gallons/day, averaged over a 30-day period

* Storage tanks with less than or equal to 10,000 gallons capacity that store volatile organic liquids with a true vapor pressure less than or equal to 1.0 psia at maximum storage temperature

* Bulk gasoline or other fuel distribution with a daily average throughput less than 2,175 gallons per day, including dispensing, averaged over a 30-day period

Gasoline and aircraft fuel handling facilities, equipment, and storage tanks except those subject to New Source Performance Standards and standards in 252:100-37-15, 39-30, 39-41, and 39-48

Emissions from condensate tanks with a design capacity of 400 gallons or less in ozone attainment areas

Emissions from crude oil and condensate marine and truck loading equipment operations at crude oil and natural gas production sites where the loading rate does not exceed 10,000 gallons per day averaged over a 30-day period

* Emissions from crude oil and condensate storage tanks with a capacity of less than or equal to 420,000 gallons that store crude oil and condensate prior to custody transfer

* Emissions from storage tanks constructed with a capacity less than 39,894 gallons which store VOC with a vapor pressure less than 1.5 psia at maximum storage temperature

ANALYSIS/LABORATORY ACTIVITIES

Additions or upgrades of instrumentation or control systems that result in emissions increases less than the pollutant quantities specified in 252:100-8-3(e)(1)

EQUIPMENT

Alkaline/phosphate washers and associated burners
Cold degreasing operations utilizing solvents that are denser than air

* Welding and soldering operations utilizing less than 100 pounds of solder and 53 tons per year of electrodes

Wood chipping operations not associated with the primary process operation

* Torch cutting and welding of under 200,000 tons of steel fabricated per year

REMEDIATION

Site restoration and/or bioremediation activities of < 5 years expected duration

Hydrocarbon contaminated soil aeration pads utilized for soils excavated at the facility only

Emissions from the operation of groundwater remediation wells including but not limited to emissions from venting, pumping, and collecting activities subject to de minimis limits for air toxics (252:100-41-43) and HAPs (§112(b) of CAAA90)

SOLID WASTE

* Non-commercial water washing operations (less than 2,250 barrels/year) and drum crushing operations of empty barrels less than or equal to 55 gallons with less than three percent by volume of residual material

Hazardous waste and hazardous materials drum staging areas
Sanitary sewage collection and treatment facilities other than incinerators and Publicly Owned Treatment Works (POTW)
Stacks or vents for sanitary sewer plumbing traps are also included (i.e., lift station)

Emissions from landfills and land farms unless otherwise regulated by an applicable state or federal regulation

COATINGS

* Automobile body shops located in an ozone attainment area emitting less than 5 tons/year of volatile organic solvents

Electrophoretic-process coating application operations (i.e., paint bath positively charged, painted object negatively charged)

* Surface coating operations which do not exceed a combined total usage of more than 60 gallons/month of coatings, thinners, and clean-up solvents at any one emissions unit

MISCELLANEOUS

Exhaust systems for chemical, paint, and/or solvent storage rooms or cabinets, including hazardous waste satellite (accumulation) areas

Hand wiping and spraying of solvents from containers with less than 1 liter capacity used for spot cleaning and/or degreasing in ozone attainment areas

* Activities having the potential to emit no more than 5 TPY (actual) of any criteria pollutant (see instructions in Title V application)

* Appropriate records of hours, quantity, or capacity must be kept on the activity to verify its insignificance.

APPENDIX J. TRIVIAL ACTIVITIES LIST

Any activity to which a State or federal applicable requirement applies is not trivial even if it is included on this list.

AGRICULTURAL

Lawn care (noncommercial)
Weed control (noncommercial)
Pest control (noncommercial)
Herbicide and pesticide activities except for manufacturing and formulation for commercial sale

ANALYSIS/TESTING

Hydraulic or hydrostatic testing
Analysis/laboratory activities emissions from the following: air contaminant detectors, air contaminant recorders, combustion controllers, combustion shut-off devices, product analyzers, laboratory analyzers, continuous emissions monitors, other analyzers (eg., water quality), and emissions associated with sampling activities. Also, emissions from bench scale laboratory equipment and laboratory equipment used exclusively for chemical and physical analysis, including assorted vacuum producing devices and vents but NOT lab fume hoods or vents
Site assessment work, including but not limited to, the evaluation of waste disposal or remediation sites
Emissions from instrument systems utilizing air or natural gas
Environmental field sampling operations
Sampling connections used exclusively to withdraw materials for testing and analysis, including air contaminant detectors and vent lines
Compressed gas cylinders and gases utilized for equipment calibration and testing

ANIMALS

Equipment used to mix and package soaps, vegetable oil, grease, animal fat, and nonvolatile aqueous salt solutions, provided appropriate lids and covers are utilized
Equipment used exclusively to slaughter animals, but not including other equipment at slaughterhouses, such as rendering cookers, boilers, heating plants, incinerators, and electrical power generating

BATTERY CHARGING

Industrial battery recharging and maintenance operations for batteries utilized within the facility only

BLOWDOWNS

Emissions from the blowdown depressurization during startup, shut down, maintenance or emergencies of compressors or other vessels containing natural gas or liquid hydrocarbons for the purpose of maintenance due to emergency circumstances

CLEANING

Acid washing (maintenance cleaning)
Caustic washing (maintenance cleaning)
Abrasive blasting
Steam cleaning
Carbon dioxide blasting equipment in degreasing or depainting
High pressure water depainting operations and aqueous industrial spray washers
Vacuum cleaning systems used exclusively for industrial, commercial, or residential housekeeping purposes, except those systems used to collect particulate matter subject to 252:100 and hazardous and/or toxic air contaminants
Ultrasonic cleaning operations which do not utilize volatile organic compounds
Molten salt bath descaling operations
Natural gas water heating systems for fixed vehicle wash racks

COOLING TOWERS/BOILER WATER

Emissions from non-contact cooling towers (cooling water that has not been in contact with other materials or fluids containing regulated air pollutants)
Boiler water treatment operations
Deaerator units associated with boilers or hot water heating systems
Process water filtration systems and demineralizers
Demineralized water tanks and demineralizer vents

ELECTRIC POWER

Equipment associated with electrical power transmission which do not involve fuel-burning activities using transformers and substations
Electric or steam-heated drying ovens and autoclaves, but not the emissions from the articles or substances being processed in the ovens or autoclaves or the boilers delivering the steam

FIREFIGHTING

Emissions from fire or emergency response equipment and training to include use of fire control equipment including equipment for testing and training, engines used exclusively for firefighting, and open burning of materials or fuels associated with firefighting training. Buildings burned for firefighting training must still adhere to NESHAP for Asbestos.
Fire extinguishers and fire extinguishing systems

FUGITIVE EMISSIONS

Seal replacement (i.e., manhole gaskets)
Roof coating, service, and repair
Paving of roads, parking lots, and other areas
Vent emissions from gas streams used as buffer or seal gas in rotating pump and compressor seals
Emissions from natural gas odorizing activities
Emissions from pneumatic starters on reciprocating engines.

turbines, compressors, or other equipment

Gas flares or flares used solely to indicate danger to the public (e.g. road hazard)

Warehouse activities including the storage of packaged raw materials and finished goods

Non-routine clean out of tanks, lift stations, and equipment for the purposes of worker entry or in preparation for maintenance or decommissions

Unpaved roadways and parking areas

Gravel, sand and dirt storage for use in on-site construction projects

VOC fugitive emissions from component additions (e.g. valves, flanges, connectors, pump seals, compressor seals, etc.) regulated by a fugitive monitoring program where the total increase is less than one ton per year of any criteria pollutant or the de minimis set forth in 252:100-41-43. The component additions must be identified in the next scheduled monitoring report required by the applicable requirements. VOC fugitive emissions from component additions (e.g. valves, flanges, connectors, pump seals, compressor seals, etc.) not regulated by a fugitive monitoring program provided that no applicable requirement is triggered when components are added.

Fugitive emissions of jet fuels associated with aircraft fuel cell and fuel bladder repair

Fugitive emissions related to movement of passenger vehicles provided the emissions are not counted for applicability purposes or any required fugitive dust control plan or its equivalent is submitted

INSULATION

Insulation installing or removal (non-asbestos)

Application of refractory & insulation (calcium silicate, etc.)

LUBRICATING

Lubricating pumps, sumps, and systems

Emissions from engine crankcase vents and equipment lubricating sumps

MAINTENANCE

Welding, brazing, soldering for maintenance purposes

Use of adhesives for maintenance purposes

Grinding, cutting, sanding for maintenance purposes

Emissions from pipeline maintenance pigging activities

Maintenance, upkeep, and replacement types of activities, including those not altering the capacity of process, combustion or control equipment, and which do not increase regulated pollutant emissions unless subject to NESHP or NSPS

METALS

Equipment used for inspection of metal products

Die casting machines

Foundry sand mold forming equipment to which no heat is applied, and from which no organics are emitted

Equipment used exclusively to mill or grind coatings and holding compounds where all materials charged are in paste form (unless HAP emission)

Equipment used exclusively for rolling, forging, pressing, spinning, drawing, or extruding either hot or cold metals unless their emissions exceed any applicable regulated amount

Carbon monoxide lasers, used only on metals and other materials which do not emit HAP in the process

MISCELLANEOUS

Operations previously determined to be de minimis pursuant to 252:100-7-2(b)(3) or 252:100-41-43(a)(5)

Laser trimmers using dust collection to prevent fugitive emissions

Shock chambers

Humidity chambers

Solar simulators

MOBILE SOURCES

Mobile source emissions from cars, trucks, forklifts, courier vehicles, front loaders, graders, cranes, carts, hydrostatic and hydraulic testing equipment, maintenance trucks, helicopters, locomotives, marine vessels, portable generators moveable by hand, portable pumps, portable air compressors, portable welding machines, and portable fuel tanks

Other on and off road mobile sources (i.e. coal stacker & reclaimer)

Well servicing/workover rigs and associated equipment

Well drilling rigs and associated equipment

Aircraft ground support (AGE) equipment, including but not limited to portable power generators, lights, and HVAC support

Vehicle exhaust from maintenance or repair shops

Road sanding and salting operations

OFFICE AND JANITORIAL

Janitorial services

Sweeping (Floor Sweep)

Office emissions (photocopying, blueprint copying, photograph processes)

OUTDOOR RECREATION

Outdoor recreational emissions (campfires, barbecue pits)

Open burning for the purpose of land management (must get permission from Air Quality Enforcement even though exempt from permitting)

Outdoor kerosene heaters

PLASTICS/FIBERGLASS

Plastic or fiberglass welding or repair

Sealing or cutting plastic film or foam with heat or wires

Processes used for the curing of fiberglass or paint products

REFRIGERANTS

Cold storage refrigerator equipment
De minimis refrigerant releases

RESIDENTIAL

Air conditioning or comfort ventilation systems not regulated under Title VI of the Clean Air Act

Emissions from residential housing units, dormitories, and multifamily dwellings to include fuel burning for the purposes of heating except prohibited open burning

SOLID WASTE

Solid waste landfill operations
RCRA Solid Waste Management Units subject to 40 CFR Part 265, Subparts AA, BB, and CC

SOLVENT

Emissions from laundry care equipment processing bedding, clothing or other fabric items. These include dryers, extractors, & tumblers. NOT CLEANING OPERATIONS USING PERCHLOROETHYLENE OR PETROLEUM SOLVENTS (i.e., dry cleaning)

Covered cold solvent degreasers not subject to federal emission standards (e.g. NESHP or NSPS)

STORAGE TANKS/DISTRIBUTION

Emissions from lube oil, seal oil, or hydraulic fluid storage tanks and equipment as long as not emitting VOCs or HAPs

Storage and use of chemicals unless otherwise regulated by an applicable state or federal regulation. These chemicals include, but not limited to: alum, ammonia, biocides, corrosion inhibitors, dechlorination chemicals, inorganic salts, acids or bases to include caustic and sulfuric acid, coagulants, flocculants, precipitants, surfactants, anti-foam chemicals, sealing inhibitors, oxygen scavengers, phosphates, polyelectrolytes, limestone slurry, lime and lime slurry, flue gas desulfurization system slurry, and sulfur slurry; propane and acetylene under pressure

Storage and use of products or equipment for maintaining motor vehicles operated at the site (including but not limited to antifreeze and fuel additives) not regulated under Title VI, CFC rules)

Emissions from tanks containing separated water produced from oil and gas operations

Commercial gasoline dispensing stations, including those located within the physical boundaries of a Title V source

Lubricants and waxes used for machinery and other equipment lubrication and emission from lubricating oil or hydraulic fluid storage tanks and equipment

Runway and aircraft de-icing activities, including de-icer storage tanks unless otherwise regulated

Storage tanks, reservoirs, and pumping and handling equipment of

any size containing soaps, vegetable oil, grease, animal fat, and nonvolatile aqueous salt solutions, provided appropriate lids and covers are utilized

SURFACE COATING

Surface coating for maintenance purposes such as roll/brush/pad coating, painting with aerosol cans, spray airless, and conventional spray painting

Touch-up painting operations where paints/coatings are applied at less than one quart per hour

WASTEWATER

Removal of basic sediment & water from collection/storage systems (i.e., clarifiers)

Water and wastewater treatment and transportation system

Pit, ponds, sumps, or wastewater conveyance facilities

Emissions from skimmer pits, oil/water separators, and maintenance of filter separators

Emissions from the removal of sludge or sediment from pits, ponds, sumps, or wastewater conveyance facilities

Industrial and/or municipal wastewater treatment processes (excluding combustion or incineration equipment), storage silos for dry material (sludges), composting, or grease trap waste handling or treatment

Ozonization process or process equipment including ozone generation for water treatment processes

Sanitary sewerage and storm water runoff collection systems

Emissions from dredging pits, ponds, sumps, or other wastewater conveyance facilities

WOODWORKING

Wood working (saw-cutting, staining & varnishing) (noncommercial)

Woodworking utilized for hobby purposes or maintenance of grounds or buildings

PUBLIC MEETING

Notice of Continued Public Meeting for January 9, 1998 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. The January 9, 1998 agenda contained items from the December 16, 1997 agenda exclusively. Copies of the agenda were posted at the entrance doors of the meeting room.

Call to Order – Dr. Canter, Vice-Chairman, called the meeting to order and roll call was taken as follows: Mr. Fishback - aye; Ms. Myers - aye; Mr. Kilpatrick - aye; Ms. Slagell - aye; Mr. Branecky - aye; Dr. Canter - aye. Mr. Breisch and Ms. Andrews were absent.

PUBLIC HEARING

OAC 252:100-8 OPERATING PERMITS (PART 70) [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A. Oklahoma Statutes, Section 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy to give staff's position.

Dr. Sheedy stated that the proposed revisions to Subchapter 8 are to correct the deficiencies in the interim Title V Program as identified by EPA in their February 5, 1996 notice of approval of the interim program. After summarizing the changes, Dr. Sheedy stated that staff's recommendation was for Council to forward this rule to the Environmental Quality Board for approval as both emergency and permanent rule.

Mr. Kilpatrick made motion that Council recommend this rule to the Board for permanent and emergency adoption. Second was made by Mr. Fishback. Roll call as follows: Mr. Fishback – aye; Ms. Myers – aye; Mr. Kilpatrick – aye; Ms. Slagell – aye; Mr. Branecky – aye; Dr. Canter – aye.

OLD BUSINESS

OAC 252:100-5 REGISTRATION OF AIR CONTAMINANT SOURCE [AMENDED]

Mr. Dyke then called upon Ms. Jeanette Buttram to give staff's position. With no additional changes made, Ms. Buttram stated that staff recommended that Subchapter 5 be approved by Council and recommended to the Environmental Quality Board for emergency and permanent adoption.

Mr. Fishback moved that Council adopt Subchapter 5, as presented, to the Environmental Quality Board for both emergency and permanent adoption. Mr. Branecky made the second to the motion. Roll call as follows: Mr. Fishback – aye; Ms. Myers – aye; Mr. Kilpatrick – aye; Ms. Slagell – aye; Mr. Branecky – aye; Dr. Canter – aye.

**OAC 252:100-7 CONSTRUCTION PERMITS FOR MAJOR AND MINOR SOURCES;
OPERATING AND RELOCATION PERMITS FOR MINOR SOURCES [AMENDED]**

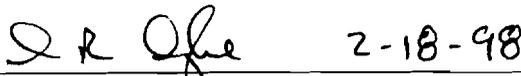

Mr. Dyke called upon Ms. Jeanette Buttram to give staff's position on this rule. With one additional change, Ms. Buttram stated that staff recommended that Subchapter 7 be approved by Council and recommended to the Environmental Quality Board for emergency and permanent adoption. Mr. Fishback made the motion that Subchapter 7, including the change to Appendix H regarding wire drawing equipment, be approved by the Council and recommended for adoption to the Environmental Quality Board as permanent and emergency rule. The second was made by Ms. Myers. Roll call was as follows: Mr. Fishback – aye; Ms. Myers – aye; Mr. Kilpatrick – aye; Ms. Slagell – aye; Mr. Branecky – aye; Dr. Canter – aye.

ADJOURNMENT: With no further business, Dr. Canter adjourned stating that the next regularly scheduled meeting would be February 18, 1998 at the Lincoln Plaza Office Park Burgundy Room, 4545 North Lincoln Boulevard, Oklahoma City, Oklahoma.

NOTE: The sign-in sheet and the hearing records are attached as an official part of these Minutes.

AIR QUALITY COUNCIL
RULEMAKING RECOMMENDATION TO THE ENVIRONMENTAL QUALITY BOARD

Identification of Proposed Rulemaking:

Chapter Number and Title – OAC 252:100-8
OPERATING PERITS (PART 70) [AMENDED]

Subchapters or Sections Involved – [new, amended or revoked]

On JANUARY 9, 1998 the members of this Council, by authority vested in them by the Oklahoma Environmental Quality Code (27 O.S. Supp. 1993, § 2-2-201), by roll call vote, recommended to the Environmental Quality Board that the rulemaking described above be adopted as:

permanent [take effect after legislative review]

emergency [temporary, to take effect upon approval by the Governor because of time; and/or special reason: _____]

(mark as appropriate)

This Council has considered the proposed rulemaking and comments about it and determined, to the best of its knowledge, that all applicable requirements of the Oklahoma Administrative Procedures Act have been followed.

This Council authorizes the Department to prepare this recommended rulemaking for the Board, making any changes approved by the Council, correcting typographical, grammatical and reference errors, and formatting them as required by the Office of Administrative Rules. This is to be done with the understanding that such changes shall neither alter the sense of what this Council recommends nor invalidate this recommendation.

Respectfully,

BRIEFING AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
REGULAR MEETING
AIR QUALITY COUNCIL

Tuesday - December 15, 1998 9:30 A.M.
4545 North Lincoln Boulevard
Burgundy Room
Oklahoma City, OK

1. **Call to Order – Bill Breisch**
2. **Division Director's Report - Staff**
 - A. Update of current events and AQD activities
 - B. Discussion by Council / Public
3. **OAC 252:100-7 Permits for Minor Facilities [AMENDED]**

Proposed revisions will delete the lower limit of 5 tons per year for Permit by Rule (PBR) facilities allowing those facilities with less than 5 tons per year emissions which are subject to new source performance standards and national emissions standards for hazardous air pollutants to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a PBR for specific facilities will also be referenced under this new Part. Continued from August 18 and October 20, 1998 Air Quality Council meeting.

 - A. Presentation – Jeanette Buttram
 - B. Questions and discussion by Council / Public
4. **OAC 252:100-8-4(a)(2) Permits for Part 70 Sources [AMENDED]**

The Department proposes to update the incorporation by reference of the case-by-case MACT rules in 40 CFR 63.41, 63.43, and 63.44 to July 1, 1998.

 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public
5. **OAC 252:100-37 Control of Emissions of Organic Materials [AMENDED]**

Proposal would simplify the language under the agency-wide re-right/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. A substantive change deletes a sentence regarding fuel-burning and refuse-burning equipment resolving a contradiction. Continued from August 18, 1998 Air Quality Council meeting.

 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public

6. **OAC 252:100-39 Emissions of Organic Materials in Nonattainment Areas [AMENDED]**
Proposal would simplify the language under the agency-wide re-right/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. Continued from August 18 and October 20, 1998 Air Quality Council meeting.
- A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public
7. **OAC 252:100-5-2.2 Registration, Emission Inventory and Annual Operating Fees [AMENDED]**
OAC 252:100-7-3 Permits for Minor Facilities [AMENDED]
OAC 252:100-8-1.7 Permits for Part 70 Sources [AMENDED]
In Subchapter 5, the Department is proposing increases in annual operating fees for both minor facilities and Part 70 sources, with increases of specific permit application fees in Subchapters 7 and 8.
- A. Presentation – Shawna McWaters-Khalousi
 - B. Questions and discussion by Council / Public

MEMORANDUM

TO: Air Quality Council

FROM: Eddie Terrill, Director *CT.*
AIR QUALITY DIVISION

SUBJECT: Modifications to Subchapter 8
PERMITS FOR PART 70 SOURCES

Enclosed is a copy of the proposed modifications to OAC 252:100-8 that will be brought to public hearing on December 15, 1998 along with the rule impact statement. These revisions to OAC 252:100-8-4(a) consist of updating the adoption by reference of the requirements for case-by-case MACT determinations by adopting 40 CFR 63.41, 40 CFR 63.43, and 40 CFR 63.44 as they exist on July 1, 1998.

Staff will suggest that the proposed rule be recommended to the Environmental Quality Board for permanent adoption.

Enclosure: 2

SUBCHAPTER 8. PERMITS FOR PART 70 SOURCES

PART 5. PERMITS FOR PART 70 SOURCES

252:100-8-4. Requirements for construction and operating permits

(a) Construction permits.

(1) Construction permit required. No person shall cause or allow the construction or installation of any new facility that will require a Part 70 operating permit without first obtaining a DEQ-issued air quality construction permit. A construction permit is also required for any physical change that would be a modification under 252:100-8-7.2(b). In addition to the requirements of this Part, sources subject to Part 7 or Part 9 of this Subchapter must also meet the applicable requirements contained therein.

(2) Requirement for case-by-case MACT determinations.

(A) Applicability. The requirement for case-by-case MACT determinations apply to any owner or operator who constructs or reconstructs a major source of hazardous air pollutants after June 29, 1998, unless the source has been specifically regulated or exempted from regulation under a subpart of 40 CFR Part 63, or the owner or operator has received all necessary air quality permits for such construction or reconstruction before June 29, 1998.

(B) Exclusions. The following sources are not subject to this subsection.

(i) Electric utility steam generating units unless and until these units are added to the source category list.

(ii) Stationary sources that are within a source category that has been deleted from the source category list.

(iii) Research and development activities as defined in 40 CFR § 63.41.

(C) MACT determinations. If subject to this subsection, an owner or operator may not begin actual construction or reconstruction of a major source of HAP until obtaining from the DEQ an approved MACT determination in accordance with the following regulations: 40 CFR 63.41, 40 CFR 63.43 and 40 CFR 63.44, which are hereby incorporated by reference as they exist on July 1, ~~1997~~1998.

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL
SUBCHAPTER 8**

RULE IMPACT STATEMENT

252:100-8, PERMITS FOR PART 70 SOURCES [AMENDED].

Before the Air Quality Council December 15, 1998.

Before the Environmental Quality Board February 26, 1999.

1. **DESCRIPTION:** The proposed revisions to 252:100-8-4(a)(2)(C) of Subchapter 8, Permits for Part 70 Sources, consist of updating the adoption by reference of the requirements for MACT determinations contained in 40 CFR 63.41, 40 CFR 63.43, and 40 CFR 63.44 to July 1, 1998.
2. **CLASSES OF PERSONS AFFECTED:** Owners or operators who construct or reconstruct a major source of hazardous air pollutants after June 29, 1998, may be affected.
3. **CLASSES OF PERSONS WHO WILL BEAR COSTS:** Owners or operators who construct or reconstruct a major source of hazardous air pollutants after June 29, 1998, who are required to determine case-by-case MACT.
4. **CLASSES OF PERSONS BENEFITTED:** The citizens of the state who will be protected from exposure to hazardous air pollutants.
5. **PROBABLE ECONOMIC IMPACT ON AFFECTED CLASSES OF PERSONS:** None. The federal rules proposed for incorporation by reference are currently applicable to the affected classes of persons. Thus the state's adoption of these rules will not cause a new economic impact on such classes.
6. **PROBABLE ECONOMIC IMPACT ON POLITICAL SUBDIVISIONS:** See #5 above.
7. **COOPERATION OF POLITICAL SUBDIVISION REQUIRED TO IMPLEMENT OR ENFORCE RULE:** No.
8. **COST TO DEQ TO IMPLEMENT AND ENFORCE:** No added cost.
9. **COST TO OTHER AGENCIES TO IMPLEMENT AND ENFORCE:** None. No other agencies will be implementing this rule.
10. **PROJECTED NET LOSS OR GAIN IN REVENUES FOR DEQ AND/OR**

OTHER AGENCIES, IF IT CAN BE PROJECTED: None.

11. **LESS COSTLY OR NONREGULATORY OR LESS INTRUSIVE METHODS OF ACHIEVING THE PURPOSE OF THE PROPOSED RULE:** None. Adopting these federal rules will streamline the regulatory and permitting processes for the affected classes of persons.

12. **PROBABLE QUANTITATIVE AND QUALITATIVE IMPACT ON BUSINESS ENTITIES (INCLUDE QUANTIFIABLE DATA WHERE POSSIBLE):** None. The federal rules proposed for incorporation by reference are currently applicable to the affected classes of persons. Thus the state's adoption of these rules will not cause a new impact on such classes.

RULE IMPACT STATEMENT WAS PREPARED ON: November 16, 1998.

PUBLIC MEETING

Notice of Public Meeting for December 15, 1998 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance door of the meeting room.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Dr. Canter - aye; Ms. Myers - aye; Dr. Grosz - aye; Mr. Branecky - aye; Mr. Wilson - aye; Mr. Breisch - aye; Mr. Kilpatrick and Ms. Slagell did not attend.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the October 20, 1998 Public Meeting/Hearings. Motion was made by Dr. Grosz to approve the Minutes as presented and second was made by Mr. Branecky. Roll call as follows: Dr. Canter - aye; Ms. Myers - aye; Dr. Grosz - aye; Mr. Branecky - aye; Mr. Wilson - aye; Mr. Breisch - aye.

PUBLIC HEARINGS

Protocol Statement - As protocol officer, Mr. Dyke convened the hearings by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke entered into the hearing records the Hearing Agenda and Oklahoma Register Notice.

OAC 252:100-7 Permits [AMENDED]

Mr. Dyke called upon Ms. Jeanette Buttram for staff recommendation to Council. Ms. Buttram advised that proposed revisions delete the lower limit of 5 tons per year for Permit by Rule (PBR) facilities allowing those facilities with less than 5 tons per year emissions which are subject to new source performance standards and national emission standards for hazardous air pollutants to apply for a PBR instead of having to obtain an individual permit.

Also a new Part 9 is proposed which will outline the requirements necessary for a facility to qualify for PE. Each subchapter containing a PBR for specific facilities would also be referenced under this new Part. Within Part 9, Section 252:100-7-60.3 was written due to the proposed PBR section for VOC storage and loading facilities in Subchapter (SC) 37. Staff recommendation for SC 37 will be to continue the rule until the February AQC meeting. Therefore, staff suggests the proposed new section be deleted from the rule and added once the PBR in SC 37 is approved. Mr. Branecky requested clarification of which part of the rule was being deleted. Ms. Buttram confirmed the suggestion to recommend the proposed rule, excluding Section 252:100-7-60.3, to the Environmental Quality Board for permanent adoption.

Following discussion and comments, Chairman Breisch entertained a motion to recommend this rule to the Environmental Quality board at the next meeting. Dr. Grosz made that motion with second made by Ms. Myers. Roll call as follows: Dr. Canter – aye; Ms. Myers – aye; Dr. Grosz – aye; Mr. Branecky – aye; Mr. Wilson – aye; Mr. Breisch – aye.

Copy of hearing transcript attached and made an official part of these minutes.

OAC 252:100:8-4(a)(2) Permits for Part 70 Sources [AMENDED]

Mr. Dyke called upon Ms. Joyce Sheedy for staff recommendation regarding this rule. Dr. Sheedy advised that these amendments update the incorporation by reference of the case-by-case MACT determinations for Part 70 sources in 252:100-8-4 (a)(2)(C) by adopting 40 CFR 63.41, 63.43, and 63.44 as they exist on July 1, 1998. Dr. Sheedy advised that this update would be made annually.

Mr. Breisch entertained motion recommending adoption as permanent rule by the Environmental Quality Board. Mr. Branecky made the motion with the second being made by Mr. Wilson. Roll call as follows: Dr. Canter – aye; Ms. Myers – aye; Dr. Grosz – aye; Mr. Branecky – aye; Mr. Wilson – aye; Mr. Breisch – aye.

Copy of hearing transcript attached and made an official part of these minutes.

OAC 252:100-37 Control of Emissions of Organic Materials (AMENDED)

Mr. Dyke called upon Dr. Joyce Sheedy who advised that proposed changes primarily simplify language and correct grammar and format but also include various substantive changes. Dr. Sheedy explained that one substantive change alters the definition of volatile organic compound (VOC) to make it reflect EPA's definition of VOC. Dr. Sheedy then stated the staff's recommendation to continue this rule until the February Council meeting because of remaining controversy.

Council discussion followed. Mr. Wilson expressed concern about SC 37 being open for so long with no action taken. During public discussion, Mr. Bradshaw from Boeing reiterated Mr. Wilson's concern. Mr. Bradshaw further explained that the specific point of concern for Boeing and American Airlines is the definition of VOC. He said the members of his industry would like to see the definition amended as soon as possible. Ms. Hoffman responded by explaining that it is the intent of the staff to have all remaining issues with SC 37 resolved and to recommend approval of the rule by the Council. She further explained that if the rule is

approved by the Council in February, there would be time to get the packet of information to the Environmental Quality Board before the March 5, 1999 meeting.

Mr. Breisch entertained a motion to continue this rule to Council's February meeting. Ms. Myers made motion with second made by Dr. Grosz. Roll call as follows: Dr. Canter – aye; Ms. Myers – aye; Dr. Grosz – aye; Mr. Branecky – aye; Mr. Wilson – aye; Mr. Breisch – aye.

Copy of hearing transcript attached and made an official part of these minutes.

OAC 252:100-39 Control of Organic Materials in Nonattainment Areas [AMENDED]
Mr. Dyke called upon Dr. Joyce Sheedy for staff recommendation. Dr. Sheedy pointed out that the proposed changes primarily simplify language and correct grammar and format but also include some substantive changes. Dr. Sheedy explained that written comments, staff responses and details of the substantive changes were summarized in the Council packet. Dr. Sheedy submitted the written letters from EPA and EFO for hearing record.

There were no questions or comments from the Council or from the public.

Following discussion, Mr. Breisch entertained a motion to continue this rule to the Council's February 17, 1999 meeting. Mr. Branecky made that motion with the second made by Ms. Myers. Roll call as follows: Dr. Canter – aye; Ms. Myers – aye; Dr. Grosz – aye; Mr. Branecky – aye; Mr. Wilson – aye; Mr. Breisch – aye.

Copy of hearing transcript attached and made an official part of these minutes

OAC 252:100-5 Registration, Emission Inventory and Annual Operating Fees [AMENDED]

OAC 252:100-7 Permits [AMENDED]

OAC 252:100-8-1.7 Permits for Part 70 Sources [AMENDED]

This subject was first brought before the Council on October 20, 1998 at which time the Council voted to continue the hearing until the December 15, 1998 Council meeting. The presentation for this public hearing consisted of several staff members. Mr. David Dyke began by informing those present that written comments have been received from the Environmental Federation of Oklahoma, Mid-Continent Oil and Gas Association, and the Small Business Advisory Panel. These comments and staff responses were submitted for official record. Mr. Dyke continued to explain the Division's anticipated increase in workload and discussed other factors contributing to the request for fee increases.

Mr. Dyke called upon Mr. Scott Thomas to describe the upcoming rulemaking activities. Mr. Thomas explained that the Division's rulemaking goals were designed according to proposed rules received from the EPA, instruction from the State Legislature to review all of our rules by December 2000, and efforts to go forward with the agencies directive and goals of the permit continuum. Mr. Thomas also stated that in order to accomplish these goals, additional staff would be required or the rulemaking priorities would have to be refined. Mr. Ray Bishop came forward to elaborate upon the need for additional permitting staff. He stated that even though the Permit program has instituted a number of time-saving and efficiency efforts, the Division does not anticipate meeting the impending Title V time frames and deadlines with the current staff. He also reviewed the non-Title V activities required of the permitting

staff. Mr. Terrill commented regarding potential actions that could occur at the federal level and consequently affect the Division.

Finally, Mr. Dyke called upon Ms. Shawna McWaters-Khalousi to explain the proposed fee increases and how they were derived. Staff recommended approval by the Council. Mr. Dyke summarized staff's position by stating that even though services and spending levels are reduced from previous years, the current level of services and management of oncoming issues cannot be maintained without additional staff. Mr. Dyke assured that the Division would not compromise the environmental protection, but be forced to shift and prioritize resources ultimately resulting in reduced services provided.

After extensive comment and discussion from the Council, the public and members of industry, Mr. Breisch entertained, and Mr. Branecky made the motion that: In SC 5, annual operating fees for minor facilities and for Part 70 sources be increased to \$17.12 per ton; In SC 7, the fee for minor source applicability determinations be increased to \$250 and the fees for all types of individual minor source permits be doubled; and In SC 8, the fee for major source applicability determinations be increased to \$250. Ms. Myers made the second to Mr. Branecky's motion with roll call as follows: Dr. Canter – aye; Ms. Myers – aye; Dr. Grosz – aye; Mr. Branecky – aye; Mr. Wilson – aye; Mr. Breisch – aye.

Copy of hearing transcript attached and made an official part of these minutes.

NEW BUSINESS The Council requested a monthly financial statement from Mr. Coleman's office. This information would enable the Finance Committee to monitor the cash flow of the AQD and work toward avoiding future budgetary shortfalls. Additionally, the Council requested that a comprehensive and detailed list of tasks that would be billed to Title V expenditures be created. This list would be a guideline for staff to follow when accounting time and effort. Finally, a request was made for additional state appropriations for a workload study that will determine staffing priorities.

ADJOURNMENT With no further business, meeting was adjourned with announcement that the next regularly scheduled meeting would be February 17, 1999 at the Department of Environmental Quality Multi-Purpose Room, First Floor, 707 North Robinson, Oklahoma City, Oklahoma.

NOTE: The sign-in sheet and the copies of hearing records are attached as an official part of these Minutes.

AGENDA
AIR QUALITY COUNCIL
DEPARTMENT OF ENVIRONMENTAL QUALITY
HEARING/MEETING
9:00 A.M.
Wednesday, June 14, 2000
OSU @ Tulsa
700 North Greenwood
Tiered Lecture Hall (North Hall 150)

1. **Call to Order – David Branecky**
2. **Roll Call – Myrna Bruce**
3. **Approval of Minutes of the April 19, 2000 Regular Meeting**
4. **PUBLIC RULEMAKING HEARINGS**

A. OAC 252:3-5 Air Quality Advisory Council Hearings [NEW]
Appendix B Style of Request for Hearing [NEW]

The proposed addition to Chapter 3 would establish Council procedures for individual proceedings on enforcement matters and requests for variance. A new Appendix B would be added.

1. Presentation – Cheryl Bradley
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for emergency adoption

B. OAC 252:100-7 PERMITS FOR MINOR FACILITIES [AMENDED]

The proposed changes to SC7 consist of the addition of sections 60.3, 60.4, and 60.5. Proposed sections 60.3 and 60.4 reference the existing permits by rule for VOC storage and loading facilities and particulate matter facilities, respectively. Section 60.5 is the proposed permit by rule for natural gas compression facilities.

1. Presentation – Barbara Hoffman
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent and emergency adoption

C. OAC 252:100-8 Permits for Part 70 Sources [AMENDED]

The proposed changes to SC 8 would amend sections 1.1, 1.4, 1.5, 1.7, 2, 3, 4, 5, 6, 7, 8, 31, 33, and 52. The changes correct errors, clarify language, and add fee categories for construction permit authorizations and modifications. Substantive changes include amending the definition of "trivial activities" in section 2 by deleting the exception for activities that are subject to an applicable requirement. A substantive change is also proposed for the definition of "major stationary source" in section 31.

1. Presentation – Barbara Hoffman
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent and emergency adoption

D. OAC 252:100-29 Control of Fugitive Dust [AMENDED]

The proposed changes would simplify and clarify the Subchapter as a part of the agency-wide re-right/de-wrong initiative. A substantive change is included which would make the rule more enforceable by deleting the qualification that the fugitive dust be emitted to such an extent as to be classified as air pollution, before precautions are required.

1. Presentation – Cheryl Bradley
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent adoption

5. Division Director's Report – David Dyke

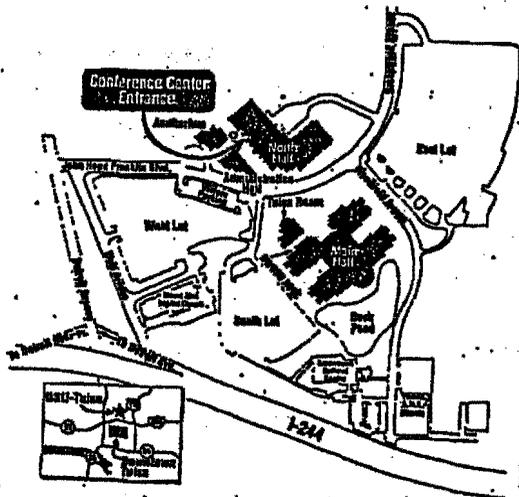

6. New Business – Any matter not known about, or which could not have been reasonably foreseen, prior to the time of posting the agenda.

7. Adjournment – Next Regular Meeting

Date and Time: August 16, 2000 @ 9:00 a.m.

**Place: Pioneer Technology Center
Education Business Center
2101 North Ash Street
Ponca City, OK 74601**

Lunch Break, if necessary

How to get to OSU-Tulsa

700 North Greenwood Ave. • Tulsa, Oklahoma 74106 • (918) 594-8000

Welcome to OSU-Tulsa. If this is your first visit, simply look for the highway you will be using and follow the corresponding instructions.

From Norman Turnoff from Oklahoma City and west
From I-44, exit 73 North (Bartlesville). When you reach the downtown area, stay in the center lane and follow the signs for I-244 East (Joplin). Exit Cincinnati/Detroit Avenues. Go to the second light, turn left onto Detroit Avenue. Move into the right lane. Watch for the campus on the right. Turn right on John Hope Franklin Boulevard.

SH-64/51 (Broken Arrow Expressway)
From the BA Expressway, exit at 73 North (Bartlesville). Move to the far left lane. Take the I-244 West exit. Then take the next exit, Cincinnati/Detroit Avenues. Turn right on Detroit Avenue. Move into the right lane. Watch for the campus on the right. Turn right on John Hope Franklin Boulevard.

I-244 (Crownpoint Expressway from the east)
Follow I-244 West to downtown Tulsa. When the highway splits, stay in the lane marked I-244 West (CKC). Take the next exit, Cincinnati/Detroit Avenues. Turn right on Detroit Avenue. Move into the right lane. Watch for the campus on the right. Turn right on John Hope Franklin Boulevard.

US-75 (from the north)
Follow US-75 South to I-244 West (CKC). Take the next exit, Cincinnati/Detroit Avenues. Turn right on Detroit Avenue. Move into the right lane. Watch for the campus on the right. Turn right on John Hope Franklin Boulevard.

June 1, 2000

MEMORANDUM

TO: Air Quality Council

FROM: Eddie Terrill, Division Director
Air Quality Division

SUBJECT: Modifications to Subchapter 8

ET
for

Enclosed is a copy of the proposed draft modifications to Subchapter 8, Permits for Part 70 Sources. After several years of implementing this Subchapter, various errors, inconsistencies, and ambiguities have surfaced which need to be corrected. Since we are still issuing the first round of Part 70 permits and have already begun modifying those that have been issued, we believe it is better to tackle these issues now rather than later.

The proposed changes to Subchapter 8 would amend sections 1.1, 1.4, 1.5, 1.7, 2, 3, 4, 5, 6, 7, 8, 31, 33, and 52. In addition to correcting errors and clarifying language, the proposed changes add fee categories for construction permit authorizations and modifications. Substantive changes include amending the definition of "trivial activities" in section 2 by deleting the exception for activities that are subject to an applicable requirement. The amendments to section 4(a)(1) clarify that de minimis emissions increases do not require construction permits, but that additions of equipment that are subject to NSPS or NESHAP would. The changes in section 5(d)(1)(A) clarify that BACT is not required for modifications that result in emissions increases of less than 100 tons per year, unless the Prevention of Significant Deterioration rules in Part 7 would require it. The reporting time in section 6(a)(3)(C) for excess emissions caused by emergencies or upsets would be changed from 24 hours to the end of the next working day to make it consistent with Subchapter 9 reporting requirements. A substantive change is proposed for the definition of "major stationary source" in section 31, where paragraph (xiv) would be changed to read "municipal incinerators capable of charging more than 50 tons of refuse per day." This change is required by the 1990 amendment to section 169(1) of the federal Clean Air Act. The changes to section 52 were adopted in 1989 but were accidentally excluded during codification of the rules.

If no substantive, adverse comments are received during the comment period or at the public hearing on these changes, staff will ask the Council to recommend these changes to the Environmental Quality Board for adoption as emergency and permanent rules.

SUBCHAPTER 8. PERMITS FOR PART 70 SOURCES

PART 1. GENERAL PROVISIONS

252:100-8-1.1. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise. Except as specifically provided in this section, terms used in this Subchapter retain the meaning accorded them under the applicable requirements of the Act.

"A stack in existence" means for purposes of 252:100-8-1.5 that the owner or operator had:

(A) begun, or caused to begin, a continuous program of physical on-site construction of the stack; or

(B) entered into binding agreements or contractual obligations, which could not be canceled or modified without substantial loss to the owner or operator, to undertake a program of construction of the stack to be completed in a reasonable time.

"Act" means the federal Clean Air Act, as amended, 42 U.S.C. 7401 *et seq.*

"Administrator" means the Administrator of the United States Environmental Protection Agency (EPA) or the Administrator's designee.

"Allowable emissions" means, for purposes of Parts 7 and 9 of this Subchapter, the emission rate of a stationary source calculated using the maximum rated capacity of the source (unless the source is subject to enforceable limits which restrict the operating rate, or hours of operation, or both) and the most stringent of the following:

(A) the applicable standards as set forth in 40 CFR Parts 60 and 61;

(B) the applicable State rule allowable emissions; or,

(C) the emissions rate specified as an enforceable permit condition.

"Begin actual construction" for purposes of Parts 7 and 9 of this Subchapter means, in general, initiation of physical on-site construction activities on an emissions unit which are of a permanent nature. Such activities include, but are not limited to, installation of building supports and foundations, laying of underground pipework, and construction of permanent storage structures. With respect to a change in method of operation this term refers to those on-site activities, other than preparatory activities, which mark the initiation of the change.

"Commence" for purposes of Parts 7 and 9 of this Subchapter means, as applied to construction of a major stationary source or major modification, that the owner or operator has all necessary preconstruction approvals or permits and either has:

(A) begun, or caused to begin, a continuous program of actual on-site construction of the source, to be completed within a reasonable time; or,

(B) entered into binding agreements or contractual obligations, which cannot be cancelled or modified without substantial loss to the owner or operator, to undertake a program of actual construction of the source to be completed within a reasonable time.

"Construction" means, for purposes of Parts 7 and 9 of this Subchapter, any physical change or change in the method of operation (including fabrication, erection, installation, demolition, or modification of an emissions unit) which would result in a change in actual emissions.

"Dispersion technique" means for purposes of 252:100-8-1.5 any technique which attempts to affect the concentration of a pollutant in the ambient air by using that portion of

a stack which exceeds good engineering practice stack height; varying the rate of emission of a pollutant according to atmospheric conditions or ambient concentrations of that pollutant; or increasing final exhaust gas plume rise by manipulating source process parameters, exhaust gas parameters, stack parameters or combining exhaust gases from several existing stacks into one stack, or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise. The preceding sentence does not include:

(A) The reheating of a gas stream, following use of a pollution control system, for the purpose of returning the gas to the temperature at which it was originally discharged from the facility generating the gas stream.

(B) The merging of exhaust gas streams where:

(i) the source owner or operator documents that the facility was originally designed and constructed with such merged streams;

(ii) after July 8, 1985, such merging is part of a change in operation at the facility that includes the installation of pollution controls and is accompanied by a net reduction in the allowable emissions of a pollutant. This exclusion from "dispersion technique" applicability shall apply only to the emission limitation for the pollutant affected by such change in operation; or

(iii) before July 8, 1985, such merging was part of a change in operation at the facility that included the installation of emissions control equipment or was carried out for sound economic or engineering reasons. Where there was an increase in the emission limitation or, in the event that no emission limitation existed prior to the merging, there was an increase in the quantity of pollutants actually emitted prior to the merging, it shall be presumed that merging was primarily intended as a means of gaining emissions credit for greater dispersion. Before such credit can be allowed, the owner or operator must satisfactorily demonstrate that merging was not carried out for the primary purpose of gaining credit for greater dispersion.

(C) Manipulation of exhaust gas parameters, merging of exhaust gas streams from several existing stacks into one stack, or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise in those cases where the resulting allowable emissions of sulfur dioxide from the facility do not exceed 5,000 tons per year.

"Emission limitations and emission standards" means for purposes of 252:100-8-1.5 requirements that limit the quantity, rate or concentration of emissions of air pollutants on a continuous basis, including any requirements that limit the level of opacity, prescribe equipment, set fuel specifications or prescribe operation or maintenance procedures for a source to assure continuous reduction. (Amended 7-9-87, effective 8-10-87)

"Emissions unit" means, for purposes of Parts 7 and 9 of this Subchapter, any part of a source which emits or would have the potential to emit any pollutant subject to regulation.

"EPA" means the United States Environmental Protection Agency.

"Fugitive emissions" means, for purposes of Parts 7 and 9 of this Subchapter, those emissions which could not reasonably pass through a stack, chimney, vent or other functionally equivalent opening.

"National Emission Standards for Hazardous Air Pollutants" or "NESHAP" means those standards found in 40 CFR Parts 61 and 63.

"Necessary preconstruction approvals or permits" means, for purposes of Parts 7 and 9 of this Subchapter, those permits or approvals required under all applicable air quality control laws and rules.

"New Source Performance Standards" or "NSPS" means those standards found in 40 CFR Part 60.

"Part 70 permit" (unless the context suggests otherwise) means any permit or group of permits covering a Part 70 source that is issued, renewed, amended, or revised pursuant to this Chapter.

"Part 70 program" means a program approved by the Administrator under 40 CFR Part 70.

"Part 70 source" means any source subject to the permitting requirements of Part 5 of this Subchapter, as provided in 252:100-8-3(a) and 252:100-8-3(b).

"Potential to emit" means, for purposes of Parts 7 and 9 of this Subchapter, the maximum capacity of a source to emit a pollutant under its physical and operational design. Any physical or operational limitation on the capacity of the source to emit a pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored or processed, shall be treated as part of its design if the limitation or the effect it would have on emissions is enforceable. Secondary emissions do not count in determining the potential to emit of a source.

"Secondary emissions" means, for purposes of Parts 7 and 9 of this Subchapter, emissions which occur as a result of the construction or operation of a major stationary source or modification, but do not come from the source or modification itself. ~~For the purpose of 252:100-8, Part 9, secondary~~ Secondary emissions must be specific, well defined, quantifiable, and impact the same general areas as the source or modification which causes the secondary emissions. Secondary emissions may include, but are not limited to:

- (A) emissions from trains coming to or from the new or modified stationary source; and,
- (B) emissions from any offsite support facility which would not otherwise be constructed or increase its emissions as a result of the construction or operation of the major source or modification.

"Stack" means for purposes of 252:100-8-1.5 any point in a source designed to emit solids, liquids or gases into the air, including a pipe or duct but not including flares.

"Stationary source" means, for purposes of Parts 7 and 9 of this Subchapter, any building, structure, facility or installation which emits or may emit any air pollutant subject to 252:100.

252:100-8-1.4. Cancellation or extension of a construction permit or authorization under a general construction permit

(a) **Cancellation of permit or authorization to construct or modify.** A duly issued permit or authorization to construct or modify will terminate and become null and void (unless extended as provided in Subsection (b) of this Section) if the construction is not commenced within 18 months after the date the permit or authorization was issued, or if work is suspended for more than 18 months after it has commenced.

(b) **Extension of permit or authorization to construct or modify.**

(1) Prior to the expiration date of the permit or authorization, a permittee may apply for extension of the permit or authorization by written request of the DEQ stating the reasons for the delay or suspension and providing justification for the extension. The DEQ may grant:

- (A) One extension of 18 months or less, or

(B) One extension of up to 36 months where the applicant is proposing to expand an already existing facility to accommodate the proposed new construction or the applicant has expended a significant amount of money (1% of total project cost as identified in the original application, not including land cost) in preparation for meeting the definition of "commence construction" at the proposed site, or

(C) One extension of up to 72 months will be granted to major industrial facilities (project cost greater than \$100,000,000.00), where the applicant proposes to construct at an existing site and demonstrates that the existing site was originally designed and constructed to accommodate the proposed new facilities. The applicant shall show a commitment to the site by having purchased land necessary to construct facilities covered by this extension and expended \$1,000,000.00 or more on engineering and/or site development.

(2) If construction has not commenced within three (3) years of the effective date of the original permit or authorization, the permittee must undertake and complete an appropriate available control technology review and an air quality analysis. This review must be approved by the DEQ before construction may commence.

(3) Upon formal request of any applicant whose permit has been denied for lack of increment, the DEQ may require any permittee under 252:100-8-1.4(b)(1)(B) or 252:100-8-1.4 (b)(1)(C), to furnish a complete air quality analysis and/or an appropriate available control technology review if such review is required in order to provide new or current information.

252:100-8-1.5. Stack height limitations

(a) **Stack height exclusion.** Air quality modeling or ambient impact evaluation shall exclude the effect of that portion of the height of any stack which exceeds good engineering practice or the effect of any other dispersion techniques.

(b) **Determination of good engineering practice (GEP) stack height.** GEP stack height shall be the greater of:

(1) 65 meters, measured from the ground-level elevation at the base of the stack; or

(2) The height under either 252:100-8-1.5(b)(2)(A) or (B):

(A) for stacks in existence on January 12, 1979 and for which the owner or operator had obtained all applicable permits or approvals required under 252:100-8 or 40 CFR Part 52, $H_g = 2.5H$, provided the owner or operator can demonstrate that this equation was relied upon in establishing an emission limitation;

(B) for all other stacks, $H_g = H + 1.5L$, where:

(i) H_g = good engineering practice stack height, measured from the ground-level elevation at the base of the stack,

(ii) H = height of nearby structure(s) measured from the ground-level elevation at the base of the stack,

(iii) L = lesser dimension (height or projected width) of nearby structure(s), provided that the owner or operator may be required to verify such GEP stack height by the use of a field study or fluid model as the Executive Director shall determine; or

(3) The height demonstrated by a fluid model or a field study approved by the reviewing agency, which ensures that the emissions from a stack do not result in excessive

concentrations of any air pollutant as a result of atmospheric downwash, wakes, or eddy effects created by the source itself, nearby structures, or nearby terrain features.

(c) Nearby.

(1) For the formulae in 252:100-8-1.5(b)(2). A structure or terrain feature shall be considered nearby if it is located within a distance of up to five times the lesser of the height or the width of a structure, but not more than 0.5 miles (0.8 km).

(2) For demonstration in 252:100-8-1.5(b)(3).

(A) A structure or terrain feature shall be considered nearby if located at a distance not greater than 0.5 mile (0.8 km), except that

(B) A portion of a terrain feature may be considered nearby if:

(i) It falls within a distance (not to exceed 2 miles) of up to 10 times the maximum height (Ht) of the feature, and

(ii) At a distance of 0.5 mile, the height of such feature is at least 40 percent of the GEP stack height determined by the formulae provided in 252:100-8-1.5(b)(2)(B) or 85.3 feet (26 meters), whichever is greater, as measured from the base of the stack.

(3) **Measurement of height of structure or terrain.** The height of the structure or terrain feature is measured from the ground-level elevation at the base of the stack.

(d) Excessive concentrations. When utilized for the purpose of determining GEP stack height under 252:100-8-1.5(b)(3), excessive concentrations shall be as follows:

(1) For sources seeking credit for stack height exceeding that calculated under ~~262:100-8-1.5(b)(2)~~ 252:100-8-1.5(b)(2), a maximum ground-level pollutant concentration from a stack due in whole or part to downwash, wakes, and eddy effects produced by nearby structures or nearby terrain features which is at least 40 percent in excess of the maximum concentration experienced in the absence of such downwash, wakes, or eddy effects and which, when combined with the impacts due to all sources, produces a concentration in excess of an ambient air quality standard. For sources subject to the prevention of significant deterioration program (Part 7 of this Subchapter or Federal 40 CFR 52.21), the same criteria apply except that a concurrent exceedance of a prevention of significant deterioration increment is experienced. In making demonstrations under this part, the allowable emission rate shall conform to the new source performance standard that is applicable to the source category unless the owner or operator can demonstrate that this emission rate is infeasible. Where such demonstrations are approved by the Executive Director, an alternative emission rate shall be established in consultation with the owner or operator;

(2) For sources seeking credit after October 1, 1983, for increases in existing stack heights up to the heights established under 252:100-8-1.5(b)(2) either:

(A) a maximum ground-level concentration due in whole or part to downwash, wakes or eddy effects as specified in 252:100-8-1.5(b)(2), except that the emission rate specified by any applicable state implementation plan (or, in the absence of such a limit, the actual emission rate) shall be used, or

(B) the actual presence of a local nuisance caused by the existing stack, as determined by the Executive Director; and

(3) For sources seeking credit after January 12, 1979 for a stack height determined under 252:100-8-1.5(b)(2) where the Executive Director requires the use of a field study or fluid model to verify GEP stack height, for sources seeking stack height credit after

November 9, 1984 based on the aerodynamic influence of cooling towers, and for sources seeking stack height credit after December 31, 1970 based on the aerodynamic influence of structures not adequately represented by the formulae in 252:100-8-1.5(b)(2), a maximum ground-level concentration due in whole or part to downwash, wakes or eddy effects that is at least 40 percent in excess of the maximum concentration experienced in the absence of such downwash, wakes or eddy effects.

PART 3. PERMIT APPLICATION FEES

252:100-8-1.7. Permit application fees

A permit application or a request for an applicability determination received after the effective date of this subsection will be assessed a one-time fee, which must accompany the application or request. Applications received without appropriate fees are administratively incomplete. Fees must be paid by check or money order made payable to the Oklahoma Air Quality Division in accordance with the following fee schedule:

- (1) **Applicability determination.** \$250, to be credited against the construction or operating permit application fee, if a permit is required. If no permit is required, the fee will be retained to cover the cost of making the determination.
- (2) **Construction permit application.** ~~The fee is \$2,000.~~
 - (A) New Part 70 source - \$2,000.
 - (B) Minor modification of a Part 70 source - \$1,000.
 - (C) Significant modification of a Part 70 source - \$1,500.
 - (D) Authorization under a general permit - \$900.
- (3) **Operating permit application.**
 - (A) Initial Part 70 permit - \$2,000.
 - (B) Authorization under a general permit - \$900
 - (C) Renewal Part 70 permit - \$1,000.
 - (D) Significant modification of Part 70 permit - \$1,000.
 - (E) Minor modification of Part 70 permit - \$500.
 - (F) Part 70 Temporary Source Relocation - \$500.

PART 5. PERMITS FOR PART 70 SOURCES

252:100-8-2. Definitions

The following words and terms, when used in this Part, shall have the following meaning, unless the context clearly indicates otherwise. Except as specifically provided in this section, terms used in this Part retain the meaning accorded them under the applicable requirements of the Act.

"**Administratively complete**" means an application that provides:

- (A) All information required under 252:100-8-5(c), (d), or (e);
- (B) A landowner affidavit as required by 252:2-15-20(b)(3);
- (C) The appropriate application fees as required by 252:100-8-1.7; and
- (D) Certification by the responsible official as required by 252:100-8-5(f).

"**Affected source**" means the same as the meaning given to it in the regulations promulgated under Title IV (acid rain) of the Act.

"Affected states" means:

(A) all states:

- (i) That are one of the following contiguous states: Arkansas, Colorado, Kansas, Missouri, New Mexico and Texas, and
 - (ii) That in the judgment of the DEQ may be directly affected by emissions from the facility seeking the permit, permit modification, or permit renewal being proposed;
- or

(B) all states that are within 50 miles of the permitted source.

"Affected unit" means the same as the meaning given to it in the regulations promulgated under Title IV (acid rain) of the Act.

"Applicable requirement" means all of the following as they apply to emissions units in a Part 70 source subject to this Chapter (including requirements that have been promulgated or approved by EPA through rulemaking at the time of issuance but have future effective compliance dates):

(A) Any standard or other requirements provided for in the applicable implementation plan approved or promulgated by EPA through rulemaking under Title I of the Act that implements the relevant requirements of the Act, including any revisions to that plan, promulgated in 40 CFR Part 52;

(B) Any term or condition of any preconstruction permits issued pursuant to regulations approved or promulgated through rulemaking under Title I, including parts C or D, of the Act;

(C) Any standard or other requirement under section 111 of the Act, including section 111(d);

(D) Any standard or other requirement under section 112 of the Act, including any requirement concerning accident prevention under section 112(r)(7) of the Act, but not including the contents of any risk management plan required under 112(r) of the Act;

(E) Any standard or other requirement of the acid rain program under Title IV of the Act or the regulations promulgated thereunder;

(F) Any requirements established pursuant to section 504(b) or section 114(a)(3) of the Act;

(G) Any standard or other requirement governing solid waste incineration, under section 129 of the Act;

(H) Any standard or other requirement for consumer and commercial products, under section 183(e) of the Act;

(I) Any standard or other requirement for tank vessels, under section 183(f) of the Act;

(J) Any standard or other requirement of the regulations promulgated to protect stratospheric ozone under Title VI of the Act, unless the Administrator has determined that such requirements need not be contained in a Title V permit; and

(K) Any national ambient air quality standard or increment or visibility requirement under part C of Title I of the Act, but only as it would apply to temporary sources permitted pursuant to section 504(e) of the Act.

"Designated representative" means with respect to affected units, a responsible person or official authorized by the owner or operator of a unit to represent the owner or operator in matters pertaining to the holding, transfer, or disposition of allowances allocated to a unit, and the submission of and compliance with permits, permit applications, and compliance plans for the unit.

"Draft permit" means the version of a permit for which the DEQ offers public participation under 27A O.S.Supp. 1995, §2-14-101 *et seq.* and 252:100-2-15 or affected State review under 252:100-8-8.

"Emergency" means, when used in 252:100-8-6(e), any situation arising from sudden and reasonably unforeseeable events beyond the control of the source, including acts of God, which situation requires immediate corrective action to restore normal operation, and that causes the source to exceed a technology-based emission limitation under the permit, due to unavoidable increases in emissions attributable to the emergency. An emergency shall not include noncompliance to the extent caused by improperly designed equipment, lack of preventive maintenance, careless or improper operation, or operator error. Quantification of accidental releases shall be made by the best available method. [Moved from 252:100-8-6(e)(1).]

"Emissions allowable under the permit" means a federally enforceable permit term or condition determined at issuance to be required by an applicable requirement that establishes an emissions limit (including a work practice standard) or a federally enforceable emissions cap that the source has assumed to avoid an applicable requirement to which the source would otherwise be subject.

"Emissions unit" means any part or activity of a stationary source that emits or has the potential to emit any regulated air pollutant or any pollutant listed under section 112(b) of the Act. Fugitive emissions from valves, flanges, etc. associated with a specific unit process shall be identified with that specific emission unit. This term is not meant to alter or affect the definition of the term "unit" for purposes of Title IV of the Act.

"Final permit" means the version of a part 70 permit issued by the DEQ that has completed all review procedures required by 252:100-8-7 through 252:100-8-7.5 and 252:100-8-8.

"Fugitive emissions" means those emissions of regulated air pollutants which could not reasonably pass through a stack, chimney, vent, or other functionally-equivalent opening.

"General permit" means a part 70 permit that meets the requirements of 252:100-8-6.1.

"Insignificant activities" means individual emissions units that are either on the list approved by the Administrator and contained in Appendix I, or whose actual calendar year emissions do not exceed any of the limits in (A) through (C) of this definition. Any activity to which a State or federal applicable requirement applies is not insignificant even if it meets the criteria below or is included on the insignificant activities list.

(A) 5 tons per year of any one criteria pollutant.

(B) 2 tons per year for any one hazardous air pollutant (HAP) or 5 tons per year for an aggregate of two or more HAP's, or 20 percent of any threshold less than 10 tons per year for single HAP that the EPA may establish by rule.

(C) 0.6 tons per year for any one category A substance, 1.2 tons per year for any one category B substance or 6 tons per year for any one category C substance as defined in 252:100-41-40.

"MACT" means maximum achievable control technology.

"Major source" means any stationary source (or any group of stationary sources that are located on one or more contiguous or adjacent properties and are under common control of the same person (or persons under common control)) belonging to a single major industrial grouping and that is described in subparagraph (A), (B), or (C) of this definition.

For the purposes of defining "major source," a stationary source or group of stationary sources shall be considered part of a single industrial grouping if all of the pollutant emitting activities at such source or group of sources on contiguous or adjacent properties belong to the same Major Group (i.e., all have the same two-digit primary SIC code) as described in the Standard Industrial Classification Manual, 1987.

(A) A major source under section 112 of the Act, which is defined as:

(i) For pollutants other than radionuclides, any stationary source or group of stationary sources located within a contiguous area and under common control that emits or has the potential to emit, in the aggregate, 10 tons per year ("tpy") or more of any hazardous air pollutant which has been listed pursuant to section 112(b) of the Act, 25 tpy or more of any combination of such hazardous air pollutants, or such lesser quantity as the Administrator may establish by rule. Notwithstanding the preceding sentence, emissions from any oil or gas exploration or production well (with its associated equipment) and emissions from any pipeline compressor or pump station shall not be aggregated with emissions from other similar units, whether or not such units are in a contiguous area or under common control, to determine whether such units or stations are major sources; or.

(ii) For radionuclides, "major source" shall have the meaning specified by the Administrator by rule.

(B) A major stationary source of air pollutants, as defined in section 302 of the Act, that directly emits or has the potential to emit, 100 tpy or more of any regulated air pollutant (except TSP that fraction of particulate matter that exhibits an average aerodynamic particle diameter of more than 10 micrometers) (including any major source of fugitive emissions of any such pollutant, as determined by rule by the Administrator). The fugitive emissions of a stationary source shall not be considered in determining whether it is a major stationary source for the purposes of section 302(j) of the Act, unless the source belongs to one of the following categories of stationary sources:

- (i) Coal cleaning plants (with thermal dryers);
- (ii) Kraft pulp mills;
- (iii) Portland cement plants;
- (iv) Primary zinc smelters;
- (v) Iron and steel mills;
- (vi) Primary aluminum ore reduction plants;
- (vii) Primary copper smelters;
- (viii) Municipal incinerators capable of charging more than 250 tons of refuse per day;
- (ix) Hydrofluoric, sulfuric, or nitric acid plants;
- (x) Petroleum refineries;
- (xi) Lime plants;
- (xii) Phosphate rock processing plants;
- (xiii) Coke oven batteries;
- (xiv) Sulfur recovery plants;
- (xv) Carbon black plants (furnace process);
- (xvi) Primary lead smelters;
- (xvii) Fuel conversion plants;
- (xviii) Sintering plants;

- (xix) Secondary metal production plants;
 - (xx) Chemical process plants;
 - (xxi) Fossil-fuel boilers (or combination thereof) totaling more than 250 million British thermal units per hour heat input;
 - (xxii) Petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels;
 - (xxiii) Taconite ore processing plants;
 - (xxiv) Glass fiber processing plants;
 - (xxv) Charcoal production plants;
 - (xxvi) Fossil-fuel-fired steam electric plants of more than 250 million British thermal units per hour heat input; or
 - (xxvii) All other stationary source categories which, as of August 7, 1980, are being regulated by a standard promulgated under section 111 or 112 of the Act, but only with respect to those air pollutants that have been regulated for that category.
- (C) A major stationary source as defined in part D of Title I of the Act, including:
- (i) For ozone non-attainment areas, sources with the potential to emit 100 tpy or more of volatile organic compounds or oxides of nitrogen in areas classified as "marginal" or "moderate," 50 tpy or more in areas classified as "serious," 25 tpy or more in areas classified as "severe," and 10 tpy or more in areas classified as "extreme"; except that the references in this paragraph to 100, 50, 25, and 10 tpy of nitrogen oxides shall not apply with respect to any source for which the Administrator has made a finding, under section 182(f)(1) or (2) of the Act, that requirements under section 182(f) of the Act do not apply;
 - (ii) For ozone transport regions established pursuant to section 184 of the Act, sources with the potential to emit 50 tpy or more of volatile organic compounds;
 - (iii) For carbon monoxide non-attainment areas:
 - (I) that are classified as "serious"; and
 - (II) in which stationary sources contribute significantly to carbon monoxide levels as determined under rules issued by the Administrator, sources with the potential to emit 50 tpy or more of carbon monoxide; and
 - (iv) For particulate matter (PM-10) non-attainment areas classified as "serious," sources with the potential to emit 70 tpy or more of PM-10.

"Maximum capacity" means the quantity of air contaminants that theoretically could be emitted by a stationary source without control devices based on the design capacity or maximum production capacity of the source and 8,760 hours of operation per year. In determining the maximum theoretical emissions of VOCs for a source, the design capacity or maximum production capacity shall include the use of raw materials, coatings and inks with the highest VOC content used in practice by the source.

"Permit" (unless the context suggests otherwise) means any permit or group of permits covering a Part 70 source that is issued, renewed, amended, or revised pursuant to this Chapter.

"Permit modification" means a revision to a Part 70 construction or operating permit that meets the requirements of 252:100-8-7.2(b).

"Permit program costs" means all reasonable (direct and indirect) costs required to develop and administer a permit program, as set forth in 252:100-5-2.2 (whether such costs

are incurred by the DEQ or other State or local agencies that do not issue permits directly, but that support permit issuance or administration).

"Permit revision" means any permit modification or administrative permit amendment.

"Potential to emit" means the maximum capacity of a stationary source to emit any air pollutant under its physical and operational design. Any physical or operational limitation on the capacity of a source to emit an air pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitation is enforceable by the Administrator. This term does not alter or affect the use of this term for any other purposes under the Act, or the term "capacity factor" as used in Title IV of the Act or the regulations promulgated thereunder.

"Proposed permit" means the version of a permit that the DEQ proposes to issue and forwards to the Administrator for review in compliance with 252:100-8-8.

"Regulated air pollutant" means the following:

(A) Nitrogen oxides or any volatile organic compound (VOC), including those substances defined in 252:100-1-3, 252:100-37-2, 252:100-39-2, ~~or any Volatile Organic Solvent (VOS), as that term is defined in 252:100-37-2 and 252:100-39-2, or any organic material defined in 252:100-37-2~~ except those specifically excluded in the EPA definition of VOC in 40 CFR 51.100(s);

(B) Any pollutant for which a national ambient air quality standard has been promulgated;

(C) Any pollutant that is subject to any standard promulgated under section 111 of the Act;

(D) Any Class I or II ozone-depleting substance subject to a standard promulgated under or established by Title VI of the Act;

(E) Any pollutant subject to a standard promulgated under section 112 or other requirements established under section 112 of the Act (Hazardous Air Pollutants), including sections 112(g) (Modifications), (j) (Equivalent Emission Limitation by Permit, and (r) (Prevention of Accidental Releases), including the following:

(i) any pollutant subject to the requirements under section 112(j) of the Act. If the Administrator fails to promulgate a standard by the date established pursuant to section 112(e) of the Act (Schedule for Standards and Review), any pollutant for which a subject source would be major shall be considered to be regulated as to that source on the date 18 months after the applicable date established pursuant to section 112(e) of the Act; and,

(ii) any pollutant for which the requirements of section 112(g)(2) of the Act have been met, but only with respect to the individual source subject to the section 112(g)(2) requirement; or

(F) Any other substance for which an air emission limitation or equipment standard is set by an existing permit or regulation.

"Renewal" means the process by which a permit is reissued at the end of its term.

"Responsible official" means one of the following:

(A) For a corporation: a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation, or a duly authorized representative of such person if the representative is responsible for the overall operation

of one or more manufacturing, production, or operating facilities applying for or subject to a permit and either:

(i) The facilities employ more than 250 persons or have gross annual sales or expenditures exceeding \$25 million (in second quarter 1980 dollars); or

(ii) The delegation of authority to such representatives is approved in advance by the DEQ;

(B) For the partnership or sole proprietorship: a general partner or the proprietor, respectively;

(C) For a municipality, State, Federal, or other public agency: Either a principal executive officer or ranking elected official. For purposes of this Subchapter, a principal executive officer or installation commander of a Federal agency includes the chief executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., a Regional Administrator of EPA); or

(D) For affected sources:

(i) The designated representative in so far as actions, standards, requirements, or prohibitions under Title IV of the Act or the regulations promulgated thereunder are concerned; and

(ii) The designated representative for any other purposes under this Subchapter.

"Section 502(b)(10) changes" means changes that contravene an express permit term. Such changes do not include changes that would violate applicable requirements or contravene federally enforceable permit terms and conditions that are monitoring (including test methods), recordkeeping, reporting, or compliance certification requirements.

"Small unit" means a fossil fuel fired combustion device which serves a generator with a name plate capacity of 25 MWe or less.

"State-only requirement" means any standard or requirement pursuant to Oklahoma Clean Air Act (27A O.S. 1993 Supp. Sec. 2-5-101 *et seq.* as amended) that is not contained in the State Implementation Plan (SIP).

"State program" means a program approved by the Administrator under 40 CFR Part 70.

"Stationary source" means any building, structure, facility, or installation that emits or may emit any regulated air pollutant or any pollutant listed under section 112(b) of the Act.

"Trivial activities" means any individual or combination of air emissions units that are considered inconsequential and are on a list approved by the Administrator and contained in Appendix J. ~~Any activity to which a State or federal applicable requirement applies is not trivial even if included on the trivial activities list.~~

"Unit" means, for purposes of Title IV, a fossil fuel-fired combustion device.

252:100-8-3. Applicability

(a) **Covered sources.** Except as exempted from the requirement to obtain a permit under subsection (b) of this Section or elsewhere in this Subchapter, the sources listed below are subject to the permitting requirements under this Subchapter. A ~~covered~~ major source or major stationary source shall remain a Part 70 source until a federally enforceable permit is obtained which contains emission limitations and/or conditions to limit the operation of the facility to below that which would define it as a covered source pursuant to this section.

(1) Any major source (as defined in 252:100-8-2);

(2) Any source subject to a NSPS;

- (3) Any source, including an area source, subject to a NESHAP;
- (4) Any affected source (as defined in 252:100-8-2);
- (5) Any source in a source category designated by the Administrator pursuant to 40 CFR §70.3; and
- (6) Any major stationary source (~~required to have a permit under as defined in~~ Parts 7 or 9 of this Subchapter).

(b) Source category exemptions.

(1) All sources listed in subsection (a) of this section that are not major sources, major stationary sources, affected sources, or solid waste incineration units required to obtain a permit pursuant to section 129(e) of the Act, are exempt from the obligation to obtain a Part 70 permit unless required to do so by appropriate implementation of EPA administrative rulemaking for non-major sources. Any such exempt source may opt to apply for a permit under these rules and shall be issued a permit if the applicant otherwise satisfies all of the requirements of this Chapter.

(2) If the Administrator determines after appropriate rulemaking that an exemption is applicable to non-major sources when adopting standards or other requirements under section 111 or section 112 of the Act after July 21, 1992, then at that time the exemption will apply.

(3) Unless otherwise required to obtain a Part 70 permit, the following source categories are exempted from the obligation to obtain a Part 70 permit:

(A) All sources in source categories that would be required to obtain a permit solely because they are subject to part 60, subpart AAA – Standards of Performance for New Residential Wood Heaters; and

(B) All sources in source categories that would be required to obtain a permit solely because they are subject to part 61, subpart M – National Emission Standard for Hazardous Air Pollutants for Asbestos, Section 61.145, Standard for Demolition and Renovation.

252:100-8-4. Requirements for construction and operating permits

(a) Construction permits.

(1) **Construction permit required.** No person shall ~~cause or allow the begin actual~~ construction or installation of any new ~~facility~~ source that will require a Part 70 operating permit without first obtaining a DEQ-issued air quality construction permit. A construction permit is also required to add a piece of equipment or a process that is subject to NSPS or NESHAP or for any physical change that would be a modification under 252:100-8-7.2(b) increase actual emissions more than 5 tons per year of any criteria pollutant, more than 2 tons per year of any one HAP, or more than 5 tons per year of two or more HAPs. In addition to the requirements of this Part, sources subject to Part 7 or Part 9 of this Subchapter must also meet the applicable requirements contained therein.

(2) **Requirement for case-by-case MACT determinations.**

(A) **Applicability.** The requirement for case-by-case MACT determinations apply to any owner or operator who constructs or reconstructs a major source of hazardous air pollutants after June 29, 1998, unless the source has been specifically regulated or exempted from regulation under a subpart of 40 CFR Part 63, or the owner or

operator has received all necessary air quality permits for such construction or reconstruction before June 29, 1998.

(B) **Exclusions.** The following sources are not subject to this subsection.

(i) Electric utility steam generating units unless and until these units are added to the source category list.

(ii) Stationary sources that are within a source category that has been deleted from the source category list.

(iii) Research and development activities as defined in 40 CFR § 63.41.

(C) **MACT determinations.** If subject to this subsection, an owner or operator may not begin actual construction or reconstruction of a major source of HAP until obtaining from the DEQ an approved MACT determination in accordance with the following regulations: 40 CFR 63.41, 40 CFR 63.43 and 40 CFR 63.44, which are hereby incorporated by reference as they exist on July 1, 1998.

(b) **Operating permits.**

(1) **Operating permits required.** Except as provided in subparagraphs (A) and (B) of this section, no Part 70 source subject to this Chapter may operate after the time that it is required to file a timely application with the DEQ, except in compliance with a DEQ-issued permit.

(A) If the owner or operator of a source subject to the requirement to obtain a Part 70 permit submits a timely application for Part 70 permit issuance or renewal, that source's failure to have a Part 70 permit shall not be a violation of the requirement to have such a permit until the DEQ takes final action on the application. This protection shall cease to apply if the applicant fails to submit, by the deadline specified in writing by the DEQ or 252:100-8-4, any additional information identified as being reasonably required to process the application.

(B) If the owner or operator of a source subject to this Subchapter files a timely application that the DEQ determines to be administratively incomplete due to the applicant's failure to timely provide additional information requested by the DEQ, the applicant loses the protection granted under paragraph (A) of this section. The source's failure to have a Part 70 permit shall be deemed a violation of this Subchapter.

(C) Filing an operating permit application shall not affect the requirement, if any, that a source have a construction permit.

(2) **Duty to apply.** For each Part 70 source, the owner or operator shall submit a timely and complete permit application on forms supplied by the DEQ in accordance with this section.

(3) **Timely application.** Sources that are subject to the operating permit program established by this Chapter as of March 6, 1996, shall file applications on the following schedules outlined in 252:100-8-4(b)(4). A timely application is one that is postmarked on or before the relevant date listed below. In the event a major source consists of operations under multiple SIC codes, the primary activity shall form the basis for the initial permit application.

(4) **Application submittal schedule.** The following sources are subject to the operating permit program and shall submit initial permit applications according to the following schedule.

(A) No later than September 5, 1996:

(i) Affected sources under the acid rain provisions of the Act shall submit a permit application for at least the affected units at the site. Regardless of the effective date of the program and the requirement to file an application defined in this section, applications for initial Phase II acid rain permits shall be submitted to the DEQ no later than January 1, 1996, for sulfur dioxide, and by January 1, 1998, for nitrogen oxides, pursuant to the Act, §407.

(ii) Any owner or operator shall submit no less than one-third of their total applications for Part 70 sources located at sources classified by the following Source Standard Industrial Classification Codes and which belong to a single major industrial grouping other than 28 (Chemicals and allied products) or 29 (Petroleum refining and related industries):

- (I) Petroleum and Natural Gas, 1311;
- (II) Natural Gas Liquids, 1321;
- (III) Electric Services, 4911, 4961;
- (IV) Natural Gas Transmission, 4922;
- (V) Natural Gas Transmission and Distribution, 4923; and
- (VI) Petroleum Bulk Stations and Terminals, 5171.

(B) All remaining Part 70 sources identified in (b)(4)(A)(ii) of this Subsection shall be subject to the operating permit program and shall submit initial permit applications no later than March 5, 1997.

(C) No later than March 5, 1997, any owner or operator shall submit their applications for Part 70 sources located at sources classified by the following Standard Industrial Classification Codes:

- (i) Metals, 3312, 3315, 3321, 3341, 3351, 3411, 3412, 3432, 3466,
- (ii) Brick Plants, 3251, 3297,
- (iii) Commercial Printing, 2752, 2761.

(D) No later than July 5, 1998, any owner or operator shall submit their applications for Part 70 sources located at sources classified by the following Standard Industrial Classification Codes:

- (i) Refineries, 2911;
- (ii) Cement Plants, 3241;
- (iii) Chemical/Carbon, 2819, 2821, 2851, 2861, 2869, 2891, 2895, 2899, 2999, 3053, 3086, 3089;
- (iv) Petroleum Transportation/Terminals/Storage, 4612, 4613;
- (v) Food Products, 2013, 2074, 2095.

(E) All remaining Part 70 sources shall be subject to the operating permit program and shall submit initial permit applications no later than March 6, 1999.

(5) **Newly regulated sources.** A source that becomes subject to the operating permit program established by this Chapter at any time following the effective date shall file an administratively complete operating permit application within 180 days of commencement of operation.

(6) **Application acceptability.** Notwithstanding the deadlines established in paragraph (4) of this subsection, an application filed prior to the above deadlines following submission of the state program to EPA for approval shall be accepted for processing.

(7) **112(g) applications.** A source that is required to meet the requirements under section 112(g) of the Act, or to have a permit under a preconstruction review program

under Title I of such Act, shall file an application to obtain an operating permit or permit amendment or modification within twelve months of commencing operation. Where an existing Part 70 operating permit would prohibit such construction or change in operation, the source must obtain a construction permit before commencing construction.

(8) **Application for renewal.** Sources subject to this Chapter shall file an application for renewal of an operating permit at least six months before the date of permit expiration, unless a longer period (not to exceed 18 months) is specified in the permit. Renewal periods greater than six months are subject to negotiation on a case-by-case basis.

(9) **Phase II acid rain permits.** Sources required to submit applications under the Acid Rain Program shall submit these applications as required by 40 CFR 72.30(b)(2)(i) through (viii).

(10) **Application completeness.** See Uniform Permitting Rules, 252:2-15-70 and the definition of administratively complete in 252:100-8-2.

252:100-8-5. Permit applications

(a) **Confidential information.** If a source submits information to the DEQ under a claim of confidentiality, the source shall also submit a copy of such information directly to the Administrator, if the DEQ requests that the source do so.

(b) **Duty to supplement or correct application.** See 252:100-6-50(e).

(c) **Standard application form and required information.** Sources that are subject to the Part 70 permit program established by this Chapter shall file applications on the standard application form that the DEQ makes available for that purpose in accordance with 252:2-15. The application must include information needed to determine the applicability of any applicable requirement, or state-only requirement, or to evaluate the fee amount required under the schedule approved pursuant to 252:100-5-2.2(b)(2). The applicant shall submit the information called for by the application form for each emissions unit at the source to be permitted. The source must provide a list of any insignificant activities that are exempted because of size or production rate. Trivial activities need not be listed. The standard application form and any attachments shall require that the information required by 252:100-8-5(d) and/or 252:100-8-5(e) be provided.

(d) **Construction permit applications.**

(1) An application for a construction permit shall provide data and information required by this Chapter and/or requested on the application form available from the DEQ pursuant to the requirements of this Chapter. Such data and information shall include but not be limited to site information, process description, emission data and when required, BACT, modeling and sampling point data as follows:

(A) **BACT determination.** To be approved for a construction permit, a major source must demonstrate that the control technology to be applied is the best that is available for each pollutant that would cause the source to be defined as a major source. This determination will be made on a case by case basis, taking into account energy, environmental, ~~cost~~ and economic impacts and other costs of alternative control systems. Unless required under Part 7 of this Subchapter, a BACT determination is not required for a modification that will result in an increase of emissions of less than 100 tons per year of any regulated air pollutant.

(B) **Modeling.** Any air quality modeling or ambient impact evaluation that is required shall be prepared in accordance with procedures acceptable to the DEQ and accomplished by the applicant.

(C) **Sampling points.** If required by the DEQ an application shall show how the new source will be equipped with sampling ports, instrumentation to monitor and record emission data and other sampling and/or testing equipment. ~~[NOTE: 252:100-8-1.4(b)(1) was taken from 252:100-7-15(b)]~~

(2) Construction permit applications for new sources must also include the requirements for operating permits contained in 252:100-8-5(e) to the extent they are applicable.

(e) Operating permit applications.

(1) Identifying information, including company name and address (or plant name and address if different from the company name), owner's name and agent, and telephone number and names of plant site manager/contact.

(2) A description of the source's processes and products (by two-digit Standard Industrial Classification Code) including any associated with each alternate scenario identified by the source.

(3) The following emissions-related information:

(A) All emissions of pollutants for which the source is major, and all emissions (including fugitive emissions) of regulated air pollutants. The permit application shall describe all emissions of regulated air pollutants emitted from any emissions unit, except where such units are exempted under this subsection 252:100-8-5(c) or 252:100-8-3(b).

(B) Identification and description of all points of emissions described in subparagraph (e)(3)(A) of this section in sufficient detail to establish the basis for fees and applicability of the Act's requirements.

(C) Emissions rates in tons per year and in such terms as are necessary to establish compliance consistent with the applicable standard.

(D) The following information to the extent it is needed to determine or regulate emissions:

- (i) fuels,
- (ii) fuel use,
- (iii) raw materials,
- (iv) production rates, and
- (v) operating schedules.

(E) Identification and description of air pollution control equipment and compliance monitoring devices or activities.

(F) Limitations on source operation affecting emissions or any work practice standards, where applicable, for all regulated pollutants at the covered source.

(G) Other information required by any applicable requirement, or state-only requirement (including information related to stack height limitations developed pursuant to section 123 of the Act).

(H) Calculations on which the information in items (A) through (G) of this paragraph is based.

(4) The following air pollution control requirements:

(A) Citation and description of all applicable requirements and all state-only requirements.

- (B) Description of or reference to any applicable test method for determining compliance with each applicable requirement and state-only requirement.
- (5) Other specific information required under the DEQ's rules and statutes to implement and enforce other applicable requirements of the Act or of this Chapter or to determine the applicability of such requirements.
- (6) An explanation of any proposed exemptions from otherwise applicable requirements and state-only requirements.
- (7) Additional information as determined to be necessary by the DEQ to define alternative operating scenarios identified by the source pursuant to 252:100-8-6(a)(9) or to define permit terms and conditions implementing 252:100-8-6(f) or 252:100-8-6(a)(10).
- (8) A compliance plan for all covered sources that contains all the following:
- (A) A description of the compliance status of the source with respect to all applicable requirements and state-only requirements as follows:
- (i) For applicable requirements and state-only requirements with which the source is in compliance, a statement that the source will continue to comply with such requirements.
- (ii) For applicable requirements and state-only requirements that will become effective during the permit term, a statement that the source will meet such requirements on a timely basis shall satisfy this provision, unless a more detailed schedule is expressly required by the applicable requirement.
- (iii) For requirements for which the source is not in compliance at the time of permit issuance, a narrative description of how the source will achieve compliance with such requirements.
- (B) For sources not in complete compliance, a compliance schedule as follows:
- (i) A schedule of compliance for sources that are not in compliance with all applicable requirements and state-only requirements at the time of permit issuance. Such a schedule shall include a schedule of remedial measures, including an enforceable sequence of actions with milestones, leading to compliance with any applicable requirements and state-only requirements for which the source will be in noncompliance at the time of permit issuance. This compliance schedule shall resemble and be equivalent in stringency to that contained in any judicial consent decree or administrative order to which the source is subject. Any such schedule of compliance shall be supplemental to, and shall not sanction non-compliance with, the applicable requirements on which it is based.
- (ii) A schedule for submission of certified progress reports no less frequently than every 6 months.
- (C) The compliance plan content requirements specified in this paragraph shall apply and be included in the acid rain portion of a compliance plan for an affected source, except as specifically superseded by regulations promulgated under Title IV of the Act with regard to the schedule and method(s) the source will use to achieve compliance with the acid rain emissions limitations.
- (9) Requirements for compliance certification, including the following:

- (A) A certification of compliance with all applicable requirements and state-only requirements by a responsible official consistent with subsection (f) of this section and section 114(a)(3) of the Act;
 - (B) A statement of methods used for determining compliance, including a description of monitoring, recordkeeping, and reporting requirements and test methods;
 - (C) A schedule for submission of compliance certifications during the permit term, which shall be submitted annually, or more frequently if required by an underlying applicable requirement state-only requirements or by the permitting authority; and
 - (D) A statement indicating the source's compliance status with any applicable enhanced monitoring and compliance certification requirements of the Act.
- (10) The use of nationally-standardized forms for acid rain portions of permit applications and compliance plans, as required by regulations promulgated under Title IV of the Act.
- (f) **Certification.** Any application form, report, or compliance certification submitted pursuant to this Chapter shall contain certification by a responsible official of truth, accuracy, and completeness. This certification and any other certification required under this Chapter shall be signed by a responsible official and shall contain the following language: "I certify, based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete."
- (g) **Number of application copies.** See Part 3 of 252:2-15.

252:100-8-6. Permit content

(a) **Standard permit requirements.** Part 70 permits issued under this Chapter shall include all applicable requirements and state-only requirements (as defined in 252:100-8-2) that apply to the permitted source at the time of issuance. Each permit shall include the following elements:

(1) **Emission limitations and standards.** The permit shall specify emissions limitations and standards that constitute applicable requirements and state-only requirements and shall include those operational conditions and limitations necessary to assure compliance with all such requirements.

(A) The permit shall specify and reference the origin of and authority for each term or condition, and identify any difference in form as compared to the applicable requirement or state-only requirement upon which the term or condition is based.

(B) The permit shall state that, where an applicable requirement of the Act is more stringent than an applicable requirement of regulations promulgated under Title IV of the Act, both provisions shall be incorporated into the permit and shall be enforceable by EPA.

(C) If the State implementation plan or an applicable requirement allows a source to comply through an alternative emission limit or means of compliance, a source may request that such an alternative limit or means of compliance be specified in its permit. Such an alternative emission limit or means of compliance shall be included in a source's permit upon a showing that it is quantifiable, accountable, enforceable, and based on replicable procedures. The source shall propose permit terms and conditions to satisfy these requirements in its application.

(2) **Permit duration.**

(A) Operating permits. The permit shall specify a fixed term. The DEQ shall issue permits for any fixed period requested in the permit application, not to exceed five years, except as provided in subparagraphs (i) and (ii) of this paragraph:

(i) Permits issued to affected sources shall in all cases have a fixed term of five years.

(ii) Permits issued to solid waste incineration units combusting municipal waste subject to standards under section 129(e) of the Act shall have a term not to exceed 12 years. Such permits shall be reviewed every five years.

(B) Construction permits. See 252:100-8-1.4.

(3) Monitoring and related recordkeeping and reporting requirements.

(A) Monitoring requirements.

(i) All emissions monitoring and analysis procedures or test methods required under applicable requirements and state-only requirements, including any procedures and methods promulgated pursuant to sections 114(a)(3) or 504(b) of the Act;

(ii) Where an applicable requirement or state-only requirement does not require periodic testing or instrumental or non-instrumental monitoring (which may consist of recordkeeping designed to serve as monitoring), periodic monitoring during the relevant time period sufficient to yield reliable data that are representative of the source's compliance with the permit, as reported pursuant to (a)(3)(C) of this section. Such monitoring requirements shall assure use of terms, test methods, units, averaging periods, and other statistical conventions consistent with the applicable requirement or state-only requirement. Recordkeeping provisions may be sufficient to meet the requirements of this subparagraph.

(iii) As necessary, requirements concerning the use, maintenance, and, where appropriate, installation of monitoring equipment or methods.

(iv) Provisions for the permittee to request the use of alternative test methods or analysis procedures, and provisions for the DEQ to approve or disapprove the request within 60 days.

(B) Recordkeeping requirements. The permit shall incorporate all applicable recordkeeping requirements and require, where applicable, the following:

(i) Records of required monitoring information that include the following:

(I) The date, place as defined in the permit, and time of sampling or measurements;

(II) The date(s) analyses were performed;

(III) The company or entity that performed the analyses;

(IV) The analytical techniques or methods used;

(V) The results of such analyses; and

(VI) The operating conditions existing at the time of sampling or measurement.

(ii) Retention of records of all required monitoring data and support information for a period of at least five years from the date of the monitoring sample, measurement, report, or application. Support information includes all calibration and maintenance records and all original strip-chart recordings for continuous monitoring instrumentation, and copies of all reports required by the permit.

Where appropriate, the permit may specify that records may be maintained in computerized form.

(C) **Reporting requirements.** The permit shall incorporate all applicable reporting requirements and require the following requirements:

(i) A permit issued under this Part shall require the permittee to submit a report of any required monitoring at least every six months. To the extent possible, the schedule for submission of such reports shall be timed to coincide with other periodic reports required by the permit, including the permittee's annual compliance certification. However, the reports may be submitted at any time within the reporting period, as stipulated in the permit.

(ii) Each report submitted under (C)(i) of this paragraph shall identify any exceedances from permit requirements since the previous report that have been monitored by the monitoring systems required under the permit, and any exceedances from the monitoring, recordkeeping and reporting requirements under the permit.

(iii) In addition to semiannual monitoring reports, each permittee shall be required to submit supplemental reports as follows:

(I) Any exceedance resulting from emergency or upset conditions as defined in ~~252:100-8-6(e)~~ 252:100-8-2 shall be reported ~~within 24 hours of the date on which~~ promptly but no later than 4:30 p.m. on the next working day after the permittee first becomes aware of the exceedance, if the permittee wishes to assert the affirmative defense authorized under said section, and the permittee shall submit a follow up written report within 10 working days of first becoming aware of the exceedance. The initial report must contain a description of the emergency, any steps taken to mitigate emissions and corrective actions taken.

(II) Any exceedance that poses an imminent and substantial danger to public health, safety, or the environment shall be reported as soon as is practicable; but under no circumstance shall notification be more than 24 hours after exceedance.

(III) Any other exceedances that are identified in the permit as requiring more frequent reporting than the permittee's semiannual report shall be reported on the schedule specified in the permit.

(IV) All reports of exceedances shall identify the probable cause of the exceedances and any corrective actions or ~~preventative~~ preventive measures taken.

(iv) Every report submitted under this subsection shall be certified by a responsible official, except that if a report of an exceedance required under (C)(iii) of this paragraph must be submitted within ten days of the exceedance, the report may be submitted in the first instance without a certification if an appropriate certification is provided within ten days thereafter, together with any corrected or supplemental information required concerning the exceedance. Reports submitted shall be consistent with the requirements of 252:100-9.

(4) **Risk management plans.** If the source is required to develop and register a risk management plan pursuant to section 112(r) of the Act, the permit need only specify that the permittee will comply with the requirement to register such a plan. Although the

requirement to have a risk management plan may be a term of the permit, the risk management plan contents are not part of the permit.

(5) Title IV allowances.

(A) No permit revision shall be required for increases in emissions that are authorized by allowances acquired pursuant to the acid rain program, provided that such increases do not require a permit revision under any other applicable requirement.

(B) No limit shall be placed on the number of allowances held by the source. The source may not, however, use allowances as a defense to noncompliance with any other applicable requirement.

(C) The permit shall prohibit emissions exceeding any allowance that the source lawfully holds under Title IV of the Act or the regulations promulgated thereunder. Compliance with this paragraph will be determined on January 31st of any given year and be based on actual emissions and the number of allowances held for the previous calendar year.

(6) Severability clause. The permit shall include a severability clause to ensure the continued validity of the various permit requirements in the event of a challenge to any portions of the permit.

(7) General requirements. The permit shall include provisions stating the following:

(A) The permittee must comply with all conditions of the permit. Any permit noncompliance constitutes a violation of the Oklahoma Clean Air Act and is grounds for:

- (i) enforcement action;
- (ii) permit termination, revocation and reissuance, or modification; or
- (iii) denial of a permit renewal application.

(B) It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit. However, nothing in this subsection shall be construed as precluding consideration of a need to halt or reduce activity as a mitigating factor in assessing penalties for noncompliance if the health, safety, or environmental impacts of halting or reducing operations would be more serious than the impacts of continuing operations.

(C) The permit may be modified, revoked, reopened, and reissued, or terminated for cause. Except as provided under 252:100-8-7.2(b)(1) for minor permit modifications, the filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or of a notification of planned changes or anticipated noncompliance does not stay any permit condition.

(D) The permit does not convey any property rights of any sort or any exclusive privilege.

(E) The permittee shall furnish to the DEQ, upon receipt of a written request and within a reasonable time, any information that the DEQ may request to determine whether cause exists for modifying, reopening, or revoking and reissuing or terminating the permit or to determine compliance with the permit. Upon request, the permittee shall also furnish to the DEQ copies of records required to be kept by the permit. The permittee may make a claim of confidentiality pursuant to 27A O.S.

~~1993 Supp. Section~~ § 2-5-105.18 for any information or records submitted under this paragraph.

(8) **Fees.** The permit shall provide that the permittee will pay fees to the DEQ consistent with the fee schedule established under 252:100-5-2.2.

(9) **Emissions trading.** The permit shall provide that no permit revision shall be required under any approved economic incentives, marketable permits, emissions trading and other similar programs or processes for changes that are provided for in the permit.

(10) **Operating scenarios.** The permit shall include terms and conditions applicable to all operating scenarios described in the permit application and eligible for approval under applicable requirements and state-only requirements. The permit shall authorize the permittee to make changes among operating scenarios authorized in the permit without notice, but shall require the permittee contemporaneously with making a change from one operating scenario to another to record in a log at the permitted facility the scenario under which it is operating.

(11) **Emissions averaging.** The permit shall include terms and conditions, if the permit applicant requests them, for the trading or averaging of emissions increases and decreases in the permitted facility, to the extent that the applicable requirements provide for trading or averaging such increases and decreases. Such terms and conditions shall include terms under subsections (a) and (c) of this section to determine compliance and shall satisfy all requirements of the applicable requirements authorizing such trading or averaging.

(b) Federally enforceable requirements.

(1) Except as provided in paragraph (b)(2) of this section, all terms and conditions in a permit issued under this section, including any provisions designed to limit a source's potential to emit, are enforceable by the DEQ, by EPA, and by citizens under section 304 of the Act.

(2) Notwithstanding paragraph (b)(1) of this section, the DEQ shall designate as not being federally enforceable under the Act any terms and conditions included in the permit that are not required under the Act or any of its applicable requirements, and such terms and conditions shall not be enforceable by EPA and citizens under section 304 of the Act.

(c) Compliance requirements. All permits issued under this Part shall contain the following elements with respect to compliance:

(1) Consistent with paragraph (a)(3) of this section, compliance certification, testing, monitoring, reporting, and recordkeeping requirements sufficient to assure compliance with the terms and conditions of the permit. Any document (including reports) required by a permit under this Part shall contain a certification by a responsible official as to the results of the required monitoring.

(2) Inspection and entry requirements that require that, upon presentation of credentials and other documents as may be required by law, the permittee shall allow authorized officials of the DEQ to perform the following:

(A) Enter upon the permittee's premises during reasonable/normal working hours where a source is located or emissions-related activity is conducted, or where records must be kept under the conditions of the permit;

- (B) Have access to and copy, at reasonable times, any records that must be kept under the conditions of the permit;
 - (C) Inspect at reasonable times and using reasonable safety practices any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under the permit; and
 - (D) As authorized by the Oklahoma Clean Air Act, sample or monitor at reasonable times substances or parameters for the purpose of assuring compliance with the permit.
- (3) A schedule of compliance if required under 252:100-8-5(e)(8)(B).
- (4) To the extent required under an applicable schedule of compliance and 252:100-8-5(e)(8), progress reports, to be submitted semiannually or more frequently if specified in the applicable requirement or by the DEQ. Such progress reports shall contain the following:
- (A) Dates for achieving the activities, milestones, or compliance required in the schedule of compliance, and dates when such activities, milestones or compliance were achieved; and
 - (B) An explanation of why any dates in the schedule of compliance were not or will not be met, and any preventive or corrective measures adopted.
- (5) Requirements for compliance certification with terms and conditions contained in the permit that are federally enforceable, including emission limitations, standards, or work practices. Each permit shall specify:
- (A) The frequency (which shall be annually unless the applicable requirement or state-only requirement specifies submission more frequently) of submissions of compliance certifications;
 - (B) In accordance with paragraph (a)(3) of this section, a means for monitoring the compliance of the source with emissions limitations, standards, and work practices;
 - (C) A requirement that the compliance certification include the following:
 - (i) The identification of each term or condition of the permit that is the basis of the certification;
 - (ii) The permittee's current compliance status, as shown by monitoring data and other information available to the permittee;
 - (iii) Whether compliance was continuous or intermittent;
 - (iv) The method(s) used for determining the compliance status of the source, currently and over the reporting period as required by paragraph (a)(3) of this section; and
 - (v) Such other facts as the DEQ may require to determine the compliance status of the source;
 - (D) A requirement that all compliance certifications be submitted to EPA as well as to the DEQ;
 - (E) Such additional requirements as may be specified pursuant to sections 114(a)(3) and 504(b) of the Act; and
- (6) Such other provisions as the DEQ may require.
- (d) **Permit shield.**
- (1) Each operating permit issued under this Part shall include a "permit shield" provision, which shall state that compliance with the terms and conditions of the permit

(including terms and conditions established for alternate operating scenarios, emissions trading, and emissions averaging, but excluding terms and conditions for which the permit shield is expressly prohibited under this Subchapter) shall be deemed compliance with the applicable requirements identified and included in the permit.

(2) Upon request, the DEQ shall include in the permit or in a separate written finding issued with the permit a determination identifying specific requirements that do not apply to the source. The source shall specify in its application for such a determination the requirements for which the determination is requested. If the determination is issued in a separate finding, that finding shall be summarized in the permit. The permit shall state that the permit shield applies to any requirements so identified. A request for a determination to extend the shield to requirements deemed inapplicable to the source may be made either in the original permit application or in a subsequent application for a permit modification.

(3) A Part 70 permit that does not expressly state that a permit shield exists shall be presumed not to provide such a shield.

(4) Nothing in this section or in the permit shall alter or affect the following:

(A) the provisions of section 303 of the Act, including the authority of the Administrator under that section;

(B) the liability of an owner or operator of a source for any violation of applicable requirements or state-only requirements prior to or at the time of permit issuance;

(C) the applicable requirements of the acid rain program, consistent with section 408(a) of the Act; or

(D) the ability of EPA to obtain information from a source pursuant to section 114 of the Act.

(e) **Emergencies.**

~~(1) When used in this Subsection, "Emergency" means any situation arising from sudden and reasonably unforeseeable events beyond the control of the source, including acts of God, which situation requires immediate corrective action to restore normal operation, and that causes the source to exceed a technology-based emission limitation under the permit, due to unavoidable increases in emissions attributable to the emergency. An emergency shall not include noncompliance to the extent caused by improperly designed equipment, lack of preventive maintenance, careless or improper operation, or operator error. Quantification of accidental releases shall be made by the best available method. *[This paragraph has been moved to 252:100-8-2 (Definitions).]*~~

~~(2)(1)~~ (1) An emergency constitutes an affirmative defense to an action brought for noncompliance with such technology-based emission limitations if the conditions of paragraph ~~(e)(3)(e)(2)~~ (e)(2) of this section and the reporting requirements of 252:100-8-6(a)(3)(C)(iii)(I) are met.

~~(3)(2)~~ (2) The affirmative defense of emergency shall be demonstrated through properly signed, contemporaneous operating logs or other relevant evidence that:

(A) An emergency occurred and that the permittee can identify the cause(s) of the emergency;

(B) The permitted facility was at the time being properly operated;

(C) During the period of the emergency the permittee took all reasonable steps to minimize levels of emissions that exceeded the emission standards or other requirements in the permit.

(4)(3) In any enforcement proceeding, the permittee seeking to establish the occurrence of an emergency has the burden of proof.

(5)(4) The provision in this subsection is in addition to any emergency or upset provision contained in any applicable requirement or 252:100-9.

(f) **Operational flexibility.**

(1) **Applicant's duty to apply for alternative scenarios.** ~~Any operating scenario allowed for in an applicable Part 70 permit may be implemented by the A facility~~ may implement any operating scenario allowed for in its Part 70 permit without the need for any permit revision or any notification to the permitting authority. It is incumbent upon the Part 70 permit applicant to apply for any reasonably anticipated alternative facility operating scenarios at the time of initial or renewal permit application.

(2) **Changes resulting in no emissions increases.** A permitted Part 70 source may make changes within the facility that:

(A) Are not modifications under any provision of Title I of the Act;

(B) Do not cause any hourly or annual permitted emission rate of any existing emissions unit to be exceeded; and

(C) Result in a net change in emissions of zero, provided that the facility notifies the DEQ and EPA in writing at least 7 days in advance of the proposed changes. The source, DEQ, and EPA shall attach each such notice to their copy of the relevant permit. For each such change, the written notification required above shall include a brief description of the change within the permitted facility, the date on which the change will occur, any change in emissions, and any permit term or condition that is no longer applicable as a result of the change. The permit shield described in 252:100-8-6(d) does not apply to any change made pursuant to this subsection.

252:100-8-7. Permit issuance

(a) **Criteria for issuance.** A permit, permit modification, or renewal may be issued only if the applicable requirements of 27A O.S. Supp. 1995, §§ 2-14-101 *et seq.*; 252:2-15; and this Chapter have been met and the DEQ has determined that the conditions of the permit provide for compliance with all applicable requirements and for applications subject to 252:100-8-8, that the requirements of that section have been satisfied.

(b) **Draft permits and notice thereof.** See 252:2-15. ~~The draft permit shall be accompanied by a statement that sets forth the legal and factual basis for the draft permit conditions (including references to the applicable statutory or regulatory provisions)~~ A statement that sets forth the legal and factual basis for the draft permit conditions (including references to the applicable statutory or regulatory provisions) shall accompany the draft permit.

(c) **EPA review.** See 252:100-8-8.

(d) **DEQ final action.** See 252:2-15, and 252:100-8-8 when applicable.

(e) **Timeline for technical review and issuance.** The DEQ shall take final action on each application for a permit within 18 months after beginning its technical review in accordance with 252:2-15-70 through 15-72 and 252:100-8-4(b)(7).

(f) **Action priorities.** See 252:100-8-4(b)(2) through (10) and 252:100-8-7.1(a).

(g) **No issuance by default.** See 27A O.S. § 2-5-112(D).

252:100-8-7.2. Administrative permit amendments and permit modifications

(a) Administrative permit amendments.

(1) An administrative permit amendment:

(A) Corrects typographical errors;

(B) Identifies a change in the name, address, or phone number of any person identified in the permit, or provides a similar minor administrative change at the source;

(C) Requires more frequent monitoring or reporting by the permittee;

(D) Allows for a change in ownership or operational control of a source where no other change in the permit is necessary, provided that a written agreement containing a specific date for transfer of permit responsibility, coverage, and liability between the current and new permittee has been submitted to the DEQ;

(E) Incorporates into the permit the requirements from preconstruction review permits processed under Tier II or Tier III requirements and issued by the DEQ under this Part.

(2) Administrative permit amendments for purposes of the acid rain portion of the permit shall be governed by 40 CFR Part 72.

(3) An administrative permit amendment shall be made by the DEQ in accordance with the following:

(A) The DEQ shall take final action on a request for an administrative permit amendment within 60 days from the date of receipt of such a request, and may incorporate the proposed changes without providing notice to the public or affected States provided that it designates any such permit revisions as having been made pursuant to this paragraph.

(B) The DEQ shall submit a copy of the revised permit to the Administrator upon the Administrator's request.

(C) The source may implement the changes addressed in the request for an administrative amendment immediately upon submittal of the request.

(4) The DEQ shall, upon taking final action granting a request for an administrative permit amendment, allow coverage by the permit shield in 252:100-8-6(d) for administrative permit amendments made pursuant to subparagraph 252:100-8-7.2(a)(1)(E) of this section.

(b) Permit modification. A permit modification is any revision to a permit that cannot be accomplished under subsection (a) of this section. A permit modification for purposes of the acid rain portion of the permit shall be governed by 40 CFR Part 72.

(1) Minor permit modification procedures.

(A) Criteria.

(i) Minor permit modification procedures may be used only for those permit modifications that:

(I) Do not violate any applicable requirement, or state-only requirements;

(II) Do not involve significant changes to existing monitoring, reporting or recordkeeping requirements in the permit;

(III) Do not require or change a case-by-case determination of an emission limitation or other standard, or a source-specific determination for temporary sources of ambient impacts, or a visibility or increment analysis;

(IV) Do not seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement or state-only requirement which the source has assumed to avoid some other applicable requirement or state-only requirement to which the source would otherwise be subject. Such terms and conditions include federally-enforceable emissions caps assumed to avoid classification as a modification under any provision of Title I and alternative emissions limits approved pursuant to regulations promulgated under §§112(i)(5) of the Act; and
(V) Are not modifications under any provision of Title I of the Act.

(ii) Notwithstanding 252:100-8-7.2(b)(1)(A)(i) and 252:100-8-7.2(b)(2)(A) , minor permit modification procedures may be used for permit modifications involving the use of economic incentives, marketable permits, emissions trading, and other similar approaches, to the extent that such minor permit modification procedures are explicitly provided for in the State's implementation plan or in applicable requirements promulgated by EPA.

(B) Application. To use the minor permit modification procedures, a source shall submit an application requesting such use which shall meet the permit application requirements of Tier I under 252:2-15 and shall include the following:

- (i) A description of the change, the emissions resulting from the change, and any new applicable requirements or state-only requirements that will apply if the change occurs;
- (ii) The source's suggested modification language;
- (iii) Certification by a responsible official, that the application and the proposed modification meet the criteria for use of minor permit modification procedures; and
- (iv) Completed forms for any notices required by 252:2-15 and subparagraph (C) of this paragraph.

(C) EPA and affected state notification. If the proposed minor modification is of a permit that underwent EPA review in accordance with 252:100-8-8, the provisions of that section shall apply to the minor modification application unless waived by the Administrator.

(D) Timetable for issuance. Within 90 days of the DEQ's receipt of a complete application under 252:2-15 the DEQ shall:

- (i) Issue the minor permit modification as approved;
- (ii) Deny the minor permit modification application; or
- (iii) Determine that the requested modification does not meet the minor permit modification criteria and should be reviewed under the significant modification procedures or administrative amendment procedures.

(E) Source's ability to make change. Immediately after filing an application meeting the requirements of these minor permit modification procedures, the source is authorized to make the change or changes proposed in the application. After the source makes the change and until the DEQ takes any of the actions specified in (1)(D)(i) through (iii) of this subsection, the source must comply with the applicable requirements and state-only requirements governing the change and the proposed permit terms and conditions. During this period, the source need not comply with the existing terms and conditions it seeks to modify. However, if the source fails to

comply with its proposed permit terms and conditions during this time period, the existing permit terms and conditions it seeks to modify may be enforced against it.

(F) **Permit shield.** The permit shield under 252:100-8-6(d) will not extend to minor permit modifications.

(G) **Permittee's risk in commencing construction.** The permittee assumes the risk of losing any investment it makes toward implementing a modification prior to receiving a permit amendment authorizing the modification. The DEQ will not consider the possibility of the permittee suffering financial loss due to such investment when deciding whether to approve, deny, or approve in modified form a minor permit amendment.

(2) **Significant modification procedures.**

(A) **Criteria.** Significant modification procedures shall be used for applications requesting permit modifications that:

(i) Involve any significant changes in existing monitoring requirements in the permit;

(ii) Relax any reporting or recordkeeping requirements.

(iii) Change any permit condition that is required to be based on a case-by-case determination of an emission limitation or other standard; on a source-specific determination of ambient impacts, or on a visibility or increment analysis;

(iv) Seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement or state-only requirement which the source has assumed to avoid some other applicable requirement or state-only requirement to which the source would otherwise be subject. Such terms and conditions include:

(I) A federally enforceable emissions cap assumed to avoid classification as a modification under any provision of Title I;

(II) An alternative emissions limit approved pursuant to regulations promulgated under section 112(i)(5) of the Act; and

(v) Are modifications under any provision of Title I of the Act; and,

(vi) Do not qualify as minor permit modifications or administrative amendments.

(B) **Procedures for processing.** Significant permit modifications shall meet all requirements of these rules that are applicable to Tier II applications. The application for the modification shall describe the change, the emissions resulting from the change, and any new applicable requirements or state-only requirements that will apply if the change occurs.

(C) **Issuance.** The DEQ shall complete review of significant permit modifications within nine months after receipt of a complete application, but shall be authorized to extend that date by up to three months for cause.

252:100-8-8. Permit review by EPA and affected states

(a) **Applicability.** This section applies only to specific Tier II and III applications for Part 70 construction and/or operating permits and permit actions that have not been waived from compliance with this section by the Administrator.

(b) **Format.** To the extent practicable, information provided to the EPA by applicants shall be in computer-readable format compatible with EPA's national database management system.

(c) **Recordkeeping.** The DEQ will keep for 5 years records required by this section and will submit to the Administrator such information as the Administrator may reasonably require to ascertain whether the State program complies with the requirements of the Act or of this Chapter.

(d) **Transmission of Part 70 applications to EPA.** For Part 70 Tier II and III applications subject to this section, the DEQ shall require an applicant upon filing to also provide a copy to the Administrator or the DEQ may submit a permit application summary form and any relevant portion of the permit application and compliance plan, in place thereof.

(e) **Transmittal of notice of draft permit to affected states.** See 27A O.S. ~~Supp. 1995~~, § 2-5-112(E); 27A O.S. ~~Supp. 1995~~, § 2-14-101 *et seq.*; and 252:2-15.

(f) **Preparation and submittal of EPA review copy.**

(1) **Tier II applications.** For Tier II applications, the DEQ shall review public comments, revise the draft permit as appropriate and submit the revision to EPA for review no later than 60 days before the issuance deadline established in 252:2-15-72 or, if none, by this Chapter.

(2) **Tier III applications.** For Tier III applications, the DEQ shall prepare a proposed permit according to 27A O.S. ~~Supp. 1995~~, § 2-14-304, and submit it to EPA for review upon the publication of notice of an administrative permit hearing opportunity.

(g) **Notice of non-acceptance.** As part of the DEQ's submittal of a revised draft permit (Tier II) or a proposed permit (Tier III) to the Administrator, the DEQ shall notify the Administrator and any affected State in writing of any refusal by the DEQ to accept all recommendations for the revised draft permit or proposed permit that the affected State submitted during the review period. The notice will include the DEQ's reasons for not accepting any such recommendation. The DEQ is not required to accept recommendations that are not based on applicable requirements of the Oklahoma Clean Air Act or these rules.

(h) **EPA review and non-objection.** Upon receipt of notice from the EPA that it will not object to:

(1) A revised draft permit based on a Tier II application, the DEQ shall issue the permit.

(2) A proposed permit based on a Tier III application, the DEQ shall issue the proposed permit as final unless an administrative permit hearing has been timely and properly requested.

(i) **EPA review and objection.**

(1) **Timing.** Except as specified in paragraph 5 of this subsection, no permit for which an application must be transmitted to the Administrator under subsection (a) of this section shall be issued if the Administrator objects to its issuance in writing within 45 days of receipt of the revised draft permit (Tier II) or proposed permit (Tier III) and all necessary supporting information.

(2) **Form of objection.** An EPA objection shall include a statement of the Administrator's reasons for objection and a description of the terms and conditions that the permit must include to respond to the objections.

(3) **Additional grounds.** Failure of the DEQ to do any of the following also shall constitute grounds for an objection:

(A) Comply with subsections (d) or (e) of this section;

(B) Submit any information necessary to review adequately the revised draft permit (Tier II) or the proposed permit (Tier III); or

- (C) Process the permit application according to the uniform permitting requirements of 252:2-15.
- (4) **Copy.** The Administrator will provide the permit applicant a copy of the objection.
- (5) **DEQ response.** The DEQ shall consult with EPA and the applicant and shall either:
- (A) **Amend permit.** Amend the permit and submit for approval an amended draft (Tier II) or proposed (Tier III) permit to EPA within 90 days after the date of EPA's objection, or
 - (B) **Give notice and issue.** Determine that one or more revisions sought by EPA are inconsistent with applicable state or federal statutes or regulations, inform EPA accordingly within 90 days following the date of the Administrator's objection, decline to make those particular revisions and:
 - (i) issue the amended or revised draft permit (Tier II) as final, or
 - (ii) issue the proposed permit (Tier III) as final unless an administrative permit hearing has been timely and properly requested.
- (6) **Failure of DEQ to respond.** If the DEQ fails, within 90 days after the date of the EPA objection, to amend and resubmit the draft permit or proposed permit in response to the objection, the Administrator will issue or deny the permit in accordance with the requirements of EPA's Part 70 regulations.
- (j) **Public petitions to the Administrator.** If the Administrator does not object in writing under subsection (h) of this section, any person that meets the requirements of this subsection may petition the Administrator within 60 days after the expiration of the Administrator's 45-day review period to make such objection. Any such petition shall be based only on objections to the permit that the petitioner raised with reasonable specificity during the public comment period provided for in 252:002-15, unless the petitioner demonstrates that it was impracticable to raise such objections within such period, or unless the grounds for such objection arose after such period. If the Administrator objects to the permit as a result of a petition filed under this subsection, the DEQ shall not issue the permit until EPA's objection has been resolved, except that a petition for review does not stay the effectiveness of a permit or its requirements if the permit was issued after the end of the 45-day review period and prior to an EPA objection. If the DEQ has issued a permit prior to receipt of an EPA objection under this subsection, the Administrator will modify, terminate, or revoke such permit, and shall do so consistent with the procedures in 252:100-8-7 through 252:100-8-7.5 except in unusual circumstances. If the DEQ revokes the permit, it may thereafter issue only a revised permit that satisfies EPA's objection. In any case, the source will not be in violation of the requirement to have submitted a timely and complete application.
- (k) **Effect on Tier III administrative permit hearing.** When a public petition or an EPA objection is registered on a proposed permit (Tier III) on which an administrative permit hearing has been requested in accordance with 27A O.S. Supp. 1995, Section §§ 2-14-101 *et seq.*, the DEQ may stay the evidentiary part of the hearing involving cross-examination until EPA objections are resolved or determined to be inconsistent with applicable laws.

**PART 7. PREVENTION OF SIGNIFICANT DETERIORATION (PSD)
REQUIREMENTS FOR ATTAINMENT AREAS**

252:100-8-31. Definitions

The following words and terms when used in this Part shall have the following meaning, unless the context clearly indicates otherwise:

"Actual emission" means the actual rate of emissions of a pollutant from an emissions unit, as determined in accordance with the following:

(A) In general, actual emissions as of a particular date shall equal the average rate in tons per year at which the unit actually emitted the pollutant during a two-year period which precedes the particular date and which is representative of normal source operation. The reviewing authority may allow the use of a different time period upon a determination that it is more representative of normal source operation. Actual emissions shall be calculated using the unit's actual operating hours, production rates, and types of materials processed, stored, or combusted during the selected time period. Actual emissions may also be determined by source tests, or by best engineering judgment in the absence of acceptable test data.

(B) The reviewing authority may presume that source-specific allowable emissions for the unit are equivalent to the actual emissions of the unit.

(C) For any emissions unit which has not begun normal operations on the particular date, actual emissions shall equal the potential to emit of the unit on that date.

"Adverse impact on visibility" means visibility impairment which interferes with the management, protection, preservation or enjoyment of the visitor's visual experience of the Federal Class I area. This determination must be made by the DEQ on a case-by-case basis taking into account the geographic extent, intensity, duration, frequency and time of visibility impairments, and how these factors correlate with:

(A) times of visitor use of the Federal Class I area; and

(B) the frequency and timing of natural conditions that reduce visibility.

"Baseline area" means any areas designated as attainment or unclassifiable in which the major source or major modification establishing the minor source baseline date would construct or would have an air quality impact equal to or greater than $1 \mu\text{g}/\text{m}^3$ (annual average) of the pollutant for which the minor source baseline date is established.

"Baseline concentration" means that ambient concentration level which exists in the baseline area at the time of the applicable minor source baseline date.

(A) A baseline concentration is determined for each pollutant for which a minor source baseline date is established and shall include:

(i) the actual emissions representative of sources in existence on the applicable minor source baseline date, except as provided in (B) of this definition.

(ii) the allowable emissions of major sources which commenced construction before the major source baseline date but were not in operation by the applicable minor source baseline date. (Effective May 11, 1991)

(B) The following will not be included in the baseline concentration and will affect the applicable maximum allowable increase(s):

(i) actual emissions from any major source on which construction commenced after the major source baseline date; and,

(ii) actual emissions increases and decreases at any source occurring after the minor source baseline date. (Effective May 11, 1991)

"Baseline date" means:

(A) for major sources,

(i) in the case of particulate matter and sulfur dioxide, January 6, 1975, and,
(ii) in the case of nitrogen dioxide, February 8, 1988; and,
(B) for minor sources, the earliest date after the trigger date on which a major source or major modification (subject to 40 CFR 52.21 or 252:100-8, Part 7) submits a complete application. The trigger date is:

- (i) in the case of particulate matter and sulfur dioxide, August 7, 1977, and
(ii) in the case of nitrogen oxides, February 8, 1988. (Effective May 11, 1991)

"Best available control technology" means the control technology to be applied for a major source or modification is the best that is available as determined by the Executive Director on a case-by-case basis taking into account energy, environmental, costs and economic impacts of alternate control systems.

"Building, structure, facility or installation" means all of the pollutant-emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person or persons under common control. Pollutant-emitting activities shall be considered as part of the same industrial grouping if they belong to the same "Major Group" (i.e., which have the same two-digit code) as described in the Standard Industrial Classification Manual, 1972, as amended by the 1977 Supplement.

"Complete" in reference to an application for a permit, means that the application contains all the information necessary for processing the application. Designating an application complete for purposes of permit processing does not preclude the reviewing authority from requesting or accepting any additional information.

"Federal land manager" means the Secretary of the department with authority over the Federal Class I area or his representative.

"Innovative control technology" means any system of air pollution control that has not been adequately demonstrated in practice, but would have a substantial likelihood of achieving greater continuous emissions reduction than any control system in current practice or of achieving at least comparable reductions at lower cost in terms of energy, economics, or non-air quality environmental impacts.

"Major modification" means any physical change in or change in the method of operation of a major source that would result in a significant net emissions increase of any pollutant subject to regulation.

(A) Any net emissions increase that is significant for volatile organic compounds shall be considered significant for ozone.

(B) A physical change or change in the method of operation shall not include:

- (i) routine maintenance, repair and replacement.
(ii) use of an alternate fuel or raw material by reason of any order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation) or by reason of a natural gas curtailment plan pursuant to the Federal Power Act.
(iii) use of an alternate fuel by reason of an order or rule under Section 125 of the Federal Clean Air Act.
(iv) use of an alternate fuel at a steam generating unit to the extent that the fuel is generated from municipal solid waste.
(v) Use of an alternate fuel or raw material by a source which:

(I) the source was capable of accommodating before January 6, 1975, unless such change would be prohibited under any enforceable permit limitation which was established after January 6, 1975; or,

(II) the source is approved to use under any permit issued under 40 CFR 52.21 or 252:100-8.

(vi) An increase in the hours of operation or in the production rate, unless such change would be prohibited under any enforceable permit limitation which was established after January 6, 1975.

(vii) Any change in source ownership.

"Major stationary source" means any source which meets any of the following conditions:

(A) Any of the following sources of air pollutants which emits, or has the potential to emit, 100 tons per year or more of any pollutant subject to regulation:

(i) carbon black plants (furnace process),

(ii) charcoal production plants,

(iii) chemical process plants,

(iv) coal cleaning plants (with thermal dryers),

(v) coke oven batteries,

(vi) fossil-fuel boilers (or combination thereof) totaling more than 250 million BTU per hour heat input,

(vii) fossil fuel-fired steam electric plants of more than 250 million BTU per hour heat input,

(viii) fuel conversion plants,

(ix) glass fiber processing plants,

(x) hydrofluoric, sulfuric or nitric acid plants,

(xi) iron and steel mill plants,

(xii) kraft pulp mills,

(xiii) lime plants,

(xiv) municipal incinerators capable of charging more than 25050 tons of refuse per day,

(xv) petroleum refineries,

(xvi) petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels,

(xvii) phosphate rock processing plant,

(xviii) portland cement plants,

(xix) primary aluminum ore reduction plants,

(xx) primary copper smelters,

(xxi) primary lead smelters,

(xxii) primary zinc smelters,

(xxiii) secondary metal production plants,

(xxiv) sintering plants,

(xxv) sulfur recovery plants, or

(xxvi) taconite ore processing plants.

(B) Any other source not on the list in (A) of this definition which emits, or has the potential to emit, 250 tons per year or more of any pollutant subject to regulation.

(C) Any physical change that would occur at a source not otherwise qualifying as a major source under (A) and (B) of this definition if the change would constitute a major source by itself.

(D) A major source that is major for volatile organic compounds shall be considered major for ozone.

"Natural conditions" mean naturally occurring phenomena against which any changes in visibility are measured in terms of visual range, contrast or coloration.

"Net emissions increase" means:

(A) The amount by which the sum of the following exceeds zero:

(i) any increase in actual emissions from a particular physical change or change in the method of operation at a source; and,

(ii) any other increases and decreases in actual emissions at the source that are contemporaneous with the particular change and are otherwise creditable.

(B) An increase or decrease in actual emissions is contemporaneous with the increase from the particular change only if it occurs within 3 years before the date that the increase from the particular change occurs.

(C) An increase or decrease in actual emissions is creditable only if the Executive Director has not relied on it in issuing a permit under 252:100-8, Part 7, which permit is in effect when the increase in actual emissions from the particular change occurs.

(D) An increase or decrease in actual emissions of sulfur dioxide, particulate matter, or nitrogen oxides which occurs before the applicable minor source baseline date is creditable only if it is required to be considered in calculating the amount of maximum allowable increases remaining available. (Effective May 11, 1991)

(E) An increase in actual emissions is creditable only to the extent that the new level of actual emissions exceeds the old level.

(F) A decrease in actual emissions is creditable only to the extent that:

(i) the old level of actual emissions or the old level of allowable emissions, whichever is lower, exceeds the new level of actual emissions;

(ii) it is enforceable at and after the time that actual construction on the particular change begins;

(iii) it has approximately the same qualitative significance for public health and welfare as that attributed to the increase from the particular change.

(G) An increase that results from a physical change at a source occurs when the emission unit on which construction occurred becomes operational and begins to emit a particular pollutant. Any replacement unit that requires shakedown becomes operational only after a reasonable shakedown period, not to exceed 180 days.

"Significant" means:

(A) In reference to a net emissions increase or the potential of a source to emit any of the following pollutants, a rate of emissions that would equal or exceed any of the following rates:

(i) carbon monoxide: 100 tons per year (tpy),

(ii) nitrogen oxides: 40 tpy,

(iii) sulfur dioxide: 40 tpy,

(iv) particulate matter: 25 tpy of particulate matter emissions or 15 tpy of PM-10 emissions,

(v) ozone: 40 tpy of volatile organic compounds,

- (vi) lead: 0.6 tpy,
- (vii) asbestos: 0.007 tpy,
- (viii) beryllium: 0.0004 tpy,
- (ix) mercury: 0.1 tpy,
- (x) vinyl chloride: 1 tpy,
- (xi) fluorides: 3 tpy,
- (xii) sulfuric acid mist: 7 tpy,
- (xiii) hydrogen sulfide (H₂S): 10 tpy,
- (xiv) total reduced sulfur (including H₂S): 10 tpy, and
- (xv) reduced sulfur compounds (including H₂S): 10 tpy.

(B) Notwithstanding (A) of this definition, "significant" means any emissions rate or any net emissions increase associated with a major source or modification which would construct within 6 miles of a Class I area, and have an impact on such area equal to or greater than 1 $\mu\text{g}/\text{m}^3$ $\mu\text{g}/\text{m}^3$ (24-hour average).

"Visibility impairment" means any humanly perceptible reduction in visibility (visual range, contrast and coloration) from that which would have existed under natural conditions.

252:100-8-33. Exemptions

(a) **Exemptions from PSD requirements.** PSD requirements do not apply to a particular source or modification if:

- (1) It is a nonprofit health or educational institution.
- (2) The source is major by virtue of fugitive emissions, to the extent quantifiable, included in calculating the potential to emit and is a source other than:
 - (A) One of the categories listed in (A)(i) through (xxvi) under the definition of "Major stationary source" in 252:100-8-31, or
 - (B) A stationary source category which, as of August 7, 1980, is being regulated by NSPS or NESHAP.
- (3) The source or modification is a portable stationary source which has previously received a permit under the PSD requirements and proposes to relocate to a temporary new location from which its emissions would not impact a Class I area or an area where an applicable increment is known to be violated.

(b) **Exemption from air quality impact evaluation.**

- (1) The requirements of 252:100-8-35 are not applicable if the emissions, with respect to a particular pollutant, would be temporary and impact no Class I area and no area where an applicable increment is known to be violated.
- (2) The requirements of 252:100-8-35 are not applicable to the emissions, with respect to a particular pollutant, to a modification of a major source that was in existence on March 1, 1978 if the net increase in allowable emissions of each regulated pollutant, after the application of best available control technology, would be less than 50 tons per year.

(c) **Exemption from monitoring requirements.**

- (1) The monitoring requirements of 252:100-8-35 are not applicable for a particular pollutant if the emission increase of the pollutant from a new source or the net emissions increase of the pollutant from a modification would cause, in any area, air quality impacts less than the following listed amounts, or are pollutant concentrations that are not on the list.

- (A) Carbon monoxide - $575 \mu\text{g}/\text{m}^3$ $\mu\text{g}/\text{m}^3$, 8-hour average,
 - (B) Nitrogen dioxide - $14 \mu\text{g}/\text{m}^3$ $\mu\text{g}/\text{m}^3$, annual average,
 - (C) Particulate matter - $10 \mu\text{g}/\text{m}^3$ $\mu\text{g}/\text{m}^3$, TSP, 24-hour average, or $10 \mu\text{g}/\text{m}^3$ $\mu\text{g}/\text{m}^3$ PM-10, 24-hour average,
 - (D) Sulfur dioxide - $13 \mu\text{g}/\text{m}^3$ $\mu\text{g}/\text{m}^3$, 24-hour average,
 - (E) Ozone - see (N) below,
 - (F) Lead - $0.1 \mu\text{g}/\text{m}^3$ $\mu\text{g}/\text{m}^3$, 24-hour 3-month average,
 - (G) Mercury - $0.25 \mu\text{g}/\text{m}^3$ $\mu\text{g}/\text{m}^3$, 24-hour average,
 - (H) Beryllium - 0.0005 $0.001 \mu\text{g}/\text{m}^3$ $\mu\text{g}/\text{m}^3$, 24-hour average,
 - (I) Fluorides - $0.25 \mu\text{g}/\text{m}^3$ $\mu\text{g}/\text{m}^3$, 24-hour average,
 - (J) Vinyl chloride - $15 \mu\text{g}/\text{m}^3$ $\mu\text{g}/\text{m}^3$, 24-hour average,
 - (K) Total reduced sulfur - $10 \mu\text{g}/\text{m}^3$ $\mu\text{g}/\text{m}^3$, 1-hour average,
 - (L) Hydrogen sulfide - 0.04 $0.2 \mu\text{g}/\text{m}^3$ $\mu\text{g}/\text{m}^3$, 1-hour average, or
 - (M) Reduced sulfur compounds - $10 \mu\text{g}/\text{m}^3$ $\mu\text{g}/\text{m}^3$, 1-hour average.
- (N) No de minimis air quality level is provided for ozone. However, any net increase of 100 tons per year or more of volatile organic compounds subject to PSD would be required to perform an ambient impact analysis, including the gathering of ambient air quality data.

(2) The requirements for air quality monitoring in 252:100-8-35(b),(c) and (d)(2) shall not apply to a source or modification that was subject to 40 CFR 52.21 as in effect on June 19, 1978, if a permit application was submitted before June 8, 1981 and the Executive Director subsequently determined that the application was complete except for 252:100-8-35(b), (c) and (d)(2). Instead, the requirements in 40 CFR 52.21(m)(2) as in effect on June 19, 1978, shall apply to such source or modification.

(3) The requirements for air quality monitoring in 252:100-8-35(b), (c), and (d)(2) shall not apply to a source or modification that was not subject to 40 CFR 52.21 as in effect on June 19, 1978, if a permit application was submitted before June 8, 1981 and the Executive Director subsequently determined that the application as submitted was complete, except for the requirements in 252:100-8-35(b), (c) and (d)(2).

(4) The Executive Director shall determine if the requirements for air quality monitoring of PM-10 in 252:100-8-35(a) through 252:100-8-35(c) and 252:100-8-35(d)(2) may be waived for a source or modification when an application for a permit was submitted on or before June 1, 1988 and the Executive Director subsequently determined that the application, except for the requirements for monitoring particulate matter under 252:100-8-35(a) through 252:100-8-35(c) and 252:100-8-35(d)(2), was complete before that date.

(5) The requirements for air quality monitoring of PM-10 in 252:100-8-35(b), (c), (d)(2) and (d)(6) shall apply to a source or modification if an application for a permit was submitted after June 1, 1988 and no later than December 1, 1988. The data shall have been gathered over at least the period from February 1, 1988 to the date the application becomes otherwise complete in accordance with the provisions of 252:100-8-33(b)(1), except that if the Executive Director determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period (not to be less than 4 months), the data required by 252:100-8-35(b)(1) and 252:100-8-35(c) shall have been gathered over that shorter period.

(d) **Exemption from BACT requirements and monitoring requirements.** If a complete permit application for a source or modification was submitted before August 7, 1980 the requirements for best available control technology in 252:100-8-34 and for monitoring in 252:100-8-35(a) through 252:100-8-35(c) and 252:100-8-35(d)(2) through 252:100-8-35(d)(4) are not applicable. Instead, the federal requirements at 40 CFR 52.21 (j) and (n) as in effect on June 19, 1978 are applicable to any such source or modification.

(e) **Exemption of modifications.** As specified in the applicable definitions of 252:100-8-31, 252:100-8-1.1, and 252:100-1, the requirements of 252:100-8, Part 7 for PSD and 252:100-8, Part 9 for nonattainment areas are not applicable to a modification if the existing source was not major on August 7, 1980 unless the proposed addition to that existing minor source is major in its own right.

(f) **Exemption from impact analyses.** The requirements of 252:100-8-35 and 252:100-8-36 do not apply to a source or modification with respect to any maximum allowable increase for nitrogen oxides if the owner or operator of the source or modification submitted a completed application for a permit before February 8, 1988.

(g) **Exemption from increment consumption.** Excluded from increment consumption are the following cases:

(1) Concentrations from an increase in emissions from any source converting from the use of petroleum products, natural gas, or both by reason of any order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation), or by reason of a natural gas curtailment plan pursuant to the Federal Power Act. Such exclusion is limited to five years after the effective date of the order or plan.

(2) Emissions of particulate matter from construction or other temporary emission-related activities of new or modified sources.

(3) A temporary increase of sulfur dioxide, particulate matter, or nitrogen oxides by order or authorized variance from any source.

PART 9. MAJOR SOURCES AFFECTING NONATTAINMENT AREAS

252:100-8-52. Source applicability determination

Proposed new sources and source modifications to which Part 9 of this Subchapter are applicable are determined by size, geographical location and type of emitted pollutants:

(1) Size.

(A) Permit review will apply to sources and modifications that emit any regulated pollutant in major amounts. These quantities are specified in the definitions for major stationary source, major modification, potential to emit, net emissions increase, significant, and other associated definitions in 252:100-8-51, 252:100-8-1.1, and 252:100-1-3.

(B) At such time that a particular source or modification becomes major solely by virtue of a relaxation in any enforceable permit limitation which was established after August 7, 1980 on the capacity of the source or modification otherwise to emit a pollutant, such as a restriction on hours of operation, then the requirements of Parts 1, 3, 5, and 9 of this Subchapter shall apply to that source or modification as though construction had not yet commenced on it.

(2) Location.

(A) Sources and modifications that are major in size and proposed for construction in an area which has been designated as nonattainment for any applicable ambient air standard are subject to the requirements for the nonattainment area, if the source or modification is major for the nonattainment pollutant(s) of that area.

(B) In addition, the requirements of a PSD review (Part 7 of this Subchapter) would be applicable if any other regulated pollutant other than the nonattainment pollutant is emitted in significant amounts by that source or modification.

(3) Location in attainment or unclassifiable area but causing or contributing to NAAQS violation.

(A) A proposed major source or major modification that would locate in an area designated attainment or unclassifiable is considered to cause or contribute to a violation of the national ambient air quality standards when such source or modification would, as a minimum, exceed the following significance levels at any locality that does not or would not meet the applicable national standard:

Pollutant	Concentration, $\mu\text{g}/\text{m}^3$			
	Averaging Time (hours)			
	Annual	24	8	3
SO ₂	1.0	5		25
PM-10	1.0	5		
NO ₂	1.0			
CO			500	2000

(B) A proposed major source or major modification subject to 252:100-8-52(3)(A) may reduce the impact of its emissions upon air quality by obtaining sufficient emissions reductions to, at a minimum, compensate for its adverse ambient impact where the proposed source or modification would otherwise cause or contribute to a violation of any national ambient air quality standard. In the absence of such emission reductions, a permit for the proposed source or modification shall be denied.

(C) The requirements of 252:100-8-52(3)(A) and (B) shall not apply to a major source or major modification with respect to a particular pollutant if the owner or operator demonstrates that, as to that pollutant, the source or modification is located in an area designated nonattainment.

(D) Sources of volatile organic compounds located outside a designated ozone nonattainment area will be presumed to have no significant impact on the designated nonattainment area. If ambient monitoring indicates that the area of source location is in fact nonattainment, then the source may be granted its permit since the area has not yet been designated nonattainment.

~~(C)~~ (E) Sources locating in an attainment area but impacting on a nonattainment area above the significant levels listed in 252:100-8-52(3) are exempted from the condition of 252:100-8-54(4)(A).

~~(D)~~ (F) The determination whether a source or modification will cause or contribute to a violation of an applicable ambient air standard for sulfur dioxide, particulate matter or carbon monoxide will be made on a case by case basis as of the proposed new source's start-up date by an atmospheric simulation model. For sources of

nitrogen oxides the model can be used for an initial determination assuming all the nitric oxide emitted is oxidized to nitrogen dioxide by the time the plume reaches ground level, and the initial concentration estimates will be adjusted if adequate data are available to account for the expected oxidation rate.

~~(E)(G)~~ The determination as to whether a source would cause or contribute to a violation of applicable ambient air standards will be made on a case by case basis as of the new source's start-up date. Therefore, if a designated nonattainment area is projected to be attainment as part of the state implementation plan control strategy by the new source start-up date, offsets would not be required if the new source would not cause a new violation.

~~(F)~~ Sources causing a new violation of applicable ambient air standards as determined by the Executive Director but not contributing to an existing violation, will be approved if both of the following conditions are met:

~~(i) The new source is required to meet a more stringent emission limitations and/or the control of existing sources below allowable levels so that the new violation of ambient standards does not occur.~~

~~(ii) The new emission limitations for the new source, as well as for any existing sources affected, are enforceable under the Oklahoma and Federal Clean Air Acts.~~

MINUTES
AIR QUALITY COUNCIL
JUNE 14, 2000
OSU @ TULSA Room 150
Tulsa, Oklahoma

Council Members Present

David Branecky, Chairman
 William B. Breisch
 Fred Grosz
 Gary Kilpatrick
 Rick Treeman
 Joel Wilson

Council Members Absent

Staff Present

Cheryl Bradley
 Myna Bruce

Notice of Public Meeting for April 19, 2000 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance doors to the OSU Tulsa Auditorium entrance and on the entrance doors of the DEQ Central Office in Oklahoma City.

Call to Order - Mr. Branecky, Chairman, called the meeting to order and roll call was taken as follows: Mr. Kilpatrick - aye; Mr. Wilson - aye; Dr. Grosz - aye; Mr. Treeman - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye. Mr. Fallon, Ms. Myers, and Dr. Canter did not attend.

Approval of Minutes - Mr. Branecky entertained a motion to approve the Minutes of the April 19, 2000 Public Meeting/Hearings. Motion was made by Dr. Grosz to approve the Minutes as presented and second was made by Mr. Wilson. Roll call: Mr. Wilson - aye; Mr. Treeman - abstain; Mr. Breisch - aye; Mr. Kilpatrick - aye; Dr. Grosz - aye; Mr. Branecky - aye.

Protocol Statement — As protocol officer, Mr. Dyke convened the hearings by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-201 through 2-5-101 - 2-5-118. Mr. Dyke entered the Agenda and the Oklahoma Register Notice into the record.

PUBLIC HEARING

OAC 252:100-3-5

Air Quality Advisory Council Hearings

Appendix B Style of Request for Hearing

Ms. Bradley advised that the proposal established procedures for individual proceedings on enforcement matters and requests for variances. Ms. Bradley pointed out minor changes that staff recommended and advised that there had been no written comments on the proposal.

Ms. Bradley stated that staff recommended emergency adoption of the rule. Following discussion, Mr. Branecky called for a motion to recommend the proposal dated June 12 to the Environmental Quality Board for emergency and permanent approval. Mr. Kilpatrick made the motion and Dr. Grosz made the second. Roll call: Mr. Wilson – aye; Mr. Treeman - abstain; Mr. Breisch – aye; Mr. Kilpatrick - aye; Dr. Grosz - aye; Mr. Branecky – aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100- 7

Permits for Minor Facilities

Ms. Barbara Hoffman was called upon to provide staff's recommendation of proposed rule. Ms. Hoffman stated that this rule was brought before the Council the first time on April 19 and that a workgroup had met on May 24. She then advised Council of the changes suggested by staff. She stated that no written comments had been received but it was anticipated that there would be comments from the industry group forthcoming; therefore, it was recommended that this rule be continued to the August Council meeting. Ms. Hoffman called for comments and advised that the industry contact for comments was Joel Howard who could be reached at 405 720 5500 or joelhoward@marathonoil.com. With no comments or questions, Mr. Branecky called for motion to continue the rule to the August meeting. Mr. Breisch made the motion and second was made by Dr. Grosz. Roll call: Mr. Wilson – aye; Mr. Treeman - abstain; Mr. Breisch – aye; Mr. Kilpatrick - aye; Dr. Grosz - aye; Mr. Branecky – aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100- 8

Permits for Part 70 Sources

Ms. Barbara Hoffman was called upon to provide staff's recommendations for this proposed rule. Ms. Hoffman pointed out all changes proposed in the Agenda Packet and a June 13, 2000 draft that was a handout. She advised that no comments had been received and suggested that the rule be recommended to the Board for emergency and permanent adoption.

Following a considerable amount of discussion and comments, it was decided that the rule should be continued to the August meeting. Mr. Branecky called for a motion. Mr. Wilson made motion to continue and second was made by Mr. Kilpatrick. Roll call: Mr. Wilson – aye; Mr. Treeman - abstain; Mr. Breisch – aye; Mr. Kilpatrick - aye; Dr. Grosz - aye; Mr. Branecky – aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

**PUBLIC HEARING
OAC 252:100-29
Control of Fugitive Dust**

Ms. Cheryl Bradley was called upon for staff recommendations. She stated that proposed changes were to simplify and clarify language according to the agency-wide re-right/de-wrong initiative and pointed out the changes proposed. She entered into the record written comments received from Fort James Corporation and from EPA Region 6 Air Planning Section. Ms. Bradley then referred to a handout of a new draft dated June 13, 2000. She discussed the changes made in that proposal. Ms. Bradley stated that since comments had been received which would result in recommended changes to the rule, it was staff's recommendation to continue the rule to the August Council meeting.

Comments and suggestions for changes were taken from Council and audience. Mr. Branecky then called for a motion to continue until August. Dr. Grosz made the motion and Mr. Kilpatrick made the second. Roll call: Mr. Wilson - aye; Mr. Treeman - abstain; Mr. Breisch - aye; Mr. Kilpatrick - aye; Dr. Grosz - aye; Mr. Branecky - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

DIVISION DIRECTOR'S REPORT - Mr. Dyke made several announcements including the fact that this had been Barbara Hoffman's final meeting and that we would be moving to New Hampshire.

NEW BUSINESS - None

ADJOURNMENT With no further business, meeting was adjourned with announcement that the next regularly scheduled meeting would be August 16 at 9:00 a.m. at the Pioneer Technology Center in Ponca City, OK.

NOTE: The sign-in sheet is attached as an official part of these Minutes.

AGENDA
AIR QUALITY COUNCIL
DEPARTMENT OF ENVIRONMENTAL QUALITY
HEARING/MEETING
9:00 A.M.
Wednesday, August 16, 2000
Pioneer Technology Center
Education Business Center
2101 North Ash Street Ponca City, OK 74601

1. **Call to Order – David Branecky**
2. **Roll Call – Myrna Bruce**
3. **Approval of Minutes of the June 14, 2000 Regular Meeting**
4. **PUBLIC RULEMAKING HEARINGS**

A. OAC 252:100-6 Permitting [REVOKED]

It is proposed that SC 6 be revoked in its entirety. This action fulfills the Department's goal of eliminating redundant or unnecessary language through the re-right/de-wrong process. The rule is for the most part a summary of the permit programs contained in SC 7 and SC 8 and a restatement of Oklahoma statutes on permitting. Only a few portions of the rule contain substantive language that will be placed into SC 8. Revocation of the rule will have no effect on permit actions.

1. Presentation – Jeanette Buttram
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent adoption

B. OAC 252:100-7 PERMITS FOR MINOR FACILITIES [AMENDED]

The proposed changes to SC7 consist of the addition of sections 60.3, 60.4, and 60.5. Proposed sections 60.3 and 60.4 reference the existing permits by rule for VOC storage and loading facilities and particulate matter facilities, respectively. Section 60.5 is the proposed permit by rule for natural gas compression facilities. This section contains eligibility requirements, standards, testing and monitoring requirements, and recordkeeping requirements for natural gas compression facilities that qualify for permit by rule.

1. Presentation –Joyce Sheedy
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent and emergency adoption

C. OAC 252:100-8 Permits for Part 70 Sources [AMENDED]

The proposed changes to SC 8 would amend sections 1.1, 1.4, 1.5, 1.7, 2, 3, 4, 5, 6, 7, 8, 31, 33, 51 and 52. The changes correct errors, clarify language, add and delete definitions, and add fee categories for construction permit authorizations and modifications. Substantive changes include amending the definition of "trivial activities" in section 2 by deleting the exception for activities that are subject to an applicable requirement. The amendments to section 4(a)(1) make clear which modifications to Part 70 sources require construction permits. A substantive change is proposed for the definition of "major stationary source" in section 31.

1. Presentation – Pam Dizikes
2. Questions and discussion by Council / Public

3. Possible action by Council
4. Roll call vote(s) for permanent and emergency adoption

D. OAC 252:100-29 Control of Fugitive Dust [AMENDED]

The proposed changes would simplify and clarify the Subchapter as a part of the agency-wide re-right/de-wrong initiative. The modifying word 'visible' is deleted from the term fugitive dust. Substantive changes are proposed to clarify when and what precautions are required to minimize or prevent pollution and to clarify what corrective measures are required in the event that fugitive dust is discharged beyond the property line.

1. Presentation – Cheryl Bradley
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent adoption

E. OAC 252:100-31 Control of Emission of Sulfur Compounds [AMENDED]

The proposed changes to SC 31 are primarily to simplify language, clarify requirements, and remove redundant requirements, or language as part of the agency-wide re-right/de-wrong initiative. New definitions of the terms "existing source" or "existing equipment" and "new source" or "new equipment" clearly identify the effective date for each industry affected by the rule. Proposed substantive changes are: to revoke 31-14(c) regarding the testing procedures for ambient hydrogen sulfide; to delete 31-25(a) pertaining to new sulfuric acid plants; to change the averaging time for ambient hydrogen sulfide concentration from existing equipment in 31-14(a); to combine 31-25(c) and 31-26 to make clear which sources are subject to the standard; to make several changes in 26(a) such as to change the standard from a combination equipment and emission standard to a more straightforward emission standard; the exception for pipeline quality sweetened gas was moved to 226(b)(1) and changed to an emission based exception; and exception to the required exhaust stack is provided based on modeling; and all subsections will be changed to a time-based average because it is unclear what is a maximum average.

1. Presentation – Joyce Sheedy
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent adoption

5. Division Director's Report – Eddie Terrill

6. New Business -- Any matter not known about, or which could not have been reasonably foreseen, prior to the time of posting the agenda.

7. Adjournment – Next Regular Meeting

Date and Time: October 18, 2000 @ 9:00 a.m.

Place: Department of Environmental Quality Multi-Purpose Room, First Floor
707 North Robinson, Oklahoma City, OK

Lunch Break, if necessary

Should you desire to attend but have a disability and need an accommodation, please notify our Department three days in advance at (405) 702-4100.

August 2, 2000

MEMORANDUM

TO: Air Quality Council

FROM: Eddie Terrill, Division Director ^{CJ.}
Air Quality Division

SUBJECT: Modifications to Subchapter 8

Enclosed is a copy of the proposed draft modifications to Subchapter 8, Permits for Part 70 Sources. This proposed revision was first presented to the Air Quality Council on June 14, 2000 at which time the hearing was continued. After several years of implementing this Subchapter, various errors, inconsistencies, and ambiguities have surfaced which need to be corrected. Since we are still issuing the first round of Part 70 permits and have already begun modifying those that have been issued, we believe it is better to tackle these issues now rather than later.

The proposed changes to Subchapter 8 would amend sections 1.1, 1.4, 1.5, 1.7, 2, 3, 4, 5, 6, 7, 8, 31, 33, 51, and 52. In addition to correcting errors and clarifying language, the proposed changes add fee categories for construction permit authorizations and modifications. The proposed fee categories have been changed since the June Air Quality Council meeting. Substantive changes include amending the definition of "trivial activities" in section 2 by deleting the exception for activities that are subject to an applicable requirement. The amendments to section 4(a)(1) clarify when construction permits are required. Additional changes to Section 4(a)(1) have been made in response to comments received at the June Air Quality Council meeting. The changes in section 5(d)(1)(A) clarify that BACT is not required for modifications that result in emissions increases of less than 100 tons per year, unless the Prevention of Significant Deterioration rules in Part 7 would require it. The reporting time in section 6(a)(3)(C) for excess emissions caused by emergencies or upsets would be changed from 24 hours to the end of the next working day to make it consistent with Subchapter 9 reporting requirements. A substantive change is proposed for the definition of "major stationary source" in section 31, where paragraph (xiv) would be changed to read "municipal incinerators capable of charging more than 50 tons of refuse per day." This change is required by the 1990 amendment to section 169(1) of the federal Clean Air Act. The changes to Section 51 consist of deleting definitions that are not used in Part 9 and moving definitions that are used in Sections in addition to Part 9. The changes to section 52 were adopted in 1989 but were accidentally excluded during codification of the rules.

Comments have been received via E-mail. Copies of these comments are enclosed.

Staff will ask the Council to recommend the proposed changes to the Environmental Quality Board for adoption as emergency and permanent rules.

SUBCHAPTER 8. PERMITS FOR PART 70 SOURCES

PART 1. GENERAL PROVISIONS

252:100-8-1.1. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise. Except as specifically provided in this section, terms used in this Subchapter retain the meaning accorded them under the applicable requirements of the Act.

"A **stack in existence**" means for purposes of OAC 252:100-8-1.5 that the owner or operator had:

- (A) begun, or caused to begin, a continuous program of physical on-site construction of the stack; or
- (B) entered into binding agreements or contractual obligations, which could not be canceled or modified without substantial loss to the owner or operator, to undertake a program of construction of the stack to be completed in a reasonable time.

"**Act**" means the federal Clean Air Act, as amended, 42 U.S.C. 7401 *et seq.*

"Actual emissions" except for Parts 7 and 9 of this Subchapter, means the total amount of regulated air pollutants emitted from a given facility during a particular calendar year, determined using methods contained in 252:100-5-2.1(d).

"**Administrator**" means the Administrator of the United States Environmental Protection Agency (EPA) or the Administrator's designee.

"**Allowable emissions**" means, for purposes of Parts 7 and 9 of this Subchapter, the emission rate of a stationary source calculated using the maximum rated capacity of the source (unless the source is subject to enforceable limits which restrict the operating rate, or hours of operation, or both) and the most stringent of the following:

- (A) the applicable standards as set forth in 40 CFR Parts 60 and 61;
- (B) the applicable State rule allowable emissions; or,
- (C) the emissions rate specified as an enforceable permit condition.

"**Begin actual construction**"

(A) for purposes of Parts 7 and 9 of this Subchapter means, in general, initiation of physical on-site construction activities on an emissions unit which are of a permanent nature. Such activities include, but are not limited to, installation of building supports and foundations, laying of underground pipework, and construction of permanent storage structures. With respect to a change in method of operation this term refers to those on-site activities, other than preparatory activities, which mark the initiation of the change.

(B) for purposes of Part 5 of this Subchapter, means that the owner or operator has begun the construction or installation of the emitting equipment on a pad or in the final location at the facility.

"Best available control technology" or "BACT" means the control technology to be applied for a major source or modification is the best that is available as determined by the Director on a case-by-case basis taking into account energy, environmental, and economic impacts and other costs of alternate control systems.

"Building, structure, facility, or installation" for purposes of Parts 7 and 9 of this Subchapter, means all of the pollutant-emitting activities which belong to the same

industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person or persons under common control. Pollutant-emitting activities shall be considered as part of the same industrial grouping if they belong to the same "Major Group" (i.e., which have the same two-digit code), as described in the Standard Industrial Classification manual, 1972, as amended by the 1977 Supplement.

"Commence" for purposes of Parts 7 and 9 of this Subchapter means, as applied to construction of a major stationary source or major modification, that the owner or operator has all necessary preconstruction approvals or permits and either has:

- (A) begun, or caused to begin, a continuous program of actual on-site construction of the source, to be completed within a reasonable time; or,
- (B) entered into binding agreements or contractual obligations, which cannot be cancelled or modified without substantial loss to the owner or operator, to undertake a program of actual construction of the source to be completed within a reasonable time.

"Construction" means, for purposes of Parts 7 and 9 of this Subchapter, any physical change or change in the method of operation (including fabrication, erection, installation, demolition, or modification of an emissions unit) which would result in a change in actual emissions.

"Dispersion technique" means for purposes of OAC 252:100-8-1.5 any technique which attempts to affect the concentration of a pollutant in the ambient air by using that portion of a stack which exceeds good engineering practice stack height; varying the rate of emission of a pollutant according to atmospheric conditions or ambient concentrations of that pollutant; or increasing final exhaust gas plume rise by manipulating source process parameters, exhaust gas parameters, stack parameters or combining exhaust gases from several existing stacks into one stack, or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise. The preceding sentence does not include:

- (A) The reheating of a gas stream, following use of a pollution control system, for the purpose of returning the gas to the temperature at which it was originally discharged from the facility generating the gas stream.
- (B) The merging of exhaust gas streams where:
 - (i) the source owner or operator documents that the facility was originally designed and constructed with such merged streams;
 - (ii) after July 8, 1985, such merging is part of a change in operation at the facility that includes the installation of pollution controls and is accompanied by a net reduction in the allowable emissions of a pollutant. This exclusion from "dispersion technique" applicability shall apply only to the emission limitation for the pollutant affected by such change in operation; or
 - (iii) before July 8, 1985, such merging was part of a change in operation at the facility that included the installation of emissions control equipment or was carried out for sound economic or engineering reasons. Where there was an increase in the emission limitation or, in the event that no emission limitation existed prior to the merging, there was an increase in the quantity of pollutants actually emitted prior to the merging, it shall be presumed that merging was primarily intended as a means of gaining emissions credit for greater dispersion. Before such credit can be allowed, the owner or operator must satisfactorily demonstrate that merging was not carried out for the primary purpose of gaining credit for greater dispersion.

(C) Manipulation of exhaust gas parameters, merging of exhaust gas streams from several existing stacks into one stack, or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise in those cases where the resulting allowable emissions of sulfur dioxide from the facility do not exceed 5,000 tons per year.

"Emission limitations and emission standards" means for purposes of OAC 252:100-8-1.5 requirements that limit the quantity, rate or concentration of emissions of air pollutants on a continuous basis, including any requirements that limit the level of opacity, prescribe equipment, set fuel specifications or prescribe operation or maintenance procedures for a source to assure continuous reduction. ~~(Amended 7-9-87, effective 8-10-87)~~

"Emissions unit" means, for purposes of Parts 7 and 9 of this Subchapter, any part of a source which emits or would have the potential to emit any pollutant subject to regulation.

"EPA" means the United States Environmental Protection Agency.

"Fugitive emissions" means, for purposes of Parts 7 and 9 of this Subchapter, those emissions which could not reasonably pass through a stack, chimney, vent or other functionally equivalent opening.

"National Emission Standards for Hazardous Air Pollutants" or "NESHAP" means those standards found in 40 CFR Parts 61 and 63.

"Necessary preconstruction approvals or permits" means, for purposes of Parts 7 and 9 of this Subchapter, those permits or approvals required under all applicable air quality control laws and rules.

"New Source Performance Standards" or "NSPS" means those standards found in 40 CFR Part 60.

"Part 70 permit" (unless the context suggests otherwise) means any permit or group of permits covering a Part 70 source that is issued, renewed, amended, or revised pursuant to this Chapter.

"Part 70 program" means a program approved by the Administrator under 40 CFR Part 70.

"Part 70 source" means any source subject to the permitting requirements of Part 5 of this Subchapter, as provided in OAC 252:100-8-3(a) and OAC 252:100-8-3(b).

"Potential to emit" means, for purposes of Parts 7 and 9 of this Subchapter, the maximum capacity of a source to emit a pollutant under its physical and operational design. Any physical or operational limitation on the capacity of the source to emit a pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored or processed, shall be treated as part of its design if the limitation or the effect it would have on emissions is enforceable. Secondary emissions do not count in determining the potential to emit of a source.

"Secondary emissions" means, for purposes of Parts 7 and 9 of this Subchapter, emissions which occur as a result of the construction or operation of a major stationary source or modification, but do not come from the source or modification itself. ~~For the purpose of 252:100-8, Part 9, secondary~~ Secondary emissions must be specific, well defined, quantifiable, and impact the same general areas as the source or modification which causes the secondary emissions. Secondary emissions may include, but are not limited to:

- (A) emissions from trains coming to or from the new or modified stationary source; and,
- (B) emissions from any offsite support facility which would not otherwise be constructed or increase its emissions as a result of the construction or operation of the major source or modification.

"Stack" means for purposes of OAC 252:100-8-1.5 any point in a source designed to emit solids, liquids or gases into the air, including a pipe or duct but not including flares.

"Stationary source" means, for purposes of Parts 7 and 9 of this Subchapter, any building, structure, facility or installation which emits or may emit any air pollutant subject to OAC 252:100.

252:100-8-1.4. Cancellation or extension of a construction permit or authorization under a general construction permit

(a) **Cancellation of permit or authorization to construct or modify.** A duly issued permit or authorization to construct or modify will terminate and become null and void (unless extended as provided in Subsection (b) of this Section) if the construction is not commenced within 18 months after the date the permit or authorization was issued, or if work is suspended for more than 18 months after it has commenced.

(b) **Extension of permit or authorization to construct or modify.**

(1) Prior to the expiration date of the permit or authorization, a permittee may apply for extension of the permit or authorization by written request of the DEQ stating the reasons for the delay or suspension and providing justification for the extension. The DEQ may grant:

(A) One extension of 18 months or less, or

(B) One extension of up to 36 months where the applicant is proposing to expand an already existing facility to accommodate the proposed new construction or the applicant has expended a significant amount of money (1% of total project cost as identified in the original application, not including land cost) in preparation for meeting the definition of "commence construction" at the proposed site, or

(C) One extension of up to 72 months will be granted to major industrial facilities (project cost greater than \$100,000,000.00), where the applicant proposes to construct at an existing site and demonstrates that the existing site was originally designed and constructed to accommodate the proposed new facilities. The applicant shall show a commitment to the site by having purchased land necessary to construct facilities covered by this extension and expended \$1,000,000.00 or more on engineering and/or site development.

(2) If construction has not commenced within three (3) years of the effective date of the original permit or authorization, the permittee must undertake and complete an appropriate available control technology review and an air quality analysis. This review must be approved by the DEQ before construction may commence.

(3) Upon formal request of any applicant whose permit has been denied for lack of increment, the DEQ may require any permittee under OAC 252:100:8-1.4(b)(1)(B) or OAC 252:100-8-1.4(b)(1)(C), to furnish a complete air quality analysis and/or an appropriate available control technology review if such review is required in order to provide new or current information.

252:100-8-1.5. Stack height limitations

(a) **Stack height exclusion.** Air quality modeling or ambient impact evaluation shall exclude the effect of that portion of the height of any stack which exceeds good engineering practice or the effect of any other dispersion techniques.

(b) **Determination of good engineering practice (GEP) stack height.** GEP stack height shall be the greater of:

- (1) 65 meters, measured from the ground-level elevation at the base of the stack; or
- (2) The height under either OAC 252:100-8-1.5(b)(2)(A) or (B):
 - (A) for stacks in existence on January 12, 1979 and for which the owner or operator had obtained all applicable permits or approvals required under OAC 252:100-8 or 40 CFR Part 52, $H_g = 2.5H$, provided the owner or operator can demonstrate that this equation was relied upon in establishing an emission limitation;
 - (B) for all other stacks, $H_g = H + 1.5L$, where:
 - (i) H_g = good engineering practice stack height, measured from the ground-level elevation at the base of the stack,
 - (ii) H = height of nearby structure(s) measured from the ground-level elevation at the base of the stack,
 - (iii) L = lesser dimension (height or projected width) of nearby structure(s), provided that the owner or operator may be required to verify such GEP stack height by the use of a field study or fluid model as the Executive Director shall determine; or
- (3) The height demonstrated by a fluid model or a field study approved by the reviewing agency, which ensures that the emissions from a stack do not result in excessive concentrations of any air pollutant as a result of atmospheric downwash, wakes, or eddy effects created by the source itself, nearby structures, or nearby terrain features.

(c) **Nearby.**

(1) **For the formulae in OAC 252:100-8-1.5(b)(2).** A structure or terrain feature shall be considered nearby if it is located within a distance of up to five times the lesser of the height or the width of a structure, but not more than 0.5 miles (0.8 km).

(2) **For demonstration in OAC 252:100-8-1.5(b)(3).**

(A) A structure or terrain feature shall be considered nearby if located at a distance not greater than 0.5 mile (0.8 km), except that

(B) A portion of a terrain feature may be considered nearby if:

- (i) It falls within a distance (not to exceed 2 miles) of up to 10 times the maximum height (H_t) of the feature, and
- (ii) At a distance of 0.5 mile, the height of such feature is at least 40 percent of the GEP stack height determined by the formulae provided in OAC 252:100-8-1.5(b)(2)(B) or 85.3 feet (26 meters), whichever is greater, as measured from the base of the stack.

(3) **Measurement of height of structure or terrain.** The height of the structure or terrain feature is measured from the ground-level elevation at the base of the stack.

(d) **Excessive concentrations.** When utilized for the purpose of determining GEP stack height under OAC 252:100-8-1.5(b)(3), excessive concentrations shall be as follows:

(1) For sources seeking credit for stack height exceeding that calculated under ~~262:100-8-1.5(b)(2)~~OAC 252:100-8-1.5(b)(2), a maximum ground-level pollutant concentration from a stack due in whole or part to downwash, wakes, and eddy effects produced by nearby structures or nearby terrain features which is at least 40 percent in excess of the maximum concentration experienced in the absence of such downwash, wakes, or eddy effects and which, when combined with the impacts due to all sources, produces a

concentration in excess of an ambient air quality standard. For sources subject to the prevention of significant deterioration program (Part 7 of this Subchapter or Federal 40 CFR 52.21), the same criteria apply except that a concurrent exceedance of a prevention of significant deterioration increment is experienced. In making demonstrations under this part, the allowable emission rate shall conform to the new source performance standard that is applicable to the source category unless the owner or operator can demonstrate that this emission rate is infeasible. Where such demonstrations are approved by the Executive Director, an alternative emission rate shall be established in consultation with the owner or operator;

(2) For sources seeking credit after October 1, 1983, for increases in existing stack heights up to the heights established under OAC 252:100-8-1.5(b)(2) either:

(A) a maximum ground-level concentration due in whole or part to downwash, wakes or eddy effects as specified in OAC 252:100-8-1.5(b)(2), except that the emission rate specified by any applicable state implementation plan (or, in the absence of such a limit, the actual emission rate) shall be used, or

(B) the actual presence of a local nuisance caused by the existing stack, as determined by the Executive Director; and

(3) For sources seeking credit after January 12, 1979 for a stack height determined under OAC 252:100-8-1.5(b)(2) where the Executive Director requires the use of a field study or fluid model to verify GEP stack height, for sources seeking stack height credit after November 9, 1984 based on the aerodynamic influence of cooling towers, and for sources seeking stack height credit after December 31, 1970 based on the aerodynamic influence of structures not adequately represented by the formulae in OAC 252:100-8-1.5(b)(2), a maximum ground-level concentration due in whole or part to downwash, wakes or eddy effects that is at least 40 percent in excess of the maximum concentration experienced in the absence of such downwash, wakes or eddy effects.

PART 3. PERMIT APPLICATION FEES

252:100-8-1.7. Permit application fees

A permit application or a request for an applicability determination received after the effective date of this subsection will be assessed a one-time fee, which must accompany the application or request. Applications received without appropriate fees are administratively incomplete. Fees must be paid by check or money order made payable to the Oklahoma Air Quality Division in accordance with the following fee schedule:

(1) **Applicability determination.** \$250, to be credited against the construction or operating permit application fee, if a permit is required. If no permit is required, the fee will be retained to cover the cost of making the determination.

(2) **Construction permit application.** ~~The fee is \$2,000.~~

(A) New Part 70 source - \$2,000.

(B) Modification of a Part 70 source - \$1,500.

(C) Authorization under a general permit - \$900.

(3) **Operating permit application.**

(A) Initial Part 70 permit - \$2,000.

(B) Authorization under a general permit - \$900

- (C) Renewal Part 70 permit - \$1,000.
- (D) Significant modification of Part 70 permit - \$1,000.
- (E) Minor modification of Part 70 permit - \$500.
- (F) Part 70 Temporary Source Relocation - \$500.

PART 5. PERMITS FOR PART 70 SOURCES

252:100-8-2. Definitions

The following words and terms, when used in this Part, shall have the following meaning, unless the context clearly indicates otherwise. Except as specifically provided in this ~~section~~ Section, terms used in this Part retain the meaning accorded them under the applicable requirements of the Act.

"Administratively complete" means an application that provides:

- (A) All information required under OAC 252:100-8-5(c), (d), or (e);
- (B) A landowner affidavit as required by OAC 252:2-15-20(b)(3);
- (C) The appropriate application fees as required by OAC 252:100-8-1.7; and
- (D) Certification by the responsible official as required by OAC 252:100-8-5(f).

"Affected source" means the same as the meaning given to it in the regulations promulgated under Title IV (acid rain) of the Act.

"Affected states" means:

(A) all states:

- (i) That are one of the following contiguous states: Arkansas, Colorado, Kansas, Missouri, New Mexico and Texas, and
 - (ii) That in the judgment of the DEQ may be directly affected by emissions from the facility seeking the permit, permit modification, or permit renewal being proposed;
- or

(B) all states that are within 50 miles of the permitted source.

"Affected unit" means the same as the meaning given to it in the regulations promulgated under Title IV (acid rain) of the Act.

"Applicable requirement" means all of the following as they apply to emissions units in a Part 70 source subject to this Chapter (including requirements that have been promulgated or approved by EPA through rulemaking at the time of issuance but have future effective compliance dates):

- (A) Any standard or other requirements provided for in the applicable implementation plan approved or promulgated by EPA through rulemaking under Title I of the Act that implements the relevant requirements of the Act, including any revisions to that plan promulgated in 40 CFR Part 52;
- (B) Any term or condition of any preconstruction permits issued pursuant to regulations approved or promulgated through rulemaking under Title I, including parts C or D, of the Act;
- (C) Any standard or other requirement under section 111 of the Act, including section 111(d);
- (D) Any standard or other requirement under section 112 of the Act, including any requirement concerning accident prevention under section 112(r)(7) of the Act, but not including the contents of any risk management plan required under 112(r) of the Act;

- (E) Any standard or other requirement of the acid rain program under Title IV of the Act or the regulations promulgated thereunder;
- (F) Any requirements established pursuant to section 504(b) or section 114(a)(3) of the Act;
- (G) Any standard or other requirement governing solid waste incineration, under section 129 of the Act;
- (H) Any standard or other requirement for consumer and commercial products, under section 183(e) of the Act;
- (I) Any standard or other requirement for tank vessels, under section 183(f) of the Act;
- (J) Any standard or other requirement of the regulations promulgated to protect stratospheric ozone under Title VI of the Act, unless the Administrator has determined that such requirements need not be contained in a Title V permit; and
- (K) Any national ambient air quality standard or increment or visibility requirement under part C of Title I of the Act, but only as it would apply to temporary sources permitted pursuant to section 504(e) of the Act.

"Designated representative" means with respect to affected units, a responsible person or official authorized by the owner or operator of a unit to represent the owner or operator in matters pertaining to the holding, transfer, or disposition of allowances allocated to a unit, and the submission of and compliance with permits, permit applications, and compliance plans for the unit.

"Draft permit" means the version of a permit for which the DEQ offers public participation under 27A O.S. ~~Supp. 1995, §§ 2-14-101 et seq. through -401~~ and OAC 252:100-2-15 or affected State review under OAC 252:100-8-8.

"Emergency" means, when used in OAC 252:100-8-6(a)(3)(C)(iii)(I) and OAC 252:100-8-6(e), any situation arising from sudden and reasonably unforeseeable events beyond the control of the source, including acts of God, which situation requires immediate corrective action to restore normal operation, and that causes the source to exceed a technology-based emission limitation under the permit, due to unavoidable increases in emissions attributable to the emergency. An emergency shall not include noncompliance to the extent caused by improperly designed equipment, lack of preventive maintenance, careless or improper operation, or operator error. *[Moved from 252:100-8-6(e)(I) and amended.]*

"Emissions allowable under the permit" means a federally enforceable permit term or condition determined at issuance to be required by an applicable requirement that establishes an emissions limit (including a work practice standard) or a federally enforceable emissions cap that the source has assumed to avoid an applicable requirement to which the source would otherwise be subject.

"Emissions unit" means any part or activity of a stationary source that emits or has the potential to emit any regulated air pollutant or any pollutant listed under section 112(b) of the Act. Fugitive emissions from valves, flanges, etc. associated with a specific unit process shall be identified with that specific emission unit. This term is not meant to alter or affect the definition of the term "unit" for purposes of Title IV of the Act.

"Final permit" means the version of a part 70 permit issued by the DEQ that has completed all review procedures required by OAC 252:100-8-7 through ~~252:100-8-7.5~~ and OAC 252:100-8-8.

"Fugitive emissions" means those emissions of regulated air pollutants which could not reasonably pass through a stack, chimney, vent, or other functionally-equivalent opening.

"General permit" means a part 70 permit that meets the requirements of OAC 252:100-8-6.1.

"Insignificant activities" means individual emissions units that are either on the list approved by the Administrator and contained in Appendix I, or whose actual calendar year emissions do not exceed any of the limits in (A) through (C) of this definition. Any activity to which a State or federal applicable requirement applies is not insignificant even if it meets the criteria below or is included on the insignificant activities list.

(A) 5 tons per year of any one criteria pollutant.

(B) 2 tons per year for any one hazardous air pollutant (HAP) or 5 tons per year for an aggregate of two or more HAP's, or 20 percent of any threshold less than 10 tons per year for single HAP that the EPA may establish by rule.

(C) 0.6 tons per year for any one category A substance, 1.2 tons per year for any one category B substance or 6 tons per year for any one category C substance as defined in OAC 252:100-41-40.

"MACT" means maximum achievable control technology.

"Major source" means any stationary source (or any group of stationary sources that are located on one or more contiguous or adjacent properties and are under common control of the same person (or persons under common control)) belonging to a single major industrial grouping and that is described in subparagraph (A), (B), or (C) of this definition. For the purposes of defining "major source," a stationary source or group of stationary sources shall be considered part of a single industrial grouping if all of the pollutant emitting activities at such source or group of sources on contiguous or adjacent properties belong to the same Major Group (i.e., all have the same two-digit primary SIC code) as described in the Standard Industrial Classification Manual, 1987.

(A) A major source under section 112 of the Act, which is defined as:

(i) For pollutants other than radionuclides, any stationary source or group of stationary sources located within a contiguous area and under common control that emits or has the potential to emit, in the aggregate, 10 tons per year ("tpy") or more of any hazardous air pollutant which has been listed pursuant to section 112(b) of the Act, 25 tpy or more of any combination of such hazardous air pollutants, or such lesser quantity as the Administrator may establish by rule. Notwithstanding the preceding sentence, emissions from any oil or gas exploration or production well (with its associated equipment) and emissions from any pipeline compressor or pump station shall not be aggregated with emissions from other similar units, whether or not such units are in a contiguous area or under common control, to determine whether such units or stations are major sources; or

(ii) For radionuclides, "major source" shall have the meaning specified by the Administrator by rule.

(B) A major stationary source of air pollutants, as defined in section 302 of the Act, that directly emits or has the potential to emit, 100 tpy or more of any regulated air pollutant (except ~~TSP~~ that fraction of particulate matter that exhibits an average aerodynamic particle diameter of more than 10 micrometers) (including any major source of fugitive emissions of any such pollutant, as determined by rule by the Administrator). The fugitive emissions of a stationary source shall not be considered in determining whether

it is a major stationary source for the purposes of section 302(j) of the Act, unless the source belongs to one of the following categories of stationary sources:

- (i) Coal cleaning plants (with thermal dryers);
 - (ii) Kraft pulp mills;
 - (iii) Portland cement plants;
 - (iv) Primary zinc smelters;
 - (v) Iron and steel mills;
 - (vi) Primary aluminum ore reduction plants;
 - (vii) Primary copper smelters;
 - (viii) Municipal incinerators capable of charging more than 250 tons of refuse per day;
 - (ix) Hydrofluoric, sulfuric, or nitric acid plants;
 - (x) Petroleum refineries;
 - (xi) Lime plants;
 - (xii) Phosphate rock processing plants;
 - (xiii) Coke oven batteries;
 - (xiv) Sulfur recovery plants;
 - (xv) Carbon black plants (furnace process);
 - (xvi) Primary lead smelters;
 - (xvii) Fuel conversion plants;
 - (xviii) Sintering plants;
 - (xix) Secondary metal production plants;
 - (xx) Chemical process plants;
 - (xxi) Fossil-fuel boilers (or combination thereof) totaling more than 250 million British thermal units per hour heat input;
 - (xxii) Petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels;
 - (xxiii) Taconite ore processing plants;
 - (xxiv) Glass fiber processing plants;
 - (xxv) Charcoal production plants;
 - (xxvi) Fossil-fuel-fired steam electric plants of more than 250 million British thermal units per hour heat input; or
 - (xxvii) All other stationary source categories which, as of August 7, 1980, are being regulated by a standard promulgated under section 111 or 112 of the Act, but only with respect to those air pollutants that have been regulated for that category.
- (C) A major stationary source as defined in part D of Title I of the Act, including:
- (i) For ozone non-attainment areas, sources with the potential to emit 100 tpy or more of volatile organic compounds or oxides of nitrogen in areas classified as "marginal" or "moderate," 50 tpy or more in areas classified as "serious," 25 tpy or more in areas classified as "severe," and 10 tpy or more in areas classified as "extreme"; except that the references in this paragraph to 100, 50, 25, and 10 tpy of nitrogen oxides shall not apply with respect to any source for which the Administrator has made a finding, under section 182(f)(1) or (2) of the Act, that requirements under section 182(f) of the Act do not apply;
 - (ii) For ozone transport regions established pursuant to section 184 of the Act, sources with the potential to emit 50 tpy or more of volatile organic compounds;

(iii) For carbon monoxide non-attainment areas:

(I) that are classified as "serious"; and

(II) in which stationary sources contribute significantly to carbon monoxide levels as determined under rules issued by the Administrator, sources with the potential to emit 50 tpy or more of carbon monoxide; and

(iv) For particulate matter (PM-10) non-attainment areas classified as "serious," sources with the potential to emit 70 tpy or more of PM-10.

"Maximum capacity" means the quantity of air contaminants that theoretically could be emitted by a stationary source without control devices based on the design capacity or maximum production capacity of the source and 8,760 hours of operation per year. In determining the maximum theoretical emissions of VOCs for a source, the design capacity or maximum production capacity shall include the use of raw materials, coatings and inks with the highest VOC content used in practice by the source.

"Permit" (unless the context suggests otherwise) means any permit or group of permits covering a Part 70 source that is issued, renewed, amended, or revised pursuant to this Chapter.

"Permit modification" means a revision to a Part 70 construction or operating permit that meets the requirements of OAC 252:100-8-7.2(b).

"Permit program costs" means all reasonable (direct and indirect) costs required to develop and administer a permit program, as set forth in OAC 252:100-5-2.2 (whether such costs are incurred by the DEQ or other State or local agencies that do not issue permits directly, but that support permit issuance or administration).

"Permit revision" means any permit modification or administrative permit amendment.

"Potential to emit" means the maximum capacity of a stationary source to emit any air pollutant under its physical and operational design. Any physical or operational limitation on the capacity of a source to emit an air pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitation is enforceable by the Administrator. This term does not alter or affect the use of this term for any other purposes under the Act, or the term "capacity factor" as used in Title IV of the Act or the regulations promulgated thereunder.

"Proposed permit" means the version of a permit that the DEQ proposes to issue and forwards to the Administrator for review in compliance with OAC 252:100-8-8.

"Regulated air pollutant" means the following:

(A) Nitrogen oxides or any volatile organic compound (VOC), including those substances defined in OAC 252:100-1-3, 252:100-37-2, and 252:100-39-2, ~~or any Volatile Organic Solvent (VOS), as that term is defined in 252:100-37-2 and 252:100-39-2, or any organic material defined in 252:100-37-2~~ except those specifically excluded in the EPA definition of VOC in 40 CFR 51.100(s);

(B) Any pollutant for which a national ambient air quality standard has been promulgated;

(C) Any pollutant that is subject to any standard promulgated under section 111 of the Act;

(D) Any Class I or II ozone-depleting substance subject to a standard promulgated under or established by Title VI of the Act;

(E) Any pollutant subject to a standard promulgated under section 112 or other requirements established under section 112 of the Act (Hazardous Air Pollutants), including sections 112(g) (Modifications), (j) (Equivalent Emission Limitation by Permit, and (r) (Prevention of Accidental Releases), including the following:

(i) any pollutant subject to the requirements under section 112(j) of the Act. If the Administrator fails to promulgate a standard by the date established pursuant to section 112(e) of the Act (Schedule for Standards and Review), any pollutant for which a subject source would be major shall be considered to be regulated as to that source on the date 18 months after the applicable date established pursuant to section 112(e) of the Act; and,

(ii) any pollutant for which the requirements of section 112(g)(2) of the Act have been met, but only with respect to the individual source subject to the section 112(g)(2) requirement; or

(F) Any other substance for which an air emission limitation or equipment standard is set by an existing permit or regulation.

"Renewal" means the process by which a permit is reissued at the end of its term.

"Responsible official" means one of the following:

(A) For a corporation: a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation, or a duly authorized representative of such person if the representative is responsible for the overall operation of one or more manufacturing, production, or operating facilities applying for or subject to a permit and either:

(i) The facilities employ more than 250 persons or have gross annual sales or expenditures exceeding \$25 million (in second quarter 1980 dollars); or

(ii) The delegation of authority to such representatives is approved in advance by the DEQ;

(B) For the partnership or sole proprietorship: a general partner or the proprietor, respectively;

(C) For a municipality, State, Federal, or other public agency: Either a principal executive officer or ranking elected official. For purposes of this Subchapter, a principal executive officer or installation commander of a Federal agency includes the chief executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., a Regional Administrator of EPA); or

(D) For affected sources:

(i) The designated representative in so far as actions, standards, requirements, or prohibitions under Title IV of the Act or the regulations promulgated thereunder are concerned; and

(ii) The designated representative for any other purposes under this Subchapter.

"Section 502(b)(10) changes" means changes that contravene an express permit term. Such changes do not include changes that would violate applicable requirements or contravene federally enforceable permit terms and conditions that are monitoring (including test methods), recordkeeping, reporting, or compliance certification requirements.

"Small unit" means a fossil fuel fired combustion device which serves a generator with a name plate capacity of 25 MWe or less.

"**State-only requirement**" means any standard or requirement pursuant to Oklahoma Clean Air Act (27A O.S. 1993 Supp. Sec. §§ 2-5-101 ~~et seq. through -118~~, as amended) that is not contained in the State Implementation Plan (SIP).

"**State program**" means a program approved by the Administrator under 40 CFR Part 70.

"**Stationary source**" means any building, structure, facility, or installation that emits or may emit any regulated air pollutant or any pollutant listed under section 112(b) of the Act.

"**Trivial activities**" means any individual or combination of air emissions units that are considered inconsequential and are on a list approved by the Administrator and contained in Appendix J. ~~Any activity to which a State or federal applicable requirement applies is not trivial even if included on the trivial activities list.~~

"**Unit**" means, for purposes of Title IV, a fossil fuel-fired combustion device.

252:100-8-3. Applicability

(a) **Covered sources.** Except as exempted from the requirement to obtain a permit under subsection (b) of this Section or elsewhere in this Subchapter, the sources listed below are subject to the permitting requirements under this Subchapter. ~~A covered~~ major source or major stationary source shall remain a Part 70 source until a federally enforceable permit is obtained which contains emission limitations and/or conditions to limit the operation of the facility to below that which would define it as a covered source pursuant to this section.

- (1) Any major source (as defined in OAC 252:100-8-2);
- (2) Any source subject to a NSPS;
- (3) Any source, including an area source, subject to a NESHAP;
- (4) Any affected source (as defined in OAC 252:100-8-2);
- (5) Any source in a source category designated by the Administrator pursuant to 40 CFR §70.3; and
- (6) Any major stationary source required to have a permit under Parts 7 or 9 of this Subchapter.

(b) Source category exemptions.

(1) All sources listed in subsection (a) of this section that are not major sources, major stationary source, affected sources, or solid waste incineration units required to obtain a permit pursuant to section 129(e) of the Act, are exempt from the obligation to obtain a Part 70 permit unless required to do so by appropriate implementation of EPA administrative rulemaking for non-major sources. Any such exempt source may opt to apply for a permit under these rules and shall be issued a permit if the applicant otherwise satisfies all of the requirements of this Chapter.

(2) If the Administrator determines after appropriate rulemaking that an exemption is applicable to non-major sources when adopting standards or other requirements under section 111 or section 112 of the Act after July 21, 1992, then at that time the exemption will apply.

(3) Unless otherwise required to obtain a Part 70 permit, the following source categories are exempted from the obligation to obtain a Part 70 permit:

- (A) All sources in source categories that would be required to obtain a permit solely because they are subject to part 60, subpart AAA -- Standards of Performance for New Residential Wood Heaters; and

(B) All sources in source categories that would be required to obtain a permit solely because they are subject to part 61, subpart M -- National Emission Standard for Hazardous Air Pollutants for Asbestos, Section 61.145, Standard for Demolition and Renovation.

252:100-8-4. Requirements for construction and operating permits

(a) Construction permits.

(1) **Construction permit required.** No person shall ~~cause or allow the begin~~ actual construction or installation of any new ~~facility~~ source that will require a Part 70 operating permit without first obtaining a DEQ-issued air quality construction permit. A construction permit is also required prior to reconstruction of a major affected source under 40 CFR Part 63, reconstruction of a major source if it would then become a major affected source under 40 CFR Part 63, or for any physical change that would be a significant modification under OAC 252:100-8-7.2(b)(2). In addition to the requirements of this Part, sources subject to Part 7 or Part 9 of this Subchapter must also meet the applicable requirements contained therein.

(2) Requirement for case-by-case MACT determinations.

(A) **Applicability.** The requirement for case-by-case MACT determinations apply to any owner or operator who constructs or reconstructs a major source of hazardous air pollutants after June 29, 1998, unless the source has been specifically regulated or exempted from regulation under a subpart of 40 CFR Part 63, or the owner or operator has received all necessary air quality permits for such construction or reconstruction before June 29, 1998.

(B) **Exclusions.** The following sources are not subject to this subsection.

(i) Electric utility steam generating units unless and until these units are added to the source category list.

(ii) Stationary sources that are within a source category that has been deleted from the source category list.

(iii) Research and development activities as defined in 40 CFR § 63.41.

(C) **MACT determinations.** If subject to this subsection, an owner or operator may not begin actual construction or reconstruction of a major source of HAP until obtaining from the DEQ an approved MACT determination in accordance with the following regulations: 40 CFR 63.41, 40 CFR 63.43 and 40 CFR 63.44, which are hereby incorporated by reference as they exist on July 1, ~~1998~~ 2000.

(b) Operating permits.

(1) **Operating permits required.** Except as provided in subparagraphs (A) and (B) of this section, no Part 70 source subject to this Chapter may operate after the time that it is required to file a timely application with the DEQ, except in compliance with a DEQ-issued permit.

(A) If the owner or operator of a source subject to the requirement to obtain a Part 70 permit submits a timely application for Part 70 permit issuance or renewal, that source's failure to have a Part 70 permit shall not be a violation of the requirement to have such a permit until the DEQ takes final action on the application. This protection shall cease to apply if the applicant fails to submit, by the deadline specified in writing by the DEQ or OAC 252:100-8-4, any additional information identified as being reasonably required to process the application.

(B) If the owner or operator of a source subject to this Subchapter files a timely application that the DEQ determines to be administratively incomplete due to the applicant's failure to timely provide additional information requested by the DEQ, the applicant loses the protection granted under paragraph (A) of this ~~section~~Section. The source's failure to have a Part 70 permit shall be deemed a violation of this Subchapter.

(C) Filing an operating permit application shall not affect the requirement, if any, that a source have a construction permit.

(2) **Duty to apply.** For each Part 70 source, the owner or operator shall submit a timely and complete permit application on forms supplied by the DEQ in accordance with this section.

(3) **Timely application.** Sources that are subject to the operating permit program established by this Chapter as of March 6, 1996, shall file applications on the following schedules outlined in OAC 252:100-8-4(b)(4). A timely application is one that is postmarked on or before the relevant date listed below. In the event a major source consists of operations under multiple SIC codes, the primary activity shall form the basis for the initial permit application.

(4) **Application submittal schedule.** The following sources are subject to the operating permit program and shall submit initial permit applications according to the following schedule.

(A) No later than September 5, 1996:

(i) Affected sources under the acid rain provisions of the Act shall submit a permit application for at least the affected units at the site. Regardless of the effective date of the program and the requirement to file an application defined in this section, applications for initial Phase II acid rain permits shall be submitted to the DEQ no later than January 1, 1996, for sulfur dioxide, and by January 1, 1998, for nitrogen oxides, pursuant to the Act, §407.

(ii) Any owner or operator shall submit no less than one-third of their total applications for Part 70 sources located at sources classified by the following Source Standard Industrial Classification Codes and which belong to a single major industrial grouping other than 28 (Chemicals and allied products) or 29 (Petroleum refining and related industries):

(I) Petroleum and Natural Gas, 1311;

(II) Natural Gas Liquids, 1321;

(III) Electric Services, 4911, 4961;

(IV) Natural Gas Transmission, 4922;

(V) Natural Gas Transmission and Distribution, 4923; and

(VI) Petroleum Bulk Stations and Terminals, 5171.

(B) All remaining Part 70 sources identified in (b)(4)(A)(ii) of this Subsection shall be subject to the operating permit program and shall submit initial permit applications no later than March 5, 1997.

(C) No later than March 5, 1997, any owner or operator shall submit their applications for Part 70 sources located at sources classified by the following Standard Industrial Classification Codes:

(i) Metals, 3312, 3315, 3321, 3341, 3351, 3411, 3412, 3432, 3466,

(ii) Brick Plants, 3251, 3297,

(iii) Commercial Printing, 2752, 2761.

(D) No later than July 5, 1998, any owner or operator shall submit their applications for Part 70 sources located at sources classified by the following Standard Industrial Classification Codes:

(i) Refineries, 2911;

(ii) Cement Plants, 3241;

(iii) Chemical/Carbon, 2819, 2821, 2851, 2861, 2869, 2891, 2895, 2899, 2999, 3053, 3086, 3089;

(iv) Petroleum Transportation/Terminals/Storage, 4612, 4613;

(v) Food Products, 2013, 2074, 2095.

(E) All remaining Part 70 sources shall be subject to the operating permit program and shall submit initial permit applications no later than March 6, 1999.

(5) **Newly regulated sources.** A source that becomes subject to the operating permit program established by this Chapter at any time following the effective date shall file an administratively complete operating permit application within 180 days of commencement of operation.

(6) **Application acceptability.** Notwithstanding the deadlines established in paragraph (4) of this subsection, an application filed prior to the above deadlines following submission of the state program to EPA for approval shall be accepted for processing.

(7) **112(g) applications.** A source that is required to meet the requirements under section 112(g) of the Act, or to have a permit under a preconstruction review program under Title I of such Act, shall file an application to obtain an operating permit or permit amendment or modification within twelve months of commencing operation. Where an existing Part 70 operating permit would prohibit such construction or change in operation, the source must obtain a construction permit before commencing construction.

(8) **Application for renewal.** Sources subject to this Chapter shall file an application for renewal of an operating permit at least six months before the date of permit expiration, unless a longer period (not to exceed 18 months) is specified in the permit. Renewal periods greater than six months are subject to negotiation on a case-by-case basis.

(9) **Phase II acid rain permits.** Sources required to submit applications under the Acid Rain Program shall submit these applications as required by 40 CFR 72.30(b)(2)(i) through (viii).

(10) **Application completeness.** See Uniform Permitting Rules, OAC 252:2-15-70 and the definition of "administratively complete" in OAC 252:100-8-2.

252:100-8-5. Permit applications

(a) **Confidential information.** If a source submits information to the DEQ under a claim of confidentiality, the source shall also submit a copy of such information directly to the Administrator, if the DEQ requests that the source do so.

(b) Duty to supplement or correct application. See ~~252:100-6-50(c)~~. Any applicant who fails to submit any relevant facts or who has submitted incorrect information in a permit application shall, upon becoming aware of such failure or incorrect submittal, submit such supplementary facts or corrected information within 30 days unless the applicant's request for more time has been approved by the DEQ. In addition, an applicant shall provide

additional information as necessary to address any requirements that become applicable to the source after the date it filed a complete application but prior to release of a draft permit.

[This language was taken from 252:100-6-50(e).]

(c) **Standard application form and required information.** Sources that are subject to the Part 70 permit program established by this Chapter shall file applications on the standard application form that the DEQ makes available for that purpose in accordance with OAC 252:2-15. The application must include information needed to determine the applicability of any applicable requirement, or state-only requirement, or to evaluate the fee amount required under the schedule approved pursuant to OAC 252:100-5-2.2(b)(2). The applicant shall submit the information called for by the application form for each emissions unit at the source to be permitted. The source must provide a list of any insignificant activities that are exempted because of size or production rate. Trivial activities need not be listed. The standard application form and any attachments shall require that the information required by OAC 252:100-8-5(d) and/or 252:100-8-5(e) be provided.

(d) **Construction permit applications.**

(1) An application for a construction permit shall provide data and information required by this Chapter and/or requested on the application form available from the DEQ pursuant to the requirements of this Chapter. Such data and information shall include but not be limited to site information, process description, emission data and when required, BACT, modeling and sampling point data as follows:

(A) **BACT determination.** To be approved for a construction permit, a major source must demonstrate that the control technology to be applied is the best that is available for each pollutant that would cause the source to be defined as a major source. This determination will be made on a case by case basis, taking into account energy, environmental, ~~cost~~ and economic impacts and other costs of alternative control systems. Unless required under Part 7 of this Subchapter, a BACT determination is not required for a modification that will result in an increase of emissions of less than 100 tons per year of any regulated air pollutant.

(B) **Modeling.** Any air quality modeling or ambient impact evaluation that is required shall be prepared in accordance with procedures acceptable to the DEQ and accomplished by the applicant.

(C) **Sampling points.** If required by the DEQ an application shall show how the new source will be equipped with sampling ports, instrumentation to monitor and record emission data and other sampling and/or testing equipment. ~~{NOTE: 252:100-8-1.4(b)(1) was taken from 252:100-7-15(b)}~~

(2) Construction permit applications for new sources must also include the requirements for operating permits contained in OAC 252:100-8-5(e) to the extent they are applicable.

(e) **Operating permit applications.**

(1) Identifying information, including company name and address (or plant name and address if different from the company name), owner's name and agent, and telephone number and names of plant site manager/contact.

(2) A description of the source's processes and products (by two-digit Standard Industrial Classification Code) including any associated with each alternate scenario identified by the source.

(3) The following emissions-related information:

(A) All emissions of pollutants for which the source is major, and all emissions (including fugitive emissions) of regulated air pollutants. The permit application shall describe all emissions of regulated air pollutants emitted from any emissions unit, except where such units are exempted under ~~this subsection 252:100-8-5(c)~~ of this Section or OAC 252:100-8-3(b).

(B) Identification and description of all points of emissions described in subparagraph (e)(3)(A) of this ~~section~~ Section in sufficient detail to establish the basis for fees and applicability of the Act's requirements.

(C) Emissions rates in tons per year and in such terms as are necessary to establish compliance consistent with the applicable standard.

(D) The following information to the extent it is needed to determine or regulate emissions:

- (i) fuels,
- (ii) fuel use,
- (iii) raw materials,
- (iv) production rates, and
- (v) operating schedules.

(E) Identification and description of air pollution control equipment and compliance monitoring devices or activities.

(F) Limitations on source operation affecting emissions or any work practice standards, where applicable, for all regulated pollutants at the covered source.

(G) Other information required by any applicable requirement, or state-only requirement (including information related to stack height limitations developed pursuant to section 123 of the Act).

(H) Calculations on which the information in items (A) through (G) of this paragraph is based.

(4) The following air pollution control requirements:

(A) Citation and description of all applicable requirements and all state-only requirements.

(B) Description of or reference to any applicable test method for determining compliance with each applicable requirement and state-only requirement.

(5) Other specific information required under the DEQ's rules and statutes to implement and enforce other applicable requirements of the Act or of this Chapter or to determine the applicability of such requirements.

(6) An explanation of any proposed exemptions from otherwise applicable requirements and state-only requirements.

(7) Additional information as determined to be necessary by the DEQ to define alternative operating scenarios identified by the source pursuant to OAC 252:100-8-6(a)(9) or to define permit terms and conditions implementing OAC 252:100-8-6(f) or 252:100-8-6(a)(10).

(8) A compliance plan for all covered sources that contains all the following:

(A) A description of the compliance status of the source with respect to all applicable requirements and state-only requirements as follows:

- (i) For applicable requirements and state-only requirements with which the source is in compliance, a statement that the source will continue to comply with such requirements.

(ii) For applicable requirements and state-only requirements that will become effective during the permit term, a statement that the source will meet such requirements on a timely basis shall satisfy this provision, unless a more detailed schedule is expressly required by the applicable requirement.

(iii) For requirements for which the source is not in compliance at the time of permit issuance, a narrative description of how the source will achieve compliance with such requirements.

(B) For sources not in complete compliance, a compliance schedule as follows:

(i) A schedule of compliance for sources that are not in compliance with all applicable requirements and state-only requirements at the time of permit issuance. Such a schedule shall include a schedule of remedial measures, including an enforceable sequence of actions with milestones, leading to compliance with any applicable requirements and state-only requirements for which the source will be in noncompliance at the time of permit issuance. This compliance schedule shall resemble and be equivalent in stringency to that contained in any judicial consent decree or administrative order to which the source is subject. Any such schedule of compliance shall be supplemental to, and shall not sanction non-compliance with, the applicable requirements on which it is based.

(ii) A schedule for submission of certified progress reports no less frequently than every 6 months.

(C) The compliance plan content requirements specified in this paragraph shall apply and be included in the acid rain portion of a compliance plan for an affected source, except as specifically superseded by regulations promulgated under Title IV of the Act with regard to the schedule and method(s) the source will use to achieve compliance with the acid rain emissions limitations.

(9) Requirements for compliance certification, including the following:

(A) A certification of compliance with all applicable requirements and state-only requirements by a responsible official consistent with subsection (f) of this section and section 114(a)(3) of the Act;

(B) A statement of methods used for determining compliance, including a description of monitoring, recordkeeping, and reporting requirements and test methods;

(C) A schedule for submission of compliance certifications during the permit term, which shall be submitted annually, or more frequently if required by an underlying applicable requirement state-only requirements or by the permitting authority; and

(D) A statement indicating the source's compliance status with any applicable enhanced monitoring and compliance certification requirements of the Act.

(10) The use of nationally-standardized forms for acid rain portions of permit applications and compliance plans, as required by regulations promulgated under Title IV of the Act.

(f) **Certification.** Any application form, report, or compliance certification submitted pursuant to this Chapter shall contain certification by a responsible official of truth, accuracy, and completeness. This certification and any other certification required under this Chapter shall be signed by a responsible official and shall contain the following

language: "I certify, based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete."

~~(g) Number of application copies. — See Part 3 of 252:2-15.~~

252:100-8-6. Permit content

(a) **Standard permit requirements.** Part 70 permits issued under this Chapter shall include all applicable requirements and state-only requirements (as defined in OAC 252:100-8-2) that apply to the permitted source at the time of issuance. Each permit shall include the following elements:

(1) **Emission limitations and standards.** The permit shall specify emissions limitations and standards that constitute applicable requirements and state-only requirements and shall include those operational conditions and limitations necessary to assure compliance with all such requirements.

(A) The permit shall specify and reference the origin of and authority for each term or condition, and identify any difference in form as compared to the applicable requirement or state-only requirement upon which the term or condition is based.

(B) The permit shall state that, where an applicable requirement of the Act is more stringent than an applicable requirement of regulations promulgated under Title IV of the Act, both provisions shall be incorporated into the permit and shall be enforceable by EPA.

(C) If the State implementation plan or an applicable requirement allows a source to comply through an alternative emission limit or means of compliance, a source may request that such an alternative limit or means of compliance be specified in its permit. Such an alternative emission limit or means of compliance shall be included in a source's permit upon a showing that it is quantifiable, accountable, enforceable, and based on replicable procedures. The source shall propose permit terms and conditions to satisfy these requirements in its application.

(2) **Permit duration.**

(A) **Operating permits.** The permit shall specify a fixed term. The DEQ shall issue permits for any fixed period requested in the permit application, not to exceed five years, except as provided in subparagraphs (i) and (ii) of this paragraph:

(i) Permits issued to affected sources shall in all cases have a fixed term of five years.

(ii) Permits issued to solid waste incineration units combusting municipal waste subject to standards under section 129(e) of the Act shall have a term not to exceed 12 years. Such permits shall be reviewed every five years.

(B) **Construction permits.** See OAC 252:100-8-1.4.

(3) **Monitoring and related recordkeeping and reporting requirements.**

(A) **Monitoring requirements.**

(i) All emissions monitoring and analysis procedures or test methods required under applicable requirements and state-only requirements, including any procedures and methods promulgated pursuant to sections 114(a)(3) or 504(b) of the Act;

(ii) Where an applicable requirement or state-only requirement does not require periodic testing or instrumental or non-instrumental monitoring (which may consist of recordkeeping designed to serve as monitoring), periodic monitoring

during the relevant time period sufficient to yield reliable data that are representative of the source's compliance with the permit, as reported pursuant to (a)(3)(C) of this section. Such monitoring requirements shall assure use of terms, test methods, units, averaging periods, and other statistical conventions consistent with the applicable requirement or state-only requirement. Recordkeeping provisions may be sufficient to meet the requirements of this subparagraph.

(iii) As necessary, requirements concerning the use, maintenance, and, where appropriate, installation of monitoring equipment or methods.

(iv) Provisions for the permittee to request the use of alternative test methods or analysis procedures, and provisions for the DEQ to approve or disapprove the request within 60 days.

(B) Recordkeeping requirements. The permit shall incorporate all applicable recordkeeping requirements and require, where applicable, the following:

(i) Records of required monitoring information that include the following:

(I) The date, place as defined in the permit, and time of sampling or measurements;

(II) The date(s) analyses were performed;

(III) The company or entity that performed the analyses;

(IV) The analytical techniques or methods used;

(V) The results of such analyses; and

(VI) The operating conditions existing at the time of sampling or measurement.

(ii) Retention of records of all required monitoring data and support information for a period of at least five years from the date of the monitoring sample, measurement, report, or application. Support information includes all calibration and maintenance records and all original strip-chart recordings for continuous monitoring instrumentation, and copies of all reports required by the permit. Where appropriate, the permit may specify that records may be maintained in computerized form.

(C) Reporting requirements. The permit shall incorporate all applicable reporting requirements and require the following requirements:

(i) A permit issued under this Part shall require the permittee to submit a report of any required monitoring at least every six months. To the extent possible, the schedule for submission of such reports shall be timed to coincide with other periodic reports required by the permit, including the permittee's annual compliance certification. However, the reports may be submitted at any time within the reporting period, as stipulated in the permit.

(ii) Each report submitted under (C)(i) of this paragraph shall identify any exceedances from permit requirements since the previous report that have been monitored by the monitoring systems required under the permit, and any exceedances from the monitoring, recordkeeping and reporting requirements under the permit.

(iii) In addition to semiannual monitoring reports, each permittee shall be required to submit supplemental reports as follows:

(I) Any exceedance resulting from an emergency or upset conditions as defined in 252:100-8-6(e) OAC 252:100-8-2 or upset conditions as defined in the permit shall be reported within 24 hours of the date on which promptly but no later than 4:30 p.m. on the next working day after the permittee first becomes aware of the exceedance, if the permittee wishes to assert the affirmative defense authorized under said section, and the permittee shall submit a follow up written report within 10 working days of first becoming aware of the exceedance. The initial report must contain a description of the emergency or upset conditions, any steps taken to mitigate emissions, and corrective actions taken. Quantification of exceedances attributable to emergencies or upset conditions shall be made by the best available method. If the permittee wishes to assert the affirmative defense authorized under subsection (e) of this Section for emergencies, the permittee shall submit a followup written report within 10 working days of first becoming aware of the exceedance.

(II) Any exceedance that poses an imminent and substantial danger to public health, safety, or the environment shall be reported as soon as is practicable; but under no circumstance shall notification be more than 24 hours after exceedance.

(III) Any other exceedances that are identified in the permit as requiring more frequent reporting than the permittee's semiannual report shall be reported on the schedule specified in the permit.

(IV) All reports of exceedances shall identify the probable cause of the exceedances and any corrective actions or ~~preventative~~ preventive measures taken.

(iv) Every report submitted under this subsection shall be certified by a responsible official, except that if a report of an exceedance required under (C)(iii) of this paragraph must be submitted within ten days of the exceedance, the report may be submitted in the first instance without a certification if an appropriate certification is provided within ten days thereafter, together with any corrected or supplemental information required concerning the exceedance. Reports submitted shall be consistent with the requirements of OAC 252:100-9.

(4) **Risk management plans.** If the source is required to develop and register a risk management plan pursuant to section 112(r) of the Act, the permit need only specify that the permittee will comply with the requirement to register such a plan. Although the requirement to have a risk management plan may be a term of the permit, the risk management plan contents are not part of the permit.

(5) **Title IV allowances.**

(A) No permit revision shall be required for increases in emissions that are authorized by allowances acquired pursuant to the acid rain program, provided that such increases do not require a permit revision under any other applicable requirement.

(B) No limit shall be placed on the number of allowances held by the source. The source may not, however, use allowances as a defense to noncompliance with any other applicable requirement.

- (C) The permit shall prohibit emissions exceeding any allowance that the source lawfully holds under Title IV of the Act or the regulations promulgated thereunder. Compliance with this paragraph will be determined on January 31st of any given year and be based on actual emissions and the number of allowances held for the previous calendar year.
- (6) **Severability clause.** The permit shall include a severability clause to ensure the continued validity of the various permit requirements in the event of a challenge to any portions of the permit.
- (7) **General requirements.** The permit shall include provisions stating the following:
- (A) The permittee must comply with all conditions of the permit. Any permit noncompliance constitutes a violation of the Oklahoma Clean Air Act and is grounds for:
- (i) enforcement action;
 - (ii) permit termination, revocation and reissuance, or modification; or
 - (iii) denial of a permit renewal application.
- (B) It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit. However, nothing in this subsection shall be construed as precluding consideration of a need to halt or reduce activity as a mitigating factor in assessing penalties for noncompliance if the health, safety, or environmental impacts of halting or reducing operations would be more serious than the impacts of continuing operations.
- (C) The permit may be modified, revoked, reopened, and reissued, or terminated for cause. Except as provided under OAC 252:100-8-7.2(b)(1) for minor permit modifications, the filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or of a notification of planned changes or anticipated noncompliance does not stay any permit condition.
- (D) The permit does not convey any property rights of any sort or any exclusive privilege.
- (E) The permittee shall furnish to the DEQ, upon receipt of a written request and within a reasonable time, any information that the DEQ may request to determine whether cause exists for modifying, reopening, or revoking and reissuing or terminating the permit or to determine compliance with the permit. Upon request, the permittee shall also furnish to the DEQ copies of records required to be kept by the permit. The permittee may make a claim of confidentiality pursuant to 27A O.S. 1993 Supp. Section § 2-5-105.18 for any information or records submitted under this paragraph.
- (8) **Fees.** The permit shall provide that the permittee will pay fees to the DEQ consistent with the fee schedule established under OAC 252:100-5-2.2.
- (9) **Emissions trading.** The permit shall provide that no permit revision shall be required under any approved economic incentives, marketable permits, emissions trading and other similar programs or processes for changes that are provided for in the permit.
- (10) **Operating scenarios.** The permit shall include terms and conditions applicable to all operating scenarios described in the permit application and eligible for approval under applicable requirements and state-only requirements. The permit shall authorize

the permittee to make changes among operating scenarios authorized in the permit without notice, but shall require the permittee contemporaneously with making a change from one operating scenario to another to record in a log at the permitted facility the scenario under which it is operating.

(11) **Emissions averaging.** The permit shall include terms and conditions, if the permit applicant requests them, for the trading or averaging of emissions increases and decreases in the permitted facility, to the extent that the applicable requirements provide for trading or averaging such increases and decreases. Such terms and conditions shall include terms under subsections (a) and (c) of this ~~section~~Section to determine compliance and shall satisfy all requirements of the applicable requirements authorizing such trading or averaging.

(b) **Federally enforceable requirements.**

(1) Except as provided in paragraph (b)(2) of this ~~section~~Section, all terms and conditions in a permit issued under this ~~section~~Section, including any provisions designed to limit a source's potential to emit, are enforceable by the DEQ, by EPA, and by citizens under section 304 of the Act.

(2) Notwithstanding paragraph (b)(1) of this ~~section~~Section, the DEQ shall designate as not being federally enforceable under the Act any terms and conditions included in the permit that are not required under the Act or any of its applicable requirements, and such terms and conditions shall not be enforceable by EPA and citizens under section 304 of the Act.

(c) **Compliance requirements.** All permits issued under this Part shall contain the following elements with respect to compliance:

(1) Consistent with paragraph (a)(3) of this ~~section~~Section, compliance certification, testing, monitoring, reporting, and recordkeeping requirements sufficient to assure compliance with the terms and conditions of the permit. Any document (including reports) required by a permit under this Part shall contain a certification by a responsible official as to the results of the required monitoring.

(2) Inspection and entry requirements that require that, upon presentation of credentials and other documents as may be required by law, the permittee shall allow authorized officials of the DEQ to perform the following:

(A) Enter upon the permittee's premises during reasonable/normal working hours where a source is located or emissions-related activity is conducted, or where records must be kept under the conditions of the permit;

(B) Have access to and copy, at reasonable times, any records that must be kept under the conditions of the permit;

(C) Inspect at reasonable times and using reasonable safety practices any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under the permit; and

(D) As authorized by the Oklahoma Clean Air Act, sample or monitor at reasonable times substances or parameters for the purpose of assuring compliance with the permit.

(3) A schedule of compliance if required under OAC 252:100-8-5(e)(8)(B).

(4) To the extent required under an applicable schedule of compliance and OAC 252:100-8-5(e)(8), progress reports, to be submitted semiannually or more frequently if

specified in the applicable requirement or by the DEQ. Such progress reports shall contain the following:

- (A) Dates for achieving the activities, milestones, or compliance required in the schedule of compliance, and dates when such activities, milestones or compliance were achieved; and
 - (B) An explanation of why any dates in the schedule of compliance were not or will not be met, and any preventive or corrective measures adopted.
- (5) Requirements for compliance certification with terms and conditions contained in the permit that are federally enforceable, including emission limitations, standards, or work practices. Each permit shall specify:
- (A) The frequency (which shall be annually unless the applicable requirement or state-only requirement specifies submission more frequently) of submissions of compliance certifications;
 - (B) In accordance with paragraph (a)(3) of this ~~section~~ Section, a means for monitoring the compliance of the source with emissions limitations, standards, and work practices;
 - (C) A requirement that the compliance certification include the following:
 - (i) The identification of each term or condition of the permit that is the basis of the certification;
 - (ii) The permittee's current compliance status, as shown by monitoring data and other information available to the permittee;
 - (iii) Whether compliance was continuous or intermittent;
 - (iv) The method(s) used for determining the compliance status of the source, currently and over the reporting period as required by paragraph (a)(3) of this ~~section~~ Section; and
 - (v) Such other facts as the DEQ may require to determine the compliance status of the source;
 - (D) A requirement that all compliance certifications be submitted to EPA as well as to the DEQ;
 - (E) Such additional requirements as may be specified pursuant to sections 114(a)(3) and 504(b) of the Act; and
- (6) Such other provisions as the DEQ may require.
- (d) **Permit shield.**
- (1) Each operating permit issued under this Part shall include a "permit shield" provision, which shall state that compliance with the terms and conditions of the permit (including terms and conditions established for alternate operating scenarios, emissions trading, and emissions averaging, but excluding terms and conditions for which the permit shield is expressly prohibited under this Subchapter) shall be deemed compliance with the applicable requirements identified and included in the permit.
 - (2) Upon request, the DEQ shall include in the permit or in a separate written finding issued with the permit a determination identifying specific requirements that do not apply to the source. The source shall specify in its application for such a determination the requirements for which the determination is requested. If the determination is issued in a separate finding, that finding shall be summarized in the permit. The permit shall state that the permit shield applies to any requirements so identified. A request for a determination to extend the shield to requirements deemed inapplicable to the source

may be made either in the original permit application or in a subsequent application for a permit modification.

(3) A Part 70 permit that does not expressly state that a permit shield exists shall be presumed not to provide such a shield.

(4) Nothing in this ~~section~~Section or in the permit shall alter or affect the following:

(A) the provisions of section 303 of the Act, including the authority of the Administrator under that section;

(B) the liability of an owner or operator of a source for any violation of applicable requirements or state-only requirements prior to or at the time of permit issuance;

(C) the applicable requirements of the acid rain program, consistent with section 408(a) of the Act; or

(D) the ability of EPA to obtain information from a source pursuant to section 114 of the Act.

(e) Emergencies.

~~(1) When used in this Subsection, "Emergency" means any situation arising from sudden and reasonably unforeseeable events beyond the control of the source, including acts of God, which situation requires immediate corrective action to restore normal operation, and that causes the source to exceed a technology-based emission limitation under the permit, due to unavoidable increases in emissions attributable to the emergency. An emergency shall not include noncompliance to the extent caused by improperly designed equipment, lack of preventive maintenance, careless or improper operation, or operator error. Quantification of accidental releases shall be made by the best available method. [This paragraph, except for the last sentence, has been moved to 252:100-8-2 (Definitions). The last sentence has been amended and moved to 252:100-8-6(a)(3)(C)(iii)(I).]~~

~~(2)~~(1) An emergency constitutes an affirmative defense to an action brought for noncompliance with such technology-based emission limitations if the conditions of paragraph ~~(e)(3)~~(e)(2) of this ~~section~~Section and the reporting requirements of 252:100-8-6(a)(3)(C)(iii)(I) are met.

~~(3)~~(2) The affirmative defense of emergency shall be demonstrated through properly signed, contemporaneous operating logs or other relevant evidence that:

(A) An emergency occurred and that the permittee can identify the cause(s) of the emergency;

(B) The permitted facility was at the time being properly operated;

(C) During the period of the emergency the permittee took all reasonable steps to minimize levels of emissions that exceeded the emission standards or other requirements in the permit.

~~(4)~~(3) In any enforcement proceeding, the permittee seeking to establish the occurrence of an emergency has the burden of proof.

~~(5)~~(4) The provision in this subsection is in addition to any emergency or upset provision contained in any applicable requirement or OAC 252:100-9.

(f) Operational flexibility.

(1) **Applicant's duty to apply for alternative scenarios.** ~~Any operating scenario allowed for in an applicable Part 70 permit may be implemented by the A facility may implement any operating scenario allowed for in its Part 70 permit without the need for any permit revision or any notification to the permitting authority. It is incumbent upon~~

the Part 70 permit applicant to apply for any reasonably anticipated alternative facility operating scenarios at the time of initial or renewal permit application.

(2) **Changes resulting in no emissions increases.** A permitted Part 70 source may make changes within the facility that:

- (A) Are not modifications under any provision of Title I of the Act;
- (B) Do not cause any hourly or annual permitted emission rate of any existing emissions unit to be exceeded; and
- (C) Result in a net change in emissions of zero, provided that the facility notifies the DEQ and EPA in writing at least 7 days in advance of the proposed changes. The source, DEQ, and EPA shall attach each such notice to their copy of the relevant permit. For each such change, the written notification required above shall include a brief description of the change within the permitted facility, the date on which the change will occur, any change in emissions, and any permit term or condition that is no longer applicable as a result of the change. The permit shield described in OAC 252:100-8-6(d) does not apply to any change made pursuant to this subsection.

252:100-8-7. Permit issuance

(a) **Criteria for issuance.** A permit, permit modification, or renewal may be issued only if the applicable requirements of 27A O.S. ~~Supp. 1995, §§ 2-14-101 et seq. through -401;~~ OAC 252:2-15; and this Chapter have been met and the DEQ has determined that the conditions of the permit provide for compliance with all applicable requirements and, for applications subject to OAC 252:100-8-8, that the requirements of that section have been satisfied.

(b) **Draft permits and notice thereof.** See OAC 252:2-15. ~~The draft permit shall be accompanied by a statement that sets forth the legal and factual basis for the draft permit conditions (including references to the applicable statutory or regulatory provisions)~~ A statement that sets forth the legal and factual basis for the draft permit conditions (including references to the applicable statutory or regulatory provisions) shall accompany the draft permit.

(c) **EPA review.** See OAC 252:100-8-8.

(d) **DEQ final action.** See OAC 252:2-15, and OAC 252:100-8-8, when applicable.

(e) **Timeline for technical review and issuance.** The DEQ shall take final action on each application for a permit within 18 months after beginning its technical review in accordance with OAC 252:2-15-70 through 45-72 and OAC 252:100-8-4(b)(7).

(f) **Action priorities.** See OAC 252:100-8-4(b)(2) through (10) and OAC 252:100-8-7.1(a).

(g) **No issuance by default.** See 27A O.S. § 2-5-112(D).

252:100-8-7.2. Administrative permit amendments and permit modifications

(a) **Administrative permit amendments.**

(1) An administrative permit amendment:

- (A) Corrects typographical errors;
- (B) Identifies a change in the name, address, or phone number of any person identified in the permit, or provides a similar minor administrative change at the source;
- (C) Requires more frequent monitoring or reporting by the permittee;

(D) Allows for a change in ownership or operational control of a source where no other change in the permit is necessary, provided that a written agreement containing a specific date for transfer of permit responsibility, coverage, and liability between the current and new permittee has been submitted to the DEQ;

(E) Incorporates into the permit the requirements from preconstruction review permits issued by the DEQ under this Part.

(2) Administrative permit amendments for purposes of the acid rain portion of the permit shall be governed by 40 CFR Part 72.

(3) An administrative permit amendment shall be made by the DEQ in accordance with the following:

(A) The DEQ shall take final action on a request for an administrative permit amendment within 60 days from the date of receipt of such a request, and may incorporate the proposed changes without providing notice to the public or affected States provided that it designates any such permit revisions as having been made pursuant to this paragraph.

(B) The DEQ shall submit a copy of the revised permit to the Administrator upon the Administrator's request.

(C) The source may implement the changes addressed in the request for an administrative amendment immediately upon submittal of the request.

(4) The DEQ shall, upon taking final action granting a request for an administrative permit amendment, allow coverage by the permit shield in OAC 252:100-8-6(d) for administrative permit amendments made pursuant to subparagraph ~~252:100-8-7.2(a)(1)(E)~~ of this ~~section~~Section.

(b) **Permit modification.** A permit modification is any revision to a permit that cannot be accomplished under subsection (a) of this ~~section~~Section. A permit modification for purposes of the acid rain portion of the permit shall be governed by 40 CFR Part 72.

(1) **Minor permit modification procedures.**

(A) **Criteria.**

(i) Minor permit modification procedures may be used only for those permit modifications that:

(I) Do not violate any applicable requirement, or state-only requirements;

(II) Do not involve significant changes to existing monitoring, reporting or recordkeeping requirements in the permit;

(III) Do not require or change a case-by-case determination of an emission limitation or other standard, or a source-specific determination for temporary sources of ambient impacts, or a visibility or increment analysis;

(IV) Do not seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement or state-only requirement which the source has assumed to avoid some other applicable requirement or state-only requirement to which the source would otherwise be subject. Such terms and conditions include federally-enforceable emissions caps assumed to avoid classification as a modification under any provision of Title I and alternative emissions limits approved pursuant to regulations promulgated under §§112(i)(5) of the Act; and

(V) Are not modifications under any provision of Title I of the Act.

(ii) Notwithstanding OAC 252:100-8-7.2(b)(1)(A)(i) and OAC 252:100-8-7.2(b)(2)(A), minor permit modification procedures may be used for permit modifications involving the use of economic incentives, marketable permits, emissions trading, and other similar approaches, to the extent that such minor permit modification procedures are explicitly provided for in the State's implementation plan or in applicable requirements promulgated by EPA.

(B) Application. To use the minor permit modification procedures, a source shall submit an application requesting such use which shall meet the permit application requirements of Tier I under OAC 252:2-15 and shall include the following:

(i) A description of the change, the emissions resulting from the change, and any new applicable requirements or state-only requirements that will apply if the change occurs;

(ii) The source's suggested modification language;

(iii) Certification by a responsible official, that the application and the proposed modification meet the criteria for use of minor permit modification procedures; and

(iv) Completed forms for any notices required by OAC 252:2-15 and subparagraph (C) of this paragraph.

(C) EPA and affected state notification. If the proposed minor modification is of a permit that underwent EPA review in accordance with OAC 252:100-8-8, the provisions of that section shall apply to the minor modification application unless waived by the Administrator.

(D) Timetable for issuance. Within 90 days of the DEQ's receipt of a complete application under OAC 252:2-15 the DEQ shall:

(i) Issue the minor permit modification as approved;

(ii) Deny the minor permit modification application; or

(iii) Determine that the requested modification does not meet the minor permit modification criteria and should be reviewed under the significant modification procedures or administrative amendment procedures.

(E) Source's ability to make change. Immediately after filing an application meeting the requirements of these minor permit modification procedures, the source is authorized to make the change or changes proposed in the application. After the source makes the change and until the DEQ takes any of the actions specified in (1)(D)(i) through (iii) of this subsection, the source must comply with the applicable requirements and state-only requirements governing the change and the proposed permit terms and conditions. During this period, the source need not comply with the existing terms and conditions it seeks to modify. However, if the source fails to comply with its proposed permit terms and conditions during this time period, the existing permit terms and conditions it seeks to modify may be enforced against it.

(F) Permit shield. The permit shield under OAC 252:100-8-6(d) will not extend to minor permit modifications.

(G) Permittee's risk in commencing construction. The permittee assumes the risk of losing any investment it makes toward implementing a modification prior to receiving a permit amendment authorizing the modification. The DEQ will not consider the possibility of the permittee suffering financial loss due to such

investment when deciding whether to approve, deny, or approve in modified form a minor permit amendment.

(2) Significant modification procedures.

(A) Criteria. Significant modification procedures shall be used for applications requesting permit modifications that:

(i) Involve any significant changes in existing monitoring requirements in the permit;

(ii) Relax any reporting or recordkeeping requirements.

(iii) Change any permit condition that is required to be based on a case-by-case determination of an emission limitation or other standard, on a source-specific determination of ambient impacts, or on a visibility or increment analysis;

(iv) Seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement or state-only requirement which the source has assumed to avoid some other applicable requirement or state-only requirement to which the source would otherwise be subject. Such terms and conditions include:

(I) A federally enforceable emissions cap assumed to avoid classification as a modification under any provision of Title I;

(II) An alternative emissions limit approved pursuant to regulations promulgated under section 112(i)(5) of the Act; and

(v) Are modifications under any provision of Title I of the Act; and,

(vi) Do not qualify as minor permit modifications or administrative amendments.

(B) Procedures for processing. Significant permit modifications shall meet all requirements of these rules that are applicable to Tier II applications. The application for the modification shall describe the change, the emissions resulting from the change, and any new applicable requirements or state-only requirements that will apply if the change occurs.

(C) Issuance. The DEQ shall complete review of significant permit modifications within nine months after receipt of a complete application, but shall be authorized to extend that date by up to three months for cause.

252:100-8-8. Permit review by EPA and affected states

(a) Applicability. This ~~section~~ Section applies only to specific Tier II and III applications for Part 70 construction and/or operating permits and permit actions that have not been waived from compliance with this section by the Administrator.

(b) Format. To the extent practicable, information provided to the EPA by applicants shall be in computer-readable format compatible with EPA's national database management system.

(c) Recordkeeping. The DEQ will keep for 5 years records required by this ~~section~~ Section and will submit to the Administrator such information as the Administrator may reasonably require to ascertain whether the State program complies with the requirements of the Act or of this Chapter.

(d) Transmission of Part 70 applications to EPA. For Part 70 Tier II and III applications subject to this section, the DEQ shall require an applicant upon filing to also provide a copy to the Administrator or the DEQ may submit a permit application summary form and any relevant portion of the permit application and compliance plan, in place thereof.

(e) **Transmittal of notice of draft permit to affected states.** See 27A O.S. ~~Supp. 1995, § 2-5-112(E); 27A O.S. Supp. 1995, §§ 2-14-101 et seq. through -401;~~ and OAC 252:2-15.

(f) **Preparation and submittal of EPA review copy.**

(1) **Tier II applications.** For Tier II applications, the DEQ shall review public comments, revise the draft permit as appropriate and submit the revision to EPA for review no later than 60 days before the issuance deadline established in OAC 252:2-15-72 or, if none, by this Chapter.

(2) **Tier III applications.** For Tier III applications, the DEQ shall prepare a proposed permit according to 27A O.S. ~~Supp. 1995, § 2-14-304,~~ and submit it to EPA for review upon the publication of notice of an administrative permit hearing opportunity.

(g) **Notice of non-acceptance.** As part of the DEQ's submittal of a revised draft permit (Tier II) or a proposed permit (Tier III) to the Administrator, the DEQ shall notify the Administrator and any affected State in writing of any refusal by the DEQ to accept all recommendations for the revised draft permit or proposed permit that the affected State submitted during the review period. The notice will include the DEQ's reasons for not accepting any such recommendation. The DEQ is not required to accept recommendations that are not based on applicable requirements of the Oklahoma Clean Air Act or these rules.

(h) **EPA review and non-objection.** Upon receipt of notice from the EPA that it will not object to:

- (1) A revised draft permit based on a Tier II application, the DEQ shall issue the permit.
- (2) A proposed permit based on a Tier III application, the DEQ shall issue the proposed permit as final unless an administrative permit hearing has been timely and properly requested.

(i) **EPA review and objection.**

(1) **Timing.** Except as specified in paragraph 5 of this subsection, no permit for which an application must be transmitted to the Administrator under subsection (a) of ~~this section~~ Section shall be issued if the Administrator objects to its issuance in writing within 45 days of receipt of the revised draft permit (Tier ~~II~~) or proposed permit (Tier III) and all necessary supporting information.

(2) **Form of objection.** An EPA objection shall include a statement of the Administrator's reasons for objection and a description of the terms and conditions that the permit must include to respond to the objections.

(3) **Additional grounds.** Failure of the DEQ to do any of the following also shall constitute grounds for an objection:

(A) Comply with subsections (d) or (e) of this ~~section~~ Section;

(B) Submit any information necessary to review adequately the revised draft permit (Tier II) or the proposed permit (Tier III); or

(C) Process the permit application according to the uniform permitting requirements of OAC 252:2-15.

(4) **Copy.** The Administrator will provide the permit applicant a copy of the objection.

(5) **DEQ response.** The DEQ shall consult with EPA and the applicant and shall either:

(A) **Amend permit.** Amend the permit and submit for approval an amended draft (Tier II) or proposed (Tier III) permit to EPA within 90 days after the date of EPA's objection, or

(B) **Give notice and issue.** Determine that one or more revisions sought by EPA are inconsistent with applicable state or federal statutes or regulations, inform EPA accordingly within 90 days following the date of the Administrator's objection, decline to make those particular revisions and:

- (i) issue the amended or revised draft permit (Tier II) as final, or
- (ii) issue the proposed permit (Tier III) as final unless an administrative permit hearing has been timely and properly requested.

(6) **Failure of DEQ to respond.** If the DEQ fails, within 90 days after the date of the EPA objection, to amend and resubmit the draft permit or proposed permit in response to the objection, the Administrator will issue or deny the permit in accordance with the requirements of EPA's Part 70 regulations.

(j) **Public petitions to the Administrator.** If the Administrator does not object in writing under subsection (h) of this section, any person that meets the requirements of this subsection may petition the Administrator within 60 days after the expiration of the Administrator's 45-day review period to make such objection. Any such petition shall be based only on objections to the permit that the petitioner raised with reasonable specificity during the public comment period provided for in OAC 252:002-15, unless the petitioner demonstrates that it was impracticable to raise such objections within such period, or unless the grounds for such objection arose after such period. If the Administrator objects to the permit as a result of a petition filed under this subsection, the DEQ shall not issue the permit until EPA's objection has been resolved, except that a petition for review does not stay the effectiveness of a permit or its requirements if the permit was issued after the end of the 45-day review period and prior to an EPA objection. If the DEQ has issued a permit prior to receipt of an EPA objection under this subsection, the Administrator will modify, terminate, or revoke such permit, and shall do so consistent with the procedures in OAC 252:100-8-7 through 252:100-8-7.5 except in unusual circumstances. If the DEQ revokes the permit, it may thereafter issue only a revised permit that satisfies EPA's objection. In any case, the source will not be in violation of the requirement to have submitted a timely and complete application.

(k) **Effect on Tier III administrative permit hearing.** When a public petition or an EPA objection is registered on a proposed permit (Tier III) on which an administrative permit hearing has been requested in accordance with 27A O.S. Supp. 1995, Section §§ 2-14-101 et seq. through -401, the DEQ may stay the evidentiary part of the hearing involving cross-examination until EPA objections are resolved or determined to be inconsistent with applicable laws.

PART 7. PREVENTION OF SIGNIFICANT DETERIORATION (PSD) REQUIREMENTS FOR ATTAINMENT AREAS

252:100-8-31. Definitions

The following words and terms when used in this Part shall have the following meaning, unless the context clearly indicates otherwise:

"**Actual emission**" means the actual rate of emissions of a pollutant from an emissions unit, as determined in accordance with the following:

- (A) In general, actual emissions as of a particular date shall equal the average rate in tons per year at which the unit actually emitted the pollutant during a two-year period which

precedes the particular date and which is representative of normal source operation. The reviewing authority may allow the use of a different time period upon a determination that it is more representative of normal source operation. Actual emissions shall be calculated using the unit's actual operating hours, production rates, and types of materials processed, stored, or combusted during the selected time period. Actual emissions may also be determined by source tests, or by best engineering judgment in the absence of acceptable test data.

(B) The reviewing authority may presume that source-specific allowable emissions for the unit are equivalent to the actual emissions of the unit.

(C) For any emissions unit which has not begun normal operations on the particular date, actual emissions shall equal the potential to emit of the unit on that date.

"Adverse impact on visibility" means visibility impairment which interferes with the management, protection, preservation or enjoyment of the visitor's visual experience of the Federal Class I area. This determination must be made by the DEQ on a case-by-case basis taking into account the geographic extent, intensity, duration, frequency and time of visibility impairments, and how these factors correlate with:

(A) times of visitor use of the Federal Class I area; and

(B) the frequency and timing of natural conditions that reduce visibility.

"Baseline area" means any areas designated as attainment or unclassifiable in which the major source or major modification establishing the minor source baseline date would construct or would have an air quality impact equal to or greater than $1 \mu\text{g}/\text{m}^3$ (annual average) of the pollutant for which the minor source baseline date is established.

"Baseline concentration" means that ambient concentration level which exists in the baseline area at the time of the applicable minor source baseline date.

(A) A baseline concentration is determined for each pollutant for which a minor source baseline date is established and shall include:

(i) the actual emissions representative of sources in existence on the applicable minor source baseline date, except as provided in (B) of this definition.

(ii) the allowable emissions of major sources which commenced construction before the major source baseline date but were not in operation by the applicable minor source baseline date. ~~(Effective May 11, 1991)~~

(B) The following will not be included in the baseline concentration and will affect the applicable maximum allowable increase(s):

(i) actual emissions from any major source on which construction commenced after the major source baseline date; and,

(ii) actual emissions increases and decreases at any source occurring after the minor source baseline date. ~~(Effective May 11, 1991)~~

"Baseline date" means:

(A) for major sources,

(i) in the case of particulate matter and sulfur dioxide, January 6, 1975, and,

(ii) in the case of nitrogen dioxide, February 8, 1988; and,

(B) for minor sources, the earliest date after the trigger date on which a major source or major modification (subject to 40 CFR 52.21 or 252:100-8, Part 7) submits a complete application. The trigger date is:

(i) in the case of particulate matter and sulfur dioxide, August 7, 1977, and

(ii) in the case of nitrogen oxides, February 8, 1988. ~~(Effective May 11, 1991)~~

~~"Best available control technology" means the control technology to be applied for a major source or modification is the best that is available as determined by the Executive Director on a case by case basis taking into account energy, environmental, costs and economic impacts of alternate control systems.~~

~~"Building, structure, facility or installation" means all of the pollutant emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person or persons under common control. Pollutant emitting activities shall be considered as part of the same industrial grouping if they belong to the same "Major Group" (i.e., which have the same two digit code) as described in the Standard Industrial Classification Manual, 1972, as amended by the 1977 Supplement.~~

"Complete" in reference to an application for a permit, means that the application contains all the information necessary for processing the application. Designating an application complete for purposes of permit processing does not preclude the reviewing authority from requesting or accepting any additional information.

"Federal land manager" means the Secretary of the department with authority over the Federal Class I area or his representative.

"Innovative control technology" means any system of air pollution control that has not been adequately demonstrated in practice, but would have a substantial likelihood of achieving greater continuous emissions reduction than any control system in current practice or of achieving at least comparable reductions at lower cost in terms of energy, economics, or non-air quality environmental impacts.

"Major modification" means any physical change in or change in the method of operation of a major source that would result in a significant net emissions increase of any pollutant subject to regulation.

(A) Any net emissions increase that is significant for volatile organic compounds shall be considered significant for ozone.

(B) A physical change or change in the method of operation shall not include:

(i) routine maintenance, repair and replacement.

(ii) use of an alternate fuel or raw material by reason of any order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation) or by reason of a natural gas curtailment plan pursuant to the Federal Power Act.

(iii) use of an alternate fuel by reason of an order or rule under Section 125 of the Federal Clean Air Act.

(iv) use of an alternate fuel at a steam generating unit to the extent that the fuel is generated from municipal solid waste.

(v) Use of an alternate fuel or raw material by a source which:

(I) the source was capable of accommodating before January 6, 1975, unless such change would be prohibited under any enforceable permit limitation which was established after January 6, 1975; or,

(II) the source is approved to use under any permit issued under 40 CFR 52.21 or OAC 252:100-8.

(vi) An increase in the hours of operation or in the production rate, unless such change would be prohibited under any enforceable permit limitation which was established after January 6, 1975.

(vii) Any change in source ownership.

"Major stationary source" means any source which meets any of the following conditions:

(A) Any of the following sources of air pollutants which emits, or has the potential to emit, 100 tons per year or more of any pollutant subject to regulation:

- (i) carbon black plants (furnace process),
- (ii) charcoal production plants,
- (iii) chemical process plants,
- (iv) coal cleaning plants (with thermal dryers),
- (v) coke oven batteries,
- (vi) fossil-fuel boilers (or combination thereof) totaling more than 250 million BTU per hour heat input,
- (vii) fossil fuel-fired steam electric plants of more than 250 million BTU per hour heat input,
- (viii) fuel conversion plants,
- (ix) glass fiber processing plants,
- (x) hydrofluoric, sulfuric or nitric acid plants,
- (xi) iron and steel mill plants,
- (xii) kraft pulp mills,
- (xiii) lime plants,
- (xiv) municipal incinerators capable of charging more than ~~250~~50 tons of refuse per day,
- (xv) petroleum refineries,
- (xvi) petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels,
- (xvii) phosphate rock processing plant,
- (xviii) portland cement plants,
- (xix) primary aluminum ore reduction plants,
- (xx) primary copper smelters,
- (xxi) primary lead smelters,
- (xxii) primary zinc smelters,
- (xxiii) secondary metal production plants,
- (xxiv) sintering plants,
- (xxv) sulfur recovery plants, or
- (xxvi) taconite ore processing plants.

(B) Any other source not on the list in (A) of this definition which emits, or has the potential to emit, 250 tons per year or more of any pollutant subject to regulation.

(C) Any physical change that would occur at a source not otherwise qualifying as a major source under (A) and (B) of this definition if the change would constitute a major source by itself.

(D) A major source that is major for volatile organic compounds shall be considered major for ozone.

"Natural conditions" mean naturally occurring phenomena against which any changes in visibility are measured in terms of visual range, contrast or coloration.

"Net emissions increase" means:

(A) The amount by which the sum of the following exceeds zero:

- (i) any increase in actual emissions from a particular physical change or change in the method of operation at a source; and,
 - (ii) any other increases and decreases in actual emissions at the source that are contemporaneous with the particular change and are otherwise creditable.
- (B) An increase or decrease in actual emissions is contemporaneous with the increase from the particular change only if it occurs within 3 years before the date that the increase from the particular change occurs.
- (C) An increase or decrease in actual emissions is creditable only if the Executive Director has not relied on it in issuing a permit under OAC 252:100-8, Part 7, which permit is in effect when the increase in actual emissions from the particular change occurs.
- (D) An increase or decrease in actual emissions of sulfur dioxide, particulate matter, or nitrogen oxides which occurs before the applicable minor source baseline date is creditable only if it is required to be considered in calculating the amount of maximum allowable increases remaining available. ~~(Effective May 11, 1991)~~
- (E) An increase in actual emissions is creditable only to the extent that the new level of actual emissions exceeds the old level.
- (F) A decrease in actual emissions is creditable only to the extent that:
- (i) the old level of actual emissions or the old level of allowable emissions, whichever is lower, exceeds the new level of actual emissions;
 - (ii) it is enforceable at and after the time that actual construction on the particular change begins;
 - (iii) it has approximately the same qualitative significance for public health and welfare as that attributed to the increase from the particular change.
- (G) An increase that results from a physical change at a source occurs when the emission unit on which construction occurred becomes operational and begins to emit a particular pollutant. Any replacement unit that requires shakedown becomes operational only after a reasonable shakedown period, not to exceed 180 days.

"Significant" means:

(A) In reference to a net emissions increase or the potential of a source to emit any of the following pollutants, a rate of emissions that would equal or exceed any of the following rates:

- (i) carbon monoxide: 100 tons per year (tpy),
- (ii) nitrogen oxides: 40 tpy,
- (iii) sulfur dioxide: 40 tpy,
- (iv) particulate matter: 25 tpy of particulate matter emissions or 15 tpy of PM-10 emissions,
- (v) ozone: 40 tpy of volatile organic compounds,
- (vi) lead: 0.6 tpy,
- (vii) asbestos: 0.007 tpy,
- (viii) beryllium: 0.0004 tpy,
- (ix) mercury: 0.1 tpy,
- (x) vinyl chloride: 1 tpy,
- (xi) fluorides: 3 tpy,
- (xii) sulfuric acid mist: 7 tpy,
- (xiii) hydrogen sulfide (H₂S): 10 tpy,

- (xiv) total reduced sulfur (including H₂S): 10 tpy, and
- (xv) reduced sulfur compounds (including H₂S): 10 tpy.

(B) Notwithstanding (A) of this definition, "significant" means any emissions rate or any net emissions increase associated with a major source or modification which would construct within 6 miles of a Class I area, and have an impact on such area equal to or greater than 1 $\mu\text{g}/\text{m}^3$ $\mu\text{g}/\text{m}^3$ (24-hour average).

"Visibility impairment" means any humanly perceptible reduction in visibility (visual range, contrast and coloration) from that which would have existed under natural conditions.

252:100-8-33. Exemptions

(a) **Exemptions from PSD requirements.** PSD requirements do not apply to a particular source or modification if:

- (1) It is a nonprofit health or educational institution.
- (2) The source is major by virtue of fugitive emissions, to the extent quantifiable, included in calculating the potential to emit and is a source other than:
 - (A) One of the categories listed in (A)(i) through (xxvi) under the definition of "Major stationary source" in OAC 252:100-8-31, or
 - (B) A stationary source category which, as of August 7, 1980, is being regulated by NSPS or NESHAP.
- (3) The source or modification is a portable stationary source which has previously received a permit under the PSD requirements and proposes to relocate to a temporary new location from which its emissions would not impact a Class I area or an area where an applicable increment is known to be violated.

(b) **Exemption from air quality impact evaluation.**

- (1) The requirements of OAC 252:100-8-35 are not applicable if the emissions, with respect to a particular pollutant, would be temporary and impact no Class I area and no area where an applicable increment is known to be violated.
- (2) The requirements of OAC 252:100-8-35 are not applicable to the emissions, with respect to a particular pollutant, to a modification of a major source that was in existence on March 1, 1978 if the net increase in allowable emissions of each regulated pollutant, after the application of ~~best available control technology~~ BACT, would be less than 50 tons per year.

(c) **Exemption from monitoring requirements.**

(1) The monitoring requirements of OAC 252:100-8-35 are not applicable for a particular pollutant if the emission increase of the pollutant from a new source or the net emissions increase of the pollutant from a modification would cause, in any area, air quality impacts less than the following listed amounts, or are pollutant concentrations that are not on the list.

- (A) Carbon monoxide - 575 $\mu\text{g}/\text{m}^3$ $\mu\text{g}/\text{m}^3$, 8-hour average,
- (B) Nitrogen dioxide - 14 $\mu\text{g}/\text{m}^3$ $\mu\text{g}/\text{m}^3$, annual average,
- (C) Particulate matter - 10 $\mu\text{g}/\text{m}^3$ $\mu\text{g}/\text{m}^3$, TSP, 24-hour average, or 10 $\mu\text{g}/\text{m}^3$ $\mu\text{g}/\text{m}^3$ PM-10, 24-hour average,
- (D) Sulfur dioxide - 13 $\mu\text{g}/\text{m}^3$ $\mu\text{g}/\text{m}^3$, 24-hour average,
- (E) Ozone - see (N) below,
- (F) Lead - 0.1 $\mu\text{g}/\text{m}^3$ $\mu\text{g}/\text{m}^3$, 24-hour 3-month average,
- (G) Mercury - 0.25 $\mu\text{g}/\text{m}^3$ $\mu\text{g}/\text{m}^3$, 24-hour average,

(H) Beryllium - ~~0.0005~~ 0.001 $\mu\text{g}/\text{m}^3$ $\mu\text{g}/\text{m}^3$, 24-hour average,

(I) Fluorides - 0.25 $\mu\text{g}/\text{m}^3$ $\mu\text{g}/\text{m}^3$, 24-hour average,

(J) Vinyl chloride - 15 $\mu\text{g}/\text{m}^3$ $\mu\text{g}/\text{m}^3$, 24-hour average,

(K) Total reduced sulfur - 10 $\mu\text{g}/\text{m}^3$ $\mu\text{g}/\text{m}^3$, 1-hour average,

(L) Hydrogen sulfide - ~~0.04~~ 0.2 $\mu\text{g}/\text{m}^3$ $\mu\text{g}/\text{m}^3$, 1-hour average, or

(M) Reduced sulfur compounds - 10 $\mu\text{g}/\text{m}^3$ $\mu\text{g}/\text{m}^3$, 1-hour average.

(N) No de minimis air quality level is provided for ozone. However, any net increase of 100 tons per year or more of volatile organic compounds subject to PSD would be required to perform an ambient impact analysis, including the gathering of ambient air quality data.

(2) The requirements for air quality monitoring in OAC 252:100-8-35(b),(c) and (d)(2) shall not apply to a source or modification that was subject to 40 CFR 52.21 as in effect on June 19, 1978, if a permit application was submitted before June 8, 1981 and the ~~Executive~~ Director subsequently determined that the application was complete except for OAC 252:100-8-35(b), (c) and (d)(2). Instead, the requirements in 40 CFR 52.21(m)(2) as in effect on June 19, 1978, shall apply to such source or modification.

(3) The requirements for air quality monitoring in OAC 252:100-8-35(b), (c), and (d)(2) shall not apply to a source or modification that was not subject to 40 CFR 52.21 as in effect on June 19, 1978, if a permit application was submitted before June 8, 1981 and the ~~Executive~~ Director subsequently determined that the application as submitted was complete, except for the requirements in OAC 252:100-8-35(b), (c) and (d)(2).

(4) The ~~Executive~~ Director shall determine if the requirements for air quality monitoring of PM-10 in OAC 252:100-8-35(a) through ~~252:100-8-35(c)~~ and OAC 252:100-8-35(d)(2) may be waived for a source or modification when an application for a permit was submitted on or before June 1, 1988 and the ~~Executive~~ Director subsequently determined that the application, except for the requirements for monitoring particulate matter under OAC 252:100-8-35(a) through ~~252:100-8-35(c)~~ and OAC 252:100-8-35(d)(2), was complete before that date.

(5) The requirements for air quality monitoring of PM-10 in OAC 252:100-8-35(b), (c), (d)(2) and (d)(6) shall apply to a source or modification if an application for a permit was submitted after June 1, 1988 and no later than December 1, 1988. The data shall have been gathered over at least the period from February 1, 1988 to the date the application becomes otherwise complete in accordance with the provisions of OAC 252:100-8-33(b)(1), except that if the ~~Executive~~ Director determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period (not to be less than 4 months), the data required by OAC 252:100-8-35(b)(1) and OAC 252:100-8-35(c) shall have been gathered over that shorter period.

(d) **Exemption from BACT requirements and monitoring requirements.** If a complete permit application for a source or modification was submitted before August 7, 1980 the requirements for ~~best available control technology~~ BACT in OAC 252:100-8-34 and for monitoring in OAC 252:100-8-35(a) through ~~252:100-8-35(c)~~ and OAC 252:100-8-35(d)(2) through ~~252:100-8-35(d)(4)~~ are not applicable. Instead, the federal requirements at 40 CFR 52.21 (j) and (n) as in effect on June 19, 1978 are applicable to any such source or modification.

(e) **Exemption of modifications.** As specified in the applicable definitions of OAC 252:100-8-31, 252:100-8-1.1, and 252:100-1, the requirements of OAC 252:100-8, Part 7

for PSD and OAC 252:100-8, Part 9 for nonattainment areas are not applicable to a modification if the existing source was not major on August 7, 1980 unless the proposed addition to that existing minor source is major in its own right.

(f) **Exemption from impact analyses.** The requirements of OAC 252:100-8-35 and OAC 252:100-8-36 do not apply to a source or modification with respect to any maximum allowable increase for nitrogen oxides if the owner or operator of the source or modification submitted a completed application for a permit before February 8, 1988.

(g) **Exemption from increment consumption.** Excluded from increment consumption are the following cases:

- (1) Concentrations from an increase in emissions from any source converting from the use of petroleum products, natural gas, or both by reason of any order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation), or by reason of a natural gas curtailment plan pursuant to the Federal Power Act. Such exclusion is limited to five years after the effective date of the order or plan.
- (2) Emissions of particulate matter from construction or other temporary emission-related activities of new or modified sources.
- (3) A temporary increase of sulfur dioxide, particulate matter, or nitrogen oxides by order or authorized variance from any source.

PART 9. MAJOR SOURCES AFFECTING NONATTAINMENT AREAS

252:100-8-51. Definitions

The following words and terms, when used in this Part, shall have the following meaning, unless the context clearly indicates otherwise:

"**Actual emissions**" means the actual rate of emissions of a pollutant from an emissions unit, as determined in accordance with the following:

(A) In general, actual emissions as of a particular date shall equal the average rate in tons per year at which the unit actually emitted the pollutant during a two-year period which precedes the operation. The reviewing authority may allow the use of a different time period upon a determination that it is more representative of normal source operation. Actual emissions shall be calculated using the unit's actual operating hours, production rates, and types of materials processed, stored, or combusted during the selected time period. Actual emissions may also be determined by source tests, or by best engineering judgment in the absence of acceptable test data.

(B) The reviewing authority may presume that source-specific allowable emissions for the unit are equivalent to the actual emissions of the unit.

(C) For any emissions unit which has not begun normal operations on the particular date, actual emissions shall equal the potential to emit of the unit on that date.

~~"**Building, structure, facility**" means all of the pollutant emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person (or persons under common control). Pollutant emitting activities shall be considered as part of the same industrial grouping if they belong to the same "Major Group" (i.e., which have the same two digit code) as described in the Standard Industrial Classification Manual, 1972, as amended by the 1977 Supplement.~~

~~"Installation" means an identifiable piece of process equipment.~~

"Lowest achievable emissions rate" means the control technology to be applied to a major source or modification which the Executive Director, on a case by case basis, determines is achievable for a source based on the lowest achievable emission rate achieved in practice by such category of source (i.e., lowest achievable emission rate as defined in the Federal Clean Air Act).

"Major modification" means any physical change in, or change in the method of operation of, a major source that would result in a significant net emissions increase of any pollutant subject to regulation.

(A) Any net emissions increase that is significant for volatile organic compounds shall be considered significant for ozone.

(B) A physical change or change in the method of operation shall not include:

(i) routine maintenance, repair and replacement;

(ii) use of an alternate fuel or raw material by reason of any order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation) or by reason of a natural gas curtailment plan pursuant to the Federal Power Act;

(iii) use of an alternate fuel by reason of an order or rule under Section 125 of the Federal Clean Air Act;

(iv) use of an alternate fuel at a steam generating unit to the extent that the fuel is generated from municipal solid waste;

(v) Use of an alternate fuel or raw material by a source which:

(I) the source was capable of accommodating before December 21, 1976, unless such change would be prohibited under any enforceable permit limitation which was established after December 21, 1976; or,

(II) the source is approved to use under any permit issued under 40 CFR 52.21 or OAC 252:100-7 or 8.

(vi) An increase in the hours of operation or in the production rate unless such change would be prohibited under any enforceable permit limitation which was established after December 21, 1976, or

(vii) any change in source ownership.

"Major stationary source" means:

(A) any stationary source of air pollutants which emits, or has the potential to emit, 100 tons per year or more of any pollutant subject to regulation; or,

(B) any physical change that would occur at a source not qualifying under (A) of this definition as a major source, if the change would constitute a major source by itself.

(C) for ozone, a source that is major for volatile organic compounds shall be considered major.

"Net emissions increase" means:

(A) The amount by which the sum of the following exceeds zero:

(i) any increase in actual emissions from a particular physical change or change in the method of operation at a source; and,

(ii) any other increases and decreases in actual emission at the source that are contemporaneous with the particular change and are otherwise creditable.

(B) An increase or decrease in actual emissions is contemporaneous with the increase from the particular change only if it occurs within 3 years before the date that the increase from the particular change occurs.

(C) An increase or decrease in actual emissions is creditable only if the Executive Director has not relied on it in issuing a permit under 252:100-8, Part 9 of this Subchapter, which permit is in effect when the increase in actual emissions from the particular change occurs.

(D) An increase in actual emissions is creditable only to the extent that the new level of actual emissions exceeds the old level.

(E) A decrease in actual emissions is creditable only to the extent that:

(i) the old level of actual emissions or the old level of allowable emissions, whichever is lower, exceeds the new level of actual emissions;

(ii) it is enforceable at and after the time that actual construction on the particular change begins;

(iii) the reviewing authority has not relied on it in issuing any permit under State air quality rules; and,

(iv) it has approximately the same qualitative significance for public health and welfare as that attributed to the increase from the particular change.

(F) An increase that results from a physical change at a source occurs when the emission unit on which construction occurred becomes operational and begins to emit a particular pollutant. Any replacement unit that requires shakedown becomes operational after a reasonable shakedown period, not to exceed 180 days.

~~"Reconstruction" means the replacement of components of an existing source (which will then be treated as a new source for purposes of Part 9 of this Subchapter) to the extent that will be determined by the Executive Director based on:~~

~~(A) The fixed capital cost (the capital needed to provide all the depreciable components) of the new components exceeds 50% of the fixed capital cost of a comparable entirely new source; and,~~

~~(B) The estimated life of the source after the replacements is comparable to the life of an entirely new source; and,~~

~~(C) the extent to which the components being replaced cause or contribute to the emissions from the source.~~

~~"Resource recovery facility" means any facility at which solid waste is processed for the purpose of extracting, converting to energy, or otherwise separating and preparing solid waste for reuse. Energy conversion facilities must utilize solid waste to provide more than 50 percent of the heat input to be considered a resource recovery facility under Part 9 of this Subchapter.~~

~~"Significant" means, in reference to a net emissions increase or the potential of a source to emit any of the following pollutants, a rate of emissions that would equal or exceed any of the following rates:~~

~~(A) Carbon monoxide: 100 tons per year (tpy),~~

~~(B) Nitrogen oxides: 40 tpy,~~

~~(C) Sulfur dioxide: 40 tpy,~~

~~(D) Particulate matter: 15 tpy of PM-10 emissions,~~

~~(E) Ozone: 40 tpy of volatile organic compounds, or~~

~~(F) Lead: 0.6 tpy.~~

252:100-8-52. Source applicability determination

Proposed new sources and source modifications to which Part 9 of this Subchapter ~~are~~ applicable are determined by size, geographical location and type of emitted pollutants:

(1) Size.

(A) Permit review will apply to sources and modifications that emit any regulated pollutant in major amounts. These quantities are specified in the definitions for major stationary source, major modification, potential to emit, net emissions increase, significant, and other associated definitions in OAC 252:100-8-51, 252:100-8-1.1, and 252:100-1-3.

(B) At such time that a particular source or modification becomes major solely by virtue of a relaxation in any enforceable permit limitation which was established after August 7, 1980 on the capacity of the source or modification otherwise to emit a pollutant, such as a restriction on hours of operation, then the requirements of Parts 1, 3, 5, and 9 of this Subchapter shall apply to that source or modification as though construction had not yet commenced on it.

(2) Location.

(A) Sources and modifications that are major in size and proposed for construction in an area which has been designated as nonattainment for any applicable ambient air quality standard are subject to the requirements for the nonattainment area, if the source or modification is major for the nonattainment pollutant(s) of that area.

(B) In addition, the requirements of a PSD review (Part 7 of this Subchapter) would be applicable if any other regulated pollutant other than the nonattainment pollutant is emitted in significant amounts by that source or modification.

(3) Location in attainment or unclassifiable area but causing or contributing to NAAQS violation.

(A) A proposed major source or major modification that would locate in an area designated attainment or unclassifiable is considered to cause or contribute to a violation of the national ambient air quality standards when such source or modification would, as a minimum, exceed the following significance levels at any locality that does not or would not meet the applicable national standard:

Pollutant	Concentration, $\mu\text{g}/\text{m}^3$			
	Annual	24	8	3
SO ₂	1.0	5		25
PM-10	1.0	5		
NO ₂	1.0			
CO			500	2000

(B) A proposed major source or major modification subject to OAC 252:100-8-52(3)(A) may reduce the impact of its emissions upon air quality by obtaining sufficient emissions reductions to, at a minimum, compensate for its adverse ambient impact where the proposed source or modification would otherwise cause or contribute to a violation of any national ambient air quality standard. In the

absence of such emission reductions, a permit for the proposed source or modification shall be denied.

(C) The requirements of OAC 252:100-8-52(3)(A) and (B) shall not apply to a major source or major modification with respect to a particular pollutant if the owner or operator demonstrates that, as to that pollutant, the source or modification is located in an area designated nonattainment.

(D) Sources of volatile organic compounds located outside a designated ozone nonattainment area will be presumed to have no significant impact on the designated nonattainment area. If ambient monitoring indicates that the area of source location is in fact nonattainment, then the source may be granted its permit since the area has not yet been designated nonattainment.

(E) Sources locating in an attainment area but impacting on a nonattainment area above the significant levels listed in OAC 252:100-8-52(3) are exempted from the condition of OAC 252:100-8-54(4)(A).

(F) The determination whether a source or modification will cause or contribute to a violation of an applicable ambient air quality standard for sulfur dioxide, particulate matter or carbon monoxide will be made on a case by case basis as of the proposed new source's start-up date by an atmospheric simulation model. For sources of nitrogen oxides the model can be used for an initial determination assuming all the nitric oxide emitted is oxidized to nitrogen dioxide by the time the plume reaches ground level, and the initial concentration estimates will be adjusted if adequate data are available to account for the expected oxidation rate.

(G) The determination as to whether a source would cause or contribute to a violation of applicable ambient air quality standards will be made on a case by case basis as of the new source's start-up date. Therefore, if a designated nonattainment area is projected to be attainment as part of the state implementation plan control strategy by the new source start-up date, offsets would not be required if the new source would not cause a new violation.

(H) Sources causing a new violation of applicable ambient air standards as determined by the Executive Director but not contributing to an existing violation, will be approved if both of the following conditions are met:

- (i) The new source is required to meet a more stringent emission limitations and/or the control of existing sources below allowable levels so that the new violation of ambient standards does not occur.
- (ii) The new emission limitations for the new source, as well as for any existing sources affected, are enforceable under the Oklahoma and Federal Clean Air Acts.

**TITLE 252. OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL
SUBCHAPTER 8. PERMITS FOR PART 70 SOURCES**

Before the Air Quality Council, June 14, 2000 and August 16, 2000
Before the Environmental Quality Board, November 14, 2000

RULE IMPACT STATEMENT

1. **DESCRIPTION:** The proposed changes to Subchapter 8 would amend sections 1.1, 1.4, 1.5, 1.7., 2, 3, 4, 5, 6, 7, 8, 31, 33, 51, and 52. The changes correct errors, clarify language, add definitions, delete definitions, and add fee categories for construction permit authorizations and modifications. Substantive changes include amending the definition of "trivial activities" in section 2 by deleting the exception for activities that are subject to an applicable requirement. The amendments to section 4(a)(1) make clear which modifications to Part 70 sources require construction permits. The changes in section 5(d)(1)(A) clarify that best available control technology (BACT) is not required for modifications that result in emissions increases of less than 100 tons per year, unless the Prevention of Significant Deterioration rules in Part 7 would require it. The reporting time in Section 6(a)(3)(C) for excess emissions caused by emergencies or upsets would be changed from 24 hours to the end of the next working day to make it consistent with Subchapter 9 reporting requirements. A substantive change is proposed for the definition of "major stationary source" in section 31, where paragraph (xiv) would be changed to read "municipal incinerators capable of charging more than 50 tons of refuse per day." This change is required by the 1990 amendment to section 169(1) of the federal Clean Air Act. The changes to section 52 were adopted in 1989 but were accidentally excluded during codification of the rules.
2. **CLASSES OF PERSONS AFFECTED:** The owners and operators of Part 70 sources.
3. **CLASSES OF PERSONS WHO WILL BEAR COSTS:** No additional costs are anticipated, except for persons planning to construct municipal waste incinerators capable of charging more than 50 but less than 250 tons of refuse per day.
4. **INFORMATION ON COST IMPACTS FROM PRIVATE/PUBLIC ENTITIES:** The Department has received no information from private or public entities.
5. **CLASSES OF PERSONS BENEFITTED:** The citizens of the State of Oklahoma and the owners or operators of Part 70 sources.
6. **PROBABLE ECONOMIC IMPACT ON AFFECTED CLASSES OF PERSONS:** Those seeking modifications to existing Part 70 sources and those seeking authorizations to

construct pursuant to a general permit will pay a lower application fee if these changes are adopted. Persons planning to construct municipal waste incinerators capable of charging more than 50 but less than 250 tons of refuse per day will be required to provide more information in their permit applications than in the past. This should increase their cost of preparing the applications.

7. **PROBABLE ECONOMIC IMPACT ON POLITICAL SUBDIVISIONS:** None, except to the extent that any are planning to construct municipal waste incinerators capable of charging more than 50 but less than 250 tons of refuse per day.
8. **LISTING OF ALL FEE CHANGES, INCLUDING A SEPARATE JUSTIFICATION FOR EACH FEE CHANGE:** The DEQ is proposing to lower construction permit application costs for those seeking modifications to existing Part 70 sources and those seeking authorizations to construct pursuant to a general permit. Currently, there is only one construction permit fee, which is \$2,000. The new categories will lower that fee for these other applications because they require less review than an individual construction permit for a new Part 70 source. The proposed fees are \$900 for an authorization to construct pursuant to a general permit, \$1,000 for a minor modification requiring a construction permit, \$1,500 for a significant modification requiring a construction permit, and \$2,000 for an individual construction permit for a new Part 70 source.
9. **PROBABLE COSTS AND BENEFITS TO DEQ TO IMPLEMENT AND ENFORCE:** No additional costs to DEQ to enforce or implement the rule are anticipated.
10. **PROBABLE COSTS AND BENEFITS TO OTHER AGENCIES TO IMPLEMENT AND ENFORCE:** None.
11. **SOURCE OF REVENUE TO BE USED TO IMPLEMENT AND ENFORCE RULE:** State appropriations, federal grants, and fees.
12. **PROJECTED NET LOSS OR GAIN IN REVENUES FOR DEQ AND/OR OTHER AGENCIES, IF IT CAN BE PROJECTED:** It can not be projected at this time.
13. **COOPERATION OF POLITICAL SUBDIVISION REQUIRED TO IMPLEMENT OR ENFORCE RULE:** None.
14. **EXPLANATION OF THE MEASURES THE DEQ TOOK TO MINIMIZE COMPLIANCE COSTS:** The revision impacting those who intend to construct municipal waste incinerators is required by federal law. The other revisions being made to the Subchapter do not affect the overall compliance costs to the owner or operator or to DEQ, but DEQ believes that certain clarifications and the change to the term "trivial activities" will help to minimize compliance costs.

15. **DETERMINATION OF WHETHER THERE ARE LESS COSTLY OR NONREGULATORY OR LESS INTRUSIVE METHODS OF ACHIEVING THE PURPOSE OF THE PROPOSED RULE:** There are none.
16. **DETERMINATION OF THE EFFECT ON PUBLIC HEALTH, SAFETY AND ENVIRONMENT:** The proposed revision regarding the size of municipal waste incinerators should provide greater protection for public health, safety and the environment by insuring that new medium-size incinerators will meet stricter permit review requirements.
17. **IF THE PROPOSED RULE IS DESIGNED TO REDUCE SIGNIFICANT RISKS TO THE PUBLIC HEALTH, SAFETY AND ENVIRONMENT, EXPLANATION OF THE NATURE OF THE RISK AND TO WHAT EXTENT THE PROPOSED RULE WILL REDUCE THE RISK:** Municipal waste incinerators have the potential to emit toxic air contaminants, and the proposal will increase the review that medium-size municipal waste incinerators receive prior to obtaining permits to construct.
18. **DETERMINATION OF ANY DETRIMENTAL EFFECT ON THE PUBLIC HEALTH, SAFETY AND ENVIRONMENT IF THE PROPOSED RULE IS NOT IMPLEMENTED:** None. Federal law will still be applicable to new municipal incinerators capable of charging more than 50 but less than 250 tons of refuse per day.
19. **PROBABLE QUANTITATIVE AND QUALITATIVE IMPACT ON BUSINESS ENTITIES (INCLUDE QUANTIFIABLE DATA WHERE POSSIBLE):** Probable quantitative impact is difficult to project, but the proposed rule will lower permit application fees for some entities and increase the cost of preparing permit applications for municipal waste incinerators capable of charging more than 50 but less than 250 tons of refuse per day. Probable qualitative impacts would be that regulated entities should find the rule easier to understand.

THIS RULE IMPACT STATEMENT WAS PREPARED ON: May 15, 2000

MODIFIED ON: July 17, 2000

Subject: Subchapter 8 Rule Changes
Author: "Don_Whitney@trinityconsultants.com"
<SMTP:Don_Whitney@trinityconsultants.com>
Date: 6/27/00 4:06 PM

Attached document contains suggested wordings of two areas of OAC 252:100-8. The very worthwhile and needed clarification of this area was proposed at the last AQC mtg and will likely be proposed again in August. Please also forward to other members of the AQD staff who may be considering changes to Subchapter 8. If you like, I would be glad to meet with you to discuss these areas and/or alternative wordings.

The potential impact of not incorporating flexibility for changes of this type is significant for both industry and DEQ. If the wording proposed at the June mtg were strictly followed, numerous facilities such as refineries and gas plants would be faced with submitting perhaps dozens of permit modifications or construction permit applications every year. Besides the burden on industry, such paperwork would do nothing to enhance or protect air quality and would be a tremendous burden on DEQ to process. Another danger of the status quo is that it leaves many facilities in jeopardy of compliance/enforcement action over trivial changes. Again, this area of minor changes is very important to large (Ch 8) and small (Ch 7) facilities and needs to be crystal clear to avoid misunderstanding. Unfortunately, there are many possible scenarios of changes which need to be addressed to prevent the need for "interpretation" of what the rule really means.

RE: OAC 252:100-8 Changes

Revisions to Subchapter 8 are scheduled to be presented for a second time at the Air Quality Council meeting on August 16, 2000. The following areas should be addressed since they have been a cause of considerable confusion for both the AQD Staff and industry. Suggested wording and rationale are provided below.

OAC 252:100-8-4 (a) Construction Permits

(1) **Construction permit required.** No person shall begin actual construction or installation of any new source that will require a Part 70 operating permit without first obtaining a DEQ-issues construction permit. A construction permit is also required in the following circumstances unless such construction or modification is specifically authorized in a Part 70 permit:

- (A) A piece of equipment or a process is added that is subject to NSPS or NESHAP except that the Director may waive this requirement for Subparts which are currently effective for similar equipment or processes at the facility such as leak checking.
- (B) Any physical change that would increase actual emissions from that unit or process more than 5 tons per year of any criteria pollutant, more than 2 tons per year of any one HAP or more than 5 tons per year of two or more HAPs.

In addition to the requirements of this Part, sources subject to Part 7 or Part 9 of this Subchapter must also meet the applicable requirements contained therein.

RATIONALE:

Major facilities with Part 70 sources have a great many processes which require routine replacement, repair, and minor modifications. Under the old definitions, such activities could require a permit for trivial items such as a valve addition or change which might increase fugitive emissions by a very slight amount or make the valve subject to a requirement such as leak-check monitoring under NSPS Subpart GGG. There is little logic in requiring a construction permit for such a change with only a few pounds per year of emissions or the addition of a few valves to an existing LDAR program. If possible, such situations will be anticipated by the Title V permit conditions and specifically excluded from notification or permit modification requirements.

There is no danger of this being a significant "loop-hole" for several reasons:

1. Parts 7 and 9 exclude such changes from exceeding PSD significance levels
2. Upstream and downstream processes will frequently have their own emission limits
3. The Title V permit will be updated every 5 years.

OAC 252:100-8-6 (f) Operational Flexibility

Changes resulting in no emissions increases. A permitted Part 70 source may make changes within the facility that are specifically authorized in the permit or that:

- (A) Are not modifications under any provision of Title I of the Act.
- (B) Do not cause any hourly or annual permitted emission rate of any existing emissions unit to be exceeded; and
- (C) Result in a net change in emissions of zero, provided that the facility notifies the DEQ and EPA in writing at least 7 days in advance of the proposed changes. The source, DEQ, and EPA shall attach each such notice to their copy of the relevant permit.....

RATIONALE:

Minor changes of operation / maintenance / construction / replacement can be anticipated for many activities at major facilities. Such changes will often result in a trivial increase of actual emissions but do not warrant a permit modification.

MINUTES
AIR QUALITY COUNCIL
AUGUST 16, 2000
Pioneer Technology Center
Ponca City, Oklahoma

Council Members Present

Beverly Botchlet-Smith

Notice of Public Meeting for August 17, 2000 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted on the entrance doors at Pioneer Technology Center and on the entrance doors of the DEQ Central Office in Oklahoma City.

Call to Order - Mr. Branecky, Chairman, called the meeting to order and roll call was taken as follows: Mr. Wilson - aye; Dr. Grosz - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye; Ms. Myers - aye; Mr. Branecky - aye.

Approval of Minutes - Mr. Branecky entertained a motion to approve the Minutes of the June 14, 2000 Public Meeting/Hearings. Motion was made by Dr. Grosz to approve the Minutes as presented and second was made by Mr. Wilson. Roll call: Mr. Wilson - aye; Dr. Grosz - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye; Ms. Myers - aye; Mr. Branecky - aye.

Protocol Statement — As protocol officer, Mr. Dyke convened the hearings by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-201 through 2-5-101 - 2-5-118. Mr. Dyke entered the Agenda and the Oklahoma Register Notice into the record.

PUBLIC HEARING

OAC 252:100-6

PERMITTING

Ms. Jeanette Buttram advised Council that staff's request for revocation of Subchapter (SC) 6 contributed to the Department's goal of eliminating redundant or unnecessary language through the re-right/de-wrong process. She stated that SC 6 mostly summarizes the permit program in SC 7 and SC 8 and restates Oklahoma statutes on permitting. She pointed out the substantive language that would be placed into SCs 7 and 8. These portions that would be moved are: Section 252:100-6-50(b), 252:100-6-50(b)(2), and 252:100-6-50(e) to SC 7

under Section 252:100-7-2, requirement for permits for minor facilities. Also, in SC 6, the language in Section 252:100-6-50(e), was moved to 252:100-8-5(b). Currently 252:100-8-5(b) references the language in 252:100-6-50(e). Ms. Buttram related that the revocation of SC 6 would have no effect on permit actions and asked that Council recommend it for revocation to the Environmental Quality Board.

In response to a question from Council, Ms. Buttram advised that staff felt that for future clarity it would be better to revoke the rule in its entirety and move the substantive sections. She added that both SC 6 and SC 7 would be presented to the Board at the same time for approval. Ms. Myers asked for clarification that the revocation of this rule would not leave any exposure until the changes had been made to SC 7 or SC 8 to which Ms. Buttram advised that the rule would not become effective until next year. Mr. Branecky then called for a motion to recommend the proposal for revocation to the Environmental Quality Board (EQB). Mr. Breisch made the motion and Mr. Wilson made the second. Roll call: Mr. Wilson - aye; Dr. Grosz - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye; Ms. Myers - aye; Mr. Branecky - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-7

Permits for Minor Facilities

Dr. Joyce Sheedy was called upon to provide staff's recommendation of proposed rule. Dr. Sheedy stated that this rule had been before the Council on April 19 and June 14 and that a workgroup had met on May 24. Dr. Sheedy stated that the main purpose for the revision is to add Section 60-5 to SC 7 to provide a permit by rule covering natural gas compression facilities with actual emissions of less than 40 tons per year. She stated that it was decided to take the opportunity, while the rule was open, to reference the permit by rule (PBR) for volatile organic liquid storage and loading facilities in Section 40 and 42 of SC 37 and the PBR for particulate matter facilities in Section 13 of SC 29.

Dr. Sheedy entered into the record a letter from EPA Region 6 dated August 14; and a letter and comments dated August 4, 2000 from Michael H. Bernard, Mid-Continent Oil and Gas Association representing the industry members of the work group. Dr. Sheedy added that there would be further meetings with staff and industry; therefore, staff's recommendation was that the Council continue the hearing to the October meeting. Mr. Branecky called for that motion which was made by Ms. Myers and the second was made by Mr. Kilpatrick. Roll call: Mr. Wilson - aye; Dr. Grosz - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye; Ms. Myers - aye; Mr. Branecky - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING
OAC 252:100- 8
Permits for Part 70 Sources

Ms. Pam Dizikes was called upon to provide staff's recommendations for this proposed rule. Ms. Dizikes pointed out that SC 8 covering permits for Part 70 sources had already been through the re-right/de-wrong process; but that since that time errors and inconsistencies needed to be resolved. Those were mainly in respect as to when construction permits are required for Part 70 sources. Ms. Dizikes pointed out the substantive changes that would be discussed. She advised that no comments had been received and suggested that the rule be recommended to the EQB for emergency and permanent adoption.

Mr. Tom Blachley requested that the rule be revisited because he stated that there had never been a resolution to the issue as to how/when a well becomes a major source stating that there are times when they would not know until after the well was perforated. Mr. Terrill stated that these issues would be discussed with a group of the effected people at which time this rule could be re-opened for hearing. Mr. Branecky then called for a motion. Mr. Kilpatrick moved that Council recommend this rule as amended to the EQB for emergency and permanent approval. Dr. Grosz made the second. Roll call: Mr. Wilson - aye; Dr. Grosz - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye; Ms. Myers - aye; Mr. Branecky - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING
OAC 252:100-29
Control of Fugitive Dust

Ms. Cheryl Bradley was called upon for staff recommendations. She stated that proposed changes were to simplify and clarify language according to the agency-wide re-right/de-wrong initiative noting that the rule had been before the Council on June 14. She entered into the record written comments received from EPA Region 6 Air Planning Section dated August 11, 2000. Ms. Bradley stated that since comments had been received which would result in recommended changes to the rule, it was staff's recommendation to continue the rule to the October meeting.

Mr. Terrill asked for feedback regarding removing the word "visible" from the term "visible fugitive dust emissions". After hearing the comments from Council and audience, Mr. Branecky asked that any further comments be sent to DEQ prior to Council's next meeting. Ms. Myers made a motion to continue the hearing until October. Mr. Wilson made the second. Roll call: Mr. Wilson - aye; Dr. Grosz - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye; Ms. Myers - aye; Mr. Branecky - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

**PUBLIC HEARING
OAC 252:100-31
Control Of Emissions of Sulfur Compounds**

Dr. Joyce Sheedy advised Council that revisions to this subchapter were proposed to simplify and clarify language according to the agency-wide re-right/de-wrong initiative. She hoped that that staff's intention to rearrange the material might make the rule to be in a more logical order. She pointed out the substantive changes proposed. Dr. Sheedy entered into the record comments received from Michael Graves of Hall, Estill, Hardwick, Gable, Golden & Nelson dated March 24, 2000; comments from Stephen E. Landers of Fort James dated August 11, 2000; and comments from Tom Diggs of EPA Region VI dated August 11, 2000. Dr. Sheedy then advised that the staff recommended that the hearing be continued to October and advised that a workgroup session would be set up to discuss the revisions.

Mr. Wilson stated that there would be a workgroup meeting on September 8 at the McKinney-Stringer Office. Mr. Terrill pointed out that the rule would not be revised just to meet the re-right/de-wrong legislative mandate, but that meaningful changes would be made to make the rule easier to interpret and apply.

Ms. Myers moved to continue the hearing to the October meeting and Dr. Grosz seconded that motion. Roll call: Mr. Wilson - aye; Dr. Grosz - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye; Ms. Myers - aye; Mr. Branecky - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

DIVISION DIRECTOR'S REPORT Mr. Terrill gave an update on activities and called upon Ms. Beverly Botchlet-Smith who gave a report of Central States Air Resource Agencies (CenSARA) activities. Mr. Dawson Lasseter, Program Manager Permits Section, also provided an update. Mr. Scott Thomas, Program Manager Rules and Planning Section, provided an update on recent ozone values experienced in Oklahoma.

NEW BUSINESS None

ADJOURNMENT With no further business, meeting was adjourned with announcement that the next regularly scheduled meeting would be on October 18 at the DEQ offices in Oklahoma City.

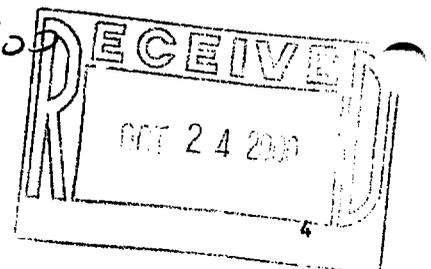

NOTE: The sign-in sheet is attached as an official part of these Minutes.

THE AIR QUALITY COUNCIL
RULEMAKING RECOMMENDATION
TO THE ENVIRONMENTAL QUALITY BOARD

Identification of Proposed Rulemaking:

Chapter Number and Title: OAC: 252:100-8
Permits for Part 70 Sources [AMENDED]

On August 16, 2000 the members of this Council, by authority vested in them by the Oklahoma Environmental Quality Code (27 O.S. Sec. 2-2-201), by roll call vote, recommended to the Environmental Quality Board that the rulemaking described above be adopted as:

X permanent [take effect after legislative review]

X emergency [temporary, to take effect upon approval by the Governor because of time]

This Council has considered the proposed rulemaking and comments about it and determined, to the best of its knowledge, that all-applicable requirements of the Oklahoma Administrative Procedures Act have been followed.

This council authorizes the Department to prepare this recommended rulemaking for the Board, making any changes approved by the Council, correcting typographical, grammatical and reference errors, and formatting them as required by the Office of Administrative Rules. This is to be done with the understanding that such changes shall neither alter the sense of what this Council recommends nor invalidate this recommendation.

Respectfully,

David Branecky
Chair or Designee:

**TITLE 252 DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

RULEMAKING ACTION: PERMANENT final adoption.

RULES: 252:100-8, Operating Permits (Part 70) [AMENDED].

AUTHORITY: Environmental Quality Board; 27A O.S. Supp. 1993 §§ 2-2-101, 2-5-101, et seq.

DATES:

Comment period: September 15, 1997 through October 15, 1997; November 17, 1997 through December 16, 1997; and January 27, 1998.

Public hearing: October 21, 1997, December 16, 1997 and January 9, 1998.

Adoption: January 27, 1998 (proposed).

Submitted to Governor:

Submitted to House:

Submitted to Senate:

Gubernatorial approval:

Legislative approval:

Final adoption:

Effective:

SUPERSEDED EMERGENCY ACTIONS:

Superseded rules:

Gubernatorial approval:

Register publication:

Docket number:

INCORPORATIONS BY REFERENCE:

Incorporated standards: 40 CFR §§ 63.41, 63.43, 63.44; 40 CFR Part 72.

Incorporating rule: 252:100-8-4(a)(2)(C); 252:100-8-6.3(h).

Availability: The standards are available to the public for examination at the Department of Environmental Quality office at 4545 N. Lincoln Blvd., Suite 250, Oklahoma City, Oklahoma.

ANALYSIS: The changes in Subchapter 8 incorporate a new permit classification system, move the requirement to pay annual operating fees from Subchapter 8 to Subchapter 5, move the requirements for construction permits for Title V sources from Subchapter 7 to Subchapter 8, make corrections to meet the federal requirements for final approval of the Oklahoma Operating Permit Program under Title V of the Federal Clean Air Act and 40 CFR Part 70, adopt by reference the federal rules governing case-by-case MACT determinations found in 40 CFR §§63.41, 63.43 and 63.44 as they exist on July 1, 1997, and update the adoption of 40 CFR 72 by adopting the provisions published in the Federal Register on October 24, 1997.

The Air Quality Advisory Council recommended these amendments for adoption at their meeting on January 9, 1998.

SUMMARY OF DIFFERENCES FROM ANALOGOUS FEDERAL RULES: None.

CONTACT PERSON: Joyce D. Sheedy, Ph.D., Department of Environmental Quality, Air Quality Division, 4545 N. Lincoln Blvd. Suite 250, Oklahoma City, Oklahoma 73105. (405) 290-8247.

PURSUANT TO THE ACTIONS DESCRIBED HEREIN, THE FOLLOWING RULES ARE CONSIDERED FINALLY ADOPTED AS SET FORTH IN 75 O.S., SECTION 308.1(A), WITH AN EFFECTIVE DATE OF JUNE 1, 1998.

**TITLE 252 DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

RULEMAKING ACTION: EMERGENCY adoption.

RULES: 252:100-8, Operating Permits (Part 70) [AMENDED].

AUTHORITY: Environmental Quality Board; 27A O.S. Supp. 1993 §§ 2-2-101, 2-5-101, et seq.

DATES:

Comment period: September 15, 1997 through October 15, 1997; November 17, 1997 through December 16, 1997; and January 27, 1998.

Public hearing: October 21, 1997, December 16, 1997 and January 9, 1998.

Adoption: January 27, 1998 (proposed).

Effective: Effective immediately upon Governor's approval.

Expiration: Effective through July 14, 1998, unless superseded by another rule or disapproved by the Legislature.

SUPERSEDED EMERGENCY ACTIONS: None.

INCORPORATIONS BY REFERENCE:

Incorporated standards: 40 CFR §§ 63.41, 63.43, 63.44; 40 CFR Part 72.

Incorporating rules: 252:100-8-4(a)(2)(C); 252:100-8-6.3(h).

Availability: The standards are available to the public for examination at the Department of Environmental Quality office at 4545 N. Lincoln Blvd., Suite 250, Oklahoma City, Oklahoma.

FINDING OF EMERGENCY: The Environmental Quality Board finds that a compelling extraordinary circumstance necessitates the seeking of emergency certification of the rules and regulations adopted today. These actions provide modern tools for the protection of environmental health in the field of air quality regulation. Under the terms of the Administrative Procedures Act, unless an emergency is declared and certified, these amendments could not go into effect until the spring of 1998 and Oklahoma citizens should not have to wait on that procedure.

ANALYSIS: The changes in Subchapter 8 incorporate a new permit classification system, move the requirement to pay annual operating fees from Subchapter 8 to Subchapter 5, move the requirements for construction permits for Title V sources from Subchapter 7 to Subchapter 8, make corrections to meet the federal requirements for final approval of the Oklahoma Operating Permit Program under Title V of the Federal Clean Air Act and 40 CFR Part 70, adopt by reference the federal rules governing case-by-case MACT determinations found in 40 CFR §§63.41, 63.43 and 63.44 as they exist on July 1, 1997, and update the adoption of 40 CFR 72 by adopting the provisions published in the Federal Register on October 24, 1997.

The Air Quality Advisory Council recommended these amendments for adoption at their meeting on January 9, 1998.

SUMMARY OF DIFFERENCES FROM ANALOGOUS FEDERAL RULES: None.

CONTACT PERSON: Joyce D. Sheedy, Ph.D., Department of Environmental Quality, Air Quality Division, 4545 N. Lincoln Blvd. Suite 250, Oklahoma City, Oklahoma 73105. (405) 290-8247.

PURSUANT TO THE ACTIONS DESCRIBED HEREIN, THE FOLLOWING EMERGENCY RULES ARE CONSIDERED PROMULGATED AND EFFECTIVE UPON APPROVAL BY THE GOVERNOR AS SET FORTH IN 75 O.S., SECTION 253(D).

SUBCHAPTER 8. OPERATING PERMITS (PART 70) FOR PART 70 SOURCES

PART 1. GENERAL PROVISIONS

252:100-8-1. Purpose

The purpose of this Subchapter is to provide for the promulgation and enforcement of the requirements necessary to meet Title V of the federal Clean Air Act (42 U.S.C. 7401, et seq.) and 40 CFR Part 70 by establishing a comprehensive state air quality permitting program for major sources of air contaminant emissions. Permits issued under this program will address all applicable air contaminant emissions and regulatory requirements in a single document. This Subchapter sets forth permit application fees and the substantive requirements for permits for Part 70 sources.

252:100-8-1.1. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise. Except as specifically provided in this section, terms used in this Subchapter retain the meaning accorded them under the applicable requirements of the Act.

"A stack in existence" means for purposes of 252:100-8-1.5 that the owner or operator had:

(A) begun, or caused to begin, a continuous program of physical on-site construction of the stack; or

(B) entered into binding agreements or contractual obligations, which could not be canceled or modified without substantial loss to the owner or operator, to undertake a program of construction of the stack to be completed in a reasonable time.

"Act" means the federal Clean Air Act, as amended, 42 U.S.C. 7401 et seq.

"Administrator" means the Administrator of the United States Environmental Protection Agency (EPA) or the Administrator's designee.

"Allowable emissions" means, for purposes of Parts 7 and 9 of this Subchapter, the emission rate of a stationary source calculated using the maximum rated capacity of the source (unless the source is subject to enforceable limits which restrict the operating rate, or hours of operation, or both) and the most stringent of the following:

(A) the applicable standards as set forth in 40 CFR Parts 60 and 61;

(B) the applicable State rule allowable emissions; or,

(C) the emissions rate specified as an enforceable permit condition.

"Begin actual construction" for purposes of Parts 7 and 9 of this Subchapter means, in general, initiation of physical on-site construction activities on an emissions unit which are of a permanent nature. Such activities include, but are not limited to, installation of building supports and foundations, laying of underground pipework, and construction of permanent storage structures. With respect to a change in method of operation this term refers to those on-site activities, other than preparatory activities, which mark the initiation of the change.

"Commence" for purposes of Parts 7 and 9 of this Subchapter

means, as applied to construction of a major stationary source or major modification, that the owner or operator has all necessary preconstruction approvals or permits and either has:

(A) begun, or caused to begin, a continuous program of actual on-site construction of the source, to be completed within a reasonable time; or,

(B) entered into binding agreements or contractual obligations, which cannot be cancelled or modified without substantial loss to the owner or operator, to undertake a program of actual construction of the source to be completed within a reasonable time.

"Construction" means, for purposes of Parts 7 and 9 of this Subchapter, any physical change or change in the method of operation (including fabrication, erection, installation, demolition, or modification of an emissions unit) which would result in a change in actual emissions.

"Dispersion technique" means for purposes of 252:100-8-1.5 any technique which attempts to affect the concentration of a pollutant in the ambient air by using that portion of a stack which exceeds good engineering practice stack height; varying the rate of emission of a pollutant according to atmospheric conditions or ambient concentrations of that pollutant; or increasing final exhaust gas plume rise by manipulating source process parameters, exhaust gas parameters, stack parameters or combining exhaust gases from several existing stacks into one stack, or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise. The preceding sentence does not include:

(A) The reheating of a gas stream, following use of a pollution control system, for the purpose of returning the gas to the temperature at which it was originally discharged from the facility generating the gas stream.

(B) The merging of exhaust gas streams where:

(i) the source owner or operator documents that the facility was originally designed and constructed with such merged streams;

(ii) after July 8, 1985, such merging is part of a change in operation at the facility that includes the installation of pollution controls and is accompanied by a net reduction in the allowable emissions of a pollutant. This exclusion from "dispersion technique" applicability shall apply only to the emission limitation for the pollutant affected by such change in operation; or

(iii) before July 8, 1985, such merging was part of a change in operation at the facility that included the installation of emissions control equipment or was carried out for sound economic or engineering reasons. Where there was an increase in the emission limitation or, in the event that no emission limitation existed prior to the merging, there was an increase in the quantity of pollutants actually emitted prior to the merging, it shall be presumed that merging was primarily intended as a means of gaining emissions credit for greater dispersion. Before such credit can be allowed, the owner or operator must satisfactorily demonstrate that merging was not carried out for the primary purpose of gaining credit for greater dispersion.

(C) Manipulation of exhaust gas parameters, merging of exhaust gas streams from several existing stacks into one stack, or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise in those cases where the resulting allowable emissions of sulfur dioxide from the facility do not exceed 5,000 tons per year.

"Emission limitations and emission standards" means for purposes of 252:100-8-1.5 requirements that limit the quantity, rate or concentration of emissions of air pollutants on a continuous basis, including any requirements that limit the level of opacity, prescribe equipment, set fuel specifications or prescribe operation or maintenance procedures for a source to assure continuous reduction. (Amended 7-9-87, effective 8-10-87)

"Emissions unit" means, for purposes of Parts 7 and 9 of this Subchapter, any part of a source which emits or would have the potential to emit any pollutant subject to regulation.

"EPA" means the United States Environmental Protection Agency.

"Fugitive emissions" means, for purposes of Parts 7 and 9 of this Subchapter, those emissions which could not reasonably pass through a stack, chimney, vent or other functionally equivalent opening.

"National Emission Standards for Hazardous Air Pollutants" or "NESHAP" means those standards found in 40 CFR Parts 61 and 63.

"Necessary preconstruction approvals or permits" means, for purposes of Parts 7 and 9 of this Subchapter, those permits or approvals required under all applicable air quality control laws and rules.

"New Source Performance Standards" or "NSPS" means those standards found in 40 CFR Part 60.

"Part 70 permit" (unless the context suggests otherwise) means any permit or group of permits covering a Part 70 source that is issued, renewed, amended, or revised pursuant to this Chapter.

"Part 70 program" means a program approved by the Administrator under 40 CFR Part 70.

"Part 70 source" means any source subject to the permitting requirements of Part 5 of this Subchapter, as provided in 252:100-8-3(a) and 252:100-8-3(b).

"Potential to emit" means, for purposes of Parts 7 and 9 of this Subchapter, the maximum capacity of a source to emit a pollutant under its physical and operational design. Any physical or operational limitation on the capacity of the source to emit a pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored or processed, shall be treated as part of its design if the limitation or the effect it would have on emissions is enforceable. Secondary emissions do not count in determining the potential to emit of a source.

"Secondary emissions" means, for purposes of Parts 7 and 9 of this Subchapter, emissions which occur as a result of the construction or operation of a major stationary source or modification, but do not come from the source or modification itself. For the purpose of 252:100-8, Part 9, secondary emissions must be specific, well defined, quantifiable, and impact the same general areas as the source or modification which causes the secondary emissions. Secondary emissions may include, but are not limited to:

(A) emissions from trains coming to or from the new or modified stationary source; and,

(B) emissions from any offsite support facility which would not otherwise be constructed or increase its emissions as a result of the construction or operation of the major source or modification.

"Stack" means for purposes of 252:100-8-1.5 any point in a source designed to emit solids, liquids or gases into the air, including a pipe or duct but not including flares.

"Stationary source" means, for purposes of Parts 7 and 9 of this Subchapter, any building, structure, facility or installation which emits or may emit any air pollutant subject to 252:100.

252:100-8-1.2. General information

(a) Permit categories. Two types of construction and operating permits are available: general permit and individual permit.

(1) General permit.

(A) A general permit may be issued for an industry if there are a sufficient number of facilities that have the same or substantially similar operations, emissions and activities which are subject to the same standards, limitations and operating and monitoring requirements.

(B) Facilities may be eligible for authorization under a general permit if the following criteria are met:

(i) The facility has actual emissions of 100 tpy or more of any one regulated air pollutant emitted and/or is a Part 70 source.

(ii) The DEQ has issued a general permit for the industry.

(2) Individual permit. Facilities requiring permits under this Subchapter that do not qualify for a general permit shall obtain individual permits. An owner or operator may apply for an individual permit even if the facility qualifies for a general permit.

(b) Applicability determination. Any person may submit a request in writing that the DEQ make a determination as to whether a particular source or installation, which that person operates or proposes to operate, is subject to the permit requirements of this Subchapter. The request must contain sufficient information for the DEQ to make the requested determination and the required fee. The DEQ may request any additional information that it needs for purposes of making the determination.

252:100-8-1.3. Duty to comply

(a) An owner or operator who applies for a permit or authorization, upon notification of coverage, shall be bound by the terms and conditions therein.

(b) An owner or operator who violates any condition of a permit or authorization is subject to enforcement under the Oklahoma Clean Air Act.

252:100-8-1.4. Cancellation or extension of a construction permit or authorization under a general construction permit

(a) Cancellation of permit or authorization to construct or modify. A duly issued permit or authorization to construct or

modify will terminate and become null and void (unless extended as provided in Subsection (b) of this Section) if the construction is not commenced within 18 months after the date the permit or authorization was issued, or if work is suspended for more than 18 months after it has commenced.

(b) Extension of permit or authorization to construct or modify.

(1) Prior to the expiration date of the permit or authorization, a permittee may apply for extension of the permit or authorization by written request of the DEQ stating the reasons for the delay or suspension and providing justification for the extension. The DEQ may grant:

(A) One extension of 18 months or less, or

(B) One extension of up to 36 months where the applicant is proposing to expand an already existing facility to accommodate the proposed new construction or the applicant has expended a significant amount of money (1% of total project cost as identified in the original application, not including land cost) in preparation for meeting the definition of "commence construction" at the proposed site, or

(C) One extension of up to 72 months will be granted to major industrial facilities (project cost greater than \$100,000,000.00), where the applicant proposes to construct at an existing site and demonstrates that the existing site was originally designed and constructed to accommodate the proposed new facilities. The applicant shall show a commitment to the site by having purchased land necessary to construct facilities covered by this extension and expended \$1,000,000.00 or more on engineering and/or site development.

(2) If construction has not commenced within three (3) years of the effective date of the original permit or authorization, the permittee must undertake and complete an appropriate available control technology review and an air quality analysis. This review must be approved by the DEQ before construction may commence.

(3) Upon formal request of any applicant whose permit has been denied for lack of increment, the DEQ may require any permittee under 252:100-8-1.4(b)(1)(B) or 252:100-8-1.4(b)(1)(C), to furnish a complete air quality analysis and/or an appropriate available control technology review if such review is required in order to provide new or current information.

252:100-8-1.5. Stack height limitations

(a) Stack height exclusion. Air quality modeling or ambient impact evaluation shall exclude the effect of that portion of the height of any stack which exceeds good engineering practice or the effect of any other dispersion techniques.

(b) Determination of good engineering practice (GEP) stack height. GEP shall be the greater of:

(1) 65 meters, measured from the ground-level elevation at the base of the stack; or

(2) The height under either 252:100-8-1.5(b)(2)(A) or (B):

(A) for stacks in existence on January 12, 1979 and for which the owner or operator had obtained all applicable permits or approvals required under 252:100-8 or 40 CFR Part 52,

$$H_g = 2.5H$$

provided the owner or operator can demonstrate that this equation was relied upon in establishing an emission limitation;

(B) for all other stacks,

$$H_g = H + 1.5L,$$

where: H_g = good engineering practice stack height, measured from the ground-level elevation at the base of the stack,

H = height of nearby structure(s) measured from the ground-level elevation at the base of the stack,

L = lesser dimension (height or projected width) of nearby structure(s), provided that the owner or operator may be required to verify such GEP stack height by the use of a field study or fluid model as the Executive Director shall determine; or

(3) The height demonstrated by a fluid model or a field study approved by the reviewing agency, which ensures that the emissions from a stack do not result in excessive concentrations of any air pollutant as a result of atmospheric downwash, wakes, or eddy effects created by the source itself, nearby structures, or nearby terrain features.

(c) Nearby.

(1) For the formulae in 252:100-8-1.5(b) (2). A structure or terrain feature shall be considered nearby if it is located within a distance of up to five times the lesser of the height or the width of a structure, but not more than 0.5 miles (0.8 km).

(2) For demonstration in 252:100-8-1.5(b) (3).

(A) A structure or terrain feature shall be considered nearby if located at a distance not greater than 0.5 mile (0.8 km), except that

(B) A portion of a terrain feature may be considered nearby if:

(i) It falls within a distance (not to exceed 2 miles) of up to 10 times the maximum height (H_t) of the feature, and

(ii) At a distance of 0.5 mile, the height of such feature is at least 40 percent of the GEP stack height determined by the formulae provided in 252:100-8-1.5(b) (2) (B) or 85.3 feet (26 meters), whichever is greater, as measured from the base of the stack.

(3) Measurement of height of structure or terrain. The height of the structure or terrain feature is measured from the ground-level elevation at the base of the stack.

(d) Excessive concentrations. When utilized for the purpose of determining GEP stack height under 252:100-8-1.5(b) (3), excessive concentrations shall be as follows:

(1) For sources seeking credit for stack height exceeding that calculated under 262:100-8-1.5(b) (2), a maximum ground-level pollutant concentration from a stack due in whole or part to downwash, wakes, and eddy effects produced by nearby structures

or nearby terrain features which is at least 40 percent in excess of the maximum concentration experienced in the absence of such downwash, wakes, or eddy effects and which, when combined with the impacts due to all sources, produces a concentration in excess of an ambient air quality standard. For sources subject to the prevention of significant deterioration program (Part 7 of this Subchapter or Federal 40 CFR 52.21), the same criteria apply except that a concurrent exceedance of a prevention of significant deterioration increment is experienced. In making demonstrations under this part, the allowable emission rate shall conform to the new source performance standard that is applicable to the source category unless the owner or operator can demonstrate that this emission rate is infeasible. Where such demonstrations are approved by the Executive Director, an alternative emission rate shall be established in consultation with the owner or operator;

(2) For sources seeking credit after October 1, 1983, for increases in existing stack heights up to the heights established under 252:100-8-1.5(b)(2) either:

(A) a maximum ground-level concentration due in whole or part to downwash, wakes or eddy effects as specified in 252:100-8-1.5(b)(2), except that the emission rate specified by any applicable state implementation plan (or, in the absence of such a limit, the actual emission rate) shall be used, or

(B) the actual presence of a local nuisance caused by the existing stack, as determined by the Executive Director; and

(3) For sources seeking credit after January 12, 1979 for a stack height determined under 252:100-8-1.5(b)(2) where the Executive Director requires the use of a field study or fluid model to verify GEP stack height, for sources seeking stack height credit after November 9, 1984 based on the aerodynamic influence of cooling towers, and for sources seeking stack height credit after December 31, 1970 based on the aerodynamic influence of structures not adequately represented by the formulae in 252:100-8-1.5(b)(2), a maximum ground-level concentration due in whole or part to downwash, wakes or eddy effects that is at least 40 percent in excess of the maximum concentration experienced in the absence of such downwash, wakes or eddy effects.

PART 3. PERMIT APPLICATION FEES

252:100-8-1.7. Permit application fees

A permit application or a request for an applicability determination received after the effective date of this subsection will be assessed a one-time fee, which must accompany the application or request. Applications received without appropriate fees are administratively incomplete. Fees must be paid by check or money order made payable to the Oklahoma Air Quality Division in accordance with the following fee schedule:

(1) Applicability determination. \$100, to be credited against the construction or operating permit application fee, if a permit is required. If no permit is required, the fee will be retained to cover the cost of making the determination.

(2) Construction permit application. The fee is \$2,000.

(3) Operating permit application.

- (A) Initial Part 70 permit - \$2,000.
- (B) Authorization under a general permit - \$900
- (C) Renewal Part 70 permit - \$1,000.
- (D) Significant modification of Part 70 permit - \$1,000.
- (E) Minor modification of Part 70 permit - \$500.
- (F) Part 70 Temporary Source Relocation - \$500.

PART 5. PERMITS FOR PART 70 Sources

252:100-8-2. Definitions

The following words and terms, when used in this ~~Subchapter~~Part, shall have the following meaning, unless the context clearly indicates otherwise. Except as specifically provided in this section, terms used in this ~~Subchapter~~Part retain the meaning accorded them under the applicable requirements of the Act.

~~"Act" means the Clean Air Act, as amended, 42 U.S.C. 7401 et. seq.~~

~~"Administratively complete" means the same as defined at OAC 252:002-11-an application that provides:~~

- (A) All information required under 252:100-8-5(c), (d), or (e);
- (B) A landowner affidavit as required by 252:2-15-20(b)(3);
- (C) The appropriate application fees as required by 252:100-8-1.7; and
- (D) Certification by the responsible official as required by 252:100-8-5(f).

~~"Administrator" means the administrator of the United States Environmental Protection Agency (EPA) or the administrator's designee.~~

"Affected source" means the same as the meaning given to it in the regulations promulgated under Title IV (acid rain) of the Act.

"Affected states" means:

- (A) all states:
 - (i) ~~that~~That are one of the following contiguous states: Arkansas, Colorado, Kansas, Missouri, New Mexico and Texas, and
 - (ii) That in the judgment of the Agency, ~~DEQ~~ may be directly affected by emissions from the facility seeking the permit, permit modification, or permit renewal being proposed; or
- (B) all states that are within 50 miles of the permitted source.

"Affected unit" means the same as the meaning given to it in the regulations promulgated under Title IV (acid rain) of the Act.

~~"Agency" means Air Quality Division of the Oklahoma Department of Environmental Quality.~~

"Applicable requirement" means all of the following as they apply to emissions units in a ~~part~~Part 70 source subject to this Chapter (including requirements that have been promulgated or approved by EPA through rulemaking at the time of issuance but have future effective compliance dates):

- (A) Any standard or other requirements provided for in the applicable implementation plan approved or promulgated by EPA through rulemaking under Title I of the Act that implements the relevant requirements of the Act, including any revisions to

that plan promulgated in 40 C.F.R.-CFR Part 52;

(B) Any term or condition of any preconstruction permits issued pursuant to regulations approved or promulgated through rulemaking under Title I, including parts C or D, of the Act;

(C) Any standard or other requirement under section 111 of the Act, including section 111(d);

(D) Any standard or other requirement under section 112 of the Act, including any requirement concerning accident prevention under section 112(r)(7) of the Act, but not including the contents of any risk management plan required under 112(r) of the Act;

(E) Any standard or other requirement of the acid rain program under Title IV of the Act or the regulations promulgated thereunder;

(F) Any requirements established pursuant to section 504(b) or section 114(a)(3) of the Act;

(G) Any standard or other requirement governing solid waste incineration, under section 129 of the Act;

(H) Any standard or other requirement for consumer and commercial products, under section 183(e) of the Act;

(I) Any standard or other requirement for tank vessels, under section 183(f) of the Act;

(J) Any standard or other requirement of the regulations promulgated to protect stratospheric ozone under Title VI of the Act, unless the Administrator has determined that such requirements need not be contained in a Title V permit; and

(K) Any national ambient air quality standard or increment or visibility requirement under part C of Title I of the Act, but only as it would apply to temporary sources permitted pursuant to section 504(e) of the Act.

~~"Department" means the Department of Environmental Quality.~~

~~"Designated representative" means the same as the meaning given to it in section 402(26) of the Act and the regulations promulgated thereunder with respect to affected units, a responsible person or official authorized by the owner or operator of a unit to represent the owner or operator in matters pertaining to the holding, transfer, or disposition of allowances allocated to a unit, and the submission of and compliance with permits, permit applications, and compliance plans for the unit.~~

~~"Draft permit" means the version of a permit for which the Agency DEQ offers public participation under OAC 252:100-8-7(i) 27A O.S.Supp. 1995, §2-14-101 et seq. and 252:100-2-15 or affected State review under OAC-252:100-8-8.~~

~~"Emissions allowable under the permit" means a federally enforceable permit term or condition determined at issuance to be required by an applicable requirement that establishes an emissions limit (including a work practice standard) or a federally enforceable emissions cap that the source has assumed to avoid an applicable requirement to which the source would otherwise be subject.~~

~~"Emissions unit" means any part or activity of a stationary source that emits or has the potential to emit any regulated air pollutant or any pollutant listed under section 112(b) of the Act. Fugitive emissions from valves, flanges, etc. associated with a specific unit process shall be identified with that specific~~

emission unit. This term is not meant to alter or affect the definition of the term "unit" for purposes of Title IV of the Act.

~~"EPA" means the United States Environmental Protection Agency.~~

"Final permit" means the version of a part 70 permit issued by the ~~Agency~~DEQ that has completed all review procedures required by ~~OAC-252:100-8-7 through 252:100-8-7.5 and 252:100-8-8.~~

"Fugitive emissions" means those emissions of regulated air pollutants which could not reasonably pass through a stack, chimney, vent, or other functionally-equivalent opening.

"General permit" means a part 70 permit that meets the requirements of ~~OAC 252:100-8-6(d)~~252:100-8-6.1.

"Insignificant activities" means individual emissions units that are either on the list approved by the Administrator and contained in Appendix I, or whose actual calendar year emissions do not exceed any of the limits in (A) through (C) of this definition. Any activity to which a State or federal applicable requirement applies is not insignificant even if it meets the criteria below or is included on the insignificant activities list.

(A) 5 tons per year of any one criteria pollutant.

(B) 2 tons per year for any one hazardous air pollutant (HAP) or 5 tons per year for an aggregate of two or more HAP's, or 20 percent of any threshold less than 10 tons per year for single HAP that the EPA may establish by rule.

(C) 0.6 tons per year for any one category A substance, 1.2 tons per year for any one category B substance or 6 tons per year for any one category C substance as defined in 252:100-41-40.

"MACT" means maximum achievable control technology.

"Major source" means any stationary source (or any group of stationary sources that are located on one or more contiguous or adjacent properties, and are under common control of the same person (or persons under common control)) belonging to a single major industrial grouping and that ~~are~~is described in subparagraph (A), (B), or (C), ~~or (D)~~, of this definition. For the purposes of defining "major source," a stationary source or group of stationary sources shall be considered part of a single industrial grouping if all of the pollutant emitting activities at such source or group of sources on contiguous or adjacent properties belong to the same Major Group (i.e., all have the same two-digit primary SIC code) as described in the Standard Industrial Classification Manual, 1987.

(A) A major source under section 112 of the Act, which is defined as:

(i) For pollutants other than radionuclides, any stationary source or group of stationary sources located within a contiguous area and under common control that emits or has the potential to emit, in the aggregate, 10 tons per year ("tpy") or more of any hazardous air pollutant which has been listed pursuant to section 112(b) of the Act, 25 tpy or more of any combination of such hazardous air pollutants, or such lesser quantity as the Administrator may establish by rule. Notwithstanding the preceding sentence, emissions from any oil or gas exploration or production well (with its associated equipment) and emissions from any pipeline compressor or pump station shall not be aggregated with emissions from other similar units, whether or not such units are in a contiguous

area or under common control, to determine whether such units or stations are major sources; or.

(ii) For radionuclides, "major source" shall have the meaning specified by the Administrator by rule.

(B) A major stationary source of air pollutants, as defined in section 302 of the Act, that directly emits or has the potential to emit, 100 tpy or more of any regulated air pollutant (except ~~Total Suspended Particulates (TSP)~~ TSP) (including any major source of fugitive emissions of any such pollutant, as determined by rule by the Administrator). The fugitive emissions of a stationary source shall not be considered in determining whether it is a major stationary source for the purposes of section 302(j) of the Act, unless the source belongs to one of the following categories of stationary sources:

- (i) Coal cleaning plants (with thermal dryers);
- (ii) Kraft pulp mills;
- (iii) Portland cement plants;
- (iv) Primary zinc smelters;
- (v) Iron and steel mills;
- (vi) Primary aluminum ore reduction plants;
- (vii) Primary copper smelters;
- (viii) Municipal incinerators capable of charging more than 250 tons of refuse per day;
- (ix) Hydrofluoric, sulfuric, or nitric acid plants;
- (x) Petroleum refineries;
- (xi) Lime plants;
- (xii) Phosphate rock processing plants;
- (xiii) Coke oven batteries;
- (xiv) Sulfur recovery plants;
- (xv) Carbon black plants (furnace process);
- (xvi) Primary lead smelters;
- (xvii) Fuel conversion plants;
- (xviii) Sintering plants;
- (xix) Secondary metal production plants;
- (xx) Chemical process plants;
- (xxi) Fossil-fuel boilers (or combination thereof) totaling more than 250 million British thermal units per hour heat input;
- (xxii) Petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels;
- (xxiii) Taconite ore processing plants;
- (xxiv) Glass fiber processing plants;
- (xxv) Charcoal production plants;
- (xxvi) Fossil-fuel-fired steam electric plants of more than 250 million British thermal units per hour heat input; or
- (xxvii) All other stationary source categories regulated by a standard promulgated under section 111 or 112 of the Act, but only with respect to those air pollutants that have been regulated for that category.

(C) A major stationary source as defined in part D of Title I of the Act, including:

- (i) For ozone non-attainment areas, sources with the potential to emit 100 tpy or more of volatile organic compounds or oxides of nitrogen in areas classified as "marginal" or "moderate," 50 tpy or more in areas classified

as "serious," 25 tpy or more in areas classified as "severe," and 10 tpy or more in areas classified as "extreme"; except that the references in this paragraph to 100, 50, 25, and 10 tpy of nitrogen oxides shall not apply with respect to any source for which the Administrator has made a finding, under section 182(f)(1) or (2) of the Act, that requirements under section 182(f) of the Act do not apply;

(ii) For ozone transport regions established pursuant to section 184 of the Act, sources with the potential to emit 50 tpy or more of volatile organic compounds;

(iii) For carbon monoxide non-attainment areas:

(I) that are classified as "serious"; and

(II) in which stationary sources contribute significantly to carbon monoxide levels as determined under rules issued by the Administrator, sources with the potential to emit 50 tpy or more of carbon monoxide; and

(iv) For particulate matter (PM-10) non-attainment areas classified as "serious," sources with the potential to emit 70 tpy or more of PM-10.

~~(D) Notwithstanding the source categories in (A) through (C) of this definition, emissions from any oil or gas exploration or production well (with its associated equipment) and emissions from any pipeline compressor station or pump station shall not be aggregated with emissions from other similar units, whether or not such units are in a contiguous area or under common control, to determine whether such units or stations are major sources and in the case of any oil or gas exploration or production well (with its associated equipment), such emissions shall not be aggregated for any purpose under this definition.~~

"Maximum capacity" means the quantity of air contaminants that theoretically could be emitted by a stationary source without control devices based on the design capacity or maximum production capacity of the source and 8,760 hours of operation per year. In determining the maximum theoretical emissions of VOCs for a source, the design capacity or maximum production capacity shall include the use of raw materials, coatings and inks with the highest VOC content used in practice by the source.

~~"Part 70 permit" (unless the context suggests otherwise) means any permit or group of permits covering a part 70 source that is issued, renewed, amended, or revised pursuant to this Chapter.~~

~~"Part 70 program" means a program approved by the Administrator under 40 C.F.R. Part 70.~~

~~"Part 70 source" means any source subject to the permitting requirements of this Chapter, as provided in OAC 252:100-8-3(a) and 252:100-8-3(b).~~

"Permit" (unless the context suggests otherwise) means any permit or group of permits covering a ~~part~~Part 70 source that is issued, renewed, amended, or revised pursuant to this Chapter.

"Permit modification" means a revision to a ~~part~~Part 70 construction or operating permit that meets the requirements of ~~OAC 252:100-8-7(e)~~ 252:100-8-7.2(b).

"Permit program costs" means all reasonable (direct and indirect) costs required to develop and administer a permit program, as set forth in ~~OAC 252:100-8-9~~ 252:100-5-2.2 (whether such costs are incurred by the Agency ~~DEQ~~ or other State or local agencies that do

not issue permits directly, but that support permit issuance or administration).

"Permit revision" means any permit modification or administrative permit amendment.

~~"Permitting authority" means the Department of Environmental Quality.~~

"Potential to emit" means the maximum capacity of a stationary source to emit any air pollutant under its physical and operational design. Any physical or operational limitation on the capacity of a source to emit an air pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitation is enforceable by the Administrator. This term does not alter or affect the use of this term for any other purposes under the Act, or the term "capacity factor" as used in Title IV of the Act or the regulations promulgated thereunder.

"Proposed permit" means the version of a permit that the Agency~~DEQ~~ proposes to issue and forwards to the Administrator for review in compliance with ~~OAC~~ 252:100-8-8.

"Regulated air pollutant" means the following:

(A) Nitrogen oxides or any volatile organic ~~compounds~~compound (VOC), including those substances defined at ~~OAC~~in 252:100-1-3, 252:100-37-2, 252:100-39-2, or any Volatile Organic Solvent (VOS), as that term is defined at ~~OAC~~in 252:100-37-2 and 252:100-39-2, or any organic material defined at ~~in~~in 252:100-37-2 except those specifically excluded in the EPA definition of VOC ~~per~~in 40 CFR 51.100(s);

(B) Any pollutant for which a national ambient air quality standard has been promulgated;

(C) Any pollutant that is subject to any standard promulgated under section 111 of the Act;

(D) Any Class I or II ozone-depleting substance subject to a standard promulgated under or established by Title VI of the Act;

(E) Any pollutant subject to a standard promulgated under section 112 or other requirements established under section 112 of the Act (Hazardous Air Pollutants), including sections 112(g) (Modifications), (j) (Equivalent Emission Limitation by Permit, and (r) (Prevention of Accidental Releases), including the following:

(i) any pollutant subject to the requirements under section 112(j) of the Act. If the Administrator fails to promulgate a standard by the date established pursuant to section 112(e) of the Act (Schedule for Standards and Review), any pollutant for which a subject source would be major shall be considered to be regulated as to that source on the date 18 months after the applicable date established pursuant to section 112(e) of the Act; and,

(ii) any pollutant for which the requirements of section 112(g)(2) of the Act have been met, but only with respect to the individual source subject to the section 112(g)(2) requirement; or

(F) Any other substance for which an air emission limitation or equipment standard is set by an existing permit or regulation.

"Renewal" means the process by which a permit is reissued at the end of its term.

"Responsible official" means one of the following:

(A) For a corporation: a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation, or a duly authorized representative of such person if the representative is responsible for the overall operation of one or more manufacturing, production, or operating facilities applying for or subject to a permit and either:

(i) The facilities employ more than 250 persons or have gross annual sales or expenditures exceeding \$25 million (in second quarter 1980 dollars); or

(ii) The delegation of authority to such representatives is approved in advance by the ~~permitting authority~~ DEQ;

(B) For the partnership or sole proprietorship: a general partner or the proprietor, respectively;

(C) For a municipality, State, Federal, or other public agency: Either a principal executive officer or ranking elected official. For purposes of this Subchapter, a principal executive officer or installation commander of a Federal agency includes the chief executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., a Regional Administrator of EPA); or

(D) For affected sources:

(i) The designated representative in so far as actions, standards, requirements, or prohibitions under Title IV of the Act or the regulations promulgated thereunder are concerned; and

(ii) The designated representative for any other purposes under this Subchapter.

"Section 502(b)(10) changes" means changes that contravene an express permit term. Such changes do not include changes that would violate applicable requirements or contravene federally enforceable permit terms and conditions that are monitoring (including test methods), recordkeeping, reporting, or compliance certification requirements.

"Small unit" means a fossil fuel fired combustion device which serves a generator with a name plate capacity of 25 MWe or less.

"State-only requirement" means any standard or requirement pursuant to Oklahoma Clean Air Act (27A O.S. 1993 Supp. Sec. 2-5-101 et seq. as amended) that is not contained in the State Implementation Plan (SIP).

"State program" means a program approved by the Administrator under 40 C.F.R. Part 70.

"Stationary source" means any building, structure, facility, or installation that emits or may emit any regulated air pollutant or any pollutant listed under section 112(b) of the Act.

"Trivial activities" means any individual or combination of air emissions units that are considered inconsequential and are on a list approved by the Administrator and contained in Appendix J. Any activity to which a State or federal applicable requirement applies is not trivial even if included on the trivial activities list.

"Unit" means, for purposes of Title IV, a fossil fuel-fired

combustion device.

252:100-8-3. Applicability

(a) **Covered sources.** Except as exempted from the requirement to obtain a permit under subsection (b) of this Section ~~and/or elsewhere in this Chapter~~Subchapter, the ~~following sources listed below~~ are subject to the permitting requirements under this ~~Chapter~~Subchapter. A covered source shall remain a Part 70 source until a federally enforceable permit is obtained which contains emission limitations and/or conditions to limit the operation of the facility to below that which would define it as a covered source pursuant to this section.

- (1) Any major source (as defined in ~~OAC~~ 252:100-8-2);
- (2) Any source, ~~including an area source,~~ subject to a ~~NSPS~~ standard, limitation, or other requirement under section 111 of the Act;
- (3) Any source, including an area source, subject to a ~~NESHAP~~ standard or other requirement under section 112 of the Act, ~~except that a source is not required to obtain a permit solely because it is subject to regulations or requirements under section 112(r) of the Act;~~
- (4) Any affected source (as defined in ~~OAC~~ 252:100-8-2); ~~and~~
- (5) Any source in a source category designated by the Administrator pursuant to 40 ~~C.F.R.~~ CFR §70.3-; and
- (6) Any major source required to have a permit under Parts 7 or 9 of this Subchapter.

(b) **Source category exemptions.**

(1) All sources listed in subsection (a) of this section that are not major sources, affected sources, or solid waste incineration units required to obtain a permit pursuant to section 129(e) of the Act, are exempt from the obligation to obtain a Part 70 permit unless required to do so by appropriate implementation of EPA administrative rulemaking for non-major sources. Any such exempt source may opt to apply for a permit under these rules and shall be issued a permit if the applicant otherwise satisfies all of the requirements of this Chapter.

(2) If the Administrator determines after appropriate rulemaking that an exemption is applicable to non-major sources when adopting standards or other requirements under section 111 or section 112 of the Act after July 21, 1992, then at that time the exemption will apply.

(3) Unless otherwise required to obtain a Part 70 permit, the following source categories are exempted from the obligation to obtain a Part 70 permit:

(A) All sources in source categories that would be required to obtain a permit solely because they are subject to part 60, subpart AAA -- Standards of Performance for New Residential Wood Heaters; and

(B) All sources in source categories that would be required to obtain a permit solely because they are subject to part 61, subpart M -- National Emission Standard for Hazardous Air Pollutants for Asbestos, Section 61.145, Standard for Demolition and Renovation.

~~(c) **Emissions units and covered sources (Part 70 sources).**~~

- ~~(1) For major sources, Part 70 permits shall include all~~

~~applicable requirements and state only requirements for all relevant emissions units in the major source.~~

~~(2) For any non major source subject to this Subchapter, Part 70 permits shall include all applicable requirements which apply to emissions units that cause the source to be subject to the requirement to obtain a permit.~~

~~(d) Fugitive emissions. Fugitive emissions from a covered source shall be included in the permit application and the permit in the same manner as stack emissions, regardless of whether the source category in question is included in the list of sources contained in the definition of major source.~~

~~(e) Insignificant activities.~~

~~(1) The insignificant activities and emissions levels shall be as follows:~~

~~(A) emissions will not exceed one pound (1 lb.) per hour for any one criteria pollutant, and~~

~~(B) emissions of toxic air contaminants will not exceed the de minimis requirements set forth under 252:100 41 43(a) (5).~~

~~(2) In addition to the quantity thresholds in (1) (A) and (1) (B) "Insignificant Activity" also means any individual or combination of air emissions sources at a facility that have an aggregate potential to emit that does not increase the overall potential to emit of the entire facility for a given regulated pollutant by more than 10% above the "baseline" permitted limit which excludes the insignificant activities. Thus, insignificant activities may apply to original permit application, permit modifications/amendments, and/or permit renewals. The cumulative amount of activities claimed as insignificant during a Title V permit term shall not increase the potential to emit of the entire facility by more than 10% of the permit limit for a given pollutant from the date of permit issuance to the date of application for renewal. These insignificant activities cannot conflict with significant emission levels in any Title V program. Insignificant activities must be identified but not quantified (except to the extent necessary to demonstrate their insignificance) in the permit application. The Agency shall maintain a list of activities which are considered to be insignificant without quantification by the permittee. The Agency shall also maintain a list of activities which are determined to be trivial. "Trivial activity" means any individual or combination of air emissions units at a Part 70 source which are considered inconsequential as determined by the Agency. Trivial activities need not be identified in the permit application, amendment or renewal.~~

~~(f) Applicability determinations. Any person may submit a request in writing that the Agency make a determination as to whether a particular source or installation, which that person operates or proposes to operate, is subject to the permit requirements of this rule. The request must contain such information as is believed sufficient for the Agency to make the requested determination. The Agency may request any additional information that it needs for purposes of making the determination.~~

~~(g) Covered sources. A covered source shall remain a Part 70 source until a federally enforceable permit is obtained which contains emission limitations and/or conditions to limit the~~

~~operation of the facility to below that which would define it as a covered source pursuant to 252:100-8-3(a).~~

252:100-8-4. ~~Title V permits required~~ Requirements for construction and operating permits

(a) Construction permits.

(1) Construction permit required. No person shall cause or allow the construction or installation of any new facility that will require a Part 70 operating permit without first obtaining a DEQ-issued air quality construction permit. A construction permit is also required for any physical change that would be a modification under 252:100-8-7.2(b). In addition to the requirements of this Part, sources subject to Part 7 or Part 9 of this Subchapter must also meet the applicable requirements contained therein.

(2) Requirement for case-by-case MACT determinations.

(A) Applicability. The requirement for case-by-case MACT determinations apply to any owner or operator who constructs or reconstructs a major source of hazardous air pollutants after June 29, 1998, unless the source has been specifically regulated or exempted from regulation under a subpart of 40 CFR Part 63, or the owner or operator has received all necessary air quality permits for such construction or reconstruction before June 29, 1998.

(B) Exclusions. The following sources are not subject to this subsection.

(i) Electric utility steam generating units unless and until these units are added to the source category list.

(ii) Stationary sources that are within a source category that has been deleted from the source category list.

(iii) Research and development activities as defined in 40 CFR § 63.41.

(C) MACT determinations. If subject to this subsection, an owner or operator may not begin actual construction or reconstruction of a major source of HAP until obtaining from the DEQ an approved MACT determination in accordance with the following regulations: 40 CFR 63.41, 40 CFR 63.43 and 40 CFR 63.44, which are hereby incorporated by reference as they exist on July 1, 1997.

(b) Operating permits.

(1) Operating permits required. Except as provided in paragraphs ~~subparagraphs (1)(A) and (2)(B)~~ of this section, no ~~Title V~~ Part 70 source subject to this Chapter may operate after the time that it is required to file a timely application with the DEQ, except in compliance with a DEQ-issued permit.

~~(1)(A)~~ If the owner or operator of a source subject to the requirement to obtain a permit submits a timely application for permit issuance or renewal, that source's failure to have a permit shall not be a violation of the requirement to have such a permit until the DEQ takes final action on the application. This protection shall cease to apply if the applicant fails to submit, by the deadline specified in writing by the DEQ or ~~OAC 252:100-8-5~~ 252:100-8-4, any additional information identified as being reasonably required to process the application.

~~(2)(B)~~ If the owner or operator of a source subject to this Subchapter files a timely application that the DEQ determines to be administratively incomplete at the end of the DEQ's administrative completeness review period due to the applicant's failure to timely provide additional information requested by the DEQ, the applicant loses the protection granted under paragraph ~~(1)(A)~~ of this section, as a result of its failure to timely provide information requested by the DEQ, the source's failure to have a permit shall be deemed a violation of this Subchapter.

~~(3)(C)~~ Filing an operating permit application shall not affect the requirement, if any, that any source have a ~~preconstruction~~ construction permit under Title I of the federal Clean Air Act.

(2) Duty to apply. For each Part 70 source, the owner or operator shall submit a timely and complete permit application on forms supplied by the DEQ in accordance with this section.

(3) Timely application. Sources that are subject to the operating permit program established by this Chapter as of March 6, 1996, shall file applications on the following schedules outlined in 252:100-8-4(b)(4). A timely application is one that is postmarked on or before the relevant date listed below. In the event a major source consists of operations under multiple SIC codes, the primary activity shall form the basis for the initial permit application.

(4) Application submittal schedule. The following sources are subject to the operating permit program and shall submit initial permit applications according to the following schedule.

(A) No later than September 5, 1996:

(i) Affected sources under the acid rain provisions of the Act shall submit a permit application for at least the affected units at the site. Regardless of the effective date of the program and the requirement to file an application defined in this section, applications for initial Phase II acid rain permits shall be submitted to the DEQ no later than January 1, 1996, for sulfur dioxide, and by January 1, 1998, for nitrogen oxides, pursuant to the Act, §407.

(ii) Any owner or operator shall submit no less than one-third of their total applications for Part 70 sources located at sources classified by the following Source Standard Industrial Classification Codes and which belong to a single major industrial grouping other than 28 (Chemicals and allied products) or 29 (Petroleum refining and related industries):

(I) Petroleum and Natural Gas, 1311;

(II) Natural Gas Liquids, 1321;

(III) Electric Services, 4911, 4961;

(IV) Natural Gas Transmission, 4922;

(V) Natural Gas Transmission and Distribution, 4923; and

(VI) Petroleum Bulk Stations and Terminals, 5171.

(B) All remaining Part 70 sources identified in (b)(4)(A)(ii) of this Subsection shall be subject to the operating permit program and shall submit initial permit applications no later than March 5, 1997.

(C) No later than March 5, 1997, any owner or operator shall submit their applications for Part 70 sources located at sources classified by the following Standard Industrial Classification Codes:

(i) Metals, 3312, 3315, 3321, 3341, 3351, 3411, 3412, 3432, 3466,

(ii) Brick Plants, 3251, 3297,

(iii) Commercial Printing, 2752, 2761.

(D) No later than July 5, 1998, any owner or operator shall submit their applications for Part 70 sources located at sources classified by the following Standard Industrial Classification Codes:

(i) Refineries, 2911;

(ii) Cement Plants, 3241;

(iii) Chemical/Carbon, 2819, 2821, 2851, 2861, 2869, 2891, 2895, 2899, 2999, 3053, 3086, 3089;

(iv) Petroleum Transportation/Terminals/Storage, 4612, 4613;

(v) Food Products, 2013, 2074, 2095.

(E) All remaining Part 70 sources shall be subject to the operating permit program and shall submit initial permit applications no later than March 6, 1999.

(5) Newly regulated sources. A source that becomes subject to the operating permit program established by this Chapter at any time following the effective date shall file an administratively complete operating permit application within 180 days of commencement of operation.

(6) Application acceptability. Notwithstanding the deadlines established in paragraph (4) of this subsection, an application filed prior to the above deadlines following submission of the state program to EPA for approval shall be accepted for processing.

(7) 112(g) applications. A source that is required to meet the requirements under section 112(g) of the Act, or to have a permit under a preconstruction review program under Title I of such Act, shall file an application to obtain an operating permit or permit amendment or modification within twelve months of commencing operation. Where an existing Part 70 operating permit would prohibit such construction or change in operation, the source must obtain a construction permit before commencing construction.

(8) Application for renewal. Sources subject to this Chapter shall file an application for renewal of an operating permit at least six months before the date of permit expiration, unless a longer period (not to exceed 18 months) is specified in the permit. Renewal periods greater than six months are subject to negotiation on a case-by-case basis.

(9) Phase II acid rain permits. Sources required to submit applications under the Acid Rain Program shall submit these applications as required by 40 CFR 72.30(b)(2)(i) through (viii).

(10) Application completeness. See Uniform Permitting Rules, 252:2-15-70 and the definition of administratively complete in 252:100-8-2.

252:100-8-5. Permit applications

~~(a) Construction permit. Any new source or modified source which becomes subject to this Subchapter shall be required to obtain a construction permit in accordance with OAC 252:100-7 prior to commencement of construction.~~

~~(b) Duty to apply. For each Part 70 source, the owner or operator shall submit a timely and complete permit application on forms supplied by the Division in accordance with this section.~~

~~(1) Timely application. Sources that are subject to the operating permit program established by this Chapter as of the date the program is approved by EPA and becomes effective (the "effective date") shall file applications on the following schedules outlined in OAC 252:100-8-5(b)(2) 252:100-8-4(b)(2). In the event a major source consists of operations under multiple SIC codes, the main activity shall form the basis for the initial permit application.~~

~~(2) Application submittal schedule. The following sources are subject to the operating permit program and shall submit initial permit applications according to the following schedule.~~

~~(A) No later than six months after the effective date of the federally approved interim state operating permit program:~~

~~(i) Affected sources under the acid rain provisions of the federal Clean Air Act shall submit a permit application for at least the affected units at the site. Regardless of the effective date of the program and the requirement to file an application defined in this section, applications for initial Phase II acid rain permits shall be submitted to the DEQ no later than January 1, 1996, for sulfur dioxide, and by January 1, 1998, for nitrogen oxides, pursuant to the Act, §407.~~

~~(ii) Any owner or operator shall submit no less than one-third of their total applications for major sources located at sources classified by the following Source Standard Industrial Classification Codes and which belong to a single major industrial grouping other than 28 (Chemicals and allied products) or 29 (Petroleum refining and related industries):~~

~~(I) Petroleum and Natural Gas, 1311;~~

~~(II) Natural Gas Liquids, 1321;~~

~~(III) Electric Services, 4911, 4961;~~

~~(IV) Natural Gas Transmission, 4922;~~

~~(V) Natural Gas Transmission and Distribution, 4923; and~~

~~(VI) Petroleum Bulk Stations and Terminals, 5171.~~

~~(B) All remaining Part 70 sources identified in (b)(2)(A)(ii) of this Subsection shall be subject to the operating permit program and shall submit initial permit applications no later than 12 months after the effective date of the federally approved interim state operating permit program.~~

~~(C) No later than 12 months after the effective date of the federally approved interim state operating permit program, any owner or operator shall submit their applications for major sources located at sources classified by the following Standard Industrial Classification Codes:~~

~~(i) Metals, 3312, 3315, 3321, 3379, 3341, 3351, 3411,~~

~~3412, 3432, 3466,~~

~~(ii) Brick Plants, 3251, 3297,~~

~~(iii) Commercial Printing, 2752, 2761.~~

~~(D) No later than 28 months after the effective date of the federally approved interim state operating permit program, any owner or operator shall submit their applications for major sources located at sources classified by the following Standard Industrial Classification Codes:~~

~~(i) Refineries, 2911,~~

~~(ii) Cement Plants, 3241,~~

~~(iii) Chemical/Carbon, 2819, 2821, 2851, 2861, 2869, 2891, 2895, 2899, 2999, 3053, 3086, 3089,~~

~~(iv) Petroleum Transportation/Terminals/Storage, 4612, 4613,~~

~~(v) Food Products, 2013, 2074, 2095.~~

~~(E) All remaining Part 70 sources shall be subject to the operating permit program and shall submit initial permit applications no later than 36 months after the effective date of the federally approved interim state operating permit program.~~

~~(3) Application following effective date. A source that becomes subject to the operating permit program established by this Chapter at any time following the effective date shall file an administratively complete operating permit application within 180 days of commencement of operation.~~

~~(4) Application acceptability. Notwithstanding the deadlines established in paragraphs (1), (2), and (3) of this subsection, an application filed prior to the above deadlines following submission of the state program to EPA for approval shall be accepted for processing. For purposes of the 60 day administrative review period established in OAC 252.2-15, the official login date for any Part 70 operating permit submitted according to the interim schedule in this subsection shall be the date on which the DEQ begins its administrative completeness review.~~

~~(5) 112(g) applications. A source that is required to meet the requirements under section 112(g) of the federal Clean Air Act, or to have a permit under a preconstruction review program under Title I of such Act, shall file an application to obtain an operating permit or permit amendment or modification within twelve months of commencing operation. Where an existing Part 70 operating permit would prohibit such construction or change in operation, the source must obtain a permit revision before commencing construction.~~

~~(6) Application for renewal. Sources subject to this Chapter shall file an application for renewal of an operating permit at least six months before the date of permit expiration, unless a longer period (not to exceed 18 months) is specified in the permit. Renewal periods greater than six months are subject to negotiation on a case by case basis.~~

~~(7) Phase II acid rain permits. Sources required to submit applications under the Acid Rain Program should submit these applications as required by 40 CFR 72.30(b)(2)(i) through (viii).~~

~~(8) Application completeness. See Uniform Permitting Rules,~~

OAC 252:010 3 50 and 3 51.

~~(9) Application content for renewal of expiring permit. In submitting an application for renewal of a DEQ issued Part 70 operating permit, a source may identify terms and conditions in its previous permit that should remain unchanged and incorporate by reference those portions of its existing permit and the permit application and any permit amendment or modification applications that describe products, processes, operations, and emissions to which those terms and conditions apply. The source must identify specifically and list which portions of its previous permit and/or applications are incorporated by reference. In addition, a renewal application must contain:~~

~~(i) information specified in OAC 252:100 8 5(d) for those products, processes, operations, and emissions that:~~

~~(I) are not addressed in the existing permit,~~

~~(II) are subject to applicable requirements or state only requirements that are not addressed in the existing permit, or~~

~~(III) as to which the source seeks permit terms and conditions that differ from those in the existing permit, and~~

~~(ii) a compliance plan and certification as required in 252:100 8 5(d)(8).~~

~~(10)(a) Confidential information. If a source submits information to the DEQ under a claim of confidentiality, the source shall also submit a copy of such information directly to the Administrator, if the DEQ requests that the source do so.~~

~~(e)(b) Duty to supplement or correct application. Renumbered as OAC 252:100 6 50(f) See 252:100-6-50(e).~~

~~(d)(c) Standard application form and required information.~~

Sources that are subject to the Part 70 permit program established by this Chapter shall file applications on the standard application form that the DEQ makes available for that purpose in accordance with ~~OAC 252:2-15~~. The application must include information needed to determine the applicability of any applicable requirement, or state-only requirement, or to evaluate the fee amount required under the schedule approved pursuant to ~~OAC 252:100 8 9~~ 252:100-5-2.2(b)(2). The applicant shall submit the information called for by the application form for each emissions unit at the source to be permitted. The source must provide a list of any such insignificant activities that are exempted because of size or production rate. Trivial activities need not be listed. The standard application form and any attachments shall require that the ~~following information required by 252:100-8-5(d) and/or 252:100-8-5(e) be provided.~~

~~(d) Construction permit applications.~~

(1) An application for a construction permit shall provide data and information required by this Chapter and/or requested on the application form available from the DEQ pursuant to the requirements of this Chapter. Such data and information shall include but not be limited to site information, process description, emission data and when required, BACT, modeling and sampling point data as follows:

(A) BACT determination. To be approved for a construction permit, a major source must demonstrate that the control

technology to be applied is the best that is available for each pollutant that would cause the source to be defined as a major source. This determination will be made on a case by case basis taking into account energy, environmental, cost and economic impacts of alternative control systems.

(B) Modeling. Any air quality modeling or ambient impact evaluation that is required shall be prepared in accordance with procedures acceptable to the DEQ and accomplished by the applicant.

(C) Sampling points. If required by the DEQ an application shall show how the new source will be equipped with sampling ports, instrumentation to monitor and record emission data and other sampling and/or testing equipment. [NOTE: 252:100-8-1.4(b)(1) was taken from 252:100-7-15(b)]

(2) Construction permit applications for new sources must also include the requirements for operating permits contained in 252:100-8-5(e) to the extent they are applicable.

(e) Operating permit applications.

(1) Identifying information, including company name and address (or plant name and address if different from the company name), owner's name and agent, and telephone number and names of plant site manager/contact.

(2) A description of the source's processes and products (by two-digit Standard Industrial Classification Code) including any associated with each alternate scenario identified by the source.

(3) The following emissions-related information:

(A) All emissions of pollutants for which the source is major, and all emissions (including fugitive emissions) of regulated air pollutants. The permit application shall describe all emissions of regulated air pollutants emitted from any emissions unit, except where such units are exempted under this subsection ~~(d) 252:100-8-5(c) or OAC 252:100-8-3(b)~~. ~~The source shall submit additional information related to the emissions of air pollutants sufficient to verify which requirements are applicable to the source, and other information necessary to determine the amount of any permit fees owed under the fee schedule approved pursuant to OAC 252:100-8-9.~~

(B) Identification and description of all points of emissions described in subparagraph ~~(d)~~ (e)(3)(A) of this section in sufficient detail to establish the basis for fees and applicability of the ~~federal Clean Air Act's~~ requirements.

(C) Emissions rates in tons per year and in such terms as are necessary to establish compliance consistent with the applicable standard.

(D) The following information to the extent it is needed to determine or regulate emissions:

- (i) fuels,
- (ii) fuel use,
- (iii) raw materials,
- (iv) production rates, and
- (v) operating schedules.

(E) Identification and description of air pollution control equipment and compliance monitoring devices or activities.

- (F) Limitations on source operation affecting emissions or any work practice standards, where applicable, for all regulated pollutants at the covered source.
- (G) Other information required by any applicable requirement, or state-only requirement (including information related to stack height limitations developed pursuant to section 123 of the ~~federal Clean Air Act~~).
- (H) Calculations on which the information in items (A) through (G) of this paragraph is based.
- (4) The following air pollution control requirements:
- (A) Citation and description of all applicable requirements, and all state-only requirements, and.
- (B) Description of or reference to any applicable test method for determining compliance with each applicable requirement and state-only requirement.
- (5) Other specific information required under the DEQ's rules and statutes to implement and enforce other applicable requirements of the ~~federal Clean Air Act~~ or of this Chapter or to determine the applicability of such requirements.
- (6) An explanation of any proposed exemptions from otherwise applicable requirements and state-only requirements.
- (7) Additional information as determined to be necessary by the DEQ to define alternative operating scenarios identified by the source pursuant to ~~OAC 252:100-8-6(a)(9)~~ or to define permit terms and conditions implementing ~~OAC 252:100-8-6(h)~~ 252:100-8-6(f) or ~~OAC 252:100-8-6(a)(10)~~.
- (8) A compliance plan for all covered sources that contains all the following:
- (A) A description of the compliance status of the source with respect to all applicable requirements and state-only requirements, as follows:
- ~~(B) A description as follows:~~
- (i) For applicable requirements, and state-only requirements, with which the source is in compliance, a statement that the source will continue to comply with such requirements.
- (ii) For applicable requirements, and state-only requirements, that will become effective during the permit term, a statement that the source will meet such requirements on a timely basis shall satisfy this provision, unless a more detailed schedule is expressly required by the applicable requirement.
- (iii) For requirements for which the source is not in compliance at the time of permit issuance, a narrative description of how the source will achieve compliance with such requirements.
- ~~(C) (B) For sources not in complete compliance, a~~ compliance schedule as follows:
- ~~(i) For applicable requirements, and state only requirements, with which the source is in compliance, a statement that the source will continue to comply with such requirements.~~
- ~~(ii) For applicable requirements, and state only requirements, that will become effective during the permit term, a statement that the source will meet such require-~~

~~ments on a timely basis. A statement that the source will meet in a timely manner applicable requirements that become effective during the permit term shall satisfy this provision, unless a more detailed schedule is expressly required by the applicable requirement.~~

~~(iii)(i)~~ A schedule of compliance for sources that are not in compliance with all applicable requirements, and state-only requirements, at the time of permit issuance. Such a schedule shall include a schedule of remedial measures, including an enforceable sequence of actions with milestones, leading to compliance with any applicable requirements, and state-only requirements, for which the source will be in noncompliance at the time of permit issuance. This compliance schedule shall resemble and be equivalent in stringency to that contained in any judicial consent decree or administrative order to which the source is subject. Any such schedule of compliance shall be supplemental to, and shall not sanction non-compliance with, the applicable requirements on which it is based.

~~(D)(ii)~~ A schedule for submission of certified progress reports no less frequently than every 6 months ~~for sources required to have a schedule of compliance under OAC 252.100-8-5(d)(8)(C)(iii).~~

~~(E)(C)~~ The compliance plan content requirements specified in this paragraph shall apply and be included in the acid rain portion of a compliance plan for an affected source, except as specifically superseded by regulations promulgated under Title IV of the ~~federal Clean Air Act~~ with regard to the schedule and method(s) the source will use to achieve compliance with the acid rain emissions limitations.

(9) Requirements for compliance certification, including the following:

(A) A certification of compliance with all applicable requirements, and state-only requirements, by a responsible official consistent with subsection ~~(e)(f)~~ of this section and section 114(a)(3) of the ~~federal Clean Air Act~~;

(B) A statement of methods used for determining compliance, including a description of monitoring, recordkeeping, and reporting requirements and test methods;

(C) A schedule for submission of compliance certifications during the permit term, which shall be submitted annually, or more frequently if required by an underlying applicable requirement, state-only requirements, or by the permitting authority; and

(D) A statement indicating the source's compliance status with any applicable enhanced monitoring and compliance certification requirements of the ~~federal Clean Air Act~~.

(10) The use of nationally-standardized forms for acid rain portions of permit applications and compliance plans, as required by regulations promulgated under Title IV of the ~~federal Clean Air Act~~.

~~(11) A list of any such units which satisfy the definition of either insignificant activities or de minimis emissions.~~

~~(e)(f)~~ Certification. Any application form, report, or compliance certification submitted pursuant to this Chapter shall contain

certification by a responsible official of truth, accuracy, and completeness. This certification and any other certification required under this Chapter shall be signed by a responsible official and shall contain the following language: "I certify, based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete."

~~(f)~~(g) **Number of application copies.** See Part 3 of ~~OAC~~252:2-15.

252:100-8-6. Permit content

(a) **Standard permit requirements.** ~~To the extent practicable, every~~ Part 70 ~~permit~~permits issued under this Chapter shall include all applicable requirements, and state-only requirements, (as defined in ~~OAC~~252:100-8-2) that apply to the permitted source at the time of issuance. Each permit shall include the following elements:

(1) **Emission limitations and standards.** The permit shall specify emissions limitations and standards that constitute applicable requirements, and state-only requirements, and shall include those operational ~~requirements~~conditions and limitations necessary to assure compliance with all ~~applicable~~such requirements.

(A) The permit shall specify and reference the origin of and authority for each term or condition, and identify any difference in form as compared to the applicable requirement, ~~and~~ or state-only requirement, upon which the term or condition is based.

(B) The permit shall state that, where an applicable requirement of the ~~federal Clean Air Act~~ is more stringent than an applicable requirement of regulations promulgated under Title IV of the ~~federal Clean Air Act~~, both provisions shall be incorporated into the permit and shall be enforceable by EPA.

(C) If ~~an applicable~~the State implementation plan or an applicable requirement allows a source to comply through an alternative emission limit or means of compliance, a source may request that such an alternative limit or means of compliance be specified in its permit. Such an alternative emission limit or means of compliance shall be included in a source's permit upon a showing that it is quantifiable, accountable, enforceable, and based on replicable procedures. The source shall propose permit terms and conditions to satisfy these requirements in its application.

(2) **Permit duration.**

(A) **Operating Permits.** The permit shall specify a fixed term. The DEQ shall issue permits for any fixed period requested in the permit application, not to exceed five years, except as provided in subparagraphs ~~(A)~~(i) and ~~(B)~~(ii) of this paragraph:

~~(A)~~(i) Permits issued to affected sources shall in all cases have a fixed term of five years.

~~(B)~~(ii) Permits issued to solid waste incineration units combusting municipal waste subject to standards under section 129(e) of the ~~federal Clean Air Act~~ shall have a term not to exceed 12 years. Such permits shall be reviewed every five years.

(B) Construction permits. See 252:100-8-1.4.
(3) Monitoring and related recordkeeping and reporting requirements.

(A) Monitoring requirements. Each permit shall contain the following requirements with respect to monitoring:

(i) All emissions monitoring and analysis procedures or test methods required under the applicable requirements, and state-only requirements, including any procedures and methods promulgated pursuant to sections 114(a)(3) or 504(b) of the federal Clean Air Act;

(ii) Where ~~the~~an applicable requirement, and or state-only requirement, does not require periodic testing or instrumental or non-instrumental monitoring (which may consist of recordkeeping designed to serve as monitoring), periodic monitoring during the relevant time period sufficient to yield reliable data ~~from the relevant time period~~ that are representative of the source's compliance with the permit, as reported pursuant to (a)(3)(C) of this section. Such monitoring requirements shall assure use of terms, test methods, units, averaging periods, and other statistical conventions consistent with the applicable requirement, or state-only requirement. Recordkeeping provisions may be sufficient to meet the requirements of this subparagraph.

(iii) As necessary, requirements concerning the use, maintenance, and, where appropriate, ~~and~~ installation of monitoring equipment or methods.

(iv) Provisions for the permittee to request the use of alternative test methods or analysis procedures, and provisions for the DEQ to approve or disapprove the request within 60 days.

(B) Recordkeeping requirements. ~~With respect to recordkeeping, the~~The permit shall incorporate all applicable recordkeeping requirements and require, where applicable, the following:

(i) Records of required monitoring information that include the following:

(I) The date, place as defined in the permit, and time of sampling or measurements;

(II) The date(s) analyses were performed;

(III) The company or entity that performed the analyses;

(IV) The analytical techniques or methods used;

(V) The results of such analyses; and

(VI) The operating conditions ~~as~~ existing at the time of sampling or measurement.

(ii) Retention of records of all required monitoring data and support information for a period of at least five years from the date of the monitoring sample, measurement, report, or application. Support information includes all calibration and maintenance records and all original strip-chart recordings for continuous monitoring instrumentation, and copies of all reports required by the permit. Where appropriate, the permit may specify that records may be maintained in computerized form.

(C) Reporting requirements. ~~With respect to reporting,~~
The permit shall incorporate all applicable reporting requirements and require the following requirements:

(i) A permit issued under this ~~Chapter~~Part shall require the permittee to submit a report of any required monitoring at least every six months. To the extent possible, the schedule for submission of such reports shall be timed to coincide with other periodic reports required by the permit, including the permittee's annual compliance certification. However, the reports may be submitted at any time within the reporting period, as stipulated in the permit.

(ii) Each report submitted under (C)(i) of this paragraph shall identify any exceedances from permit requirements since the previous report that have been monitored by the monitoring systems required under the permit, and any exceedances from the monitoring, recordkeeping and reporting requirements under the permit.

(iii) In addition to semiannual monitoring reports, each permittee shall be required to submit supplemental reports as follows:

(I) Any exceedance resulting from emergency or upset conditions as defined in ~~OAC 252:100-8-6(g)~~ 252:100-8-6(e) shall be reported within 24 hours of the date on which the permittee first becomes aware of the exceedance, if the permittee wishes to assert the affirmative defense authorized under said section, and the permittee shall submit a follow up written report within 10 working days of first becoming aware of the exceedance. The initial report must contain a description of the emergency, any steps taken to mitigate emissions and corrective actions taken.

(II) Any exceedance that poses an imminent and substantial danger to public health, safety, or the environment shall be reported as soon as is practicable; but under no circumstance shall notification be more than 24 hours after exceedance.

(III) Any other exceedances that are identified in the permit as requiring more frequent reporting than the permittee's semiannual report shall be reported on the schedule specified in the permit.

(IV) All reports of exceedances shall identify the probable cause of the exceedances and any corrective actions or preventative measures taken.

(iv) Every report submitted under this subsection shall be certified by a responsible official, except that if a report of an exceedance required under (C)(iii) of this paragraph must be submitted within ten days of the exceedance, the report may be submitted in the first instance without a certification if an appropriate certification is provided within ten days thereafter, together with any corrected or supplemental information required concerning the exceedance. Reports submitted shall be consistent with the requirements of ~~OAC 252:100-9.~~

(4) Risk management plans. If the source is required to

develop and register a risk management plan pursuant to section 112(r) of the ~~federal Clean Air Act~~, the permit need only specify that ~~it~~ the permittee will comply with the requirement to register such a plan. Although the requirement to have a risk management plan may be a term of the permit, the risk management plan contents are not part of the permit.

(5) Title IV allowances.

(A) No permit revision shall be required for increases in emissions that are authorized by allowances acquired pursuant to the acid rain program, provided that such increases do not require a permit revision under any other applicable requirement.

(B) No limit shall be placed on the number of allowances held by the source. The source may not, however, use allowances as a defense to noncompliance with any other applicable requirement.

(C) The permit shall prohibit emissions exceeding any allowance that the source lawfully holds under Title IV of the ~~federal Clean Air Act~~ or the regulations promulgated thereunder. Compliance with this paragraph will be determined on January 31st of any given year and be based on actual emissions and the number of allowances held for the previous calendar year.

(6) Severability clause. The permit shall include a severability clause to ensure the continued validity of the various permit requirements in the event of a challenge to any portions of the permit.

(7) General requirements. The permit shall include provisions stating the following:

(A) The permittee must comply with all conditions of the permit. Any permit noncompliance constitutes a violation of the Oklahoma Clean Air Act and is grounds for:

(i) enforcement action;

(ii) permit termination, revocation and reissuance, or modification; or

(iii) denial of a permit renewal application.

(B) It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit. However, nothing in this subsection shall be construed as precluding consideration of a need to halt or reduce activity as a mitigating factor in assessing penalties for noncompliance if the health, safety, or environmental impacts of halting or reducing operations would be more serious than the impacts of continuing operations.

(C) The permit may be modified, revoked, reopened, and reissued, or terminated for cause. Except as provided under ~~OAC 252:100-8-7(e)(1)~~ 252:100-8-7.2(b)(1) for minor permit modifications, the filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or of a notification of planned changes or anticipated noncompliance does not stay any permit condition.

(D) The permit does not convey any property rights of any sort, or any exclusive privilege.

(E) The permittee shall furnish to the DEQ, upon receipt of a written request and within a reasonable time, any information that the DEQ may request to determine whether cause exists for modifying, reopening, or revoking and reissuing or terminating the permit or to determine compliance with the permit. Upon request, the permittee shall also furnish to the DEQ copies of records required to be kept by the permit. The permittee may make a claim of confidentiality pursuant to ~~OAC 252:100-8-5(b)(10)~~ 27A O.S. 1993 Supp. Section 2-5-105.18 for any information or records submitted under this paragraph.

(8) **Fees.** The permit shall provide that the permittee will pay fees to the DEQ consistent with the fee schedule established under ~~OAC 252:100-8-9252:100-5-2.2~~.

(9) **Emissions trading.** The permit shall provide that no permit revision shall be required under any approved economic incentives, marketable permits, emissions trading and other similar programs or processes for changes that are provided for in the permit.

(10) **Operating scenarios.** The permit shall include terms and conditions applicable to all operating scenarios described in the permit application and eligible for approval under applicable requirements, and state-only requirements. The permit shall authorize the permittee to make changes among operating scenarios authorized in the permit without notice, but shall require the permittee contemporaneously with making a change from one operating scenario to another to record in a log at the permitted facility the scenario under which it is operating.

(11) **Emissions averaging.** The permit shall include terms and conditions, if the permit applicant requests them, for the trading or averaging of emissions increases and decreases in the permitted facility, to the extent that the applicable requirements provide for trading or averaging such increases and decreases. Such terms and conditions shall include terms under subsections (a) and (c) of this section to determine compliance and shall satisfy all requirements of the applicable requirements authorizing such trading or averaging.

(b) **Federally enforceable requirements.**

(1) Except as provided in paragraph (b) (2) of this section, all terms and conditions in a permit issued under this section, including any provisions designed to limit a source's potential to emit, are enforceable by the DEQ, by EPA, and by citizens under section 304 of the ~~federal Clean Air Act~~.

(2) Notwithstanding paragraph (b) (1) of this section, the DEQ shall designate as not being federally enforceable under the ~~federal Clean Air Act~~ any terms and conditions included in the permit that are not required under the ~~federal Clean Air Act~~ or any of its applicable requirements, and such terms and conditions shall not be enforceable by EPA and citizens under section 304 of the ~~federal Clean Air Act~~.

(c) **Compliance requirements.** All permits issued under this ~~Chapter~~ Part shall contain the following elements with respect to compliance:

(1) Consistent with paragraph (a) (3) of this section, compli-

ance certification, testing, monitoring, reporting, and record-keeping requirements sufficient to assure compliance with the terms and conditions of the permit. Any document (including reports) required by a permit under this ~~Chapter~~Part shall contain a certification by a responsible official as to the results of the required monitoring.

(2) Inspection and entry requirements that require that, upon presentation of credentials and other documents as may be required by law, the permittee shall allow authorized officials of the DEQ to perform the following ~~(subject to the permittee's right to seek confidential treatment pursuant to OAC 252:100-8-5(b)(10) for confidential information submitted to or obtained by the DEQ under this subsection):~~

(A) Enter upon the permittee's premises during reasonable/normal working hours where a source is located or emissions-related activity is conducted, or where records must be kept under the conditions of the permit;

(B) Have access to and copy, at reasonable times, any records that must be kept under the conditions of the permit;

(C) Inspect at reasonable times and using reasonable safety practices any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under the permit; and

(D) As authorized by the ~~federal Clean Air~~Oklahoma Clean Air Act, sample or monitor at reasonable times substances or parameters for the purpose of assuring compliance with the permit.

(3) A schedule of compliance ~~to the extent if~~ required under ~~OAC 252:100-8-5(d)(8)(C)~~252:100-8-5(e)(8)(B).

(4) To the extent required under an applicable schedule of compliance and ~~OAC 252:100-8-5(d)(8)~~252:100-8-5(e)(8), progress reports, to be submitted semiannually, or more frequently if specified in the applicable requirement or by the DEQ. Such progress reports shall contain the following:

(A) Dates for achieving the activities, milestones, or compliance required in the schedule of compliance, and dates when such activities, milestones or compliance were achieved; and

(B) An explanation of why any dates in the schedule of compliance were not or will not be met, and any preventive or corrective measures adopted.

(5) Requirements for compliance certification with terms and conditions contained in the permit that are federally enforceable, including emission limitations, standards, or work practices. Each permit shall specify:

(A) The frequency (which shall be annually unless the applicable requirement, ~~and~~ or state-only requirement, specifies submission more frequently) of submissions of compliance certifications;

(B) In accordance with paragraph (a)(3) of this section, a means for monitoring the compliance of the source with emissions limitations, standards, and work practices;

(C) A requirement that the compliance certification include the following:

(i) The identification of each term or condition

of the permit that is the basis of the certification;

(ii) The permittee's current compliance status, as shown by monitoring data and other information available to the permittee;

(iii) Whether compliance was continuous or intermittent;

(iv) The method(s) used for determining the compliance status of the source, currently and over the reporting period as required by paragraph (a) (3) of this section; and

(v) Such other facts as the DEQ may require to determine the compliance status of the source;

(D) A requirement that all compliance certifications be submitted to EPA as well as to the DEQ;

(E) Such additional requirements as may be specified pursuant to sections 114(a) (3) and 504(b) of the federal Clean Air Act; and

(6) Such other provisions as the DEQ may require.

~~(d) General permits.~~

~~(1) The DEQ may, after notice and opportunity for public participation, issue a general permit to any source category if it concludes that the category is appropriate for permitting on a generic basis. Any general permit shall comply with all requirements applicable to other Part 70 permits. No general permit may be issued for affected sources under the acid rain program unless otherwise provided in regulations promulgated under Title IV of the federal Clean Air Act.~~

~~(2) A general permit may be issued for a source category based upon an application from a source within the source category or upon the DEQ's own initiative. The DEQ shall, following receipt of an application for a general permit, or upon a determination that issuance of a general permit for a category of sources may be appropriate, follow the same procedures for issuance of a general permit as for any other permit issued under this part.~~

~~(3) A general permit may be issued for the following purposes~~

~~(A) to establish terms and conditions to implement applicable requirements, and state only requirements, for a source category;~~

~~(B) to establish terms and conditions to implement applicable requirements, and state only requirements, for specified categories of changes to permitted sources;~~

~~(C) to establish terms and conditions for new requirements that apply to sources with existing permits, and~~

~~(D) to establish federally enforceable caps on emissions from sources in a specified category.~~

~~(4) The DEQ may issue a general permit if it finds that:~~

~~(A) there are several permittees, permit applicants, or potential permit applicants who have the same or substantially similar operations, emissions, activities, or facilities;~~

~~(B) the permittees, permit applicants, or potential permit~~

applicants emit the same types of regulated air pollutants;
(C) the operations, emissions, activities, or facilities are subject to the same or similar standards, limitations, and operating requirements; and

(D) the operations, emissions, activities, or facilities are subject to the same or similar monitoring requirements.

(5) A general permit issued under this section shall identify criteria by which sources may qualify for the general permit. After a general permit has been issued, any source may submit a request to be covered under the permit in the form of an application for authorization to operate under the general permit.

(A) Such application shall identify the source and provide information sufficient to demonstrate that it falls within the source category covered by the general permit, together with any additional information that may be specified in the general permit.

(B) See OAC 252:2-15 for Tier I permitting procedures and timelines for individual authorizations under general permits. The Agency shall act to approve or deny the application within 90 days of filing.

(C) A final action approving an authorization to operate under a general permit shall not be subject to public comment or judicial review.

(6) A copy of the general permit, together with a list of sources approved for coverage under it, shall be kept on file for public review at the offices of the DEQ.

(7) A general permit issued under this section shall provide that any source approved for coverage under a general permit shall be entitled to the protection of the permit shield for all operations, activities, and emissions addressed by the general permit, unless and to the extent that it is subsequently determined that the source does not qualify for the conditions and terms of the general permit.

(8) If some, but not all, of a source's operations, activities, and emissions are eligible for coverage under one or more general permits, the source may apply for and receive coverage under the general permits for the operations, activities, and emissions that are so eligible. If the source is required under OAC 252:100-8-3 of this part to obtain a permit addressing the remainder of its operations, activities, and emissions, it may apply for and receive a permit that addresses specifically only those items not covered by general permits. In such a case, the source's permit shall identify all operations, activities, and emissions that are subject to general permits and incorporate those general permits by reference. Unless the permit specifically states otherwise, the permit shield shall apply to the terms and conditions of any general permits so incorporated by reference as well as to the terms and conditions specifically stated in the permit.

(e) **Temporary sources.** The DEQ may issue a single permit authorizing emissions from similar operations by the same source owner or operator at multiple temporary locations. The operation must be temporary and involve at least one change of location during the term of the permit. No affected source shall be

~~permitted as a temporary source. Permits for temporary sources shall include the following:~~

- ~~(1) Conditions that will assure compliance with all applicable requirements at all authorized locations;~~
- ~~(2) Requirements that the owner or operator notify the permitting authority at least ten days in advance of each change in location; and~~
- ~~(3) Conditions that assure compliance with all other provisions of this section.~~

~~(f)~~ (d) Permit shield.

(1) Each operating permit issued under this ~~section~~ Part shall include a "permit shield" provision, which shall state that compliance with the terms and conditions of the permit (including terms and conditions established for alternate operating scenarios, emissions trading, and emissions averaging, but excluding terms and conditions for which the permit shield is expressly prohibited under this Subchapter) shall be deemed compliance with the applicable requirements identified and included in the permit.

(2) Upon request, the DEQ shall include in the permit or in a separate written finding issued with the permit a determination identifying specific requirements that do not apply to the source. The source shall specify in its application for such a determination the requirements ~~as to~~ for which the determination is requested. If the determination is issued in a separate finding, that finding shall be summarized in the permit. The permit shall state that the permit shield applies to any requirements so identified. A request for a determination to extend the shield to requirements deemed inapplicable to the source may be made either in the original permit application or in a subsequent application for a permit modification.

(3) A Part 70 permit that does not expressly state that a permit shield exists shall be presumed not to provide such a shield.

(4) Nothing in this section or in the permit shall alter or affect the following:

(A) the provisions of section 303 of the ~~federal Clean Air Act~~, including the authority of the ~~EPA Administrator~~ under that section;

(B) the liability of an owner or operator of a source for any violation of applicable requirements, ~~and~~ or state-only requirements, prior to or at the time of permit issuance;

(C) the applicable requirements of the acid rain program, consistent with section 408(a) of the ~~federal Clean Air Act~~;

or

(D) the ability of EPA to obtain information from a source pursuant to section 114 of the ~~federal Clean Air Act~~.

~~(g)~~ (e) Emergencies.

(1) When used in this Subsection, "Emergency" means any situation arising from sudden and reasonably unforeseeable events beyond the control of the source, including acts of God, which situation requires immediate corrective action to restore normal operation, and that causes the source to exceed a technology-based emission limitation under the permit, due to unavoidable increases in emissions attributable to the

emergency. An emergency shall not include noncompliance to the extent caused by improperly designed equipment, lack of ~~preventative~~preventive maintenance, careless or improper operation, or operator error. Quantification of accidental releases shall be made by the best available method.

(2) An emergency constitutes an affirmative defense to an action brought for noncompliance with such technology-based emission limitations if the conditions of paragraph ~~(g)~~(e) (3) of this section and the reporting requirements of 252:100-8-6(a)(3)(C)(iii)(I) are met.

(3) The affirmative defense of emergency shall be demonstrated through properly signed, contemporaneous operating logs, or other relevant evidence that:

(A) An emergency occurred and that the permittee can identify the cause(s) of the emergency;

(B) The permitted facility was at the time being properly operated;

(C) During the period of the emergency the permittee took all reasonable steps to minimize levels of emissions that exceeded the emission standards, or other requirements in the permit, and.

~~(D) The permittee submitted notice of the emergency to the DEQ within 24 hours of the time when emission limitations were exceeded due to the emergency. Such notice must contain a description of the emergency, any steps taken to mitigate emissions, and corrective actions taken.~~

(4) In any enforcement proceeding, the permittee seeking to establish the occurrence of an emergency has the burden of proof.

(5) The provision in this subsection is in addition to any emergency or upset provision contained in any applicable requirement or ~~OAC~~-252:100-9.

~~(h)(f) **Operational flexibility.** Any operating scenario allowed for in an applicable Part 70 permit may be implemented by the facility without the need for any permit revision or any notification to the permitting authority. It is incumbent upon the Part 70 permit applicant to apply for any reasonably anticipated alternative facility operating scenarios at the time of initial or renewal permit application.~~

(1) **Applicant's duty to apply for alternative scenarios.** Any operating scenario allowed for in an applicable Part 70 permit may be implemented by the facility without the need for any permit revision or any notification to the permitting authority. It is incumbent upon the Part 70 permit applicant to apply for any reasonably anticipated alternative facility operating scenarios at the time of initial or renewal permit application.

(2) **Changes resulting in no emissions increases.** A permitted Part 70 source may make changes within the facility that:

(A) Are not modifications under any provision of Title I of the ~~federal Clean Air Act~~;

(B) Do not cause any hourly or annual permitted emission rate of any existing emissions unit to be exceeded; ~~or~~and

(C) Result in a Netnet change in emissions ~~is of zero~~, Provided~~provided~~ that the facility ~~provides~~notifies the Administrator and the permitting authority with written

~~notification as required below~~ DEQ and EPA in writing at least 7 days in advance of the proposed changes, which shall be a minimum of 7 days, or such shorter time frame that permitting authority allows for emergencies [as defined in OAC 252:100-8-6(g)]. The source, ~~permitting authority~~ DEQ, and EPA shall attach each such notice to their copy of the relevant permit. For each such change, the written notification required above shall include a brief description of the change within the permitted facility, the date on which the change will occur, any change in emissions, and any permit term or condition that is no longer applicable as a result of the change. The permit shield described in OAC 252:100-8-6(f) 252:100-8-6(d) does not apply to any change made pursuant to this subsection.

~~(3) Emissions trading in permit.~~ A permitted source may rely on the authority of this section to trade increases and decreases in emissions within the facility, where the implementation plan provides for such emissions trades without a permit modification. In such a case, the advance written notice provided by the permittee shall identify the underlying authority authorizing the trading and shall state when the change will occur, the types and quantities of emissions to be traded, the permit terms or other applicable requirements, and state only requirements, with which the source will comply through emissions trading, and such other information as may be required by the applicable requirement authorizing the emissions trade.

~~(i) Special provisions for affected (acid rain) sources~~

~~(1) Application binding until permit issuance or denial.~~ A complete acid rain permit application is binding on the applicant and enforceable as an acid rain permit until an acid rain permit is issued or denied. For applicable permitting procedures, see OAC 252:2-15.

~~(2) Exemption petitions.~~ Applicants with small units that burn low sulfur fuel or sources that retire a unit can petition to have such units exempted from certain permitting and monitoring requirements under the acid rain regulations.

~~(3) Permit shield.~~ The acid rain portion of every operating permit is covered by a permit shield. This shield assures that an applicant operating in accordance with a permit issued in accordance with Title IV of the federal Clean Air Act, will be deemed to be operating in compliance with the Acid Rain Program.

~~(4) Modifications.~~ See 40 CFR 72.82.

~~(5) Duration.~~ Acid rain permits will have a term of five years commencing on the permits effective date. The DEQ may issue a permit with a future effective date.

~~(6) Right of intervention.~~ The Administrator may intervene as a matter of right in any administrative appeal involving an Acid Rain permit or denial of an Acid Rain permit.

~~(7) Administrative appeal.~~ The administrative appeal period shall be no more than 90 days following the issuance of the Acid Rain permit and the judicial appeal period shall be no more than 90 days following a final agency action.

~~(8) Adoption of 40 CFR Part 72 by reference.~~ Owners or operators of sources subject to the acid rain provisions of the federal Clean Air Act shall comply with applicable provisions of 40 CFR Part 72, as published in the Federal Register on January

~~11, 1993, and on March 23, 1993, which is hereby adopted by reference as rules of the Environmental Quality Board. In such regulations, the term "permitting authority" shall mean the Oklahoma Department of Environmental Quality and the term "Administrator" shall mean the Administrator of the United States Environmental Protection Agency. If the provisions or requirements of 40 CFR Part 72 conflict with this Chapter, the Part 72 provisions and requirements shall apply and take precedence.~~

~~(8) The Oklahoma Department of Environmental Quality hereby adopts and incorporates by reference the provisions of 40 CFR part 72, as published in the Federal Register on January 11, 1993, and on March 23, 1993 for purposes of implementing an acid rain program that meets the requirements of Title IV of the Clean Air Act. The term "permitting authority" shall mean the Oklahoma Department of Environmental Quality and the term "Administrator" shall mean the Administrator of the United States Environmental Protection Agency. If the provisions or requirements of 40 CFR part 72 conflict with or are not included in Oklahoma Administrative Code 252:100-8, the part 72 provisions and requirements shall apply and take precedence.~~

252:100-8-6.1 General permits

(a) Applicability.

(1) The DEQ may, after notice and opportunity for public participation, issue a general permit for any source category if it concludes that the category is appropriate for permitting on a generic basis. Any general permit shall comply with all requirements applicable to other Part 70 permits. No general permit may be issued for affected sources under the acid rain program unless otherwise provided in regulations promulgated under Title IV of the Act.

(2) A general permit may be issued for a source category based upon an application from a source within the source category or upon the DEQ's own initiative. The DEQ shall, following receipt of an application for a general permit, or upon a determination that issuance of a general permit for a category of sources may be appropriate, follow the same procedures for issuance of a general permit as for any other permit issued under this part.

(3) A general permit may be issued to establish:

(A) Terms and conditions to implement applicable requirements and state-only requirements for a source category.

(B) Terms and conditions to implement applicable requirements and state-only requirements for specified categories of changes to permitted sources.

(C) Terms and conditions for new requirements that apply to sources with existing permits.

(D) Federally-enforceable caps on emissions from sources in a specified category.

(4) The DEQ may issue a general permit if it finds that:

(A) There are several permittees, permit applicants, or potential permit applicants who:

(i) Have the same or substantially similar

operations, emissions, activities, or facilities.

(ii) Emit the same types of regulated air pollutants.

(B) The operations, emissions, activities, or facilities are subject to the same or similar:

(i) Standards, limitations, and operating requirements.

(ii) Monitoring requirements.

(5) If some, but not all, of a source's operations, activities, and emissions are eligible for coverage under one or more general permits, the source must apply for an individual Part 70 permit for all of its covered sources.

(6) Facilities located in areas that are federally designated as non-attainment are not eligible for coverage under a general permit.

(7) Sites that are not in compliance with all applicable State and Federal air regulations are eligible for a general operating permit only if:

(A) They submit to DEQ an approvable compliance plan, and

(B) The facility submits to Tier II public review.

(8) Facilities with existing state operating permits are eligible for coverage under a general operating permit.

(9) Facilities existing prior to the effective date of any applicable standard that would have created specific quantifiable and enforceable emission rates are eligible for coverage under a general operating permit.

(b) Authorization.

(1) A general permit issued under this section shall identify criteria by which sources may qualify for the general permit. After a general permit has been issued, any source may submit a request to be covered under the permit in the form of an application for authorization to operate under the general permit. Such application shall identify the source and provide information sufficient to demonstrate that it falls within the source category covered by the general permit, together with any additional information that may be specified in the general permit.

(2) See 252:2-15 for Tier I permitting procedures and timelines for individual authorizations under general permits. The DEQ shall act to approve or deny the application within 90 days of filing.

(3) A final action approving an authorization to operate under a general permit shall not be subject to public comment or judicial review.

(4) The DEQ will publish, at least monthly, an updated list of sources approved for inclusion under the general permit and any aggrieved person may petition the DEQ to review the approval of any stationary source for inclusion under a general permit within 30 days after publication of the list.

(5) A copy of the general permit, together with a list of sources approved for coverage under it, shall be kept on file for public review at the offices of the DEQ.

(c) Permit Shield. A general permit issued under this section shall provide that any source approved for coverage under a general permit shall be entitled to the protection of the permit shield for all operations, activities, and emissions addressed by the general permit, unless and to the extent that it is subsequently determined

that the source does not qualify for the conditions and terms of the general permit.

(d) Revisions.

(1) If an owner or operator of a source(s) makes a change to a source covered by a general permit that affects any applicability information supplied in the general permit application, but the source is still eligible for coverage under a general permit, the owner or operator must revise the general permit application and submit it to the DEQ within 60 days.

(2) After coverage is granted to a source under the general permit, physical changes to the facility which result in the addition of equipment new to the facility, either as a replacement (except like-kind replacements) or net addition, will require a construction permit or a new authorization. Any significant modification to a stationary source included under a general permit shall subject the source to a Tier II review.

(3) If equipment new to the facility is newly purchased or is relocated from another facility where a permit was issued with enforceable emissions limits on that equipment, then authorization under the general permit shall be modified or amended to include an emissions limit for the newly purchased or relocated equipment. "Grandfathered" emissions sources at the facility will retain only the equipment descriptions as permit conditions. "Grandfathered" means a unit that was in existence prior to the effective date of any applicable regulation that would have created specific quantifiable and enforceable emissions rate limits.

(4) For a general operating permit, if emissions change for any reason that subjects the facility to PSD permitting requirements, then the facility no longer qualifies for a general operating permit. However, the existing general operating permit will remain valid during the time period covered by the PSD construction permit until the facility receives a Part 70 site specific operating permit for the entire facility.

(e) Permit Content. Specific terms and conditions that will make the applicable rules and requirements enforceable shall be stipulated in the general permit.

(f) Renewal of general operating permits.

(1) The DEQ will initiate the renewal process for a general operating permit at least 180 days prior to the permit's expiration date and will follow the requirements in 252:100-8-7(a).

(2) Owners or operators shall apply to renew an authorization at least 60 days prior to expiration of the existing authorization. Upon submittal of a timely and administratively complete application, the applicant may continue to operate until such time as the DEQ grants or denies coverage under the general operating permit.

252:100-8-6.2 Temporary sources

The DEQ may issue a single permit authorizing emissions from similar operations by the same source owner or operator at multiple temporary locations. The operation must be temporary and involve at least one change of location during the term of the permit. No

affected source shall be permitted as a temporary source. Permits for temporary sources shall include the following:

- (1) Conditions that will assure compliance with all applicable requirements at all authorized locations;
- (2) Requirements that the owner or operator notify the permitting authority at least ten days in advance of each change in location; and
- (3) Conditions that assure compliance with all other provisions of this section.

252:100-8-6.3. Special provisions for affected (acid rain) sources

(a) Application binding until permit issuance or denial. A complete acid rain permit application is binding on the applicant and enforceable as a permit until an acid rain permit is issued or denied. For applicable permitting procedures, see 252:2-15.

(b) Exemption petitions. Applicants with small units that burn low sulfur fuel or sources that retire a unit can petition to have such units exempted from certain permitting and monitoring requirements under the acid rain regulations.

(c) Permit shield. The acid rain portion of every operating permit is covered by a permit shield. This shield assures that an applicant operating in accordance with a permit issued in accordance with Title IV of the Act, will be deemed to be operating in compliance with the Acid Rain Program.

(d) Modifications. See 40 CFR 72.82.

(e) Duration. Acid rain permits will have a term of five years commencing on the permits effective date. The DEQ may issue a permit with a future effective date.

(f) Right of intervention. The Administrator may intervene as a matter of right in any administrative appeal involving an Acid Rain permit or denial of an Acid Rain permit.

(g) Administrative appeal. The administrative appeal period shall be no more than 90 days following the issuance of the Acid Rain permit and the judicial appeal period shall be no more than 90 days following a final agency action.

(h) Adoption of 40 CFR Part 72 by reference. DEQ hereby adopts and incorporates by reference the provisions of 40 CFR Part 72, as published in the Federal Register on January 11, 1993, on March 23, 1993, and on October 24, 1997, for purposes of implementing an acid rain program that meets the requirements of Title IV of the Act. The term "permitting authority" shall mean the Oklahoma Department of Environmental Quality and the term "Administrator" shall mean the Administrator of the United States Environmental Protection Agency. If the provisions or requirements of 40 CFR Part 72 conflict with or are not included in 252:100-8, the Part 72 provisions and requirements shall apply and take precedence.

252:100-8-7. Permit issuance, renewal, reopenings, and revisions

~~(a) Action on application, issuance/denial criteria.~~

~~(1)(a) Criteria for issuance. A permit, permit modification, or renewal may be issued only if the applicable requirements of 27A O.S.Supp. 1995, Section 2-14-101 et seq.; OAC 252:2-15; and this Chapter have been met and the DEQ has determined that the conditions of the permit provide for compliance with all applicable requirements and for applications subject to OAC 252:100-8-8, that~~

the requirements of that section have been satisfied.

~~(2)(b) Draft permits and notice thereof. See OAC-252:2-15. The draft permit shall be accompanied by a statement that sets forth the legal and factual basis for the draft permit conditions (including references to the applicable statutory or regulatory provisions).~~

~~(3)(c) EPA review. See OAC-252:100-8-8.~~

~~(4)(d) DEQ final action. See OAC-252:2-15, and OAC-252:100-8-8 when applicable.~~

~~(5)(e) Timeline for technical review and issuance. See OAC 252:2-15 70 through 15 72. Except as provided in paragraphs (A) and (B) of this paragraph, the DEQ shall take final action on each application for a permit within 18 months after beginning its technical review in accordance with 252:2-15-70 through 15-72 and OAC 252:100-8-5(b)(5) 252:100-8-4(b)(7).~~

~~(6)(f) Action priorities. See OAC 252:100-8-5(b) 252:100-8-4(b)(2) through (10) and 252:100-8-7.1(a).~~

~~(7)(g) No issuance by default. See 27A:2-5-112(D).~~

~~(b) Requirement for a permit. See OAC 252:100-8-4(b).~~

~~(c) Permit renewal and expiration.~~

~~(1) Applications for permit renewal after the transition period, and for permit for new Part 70 sources or amendments, shall be considered timely if the applicant meets the requirements of this subsection.~~

~~(2) Applications for permit renewal shall be subject to the same procedural requirements, including those for public participation, affected State comment, and EPA review, that apply to initial permit issuance under OAC 252:100-8-7(a).~~

~~(3) A source's right to operate shall terminate upon the expiration of its permit unless a timely and complete renewal application has been submitted at least 180 days before the date of expiration.~~

~~(4) If a timely and complete application for a permit renewal is submitted, but the DEQ fails to take final action to issue or deny the renewal permit before the end of the term of the previous permit, then the permit shall not expire until the renewal permit has been issued or denied, and any permit shield granted for the permit shall continue in effect during that time.~~

~~(5) Stationary sources operating under permits issued by the DEQ under this subchapter shall apply for permit reissuance at least 180 days before the expiration of the existing permit, unless the permit specifies that the application must be submitted sooner. The DEQ shall require in a permit that a reissuance application be submitted sooner if it determines that an earlier application is needed to minimize the possibility of expiration prior to reissuance. The DEQ may make the determination if it anticipates a relatively lengthy permit review process due to the complexity of the stationary source or anticipated involvement of the public. In no event shall the permit require application for reissuance sooner than eighteen months prior to the expiration of the permit.~~

~~(d) Administrative permit amendments.~~

~~(1) When used in this subsection "Administrative permit amendment" means a permit revision that:~~

- ~~(A) Corrects typographical errors;~~
 - ~~(B) Identifies a change in the name, address, or phone number of any person identified in the permit, or provides a similar minor administrative change at the source;~~
 - ~~(C) Requires more or less frequent monitoring or reporting by the permittee;~~
 - ~~(D) Allows for a change in ownership or operational control of a source where no other change in the permit is necessary, provided that a written agreement containing a specific date for transfer of permit responsibility, coverage, and liability between the current and new permittee has been submitted to the DEQ;~~
 - ~~(E) Incorporates into the permit the requirements from preconstruction review permits issued by the DEQ under OAC 252:100-7. Enhanced New Source Review (NSR) procedures apply to all major sources and all State Implementation Plan (SIP) minor source changes to majors.~~
- ~~(2) Administrative permit amendments for purposes of the acid rain portion of the permit shall be governed by regulations promulgated under Title IV of the federal Clean Air Act.~~
- ~~(3) An administrative permit amendment shall be made by the DEQ in accordance with the following:~~
- ~~(A) The DEQ shall take final action on a request for an administrative permit amendment within 60 days from the date of receipt of such a request, and may incorporate the proposed changes without providing notice to the public or affected States provided that it designates any such permit revisions as having been made pursuant to this paragraph.~~
 - ~~(B) The DEQ shall submit a copy of the revised permit to the Administrator upon the Administrator's request.~~
 - ~~(C) The source may implement the changes addressed in the request for an administrative amendment immediately upon submittal of the request.~~
- ~~(4) The DEQ shall, upon taking final action granting a request for an administrative permit amendment, allow coverage by the permit shield in OAC 252:100-8-6(f) for administrative permit amendments made pursuant to subparagraph (d)(1)(E) of this section.~~
- ~~(e) Permit modification. A permit modification is any revision to an operating permit that cannot be accomplished under the program's provisions for administrative permit amendments under subsection (d) of this section. A permit modification for purposes of the acid rain portion of the permit shall be governed by regulations promulgated under Title IV of the federal Clean Air Act.~~
- ~~(1) Minor permit modification procedures.~~
- ~~(A) Criteria.~~
 - ~~(i) Minor permit modification procedures may be used only for those permit modifications that:~~
 - ~~(I) Do not violate any applicable requirement, or state-only requirements;~~
 - ~~(II) Do not involve significant changes to existing monitoring, reporting or recordkeeping requirements in the permit;~~
 - ~~(III) Do not require or change a case by case determination of an emission limitation or other standard, or a~~

~~source specific determination for temporary sources of ambient impacts, or a visibility or increment analysis~~
~~(IV) Do not seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement, or state only requirement, and that the source has assumed to avoid an applicable requirement, or state only requirement, to which the source would otherwise be subject. Such terms and conditions include federally enforceable emissions caps assumed to avoid classification as a modification under any provision of Title I and alternative emissions limits approved pursuant to regulations promulgated under §§112(i)(5) of the federal Clean Air Act; and~~
~~(V) Are not modifications under any provision of Title I of the federal Clean Air Act.~~

~~(ii) Notwithstanding OAC 252:100-8-7(e)(1)(A)(i) and OAC 252:100-8-7(e)(2)(A), minor permit modification procedures may be used for permit modifications involving the use of economic incentives, marketable permits, emissions trading, and other similar approaches, to the extent that such minor permit modification procedures are explicitly provided for in an applicable implementation plan or in applicable requirements promulgated by EPA.~~

~~(B) Application. To use the minor permit modification procedures, a source shall submit an application requesting such use which shall meet the permit application requirements of Tier I under OAC 252:2-15 and shall include the following:~~

~~(i) A description of the change, the emissions resulting from the change, and any new applicable requirements, and state only requirements, that will apply if the change occurs;~~

~~(ii) The source's suggested modification language;~~

~~(iii) Certification by a responsible official, that the application and the proposed modification meet the criteria for use of minor permit modification procedures; and~~

~~(iv) Completed forms for any notices required by OAC 252:2-15 and, regarding notice to EPA and affected states, as required under subparagraph (C) of this paragraph.~~

~~(C) EPA and affected state notification. If the proposed minor modification is of a permit that underwent EPA review in accordance with OAC 252:100-8-8, the provisions of that section shall apply to the minor modification application unless waived by the Administrator.~~

~~(D) Timetable for issuance. Within 90 days of the DEQ's receipt of a complete application under OAC 252:2-15 the DEQ shall:~~

~~(i) Issue the minor permit modification as approved;~~

~~(ii) Deny the minor permit modification application; or~~

~~(iii) Determine that the requested modification does not meet the minor permit modification criteria and should be reviewed under the significant modification procedures or administrative amendment procedures.~~

~~(E) Source's ability to make change. Immediately after filing an application meeting the requirements of these minor permit modification procedures, the source is authorized to~~

~~make the change or changes proposed in the application. After the source makes the change allowed by the preceding sentence, and until the DEQ takes any of the actions specified in (1) (D) (i) through (iii) of this section, the source must comply with both the applicable requirements and state only requirements, governing the change and the proposed permit terms and conditions. During this period, the source need not comply with the existing terms and conditions it seeks to modify. However, if the source fails to comply with its proposed permit terms and conditions during this time period, the existing permit terms and conditions it seeks to modify may be enforced against it.~~

~~(F) Permit shield. The permit shield under OAC 252:100-8-6(f) will not extend to minor permit modifications.~~

~~(G) Permittee's risk in commencing construction. The permittee assumes the risk of losing any investment it makes toward implementing a modification prior to receiving a permit amendment authorizing the modification. The DEQ will not consider the possibility of the permittee suffering financial loss due to such investment when deciding whether to approve, deny, or approve in modified form a minor permit amendment.~~

~~(2) Significant modification procedures.~~

~~(A) Criteria. Significant modification procedures shall be used for applications requesting permit modifications that:~~

~~(i) Involve any significant amendment to existing monitoring, reporting, or recordkeeping requirements in the permit;~~

~~(ii) Require any amendment to establish or amend a permit condition that is required to be based on a case by case determination of an emission limitation or other standard, on a source specific determination of ambient impacts, or on a visibility or increment analysis;~~

~~(iii) Seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement, and state only requirement, and that the source has assumed to avoid an applicable requirement, and state only requirement, to which the source would otherwise be subject. Such terms and conditions include:~~

~~(I) A federally enforceable emissions cap assumed to avoid classification as a modification under any provision of Title I;~~

~~(II) An alternative emissions limit approved pursuant to regulations promulgated under section 112(i)(5) of the federal Clean Air Act; and~~

~~(iv) Are modifications under any provision of Title I of the federal Clean Air Act; and,~~

~~(v) Do not qualify as minor permit modifications or administrative amendments.~~

~~(B) Procedures for processing. Significant permit modifications shall meet all requirements of these rules that are applicable to Tier II applications. The application for the modification shall describe the change, the emissions resulting from the change, and any new applicable requirements, and state only requirements, that will apply if the change occurs.~~

~~(C) Issuance.~~ The DEQ shall complete review of significant permit modifications within nine months after receipt of a complete application, but shall be authorized to extend that date by up to three months for cause.

~~(f) Reopening for cause.~~

~~(1) Mandatory reopening.~~ Each issued permit shall include provisions specifying the conditions under which the permit will be reopened prior to the expiration date of the permit. A permit shall be reopened and revised under any of the following circumstances:

~~(A) Additional federal applicable requirements become applicable to a stationary source with a remaining permit term of three or more years. Such a reopening and amendment shall be completed not later than 18 months after promulgation of the federal applicable requirement. Reopening is allowed if an applicable requirement becomes effective and the original permit or any of its terms and conditions has been extended pursuant to the application shield provided at OAC 252:100 8-7(e)(4) beyond the 18 month timeframe for revision. No such reopening is required if the effective date of the requirement is later than the date on which the permit is due to expire.~~

~~(B) Additional requirements (including excess emissions requirements) become applicable to an affected source under the acid rain program. Upon approval by the administrator, excess emissions offset plans shall be deemed to be incorporated into the permit.~~

~~(C) The agency or the administrator determines that the permit contains a material mistake or that inaccurate statements were made in establishing the emissions standards, limitations, or other terms or conditions of the permit.~~

~~(D) The administrator or the agency determines that the permit must be revised or revoked to assure compliance with the applicable requirements.~~

~~(2) Discretionary reopening.~~ The agency may reopen and amend a permit when:

~~(A) additional state only requirements become applicable to a permitted stationary source, and the effective date of the requirement is at least 18 months prior to the date on which the permit is due to expire;~~

~~(B) alterations or modifications to the permitted facility will result in or have the potential to result in significant alteration of the nature or quantity of regulated air pollutants to be emitted by the permittee;~~

~~(C) the agency receives information previously unavailable to the agency that shows that the terms and conditions of the permit do not accurately represent the actual circumstances relating to the permitted facility;~~

~~(D) a court of competent jurisdiction invalidates or modifies an Oklahoma or federal statute or rule or federal guideline upon which a condition of the permit is based; and~~

~~(E) an event occurs that is beyond the control of the permittee that necessitates modification of a compliance schedule in the permit.~~

~~(3) Reopening procedures.~~ To reopen and amend a permit, the agency shall follow the procedures that apply to significant

~~permit amendments under this chapter, unless the amendment can be made as an administrative amendment under OAC 252:100-8-7(d). Mandatory reopenings under OAC 252:100-8-7(f)(1) shall be made as expeditiously as practicable. In lieu of an application, the significant permit amendment process will commence when the agency gives the permittee written notice of its intent to amend the permit. The agency shall not issue the amendment, or make public notice of the amendment where public notice is required, until at least thirty days after the agency has given the permittee consents to less notice, or in the case of an emergency. In cases where public participation is required, only those portions of the permit which the agency proposes to amend shall be open for public comment or consideration at a meeting or hearing.~~

~~(g) Reopenings for cause by EPA.~~

~~(1) If the Administrator finds that cause exists to terminate, modify, or revoke and reissue a permit, the Administrator shall notify the permitting authority and the permittee of such findings in writing.~~

~~(2) The permitting authority shall, within 90 days after receipt of such notification, forward to EPA a proposed determination of termination, modification, or revocation and reissuance, as appropriate. The Administrator may extend this 90 day period for an additional 90 days if he finds that a new or revised permit application is necessary or that the permitting authority must require the permittee to submit additional information.~~

~~(3) The Administrator will review the proposed determination from the permitting authority within 90 days of receipt.~~

~~(4) The permitting authority shall have 90 days from receipt of an EPA objection to resolve any objection that EPA makes and to terminate, modify, or revoke and reissue the permit in accordance with the Administrator's objection.~~

~~(5) If the permitting authority fails to submit a proposed determination pursuant to this subsection, or fails to resolve any objection pursuant to this subsection, the Administrator will terminate, modify, or revoke and reissue the permit after taking the following actions:~~

~~(A) Providing at least 30 days' notice to the permittee in writing of the reasons for any such action.~~

~~(B) Providing the permittee an opportunity for comment on the Administrator's proposed action and an opportunity for a hearing.~~

~~(h) Revocations.~~

~~(1) Permit revocation without reissuance. The agency may revoke permits and not reissue them when:~~

~~(A) there exists at the permitted facility unresolved noncompliance with applicable requirements or a condition of the permit, and the permittee refuses to undertake an enforceable schedule of compliance to resolve the noncompliance;~~

~~(B) the permittee fails to disclose fully the facts relevant to issuance of the permit or submits false or misleading information to the agency or the administrator;~~

~~(C) the permittee has failed to comply with any requirement~~

under OAC 252:100-9 to pay fees; or

(D) the permittee has failed to pay a penalty owed pursuant to court order, consent decree, stipulation agreement, or schedule of compliance.

(2) ~~Revocation procedures.~~ The agency shall give notice to the permittee of its intention to revoke a permit without reissuance. This notice must state that within 30 days of the receipt of the notice the permittee may request a contested case hearing be held on the proposed action, except that the agency may provide less notice in case of an emergency. If the permittee requests a contested case hearing, the agency shall hold the hearing in accordance with the Oklahoma Administrative Procedures Act.

(i) ~~Public participation.~~ See 27A O.S. Supp. 1995, § 2-14-101 et seq. and OAC 252:2-15.

(j) ~~Judicial review.~~ Any final action in granting or denying an application for a permit, permit amendment or modification, or permit renewal shall be subject to judicial review in the court of appropriate jurisdiction upon an application filed by the applicant or permittee, or by any affected state or other person who participated in the public comment process. Except for authorizations under General Permits, judicial review is available to all affected parties for all final permit actions including minor modifications and administrative actions. If no public comment procedure was employed for the action under challenge, an application for review may be filed by the permittee or an affected state. The opportunity for judicial review provided for in this subsection shall be the exclusive means for obtaining judicial review of any permit action.

(1) No application for judicial review may be filed more than 90 days following the final action on which review is sought, unless the grounds for review arose at a later time, in which case the application for review shall be filed within 90 days of the date on which the grounds for review first arose and review shall be limited to such later arising grounds.

(2) Any application for judicial review shall be limited to issues that:

(A) were raised in written comments filed with the Agency or during a public hearing on the proposed permit action (if the grounds on which review is sought were known at that time), except that this restriction shall not apply if the person seeking review was not afforded an advance opportunity to comment on the challenged action; and

(B) are germane and material to the permit action at issue.

(3) For purposes of this section, "final action" shall include a failure by the Agency to take final action to grant or deny an application within the time specified in this Chapter.

252:100-8-7.1. Permit renewal and expiration

(a) Timely application for permit renewal.

(1) Applications for permit renewal and for permits for new Part 70 sources or amendments, shall be considered timely if the applicant meets the requirements of this subsection.

(2) Stationary sources operating under permits issued by the DEQ under this Subchapter shall apply for permit reissuance at

least 180 days before the expiration of the existing permit, unless the permit specifies that the application must be submitted sooner. The DEQ shall require in a permit that a reissuance application be submitted sooner if it determines that an earlier application is needed to minimize the possibility of expiration prior to reissuance. The DEQ may make the determination if it anticipates a relatively lengthy permit review process due to the complexity of the stationary source or anticipated involvement of the public. In no event shall the permit require application for reissuance sooner than eighteen months prior to the expiration of the permit.

(b) Application content for renewal of expiring permit. In submitting an application for renewal of a Part 70 operating permit, a source may identify and incorporate by reference terms and conditions in its previous permit and permit application(s) that should remain unchanged. In addition, a renewal application must contain:

(1) information specified in 252:100-8-5(e) for those products, processes, operations, and emissions:

(A) That are not addressed in the existing permit;

(B) That are subject to applicable requirements or state-only requirements that are not addressed in the existing permit; or

(C) For which the source seeks permit terms and conditions that differ from those in the existing permit; and

(2) a compliance plan and certification as required in 252:100-8-5(e)(8) and (9).

(c) Issuance of renewal permit. Applications for permit renewal shall be subject to the same procedural requirements, including those for public participation, affected State comment, and EPA review, that apply to initial permit issuance under 252:100-8-7(a).

(d) Expiration of permit.

(1) A source's right to operate shall terminate upon the expiration of its permit unless a timely and complete renewal application has been submitted at least 180 days before the date of expiration.

(2) If a timely and complete application for a permit renewal is submitted, but the DEQ fails to take final action to issue or deny the renewal permit before the end of the term of the previous permit, then the permit shall not expire until the renewal permit has been issued or denied, and any permit shield granted for the permit shall continue in effect during that time.

252:100-8-7.2. Administrative permit amendments and permit modifications

(a) Administrative permit amendments.

(1) An administrative permit amendment:

(A) Corrects typographical errors;

(B) Identifies a change in the name, address, or phone number of any person identified in the permit, or provides a similar minor administrative change at the source;

(C) Requires more frequent monitoring or reporting by the permittee;

(D) Allows for a change in ownership or operational control of a source where no other change in the permit is necessary.

provided that a written agreement containing a specific date for transfer of permit responsibility, coverage, and liability between the current and new permittee has been submitted to the DEQ;

(E) Incorporates into the permit the requirements from preconstruction review permits issued by the DEQ under this Part.

(2) Administrative permit amendments for purposes of the acid rain portion of the permit shall be governed by 40 CFR Part 72.

(3) An administrative permit amendment shall be made by the DEQ in accordance with the following:

(A) The DEQ shall take final action on a request for an administrative permit amendment within 60 days from the date of receipt of such a request, and may incorporate the proposed changes without providing notice to the public or affected States provided that it designates any such permit revisions as having been made pursuant to this paragraph.

(B) The DEQ shall submit a copy of the revised permit to the Administrator upon the Administrator's request.

(C) The source may implement the changes addressed in the request for an administrative amendment immediately upon submittal of the request.

(4) The DEQ shall, upon taking final action granting a request for an administrative permit amendment, allow coverage by the permit shield in 252:100-8-6(d) for administrative permit amendments made pursuant to subparagraph 252:100-8-7.2(a)(1)(E) of this section.

(b) Permit modification. A permit modification is any revision to a permit that cannot be accomplished under subsection (a) of this section. A permit modification for purposes of the acid rain portion of the permit shall be governed by 40 CFR Part 72.

(1) Minor permit modification procedures.

(A) Criteria.

(i) Minor permit modification procedures may be used only for those permit modifications that:

(I) Do not violate any applicable requirement, or state-only requirements;

(II) Do not involve significant changes to existing monitoring, reporting or recordkeeping requirements in the permit;

(III) Do not require or change a case-by-case determination of an emission limitation or other standard, or a source-specific determination for temporary sources of ambient impacts, or a visibility or increment analysis;

(IV) Do not seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement or state-only requirement which the source has assumed to avoid some other applicable requirement or state-only requirement to which the source would otherwise be subject. Such terms and conditions include federally-enforceable emissions caps assumed to avoid classification as a modification under any provision of Title I and alternative emissions limits approved pursuant to regulations promulgated under §§112(i)(5) of the Act; and

(V) Are not modifications under any provision of Title I of the Act.

(ii) Notwithstanding 252:100-8-7.2(b)(1)(A)(i) and 252:100-8-7.2(b)(2)(A), minor permit modification procedures may be used for permit modifications involving the use of economic incentives, marketable permits, emissions trading, and other similar approaches, to the extent that such minor permit modification procedures are explicitly provided for in the State's implementation plan or in applicable requirements promulgated by EPA.

(B) Application. To use the minor permit modification procedures, a source shall submit an application requesting such use which shall meet the permit application requirements of Tier I under 252:2-15 and shall include the following:

(i) A description of the change, the emissions resulting from the change, and any new applicable requirements or state-only requirements that will apply if the change occurs;

(ii) The source's suggested modification language;

(iii) Certification by a responsible official, that the application and the proposed modification meet the criteria for use of minor permit modification procedures; and

(iv) Completed forms for any notices required by 252:2-15 and subparagraph (C) of this paragraph.

(C) EPA and affected state notification. If the proposed minor modification is of a permit that underwent EPA review in accordance with 252:100-8-8, the provisions of that section shall apply to the minor modification application unless waived by the Administrator.

(D) Timetable for issuance. Within 90 days of the DEQ's receipt of a complete application under 252:2-15 the DEQ shall:

(i) Issue the minor permit modification as approved;

(ii) Deny the minor permit modification application; or

(iii) Determine that the requested modification does not meet the minor permit modification criteria and should be reviewed under the significant modification procedures or administrative amendment procedures.

(E) Source's ability to make change. Immediately after filing an application meeting the requirements of these minor permit modification procedures, the source is authorized to make the change or changes proposed in the application. After the source makes the change and until the DEQ takes any of the actions specified in (1)(D)(i) through (iii) of this subsection, the source must comply with the applicable requirements and state-only requirements governing the change and the proposed permit terms and conditions. During this period, the source need not comply with the existing terms and conditions it seeks to modify. However, if the source fails to comply with its proposed permit terms and conditions during this time period, the existing permit terms and conditions it seeks to modify may be enforced against it.

(F) Permit shield. The permit shield under 252:100-8-6(d) will not extend to minor permit modifications.

(G) Permittee's risk in commencing construction. T h e

permittee assumes the risk of losing any investment it makes toward implementing a modification prior to receiving a permit amendment authorizing the modification. The DEQ will not consider the possibility of the permittee suffering financial loss due to such investment when deciding whether to approve, deny, or approve in modified form a minor permit amendment.

(2) Significant modification procedures.

(A) Criteria. Significant modification procedures shall be used for applications requesting permit modifications that:

(i) Involve any significant changes in existing monitoring requirements in the permit;

(ii) Relax any reporting or recordkeeping requirements.

(iii) Change any permit condition that is required to be based on a case-by-case determination of an emission limitation or other standard, on a source-specific determination of ambient impacts, or on a visibility or increment analysis;

(iv) Seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement or state-only requirement which the source has assumed to avoid some other applicable requirement or state-only requirement to which the source would otherwise be subject. Such terms and conditions include:

(I) A federally enforceable emissions cap assumed to avoid classification as a modification under any provision of Title I;

(II) An alternative emissions limit approved pursuant to regulations promulgated under section 112(i)(5) of the Act; and

(v) Are modifications under any provision of Title I of the Act; and,

(vi) Do not qualify as minor permit modifications or administrative amendments.

(B) Procedures for processing. Significant permit modifications shall meet all requirements of these rules that are applicable to Tier II applications. The application for the modification shall describe the change, the emissions resulting from the change, and any new applicable requirements or state-only requirements that will apply if the change occurs.

(C) Issuance. The DEQ shall complete review of significant permit modifications within nine months after receipt of a complete application, but shall be authorized to extend that date by up to three months for cause.

252:100-8-7.3. Reopening of operating permits for cause

(a) ~~(1)~~ Mandatory reopening. Each issued permit shall include provisions specifying the conditions under which the permit will be reopened prior to the expiration date of the permit. A permit shall be reopened and revised under any of the following circumstances:

(1) Additional federal applicable requirements become applicable to a stationary source with a remaining permit term of three or more years. Such a reopening and amendment shall be completed not later than 18 months after promulgation of the

federal applicable requirement. Reopening is allowed if an applicable requirement becomes effective and the original permit or any of its terms and conditions has been extended pursuant to the application shield provided at 252:100-8-7.1(d)(2) beyond the 18-month timeframe for revision. No such reopening is required if the effective date of the requirement is later than the date on which the permit is due to expire.

(2) Additional requirements (including excess emissions requirements) become applicable to an affected source under the acid rain program. Upon approval by the Administrator, excess emissions offset plans shall be deemed to be incorporated into the permit.

(3) The DEQ or the EPA determines that the permit contains a material mistake or that inaccurate statements were made in establishing the emissions standards, limitations, or other terms or conditions of the permit.

(4) The Administrator or the DEQ determines that the permit must be revised or revoked to assure compliance with the applicable requirements.

(b) Discretionary reopening. The DEQ may reopen and amend a permit when:

(1) additional state-only requirements become applicable to a permitted stationary source and the effective date of the requirement is at least 18 months prior to the date on which the permit is due to expire;

(2) alterations or modifications to the permitted facility will result in or have the potential to result in significant alteration of the nature or quantity of regulated air pollutants to be emitted by the permittee;

(3) the DEQ receives information previously unavailable to the DEQ that shows that the terms and conditions of the permit do not accurately represent the actual circumstances relating to the permitted facility;

(4) a court of competent jurisdiction invalidates or modifies an Oklahoma or federal statute or rule or federal guideline upon which a condition of the permit is based; or

(5) an event occurs that is beyond the control of the permittee that necessitates modification of a compliance schedule in the permit.

(c) Reopening procedures. To reopen and amend a permit, the DEQ shall follow the procedures that apply to significant permit modifications under this Subchapter, unless the amendment can be made as an administrative amendment under 252:100-8-7.2(a). Mandatory reopenings under 252:00-8-7.3(a) shall be made as expeditiously as practicable. In lieu of an application, the significant permit modification process will commence when the DEQ gives the permittee written notice of its intent to amend the permit. The DEQ shall not issue the amendment, or make public notice of the amendment where public notice is required, until at least thirty days after the DEQ has given the permittee written notice of its intent to amend the permit, unless the permittee consents to less notice, or in the case of an emergency. In cases where public participation is required, only those portions of the permit that the DEQ proposes to amend shall be open for public comment or consideration at a meeting or hearing.

(d) Reopenings for cause by EPA.

(1) If the Administrator finds that cause exists to terminate, modify, or revoke and reissue a permit, the Administrator shall notify the DEQ and the permittee of such findings in writing.

(2) The DEQ shall, within 90 days after receipt of such notification, forward to EPA a proposed determination of termination, modification, or revocation and reissuance, as appropriate. The Administrator may extend this 90-day period for an additional 90 days if he finds that a new or revised permit application is necessary or that the DEQ must require the permittee to submit additional information.

(3) The Administrator will review the proposed determination from the DEQ within 90 days of receipt.

(4) The DEQ shall have 90 days from receipt of an EPA objection to resolve any objection that EPA makes and to terminate, modify, or revoke and reissue the permit in accordance with the Administrator's objection.

(5) If the DEQ fails to submit a proposed determination pursuant to this subsection, or fails to resolve any objection pursuant to this subsection, the Administrator will terminate, modify, or revoke and reissue the permit after taking the following actions:

(A) Providing at least 30 days' notice to the permittee in writing of the reasons for any such action.

(B) Providing the permittee an opportunity for comment on the Administrator's proposed action and an opportunity for a hearing.

252:100-8-7.4. Revocations of operating permits

(a) Revocation of a permit or authorization under a general permit without reissuance. The DEQ may revoke permits or authorizations under a general permit and not reissue them when:

(1) there exists at the permitted facility unresolved noncompliance with applicable requirements or a condition of the permit or authorization, and the permittee refuses to undertake an enforceable schedule of compliance to resolve the noncompliance;

(2) the permittee fails to disclose fully the facts relevant to issuance of the permit or authorization or submits false or misleading information to the DEQ or the Administrator;

(3) the permittee has failed to comply with any requirement under 252:100-5 to pay fees; or

(4) the permittee has failed to pay a penalty owed pursuant to court order, consent decree, stipulation agreement, or schedule of compliance.

(b) Revocation procedures. The DEQ shall give notice to the permittee of its intention to revoke a permit without reissuance. This notice must state that within 30 days of the receipt of the notice the permittee may request a contested case hearing be held on the proposed action, except that the DEQ may provide less notice in case of an emergency. If the permittee requests a contested case hearing, the DEQ shall hold the hearing in accordance with the Oklahoma Administrative Procedures Act.

252:100-8-7.5. Judicial review

Any final action in granting or denying an application for a permit, permit amendment or modification, or permit renewal shall be subject to judicial review in the court of appropriate jurisdiction upon an application filed by the applicant or permittee, or by any affected state or other person who participated in the public comment process. Except for authorizations under General Permits, judicial review is available to all affected parties for all final permit actions including minor modifications and administrative actions. If no public comment procedure was employed for the action under challenge, an application for review may be filed by the permittee or an affected state. The opportunity for judicial review provided for in this subsection shall be the exclusive means for obtaining judicial review of any permit action.

(1) No application for judicial review may be filed more than 90 days following the final action on which review is sought, unless the grounds for review arose at a later time, in which case the application for review shall be filed within 90 days of the date on which the grounds for review first arose and review shall be limited to such later-arising grounds.

(2) Any application for judicial review shall be limited to issues that:

(A) were raised in comments filed with the DEQ or during a public hearing on the proposed permit action (if the grounds on which review is sought were known at that time), except that this restriction shall not apply if the person seeking review was not afforded an advance opportunity to comment on the challenged action; and

(B) are germane and material to the permit action at issue.

(3) For purposes of this section, "final action" shall include a failure by the DEQ to take final action to grant or deny an application within the time specified in this Chapter.

252:100-8-8.. Permit review by EPA and affected states

(a) **Applicability.** This section applies only to specific Tier II and III applications for Part 70 construction and/or operating permits and permit actions that have not been waived from compliance with this section by the Administrator.

(b) **Format.** To the extent practicable, information provided to the EPA by applicants shall be in computer-readable format compatible with EPA's national database management system.

(c) **Recordkeeping.** The DEQ will keep for 5 years records required by this section and will submit to the Administrator such information as the Administrator may reasonably require to ascertain whether the State program complies with the requirements of the ~~federal Clean Air Act~~ or of this Chapter.

(d) **Transmission of Part 70 applications to EPA.** For Part 70 Tier II and III applications subject to this section, the DEQ shall require an applicant upon filing to also provide a copy to the Administrator or the DEQ may submit a permit application summary form and any relevant portion of the permit application and compliance plan, in place thereof.

(e) **Transmittal of notice of draft permit to affected states.** See 27A O.S.Supp. 1995, § 2-5-112(E); 27A O.S.Supp. 1995, § 2-14-101 et seq.; and OAC-252:2-15.

(f) **Preparation and submittal of EPA review copy.**

(1) **Tier II applications.** For Tier II applications, the DEQ shall review public comments, revise the draft permit as appropriate and submit the revision to EPA for review no later than 60 days before the issuance deadline established in OAC 252:2-15-72 or, if none, by this Chapter.

(2) **Tier III applications.** For Tier III applications, the DEQ shall prepare a proposed permit according to 27A O.S. Supp. 1995, § 2-14-304, and submit it to EPA for review upon the publication of notice of an administrative permit hearing opportunity.

(g) **Notice of non-acceptance.** As part of the DEQ's submittal of a revised draft permit (Tier II) or a proposed permit (Tier III) to the Administrator, the DEQ shall notify the Administrator and any affected State in writing of any refusal by the DEQ to accept all recommendations for the revised draft permit or proposed permit that the affected State submitted during the review period. The notice will include the DEQ's reasons for not accepting any such recommendation. The DEQ is not required to accept recommendations that are not based on applicable requirements of the Oklahoma Clean Air Act or these rules.

(h) **EPA review and non-objection.** Upon receipt of notice from the EPA that it will not object to:

(1) A revised draft permit based on a Tier II application, the DEQ shall issue the permit.

(2) A proposed permit based on a Tier III application, the DEQ shall issue the proposed permit as final unless an administrative permit hearing has been timely and properly requested.

(i) **EPA review and objection.**

(1) **Timing.** Except as specified in paragraph 5 of this subsection, no permit for which an application must be transmitted to the Administrator under subsection (a) of this section shall be issued if the Administrator objects to its issuance in writing within 45 days of receipt of the revised draft permit (Tier II) or proposed permit (Tier III) and all necessary supporting information.

(2) **Form of objection.** An EPA objection shall include a statement of the Administrator's reasons for objection and a description of the terms and conditions that the permit must include to respond to the objections.

(3) **Additional grounds.** Failure of the DEQ to do any of the following also shall constitute grounds for an objection:

(A) Comply with subsections (d) or (e) of this section;

(B) Submit any information necessary to review adequately the revised draft permit (Tier II) or the proposed permit (Tier III); or

(C) Process the permit application according to the uniform permitting requirements of OAC-252:2-15.

(4) **Copy.** The Administrator will provide the permit applicant a copy of the objection.

(5) **DEQ response.** The DEQ shall consult with EPA and the applicant and shall either:

(A) **Amend permit.** Amend the permit and submit for approval an amended draft (Tier II) or proposed (Tier III) permit to EPA within 90 days after the date of EPA's objection, or

(B) **Give notice and issue.** Determine that one or more revisions sought by EPA are inconsistent with applicable state or federal statutes or regulations, inform EPA accordingly within 90 days following the date of the Administrator's objection, decline to make those particular revisions and:

(i) issue the amended or revised draft permit (Tier II) as final, or

(ii) issue the proposed permit (Tier III) as final unless an administrative permit hearing has been timely and properly requested.

(6) **Failure of DEQ to respond.** If the DEQ fails, within 90 days after the date of the EPA objection, to amend and resubmit the draft permit or proposed permit in response to the objection, the Administrator will issue or deny the permit in accordance with the requirements of EPA's Part 70 regulations.

(j) **Public petitions to the Administrator.** If the Administrator does not object in writing under subsection (h) of this section, any person that meets the requirements of this subsection may petition the Administrator within 60 days after the expiration of the Administrator's 45-day review period to make such objection. Any such petition shall be based only on objections to the permit that the petitioner raised with reasonable specificity during the public comment period provided for in ~~0AC-252:002-15~~, unless the petitioner demonstrates that it was impracticable to raise such objections within such period, or unless the grounds for such objection arose after such period. If the Administrator objects to the permit as a result of a petition filed under this subsection, the DEQ shall not issue the permit until EPA's objection has been resolved, except that a petition for review does not stay the effectiveness of a permit or its requirements if the permit was issued after the end of the 45-day review period and prior to an EPA objection. If the DEQ has issued a permit prior to receipt of an EPA objection under this subsection, the Administrator will modify, terminate, or revoke such permit, and shall do so consistent with the procedures in ~~0AC-252:100-8-7 through 252:100-8-7.5~~ except in unusual circumstances. If the DEQ revokes the permit, it may thereafter issue only a revised permit that satisfies EPA's objection. In any case, the source will not be in violation of the requirement to have submitted a timely and complete application.

(k) **Effect on Tier III administrative permit hearing.** When a public petition or an EPA objection is registered on a proposed permit (Tier III) on which an administrative permit hearing has been requested in accordance with 27A O.S. Supp. 1995, Section 2-14-101 et seq., the DEQ may stay the evidentiary part of the hearing involving cross-examination until EPA objections are resolved or determined to be inconsistent with applicable laws.

252:100-8-9. Permit fees

~~(a) Definitions. The following words and terms, when used in this Section, shall have the following meaning, unless the context clearly indicates otherwise:~~

~~(1) "Actual emission" means the total amount of regulated pollutant (for fee calculation) emitted from a given facility during a particular calendar year, as determined by methods contained in~~

OAC 252:100-8-9(d).

~~(2) "Allowable emissions" means the total amount of regulated pollutant (for fee calculation) emitted based on limits contained in a federally enforceable permit or potential to emit.~~

~~(3) "Emission inventory" means a compilation of the total of all point source, storage and process fugitive air emissions for all regulated pollutant (for fee calculation) at a given facility.~~

~~(4) "Consumer Price Index" means an index determined by the U.S. Department of Labor measuring the change in the cost of typical wage earner purchases of goods and services expressed as a percentage of the cost of these same goods and services in a base period.~~

~~(b) Fee required. The owners or operators of Part 70 sources shall pay annual fees that are sufficient to cover the part 70 program costs. The permitting authority shall ensure that any fee required by these rules will be used solely for part 70 program costs.~~

~~(c) Applicability. A Part 70 source shall be subject to fee requirements of this section on January 1, 1995, and as of this date shall no longer be subject to the major source annual operating fee specified in 252:100-7-4 (b) (1) (A).~~

~~(d) Fee schedule for Part 70 sources.~~

~~(1) Annual fees. The annual fee shall be calculated on a source specific basis and may be based on either actual or allowable emissions at the option of the owner or operator paying the fee as set forth in the facility emissions inventory. Fees shall be based on emission inventories submitted in the previous calendar year. (For example, fee invoiced during calendar year 1995 shall be based upon inventory data covering the calendar year 1993).~~

~~(A) Annual fees shall be determined according to the following:~~

~~(i) where only one basis for fee assessment, i.e. only actual, or only allowable is reflected by the inventory, that basis shall be used for invoicing; or~~

~~(ii) where both actual and allowable emission are reflected on the inventory, the lesser of the two shall be used.~~

~~(B) Annual fees shall be as follows:~~

~~(i) Effective January 1, 1995, the annual operating fee for Part 70 sources shall be \$15.19 per ton of regulated air pollutant.~~

~~(ii) The annual operating fee shall be adjusted automatically each year by the percentage, if any, by which the Consumer Price Index for the most recent calendar year ending before the beginning of such year differs from the Consumer Price Index for the calendar year 1994. The Consumer Price Index for any calendar year is the average of the Consumer Price Index for all urban consumers published by the Department of Labor, as of the close of the twelve month period ending on August 31 of each calendar year.~~

~~(iii) Regulated pollutants (for fee calculation) in excess of 4,000 tons per year per pollutant for a part 70 source shall not be considered in the calculation of the annual fee.~~

~~(2) Permit processing fees. Permit processing fees shall be as follows:~~

- ~~(A) Initial Part 70 permit \$2,000.~~
- ~~(B) Renewal Part 70 permit \$1,000.~~
- ~~(C) Significant Part 70 Permit Mod. \$1,000.~~
- ~~(D) Minor Part 70 Permit Modification \$ 500.~~
- ~~(E) The Part 70 Temporary Permit \$1,000.~~
- ~~(F) Part 70 Temporary Source Relocation \$ 500.~~

~~(3) Payment. Fees will be paid by check or money order made payable to the Oklahoma Air Quality fund or upon delegation, to the appropriate reviewing agency. Fees are due and payable upon receipt of invoice. Fees shall be considered delinquent 30 days from the date of billing, at which time simple interest shall accrue at the rate of one and one half percent (1 1/2%) per month on any amount unpaid. The Department shall allow a grace period of one hundred and twenty days from the date of billing before issuing any administrative order and assessing a reasonable administrative fine in accordance with the provisions of the Oklahoma Clean Air Act, 27A O.S. 1993 Supp. Sec. 2 5 101 et seq., as amended.~~

~~(4) Emissions inventory. The owner or operator of any Part 70 source shall by April 1, 1994, and every succeeding year thereafter, submit a complete emission inventory on forms obtained from the Agency. These inventories, covering the previous calendar year, will be used for the purpose of calculating the annual operating fee. The methods of calculation to be utilized in the development of an emission inventory shall be in accordance with the methods described in OAC 252:100-7-4(e). [252:100-8-9(a), (b), (c), (d) (1), (d) (3) and (d) (4) amended and renumbered to 252:100-5. 252:100-8-9(d) (2) amended and renumbered to 252:100-8-1.7]~~

PART 7. PREVENTION OF SIGNIFICANT DETERIORATION (PSD) REQUIREMENTS FOR ATTAINMENT AREAS

252:100-8-30. Applicability

The new source requirements of this Part, in addition to the requirements of Parts 1, 3, and 5 of this Subchapter, shall apply to the construction of all major stationary sources and major modifications as specified in 252:100-8-31 through 252:100-8-33. Sources subject to this Part are also subject to the operating permit provisions contained in Part 5 of 252:100-8.

252:100-8-31. Definitions

The following words and terms when used in this Part shall have the following meaning, unless the context clearly indicates otherwise:

"Actual emission" means the actual rate of emissions of a pollutant from an emissions unit, as determined in accordance with the following:

- (A) In general, actual emissions as of a particular date shall equal the average rate in tons per year at which the unit actually emitted the pollutant during a two-year period which precedes the particular date and which is representative of

normal source operation. The reviewing authority may allow the use of a different time period upon a determination that it is more representative of normal source operation. Actual emissions shall be calculated using the unit's actual operating hours, production rates, and types of materials processed, stored, or combusted during the selected time period. Actual emissions may also be determined by source tests, or by best engineering judgment in the absence of acceptable test data.

(B) The reviewing authority may presume that source-specific allowable emissions for the unit are equivalent to the actual emissions of the unit.

(C) For any emissions unit which has not begun normal operations on the particular date, actual emissions shall equal the potential to emit of the unit on that date.

"Adverse impact on visibility" means visibility impairment which interferes with the management, protection, preservation or enjoyment of the visitor's visual experience of the Federal Class I area. This determination must be made by the DEQ on a case-by-case basis taking into account the geographic extent, intensity, duration, frequency and time of visibility impairments, and how these factors correlate with:

(A) times of visitor use of the Federal Class I area; and

(B) the frequency and timing of natural conditions that reduce visibility.

"Baseline area" means any areas designated as attainment or unclassifiable in which the major source or major modification establishing the minor source baseline date would construct or would have an air quality impact equal to or greater than 1 ug/m³ (annual average) of the pollutant for which the minor source baseline date is established.

"Baseline concentration" means that ambient concentration level which exists in the baseline area at the time of the applicable minor source baseline date.

(A) A baseline concentration is determined for each pollutant for which a minor source baseline date is established and shall include:

(i) the actual emissions representative of sources in existence on the applicable minor source baseline date, except as provided in (B) of this definition.

(ii) the allowable emissions of major sources which commenced construction before the major source baseline date but were not in operation by the applicable minor source baseline date.

(Effective May 11, 1991)

(B) The following will not be included in the baseline concentration and will affect the applicable maximum allowable increase(s):

(i) actual emissions from any major source on which construction commenced after the major source baseline date; and,

(ii) actual emissions increases and decreases at any source occurring after the minor source baseline date. (Effective May 11, 1991)

"Baseline date" means:

(A) for major sources,

(i) in the case of particulate matter and sulfur dioxide,

January 6, 1975, and,

(ii) in the case of nitrogen dioxide, February 8, 1988; and,
(B) for minor sources, the earliest date after the trigger date
on which a major source or major modification (subject to 40 CFR
52.21 or 252:100-8, Part 7) submits a complete application. The
trigger date is:

(i) in the case of particulate matter and sulfur dioxide,
August 7, 1977, and

(ii) in the case of nitrogen oxides, February 8, 1988.
(Effective May 11, 1991)

"Best available control technology" means the control technology
to be applied for a major source or modification is the best that
is available as determined by the Executive Director on a case-by-
case basis taking into account energy, environmental, costs and
economic impacts of alternate control systems.

"Building, structure, facility or installation" means all of the
pollutant-emitting activities which belong to the same industrial
grouping, are located on one or more contiguous or adjacent
properties, and are under the control of the same person or persons
under common control. Pollutant-emitting activities shall be
considered as part of the same industrial grouping if they belong
to the same "Major Group" (i.e., which have the same two-digit
code) as described in the Standard Industrial Classification
Manual, 1972, as amended by the 1977 Supplement.

"Complete" in reference to an application for a permit, means
that the application contains all the information necessary for
processing the application. Designating an application complete
for purposes of permit processing does not preclude the reviewing
authority from requesting or accepting any additional information.

"Federal land manager" means the Secretary of the department with
authority over the Federal Class I area or his representative.

"Innovative control technology" means any system of air pollution
control that has not been adequately demonstrated in practice, but
would have a substantial likelihood of achieving greater continuous
emissions reduction than any control system in current practice or
of achieving at least comparable reductions at lower cost in terms
of energy, economics, or non-air quality environmental impacts.

"Major modification" means any physical change in or change in
the method of operation of a major source that would result in a
significant net emissions increase of any pollutant subject to
regulation.

(A) Any net emissions increase that is significant for volatile
organic compounds shall be considered significant for ozone.

(B) A physical change or change in the method of operation
shall not include:

(i) routine maintenance, repair and replacement.

(ii) use of an alternate fuel or raw material by reason of any
order under Sections 2(a) and (b) of the Energy Supply and
Environmental Coordination Act of 1974 (or any superseding
legislation) or by reason of a natural gas curtailment plan
pursuant to the Federal Power Act.

(iii) use of an alternate fuel by reason of an order or rule
under Section 125 of the Federal Clean Air Act.

(iv) use of an alternate fuel at a steam generating unit to
the extent that the fuel is generated from municipal solid

waste.

(v) Use of an alternate fuel or raw material by a source which:

(I) the source was capable of accommodating before January 6, 1975, unless such change would be prohibited under any enforceable permit limitation which was established after January 6, 1975; or,

(II) the source is approved to use under any permit issued under 40 CFR 52.21 or 252:100-8.

(vi) An increase in the hours of operation or in the production rate, unless such change would be prohibited under any enforceable permit limitation which was established after January 6, 1975.

(vii) Any change in source ownership.

"Major stationary source" means any source which meets any of the following conditions:

(A) Any of the following sources of air pollutants which emits, or has the potential to emit, 100 tons per year or more of any pollutant subject to regulation:

(i) carbon black plants (furnace process),

(ii) charcoal production plants,

(iii) chemical process plants,

(iv) coal cleaning plants (with thermal dryers),

(v) coke oven batteries,

(vi) fossil-fuel boilers (or combination thereof) totaling more than 250 million BTU per hour heat input,

(vii) fossil fuel-fired steam electric plants of more than 250 million BTU per hour heat input,

(viii) fuel conversion plants,

(ix) glass fiber processing plants,

(x) hydrofluoric, sulfuric or nitric acid plants,

(xi) iron and steel mill plants,

(xii) kraft pulp mills,

(xiii) lime plants,

(xiv) municipal incinerators capable of charging more than 250 tons of refuse per day,

(xv) petroleum refineries,

(xvi) petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels,

(xvii) phosphate rock processing plant,

(xviii) portland cement plants,

(xix) primary aluminum ore reduction plants,

(xx) primary copper smelters,

(xxi) primary lead smelters,

(xxii) primary zinc smelters,

(xxiii) secondary metal production plants,

(xxiv) sintering plants,

(xxv) sulfur recovery plants, or

(xxvi) taconite ore processing plants.

(B) Any other source not on the list in (A) of this definition which emits, or has the potential to emit, 250 tons per year or more of any pollutant subject to regulation.

(C) Any physical change that would occur at a source not otherwise qualifying as a major source under (A) and (B) of this definition if the change would constitute a major source by

itself.

(D) A major source that is major for volatile organic compounds shall be considered major for ozone.

"Natural conditions" mean naturally occurring phenomena against which any changes in visibility are measured in terms of visual range, contrast or coloration.

"Net emissions increase" means:

(A) The amount by which the sum of the following exceeds zero:

(i) any increase in actual emissions from a particular physical change or change in the method of operation at a source; and,

(ii) any other increases and decreases in actual emissions at the source that are contemporaneous with the particular change and are otherwise creditable.

(B) An increase or decrease in actual emissions is contemporaneous with the increase from the particular change only if it occurs within 3 years before the date that the increase from the particular change occurs.

(C) An increase or decrease in actual emissions is creditable only if the Executive Director has not relied on it in issuing a permit under 252:100-8, Part 7, which permit is in effect when the increase in actual emissions from the particular change occurs.

(D) An increase or decrease in actual emissions of sulfur dioxide, particulate matter, or nitrogen oxides which occurs before the applicable minor source baseline date is creditable only if it is required to be considered in calculating the amount of maximum allowable increases remaining available. (Effective May 11, 1991)

(E) An increase in actual emissions is creditable only to the extent that the new level of actual emissions exceeds the old level.

(F) A decrease in actual emissions is creditable only to the extent that:

(i) the old level of actual emissions or the old level of allowable emissions, whichever is lower, exceeds the new level of actual emissions;

(ii) it is enforceable at and after the time that actual construction on the particular change begins;

(iii) it has approximately the same qualitative significance for public health and welfare as that attributed to the increase from the particular change.

(G) An increase that results from a physical change at a source occurs when the emission unit on which construction occurred becomes operational and begins to emit a particular pollutant. Any replacement unit that requires shakedown becomes operational only after a reasonable shakedown period, not to exceed 180 days.

"Significant" means:

(A) In reference to a net emissions increase or the potential of a source to emit any of the following pollutants, a rate of emissions that would equal or exceed any of the following rates:

(i) carbon monoxide: 100 tons per year (tpy),

(ii) nitrogen oxides: 40 tpy,

(iii) sulfur dioxide: 40 tpy.

- (iv) particulate matter: 25 tpy of particulate matter emissions or 15 tpy of PM-10 emissions,
- (v) ozone: 40 tpy of volatile organic compounds,
- (vi) lead: 0.6 tpy,
- (vii) asbestos: 0.007 tpy,
- (viii) beryllium: 0.0004 tpy,
- (ix) mercury: 0.1 tpy,
- (x) vinyl chloride: 1 tpy,
- (xi) fluorides: 3 tpy,
- (xii) sulfuric acid mist: 7 tpy,
- (xiii) hydrogen sulfide (H₂S): 10 tpy,
- (xiv) total reduced sulfur (including H₂S): 10 tpy, and
- (xv) reduced sulfur compounds (including H₂S): 10 tpy.

(B) Notwithstanding (A) of this definition, "significant" means any emissions rate or any net emissions increase associated with a major source or modification which would construct within 6 miles of a Class I area, and have an impact on such area equal to or greater than 1 ug/m³ (24-hour average).

"Visibility impairment" means any humanly perceptible reduction in visibility (visual range, contrast and coloration) from that which would have existed under natural conditions.

252:100-8-32. Source applicability determination

Proposed new sources and source modifications to which this Part is applicable are determined by size, geographical location and type of emitted pollutants.

(1) Size.

(A) Permit review will apply to sources and modifications that emit any regulated pollutant in major amounts. These quantities are specified in the definitions for major stationary source, major modification, potential to emit, net emissions increase, significant and other associated definitions in 252:100-8-31, 252:100-8-1.1, and 252:100-1.

(B) When a source or modification becomes major solely by virtue of a relaxation in any enforceable permit limitation established after August 7, 1980, on the capacity of the source or modification to emit a pollutant, such as a restriction on hours of operation, then the requirements of 252:100-8, Parts 1, 3, 5, and 7 shall apply to that source or modification as though construction had not yet commenced on it.

(2) Location.

(A) Sources and modifications which are major in size and proposed for construction in an area which has been designated as attainment or unclassified for any applicable ambient air standard are subject to the PSD requirements.

(B) Those sources and modifications locating in an attainment or unclassified area but impacting on a nonattainment area may also be subject to the requirements for major sources affecting nonattainment areas in 252:100-8, Part 9.

252:100-8-33. Exemptions

(a) Exemptions from PSD requirements. PSD requirements do not apply to a particular source or modification if:

- (1) It is a nonprofit health or educational institution.

(2) The source is major by virtue of fugitive emissions, to the extent quantifiable, included in calculating the potential to emit and is a source other than:

(A) One of the categories listed in (A)(i) through (xxvi) under the definition of "Major stationary source" in 252:100-8-31, or

(B) A stationary source category which, as of August 7, 1980, is being regulated by NSPS or NESHAP.

(3) The source or modification is a portable stationary source which has previously received a permit under the PSD requirements and proposes to relocate to a temporary new location from which its emissions would not impact a Class I area or an area where an applicable increment is known to be violated.

(b) Exemption from air quality impact evaluation.

(1) The requirements of 252:100-8-35 are not applicable if the emissions, with respect to a particular pollutant, would be temporary and impact no Class I area and no area where an applicable increment is known to be violated.

(2) The requirements of 252:100-8-35 are not applicable to the emissions, with respect to a particular pollutant, to a modification of a major source that was in existence on March 1, 1978 if the net increase in allowable emissions of each regulated pollutant, after the application of best available control technology, would be less than 50 tons per year.

(c) Exemption from monitoring requirements.

(1) The monitoring requirements of 252:100-8-35 are not applicable for a particular pollutant if the emission increase of the pollutant from a new source or the net emissions increase of the pollutant from a modification would cause, in any area, air quality impacts less than the following listed amounts, or are pollutant concentrations that are not on the list.

(A) Carbon monoxide - 575 ug/m³, 8-hour average,

(B) Nitrogen dioxide - 14 ug/m³, annual average,

(C) Particulate matter - 10 ug/m³, TSP, 24-hour average, or 10 ug/m³ PM-10, 24-hour average,

(D) Sulfur dioxide - 13 ug/m³, 24-hour average,

(E) Ozone - see (N) below,

(F) Lead - 0.1 ug/m³, 24-hour 3-month average,

(G) Mercury - 0.25 ug/m³, 24-hour average,

(H) Beryllium - 0.0005 0.001 ug/m³, 24-hour average,

(I) Fluorides - 0.25 ug/m³, 24-hour average,

(J) Vinyl chloride - 15 ug/m³, 24-hour average,

(K) Total reduced sulfur - 10 ug/m³, 1-hour average,

(L) Hydrogen sulfide - 0.04 0.2 ug/m³, 1-hour average, or

(M) Reduced sulfur compounds - 10 ug/m³, 1-hour average.

(N) No de minimis air quality level is provided for ozone. However, any net increase of 100 tons per year or more of volatile organic compounds subject to PSD would be required to perform an ambient impact analysis, including the gathering of ambient air quality data.

(2) The requirements for air quality monitoring in 252:100-8-35(b), (c) and (d)(2) shall not apply to a source or modification that was subject to 40 CFR 52.21 as in effect on June 19, 1978, if a permit application was submitted before June 8, 1981 and

the Executive Director subsequently determined that the application was complete except for 252:100-8-35(b), (c) and (d)(2). Instead, the requirements in 40 CFR 52.21(m)(2) as in effect on June 19, 1978, shall apply to such source or modification.

(3) The requirements for air quality monitoring in 252:100-8-35(b), (c), and (d)(2) shall not apply to a source or modification that was not subject to 40 CFR 52.21 as in effect on June 19, 1978, if a permit application was submitted before June 8, 1981 and the Executive Director subsequently determined that the application as submitted was complete, except for the requirements in 252:100-8-35(b), (c) and (d)(2).

(4) The Executive Director shall determine if the requirements for air quality monitoring of PM-10 in 252:100-8-35(a) through 252:100-8-35(c) and 252:100-8-35(d)(2) may be waived for a source or modification when an application for a permit was submitted on or before June 1, 1988 and the Executive Director subsequently determined that the application, except for the requirements for monitoring particulate matter under 252:100-8-35(a) through 252:100-8-35(c) and 252:100-8-35(d)(2), was complete before that date.

(5) The requirements for air quality monitoring of PM-10 in 252:100-8-35(b), (c), (d)(2) and (d)(6) shall apply to a source or modification if an application for a permit was submitted after June 1, 1988 and no later than December 1, 1988. The data shall have been gathered over at least the period from February 1, 1988 to the date the application becomes otherwise complete in accordance with the provisions of 252:100-8-33(b)(1), except that if the Executive Director determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period (not to be less than 4 months), the data required by 252:100-8-35(b)(1) and 252:100-8-35(c) shall have been gathered over that shorter period.

(d) Exemption from BACT requirements and monitoring requirements. If a complete permit application for a source or modification was submitted before August 7, 1980 the requirements for best available control technology in 252:100-8-34 and for monitoring in 252:100-8-35(a) through 252:100-8-35(c) and 252:100-8-35(d)(2) through 252:100-8-35(d)(4) are not applicable. Instead, the federal requirements at 40 CFR 52.21 (j) and (n) as in effect on June 19, 1978 are applicable to any such source or modification.

(e) Exemption of modifications. As specified in the applicable definitions of 252:100-8-31, 252:100-8-1.1, and 252:100-1, the requirements of 252:100-8, Part 7 for PSD and 252:100-8, Part 9 for nonattainment areas are not applicable to a modification if the existing source was not major on August 7, 1980 unless the proposed addition to that existing minor source is major in its own right.

(f) Exemption from impact analyses. The requirements of 252:100-8-35 and 252:100-8-36 do not apply to a source or modification with respect to any maximum allowable increase for nitrogen oxides if the owner or operator of the source or modification submitted a completed application for a permit before February 8, 1988.

(g) Exemption from increment consumption. Excluded from increment consumption are the following cases:

(1) Concentrations from an increase in emissions from any

source converting from the use of petroleum products, natural gas, or both by reason of any order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation), or by reason of a natural gas curtailment plan pursuant to the Federal Power Act. Such exclusion is limited to five years after the effective date of the order or plan.

(2) Emissions of particulate matter from construction or other temporary emission-related activities of new or modified sources.

(3) A temporary increase of sulfur dioxide, particulate matter, or nitrogen oxides by order or authorized variance from any source.

252:100-8-34. Best available control technology

(a) A new source must demonstrate that the control technology to be applied is the best that is available (i.e., BACT as defined herein for each regulated pollutant that it would have the potential to emit in significant amounts).

(b) A major modification must demonstrate that the control technology to be applied is the best that is available for each regulated pollutant for which it would be a significant net emissions increase at the source. This requirement applies to each proposed emissions unit at which a net emissions increase in the pollutant would occur as a result of a physical change or change in the method of operation in the unit.

(c) The determination of best available control technology shall be made on a case by case basis taking into account costs and energy, environmental and economic impacts.

(d) For phased construction projects the determination of best available control technology shall be reviewed and modified at the discretion of the Executive Director at a reasonable time but no later than 18 months prior to commencement of construction of each independent phase of the project. At such time the owner or operator may be required to demonstrate the adequacy of any previous determination of best available control technology.

252:100-8-35. Air quality impact evaluation

(a) Application contents. Any application for a permit shall contain, as the Executive Director determines appropriate, an evaluation of ambient air quality in the area that the source or modification would affect for each of the following pollutants:

(1) for a new source, each regulated pollutant that it would have the potential to emit in a significant amount;

(2) for a major modification, each regulated pollutant for which it would result in a significant net emissions increase.

(b) Continuous monitoring data. For visibility and any pollutant, other than volatile organic compounds, for which an ambient air quality standard exists, the evaluation shall contain continuous air quality monitoring data gathered to determine whether emissions of that pollutant would cause or contribute to a violation of the applicable ambient air quality standard. For any such pollutant for which a standard does not exist, the monitoring data required shall be that which the Executive Director determines is necessary to assess the ambient air quality for that pollutant

in that area. (Amended 7-9-87, effective 8-10-87)

(c) Increment consumption. The evaluation shall demonstrate that, as of the source's start-up date, the increase in emissions from that source, in conjunction with all other applicable emissions increases or reductions of that source, will not cause or contribute to any increase in ambient concentrations exceeding the remaining available PSD increment for the specified air contaminants as determined by the Executive Director.

(d) Monitoring.

(1) Monitoring method. With respect to any requirements for air quality monitoring of PM-10 under 252:100-8-33(c)(4) and 252:100-8-33(c)(5), the owner or operator of the source or modification shall use a monitoring method approved by the Executive Director and shall estimate the ambient concentrations of PM-10 using the data collected by such approved monitoring method in accordance with estimating procedures approved by the Executive Director.

(2) Monitoring period. The required monitoring data shall have been gathered for a time period of up to one year and shall represent the year preceding submission of the application. Ambient monitoring data collected for a time period shorter than one year (but no less than four months) or for a time period other than immediately preceding the application may be acceptable if such data are determined by the Executive Director to be within the time period that maximum pollutant concentrations would occur, and to be complete and adequate for determining whether the source or modification will cause or contribute to a violation of any applicable ambient air quality standard or consume more than the remaining available PSD increment.

(3) Monitoring period exceptions.

(A) For any application which becomes complete except as to the monitoring requirements of 252:100-8-35(b) through 252:100-8-35(c) and 252:100-8-35(d)(2), between June 8, 1981 and February 9, 1982, the data that 252:100-8-35(b) and 252:100-8-35(c) require shall have been gathered over the period from February 9, 1981 to the date the application becomes otherwise complete, except that:

(i) If the source or modification would have been major for that pollutant under 40 CFR 52.21 as in effect on June 19, 1978, any monitoring data shall have been gathered over the period required by those regulations.

(ii) If the Executive Director determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period, not to be less than four months, the data that 252:100-8-35(b) and 252:100-8-35(c) require shall have been gathered over that shorter period.

(iii) If the monitoring data would relate exclusively to ozone and would not have been required under 40 CFR 52.21 as in effect on June 19, 1978, the Executive Director may waive the otherwise applicable requirements of 252:100-8-35(d)(3)(A) to the extent that the applicant shows that the monitoring data would be unrepresentative of air quality over a full year.

(B) For any application that becomes complete, except as to

the requirements of 252:100-8-35(b), (c) and (d)(2) pertaining to monitoring of PM-10, after December 1, 1988 and no later than August 1, 1989, the data that 252:100-8-35(b) and (c) require shall have been gathered over at least the period from August 1, 1988 to the date the application becomes otherwise complete, except that if the Executive Director determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period(not to be less than 4 months), the data that 252:100-8-35(b) and 252:100-8-35(c) require shall have been gathered over that shorter period.

(4) Ozone post-approval monitoring. The application for a source or modification of volatile organic compounds which satisfies all conditions of 252:100-8-54 may provide post-approval monitoring data for ozone in lieu of providing preconstruction data as required under 252:100-8-35.

(5) Post-construction monitoring. The applicant for a permit for a new source or modification shall conduct, after construction, such ambient monitoring and visibility monitoring as the Executive Director determines necessary to determine the effect its emissions may have, or are having, on air quality in any area. (Amended 7-9-87, effective 8-10-87).

(6) Monitoring system operation. The operation of monitoring stations for any air quality monitoring required under Part 7 of this Subchapter shall meet the requirements of 40 CFR 58 Appendix B.

(e) Air quality models.

(1) Any air quality dispersion modeling that is required under Part 7 of this Subchapter for estimates of ambient concentrations shall be based on the applicable air quality models, data bases and other requirements specified in the Guidelines on Air Quality Models, OAOPS 1.2-080, U.S. Environmental Protection Agency, April, 1978 and subsequent revisions.

(2) Where an air quality impact model specified in the Guidelines on Air Quality Models is inappropriate, the model may be modified or another model substituted, as approved by the Executive Director. Methods like those outlined in the Workbook for the Comparison of Air Quality Models, U.S. Environmental Protection Agency, April, 1977 and subsequent revisions, can be used to determine the comparability of air quality models.

(f) Growth analysis. Upon request of the Executive Director the permit application shall provide information on the nature and extent of any or all general commercial, residential, industrial and other growth which has occurred since August 7, 1977 in the area the source or modification would affect. The permit application shall also contain an analysis of the air quality impact projected for the area as a result of general commercial, residential and other growth associated with the source or modification.

(g) Visibility and other impacts analysis. The permit application shall provide an analysis of the impairment to visibility, soils and vegetation as a result of the source or modification. The Executive Director may require monitoring of visibility in any Federal Class I area near the proposed new stationary source or major modification for such purposes and by such means as the

Executive Director deems necessary and appropriate. (Amended 7-9-87, effective 8-10-87)

252:100-8-36. Source impacting Class I areas

(a) Permits issuance. Permits may be issued at variance to the limitations imposed on a Class I area in compliance with the procedures and limitations established in State and Federal Clean Air Acts.

(b) Impact analysis required. The permit application for a proposed new source or modification will contain an analysis on the impairment of visibility and an assessment of any anticipated adverse impacts on soils and vegetation in the vicinity of the source resulting from construction of the source. The Executive Director shall notify the appropriate Federal Land Manager of the receipt of any such analysis and include a complete copy of the permit application. Any analysis performed by the Land Manager shall be considered by the Executive Director provided that the analysis is filed with the DEQ within 30 days of receipt of the application by the Land Manager. Where the Executive Director finds that such an analysis does not demonstrate to the satisfaction of the Executive Director that an adverse impact on visibility will result in the Federal Class I area, the Executive Director will, in any notice of public hearing on the permit application, either explain his decision or give notice as to where the explanation can be obtained. Further, upon presentation of good and sufficient information by a Federal Land Manager, the Executive Director may deny the issuance of a permit for a source, emissions from which will adversely impact areas heretofore or hereafter categorized as Class I areas even though the emissions would not cause the increment for such Class I areas to be exceeded.

252:100-8-37. Innovative control technology

(a) An applicant for a permit for a proposed major source or modification may request the Executive Director in writing to approve a system of innovative control technology.

(b) The Executive Director may determine that the innovative control technology is permissible if:

(1) The proposed control system would not cause or contribute to an unreasonable risk to public health, welfare or safety in its operation or function.

(2) The applicant agrees to achieve a level of continuous emissions reductions equivalent to that which would have been required for best available control technology under 252:100-8-34 by a date specified by the Executive Director. Such date shall not be later than 4 years from the time of start-up or 7 years from permit issuance.

(3) The source or modification would meet the requirements equivalent to those in Parts 1 and 5 of this Subchapter and 252:100-8-36 based on the emissions rate that the source employing the system of innovative control technology would be required to meet on the date specified by the Executive Director.

(4) The source or modification would not, before the date specified, cause or contribute to any violation of the

applicable ambient air standards, or impact any Class I area or area where an applicable increment is known to be violated.

(5) All other applicable requirements including those for public review have been met.

(c) The Executive Director shall withdraw approval to employ a system of innovative control technology made under 252:100-8-37, if:

(1) The proposed system fails by the specified date to achieve the required continuous reduction rate; or,

(2) The proposed system fails before the specified date so as to contribute to an unreasonable risk to public health, welfare or safety; or,

(3) The Executive Director decides at any time that the proposed system is unlikely to achieve the required level of control or to protect the public health, welfare or safety.

(d) If a source or modification fails to meet the required level of continuous emissions reduction within the specified time period, or if the approval is withdrawn in accordance with 252:100-8-37(c), the source or modification may be allowed up to an additional 3 years to meet the requirement for application of best available control technology through the use of a demonstrated system of control.

PART 9. MAJOR SOURCES AFFECTING NONATTAINMENT AREAS

252:100-8-50. Applicability

The new source requirements of this Part, in addition to the applicable requirements of Parts 1, 3, and 5 of this Subchapter, shall apply to the construction of all major sources and major modifications affecting designated nonattainment areas as specified in 252:100-8-51 through 252:100-8-53.

252:100-8-51. Definitions

The following words and terms, when used in this Part, shall have the following meaning, unless the context clearly indicates otherwise:

"Actual emissions" means the actual rate of emissions of a pollutant from an emissions unit, as determined in accordance with the following:

(A) In general, actual emissions as of a particular date shall equal the average rate in tons per year at which the unit actually emitted the pollutant during a two-year period which precedes the operation. The reviewing authority may allow the use of a different time period upon a determination that it is more representative of normal source operation. Actual emissions shall be calculated using the unit's actual operating hours, production rates, and types of materials processed, stored, or combusted during the selected time period. Actual emissions may also be determined by source tests, or by best engineering judgment in the absence of acceptable test data.

(B) The reviewing authority may presume that source-specific allowable emissions for the unit are equivalent to the actual emissions of the unit.

(C) For any emissions unit which has not begun normal operations on the particular date, actual emissions shall equal

the potential to emit of the unit on that date.

"Building, structure, facility" means all of the pollutant-emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person (or persons under common control). Pollutant-emitting activities shall be considered as part of the same industrial grouping if they belong to the same "Major Group" (i.e., which have the same two digit code) as described in the Standard Industrial Classification Manual, 1972, as amended by the 1977 Supplement.

"Installation" means an identifiable piece of process equipment.

"Lowest achievable emissions rate" means the control technology to be applied to a major source or modification which the Executive Director, on a case by case basis, determines is achievable for a source based on the lowest achievable emission rate achieved in practice by such category of source (i.e., lowest achievable emission rate as defined in the Federal Clean Air Act).

"Major modification" means any physical change in, or change in the method of operation of, a major source that would result in a significant net emissions increase of any pollutant subject to regulation.

(A) Any net emissions increase that is significant for volatile organic compounds shall be considered significant for ozone.

(B) A physical change or change in the method of operation shall not include:

(i) routine maintenance, repair and replacement;

(ii) use of an alternate fuel or raw material by reason of any order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation) or by reason of a natural gas curtailment plan pursuant to the Federal Power Act;

(iii) use of an alternate fuel by reason of an order or rule under Section 125 of the Federal Clean Air Act;

(iv) use of an alternate fuel at a steam generating unit to the extent that the fuel is generated from municipal solid waste;

(v) Use of an alternate fuel or raw material by a source which:

(I) the source was capable of accommodating before December 21, 1976, unless such change would be prohibited under any enforceable permit limitation which was established after December 21, 1976; or,

(II) the source is approved to use under any permit issued under 40 CFR 52.21 or 252:100-7 or 8.

(vi) An increase in the hours of operation or in the production rate unless such change would be prohibited under any enforceable permit limitation which was established after December 21, 1976, or

(vii) any change in source ownership.

"Major stationary source" means:

(A) any stationary source of air pollutants which emits, or has the potential to emit, 100 tons per year or more of any pollutant subject to regulation; or,

(B) any physical change that would occur at a source not qualifying under (A) of this definition as a major source, if

the change would constitute a major source by itself.

(C) for ozone, a source that is major for volatile organic compounds shall be considered major.

"Net emissions increase" means:

(A) The amount by which the sum of the following exceeds zero:

(i) any increase in actual emissions from a particular physical change or change in the method of operation at a source; and,

(ii) any other increases and decreases in actual emission at the source that are contemporaneous with the particular change and are otherwise creditable.

(B) An increase or decrease in actual emissions is contemporaneous with the increase from the particular change only if it occurs within 3 years before the date that the increase from the particular change occurs.

(C) An increase or decrease in actual emissions is creditable only if the Executive Director has not relied on it in issuing a permit under 252:100-8, Part 9, which permit is in effect when the increase in actual emissions from the particular change occurs.

(D) An increase in actual emissions is creditable only to the extent that the new level of actual emissions exceeds the old level.

(E) A decrease in actual emissions is creditable only to the extent that:

(i) the old level of actual emissions or the old level of allowable emissions, whichever is lower, exceeds the new level of actual emissions;

(ii) it is enforceable at and after the time that actual construction on the particular change begins;

(iii) the reviewing authority has not relied on it in issuing any permit under State air quality rules; and,

(iv) it has approximately the same qualitative significance for public health and welfare as that attributed to the increase from the particular change.

(F) An increase that results from a physical change at a source occurs when the emission unit on which construction occurred becomes operational and begins to emit a particular pollutant. Any replacement unit that requires shakedown becomes operational after a reasonable shakedown period, not to exceed 180 days.

"Reconstruction" means the replacement of components of an existing source (which will then be treated as a new source for purposes of Part 9 of this Subchapter) to the extent that will be determined by the Executive Director based on:

(A) The fixed capital cost (the capital needed to provide all the depreciable components) of the new components exceeds 50% of the fixed capital cost of a comparable entirely new source; and,

(B) The estimated life of the source after the replacements is comparable to the life of an entirely new source; and,

(C) the extent to which the components being replaced cause or contribute to the emissions from the source.

"Resource recovery facility" means any facility at which solid waste is processed for the purpose of extracting, converting to energy, or otherwise separating and preparing solid waste for reuse. Energy conversion facilities must utilize solid waste to

provide more than 50 percent of the heat input to be considered a resource recovery facility under Part 9 of this Subchapter.

"Significant" means, in reference to a net emissions increase or the potential of a source to emit any of the following pollutants, a rate of emissions that would equal or exceed any of the following rates:

- (A) Carbon monoxide: 100 tons per year (tpy),
- (B) Nitrogen oxides: 40 tpy,
- (C) Sulfur dioxide: 40 tpy,
- (D) Particulate matter: 15 tpy of PM-10 emissions,
- (E) Ozone: 40 tpy of volatile organic compounds, or
- (F) Lead: 0.6 tpy.

252:100-8-52. Source applicability determination

Proposed new sources and source modifications to which Part 9 of this Subchapter are applicable are determined by size, geographical location and type of emitted pollutants:

(1). Size.

(A) Permit review will apply to sources and modifications that emit any regulated pollutant in major amounts. These quantities are specified in the definitions for major stationary source, major modification, potential to emit, net emissions increase, significant, and other associated definitions in 252:100-8-51, 252:100-8-1.1, and 252:100-1.

(B) At such time that a particular source or modification becomes major solely by virtue of a relaxation in any enforceable permit limitation which was established after August 7, 1980 on the capacity of the source or modification otherwise to emit a pollutant, such as a restriction on hours of operation, then the requirements of Parts 1, 3, 5, and 9 of this Subchapter shall apply to that source or modification as though construction had not yet commenced on it.

(2). Location.

(A) Sources and modifications that are major in size and proposed for construction in an area which has been designated as nonattainment for any applicable ambient air standard are subject to the requirements for the nonattainment area, if the source or modification is major for the nonattainment pollutant(s) of that area.

(B) In addition, the requirements of a PSD review (Part 7 of this Subchapter) would be applicable if any other regulated pollutant other than the nonattainment pollutant is emitted in significant amounts by that source or modification.

(3) Location in attainment or unclassifiable area but causing or contributing to NAAQS violation.

(A) A proposed major source or major modification that would locate in an area designated attainment or unclassifiable is considered to cause or contribute to a violation of the national ambient air quality standards when such source or modification would, as a minimum, exceed the following significance levels at any locality that does not or would not meet the applicable national standard:

Concentration, ug/m³
Averaging Time (hours)

<u>Pollutant</u>	<u>Annual</u>	<u>24</u>	<u>8</u>	<u>3</u>	<u>1</u>
<u>SO₂</u>	<u>1.0</u>	<u>5</u>		<u>25</u>	
<u>PM-10</u>	<u>1.0</u>	<u>5</u>			
<u>NO₂</u>	<u>1.0</u>				
<u>CO</u>			<u>500</u>		<u>2000</u>

(B) Sources of volatile organic compounds located outside a designated ozone nonattainment area will be presumed to have no significant impact on the designated nonattainment area. If ambient monitoring indicates that the area of source location is in fact nonattainment, then the source may be granted its permit since the area has not yet been designated nonattainment.

(C) Sources locating in an attainment area but impacting on a nonattainment area above the significant levels listed in 252:100-8-52(3) are exempted from the condition of 252:100-8-54(4) (A).

(D) The determination whether a source or modification will cause or contribute to a violation of an applicable ambient air standard for sulfur dioxide, particulate matter or carbon monoxide will be made on a case by case basis as of the proposed new source's start-up date by an atmospheric simulation model. For sources of nitrogen oxides the model can be used for an initial determination assuming all the nitric oxide emitted is oxidized to nitrogen dioxide by the time the plume reaches ground level, and the initial concentration estimates will be adjusted if adequate data are available to account for the expected oxidation rate.

(E) The determination as to whether a source would cause or contribute to a violation of applicable ambient air standards will be made on a case by case basis as of the new source's start-up date. Therefore, if a designated nonattainment area is projected to be attainment as part of the state implementation plan control strategy by the new source start-up date, offsets would not be required if the new source would not cause a new violation.

(F) Sources causing a new violation of applicable ambient air standards as determined by the Executive Director but not contributing to an existing violation, will be approved if both of the following conditions are met:

(i) The new source is required to meet a more stringent emission limitations and/or the control of existing sources below allowable levels so that the new violation of ambient standards does not occur.

(ii) The new emission limitations for the new source, as well as for any existing sources affected, are enforceable under the Oklahoma and Federal Clean Air Acts.

252:100-8-53. Exemptions

(a) Nonattainment area requirements do not apply to a particular source or modification locating in or impacting on a nonattainment area if:

(1) The source is major by virtue of fugitive emissions, to the extent quantifiable, included in calculating the potential to emit and is a source other than one of the following categories:

- (A) carbon black plants (furnace process),
- (B) charcoal production plants,
- (C) chemical process plants,
- (D) coal cleaning plants (with thermal dryers),
- (E) coke oven batteries,
- (F) fossil-fuel boilers (or combination thereof) totaling more than 250 million BTU per hour heat input,
- (G) fossil fuel-fired steam electric plant of more than 250 million BTU per hour heat input,
- (H) fuel conversion plants,
- (I) glass fiber processing plants,
- (J) hydrofluoric, sulfuric or nitric acid plants,
- (K) iron and steel mills,
- (L) kraft pulp mills,
- (M) lime plants,
- (N) municipal incinerators capable of charging more than 250 tons of refuse per day,
- (O) petroleum refineries,
- (P) petroleum storage and transfer units with a total storage exceeding 300,000 barrels,
- (Q) phosphate rock processing plants,
- (R) portland cement plants,
- (S) primary aluminum ore reduction plants,
- (T) primary copper smelters,
- (U) primary lead smelters,
- (V) primary zinc smelters,
- (W) secondary metal production plants,
- (X) sintering plants,
- (Y) sulfur recovery plants,
- (Z) taconite ore processing plants, or
- (AA) any other stationary source category which, as of August 7, 1980, is being regulated by NSPS or NESHAP.

(2) A source or modification was not subject to 40 CFR Part 51, Appendix S (emission offset interpretative ruling) as in effect on January 16, 1979 and the source:

- (A) Obtained all final federal and state construction permits before August 7, 1980;
- (B) Commenced construction within 18 months from August 7, 1980 or any earlier time required by the State Implementation Plan; and,
- (C) Did not discontinue construction for a period of 18 months or more and completed construction within a reasonable time.

(b) Secondary emissions are excluded in determining the potential to emit (see definition of "potential to emit" in 252:100-8-1.1). However, upon determination of the Executive Director, if a source is subject to the requirements on the basis of its direct emissions, the applicable requirements must also be met for secondary emissions but the source would be exempt from the conditions of 252:100-8-52(3)(F) and 252:100-8-54(1) through 252:100-8-54(3). Also, the indirect impacts of mobile sources are excluded.

(c) As specified in the applicable definitions, the requirements of Part 7 for PSD and Part 9 for nonattainment areas of this Subchapter are not applicable to a modification if the existing

source was not major on August 7, 1980 unless the proposed addition to the existing minor source is major in its own right.

252:100-8-54. Requirements for sources located in nonattainment areas

In the event a major source or modification would be constructed in an area designated as nonattainment for a pollutant for which the source or modification is major, approval shall be granted only if the following conditions are met:

(1) The new source must demonstrate that it has applied control technology which the Executive Director, on a case by case basis, determines is achievable for a source based on the lowest achievable emission rate (LAER) achieved in practice by such category of source (i.e., lowest achievable emission rate as defined in the Act).

(2) If the Executive Director determines that imposition of an enforceable numerical emission standard is infeasible due to technological or economic limitations on measurement methodology, a design, equipment, work practice or operational standard, or combination thereof, may be prescribed as the emission limitation rate.

(3) The owner or operator of the new source must demonstrate that all other major sources owned or operated by such person in Oklahoma are in compliance, or are meeting all steps on a schedule for compliance, with all applicable limitations and standards under Oklahoma and Federal Clean Air Acts.

(4) The owner or operator of the new source must demonstrate that upon commencing operations:

(A) The emissions from the proposed source and all other sources permitted in the area do not exceed the planned growth allowable for the area designated in the State Implementation Plan; or,

(B) The total allowable emissions from existing sources in the region and the emissions from the proposed source will be sufficiently less than the total emissions from existing sources allowed under the State Implementation Plan at the date of construction permit application so as to represent further progress toward attainment or maintenance of the ambient air quality standards in the problem area.

(5) The owner or operator may present with the application an analysis of alternate sites, sizes and production processes for such proposed source.

APPENDIX I. INSIGNIFICANT ACTIVITIES (REGISTRATION) LIST

Any Activity to which a State of federal applicable requirement applies is not insignificant even if it is included on this list.

COMBUSTION EQUIPMENT

* Stationary reciprocating engines burning natural gas, gasoline, aircraft fuels, or diesel fuel which are either used exclusively for emergency power generation or for peaking power service not exceeding 500 hours/year

Space heaters, boilers, process heaters, and emergency flares less than or equal to 5 MMBTU/hr heat input (commercial natural gas)

Emissions from stationary internal combustion engines rated less than 50 hp output

Emissions from gas turbines with less than 215 kilowatt rating of electric output

STORAGE TANKS/DISTRIBUTION

* Emissions from fuel storage/dispensing equipment operated solely for facility owned vehicles if fuel throughput is not more than 2,175 gallons/day, averaged over a 30-day period

* Storage tanks with less than or equal to 10,000 gallons capacity that store volatile organic liquids with a true vapor pressure less than or equal to 1.0 psia at maximum storage temperature

* Bulk gasoline or other fuel distribution with a daily average throughput less than 2,175 gallons per day, including dispensing, averaged over a 30-day period

Gasoline and aircraft fuel handling facilities, equipment, and storage tanks except those subject to New Source Performance Standards and standards in 252:100-37-15, 252:100-39-30, 252:100-39-41, and 252:100-39-48

Emissions from condensate tanks with a design capacity of 400 gallons or less in ozone attainment areas

Emissions from crude oil and condensate marine and truck loading equipment operations at crude oil and natural gas production sites where the loading rate does not exceed 10,000 gallons per day averaged over a 30-day period

* Emissions from crude oil and condensate storage tanks with a capacity of less than or equal to 420,000 gallons that store crude oil and condensate prior to custody transfer

* Emissions from storage tanks constructed with a capacity less than 39,894 gallons which store VOC with a vapor pressure less than 1.5 psia at maximum storage temperature

ANALYSIS/LABORATORY ACTIVITIES

Additions or upgrades of instrumentation or control systems that result in emissions increases less than the pollutant quantities specified in 252:100-8-3(e) (1)

EQUIPMENT

Alkaline/phosphate washers and associated burners

Cold degreasing operations utilizing solvents that are denser than air

* Welding and soldering operations utilizing less than 100 pounds of solder and 53 tons per year of electrodes

Wood chipping operations not associated with the primary process operation

* Torch cutting and welding of under 200,000 tons of steel fabricated per year

REMEDIATION

Site restoration and/or bioremediation activities of < 5 years expected duration

Hydrocarbon contaminated soil aeration pads utilized for soils excavated at the facility only

Emissions from the operation of groundwater remediation wells including but not limited to emissions from venting, pumping, and collecting activities subject to de minimis limits for air toxics (252:100-41-43) and HAPs (§112(b) of CAAA90)

SOLID WASTE

* Non-commercial water washing operations (less than 2,250 barrels/year) and drum crushing operations of empty barrels less than or equal to 55 gallons with less than three percent by volume of residual material

Hazardous waste and hazardous materials drum staging areas

Sanitary sewage collection and treatment facilities other than incinerators and Publicly Owned Treatment Works (POTW)
Stacks or vents for sanitary sewer plumbing traps are also included (i.e., lift station)

Emissions from landfills and land farms unless otherwise regulated by an applicable state or federal regulation

COATINGS

* Automobile body shops located in an ozone attainment area emitting less than 5 tons/year of volatile organic solvents

Electrophoretic-process coating application operations (i.e., paint bath positively charged, painted object negatively charged)

* Surface coating operations which do not exceed a combined total usage of more than 60 gallons/month of coatings, thinners, and clean-up solvents at any one emissions unit

MISCELLANEOUS

Exhaust systems for chemical, paint, and/or solvent storage rooms or cabinets, including hazardous waste satellite (accumulation) areas

Hand wiping and spraying of solvents from containers with less than 1 liter capacity used for spot cleaning and/or degreasing in

ozone attainment areas

* Activities having the potential to emit no more than 5 TPY (actual) of any criteria pollutant (see instructions in Title V application)

* Appropriate records of hours, quantity, or capacity must be kept on the activity to verify its insignificance.

APPENDIX J. TRIVIAL ACTIVITIES (DE MINIMIS) LIST

Any activity to which a State or federal applicable requirement applies is not trivial even if it is included on this list.

AGRICULTURAL

Lawn care (noncommercial)
Weed control (noncommercial)
Pest control (noncommercial)
Herbicide and pesticide activities except for manufacturing and formulation for commercial sale

ANALYSIS/TESTING

Hydraulic or hydrostatic testing
Analysis/laboratory activities emissions from the following: air contaminant detectors, air contaminant recorders, combustion controllers, combustion shut-off devices, product analyzers, laboratory analyzers, continuous emissions monitors, other analyzers (e.g., water quality), and emissions associated with sampling activities. Also, emissions from bench scale laboratory equipment and laboratory equipment used exclusively for chemical and physical analysis, including assorted vacuum producing devices and vents but NOT lab fume hoods or vents
Site assessment work, including but not limited to, the evaluation of waste disposal or remediation sites
Emissions from instrument systems utilizing air or natural gas
Environmental field sampling operations
Sampling connections used exclusively to withdraw materials for testing and analysis, including air contaminant detectors and vent lines
Compressed gas cylinders and gases utilized for equipment calibration and testing

ANIMALS

Equipment used to mix and package soaps, vegetable oil, grease, animal fat, and nonvolatile aqueous salt solutions, provided appropriate lids and covers are utilized
Equipment used exclusively to slaughter animals, but not including other equipment at slaughterhouses, such as rendering cookers, boilers, heating plants, incinerators, and electrical power generating

BATTERY CHARGING

Industrial battery recharging and maintenance operations for batteries utilized within the facility only

BLOWDOWNS

Emissions from the depressurization during startup, shut down, maintenance or emergencies of compressors or other vessels containing natural gas or liquid hydrocarbons for the purpose of maintenance due to emergency circumstances

CLEANING

Acid washing (maintenance cleaning)
Caustic washing (maintenance cleaning)
Abrasive blasting
Steam cleaning
Carbon dioxide blasting equipment in degreasing or depainting
High pressure water depainting operations and aqueous industrial spray washers
Vacuum cleaning systems used exclusively for industrial, commercial, or residential housekeeping purposes, except those systems used to collect particulate matter subject to 252:100 and hazardous and/or toxic air contaminants
Ultrasonic cleaning operations which do not utilize volatile organic compounds
Molten salt bath descaling operations
Natural gas water heating systems for fixed vehicle wash racks

COOLING TOWERS/BOILER WATER

Emissions from non-contact cooling towers (cooling water that has not been in contact with other materials or fluids containing regulated air pollutants)
Boiler water treatment operations
Deaerator units associated with boilers or hot water heating systems
Process water filtration systems and demineralizers
Demineralized water tanks and demineralizer vents

ELECTRIC POWER

Equipment associated with electrical power transmission which do not involve fuel-burning activities using transformers and substations
Electric or steam-heated drying ovens and autoclaves, but not the emissions from the articles or substances being processed in the ovens or autoclaves or the boilers delivering the steam

FIREFIGHTING

Emissions from fire or emergency response equipment and training to include use of fire control equipment including equipment for testing and training, engines used exclusively for firefighting, and open burning of materials or fuels associated with firefighting training. Buildings burned for firefighting training must still adhere to NESHAP for Asbestos.

Fire extinguishers and fire extinguishing systems

FUGITIVE EMISSIONS

- Seal replacement (i.e., manhole gaskets)
- Roof coating, service, and repair
- Paving of roads, parking lots, and other areas
- Vent emissions from gas streams used as buffer or seal gas in rotating pump and compressor seals
- Emissions from natural gas odorizing activities
- Emissions from pneumatic starters on reciprocating engines, turbines, compressors, or other equipment
- Gas flares or flares used solely to indicate danger to the public (e.g. road hazard)
- Warehouse activities including the storage of packaged raw materials and finished goods
- Non-routine clean out of tanks, lift stations, and equipment for the purposes of worker entry or in preparation for maintenance or decommissions
- Unpaved roadways and parking areas
- Gravel, sand and dirt storage for use in on-site construction projects
- VOC fugitive emissions from component additions (e.g. valves, flanges, connectors, pump seals, compressor seals, etc.) regulated by a fugitive monitoring program where the total increase is less than one ton per year of any criteria pollutant or the de minimis set forth in 252:100-41-43. The component additions must be identified in the next scheduled monitoring report required by the applicable requirements. VOC fugitive emissions from component additions (e.g. valves, flanges, connectors, pump seals, compressor seals, etc.) not regulated by a fugitive monitoring program provided that no applicable requirement is triggered when components are added.
- Fugitive emissions of jet fuels associated with aircraft fuel cell and fuel bladder repair
- Fugitive emissions related to movement of passenger vehicles provided the emissions are not counted for applicability purposes or any required fugitive dust control plan or its equivalent is submitted

INSULATION

- Insulation installing or removal (non-asbestos)
- Application of refractory & insulation (calcium silicate, etc.)

LUBRICATING

- Lubricating pumps, sumps, and systems
- Emissions from engine crankcase vents and equipment lubricating sumps

MAINTENANCE

- Welding, brazing, soldering for maintenance purposes
- Use of adhesives for maintenance purposes
- Grinding, cutting, sanding for maintenance purposes
- Emissions from pipeline maintenance pigging activities

Maintenance, upkeep, and replacement types of activities, including those not altering the capacity of process, combustion or control equipment, and which do not increase regulated pollutant emissions unless subject to NESHAP or NSPS

METALS

Equipment used for inspection of metal products

Die casting machines

Foundry sand mold forming equipment to which no heat is applied, and from which no organics are emitted

Equipment used exclusively to mill or grind coatings and holding compounds where all materials charged are in paste form (unless HAP emission)

Equipment used exclusively for rolling, forging, pressing, spinning, drawing, or extruding either hot or cold metals unless their emissions exceed any applicable regulated amount

Carbon monoxide lasers, used only on metals and other materials which do not emit HAP in the process

MISCELLANEOUS

Operations previously determined to be de minimis pursuant to 252:100-7-2(b)(3) or 252:100-41-43(a)(5)

Laser trimmers using dust collection to prevent fugitive emissions

Shock chambers

Humidity chambers

Solar simulators

MOBILE SOURCES

Mobile source emissions from cars, trucks, forklifts, courier vehicles, front loaders, graders, cranes, carts, hydrostatic and hydraulic testing equipment, maintenance trucks, helicopters, locomotives, marine vessels, portable generators moveable by hand, portable pumps, portable air compressors, portable welding machines, and portable fuel tanks

Other on and off road mobile sources (i.e. coal stacker & reclaimer)

Well servicing/workover rigs and associated equipment

Well drilling rigs and associated equipment

Aircraft ground support (AGE) equipment, including but not limited to portable power generators, lights, and HVAC support

Vehicle exhaust from maintenance or repair shops

Road sanding and salting operations

OFFICE AND JANITORIAL

Janitorial services

Sweeping (Floor Sweep)

Office emissions (photocopying, blueprint copying, photograph processes)

OUTDOOR RECREATION

Outdoor recreational emissions (campfires, barbecue pits)
Open burning for the purpose of land management (must get permission from Air Quality Enforcement even though exempt from permitting)

Outdoor kerosene heaters

PLASTICS/FIBERGLASS

Plastic or fiberglass welding or repair
Sealing or cutting plastic film or foam with heat or wires
Processes used for the curing of fiberglass or paint products

REFRIGERANTS

Cold storage refrigerator equipment
De minimis refrigerant releases

RESIDENTIAL

Air conditioning or comfort ventilation systems not regulated under Title VI of the Clean Air Act

Emissions from residential housing units, dormitories, and multifamily dwellings to include fuel burning for the purposes of heating except prohibited open burning

SOLID WASTE

Solid waste landfill operations
RCRA Solid Waste Management Units subject to 40 CFR Part 265, Subparts AA, BB, and CC

SOLVENT

Emissions from laundry care equipment processing bedding, clothing or other fabric items. These include dryers, extractors, & tumblers. **NOT CLEANING OPERATIONS USING PERCHLOROETHYLENE OR PETROLEUM SOLVENTS (i.e., dry cleaning)**

Covered cold solvent degreasers not subject to federal emission standards (e.g. NESHAP or NSPS)

STORAGE TANKS/DISTRIBUTION

Emissions from lube oil, seal oil, or hydraulic fluid storage tanks and equipment as long as not emitting VOCs or HAPs

Storage and use of chemicals unless otherwise regulated by an applicable state or federal regulation. These chemicals include, but not limited to: alum, ammonia, biocides, corrosion inhibitors, dechlorination chemicals, inorganic salts, acids or bases to include caustic and sulfuric acid, coagulants, flocculants, precipitants, surfactants, anti-foam chemicals, sealing inhibitors, oxygen scavengers, phosphates, polyelectrolytes, limestone slurry, lime and lime slurry, flue gas desulfurization system slurry, and

sulfur slurry; propane and acetylene under pressure

Storage and use of products or equipment for maintaining motor vehicles operated at the site (including but not limited to antifreeze and fuel additives) not regulated under Title VI, CFC rules)

Emissions from tanks containing separated water produced from oil and gas operations

Commercial gasoline dispensing stations, including those located within the physical boundaries of a Title V source

Lubricants and waxes used for machinery and other equipment lubrication and emission from lubricating oil or hydraulic fluid storage tanks and equipment

Runway and aircraft de-icing activities, including de-icer storage tanks unless otherwise regulated

Storage tanks, reservoirs, and pumping and handling equipment of any size containing soaps, vegetable oil, grease, animal fat, and nonvolatile aqueous salt solutions, provided appropriate lids and covers are utilized

SURFACE COATING

Surface coating for maintenance purposes such as roll/brush/pad coating, painting with aerosol cans, spray airless, and conventional spray painting

Touch-up painting operations where paints/coatings are applied at less than one quart per hour

WASTEWATER

Removal of basic sediment & water from collection/storage systems (i.e., clarifiers)

Water and wastewater treatment and transportation system

Pit, ponds, sumps, or wastewater conveyance facilities

Emissions from skimmer pits, oil/water separators, and maintenance of filter separators

Emissions from the removal of sludge or sediment from pits, ponds, sumps, or wastewater conveyance facilities

Industrial and/or municipal wastewater treatment processes (excluding combustion or incineration equipment), storage silos for dry material (sludges), composting, or grease trap waste handling or treatment

Ozonization process or process equipment including ozone generation for water treatment processes

Sanitary sewerage and storm water runoff collection systems

Emissions from dredging pits, ponds, sumps, or other wastewater conveyance facilities

WOODWORKING

Wood working (saw-cutting, staining & varnishing) (noncommercial)

Woodworking utilized for hobby purposes or maintenance of grounds or buildings

CHAPTER 100. AIR POLLUTION CONTROL
SUBCHAPTER 8. OPERATING PERMITS (PART 70)

EXECUTIVE SUMMARY: The proposed amendments to Subchapter 8 include the incorporation of a new permit classification system; streamlining and simplifying the permit rules by moving the requirements for construction permits for Part 70 sources from Subchapter 7 to Subchapter 8, moving the requirement to pay annual operating fees from Subchapter 8 to Subchapter 5, and reorganizing the material in Subchapter 8 for clarity and ease of use; the revisions necessary to meet the federal requirements for final approval of the Oklahoma Operating Permits Program under Title V of the federal Clean Air Act and 40 CFR Part 70. The new permit classification system introduces general permits for construction of Part 70 sources. The amendments to meet the requirements for final approval of the Title V program include the incorporation by reference of federal rules governing case-by-case MACT determinations (40 CFR §§ 63.40, 63.41, 63.43 and 63.44).

STATUTORY AUTHORITY: Environmental Quality Board, 27A O.S. Supp. 1993, §§ 2-2-101 and 2-5-101 *et seq.*, Oklahoma Clean Air Act.

DIFFERENCES FROM ANALOGOUS FEDERAL RULES: Part of the proposed revisions will be accomplished by incorporating the federal rules by reference. In general the other proposed revisions were not substantive, but changes in format and reorganization of material. There are no analogous federal rules for the inclusion of general construction permits for Part 70 sources. The use of general permits is expected to stream line the permitting program for both the regulated community and the DEQ. The purpose of the revisions required by EPA in their Notice of February 5, 1996, was to correct differences between the State rule and the analogous federal rule.

ENVIRONMENTAL BENEFIT STATEMENT: Not required because these rules are not more stringent than corresponding federal rules.

SUMMARY OF COMMENTS AND RESPONSES:

Letter of Comments from Charles R. Evans of Delhi Gas Pipeline Corporation.

1. **Comment:** DEQ should distinguish between insignificant activities and trivial activities in areas where there is overlap e.g., storage tanks constructed with a capacity less than 39,894 gallons which store VOC with a vapor pressure less than 1.5 psia at maximum storage temperature are included on the insignificant activities list and Fuel/VOC storage tanks with less than or equal to 1000 gallons capacity having a true vapor pressure at storage conditions less than 1.5 psia are on the trivial list. Mr. Evans suggested that items that overlap should be considered as trivial activities.

Response: Fuel/VOC storage tanks with capacities of 1000 gallons or less and vapor pressure less than 1.5 psia have been removed from the trivial activities list since AQD does

not regulate these tanks. Thus overlap is no longer a problem in this case.

2. **Comment:** "Emissions from residential housing units, dormitories, and multifamily dwellings to include fuel burning for the purposes of heating except prohibited open burning" is included on page 5 of the trivial activities list under Residential. The commenter recommends that offices or similar places of work be added to this item.

Response: Space heating for offices and similar places of work is already addressed on page 1 of the insignificant activities list under Combustion Equipment. The staff believes that this is a more appropriate place for space heating for commercial premises.

3. **Comment:** Mr. Evans suggested that the trivial activities list be modified to make clear that both electric motors and the units they operate (specifically natural gas compressors) are considered trivial.

Response: Since electric motors and electric powered generators, chillers, air compressors and pumps have essentially no air emissions, they are not subject to air quality rules and, therefore, it is not necessary to include them on the trivial activities list. The staff did not agree that other types of equipment powered by electric motors would have only trivial emissions.

4. **Comment:** It was suggested that the item in Appendix J that included emissions from the blowdown of compressors or other vessels containing natural gas or liquid hydrocarbons for the purpose of maintenance due to emergency circumstances be modified to include emissions from depressurization during startup, shut down, maintenance or other emergencies of such compressors or other vessels, since historically EPA has not regulated these emissions.

Response: Staff concurs. These changes were included in the list.

5. **Comment:** It was recommended that the language regarding fugitive emissions from component additions (e.g. valves, etc.) in Appendix J be clarified and that fugitive emissions from components not subject to a fugitive monitoring plan be added.

Response: The language was modified to make it clear that VOC fugitive emissions from component additions regulated by a fugitive monitoring program where the total increase is less than one ton per year of any criteria pollutant or the de minimis levels set forth in 252:100-41-43 are considered trivial. Staff concurred with the request to include VOC emissions from component additions not regulated by a fugitiv

monitoring program providing no applicable requirement is triggered when the components are added.

6. **Comment:** It was suggested that methanol storage tanks less than or equal to 10,000 gallons in volume with an annual throughput of no more than 50,000 gallons be added to the trivial activities list.

Response: Methanol storage tanks of 400 gallons or greater are subject to 252:100-37-15 since the as-stored vapor pressure should be greater than 1.5 psia. Since there is an applicable requirement for these tanks, they cannot be considered trivial activities.

7. **Comment:** It was suggested that cathodic protection systems be added to the trivial list.

Response: Staff felt that these systems are not regulated and, therefore, there is no need to include them on the trivial activities list.

Letter of Comments dated January 8, 1998, from Jole C. Luehrs, Chief, Air Permits Section, U. S. EPA, Region 6, Dallas, Texas.

1. **Comment:** It was stated that the language in item (B)(viii)(municipal incinerators) under the definition of "Major source" as found in 252:100-8, Part 5, and item (A)(xiv) (municipal incinerators) under the definition of "Major stationary source" as found in 252:100-8, Part 7 should be changed to reflect Part C, Prevention of Significant Deterioration of Air Quality, Subpart 1, Section 169, of the Clean Air Act Amendments of 1990. The language should read "municipal incinerators capable of charging more than 50 tons of refuse per day," instead of "municipal incinerators capable of charging more than 250 tons of refuse per day." This comment was reiterated by Mr. Rick Barrett of EPA Region 6 at the Hearing on January 9, 1998.

Response: Staff agreed to review Chapter 100 to determine all of the places where this change needs to be made, and then to propose appropriate rule revisions later this year. At this time, the only municipal waste combustor in Oklahoma that might be affected by such a rule change would only be impacted if it were modified so as to significantly increase its emissions. There are no indications that there are any plans to do so at this time. Therefore, EPA agreed that revising the rule later this year would be acceptable.

Comments made at the 1/9/98 Air Quality Council Meeting

1. **Comment:** Dr. Larry Canter asked, if incorporation by reference of a previous permit is allowed in the permit renewal, how the Department will insure that the previous permit(s) are not thrown away and the information thus becoming unavailable.

Response: Active permit files are never purged. They contain everything relating to the permit. When a permit ceases to be active, it is archived according to Department procedures and should not be thrown out.

2. **Comment:** Dole McWhirter was concerned that, if incorporation by reference of previous permit is allowed for permit renewals, it would then require both permits in order to know what the permit conditions are.

Response: The particular Subsection under discussion concerns the application content and simplifies permit applications by allowing the applicant to reference the previous permit when information is unchanged. All the standards, limitations, and conditions that remain pertinent to the facility will be repeated in the "new" permit. They will not be referenced. The "new" permit will stand alone.

3. **Comment:** Rick Barrett, EPA, Region 6, repeated the comment made in the 1/8/98 letter from Jole C. Luehrs.

RULE IMPACT STATEMENT: Attached.

CHAPTER 252:100 AIR POLLUTION CONTROL

Subchapters 5, 7 & 8

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

RULEMAKING ACTION:

PERMANENT final adoption

RULES:

Subchapter 8. Permits for Part 70 Sources

252:100-8-1.7 Permit Application Fee [AMENDED]

252:100-8-4(a)(2)(C) Requirements for Construction and
Operating Permits [AMENDED]

AUTHORITY:

Environmental Quality Board; 27A O.S. Supp. 1998, §§ 2-2-101, 2-5-101, et seq.

DATES:

Comment period:

For 252:100-8-1.7, September 15, 1998 through December 8, 1998;
and December 15, 1998

For 252:100-8-4(a)(2), November 16, 1998 through December 15,
1998

Public hearing:

For 252:100-8-1.7, October 20 and December 15, 1998; and March
5, 1999

For 252:100-8-4(a)(2)(C), December 15, 1998; and March 5, 1999

Adoption:

March 5, 1999 (proposed)

Submitted to Governor:

Submitted to House:

Submitted to Senate:

Gubernatorial approval:

Legislative approval:

Final adoption:

Effective:

June 1, 1999 (proposed).

SUPERSEDED EMERGENCY ACTIONS:

None

INCORPORATIONS BY REFERENCE:

None

ANALYSIS:

The change to 252:100-8-1.7 will increase the fee for applicability determinations from \$100 to \$250. This fee change is consistent with the proposed applicability determination fee increase proposed in Subchapter 7.

The change to 252:100-8-4(a)(2)(C) updates the adoption by reference of the requirements for case-by-case MACT determinations contained in 40 CFR 63.41, 40 CFR 63.43, and 40 CFR 63.44 to July 1, 1998.

The Air Quality Advisory Council recommended these amendments for adoption at their meeting on December 15, 1998.

PURSUANT TO THE ACTIONS DESCRIBED HEREIN, THE FOLLOWING RULES ARE
CONSIDERED FINALLY ADOPTED AS SET FORTH IN 75 O.S., SECTION
308.1(A), WITH AN EFFECTIVE DATE OF JUNE 1, 1999.

SUBCHAPTER 8. PERMITS FOR PART 70 SOURCES

PART 3. PERMIT APPLICATION FEES

252:100-8-1.7. Permit application fees

A permit application or a request for an applicability determination received after the effective date of this subsection will be assessed a one-time fee, which must accompany the application or request. Applications received without appropriate fees are administratively incomplete. Fees must be paid by check or money order made payable to the Oklahoma Air Quality Division in accordance with the following fee schedule:

- (1) **Applicability determination.** ~~\$100~~\$250, to be credited against the construction or operating permit application fee, if a permit is required. If no permit is required, the fee will be retained to cover the cost of making the determination.
- (2) **Construction permit application.** The fee is \$2,000.
- (3) **Operating permit application.**
 - (A) Initial Part 70 permit - \$2,000.
 - (B) Authorization under a general permit - \$900
 - (C) Renewal Part 70 permit - \$1,000.
 - (D) Significant modification of Part 70 permit - \$1,000.
 - (E) Minor modification of Part 70 permit - \$500.
 - (F) Part 70 Temporary Source Relocation - \$500.

PART 5. PERMITS FOR PART 70 SOURCES

252:100-8-4. Requirements for construction and operating permits

(a) Construction permits.

(1) **Construction permit required.** No person shall cause or allow the construction or installation of any new facility that will require a Part 70 operating permit without first obtaining a DEQ-issued air quality construction permit. A construction permit is also required for any physical change that would be a modification under 252:100-8-7.2(b). In addition to the requirements of this Part, sources subject to Part 7 or Part 9 of this Subchapter must also meet the applicable requirements contained therein.

(2) Requirement for case-by-case MACT determinations.

(A) **Applicability.** The requirement for case-by-case MACT determinations apply to any owner or operator who constructs or reconstructs a major source of hazardous air pollutants after June 29, 1998, unless the source has been specifically regulated or exempted from regulation under a subpart of 40 CFR Part 63, or the owner or operator has received all necessary air quality permits for such construction or reconstruction before June 29, 1998.

(B) **Exclusions.** The following sources are not subject to this subsection.

(i) Electric utility steam generating units unless and until these units are added to the source category list.

(ii) Stationary sources that are within a source category

that has been deleted from the source category list.

(iii) Research and development activities as defined in 40 CFR § 63.41.

(C) **MACT determinations.** If subject to this subsection, an owner or operator may not begin actual construction or reconstruction of a major source of HAP until obtaining from the DEQ an approved MACT determination in accordance with the following regulations: 40 CFR 63.41, 40 CFR 63.43 and 40 CFR 63.44, which are hereby incorporated by reference as they exist on July 1, ~~1997~~1998.

TITLE 252. OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL
SUBCHAPTER 8, Part 3 - Permit Application Fees
SUBCHAPTER 8, Part 5 - Permits for Part 70 Sources

Before the Air Quality Council, October 20 and December 15, 1998
Before the Environmental Quality Board, March 5, 1999

RULE IMPACT STATEMENT

1. **DESCRIPTION:** The proposed revision to 252:100-8-1.7, Permit Application Fees, will increase the fee for applicability determinations from \$100 to \$250. This fee change is consistent with the proposed applicability determination fee increase in Subchapter 7. The proposed revision to 252:100-8-4(a)(2)(C), Permits for Part 70 Sources, consists of updating the adoption by reference of the requirements for case-by-case MACT determinations contained in 40 CFR 63.41, 40 CFR 63.43, and 40 CFR 63.44 to July 1, 1998.
2. **CLASSES OF PERSONS AFFECTED:** Owners or operators of any facility that is a major source of air emissions that applies for an applicability determination along with those who construct or reconstruct a major source of hazardous air pollutants after June 29, 1998, may be affected.
3. **CLASSES OF PERSONS WHO WILL BEAR COSTS:** Owners or operators of any facility that is a major source of air emissions that applies for an applicability determination along with those who construct or reconstruct a major source of hazardous air pollutants after June 29, 1998, who are required to determine case-by-case MACT.
4. **CLASSES OF PERSONS BENEFITTED:** The citizens of the State who will be protected from exposure to hazardous air pollutants.
5. **PROBABLE ECONOMIC IMPACT ON AFFECTED CLASSES OF PERSONS:** For owners or operators of major source facilities who choose to apply for an applicability determination, the fee will be \$250 rather than \$100. The federal rules proposed for incorporation by reference are currently applicable to the affected classes of persons. Thus the state's adoption of these rules will not cause a new economic impact on such classes.
6. **PROBABLE ECONOMIC IMPACT ON POLITICAL SUBDIVISIONS:** None.
7. **COOPERATION OF POLITICAL SUBDIVISION REQUIRED TO IMPLEMENT OR ENFORCE RULE:** No.
8. **COST TO DEQ TO IMPLEMENT AND ENFORCE:** None.
9. **COST TO OTHER AGENCIES TO IMPLEMENT AND ENFORCE:** None. No other agencies will be implementing these rules.

10. PROJECTED NET LOSS OR GAIN IN REVENUES FOR DEQ AND/OR OTHER AGENCIES, IF IT CAN BE PROJECTED: Facility owners and operators will be required to pay an additional upfront fee cost of \$150 for applicability determinations. If the requested applicability determination concludes that a permit is necessary, the \$250 fee will be credited toward the cost of the permit application fee. However, the total cost of the permitting process remains the same. If it is determined a permit is not necessary, the agency will realize a gain in revenues of \$150 per applicant. There is no projected net loss or gain in revenues for those required to determine case-by-case MACT.
11. LESS, COSTLY OR NONREGULATORY OR LESS INTRUSIVE METHODS OF ACHIEVING THE PURPOSE OF THE PROPOSED RULE: None.
12. PROBABLE QUANTITATIVE AND QUALITATIVE IMPACT ON BUSINESS ENTITIES (INCLUDE QUANTIFIABLE DATA WHERE POSSIBLE):

Quantitative impact: Facility owners and operators that request applicability determinations will pay \$150 more than they do now. The state's adoption of these federal rules, proposed for incorporation by reference, will not cause a new impact on such classes since they are currently applicable to the affected classes of persons.

Qualitative impact: The fee increase is needed to continue to perform this service at the present level of effectiveness. Therefore, facility owners and operators should not observe any qualitative impact if the applicability determination fee is increased.

THIS RULE IMPACT STATEMENT WAS PREPARED ON: November 15, 1998.

MODIFIED: December 31, 1998.

**CHAPTER 100. AIR POLLUTION CONTROL
SUBCHAPTER 8. PERMITS FOR PART 70 SOURCES**

EXECUTIVE SUMMARY: The proposed amendments to Subchapter 8, 252:100-8-1.7, Permit application fee, will increase the fee for applicability determinations from \$100 to \$250. This fee change is consistent with the proposed applicability determination fee increase in Subchapter 7. The proposed amendments to 252:100-8-4(a)(2)(C), Requirements for construction and operating permits, will update the adoption by reference of the requirements for case-by-case MACT determinations contained in 40 CFR 63.41, 40 CFR 63.43, and 40 CFR 63.44 to July 1, 1998.

DIFFERENCES FROM ANALOGOUS FEDERAL RULES: None.

ENVIRONMENTAL BENEFIT STATEMENT: Not required because the rule is not more stringent than corresponding federal requirements.

SUMMARY OF COMMENTS AND RESPONSES:

NONE

AIR QUALITY COUNCIL
RULEMAKING RECOMMENDATION TO THE ENVIRONMENTAL QUALITY BOARD

Identification of Proposed Rulemaking:

Chapter Number and Title – OAC 252:100

Subchapters or Sections Involved – [new, amended or revoked]

OAC 252:100-5-2.2 Registration, Emission Inventory and Annual Operating Fees AMENDED]
OAC 252:100-7-3 Permits for Minor Facilities [AMENDED]
OAC 252:100-8-1.7 Permits for Part 70 Sources [AMENDED]

On DECEMBER 15, 1998 the members of this Council, by authority vested in them by the Oklahoma Environmental Quality Code (27 O.S.Supp. 1993, § 2-2-201), by roll call vote, recommended to the Environmental Quality Board that the rulemaking described above be adopted as:

X permanent [take effect after legislative review]

emergency [temporary, to take effect upon approval by the Governor because of time; and/or special reason: _____]

This Council has considered the proposed rulemaking and comments about it and determined, to the best of its knowledge, that all applicable requirements of the Oklahoma Administrative Procedures Act have been followed.

This Council authorizes the Department to prepare this recommended rulemaking for the Board, making any changes approved by the Council, correcting typographical, grammatical and reference errors, and formatting them as required by the Office of Administrative Rules. This is to be done with the understanding that such changes shall neither alter the sense of what this Council recommends nor invalidate this recommendation.

Respectfully,

Chair or Designee

**AIR QUALITY COUNCIL
RULEMAKING RECOMMENDATION TO THE ENVIRONMENTAL QUALITY BOARD**

Identification of Proposed Rulemaking:

Chapter Number and Title – OAC 252:100-8-4^(a)~~(2)~~(2)

PERMITS FOR PART 70 SOURCES [AMENDED]

Subchapters or Sections Involved – [new, amended or revoked]

On DECEMBER 15, 1998 the members of this Council, by authority vested in them by the Oklahoma Environmental Quality Code (27 O.S. Supp. 1993, § 2-2-201), by roll call vote, recommended to the Environmental Quality Board that the rulemaking described above be adopted as:

permanent [take effect after legislative review]

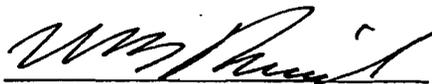

emergency [temporary, to take effect upon approval by the Governor because of time; and/or special reason: _____]

(mark as appropriate)

This Council has considered the proposed rulemaking and comments about it and determined, to the best of its knowledge, that all applicable requirements of the Oklahoma Administrative Procedures Act have been followed.

This Council authorizes the Department to prepare this recommended rulemaking for the Board, making any changes approved by the Council, correcting typographical, grammatical and reference errors, and formatting them as required by the Office of Administrative Rules. This is to be done with the understanding that such changes shall neither alter the sense of what this Council recommends nor invalidate this recommendation.

REGULAR MEETING AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
OKLAHOMA ENVIRONMENTAL QUALITY BOARD

A Public Meeting: 9:30 a.m., Tuesday, November 14, 2000
American Legion Hall
113 North Swem
Hooker, Oklahoma

1. Call to Order – Lee Paden, Chair
2. Roll Call - Lynda Finch
3. Approval of Minutes of the August 29, 2000 Regular Meeting
4. **Rulemaking – OAC 252:205 Hazardous Waste Management**
Two sets of changes are proposed:
 - The proposed amendments to 252:205-3-2 are clarifying and corrective. First, they delineate those non-delegable hazardous waste regulatory duties that remain with the U.S. Environmental Protection Agency, rather than being administered by the DEQ hazardous waste management program. Second, they correct errors and clarify requirements found in the adopted-by-reference portions of the July 1, 1999, version of Title 40 of the Code of Federal Regulations.
 - The purpose of the proposed amendments to 252:205-7-1, 7-3 and 21-3 is to revoke superseded hazardous waste transporter rules. The rules were superseded by legislation passed during the 2000 legislative session that transferred transporter registration responsibility from the DEQ to the Oklahoma Corporation Commission.
 - A. Presentation – Jody Reinhart, Hazardous Waste Council Chair
 - B. Questions and discussion by the Board
 - C. Questions, comments and discussion by the public
 - D. Discussion by the Board
 - E. Roll call vote(s) on emergency* adoption of amendments to 252:205-3-2, and on permanent and emergency* adoption of amendments to 252:205-7-1, 7-3 and 21-3
5. **Rulemaking – OAC 252:001, 002, 003 and 004 Rules of Practice and Procedure**
The proposed new Chapter 4 (Rules of Practice and Procedure) is a product of DEQ's re-right/de-wrong process. It represents a comprehensive and integrated rewrite of existing Chapter 1 (Procedures of the Environmental Quality Board), Chapter 2 (Procedures of the DEQ) and Chapter 3 (Procedures of the Environmental Quality Councils), in an effort to make the procedures easier to follow. Among the changes are: reorganization into more logical arrangements; language simplification; elimination of duplicative rules; updating of statutory citations; and deletion of statutory language. Chapter 4 also includes rules recommended by the Air Quality Council, which address hearings before that council. Chapters 1, 2 and 3 are proposed for revocation, subject to the adoption of proposed Chapter 4.
 - A. Presentation – Jimmy Givens, DEQ General Counsel
 - B. Questions and discussion by the Board
 - C. Questions, comments and discussion by the public
 - D. Discussion by the Board
 - E. Roll call vote(s) on permanent adoption of Chapter 4 and permanent revocation of Chapters 1, 2 and 3

6. Rulemaking – OAC 252:100 Air Pollution Control

Six sets of changes are proposed:

- The amendments to Subchapter 4, New Source Performance Standards, update the incorporations by reference of the federal NSPS from July 1, 1999, to July 1, 2000.
- The proposed revocation of Subchapter 6, Permitting, is part of DEQ's effort to eliminate redundant or unnecessary language through its re-right/de-wrong process. Subchapter 6 is largely a summary of the permit programs contained in Subchapters 7 and 8, and a restatement of Oklahoma statutes on permitting. Only a few portions of the rule contain substantive language, and those portions will be placed into Subchapters 7 and 8.
- The proposed changes to Subchapter 7, Permits for Minor Facilities, also derive from the re-right/de-wrong initiative. In connection with the proposed revocation of Subchapter 6 (see above), three substantive provisions of Subchapter 6, relating to the requirement for and the implications of the signing of a permit application, are moved into Section 252:100-7-2.
- The proposed revisions to Subchapter 8, Permits for Part 70 Sources, generally correct errors or omissions, clarify language, and specify fee categories for construction permit authorizations and modifications. Other amendments include clarification of construction permit and best available control technology (BACT) requirements, slight modification of the reporting time for excess emissions caused by emergencies or upsets, and modification of the definition of "major stationary source" as it relates to charge rates of municipal incinerators. The incorporation by reference of 40 CFR 63.41, 63.43, and 63.44 is updated to July 1, 2000.
- Proposed amendments to Subchapter 29, Control of Fugitive Dust, clarify and simplify language as part of the re-right/de-wrong initiative. Substantive changes are proposed to clarify the precautions required to minimize or prevent pollution and the corrective measures required if fugitive dust is discharged beyond the property line.
- The proposed revisions to Subchapter 41, Control of Emission of Hazardous Air Pollutants and Toxic Air Contaminants, update the adoption by reference of specific National Emission Standards for Hazardous Air Pollutants (NESHAP) in 40 CFR Part 61, and the Maximum Achievable Control Technology (MACT) standards for hazardous air pollutants in 40 CFR Part 63. The new adoption-by-reference date would be July 1, 2000.
 - A. Presentation – David Branecky, Air Quality Council Chair
 - B. Questions and discussion by the Board
 - C. Questions, comments and discussion by the public
 - D. Discussion by the Board
 - E. Roll call vote(s) on permanent adoption of amendments to Subchapters 6, 7, and 8, on permanent and emergency* adoption of amendments to Subchapters 4 and 41, and on emergency* adoption of amendments to Sections 252:100-8-1.7 and 252:100-8-4

7. Rulemaking -- OAC 252:622 and 623 Pretreatment for Central Treatment Trusts

This rulemaking is part of the re-right/de-wrong process to eliminate outdated and unenforceable rules and simplify existing language. The changes are extensive enough that it is proposed that Chapter 622 be revoked and replaced by new Chapter 623.

- A. Presentation – Robert Johnston, Water Quality Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote(s) on permanent adoption and revocation

8. **Rulemaking -- OAC 252:625 and 626 Public Water Supply Construction Standards**
This rule making is part of the re-right/de-wrong process to eliminate outdated and unenforceable rules and simplify existing language. The changes are extensive enough that it is proposed that Chapter 625 be revoked and replaced by new Chapter 626. The new chapter includes construction standards for technology that has been developed since the last revision of the rules.
 - A. Presentation – Robert Johnston, Water Quality Council Chair
 - B. Questions and discussion by the Board
 - C. Questions, comments and discussion by the public
 - D. Discussion by the Board
 - E. Roll call vote(s) on permanent adoption and revocation

9. **Rulemaking -- OAC 252:645 Septage Tank Cleaners**
The majority of the changes in this rulemaking were done to reorganize, simplify and clarify the rules as part of DEQ's re-right/de-wrong process. However, there are a few substantive changes. These include specifying the amount of lime that must be added per volume of septage before application, designating phosphorus as a limiting factor in the amount of septage that may be applied, and increasing the minimum distance of a land application site from a public water supply well. The rulemaking also requires that applicants for a permit to land apply septage be licensed to pump and haul septage.
 - A. Presentation – Robert Johnston, Water Quality Council Chair
 - B. Questions and discussion by the Board
 - C. Questions, comments and discussion by the public
 - D. Discussion by the Board
 - E. Roll call vote on permanent adoption of amendments

10. **Rulemaking -- OAC 252:652 Underground Injection Control**
The purpose of the proposed amendments is to make the underground injection control rules correspond with recent statutory changes which clarify jurisdictional responsibilities between the DEQ and other state agencies, and to update the incorporation by reference of new federal underground injection well regulations to allow the state program to retain its "primacy" status with the U.S. Environmental Protection Agency.
 - A. Presentation – Robert Johnston, Water Quality Council Chair
 - B. Questions and discussion by the Board
 - C. Questions, comments and discussion by the public
 - D. Discussion by the Board
 - E. Roll call vote on emergency* adoption of amendments

11. **Consideration of the Environmental Quality Report**
The Oklahoma Environmental Quality Code requires the DEQ to prepare an "Oklahoma Environmental Quality Report" and to submit it to the Governor, Speaker of the House and Senate President Pro Tem by January 1st of each year. The statutorily prescribed purposes of this report are to outline the DEQ's two-year needs for providing environmental services within its jurisdiction, reflect any new federal mandates, and recommended statutory changes. The Environmental Quality Board is to review, amend (as necessary) and approve the report.
 - A. Presentation – Steve Thompson, DEQ Deputy Executive Director
 - B. Questions and discussion by the Board
 - C. Questions, comments and discussion by the public
 - D. Discussion by the Board
 - E. Roll call vote on approval

12. New Business (any matter not known about, or which could not have been reasonably foreseen prior to the time of posting of agenda)
13. Executive Director's Report
14. Adjournment

Public Forum: The Board meets four times a year at different locations across the State to hear the views and concerns of all Oklahomans about environmental issues. This opportunity is informal, and we invite you to sign the register to speak.

Should you have a disability and need an accommodation, please notify the DEQ three days in advance at 702-7100.

* Specification of proposed adoption by emergency rulemaking, by permanent rulemaking, or by both, is based on the recommendations of the respective advisory councils. Adoption or amendment of rules as emergency rulemaking requires a finding by the Board that a compelling extraordinary circumstance warrants the seeking of emergency certification, so that the rules will take effect immediately upon the Governor's signature. Absent a finding and certification of emergency, rules adopted today will not become effective until June of 2001.

SUBCHAPTER 8. PERMITS FOR PART 70 SOURCES

PART 1. GENERAL PROVISIONS

252:100-8-1.1. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise. Except as specifically provided in this section, terms used in this Subchapter retain the meaning accorded them under the applicable requirements of the Act.

"A stack in existence" means for purposes of OAC 252:100-8-1.5 that the owner or operator had:

- (A) begun, or caused to begin, a continuous program of physical on-site construction of the stack; or
- (B) entered into binding agreements or contractual obligations, which could not be canceled or modified without substantial loss to the owner or operator, to undertake a program of construction of the stack to be completed in a reasonable time.

"Act" means the federal Clean Air Act, as amended, 42 U.S.C. 7401 et seq.

"Actual emissions" except for Parts 7 and 9 of this Subchapter, means the total amount of regulated air pollutants emitted from a given facility during a particular calendar year, determined using methods contained in OAC 252:100-5-2.1(d).

"Administrator" means the Administrator of the United States Environmental Protection Agency (EPA) or the Administrator's designee.

"Allowable emissions" means, for purposes of Parts 7 and 9 of this Subchapter, the emission rate of a stationary source calculated using the maximum rated capacity of the source (unless the source is subject to enforceable limits which restrict the operating rate, or hours of operation, or both) and the most stringent of the following:

- (A) the applicable standards as set forth in 40 CFR Parts 60 and 61;
- (B) the applicable State rule allowable emissions; or,
- (C) the emissions rate specified as an enforceable permit condition.

"Begin actual construction"

(A) for purposes of Parts 7 and 9 of this Subchapter means, in general, initiation of physical on-site construction activities on an emissions unit which are of a permanent nature. Such activities include, but are not limited to, installation of building supports and foundations, laying of underground pipework, and construction of permanent storage structures. With respect to a change in method of operation this term refers to those on-site activities, other than preparatory activities, which mark the initiation of the change.

(B) for purposes of Part 5 of this Subchapter, means that the owner or operator has begun the construction or installation of the emitting equipment on a pad or in the final location at the facility.

"Best available control technology" or "BACT" means the control technology to be applied for a major source or modification is the best that is available as determined by the Director on a case-by-

case basis taking into account energy, environmental, and economic impacts and other costs of alternate control systems.

"Building, structure, facility, or installation" for purposes of Parts 7 and 9 of this Subchapter, means all of the pollutant-emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person or persons under common control. Pollutant-emitting activities shall be considered as part of the same industrial grouping if they belong to the same "Major Group" (i.e., which have the same two-digit code), as described in the Standard Industrial Classification manual, 1972, as amended by the 1977 Supplement.

"Commence" for purposes of Parts 7 and 9 of this Subchapter means, as applied to construction of a major stationary source or major modification, that the owner or operator has all necessary preconstruction approvals or permits and either has:

(A) begun, or caused to begin, a continuous program of actual on-site construction of the source, to be completed within a reasonable time; or,

(B) entered into binding agreements or contractual obligations, which cannot be cancelled or modified without substantial loss to the owner or operator, to undertake a program of actual construction of the source to be completed within a reasonable time.

"Construction" means, for purposes of Parts 7 and 9 of this Subchapter, any physical change or change in the method of operation (including fabrication, erection, installation, demolition, or modification of an emissions unit) which would result in a change in actual emissions.

"Dispersion technique" means for purposes of OAC 252:100-8-1.5 any technique which attempts to affect the concentration of a pollutant in the ambient air by using that portion of a stack which exceeds good engineering practice stack height; varying the rate of emission of a pollutant according to atmospheric conditions or ambient concentrations of that pollutant; or increasing final exhaust gas plume rise by manipulating source process parameters, exhaust gas parameters, stack parameters or combining exhaust gases from several existing stacks into one stack, or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise. The preceding sentence does not include:

(A) The reheating of a gas stream, following use of a pollution control system, for the purpose of returning the gas to the temperature at which it was originally discharged from the facility generating the gas stream.

(B) The merging of exhaust gas streams where:

(i) the source owner or operator documents that the facility was originally designed and constructed with such merged streams;

(ii) after July 8, 1985, such merging is part of a change in operation at the facility that includes the installation of pollution controls and is accompanied by a net reduction in the allowable emissions of a pollutant. This exclusion from "dispersion technique" applicability shall apply only to the emission limitation for the pollutant affected by such change in operation; or

(iii) before July 8, 1985, such merging was part of a change in operation at the facility that included the installation of emissions control equipment or was carried out for sound economic or engineering reasons. Where there was an increase in the emission limitation or, in the event that no emission limitation existed prior to the merging, there was an increase in the quantity of pollutants actually emitted prior to the merging, it shall be presumed that merging was primarily intended as a means of gaining emissions credit for greater dispersion. Before such credit can be allowed, the owner or operator must satisfactorily demonstrate that merging was not carried out for the primary purpose of gaining credit for greater dispersion.

(C) Manipulation of exhaust gas parameters, merging of exhaust gas streams from several existing stacks into one stack, or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise in those cases where the resulting allowable emissions of sulfur dioxide from the facility do not exceed 5,000 tons per year.

"**Emission limitations and emission standards**" means for purposes of OAC 252:100-8-1.5 requirements that limit the quantity, rate or concentration of emissions of air pollutants on a continuous basis, including any requirements that limit the level of opacity, prescribe equipment, set fuel specifications or prescribe operation or maintenance procedures for a source to assure continuous reduction. ~~(Amended 7-9-87, effective 8-10-87)~~

"**Emissions unit**" means, for purposes of Parts 7 and 9 of this Subchapter, any part of a source which emits or would have the potential to emit any pollutant subject to regulation.

"**EPA**" means the United States Environmental Protection Agency.

"**Fugitive emissions**" means, for purposes of Parts 7 and 9 of this Subchapter, those emissions which could not reasonably pass through a stack, chimney, vent or other functionally equivalent opening.

"**National Emission Standards for Hazardous Air Pollutants**" or "**NESHAP**" means those standards found in 40 CFR Parts 61 and 63.

"**Necessary preconstruction approvals or permits**" means, for purposes of Parts 7 and 9 of this Subchapter, those permits or approvals required under all applicable air quality control laws and rules.

"**New Source Performance Standards**" or "**NSPS**" means those standards found in 40 CFR Part 60.

"**Part 70 permit**" (unless the context suggests otherwise) means any permit or group of permits covering a Part 70 source that is issued, renewed, amended, or revised pursuant to this Chapter.

"**Part 70 program**" means a program approved by the Administrator under 40 CFR Part 70.

"**Part 70 source**" means any source subject to the permitting requirements of Part 5 of this Subchapter, as provided in OAC 252:100-8-3(a) and ~~252:100-8-3(b)~~ (b).

"**Potential to emit**" means, for purposes of Parts 7 and 9 of this Subchapter, the maximum capacity of a source to emit a pollutant under its physical and operational design. Any physical or operational limitation on the capacity of the source to emit a pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of

material combusted, stored or processed, shall be treated as part of its design if the limitation or the effect it would have on emissions is enforceable. Secondary emissions do not count in determining the potential to emit of a source.

"Secondary emissions" means, for purposes of Parts 7 and 9 of this Subchapter, emissions which occur as a result of the construction or operation of a major stationary source or modification, but do not come from the source or modification itself. ~~For the purpose of 252:100-8, Part 9, secondary~~ Secondary emissions must be specific, well defined, quantifiable, and impact the same general areas as the source or modification which causes the secondary emissions. Secondary emissions may include, but are not limited to:

(A) emissions from trains coming to or from the new or modified stationary source; and,

(B) emissions from any offsite support facility which would not otherwise be constructed or increase its emissions as a result of the construction or operation of the major source or modification.

"Stack" means for purposes of OAC 252:100-8-1.5 any point in a source designed to emit solids, liquids or gases into the air, including a pipe or duct but not including flares.

"Stationary source" means, for purposes of Parts 7 and 9 of this Subchapter, any building, structure, facility or installation which emits or may emit any air pollutant subject to OAC 252:100.

252:100-8-1.4. Cancellation or extension of a construction permit or authorization under a general construction permit

(a) **Cancellation of permit or authorization to construct or modify.** A duly issued permit or authorization to construct or modify will terminate and become null and void (unless extended as provided in Subsection (b) of this Section) if the construction is not commenced within 18 months after the date the permit or authorization was issued, or if work is suspended for more than 18 months after it has commenced.

(b) **Extension of permit or authorization to construct or modify.**

(1) Prior to the expiration date of the permit or authorization, a permittee may apply for extension of the permit or authorization by written request of the DEQ stating the reasons for the delay or suspension and providing justification for the extension. The DEQ may grant:

(A) One extension of 18 months or less, or

(B) One extension of up to 36 months where the applicant is proposing to expand an already existing facility to accommodate the proposed new construction or the applicant has expended a significant amount of money (1% of total project cost as identified in the original application, not including land cost) in preparation for meeting the definition of "commence construction" at the proposed site, or

(C) One extension of up to 72 months will be granted to major industrial facilities (project cost greater than \$100,000,000.00), where the applicant proposes to construct at an existing site and demonstrates that the existing site was originally designed and constructed to accommodate the

proposed new facilities. The applicant shall show a commitment to the site by having purchased land necessary to construct facilities covered by this extension and expended \$1,000,000.00 or more on engineering and/or site development.

(2) If construction has not commenced within three (3) years of the effective date of the original permit or authorization, the permittee must undertake and complete an appropriate available control technology review and an air quality analysis. This review must be approved by the DEQ before construction may commence.

(3) Upon formal request of any applicant whose permit has been denied for lack of increment, the DEQ may require any permittee under OAC 252:100:8-1.4(b)(1)(B) or ~~252:100-8-1.4(b)(1)(C)-(C)~~, to furnish a complete air quality analysis and/or an appropriate available control technology review if such review is required in order to provide new or current information.

252:100-8-1.5. Stack height limitations

(a) **Stack height exclusion.** Air quality modeling or ambient impact evaluation shall exclude the effect of that portion of the height of any stack which exceeds good engineering practice or the effect of any other dispersion techniques.

(b) **Determination of good engineering practice (GEP) stack height.** GEP stack height shall be the greater of:

(1) 65 meters, measured from the ground-level elevation at the base of the stack; or

(2) The height under either OAC 252:100-8-1.5(b)(2)(A) or (B):

(A) for stacks in existence on January 12, 1979 and for which the owner or operator had obtained all applicable permits or approvals required under OAC 252:100-8 or 40 CFR Part 52, $H_g = 2.5H$, provided the owner or operator can demonstrate that this equation was relied upon in establishing an emission limitation;

(B) for all other stacks, $H_g = H + 1.5L$, where:

(i) H_g = good engineering practice stack height, measured from the ground-level elevation at the base of the stack,

(ii) H = height of nearby structure(s) measured from the ground-level elevation at the base of the stack,

(iii) L = lesser dimension (height or projected width) of nearby structure(s), provided that the owner or operator may be required to verify such GEP stack height by the use of a field study or fluid model as the Executive Director shall determine; or

(3) The height demonstrated by a fluid model or a field study approved by the reviewing agency, which ensures that the emissions from a stack do not result in excessive concentrations of any air pollutant as a result of atmospheric downwash, wakes, or eddy effects created by the source itself, nearby structures, or nearby terrain features.

(c) **Nearby.**

(1) For the formulae in OAC 252:100-8-1.5(b)(2). A structure or terrain feature shall be considered nearby if it is located within a distance of up to five times the lesser of the height or the width of a structure, but not more than 0.5 miles (0.8 km).

(2) For demonstration in OAC 252:100-8-1.5(b)(3).

(A) A structure or terrain feature shall be considered nearby if located at a distance not greater than 0.5 mile (0.8 km), except that

(B) A portion of a terrain feature may be considered nearby if:

- (i) It falls within a distance (not to exceed 2 miles) of up to 10 times the maximum height -(Ht) of the feature, and
- (ii) At a distance of 0.5 mile, the height of such feature is at least 40 percent of the GEP stack height determined by the formulae provided in OAC 252:100-8-1.5(b)(2)(B) or 85.3 feet (26 meters), whichever is greater, as measured from the base of the stack.

(3) **Measurement of height of structure or terrain.** The height of the structure or terrain feature is measured from the ground-level elevation at the base of the stack.

(d) **Excessive concentrations.** When utilized for the purpose of determining GEP stack height under OAC 252:100-8-1.5(b)(3), excessive concentrations shall be as follows:

(1) For sources seeking credit for stack height exceeding that calculated under ~~262:100-8-1.5(b)(2)~~ OAC 252:100-8-1.5(b)(2), a maximum ground-level pollutant concentration from a stack due in whole or part to downwash, wakes, and eddy effects produced by nearby structures or nearby terrain features which is at least 40 percent in excess of the maximum concentration experienced in the absence of such downwash, wakes, or eddy effects and which, when combined with the impacts due to all sources, produces a concentration in excess of an ambient air quality standard. For sources subject to the prevention of significant deterioration program (Part 7 of this Subchapter or Federal 40 CFR 52.21), the same criteria apply except that a concurrent exceedance of a prevention of significant deterioration increment is experienced. In making demonstrations under this part, the allowable emission rate shall conform to the new source performance standard that is applicable to the source category unless the owner or operator can demonstrate that this emission rate is infeasible. Where such demonstrations are approved by the ~~Executive Director~~, an alternative emission rate shall be established in consultation with the owner or operator;

(2) For sources seeking credit after October 1, 1983, for increases in existing stack heights up to the heights established under OAC 252:100-8-1.5(b)(2) either:

(A) a maximum ground-level concentration due in whole or part to downwash, wakes or eddy effects as specified in OAC 252:100-8-1.5(b)(2), except that the emission rate specified by any applicable state implementation plan (or, in the absence of such a limit, the actual emission rate) shall be used, or

(B) the actual presence of a local nuisance caused by the existing stack, as determined by the ~~Executive Director~~; and

(3) For sources seeking credit after January 12, 1979 for a stack height determined under OAC 252:100-8-1.5(b)(2) where the ~~Executive Director~~ requires the use of a field study or fluid model to verify GEP stack height, for sources seeking stack height credit after November 9, 1984 based on the aerodynamic

influence of cooling towers, and for sources seeking stack height credit after December 31, 1970 based on the aerodynamic influence of structures not adequately represented by the formulae in OAC 252:100-8-1.5(b)(2), a maximum ground-level concentration due in whole or part to downwash, wakes or eddy effects that is at least 40 percent in excess of the maximum concentration experienced in the absence of such downwash, wakes or eddy effects.

PART 3. PERMIT APPLICATION FEES

252:100-8-1.7. Permit application fees

A permit application or a request for an applicability determination received after the effective date of this subsection will be assessed a one-time fee, which must accompany the application or request. Applications received without appropriate fees are administratively incomplete. Fees must be paid by check or money order made payable to the Oklahoma Air Quality Division in accordance with the following fee schedule:

- (1) **Applicability determination.** \$250, to be credited against the construction or operating permit application fee, if a permit is required. If no permit is required, the fee will be retained to cover the cost of making the determination.
- (2) **Construction permit application.** ~~The fee is \$2,000.~~
 - (A) New Part 70 source - \$2,000.
 - (B) Modification of a Part 70 source - \$1,500.
 - (C) Authorization under a general permit - \$900.
- (3) **Operating permit application.**
 - (A) Initial Part 70 permit - \$2,000.
 - (B) Authorization under a general permit - \$900
 - (C) Renewal Part 70 permit - \$1,000.
 - (D) Significant modification of Part 70 permit - \$1,000.
 - (E) Minor modification of Part 70 permit - \$500.
 - (F) Part 70 Temporary Source Relocation - \$500.

PART 5. PERMITS FOR PART 70 SOURCES

252:100-8-2. Definitions

The following words and terms, when used in this Part, shall have the following meaning, unless the context clearly indicates otherwise. Except as specifically provided in this ~~section~~ Section, terms used in this Part retain the meaning accorded them under the applicable requirements of the Act.

"**Administratively complete**" means an application that provides:

- (A) All information required under OAC 252:100-8-5(c), (d), or (e);
- (B) A landowner affidavit as required by OAC 252:2-15-20(b)(3);
- (C) The appropriate application fees as required by OAC 252:100-8-1.7; and
- (D) Certification by the responsible official as required by OAC 252:100-8-5(f).

"**Affected source**" means the same as the meaning given to it in the regulations promulgated under Title IV (acid rain) of the Act.

"**Affected states**" means:

- (A) all states:

(i) That are one of the following contiguous states: Arkansas, Colorado, Kansas, Missouri, New Mexico and Texas, and

(ii) That in the judgment of the DEQ may be directly affected by emissions from the facility seeking the permit, permit modification, or permit renewal being proposed; or

(B) all states that are within 50 miles of the permitted source.

"Affected unit" means the same as the meaning given to it in the regulations promulgated under Title IV (acid rain) of the Act.

"Applicable requirement" means all of the following as they apply to emissions units in a Part 70 source subject to this Chapter (including requirements that have been promulgated or approved by EPA through rulemaking at the time of issuance but have future effective compliance dates):

(A) Any standard or other requirements provided for in the applicable implementation plan approved or promulgated by EPA through rulemaking under Title I of the Act that implements the relevant requirements of the Act, including any revisions to that plan promulgated in 40 CFR Part 52;

(B) Any term or condition of any preconstruction permits issued pursuant to regulations approved or promulgated through rulemaking under Title I, including parts C or D, of the Act;

(C) Any standard or other requirement under section 111 of the Act, including section 111(d);

(D) Any standard or other requirement under section 112 of the Act, including any requirement concerning accident prevention under section 112(r)(7) of the Act, but not including the contents of any risk management plan required under 112(r) of the Act;

(E) Any standard or other requirement of the acid rain program under Title IV of the Act or the regulations promulgated thereunder;

(F) Any requirements established pursuant to section 504(b) or section 114(a)(3) of the Act;

(G) Any standard or other requirement governing solid waste incineration, under section 129 of the Act;

(H) Any standard or other requirement for consumer and commercial products, under section 183(e) of the Act;

(I) Any standard or other requirement for tank vessels, under section 183(f) of the Act;

(J) Any standard or other requirement of the regulations promulgated to protect stratospheric ozone under Title VI of the Act, unless the Administrator has determined that such requirements need not be contained in a Title V permit; and

(K) Any national ambient air quality standard or increment or visibility requirement under part C of Title I of the Act, but only as it would apply to temporary sources permitted pursuant to section 504(e) of the Act.

"Designated representative" means with respect to affected units, a responsible person or official authorized by the owner or operator of a unit to represent the owner or operator in matters pertaining to the holding, transfer, or disposition of allowances allocated to a unit, and the submission of and compliance with permits, permit applications, and compliance plans for the unit.

"Draft permit" means the version of a permit for which the DEQ offers public participation under ~~27A O.S. Supp. 1995, §2 14 101 et seq.~~ 27A O.S. §§ 2-14-101 through 2-14-401 and OAC 252:100-2-15 or affected State review under OAC 252:100-8-8.

"Emergency" means, when used in OAC 252:100-8-6(a)(3)(C)(iii)(I) and OAC 252:100-8-6(e), any situation arising from sudden and reasonably unforeseeable events beyond the control of the source, including acts of God, which situation requires immediate corrective action to restore normal operation, and that causes the source to exceed a technology-based emission limitation under the permit, due to unavoidable increases in emissions attributable to the emergency. An emergency shall not include noncompliance to the extent caused by improperly designed equipment, lack of preventive maintenance, careless or improper operation, or operator error.

"Emissions allowable under the permit" means a federally enforceable permit term or condition determined at issuance to be required by an applicable requirement that establishes an emissions limit (including a work practice standard) or a federally enforceable emissions cap that the source has assumed to avoid an applicable requirement to which the source would otherwise be subject.

"Emissions unit" means any part or activity of a stationary source that emits or has the potential to emit any regulated air pollutant or any pollutant listed under section 112(b) of the Act. Fugitive emissions from valves, flanges, etc. associated with a specific unit process shall be identified with that specific emission unit. This term is not meant to alter or affect the definition of the term "unit" for purposes of Title IV of the Act.

"Final permit" means the version of a part 70 permit issued by the DEQ that has completed all review procedures required by OAC 252:100-8-7 through ~~252:100-8-7.5-7.5~~ and OAC 252:100-8-8.

"Fugitive emissions" means those emissions of regulated air pollutants which could not reasonably pass through a stack, chimney, vent, or other functionally-equivalent opening.

"General permit" means a part 70 permit that meets the requirements of OAC 252:100-8-6.1.

"Insignificant activities" means individual emissions units that are either on the list approved by the Administrator and contained in Appendix I, or whose actual calendar year emissions do not exceed any of the limits in (A) through (C) of this definition. Any activity to which a State or federal applicable requirement applies is not insignificant even if it meets the criteria below or is included on the insignificant activities list.

(A) 5 tons per year of any one criteria pollutant.

(B) 2 tons per year for any one hazardous air pollutant (HAP) or 5 tons per year for an aggregate of two or more HAP's, or 20 percent of any threshold less than 10 tons per year for single HAP that the EPA may establish by rule.

(C) 0.6 tons per year for any one category A substance, 1.2 tons per year for any one category B substance or 6 tons per year for any one category C substance as defined in OAC 252:100-41-40.

"MACT" means maximum achievable control technology.

"Major source" means any stationary source (or any group of stationary sources that are located on one or more contiguous or

adjacent properties and are under common control of the same person (or persons under common control)) belonging to a single major industrial grouping and that is described in subparagraph (A), (B), or (C) of this definition. For the purposes of defining "major source," a stationary source or group of stationary sources shall be considered part of a single industrial grouping if all of the pollutant emitting activities at such source or group of sources on contiguous or adjacent properties belong to the same Major Group (i.e., all have the same two-digit primary SIC code) as described in the Standard Industrial Classification Manual, 1987.

(A) A major source under section 112 of the Act, which is defined as:

(i) For pollutants other than radionuclides, any stationary source or group of stationary sources located within a contiguous area and under common control that emits or has the potential to emit, in the aggregate, 10 tons per year ("tpy") or more of any hazardous air pollutant which has been listed pursuant to section 112(b) of the Act, 25 tpy or more of any combination of such hazardous air pollutants, or such lesser quantity as the Administrator may establish by rule. Notwithstanding the preceding sentence, emissions from any oil or gas exploration or production well (with its associated equipment) and emissions from any pipeline compressor or pump station shall not be aggregated with emissions from other similar units, whether or not such units are in a contiguous area or under common control, to determine whether such units or stations are major sources; or.

(ii) For radionuclides, "major source" shall have the meaning specified by the Administrator by rule.

(B) A major stationary source of air pollutants, as defined in section 302 of the Act, that directly emits or has the potential to emit, 100 tpy or more of any regulated air pollutant (except TSP that fraction of particulate matter that exhibits an average aerodynamic particle diameter of more than 10 micrometers) (including any major source of fugitive emissions of any such pollutant, as determined by rule by the Administrator). The fugitive emissions of a stationary source shall not be considered in determining whether it is a major stationary source for the purposes of section 302(j) of the Act, unless the source belongs to one of the following categories of stationary sources:

- (i) Coal cleaning plants (with thermal dryers);
- (ii) Kraft pulp mills;
- (iii) Portland cement plants;
- (iv) Primary zinc smelters;
- (v) Iron and steel mills;
- (vi) Primary aluminum ore reduction plants;
- (vii) Primary copper smelters;
- (viii) Municipal incinerators capable of charging more than 250 tons of refuse per day;
- (ix) Hydrofluoric, sulfuric, or nitric acid plants;
- (x) Petroleum refineries;
- (xi) Lime plants;
- (xii) Phosphate rock processing plants;
- (xiii) Coke oven batteries;

- (xiv) Sulfur recovery plants;
- (xv) Carbon black plants (furnace process);
- (xvi) Primary lead smelters;
- (xvii) Fuel conversion plants;
- (xviii) Sintering plants;
- (xix) Secondary metal production plants;
- (xx) Chemical process plants;
- (xxi) Fossil-fuel boilers (or combination thereof) totaling more than 250 million British thermal units per hour heat input;
- (xxii) Petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels;
- (xxiii) Taconite ore processing plants;
- (xxiv) Glass fiber processing plants;
- (xxv) Charcoal production plants;
- (xxvi) Fossil-fuel-fired steam electric plants of more than 250 million British thermal units per hour heat input; or
- (xxvii) All other stationary source categories which, as of August 7, 1980, are being regulated by a standard promulgated under section 111 or 112 of the Act, but only with respect to those air pollutants that have been regulated for that category.

(C) A major stationary source as defined in part D of Title I of the Act, including:

- (i) For ozone non-attainment areas, sources with the potential to emit 100 tpy or more of volatile organic compounds or oxides of nitrogen in areas classified as "marginal" or "moderate," 50 tpy or more in areas classified as "serious," 25 tpy or more in areas classified as "severe," and 10 tpy or more in areas classified as "extreme"; except that the references in this paragraph to 100, 50, 25, and 10 tpy of nitrogen oxides shall not apply with respect to any source for which the Administrator has made a finding, under section 182(f)(1) or (2) of the Act, that requirements under section 182(f) of the Act do not apply;
- (ii) For ozone transport regions established pursuant to section 184 of the Act, sources with the potential to emit 50 tpy or more of volatile organic compounds;
- (iii) For carbon monoxide non-attainment areas:
 - (I) that are classified as "serious"; and
 - (II) in which stationary sources contribute significantly to carbon monoxide levels as determined under rules issued by the Administrator, sources with the potential to emit 50 tpy or more of carbon monoxide; and
- (iv) For particulate matter (PM-10) non-attainment areas classified as "serious," sources with the potential to emit 70 tpy or more of PM-10.

"Maximum capacity" means the quantity of air contaminants that theoretically could be emitted by a stationary source without control devices based on the design capacity or maximum production capacity of the source and 8,760 hours of operation per year. In determining the maximum theoretical emissions of VOCs for a source, the design capacity or maximum production capacity shall include the use of raw materials, coatings and inks with the highest VOC content used in practice by the source.

"Permit" (unless the context suggests otherwise) means any permit or group of permits covering a Part 70 source that is issued, renewed, amended, or revised pursuant to this Chapter.

"Permit modification" means a revision to a Part 70 construction or operating permit that meets the requirements of OAC 252:100-8-7.2(b).

"Permit program costs" means all reasonable (direct and indirect) costs required to develop and administer a permit program, as set forth in OAC 252:100-5-2.2 (whether such costs are incurred by the DEQ or other State or local agencies that do not issue permits directly, but that support permit issuance or administration).

"Permit revision" means any permit modification or administrative permit amendment.

"Potential to emit" means the maximum capacity of a stationary source to emit any air pollutant under its physical and operational design. Any physical or operational limitation on the capacity of a source to emit an air pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitation is enforceable by the Administrator. This term does not alter or affect the use of this term for any other purposes under the Act, or the term "capacity factor" as used in Title IV of the Act or the regulations promulgated thereunder.

"Proposed permit" means the version of a permit that the DEQ proposes to issue and forwards to the Administrator for review in compliance with OAC 252:100-8-8.

"Regulated air pollutant" means the following:

(A) Nitrogen oxides or any volatile organic compound (VOC), including those substances defined in OAC 252:100-1-3, 252:100-37-2, and 252:100-39-2, ~~or any Volatile Organic Solvent (VOS), as that term is defined in 252:100-37-2 and 252:100-39-2, or any organic material defined in 252:100-37-2~~ except those specifically excluded in the EPA definition of VOC in 40 CFR 51.100(s);

(B) Any pollutant for which a national ambient air quality standard has been promulgated;

(C) Any pollutant that is subject to any standard promulgated under section 111 of the Act;

(D) Any Class I or II ozone-depleting substance subject to a standard promulgated under or established by Title VI of the Act;

(E) Any pollutant subject to a standard promulgated under section 112 or other requirements established under section 112 of the Act (Hazardous Air Pollutants), including sections 112(g) (Modifications), (j) (Equivalent Emission Limitation by Permit, and (r) (Prevention of Accidental Releases), including the following:

(i) any pollutant subject to the requirements under section 112(j) of the Act. If the Administrator fails to promulgate a standard by the date established pursuant to section 112(e) of the Act (Schedule for Standards and Review), any pollutant for which a subject source would be major shall be considered to be regulated as to that source on the date 18 months after the applicable date established pursuant to section 112(e) of

the Act; and,

(ii) any pollutant for which the requirements of section 112(g) (2) of the Act have been met, but only with respect to the individual source subject to the section 112(g) (2) requirement; or

(F) Any other substance for which an air emission limitation or equipment standard is set by an existing permit or regulation.

"Renewal" means the process by which a permit is reissued at the end of its term.

"Responsible official" means one of the following:

(A) For a corporation: a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation, or a duly authorized representative of such person if the representative is responsible for the overall operation of one or more manufacturing, production, or operating facilities applying for or subject to a permit and either:

(i) The facilities employ more than 250 persons or have gross annual sales or expenditures exceeding \$25 million (in second quarter 1980 dollars); or

(ii) The delegation of authority to such representatives is approved in advance by the DEQ;

(B) For the partnership or sole proprietorship: a general partner or the proprietor, respectively;

(C) For a municipality, State, Federal, or other public agency: Either a principal executive officer or ranking elected official. For purposes of this Subchapter, a principal executive officer or installation commander of a Federal agency includes the chief executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., a Regional Administrator of EPA); or

(D) For affected sources:

(i) The designated representative in so far as actions, standards, requirements, or prohibitions under Title IV of the Act or the regulations promulgated thereunder are concerned; and

(ii) The designated representative for any other purposes under this Subchapter.

"Section 502(b) (10) changes" means changes that contravene an express permit term. Such changes do not include changes that would violate applicable requirements or contravene federally enforceable permit terms and conditions that are monitoring (including test methods), recordkeeping, reporting, or compliance certification requirements.

"Small unit" means a fossil fuel fired combustion device which serves a generator with a name plate capacity of 25 MWe or less.

"State-only requirement" means any standard or requirement pursuant to Oklahoma Clean Air Act (~~27A O.S. 1993 Supp. Sec. 2-5-101 et seq.~~ 27A O.S. §§ 2-5-101 through 2-5-118, as amended) that is not contained in the State Implementation Plan (SIP).

"State program" means a program approved by the Administrator under 40 CFR Part 70.

"Stationary source" means any building, structure, facility, or installation that emits or may emit any regulated air pollutant or

any pollutant listed under section 112(b) of the Act.

"Trivial activities" means any individual or combination of air emissions units that are considered inconsequential and are on a list approved by the Administrator and contained in Appendix J. ~~Any activity to which a State or federal applicable requirement applies is not trivial even if included on the trivial activities list.~~

"Unit" means, for purposes of Title IV, a fossil fuel-fired combustion device.

252:100-8-3. Applicability

(a) **Covered sources.** Except as exempted from the requirement to obtain a permit under subsection (b) of this Section or elsewhere in this Subchapter, the sources listed below are subject to the permitting requirements under this Subchapter. A ~~covered major~~ source or major stationary source shall remain a Part 70 source until a federally enforceable permit is obtained which contains emission limitations and/or conditions to limit the operation of the facility to below that which would define it as a covered source pursuant to this section.

- (1) Any major source (as defined in OAC 252:100-8-2);
- (2) Any source subject to a NSPS;
- (3) Any source, including an area source, subject to a NESHAP;
- (4) Any affected source (as defined in OAC 252:100-8-2);
- (5) Any source in a source category designated by the Administrator pursuant to 40 CFR §70.3; and
- (6) Any major stationary source required to have a permit under Parts 7 or 9 of this Subchapter.

(b) Source category exemptions.

(1) All sources listed in subsection (a) of this section that are not major sources, major stationary sources, affected sources, or solid waste incineration units required to obtain a permit pursuant to section 129(e) of the Act, are exempt from the obligation to obtain a Part 70 permit unless required to do so by appropriate implementation of EPA administrative rulemaking for non-major sources. Any such exempt source may opt to apply for a permit under these rules and shall be issued a permit if the applicant otherwise satisfies all of the requirements of this Chapter.

(2) If the Administrator determines after appropriate rulemaking that an exemption is applicable to non-major sources when adopting standards or other requirements under section 111 or section 112 of the Act after July 21, 1992, then at that time the exemption will apply.

(3) Unless otherwise required to obtain a Part 70 permit, the following source categories are exempted from the obligation to obtain a Part 70 permit:

(A) All sources in source categories that would be required to obtain a permit solely because they are subject to part 60, subpart AAA -- Standards of Performance for New Residential Wood Heaters; and

(B) All sources in source categories that would be required to obtain a permit solely because they are subject to part 61, subpart M -- National Emission Standard for Hazardous Air Pollutants for Asbestos, Section 61.145, Standard for Demolition and Renovation.

252:100-8-4. Requirements for construction and operating permits

(a) Construction permits.

(1) **Construction permit required.** No person shall ~~cause or allow the begin~~ begin actual construction or installation of any new ~~facility source~~ that will require a Part 70 operating permit without first obtaining a DEQ-issued air quality construction permit. A construction permit is also required prior to reconstruction of a major affected source under 40 CFR Part 63, reconstruction of a major source if it would then become a major affected source under 40 CFR 63, or for any physical change that would be a significant modification under 252:100-8-7.2(b) OAC 252:100-8-7.2(b)(2). In addition to the requirements of this Part, sources subject to Part 7 or Part 9 of this Subchapter must also meet the applicable requirements contained therein.

(2) **Requirement for case-by-case MACT determinations.**

(A) **Applicability.** The requirement for case-by-case MACT determinations apply to any owner or operator who constructs or reconstructs a major source of hazardous air pollutants after June 29, 1998, unless the source has been specifically regulated or exempted from regulation under a subpart of 40 CFR Part 63, or the owner or operator has received all necessary air quality permits for such construction or reconstruction before June 29, 1998.

(B) **Exclusions.** The following sources are not subject to this subsection.

(i) Electric utility steam generating units unless and until these units are added to the source category list.

(ii) Stationary sources that are within a source category that has been deleted from the source category list.

(iii) Research and development activities as defined in 40 CFR § 63.41.

(C) **MACT determinations.** If subject to this subsection, an owner or operator may not begin actual construction or reconstruction of a major source of HAP until obtaining from the DEQ an approved MACT determination in accordance with the following regulations: 40 CFR 63.41, 40 CFR 63.43 and 40 CFR 63.44, which are hereby incorporated by reference as they exist on July 1, ~~1998-2000~~.

(b) Operating permits.

(1) **Operating permits required.** Except as provided in subparagraphs (A) and (B) of this section, no Part 70 source subject to this Chapter may operate after the time that it is required to file a timely application with the DEQ, except in compliance with a DEQ-issued permit.

(A) If the owner or operator of a source subject to the requirement to obtain a Part 70 permit submits a timely application for Part 70 permit issuance or renewal, that source's failure to have a Part 70 permit shall not be a violation of the requirement to have such a permit until the DEQ takes final action on the application. This protection shall cease to apply if the applicant fails to submit, by the deadline specified in writing by the DEQ or OAC 252:100-8-4, any additional information identified as being reasonably required to process the application.

(B) If the owner or operator of a source subject to this

Subchapter files a timely application that the DEQ determines to be administratively incomplete due to the applicant's failure to timely provide additional information requested by the DEQ, the applicant loses the protection granted under paragraph (A) of this ~~section~~ Section. The source's failure to have a Part 70 permit shall be deemed a violation of this Subchapter.

(C) Filing an operating permit application shall not affect the requirement, if any, that a source have a construction permit.

(2) **Duty to apply.** For each Part 70 source, the owner or operator shall submit a timely and complete permit application on forms supplied by the DEQ in accordance with this section.

(3) **Timely application.** Sources that are subject to the operating permit program established by this Chapter as of March 6, 1996, shall file applications on the following schedules outlined in OAC 252:100-8-4(b)(4). A timely application is one that is postmarked on or before the relevant date listed below. In the event a major source consists of operations under multiple SIC codes, the primary activity shall form the basis for the initial permit application.

(4) **Application submittal schedule.** The following sources are subject to the operating permit program and shall submit initial permit applications according to the following schedule.

(A) No later than September 5, 1996:

(i) Affected sources under the acid rain provisions of the Act shall submit a permit application for at least the affected units at the site. Regardless of the effective date of the program and the requirement to file an application defined in this section, applications for initial Phase II acid rain permits shall be submitted to the DEQ no later than January 1, 1996, for sulfur dioxide, and by January 1, 1998, for nitrogen oxides, pursuant to the Act, §407.

(ii) Any owner or operator shall submit no less than one-third of their total applications for Part 70 sources located at sources classified by the following Source Standard Industrial Classification Codes and which belong to a single major industrial grouping other than 28 (Chemicals and allied products) or 29 (Petroleum refining and related industries):

(I) Petroleum and Natural Gas, 1311;

(II) Natural Gas Liquids, 1321;

(III) Electric Services, 4911, 4961;

(IV) Natural Gas Transmission, 4922;

(V) Natural Gas Transmission and Distribution, 4923; and

(VI) Petroleum Bulk Stations and Terminals, 5171.

(B) All remaining Part 70 sources identified in (b)(4)(A)(ii) of this Subsection shall be subject to the operating permit program and shall submit initial permit applications no later than March 5, 1997.

(C) No later than March 5, 1997, any owner or operator shall submit their applications for Part 70 sources located at sources classified by the following Standard Industrial Classification Codes:

- (i) Metals, 3312, 3315, 3321, 3341, 3351, 3411, 3412, 3432, 3466,
- (ii) Brick Plants, 3251, 3297,
- (iii) Commercial Printing, 2752, 2761.

(D) No later than July 5, 1998, any owner or operator shall submit their applications for Part 70 sources located at sources classified by the following Standard Industrial Classification Codes:

- (i) Refineries, 2911;
- (ii) Cement Plants, 3241;
- (iii) Chemical/Carbon, 2819, 2821, 2851, 2861, 2869, 2891, 2895, 2899, 2999, 3053, 3086, 3089;
- (iv) Petroleum Transportation/Terminals/Storage, 4612, 4613;
- (v) Food Products, 2013, 2074, 2095.

(E) All remaining Part 70 sources shall be subject to the operating permit program and shall submit initial permit applications no later than March 6, 1999.

(5) **Newly regulated sources.** A source that becomes subject to the operating permit program established by this Chapter at any time following the effective date shall file an administratively complete operating permit application within 180 days of commencement of operation.

(6) **Application acceptability.** Notwithstanding the deadlines established in paragraph (4) of this subsection, an application filed prior to the above deadlines following submission of the state program to EPA for approval shall be accepted for processing.

(7) **112(g) applications.** A source that is required to meet the requirements under section 112(g) of the Act, or to have a permit under a preconstruction review program under Title I of such Act, shall file an application to obtain an operating permit or permit amendment or modification within twelve months of commencing operation. Where an existing Part 70 operating permit would prohibit such construction or change in operation, the source must obtain a construction permit before commencing construction.

(8) **Application for renewal.** Sources subject to this Chapter shall file an application for renewal of an operating permit at least six months before the date of permit expiration, unless a longer period (not to exceed 18 months) is specified in the permit. Renewal periods greater than six months are subject to negotiation on a case-by-case basis.

(9) **Phase II acid rain permits.** Sources required to submit applications under the Acid Rain Program shall submit these applications as required by 40 CFR 72.30(b)(2)(i) through (viii).

(10) **Application completeness.** See Uniform Permitting Rules, OAC 252:2-15-70 and the definition of ~~administratively complete~~ "administratively complete" in OAC 252:100-8-2.

252:100-8-5. Permit applications

(a) **Confidential information.** If a source submits information to the DEQ under a claim of confidentiality, the source shall also submit a copy of such information directly to the Administrator, if

the DEQ requests that the source do so.

(b) **Duty to supplement or correct application.** ~~See 252:100-6-50(e).~~ Any applicant who fails to submit any relevant facts or who has submitted incorrect information in a permit application shall, upon becoming aware of such failure or incorrect submittal, submit such supplementary facts or corrected information within 30 days unless the applicant's request for more time has been approved by the DEQ. In addition, an applicant shall provide additional information as necessary to address any requirements that become applicable to the source after the date it filed a complete application but prior to release of a draft permit.

(c) **Standard application form and required information.** Sources that are subject to the Part 70 permit program established by this Chapter shall file applications on the standard application form that the DEQ makes available for that purpose in accordance with OAC 252:2-15. The application must include information needed to determine the applicability of any applicable requirement, or state-only requirement, or to evaluate the fee amount required under the schedule approved pursuant to OAC 252:100-5-2.2(b)(2). The applicant shall submit the information called for by the application form for each emissions unit at the source to be permitted. The source must provide a list of any insignificant activities that are exempted because of size or production rate. Trivial activities need not be listed. The standard application form and any attachments shall require that the information required by OAC 252:100-8-5(d) and/or ~~252:100-8-5(e)~~ (e) be provided.

(d) **Construction permit applications.**

(1) An application for a construction permit shall provide data and information required by this Chapter and/or requested on the application form available from the DEQ pursuant to the requirements of this Chapter. Such data and information shall include but not be limited to site information, process description, emission data and when required, BACT, modeling and sampling point data as follows:

(A) **BACT determination.** To be approved for a construction permit, a major source must demonstrate that the control technology to be applied is the best that is available for each pollutant that would cause the source to be defined as a major source. This determination will be made on a case by case basis taking into account energy, environmental, ~~cost~~ and economic impacts and other costs of alternative control systems. Unless required under Part 7 of this Subchapter, a BACT determination is not required for a modification that will result in an increase of emissions of less than 100 tons per year of any regulated air pollutant.

(B) **Modeling.** Any air quality modeling or ambient impact evaluation that is required shall be prepared in accordance with procedures acceptable to the DEQ and accomplished by the applicant.

(C) **Sampling points.** If required by the DEQ an application shall show how the new source will be equipped with sampling ports, instrumentation to monitor and record emission data and other sampling and/or testing equipment. ~~[NOTE: 252:100-8-1.4(b)(1) was taken from 252:100-7-15(b)]~~

(2) Construction permit applications for new sources must also include the requirements for operating permits contained in OAC 252:100-8-5(e) to the extent they are applicable.

(e) **Operating permit applications.**

(1) Identifying information, including company name and address (or plant name and address if different from the company name), owner's name and agent, and telephone number and names of plant site manager/contact.

(2) A description of the source's processes and products (by two-digit Standard Industrial Classification Code) including any associated with each alternate scenario identified by the source.

(3) The following emissions-related information:

(A) All emissions of pollutants for which the source is major, and all emissions (including fugitive emissions) of regulated air pollutants. The permit application shall describe all emissions of regulated air pollutants emitted from any emissions unit, except where such units are exempted under ~~this subsection 252:100-8-5(e)-(c)~~ of this Section or OAC 252:100-8-3(b).

(B) Identification and description of all points of emissions described in subparagraph (e) (3) (A) of this ~~section~~ Section in sufficient detail to establish the basis for fees and applicability of the Act's requirements.

(C) Emissions rates in tons per year and in such terms as are necessary to establish compliance consistent with the applicable standard.

(D) The following information to the extent it is needed to determine or regulate emissions:

- (i) fuels,
- (ii) fuel use,
- (iii) raw materials,
- (iv) production rates, and
- (v) operating schedules.

(E) Identification and description of air pollution control equipment and compliance monitoring devices or activities.

(F) Limitations on source operation affecting emissions or any work practice standards, where applicable, for all regulated pollutants at the covered source.

(G) Other information required by any applicable requirement, or state-only requirement (including information related to stack height limitations developed pursuant to section 123 of the Act).

(H) Calculations on which the information in items (A) through (G) of this paragraph is based.

(4) The following air pollution control requirements:

(A) Citation and description of all applicable requirements and all state-only requirements.

(B) Description of or reference to any applicable test method for determining compliance with each applicable requirement and state-only requirement.

(5) Other specific information required under the DEQ's rules and statutes to implement and enforce other applicable requirements of the Act or of this Chapter or to determine the applicability of such requirements.

(6) An explanation of any proposed exemptions from otherwise applicable requirements and state-only requirements.

(7) Additional information as determined to be necessary by the DEQ to define alternative operating scenarios identified by the source pursuant to OAC 252:100-8-6(a)(9) or to define permit terms and conditions implementing OAC 252:100-8-6(f) or 252:100-8-6(a)(10).

(8) A compliance plan for all covered sources that contains all the following:

(A) A description of the compliance status of the source with respect to all applicable requirements and state-only requirements as follows:

(i) For applicable requirements and state-only requirements with which the source is in compliance, a statement that the source will continue to comply with such requirements.

(ii) For applicable requirements and state-only requirements that will become effective during the permit term, a statement that the source will meet such requirements on a timely basis shall satisfy this provision, unless a more detailed schedule is expressly required by the applicable requirement.

(iii) For requirements for which the source is not in compliance at the time of permit issuance, a narrative description of how the source will achieve compliance with such requirements.

(B) For sources not in complete compliance, a compliance schedule as follows:

(i) A schedule of compliance for sources that are not in compliance with all applicable requirements and state-only requirements at the time of permit issuance. Such a schedule shall include a schedule of remedial measures, including an enforceable sequence of actions with milestones, leading to compliance with any applicable requirements and state-only requirements for which the source will be in noncompliance at the time of permit issuance. This compliance schedule shall resemble and be equivalent in stringency to that contained in any judicial consent decree or administrative order to which the source is subject. Any such schedule of compliance shall be supplemental to, and shall not sanction non-compliance with, the applicable requirements on which it is based.

(ii) A schedule for submission of certified progress reports no less frequently than every 6 months.

(C) The compliance plan content requirements specified in this paragraph shall apply and be included in the acid rain portion of a compliance plan for an affected source, except as specifically superseded by regulations promulgated under Title IV of the Act with regard to the schedule and method(s) the source will use to achieve compliance with the acid rain emissions limitations.

(9) Requirements for compliance certification, including the following:

(A) A certification of compliance with all applicable requirements and state-only requirements by a responsible

official consistent with subsection (f) of this section and section 114(a)(3) of the Act;

(B) A statement of methods used for determining compliance, including a description of monitoring, recordkeeping, and reporting requirements and test methods;

(C) A schedule for submission of compliance certifications during the permit term, which shall be submitted annually, or more frequently if required by an underlying applicable requirement state-only requirements or by the permitting authority; and

(D) A statement indicating the source's compliance status with any applicable enhanced monitoring and compliance certification requirements of the Act.

(10) The use of nationally-standardized forms for acid rain portions of permit applications and compliance plans, as required by regulations promulgated under Title IV of the Act.

(f) **Certification.** Any application form, report, or compliance certification submitted pursuant to this Chapter shall contain certification by a responsible official of truth, accuracy, and completeness. This certification and any other certification required under this Chapter shall be signed by a responsible official and shall contain the following language: "I certify, based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete."

~~(g) Number of application copies. See Part 3 of 252:2-15.~~

252:100-8-6. Permit content

(a) **Standard permit requirements.** Part 70 permits issued under this Chapter shall include all applicable requirements and state-only requirements (as defined in OAC 252:100-8-2) that apply to the permitted source at the time of issuance. Each permit shall include the following elements:

(1) **Emission limitations and standards.** The permit shall specify emissions limitations and standards that constitute applicable requirements and state-only requirements and shall include those operational conditions and limitations necessary to assure compliance with all such requirements.

(A) The permit shall specify and reference the origin of and authority for each term or condition, and identify any difference in form as compared to the applicable requirement or state-only requirement upon which the term or condition is based.

(B) The permit shall state that, where an applicable requirement of the Act is more stringent than an applicable requirement of regulations promulgated under Title IV of the Act, both provisions shall be incorporated into the permit and shall be enforceable by EPA.

(C) If the State implementation plan or an applicable requirement allows a source to comply through an alternative emission limit or means of compliance, a source may request that such an alternative limit or means of compliance be specified in its permit. Such an alternative emission limit or means of compliance shall be included in a source's permit upon a showing that it is quantifiable, accountable,

enforceable, and based on replicable procedures. The source shall propose permit terms and conditions to satisfy these requirements in its application.

(2) **Permit duration.**

(A) **Operating permits.** The permit shall specify a fixed term. The DEQ shall issue permits for any fixed period requested in the permit application, not to exceed five years, except as provided in subparagraphs (i) and (ii) of this paragraph:

(i) Permits issued to affected sources shall in all cases have a fixed term of five years.

(ii) Permits issued to solid waste incineration units combusting municipal waste subject to standards under section 129(e) of the Act shall have a term not to exceed 12 years. Such permits shall be reviewed every five years.

(B) **Construction permits.** See OAC 252:100-8-1.4.

(3) **Monitoring and related recordkeeping and reporting requirements.**

(A) **Monitoring requirements.**

(i) All emissions monitoring and analysis procedures or test methods required under applicable requirements and state-only requirements, including any procedures and methods promulgated pursuant to sections 114(a)(3) or 504(b) of the Act;

(ii) Where an applicable requirement or state-only requirement does not require periodic testing or instrumental or non-instrumental monitoring (which may consist of recordkeeping designed to serve as monitoring), periodic monitoring during the relevant time period sufficient to yield reliable data that are representative of the source's compliance with the permit, as reported pursuant to (a)(3)(C) of this section. Such monitoring requirements shall assure use of terms, test methods, units, averaging periods, and other statistical conventions consistent with the applicable requirement or state-only requirement. Recordkeeping provisions may be sufficient to meet the requirements of this subparagraph.

(iii) As necessary, requirements concerning the use, maintenance, and, where appropriate, installation of monitoring equipment or methods.

(iv) Provisions for the permittee to request the use of alternative test methods or analysis procedures, and provisions for the DEQ to approve or disapprove the request within 60 days.

(B) **Recordkeeping requirements.** The permit shall incorporate all applicable recordkeeping requirements and require, where applicable, the following:

(i) Records of required monitoring information that include the following:

(I) The date, place as defined in the permit, and time of sampling or measurements;

(II) The date(s) analyses were performed;

(III) The company or entity that performed the analyses;

(IV) The analytical techniques or methods used;

(V) The results of such analyses; and

(VI) The operating conditions existing at the time of sampling or measurement.

(ii) Retention of records of all required monitoring data and support information for a period of at least five years from the date of the monitoring sample, measurement, report, or application. Support information includes all calibration and maintenance records and all original stripchart recordings for continuous monitoring instrumentation, and copies of all reports required by the permit. Where appropriate, the permit may specify that records may be maintained in computerized form.

(C) **Reporting requirements.** The permit shall incorporate all applicable reporting requirements and require the following requirements:

(i) A permit issued under this Part shall require the permittee to submit a report of any required monitoring at least every six months. To the extent possible, the schedule for submission of such reports shall be timed to coincide with other periodic reports required by the permit, including the permittee's annual compliance certification. However, the reports may be submitted at any time within the reporting period, as stipulated in the permit.

(ii) Each report submitted under (C)(i) of this paragraph shall identify any exceedances from permit requirements since the previous report that have been monitored by the monitoring systems required under the permit, and any exceedances from the monitoring, recordkeeping and reporting requirements under the permit.

(iii) In addition to semiannual monitoring reports, each permittee shall be required to submit supplemental reports as follows:

(I) Any exceedance resulting from an emergency or upset conditions as defined in 252:100-8-6(e) OAC 252:100-8-2 or upset conditions as defined in the permit shall be reported within 24 hours of the date on which promptly but no later than 4:30 p.m. on the next working day after the permittee first becomes aware of the exceedance, if the permittee wishes to assert the affirmative defense authorized under said section, and the permittee shall submit a follow up written report within 10 working days of first becoming aware of the exceedance. The initial report must contain a description of the emergency or upset conditions, any steps taken to mitigate emissions, and corrective actions taken. Quantification of exceedances attributable to emergencies or upset conditions shall be made by the best available method. If the permittee wishes to assert the affirmative defense authorized under subsection (e) of this Section for emergencies, the permittee shall submit a followup written report within 10 working days of first becoming aware of the exceedance.

(II) Any exceedance that poses an imminent and substantial danger to public health, safety, or the environment shall be reported as soon as is practicable;

but under no circumstance shall notification be more than 24 hours after exceedance.

(III) Any other exceedances that are identified in the permit as requiring more frequent reporting than the permittee's semiannual report shall be reported on the schedule specified in the permit.

(IV) All reports of exceedances shall identify the probable cause of the exceedances and any corrective actions or ~~preventative~~ preventive measures taken.

(iv) Every report submitted under this subsection shall be certified by a responsible official, except that if a report of an exceedance required under (C)(iii) of this paragraph must be submitted within ten days of the exceedance, the report may be submitted in the first instance without a certification if an appropriate certification is provided within ten days thereafter, together with any corrected or supplemental information required concerning the exceedance. Reports submitted shall be consistent with the requirements of OAC 252:100-9.

(4) **Risk management plans.** If the source is required to develop and register a risk management plan pursuant to section 112(r) of the Act, the permit need only specify that the permittee will comply with the requirement to register such a plan. Although the requirement to have a risk management plan may be a term of the permit, the risk management plan contents are not part of the permit.

(5) **Title IV allowances.**

(A) No permit revision shall be required for increases in emissions that are authorized by allowances acquired pursuant to the acid rain program, provided that such increases do not require a permit revision under any other applicable requirement.

(B) No limit shall be placed on the number of allowances held by the source. The source may not, however, use allowances as a defense to noncompliance with any other applicable requirement.

(C) The permit shall prohibit emissions exceeding any allowance that the source lawfully holds under Title IV of the Act or the regulations promulgated thereunder. Compliance with this paragraph will be determined on January 31st of any given year and be based on actual emissions and the number of allowances held for the previous calendar year.

(6) **Severability clause.** The permit shall include a severability clause to ensure the continued validity of the various permit requirements in the event of a challenge to any portions of the permit.

(7) **General requirements.** The permit shall include provisions stating the following:

(A) The permittee must comply with all conditions of the permit. Any permit noncompliance constitutes a violation of the Oklahoma Clean Air Act and is grounds for:

- (i) enforcement action;
- (ii) permit termination, revocation and reissuance, or modification; or
- (iii) denial of a permit renewal application.

(B) It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit. However, nothing in this subsection shall be construed as precluding consideration of a need to halt or reduce activity as a mitigating factor in assessing penalties for noncompliance if the health, safety, or environmental impacts of halting or reducing operations would be more serious than the impacts of continuing operations.

(C) The permit may be modified, revoked, reopened, and reissued, or terminated for cause. Except as provided under OAC 252:100-8-7.2(b)(1) for minor permit modifications, the filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or of a notification of planned changes or anticipated noncompliance does not stay any permit condition.

(D) The permit does not convey any property rights of any sort or any exclusive privilege.

(E) The permittee shall furnish to the DEQ, upon receipt of a written request and within a reasonable time, any information that the DEQ may request to determine whether cause exists for modifying, reopening, or revoking and reissuing or terminating the permit or to determine compliance with the permit. Upon request, the permittee shall also furnish to the DEQ copies of records required to be kept by the permit. The permittee may make a claim of confidentiality pursuant to ~~27A O.S. 1993 Supp. Section 2-5-105.18~~ 27A O.S. § 2-5-105.18 for any information or records submitted under this paragraph.

(8) **Fees.** The permit shall provide that the permittee will pay fees to the DEQ consistent with the fee schedule established under OAC 252:100-5-2:2.

(9) **Emissions trading.** The permit shall provide that no permit revision shall be required under any approved economic incentives, marketable permits, emissions trading and other similar programs or processes for changes that are provided for in the permit.

(10) **Operating scenarios.** The permit shall include terms and conditions applicable to all operating scenarios described in the permit application and eligible for approval under applicable requirements and state-only requirements. The permit shall authorize the permittee to make changes among operating scenarios authorized in the permit without notice, but shall require the permittee contemporaneously with making a change from one operating scenario to another to record in a log at the permitted facility the scenario under which it is operating.

(11) **Emissions averaging.** The permit shall include terms and conditions, if the permit applicant requests them, for the trading or averaging of emissions increases and decreases in the permitted facility, to the extent that the applicable requirements provide for trading or averaging such increases and decreases. Such terms and conditions shall include terms under subsections (a) and (c) of this ~~section~~ Section to determine compliance and shall satisfy all requirements of the applicable

requirements authorizing such trading or averaging.

(b) **Federally enforceable requirements.**

(1) Except as provided in paragraph (b)(2) of this ~~section~~ Section, all terms and conditions in a permit issued under this ~~section~~ Section, including any provisions designed to limit a source's potential to emit, are enforceable by the DEQ, by EPA, and by citizens under section 304 of the Act.

(2) Notwithstanding paragraph (b)(1) of this ~~section~~ Section, the DEQ shall designate as not being federally enforceable under the Act any terms and conditions included in the permit that are not required under the Act or any of its applicable requirements, and such terms and conditions shall not be enforceable by EPA and citizens under section 304 of the Act.

(c) **Compliance requirements.** All permits issued under this Part shall contain the following elements with respect to compliance:

(1) Consistent with paragraph (a)(3) of this ~~section~~ Section, compliance certification, testing, monitoring, reporting, and recordkeeping requirements sufficient to assure compliance with the terms and conditions of the permit. Any document (including reports) required by a permit under this Part shall contain a certification by a responsible official as to the results of the required monitoring.

(2) Inspection and entry requirements that require that, upon presentation of credentials and other documents as may be required by law, the permittee shall allow authorized officials of the DEQ to perform the following:

(A) Enter upon the permittee's premises during reasonable/normal working hours where a source is located or emissions-related activity is conducted, or where records must be kept under the conditions of the permit;

(B) Have access to and copy, at reasonable times, any records that must be kept under the conditions of the permit;

(C) Inspect at reasonable times and using reasonable safety practices any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under the permit; and

(D) As authorized by the Oklahoma Clean Air Act, sample or monitor at reasonable times substances or parameters for the purpose of assuring compliance with the permit.

(3) A schedule of compliance if required under OAC 252:100-8-5(e)(8)(B).

(4) To the extent required under an applicable schedule of compliance and OAC 252:100-8-5(e)(8), progress reports, to be submitted semiannually or more frequently if specified in the applicable requirement or by the DEQ. Such progress reports shall contain the following:

(A) Dates for achieving the activities, milestones, or compliance required in the schedule of compliance, and dates when such activities, milestones or compliance were achieved; and

(B) An explanation of why any dates in the schedule of compliance were not or will not be met, and any preventive or corrective measures adopted.

(5) Requirements for compliance certification with terms and conditions contained in the permit that are federally

enforceable, including emission limitations, standards, or work practices. Each permit shall specify:

(A) The frequency (which shall be annually unless the applicable requirement or state-only requirement specifies submission more frequently) of submissions of compliance certifications;

(B) In accordance with paragraph (a)(3) of this ~~section~~ Section, a means for monitoring the compliance of the source with emissions limitations, standards, and work practices;

(C) A requirement that the compliance certification include the following:

(i) The identification of each term or condition of the permit that is the basis of the certification;

(ii) The permittee's current compliance status, as shown by monitoring data and other information available to the permittee;

(iii) Whether compliance was continuous or intermittent;

(iv) The method(s) used for determining the compliance status of the source, currently and over the reporting period as required by paragraph (a)(3) of this ~~section~~ Section; and

(v) Such other facts as the DEQ may require to determine the compliance status of the source;

(D) A requirement that all compliance certifications be submitted to EPA as well as to the DEQ;

(E) Such additional requirements as may be specified pursuant to sections 114(a)(3) and 504(b) of the Act; and

(6) Such other provisions as the DEQ may require.

(d) **Permit shield.**

(1) Each operating permit issued under this Part shall include a "permit shield" provision, which shall state that compliance with the terms and conditions of the permit (including terms and conditions established for alternate operating scenarios, emissions trading, and emissions averaging, but excluding terms and conditions for which the permit shield is expressly prohibited under this Subchapter) shall be deemed compliance with the applicable requirements identified and included in the permit.

(2) Upon request, the DEQ shall include in the permit or in a separate written finding issued with the permit a determination identifying specific requirements that do not apply to the source. The source shall specify in its application for such a determination the requirements for which the determination is requested. If the determination is issued in a separate finding, that finding shall be summarized in the permit. The permit shall state that the permit shield applies to any requirements so identified. A request for a determination to extend the shield to requirements deemed inapplicable to the source may be made either in the original permit application or in a subsequent application for a permit modification.

(3) A Part 70 permit that does not expressly state that a permit shield exists shall be presumed not to provide such a shield.

(4) Nothing in this ~~section~~ Section or in the permit shall alter or affect the following:

- (A) the provisions of section 303 of the Act, including the authority of the Administrator under that section;
- (B) the liability of an owner or operator of a source for any violation of applicable requirements or state-only requirements prior to or at the time of permit issuance;
- (C) the applicable requirements of the acid rain program, consistent with section 408(a) of the Act; or
- (D) the ability of EPA to obtain information from a source pursuant to section 114 of the Act.

(e) **Emergencies.**

~~(1) When used in this Subsection, "Emergency" means any situation arising from sudden and reasonably unforeseeable events beyond the control of the source, including acts of God, which situation requires immediate corrective action to restore normal operation, and that causes the source to exceed a technology based emission limitation under the permit, due to unavoidable increases in emissions attributable to the emergency. An emergency shall not include noncompliance to the extent caused by improperly designed equipment, lack of preventive maintenance, careless or improper operation, or operator error. Quantification of accidental releases shall be made by the best available method.~~

~~(2) (1)~~ An emergency constitutes an affirmative defense to an action brought for noncompliance with such technology-based emission limitations if the conditions of paragraph (e) (3) of this ~~section~~ Section and the reporting requirements of OAC 252:100-8-6(a) (3) (C) (iii) (I) are met.

~~(3) (2)~~ The affirmative defense of emergency shall be demonstrated through properly signed, contemporaneous operating logs or other relevant evidence that:

(A) An emergency occurred and that the permittee can identify the cause(s) of the emergency;

(B) The permitted facility was at the time being properly operated;

(C) During the period of the emergency the permittee took all reasonable steps to minimize levels of emissions that exceeded the emission standards or other requirements in the permit.

~~(4) (3)~~ In any enforcement proceeding, the permittee seeking to establish the occurrence of an emergency has the burden of proof.

~~(5) (4)~~ The provision in this subsection is in addition to any emergency or upset provision contained in any applicable requirement or OAC 252:100-9.

(f) **Operational flexibility.**

(1) **Applicant's duty to apply for alternative scenarios.** ~~Any operating scenario allowed for in an applicable Part 70 permit may be implemented by the A facility~~ may implement any operating scenario allowed for in its Part 70 permit without the need for any permit revision or any notification to the permitting authority. It is incumbent upon the Part 70 permit applicant to apply for any reasonably anticipated alternative facility operating scenarios at the time of initial or renewal permit application.

(2) **Changes resulting in no emissions increases.** A permitted Part 70 source may make changes within the facility that:

- (A) Are not modifications under any provision of Title I of the Act;
- (B) Do not cause any hourly or annual permitted emission rate of any existing emissions unit to be exceeded; and
- (C) Result in a net change in emissions of zero, provided that the facility notifies the DEQ and EPA in writing at least 7 days in advance of the proposed changes. The source, DEQ, and EPA shall attach each such notice to their copy of the relevant permit. For each such change, the written notification required above shall include a brief description of the change within the permitted facility, the date on which the change will occur, any change in emissions, and any permit term or condition that is no longer applicable as a result of the change. The permit shield described in OAC 252:100-8-6(d) does not apply to any change made pursuant to this subsection.

252:100-8-7. Permit issuance

(a) **Criteria for issuance.** A permit, permit modification, or renewal may be issued only if the applicable requirements of ~~27A O.S. Supp. 1995, 2-14-101 et seq.~~ 27A O.S. §§ 2-14-101 through 2-14-401; OAC 252:2-15; and this Chapter have been met and the DEQ has determined that the conditions of the permit provide for compliance with all applicable requirements and, for applications subject to OAC 252:100-8-8, that the requirements of that ~~section~~ Section have been satisfied.

(b) **Draft permits and notice thereof.** See OAC 252:2-15. ~~The draft permit shall be accompanied by a statement that sets forth the legal and factual basis for the draft permit conditions (including references to the applicable statutory or regulatory provisions)~~ A statement that sets forth the legal and factual basis for the draft permit conditions (including references to the applicable statutory or regulatory provisions) shall accompany the draft permit.

(c) **EPA review.** See OAC 252:100-8-8.

(d) **DEQ final action.** See OAC 252:2-15, and 252:100-8-8 when applicable.

(e) **Timeline for technical review and issuance.** The DEQ shall take final action on each application for a permit within 18 months after beginning its technical review in accordance with OAC 252:2-15-70 through 15-72-72 and OAC 252:100-8-4(b)(7).

(f) **Action priorities.** See OAC 252:100-8-4(b)(2) through (10) and OAC 252:100-8-7.1(a).

(g) **No issuance by default.** See 27A O.S. § 2-5-112(D).

252:100-8-7.2. Administrative permit amendments and permit modifications

(a) **Administrative permit amendments.**

(1) An administrative permit amendment:

(A) Corrects typographical errors;

(B) Identifies a change in the name, address, or phone number of any person identified in the permit, or provides a similar minor administrative change at the source;

(C) Requires more frequent monitoring or reporting by the permittee;

(D) Allows for a change in ownership or operational control

of a source where no other change in the permit is necessary, provided that a written agreement containing a specific date for transfer of permit responsibility, coverage, and liability between the current and new permittee has been submitted to the DEQ;

(E) Incorporates into the permit the requirements from preconstruction review permits issued by the DEQ under this Part.

(2) Administrative permit amendments for purposes of the acid rain portion of the permit shall be governed by 40 CFR Part 72.

(3) An administrative permit amendment shall be made by the DEQ in accordance with the following:

(A) The DEQ shall take final action on a request for an administrative permit amendment within 60 days from the date of receipt of such a request, and may incorporate the proposed changes without providing notice to the public or affected States provided that it designates any such permit revisions as having been made pursuant to this paragraph.

(B) The DEQ shall submit a copy of the revised permit to the Administrator upon the Administrator's request.

(C) The source may implement the changes addressed in the request for an administrative amendment immediately upon submittal of the request.

(4) The DEQ shall, upon taking final action granting a request for an administrative permit amendment, allow coverage by the permit shield in OAC 252:100-8-6(d) for administrative permit amendments made pursuant to ~~subparagraph 252:100-8-7.2(a)(1)(E)-7.2(a)(1)(E)~~ of this ~~section-Section~~.

(b) **Permit modification.** A permit modification is any revision to a permit that cannot be accomplished under subsection (a) of this ~~section-Section~~. A permit modification for purposes of the acid rain portion of the permit shall be governed by 40 CFR Part 72.

(1) **Minor permit modification procedures.**

(A) **Criteria.**

(i) Minor permit modification procedures may be used only for those permit modifications that:

(I) Do not violate any applicable requirement, or state-only requirements;

(II) Do not involve significant changes to existing monitoring, reporting or recordkeeping requirements in the permit;

(III) Do not require or change a case-by-case determination of an emission limitation or other standard, or a source-specific determination for temporary sources of ambient impacts, or a visibility or increment analysis;

(IV) Do not seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement or state-only requirement which the source has assumed to avoid some other applicable requirement or state-only requirement to which the source would otherwise be subject. Such terms and conditions include federally-enforceable emissions caps assumed to avoid classification as a modification under any provision of Title I and alternative emissions limits

approved pursuant to regulations promulgated under ~~§§112(i)(5)~~ § 112(i)(5) of the Act; and

(V) Are not modifications under any provision of Title I of the Act.

(ii) Notwithstanding OAC 252:100-8-7.2(b)(1)(A)(i) and ~~252:100-8-7.2(b)(2)(A)~~ 7.2(b)(2)(A), minor permit modification procedures may be used for permit modifications involving the use of economic incentives, marketable permits, emissions trading, and other similar approaches, to the extent that such minor permit modification procedures are explicitly provided for in the State's implementation plan or in applicable requirements promulgated by EPA.

(B) **Application.** To use the minor permit modification procedures, a source shall submit an application requesting such use which shall meet the permit application requirements of Tier I under OAC 252:2-15 and shall include the following:

i) A description of the change, the emissions resulting from the change, and any new applicable requirements or state-only requirements that will apply if the change occurs;

(ii) The source's suggested modification language;

(iii) Certification by a responsible official, that the application and the proposed modification meet the criteria for use of minor permit modification procedures; and

(iv) Completed forms for any notices required by OAC 252:2-15 and subparagraph (C) of this paragraph.

(C) **EPA and affected state notification.** If the proposed minor modification is of a permit that underwent EPA review in accordance with OAC 252:100-8-8, the provisions of that section shall apply to the minor modification application unless waived by the Administrator.

(D) **Timetable for issuance.** Within 90 days of the DEQ's receipt of a complete application under OAC 252:2-15 the DEQ shall:

(i) Issue the minor permit modification as approved;

(ii) Deny the minor permit modification application; or

(iii) Determine that the requested modification does not meet the minor permit modification criteria and should be reviewed under the significant modification procedures or administrative amendment procedures.

(E) **Source's ability to make change.** Immediately after filing an application meeting the requirements of these minor permit modification procedures, the source is authorized to make the change or changes proposed in the application. After the source makes the change and until the DEQ takes any of the actions specified in (1)(D)(i) through (iii) of this subsection, the source must comply with the applicable requirements and state-only requirements governing the change and the proposed permit terms and conditions. During this period, the source need not comply with the existing terms and conditions it seeks to modify. However, if the source fails to comply with its proposed permit terms and conditions during this time period, the existing permit terms and conditions it seeks to modify may be enforced against it.

(F) **Permit shield.** The permit shield under OAC 252:100-8-6(d) will not extend to minor permit modifications.

(G) **Permittee's risk in commencing construction.** The permittee assumes the risk of losing any investment it makes toward implementing a modification prior to receiving a permit amendment authorizing the modification. The DEQ will not consider the possibility of the permittee suffering financial loss due to such investment when deciding whether to approve, deny, or approve in modified form a minor permit amendment.

(2) **Significant modification procedures.**

(A) **Criteria.** Significant modification procedures shall be used for applications requesting permit modifications that:

(i) Involve any significant changes in existing monitoring requirements in the permit;.

(ii) Relax any reporting or recordkeeping requirements.

(iii) Change any permit condition that is required to be based on a case-by-case determination of an emission limitation or other standard, on a source-specific determination of ambient impacts, or on a visibility or increment analysis;

(iv) Seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement or state-only requirement which the source has assumed to avoid some other applicable requirement or state-only requirement to which the source would otherwise be subject. Such terms and conditions include:

(I) A federally enforceable emissions cap assumed to avoid classification as a modification under any provision of Title I;

(II) An alternative emissions limit approved pursuant to regulations promulgated under section 112(i)(5) of the Act; and

(v) Are modifications under any provision of Title I of the Act; and,

(vi) Do not qualify as minor permit modifications or administrative amendments.

(B) **Procedures for processing.** Significant permit modifications shall meet all requirements of these rules that are applicable to Tier II applications. The application for the modification shall describe the change, the emissions resulting from the change, and any new applicable requirements or state-only requirements that will apply if the change occurs.

(C) **Issuance.** The DEQ shall complete review of significant permit modifications within nine months after receipt of a complete application, but shall be authorized to extend that date by up to three months for cause.

252:100-8-8. Permit review by EPA and affected states

(a) **Applicability.** This ~~section~~ Section applies only to specific Tier II and III applications for Part 70 construction and/or operating permits and permit actions that have not been waived from compliance with this section by the Administrator.

(b) **Format.** To the extent practicable, information provided to

the EPA by applicants shall be in computer-readable format compatible with EPA's national database management system.

(c) **Recordkeeping.** The DEQ will keep for 5 years records required by this ~~section~~ Section and will submit to the Administrator such information as the Administrator may reasonably require to ascertain whether the State program complies with the requirements of the Act or of this Chapter.

(d) **Transmission of Part 70 applications to EPA.** For Part 70 Tier II and III applications subject to this section, the DEQ shall require an applicant upon filing to also provide a copy to the Administrator or the DEQ may submit a permit application summary form and any relevant portion of the permit application and compliance plan, in place thereof.

(e) **Transmittal of notice of draft permit to affected states.** See ~~27A O.S. Supp. 1995, § 2-5-112(E); 27A O.S. Supp. 1995, § 2-14-101 et seq.~~ 27A O.S. § 2-5-112(E); 27A O.S. §§ 2-14-101 through 2-14-401; and OAC 252:2-15.

(f) **Preparation and submittal of EPA review copy.**

(1) **Tier II applications.** For Tier II applications, the DEQ shall review public comments, revise the draft permit as appropriate and submit the revision to EPA for review no later than 60 days before the issuance deadline established in OAC 252:2-15-72 or, if none, by this Chapter.

(2) **Tier III applications.** For Tier III applications, the DEQ shall prepare a proposed permit according to ~~27A O.S. Supp. 1995, § 2-14-304~~ 27A O.S. § 2-14-304, and submit it to EPA for review upon the publication of notice of an administrative permit hearing opportunity.

(g) **Notice of non-acceptance.** As part of the DEQ's submittal of a revised draft permit (Tier II) or a proposed permit (Tier III) to the Administrator, the DEQ shall notify the Administrator and any affected State in writing of any refusal by the DEQ to accept all recommendations for the revised draft permit or proposed permit that the affected State submitted during the review period. The notice will include the DEQ's reasons for not accepting any such recommendation. The DEQ is not required to accept recommendations that are not based on applicable requirements of the Oklahoma Clean Air Act or these rules.

(h) **EPA review and non-objection.** Upon receipt of notice from the EPA that it will not object to:

(1) A revised draft permit based on a Tier II application, the DEQ shall issue the permit.

(2) A proposed permit based on a Tier III application, the DEQ shall issue the proposed permit as final unless an administrative permit hearing has been timely and properly requested.

(i) **EPA review and objection.**

(1) **Timing.** Except as specified in paragraph 5 of this subsection, no permit for which an application must be transmitted to the Administrator under subsection (a) of this ~~section~~ Section shall be issued if the Administrator objects to its issuance in writing within 45 days of receipt of the revised draft permit ~~(Tier I)~~ (Tier II) or proposed permit (Tier III) and all necessary supporting information.

(2) **Form of objection.** An EPA objection shall include a

statement of the Administrator's reasons for objection and a description of the terms and conditions that the permit must include to respond to the objections.

(3) **Additional grounds.** Failure of the DEQ to do any of the following also shall constitute grounds for an objection:

(A) Comply with subsections (d) or (e) of this ~~section~~ Section;

(B) Submit any information necessary to review adequately the revised draft permit (Tier II) or the proposed permit (Tier III); or

(C) Process the permit application according to the uniform permitting requirements of OAC 252:2-15.

(4) **Copy.** The Administrator will provide the permit applicant a copy of the objection.

(5) **DEQ response.** The DEQ shall consult with EPA and the applicant and shall either:

(A) **Amend permit.** Amend the permit and submit for approval an amended draft (Tier II) or proposed (Tier III) permit to EPA within 90 days after the date of EPA's objection, or

(B) **Give notice and issue.** Determine that one or more revisions sought by EPA are inconsistent with applicable state or federal statutes or regulations, inform EPA accordingly within 90 days following the date of the Administrator's objection, decline to make those particular revisions and:

(i) issue the amended or revised draft permit (Tier II) as final, or

(ii) issue the proposed permit (Tier III) as final unless an administrative permit hearing has been timely and properly requested.

(6) **Failure of DEQ to respond.** If the DEQ fails, within 90 days after the date of the EPA objection, to amend and resubmit the draft permit or proposed permit in response to the objection, the Administrator will issue or deny the permit in accordance with the requirements of EPA's Part 70 regulations.

(j) **Public petitions to the Administrator.** If the Administrator does not object in writing under subsection (h) of this section, any person that meets the requirements of this subsection may petition the Administrator within 60 days after the expiration of the Administrator's 45-day review period to make such objection. Any such petition shall be based only on objections to the permit that the petitioner raised with reasonable specificity during the public comment period provided for in ~~252:002-15~~ OAC 252:2-15, unless the petitioner demonstrates that it was impracticable to raise such objections within such period, or unless the grounds for such objection arose after such period. If the Administrator objects to the permit as a result of a petition filed under this subsection, the DEQ shall not issue the permit until EPA's objection has been resolved, except that a petition for review does not stay the effectiveness of a permit or its requirements if the permit was issued after the end of the 45-day review period and prior to an EPA objection. If the DEQ has issued a permit prior to receipt of an EPA objection under this subsection, the Administrator will modify, terminate, or revoke such permit, and shall do so consistent with the procedures in OAC 252:100-8-7 through ~~252:100-8-7.5~~ 7.5 except in unusual circumstances. If the

DEQ revokes the permit, it may thereafter issue only a revised permit that satisfies EPA's objection. In any case, the source will not be in violation of the requirement to have submitted a timely and complete application.

(k) **Effect on Tier III administrative permit hearing.** When a public petition or an EPA objection is registered on a proposed permit (Tier III) on which an administrative permit hearing has been requested in accordance with ~~27A O.S. Supp. 1995, Section 2-14-101 et seq.~~ 27A O.S. §§ 2-14-101 through 2-14-401, the DEQ may stay the evidentiary part of the hearing involving cross-examination until EPA objections are resolved or determined to be inconsistent with applicable laws.

PART 7. PREVENTION OF SIGNIFICANT DETERIORATION (PSD) REQUIREMENTS FOR ATTAINMENT AREAS

252:100-8-31. Definitions

The following words and terms when used in this Part shall have the following meaning, unless the context clearly indicates otherwise:

"Actual emission" means the actual rate of emissions of a pollutant from an emissions unit, as determined in accordance with the following:

(A) In general, actual emissions as of a particular date shall equal the average rate in tons per year at which the unit actually emitted the pollutant during a two-year period which precedes the particular date and which is representative of normal source operation. The reviewing authority may allow the use of a different time period upon a determination that it is more representative of normal source operation. Actual emissions shall be calculated using the unit's actual operating hours, production rates, and types of materials processed, stored, or combusted during the selected time period. Actual emissions may also be determined by source tests, or by best engineering judgment in the absence of acceptable test data.

(B) The reviewing authority may presume that source-specific allowable emissions for the unit are equivalent to the actual emissions of the unit.

(C) For any emissions unit which has not begun normal operations on the particular date, actual emissions shall equal the potential to emit of the unit on that date.

"Adverse impact on visibility" means visibility impairment which interferes with the management, protection, preservation or enjoyment of the visitor's visual experience of the Federal Class I area. This determination must be made by the DEQ on a case-by-case basis taking into account the geographic extent, intensity, duration, frequency and time of visibility impairments, and how these factors correlate with:

(A) times of visitor use of the Federal Class I area; and

(B) the frequency and timing of natural conditions that reduce visibility.

"Baseline area" means any areas designated as attainment or unclassifiable in which the major source or major modification establishing the minor source baseline date would construct or would have an air quality impact equal to or greater than 1 ~~ug/m³~~ ^{ug/m³}

$\mu\text{g}/\text{m}^3$ (annual average) of the pollutant for which the minor source baseline date is established.

"Baseline concentration" means that ambient concentration level which exists in the baseline area at the time of the applicable minor source baseline date.

(A) A baseline concentration is determined for each pollutant for which a minor source baseline date is established and shall include:

(i) the actual emissions representative of sources in existence on the applicable minor source baseline date, except as provided in (B) of this definition.

(ii) the allowable emissions of major sources which commenced construction before the major source baseline date but were not in operation by the applicable minor source baseline date. ~~(Effective May 11, 1991)~~

(B) The following will not be included in the baseline concentration and will affect the applicable maximum allowable increase(s):

(i) actual emissions from any major source on which construction commenced after the major source baseline date; and,

(ii) actual emissions increases and decreases at any source occurring after the minor source baseline date. ~~(Effective May 11, 1991)~~

"Baseline date" means:

(A) for major sources,

(i) in the case of particulate matter and sulfur dioxide, January 6, 1975, and,

(ii) in the case of nitrogen dioxide, February 8, 1988; and,

(B) for minor sources, the earliest date after the trigger date on which a major source or major modification (subject to 40 CFR 52.21 or OAC 252:100-8, Part 7) submits a complete application.

The trigger date is:

(i) in the case of particulate matter and sulfur dioxide, August 7, 1977, and

(ii) in the case of nitrogen oxides, February 8, 1988.

~~(Effective May 11, 1991)~~

~~"Best available control technology" means the control technology to be applied for a major source or modification is the best that is available as determined by the Executive Director on a case by case basis taking into account energy, environmental, costs and economic impacts of alternate control systems.~~

~~"Building, structure, facility or installation" means all of the pollutant emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person or persons under common control. Pollutant emitting activities shall be considered as part of the same industrial grouping if they belong to the same "Major Group" (i.e., which have the same two digit code) as described in the Standard Industrial Classification Manual, 1972, as amended by the 1977 Supplement.~~

"Complete" in reference to an application for a permit, means that the application contains all the information necessary for processing the application. Designating an application complete for purposes of permit processing does not preclude the reviewing

authority from requesting or accepting any additional information.

"Federal land manager" means the Secretary of the department with authority over the Federal Class I area or his representative.

"Innovative control technology" means any system of air pollution control that has not been adequately demonstrated in practice, but would have a substantial likelihood of achieving greater continuous emissions reduction than any control system in current practice or of achieving at least comparable reductions at lower cost in terms of energy, economics, or non-air quality environmental impacts.

"Major modification" means any physical change in or change in the method of operation of a major source that would result in a significant net emissions increase of any pollutant subject to regulation.

(A) Any net emissions increase that is significant for volatile organic compounds shall be considered significant for ozone.

(B) A physical change or change in the method of operation shall not include:

(i) routine maintenance, repair and replacement.

(ii) use of an alternate fuel or raw material by reason of any order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation) or by reason of a natural gas curtailment plan pursuant to the Federal Power Act.

(iii) use of an alternate fuel by reason of an order or rule under Section 125 of the Federal Clean Air Act.

(iv) use of an alternate fuel at a steam generating unit to the extent that the fuel is generated from municipal solid waste.

(v) Use of an alternate fuel or raw material by a source which:

(I) the source was capable of accommodating before January 6, 1975, unless such change would be prohibited under any enforceable permit limitation which was established after January 6, 1975; or,

(II) the source is approved to use under any permit issued under 40 CFR 52.21 or OAC 252:100-8.

(vi) An increase in the hours of operation or in the production rate, unless such change would be prohibited under any enforceable permit limitation which was established after January 6, 1975.

(vii) Any change in source ownership.

"Major stationary source" means any source which meets any of the following conditions:

(A) Any of the following sources of air pollutants which emits, or has the potential to emit, 100 tons per year or more of any pollutant subject to regulation:

(i) carbon black plants (furnace process),

(ii) charcoal production plants,

(iii) chemical process plants,

(iv) coal cleaning plants (with thermal dryers),

(v) coke oven batteries,

(vi) fossil-fuel boilers (or combination thereof) totaling more than 250 million BTU per hour heat input;

(vii) fossil fuel-fired steam electric plants of more than 250 million BTU per hour heat input,

- (viii) fuel conversion plants,
- (ix) glass fiber processing plants,
- (x) hydrofluoric, sulfuric or nitric acid plants,
- (xi) iron and steel mill plants,
- (xii) kraft pulp mills,
- (xiii) lime plants,
- (xiv) municipal incinerators capable of charging more than 250-50 tons of refuse per day,
- (xv) petroleum refineries,
- (xvi) petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels,
- (xvii) phosphate rock processing plant,
- (xviii) portland cement plants,
- (xix) primary aluminum ore reduction plants,
- (xx) primary copper smelters,
- (xxi) primary lead smelters,
- (xxii) primary zinc smelters,
- (xxiii) secondary metal production plants,
- (xxiv) sintering plants,
- (xxv) sulfur recovery plants, or
- (xxvi) taconite ore processing plants.

(B) Any other source not on the list in (A) of this definition which emits, or has the potential to emit, 250 tons per year or more of any pollutant subject to regulation.

(C) Any physical change that would occur at a source not otherwise qualifying as a major source under (A) and (B) of this definition if the change would constitute a major source by itself.

(D) A major source that is major for volatile organic compounds shall be considered major for ozone.

"Natural conditions" mean naturally occurring phenomena against which any changes in visibility are measured in terms of visual range, contrast or coloration.

"Net emissions increase" means:

(A) The amount by which the sum of the following exceeds zero:

(i) any increase in actual emissions from a particular physical change or change in the method of operation at a source; and,

(ii) any other increases and decreases in actual emissions at the source that are contemporaneous with the particular change and are otherwise creditable.

(B) An increase or decrease in actual emissions is contemporaneous with the increase from the particular change only if it occurs within 3 years before the date that the increase from the particular change occurs.

(C) An increase or decrease in actual emissions is creditable only if the Executive Director has not relied on it in issuing a permit under OAC 252:100-8, Part 7, which permit is in effect when the increase in actual emissions from the particular change occurs.

(D) An increase or decrease in actual emissions of sulfur dioxide, particulate matter, or nitrogen oxides which occurs before the applicable minor source baseline date is creditable only if it is required to be considered in calculating the amount of maximum allowable increases remaining available.

~~(Effective May 11, 1991)~~

(E) An increase in actual emissions is creditable only to the extent that the new level of actual emissions exceeds the old level.

(F) A decrease in actual emissions is creditable only to the extent that:

(i) the old level of actual emissions or the old level of allowable emissions, whichever is lower, exceeds the new level of actual emissions;

(ii) it is enforceable at and after the time that actual construction on the particular change begins;

(iii) it has approximately the same qualitative significance for public health and welfare as that attributed to the increase from the particular change.

(G) An increase that results from a physical change at a source occurs when the emission unit on which construction occurred becomes operational and begins to emit a particular pollutant. Any replacement unit that requires shakedown becomes operational only after a reasonable shakedown period, not to exceed 180 days.

"Significant" means:

(A) In reference to a net emissions increase or the potential of a source to emit any of the following pollutants, a rate of emissions that would equal or exceed any of the following rates:

(i) carbon monoxide: 100 tons per year (tpy),

(ii) nitrogen oxides: 40 tpy,

(iii) sulfur dioxide: 40 tpy,

(iv) particulate matter: 25 tpy of particulate matter emissions or 15 tpy of PM-10 emissions,

(v) ozone: 40 tpy of volatile organic compounds,

(vi) lead: 0.6 tpy,

(vii) asbestos: 0.007 tpy,

(viii) beryllium: 0.0004 tpy,

(ix) mercury: 0.1 tpy,

(x) vinyl chloride: 1 tpy,

(xi) fluorides: 3 tpy,

(xii) sulfuric acid mist: 7 tpy,

(xiii) hydrogen sulfide (H₂S): 10 tpy,

(xiv) total reduced sulfur (including H₂S): 10 tpy, and

(xv) reduced sulfur compounds (including H₂S): 10 tpy.

(B) Notwithstanding (A) of this definition, "significant" means any emissions rate or any net emissions increase associated with a major source or modification which would construct within 6 miles of a Class I area, and have an impact on such area equal to or greater than 1 $\mu\text{g}/\text{m}^3$ - $\mu\text{g}/\text{m}^3$ (24-hour average).

"Visibility impairment" means any humanly perceptible reduction in visibility (visual range, contrast and coloration) from that which would have existed under natural conditions.

252:100-8-33. Exemptions

(a) Exemptions from PSD requirements. PSD requirements do not apply to a particular source or modification if:

(1) It is a nonprofit health or educational institution.

(2) The source is major by virtue of fugitive emissions, to the extent quantifiable, included in calculating the potential to

emit and is a source other than:

(A) One of the categories listed in (A)(i) through (xxvi) under the definition of "Major stationary source" in OAC 252:100-8-31, or

(B) A stationary source category which, as of August 7, 1980, is being regulated by NSPS or NESHAP.

(3) The source or modification is a portable stationary source which has previously received a permit under the PSD requirements and proposes to relocate to a temporary new location from which its emissions would not impact a Class I area or an area where an applicable increment is known to be violated.

(b) **Exemption from air quality impact evaluation.**

(1) The requirements of OAC 252:100-8-35 are not applicable if the emissions, with respect to a particular pollutant, would be temporary and impact no Class I area and no area where an applicable increment is known to be violated.

(2) The requirements of OAC 252:100-8-35 are not applicable to the emissions, with respect to a particular pollutant, to a modification of a major source that was in existence on March 1, 1978 if the net increase in allowable emissions of each regulated pollutant, after the application of ~~best available control technology~~ BACT, would be less than 50 tons per year.

(c) **Exemption from monitoring requirements.**

(1) The monitoring requirements of OAC 252:100-8-35 are not applicable for a particular pollutant if the emission increase of the pollutant from a new source or the net emissions increase of the pollutant from a modification would cause, in any area, air quality impacts less than the following listed amounts, or are pollutant concentrations that are not on the list.

(A) Carbon monoxide - $575 \text{ } \mu\text{g}/\text{m}^3$ - $\mu\text{g}/\text{m}^3$, 8-hour average,

(B) Nitrogen dioxide - $14 \text{ } \mu\text{g}/\text{m}^3$ - $\mu\text{g}/\text{m}^3$, annual average,

(C) Particulate matter - $10 \text{ } \mu\text{g}/\text{m}^3$ - $\mu\text{g}/\text{m}^3$, TSP, 24-hour average, or $10 \text{ } \mu\text{g}/\text{m}^3$ - $\mu\text{g}/\text{m}^3$ PM-10, 24-hour average,

(D) Sulfur dioxide - $13 \text{ } \mu\text{g}/\text{m}^3$ - $\mu\text{g}/\text{m}^3$, 24-hour average,

(E) Ozone - see (N) below,

(F) Lead - $0.1 \text{ } \mu\text{g}/\text{m}^3$ - $\mu\text{g}/\text{m}^3$, 24-hour 3-month average,

(G) Mercury - $0.25 \text{ } \mu\text{g}/\text{m}^3$ - $\mu\text{g}/\text{m}^3$, 24-hour average,

(H) Beryllium - 0.0005 - $0.001 \text{ } \mu\text{g}/\text{m}^3$ - $\mu\text{g}/\text{m}^3$, 24-hour average,

(I) Fluorides - $0.25 \text{ } \mu\text{g}/\text{m}^3$ - $\mu\text{g}/\text{m}^3$, 24-hour average,

(J) Vinyl chloride - $15 \text{ } \mu\text{g}/\text{m}^3$ - $\mu\text{g}/\text{m}^3$, 24-hour average,

(K) Total reduced sulfur - $10 \text{ } \mu\text{g}/\text{m}^3$ - $\mu\text{g}/\text{m}^3$, 1-hour average,

(L) Hydrogen sulfide - 0.04 - $0.2 \text{ } \mu\text{g}/\text{m}^3$ - $\mu\text{g}/\text{m}^3$, 1-hour average,

or

(M) Reduced sulfur compounds - $10 \text{ } \mu\text{g}/\text{m}^3$ - $\mu\text{g}/\text{m}^3$, 1-hour average.

(N) No de minimis air quality level is provided for ozone.

However, any net increase of 100 tons per year or more of volatile organic compounds subject to PSD would be required to perform an ambient impact analysis, including the gathering of ambient air quality data.

(2) The requirements for air quality monitoring in OAC 252:100-8-35(b), (c) and (d)(2) shall not apply to a source or modification that was subject to 40 CFR 52.21 as in effect on June 19, 1978, if a permit application was submitted before June 8, 1981 and the Executive Director subsequently determined that

the application was complete except for OAC 252:100-8-35(b), (c) and (d)(2). Instead, the requirements in 40 CFR 52.21(m)(2) as in effect on June 19, 1978, shall apply to such source or modification.

(3) The requirements for air quality monitoring in OAC 252:100-8-35(b), (c), and (d)(2) shall not apply to a source or modification that was not subject to 40 CFR 52.21 as in effect on June 19, 1978, if a permit application was submitted before June 8, 1981 and the ~~Executive~~ Director subsequently determined that the application as submitted was complete, except for the requirements in OAC 252:100-8-35(b), (c) and (d)(2).

(4) The ~~Executive~~ Director shall determine if the requirements for air quality monitoring of PM-10 in OAC 252:100-8-35(a) through ~~252:100-8-35(e)-(c)~~ and OAC 252:100-8-35(d)(2) may be waived for a source or modification when an application for a permit was submitted on or before June 1, 1988 and the ~~Executive~~ Director subsequently determined that the application, except for the requirements for monitoring particulate matter under OAC 252:100-8-35(a) through ~~252:100-8-35(e)-(c)~~ and OAC 252:100-8-35(d)(2), was complete before that date.

(5) The requirements for air quality monitoring of PM-10 in OAC 252:100-8-35(b), (c), (d)(2) and (d)(6) shall apply to a source or modification if an application for a permit was submitted after June 1, 1988 and no later than December 1, 1988. The data shall have been gathered over at least the period from February 1, 1988 to the date the application becomes otherwise complete in accordance with the provisions of OAC 252:100-8-33(b)(1), except that if the ~~Executive~~ Director determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period (not to be less than 4 months), the data required by OAC 252:100-8-35(b)(1) and OAC 252:100-8-35(c) shall have been gathered over that shorter period.

(d) **Exemption from BACT requirements and monitoring requirements.** If a complete permit application for a source or modification was submitted before August 7, 1980 the requirements for ~~best available control technology~~ BACT in OAC 252:100-8-34 and for monitoring in OAC 252:100-8-35(a) through ~~252:100-8-35(e)-(c)~~ and OAC 252:100-8-35(d)(2) through ~~252:100-8-35(d)(4)-(4)~~ are not applicable. Instead, the federal requirements at 40 CFR 52.21(j) and (n) as in effect on June 19, 1978 are applicable to any such source or modification.

(e) **Exemption of modifications.** As specified in the applicable definitions of OAC 252:100-8-31, 252:100-8-1.1, and 252:100-1, the requirements of OAC 252:100-8, Part 7 for PSD and OAC 252:100-8, Part 9 for nonattainment areas are not applicable to a modification if the existing source was not major on August 7, 1980 unless the proposed addition to that existing minor source is major in its own right.

(f) **Exemption from impact analyses.** The requirements of OAC 252:100-8-35 and OAC 252:100-8-36 do not apply to a source or modification with respect to any maximum allowable increase for nitrogen oxides if the owner or operator of the source or modification submitted a completed application for a permit before February 8, 1988.

(g) **Exemption from increment consumption.** Excluded from increment

consumption are the following cases:

(1) Concentrations from an increase in emissions from any source converting from the use of petroleum products, natural gas, or both by reason of any order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation), or by reason of a natural gas curtailment plan pursuant to the Federal Power Act. Such exclusion is limited to five years after the effective date of the order or plan.

(2) Emissions of particulate matter from construction or other temporary emission-related activities of new or modified sources.

(3) A temporary increase of sulfur dioxide, particulate matter, or nitrogen oxides by order or authorized variance from any source.

PART 9. MAJOR SOURCES AFFECTING NONATTAINMENT AREAS

252:100-8-51. Definitions

The following words and terms, when used in this Part, shall have the following meaning, unless the context clearly indicates otherwise:

"Actual emissions" means the actual rate of emissions of a pollutant from an emissions unit, as determined in accordance with the following:

(A) In general, actual emissions as of a particular date shall equal the average rate in tons per year at which the unit actually emitted the pollutant during a two-year period which precedes the operation. The reviewing authority may allow the use of a different time period upon a determination that it is more representative of normal source operation. Actual emissions shall be calculated using the unit's actual operating hours, production rates, and types of materials processed, stored, or combusted during the selected time period. Actual emissions may also be determined by source tests, or by best engineering judgment in the absence of acceptable test data.

(B) The reviewing authority may presume that source-specific allowable emissions for the unit are equivalent to the actual emissions of the unit.

(C) For any emissions unit which has not begun normal operations on the particular date, actual emissions shall equal the potential to emit of the unit on that date.

~~"Building, structure, facility" means all of the pollutant emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person (or persons under common control). Pollutant emitting activities shall be considered as part of the same industrial grouping if they belong to the same "Major Group" (i.e., which have the same two digit code) as described in the Standard Industrial Classification Manual, 1972, as amended by the 1977 Supplement.~~

~~"Installation" means an identifiable piece of process equipment.~~

"Lowest achievable emissions rate" means the control technology to be applied to a major source or modification which the Executive Director, on a case by case basis, determines is achievable for a

source based on the lowest achievable emission rate achieved in practice by such category of source (i.e., lowest achievable emission rate as defined in the Federal Clean Air Act).

"Major modification" means any physical change in, or change in the method of operation of, a major source that would result in a significant net emissions increase of any pollutant subject to regulation.

(A) Any net emissions increase that is significant for volatile organic compounds shall be considered significant for ozone.

(B) A physical change or change in the method of operation shall not include:

(i) routine maintenance, repair and replacement;

(ii) use of an alternate fuel or raw material by reason of any order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation) or by reason of a natural gas curtailment plan pursuant to the Federal Power Act;

(iii) use of an alternate fuel by reason of an order or rule under Section 125 of the Federal Clean Air Act;

(iv) use of an alternate fuel at a steam generating unit to the extent that the fuel is generated from municipal solid waste;

(v) Use of an alternate fuel or raw material by a source which:

(I) the source was capable of accommodating before December 21, 1976, unless such change would be prohibited under any enforceable permit limitation which was established after December 21, 1976; or,

(II) the source is approved to use under any permit issued under 40 CFR 52.21 or OAC 252:100-7 or 8.

(vi) An increase in the hours of operation or in the production rate unless such change would be prohibited under any enforceable permit limitation which was established after December 21, 1976, or

(vii) any change in source ownership.

"Major stationary source" means:

(A) any stationary source of air pollutants which emits, or has the potential to emit, 100 tons per year or more of any pollutant subject to regulation; or,

(B) any physical change that would occur at a source not qualifying under (A) of this definition as a major source, if the change would constitute a major source by itself.

(C) for ozone, a source that is major for volatile organic compounds shall be considered major.

"Net emissions increase" means:

(A) The amount by which the sum of the following exceeds zero:

(i) any increase in actual emissions from a particular physical change or change in the method of operation at a source; and,

(ii) any other increases and decreases in actual emission at the source that are contemporaneous with the particular change and are otherwise creditable.

(B) An increase or decrease in actual emissions is contemporaneous with the increase from the particular change only if it occurs within 3 years before the date that the

increase from the particular change occurs.

(C) An increase or decrease in actual emissions is creditable only if the ~~Executive Director~~ has not relied on it in issuing a permit under ~~252:100-8~~, Part 9 of this Subchapter, which permit is in effect when the increase in actual emissions from the particular change occurs.

(D) An increase in actual emissions is creditable only to the extent that the new level of actual emissions exceeds the old level.

(E) A decrease in actual emissions is creditable only to the extent that:

(i) the old level of actual emissions or the old level of allowable emissions, whichever is lower, exceeds the new level of actual emissions;

(ii) it is enforceable at and after the time that actual construction on the particular change begins;

~~(iii)~~ (iii) the reviewing authority has not relied on it in issuing any permit under State air quality rules; and,

(iv) it has approximately the same qualitative significance for public health and welfare as that attributed to the increase from the particular change.

(F) An increase that results from a physical change at a source occurs when the emission unit on which construction occurred becomes operational and begins to emit a particular pollutant. Any replacement unit that requires shakedown becomes operational after a reasonable shakedown period, not to exceed 180 days.

~~"Reconstruction" means the replacement of components of an existing source (which will then be treated as a new source for purposes of Part 9 of this Subchapter) to the extent that will be determined by the Executive Director based on:~~

~~(A) The fixed capital cost (the capital needed to provide all the depreciable components) of the new components exceeds 50% of the fixed capital cost of a comparable entirely new source; and,~~

~~(B) The estimated life of the source after the replacements is comparable to the life of an entirely new source; and,~~

~~(C) the extent to which the components being replaced cause or contribute to the emissions from the source.~~

~~"Resource recovery facility" means any facility at which solid waste is processed for the purpose of extracting, converting to energy, or otherwise separating and preparing solid waste for reuse. Energy conversion facilities must utilize solid waste to provide more than 50 percent of the heat input to be considered a resource recovery facility under Part 9 of this Subchapter.~~

~~"Significant" means, in reference to a net emissions increase or the potential of a source to emit any of the following pollutants, a rate of emissions that would equal or exceed any of the following rates:~~

~~(A) Carbon monoxide: 100 tons per year (tpy),~~

~~(B) Nitrogen oxides: 40 tpy,~~

~~(C) Sulfur dioxide: 40 tpy,~~

~~(D) Particulate matter: 15 tpy of PM-10 emissions,~~

~~(E) Ozone: 40 tpy of volatile organic compounds, or~~

~~(F) Lead: 0.6 tpy.~~

Proposed new sources and source modifications to which Part 9 of this Subchapter ~~are~~ is applicable are determined by size, geographical location and type of emitted pollutants:

(1) **Size.**

(A) Permit review will apply to sources and modifications that emit any regulated pollutant in major amounts. These quantities are specified in the definitions for major stationary source, major modification, potential to emit, net emissions increase, significant, and other associated definitions in OAC 252:100-8-51, 252:100-8-1.1, and ~~252:100-1~~ 252:100-1-3.

(B) At such time that a particular source or modification becomes major solely by virtue of a relaxation in any enforceable permit limitation which was established after August 7, 1980 on the capacity of the source or modification otherwise to emit a pollutant, such as a restriction on hours of operation, then the requirements of Parts 1, 3, 5, and 9 of this Subchapter shall apply to that source or modification as though construction had not yet commenced on it.

(2) **Location.**

(A) Sources and modifications that are major in size and proposed for construction in an area which has been designated as nonattainment for any applicable ambient air quality standard are subject to the requirements for the nonattainment area, if the source or modification is major for the nonattainment pollutant(s) of that area.

(B) In addition, the requirements of a PSD review (Part 7 of this Subchapter) would be applicable if any other regulated pollutant other than the nonattainment pollutant is emitted in significant amounts by that source or modification.

(3) **Location in attainment or unclassifiable area but causing or contributing to NAAQS violation.**

(A) A proposed major source or major modification that would locate in an area designated attainment or unclassifiable is considered to cause or contribute to a violation of the national ambient air quality standards when such source or modification would, as a minimum, exceed the following significance levels at any locality that does not or would not meet the applicable national standard:

Pollutant	Concentration, ug/m³ <u>ug/m³</u>				
	Averaging Time (hours)				
	Annual	24	8	3	1
SO ₂	1.0	5	25		
PM 10	1.0	5			
NO ₂	1.0				
CO			500		2000

(i) SO₂:

(I) 1.0 ug/m³ annual average;

(II) 5 ug/m³ 24-hour average;

(III) 25 ug/m³ 3-hour average;

(ii) PM-10:

(I) 1.0 ug/m³ annual average;

(II) 5 ug/m³ 24-hour average;

(iii) NO₂: 1.0 ug/m³ annual average;

(iv) CO:

(I) 500 $\mu\text{g}/\text{m}^3$ 8-hour average;

(II) 2000 $\mu\text{g}/\text{m}^3$ one-hour average.

(B) A proposed major source or major modification subject to OAC 252:100-8-52(3)(A) may reduce the impact of its emissions upon air quality by obtaining sufficient emissions reductions to, at a minimum, compensate for its adverse ambient impact where the proposed source or modification would otherwise cause or contribute to a violation of any national ambient air quality standard. In the absence of such emission reductions, a permit for the proposed source or modification shall be denied.

(C) The requirements of OAC 252:100-8-52(3)(A) and (B) shall not apply to a major source or major modification with respect to a particular pollutant if the owner or operator demonstrates that, as to that pollutant, the source or modification is located in an area designated nonattainment.

~~(B)-(D) Sources of volatile organic compounds located outside a designated ozone nonattainment area will be presumed to have no significant impact on the designated nonattainment area. If ambient monitoring indicates that the area of source location is in fact nonattainment, then the source may be granted its permit since the area has not yet been designated nonattainment.~~

~~(C)-(E) Sources locating in an attainment area but impacting on a nonattainment area above the significant levels listed in OAC 252:100-8-52(3) are exempted from the condition of OAC 252:100-8-54(4)(A).~~

~~(D)-(F) The determination whether a source or modification will cause or contribute to a violation of an applicable ambient air quality standard for sulfur dioxide, particulate matter or carbon monoxide will be made on a case by case basis as of the proposed new source's start-up date by an atmospheric simulation model. For sources of nitrogen oxides the model can be used for an initial determination assuming all the nitric oxide emitted is oxidized to nitrogen dioxide by the time the plume reaches ground level, and the initial concentration estimates will be adjusted if adequate data are available to account for the expected oxidation rate.~~

~~(E)-(G) The determination as to whether a source would cause or contribute to a violation of applicable ambient air quality standards will be made on a case by case basis as of the new source's start-up date. Therefore, if a designated nonattainment area is projected to be attainment as part of the state implementation plan control strategy by the new source start-up date, offsets would not be required if the new source would not cause a new violation.~~

~~(F) Sources causing a new violation of applicable ambient air standards as determined by the Executive Director but not contributing to an existing violation, will be approved if both of the following conditions are met:~~

~~(i) The new source is required to meet a more stringent emission limitations and/or the control of existing sources below allowable levels so that the new violation of ambient standards does not occur.~~

~~(ii) The new emission limitations for the new source, as well as for any existing sources affected, are enforceable under the Oklahoma and Federal Clean Air Acts.~~

OAC 252:100-8
Additional Comments

**CHAPTER 100. AIR POLLUTION CONTROL
SUBCHAPTER 8. OPERATING PERMITS (PART 70)**

EXECUTIVE SUMMARY: The proposed amendments to Subchapter 8 include the incorporation of a new permit classification system; streamlining and simplifying the permit rules by moving the requirements for construction permits for Part 70 sources from Subchapter 7 to Subchapter 8, moving the requirement to pay annual operating fees from Subchapter 8 to Subchapter 5, and reorganizing the material in Subchapter 8 for clarity and ease of use; the revisions necessary to meet the federal requirements for final approval of the Oklahoma Operating Permits Program under Title V of the federal Clean Air Act and 40 CFR Part 70. The new permit classification system introduces general permits for construction of Part 70 sources. The amendments to meet the requirements for final approval of the Title V program include the incorporation by reference of federal rules governing case-by-case MACT determinations (40 CFR §§ 63.40, 63.41, 63.43 and 63.44).

STATUTORY AUTHORITY: Environmental Quality Board, 27A O.S. Supp. 1993, §§ 2-2-101 and 2-5-101 et seq., Oklahoma Clean Air Act.

DIFFERENCES FROM ANALOGOUS FEDERAL RULES: Part of the proposed revisions will be accomplished by incorporating the federal rules by reference. In general the other proposed revisions were not substantive, but changes in format and reorganization of material. There are no analogous federal rules for the inclusion of general construction permits for Part 70 sources. The use of general permits is expected to stream line the permitting program for both the regulated community and the DEQ. The purpose of the revisions required by EPA in their Notice of February 5, 1996, was to correct differences between the State rule and the analogous federal rule.

ENVIRONMENTAL BENEFIT STATEMENT: Not required because these rules are not more stringent than corresponding federal rules.

SUMMARY OF COMMENTS AND RESPONSES:

Letter of Comments from Charles R. Evans of Delhi Gas Pipeline Corporation.

- Comment:** DEQ should distinguish between insignificant activities and trivial activities in areas where there is overlap e.g., storage tanks constructed with a capacity less than 39,894 gallons which store VOC with a vapor pressure less than 1.5 psia at maximum storage temperature are included on the insignificant activities list and Fuel/VOC storage tanks with less than or equal to 1000 gallons capacity having a true vapor pressure at storage conditions less than 1.5 psia are on the trivial list. Mr. Evans suggested that items that overlap should be considered as trivial activities.

Response: Fuel/VOC storage tanks with capacities of 1000 gallons or less and vapor pressure less than 1.5 psia have been removed from the trivial activities list since AQD does

not regulate these tanks. Thus overlap is no longer a problem in this case.

2. **Comment:** "Emissions from residential housing units, dormitories, and multifamily dwellings to include fuel burning for the purposes of heating except prohibited open burning" is included on page 5 of the trivial activities list under Residential. The commenter recommends that offices or similar places of work be added to this item.

Response: Space heating for offices and similar places of work is already addressed on page 1 of the insignificant activities list under Combustion Equipment. The staff believes that this is a more appropriate place for space heating for commercial premises.

3. **Comment:** Mr. Evans suggested that the trivial activities list be modified to make clear that both electric motors and the units they operate (specifically natural gas compressors) are considered trivial.

Response: Since electric motors and electric powered generators, chillers, air compressors and pumps have essentially no air emissions, they are not subject to air quality rules and, therefore, it is not necessary to include them on the trivial activities list. The staff did not agree that other types of equipment powered by electric motors would have only trivial emissions.

4. **Comment:** It was suggested that the item in Appendix J that included emissions from the blowdown of compressors or other vessels containing natural gas or liquid hydrocarbons for the purpose of maintenance due to emergency circumstances be modified to include emissions from depressurization during startup, shut down, maintenance or other emergencies of such compressors or other vessels, since historically EPA has not regulated these emissions.

Response: Staff concurs. These changes were included in the list.

5. **Comment:** It was recommended that the language regarding fugitive emissions from component additions (e.g. valves, etc.) in Appendix J be clarified and that fugitive emissions from components not subject to a fugitive monitoring plan be added.

Response: The language was modified to make it clear that VOC fugitive emissions from component additions regulated by a fugitive monitoring program where the total increase is less than one ton per year of any criteria pollutant or the de minimis levels set forth in 252:100-41-43 are considered trivial. Staff concurred with the request to include VOC emissions from component additions not regulated by a fugitive

monitoring program providing no applicable requirement is triggered when the components are added.

6. **Comment:** It was suggested that methanol storage tanks less than or equal to 10,000 gallons in volume with an annual throughput of no more than 50,000 gallons be added to the trivial activities list.

Response: Methanol storage tanks of 400 gallons or greater are subject to 252:100-37-15 since the as-stored vapor pressure should be greater than 1.5 psia. Since there is an applicable requirement for these tanks, they cannot be considered trivial activities.

7. **Comment:** It was suggested that cathodic protection systems be added to the trivial list.

Response: Staff felt that these systems are not regulated and, therefore, there is no need to include them on the trivial activities list.

Letter of Comments dated January 8, 1998, from Jole C. Luehrs, Chief, Air Permits Section, U. S. EPA, Region 6, Dallas, Texas.

1. **Comment:** It was stated that the language in item (B)(viii) (municipal incinerators) under the definition of "Major source" as found in 252:100-8, Part 5, and item (A)(xiv) (municipal incinerators) under the definition of "Major stationary source" as found in 252:100-8, Part 7 should be changed to reflect Part C, Prevention of Significant Deterioration of Air Quality, Subpart 1, Section 169, of the Clean Air Act Amendments of 1990. The language should read "municipal incinerators capable of charging more than 50 tons of refuse per day," instead of "municipal incinerators capable of charging more than 250 tons of refuse per day." This comment was reiterated by Mr. Rick Barrett of EPA Region 6 at the Hearing on January 9, 1998.

Response: Staff agreed to review Chapter 100 to determine all of the places where this change needs to be made, and then to propose appropriate rule revisions later this year. At this time, the only municipal waste combustor in Oklahoma that might be affected by such a rule change would only be impacted if it were modified so as to significantly increase its emissions. There are no indications that there are any plans to do so at this time. Therefore, EPA agreed that revising the rule later this year would be acceptable.

Comments made at the 1/9/98 Air Quality Council Meeting

1. **Comment:** Dr. Larry Canter asked, if incorporation by reference of a previous permit is allowed in the permit renewal, how the Department will insure that the previous permit(s) are not thrown away and the information thus becoming unavailable.

Response: Active permit files are never purged. They contain everything relating to the permit. When a permit ceases to be active, it is archived according to Department procedures and should not be thrown out.

2. **Comment:** Dole McWhirter was concerned that, if incorporation by reference of previous permit is allowed for permit renewals, it would then require both permits in order to know what the permit conditions are.

Response: The particular Subsection under discussion concerns the application content and simplifies permit applications by allowing the applicant to reference the previous permit when information is unchanged. All the standards, limitations, and conditions that remain pertinent to the facility will be repeated in the "new" permit. They will not be referenced. The "new" permit will stand alone.

3. **Comment:** Rick Barrett, EPA, Region 6, repeated the comment made in the 1/8/98 letter from Jole C. Luehrs.

RULE IMPACT STATEMENT: Attached.

11/14/00 Board mtg

CHAPTER 100. AIR POLLUTION CONTROL
SUBCHAPTER 8. PERMITS FOR PART 70 SOURCES

EXECUTIVE SUMMARY:

The proposed revisions to Sections 1.1, 1.4, 1.5, 1.7, 2, 3, 4, 5, 6, 7, 7.2, 8, 31, 33, 51, and 52 of Oklahoma Administrative Code 252:100-8, Permits for Part 70 Sources, correct errors, clarify language, add definitions, delete definitions, and add fee categories for construction permit authorizations and modifications. Substantive changes include amending the definition of "trivial activities" in Section 2 by deleting the exception for activities that are subject to an applicable requirement. The amendments to Section 4(a)(1) clarify which modifications to Part 70 sources require construction permits. The changes in Section 5(d)(1)(A) clarify that best available control technology (BACT) is not required for modifications that result in emissions increases of less than 100 tons per year, unless the Prevention of Significant Deterioration rules in Part 7 would require it. The reporting time in Section 6(a)(3)(C) for excess emissions caused by emergencies or upsets would be changed from 24 hours to the end of the next working day to make it consistent with Subchapter 9 reporting requirements. A substantive change is proposed for the definition of "major stationary source" in Section 31, where paragraph (xiv) would be changed to read "municipal incinerators capable of charging more than 50 tons of refuse per day." This change is required by the 1990 amendment to section 169(1) of the federal Clean Air Act. The changes to Section 52 were adopted in 1989 but were accidentally excluded during codification of the rules. Section 4(a)(2)(C) updates the incorporation by reference of 40 CFR 63.41, 40 CFR 63.43, and 40 CFR 63.44 to July 1, 2000.

DIFFERENCES FROM ANALOGOUS FEDERAL RULES:

None of the changes that were made to this rule creates a difference from analogous federal rules.

ENVIRONMENTAL BENEFIT STATEMENT:

Not required because the revisions to this rule does not make the rule more stringent than corresponding federal rules.

SUMMARY OF COMMENTS AND RESPONSES:

Attached.

WRITTEN COMMENTS WITH STAFF RESPONSES

Trinity Consultants - memo received from Don Whitney via e-mail on June 27, 2000 (Comments on June 14, 2000 draft rule)

1. **COMMENT:** Trinity Consultants believes there is little logic in requiring a construction permit for routine replacement, repair and minor modification which involve only a few pounds per year increase in emissions or the addition of a few valves to an existing LDAR program. Trinity Consultants recommends that OAC 252:100-8-4(a) be rewritten as follows: "(1) Construction permit required. No person shall begin actual construction or installation of any new source that will require a Part 70 operating permit without first obtaining a DEQ-issued construction permit. A construction permit is also required in the following circumstances unless such construction or modification is specifically authorized in a Part 70 permit: (A) A piece of equipment or a process is added that is subject to NSPS or NESHAP except that the Director may waive this requirement for Subparts which are currently effective for similar equipment or processes at the facility such as leak checking. (B) Any physical change that would increase actual emissions from that unit or process more than 5 tons per year of any criteria pollutant, more than 2 tons per year of any one HAP or more than 5 tons per year of two or more HAPs. In addition to the requirements of this Part, sources subject to Part 7 or Part 9 of this Subchapter must also meet the applicable requirements contained therein."

RESPONSE: Staff agrees. It was not our intent to require construction permits for such routine replacement, repair, and minor modifications. The Section has been rewritten to more clearly reflect this, by deleting the construction permit requirement for physical changes based on increased emissions. Construction permits will be required only to the extent provided by federal regulation, as follows: "No person shall begin actual construction or installation of any new source that will required a Part 70 operating permit without first obtaining a DEQ-issued air quality construction permit. A construction permit is also required prior to reconstruction of a major affected source under 40 CFR 63, reconstruction of a major source if it would then become a major affected source under 40 CFR Part 63, or for any physical change that would be a significant modification under OAC 252:100-8-7.2(b)(2). In addition to the requirements of this Part, sources subject to Part 7 or Part 9 of this Subchapter must also meet the applicable requirements contained therein."

2. **COMMENT:** Trinity Consultants believes that minor change of operation, maintenance, construction and replacement can be anticipated for many activities at major facilities. Such changes will often result in a trivial increase of actual emissions but do not warrant a permit modification. The first sentence of Section OAC 252:100-8-6(f) should be amended as follows: "A permitted Part 70 source may make changes within the facility that are specifically authorized in the permit or that. . .".

RESPONSE: Staff understands this proposed change to be related to the construction permit requirement discussed in Comment 1. The rule has been rewritten to eliminate requirements for construction permits, except as required by federal regulation. See Response 1. Additional discretion to waive permit requirements is not consistent with the rule.

Conoco, Inc. - Letter of comments received on August 7, 2000 from Joel Wilson

3. **COMMENT:** The proposed language in OAC 252:100-8-4(a)(1) requires a construction permit "...to add a piece of equipment or a process that is subject to NSPS or NESHAP..." This language could require a construction permit for small physical changes, such as the addition of a valve. We do not believe that the AQD intended to require individual construction permits for these sources. Of greatest concern to us is that the term "actual emissions" could include those emissions attributable to a physical change, but not directly emitted by the equipment being changed. In addition, it is also unclear what opportunities are available to the source to avoid the burden of obtaining a permit by putting in place voluntary controls to stay below the 5 ton per year threshold or how and if offsets can be utilized without a permit. Conoco does not feel that a new construction permit nor any permit modification is needed, unless the change triggers an NSPS or causes the source to exceed existing permit limits.

RESPONSE: Staff agrees with this comment. After further reflection the Division concluded that the Part 70 construction permit requirement should be no broader than is required by federal regulation. Following this logic, OAC 252:100-8-4(a)(1) was redrafted to delete the proposed requirement that a construction permit be secured both for adding a piece of equipment or process that is subject to NSPS, and for physical changes that result in an increase in emissions of over 5 tons per year for criteria pollutants, 2 tons per year for one HAP, and 5 tons per year for more than one HAP.

EPA Region 6 - letter from Jole Luehrs dated August 14, 2000, received August 17, 2000.

4. **COMMENT:** EPA expressed concern that the elimination of the sentence "Any activity to which a State of federal applicable requirement applies is not trivial even if included on the trivial activities list." from the definition of "trivial activities" in OAC 252:100-8-2 might be a relaxation of the rule. However, EPA expressed approval of the proposed revisions to Subchapter 8 when assured that trivial activities remain limited to those emission units contained on a list approved by the Administrator and contained in Appendix J.

VERBAL COMMENTS RECEIVED AT THE JUNE 14, 2000 HEARING

5. **COMMENT:** Several attendees were concerned that the revisions to OAC 252:100-8-4(a)(1) could be interpreted to mean that a

construction permit would be required for extremely small modifications to a facility. For example, they felt that, as written this paragraph required that a construction permit be obtained prior to the addition of a valve at a refinery.

RESPONSE: This is not what was intended. This paragraph has been revised to require no more than is required by federal regulations.

6. **COMMENT:** Mr. Preston Petula of Hannover asked if the revisions to OAC 252:100-8-4(a)(1) meant that the AQD wanted to know every time there is a 5 ton increase in the emissions from regulated equipment.

RESPONSE: OAC 252:100-8-4(a)(1) has been redrafted to delete the 5 ton increase as a threshold.

7. **COMMENT:** Ms. Nadine Barton with Citizens Action for a Safe Environment (CASE), questioned whether the addition of the definition of "emergency" in OAC 252:100-8-2 would affect enforcement ability when lack of preventive maintenance, improperly designed equipment, careless or improper operation, or operator error results in noncompliance with a technology based emission limit.

RESPONSE: It will not. OAC 252:100-8-6(e) states that an emergency constitutes an affirmative defense to an action brought for noncompliance with technology-based emission limitations if certain criteria are met. The definition of emergency states that an emergency shall not include noncompliance caused by improperly designed equipment, lack of preventive maintenance, careless or improper operation, or operator error.

8. **COMMENT:** Mr. Don Whitney, Trinity Consultants questioned the necessity of replacing covered source with both major source and major stationary source in OAC 252:100-8-3(a). He felt that the use of major stationary source was superfluous.

RESPONSE: Staff disagrees. OAC 252:100-8-3(a) lists covered sources. It includes major sources as defined in OAC 252:100-8-2 for Part 70 sources and major stationary sources as defined in Parts 7 or 9 of Subchapter 8 for PSD sources and nonattainment sources. These definitions are not identical and should not be used interchangeably.

9. **COMMENT:** Howard Ground with Central and South West questioned the need to codify the revisions to OAC 252:100-8-52(3) that were originally adopted in 1988, readopted in 1989 and never codified.

RESPONSE: These are changes that EPA requested be made so that we will to continue to have approved PSD and nonattainment area programs. The new language is almost identical to the language in 40 CFR 51, Section 165.

VERBAL COMMENTS RECEIVED AT THE August 16, 2000 HEARING

10. **COMMENT:** Mr. Tom Blatchley, environmental consultant, questioned whether the revisions to Subchapter 8 should be held up so that the problem of how to handle construction permits for exploration wells or production wells could be resolved. Until such a well is brought into production it is not possible to know what the hydrogen sulfide or sulfur dioxide emissions will be and it is very difficult to size equipment prior to this time. This makes the application for a construction permit difficult to prepare and might result in a PSD source being constructed without a PSD permit.

RESPONSE: Staff recognizes that this is a problem and in the past has been handled by a variance or consent order. However, with the advent of the Title V operating permit program, these two avenues may no longer be appropriate. Up to now this has not been a frequent problem. Workgroups have been established to work with staff in the revisions of Subchapter 7 and Subchapter 31. One of these workgroups could also address this issue, and the change offered for revision at a future date. Staff believes that the proposed revisions to Subchapter 8 should not be held up until this problem is solved.

MS. MYERS

MR. BRANECKY

MR. BREISCH -- CHAIRMAN

MR. BYRUM -- PROTOCOL OFFICER

MS. MYRNA BRUCE -- SECRETARY

Dick's Transcription Service (405) 525-4111

PUBLIC HEARING:

MR. BYRUM: For the record, ladies and gentlemen, my name is Larry Byrum. I am the Director of the Air Quality Division. As such, I will act as the Protocol Officer for this hearing.

This hearing is convened by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act, Title 40 of the code of Federal regulations, Part 51, as well as the authority of Title 27 A of the Oklahoma Statutes, Sections 2:1-101 and the following.

This hearing was advertised in the Oklahoma Register for the purposes of receiving comment pertaining the proposed revision of the operating permits portion of OAC 252:100-8.

If you wish to make a statement, please complete the form at the registration table, and I will call upon you at the appropriate time.

At this time, I'd like to call upon Dr. Joyce Sheedy to give a Staff position on these proposed changes.

Dr. Sheedy.

DR. SHEEDY: Mr. Chairman, Members of the Council, ladies and gentlemen, the goals for the proposed revisions to Sub Chapter 8 were to correct

deficiencies that were listed in the approval of our interim Title 5 Program to incorporate case-by-case MACT requirements of 113 G contained in 40 CFR 63.40 through 63.44, to incorporate permit continuum to reorganize Sub Chapter 8 to include major source permitting as well as Part 70 operating permit program and Clarify, simplify, and streamline the rule as we worked with it.

The first goal is to correct deficiencies that were identified by EPA in their notice published on February the 5th, 1996. Approving our interim Title 5 Program was accomplished by revising the definition of major source, on Pages 15 through 17, make it consistent with Part 70 by removing the provisions for non-aggregation of criteria pollutants; revising the insignificant activities definition on Page 15 to make it consistent with Part 70; deleting the words "to the extent practicable" from 8-6 A, Standard Permit Requirements, on page 33; deleting the words "or less" from 8-7.2 a 1 C, Administrative Permanent Amendments, on Page 51; deleting the requirement for enhanced NSR in 8-7.2 A 1 E on Page 51; and construction permit requirements for Part 70 sources were moved to Sub Chapter 8, Pages 24 through 25, and we endeavor to make them more consistent with Part 70 requirements.

Our second goal was to incorporate the case-by-case

4997

1 incorporation of appropriate sections of Sub Chapter 10,
2 for general permits, that would be in 8-6.1 A 6 through
3 8-6.1 A 10, 8-6.1 B 4, 8-6.1 D, and 8-6.1 E; additional
4 requirements for renewal of permit for in 8-6.1 F;
5 deletion of emission trading, which was 8-6 H 3, and
6 8-6 A 9. Addition of trivial activities list in
7 Appendix "J"; addition of insignificant activities list,
8 Appendix "I"; and revisions previously outlined that are
9 required by EPA to correct the deficiencies in our
10 Title 5 Program.

11 Part 9 is Prevention of Significant Deterioration
12 Requirements for Attainment Areas. Basically, we did
13 some organization to 9, which was moved in total from
14 Sub Chapter 7. We deleted some definitions that were
15 duplicates of those in Sub Chapter 1. We corrected an
16 error in the major source definition, replacing the
17 word, "combustion" under fossil-fuel boilers with the
18 word, "combination," I believe.

19 And we reorganized 8-33, grouping the exemptions
20 into sub sections of like types of exemptions and adding
21 tag lines to make them easier to find.

22 And we moved 8-33 K and L from the exemption
23 section to the monitoring Section 8-35, since they
24 really are not exemptions, but speak to PM 10 monitoring
25 requirements. We intended to make no substantive

Dick's Transcription Service (405) 525-4111

11

1 changes, and we don't think we did.

2 Part 1 is, Major Sources Affecting Non Attainment
3 Areas. Again, we deleted definitions that were
4 duplicated in Sub Chapter 1. Again, we made no
5 substantive changes to this rule. We received one
6 letter of comment too late to be considered in the draft
7 of this rule. These comments concern the insignificant
8 activities list and the trivial activities list. We
9 would like to make those part of the record at this
10 time.

11 The Staff recommends that the hearing on the
12 revisions to Sub Chapter 8 be continued to the December
13 Council meeting.

14 MR. BYRUM: Questions for Dr. Sheedy from the
15 Council?

16 (No Response.)

17 MR. BYRUM: Nadine Barton is wanting to speak
18 to this issue.

19 MS. BARTON: My name is Nadine Barton with
20 CASE, Citizen's Action for a Safe Environment. And I
21 just want to make one comment, and that is to compliment
22 Staff on the monumental task that they have accomplished
23 here. I think that they've done a good job, and we
24 don't say that very often, and I just want to go on
25 record. You did a good job. I may not be happy with

Dick's Transcription Service (405) 525-4111

12

1 all of it after I look at it, but --

2 (Laughter.)

3 MR. BYRUM: Questions for Ms. Barton?

4 (No Response.)

5 MR. BYRUM: Others who wish to speak to the
6 issue?

7 (No response.)

8 MR. BYRUM: Mr. Chairman.

9 MR. BREISCH: The Staff has recommended that
10 we hold this or continue this item to our next meeting
11 on December 16th, and that means the comment period is
12 open.

13 MR. KILPATRICK: - I move that we continue it to
14 the 16th.

15 MR. BREISCH: I have a motion.

16 MR. BRANECKY: Second.

17 MR. BREISCH: I have a motion and second to
18 continue this item until the December 16th meeting.

19 Myrna.

20 MS. BRUCE: Mr. Fishback?

21 MR. FISHBACK: Aye.

22 MS. BRUCE: Ms. Slagell?

23 MS. SLAGELL: Aye.

24 MS. BRUCE: Mr. Kilpatrick?

25 MR. KILPATRICK: Aye.

Dick's Transcription Service (405) 525-4111

1 MS. BRUCE: Ms. Myers?

2 MR. MYERS: Yes.

3 MS. BRUCE: Mr. Branecky?

4 MR. BRANECKY: Yes.

5 MS. BRUCE: Mr. Breisch?

6 MR. BREISCH: Yes.

7 (Hearing concluded.)

PROCEEDINGS

MR. DYKE: My name is David Dyke. I'm the Interim Director of the Air Quality Division. As such, I will act as the Protocol Officer for this hearing.

This hearing is convened by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act, in Title 40 of the Code of Federal Regulations, Part 51, as well as the Authority of Title 27A of the Oklahoma Statutes, Section 1 through 1801 and the following.

The hearing was advertised in the Oklahoma Register for the purpose of receiving comments pertaining to the Proposed Revisions of OAC 252:100-8 Operating Permits (Part 70). If you wish to make a statement, please complete the form at the registration table, and you will be called upon at the appropriate time.

At this time, Dr. Joyce Sheedy stands ready to discuss the staff's proposal. Do you wish for us to continue

with the discussion and the proposal at this time?

MR. KILPATRICK: Mr. Chairman, I move that we continue this hearing on this subject to January the 9th at 1:00 P.M. in the Burgundy Room, at whatever this building is.

MR. BREISCH: Gary, are we going to have a briefing meeting in the morning and a hearing in the afternoon like we generally do or are you just --

MR. KILPATRICK: I would assume that we would want to follow the normal protocol. I was giving the time of the actual hearing as 1:00 P.M., does the Notice also have to require notice of the briefing time, also?

MS. MYERS: Is January 9th sufficient time to --

MR. KILPATRICK: We're just continuing the hearing.

MS. MYERS: Is that sufficient time to meet all of the other deadlines?

DR. SHEEDY: Yes. We have to have the Board pack -- the stuff to Linda

1 Finish by the 15th for Board packet. So
2 that should give us time to make the
3 changes to the Rule, and the Rule Impact
4 Statement, and the Executive Summary, and
5 all of that and get copies made for
6 everybody by the 15th.

7 MR. DYKE: We do not have to have
8 a briefing as part of this but we could if
9 the Council requests it.

10 MS. SLAGELL: If we're only going
11 to continue from this point without
12 adjourning, we just go directly into a
13 hearing. We wouldn't have a briefing.

14 MR. DOUGHTY: That's correct.
15 We've already had the briefing. And
16 actually there is nothing really binding as
17 far as the briefing is concerned. It's
18 just a tradition and a procedure that the
19 Council has had over the years and it's not
20 mandated by law anyway, is what I'm saying.
21 And since you've already had your briefing
22 and had all the informal discussion, you're
23 ready to go into the hearing. Just set
24 your hearing and go.

25 MR. BREISCH: Well, that's fine

Christy A. Myers
Certified Shorthand Reporter

7

1 understand the timeliness that is necessary
2 for these revisions, 5, 7 and 8, to be
3 forwarded based on the interim approval and
4 conditions of the final Part 70 deadline of
5 January of '99. And we'll do all that we
6 can to be sure and attend here at that time
7 and review these revisions between now and
8 that time.

9 DR. SHEEDY: Rick, I know that
10 there were a number of changes made to
11 subchapter 8 since you got the previous --
12 the Council packet. But of those changes,
13 only about ten of them really have any
14 substantive quality at all. And the rest
15 are really required because of number
16 changes. So they're really just changing a
17 one point six (1.6) to a one point five
18 (1.5). It makes no -- as far as the
19 252:100-8-1.6 is now 252:100-8-1.5. It has
20 no real change in the meaning of what is
21 there. And if it will help you, I can give
22 you a list of the substantive changes and
23 where they are and what they are.

24 DR. CANTER: Is that something
25 that you could give to us as well?

Christy A. Myers
Certified Shorthand Reporter

1 we because I'm not going to be able
2 attend the meeting, anyway.

3 MS. MYERS: Are we going to be
4 able to get a quorum?

5 DR. SHEEDY: We definitely
6 to have a quorum.

7 MR. BREISCH: How many people
8 available?

9 MS. MYERS: Six.

10 MR. BREISCH: Now, EPA made a
11 comment that they're going to have to
12 review this. And I would like to hear from
13 them whether this is -- this time frame
14 allows them to review what we've done the
15 far and be at that meeting so we can
16 finalize it.

17 MR. BARRETT: January 9th, is
18 that the very latest?

19 MR. DYKE: Please identify
20 yourselves for the court reporter.

21 MR. BARRETT: My name is Rick
22 Barrett. I'm with the Environmental
23 Protection Agency, in Region Six, Dallas,
24 Texas. I'm in the Air Permits Section of
25 the Planning and Permitting Division. We

Christy A. Myers
Certified Shorthand Reporter

1 DR. SHEEDY: Yes. I can do that
2 and will.

3 MR. BARRETT: Thank you. That
4 will be helpful.

5 MS. MYERS: Did we just set a
6 meeting date?

7 MR. DYKE: We don't have a second
8 on the motion.

9 MR. BRANECKY: Second.

10 MR. BREISCH: Any further
11 comments or questions?

12 Myrna, call the roll.

13 MS. BRUCE: Mr. Kilpatrick.

14 MR. KILPATRICK: Aye.

15 MS. BRUCE: Ms. Slagell.

16 MS. SLAGELL: Aye.

17 MS. BRUCE: Mr. Fishback.

18 MR. FISHBACK: Aye.

19 MS. BRUCE: Dr. Canter.

20 DR. CANTER: Aye.

21 MS. BRUCE: Ms. Myers.

22 MS. MYERS: Aye.

23 MS. BRUCE: Mr. Branecky.

24 MR. BRANECKY: Aye.

25 MS. BRUCE: Mr. Breisch.

1 PROCEEDINGS

2 DR. CANTER: I'd like to call our
3 meeting to order this afternoon. This will
4 be a meeting of the Air Quality Council
5 which is a continuation of our regular
6 meeting hearing which was held on December
7 16, 1997. I will be chairing the meeting
8 this afternoon in the absence of our
9 Chairman, who I understand is examining air
10 quality in Arizona, right now, on a golf
11 course, apparently, or where ever it is.

12 Let me ask first of all that Myrna,
13 you would call the roll, please.

14 MS. BRUCE: Mr. Fishback.

15 MR. FISHBACK: Here.

16 MS. BRUCE: Ms. Myers.

17 MS. MYERS: Here.

18 MS. BRUCE: Mr. Kilpatrick.

19 MR. KILPATRICK: Here.

20 MS. BRUCE: Ms. Slagell.

21 MS. SLAGELL: Here.

22 MS. BRUCE: Mr. Branecky.

23 MR. BRANECKY: Here.

24 MS. BRUCE: Dr. Canter.

25 DR. CANTER: Here.

1 MS. BRUCE: And for the record,
2 absent are Ms. Andrews and Mr. Breisch.
3 DR. CANTER: Thank you. Our
4 first order of business this afternoon is
5 the continuation of a public hearing on O
6 252:100-8. And I will turn the meeting
7 over to David Dyke at this point.

8 MR. DYKE: Ladies and gentlemen
9 my name is David Dyke. I'm the Interim
10 Director of the Air Quality Division. As
11 such, I will act as the Protocol Officer
12 for this hearing.

13 This hearing is convened by the Air
14 Quality Council in compliance with the
15 Oklahoma Administrative Procedures Act, 1
16 Title 40 of the Code of the Federal
17 Regulations, Part 51, as well as the
18 Authority of Title 27A of the Oklahoma
19 Statutes, Section 2-5-101 through 2-5-118.

20 The hearing was advertised in the
21 Oklahoma Register for the purposes of
22 receiving comments pertaining to the
23 proposed revisions of OAC 252:100-8,
24 Operating Permits Part 70 Amended. If yo
25 wish to make a statement, please complete

1 the form at the registra n table, and you
2 will be called upon at the appropriate
3 time.

4 At this time, I will call upon Joyce
5 Sheedy to give the staff position on these
6 proposed changes.

7 Dr. Sheedy.

8 DR. SNEEDY: Mr. Vice-Chairman,
9 Members of the Council, ladies and
10 gentlemen, my name is Joyce Sheedy and I
11 work in the Rules and Planning Unit of the
12 Air Quality Division. As you know, the
13 hearing for the proposed revisions to
14 Subchapter 8 was continued from the
15 December 16, 1997 hearing. The proposed
16 revisions to Subchapter 8, are to correct
17 the deficiencies in our interim Title V
18 Program as identified by EPA in their
19 notice of approval of our interim program
20 that was published on February 5, 1996,
21 and to incorporate case by case, maximum
22 achievable control technology, known as
23 MACT, requirements of 1-12 G, contained in
24 40 CFR 63.40 and 63.44 -- through 63.44, to
25 incorporate the permit continuum concept of

Christy A. Stone
Certified shorthand Reporter

1 DR. SNEEDY: The first one is on
2 page 13. And it's under the definition of
3 insignificant activities and it's about the
4 fifth line of that definition.

5 DR. CANTER: I've got it.

6 DR. SNEEDY: The "s" should be
7 stricken from the word definitions.

8 The second one is an Appendix I.
9 And it's on the first page of Appendix I,
10 under storage tank/distribution. About the
11 fifth item down, gasoline and aircraft fuel
12 handling facilities, it's the third line of
13 that, 252 colon 100 dash (252:100-) should
14 be in front of 39-30, 39-41 and 39-48. And
15 that's just a legal format thing that
16 they've informed us should be done that
17 way.

18 The Department is also requesting
19 two minor non-substantive additions to the
20 titles of Appendices I and J, in Subchapter
21 8. As you know, the Department as been
22 promoting the incorporation of the permit
23 continuum in all of its division's rules.
24 The proposed revisions to Subchapter 7 and
25 8 incorporate that concept. And it's been

Christy A. Stone
Certified shorthand Reporter

1 the 10 and to reorganize Subchapter 8 in
2 conjunction with reorganization of
3 Subchapters 5 and 7, moving annual fees an
4 emissions inventory to Subchapter 5, and
5 moving the construction permit requirem^{ent}
6 for Part 70 Sources from Subchapter
7 Subchapter 8.

8 Four changes have been proposed to
9 the draft revisions contained in the
10 Council packets and those are corrections
11 of typographical error. On page 13, line
12 of the definition of insignificant
13 activity, definitions should have been,
14 definition without the "s". And on page 1
15 of Appendix I, under storage
16 tank/distribution, item 4, for gasoline an
17 aircraft fuel handling facilities, on line
18 2 and 3 of that item, 252 colon 100
19 (252:100) should have been inserted before
20 39-30, 39-41, 39-48.

21 DR. CANTER: Joyce, could you ru
22 over those, again?

23 DR. SNEEDY: Yes, sir.

24 DR. CANTER: I got lost on the
25 first one.

Christy A. Stone
Certified shorthand Reporter

1 suggested that we can further promote the
2 incorporation and understanding of that
3 concept by correlating the titles of
4 Appendices I and J with the permit
5 Continuum terminology. Appendix I is the
6 insignificant activities list. Since
7 Subchapter 8, requires only that
8 insignificant activities be listed in Part
9 70 Permit Applications, that's very similar
10 to the registration requirement for permit
11 by rule facilities. Thus, the Department
12 would like to add the word registration in
13 parenthesis after insignificant activities,
14 on the title of that list in Appendix I.

15 And in addition, since trivial
16 activities are not included in the Part 70
17 Permit Application, they are very similar
18 to de minimis facilities which are not
19 required to obtain a permit. Therefore,
20 the Department would like to add the word,
21 de minimis in parenthesis after trivial
22 activities. We feel that using this
23 terminology would promote everyone's
24 understanding and use of the permit
25 continuum.

Christy A. Stone
Certified shorthand Reporter

1 And those are the only changes from
2 what's in the packet.

3 MR. DYKE: Is there questions of
4 the Council of Dr. Sheedy?

5 DR. CANTER: I had one question.
6 On page 57.

7 DR. SHEEDY: All right.

8 DR. CANTER: It's not a
9 substantive -- it's a procedural question,
10 really. It's the top three lines on page
11 57. This is where the issue is of
12 applications for renewal of an expiring
13 permit. And it says, you can incorporate
14 by reference, terms and conditions in the
15 previous permit, et cetera. It seems to me
16 government agencies often throw things away
17 routinely, and I guess my question is is
18 that -- government agencies and all people.
19 So -- but my question is, if you're
20 incorporating by reference a previous
21 permit, how do you do that? I mean, do you
22 have a file? I mean, is that going to be
23 perpetuated, you know, for ten or fifteen
24 years or is somebody going to come along in
25 three years and say everything, you know,

Christy A. Mann
Certified Notary Public

11

1 stowed away somewhere, that you would have
2 to have both documents to know what you are
3 talking about. What I'm saying is, when
4 the new permit or the renewal procedures
5 did not contain all of the writings that
6 are necessary for that permit, what do you
7 do?

8 DR. SHEEDY: Of course, this
9 particular Subsection is talking about the
10 application content and it's giving a break
11 to applicants by saying, if it was in your
12 previous permit and you didn't change it,
13 then you may reference it in your
14 application instead of repeating it. It
15 doesn't really -- and I don't know that
16 anywhere in this rule actually speaks to
17 whether we will reiterate all that in your
18 permit renewal.

19 Ray, have you all thought about this
20 issue?

21 MR. BISHOP: Yes. I'm Ray
22 Bishop. Not all the previous permit
23 conditions will be put into the new permit
24 if they are applicable.

25 DR. SHEEDY: So they will be

Christy A. Mann
Certified Notary Public

1 is thrown out. I guess, it's really a
2 procedural question in any way. I just want
3 to be sure that there is a reference to a
4 previous permit and no one can find the
5 previous permit.

6 DR. SHEEDY: In the past, in DEQ
7 and in the Health Department before, as far
8 as Air Quality was concerned, if a permit
9 file was active, it was never really
10 purged. It contained everything. And when
11 it ceased to be active, then there are
12 procedures for archiving. So it should not
13 be thrown out.

14 DR. CANTER: Thank you.

15 MR. DYKE: Any additional
16 questions at this point from Council? From
17 the public?

18 MR. MCWHIRTER: I'm Doyle
19 McWhirter. Along the same lines, are you
20 saying that these permit conditions and
21 terms that were being referenced in a
22 previous permit, will they or will they not
23 be included in that same document of the
24 permit that is issued as opposed to terms
25 and conditions in a previous permit being

Christy A. Mann
Certified Notary Public

12

1 repeated in the new one?

2 MR. BISHOP: Right. This gives
3 the applicant the opportunity to say, I
4 have already requested this and it's in a
5 previous permit, and did not have to submit
6 that information again. But we will
7 include it into the new permit so the old
8 permit is not necessary to understand what
9 the new permit says.

10 DR. SHEEDY: So the new permit
11 will be -- it will include everything?

12 MR. BISHOP: It's total and
13 stands alone by itself.

14 DR. SHEEDY: Okay. Thank you,
15 Ray.

16 MR. DYKE: Is there additional
17 questions of Dr. Sheedy from the audience?
18 Is there anyone else who wishes to speak on
19 this matter?

20 MR. BARRETT: My name is Rick
21 Barrett, I'm with the EPA in Dallas, Region
22 6. And I have a minor comment to be made
23 about something in Subchapter 8. And first
24 of all, we'd like to commend ODEQ for their
25 efforts to correct all the deficiencies in

Christy A. Mann
Certified Notary Public

5007

1 the interim approval for t 70 Programs.
2 And a tremendous amount of work has gone in
3 to that. And we applaud that and would
4 like to mention that here at the hearing.

5 The minor comment I have to make is
6 that, in the Clean Air Act Amends of 1990,
7 a reference to municipal waste incinerators
8 regarding the size of the charge rate
9 process per day was changed from a
10 threshold of 250 tons per day to 50 tons.
11 And this is part of the 100 ton category
12 list also called a list of 28 Source
13 category. And this rule has not been
14 recodified, however, into 40 CFR 51-165 or
15 166, or Part 70 as of this time. And so,
16 we had made a comment by letter to the ODEQ
17 that the threshold that's listed in
18 Subchapter 8 for municipal waste
19 incinerators -- I think it's on -- for
20 example, under PSD, Part 7 Section of
21 Subchapter 8, page 73, again, that's the
22 list of the name categories or source
23 categories. There's a -- it's A 14, on
24 page 73. And so ODEQ, we discussed this
25 with them, and of course by letter, and

Christy A. Hunt
Certified shorthand reporter

1 ODEQ is going to make that correction as a
2 IBR in the near future. And so, we just
3 wanted to make that comment that that's the
4 only thing at this time we have, that I
5 know of, that we would like to come
6 about Subchapter 8.

7 DR. CANTER: What is an IBR?

8 MR. BARRETT: Incorporation by
9 Reference.

10 DR. SHEEDY: We won't actually
11 incorporate it by reference, but when we
12 have to re-open Subchapter 8 to update our
13 incorporation, then, we can address this at
14 the same time.

15 MR. BARRETT: Okay. I stand
16 corrected, sorry. It will be re-opened in
17 the near future, and we will make that
18 minor correction.

19 MR. DYKE: Are there any more
20 questions of Dr. Sheedy?

21 MR. FISHBACK: I didn't exactly
22 follow the comment. Is the 250 ton
23 reference to municipal incinerators
24 inconsistent with a threshold in another
25 rule?

Christy A. Hunt
Certified shorthand reporter

15

1 DR. SHEEDY: It's not
2 inconsistent with the federal rule in 40
3 CFR 51, 52 or 40 CFR 70 because EPA has not
4 yet made that change to their own rule.
5 They did include that in the 1990 Clean Air
6 Act Amendment. But they have not changed
7 their rule.

8 MR. FISHBACK: And this
9 threshold will change from 250 tons to 50.

10 DR. SHEEDY: 50. So what it
11 would mean is that at present, if you're an
12 incinerator and you emit more and you have
13 a capacity charge rate of 250 tons per day
14 or more, and you have emissions of 100 tons
15 per hour or more, then you are subject to
16 PSD. With the change, if the incinerator
17 has a charge rate of 50 tons per day or
18 more, and 100 tons emission, they would be
19 subject to PSD.

20 MR. FISHBACK: But, it would not
21 be retroactive?

22 DR. SHEEDY: At this point, we --
23 the only source we have that would fall
24 under that is already PSD.

25 MR. FISHBACK: They're above 250?

Christy A. Hunt
Certified shorthand reporter

1 DR. SHEEDY: Yes.

2 MR. FISHBACK: So, if you change
3 it to 50 it has no effect. But prior to
4 that change in the federal regulations, a
5 249 ton source would not be PSD after that
6 change, a 51 ton source would be PSD.

7 DR. SHEEDY: If they had
8 emissions of 100 tons per year. And of
9 course, the 250 tons a year emissions --
10 wouldn't make any difference.

11 MR. FISHBACK: Okay. But, I just
12 wanted to be clear that it's not proposed
13 to be implemented retroactively. It's just
14 a change that's incorporated when the
15 federal rule is changed; is that correct?

16 DR. SHEEDY: Yes.

17 MR. FISHBACK: Okay.

18 MR. DYKE: Any additional
19 questions of Dr. Sheedy?

20 MR. FISHBACK: Oh, I'm sorry.
21 Let me ask, is that change based on the
22 fact that there were municipal waste
23 incinerators with 50 ton charging range
24 that had more than 100 tons per year
25 emissions?

Christy A. Hunt
Certified shorthand reporter

1 DR. SHEEDY: Right.
 2 MR. FISHBACK: Is that the reason
 3 for that change in threshold?
 4 MR. BARRETT: I don't know.
 5 Probably. Okay. But, I really don't know
 6 for sure, why.
 7 MR. FISHBACK: Of course, the
 8 emission rate is going to be very dependent
 9 on the composition of the waste, not so
 10 much the actual --
 11 MR. BARRETT: Yes.
 12 MR. FISHBACK: Okay. Thank you.
 13 MR. DYKE: Any additional
 14 questions of Dr. Sheedy?
 15 DR. CANTER: Thank you. At this
 16 point, the Chair would entertain a motion
 17 for sotion with regard to Subchapter 8.
 18 MR. KILPATRICK: Mr. Chairman, I
 19 would move that we recommend approval of
 20 this Subchapter 8 rule to the DEQ for
 21 permanent and emergency adoption.
 22 DR. CANTER: Is there a second?
 23 MS. SLAGELL: I second it.
 24 MR. BRANECKY: Would that motion
 25 include what Dr. Sheedy said. The changes?

PROCEEDINGS

MR. DYKE: The next item on the hearing agenda is item -- listed as Item number 5, OAC 252:100-8-4(a)(2), Permits for Part 70 Sources.

At this time, I'll call on Dr. Joyce Sheedy.

DR. SHEEDY: Mr. Chairman, Members of the Council, ladies and gentlemen, my name is Joyce Sheedy and I work in the Rules and Planning Unit.

The proposed revisions to Subchapter F, Permits for Part 70 Sources, updates the adoption by reference of the requirements for case-by-case MACT determinations for Part 70 sources in 252:100-8-4(a)(2)(C) by adopting 40 CFR 63.41, 63.43, and 63.44 as they exist on July 1, 1998. The revision consists of deleting 1997 and inserting 1998. And although there have been no revisions to these paragraphs since their incorporation by reference as of July 1, 1997, the staff plans to update this 252:100-17-8-4(a)(2)(C) annually, as a matter of routine.

Staff proposes that this revision be recommended to the Environmental Quality Board for permanent adoption.

MR. DYKE: Questions and discussion from the Council? Is there anyone from the public wishing to make a statement on this particular item? Additional questions, anything from the Council?

MR. BREISCH: Okay. I'll entertain a motion to

1 the version that was in your packet first,
 2 your packet version. Not the one I handed
 3 out. I handed it out.
 4 If you'll look in your packet
 5 version on page 6, we have proposed to add
 6 several subdivisions of construction fees -
 7 - construction permit fees to Section
 8 1.7(2). As it currently exists, this
 9 section requires an owner or operator to
 10 pay \$2,000.00 for every construction
 11 permit, regardless of whether it's a minor
 12 modification to an existing facility or
 13 whether it's a construction permit for a
 14 brand new major facility.
 15 Since we also offer general permits
 16 with the construction of certain
 17 facilities, it doesn't seem in keeping with
 18 the permit continuum to charge the same for
 19 an authorization under a general permit as
 20 we do for an individual facility
 21 construction permit. Therefore, we are
 22 proposing to expand the construction permit
 23 fee category and to add lower fees for
 24 modifications and for general permit
 25 authorizations of construction permits

1

2

3

4 PROCEEDINGS

5 MR. DYKE: The next item on the
 6 hearing agenda this morning is Item 4C, OAC
 7 252:100-8, Permits for Part 70 Sources.
 8 I'll call on Barbara Hoffman.

9 MS. HOFFMAN: Subchapter 8 has
 10 already been through the re-right/de-wrong
 11 process, but it wasn't until after the
 12 industry and the Division really began
 13 using this rule that we discovered that
 14 there were certain errors and
 15 inconsistencies and issues that really need
 16 to be resolved. This is the first time we
 17 have brought these revisions before the
 18 Council. I am going to go through almost
 19 all of them, so here we go -- at least the
 20 ones that aren't just typographical errors.

21 On page 6, one of the more
 22 substantive changes is the proposal --

23 MR. BRANECKY: Barbara, which
 24 version are you using?

25 MS. HOFFMAN: We're looking at

1 issued by the Division.
 2 On page 9, another change is in the
 3 definition of "major source" and this is in
 4 Section 2 of the rule, on page 9. If
 5 you'll look at the definition of major
 6 source, we propose to substitute the phrase
 7 "that fraction of particulate matter that
 8 exhibits an average aerodynamic particle
 9 diameter of more than 10 micrometers" for
 10 the term "TSP". While this change is
 11 wordy, it is necessary because excepting
 12 TSP, which stands for total suspended
 13 particulates, from this definition also
 14 excepts PM-10, which we don't want to do
 15 and we never intended to do. In other
 16 words, total suspended particulates
 17 actually includes all the particulates,
 18 whether they are PM-10, 2.5, or whatever,
 19 and that was really not the intent. We
 20 just want to exclude those particulates
 21 that have greater than 10 micrometers
 22 particle size.
 23 Further on down in this definition
 24 of "major source" on page 10, you'll see
 25 that we added the phrase "which, as of

Page 6

1 August 7, 1980, are being". The reason for
2 this proposed addition is that EPA's
3 definition of "major source" in Part 70
4 does not include the underlying language
5 but EPA stated in their preamble to Part
6 71, which are the Title V rules under the
7 federal program, they stated in this
8 preamble that the Part 70 definition should
9 have contained that language and will be
10 revised. EPA acknowledged that it did not
11 follow the procedural steps necessary under
12 section 302(j) of the federal Clean Air Act
13 to expand the scope of sources in this
14 category for which fugitive emissions must
15 be counted in Part 70 major source
16 determinations. So this is one of those
17 fairly confusing -- well, it's not
18 confusing, it's just very -- it's a very
19 detailed point in this definition of major
20 source. And basically the only way EPA can
21 regulate fugitive emissions of major
22 sources is if they do a rule and make a
23 determination, and then redo this rule, and
24 they really didn't do it for all of these
25 sources. They've only, in the past, done

Page 7

1 it for sources that were subject to NSPS or
2 NESHAP as of August 7th, 1981.
3 The change to the definition of
4 "regulated air pollutant" in Section 2,
5 page 11, will delete the references to
6 "VOS" and "organic material". Those terms
7 were previously deleted from Subchapters 37
8 and 39 when we did the re-right/de-wrong on
9 those subchapters, so this change will
10 insure consistency with those subchapters.
11 Also, in Section 2, on page 12, we
12 are proposing to amend the definition of
13 "trivial activities" by deleting the
14 exception for activities that are subject
15 to an applicable requirement. This
16 restriction is not required by EPA's Part
17 70 program and as it is, it practically
18 eliminates any activity from actually
19 qualifying for this exception. Because
20 when you look at our rules, we have what we
21 call nuisance rules, like Subchapter 29,
22 for example, that's up today on fugitive
23 dust control, we look at that as sort of a
24 rule that handles nuisance-type conditions.
25 Well, it's applicable to everybody,

Page 8

1 including the de minimis sources. So
2 consequently, you could make the argument
3 that even if you are on the trivial
4 activities list, nevertheless it's subject
5 to an applicable requirement of Subchapter
6 29, fugitive dust, so it can't be trivial
7 activity. So that didn't make much sense
8 to us: We thought if you're on the list,
9 which is Appendix J, then we looked at it
10 pretty carefully, we feel that it's truly a
11 trivial activity and therefore we don't
12 need to have this exception for those that
13 would be subject to applicable
14 requirements.
15 In Section 3, pages 12 and 13, it is
16 proposed that we change the word "covered"
17 to "major" and "major stationary", since
18 the rule states that any covered source
19 remains a Part 70 source until a permit is
20 issued to cause the facility to limit its
21 operation to below that which would define
22 it as a covered source. Well, covered
23 sources include those that, regardless of
24 the amount of pollutants emitted, operate a
25 particular piece of equipment. So if a

Page 9

1 source eliminates that piece of equipment
2 and doesn't want to continue to be
3 regulated as a Part 70 covered source, it
4 really can't obtain a permit to limit its
5 operation below that which would define it
6 as a covered source. It's sort of like one
7 of those little technical problems that
8 permit writers came to us with and said we
9 can't write a permit like that. So,
10 anyway, we felt that therefore this rule
11 would make more sense if we changed the
12 word "covered" to "major", because if
13 you're a major source, then that's because
14 you emit a certain amount of pollutants.
15 And if you decided to emit less than that
16 amount, you can come in for a permit that
17 will lower your emissions to that amount.
18 Anyway, so we felt that this change might
19 make a little more sense in the actual
20 application of this rule.
21 Section 4(a)(1), on page 13, would
22 be changed to clarify that sources can't
23 begin construction until they obtain a
24 construction permit. That's always been
25 the way our program has been run, it's just

1 that when we created Subchapter 8, we sort
2 of forgot to make that as clear as it ought
3 to be. So we want to add that back in here
4 to show that you actually have to have a
5 construction permit before you can begin
6 actual construction of a source.

7 In addition, we found that using
8 Section 7.2(b) to determine if a change
9 would be a modification requiring a
10 construction permit proved difficult and
11 created some odd results. It was decided
12 that we should go back to the rather time-
13 honored tradition of seeing whether or not
14 a physical change would cause an increase
15 in emissions above de minimis amounts or
16 whether it involved the addition of
17 equipment or a process subject to NSPS or
18 NESHAP.

19 On page 16, in Section 5(d)(1)(A), a
20 clarification was added that BACT, Best
21 Available Control Technology, is not
22 required for modifications that will result
23 in an increase in emissions of less than
24 100 tons per year, unless of course BACT is
25 required under the PSD rules or under

1 so we changed this to the end of the next
2 working day.
3 On page 27, it is proposed to add
4 the phrase "processed under Tier II or Tier
5 III requirements and" so that only
6 requirements from construction permits that
7 had undergone Tier II or Tier III public
8 participation procedures could be
9 incorporated into Part 70 operating permits
10 as administrative amendments. We now think
11 that this proposal is not warranted, since
12 it would have the odd effect of requiring
13 Tier I modifications to obtain both a
14 construction permit and a Part 70 permit
15 modification, when a Tier II modification
16 would only require a construction permit.
17 So we think now that perhaps this proposed
18 rule was not such a good idea.

19 Let's see, on page 34, a substantive
20 change is proposed for the definition of
21 "major stationary source" in Section 31,
22 where paragraph XIV would be changed to
23 read "municipal incinerators capable of
24 charging more than 50 tons of refuse per
25 day." The existing rule sets the trigger

1 Subchapter 41, toxic air contaminants.
2 Again, this has always been our
3 practice and it wasn't clear when we redid
4 Subchapter 8 that that would continue to be
5 the practice, so we felt that we needed to
6 add this to the rule.

7 On page 21, in Section
8 6(a)(3)(C)(iii)(I), the reporting time for
9 excess emissions caused by emergencies or
10 upsets would be changed from 24 hours to
11 the end of the next working day to make it
12 consistent with the Subchapter 9 reporting
13 requirements.

14 You'll recall how we went through
15 this exercise when we did the re-right/de-
16 wrong on Subchapter 9 and how there was
17 noted there was this discrepancy between
18 the two. So this was our effort to now
19 change that inconsistency to be consistent
20 with Subchapter 9 so that a Title V source
21 doesn't have two separate reporting
22 requirements. Some things it would be
23 within 24 hours and for other things it
24 would be by the end of the next working
25 day, but we thought that was too confusing

1 at 250 tons of refuse per day. This change
2 is required by the 1990 amendment to
3 Section 169(1) of the federal Clean Air
4 Act. And I'll just note that we've been
5 asked by EPA about whether we had written
6 this change and so we asked them, have you
7 made it in your rules? And they said, no.
8 So we're a little ahead of the EPA in this
9 respect, because I don't think they have
10 yet changed their rules, nevertheless, this
11 is the federal law and we can -- and PSD
12 program is the program that we have
13 approval to run, and so we have to meet the
14 federal law when we issue a PSD permit. So
15 we felt we might as well go ahead and
16 change the rule so that people understood
17 when they looked at our rules what would be
18 required.

19 The additions and deletions proposed
20 on pages 39 and 40 which is in Section
21 52(3), are changes that were adopted in
22 1988 and, then, believe it or not, they
23 were readopted in 1989, and somehow or
24 another they were never codified. We don't
25 know how that happened and when we asked

Page 14

1 the Secretary of State's office if they
2 could just go ahead and make that change
3 and go ahead and codify it, they said no,
4 we're going to have to readopt them. So
5 for the third time, the Council gets to
6 look at these particular proposals for
7 additions and deletions. And I believe the
8 reason that these were required was because
9 they are part of the nonattainment new
10 source review rules and changes that were
11 required at the time by EPA.
12 And all the rest of the changes that
13 you might have noticed in there are changes
14 that were either typographical errors or
15 simply rewording for clarification, there
16 is absolutely no change to the meaning.
17 Now, we can switch to the version I
18 handed out this morning. It says on the
19 front of it, at the bottom, June 13, 2000
20 Draft.
21 All these proposed changes were issued for
22 public comment last month and after we did
23 that, we learned from the Office of
24 Administrative Rules that they want us to
25 put back the term "OAC", which stands for

Page 15

1 "Oklahoma Administrative Code", in front of
2 all the rules. We thought that they had
3 told us -- we swear that they told us to
4 take that out a few years ago and so we've
5 been trying to take it out of every rule
6 that we have done through re-right/de-
7 wrong, and now we find that they want it
8 in, so we're putting it back in.
9 MR. KILPATRICK: Did you get it
10 in writing this time?
11 MS. HOFFMAN: I wish. Also, in
12 this re-right, in this version right now,
13 we've capitalized the word "section" when
14 it came in front of our Subchapter 8
15 section numbers and we're trying to
16 eliminate the use of the phrase "et seq."
17 when used in describing rules or statutes
18 and we're trying to also delete any time we
19 put parenthesis, "effective dates", because
20 those aren't supposed to be in rules. In
21 other words, these are all just rule-
22 writing types of things that -- what do you
23 call them? Administrative rules, I
24 believe. These are the kind of changes
25 that they have in their rules that we're

Page 16

1 supposed to use in re-right rules. So
2 we'll try to make those changes.
3 There are a couple of other
4 substantive changes that I wanted to
5 propose to you today. We discovered that
6 the phrase "begin actual construction",
7 which we proposed to add to Section
8 4(a)(1), is defined in Section 1.1 for
9 purposes of PSD and new source review. In
10 other words, it specifically says "for
11 purposes of PSD and new source review,
12 here's what begin actual construction
13 means. Well, we're also using it in our --
14 we're proposing to put it in our sections
15 on Part 70 construction permits and so
16 what I proposed here is for that
17 definition, we add this sentence, "for
18 purposes of Part 5 of this Subchapter, the
19 term means that the owner or operator has
20 begun the construction or installation of
21 the emitting equipment on a pad or in the
22 final location at the facility."
23 MR. DYKE: Barbara, what page is
24 that on?
25 MS. HOFFMAN: That's on page 1.

Page 17

1 MR. DYKE: Thank you.
2 MR. BREISCH: In other words,
3 what we're saying here, incidental
4 construction that would receive the
5 equipment is not considered construction?
6 MS. HOFFMAN: Right. The PSD
7 definition of begin actual construction is
8 very restrictive. Basically you can do
9 some groundwork but you can't really do any
10 actual construction of the facility that
11 you're building. We have, as a state,
12 always had a slightly less restrictive
13 definition for things that weren't PSD or
14 nonattainment. What we've allowed is that
15 we've allowed construction of, say, the
16 foundations and that type of thing, we've
17 allowed anything except actually bringing a
18 piece of equipment on the pad or actually
19 drilling it on the location where it's
20 going to be, so that we would allow you to
21 pour foundations and that type of thing.
22 So since we're going to use this phrase or
23 if you agree that we're going to use this
24 phrase, "begin actual construction" in the
25 construction section for Part 70 permits,

1 then we thought we needed to expand the
2 definition of actual construction to
3 accommodate the way we've always treated
4 non-PSD construction.

5 MR. WILSON: Barbara, could you
6 read that again, what you're recommending
7 we insert here?

8 MR. BRANECKY: You should have a
9 copy.

10 MR. WILSON: Okay. Is it Part 5
11 you are talking about? I'm questioning why
12 that doesn't say Part 4.

13 MR. KILPATRICK: There is no Part
14 4.

15 MS. HOFFMAN: Part 5 starts on
16 page 6, it's the Permit for Part 70 sources
17 and as I was saying --

18 MR. WILSON: I'm clear on that,
19 thanks.

20 MS. HOFFMAN: All right. Also,
21 several minor changes are suggested to the
22 definition of "emergency" and the
23 paragraphs that use that phrase. If you'll
24 look first at the definition which is on
25 page 8 in Section 2, we added the cite "OAC

1 complete sentence of its own and was moved
2 down in the paragraph. Finally, the
3 reference to "accidental releases" was
4 changed to "exceedances attributable to
5 emergencies or upset conditions", since the
6 phrase "accidental releases" had not been
7 used previously in this rule nor is it
8 defined.

9 So really there weren't really any
10 substantive changes to this rule, it's just
11 that everything has gotten moved around a
12 little bit, hopefully to make it clearer.

13 We'll see.

14 And then on page 16, in Section
15 5(b), we added back the language that had
16 been there originally, but a few years ago
17 was moved to Subchapter 6. At the time
18 when they created Subchapter 6, it was seen
19 as the subchapter where all the procedural
20 permit requirements would be. And we're
21 starting to look at Subchapter 6 now for
22 the re-right/de-wrong process and we feel
23 that really it's not necessary. It just
24 repeats things that are found elsewhere and
25 we're not supposed to do that with our

1 252:100-8-6(a)(3)(C)(iii)(I)", since the
2 term "emergency" is used in that section,
3 too. So that was an oversight. We need to
4 add that reference. And then also, we
5 deleted the last section -- the last
6 sentence, I mean, about quantifying
7 releases and moved it to page 21, Section
8 6(a)(3)(C)(iii)(I), since definitions are
9 not supposed to contain substantive
10 requirements, and we thought that was
11 actually a substantive requirement. So we
12 moved that to the section that actually
13 talks about emergency releases.

14 Now, if you'll go to page 21,
15 Section 6(a)(3)(C)(iii)(I), you'll see that
16 a few minor changes have been proposed.
17 First, "upset conditions" is not defined in
18 the definition of emergency so that phrase
19 was moved to after the definition cite, and
20 the permittee is now referred to his permit
21 to see how the term is defined there. This
22 is how EPA's Part 70 rule refers to "upset
23 conditions". Then, since that sentence was
24 so long, it seemed confusing to me, so the
25 part about affirmative defense became a

1 rules. We're not supposed to keep
2 repeating things. So what we thought --
3 what we're thinking of doing, anyway, at
4 this point is revoking Subchapter 6 and
5 then moving the one or two substantive
6 requirements that are actually in it back
7 to where they came from, and this was one
8 that had been in Subchapter 8 previously
9 and it's required by the Part 70 program.
10 So we're moving it back to Subchapter 8.

11 We haven't received any comments on
12 this rule to date and I don't know if -- if
13 we receive some today and believe it needs
14 to be continued, that would be fine. If
15 there are no comments and everyone is in
16 agreement, then I would recommend that the
17 Council go ahead and recommend its approval
18 today. But we have noticed it both as an
19 emergency rule and permanent rule, and the
20 reason for that is because of the various
21 errors and inconsistencies, so we would
22 like this change made as quickly as
23 possible. Otherwise, if we just adopt it
24 as a permanent rule, it won't take effect
25 until a year from now. So whether we do it

Page 22

1 today or the next meeting, whichever, we
2 would like to have it passed as an
3 emergency rule simply because these are
4 things that both our industry and
5 permitting engineers are having to deal
6 with right now and these clarifications and
7 corrections would certainly help them.
8 MR. DYKE: We'll begin with
9 questions from the Council.
10 MR. WILSON: I have a question.
11 On the Rule Impact Statement, Item Number
12 18, determination on any detrimental effect
13 on the public health, safety and
14 environment, if the proposed rule is not
15 implemented, it says none. It says federal
16 law will still be applicable to new
17 municipal incinerators capable of charging
18 more than 50 but less than 250 tons of
19 refuse per day. What is the significance
20 of 250 and why would the federal law not
21 apply to those charging more than 250?
22 MS. HOFFMAN: It would. It
23 would. I was trying to indicate there that
24 those that were between 50 and 250, that it
25 would appear to not be considered major

Page 23

1 sources even if we didn't make this change,
2 it would still be considered major sources
3 under federal law.
4 MR. WILSON: Those are the
5 sources impacted by this rule?
6 MS. HOFFMAN: Exactly.
7 MR. WILSON: I have another
8 question. This is not proposed for change
9 by you, but my question is under 252:100-8-
10 5 -- excuse me, I'm sorry. 252:100-8-6,
11 permit content.
12 MS. HOFFMAN: Okay.
13 MR. WILSON: Item Number 3.
14 MR. KILPATRICK: What page are
15 you on?
16 MR. WILSON: Page 20. Monitoring
17 and related recordkeeping and reporting
18 requirements. Barbara, do you know if the
19 language in paragraph -- the (ii) is part
20 of EPA's Part 70 program?
21 MS. HOFFMAN: Word for word, I
22 don't know. I don't recall.
23 MR. WILSON: I believe that
24 paragraph imposes monitoring requirements?
25 MS. HOFFMAN: Yes.

Page 24

1 MR. WILSON: On sources that have
2 no applicable requirements or state-only
3 requirements to do the periodic testing?
4 MS. HOFFMAN: Yes.
5 MR. WILSON: And I don't recall,
6 but I believe that language is part of
7 EPA's guidance to the Part 70 program?
8 MS. HOFFMAN: Yes.
9 MR. WILSON: And that that
10 guidance was recently stricken out?
11 MS. HOFFMAN: But not for sources
12 that didn't have any requirements. I think
13 that what they did was they said if there
14 was already a monitoring requirement for a
15 source, then that was the monitoring
16 requirement. And Part 70 didn't allow or
17 didn't require that the states imposed a
18 more restrictive monitoring requirement.
19 But I believe they did to on to state that
20 if there were no monitoring requirements,
21 then the state or the permitting agency
22 could go ahead and impose monitoring
23 requirements in its permit. That was my
24 understanding of the Court's decision.
25 MR. WILSON: I'll defer to your

Page 25

1 understanding because I'm not a lawyer and
2 I can't read through a lot of those
3 renderings. But my thought was that the
4 Court said that EPA guidance was
5 unconstitutional and that it didn't apply
6 and that the states were not required as
7 part of their SIP to have that guidance
8 language in the regulations.
9 MS. HOFFMAN: Yes, that was the
10 general idea, yes.
11 MR. WILSON: Barbara, I have
12 another question. Under 252:100-8-4,
13 Requirements for Construction and Operating
14 Permits --
15 MR. DYKE: Page number?
16 MR. WILSON: Page 13, I'm sorry.
17 The first paragraph there, paragraph one,
18 under Rule A, Construction Permits, has
19 some language that I think could create a
20 lot of confusion for major sources that
21 need to install small pieces of equipment
22 that are subject to either an NSPS or a
23 NESHAP. The language, specifically, would
24 be the second sentence, a construction
25 permit is also required to any piece of

Page 26

1 equipment for a process that is subject to
2 NSPS or NESHAP. And then the sentence goes
3 on to talk about physical change, which I
4 have another question on. But an example
5 would be in a petroleum refinery where we
6 have process units that are subject to a
7 NESHAP -- well, the whole refinery is
8 subject to NESHAP, or a process unit that's
9 subject to NSPS, if we wanted to add a
10 valve, which is a fugitive emission piece
11 of equipment, this language would indicate
12 that we would be required to go and get a
13 permit for that. I don't think that's what
14 you all want, but it is there. Any
15 comments on that?
16 MS. HOFFMAN: Well, I agree. I
17 don't think that's what we want. I think
18 what we have in mind is that if you're
19 adding a piece of equipment that's subject
20 to a NSPS or to a NESHAP that you wouldn't
21 want to get a construction permit for
22 replacing a piece of equipment that's
23 already subject to NSPS and replacing it
24 with another, exactly the same piece.
25 That, of course, doesn't require a permit.

Page 27

1 But I see what you're saying, when you
2 start getting down to little valves, that
3 it would not be very -- it wouldn't make
4 much sense and it wouldn't be very
5 convenient to require a construction permit
6 for every valve that gets added to a
7 facility. It would seem to me that if
8 you're talking about a refinery that's
9 already subject to NSPS or to a NESHAP, and
10 you have to add some valves, that you
11 follow the rules under NSPS or NESHAP as
12 far as notification, or whatever you need
13 to do for those. But I don't believe that
14 our permit engineers, at this point,
15 require a construction permit to add a
16 little component like that. I mean, when
17 we say piece of equipment, I think we were
18 thinking of something --
19 MR. WILSON: Substantial?
20 MS. HOFFMAN: -- yes, something
21 that's -- you know, I'm not exactly sure
22 how to phrase it. I wonder if maybe Dawson
23 can help me.
24 MR. LASSETTER: This is Dawson
25 Lassetter. No, I don't know how to phrase

Page 28

1 it, either, but I know what you are talking
2 about and I agree with you. We don't
3 intend to write a construction permit for
4 every new valve you have at a refinery. I
5 think the concern, though, is whether there
6 is a piece of equipment added that might
7 trigger another NSPS rule that isn't
8 already triggered. But I don't know.
9 MR. WILSON: Well, we wouldn't
10 want to pay \$1,000.00 for a permit to put
11 in a \$50.00 valve.
12 MS. HOFFMAN: I can understand
13 that. I know that's not our intent.
14 Whether there is a way to write this to
15 make that perfectly clear, I don't know.
16 We would have to go back and work with the
17 permit engineers on that.
18 MR. WILSON: Set that one aside
19 for a second. Let's move on to the rest of
20 the sentence there. It says, or for any
21 physical change that would increase actual
22 emissions more than 5 tons per year of any
23 criteria of pollutant, and then it goes on
24 and talks about the hazardous air
25 pollutants. My question there is, when we

Page 29

1 talk about a physical change that would
2 increase the actual emissions, let's say
3 for example we put -- we took out an old
4 pump and replaced it with a larger pump and
5 this pump was used to pump material through
6 a grandfather heater, where that material
7 was being heated up by that heater and our
8 reasons for doing this was so that we could
9 get more material through that heater and
10 in order to heat up more material, we have
11 to crank up the heater. And cranking up
12 the heater would create emissions and let's
13 say that it did, first of all, did not
14 require any modification to the heater but
15 caused the heater to experience an increase
16 in emissions greater than 5 tons per year.
17 Is it the intent of the Department to
18 require a permit for a physical change that
19 in and of itself does not create an
20 increase in emissions but causes an
21 attributable emission increase of more than
22 5 tons per year?
23 MS. HOFFMAN: Well -- and Dawson,
24 I want you to jump in here if you disagree.
25 Here is what I thought about. The section

Page 30

1 starts off talking about source and the
 2 definition of stationary source means any
 3 building, structure, facility, or
 4 installation that emits or may emit any
 5 regulated air pollutant. And it seems to
 6 me that if the pump and the heater are part
 7 of a single source then, yes, I think you
 8 would have to get a construction permit.
 9 That's my position on that.

10 MR. LASSETTER: Yes.

11 MR. WILSON: If we did get a
 12 construction permit, what would we be
 13 permitting? As long as we don't make
 14 changes to a heater that trip an NSPS, we
 15 are entitled to operate that heater however
 16 we needed to operate that heater, we do not
 17 physically have to change that heater?

18 MR. LASSETTER: I guess the
 19 question becomes whether or not you changed
 20 the potential to emit.

21 MS. WILSON: If we didn't change
 22 the heater, we didn't change the potential
 23 to emit.

24 MR. LASSETTER: Well, if it's
 25 emitting more now and can emit more now

Page 31

1 because you changed something else, then
 2 you may have actually changed the potential
 3 to emit. I don't know. That's a tough
 4 question.

5 MS. BRADLEY: It isn't that you
 6 changed the process.

7 MR. WILSON: I made a physical
 8 change to a pump.

9 MS. BRADLEY: you made a physical
 10 change to the process but -- I mean, to the
 11 pump. But essentially you changed the
 12 production rate of the process itself, by
 13 making the physical change to that pump.

14 MR. WILSON: That's right. So
 15 what would be the point --

16 MS. BRADLEY: So the process
 17 change would change the -- or would result
 18 in the increase of emissions. Because
 19 permits are sometimes written to control
 20 production. The difference is, I do not
 21 work in the permitting process or in the
 22 permitting area, but it appears to me that
 23 it would be a process change which results
 24 in an increase in production.

25 MR. WILSON: Let's say this

Page 32

1 material then goes to a tank and because
 2 we've got more going to that tank, that
 3 tank experiences an increase in emissions
 4 of more than 5 tons per year. Would that
 5 require a permit?

6 MS. HOFFMAN: Say that again.

7 MR. WILSON: Since we are
 8 changing this pump and therefore changing
 9 throughput, then we would expect that
 10 product tank downstream of that to see more
 11 throughput. Let's assume that that
 12 throughput increases the emissions from
 13 this tank more than 5 tons per year. Would
 14 that require a permit?

15 MR. LASSETTER: Is there a limit
 16 on the tank to begin with?

17 MR. WILSON: Let's say there is a
 18 limit on the tank and we won't exceed the
 19 permitted limit, Dawson, but we will
 20 increase the actual emissions?

21 MR. LASSETTER: As long as you
 22 have a permitted limit, my opinion would be
 23 if you stay below the permitted limit, then
 24 it's fine.

25 MR. WILSON: So then the actual

Page 33

1 increase would apply only to nonpermitted
 2 units?

3 MR. LASSETTER: If you don't go
 4 over the permitted limit.

5 MR. WILSON: We couldn't do that,
 6 anyway. We would have to get a
 7 modification of that permit.

8 MR. LASSETTER: It's a tougher
 9 question than just what we're talking
 10 about, either way we look at it.

11 MR. WILSON: I accept that to
 12 mean it's not clear.

13 MR. LASSETTER: I'm not sure we
 14 could ever make it perfectly clear for all
 15 cases. We're just going to have to
 16 probably look at every case.

17 MR. DYKE: Can I ask a question?
 18 Your changes here that you are
 19 recommending, is that changing our process
 20 -- is that changing what we do today?

21 MS. HOFFMAN: No. It's basically
 22 intended to reflect what we do today, what
 23 we have done for years.

24 MS. WARRAM: May I say
 25 something? I'm Kim Warram with OG&E. The

1 way your regs used to be written was
2 anytime a change was made that triggered
3 requirements for a permit, it subjected the
4 entire facility.

5 MS. HOFFMAN: This is Part 70 and
6 the entire facility will be subject to a
7 Part 70 permit.

8 MS. WARRAM: I mean, Joel is
9 coming from a perspective that is to what
10 parts or what pieces of equipment would be
11 included in that permit if it required a
12 permit. That's the way the regs used to be
13 written.

14 MR. WILSON: Right.

15 MS. WARRAM: Any part of that
16 process.

17 MR. WILSON: The regulations of
18 the wording has changed over the last few
19 years and this represents another change in
20 the wording that quite frankly changes, in
21 my opinion, the meaning of what would
22 require a permit. We can interpret it the
23 old way, I believe, but it's more difficult
24 to do that because the language is a little
25 more specific. In our attempt to make it

1 are regulated. I guess with that, I would
2 like to hear from some other sources that
3 want to comment on this.

4 MR. BRANECKY: Joel, do you have
5 some suggestion on how we can fix that? I
6 guess we would really like to get this
7 passed today if we could, so if there is
8 some-ideas on how we could fix that
9 paragraph and get it done today, it would
10 be helpful. But if not, then we can
11 continue it.

12 MR. PETULA : I'm Preston Petula
13 with Hannover. I have a question.

14 MR. DYKE: Yes. Do you have a
15 business card?

16 MS. PETULA: I'm relatively new
17 at this, but what you said about being
18 regulated, it comes to my mind to -- does
19 the OAC want to know every time there is a
20 5 ton increase in regulated equipment?

21 MS. HOFFMAN: Yes. Unless it's
22 already part of the permit. In other
23 words, a lot of the Part 70 permits are now
24 being drafted with a cap, so that you can
25 emit up to that cap. So long as you stay

1 clear, it appears to me that we've made it
2 clear that I would have to go and get a
3 permit for a valve. Whereas before, I
4 could argue I didn't have to, and I don't
5 think I would have to argue very hard,
6 because I believe the Department would
7 agree that I didn't have to. You might say
8 that it is possible for us and other
9 sources -- and we can hear from other folks
10 here, that we could apply for permits where
11 we could make -- where we've made physical
12 changes and these changes would create, you
13 know, whether it was from the actual piece
14 of equipment that was changed or whether it
15 was an attributable emission increase, we
16 could apply for permits. But in my opinion
17 and at least from my facility, the number
18 of permits that we would submit would go up
19 drastically because we've not done this in
20 the past. And mostly because there is a
21 regulation under new source review that we
22 must apply to attributable emission
23 increases and that's new source review. So
24 those are regulated, granted the emission
25 thresholds are more than 5 tons but they

1 under the cap, you are fine. But if you
2 are going to do a physical change and you
3 are going to go over that, then you yes, we
4 want to know about it.

5 MR. DYKE: Don.

6 MR. WHITNEY: I'm Don Whitney
7 from Trinity Consultants and I have a
8 suggestion on wording that might help get
9 over this point and that is adding that the
10 physical change increase actual emissions
11 from that unit or from that specific
12 process of the 5 tons a year to clarify
13 that we're just talking about the valve and
14 not related processes upstream and
15 downstream that might be affected. Because
16 those upstream and downstream and
17 associated changes are already covered by
18 PSD regulations and new source review
19 things that are going to provide a cap on
20 this. So it's not like you can change a
21 little valve and increase 100 tons
22 somewhere else, those things -- safeguards
23 are already in place. So I think this --
24 we need to put in some kind of words that
25 talk about the change of that equipment,

Page 38

1 that valve or unit, so that we're just.
 2 talking about 5 tons from that unit, might
 3 give us what we want.
 4 MR. DYKE: So repeating, for any
 5 physical change from that equipment or
 6 process that would increase actual
 7 emissions?
 8 MR. WHITNEY: That would increase
 9 actual emissions from that unit or process
 10 and then back to the existing wording, more
 11 than actual emissions. So we just add,
 12 "from that unit or process more than 5 tons
 13 per year".
 14 MS. HOFFMAN: I'm not sure that
 15 we don't need to look at this some more
 16 back at the ranch.
 17 MR. BRANECKY: That's because
 18 you're leaving. This is Barbara's last
 19 Council meeting, by the way.
 20 MS. HOFFMAN: I think the permit
 21 engineers need a chance to look back over
 22 this just a little bit, because I can't
 23 tell you for sure, how they've been
 24 interpreting it. And Dawson and I were
 25 just discussing it and we think that.

Page 39

1 perhaps we don't make it that specific. So
 2 we would kind of like to go back and check
 3 on that and talk about it a little bit.
 4 MR. DYKE: Go ahead, Joel.
 5 MR. WILSON: I appreciate that.
 6 The scenarios that I've given here are
 7 really not at all uncommon.
 8 MR. DYKE: Could we go on with
 9 other questions on other parts of the rule
 10 before we go on?
 11 MR. BRANECKY: Do you have
 12 anything else, Joel?
 13 MR. WILSON: No.
 14 MS. WARRAM: I'm Kim Warram with
 15 OG&E. And over this specific paragraph 8-
 16 4, where you were talking about the NSPS
 17 and NESHAP requirements. While NSPS
 18 doesn't specifically require a construction
 19 permit, NESHAP does specifically in Part 61
 20 (inaudible).
 21 MR. WILSON: So you are
 22 suggesting if I had a valve and it's
 23 subject to a NESHAP, I would need to get a
 24 permit?
 25 MS. WARRAM: That's what NESHAP

Page 40

1 says. But now NESHAP regulates the
 2 pollutants rather than pollutants that are
 3 emitted from certain processes.
 4 MR. WILSON: And apply to
 5 specific equipment?
 6 MS. WARRAM: Right.
 7 MR. WILSON: Does NESHAP
 8 reference the state permitting program?
 9 MS. HOFFMAN: NESHAP basically
 10 requires a preconstruction permit and then
 11 the state is supposed to affirm to EPA
 12 whether or not certified (inaudible)
 13 whether or not we have preconstruction
 14 permit program that would cover those
 15 sources, so we did that, we said we'll
 16 handle that. So I guess we need to go back
 17 and see how that's worded to be sure how to
 18 write this section.
 19 MR. DYKE: Additional questions
 20 from the Council on this rule? Is there
 21 anyone wishing to speak on this rule or any
 22 other questions?
 23 MS. BARTON: I have a question.
 24 Nadine Barton, with CASE. And this has to
 25 do with your draft here on emergencies on

Page 41

1 page 6. And I just would like for my own
 2 clarification that what they are going to
 3 be voting on today, is that going to be the
 4 6-13-2000 draft? The second pass out --
 5 MS. HOFFMAN: Yes.
 6 MS. BARTON: So we're just kind
 7 of ignoring what's going on in this other
 8 one here, basically?
 9 MS. HOFFMAN: Right.
 10 MS. BARTON: Okay.
 11 MR. DYKE: Nadine, we have some
 12 other questions if you would like for me to
 13 go on and come back.
 14 MS. BARTON: Can you hear me?
 15 There is an exemption here about an
 16 emergency shall not include noncompliance
 17 to the extent caused by improperly designed
 18 equipment, lack of preventative
 19 maintenance, careless or improper operator
 20 or operation error. And then you reference
 21 it and you move that to a continuing
 22 section. I guess my question is, is that
 23 you know there are emergencies, if there is
 24 an upset, say, at a refinery and whether
 25 it's, you know, because of lack of

1 maintenance or it's just an accident, is
2 there something that addresses this for
3 noncompliance issues involved in an
4 emergency status and does it give you any
5 type of enforcement ability for that lack
6 of maintenance or control or whatever it
7 happens to be under an emergency situation
8 in another part of this section, since this
9 exempts that.

10 MS. HOFFMAN: I'm not sure I'm
11 following you, but we do have Subchapter 9,
12 which requires reporting of excess
13 emissions and if it doesn't qualify as an
14 emergency here in Subchapter 8, there are
15 certain defenses that can be used in
16 Subchapter 9. But if it doesn't qualify
17 for those defenses, then it's treated like
18 any other excess emission, as a violation
19 of the rules or the permit.

20 MS. BARTON: Well, my question
21 is, I guess what I'm getting at, since
22 you've exempted any kind of emergency
23 because of lack of control or design or
24 preventive maintenance, does that exempt an
25 industry from a compliance action because

1 exclusively referenced to Chapter 7, Minor
2 Sources. So when we're talking here in
3 Chapter 8, it seems that major source is
4 all you need to say. Major stationary
5 source is superfluous.

6 MS. HOFFMAN: I disagree. If you
7 look on page 13, where it lists the covered
8 sources, the first one says a major source
9 as defined in OAC 252:100-8-2, and I
10 believe that is the Part 70 major source
11 definition. And then if you go on down
12 that list, under 6, it says any major
13 stationary source as defined in Parts 7 and
14 9, major stationary sources specifically
15 defined in those parts which are for PSD
16 and for nonattainment, new source review.
17 And they are slightly different definitions
18 for a Part 70 major source and definition
19 for PSD major stationary source.

20 MR. DYKE: Barbara, I have a
21 question. Do you think it's possible to
22 propose passage of this rule, except for
23 that one section in question, the one
24 paragraph in question, could we leave those
25 recommended changes out at this time and

1 you've exempted them here?

2 MS. HOFFMAN: No, they're not
3 exempted here. In other words, they're
4 exempted if it's an emergency, but it says
5 an emergency shall not include those that
6 are caused by improperly designed
7 equipment, et cetera. So an emergency that
8 would be caused by an improper operation,
9 for example, wouldn't be -- (two people
10 talking at the same time). They would
11 still have to report it, but they wouldn't
12 be eligible for the permit.

13 MR. DYKE: Don Whitney.

14 MR. WHITNEY: Yes, Don Whitney
15 again. Just a minor clarification on the
16 bottom of page 12, they've inserted the
17 definition of major source or major
18 stationary source and I'm questioning
19 whether that second major stationary source
20 is really needed there, since if you go
21 back further in the definitions of Chapter
22 8, it says that a major source is a
23 stationary source. And going back further
24 into Chapter 1 definitions, I could find
25 major stationary source but that's

1 pass the rest of it? Would that make any
2 difference?

3 MS. HOFFMAN: I don't think we
4 can do that, because of the way that we've
5 noticed this proposal.

6 MR. DYKE: So strike all
7 recommendations for that paragraph --

8 MR. BRANECKY: All or nothing.

9 MS. HOFFMAN: We have to do it as
10 a whole proposal.

11 MR. DYKE: My concern is we're
12 going to have to reassign this rule to
13 somebody else to work on for the next --
14 someone who has not been working on these
15 changes, these comments will have to take
16 it over. I was just trying to get through
17 what we could.

18 MR. BREISCH: How many changes
19 are we talking about? Are we just talking
20 about the one that Joel elaborated on a
21 while ago, or are there others that we have
22 decided need to be changed?

23 MR. DYKE: It appears just the
24 one additional definition, elaboration of
25 the definition.

Page 46

1 MR. BREISCH: Barbara, I
2 understood that you all were under the
3 impression that this particular wording was
4 a little loose?
5 MS. HOFFMAN: As proposed to the
6 existing wording.
7 MR. BREISCH: As proposed here.
8 You a while ago said that yes, really it's
9 somewhat vague, the way I understood what
10 you said.
11 MS. HOFFMAN: See, we're always
12 having to weigh the pros and cons of making
13 a rule a lot longer so that it covers
14 everything and everyone is clear on what it
15 means and making it a little shorter so
16 it's a little more understandable right off
17 the bat. So when we drafted it, it was
18 just -- we were trying to cover it pretty
19 quickly and hopefully in a way that our
20 industry and our permit writers understood
21 that they could work out the details later.
22 But apparently I think Joel has raised some
23 good questions about exactly how it needs
24 to be fixed and frankly, this is real
25 important to everyone here with industry

Page 47

1 and the agency, as far as the exact wording
2 of it, so I would hate to try to come up
3 with a fix today without talking to our
4 permit engineers.
5 MR. BREISCH: I guess what I'm
6 suggesting maybe it doesn't need a fix.
7 That if what Joel said is something that
8 happens frequently and he came to the staff
9 and said I'd like to make a determination
10 of whether I need a permit, that you all
11 could probably work it out. And from the
12 scenario that he said, it probably wouldn't
13 require a permit.
14 MS. HOFFMAN: Right. I think his
15 interpretation and ours is the same, as far
16 as how it would actually be applied, yes.
17 MR. BREISCH: Then maybe a simple
18 change in this, given the authority of our
19 Director -- am I using the right term -- to
20 determine whether it needs a permit or not.
21 It might solve this.
22 MS. HOFFMAN: I agree.
23 MR. BREISCH: I would suggest
24 that if this happens to be a real problem
25 with industry, it's brought back and we

Page 48

1 make a change then so we can go ahead and
2 pass this, either with a simple language
3 change of who really intercedes in the
4 argument and makes the final decision, or
5 let it be like it is and see if it works.
6 MS. HOFFMAN: Sounds like a good
7 idea to me.
8 MR. BREISCH: I'm just suggesting
9 a way to get over this. We want to pass
10 it. If Joel can't see that working that
11 way, I'm going to agree with him. We just
12 -- we go ahead and continue this to another
13 time. But if he believes that he can work
14 this out with the staff and all other
15 industry can, I think we ought to go that
16 way.
17 MR. WILSON: Do we have others
18 here that want to comment on this? Can we
19 open this up?
20 MR. BRANECKY: Sure.
21 MR. KILPATRICK: I would just
22 comment that I think Bill has got a good
23 proposal, but it seems to me the only
24 reason that we're not taking -- that from
25 not taking action or postponing this for

Page 49

1 one meeting is simply that we have to
2 reassign it to someone else on the staff to
3 look at this one issue. I don't see much -
4 - since there is no hurry to pass it, why
5 don't we let it be reassigned and discuss
6 this issue and come back next meeting with
7 what we think would be a better proposal?
8 I don't know anything about the particular
9 permitting issues, but it seemed like the
10 issues that Joel brought up would probably
11 be ones that would be common to many
12 facilities and it doesn't make much sense
13 to me to go ahead and pass something we
14 know is going to create confusion and try
15 not to work it out.
16 MR. WILSON: Gary, I would agree
17 with that. Specifically, regarding the
18 issue of a physical change that increases
19 actual emissions. The state's response and
20 Dawson's response to that indicates that
21 the state does intend to require a permit
22 for that. Given that, and given that
23 that's part of this record, I would like to
24 have an opportunity to comment on that
25 because that is to submit comments formally

1 regarding that intent.
2 MR. KILPATRICK: Another point
3 along that line and, once again, I never
4 have submitted permits, I'm certainly not
5 an expert in this area, but I think in the
6 past we've had guidelines or
7 interpretations, I don't know what you call
8 them, which have now been basically decided
9 we're not going to use those. And this
10 almost sounds like an issue where we're
11 going beyond this just to settle
12 interpretation of what the rule says to
13 almost establishing a guideline, maybe an
14 unwritten guideline but establishing a
15 guideline which the DEQ has decided we
16 should not be doing, that should come
17 through the rule itself. So I think it
18 just argues to go ahead and fix the rule
19 rather than try to have an understanding in
20 the background about what the rule means.
21 MR. BRANECKY: I would agree. I
22 would rather have it in the rule because
23 personnel changes, as we know people leave,
24 different people come in and have different
25 interpretations, so I'd rather have it

1 written in the rule. And let me point out
2 one other thing, we only have five voting
3 members here today, so whatever we do
4 requires five votes. So we need to all be
5 in agreement on what we do in order for it
6 to pass.
7 MR. DYKE: Let me clarify the
8 reassignment of staff. Obviously, Dawson
9 and his staff can look at this particular
10 section, but Barbara has answered questions
11 today regarding this rule that cover
12 everything from quoting federal law and
13 guidance and other things, that's my
14 concern. Once we've announced the rule,
15 and we are going to post it again, it's
16 wide open one more time in addition to this
17 section. We can bring a lot of staff or
18 several people, I guess to replace Barbara.
19 So it would be our recommendation to
20 continue it until the August meeting.
21 MR. BREISCH: Yes, I can agree
22 with that. I just wanted Joel to say
23 whether he was strong enough in his
24 feelings to want to go ahead and continue
25 it, too.

1 MR. WILSON: I would like to see
2 us continue this.
3 MR. BROWN: Mr. Dyke, my name is
4 Howard Brown with Central and Southwest. I
5 was wondering if I could get a
6 clarification on another area, something I
7 don't think I quite understand. That is on
8 Part 9, page 39, the areas that Barbara
9 referenced were actually passed in '88 and
10 '89 and were never codified. I don't
11 understand why they were never --I don't
12 understand the reason from them so why
13 would you want to do it now.
14 MS. HOFFMAN: I don't think they
15 are really major changes from what was
16 there previously, just they are a little
17 more defined, I think, than what was there
18 originally. But I believe that it was
19 language changes -- they were language
20 changes that EPA requested to be made in
21 our program to continue to have approved
22 PSD nonattainment resource review
23 programs.
24 MR. BROWN: I guess the way I
25 read this, nonattainment areas, and this is

1 about building a source in an attainment
2 area that would have an effect on a
3 nonattainment areas?
4 MS. HOFFMAN: Right.
5 MR. BROWN: And if you meet these
6 significant levels you have to either get
7 offset or your permit denied or I have to
8 argue that I'm actually in a nonattainment
9 area and this doesn't apply at all.
10 MS. HOFFMAN: Right. Then you go
11 back to the nonattainment part of the
12 rules.
13 MR. BROWN: How can I argue that
14 I'm actually in a nonattainment area when
15 I'm in an attainment area and effecting a
16 nonattainment area?
17 MS. HOFFMAN: Actually, this is
18 almost word for word of what's in the Part
19 51, Section 165.
20 MR. BROWN: So I do understand
21 that correctly?
22 MS. HOFFMAN: Yes.
23 MR. DYKE: Is there anyone else
24 wishing to speak on this rule today? Any
25 additional questions from the Council?

1 MR. BRANECKY: At this point in
2 time, I'm ready for a motion. What are the
3 Council's wishes?

4 MR. WILSON: David, I would like
5 to make a motion that we continue this to
6 the next meeting.

7 MR. BRANECKY: I have a motion
8 that we continue Subchapter 8 to the August
9 meeting.

10 MR. KILPATRICK: Second.

11 MR. BRANECKY: Second. Myrna.

12 MS. BRUCE: Mr. Wilson.

13 MR. WILSON: Aye.

14 MS. BRUCE: Mr. Treeman.

15 MR. TREEMAN: I abstain.

16 MS. BRUCE: Mr. Breisch.

17 MR. BREISCH: Aye.

18 MS. BRUCE: Mr. Kilpatrick.

19 MR. KILPATRICK: Aye.

20 MS. BRUCE: Dr. Grosz.

21 DR. GROSZ: Aye.

22 MS. BRUCE: Mr. Branecky.

23 MR. BRANECKY: Yes.

1 forth in Barbara's testimony included in
2 the transcript of proceedings from the June
3 14th meeting, which is included in your
4 packets. I will walk through all changes
5 proposed in response to questions raised at
6 the June meeting and all new changes, which
7 are primarily non-substantive. I will also
8 briefly highlight the substantive changes
9 which were included in Barbara's
10 presentation.

11 Beginning at page 1, the definition
12 section, Section 1.1, are several relocated
13 defined terms. These are "actual
14 emissions", "best available control
15 technology", "begin actual construction",
16 and the term "building, structure,
17 facility, or installation". Of these, the
18 terms "best available control technology"
19 and "building, structure, facility, or
20 installation" have been deleted from Parts
21 7 and 9 and moved to the beginning of this
22 Subchapter 8, since the terms apply to more
23 than just PSD sources.

24 A new definition is included for the
25 term "actual emissions", for use only in

PROCEEDINGS

1
2 MR. DYKE: The next item on the
3 agenda is OAC 252:100-8, Permits for Part
4 70 Sources, Agenda Item 4C. I'll call on
5 staff attorney, Pam Dizikes.

6 MS. DIZIKES: Mr. Chairman,
7 Council Members, ladies and gentlemen,
8 Subchapter 8, covering permits for Part 70
9 sources, has already been through the re-
10 right/de-wrong process. Since that initial
11 go-around, industry and the Division have
12 identified certain errors and
13 inconsistencies that need to be resolved.

14 Barbara Hoffman presented these
15 proposed revisions to you at the June 14th
16 meeting in Tulsa. Following Barbara's
17 presentation, several questions were raised
18 with respect to the need to more clearly
19 spell out when construction permits are
20 required for Part 70 sources. Since that
21 June meeting, staff has recommended that
22 Subchapter 6 be revoked, but that portions
23 be moved into Subchapter 8.

24 I will not go through each of the
25 proposed changes, since they are amply set

1 connection with Part 70 sources that are
2 not PSD or nonattainment. The definition
3 is identical to that in Subchapters 7 and
4 5.

5 A new definition for the term "begin
6 actual construction" is proposed for
7 clarification, for use only in connection
8 with Part 70 sources that are not PSD or
9 nonattainment. The definition, which is
10 found in Section 4(a)(1), at page 14,
11 requires a construction permit at the time
12 that a person begins actual construction or
13 installation of the emitting equipment on a
14 pad or at the final location at the
15 facility. The definition is nearly
16 identical to the definition of the term
17 "commence" for state permits found in
18 Subchapter 7.

19 As Barbara explained to you in June,
20 staff is proposing to add several
21 subdivisions of construction permit fees to
22 Section 1.7(2), which is at page 6 in your
23 packet. As it currently exists, this
24 section requires an owner or operator to
25 pay \$2,000.00 for every construction

1 permit, regardless of whether it's a
 2 modification to an existing facility or
 3 whether it's a construction permit for a
 4 brand-new facility. At the June meeting,
 5 staff proposed separate fees for
 6 construction of new Part 70 sources, minor
 7 modifications to Part 70 sources,
 8 significant modifications to Part 70
 9 sources, and authorizations under a general
 10 permit. After further reflection, staff
 11 asks that fees for minor modifications and
 12 significant modifications to Part 70
 13 sources be treated in a like fashion for
 14 purpose of charging fees. As now proposed,
 15 Part 70 construction permit applications
 16 will carry the following fees: \$2,000.00
 17 for construction of a new source, \$1,500.00
 18 for modification of a source, and \$900.00
 19 for authorization under a general permit.
 20 Section 4(a)(1), on page 14, is
 21 changed to clarify that sources cannot
 22 begin construction until they obtain a
 23 construction permit. This change, together
 24 with the new definition for "begin actual
 25 construction", which I already mentioned,

1 emissions of over 5 tons per year for
 2 criteria pollutants.
 3 We have revised this sentence to
 4 require no more than is required by federal
 5 regulation. That is, a construction permit
 6 will be required for reconstruction of a
 7 major affected source under 40 CFR Part 63,
 8 reconstruction of a major source if it
 9 would then become a major affected source
 10 under 40 CFR Part 63, and for any physical
 11 change that would be a significant
 12 modification under Section 7.2(b)(2).
 13 Sources subject to Part 7 or Part 9 of this
 14 subchapter must also meet the applicable
 15 requirements for a permit, as is already
 16 spelled out in Part 7 and Part 9. Staff
 17 believes that these changes are responsive
 18 to all questions and comments received
 19 about Section 4(a)(1).
 20 Section 5(b), at page 16, titled
 21 "Duty to Supplement or Correct
 22 Application", has been relocated from
 23 Chapter 6. As Jeannette Buttram explained
 24 earlier this morning, staff proposes to
 25 revoke Chapter 6, but to relocate several

1 should eliminate further questions about
 2 the need to secure a permit before
 3 beginning construction.
 4 The second sentence of this same
 5 Section 4(a)(1), has been changed further
 6 since our June meeting. As you may recall,
 7 questions were raised during our meeting
 8 and written comments have been received
 9 since, as well, expressing disagreement
 10 with the need to secure a construction
 11 permit for small physical changes, such as
 12 the addition of a valve. I believe copies
 13 of these comments are on the table in the
 14 rear and I would also like to have the
 15 comments incorporated into the record.
 16 After further reflection, the
 17 Division has concluded that the Part 70
 18 construction permit requirement should be
 19 no broader than is required by federal
 20 regulation. Following this logic, we have
 21 deleted the proposed requirement that a
 22 construction permit be secured both for
 23 adding a piece of equipment or process that
 24 is subject to NSPS, and for physical
 25 changes that result in an increase in

1 requirements of that Chapter into the
 2 chapters to which those requirements
 3 relate. I think Jeannette also explained
 4 earlier that this particular subsection was
 5 already referenced in Subchapter 8.
 6 Staff has done some fine-tuning of
 7 Section 6(a)(3)(C)(iii)(1) at page 22. Our
 8 revisions makes clear that an initial
 9 report must be made for all emissions in
 10 excess of permit requirements. In order to
 11 qualify for the affirmative defense, the
 12 permit holder must submit a follow-up
 13 written report.
 14 Further fine-tuning to the emergency
 15 language is reflected in the insertion at
 16 line 10 of the sentence "quantification of
 17 exceedances attributable to emergencies or
 18 upset conditions shall be made by the best
 19 available method." This sentence was
 20 merely moved forward from the now deleted
 21 Subsection 6(e)(1) at page 26.
 22 Barbara explained to you that we are
 23 making a substantive change at page 35, in
 24 the definition of "major stationary
 25 source". The existing rule sets the

5031

1 trigger for municipal incinerators at 250
2 tons of refuse per day. The 1990
3 amendments to the Clean Air Act, Section
4 169(1), require this lower threshold of 50
5 tons of refuse per day.

6 At page 39, you will note that we
7 are adding several definitions to Section
8 8-51. This is part of our re-write of
9 Subchapter 1. Each one of these
10 definitions has been moved, verbatim, from
11 Subchapter 1, since the definitions apply
12 specifically to Subchapter 8, Part 9, for
13 major sources in nonattainment areas.

14 The very last change to this rule,
15 at pages 42 through 43, were explained by
16 Barbara at the June meeting. These changes
17 were actually adopted in 1988 and readopted
18 in 1989, but for some reason were never
19 codified. Our records show that the
20 changes were made for clarification at the
21 request of EPA.

22 Before I close, I would mention that
23 Ms. Myers has identified a couple of very
24 minor problems in the text that you have
25 before you. At page 13, Section

1 during a particular calendar year,
2 determined using methods contained in
3 252:100-5-2.1(d)". And my question is, why
4 the words "given facility" are used instead
5 of "emissions unit", as it's used back in
6 the definition under Part 9.

7 MS. DIZIKES: I'm going to have
8 to look, but I believe that this was a
9 definition that was relocated verbatim.
10 But let me check.

11 DR. SHEEDY: This is Joyce
12 Sheedy. I believe we copied that
13 definition out of Subchapter 5, 5-1.1, and
14 because we had in Subchapter 8 a definition
15 for "actual emissions" when we were talking
16 about PSD and when we were talking about
17 nonattainment area sources, but we had no
18 definition for "actual emissions" for other
19 major sources that were in Part 70 that
20 weren't PSD or nonattainment, and there was
21 no definition in the general definitions in
22 Subchapter 1, and we used -- we just used
23 the exact words that we had used in
24 Subchapter 5 and, I believe, perhaps in
25 Subchapter 7, as well.

1 3(b)(9)(2), it looks as though there was a
2 problem with the photocopier, and after the
3 word "sources", which is plural, there
4 should be a comma. Also, Section 52, in
5 the graphic presentation, and that's on
6 page 42 of your text, the graphic
7 presentation looks a little bit funny, when
8 it is typeset, it should be very clear and
9 actually as you read down following the
10 lines, it is accurate. So if you trace
11 down under the lines from top to bottom, it
12 reads correctly. With that, I would just
13 like to conclude that the staff recommends
14 these proposed changes to Subchapter 8 for
15 emergency and permanent adoption.

16 MR. DYKE: Questions from the
17 Council?

18 MR. WILSON: Pam, I have a
19 question regarding the definition of
20 "actual emissions", this is Part 1 in the
21 "General Provisions". On my copy it is
22 page 1. And it reads, "actual emissions,
23 except for Part 7 and 9 of this subchapter,
24 means the total amount of regulated air
25 pollutants emitted from a given facility

1 MS. DIZIKES: Is that a
2 sufficient explanation, or would you like
3 us to read the definition as it appears in
4 Subchapter 5?

5 DR. SHEEDY: It's identical to 7.

6 MR. WILSON: Well, a given
7 facility to me introduces a lack of clarity
8 and I'm not sure why I understand the words
9 "given facility" are in there instead of
10 "emissions unit", other than they were
11 carried forward from other subchapters.

12 MS. DIZIKES: I'll give you that.

13 DR. SHEEDY: Yes, I think this --
14 the whole thing about facilities and
15 sources and emitting units is something, I
16 think, we're going to have to come to grips
17 with in the future throughout the whole
18 subchapter -- I mean, throughout the whole
19 chapter.

20 MR. WILSON: The terminology,
21 "facility, source, emissions unit" has
22 always been confusing to me in these
23 regulations.

24 DR. SHEEDY: I think emissions
25 unit is the clearest of the three.

1 MR. WILSON: I think so, too.
2 That's why I'm suggesting, if there is no
3 other reasons that "given facility" is in
4 there, my suggestion would be to replace
5 those words with "emission units", or you
6 can say emission unit or emission units.

7 DR. SHEEDY: I'm not absolutely
8 certain there is no reason for it to be
9 there at this point.

10 MS. DIZIKES: Joel, I would
11 hesitate to make that change on the fly,
12 specifically because of that confusion over
13 each of those terms. For the most part,
14 the wording was deliberately chosen at some
15 point in time. But you are absolutely
16 right. In the future, we need to pay
17 attention to each of those terms.

18 MR. WILSON: And I appreciate
19 that. I'm not expecting us to make that on
20 the fly, because I think there may be -- I
21 think it's worth looking into why it's like
22 that.

23 Another comment I just want to make
24 is, I'm the one that submitted the comments
25 on the language in 8-4, the instructions

1 the burden on our permit writers. We've
2 all been told how heavy it is and we know
3 how heavy it is and that should, as well,
4 be one of our objectives whenever we write
5 these regulations.

6 MR. DYKE: Is there anyone
7 wishing to speak on this rule or any
8 comments from the public? Questions?
9 Please identify yourself.

10 MR. BLATCHLEY: My name is Tom
11 Blatchley, I'm an environmental consultant
12 out of Tulsa. I've had a client that's
13 raised an issue recently. Dawson is aware
14 of the situation. There has been some
15 preliminary discussions with him. This
16 goes back to 1995, when the OCC and the DEQ
17 signed some agreements about how the two
18 agencies interacted. There never was a
19 resolution of how a well, an exploration
20 well, a production well, when it's brought
21 on-site -- when it's brought into
22 production and it turns out to be a major
23 source. You find that fact after you
24 perforated the well and now you're in a
25 situation where you don't have your permits

1 for getting a construction permit. I just
2 wanted to note that the changes that have
3 been made satisfies the comments that I
4 submitted.

5 MS. DIZIKES: Thank you. No
6 other comments?

7 MR. WILSON: One last comment.
8 The way that I see the changes that have
9 been made in Subchapter 8 regarding when
10 you get a construction permit, it seems to
11 me like there is going to be less burden or
12 this should end up being less burdensome to
13 the permit writers. Has there been any
14 determination or discussion of that?

15 MS. DIZIKES: I think I'll have
16 to turn to the permit writers. Dawson.

17 MR. LASSETTER: I'm Dawson
18 Lassetter. It appears that way to us right
19 now. It's looking like it would be a lot
20 easier for us to make a determination
21 quicker.

22 MR. WILSON: Good. Well, I just
23 wanted to note that for the record because
24 it seems to me like one of the other
25 interests that we should have in this is

1 in place that are required under Chapter 8.
2 You're required to have a construction
3 permit, and an operating permit. So the
4 site is sort of a special case. The
5 industry wants to come back and propose
6 some language to be added to Chapter 8.
7 It's not clear to me whether we should
8 delay the revisions of Chapter 8 today or
9 merely recognize that that is an area of
10 concern that the industry needs to be
11 addressed at a later time.

12 There was a series of correspondence
13 that did take place between Mid-Continent
14 Oil and Gas Association and the DEQ that
15 appeared to resolve this problem. However,
16 there is nothing in place regulatory-wise
17 that really gives any protection in this
18 situation.

19 So, I guess it's partly a comment
20 and partly a question on my part, you know,
21 should we in fact put off the approval of
22 Chapter 8 today or could we go ahead and
23 approve it and somehow reserve the right
24 for additional language to be proposed in
25 the future? I don't really have any

1 language. This is such a new issue, we
2 really haven't come up with any language at
3 this point in time. However, we can tell
4 the Council that we will be working
5 diligently to come up with something in a
6 short-term basis that will resolve the
7 issue.

8 MR. BRANECKY: Does this affect a
9 lot of industry in Oklahoma?

10 MR. BLATCHLEY: I couldn't really
11 say, David. This really just comes up when
12 we go out and perforate a well and it turns
13 out you have a relatively high sulfur well
14 of H2S and then you get into sulfur
15 recovery or incineration of the H2S. And
16 if those emissions, in fact, are greater
17 than 100 tons, again, you're finding that
18 out after the fact. Texas has a way of
19 dealing with this. They've got some
20 specific language that I had a chance to
21 look at yesterday very briefly.

22 MS. MYERS: How frequently does
23 something like this come up, Dawson? Do
24 you have any idea of that?

25 MR. BLATCHLEY: I really don't

1 know. Dawson, maybe you've heard some
2 information.

3 MR. LASSETTER: This is the
4 second time in six years. It's relatively
5 rare, but it is an emergency kind of a
6 situation, naturally, for the company.

7 MS. MYERS: Is that something
8 that we can handle by some kind of an
9 appeal to the Council or is there some
10 other process that we could have other than
11 delaying this rule? Two times in six years
12 isn't a whole lot of frequency to think
13 about trying to delay passage of the rule
14 if it needs to be passed.

15 MR. LASSETTER: Right. I'm not
16 sure that we will hurry the process by
17 delaying this action today. I'm like Tom,
18 I'm not sure what the proper approach maybe
19 should be, but I think it will take a
20 little while for us to work out the answer.

21 MR. DYKE: Dawson, since we have
22 this work group on Subchapter 7, the Mid-
23 Continent Oil and Gas Group, isn't this --
24 and we're working with the jurisdictional
25 guidance document with the Corporation

1 Commission, isn't that a good place to --

2 MR. LASSETTER: That would be a
3 great place.

4 MR. DYKE: -- to throw this thing
5 in and try to work out something? This
6 issue has been around for as long as I've
7 worked for the State of Oklahoma.

8 MR. LASSETTER: It is important
9 enough that we need to address it.

10 MR. DYKE: And we're making
11 permitting changes in that area and the
12 guidance document has to be written. I
13 think that's a perfect place for this.
14 That's why I would suggest that -- we've
15 got Joel Howard here who is working on that
16 committee and chairing that thing up. I
17 would just recommend we take that issue up
18 in that committee.

19 MR. DOUGHTY: David. I'm Dennis
20 Doughty. I'm not sure that that will be
21 the complete cure for that problem, because
22 it raises some PSD issues that you're going
23 to have to address. Part of the problem,
24 as I understand it, is that some of these
25 wells, you really don't know what the

1 emissions are going to be until you allow
2 them to produce at full capacity for a
3 certain amount of time, and they measure
4 the amount of H2S that's coming out of
5 them. So they don't know how to size their
6 equipment, they don't know what their
7 permit is going to look like. So, indeed,
8 there is a problem there. We handled ones
9 quite a few years ago, I believe, with a
10 variance, before the Council or a consent
11 order. It's been quite a while. It's one
12 of the few instances that I know of, where
13 that came along. I don't think the
14 variance would be practical anymore,
15 because it would probably kick in Title V.
16 But I just wanted to make you aware that
17 there is some other issues that we'll have
18 to deal with.

19 MR. LASSETTER: To go along with
20 that, because of the H2S and water
21 problems, I'm not real interested in
22 anything that results in shutting the well
23 in for an extended amount of time, unless
24 they want to put stainless steel tubing
25 down the hole. So I think there is some

1 real concerns about that.

2 DR. SHEEDY: I guess, I have kind
3 of a question for -- because my memory is
4 so bad. I know that Part 70 requires that
5 we look at exploration and production for
6 the operating permit program. Is that true
7 of PSD? Does it cover exploration and
8 production, can anyone recall, for a
9 construction permit requirement?

10 MR. TERRILL: I don't know.
11 That's something we would have to address.
12 I think Dennis is right. I think that
13 we're going to have to -- this kind of cuts
14 across several different rules. But I do
15 think that getting a group of people that
16 are most effected by it, that are doing
17 this PBR and the re-right of 7, was a good
18 place to get some of the technical issues
19 to start formulating, and then we can move
20 and make the changes to the other sections
21 as we need to, to address this. I would
22 propose we go ahead and pass this rule,
23 that with, in the record we would come back
24 and address this as quickly as we can.

25 MR. DOUGHTY: Let me address your

1 would be we would request that we be able
2 to address it in the future, whether that
3 requires approving Chapter 8 language today
4 or not, as long as we reserve that right to
5 come back at a later time.

6 MS. DIZIKES: I just wanted to
7 remind Council that we are moving this rule
8 for both emergency and permanent adoption.
9 I believe a lot of the rationale is for a
10 different reason here, but to allow a
11 timely relief on permit fees and we
12 hesitate to lose that benefit for our
13 community.

14 MR. DYKE: Any additional
15 questions from the Council?

16 MR. WILSON: If we're going to
17 pass this now, we need to address the issue
18 of the actual emission definition.

19 MR. TERRILL: We're going to come
20 back and fix -- as we probably will, just
21 fix that then.

22 MR. WILSON: Fix it then?

23 MR. TERRILL: Just because we
24 pass this, doesn't mean it's concrete
25 forever.

1 question. Joyce, if it's going to be a
2 major source for PSD, somebody is going to
3 have to permit it, whether it's us or
4 whether it's EPA. It falls into a Title V
5 situation. I know of absolutely no
6 exemptions under the Federal Clean Air Act
7 except for aggregating toxic sources.

8 DR. SHEEDY: I understand about
9 Title V for an operating permit. I just
10 wonder is there a requirement for a
11 construction permit under any of the
12 federal laws?

13 MR. DOUGHTY: Well, the federal
14 system doesn't split them between a
15 construction and an operating permit. They
16 basically get -- their first permit is
17 rolled all into one. You do all of your
18 public input into the operating permit like
19 we do in construction permits. So for us,
20 hopefully, the operating permit is rather
21 (inaudible) until the tests and everything
22 are done. For EPA, my understanding is
23 they rolled it up all into one, and it's
24 all done in one fell swoop.

25 MR. BLATCHLEY: Our position

1 MR. WILSON: Well --

2 MR. TERRILL: Either that or not
3 pass it all, because I'm not willing to
4 change this without making absolutely sure
5 it's not going to effect something else.
6 We can come back and fix that when we come
7 back and address this issue that Mr.
8 Lassetter brought up. I've got a note to
9 do that.

10 MR. WILSON: I agree.

11 MR. DYKE: Anyone else wishing to
12 speak on this matter? Any additional
13 questions from the Council?

14 MR. BRANECKY: We've heard the
15 recommendation of staff that this be passed
16 as an emergency and a permanent. I would
17 like to hear the wishes of the Council at
18 this time through the form of a motion.

19 MR. KILPATRICK: I move that we
20 adopt the modifications to Chapter 8 for
21 emergency and permanent, as they have been
22 proposed and in addition to the -- I think
23 there were two corrections made in the
24 presentation.

25 DR. GROSZ: Second.

5035

1 MR. BRANECKY: I have a motion
 2 and a second. Any further discussion by
 3 the Council? Myrna.
 4 MS. BRUCE: Mr. Wilson.
 5 MR. WILSON: Aye.
 6 MS. BRUCE: Dr. Grosz.
 7 DR. GROSZ: Aye.
 8 MS. BRUCE: Mr. Kilpatrick.
 9 MR. KILPATRICK: Aye.
 10 MS. BRUCE: Mr. Breisch.
 11 MR. BREISCH: Yes.
 12 MS. BRUCE: Ms. Myers.
 13 MS. MYERS: Yes.
 14 MS. BRUCE: Mr. Branecky.
 15 MR. BRANECKY: Aye.

RE: OAC 252:100-8 Changes

Revisions to Subchapter 8 are scheduled to be presented for a second time at the Air Quality Council meeting on August 16, 2000. The following areas should be addressed since they have been a cause of considerable confusion for both the AQD Staff and industry. Suggested wording and rationale are provided below.

OAC 252:100-8-4 (a) Construction Permits

(1) **Construction permit required.** No person shall begin actual construction or installation of any new source that will require a Part 70 operating permit without first obtaining a DEQ-issues construction permit. A construction permit is also required in the following circumstances unless such construction or modification is specifically authorized in a Part 70 permit:

- (A) A piece of equipment or a process is added that is subject to NSPS or NESHAP except that the Director may waive this requirement for Subparts which are currently effective for similar equipment or processes at the facility such as leak checking.
- (B) Any physical change that would increase actual emissions from that unit or process more than 5 tons per year of any criteria pollutant, more than 2 tons per year of any one HAP or more than 5 tons per year of two or more HAPs.

In addition to the requirements of this Part, sources subject to Part 7 or Part 9 of this Subchapter must also meet the applicable requirements contained therein.

RATIONALE:

Major facilities with Part 70 sources have a great many processes which require routine replacement, repair, and minor modifications. Under the old definitions, such activities could require a permit for trivial items such as a valve addition or change which might increase fugitive emissions by a very slight amount or make the valve subject to a requirement such as leak-check monitoring under NSPS Subpart GGG. There is little logic in requiring a construction permit for such a change with only a few pounds per year of emissions or the addition of a few valves to an existing LDAR program. If possible, such situations will be anticipated by the Title V permit conditions and specifically excluded from notification or permit modification requirements.

There is no danger of this being a significant "loop-hole" for several reasons:

1. Parts 7 and 9 exclude such changes from exceeding PSD significance levels
2. Upstream and downstream processes will frequently have their own emission limits
3. The Title V permit will be updated every 5 years.

Subject: Subchapter 8 Rule Changes
Author: "Don_Whitney@trinityconsultants.com"
<SMTP:Don_Whitney@trinityconsultants.com>
Date: 6/27/00 4:06 PM

Attached document contains suggested wordings of two areas of OAC 252:100-8. The very worthwhile and needed clarification of this area was proposed at the last AQC mtg and will likely be proposed again in August. Please also forward to other members of the AQD staff who may be considering changes to Subchapter 8. If you like, I would be glad to meet with you to discuss these areas and/or alternative wordings.

The potential impact of not incorporating flexibility for changes of this type is significant for both industry and DEQ. If the wording proposed at the June mtg were strictly followed, numerous facilities such as refineries and gas plants would be faced with submitting perhaps dozens of permit modifications or construction permit applications every year. Besides the burden on industry, such paperwork would do nothing to enhance or protect air quality and would be a tremendous burden on DEQ to process. Another danger of the status quo is that it leaves many facilities in jeopardy of compliance/enforcement action over trivial changes. Again, this area of minor changes is very important to large (Ch 8) and small (Ch 7) facilities and needs to be crystal clear to avoid misunderstanding. Unfortunately, there are many possible scenarios of changes which need to be addressed to prevent the need for "interpretation" of what the rule really means.

(See attached file: OK-Rules8.doc)

OAC 252:100-8-6 (f) Operational Flexibility

Changes resulting in no emissions increases. A permitted Part 70 source may make changes within the facility that are specifically authorized in the permit or that:

- (A) Are not modifications under any provision of Title I of the Act.
- (B) Do not cause any hourly or annual permitted emission rate of any existing emissions unit to be exceeded; and
- (C) Result in a net change in emissions of zero, provided that the facility notifies the DEQ and EPA in writing at least 7 days in advance of the proposed changes. The source, DEQ, and EPA shall attach each such notice to their copy of the relevant permit.....

RATIONALE:

Minor changes of operation / maintenance / construction / replacement can be anticipated for many activities at major facilities. Such changes will often result in a trivial increase of actual emissions but do not warrant a permit modification.

REGULATION 1.4
[PRESENTLY REFERRED TO AS 252:100-7]

COUNCIL MEETING DATES

MARCH 17, 1987

MAY 19, 1987

JULY 21, 1987

SEPTEMBER 22, 1987

BOARD MEETING DATE

JANUARY 28, 1988

SUMMARY OF RULE CHANGE:

Regulation 1.4 – revise permit regulations for both new and existing sources of air pollution by (1) substantially increasing construction and operating permit fees for new sources; and (2) requiring all permits to be renewable on an annual basis. Renewal fees, or renewal equivalents, ranging from \$50 to \$500 per facility, are also assessed annually on all regulated sources.

REGULATION 1.4

Air Resources Management Permits Required

Permits

1.4.1 General Permit Requirements

1.4.1 (a) Scope and Purpose

~~— (1) Pursuant to the Oklahoma Clean Air Act as amended, this regulation is adopted to define Air Resource Management Requirements to protect and enhance Oklahoma Clean Air Resources and assure attainment/ maintenance of the ambient air quality through the utilization of a construction/operation permit system.~~

1.4.1 (a)(b) General Requirements Permitting System

(1) The Air Quality Service shall operate for the State of Oklahoma a dual permitting system for all new stationary/portable facilities/sources to be established in Oklahoma. The first permit is authorization to construct and is issued upon a determination by the Commissioner that the new source is so designed as to assure that the emission limitations of the several control regulations will be met. The second permit is a permit to operate and is issued by the Commissioner upon demonstration that the source was constructed as designed and the facility does meet the requirements of those several control regulations. Issuance of a permit is evidence that the source has met all requirements; however, upon proper showing this can be refuted by the State or a third party and in such a case the permit does not relieve the source of the responsibility to comply with all local, state or federal laws. All operating permits, for sources having emissions above de minimis levels under Section 1.4.1(c)(4)(C)(i) including those issued prior to the effective date of this subsection, shall be for the term of one year, renewable annually as provided herein.

1.4.1 (c) Necessity to Obtain Permit

(b) Applicability

(1) Except as provided herein, no person may commence construction of, or operate any new source, or relocate any source without obtaining a permit from the Air Quality Service.

~~(1)(2)~~ (2) Permits are required when the addition of a new source, or modification of an existing source, results in a net increase in air contaminant emissions as the Commissioner determines appropriate.

(2) Transfer of a source to a new owner or operator is not considered an increase in emissions and does not require new permits. However, any transfer shall be subject to existing permit conditions and/or compliance schedules. Notification of such transfers shall be made promptly in writing to the State Air Quality Service.

~~(3) The Commissioner may determine that a source is of minor significance and that permits are not required.~~

(3) Upon the effective date of this subsection, no permit shall be required for any new or modified source when it can be shown to the satisfaction of the Commissioner that:

- (A) Emissions will not exceed one pound (1 lb.) per hour for any one criteria pollutant, and
- (B) Emissions of toxics will not exceed the de minimis requirements set forth under Regulation 3.8.4(i)(1)(E).

1.4.1 (c) (d) Permit fees

~~(1) The applicant for a permit to construct, operate or relocate will attach a check or money order in the amount of thirty five dollars (\$35.00) as an initial processing fee.~~

~~(2) After evaluation and prior to issuance of the construction permit, an additional fee will be charged and collected in accordance with the following schedule~~

- ~~(A) Each major source operation – \$300.00~~
- ~~(B) Each minor source operation – no fee~~
- ~~(C) Relocation fee – no fee~~

(1) Definitions. For the purposes of section 1.4.1(c):

(A) Major Source – means any new or modified stationary source which directly emits or has the capability at maximum design capacity, and if appropriately permitted, authority to emit 100 tons per year or more of a given pollutant.

(B) Facility – means all of the pollutant-emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person or persons under common control.

Pollutant-emitting activities shall be considered as part of the same industrial grouping if they belong to the same “Major Group” (i.e., which have the same two-digit code) as described in the Standard Industrial Classification Manual, 1972, as amended by the 1977 Supplement.

(C) Minor Source – means any source for which a permit is required, but is not a major source.

(D) Permit Renewal – means the process whereby operating permits are extended for another one year term. In no case shall the term “permit renewal” be construed to allow the imposition of additional permit requirements not otherwise required or authorized by law or regulation.

(E) Relocate – means to move a source from on geographical location to another. The term shall not include de minimis moves within the proximity of the original site, or convenience moves to contiguous areas when such moves are readily observable by inspectors.

(F) Annual Permit Renewal Fee Equivalent – means the annual fee assessed on facilities which, because of the date of start-up or construction, are exempt from the requirements to have a permit.

(2) Construction and Operating Permit Fees – New Sources

(A) All new permits, the construction permit application for which is received after the effective date of this subsection, will be assessed a fee, which must accompany the application, in accordance with the following schedule:

- (i) Major Source

Construction Permit	\$2,000
Operating Permit	\$1,500

(ii) Minor sources actually emitting 25 tons but less than 10 tons per year of any one pollutant; and minor NSPS sources.

	<u>Construction Permit</u>	<u>\$1,000</u>
	<u>Operating Permit</u>	<u>\$250</u>
(iii)	<u>Minor sources emitting more than one pound per hour but less than 25 tons per year of any one pollutant.</u>	

	<u>Construction Permit</u>	<u>\$200</u>
	<u>Operating Permit</u>	<u>\$100</u>
(iv)	<u>Relocation Permits</u>	<u>\$50</u>

(3) Review to Determine Applicability – New Sources

(A) Upon submittal of a written request, a \$100 determination fee and any relevant information needed to make a permit determination, the Air Quality Service will make a determination whether or not a permit is required. If a determination is made that a permit is required the \$100.00 fee will be credited against the construction and operation permit fees. If it is determined that a permit is not required the \$100.00 fee will be retained by the AQS to cover the cost of making the determination.

(4) Permit Renewal and Renewal Equivalents

(A) Applicability

(i) The Air Quality Service shall annually assess and collect a permit renewal fee or permit renewal fee equivalent from all facilities in the State according to their classification as set forth in Table I. Assessments for existing facilities grandfathered from permit requirements (i.e., permit renewal fee equivalents) shall be made in the same manner and on the same basis as a new facility of the same type (permit renewal fees).

(ii) New facilities shall not be subject to a permit renewal fee until a minimum of one year shall have elapsed from the operating permit application due date.

(B) Facility Classification

(i) Any new facility for which an appropriate classification does not exist shall be assigned a classification and class number in Table I as a permit condition.

(ii) Any existing facility for which an appropriate classification does not exist shall be assigned a facility classification and class number in the same manner as

(B)(i) above except that:

(a) Such assignment shall be made in writing, setting forth the reasons why the facility has been assigned to any particular category, and

(b) Any person aggrieved by such assignment shall be entitled to a hearing on the reasonableness of the assignment.

(C) De Minimis

(i) A permit renewal fee or renewal fee equivalent shall not be required, regardless of the requirement to have a permit, provided that total emissions from the facility do not exceed ten (10) tons per year for any one criteria pollutant.

(D) Assessments

(i) Fees established under this section shall be assessed and paid on the basis of facility classification as identified in Table I. The annual fee collected for a facility in any class shall be determined by multiplying the class number for the facility, as determined by Table I, by fifth (\$50) dollars. In no case shall more than one fee per source be assessed unless such source shall constitute two or more facilities as defined herein.

(ii) On or before the first working day of each year, the Air Quality Service will mail fee assessments to all facilities subject to this regulation. Such assessments shall be made pursuant to the date contained in the emissions inventory and shall set forth:

(a) The facility classification

(b) The class number assigned to the facility, and

(c) The amount of the fee that is to be remitted to the Service.

(iii) For the calendar year 1988, fee assessments will be mailed on or about the effective date of this regulation and shall be due in the offices of the Air Quality Service 30 days from the date of receipt of the assessment.

(3)(5) Fees will be paid by check or money order (no cash will be accepted) made payable to the reviewing agency, e.g., Oklahoma State Department of Health, Air Quality Service. Fees shall be due in the offices of the Air Quality Service 30 days from the date of postmark. A ten (10) calendar-day grace period will be given before any enforcement action will be taken. Upon the expiration of the ten-day grace period, notices of violation (NOV) may be issued and civil penalties, in addition to other remedies, may be sought as authorized under 63 O.S. 1986 Supp. Section 1-1701.1A.

(6) The fee provisions set forth in this regulation shall apply to those permits, renewals and renewal fee equivalents processed by the State Air Quality Service and are not intended to preempt any local fee program.

Air Quality Service
Oklahoma State Department of Health
January 30, 1987

The Oklahoma Air Quality Council, acting under the authority of 63 O.S. 1981, Sections 1-1802, et.seq., hereby gives notice of its regular meeting and public hearing as follows:

Date: March 17, 1987

Time: Briefing: 9:30 a.m.
Meeting: 1:00 p.m.

Place: Oklahoma State Department of Health
1000 N.E. 10th
Room 314
Oklahoma City, Oklahoma

The Council is scheduled to hear:

1. Proposed revision to Regulation 1.4.2(g), "Source Impacting Class I Areas", to include authority of the Commissioner to require pre-construction monitoring of visibility;
2. Proposed revision to Regulation 1.4.2 (a) "Standards Required", to provide a definition of excessive emission;
3. Proposed revision to Regulation 1.4.1 (d), "Permit Fees", to raise the permit fees; and require renewal and inspection fees;
4. Proposed revision to Regulation 1.4.1(b), "General Requirements", to require annual permit;
5. Staff recommendation for the Council to recommend the Regulation 3.4, "Control of Emission of Sulfur Compounds", to the Board of Health for adoption.

Any inquiry regarding these matters may be made to the Air Quality Service, Oklahoma State Department of Health, 1000 Northeast 10 Street, Oklahoma City, OK 73152, within 30 days prior to the meeting.

Air Quality Service
Oklahoma State Department of Health
March 27, 1987

The Oklahoma Air Quality Council, acting under the authority of 63 O.S. 1981, Sections 1-1802, et. seq., hereby gives notice of its regular meeting and public hearing as follows:

Date: May 19, 1987

Time: Briefing: 9:30 a.m.
Meeting: 1:00 p.m.

Place: Tulsa City-County Health Department
Auditorium
4616 East 15th
Tulsa, Oklahoma

(1) There will be a public hearing to receive oral and/or written comments concerning amendments to the Oklahoma Air Pollution Control Regulations as follows:

(a) Regulation 1.4 Air Resources Management Permits Required. Proposed changes would require permits for both new and existing sources; increase fees for construction and operating permits, and establish annual renewal and inspection fees.

(b) Regulation 1.5 Reports Required: Excess Emissions During Startup, Shutdown and Malfunction of Equipment. Proposed changes would require reporting of all excess emissions; define releases and toxic chemicals and require that releases of toxic chemicals be reported immediately.

(2) The Council is also scheduled to hear the staff recommendation for adoption of revisions to Regulation 1.4, which would give the Commissioner authority to require preconstruction monitoring of visibility prior to permitting of sources impacting Class I areas. Other changes are calculated to assure the opportunity for participation by the federal land manager. Public hearing on these changes was held March 17, 1987.

Any inquiry concerning these matters may be made to the Air Quality Service, Oklahoma State Department of Health, 1000 Northeast 10th Street, Oklahoma City, Oklahoma 73152, within thirty (30) days prior to the meeting. Proposed changes to the above-referenced regulations will be made available to the public at that time.

May 27, 1987

The Oklahoma Air Quality Council, acting under the authority of 63 O.S. 1981, Sections 1-1802, et. seq., hereby gives notice of its regular meeting and public hearing as follows:

Date: July 21, 1987

Time: Briefing: 9:30 a.m.
Meeting: 1:00 p.m.

Place: Oklahoma State Department of Health
1000 Northeast 10th Street,
Oklahoma City, Oklahoma
Room 314

The public hearings on amendments to Oklahoma Air Pollution Control Regulation 1.4, Air Resources Management, Permits Required, and Regulation 1.5, Reports Required: Excess Emissions During Startup, Shutdown and Malfunction of Equipment, were continued from the May, 1987 Council meeting. Anticipated is the conclusion of these hearings, recommendations of the staff, and possible approval by the Council for recommendation to the Board of Health.

Proposed changes to Regulation 1.4 would increase fees for construction and operating permits and establish annual fees for both new and existing sources.

Proposed changes to Regulation 1.5 would require at a minimum, that releases of toxic chemicals be reported to the Air Quality Service or the Oklahoma Civil Defense in certain circumstances.

Any inquiry concerning these matters may be made to the Air Quality Service, Oklahoma State Department of Health, 1000 Northeast 10th Street, Oklahoma City, Oklahoma 73152, within thirty (30) days prior to the meeting. Proposed changes to the above-referenced regulations will be made available to the public at that time.

July 29, 1987

The Oklahoma Air Quality Council, acting under the authority of 63 O.S. 1981, Sections 1-1802, et. seq., hereby gives notice of its regular meeting and public hearing as follows:

Date: September 22, 1987

Time: Briefing: 9:30 a.m.
Meeting: 1:00 p.m.

Place: Tulsa City-County Health Department
Auditorium
4616 East 15th
Tulsa, Oklahoma

(1) There will be a public hearing to receive oral and/or written comments concerning amendments to the Oklahoma Air Pollution Control Regulations as follows:

(a) Regulation 1.4 Air Resources Management Permits Required. Proposed changes would require permits for new sources and establish annual renewal fees (Note this regulation was continued from the May, July 1987 Council meeting).

(b) Regulation 1.1 Defining Terms Used in Oklahoma Air Pollution Control Regulations. Proposed changes would incorporate the necessary revisions to adopt the Federal PM-10 Standard as a state standard.

(c) Regulation 1.2 Air Quality Standards and Increments. Proposed changes would adopt the Federal PM-10 standard as a state standard.

(2) The Council is scheduled to hear the staff recommendation for adoption of revisions to Regulation 1.4. This revision would require fees for new and existing sources.

(3) The Council is also scheduled to hear a variance request for the WEYCO Co., Valliant Plant. This variance was continued from the July meeting and would result in a one-year study of precipitator problems. This action would result in an increase in emissions from this plant during the term of the variance.

(4) The Council will hear a variance request from the Sheffield Steel Company, Sand Springs Plant. This request will be for a period of one year. The plant is requesting a continuation of their variance to Regulation 1.6 Alternative Emissions Reduction Permits. This request was expected and would continue the program the company committed to in their original variance request.

Any inquiry concerning these matters may be made to the Air Quality Service, Oklahoma State Department of Health, 1000 Northeast 10th Street, Oklahoma City, Oklahoma 73152, within thirty (30) days prior to the meeting. Proposed changes to the above-referenced regulations will be made available to the public at that time.

BOARD OF HEALTH

NOTICE OF RULEMAKING INTENT

NAME OF RULEMAKING AGENCY/ENTITY:

Oklahoma State Board of Health

INTENDED RULEMAKING ACTION:

Adoption by the Board of Health, of revisions to the permitting system and increases in the permit/renewal fees under Regulation 1.4, Air Resources Management - Permits Required.

Summary

This proposal would revise permit regulations for both new and existing sources of air pollution by (a) substantially increasing construction and operating permit fees for new sources; and (b) requiring all permits to be renewable on an annual basis. Renewal fees, or renewal equivalents, ranging from \$500 to \$50 per facility, are also assessed annually on all regulated sources.

Background

Amendments to the permit fee structure were first publically proposed at the March 17, 1987 Air Quality Council meeting. A proposed revision was presented for public hearing at the May 19, 1987 Council meeting. The proposal was vigorously debated and questioned by industry with the result that the hearing was continued until July 21, 1987.

In accordance with special instructions from the Council, the staff prepared and mailed out over 200 special notices calculated to give actual notice to certain affected sources. As a result, industry was well represented at the July public hearing and Council meeting. The staff proposal was again vigorously debated and the hearing was again continued until the September 22, 1987 Council meeting.

The staff was requested to try to resolve conflicts by holding two workshops prior to the next public hearing. These workshops were held on August 5th and 12th wherein different approaches were discussed. As a result of these workshops, the staff prepared and distributed, on August 21, 1987, an amended proposal.

The new proposal was presented again at public hearing on September 22, 1987. With major conflicts resolved, the Air Quality Council voted to recommend the proposal to the State Board of Health. Certain changes suggested by industry were incorporated, resulting in the proposal presented herein.

Need and Effect of the Rule:

Operating funds for the State Air Quality Service have been reduced annually for the past several years. The existing fee system cannot begin to cover the cost of permit service and other efforts expended by the Department annually in conjunction with the permit system. This new system should recoup those funds lost in previous years and provide a source of funds in the future. The new system, as devised, should place a more equitable portion of the regulatory costs on those facilities emitting air pollutants.

63 O.S. Supp. 1986, Section 1-106.1

COST/BENEFIT ANALYSIS:

A cost/benefit analysis will be prepared and will be available for inspection in Room 905 of the State Health Department Building, 1000 N.E. 10th Street, Oklahoma City, Oklahoma.

DATE, TIME & PLACE FOR COMMENT:

Thursday, January 28, 1988, commencing on or about 1:00 p.m. at the regularly scheduled meeting of the Oklahoma State Board of Health, in Room 307 of the State Health Department Building, 1000 N.E. 10th Street, Oklahoma City, Oklahoma.

MANNER IN WHICH INTERESTED PARTIES MAY PRESENT VIEWS:

Interested parties may present their views in writing in advance of the meeting by mailing same to the Air Quality Service, State Health Department, P.O. Box 53551, Oklahoma City, Oklahoma 73152; or in writing at the meeting or may request an opportunity at the meeting to make an oral presentation.

DATE OF SUBMISSION TO ADMINISTRATIVE RULE REVIEW COMMITTEE:

(if applicable)

February 5, 1988

DATE OF FINAL ADOPTION:

May 6, 1988

ANALYSIS OF RULE(S):

These rules revise permit requirements for both new and existing sources of air pollution by (a) substantially increasing construction and operating permit fees for new sources; and (b) requiring all permits to be renewable on an annual basis. Renewal fees or renewal equivalents, ranging from \$50 to \$500 per facility are also assessed annually. De minimis levels are also set for both permitting requirements and applicability of fees. Operating funds for the State Air Quality Service have been reduced annually for the past several years. The existing fee system cannot begin to cover the cost of permit service and other efforts expended by the Department annually in conjunction with the permit system. This new system should recoup those funds lost in previous years and provide a source of funds in the future. The new system, as devised, should place a more equitable portion of the regulatory costs on those facilities emitting air pollutants.

REGULATION 1.4

Air Resources Management
Permits RequiredPermits1.4.1 General Permit Requirements~~1.4.1~~ (a) Scope and Purpose

~~(1)~~ Pursuant to the Oklahoma Clean Air Act as amended, this regulation adopted to define Air Resource Management Requirements to protect and enhance Oklahoma Clean Air Resources and assure attainment maintenance of the ambient air quality through the utilization of a construction/operating permit system.

1.4.1 (a) ~~(b)~~ General Requirements Permitting System

(1) The Air Quality Service shall operate for the State of Oklahoma a dual permitting system for all new stationary/portable facilities/sources to be established in Oklahoma. The first permit is authorization to construct and issued upon a determination by the Commissioner that the new source is designed as to assure that the emission limitations of the several control regulations will be met. The second permit is a permit to operate and issued by the Commissioner upon demonstration that the source was constructed as designed and the facility does meet the requirements of the several control regulations. Issuance of a permit is evidence that the source has met all requirements; however, upon proper showing this can be refuted by the State or a third party and in such a case the permit does not relieve the source of the responsibility to comply with all local, state or federal laws. All operating permits, for sources having emissions above de minimis levels under Section 1.4.1(c)(4)(C)(i) including those issued prior to the effective date of this subsection, shall be for the term of one year, renewable annually as provided herein.

~~1.4.1~~ (c) Necessity to Obtain Permit(b) Applicability

(1) Except as provided herein, no person may commence construction of, or operate any new source, or relocate any source without obtaining a permit from the Air Quality Service.

~~(1)~~ (2) Permits are required when the addition of a new source, or modification of an existing source, results in a net increase in air contaminant emissions if the Commissioner determines appropriate. Transfer of a source to a new owner or operator is not considered an increase in emissions and does not require new permits. However, any transfer shall be subject to existing permit conditions and/or compliance schedules. Notification of such

transfers shall be made promptly in writing to the State Air Quality Service.

~~(2)~~ The Commissioner may determine that a source is of minor significance and that permits are not required.

(3) Upon the effective date of this subsection, no permit shall be required for any new or modified source when it can be shown to the satisfaction of the Commissioner that:

(A) Emissions will not exceed one pound (1 lb.) per hour for any one criteria pollutant, and

(B) Emissions of toxics will not exceed the de minimis requirements set forth under Regulation 3.8.4(i)(1)(E).

1.4.1 ~~(c)~~ (d) Permit Fees

~~(1)~~ The applicant for a permit to construct, operate or relocate will attach a check or money order in the amount of thirty-five dollars (~~\$35.00~~) as an initial processing fee.

~~(2)~~ After evaluation and prior to issuance of the construction permit, an additional fee will be charged and collected in accordance with the following schedule:

~~(A)~~ Each major source operation - \$300.00

~~(B)~~ Each minor source operation - no fee

~~(C)~~ Relocation fee - no fee

(1) Definitions. For the purposes of section 1.4.1(c):

(A) Major Source - means any new or modified stationary source which directly emits or has the capability at maximum design capacity, and if appropriately permitted, authority to emit 100 tons per year or more of a given pollutant.

(B) Facility - means all of the pollutant-emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person or persons under common control. Pollutant-emitting activities shall be considered as part of the same industrial grouping if they belong to the same "Major Group" (i.e., which have the same two-digit code) as described in the Standard Industrial Classification Manual, 1972, as amended by the 1977 Supplement.

(C) Minor Source - means any source for which a permit is required, but is not a major source.

(D) Permit Renewal - means the process whereby operating permits are extended for another one year term. In no case shall the term

"permit renewal" be construed to allow the imposition of additional permit requirements not otherwise required or authorized by law or regulation.

(E) Relocate - means to move a source from one geographic location to another. The term shall not include de minimis moves within the proximity of the original site, or convenience moves in contiguous areas when such moves are readily observable by inspectors

(F) Annual Permit Renewal Fee Equivalent - means the annual fee assessed on facilities which, because of the date of start-up or construction, are exempt from the requirements to have a permit.

(2) Construction and Operating Permit Fees - New Sources

(A) All new permits, the construction permit application for which received after the effective date of this subsection, will be assessed a fee, which must accompany the application, in accordance with the following schedule:

(i) Major Source

Construction Permit \$2,000

Operating Permit \$1,500

(ii) Minor sources actually emitting 25 tons but less than 100 tons per year of any one pollutant; and minor NSPS sources.

Construction Permit \$1,000

Operating Permit \$250

(iii) Minor sources emitting more than one pound per hour but less than 25 tons per year of any one pollutant.

Construction Permit \$200

Operating Permit \$100

(iv) Relocation Permits \$50

(3) Review to Determine Applicability - New Sources

(A) Upon submittal of a written request, a \$100 determination fee and any relevant information needed to make a permit determination, the Air Quality Service will make a determination whether or not a permit is required. If a determination is made that a permit is required the \$100.00 fee will be credited against the construction and operating permit fees. If it is determined that a permit is not required the \$100.00 fee will be retained by the AQS to cover the cost of making the determination.

(4) Permit Renewal and Renewal Equivalents

(A) Applicability

(i) The Air Quality Service shall annually assess and collect a permit renewal fee or permit renewal fee equivalent from all facilities in the State according to their classification as set forth in Table L. Assessments for existing facilities grandfathered from permit requirements (i.e., permit renewal fee equivalents) shall be made in the same manner and on the same basis as a new facility of the same type (permit renewal fees).

(ii) New facilities shall not be subject to a permit renewal fee until a minimum of one year shall have elapsed from the operating permit application due date.

(B) Facility Classification

(i) Any new facility for which an appropriate classification does not exist shall be assigned a classification and class number in Table I as a permit condition.

(ii) Any existing facility for which an appropriate classification does not exist shall be assigned a facility classification and class number in the same manner as (B)(i) above except that:

(a) Such assignment shall be made in writing, setting forth the reasons why the facility has been assigned to any particular category, and

(b) Any person aggrieved by such assignment shall be entitled to a hearing on the reasonableness of the assignment.

(C) De Minimis

(i) A permit renewal fee or renewal fee equivalent shall not be required, regardless of the requirement to have a permit, provided that total emissions from the facility do not exceed ten (10) tons per year for any one criteria pollutant.

(D) Assessments

(i) Fees established under this section shall be assessed and paid on the basis of facility classification as identified in Table I. The annual fee collected for a facility in any class shall be determined by multiplying the class number for the facility, as determined by Table I, by fifty (\$50) dollars. In no case shall more than one fee per source be assessed unless such source shall constitute two or more facilities as defined herein.

(ii) On or before the first working day of each year, the Air Quality Service will mail fee assessments to all facilities subject to this regulation. Such assessments shall be made pursuant to data contained in the emissions inventory and shall set forth:

(a) The facility classification

(b) The class number assigned to the facility, and

(c) The amount of the fee that is to be remitted to the Service.

(iii) For the calendar year 1988, fee assessments will be mailed on or about the effective date of this regulation and shall be due in the offices of the Air Quality Service 30 days from the date of receipt of the assessment.

(5) Fees will be paid by check or money order (no cash will be accepted made payable to the reviewing agency, e.g., Oklahoma State Department of Health, Air Quality Service. Fees shall be due in the offices of the Air Quality Service 30 days from the date of postmark. A ten (10) calendar-day grace period will be given before any enforcement action will be taken. Upon the expiration of the ten-day grace period, notices of violation (NOV) may be issued and civil penalties, in addition to other remedies, may be sought as authorized under 63 O.S. 1986 Supp. Section 1-1701.1A.

(6) The fee provisions set forth in this regulation shall apply to those permits, renewals and renewal fee equivalents processed by the State Air Quality Service and are not intended to preempt any local fee program.

AN EQUAL OPPORTUNITY EMPLOYER

February 27, 1987

MEMORANDUM

To: Air Quality Council
From: John W. Drake, Chief *John Drake*
Air Quality Service
Subject: Alternative Funding Mechanisms

The funding for the Oklahoma air program has diminished over the past several years, however, the workload and cost of operations has not. The AQS established a goal to revise permit fees this fiscal year to offset the eroding State appropriations. Towards this end, the AQS advertised for a hearing on revision to Regulation 1.4.

However, when the staff attempted to draft proposed revisions several questions were presented that could not be readily answered. The first being what "target" should the fee system go for. That is, what amount of monies should the fee system be designed to take in. If the fees were increased under the current system to the maximum amount, the revenue intake would not cover the erosion that has occurred. Further, based on media reports, this erosion in appropriations will continue. The Department, therefore, felt it would be more appropriate to have a discussion of this subject before formal proposals were submitted for hearing.

JWD/pjl

1885

Draft 2/18/87

Proposed Revision to Regulation 1.4
Air Resources Management Permits Required

1.4.1 General Permit Requirements

1.4.1 (a) Scope and Purpose

(1) Pursuant to the Oklahoma Clean Air Act as amended, this regulation is adopted to define Air Resource Management Requirements to protect and enhance Oklahoma Clean Air Resources and assure attainment/maintenance of the ambient air quality through the utilization of a construction/operation permit system.

1.4.1 (b) General Requirements is amended as follows:

1.4.1 (b) General Requirements

(1) No person may commence construction of, or operate any new or existing source, or relocate any source without obtaining a permit from the Air Quality Service.

~~(1)~~ (2) New Sources

~~(1)~~ A. The Air Quality Service shall operate for the State of Oklahoma a dual permitting system for all new stationary/portable facilities/sources to be established in Oklahoma. The first permit is authorization to construct and is issued upon a determination by the Commissioner that the new source is so designed as to assure that the emission limitations of the several control regulations will be met. The second permit is a permit to operate and is issued by the Commissioner upon demonstration that the source was constructed as designed and the facility does meet the requirements of the several control regulations. Issuance of a permit is evidence that the source has met all requirements; however, upon proper showing this can be refuted by the State or a third party and in such a case the permit does not relieve the source of the responsibility to comply with all local, state or federal laws.

~~(2)~~ (3) Existing Sources

A. The Air Quality Service shall operate for the State of Oklahoma an annual permit system for all source operations within Oklahoma. For this section and section 1.4.1 (d) a new source shall become an existing source on the 1st day of March following the third anniversary of the date of issuance of an operating permit.

B. The Air Quality Service will present each permittee with a permit renewal application on or about the first of each calendar year. That application must be completed and returned to the AQS with appropriate fees no later than the last calendar day of the month of March. Failure of a facility to comply with this subpart is to be considered a surrender of the existing permit.

1.4.1 (c) Necessity to Obtain Permit

(1) Permits are required when the addition of a new source, or modification of an existing source, results in a net increase in air contaminant emissions as the Commissioner determines appropriate.

(2) Transfer of a source to a new owner or operator is not considered an increase in emissions and does not require new permits. However, any transfer shall be subject to existing permit conditions and/or compliance schedules. Notification of such transfers shall be made promptly in writing to the State Air Quality Service.

(3) The Commissioner may determine that a source is of minor significance and that permits are not required.

Section 1.4.1 (d) is revised to read as follows:

1.4.1 (d) Permit Fees

~~(1) The applicant for a permit to construct, operate or relocate will attach a check or money order in the amount of thirty-five dollars (\$35.00) as an initial processing fee.~~

~~(2) After evaluation and prior to issuance of the construction permit, an additional fee will be charged and collected in accordance with the following schedule:~~

~~(A) Each major source operation - \$300.00~~

~~(B) Each minor source operation - no fee~~

~~(C) Relocation permit - no fee~~

(1) New Sources. All sources requesting permits as required by subsection 1.4.1(b)(1) will be assessed in accordance with the following fee schedule.

A. Major Source

(i) Construction Permit \$ 500

(ii) Operating Permit \$ 250

(iii) Late Processing \$ 250

(Late processing occurs upon failure to comply with the requirements of Section 1.4.2(a)(1)).

B. Major source subject to PSD NSPS or NESHAPS Requirements

(i) Construction Permit \$ 500

(ii) Operating Permit \$ 500

(iii) Combined Permit \$1250

C. Minor Sources

<u>(i)</u>	<u>Construction Permit</u>	<u>\$250</u>
<u>(ii)</u>	<u>Operating Permit</u>	<u>\$125</u>
<u>(iii)</u>	<u>Late Processing</u>	<u>\$125</u>

D. Minor Sources subject to NSPS or NESHAPS

<u>(i)</u>	<u>Construction Permit</u>	<u>\$250</u>
<u>(ii)</u>	<u>Operating Permit</u>	<u>\$250</u>
<u>(iii)</u>	<u>Late Processing</u>	<u>\$125</u>

2. Existing sources - All existing source operations shall be assessed an annual fee of \$50 per source in accordance with the provisions of subsection 1.4.1(b)(3).

3. Permit to relocate existing sources within the state shall be assessed a \$50.00 fee.

4. Asbestos renovation/demolition projects as required in Air Pollution Control Regulation 3.8 Control of Emission of Hazardous and Toxic Air Contaminants will be assessed a processing fee of \$100 for each source.

~~(3)~~ 5. Fees will be paid by check or money order (no cash will be accepted) made payable to the reviewing agency, e.g., Oklahoma State Department of Health, Air Quality Service.

The public hearing for considering the proposed revisions to Regulation 1.4 was announced in the February 2, 1987 issue of The Oklahoma Register as required by EPA regulations and also published in newspapers and media throughout the State.

Public Hearing

Proposed Revision to Regulation 1.4

The testimony offered regarding these proposed revisions was transcribed by a Court Reporter. The official transcripts are available for review at Air Quality Service's office during normal working hours.

Aluminum Services Variance

Grant Marburger, Director, Permits and Enforcement Division, presented staff position regarding this variance (copy of his statement is attachment D). Mr. Bill Bean, representing Aluminum Services, was present to answer Council queries. Mr. Breisch requested comments from all present.

Mr. Skeith moved that a variance from Regulation 3.1 and 3.3 be granted to Aluminum Services for 12 months. Mr. Pyle seconded. Council voted as follows: Mr. Quinlan - aye; Mr. Skeith - aye; Mr. Pyle - aye; and Mr. Breisch - aye.

Mr. Breisch closed the hearing.

Public Meeting

Notice of the public meeting was forwarded to the Secretary of State's Office and prior to the meeting news releases were sent to newspapers giving time, date, place and content of the meeting. Agendas were posted at the basement entrance, first floor entrance and door of the meeting room.

Call to Order

The meeting was called to order by Mr. Breisch.

Approval of Minutes

Mr. Quinlan moved to approve the September 16, 1986 minutes as written. Mr. Pyle seconded. All Council members voted aye.

Election of Officers

Mr. Skeith moved that the incumbent slate of officers be reelected - that is, Mr. Breisch continue as Chairman and Mr. Skeith as Vice Chairman. Mr. Quinlan seconded. All Council members voted aye.

Approval of CY '87 Schedule

John Parry, staff, stated that the attached Schedule of Council Meetings (Attachment II) was forwarded to the Secretary of State's Office in December, 1986, as required by the Oklahoma Open Meeting Law. Council made no revisions to the schedule and Mr. Quinlan moved to approve the 1987 Council Meeting Schedule. Mr. Skeith seconded and all Council members present voted aye.

Recommendation on Proposed Revisions to Regulation 3.4

Grant Marburger, staff, presented the changes resulting from the public hearing held on September 16, 1986. A copy of his comments delineating these changes is attached to these minutes (attachment III). After considerable discussion by Council, Mr. Skeith moved to approve the proposed revisions to Regulation 3.4 and forward it to the Board of Health for their consideration. Mr. Quinlan seconded. Council voted as follows: Mr. Quinlan - aye; Mr. Skeith - aye; Mr. Pyle - aye; and Mr. Breisch - aye. A copy of revised Regulation 3.4 as will be presented to the Board of Health is attached to these minutes (attachment IV).

Other Business

Mr. Pyle expressed Council's desire to recognize Mr. Jess Crook's many years of faithful service to the citizens of Oklahoma as a member of the Council, representing the Transportation Industry. Mr. Drake stated that staff will have the proper recognition prepared for Council to present to Mr. Crook at its May meeting in Tulsa.

Mr. Breisch requested that staff make every effort to secure Federal approval of the Tulsa ozone SIP.

Next Meeting - May 19, 1987 - Tulsa

Approved. Briefing at 9:30 a.m. and Meeting at 1:00 p.m. at the Tulsa City-County Health Department.

Adjourn

Meeting adjourned by acclamation.

APPROVED:

MEMORANDUM

To: Air Quality Council

From: Alwin Ning, Head
Analysis Section

Subject: Visibility SIP

In view of EPA's disapproval of Oklahoma's SIP on the protection of visibility in the Wichita Mountains Wilderness Area the staff is attempting to remedy the deficiency by adding some language in our existing permit regulation. This revision relates to the following items:

1. Adding **visibility** as a distinctive monitoring parameter distinguished from other pollutants;
2. Specific language empowering the Commissioner to require visibility monitoring;
3. Notification to the Federal Land Manager (FLM) prior to the public notice of pre-construction hearing and including FLM's comment for public review.

The staff has discussed this amendment with EPA and believes that in conjunction with some modifications in the SIP narrative, these changes should suffice to meet EPA's requirement for approval.

after November 9, 1984 based on the aerodynamic influence of cooling towers, and for sources seeking stack height credit after December 31, 1970 based on the aerodynamic influence of structures not adequately represented by the formulae in 1.4.2(b)(1)(D)(ii), a maximum ground-level concentration due in whole or part to downwash, wakes or eddy effects that is at least 40 percent in excess of the maximum concentration experienced in the absence of such downwash, wakes or eddy effects.

Section 1.4.2 (b)(1) is amended to add a new Paragraph G as follows:

(G) Emission limitations and emission standards means a requirement which limits the quantity, rate or concentration of emissions of air pollutants on a continuous basis, including any requirements which limit the level of opacity, prescribe equipment, set fuel specifications or prescribe operation or maintenance procedures for a source to assure continuous reduction.

1.4.2 (c) Permit Applications

(1) Required applications shall be made on a form to be supplied by the Commissioner and signed by the applicant. The signature of the applicant shall constitute an agreement that the application and all supplemental data is true and correct and that the applicant is responsible for assuring construction in accordance with the application and operation in accordance with all rules and regulations.

(2) Attached to the application form and considered a part thereof will be supplemental data as prescribed in application instructions provided by the Commissioner. This supplemental data shall include, but is not limited to, site information, process description, emission data, ambient air modeling data, etc., as specified in this regulation and the aforementioned instructions.

(3) The application and supplemental data will be provided three copies to the Air Quality Service or its delegatee for evaluation.

1.4.2 (d) Action on Applications

(1) The applicant will be notified of any deficiency in the application or information submitted. In the event of such a deficiency, the date of receipt of the application shall be the date all required information for a complete application has been received. The Commissioner will evaluate the permit application based on information provided by the applicant and other available information, and make a determination whether the application will be approved, approved with condition or disapproved. No permit to construct or modify will be issued unless the applicant demonstrates to the satisfaction of the Commissioner that the new source has complied with all pertinent requirements and the proposed source conforms to the general intent of applicable laws and regulations.

(2) For permit applications that are subject to the requirements of Section 1.4.4, the Commissioner will make a determination whether the application will be approved, approved with condition or disapproved within 180 days after the date that all required information for a complete application has been received.

1901

(C) A temporary increase of sulfur dioxide or particulate matter by order or authorized variance from any source.

1.4.4 (e) Control Technology

(1) A new source must demonstrate that the control technology to be applied is the best that is available (i.e., BACT as defined herein for each regulated pollutant that it would have the potential to emit in significant amounts).

(2) A major modification must demonstrate that the control technology to be applied is the best that is available for each regulated pollutant for which it would be a significant net emissions increase at the source. This requirement applies to each proposed emissions unit at which a net emissions increase in the pollutant would occur as a result of a physical change or change in the method of operation in the unit.

(3) The determination of best available control technology shall be made on a case by case basis taking into account costs and energy, environmental and economic impacts.

(4) For phased construction projects the determination of best available control technology shall be reviewed and modified at the discretion of the Commissioner at a reasonable time but no later than 18 months prior to commencement of construction of each independent phase of the project. At such time the owner or operator may be required to demonstrate the adequacy of any previous determination of best available control technology.

Section 1.4.4(f) is amended to read as follows:

1.4.4 (f) Air Quality Impact Evaluation

(1) Any application for a permit shall contain, as the Commissioner determines appropriate, an evaluation of ambient air quality in the area that the source or modification would affect for each of the following pollutants:

(A) For a new source, each regulated pollutant that it would have the potential to emit in a significant amount;

(B) For a major modification, each regulated pollutant for which it would result in a significant net emissions increase.

(2) For visibility and any such pollutant, other than volatile organic compounds, for which an ambient air standard does exist, the evaluation shall contain continuous air quality monitoring data gathered to determine whether emissions of that pollutant would cause or contribute to a violation of the applicable ambient air quality standard. For any such pollutant for which a standard does not exist, the monitoring data required shall be that which the Commissioner determines is necessary to assess the ambient air quality for that pollutant in that area.

(3) The evaluation shall demonstrate that, as of the source's start-up date, the increase in emissions from that source, in conjunction with all other applicable emissions increases or reductions of that source, will not cause or

contribute to any increase in ambient concentrations exceeding the remaining available PSD increment for the specified air contaminants as determined by the Commissioner.

(4) The required monitoring data shall have been gathered for a time period of up to one year and shall represent the year preceding submission of the application. Ambient monitoring data collected for a time period shorter than one year (but no less than four months) or for a time period other than immediately preceding the application may be acceptable if such data are determined by the Commissioner to be within the time period that maximum pollutant concentrations would occur, and to be complete and adequate for determining whether the source or modification will cause or contribute to a violation of any applicable ambient air quality standard or consume more than the remaining available PSD increment.

(5) For any application which becomes complete except as to the monitoring requirements of 1.4.4(f) (2)-(4), between June 8, 1981 and February 9, 1982, the data that 1.4.4(f) (2) and (3) require shall have been gathered over the period from February 9, 1981 to the date the application becomes otherwise complete, except that:

(A) If the source or modification would have been major for that pollutant under Federal 40 CFR 52.21 as in effect on June 19, 1978, any monitoring data shall have been gathered over the period required by those regulations.

(B) If the Commissioner determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period, not to be less than four months, the data that 1.4.4(f) (2) and (3) require shall have been gathered over that shorter period.

(C) If the monitoring data would relate exclusively to ozone and would not have been required under Federal 40 CFR 52.21 as in effect on June 19, 1978, the Commissioner may waive the otherwise applicable requirements of this subsection 1.4.4(f) (5) to the extent that the applicant shows that the monitoring data would be unrepresentative of air quality over a full year.

(6) The application for a source or modification of volatile organic compounds which satisfies all conditions of 1.4.5(e) may provide post-approval monitoring data for ozone in lieu of providing preconstruction data as required under 1.4.4(f).

(7) Post-construction monitoring. The applicant for a permit for a new source or modification shall conduct, after construction, such ambient monitoring and visibility monitoring as the Commissioner determines necessary to determine the effect its emissions may have, or are having, on air quality in any area.

(8) The operation of monitoring stations for any air quality monitoring required under Section 1.4.4 shall meet the requirements of 40 CFR 58 Appendix B.

(9) Air Quality Models

(A) Any air quality dispersion modeling that is required under Section 1.4.4 for estimates of ambient concentrations shall be based on the applicable air quality models, data basis and other requirements specified in the Guidelines on Air Quality Models, OAQPS 1.2-080, U.S. Environmental Protection Agency, April, 1978 and subsequent revisions.

(B) Where an air quality impact model specified in the Guidelines on Air Quality Models is inappropriate, the model may be modified or another model substituted, as approved by the Commissioner. Methods like those outlined in the Workbook for the Comparison of Air Quality Models, U.S. Environmental Protection Agency, April, 1977 and subsequent revisions, can be used to determine the comparability of air quality models.

(10) Upon request of the Commissioner the permit application shall provide information on the nature and extent of any or all general commercial, residential, industrial and other growth which has occurred since August 7, 1977 in the area the source or modification would affect. The permit application shall also contain an analysis of the air quality impact projected for the area as a result of general commercial, residential and other growth associated with the source or modification.

(11) The permit application shall provide an analysis of the impairment to visibility, soils and vegetation as a result of the source or modification. The Commissioner may require monitoring of visibility in any Federal Class I area near the proposed new stationary source or major modification for such purposes and by such means as the Commissioner deems necessary and appropriate.

Section 1.4.4 (f) is amended to read as follows:

1.4.4 (g) Source Impacting Class I Areas

(1) Permits may be issued at variance to the limitations imposed on a Class I area in compliance with the procedures and limitations established in State and Federal Clean Air Acts.

(2) The permit application for a proposed new source or modification will contain an analysis on the impairment of visibility and an assessment of any anticipated adverse impacts on soils and vegetation in the vicinity of the source resulting from construction of the source. The Commissioner shall notify the appropriate Federal Land Manager of the receipt of any such analysis and include a complete copy of the permit application. Any analysis performed by the Land Manager shall be considered by the Commissioner provided that the analysis is filed with the Air Quality Service within 30 days of receipt of the application by the Land Manager. Where the Commissioner finds that such an analysis does not demonstrate to the satisfaction of the Commissioner that an adverse impact on visibility will result in the Federal Class I area, the Commissioner will, in any notice of public hearing on the permit application, either explain his decision or give notice as to where the explanation can be obtained. Further, upon presentation of good and

sufficient information, by a federal land manager, the Commissioner may deny the issuance of a permit for a source, emissions from which will adversely impact areas heretofore or hereafter categorized as Class I areas even though the emissions would not cause the increment for such Class I areas to be exceeded.

1.4.4 (h) Innovative Control Technology

(1) An applicant for a permit for a proposed major source or modification may request the Commissioner in writing to approve a system of innovative control technology.

(2) The Commissioner may determine that the innovative control technology is permissible if:

(A) The proposed control system would not cause or contribute to an unreasonable risk to public health, welfare or safety in its operation or function.

(B) The applicant agrees to achieve a level of continuous emissions reductions equivalent to that which would have been required for best available control technology under 1.4.4(e) by a date specified by the Commissioner. Such date shall not be later than 4 years from the time of start-up or 7 years from permit issuance.

(C) The source or modification would meet the requirements equivalent to those in 1.4.2 and 1.4.4(e) based on the emissions rate that the source employing the system of innovative control technology would be required to meet on the date specified by the Commissioner.

(D) The source or modification would not, before the date specified, cause or contribute to any violation of the applicable ambient air standards, or impact any Class I area or area where an applicable increment is known to be violated.

(E) All other applicable requirements including those for public review have been met.

(3) The Commissioner shall withdraw approval to employ a system of innovative control technology made under this section 1.4.4(h), if:

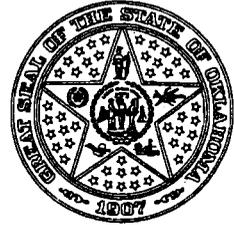

(A) The proposed system fails by the specified date to achieve the required continuous reduction rate; or,

(B) The proposed system fails before the specified date so as to contribute to an unreasonable risk to public health, welfare or safety; or,

(C) The Commissioner decides at any time that the proposed system is unlikely to achieve the required level of control or to protect the public health, welfare or safety.

MEMORANDUM

To: Air Quality Council

From: D. G. Doughty *DGD*

Subject: Proposed Revision to Regulation 1.4 Permit Fees

Attached is a proposed amendment to Regulation 1.4 which would change the existing permit fee structure. Major changes are as follows:

1. All sources (new and existing) would be required to obtain a permit;
2. Permit renewal and fee payments would be required on a yearly basis;
3. Asbestos reno/demo projects would require permits and payment of a \$100.00 fee;
4. Fees are assessed in proportion to effort required for review and inspection and subject to statutory limitations set forth under current law.

DGD/pjl
Attachment

1967

after November 9, 1984 based on the aerodynamic influence of cooling towers, and for sources seeking stack height credit after December 31, 1970 based on the aerodynamic influence of structures not adequately represented by the formulae in 1.4.2(b)(1)(D)(ii), a maximum ground-level concentration due in whole or part to downwash, wakes or eddy effects that is at least 40 percent in excess of the maximum concentration experienced in the absence of such downwash, wakes or eddy effects.

Section 1.4.2 (b)(1) is amended to add a new Paragraph G as follows:

(G) Emission limitations and emission standards means a requirement which limits the quantity, rate or concentration of emissions of air pollutants on a continuous basis, including any requirements which limit the level of opacity, prescribe equipment, set fuel specifications or prescribe operation or maintenance procedures for a source to assure continuous reduction.

1.4.2 (c) Permit Applications

(1) Required applications shall be made on a form to be supplied by the Commissioner and signed by the applicant. The signature of the applicant shall constitute an agreement that the application and all supplemental data is true and correct and that the applicant is responsible for assuring construction in accordance with the application and operation in accordance with all rules and regulations.

(2) Attached to the application form and considered a part thereof will be supplemental data as prescribed in application instructions provided by the Commissioner. This supplemental data shall include, but is not limited to, site information, process description, emission data, ambient air modeling data, etc., as specified in this regulation and the aforementioned instructions.

(3) The application and supplemental data will be provided three copies to the Air Quality Service or its delegatee for evaluation.

1.4.2 (d) Action on Applications

(1) The applicant will be notified of any deficiency in the application or information submitted. In the event of such a deficiency, the date of receipt of the application shall be the date all required information for a complete application has been received. The Commissioner will evaluate the permit application based on information provided by the applicant and other available information, and make a determination whether the application will be approved, approved with condition or disapproved. No permit to construct or modify will be issued unless the applicant demonstrates to the satisfaction of the Commissioner that the new source has complied with all pertinent requirements and the proposed source conforms to the general intent of applicable laws and regulations.

(2) For permit applications that are subject to the requirements of Section 1.4.4, the Commissioner will make a determination whether the application will be approved, approved with condition or disapproved within 180 days after the date that all required information for a complete application has been received.

(C) A temporary increase of sulfur dioxide or particulate matter by order or authorized variance from any source.

1.4.4 (e) Control Technology

(1) A new source must demonstrate that the control technology to be applied is the best that is available (i.e., BACT as defined herein for each regulated pollutant that it would have the potential to emit in significant amounts).

(2) A major modification must demonstrate that the control technology to be applied is the best that is available for each regulated pollutant for which it would be a significant net emissions increase at the source. This requirement applies to each proposed emissions unit at which a net emissions increase in the pollutant would occur as a result of a physical change or change in the method of operation in the unit.

(3) The determination of best available control technology shall be made on a case by case basis taking into account costs and energy, environmental and economic impacts.

(4) For phased construction projects the determination of best available control technology shall be reviewed and modified at the discretion of the Commissioner at a reasonable time but no later than 18 months prior to commencement of construction of each independent phase of the project. At such time the owner or operator may be required to demonstrate the adequacy of any previous determination of best available control technology.

Section 1.4.4(f) is amended to read as follows:

1.4.4 (f) Air Quality Impact Evaluation

(1) Any application for a permit shall contain, as the Commissioner determines appropriate, an evaluation of ambient air quality in the area that the source or modification would affect for each of the following pollutants:

(A) For a new source, each regulated pollutant that it would have the potential to emit in a significant amount;

(B) For a major modification, each regulated pollutant for which it would result in a significant net emissions increase.

(2) For visibility and any such pollutant, other than volatile organic compounds, for which an ambient air standard does exist, the evaluation shall contain continuous air quality monitoring data gathered to determine whether emissions of that pollutant would cause or contribute to a violation of the applicable ambient air quality standard. For any such pollutant for which a standard does not exist, the monitoring data required shall be that which the Commissioner determines is necessary to assess the ambient air quality for that pollutant in that area.

(3) The evaluation shall demonstrate that, as of the source's start-up date, the increase in emissions from that source, in conjunction with all other applicable emissions increases or reductions of that source, will not cause or

contribute to any increase in ambient concentrations exceeding the remaining available PSD increment for the specified air contaminants as determined by the Commissioner.

(4) The required monitoring data shall have been gathered for a time period of up to one year and shall represent the year preceding submission of the application. Ambient monitoring data collected for a time period shorter than one year (but no less than four months) or for a time period other than immediately preceding the application may be acceptable if such data are determined by the Commissioner to be within the time period that maximum pollutant concentrations would occur, and to be complete and adequate for determining whether the source or modification will cause or contribute to a violation of any applicable ambient air quality standard or consume more than the remaining available PSD increment.

(5) For any application which becomes complete except as to the monitoring requirements of 1.4.4(f) (2)-(4), between June 8, 1981 and February 9, 1982, the data that 1.4.4(f) (2) and (3) require shall have been gathered over the period from February 9, 1981 to the date the application becomes otherwise complete, except that:

(A) If the source or modification would have been major for that pollutant under Federal 40 CFR 52.21 as in effect on June 19, 1978, any monitoring data shall have been gathered over the period required by those regulations.

(B) If the Commissioner determines that a complete and adequate analysis can be accomplished with monitoring data over a shorter period, not to be less than four months, the data that 1.4.4(f) (2) and (3) require shall have been gathered over that shorter period.

(C) If the monitoring data would relate exclusively to ozone and would not have been required under Federal 40 CFR 52.21 as in effect on June 19, 1978, the Commissioner may waive the otherwise applicable requirements of this subsection 1.4.4(f) (5) to the extent that the applicant shows that the monitoring data would be unrepresentative of air quality over a full year.

(6) The application for a source or modification of volatile organic compounds which satisfies all conditions of 1.4.5(e) may provide post-approval monitoring data for ozone in lieu of providing preconstruction data as required under 1.4.4(f).

(7) Post-construction monitoring. The applicant for a permit for a new source or modification shall conduct, after construction, such ambient monitoring and visibility monitoring as the Commissioner determines necessary to determine the effect its emissions may have, or are having, on air quality in any area.

(8) The operation of monitoring stations for any air quality monitoring required under Section 1.4.4 shall meet the requirements of 40 CFR 58 Appendix B.

(9) Air Quality Models

(A) Any air quality dispersion modeling that is required under Section 1.4.4 for estimates of ambient concentrations shall be based on the applicable air quality models, data basis and other requirements specified in the Guidelines on Air Quality Models, OAQPS 1.2-080, U.S. Environmental Protection Agency, April, 1978 and subsequent revisions.

(B) Where an air quality impact model specified in the Guidelines on Air Quality Models is inappropriate, the model may be modified or another model substituted, as approved by the Commissioner. Methods like those outlined in the Workbook for the Comparison of Air Quality Models, U.S. Environmental Protection Agency, April, 1977 and subsequent revisions, can be used to determine the comparability of air quality models.

(10) Upon request of the Commissioner the permit application shall provide information on the nature and extent of any or all general commercial, residential, industrial and other growth which has occurred since August 7, 1977 in the area the source or modification would affect. The permit application shall also contain an analysis of the air quality impact projected for the area as a result of general commercial, residential and other growth associated with the source or modification.

(11) The permit application shall provide an analysis of the impairment to visibility, soils and vegetation as a result of the source or modification. The Commissioner may require monitoring of visibility in any Federal Class I area near the proposed new stationary source or major modification for such purposes and by such means as the Commissioner deems necessary and appropriate.

Section 1.4.4 (f) is amended to read as follows:

1.4.4 (g) Source Impacting Class I Areas

(1) Permits may be issued at variance to the limitations imposed on a Class I area in compliance with the procedures and limitations established in State and Federal Clean Air Acts.

(2) The permit application for a proposed new source or modification will contain an analysis on the impairment of visibility and an assessment of any anticipated adverse impacts on soils and vegetation in the vicinity of the source resulting from construction of the source. The Commissioner shall notify the appropriate Federal Land Manager of the receipt of any such analysis and include a complete copy of the permit application. Any analysis performed by the Land Manager shall be considered by the Commissioner provided that the analysis is filed with the Air Quality Service within 30 days of receipt of the application by the Land Manager. Where the Commissioner finds that such an analysis does not demonstrate to the satisfaction of the Commissioner that an adverse impact on visibility will result in the Federal Class I area, the Commissioner will, in any notice of public hearing on the permit application, either explain his decision or give notice as to where the explanation can be obtained. Further, upon presentation of good and

sufficient information, by a federal land manager, the Commissioner may deny the issuance of a permit for a source, emissions from which will adversely impact areas heretofore or hereafter categorized as Class I areas even though the emissions would not cause the increment for such Class I areas to be exceeded.

(3) Definitions

(A) Adverse impact on visibility means visibility impairment which interferes with the management, protection, preservation or enjoyment of the visitor's visual experience of the Federal Class I area. This determination must be made by the Air Quality Service on a case-by-case basis taking into account the geographic extent, intensity, duration, frequency and time of visibility impairments, and how these factors correlate with (1) times of visitor use of the Federal Class I area, and (2) the frequency and timing of natural conditions that reduce visibility.

(B) Natural conditions mean naturally occurring phenomena against which any changes in visibility are measured in terms of visual range, contrast or coloration.

(C) Visibility impairment means any humanly perceptible reduction in visibility (visual range, contrast and coloration) from that which would have existed under natural conditions.

(D) Federal land manager means the Secretary of the department with authority over the Federal Class I area or his representative.

(E) Installation means an identifiable piece of process equipment.

1.4.4 (h) Innovative Control Technology

(1) An applicant for a permit for a proposed major source or modification may request the Commissioner in writing to approve a system of innovative control technology.

(2) The Commissioner may determine that the innovative control technology is permissible if:

(A) The proposed control system would not cause or contribute to an unreasonable risk to public health, welfare or safety in its operation or function.

(B) The applicant agrees to achieve a level of continuous emissions reductions equivalent to that which would have been required for best available control technology under 1.4.4(e) by a date specified by the Commissioner. Such date shall not be later than 4 years from the time of start-up or 7 years from permit issuance.

(see attached list)

The public hearing for considering the proposed revisions to Regulations 1.4 and 1.5 was announced in the April 1, 1987 issue of The Oklahoma Register as required by EPA regulations and also published in newspapers and media throughout the State.

Public Hearing

Proposed Revisions to Regulations 1.5 and 1.4

The testimony offered regarding these proposed revisions was recorded and transcribed by Air Quality Service staff. These recordings and transcripts are available for review at Air Quality Service's office during normal working hours.

Mr. Breisch closed the hearing.

Public Meeting

Notice of the public meeting was forwarded to the Secretary of State's Office and prior to the meeting news releases were sent to newspapers giving time, date, place and content of the meeting. Agendas were posted on the entrances and the auditorium doors at the Tulsa City-County Health Department. They were also posted at the Air Quality Service office and the doors to the State Health Department parking garage.

Call to Order

The meeting was called to order by Mr. Breisch.

Approval of Minutes

Dr. Canter moved to approve the March 17, 1987 minutes as written. Mr. Pyle seconded. All Council members voted aye.

Recognition for Mr. Jess Crook

Mr. Breisch requested that Mr. Crook come to the Council platform for presentation of awards honoring his 13 years of service to the citizens of Oklahoma as a Council member. Dr. Jerry Cleveland, assistant director, TCCHD presented a certificate of appreciation from the State Health Department. Mr. Breisch presented three awards - a resolution from the Air Quality Council; a plaque from the Council and staff for services rendered; and a framed letter of appreciation from the Governor.

After a brief appreciation speech from Mr. Crook, he received a standing ovation as he left the auditorium.

Recommended Action on Proposed Revision to Regulation 1.4

Alwin Ning, staff, presented to Council the changes deemed necessary to the permit regulation to obtain EPA's approval of the visibility SIP. This revision relates to the following items: 1. adding "visibility" as a distinctive monitoring parameter distinguished from other pollutants; 2. specific language empowering the Commissioner to require visibility monitoring; and 3. notification to the Federal Land Manager (FLM) prior to the public notice of pre-construction hearing and including FLM's comment for public review.

Mr. Pyle moved to approve the proposed visibility revisions to Regulation 1.4 and forward it to the Board of Health for their consideration. Dr. Canter seconded. All Council members present voted aye. A copy of revised Regulation 1.4 as will be presented to the Board of Health is attached to these minutes.

renewal fee*

Attached is the staff's proposed revision to Regulation 1.4 resulting from the May 19, 1987 public hearing.

The first major change (section 1.4.1(b)(5)) makes it clear that only permitted sources would be subject to the permit renewal requirement. Grandfathered facilities must pay comparable fees, but no permit will be required (1.4.1(d)(1)).

The second major change was to add a definition section (1.4.1(e)(1)) to further clarify the proposal. For example, the definition of "permit renewal" has been added. This definition makes it clear that renewal entails the additional burden of fee payment only, not to include any added permit restrictions.

Thirdly, for applications received after the effective date, permit fees were restructured to require \$2,000 for new major source construction and \$750 for new minor source construction. No fees will be assessed facilities for operating permits initially, but they will be required to pay an annual renewal. Renewals and annual renewal equivalents would be assessed at the rate of \$65 per source operation.

Lastly, asbestos demolition/renovation projects would be assessed \$100 per year for each project. Separate notifications would constitute separate projects.

As the Council may recall, the staff was also requested to prepare and send out special notices to some of the smaller operations which may not be aware of this proposal. The staff prepared and mailed some 204 of these special notices on June 12. All regulated sources, as reflected by the Service's records, have thus been notified directly; many have requested copies of the proposal as of this writing and may be expected to submit comments. A copy of this notice is attached (attachment #2).

Attachment no. 3 includes a summary of public comments and the staff response; attachments nos. 4 and 5 include, respectively, permit fee information obtained from surrounding states and several examples of affected facilities.

Draft 6/29/87

Proposed Revision to Regulation 1.4
Air Resources Management Permits Required

1.4.1 (a) Scope and Purpose

(1) Pursuant to the Oklahoma Clean Air Act as amended, this regulation is adopted to define Air Resource Management Requirements to protect and enhance Oklahoma Clean Air Resources and assure attainment/maintenance of the ambient air quality through the utilization of a construction/operation permit system.

1.4.1 (b) General Requirements

(1) Except as provided herein, no person may commence construction of, or operate any new source, or relocate any source without obtaining a permit from the Air Quality Service.

~~(1)~~(2) Permits are required when the addition of a new source, or modification of an existing source, results in a net increase in air contaminant emissions as the Commissioner determines appropriate.

~~(2)~~(3) Transfer of a source to a new owner or operator is not considered an increase in emissions and does not require new permits. However, any transfer shall be subject to existing permit conditions and/or compliance schedules. Notification of such transfers shall be made promptly in writing to the State Air Quality Service.

~~(3)~~(4) The Commissioner may determine that a source is of minor significance and that permits are not required.

(5) Upon the effective date of this subsection, all operating permits, including those issued prior to the effective date, shall be for the term of one year, renewable on the first working day of February of each calendar year. Fee assessments shall include the year 1988.

(6) Any source for which the permit renewal fee or the annual permit renewal fee equivalent has not been received in the offices of the Air Quality Services by close of business on the first working day of March, shall be deemed to be operating without a permit.

1.4.1 (c)~~(1)~~ New Sources

(1) The Air Quality Service shall operate for the State of Oklahoma a dual permitting system for all new stationary/portable facilities/sources to be established in Oklahoma. The first permit is authorization to construct and is issued upon a determination by the Commissioner that the new source is so designed as to assure that the emission limitations of the several control regulations will be met.

The second permit is a permit to operate and is issued by the Commissioner upon demonstration the source was constructed as designed and the facility does meet the requirements of the several control regulations. Issuance of a permit is evidence that the source has met all requirements; however, upon proper showing this can be refuted by the State or a third party and in such a case the permit does not relieve the source of the responsibility to comply with all local, state or federal laws.

(2) Operating permits, issued subsequent to construction permit applications received on or after January 1, 1988, shall be subject to permit renewal fee payment on the first day of January following the first anniversary of the operating permit application due date.

1.4.1 (d) Existing Sources

(1) Any facility exempt from the requirement to obtain a permit based on date of construction or start-up shall be subject to an annual permit renewal fee equivalent. Permit renewal fee equivalents shall be equal to comparable permit renewal fees and shall be processed in the same manner and on the same basis as provided herein.

1.4.1 (e) Necessity to Obtain Permit

~~(1) Permits are required when the addition of a new source, or modification of an existing source, results in a net increase in air contaminant emissions as the Commissioner determines appropriate.~~

~~(2) Transfer of a source to a new owner or operator is not considered an increase in emissions and does not require new permits.~~

~~(3) The Commissioner may determine that a source is of minor significance and that permits are not required.~~

1.4.1 ~~(d)~~ (e) Permit Fees

(1) Definitions. For the purposes of section 1.4.1(c):

Major Source - shall have the same meaning as set forth in subsection 1.4.2(a)(2).

Minor Source - means any source for which a permit is required, but is not a major source.

Permit Renewal - means the yearly process of assessing and collecting permit renewal fees. In no case shall such term be construed to require any formal permit review.

Relocate - means to move a source from one geographical location to another. The term shall not include de minimis moves within the proximity of the original site, or convenience moves to contiguous areas when such moves are readily observable by inspectors.

Source Operation - means the last operation preceding the emission of an air contaminant, which operation (a) results in the separation of the air contaminant from the process materials or in the conversion of the process materials into air contaminants, as in the case of combustion of fuel; and (b) is not a pollution abatement operation. The term shall not be construed to include a source operation which is of minor significance and would not be permittable if it were a new source.

Annual Permit Renewal Fee Equivalent - means the annual fee assessed on source operations at facilities which, because of the date of start-up or construction, are exempt from the requirements to have a permit.

(2) All construction permits, the application for which is received after the effective date of this subsection, will be assessed a fee, which must accompany the application, in accordance with the following schedule:

(A) Major Source

- | | |
|--------------------------------|----------------|
| <u>(i) Construction permit</u> | <u>\$2,000</u> |
| <u>(ii) Operating permit</u> | <u>No fee</u> |

(B) Minor Source

- | | |
|--------------------------------|---------------|
| <u>(i) Construction permit</u> | <u>\$750</u> |
| <u>(ii) Operating permit</u> | <u>No fee</u> |

(3) A fee for the annual renewal of operating permits shall be assessed at the rate of sixty-five dollars (\$65) per source operation and payable in accordance with the provisions of subsection 1.4.1(b). Annual permit renewal fee equivalents shall be assessed at the same rate and be payable in the same manner.

(4) Except for the calendar year 1988, the Air Quality Service will, on or before the first working day of January of each year, present persons subject to annual permit renewal fees and annual permit renewal fee equivalents with a fee assessment. Fee assessments for 1988 renewals shall be presented on or about the effective date of this part.

(5) Permits to locate existing sources within the state shall be assessed a fifty dollar (\$50) fee payable upon application.

(6) Asbestos renovation/demolition projects as required under Air Pollution Control Regulation 3.8, Control of Emission of Hazardous and Toxic Air Contaminants, shall be assessed a one hundred dollar (\$100) permit fee per project. For the purposes of this subsection, the term "project" shall be defined to mean any renovation/demolition operation at any one facility submitted under separate notification. Any project not completed within one year from the date of notification shall pay a permit renewal fee of \$100 per year or part of a year until such time as the project is completed.

(7) Fees will be paid by check or money order (no cash will be accepted) made payable to the reviewing agency, e.g., Oklahoma State Department of Health, Air Quality Service.

(8) The fee provisions set forth in this regulation shall apply to those permits, renewals and renewal fee equivalents processed by the State Air Quality Service and are not intended to preempt any local fee program.

1.4.2 Construction Permit

1.4.2 (a) Standards Required

(1) No person shall cause or allow the construction or modification of any source without first obtaining an authority to construct or modify from the Commissioner as to comply with all applicable air pollution rules and regulations, and not to exceed ambient air quality standards or applicable federal new source performance standards (NSPS) and national emission standards for hazardous air pollutants (NESHAPS), Sections 111 and 112 of the Federal Clean Air Act.

(2) Major Sources. For purposes of this Section 1.4.2 (a), a major source is defined as any new or modified stationary source which directly emits or has the capability at maximum design capacity and, if appropriately permitted, authority to emit 100 tons per year or more of a given pollutant. A major source must demonstrate that the control technology to be applied is the best that is available for each pollutant controlled under air pollution control regulations if such pollutant would cause the source to be defined as a major source. This determination will be made by the Commissioner on a case by case basis taking into account energy, environmental, costs and economic impacts of alternative control systems.

(3) Any air quality modeling or ambient impact evaluation that is required shall be prepared in accordance with procedures acceptable to the Commissioner and accomplished by the applicant.

(4) If required by the Commissioner, the new source will be equipped with sampling ports, instrumentation to monitor and record emission data and other sampling and/or testing facilities.

1.4.2 (b) Stack Height Limitation

(1) Air quality modeling or ambient impact evaluation shall exclude the effect of that portion of the height of any stack which exceeds good engineering practice or the effect of any other dispersion techniques as defined in the following:

(A) Stack means any point in a source designed to emit solids, liquids or gases into the air, including a pipe or duct but not including flares.

(B) A stack in existence means that the owner or operator had (1) begun, or caused to begin, a continuous program of physical on-site construction of the stack or (2) entered into binding agreements or contractual obligations, which could not be cancelled or modified without substantial loss to the owner or operator, to undertake a program of construction of the stack to be completed in a reasonable

The public hearing for considering the proposed revisions to Regulations 1.4 and 1.5 was announced in the June 1, 1987 issue of The Oklahoma Register as required by EPA regulations and also published in newspapers and media throughout the State.

Public Hearing

Proposed Revision to Regulation 1.4 - Permit Fees

Proposed Revision to Regulation 1.5 - Excessive Emissions

The testimony offered regarding these proposed revisions was transcribed by a Court Reporter. The official transcript is available for review at Air Quality Service's office during normal working hours.

Proposed Weyerhaeuser Valliant Variance 87-2

John Drake acted as protocol officer for this proposed variance from Regulations 3.1, 2.4 and, also, presented staff position.

Air Quality staff received the petition for variance on June 29, 1987 and, after a cursory review, decided further study and understanding was necessary, suggesting a September presentation to Council by Weyerhaeuser Company representatives. Staff met with WeyCo, a fair explanation of the problem was presented and they expressed eagerness to be placed on the July Council agenda.

Currently, the company is allowed to emit .185# of particulates per million BTUs of heat input. They request this limit be revised to a limit of 1.0# of particulates per million BTUs heat input. They request this allowance for a one year time period until July 1988. During this time, the company will conduct a study to determine cause of excess mechanical failures and develop a corrective action plan to be implemented during 1988-89 time frame.

The electrostatic precipitator has two sides and 1/2 flue gas passes through each side. Each side has four units. Each unit removes 90 percent of the particulate in the gas stream. When an electrical wire inside a unit breaks, then the unit must be deactivated. When a unit is deactivated, the efficiency is cut. When this occurs, the source operation is not in compliance with the control regulation. To repair a malfunctioning unit, the entire side must be deactivated. To do this the company cuts the source operation to half of normal, diverts all flue gas through the remaining up side, thus staying in compliance. This procedure requires about eight hours.

Jim Odendahl and Bill Dawson, Weyerhaeuser Co., presented the operational and economic problems that are occurring at the plant. As the bottom line, WeyCo is requesting help to allow scheduling of repairs, try to keep a cost-effective operation and time to engineer an effective one-year solution to the breakdown problem.

Mrs. Anna Clapper, Chairperson of the Oklahoma Coalition for Clean Air, was concerned about the increase in particulates in the air if WeyCo was allowed to operate at variance for one year. It was her recommendation that Council keep in mind the health effects of increased air pollution and structure their action to keep careful control of WeyCo emissions during the period of study and correction. (A copy of Mrs. Clapper's statement is attached to these minutes).

Mr. Drake stated that staff is very concerned about the prudence of recommending a variance without knowing more about the impact of these emissions on the atmosphere. Staff has computed a five fold increase and the information from WeyCo indicates a ten fold increase. The staff recommends that Council take no action on this variance petition at this time giving the company an opportunity to provide additional justification and information before the next Council meeting. With this recommendation and after considerable questioning by Council of staff and WeyCo representatives, Mr. Pyle moved to delay action on this variance request until the next Council meeting (9/22/87). Mr. Quinlan seconded. Council members voted as follows: Mr. Quinlan - aye; Mr. Pyle - aye; Mr. Skeith - aye; Mr. Pettis - aye; and Mr. Breisch - aye.

Mr. Breisch closed the public hearing.

Public Meeting

Notice of the public meeting was forwarded to the Secretary of State's office and prior to the meeting news releases were sent to newspapers giving time, date, place and content of the meeting. Agendas were posted on the building entrance doors, the hall window of the Air Quality Service and the door to the meeting room.

Call to Order

The meeting was called to order by Mr. Breisch.

Approval of Minutes

Mr. Pettis moved to approve the May 19, 1987 minutes as written. Mr. Quinlan seconded. All Council members present voted aye.

Other Business

There was none.

Next Meeting - 9/15/87 in Tulsa

Confirmed. NOTE: On July 22, 1987, because of a conflict in scheduling, the meeting date was changed to September 22, 1987. Notice of scheduling change was mailed to the office of the Secretary of State.

Adjourn

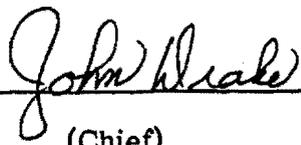

Meeting adjourned by acclamation.

AN EQUAL OPPORTUNITY EMPLOYER

September 1, 1987

MEMORANDUM

To: Air Quality Council
From: D. G. Doughty *DGD*
Subject: Regulation 1.4 - Permit Fees

Attached for the Council's information is the staff's latest draft of an acceptable permit fee regulation. As the Council is well aware, this proposal will be the subject of a public hearing at the Council meeting September 22nd. You may also recall that hearings were previously held last May and again in July. The July meeting resulted in the scheduling of two workshops which were held August 5th and August 12th.

The first workshop addressed the legal issues, alternative approaches and various industry concerns such as de minimis and renewal fee cap (see attachment #2, minutes of the August 5th workshop).

The second workshop was a work session, broken into three groups. The groups addressed, respectively, de minimis; alternative A (the approach seemingly favored by Oklahoma public utilities) and alternative B (the Kansas approach). The minutes of this workshop are also attached for your review, as is a memorandum summarizing the consensus of each work group.

Summary of Staff Proposal

- (1) The current draft regulation incorporates the so-called Kansas approach. It places all sources into one of 10 categories, ranked in order of the amount of fee payable. The actual fee is calculated by multiplying the class number for the source by \$50; e.g., a category 10 facility would pay \$500 yearly (\$50 X 10). See section 1.4.1(c)(4)(C).
- (2) A de minimis for purposes of permit renewal fees is set at 10 tons per year for any one criteria pollutant. See section 1.4.1(c)(4)(B).
- (3) Construction and operating permits would be assessed as set out below. See section 1.4.1(c)(2).

	<u>Construction</u>	<u>Operation</u>
Major source	\$2,000	\$1,500
Minor source > 25 T/yr; < 100 and minor NSPS	\$1,000	\$250
Minor source > 1 lb/hr; < 25T/yr	\$200	\$100

(4) Grandfathered sources would be required to pay the same fee as a "permit renewal equivalent". Section 1.4.1(c)(4)(A).

(5) It will be the duty of the AQS to mail out assessments at the first of every year, based on the emissions inventory. Section 1.4.1(c)(4)(C)(ii).

Based on the two previous public hearings and input at the workshops, the staff believes that this approach will be acceptable by industry. The present draft addresses, we believe, all of the major concerns of industry. The approach is simple, easily understood and equitable. It should not create unacceptable administrative burdens for either industry or staff, and more importantly, it should provide revenue approaching the amount needed to provide a viable state air program.

REGULATION 1.4

Air Resources Management
Permits Required

Permits

1.4.1 General Permit Requirements

~~1.4.1~~ (a) Scope and Purpose

(1) Pursuant to the Oklahoma Clean Air Act as amended, this regulation is adopted to define Air Resource Management Requirements to protect and enhance Oklahoma Clean Air Resources and assure attainment maintenance of the ambient air quality through the utilization of a construction/operation permit system.

1.4.1 (a) ~~(b)~~ General Requirements Permitting System

(1) The Air Quality Service shall operate for the State of Oklahoma a dual permitting system for all new stationary/portable facilities/sources to be established in Oklahoma. The first permit is authorization to construct and is issued upon a determination by the Commissioner that the new source is so designed as to assure that the emission limitations of the several control regulations will be met. The second permit is a permit to operate and is issued by the Commissioner upon demonstration that the source was constructed as designed and the facility does meet the requirements of the several control regulations. Issuance of a permit is evidence that the source has met all requirements; however, upon proper showing this can be refuted by the State or a third party and in such a case the permit does not relieve the source of the responsibility to comply with all local, state or federal laws. All operating permits, for sources having emission above de minimis levels under Section 1.4.1(c)(4)(B)(i) including those issued prior to the effective date of this subsection, shall be for the term of one year, renewable annually as provided herein.

~~1.4.1~~ (c) Necessity to Obtain Permit

(b) Applicability

(1) Except as provided herein, no person may commence construction of, or operate any new source, or relocate any source without obtaining a permit from the Air Quality Service.

(1) (2) Permits are required when the addition of a new source, or modification of a existing source, results in a net increase in air contaminant emissions as the Commissioner determines appropriate. Transfer of a source to a new owner or operator is not considered an increase in emissions and does not require new permits. However, any transfer shall be subject to existing permit conditions and/or compliance schedules. Notification of such

transfers shall be made promptly in writing to the State Air Quality Service.

~~(2) The Commissioner may determine that a source is of minor significance and that permits are not required.~~

(3) Upon the effective date of this subsection, no permit shall be required for any new or modified source when it can be shown to the satisfaction of the Commissioner that:

(A) Total emissions will not exceed one pound (1 lb.) per hour for any one criteria pollutant, and

(B) Total emissions of toxics will not exceed the de minimis requirements set forth under Regulation 3.8.4(i)(1)(E).

1.4.1 (c) ~~(d)~~ Permit Fees

~~(1) The applicant for a permit to construct, operate or relocate will attach a check or money order in the amount of thirty-five dollars (\$35.00) as an initial processing fee.~~

~~(2) After evaluation and prior to issuance of the construction permit, an additional fee will be charged and collected in accordance with the following schedule:~~

~~(A) Each major source operation - \$300.00~~

~~(B) Each minor source operation - no fee~~

~~(C) Relocation fee - no fee~~

(1) Definitions. For the purposes of section 1.4.1(c):

(A) Major Source - means any new or modified stationary source which directly emits or has the capability at maximum design capacity, and if appropriately permitted, authority to emit 100 tons per year of a given pollutant.

(B) Facility - means all of the pollutant-emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person or persons under common control. Pollutant-emitting activities shall be considered as part of the same industrial grouping if they belong to the same "Major Group" (i.e., which have the same two-digit code) as described in the Standard Industrial Classification Manual, 1972, as amended by the 1977 Supplement.

(C) Minor Source - means any source for which a permit is required, but is not a major source.

(D) Permit Renewal - means the process whereby operating permits

are extended for another one year term. In no case shall the term "permit renewal" be construed to allow the imposition of additional permit requirements not otherwise required or authorized by law or regulation.

(E) Relocate - means to move a source from one geographical location to another. The term shall not include de minimis moves within the proximity of the original site, or convenience moves to contiguous areas when such moves are readily observable by inspectors.

(F) Annual Permit Renewal Fee Equivalent - means the annual fee assessed on facilities which, because of the date of start-up or construction, are exempt from the requirements to have a permit.

(2) Construction and Operating Permit Fees - New Sources

(A) All new permits, the construction permit application for which is received after the effective date of this subsection, will be assessed a fee, which must accompany the application, in accordance with the following schedule:

(i) Major Source

Construction Permit \$2,000

Operating Permit \$1,500

(ii) Minor sources actually emitting 25 tons but less than 100 tons per year of any one pollutant; and minor NSPS sources.

Construction Permit \$1,000

Operating Permit \$250

(iii) Minor sources emitting more than one pound per hour but less than 25 tons per year of any one pollutant.

Construction Permit \$200

Operating Permit \$100

(iv) Relocation Permits \$50

(3) Review to Determine Applicability - New Sources

(A) Upon request, the Commissioner will make a determination of whether or not a permit is required. Upon the determination that a permit is not required, the original permit application fee will be returned upon submission of a \$100 determination fee.

(4) Permit Renewal and Renewal Equivalents

(A) Applicability

(i) The Air Quality Service shall annually assess and collect a permit renewal fee or permit renewal fee equivalent from all sources in the State according to their classification as set forth in Table L. Assessments for existing sources grandfathered from permit requirements (i.e., permit renewal fee equivalents) shall be made in the same manner and on the same basis as a new source of the same type (permit renewal fees).

(ii) New sources shall not be subject to a permit renewal fee until a minimum of one year shall have elapsed from the operating permit application due date.

(B) De Minimis

(i) A permit renewal fee or renewal fee equivalent shall not be required, regardless of the requirement to have a permit, provided that total emissions from the source do not exceed ten (10) tons per year for any one criteria pollutant.

(C) Assessments

(i) Fees established under this section shall be assessed and paid on the basis of source classification as identified in Table L. The annual fee collected for a source in any class shall be determined by multiplying the class number for the source, as determined by Table L, by fifty (\$50) dollars. In no case shall more than one fee per source be assessed unless such source shall constitute two or more facilities as defined herein.

(ii) On or before the first working day of each year, the Air Quality Service will mail fee assessments to all sources subject to this regulation. Such assessments shall be made pursuant to data contained in the emissions inventory and shall set forth:

(a) The source classification

(b) The class number assigned to the source, and

(c) The amount of the fee that is to be remitted to the Service.

(iii) For the calendar year 1988, fee assessments will be mailed on or about the effective date of this regulation and shall be due in the offices of the Air Quality Service 30 days from the date of receipt of the assessment.

(3) (5) Fees will be paid by check or money order (no cash will be accepted) made payable to the reviewing agency, e.g., Oklahoma State Department of Health, Air Quality Service. Fees shall be due in the offices of the Air Quality Service on the first working day of February. A ten (10) calendar-day

grace period will be given before any enforcement action will be taken. Upon the expiration of the ten day grace period, notices of violation (NOV) will be issued and civil penalties, in addition to other remedies, may be sought as authorized under 63 O.S. 1986 Supp. Section 1-1701.1A.

(6) The fee provisions set forth in this regulation shall apply to those permits, renewals and renewal fee equivalents processed by the State Air Quality Service and are not intended to preempt any local fee program.

(D) Source Classification

(i) Any new source for which an appropriate source classification does not exist shall be assigned a classification and class number in Table I as a permit condition.

(ii) Any existing source for which a permit is not required, and for which an appropriate source classification does not exist shall be assigned a source classification and class number in the same manner as (D)(i) above except that:

(a) Such assignment shall be made in writing, setting forth the reasons why the source has been assigned to any particular category, and

(b) Any person aggrieved by such assignment shall be entitled to a hearing on the reasonableness of the assignment.

Guests Present
(See attached list)

The public hearing for considering the proposed revisions to Regulations 1.1, 1.2 and 1.4 and variances for Weyerhaeuser and Sheffield Steel was announced in the August 3, 1987 issue of The Oklahoma Register as required by EPA regulations and also published in newspapers and media throughout the State.

Public Hearing

Proposed Revision to Regulations 1.1 and 1.2
Defining PM-10

Proposed Revision to Regulation 1.4
Concerning Fees

The testimony offered regarding these proposed revisions was transcribed by a Court Reporter. The official transcript is available for review at Air Quality Service's office during normal working hours.

Proposed Variance 87-2
Weyerhaeuser - Valliant

John Drake acted as protocol officer for this proposed variance from Regulations 3.1 and 2.4. This proposed variance is a carry over from the July 21, 1987 Council meeting where Council requested additional justification and information. Grant Marburger, staff, presented staff position (a copy of his presentation is attached as Addendum I). WeyCo provided additional written information in support of its variance request to AQS and this information was provided to Council members (Addendum II). Messrs. Mark Coldiron and Jim Odendahl, representing WeyCo. were present to answer Council's inquiries. Mr. Bill Hickman, representing the Oklahoma Wildlife Federation, read a letter (copy attached, Addendum III) that stated the Executive Committee of OWF opposed the proposed variance to WeyCo. After considerable questioning by Council members, Dr. Canter moved that WeyCo. be granted a one-year variance and this recommendation be forwarded to the Board of Health. Mr. Quinlan seconded. Council voted as follows: Mr. Quinlan - aye; Mr. Skeith - aye; Dr. Canter - aye; Mr. Pyle - aye and Mr. Breisch - aye.

Proposed Variance 85-1
Sheffield Steel, Sand Springs

John Drake acted as protocol officer for this proposed variance from Alternative Emission Regulation 1.6. Grant Marburger, staff, presented staff position (Addendum IV). Mr. Charles Rearden, representing Sheffield Steel Co., was present to answer Council queries. He stated that this would be the last time to ask for a variance and all phases of the operation are on the time schedule. On May 1, 1988 Sheffield will shut down for 16 days to install the hoods over the furnaces. This should eliminate all visible emissions out the top of the furnace building. Roger Randolph, TCCHD, read a statement concerning the Sheffield variance - recommending approval as this will be the last variance (Addendum V). Mr. Skeith moved to grant the variance to Sheffield Steel and forward it to the Board of Health. Mr. Quinlan seconded. Council voted as follows: Mr. Quinlan - aye; Mr. Skeith - aye; Dr. Canter - aye; Mr. Pyle - aye and Mr. Breisch - aye.

Mr. Breisch closed the public hearing.

Public Meeting

Notice of the public meeting was forwarded to the Secretary of State's Office and prior to the meeting news releases were sent to newspapers giving time, date, place and content of the meeting. Agendas were posted at the building entrance and the auditorium door.

Call to Order

The meeting was called to order by Mr. Breisch.

Approval of Minutes

Mr. Skeith moved for approval of the July 21, 1987 minutes as written. Mr. Quinlan seconded. All Council members present voted aye.

Other Business

There was none.

Next Meeting - November 17, 1987
State Health Department

Confirmed.

Adjournment

Meeting adjourned by acclamation.

P R O C E E D I N G S

1:00 p.m.

THE REPORTER: On record.

MR. BREISCH: We will call the Air Quality Council Meeting to order, and first, we will proceed with our hearing. And, John Drake will act as Hearing Officer.

MR. DRAKE: Yes, I will act as Protocal Officer for this hearing. This is proposed division regulation 1.4 was appropriately advertised in the Oklahoma Register.

As will be our custom, we will leave the hearing record open for ten days to receive any written comments. If anyone cares to make a statement concerning this regulation, there are slips, there are not slips available at the back of the room.

If you care to make a statement, fill out a slip, they will be handed me and we will call on you after the staff has made it's presentation.

I would ask Mr. Alwin Ning to present the position of the staff concerning these proposed revisions.

MR. NING: Members of the Air Quality Council, and ladies and gentlemen, my name is Alwin Ning.

1 THE REPORTER: Please spell that
2 first name.

3 MR. NING: A-l-w-i-n, last name, N,
4 as in Nancy, i-n-g.

5 THE REPORTER: Thank you.

6 MR. NING: I am the head of the
7 analysis section of the Air Quality Service. EPA in
8 1986 has approved Oklahoma's state incrementation
9 plans under the protection of visibility in the
10 Wichita Mountains wilderness area.

11 The staff is attempting to remedy
12 some ^{deficiencies} ~~efficiencies~~ by adding some language into our
13 existing permit regulation, 1.4.4.

14 In this 1.4.4, E-2, on page 23 of 32,
15 Section 7, we added visibility and and visibility
16 monitoring as a distinctive monitoring perimeter
17 distinguished from other groups.

18 Second, in Section 1.4.4 G-2 on page
19 25 of 32, we've inserted specific language for the
20 Commissioner to notify the Federal Land Manager of
21 a permit application. Any comment by the Federal Land
22 will be available for public review, prior to any
23 hearing.

24 - The inserted language to read, as
25 follows: The Commissioner shall notify the appropriate

1 Federal Land Manager of the receipt of any such
2 analysis, and include a complete copy of the permit
3 application. Any analysis performed by the Land
4 Manager, shall be considered by the Commissioner,
5 provided that the analysis is filed with the Air
6 Quality Service, within 90 days of the receipt of the
7 application, by the Land Manager.

8 Where the Commissioner finds that
9 such an analysis does not demonstrate to the satisfaction
10 of the Commissioner, that an adverse impact of
11 visibility will result in the Federal Class 1 area,
12 the Commissioner will, in any notice of a public hearing
13 on the permit application, either explain his decision,
14 or give notice as to where the explanation can be
15 obtained.

16 Third, at the request of EPA we also
17 added the definition of "emission limitations", and
18 "emission standards of fact", which was previously
19 thought unnecessary.

20 A new paragraph 1.4.2 B-1G, reads,
21 "Emission Limitations and Emission Standards means
22 requirement which limits the quantity, rate or concentra-
23 tion of emissions of air pollutants on a continuous
24 basis, including any requirements which limit the level
25 of opacity, prescribe equipment, set fuel specifications,

1 or prescribe operations, or maintenance procedures..."
2 We have a misspelling on the word "maintenance",
3 insert the letter "n", to correct it -- "...for a source
4 to assure continuous reduction."

5 The Staff of the Air Quality Service
6 respectfully urges the Council to recommend these
7 changes to the Board of Health, for approval.

8 MR. DRAKE: Alwin, would you -- oh,
9 go ahead.

10 MR. PYLE: On my page 25 of 32, you
11 are reading the insertion about the Federal Land Manager,
12 and my copy says, "within 30 days" and you mentioned,
13 within 90 days.

14 MR. NING: I did?

15 MR. PYLE: Yes.

16 MR. NING: I'm sorry, correction,
17 30 days.

18 MR. DRAKE: Are there any questions
19 from the Council?

20 (No oral response)

21 MR. DRAKE: Thank you, Alwin.

22 Is there anyone in the audience who
23 would like to make a statement concerning this proposed
24 revision?

25 (No oral response)

1 MR. DRAKE: Is there anyone who would
2 like to make a statement on this proposed revision?

3 (No oral response)

4 MR. DRAKE: The third time; is there
5 anyone who would like to make a comment concerning this
6 proposed revision?

7 (No oral response)

8 MR. DRAKE: Apparently, no one cares
9 to comment on this. As I stated in my opening statement,
10 we will hold the record opened for ten days, to receive
11 further comments, and we will bring this back to you
12 at your next council meeting, with the proposed
13 recommendations for action.

14 That's, apparently, it.

15 (Whereupon, the hearing in the above-
16 entitled matter was concluded.)

PROPOSED CHANGES TO REGULATION 1.4

Sinclair Oil Corporation-Tulsa Refinery appreciates the opportunity to present its point of view on the proposed changes to Regulation 1.4 of the "Oklahoma Clean Air Act Air Pollution Control Regulations and Guidelines".

Sinclair Oil Corporation-Tulsa Refinery is opposed to the permitting of "existing sources". However, if a permit requirement for existing sources is passed, we would have the following comments:

1. Instead of a fee of \$50 per source, we would propose a lump sum fee for each facility.
2. The regulations should clearly state that the permitting of existing sources will not subject us to performance testing, monitoring, or any other standards other than those currently in effect.

In addition to our comments above, we believe that proposed Regulation 1.4.1(d)4 should be better defined. For example, what would constitute an "asbestos renovation/demolition project"? We wish to strongly recommend that removal of asbestos for routine maintenance, such as valve or pipe repair or replacement not be included.

Again, we thank you for your time and consideration.

H. M. Connell
Refinery Manager

P O Box 2039
Tulsa OK 74102

Mr. John Drake
Chief, Air Quality Service
Oklahoma State Health Department
P. O. Box 53551
Oklahoma City, Oklahoma 73152

Dear Mr. Drake:

Sun Refining and Marketing Company appreciates the opportunity to comment on the proposed changes to regulations 1.4 and 1.5.

Regulation 1.4 (Permits), Section 1.4.1.(d)(2), concerns fees for existing sources. We feel that the fee of \$50 per source is overkill in facilities such as ours. We presently have approximately 70 sources under the definition of sources. We feel that the paperwork alone for each source is not worth the \$50 per source fee. A fee such as \$500 per facility, for any facility with more than ten sources would be much more reasonable, require less paperwork, and therefore require less administrative burden on industry and the AQS. These fees do nothing to improve or maintain environmental quality, which is our primary purpose.

We also feel that some wording should be inserted to prevent the existing sources issued a permit under 1.4.1(b)(3) from being placed under the same testing and data gathering requirements as for a new permit application.

Section 1.4.1.(d)(4) on asbestos fees can turn into a paperwork and administrative nightmare greater than the asbestos problem already is. We again feel that everyday asbestos removal in a facility should be permitted on an annual basis, with a fee such as \$500 per facility. Any major renovation/demolition projects could then be handled on a case-by-case basis.

We recognize the necessity for the AQS to issue permits and collect fees, but do not believe that is Industry's duty alone to fund the AQS.

Sincerely,

A handwritten signature in cursive script that reads "William R. Clarke".

MEMORANDUM

TO: ~~Air Quality Council~~

Dennis DOTY

SUBJECT: Revision to Regulation 1.4, Permit Fees
Oklahoma Clean Air Act

In general, we support the proposed revision, however, the Tulsa City-County Health Department **does** feel that the permit fee system for new construction now in use in Tulsa County, is more equitable than the proposed revision to Section 1.4.1.

Our fee for a major source would cost the company 0.2% of actual construction costs to a maximum of \$10,000. We anticipate few, if any, new plants of this size in the foreseeable future. On the other hand, the majority of our permits are in the \$100 price range. It does not seem as fair to charge service stations, dry cleaners and small paint booths the \$250 suggested.

We are currently charging a double fee for late filing of construction permits. We prefer this to the 50% additional late filing fee.

We do like the proposed annual fee as shown in 1.4.1(d)2. The \$50 charge per point seems reasonable, but we would like to see a \$2,500 maximum annual charge. As an example, a major source would have to pay approximately \$5,000 per year on an estimated 100 point sources as the proposed regulation is now written.

In the Matter of:)

PROPOSED REVISION 1.5)
PROPOSED REVISION 1.4)

Tulsa City-County Health Dept.
4616 East 15th Street
Auditorium
May 19, 1987

The above-entitled matter came on for hearing, pursuant
to Notice.

BEFORE: Mr. Larry Byrum, PRESIDING OFFICIAL
Director, Air Monitoring & Analysis Division
Air Quality Service
State Health Department

APPEARANCES:

AIR QUALITY COUNCIL MEMBERS: Mr. William B. Breisch, Mr. James F. Quinlan, Dr. Larry Canter, and Mr. Charles Pyle.

WITNESSES:

1. Dennis Doughty
2. Royce Bentley
3. Jim Pollard
4. Ray Bishop
5. Jerry Cleveland
6. David Bradshaw

P R O C E E D I N G S

PRESIDING OFFICIAL BYRUM: Ladies and gentlemen, my name is Larry Byrum and I am acting as the Chief of Air Quality Service today for the State Health Department and as such will act as protocol officer for the hearing. For the record, I would state this hearing is convened by the Air Quality Council in compliance with Title 75 O.S. Section 301-325 and the requirements entitled 40 Part 51 Code of Federal Regulations and under the authority of Title 63 O.S. Section 1-1802 and following. I would advise you that the Oklahoma Register advertised this meeting for a hearing in its May 1987 issue. Copies of the proposed regulation were mailed to all known interested parties. The advertised purpose of the hearing was to receive public comments on regulations 1.4 and 1.5. A transcript of this hearing will be made. We do not normally provide copies, but if you for some specific reason would need one, you can contact our office and anyone who makes an oral statement and does not have a written statement today, we would appreciate it if you would provide us with a written statement during the proposed hearing comment period. It is the practice of the Council to keep the record open for 10 days to receive further comments. As protocol officer I will call the names of the people who have signed sheets of paper at the rear of the room indicating they wish to make a statement. If anyone wishes to fill out one of these slips, they are available and will be passed up to us here. I would call on Mr. Dennis Doughty at this time. He is the staff attorney for Air Quality Service and will present the staff position on Regulation 1.5.

MR. DOUGHTY: Thank you, Mr. Byrum. As you may recall, there was a proposal to amend Regulation 1.5 brought before the last Council meeting and we were anticipating a public hearing at this time. The basic impact of these changes is that it would require that all excess emissions be reported, and number two, that releases of toxics with a potential for public exposure would be required to be reported immediately. There were certain lists of chemicals which comprised the definition of toxic chemicals. The original regulation was changed to incorporate by reference those particular lists which would come under this regulation rather than attach them as an appendix. The term release has been defined in the context of air releases, and there has also been a provision added which would add the local emergency response organization to the list of persons to be notified.

On the first page of the proposed change under the definition of toxic chemical, under sub-paragraph (i) you will find that one of the lists which has been incorporated by reference is the so-called EPA 402 list. Under subsection (ii) the list which would be incorporated is the OSHA hazardous communications standard. Under subsection (iii) the definition incorporates the so-called Maryland and New Jersey list of chemicals. Also, under subsection (iv) the definition incorporates the superfund list of hazardous substances. The term release has been defined here and it would include a release from any source. Here is [holds up] a compilation of the lists which come under the definition of hazardous chemicals which would come under that definition. If anyone of you don't have these references, if they will contact the Air Quality Service, we will make copies of these available for a fee.

SOMEONE: What is the fee?

MR. DOUGHTY: Whatever the copying fee is.

MR. BYRUM: Fifteen cents a page I believe.

MR. DOUGHTY: There is also a reference book here which is copyrighted so I am not going to copy these materials out of there, but they take the definition of the OSDH hazardous substances and compile a list of those materials which they believe fit this definition, but if you will call me or someone at the Air Quality Service, we'll give you a citation on this.

SOMEONE: What is the date of that [unintelligible] you just had?

MR. DOUGHTY: Well, this is only one. This is the EPA 402 list and it's November 17, 1986. I'll go through these if you would like. It's volume one, number 221, page 14582 of the Federal Register, November 17, 1986. This [second document] is the Maryland and New Jersey lists and I don't know what to cite you on that. This is the list of hazardous substances and reportable quantities and that is found in 40 CFR Part 302.4. This [third document] is the OSHA hazardous, is it substances or materials Nancy, what's the ... [unintelligible] 29 CFR 1910.1200. And judging from the comments and response this morning it would be our recommendation that this regulation, this proposal be held over for comments and brought back to the Council at the next meeting. So, if there are any oral or written comments, we can throw the meeting open for those at this time. Larry.

BYRUM: Thank you, Dennis. Royce Bentley, Public Service.

MR. BENTLEY: We would like to endorse the staff's recommendation that the record be held open and we could work with them and continue our discussions of this morning and formalize the written comments.

MR. BREISCH: We generally leave this open for 10 days. Do we want to extend this a little more than that?

MR. BYRUM: That's a true ... question.

MR. BREISCH: All right, I would recommend we extend it ...

MR. DOUGHTY: If we decide to go back to public hearing, we'll need enough lead time to get it in the Oklahoma Register.

MR. BYRUM: About the most we can extend it ...

MR. BREISCH: When is the next Board of Health meeting?

MR. BYRUM: They were going to have one the 27th of May but it was postponed ... we don't receive ... Board of Health meetings. We don't perceive they will have another Board of Health meeting until after the legislature adjourns.

SOMEONE: We need to ... by April.

MR. BYRUM: Fifteen days I think is ...

MR. DOUGHTY: Yes, it would have to go in the Register by the first of June if we decide to ...

SOMEONE: What, the first of June?

MR. DOUGHTY: Well, we have to have it ready in the June first issue of the Oklahoma Register in order for us to meet our legal notification requirements if it comes back to public hearing.

SOMEONE: That's the assumption that there was a substantial change.

MR. DOUGHTY: That's if there is a substantial change. If we can take the comments and incorporate them into the regulation with no substantive change, then all we will have to do is bring it back and ask the Council for their recommendation on it.

MR. BREISCH: Well, we wouldn't have much over 10 days if we need to get it in by then. About all I can say as just one member of the Council, if there is something that is brought to our attention at the next public hearing, well we'll have to play that by ear at that point. So, we'll just leave it open then for the normal 10 days.

MR. BYRUM: That's kind of what our options are if you have 10 days. If you go longer, then we can't hear it until the next meeting. So, ... we can do it in 10 days and get it through and it's acceptable next time ...

MR. BYRUM: Any questions for Royce? Jim Pollard.

MR. POLLARD: My name is Jim Pollard and I represent Oklahoma Gas and Electric Company. Based on my review of these regulations and of the discussions at this morning's briefing, I would respectfully request that no action be taken today and that the ... I would recommend that the hearing stay open for 30 days. I think 10 days is too close to the time and I understand the constraints that you all are operating under. We will prepare and submit written comments in whatever time you indicate, however long that hearing will be open concerning what we discussed today. Thank you.

MR. BYRUM: Any questions for Jim? Jerry Cleveland.

[something about Cleveland] [Jerry's comments were for 1.4 later]

MR. BYRUM: No problem. Ray Bishop.

MR. BISHOP: My name is Ray Bishop. I'm with the Tulsa City-County Health Department. I just wanted to say that the Health Department supports the intent of the regulation. We understand there are some changes and modifications that need to be made, but we still support the intent and we feel it will be a good regulation when it is passed.

MR. BYRUM: Any questions of Ray? Anyone else wishing to speak? Again, anyone else wishing to speak? Okay, I have no one else who wishes to speak at this time.

MR. BREISCH: Our options are to leave it open for 10 days of comments or take some other action.

MR. BYRUM: If you leave it open longer than 10 days, it will probably necessitate skipping the next meeting and ... [something about the reasons for leaving it open for longer than 10 days and anticipating substantive changes]

MR. BYRUM: We're talking about 1.4 now, right? No, 1.5.

MR. BREISCH: Well, if there are substantive changes, then the hearing takes care of that and then if there are enough that we're not satisfied, we shouldn't take action ...

MR. BYRUM: Yes, you can continue it next time.

MR. BREISCH: I think we gain the same thing by having a hearing as we would by lengthening out the open period of more than 10 days. You ...

MR. PYLE: I move that we proceed normally. Have a 10 days open period for statements. See if there are substantive changes and review the thing at our next meeting. Is that too complicated?

MR. BREISCH: His motion is that we move to leave it open for comments for 10 days and set it for a second public hearing on our next regular meeting. Is there a second?

MR. BYRUM: Second?

DR. CANTER: Second.

MR. BREISCH: It has been moved and seconded. Would you call the roll, John?

MR. PARRY: Mr. Quinlan - aye; Dr. Canter - aye; Mr. Pyle - aye;
and Mr. Breisch - aye.

MR. BYRUM: I will call on Mr. Dennis Doughty, staff attorney for Air Quality Service to present the staff's position on regulation 1.4.

MR. DOUGHTY: On the proposed revisions to regulation 1.4, the primary thrust is the increase of permit fees; the proposal which we have come here with today. The amendments would change the existing fee structure as I said and it would require that all sources whether new or existing sources would be required to have a permit. Permits would be renewable on a yearly basis. Fee payments would be required on a yearly basis. There would be a \$100 permit fee for the asbestos renovation/demolition projects: these would also require permits. The fee system that we have set forth here would not, is not meant to preempt the fee system that is set up in Tulsa City-County or Oklahoma City-County and we do not ..., the intent of this regulation is to not impose any additional permit requirements on the regulated community with the exception of the fees.

On the first page of the proposed amendment under the definition of "existing sources," you will see on the second line there, "source operations;" the permit system would apply to source operations and that the Air Quality Service would present each permittee with a permit renewal application on or about the first of each calendar year. On the next page you'll see the fee systems as they are set forth for the major sources subject to PSD or NSPS or NESHAPs requirements. On the last page you'll see some mention of minor sources. Under "existing sources" the annual renewal fee for an existing source would be \$50. The permit to relocate would be \$50. and those asbestos renovation/demolition projects would be assessed a fee of \$100. If there are any questions on this, I would be glad to try and answer them for you right now.

MR. BREISCH: Dennis.

MR. DOUGHTY: Yes?

MR. BREISCH: Do I understand that if you issue a construction permit that you issue an operating permit on an interim basis and then finally it takes a \$50 renewal takes effect?

MR. DOUGHTY: That's my understanding of the intent. The way the permit system has worked in the past is that they would be issued a construction permit and then after the construction was done and the source was operating and checked out, then an operating permit would be issued. My interpretation of this section is that there would be, I believe a three year reprieve after paying your construction and operating permit fees, before they would be deemed an existing source and therefore subject to the \$50 yearly renewal.

MR. BREISCH: It really doesn't say that the operating permit at ... is discontinued does it? In those words? You know it could be explained that that does happen.

MR. DOUGHTY: OK. Well, we're talking about a definition problem then as to the difference between an operating permit that's issued for a new source and a continual operating permit for existing sources.

MR. BREISCH: Maybe it just wasn't clear to me ...

MR. DOUGHTY: That was not the intent to stack these, no.

SOMEONE: OK, then on the second page was that supposed to be ... rather than ... permit?

MR. DOUGHTY: That's correct, that was just an error that was carried through.

SOMEONE: Why so high on that?

MR. BREISCH: All the other ... permits, it just doesn't seem to be that multiple ...

MR. BYRUM: I think it has to do with PSD, NSPS and NESHAPs. Those are all federal ... you're going to be dealing with big, big sources.

MR. BREISCH: I agree to that, but the concept of this thing among other things is based on a time/cost to the Service and is this in line with the others and if it is, fine and if not, I'd like you to look at that and see if it bears that quite a bit higher of a fee.

MR. DOUGHTY: OK. Mr. John Drake has made some, done some calculations on this and I don't have his figures here or his rationale for it, but this is backed up with John's figures as to the effort that is put into processing these.

MR. BREISCH: I know we are hurt a little bit without this explanation, but it does seem a little out of line.

MR. BYRUM: There is a lot of work involved doing all the modeling analysis and when they come in late, we quite frequently have to drop everything else to get ... in time. You're probably looking at having to put several people on that to get it out on time.

MR. BREISCH: Yes, an explanation would probably clear that up.

MR. DOUGHTY: What happens sometimes is that people may not realize they have to have a permit and they are partially through their construction before we ever know anything about it, so then it causes us some problems in that regard. Here again on this proposal, we would recommend it to be held over for action on a later date and if there's any comments or questions, we will address those at this time.

MR. BYRUM: Any questions of Dennis?

[a question from someone.]

MR. DOUGHTY: I'm saying that staff would recommend that this regulation be held over for action not today, but at a later date.

MR. BYRUM: Any questions for Dennis?

SOMEONE: Where in the regulation are sources defined?

MR. DOUGHTY: Well, who could answer that? We've got sources in our air quality regs, we've got a regulation that speaks to definitions, ok? As came out of the briefing, there is an EPA definition of a minor source. A major source emits greater than 100 tons per year or greater Larry?

MR. BYRUM: Without control.

MR. DOUGHTY: Without control. And there is a EPA definition of minor source which as near as I could gather this morning is a source which is less than 100 tons per year. So the real question arises as to what a de minimis source that drops out underneath the minor source. So that's a definition which will have to be addressed also.

MR. BYRUM: Any other questions of Dennis? Thank you Dennis.
Jerry Cleveland.

MR. CLEVELAND: I am Assistant Director of the Tulsa City-County Health Department. TCCHD air pollution staff generally supports the revisions to the state regulation pertaining to permits. As you are well aware, we went through this about two or three years ago in developing a new permit system that included a change of fee structures. We worked quite some time on it before we came up with the regulation that we have which is essentially a permit to construct followed by a permit to operate one time charge. We have no annual operating permit fee at the present time. We realize

that the time has come and the state must modify their permit regulation and I hoped I would have an opportunity to present this information and permit regulations to our environmental advisory council and let them have some input to the development of this if possible. I think it would be very important from my point of view since they work long and hard on what they come up with locally, even though at the present time the state has indicated their permit system would have no impact on what we might want to do locally or have done locally. I think it would be very important that I coordinate this with our environmental advisory council. Overall, I think we do support the development of the revised permit system.

MR. BREISCH: Jerry, about what are your fees compared with these?

MR. CLEVELAND: I haven't set down and done calculations as far as the comparison goes, of course, our concept of how we charge fees is a little bit different from the state because we take a percentage of the construction cost as our fee up to a maximum and it seems to be working pretty good and we've had two years of experience with it and we know the ins and outs of it where you run into some problems with it, so I can't compare the amounts.

SOMEONE: Did we do any of that type of comparison rate?

SOMEONE: Jim did a little of it in some cases we'd be sliding and some cases ... it was just individual.

SOMEONE: It's not necessarily based on the construction of the pollution control equipment, but covers the whole plant?

MR. CLEVELAND: What, this percentage of construction cost? It was modeled after a permit regulation in Texas a number of years ago. Of course, since we have two years experience with it, we have been generating some funds to offset the costs ... system and we want to be for sure that

whatever the state develops, it wouldn't impact us or we figured in such a way that it's a benefit to everyone.

MR. BYRUM: Any further questions of Jerry? Jim Pollard.

MR. POLLARD: My name is Jim Pollard and I represent OG&E. I concur with the staff's recommendations that we do need 10 days to submit additional comments based on our discussions at this morning's briefing. I do have one or two questions that came up. I would like to address to the staff if I may at this time. The \$100 fee for asbestos ... is that paid to the state or is it to go back to the city-county? We have facilities in Oklahoma County and we submit our applications to the city-county now. How is that fee in this regulation, does that go to you, does that go to the state or?

MR. BYRUM: We envision it as going to the area of jurisdiction that you are under. In other words, if you are in Oklahoma County, then you are under the OCCHD. They do the enforcement, they do the permit and all that, so fees generated would be the fees that they charge. If they choose to use our regulation, then it would be based on our regulation. If they choose to use a local regulation, which Oklahoma City and Tulsa have the priority to do, it would be based on whatever they charge.

MR. POLLARD: But this would not be an addition to a fee that they might charge?

MR. BYRUM: We would be administering this in the 75 other counties.

MR. POLLARD: One other question. I was noticing we don't have a lot of people represented here of industry who might be subject to this permit fee for existing sources. Do you have some figure in mind of how many new sources will be covered by this annual permit?

MR. BYRUM: Are you talking about additional to what we have, sources we have now?

MR. POLLARD: Sources who do not have permits now. How many additional ones we will ...

MR. BYRUM: I really don't have that, but I can tell you we are talking in the neighborhood of 4,000 point sources. How many facilities, roughly 300 maybe, something in that neighborhood that would be on the state level and then you've got, how many sources do you have Ray? About 200?

MR. BISHOP: I think there's a little bit more than 200.

SOMEONE: Unless the question of definition of sources is resolved, do you use the same definition in Tulsa County?

MR. POLLARD: My recommendation to the Council would be that it might have a big impact on some people who have never had any permits before, have never had to pay any money out on this kind of thing before, that will come as a big shock to them. And it could be a very substantial amount of money for some smaller operators. It wouldn't be for my company, but it might be for some smaller ones, it would be. If you had some way of notifying them if you know who they are, I think they and yourselves would be well served.

MR. BYRUM: I would state that we do make a mail out of our agenda items to a very significant number of the industries who have representatives who usually come to our meetings. I can't speak as to why there aren't any more of them here.

MR. BREISCH: Jim's right. They might not have known about it, heard about it.

MR. BYRUM: That's true.

SOMEONE: Do you know, for example, that everyone who is on this list of 3,000 ...

MR. BYRUM: I don't know who all her list encompasses. I know there are many, many mailouts made, but I don't know who all it encompasses, but it does cover anyone who has ever requested to be on that list is mailed to.

SOMEONE: But the most immediate target group it would seem to me, would be those who currently have some kind of permit.

MR. BYRUM: We, what we are using as a basis for this, is the emissions inventory system that we have and a lot of those people are either represented by groups that we do make a mailout to or who have representatives come to the meetings and that type of thing. I would think there is a fairly sizable number of people who ... and of course we mentioned at the last meeting and some of the meetings before that.

MR. POLLARD: One additional thought. To me this is a very significant step the Council is taking to require permits from existing facilities. I understand the need for fees to cover the administration of air programs and I support that, but when you require a permit, an operating permit on existing sources, what will happen is that now people who do not have a permit are no longer legally allowed to operate. Whereas before there was no requirement on them. I think that is a significant point of regulation on them that you need to consider very carefully as to how that is implemented. How they are notified to know if they are, because now you are requiring them to have a permit to operate or they are ...

MR. BYRUM: It may be that we address a different class of permit or something, I'm not sure. Any comments for Jim? Questions? Royce Bentley.

MR. BENTLEY: Royce Bentley of Public Service Company of Oklahoma. I think it's pretty evident from the questions generated both this morning and this afternoon that there are very few of us who either entirely understand the regulation as it's proposed now or after some of the explanations we have received, we have really changed an opinion of the regulation itself and I would just simply ask that we do in fact have a comment period that in this case we might want to consider a 30 day comment period. The impact of this regulation is tremendous beyond the fee generation stage and I don't think any of us here have much hesitation in supporting the program financially, it's the impact it may have in other areas that concerns us. Thank you.

MR. BYRUM: Any questions for Royce? David Bradshaw.

MR. BRADSHAW: My name is David Bradshaw and I represent the Agrico Chemical Verdigris Plant. We do not support the idea of an annual permit renewal process. We suggest the substitution of an annual inspection fee as used by many other states. As with the proposed regulation, this inspection fee could be geared to the number of point sources at a facility and would result in the same revenue. Alternatively, if an inspection fee is unacceptable, then we suggest that the permit renewal process be clearly defined within the regulation itself. That is, we would like to know what may or may not be required. As the regulation is proposed, we feel the process is open to arbitrary requirements and could be used unfairly and selectively at some future time. Again, we are not opposed at all to the raising of revenue for the purpose, but we would like a different approach.

MR. BYRUM: Any questions of David? Thank you. Anyone else who wishes to speak? Again, anyone else who wishes to speak? I find no one else who wishes to speak.

MR. BREISCH: [unintelligible]

SOMEONE: Could I ask about the urgency of acting upon this item?

MR. BYRUM: There's no urgency since there's no Board of Health meeting before the legislature goes out of session, so you have the rest of the year.

SOMEONE: This is what I started to say earlier, it seems to me this would bring some major contributions ... and maybe it would make sense to have a longer comment period ...

MR. BREISCH: I don't know what other effort could be made to notify unsuspecting industry permittees, but we sure ought to make an additional effort since Jim and Royce seem to think there might be.

MR. DOUGHTY: Mr. Chairman, we could leave this open. Set it for public hearing again at the next Council meeting and leave the comment period open until that time. We can make some effort to identify those people who we think would be impacted by this regulation and send out special notices. That's not unheard of, we've done that before.

MR. BREISCH: You wouldn't be publishing any new regulation ...

MR. DOUGHTY and MR. BYRUM: Oh no.

MR. DOUGHTY: We could bring it back to public hearing again at the next Council meeting.

MR. BREISCH: Could you at that time have a suggested regulation?

MR. DOUGHTY: That's a real possibility and the Council could also act on it at that time. I'm saying there's no real ...

MR. BREISCH: We couldn't act on it unless it had been published could we? Unless you said we were going to act on it.

MR. DOUGHTY: Well, we could publish it. I don't see any problem with that. We could publish a public hearing and continuation of public hearing and possible action. Or we could set it for Council and the Council could either accept it or reject it based on the proposal and what comes out at the public hearing.

MR. BREISCH: Well, then what you're saying we don't need to close this for comment.

MR. DOUGHTY: Since the Board of Health meeting has been canceled, then there's no use to require any urgency.

MR. BREISCH: I think we can just leave it open then until our next meeting.

[someone seconded]

MR. BREISCH: It has been moved and seconded to continue the hearing on 1.4 through our next regular meeting and then take appropriate action at that time.

Mr. Quinlan - aye; Dr. Canter - aye; Mr. Pyle - aye; and Mr. Breisch - aye.

MR. BREISCH: That will conclude our hearing portion of the meeting.

28 April 1987

Mr. Dennis Doughty
Oklahoma Air Quality Service
Oklahoma State Department of Health
P. O. Box 53551
Oklahoma City, Oklahoma 37152

Dear Mr. Doughty:

Thank you very much for the advanced copies of Regulations 1.4 and 1.5. Both Jim Schellhorn and I have reviewed them and we offer the following comments:

Regulation 1.4 -- Instead of an annual permit renewal we suggest implementation of an annual recertification contingent upon a facility meeting three requirements: (1) Payment of an annual inspection fee (this could be based on number of point sources), (2) Completion of the Annual Emissions Inventory and, (3) Completion of a Toxic Emission Inventory as requested by the AQS. We feel that by limiting the intent of the regulation to these (or other) statements that the purpose of the modification becomes clear to the regulated community. As proposed, the renewal requirement appears to be a club which could be used at some future date in an arbitrary fashion. The approach which we have suggested makes clear the intent of the AQS and makes it much less likely that the above listed tasks will have to be spelled out to some members of the regulated community.

Regulation 1.5 -- We feel that this proposed revision presents a considerable improvement! We do suggest that language be added to

1.5(e)(2) to clarify the source of the toxic chemical. For example, if all sources are considered (as we suspect) then we feel that the regulation should read, "If the release of a toxic chemical from any source: point or non-point, regulated or non-regulated, has the...". If the scope of the regulation is not this broad then the source type or applicable regulation(s) should be specified.

Very truly yours,

THE VERDIGRIS PLANT

Air Quality Council
P. O. Box 53551
Oklahoma City, OK 73152

Gentlemen:

Your proposed amendments to the Air Quality Standards of 1.4 and 1.5 raise several questions and you are entitled to several compliments.

1.4 (1) - What is a source? - Should be clarified to include the facility particularly as "source" applies to the asbestos situation. As written, a permit could be required for each valve in a facility. One permit should cover the facility.

1.4.1 (b)(1) - What does "relocate mean?" It could mean moving a machine a few feet inside a facility. One should not need a new permit as long as one is just rearranging within a facility.

1.4.1 (c)(2) - after word "operator" insert "at the time of transfer."

1.5 (b)(1)&(2) - The use of "Release" is confusing. However, would suggest that the section be left as is and a group be formed to study the most effective and efficient way to interpret and implement.

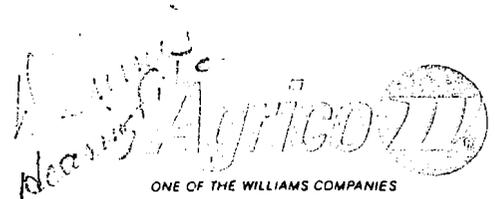

We would like to compliment the Council on the requirement of public notification. We believe it is in the right direction and would suggest the group also study the most efficient definition and enlargement of such for the public protection.

Sincerely,

Julius E. Kubier

20 May 1987

Mr. John Drake
Oklahoma Air Quality Service
Oklahoma State Department of Health
P. O. Box 53551
Oklahoma City, Oklahoma 37152

Dear Mr. Drake:

At the May 19th meeting of the AQS in Tulsa I delivered oral comments at the Hearing Briefing concerning the proposed revisions to Regulation 1.4. Following is the text of those comments with only minor changes.

We do not support the idea of an annual permit renewal process as proposed by the revision. We suggest the substitution of an annual inspection fee as used by many other states. As with the proposed regulation, this inspection fee could be based on the number of point sources at a facility thus producing the same amount of revenue and much less paperwork for the AQS and the regulated facility.

Alternatively, if the inspection fee approach is unacceptable, we request that the permit renewal process be clearly defined. That is, we would like to have what may and may not be required stated in the regulation. As the proposal now stands the purpose and the method of the renewal is undefined. We feel that this leaves the process open to misunderstanding and abuse at some future date when the present staff is no longer with the AQS.

Very truly yours,

MAY 28 1987

AIR QUALITY
SERVICE

Mr. John Drake, Chief
Air Quality Service
Oklahoma Dept. of Health
P. O. Box 53551
Oklahoma City, OK 73152

Dear Mr. Drake:

On behalf of Weyerhaeuser Company, I am submitting the following comments on the proposed changes to regulations 1.4 and 1.5.

- 1.4.1(b)(1) - The term "relocate" as used could lead to a lot of confusion. I suggest that the definition of relocate should be as follows:
Relocate means moving the source from one described geographical site to another. An example would be the relocation of an asphalt or cement mixing plant.
- 1.4.1(b)(3) - The intent of this section appears to be that of providing a means for assessing and collecting the annual fees as described in section 1.4.1(d). It should not be necessary to reissue permits each year for this purpose. The required annual Air Emissions Inventory lists all emissions at each facility. Billings could be sent with the inventory sheets and the fees collected at the time the completed inventories are submitted. This would eliminate a lot of unnecessary paper work both for permittee and the Air Quality Service Staff.
- 1.4(1) - Source - How is this defined? Is a contiguous geographic area a "source" or is each emission point at a facility? If each stack or vent is considered a "source", then a maximum fee per "facility" must be set. The fees for asbestos permits/approvals projects should be an "annual fee per facility".
- 1.4.1(d) - The fee schedule would not be considered a major issue if "source" is defined as a "single entire industrial complex" or "facility". If each vent or stack is a "source" then a maximum cap for the permit fees must be set. As noted above, a single "facility" could have 25 or more vents or "sources" and permit fees could run from \$4,000 to \$10,000 per year.

May 27, 1987
Page Two

1.5(b)(E) & (F) and 1.5(e)(2) - I urge that these proposed changes not be added to the regulations at this time for these reasons:

- . New EPA regulations under Title III of the 1986 CERCLA amendments are just now taking effect. The first reporting date under the Community Right-to-Know provisions was May 17, 1987.
- . Each state must set up local emergency planning commissions by October, 1987. Reports of "emissions" must then be made to there local commissions along with lists of "toxic" or "hazardous" chemicals stored or used.
- . Proposed additions are duplicative of the mandated federal regulations and unnecessary. The reporting of "spills" to the local and/or state agencies will have to be made absence the proposed changes.
- . Federal regulations are still evolving and being refined. Until such time as the current program has been fully implemented there is no way to be sure that the proposed additions would not be either duplicative or in conflict with the final federal regulations.
- . The proposed additions apply to "air emissions" while the existing Federal regulations apply to all spills of "toxic" and/or "hazardous" materials. Adding this to the Air regulations only adds to the present confusion.

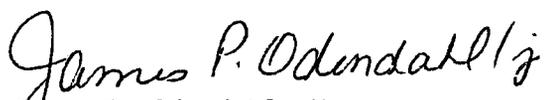

I urge that these proposed additions be dropped from regulations 1.5(b) on the basis that these requirements are already in place and these changes are an unnecessary duplication.

I appreciate the opportunity to submit these comments and respectively request that they be made a part of the official record of the hearings held on 5/19/87.

Date: July 21, 1987 1: 00 PM

From: Anna Clapper, 12104 Camelot Place, OkC, OK 73120

Re: Proposed Variance 87-2, Weyerhaeuser, Valliant

Mr. Chairman, Members of the Air Quality Council, Ladies and Gentlemen:

My name is Anna Clapper. I live at 12104 Camelot Place, Oklahoma City, OK 73120. I am representing the Oklahoma Coalition for Clean Air and I serve on the Board of the American Lung Assn. of Oklahoma as environmental chairman. Over the years, since 1969 I have monitored meetings of the Oklahoma Air Quality Council and have followed the development of the Oklahoma Clean Air Act through all its regulations. As a citizen interested in the quality of life, it was a shock to me to find a location in this state listed on the cover of the brochure "Warning: Breathing in these cities may be hazardous to your health". Tulsa, OK has this dubious distinction.

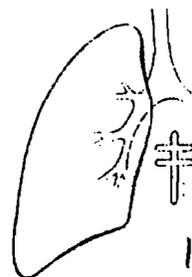

Just in case you may wonder why the request for variance made by Weyerhaeuser causes me concern, let me refresh your recollection of the magnitude of the people sensitive to air pollution in the state of Oklahoma. From the 1980 census we learned that Oklahoma has three and three-quarters million people. Of these, one-quarter million are under the age of five; one-half million are over age fifty, and one-half million suffer from chronic respiratory ailments. Then add to this $1\frac{1}{2}$ million, the large numbers of persons suffering from coronary heart disease, and lung cancer, and you realize that there are indeed many who live in our state who could have serious health effects from an increased air pollution.

Furthermore, Weyerhaeuser is requesting a possible five-fold increase in the emission of particulates for one year. Particulates are the solid matter on which other pollutants adhere and travel, so this is indeed a serious consideration.

Another cause for concern is the occurrence of acid rain in the eastern part of the state. There are already readings at Clayton Lake at 4.76 to 4.23 acidity, and readings in other locations ranging from 5.63 to 4.49 (ph), so the addition of greater amounts of particulates to the existing condition is something to consider.

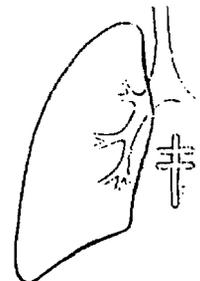

I realize that electronic precipitators can and do break down. However, to take one year to study the breakdown process seems a bit too long. My question is, once Weyerhaeuser gets the variance, how long will it be before they get into compliance?

It is my recommendation that Council keep in mind the health effects of added air pollution and structure their action on a way to keep careful control on Weyerhaeuser emissions during the period of study and correction while being aware of the ambient impact on the area.

Thank you for this opportunity to share my observations with you.

Respectfully,

Anna Clapper
Anna Clapper

Comments Pursuant to Public Hearing
on Revisions to Regulation 1.4
Concerning Permit Fees

Comment #1

We are opposed to permitting "existing sources".

Staff Response

Under the proposal set forth for hearing, grandfathered sources will not be required to obtain permits.

Comment #2

We do not support the idea of an annual permit renewal process as proposed by the revision. We suggest the substitution of an annual inspection fee as used by many other states. As with the proposed regulation, this inspection fee could be based on the number of point sources at a facility thus producing the same amount of revenue and much less paperwork for the AQS and the regulated facility.

Staff Response

The regulation must be written to be in concert with the enabling legislation. This legislation is couched in terms of permit fee, annual permit fees and permit fee equivalents; thus, these are the terms used in the regulation.

Comment #3

Instead of an annual permit renewal we suggest implementation of an annual recertification contingent upon a facility meeting three requirements: (1) Payment of an annual inspection fee (this could be based on number of point sources), (2) Completion of the Annual Emissions Inventory and, (3) Completion of a Toxic Emission Inventory as requested by the AQS. We feel that by limiting the intent of the regulation to these (or other) statements that the purpose of the modification becomes clear to the regulated community. As proposed, the renewal requirement appears to be a club which could be used at some future date in an arbitrary fashion. The approach which we have suggested makes clear the intent of the AQS and makes it much less likely that the above listed tasks will have to be spelled out to some members of the regulated community.

Staff Response

As stated above, the wording of the regulation must conform to the legislation, but the commentor's suggested intent is the intent of the

material that we presented. Several commentors expressed concern about the term "permit" and the implication or connotation of "permit application," "testing," etc., associated with new or modified source permits. Thus, new wording has been included to make this intent more obvious.

Comment #4

Section 1.4.1(d)(4) on asbestos fees can turn into a paperwork and administrative nightmare greater than the asbestos problem already is. We again feel that everyday asbestos removal in a facility should be permitted on an annual basis, with a fee such as \$500 per facility. Any major renovation/demolition projects could then be handled on a case-by-case basis.

In addition to our comments above, we believe that proposed Regulation 1.4.1(d)4 should be better defined. For example, what would constitute an "asbestos renovation/demolition project"? We wish to strongly recommend that removal of asbestos for routine maintenance, such as valve or pipe repair or replacement not be included.

Staff Response

The intent of this requirement was not to require additional reporting. The current NESHAPs reporting requirements are not expanded by this regulation. Those projects that can be encompassed on an annual report may still be done with a \$100 fee for each facility and those projects, that meet the requirements, must be reported individually with a \$100 fee. Clarifying language has been inserted.

Comment #5

1.4.1(b)(1) - What does "relocate mean?" It could mean moving a machine a few feet inside a facility. One should not need a new permit as long as one is just rearranging within a facility.

Staff Response

See below.

Comment #6

1.4.1(b)(1) - The term "relocate" as used could lead to a lot of confusion. I suggest that the definition of relocate should be as follows: Relocate means moving the source from one described geographical site to another. An example would be the relocation of an asphalt or cement mixing plant.

Staff Response

Language similar to the above has been inserted for clarification.

Comment #7

The regulations should clearly state that the permitting of existing sources will not subject us to performance testing, monitoring, or any other standards other than those currently in effect.

Staff Response

See comment 3. (The requirement for permitting grandfathered sources has been dropped from the current proposal).

Comment #8

Some wording should be inserted to prevent the existing sources issued a permit under 1.4.1(b)(3) from being placed under the same testing and data gathering requirements as for a new permit application.

Staff Response

See comments 2 and 7.

Comment #9

1.4.1(b)(3) - The intent of this section appears to be that of providing a means for assessing and collecting the annual fees as described in section 1.4.1(d). It should not be necessary to reissue permits each year for this purpose. The required annual Air Emissions Inventory lists all emissions at each facility. Billing could be sent with the inventory sheets and the fees collected at the time the completed inventories are submitted. This would eliminate a lot of unnecessary paper work both for permittee and the Air Quality Service staff.

Staff Response

This is the intent, see comment 2.

Comment #10

Regulation 1.4 (Permits), Section 1.4.1(d)(2), concerns fees for existing sources. We feel that the fee of \$50 per source is overkill in facilities such as ours. We presently have approximately 70 sources under the definition of sources. We feel that the paperwork alone for each source is not worth the \$50 per source fee. A fee such as \$500 per facility, for any facility with more than ten sources would be more reasonable, require less paperwork, and therefore require less administrative burden on industry and the AQS. These fees do nothing to improve or maintain environmental quality, which is our primary purpose.

Staff Response

The enabling legislation limits annual permits to \$250. Thus, if the permit is for a facility, as suggested, sufficient revenues would not generate. Further, to charge all sources the same fee, i.e., \$250, is not considered equitable.

Comment #11

Instead of a fee of \$50 per source, we would propose a lump sum fee for each facility.

Staff Response

See comment 10.

Comment #12

We do like the proposed annual fee as shown in 1.4.1(d)(2). The \$50 charge per point seems reasonable, but we would like to see a \$2,500 maximum annual charge. As an example, a major source would have to pay approximately \$5,000 per year on an estimated 100 point sources as the proposed regulation is now written.

Staff Response

This is true and a 100 point source will consume more staff time than a 10 point source.

Comment #13

We are currently charging a double fee for late filing of construction permits. We prefer this to the 50% additional late filing fee.

Staff Response

While we see an advantage to late filing fee and/or penalties for late filing, review of the enabling legislation does not seem to authorize such.

Comment #14

The permit fee system for new construction now in use in Tulsa County, is more equitable than the proposed revision to section 1.4.1.

Staff Response

See comment 13.

Comment #15

1.4.1 - Source - How is this defined? Is a contiguous geographic area a "source" or is each emission point at a facility? If each stack or vent is considered a "source", then a maximum fee per "facility" must be set. The fees for asbestos permits/approvals projects should be an "annual fee per facility".

Staff Response

"Source operation" has been defined in this regulation. See section 1.4.1(e)(1).

Comment #16

1.4.1(d) - The fee schedule would not be considered a major issue if "source" is defined as a "single entire industrial complex" or "facility". If each vent or stack is a "source" then a maximum cap for the permit fees must be set. As noted above, a single "facility" could have 25 or more vents or "sources" and permit fees could run from \$4,000 to \$10,000 per year.

Staff Response

Yes. See also comment #12.

Comment #17

1.4.1 - What is a source? - Should be clarified to include the facility particularly as "source" applies to the asbestos situation. As written, a permit could be required for each valve in a facility. One permit should cover the facility.

Staff Response

See comment #4.

BEFORE THE
AIR QUALITY CONTROL COUNCIL

In the Matter of:)
)
PROPOSED REVISION OF)
REGULATION 1.4)
AIR RESOURCES MANAGE-)
MENT PERMITS REQUIRED)
_____)

DEPARTMENT OF HEALTH
3rd FLOOR CONFERENCE ROOM
Oklahoma City, Oklahoma

Tuesday, July 21, 1987

The above-entitled matter came on for
hearing, pursuant to Notice at 1:30 PM.

BEFORE: MR. DRAKE, CHAIRMAN
Air Quality Control Council
Oklahoma City, Oklahoma

REPORTED BY: Patricia R. Burns, C.E.R.

APPEARANCES:

AIR QUALITY CONTROL COUNCIL:

MR. JOHN PARRY, MR. DRAKE, CHAIRMAN, MR.
BREISCH, MR. PETTIS, MR. SKEITH, MR. PYLE, MR. QUINLAN.

SPEAKERS:	PAGE:
Mr. Dennis Doughty	3
Mr. Robert J. Cinq-Mars	11
Mr. Ray Hedrick	21
Mr. Jim Pollard	23
Ms. Rachael Pappworth	24
Mr. Clyde Jones	26

P R O C E E D I N G S

2:00 PM

1
2
3 MR. BREISCH: We'll continue our
4 hearing, now, and go on with the rule making. Again,
5 John Drake will act as our Hearing Officer. John.

6 MR. DRAKE: Okay, this is a continuation
7 of the public hearing that was commenced at the May
8 Council Meeting, in Tulsa. At that time the Air Quality
9 Council directed the staff to leave, to continue the
10 hearing to this meeting, and to continue to receive
11 public comments.

12 Therefore, this hearing was appropriately
13 advertised, before May. It was readvertised, again,
14 to this meeting. And, we won't go through the normal
15 -- set the record information. However, the -- if you
16 want to make a comment concerning Regulation 1.4, that
17 is the hearing pertaining to Permit Fees, fill out a
18 slip of paper at the back, and pass it up here, and we
19 will give you an opportunity to speak.

20 At this time I want to ask Mr. Dennis
21 Doughty to give the staff's presentation, and indicate
22 what revisions and regulations were made, as a result
23 of the May hearing. Dennis.

24 MR. DOUGHTY: Ladies and gentlemen,
25 members of the Council, and Mr. Chairman, my name is

1 Dennis Doughty, and I am the Staff Attorney for the Air
2 Quality Service. And, as Mr. Drake said, the hearing
3 on the revision to this regulation was continued from
4 the last Council meeting, to this time.

5 At the end of the last Council Meeting,
6 the Council requested the staff make a special mail-out
7 on notices to those persons who might not have recieved
8 notice.

9 The staff did this. Dr. Coleman, and some
10 others from the staff, spent a lot of time putting to-
11 gether these sources, and making special mail-outs,
12 or special notices.

13 I've attached a copy of the text of
14 this special notice, next to the regulation. Also,
15 the staff has compiled a document, whereby we took the
16 comments and the staff response, and put them altogether,
17 and this document is appended to the regulation, to
18 the proposal.

19 Also, Larry Byrum and some of his staff
20 has put together some fee information from the
21 surrounding states. This is included, as are also
22 several examples of how facilities were being -- how
23 facilities would be affected.

24 I would like to go through the regulation
25 much as I did in the briefing, and sort of paraphrase

1 the new language, so we'll know what's been added, and
2 how this would affect.

3 Under -- one page 1 of the Proposal,
4 under 1.4.1b, Sub-Section 1, basically says that you
5 can't "commence construction or operate any new source,
6 or relocate any source without obtaining a permit."

7 Sub-Section 3, says, when you transfer
8 a source the new owners are going to be subject to the
9 existing conditions, and also any compliance schedules
10 that they are subject to, at the time of transfer.

11 The new language in Sub-Section 5,
12 on the same page, indicates that the term of all permits
13 is going to be for one year.

14 Under Sub-Section 6, it says if the
15 fees are not in by March 1st, that the facility is going
16 to be in violation of the "b-1", which requires a permit
17 to operate.

18 On the next page, on 1.4.1c, Sub-Section
19 2, this says that for construction permit applications,
20 which are received after January 1st, 1988, you have
21 at least one year's grace before you have to pay a
22 renewal fee.

23 Under 1.4.1d, "Existing Sources",
24 Sub-Section 1, there, basically says, if you have a
25 grandfather facility, and you don't have a permit, you

1 are going to have to pay the same renewal that you would
2 pay, if you had a permit. We've added the "Definition"
3 section, under 1.4.1e, "Permit Fees", and it's been
4 pointed out to me that under Sub-Section 1, "Definitions",
5 that 1.4.1c is not appropriate. And, I believe that
6 the staff intended that this was 1.4.1e. In other words,
7 these definitions, were to apply to a permit fee sub-
8 section, here.

9 We've added a definition of major source,
10 And, basically, all this does is to point out that a
11 major source shall have the same definition as set forth
12 elsewhere, in this same regulation.

13 A minor source, for the purposes of
14 permit fees, means any source for which a permit is
15 required, is not a major source.

16 We've added the definition "permit
17 renewal", and this was added to make sure, to make it
18 clear that the only consequence of renewing the permit,
19 is that the fees have to be paid. That there are no
20 special reviews, that a permit will have to undergo,
21 during a permit renewal.

22 The definition, "relocate", has been
23 added, and this has been added to make it clear that
24 relocate is not meant to include some de minimis moves
25 within the facility area. That is't really meant to

1 include a genuine relocation.

2 On the next page, we've added the
3 definition, "source operation". This was added to
4 show that only permitable point sources are going to
5 be subject to the fee renewal requirement.

6 We've added another definition, "annual
7 permit renewal fee equivalent", and this explains, or
8 defines the fact that the fees which are going to be
9 assessed on grandfather facilities.

10 If you go down to Sub-Section 2, here,
11 this sub-section talks about the fees which will be
12 assessed on sources, at the time of permitting.
13 Construction permit for a major source, a new source,
14 will be \$2,000.00. And, there will be no operating
15 permit fee for a new major source.

16 A minor source construction permit,
17 will be \$750.00.00, and no fee for the operating permit.

18 I might add that the no fee for an
19 operating permit, is only at the time that the permit
20 is applied for, during the initial permitting process,
21 that after the grace period they would be required to
22 pay a renewal fee.

23 We go to Sub-Section 3, and the renewal
24 fees will be assessed at the rate of \$65.00 per source
25 operation. That's for a renewal, permit renewal fee

1 or the equivalent.

2 Sub-Section 4 says, basically, that
3 the service will present assessments the first of every
4 year, to the facility, except for the year 1988. And,
5 during this year, these assessments will be presented,
6 as close as we can make it, to the effective date, which
7 would be -- we anticipate, might be in January.

8 So, the practical matter, we don't anticipate
9 that there's going to be a lot of difference between
10 the 1988 assessment, and any subsequent assessment.

11 Under Sub-Section 5, and this should
12 say, "permits to relocate", instead of "permits to locate".
13 That's a typographical, there -- will be assessed a
14 \$50.00 fee.

15 Under Sub-Section 6, this speaks to
16 the asbestos renovation demolition projects. The fee
17 permit is defined in terms of notification. In other
18 words, a project will comprise those activities submitted
19 under one notification. If the project lasts any longer
20 than a year, then you would be assessed a \$100.00 renewal
21 fee, for that project. Any new project encompassing
22 other activities, like another renovation, another
23 part of the facility, would become a new permit, and
24 a new fee.

25 On the next page, Sub-Section 8, under

1 1.4.1e, was added to make it clear that these permit
2 fee provisions would be applicable to the State Air
3 Program, and would not pre-empt any City/County program.

4 The staff comes prepared to recommend
5 that the Council take action on this today, for
6 recommendation to the Board of Health. But, I'm sure
7 the staff will consider -- well, let me just say that,
8 certainly, the Council is free to do whatever they want
9 to, on this. And, that's all I have to say, unless
10 there are some questions.

11 MR. DRAKE: Any questions for Mr.
12 Doughty?

13 (No oral response)

14 MR. DRAKE: We have several people who
15 have indicated they would like to make a response to
16 this. Are there any more slips? Have I got them all?

17 Do you want to say something?

18 MR. SKEITH: Yeah, Mr. Chairman, and
19 gentlemen of the Council, at the appropriate time, and
20 I hope this will have some bearing on the records, the
21 comments by those who take the time to come and talk.
22 At the appropriate time, Mr. Chairman, I will make the
23 following motion, that this particular item be...

24 THE REPORTER: Excuse me. Could we
25 go off the record for a moment?

(A short break was taken.)

1 THE REPORTER: Back on the record.

2 MR. SKEITH: Do you want me to start
3 over?

4 THE REPORTER: I got the first part.

5 MR. SKEITH: The first part is, that
6 we take this item up for consideration at the September
7 meeting, in Tulsa, Oklahoma. Can you still hear?

8 THE REPORTER: Yes, sir.

9 MR. SKEITH: The second thing is that
10 we direct it be the will of the counsel to direct Mr.
11 Drake and his staff to allot as many days as they deem
12 appropriate to hear the recommendations, and suggested
13 changes, for those people who have voiced their feelings,
14 at the earlier period of the day, in the briefing, that
15 those be taken into full consideration in making your
16 final recommendation. That you send out another letter,
17 I guess, Dr. Coleman, to the folks that are on the
18 mailing list, and anyone else who wants to add their
19 name, in hopes that this time, which will extend this
20 consideration of this item, into, I believe, close to
21 six months.

22 In hopes that everyone will have their
23 say, with the idea in mind that the Council will then
24 attempt to, at the Tulsa meeting, take final action
25 on it. That's my observation, Mr. Chairman.

1 MR. BREISCH: We have some seven requests
2 here, with the knowledge that Mr. Skeith intends to
3 make such a motion, this might warrant these various
4 comments to be shortened, and not done away with. But,
5 that's up to the people who have the slips.

6 If you do want to make comments, and
7 if you hear somebody preceding you, to say something,
8 don't repeat. Let's make this as short as possible,
9 and again, if for any reason, with knowledge that Mr.
10 Skeith intends to make the motion, it might change
11 your mind in having to comment, at this time.

12 John, go ahead.

13 MR. DRAKE: Okay, Mr. Brightmyre,
14 Joe. E.

15 MR. BRIGHTMYRE: No comment.

16 MR. DRAKE: I beg your pardon?

17 MR. BRIGHTMYRE: No, we won't comment,
18 at this time.

19 MR. DRAKE: Robert J. Cinq-mars.

20 MR. CINQ-MARS: Cinq-mars.

21 MR. DRAKE: How did you pronounce that?

22 AUDIENCE SPEAK: Very carefully.

23 MR. DRAKE: Very quickly, is what I heard.

24 MR. CINQ-MARS: My name is R. J.

25 Cinq-mars, that's C-i-n-q hyphen m-a-r-s. For those

1 of you who are French scholars, that means the 5th of
2 March, in French. However, it's not the French equivalent
3 of Smith.

4 I'm an employee of City Service Gas
5 & Oil Corporation, but I'm basically appearing here
6 on behalf of the Gas Processors Association. I do wish,
7 however, to take the opportunity, perhaps, to change
8 hats in the middle of this, since I have some extemporaneous
9 comments that I've observed.

10 The Gas Processors Association is an
11 incorporated non-profit trade association, representing
12 approximately 195 members, each of which is engaged
13 in one of several activities, in the production, gathering,
14 treating, processing and transportation of natural gas.

15 Collectively, member companies process
16 over 90% of all the gas liquids produced in the United
17 States. From my review of companies and facilities
18 in Oklahoma, and also the GPA staff, we know this is
19 more than true for Oklahoma, probably 95% or greater,
20 of our companies are -- we have 95% or greater of the
21 capacity for such processing in Oklahoma, as well.

22 The GPA believes these regulations,
23 as proposed, can have a fairly major impact on it's
24 member companies, and so we appreciate the opportunity
25 to talk to you today.

1 As a procedural matter, we believe today's
2 hearing to be somewhat premature. Now, I know this
3 has been beaten to death earlier today, but we don't
4 feel that we had the 30 days notice of the meeting,
5 or, especially, of the availability of the materials
6 for the meeting. Our first understanding of it was
7 Mr. Drake's letter that, I believe, came to a member
8 of my staff, dated June 17th. And, the drafts that we
9 received were dated 6/29/87, which is considerably less
10 than 30 days.

11 We also consider this draft to be, if
12 not a first pass, at least a second pass of what is
13 an ongoing process. And, we've already stated, and I
14 think the sentiment is obvious here today, that it should
15 probably be rewritten or substantially remodified, before
16 possible adoption.

17 We would submit that this hearing should
18 only be the first of a couple of hearings on the topic,
19 or at least a couple of workshops. Mr. Skeith has
20 already recommended, and we, certainly, support that.
21 Because of the experience that members of the GPA have
22 had in dealing with other states, with regards to similar
23 kinds of permitting, and permit fee processings over
24 the last couple of years; and, it's been that long.
25 We would greatly like the opportunity to meet with you,

1 here, or in Tulsa, if you have set up a workshop there
2 of some kind, either in a workshop forum, or any other
3 forum that you deem acceptable, to give you our views,
4 specifically, as a group.

5 turning to the main comments on
6 regulations, I would like to go through them somewhat
7 systematically, 1.4.1b, the General Requirements, I
8 understand from listening to the staff that this requires
9 every source in the State to have a permit.

10 I will probably be a little heretical,
11 and say, I'm not sure you really intend to do so. We
12 don't think you have the resources to do it, and certainly
13 you odn't have the dollars, which is probably the reason
14 you are trying to raise these -- or set up these
15 proposed regulations, at any rate.

16 But, secondly, the particular provision,
17 very definitely conflicts with the next provision, in
18 which it says, permits are required when emissions
19 increase, as the commissioner determines to be
20 appropriate.

21 There is an inherent contradiction
22 between these two items here. 1.4.1(b)(4), this provision
23 allows exemptions from permit for those facilities that
24 are minor significance. There is, I believe, one
25 policy statement that exempts stationary internal

1 combustion, or turbine engine, compressor engines. And,
2 we strongly support continuing of this type of policy.
3 In fact, we recommend a great expansion of this policy,
4 to set up whole categories of exemptions, as I will
5 discuss shortly.

6 1.4.1(b)(5), as such, we don't have
7 a comment on this particular segment, but we find reading
8 through the rest of the text that it's very confusing,
9 concerning the effective date of the regulation. If
10 you propose the effective date to be January 1st, then,
11 we would suggest that you say so. I think it would
12 make things a lot clearer, and easier to handle.

13 1.4.1(b)(6), the way it's written, we
14 believe you probably mean this to say, "any source for
15 which the invoiced permit renewal fee has not been
16 received in the offices of the Air Quality Service,
17 on the first working day in March." Since you are
18 going to send out the fees, or you are going to send
19 out the assessments, if the people haven't been invoiced,
20 we assume there isn't a question of not being in com-
21 pliance if you haven't gotten such a fee. That's
22 something, really, you have to make that call, obviously.

23 1.4.1(c)(2), in our meeting the other
24 day the Gas Processors had, we were really puzzled over
25 this paragraph, for a long time. We got all said and

1 done, we think we understand it, and we liked it, but
2 we had a hard time getting to it. We understand it
3 to mean we would not end up paying a construction permit
4 fee, and an operating permit fee, in the first 12 month
5 period. That's our understanding, and I think that's
6 been substantiated here today.

7 I think it can be reworded to say that.
8 Mr. Doughty's presentation, this morning, maybe if you
9 just paraphrased what he said, in the regulation, it
10 would make it so much easier to understand.

11 1.4.1(e)(1), "Permit Fees and Definitions",
12 the definition I think we have the most trouble with,
13 and probably the majority of people in the room, is
14 "minor source". We have a real problem with this
15 definition, as I said. It seems that "minor source"
16 is virtually any emission to the atmosphere, no matter
17 how small, that can possibly occur in the State.

18 For example, at our gas processing
19 plants, we might need to install a hot water heater,
20 or a small space heater. We shouldn't even have to ask
21 you for any determination, on a situation like this.
22 We feel this is such a small item that the idea of having
23 to get a permit for something like this, really borders
24 on the ridiculous.

25 As I mentioned, earlier, we believe

1 the policy of exemption for internal combustion engine
2 is to be expanded to include a variety of exempted
3 sources. This list of sources, in some states, is
4 quite numerous. I heard previous mention today of the
5 fact that regulations of other states have been obtained
6 by some members of your staff. I refer you to the
7 exemption list of the Texas Air Control Board, which,
8 I believe, has some 90 different exemptions.

9 On the definition of "relocate", we
10 just have a question. We are not sure what de minimis
11 move means. I think that maybe you've tried to help,
12 and maybe added more problems.

13 On "source operation", we understand,
14 and we are aware the source operation is otherwisely
15 defined in your regulation, except for the last sentence,
16 as used here.

17 We definitely believe there should be
18 some de minimis exemptions from the definition of source
19 operation. We also feel a need to clarify, for our
20 industry, and the purpose of these fees, what source
21 operation is. We consider emission points, that's
22 engine exhaust stacks, heater stacks, flare stacks,
23 and so on, to be source operations. We do not believe
24 it should include such things as emergency relief vent
25 valves, or valve vents, I should say, that may never

1 emit to the atmosphere, except in the situation where
2 such a relief valve might blow, which may be never.
3 It shouldn't include small sampling points, that may
4 be as small as a quarter inch align, for sampling.
5 And, there are probably other small individual possible
6 emission points in the facility, that are either very
7 intermittent, or very small, as I said before.

8 Again, we would be happy to give our
9 ideas, specifically, in writing, as to what some of
10 these sources should or should not be.

11 On construction permit fees, unless
12 you greatly reduce the number of minor sources, we
13 strongly suggest you eliminate this concept of construction
14 fees for minor sources.

15 I can foresee a situation that may seem
16 ridiculous in the extreme, where we pay more for a permit
17 fee than we would for the equipment, itself. A big
18 hot water heater is an example.

19 Annual permit renewal fee equivalence,
20 again, I refer to my previous comments under minor
21 sources. Not all individual source operations should
22 have to pay a fee equivalent. And, again, I point out
23 what we envision as the source operations in our
24 facilities, the engine stacks, the heater stacks, and
25 flare stacks.

1 As has been mentioned here, earlier,
2 and as the Chairman indicated, we strongly suggest that
3 these regulations need additional workshop type
4 activities. And, we support that concept, and we would
5 like to participate with it -- in this with you.

6 I would like to finally close by pointing
7 out some of the problems, and trying to come up with
8 a system based on emission points, or emission quantities.

9 I heard something mentioned earlier,
10 that they've been working -- you've been working on
11 these permit fees, or you will be, for six months.

12 Texas has gone through a two year
13 process. And, we've participated in it. And, the first
14 two years, the system was based on emissions. And, the
15 system has been a source of great deal of controversy.

16 It's been a system that's probably
17 unfairly penalized certain segments of industry, or
18 at least those segments of industry that most consciously
19 try to comply with it.

20 Even though the system was based on
21 relatively simplistic emissions information, the collection
22 of such data, proved to be very time consuming, and
23 difficult. And, I believe they had a much larger staff
24 capability, than you people have.

25 Texas also found out that, to it's amazement,

1 it's emission information was very incomplete. Most
2 interestingly, Texas is now in the process of finalizing
3 a set of regulations, that will, basically, go to an
4 SIC code concept.

5 And, an SIC code concept set up in such
6 a way that some concept of through put or size of
7 facility is brought into it, as well.

8 These regulations are going to effectively
9 broaden the basis for fee collection in the State of
10 Texas, and at the same time make it more equitable,
11 and easier to administer.

12 And, the word, "equitability" is one
13 that I haven't heard too much of here today. It seems
14 to me that I have heard that we need a certain amount
15 of money raised, in the State, and that's all good and
16 well. However, it seems to me that it needs to be
17 equitably raised across all segments of industry, and
18 that is probably the advantage of going to something
19 like an SIC code concept.

20 Finally, we believe that a system based
21 on the number of source operations in the facility,
22 is an unwieldy situation. We suggest that some approach
23 to this SIC code system, or an alternative system, as
24 an example of relatively simplistic one used in the
25 State of Kansas. I'm not sure of the number, but Kansas

1 has some 20 or 30 categories for which standard fees
2 are collected. It's somewhat analogous to an SIC code
3 system. I realize the dollar amounts you need to raise
4 may be different than those raised in other states,
5 but the use of systems that are proven to be administratively
6 useful, such as an SIC code, or standardized list of
7 facilities is something that Oklahoma should, very
8 seriously, consider doing.

9 And, again, I thank you for the
10 opportunity to comment, and look forward to working
11 with you at workshops, or hearings, or whatever, further
12 on it. And, I will be happy to answer any questions
13 that I might be able to answer.

14 MR. DRAKE: Any questions?

15 (No oral response)

16 MR. DRAKE: Thank you.

17 MR. CINQ-MARS: Thank you.

18 MR. DRAKE: Ray Hedrick.

19 MR. HEDRICK: My name is Ray Hedrick.
20 I'm with Public Service Company of Oklahoma, and we
21 made many of our feelings known in the meeting this
22 morning, so I will just briefly touch on those, and
23 if you have any questions, I'll be glad to speak further.

24 Our company, in the past, has not
25 argued against fees. We realize the economic climate

1 we work in, and so any comments we made this morning
2 were not intended to be an objection to a fee system,
3 in principle.

4 However, we do have some concerns with
5 the fee system, as presented by the staff, at this time.
6 We believe that by law, as passed by the State Legis-
7 lature, that these fees are to be based on services
8 rendered by the department, for licensing and inspection
9 fees. And, we believe that the current concept does
10 not fully adhere to that.

11 We also have concerns as to the clarity
12 in the system, in that we have some questions in our
13 minds, just what source operations that we have at our
14 facilities, that would be subject to fee, particularly
15 in reference to our source operations at facilities
16 that are grandfathered under the existing regulations.

17 And, we believe that changes could be
18 made to improve that situation. We also have some more
19 technical concerns, procedural concerns, and I'll forego
20 those, at this time. But, again, PSO and its staff is
21 willing to work for the Air Quality Service, in any
22 way, through the workshop system, and through any other
23 type of meeting, and we have some ideas on some other
24 systems, we would be happy to work with the staff.

25 And, we believe, again, a more equitable system, and

1 different system is possible, and would balance the
2 functional operation of the system, with the amount
3 of money that needs to be raised by the Air Quality
4 Service.

5 MR. DRAKE: Any questions?

6 (No oral response)

7 MR. DRAKE: Wayne Workman.

8 Jim Pollard?

9 MR. POLLARD: My name is Jim Pollard,
10 and I represent Oklahoma Gas & Electric Company. I
11 concur with what Mr. Hedrick said, so I won't address
12 anything that he's already said.

13 There is one other section that has
14 not been addressed, that I would like to draw your
15 attention to. That's Section 1.4.1(d)(5). And, it
16 states, "Upon the effective date of this section all
17 operating permits, including those issued prior to the
18 effective date, shall be for the term of one year,
19 renewable on the first working day of February of
20 each calendar year. The assessment shall include the
21 year, 1988."

22 The issuance of an operating permit
23 falls under 75 Section 309 of the Administrative
24 Procedures Act. This section addresses individual
25 proceedings. The issuance of a permit is an individual

1 proceeding. Section 309 requires that before a permit
2 can be changed, prior notice and opportunity for
3 hearing must be given to the permit holder. The
4 proposed rule change, in 1.4.1(d)(5) does not fulfill
5 the requirement for individual proceedings, found in
6 Title 75.

7 This section could be rewritten, to
8 allow for the duration of operating permits to be
9 for one year, but cannot unilaterally change all
10 existing permits, which have no expiration terms
11 presently, to a one-year duration permit.

12 And, that's the only additional
13 comment that I have to make on 1.4. I do support the
14 collection of fees, and I think we can work a system
15 out, and would be happy to have my company participate
16 in that, and support it.

17 Thank you all, very much.

18 MR. DRAKE: Any questions?

19 (No oral response)

20 MR. DRAKE: S.S. Rachael Pappworth.

21 MS. PAPPWORTH: Mr. Chairman, Members
22 of the Council, ladies and gentlemen. My name is
23 Rachael Pappworth, and I'm Regional Environmental
24 Engineer for Witco Corporation.

25 THE REPORTER: Would you spell your

1 name?

2 MS. PAPPWORTH: Which one? Oh, the last
3 one? P-a-p-p-w-o-r-t-h. And, it's not French.

4 Having attended the briefing this
5 morning, I was actually impressed by the Council's
6 desire to impose an equitable fee system. I think it
7 was an impression, which, at least, I obtained, that
8 several of you said that that was one of the things
9 you were looking for.

10 Like many other potentially affected
11 companies, we were actually unaware of the proposed
12 amendments to Regulation 1.4, until late June, this
13 year.

14 This morning it became apparent, and
15 we heard again, this afternoon, that several of the
16 attendees had ideas for a potentially more equitable
17 system. And, we would, therefore, like to urge the
18 Council to agree with Mr. Skeith, to go for, or at
19 least to attempt to come up with a different system.

20 I, in particular, would like to suggest
21 that we go for a workshop environment. The advantage
22 of a workshop, over a hearing, is that the workshop
23 is a cooperative effort, towards and accepted goal.
24 As opposed to a hearing, which can become adversal,
25 as we saw this morning. And, I think from the sentiment

1 out here, while people understand that a fee is
2 inevitable, we're not fighting that. What we are trying
3 to do is come up with the best fee we can. That's
4 what I understand your staff and the Council wants
5 to do. And, I think a workshop is the most appropriate
6 place to do that.

7 And, as to other points of the workshop,
8 we would be very happy to discuss definitions of minor
9 sources, which, I think, really is an essential part.

10 I understand what you are saying about
11 if you tie it down too much, that can work against
12 us. But, on the other hand we understand you're
13 reasonable, but we don't know what's going to happen
14 in the future, and we would like to -- we need to be
15 able to go through, review our operations, and have
16 a good understanding of what the liability is. That's
17 our responsibility to our management, as well.

18 So, those are the issues we would be
19 very happy to work with you, at the work shop. Looking
20 forward to seeing you then; thank you.

21 MR. DRAKE: Any questions?

22 (No oral response)

23 MR. DRAKE: Thank you. Clyde Jones?

24 MR. JONES: My name is Clyde Jones,
25 I represent National Zinc Company, Bartlesville, Oklahoma.

1 And, I'll just touch on a couple of comments, I think
2 were not made.

3 And, those are in reference to 1.4.1(b)(5)
4 and (c)(2), the renewal dates. I think there was
5 reference to it, but I don't think it was pinpointed.
6 I think there's a conflict as to what is the renewal
7 dates. And, what's the purpose of renewal dates if for
8 the new permits that are issued after 1988, and the
9 ones already existing.

10 We have a date for February, the existing
11 ones, and a date set in January for the new permits.
12 I would like to see that clarified, myself.

13 Also, putting a little bit more perspective,
14 I think there is a misunderstanding as to whether this
15 is a permit renewal fee, a point source removal fee,
16 or source operation renewal fee.

17 We have a misunderstanding of that
18 definition. I don't think there is a definition for
19 source, point source, in your rules and regulations.
20 An example is, we have a source operation, which has
21 five point sources, its cooling towers. And, is that
22 a source operation, five of them, or is that one source
23 operation, therefore are reliable for one fee or five
24 times that amount.

25 So, I think there is definition problems.

1 My company also believes there should
2 be some type of cap, fee cap for each facility, you
3 know, whether it be \$2,000.00, or whatever, but we would
4 like to see some type of cap, in order that this thing
5 wouldn't get out of hand.

6 And, finally, the purpose of the renewal
7 fee equivalent, again, the lack of definition for minor
8 sources, are insignificant sources, we are not sure
9 if we are going to be liable for a lot more point sources
10 that is available in our facility, for a fee assessment,
11 under your definitions of 1.4.1(d)(1), the renewal
12 fee equivalent.

13 So, there is a large concern. With
14 that, I had other comments, but they have been covered.
15 That's all I have to say.

16 MR. DRAKE: Questions?

17 MR. PETTIS: Mr. Chairman, if Mr. Skeith
18 is in a position to make his motion, I'll second it.

19 MR. DRAKE: Well, is there anyone else
20 that -- that's all the slips that I had. Is there
21 anyone else who would like to make a comment?

22 (No oral response)

23 MR. DRAKE: Apparently, that's all of
24 the comments.

25 MR. BREISCH: Is there any other

1 questions from the Council? Are we ready for a motion?

2 MR. SKEITH: Mr. Chairman, I think what
3 I said awhile ago is pretty much what I meant. I would
4 like to say if I didn't include the idea that it ought
5 to be a workshop fashion, I would strongly urge that,
6 John. I don't want to straight jacket you, and your
7 staff, but what this member of the Council feels is
8 there is something to be gained by hearing from these
9 people who are going to be paying these fees, and
10 getting their input. And, if they can build a better
11 mouse trap than we come up with on staff, and in this
12 Council, then it behooves us to consider every bit of
13 their recommendation.

14 I'd hope that you could have one or
15 two workshops. Maybe one here, and one at Tulsa, and
16 get the comments by the people who are interested, and
17 see what could be done to write a revision that we
18 would, hopefully, the next time be able to pass. I
19 know we are not going to get, and I hope the people
20 in the audience understand that I'm satisfied we are
21 never going to pull this together to a place you will
22 be tickled to death to pay the additional fees, knowing
23 that you are not really getting a whole lot more for
24 it.

25 But, as we discussed, briefly, at lunch,

1 the four of us that were together, the Legislature saw
2 fit to check the deal to us. And, we can sit here as
3 a public minded bunch, that, as I indicated this morning,
4 don't get any money for this, some of us would just
5 as soon be off. But, by the same token, as long as
6 we are on here, we think that it is best for Oklahoma
7 to have an Air Quality Service.

8 And, without the appropriate amount
9 of personnel, and enough income to have the equipment
10 and the manpower to do the job, I'm satisfied that the
11 Environmental Protection Agency will make their demands
12 on us to vacate certain areas of concerns. And, I don't
13 think it would be in the best interest of the people
14 of our State, nor you who represent different corporations
15 and entities. So, I make those, Mr. Chairman, those
16 remarks, hoping to justify some of the things that we
17 said earlier, and was pointed out by the young lady
18 who testified awhile ago. The morning meeting did get
19 in a rather adversarial position. I regret that, if
20 I said anything that offended anyone, it was not my
21 intention.

22 But, we can't get into a posture, on
23 the Council, as I see it, trying to defend what the
24 Legislature did, or did not do. We've got to try to
25 do our job, the best way we can. And, that's what we

1 are going to keep trying to do. And, if you all have
2 got any persuasion with Governor Bellman, well, I'm
3 sure most of us come up for reappointment, and we
4 can hardly wait for the day he either tells us we can
5 serve some more here, or get a chance to get paroled.
6 And, that will come soon for this member of the Council,
7 after about 12 or 15 years. And, I know for Mr. Pettis,
8 his parole is already due.

9 And, so, in all candor, we are going
10 to do the best we can. I want the staff to know that
11 I expect, hopefully, that you will let these people
12 be heard, and I know you will. And, in defense of the
13 staff, I think you've done everything we've asked you
14 to, up to this point, you've come out with the best
15 setup you thought you could get.

16 But, in difference to that, I think
17 even you recognize that there are people in the audience,
18 who will be bearing a rather substantial load of this
19 burden, who feel like it is not in the best equity to
20 enact the one we've got before us.

21 Therefore, that's my position, Mr.
22 Chairman, and I apologize for the time it's taken, but
23 I think, I'd like to see these kinds of meetings end
24 on a note that people feel like any Board or Commission
25 they are appearing in front of, is going to listen to

1 their concerns. We may not be able to satisfy your
2 requests, but I don't like to serve in the capacity
3 of attempting to just run over somebody, because we
4 have the votes here to enact this if we wanted to, and
5 say, "Well, your better idea is not well accepted."

6 So, that's the place we are coming from.

7 MR. DRAKE: Bill, do I understand your
8 motion is to continue this hearing, until our next
9 meeting, and during that we've instructed the staff
10 to hold meetings with interested parties, to the extent,
11 possibly, of workshops?

12 MR. SKEITH: Well, I'd rather say that
13 it ought to have that format, hopefully.

14 MR. DRAKE: Okay.

15 MR. SKEITH: You can call it whatever
16 name you want to, but I don't want to envision John
17 and his staff setting up shop here, Mr. Chairman, or
18 over at Tulsa, in this kind of deal we've got going
19 here, where we have to not allow these people to bring
20 in -- for instance, John, to me, I would invite these
21 people to give suggested changes, in advance of the
22 first one of these meetings, by mail, so that your
23 staff and you can get into those, rather than losing
24 that two or three weeks in there, before you set the
25 first meeting.

1 That's not part of my motion, I'm not
2 trying to run this office over here. But, I just feel
3 obligated to the point that these people ought to get
4 their pick in the ground in this final decision we make.

5 MR. DRAKE: All right.

6 MR. BREISCH: I was attempting to word
7 this properly, John, and Bill, do you say that the staff
8 has the leeway of having workshop type meetings, or
9 other meetings, whereby the input will be...

10 MR. SKETIH: Yes, that's right.

11 MR. BREISCH: ..had by the interested
12 parties.

13 MR. SKEITH: Hopefully, with the
14 recommendation for a decision on this, at the 15th of
15 September meeting in Tulsa. I said, "hopefully". I'm
16 not going to box myself in by saying to these people,
17 here, that day it's in cement, and we have to, that
18 day, vote up or down on any proposal. Because I don't
19 think we have to.

20 MR. BREISCH: Okay.

21 MR. PETTIS: Second it.

22 MR. BREISCH: Okay, the motion is to
23 continue this hearing, instructing the staff to hold
24 meetings, such as workshop meetings, between now and
25 the next meeting. Hopefully, to have a recommendation

1 to us, that is concurred with by the majority of the
2 parties.

3 Okay, call the roll.

4 MR. PARRY: Mr. Quinlan?

5 MR. QUINLAN: Aye.

6 MR. PARRY: Mr. Pyle?

7 MR. PYLE: Aye.

8 MR. PARRY: Mr. Skeith?

9 MR. SKEITH: Aye.

10 MR. PARRY: Mr. Pettis?

11 MR. PETTIS: Aye.

12 MR. PARRY: Mr. Breisch?

13 MR. BREISCH: Aye.

14 John, you are still up...

15 MR. DOUGHTY: John, could I make one
16 point. Those people who made comments today, I would
17 request that they please reduce them to writing, and
18 submit us a copy of those for our records, please.

19 MR. DRAKE: Yes.

20 (Whereupon, the hearing in the above-
21 entitled matter was concluded.)

Dear Sir:

Below are the comments prepared for the Air Quality Council Hearing of July 21, 1987 on proposed Regulation 1.4.

1. Re: Paragraphs 1.4.1(b)(5) and 1.4.1(c)(2)

Comments: Clarification is needed on the term of duration for all permits.

There are two different renewal dates proposed in the regulation. One for permits issued prior to the effective date of proposed 1.4 amendments with the term ending on first working day in February and fees due on the first working day of March. The other for permits issued subsequent to construction permit applications received after January 1, 1988 with term ending on first day of January following the first anniversary of the operating permit application due date.

2. Re: Paragraphs 1.4.1(d)(1) existing sources, 1.4.1(e)(1) minor source, 1.4.1(e)(1) source operation and source operation of minor significance.

Comments: There is a general lack of definition concerning source assessment.

(1) Does the word source in major, minor, and existing sources have the same meaning as the word source in source operation or are they point sources (stack sources)?

(1.1) For an operation of cooling process solution with 5 cooling towers (only four used at a time), is there one source operation as recorded in the existing annual inventory or is it redefined to 4 or 5 point sources?

(1.2) There are no definitions for either source or point sources. Are we therefor, to assume that all use of the term source means source operation?

(2) To which sources does existing sources, minor sources and source operations of minor significances refer? No minimum emissions or process rates are defined. Are there as yet undefined minor sources, such as process radiant heater/dryers, to be included in the definition?

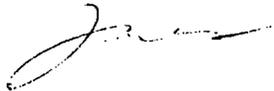

(3) The major concern is that there will be no limitations to the definition of minor sources, which are now-existing, that will be added for renewal fee equivalent assessments. Also it is unclear which minor sources will, in the future, require permitting.

3. Re: Paragraph 1.4.1(e)(3)

Comments: There are no limitations to the source inventory, and therefore a potential method for unlimited fee collections. An assessment cap should be considered to allay these concerns.

We recommend a facility (total operating plant) maximum renewal fee of \$2000 per year be included in the regulation.

Best regards,

C.W. Jones
Environmental & Safety Engineer

RE: Proposed Revision to Regulation 1.4
Permit Required

Dear Mr. Drake:

Enclosed are the comments of Public Service Company of Oklahoma on the Air Quality Service's June 29, 1987, proposed revisions to Oklahoma Air Pollution Control Regulation 1.4, "Air Resources Management, Permits Required". PSO understands the need of the OAQS to seek alternative methods of funding and is generally supportive of the permit fee concept. However, we do not believe the revisions, as proposed, are consistent with the intent of the legislature or the authority granted by the enabling legislation. Our concerns are expressed in the enclosed comments.

We are supportive of the concept of public briefings or workshops, as discussed at the July 21, 1987, Air Quality Council meeting, and would be willing to work with you, your staff, and other interested parties to develop an alternative fee program.

We appreciate the opportunity to provide comments on the proposed revisions to Regulation 1.4 and respectfully submit them for your consideration.

Sincerely,

Louis O. Hosek, Manager
Environmental & Occupational Health

COMMENTS OF PUBLIC SERVICE COMPANY OF OKLAHOMA ON THE JUNE 29, 1987
PROPOSED REVISION OF OKLAHOMA AIR POLLUTION CONTROL REGULATION NO. 1.4
AIR RESOURCE MANAGEMENT, PERMITS REQUIRED

The following comments are submitted on behalf of Public Service Company of Oklahoma (PSO) on the Oklahoma Air Quality Service's (OAQS) June 29, 1987 proposed revision of Oklahoma Air Pollution Control Regulation No. 1.4. PSO understands the desire of the OAQS to seek alternative methods of funding and is generally supportive of the permit fee concept. However, we believe the revised regulation, as proposed, is inconsistent with the intent of the legislature and the authority granted by the enabling legislation. We also believe that the OAQS and the Air Quality Council have failed to fully adhere to the provisions of the Oklahoma Administrative Procedures Act.

ABSENCE OF STATUTORY AUTHORITY

The enabling legislation only provides authorization to assess fees to recover the costs of administering a permit program, not to generate monies for support of the general programs of the OAQS. The enabling legislation allowing the OAQS to establish a fee system is found in 63 O.S. Sec. 1-106.1, as recently amended by House Bill No. 1135. Section 1-106.1(C) provides that "(t)he board shall base its schedule of licensing or permitting fees upon the reasonable costs of review and inspection services rendered in connection with each license and permit program. . . ." (emphasis added). The legislature very clearly intended that the revenue produced by permit fees be tied to the cost incurred for review and inspection services actually rendered. Under the present proposal, there is no service being rendered in conjunction with a permit or license renewal. Section 1.4.1(e) (1) of the proposed regulation de-

finer permit renewal as simply a collection of the fee. Thus, the OAQS has overstepped its authority in proposing to assess permit fees in excess of the reasonable costs of review and inspection services.

Quite simply, the OAQS is unauthorized in assessing permit fees in excess of the reasonable costs of review and inspection services rendered in connection with each license and permit program.

FAILURE TO COMPLY WITH ADMINISTRATIVE PROCEDURE ACT

It is also our position that the enactment of the proposed revisions requires an individual hearing. The Administrative Procedures Act, 75 O.S. Sec. 301 et seq., defines "rule" as "any agency statement of general applicability and future effect that implements, interprets or prescribes substantive law or policy, or prescribes the procedure or practice requirements of the agency. The term includes the amendment or repeal of a prior rule but does not include (A) the issuance, renewal or denial of licenses; * * * ." 75 O.S. Sec. 301 (2) (emphasis added). "License" is defined to include "the whole or part of any agency permit, certificate, approval, registration, charter, or similar form of permission required by law;" while "licensing" is defined to include "the agency process respecting the grant, denial, renewal, revocation, suspension, annulment, withdrawal, or amendment of a license." 75 O.S. Sec. 301 (3) and (4) (emphasis added). Because the proposed change in Regulation 1.4 would include the amendment of licenses and permits by the State Health Department, the action proposed by the OAQS would fall under exception (A) of the definition of "rule", and therefore would be an order requiring an individual proceeding.

Moreover, individual permits will be affected by the OAQS proposal. The authority to collect the fees as proposed in Regulation 1.4 is found at 63 O.S. Sec. 1-106.1. Paragraph C of Sec. 1-106.1 provides that licensing and permitting fees are to be based upon the reasonable cost of review and inspection services rendered by the agency. Because the fee is to reflect the reasonable

cost of review and inspection services, an evidentiary hearing is necessary to determine what the costs of these review and inspection services will be. An evidentiary hearing requires an individual proceeding on the record.

In addition, the issuance of a permit is an individual proceeding. Individual proceedings are addressed in 75 O.S. Sec. 309. Pursuant to this section, proper notice and opportunity for hearing must be given. The Council did not follow the requirements of 75 O.S. Sec. 309 with respect to the proposed rule change in Regulation 1.4. In particular, it should be noted that the proposed regulation was not drafted until June 29, 1987, less than 30 days before the hearing. All substantive changes to be considered and ruled upon by a meeting of the Council should be available at least 30 days before the meeting.

We believe that it is possible to develop an alternative fee system that will comply with the law and also fulfill the needs of the OAQS and industry. The public briefings/workshop currently being arranged by the OAQS should provide a suitable forum for development of an improved fee system. We have additional comments and ideas that we would be glad to share during those sessions.

EXHIBITS 14

I. INTRODUCTION

Public Service Company of Oklahoma (PSO) is a public utility engaged in production, purchase, transmission, distribution, and sale of electricity in eastern and southwestern Oklahoma. PSO is a wholly-owned operating subsidiary of Central and South West Corporation. Central and South West Corporation, a public utility holding company, owns all of the common stock of four operating subsidiaries: Central Power and Light Company, West Texas Utility Company, Southwestern Electric Power Company, and Public Service Company of Oklahoma. These companies provide electric service to a population of approximately 3.5 million people in a widely-diversified area covering 152,000 square miles in Oklahoma, Arkansas, Louisiana, and Texas.

PSO currently operates five principle generating stations designated as Northeastern Station (Oologah, OK), Riverside Station (Jenks, OK), Weleetka Station (Weleetka, OK), Southwestern Station (Washita, OK) and Comanche Station (Lawton, OK) with a currently inactive powerplant (Tulsa Power Station) located in Tulsa. Of these facilities, portions of Weleetka Station and Northeastern Station were constructed subsequent to the initial adoption of permitting regulations and currently operate under life-of-the-facility permits granted by the Oklahoma State Department of Health's Air Quality Service.

We, at PSO, recognize our responsibility as an Oklahoma Corporation, and more importantly as a group of individual Oklahoma citizens, to maintain and preserve the atmospheric purity for the protection and enjoyment of

not only this, but future generations. We are prepared to support the Board's efforts whether they are funded by Legislative appropriations derived from the taxes we pay or they are supported, in part, by reasonable direct assessment of operating permit fees. Our comments are, however, the result of our concern over the method to be imposed by the proposal under review; we believe that the permit scheme before the Board fails to meet either the letter or the intent of the law and exceeds the statutory authority granted by the legislature. Adoption of a void, unenforceable regulation in reality helps no one and, in fact, impedes our shared objective of meeting the intent and purpose of the Legislature reflected in the Oklahoma Clean Air Act.

We would urge that the present proposal be returned to the Air Quality Council with directions to make those modifications necessary to assure that the Board is not put in the position of exceeding its statutory authority in adopting any such proposal.

II. ADOPTION WOULD EXCEED THE SCOPE OF THE BOARD'S STATUTORY AUTHORITY

Administrative agencies may only exercise powers granted by the legislative in the statutes.(1) Our review of the statutes addressing the powers and duties of the Board revealed that the Legislature did not authorize the agency to "institute a system of permit fees simply to recoup those funds lost in previous years" on an annual basis in order to "provide a source of funds in the future."

A. The Proposed Fee System Fails to Satisfy Statutory Requirements

Section 1-104.(b)(2) of Title 63 empowers the Board to adopt rules and regulations to carry out the provisions of the Public Health Code. With respect to the provisions of the Oklahoma Clean Air Act, the Board may adopt or amend its rules only upon public hearings and the written recommendation of the Air Quality Council. Okla. Stat. Tit. 63 sections 1-802.(D)and (F). While this authorization includes the ability to adopt, amend or repeal rules and regulations which address permit fees, the Legislature has imposed a number of limitations on these powers.

Among the statutory limitations imposed upon the Board's delegated powers is one that restricts permits issued subsequent to May 1, 1984, the effective date of Okla. Stat. Tit. 63 section 1-106.1.F., to an effective term of one year. Thus, for permits issued after May 1984 an annual renewal may, in fact, be required to authorize continued operation. With respect to the authority to establish fees for renewal of these annual permits, the Legislature chose to

restrict the amount charged to that of reasonable cost of services actually rendered in connection with the (i) review, (ii) inspection and (iii) training of those personnel actually involved in either the review or inspection necessary to review applications for renewal of annual permits. Okla. Stat. Tit. 63 section 1-106.1.C. Moreover, the Legislature found it necessary to further restrict the amount of fees assessed for annual review and inspection associated with permit renewal, notwithstanding the reasonable cost associated with the annual renewal process. Both a maximum and minimum limit is imposed on annual permit renewal fees. Okla. Stat. Tit. 63 section 1-106.1.A.2.

NOT
me

The Air Quality Service (AQS) has chosen to ignore those statutory restrictions tying the schedule of fees for the annual permit renewal program to the reasonable cost for services actually rendered during the process of permit renewal. The AQS has simply dismissed public comments highlighting the need to base its schedule of permit renewal fees only upon the reasonable costs of services actually rendered during the year in connection with the annual permit renewal program. From its inception the basis of the AQS fee schedule has instead relied solely on recovery of "eroding State appropriations" rather than the reasonable cost of services actually rendered annually in the (i) review, (ii) inspection and (iii) training of that portion of its staff dedicated to renewing annual permits. See Exhibit "A". In the first of two "workshops" held to develop a fee system, the AQS continued to maintain that the proper basis was one

which would recapture all previously lost legislative appropriation. See Exhibit "B". In its open letter of August 21, 1987, the fees were publicly acknowledged by AQS as being designed solely to make up for \$100,000 in "erosion" plus the total reduction in legislative appropriations to the AQS. See Exhibit "C". There has been no retreat from this approach even after the proposal was presented to the Air Quality Council for review. Even before this Board, the AQS does not contend that the fee system is designed to recover that portion of the reasonable cost of review, inspection and training of permit renewal staff which is equal to or less than the statutory ceiling of Section 1-106.1. The only acknowledged basis is to "recoup those funds lost in previous years and (thus) provide a source of funds in the future." See Exhibit "D".

if so, can justify new charge

At no time during public meetings was the actual cost of services rendered presented on other than a total departmental budget; no breakdown delineated the actual expenditures for permit renewal application review, no breakdown was presented for expenditures of permitted facilities, no breakdown was presented for either the permitting or the enforcement sections of the staff. This may be due in part to the fact that the regulation itself defines "permit renewal" as "the process whereby operating permits are extended for another one year term" and stating that "(i)n no case shall the term "permit renewal" be construed to allow the imposition of additional permit requirements not otherwise required or authorized by law or regulation." Under the proposal, the review and inspec-

to be done to assure industry con. to the Renewal Arbitrarily imposed to new Emission Requirements.

tion services for renewal amount to no more than preparing and mailing fee assessments and the deposit of the fee received. See also Section 1.4.1 (C)(5) of the proposed revision. At one point the AQS contended informally that all its activity was directly related to the permit system but this argument is overshadowed by the department's mandate under the Oklahoma Clean Air Act., Okla. Stat. Tit. 63 section 1-1802 (1985).

The concerns expressed thus far have been directed to that part of the proposal addressing the permit system for renewal of annual permits. The independent permitting system for issuing construction and initial operating permits for new facilities appears to represent a much more blatant attempt to circumvent the statutory restrictions placed on that permit program. These programs are currently being funded by federal grants, as well as legislative appropriations. As a result, we simply cannot envision the purpose of the AQS's statement in the "Cost/Benefit Analysis" which states:

"Failure to secure these funds in this manner will require either a supplemental appropriation or the (Air Quality) Service will close out."

Emphasis supplied. In the current economic climate, we all are forced to become more efficient in our use of limited financial resources.

III. INDIVIDUAL PROCEEDINGS ARE REQUIRED TO AMEND EXISTING PERMITS

Our review of the proposed amendment to Regulation 1.4 has revealed certain fatal flaws in its basic design. The following sections detail our concerns which were submitted to the Air Quality Service early in the development of the proposal but to this date remain unaddressed.

A. EXPRESS LEGISLATIVE AUTHORITY FOR RETROACTIVE APPLICATION OF ANNUAL APPLICATION OF ANNUAL PERMITS IS LACKING

The Board undoubtedly has the power under the Public Health Code to adopt rules and regulations to carry out the provisions of the Code. Okla. Stat. Tit. 63 section 1-104(b)(2). Under this power the Board has adopted numerous regulations which require permits for certain activities under its oversight. However, in 1984 the Legislature restricted the Board's authority with respect to the issuance of permits and licences when it mandated that permits issued by the Commissioner be limited to no longer than one year terms. Okla. Stat. Tit. 63 section 1-106.1.F. Prior to the May 1, 1984 effective date of this enactment, the Commissioner of Health had, under authority granted by the Board, issued permits to operate under the Oklahoma Clean Air Act for the-life-of-the-facility; no expiration date or provision for renewal was included. Adoption of this proposed amendment to OAPC Regulation 1.4 attempts to make this a retroactive application of the May 1984 enactment to prior vested rights by declaring "(a)ll operating permits...shall be for the term of one year, renewable annually as provided herein." See Section 1.4.1(a)(1) of the proposed revision.

→
March
second
as failed
to verify
his report
issue.

→
see
106.1(2)(F)

Generally, statutes are presumed to operate prospectively. A clear expression of legislative purpose is required to justify a retroactive application, and in the case of doubt, the doubt must be resolved against a retroactive effect.(2), (3), (4), (5). Without express legislation, a statute may not be applied retroactively if it alters the rights and duties under an existing contract, especially if the enactment would affect vested rights or the legal character of past transactions would be prejudiced.(6) A "vested right" is the power to do certain actions or possess certain things lawfully and is substantially a property right. "Vested Rights" can be created either by common law or by statute and once created become absolute; vested rights are constitutionally protected from legislative invasion.(7)

The principle has obvious application to the amendment under consideration and its effect upon operating permits issued prior to May 1984. Any retroactive application of the amendment would certainly change the value of the owner/operator's interest. The life-of-the-facility permit holder has legitimately relied on the provisions of his permit, making, as the case with Public Service Company of Oklahoma, major investments in the construction, operation and maintenance of air pollution control equipment.

Simply stated, life-of-the-facility operating permits issued prior to the enactment of Okla. Stat. Tit. 63 section 1-106.1.F. repre-

sent vested rights which may not be overturned by subsequent action of the Board through amendment of OAPC Regulation 1.4. ←

B. ADMINISTRATIVE PROCEDURES ACT REQUIRES INDIVIDUAL PROCEEDINGS TO AMEND EXISTING PERMITS

The Oklahoma Legislature extensively revised and strengthened the Administrative Procedures Act (APA) in House Bill 1493. This Act was signed by the Governor June 30, 1987, and became effective September 1, 1987. Among the amendments made were those related to certain administrative procedures for promulgation of rules and regulations. The present proposal to amend OAPC Regulation 1.4 fails to comply with the mandates of the APA.

The Administrative Procedures Act must be followed by the Board of Health and the Air Quality Council in adopting any rule or regulation pursuant to 63 O.S. Section 1-106-1. Section 1-106.1 specifically states that "(t)he Board must follow the procedures required by Section 305 through 325 of title 75 of the Oklahoma Statutes for adoption of rules and regulations in establishing or amending any such schedule of fees...." 63 O.S. Section 1-106-1 (A) (1). Moreover, 63 O.S. section 1-106. (b) (3) states that "(a)ll rules and regulations adopted by the State Board of Health are subject to the terms and conditions of the Administrative Procedures Act." The APA itself provides, with limited exception, that "all agencies shall comply with the provision of Article I and Article II of the Administrative Procedures Act." 75 O.S. section 250.1.B. The Board is

not among those agencies excused from compliance with the APA. 75 O.S. section 250.4. Thus, in adopting the proposed changes, the Board must comply with the APA.

The Administrative Procedures Act itself defines "rule" as

any agency statement of general applicability and future effect that implements, interprets or prescribes law or policy or describes the procedure or practice requirements of the agency. The term includes the amendment or repeal of a prior rule but does not include: a. the issuance, renewal or denial of an individual, specific license.

75 O.S. section 250.3.1. (emphasis supplied). The license referred to, is also defined by the APA to include "the whole or part of any agency permit, certificate, approval, registration, charter, or similar form of permission required by law;" while "licensing" is defined to include "the agency process respecting the grant, denial, renewal, revocation, suspension, annulment, withdrawal, or amendment of license." 75 O.S. Section 250.3.3 and 250.3.4.

Because the proposed change to Regulation 1.4 would amend the term of each of our individual and specific permits from life-of-the-facility to that of one year, action by the Board would fall under exception of 75 O.S. 250.3.2. and would constitute an order requiring an individual proceeding in order to amend each of our

existing separate individual permits. No opportunity for individual proceedings have been undertaken by the AQS.

Simply misconstrues the law.
This is a rule change

position is absurd - is equivalent to requiring a hearing for each and every permit holder - in fact hundreds or perhaps thousands of individual proceedings. It is our position that the same thing can be accomplished and DUE PROCESS given through a rulemaking hearing & proceeding.

IV. SUMMARY AND CONCLUSIONS

While not opposed to establishment of a system of direct fee assessment as a supplement to legislative appropriations, we are concerned over the method to be imposed by the current proposal. We believe that the permit scheme before the Board, fails to meet either the letter or the intent of the law and unnecessarily places the Board in a position of exceeding its statutory authority. Adoption of a void, unenforceable regulation in reality helps no one and, in fact, only impedes our shared objective of meeting the intent and purpose of the Legislature reflected in the Oklahoma Clean Air Act.

We would urge that the present proposal be returned to the Air Quality Council with directions to make those modifications necessary to assure that the Board is not put in the position of exceeding its statutory authority in adopting any such proposal.

Re: Revision of Regulation 1.4 Concerning Permit Fees.

Dear John:

Witco understands the need for the Oklahoma Air Quality Service (AQS) to raise funds by charging annual fees, and supports the AQS in its attempt to develop an equitable fee schedule.

Witco representatives participated in the July 21, 1987 hearing and both workshops on the fee schedules. The company supports the AQS choice of a "Kansas" style approach to annual fees. However, Witco wishes to express its opposition to including carbon black plants in Class Number 10.

The Industrial Classification Classes are supposed to represent groups of industries whose size and emissions are similar. AQS is proposing including carbon black in the same category as coal fired electric power plants and petroleum refineries. This is inappropriate due to the benign nature and smaller volume of emissions from carbon black plants. Texas, which employs a similar classification system, charges carbon black plants less than 50% of the annual fee for petroleum refineries.

A concern was expressed by AQS staff, at the second workshop, that the carbon monoxide emissions from carbon black plants are a precursor to benzene. Witco wishes to go on record as categorically denying that carbon monoxide emissions lead to the formation of benzene.

Witco supports the AQS in its endeavors to develop an equitable fee system and respectfully requests that carbon black plants be placed in a lower Industrial Classification Class.

AIR QUALITY
SERVICE

Dear Mr. Drake:

We have reviewed the proposed changes to Regulations 1.1, 1.2 and 1.4 and have several comments that we feel will both clarify and improve these regulations.

Regulation 1.1:

- 1) The proposed location of the definition of Particulate Matter - 10 micrometers (PM-10) is inappropriate. It would be more appropriate to list the definition of Particulate Matter - 10 micrometers (PM-10) in alphabetical order as #99 following the definition of Particle Board than to place it at the end of the list as #151.
- 2) Adopt the current EPA definition for PM-10 instead of creating a new definition. It is:

PM-10 - Particles with an aerodynamic diameter less than or equal to a nominal 10 micrometers.

One definition would be much simpler in all respects.

Regulation 1.2:

- 1) The footnote for the annual standard states that it is an "Annual Arithmetic Mean", but in fact it is much more than that. We suggest that the footnote be changed to the following:

The standard is attained when the expected annual arithmetic mean concentration, as determined in accordance with Appendix K for Part 50 of Chapter I, Title 40 of the Code of Federal Regulations, is less than or equal to 50 $\mu\text{g}/\text{m}^3$.

2067

Regulation 1.4:

1) Section 1.4.1(b)(3)(A) states:

(3) Upon the effective date of this subsection, no permit shall be required for any new or modified source when it can be shown to the satisfaction of the Commissioner that:

(A) Total emissions will not exceed one pound (1 lb.) per hour for any one criteria pollutant, and

We are not sure of the definition of "Total emissions". We suggest the following wording:

(A) Emissions for any one criteria pollutant will not exceed one pound (1 lb) per hour.

2) Section 1.4.1(c)(1)(A) states:

(A) Major Source - means any new or modified stationary source which directly emits or has the capability at maximum design capacity, and if appropriately permitted, authority to emit 100 tons per year of a given pollutant.

This would indicate that one must emit 100 tons exactly in order to be classified a major source. We propose the following wording:

(A) Major Source - means any new or modified stationary source which directly emits or has the capability at maximum design capacity, and if appropriately permitted, authority to emit 100 tons per year or more of a given pollutant.

3) Section 1.4.1(c)(3)(A) states:

(A) Upon request, the Commissioner will make a determination of whether or not a permit is required. Upon the determination that a permit is not required, the original permit application fee will be returned upon submission of a \$100 determination fee.

This section assesses a \$100 fee for the determination if a permit is needed or not. As written now the applicant must submit an application plus the appropriate construction permit fee. If no permit is required the applicant must then submit a \$100 determination fee in order to get his application fee returned. When this idea was originally suggested it was the intent to get away from having to submit a full blown application along with the appropriate fee just to see if a permit was needed. It

would be much easier and simpler if a minimum amount of information was submitted along with the \$100 determination fee in the first place. We suggest the following wording:

OK.
USE ALL!

(A) Upon submittal of a written request, a \$100 determination fee and any relevant information needed to make a permit determination, the Air Quality Service will make a determination whether or not a permit is required. If a determination is made that a permit is required the \$100.00 fee will be credited against the construction and operation permit fees. If it is determined that a permit is not required the \$100.00 fee will be retained by the AQS to cover the cost of making the determination.

OK

4) Section 1.4.1(c)(5) states:

(5) Fees will be paid by check or money order (no cash will be accepted) made payable to the reviewing agency, e.g., Oklahoma State Department of Health, Air Quality Service. Fees shall be due in the offices of the Air Quality Service on the first working day of February. A ten (10) calendar-day grace period will be given before any enforcement action will be taken. Upon the expiration of the ten day grace period, notices of violation (NOV) will be issued and civil penalties, in addition to other remedies, may be sought as authorized under 63 O.S. 1986 Supp. Section 1-1701.1A.

The date that the fees are due in the offices of the AQS should be tied to the actual date of mailing rather than the fixed date of the first working day of February. As presently worded the AQS will mail on or before the first working day of each year. This is good in theory but not always attainable. Tying the due date to the mailing date would assure adequate time for payment. We suggest the following wording:

THIS IS OK
~~the first working day of February~~
~~30 days from the date of postmark~~
OK

(5) Fees will be paid by check or money order (no cash will be accepted) made payable to the reviewing agency, e.g., Oklahoma State Department of Health, Air Quality Service. Fees shall be due in the offices of the Air Quality Service ~~on the first working day of February~~ 30 days from the date of postmark. A ten (10) calendar-day grace period will be given before any enforcement action will be taken. Upon the expiration of the ten day grace period, notices of violation (NOV) will be issued and civil penalties, in addition to other remedies, may be sought as authorized under 63 O.S. 1986 Supp. Section 1-1701.1A.

But user need to change ~~the first working day of February~~ 1.4.1(c)(4)(ii)
No need to ~~change~~

- 5) There should be some appeals process allowed for in the fee assessment in case of any mistakes or discrepancies. We suggest the following wording:

1.4.1(c)(7)

Any person aggrieved by such fee assessment shall be entitled to a hearing on the reasonableness of the fee assessment.

ALSO →
CATEGORIES
ARE HERE
BEING SET BY
RULE.

To challenge
any enforcement
action is
class. 1.

- 6) The term "source" is used in 1.4.1(c)(4) Permit Renewal and Renewal Equivalents. We believe, as concluded in the workshops, that the fees are intended to be assessed per facility as is the Kansas system. We suggest replacing the term "source" with the term "facility" where it is used in this section.

7) Section 1.4.1(c)(6)(D)

We believe this section is incorrectly placed in the regulations. Currently it is at the very end of the regulation. We believe it would be more properly placed after Section 1.4.1(c)(4)(A). Section 1.4.1(c)(4) would then read as follows:

(A) Applicability

(i) The Air Quality Service shall annually assess and collect a permit renewal fee or permit renewal fee equivalent from all sources in the State according to their classification as set forth in Table I. Assessments for existing sources grandfathered from permit requirements (i.e., permit renewal fee equivalents) shall be made in the same manner and on the same basis as a new source of the same type (permit renewal fees).

(B) Source Classification

(i) Any new source for which an appropriate source classification does not exist shall be assigned a classification and class number in Table I as a permit condition.

(ii) Any existing source ~~for which a permit is not required,~~ and for which an appropriate source classification does not exist shall be assigned a source classification and class number in the same manner as (D)(i) except that:

(a) Such assignment shall be made in writing, setting forth the reasons why the source has been assigned to any particular category, and

(b) Any person aggrieved by such assignment shall be entitled to a hearing on the reasonableness of the assignment.

EXCEPT →

(C) De Minimis

(i) A permit renewal fee or renewal fee equivalent shall not be required, regardless of the requirement to have a permit, provided that total emissions from the source do not exceed ten (10) tons per year for any one criteria pollutant.

(D) Assessments

(i) Fees established under this section shall be assessed and paid on the basis of source classification as identified in Table I. The annual fee collected for a source in any class shall be determined by multiplying the class number for the source, as determined by Table I, by fifty (\$50) dollars. In no case shall more than one fee per source be assessed unless such source shall constitute two or more facilities as defined herein.

(ii) On or before the first working day of each year, the Air Quality Service will mail fee assessments to all sources subject to this regulation. Such assessments shall be made pursuant to data contained in the emissions inventory and shall set forth:

(a) The source classification

(b) The class number assigned to the source, and

(c) The amount of the fee that is to be remitted to the Service.

(iii) For the calendar year 1988, fee assessments will be mailed on or about the effective date of this regulation and shall be due in the offices of the Air Quality Service 30 days from the date of receipt of the assessment.

- 8) As stated in John Drake's letter of August 21, 1987, these fees are being implemented as a result of "erosion" and reduced appropriations. The magnitude of the fees in the proposed regulation are based on, in part, the budgetary deficit faced by the AQS for FY-88 as compared to FY-87. Since these fees are tied to appropriations then the magnitude of the fees should decrease with increased appropriations. It was stated by Mr. Drake in the first workshop of August 5, 1987 that public hearings would be held to reduce the fees in the event that the appropriations increase to previous levels. Therefore we recommend that the multiplication factor in Section 1.4.1(c)(4)(C)(i) (currently

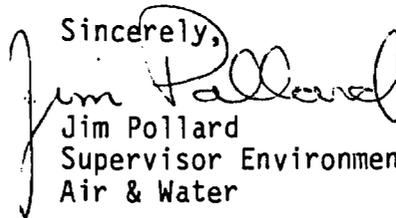

CANNOT ACCEPT THIS.

proposed at \$50) come under review each year and adjusted based on the appropriated amount by the legislature as compared to FY-87. We suggest the following wording in that regard:

Section 1.4.1(c)(8) After the Air Quality Service has determined its appropriation for the coming fiscal year, Section 1.4.1(c)(4)(C)(i) shall be reviewed and the multiplication factor adjusted as necessary to reflect the ~~increase~~ or ~~decrease~~ in appropriations.

We would be happy to discuss the above comments with you at your convenience.

Sincerely,

Jim Pollard

Date: September 22, 1987
From: Anna Clapper, 12104 Camelot Place, Oklahoma City, OK
Re: Public Hearing, Regulation 1.4 Permits (Draft 8-20-87)

Mr. Chairman, Members of the Air Quality Council, Ladies and Gentlemen:

My name is Anna Clapper. I live at 12104 Camelot Place, Oklahoma City, Oklahoma. I am a member of the board of directors of the American Lung Assn. of Oklahoma and have been a member of the Oklahoma Coalition for Clean Air for 18 years, having attended meetings of the Council during this period as a concerned citizen.

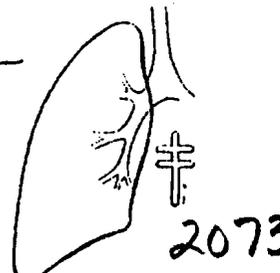

On page 2, paragraph (3) which states that "... no permit shall be required..." there is concern that there needs to be a record regardless of emission amount, just in case an exceedence might occur.

I need clarification in this regard: since a source having one pound per hour of one criteria pollutant comes under this ruling, this means a total of 8,760 lbs. per year, or 4.38 tons emission does not need a permit, as I understand the regulation. Is this correct?

Also on page 4, (B) De Minimis (1) it is my understanding that if "total emissions from the source do not exceed ten (10) tons per year for any one critical pollutant", a permit renewal fee is not required. Since no permit is required for 4.38 tons per year, then it follows that a "minor source" falls between 4.38 T/Yr and 100 T/yr. Is then the 10 ton per year a "shady" area, or is there a specific reason for selecting this unit? Do sources between 4.38 tons per year and 10 tons per year therefore require no permit fee? Kindly clarify.

Thank you for this opportunity to present my concern on this regulation.

Anna Clapper

2
3
4 HEARING OFFICER DRAKE: Okay, we
5 have another hearing. This is the continuation of
6 the hearing initiated at the May Council Meeting,
7 continued the July Council Meeting, and again,
8 continued to this council Meeting.

9 I would reiterate that this hearing
10 is convened by the Air Quality Council, in compliance
11 with 75 OS 301 through 325, and under the Federal
12 requirements of Title 40, Code Federal Regulations,
13 Section 51.

14 I would add that this rule making
15 was advertised in the August 1st, Oklahoma Register,
16 the purpose of the hearing is to receive comments
17 concerning proposed changes to the Air Pollution
18 Control Regulation 1.4, Air Resource Management,
19 permits required. The proposed change is to establish
20 a new fee structure, or new source permits in
21 establishing annual permit/equivalent fee program.

22 Any person making an oral statement
23 today, we would appreciate it if you would supply us
24 with the original and one copy of the record -- for
25 the record.

1 While it is the past practice of the
2 Council to leave the record opened for ten days, after
3 a hearing, the Staff would request that the Council;
4 if it does not feel in excess, discomfort, should make
5 the decision on this item, at this hearing.

6 I would advise you that this regulation
7 cannot be presented to the Board of Health, until the
8 Legislature returns to session. However, the
9 Department desires to nail down the changes, wherein,
10 and proceed with accomplishing the administrative
11 action to put the program into place, as soon as the
12 requirements of the Oklahoma Administrative Procedures
13 Act is complied with.

14 As the Protocol Officer, I will call
15 upon persons who have indicated a desire to speak for
16 this regulation, by filling out a form in the rear
17 of the room. At this time I will call on Mr. Dennis
18 Doughty to give the Staff's position on each
19 proposed change.

20 MR. DOUGHTY: Okay, thank you.

21 Mr. Chairman, members of the Council,
22 ladies and gentlemen, my name is Dennis Doughty. And,
23 I will present the Staff's position, on this proposed
24 change.

25 As you're aware, this is a proposal

1 to change Regulation 1.4, to raise permit fees, and
2 yearly renewal fees. This particular issue was brought
3 before the Council, back in March. At that time there
4 had been certain budget cuts, and spectre of raising
5 more money, came before the Council..

6 A public hearing was set for May,
7 a proposal was presented by the Staff, at that time.
8 And, I might say that industry participated very
9 vigorously. And, so the hearing was continued until
10 July.

11 The Council also directed the staff,
12 at that time, to send out a supplemental mailing
13 to make sure that some of the smaller operations had
14 notice of this hearing. The Staff did this, and sent
15 out some 200 supplemental mailings.

16 The continued hearing in July was
17 also vigorously attended, and opposed by industry.
18 At that time it was proposed that a series of workshops
19 be held in order to reach some sort of agreeable
20 approach for this particular regulation. And, there
21 were two work shops held, one on August 5th, and one
22 on August 12th.

23 The Staff has incorporated as many
24 of the suggestions and proposals that came from these
25 workshops, into the draft, that we have presented here

1 today.

2 The approach we have taken is the
3 approach that was presented by the Gas Processing
4 Industry. And, it is basically, the Kansas approach
5 for implementing a fee, and permit renewal fee system.

6 Now, there are copies of this proposal
7 available, and they were also presented to the Council
8 packet, -- in the Council packet.

9 I would also like to say that we have
10 received some written comments from OG&E, and the staff
11 is going to recommend adoption of these changes, some
12 of these changes, as proposed by OG&E.

13 And, with the Council's indulgence,
14 I will go through some of these proposals, and for
15 the record, the letter is from OG&E, dated September
16 18th, 1987, to Mr. John Drake. And, our Reporter has
17 a copy of that.

18 So, if you will turn to the second
19 page. The first comment basically says Section 1.4.1
20 (b)(3)(A), they would like to have the word "total"
21 removed. And, the Staff finds no problem with removing
22 it. This change will not substantially affect the
23 implementation of this regulation.

24 Their comment No. 2, in the
25 definition of "Major Source", they wanted to add the

1 words, "or more" after "authority to emit 100 tons per
2 year", which would somewhat make the definition a
3 little bit more clear. And, we would suggest that the
4 Council adopt this, also.

5 The third proposal, is a complete
6 rewriting of the portion which would enable the
7 Staff to collect a \$100.00 fee, for determining the
8 applicability of a permit, or whether or not a permit
9 was required.

10 And, the Staff would recommend that
11 the language, as proposed here by OG&E be adopted.
12 It's a minor change, and we find that this language
13 is probably better.

14 Their fourth suggestion changes the
15 language under 1.4.1(c)(5), which would make, the
16 Staff proposal would make the fees due on the first
17 working day of February. This language has been
18 stricken, and they have inserted "30 days from the
19 date of postmark, and that postmark being the assessment.
20 And, we found this to be a minor change, and a little
21 bit easier to calculation, so we would also recommend
22 that this particular change be accepted by the Council.

23 On page 4 of 6, their comment No. 5,
24 Section 1.4.1(c)(7), they are asking that we insert
25 a sentence here, which we believe would allow a hearing

1 on the reasonableness of the fee assessments. And,
2 we would have to oppose this particular addition, of
3 this particular language, because the hearings are
4 guaranteed by the Administrative Procedures Act, and
5 we feel that the categories as set by the public hearing,
6 would be enough to implement this.

7 Under their 6th proposal, they are
8 asking, where the term "source" is used in 1.4.1(c)(4)
9 that the word "source" be replaced with the term,
10 "facility". And, we find that this is certainly in
11 keeping with the intent of what the regulation is meant
12 to do, and it would have no substantial change. And,
13 if it makes it clearer for industry, then we support
14 this change, also.

15 Their 7th suggestion concerns Section
16 1.4.1(c)(6)(D), and what they're saying here is that
17 a little rearrangement of the regulation, might make
18 it a little easier to read, and a little neater. And,
19 we certainly would agree with that, and have no
20 objection, and would recommend that the Council
21 accept it, in that manner. Except that under
22 Subsection "B" "Source Classification", Subsection "II"
23 we would recommend the words, "for which a permit is
24 not required", be stricken from this sentence, in order
25 to make it clear that the source classification will

1 be applied whether or not it is a permitted source,
2 or unpermitted source.

3 And, the very last recommendation
4 talks about connecting, administratively adjusting
5 fees as the appropriations change for the service.
6 And, we find that this would be a real administrative
7 burden, and we cannot recommend that the Council
8 adopt this particular addition to the regulation, as
9 proposed.

10 So, if there are any questions that
11 I can answer.

12 HEARING OFFICER DRAKE: Yes, sir,
13 can you identify yourself?

14 MR. JONES: My name is Clyde Jones.

15 Concerning the ^{NEW} LV statement in May,
16 was that to be included, also, that we discussed this
17 morning?

18 MR. DENNIS DOUGHTY: That's true.
19 I had overlooked that, and we would suggest that,
20 on the last page of the Staff's proposal, where it
21 talks about the Notice of Violation, the word , "will"
22 which follows the abbreviation ^{NOV} NOB, we would suggest
23 and recommend that this word, "will" be stricken and
24 replaced by the word, "may".

25 HEARING OFFICER DRAKE: Are there

1 any other questions?

2 We have several people that's
3 indicating a desire to speak to this. Let's go to
4 Mr. David Branecky, of OG&E first.

5 MR. BRANECKY: My name is David
6 Branecky. I'm Senior Environmental Control Specialist
7 with Oklahoma Gas & Electric.

8 I can't say that OG&E supports the
9 proposed revisions in 1.4, but being resigned to the
10 fact that it looks like it is inevitable, we did submit
11 comments, hoping to improve the clarity of the
12 regulation. And, there are two -- we do appreciate
13 the receptiveness of the Air Quality Service.

14 But, there are a couple of things that
15 I would like to emphasize, at this time. One thing
16 I felt that we left out was a change to 1.4.1(b)(3)(B).
17 We did make reference to 1.4.1(b)(3)(A), where it
18 talked about "total emissions". The total emissions
19 is also referenced in Part "B" of that same section.
20 We would suggest that that also be changed to the
21 wording we suggested for the Part "A".

22 One thing that I would like to ask
23 again for the Council to consider, is our suggestion
24 No. 8, in our written comments. That is, that the
25 fees come under review each year. We feel that the fees

1 were initiated or came about because of reduced
2 appropriations. The only reason we have these fees
3 is because of reduced appropriations. We feel that,
4 if in the future, the appropriations are increased,
5 since these fees are tied to the appropriations, then,
6 the fees ought to be decreased, with increased appropri-
7 ations.

8 And, it was our understanding, from
9 the first workshop that was held August 5th, and Mr.
10 Drake stated if the appropriations were increased, that
11 these fees would be decreased, appropriately.

12 So, we would ask, at this time, that
13 the Council would reconsider that No. 8 on our comments,
14 and incorporate that into the revision.

15 And, I do have, for those in the
16 audience, I did make some copies, since a lot of our
17 comments were incorporated into the proposed revision.
18 I do have ten copies of our comments if anybody would
19 like to have those, to see what, actually, we said.

20 HEARING OFFICER DRAKE: Does anyone
21 have a question of Mr. Branecky?

22 THE REPORTER: Would you spell your
23 last name, please?

24 MR. BRANECKY: B-r-a-n-e-c-k-y.

25 THE REPORTER: Thank you.

1 HEARING OFFICER DRAKE: Clyde Jones.

2 MR. JONES: My name is Clyde Jones.

3 I'm with Zinc Corporation of America, and I will be
4 speaking for Julius Kubbe, whose with the State
5 Chamber of Commerce and Industries.

6 Basically, what we would like to say
7 is that we have two objections, and then comments after
8 that.

9 The first objection, philosophically,
10 we feel that most members are opposed to this method
11 of selective taxation.

12 Section objection, members feel that
13 these fees are in excess of the services rendered.

14 Finally, the comment, we feel that
15 the battle has been lost, but the Chamber is willing
16 to work with the Agency, in seeking ways to implement
17 this regulation.

18 Finally, we realize the Agency is not
19 in it for profit, but there are systems of checks and
20 balances, and we are concerned with that check. This
21 is the reason that we would need to know what the costs
22 are, for the Agency, along these lines.

23 We have complete confidence in the
24 Agency. Mr. Drake, we feel like we have complete
25 confidence in him and the administration, and the

1 application of these fees. We have no problem along
2 these lines. But, this is for the future, as far as
3 I'm concerned. Thank you.

4 HEARING OFFICER DRAKE: Any questions?
5 Laura Baker?

6 MS. BAKER: Again, my name is Laura
7 Baker, I'm with the American Lung Association, and I
8 will be reading a statement from Anna Clapper.

9 "Mr. Chairman, Members of the Air
10 Quality Council, and ladies and gentlemen:

11 My name is Anna Clapper, I live at
12 12104 Camelot Place, Oklahoma City, Oklahoma. I am
13 a member of the Board of Directors of the American
14 Lung Association of Oklahoma, and have been a member
15 of the Oklahoma Coalition For Clean Air, for 18 years,
16 having attended meetings of the Council during this
17 period, as a concerned citizen.

18 On page 2, paragraph 3, which states
19 that "No permit shall be required..", there is concern
20 that there needs to be a record, regardless of emission
21 amount, just in case an exceedence might occur.

22 I need clarification in this regard,
23 since a source having one pound per year of one criteria
24 pollutant comes under this ruling, this means a total
25 of 8,760 pounds per year, or 4.38 tons emission does

1 not need a permit, as I understand the regulation.
2 Is this correct?

3 Also, on page 4, (Part "B", "De
4 Minimis" (1), it is my understanding that if total
5 emissions from the source do not exceed ten tons per
6 year for any one critical pollutant, one permit
7 renewal fee is not required. Since no permit is required
8 for 4.38 tons per year, then it follows that a minor
9 source falls between 4.38 tons per year, and 100 tons
10 per year. Is, then, the ten ton per year a shady
11 area, or is there a specific reason for selecting this
12 unit?

13 Do sources between 4.38 tons per year
14 and 10 tons per year, therefore, require no permit
15 fee? Kindly clarify.

16 Thank you for this opportunity to
17 present my concern on this regulation. Anna Clapper."

18 HEARING OFFICER DRAKE: Any questions?

19 (No oral response)

20 HEARING OFFICER DRAKE: Mr. R. J.

21 Cinq-Mars?

22 MR. CINQ-MARS: My name is R. J.
23 Cinq-Mars. That's C-i-n-q, hyphen, M-a-r-s. I work
24 for City Service Oil & Gas Corporation, Natural Gas
25 Liquid Group, but I'm also here today on behalf of

1 the Gas Processors Association. As Mr. Doughty has
2 already mentioned, EPA has already worked with you,
3 I believe, at the State, on this matter. We support
4 the system as proposed in the 820-87 draft, with the
5 minor changes proposed, as we understand them.
6 Obviously, we haven't seen all of them in print.

7 We believe it will be an equitable
8 and efficient way to raise the needed funds with the
9 minimum administrative burden to both industry and the
10 state. And, as you will recall, that was one of our
11 concerns, when we first appeared before you, back in
12 I guess it was July, now, I lose track.

13 Again, we wish to thank both the
14 Council and the Staff for their openness to suggestions,
15 the suggestions of the regulated industry and the
16 general public. And, especially, we feel that the work
17 shops held in Oklahoma City were an excellent means
18 of bringing about communication, and putting lots of
19 things on the table, in a relatively non-confrontative
20 way, and in a way that fostered communications.

21 Again, thank you.

22 HEARING OFFICER DRAKE: Any questions?

23 (No oral response)

24 HEARING OFFICER DRAKE: Ray Hedrick.

25 MR. HEDRICK; My name is Ray Hedrick,

1 and I supervise environmental programs for Public
2 Service Company of Oklahoma. We, too, participated
3 in workshop programs, and we feel like this has resulted
4 in a much better structured program, than what we
5 intitially started with.

6 We also concur with the changes that are
7 proposed to be adopted or submitted by OG&E. We
8 have some additional technical comments that we are
9 also presenting in writing. We also have some addtional
10 questions, some additional concerns. Specifically,
11 if the Oklahoma Legislature extensively revised and
12 strengthened the Administrative Procedures Act, in
13 House Bill 1493. The Act was signed by the Governor
14 on June 30th, of this year, and became effective
15 September 1, 1987.

16 Among the amendments to the Administra-
17 tive Procedures Act, was a requirement for a cost
18 benefit analysis of all new proposed regulations. And,
19 we feel that this aspect of the Administrative
20 Proceure act should be complied with, at this level,
21 prior to the approval of the new rule by the Board.

22 And, so, therefore, we believe that
23 the Council should put off action on this proposal,
24 until such time as compliance of the -- full complaince
25 of the Administrative Procedures Act has been obtained.
And, therefore we recommend that the action ought to

1 be put off until the next meeting, in November, and
2 pending this, we would ask the consideration of our
3 technical comments.

4 Thank you, very much.

5 HEARING OFFICER DRAKE: No questions?

6 Mr. Roger Randolph.

7 MR. RANDOLPH: I would like to say
8 that given the constraints and the mandates from the
9 State Legislature, and the requirements and budget
10 problems, that the State Health Department has done
11 a fine job in developing a fee regulation that is
12 simple, straight forward, and reasonably equitable,
13 and we recommend approval for that reason.

14 I want to say, again, that there are
15 a lot of "what ifs", that might rear their head, and
16 we've gone through this without the regulation, here
17 in the County, and they've just not proven to be a
18 big problem. I would, however, echo some of the
19 industry's comments, and recommend that the Staff
20 bring before this Council, an annual report about the
21 fees collected, and what projections are, that sort
22 of thing, so that they can be reviewed.

23 That's it's.

24 HEARING OFFICER DRAKE: Any questions?

25 (No oral response)

1 HEARING OFFICER DRAKE: I believe
2 that's all the slips that I have. Was there someone
3 else that wanted to make a comment, in regard to this
4 proposed revision?

5 (No oral response)

6 HEARING OFFICER DRAKE: My last call.
7 Is there anyone else that would care to make a comment?

8 MR. BREISCH: John, I would like to
9 ask, when the Staff could bring to the Council their
10 newest estimate each year, of the funds needed above
11 the appropriations, so at least we have an opportunity
12 to review these. Is there a time period you can do
13 this?

14 HEARING OFFICER DRAKE: There is a
15 rule, the Legislature is rather late in the session
16 before it makes its appropriations. Therefore, as
17 was this year, it was July before they actually made
18 the appropriations for the State Health Department.

19 The Staff would be in a position,
20 generally, I will either be prepared to, or have a good
21 excuse for not giving such a report, at the July
22 Council Meeting.

23 One thing to keep in mind in this,
24 tough, is if there is an adjustment in the fee
25 schedule, then, it has to come back through the hearing

1 process, and therefore, it would be March of the
2 following year before the change could be made. So,
3 I have no objections to making a report to the Council,
4 on appropriations, and fees, and I have enough respect
5 for this Council to know that it will do what is
6 appropriate, as to changing them, if they're necessary.

7 Does that answer your questions?

8 MR. BREISCH: Yes. I don't know that
9 that needs to be part of the regulation, though.

10 HEARING OFFICER DRAKE: I would
11 recommend that it not be a part of the record --
12 regulation.

13 But, you can beat upon my head
14 severely, if I -- I would hope you would remind me
15 in May, and then beat on me in September, if I don't
16 do it.

17 MR. BREISHCH: Well, we'll make it
18 a matter of record, in this hearing, that we did
19 request that you do that.

20 HEARING OFFICER DRAKE: All right.

21 Any other questions or comments from
22 the Council?

23 I understand then, at this time it's
24 in order to either postpone approval of this, or
25 make a recommendation to the Board of Health for

1 acceptance.

2 MR. BREISCH: Council, if they care
3 to, could leave the record opened for a few more days?
4 Have a Staff present a report at the next Council
5 Meeting, or are they to take action today; it's their
6 pleasure.

7 MR. SKEITH: Mr. Chairman, I move
8 that the proposed revision of Regulation 1.4 be
9 recommended to the Board of Health, for approval.

10 HEARING OFFICER DRAKE: Does that
11 include the amendments...

12 MR. SKEITH: Oh, it includes everything
13 that was talked about here today, and all the amendments
14 and the conversation, and everything you want to put
15 in it, just send it over to the Board of Health.

16 MR. PYLE: Second.

17 HEARING OFFICER DRAKE: Any more
18 comments. We have moved and seconded, call roll now.

19 MR. BREISCH: Mr. Quinlan?

20 MR. QUINLAN: Aye.

21 MR. BREISCH: Mr. Skeith?

22 MR. SKEITH: Aye.

23 MR. BREISCH: Dr. Canter.

24 DR. CANTER: Aye.

25 MR. BREISCH: Mr. Pyle?

AN EQUAL OPPORTUNITY EMPLOYER

July 27, 1987

Dear Sir:

Subject: Workshop on Permit Fee Schedules

Upon recommendation by the Air Quality Council a workshop to discuss methods of scheduling permit fees has been set for August 5, 1987 from 10:00 A.M. until 3:30 P.M. to be held at the Southwestern Bell Auditorium, Room 426, 800 N. Harvey, Oklahoma City, Oklahoma. The scope of this workshop will be restricted to the goal of deriving an appropriate approach to allow the collection of permit and renewal fees of approximately \$228,000.00 per year. Please bear in mind that any fee regulation must conform to the authority set out in the permit fee statute which is attached for your review. This is a copy of the 1987 amendments to the fee authorizations of the Public Health Code effective July 20, 1987.

There will be a \$10 registration fee which can be made payable to the Oklahoma State Chamber of Commerce and Industry. You may mail your check along with the registration form below to the Oklahoma State Chamber of Commerce and Industry, 4020 N. Lincoln Boulevard, Oklahoma City, Oklahoma 73105. Registration will be open through the close of business Friday, July 31, 1987.

Sincerely,

John W. Drake, Chief

NOTICE OF WORKSHOP

The State Chamber of Commerce, in conjunction with the Air Quality Service of the Oklahoma State Department of Health, has scheduled a workshop on the collection of permit and renewal fees industries must pay for air quality permits in Oklahoma.

The workshop will be held Wednesday, August 5, from 10 a.m. until 3:30 p.m. at the Southwestern Bell Auditorium, Room 426, 800 N. Harvey, in Oklahoma City.

Registration is \$10 and checks should be made payable to the State Chamber of Commerce, 4020 N. Lincoln Blvd., Oklahoma City, OK 73105. Registration is open to the public, but reservations must be made by Friday, July 31. For more information, contact Julius Kubier, Oklahoma State Chamber of Commerce, 405/424-4003; or Marsha Sweazy, Air Quality Service, 405/271-5220.

35. Suzanne Moore, ACOG, OKC
36. Frank McGilbra, PSO, Tulsa
37. Ronn W. Cupp, OCCI, OKC
38. Jules Kubier, OCCI, OKC

Welcome by Julius Kubier - As requested by Air Quality Council we are having this workshop. Introduced Bill Breisch.

Bill Breisch - Need fees because in 1987 we had \$360,000.00 from the general fund. In 1988 we are going to get \$232,000.00, leaving a deficit of \$128,000.00. Erosion fees, as John Drake calls it, we are adding \$100,000.00 to it and will come up with \$228,000.00 to be the total needed to be collected. A proposed regulation to collect these fees was presented at the last public hearing. At this public hearing we became aware that alot of industries were not aware of this propose change, so the Air Quality Council requested that this workshop be held. Introduced Rachel Pappworth. She has a degree in Environmental and Civil Engineering from the University of Newcastle, England. Worked with Conoco for nine years, state-side and in England. She is now employed at Witco Corporation in Houston, Texas as the Regional Environmental Engineer and has a Ph.D.

Rachel Pappworth - At the public hearing it became well apparent that some were opposed to regulations requiring them to pay fees. We are going to have to start with this premise - that we are going to have to pay these fees, and we are going to have to come up with a method of paying them. Introduced Dennis Doughty, AQS Staff Attorney.

Dennis Doughty - Title 63, Section 1-1802 of the Oklahoma Clean Air Act, Subsection D talks about the Board of Health and the AQC passing rules and regulations. The Clean Air Act itself speaks of permit fees and the authority to promulgate rules and regulations. A copy of the latest statutory authority for permit fees was included in the invitational packet sent to and, hopefully, received by everyone here. This is in Title 63 Sect. 1-106.1 originally passed in 1984. It was recently ammended as house bill 1473 and signed by the Governor July 17, 1987. 106.1a - allows the Board of Health to establish a system of fees to be charged for environmental and other health services. There are some limitations. The first one says that these rules will be passed according to the administrative procedures act. Thus, these rules and regulations will be passed via these procedures, not through individual proceedings as was suggested. Secondly, ranges were established for permit issuance. The range for permit issuance would be from \$50 to \$2000 and for renewal of a permit the range would be from \$10 to \$500. Another clause added states that a grandfather facility still has to pay renewal fees. Subsection C - addresses the reasonable cost of review and inspection which John Drake will address. Subsection D - addresses exemption due to unreasonable hardship. Subsection F - liscenses and permits issued by the Board of Health shall be for a one year period. That is basically the statutory authority with which we have to work. The law gives us the authority to establish this permit and fee schedule.

Dave Braneky of DG&E - Presented information using overheads and passed out a copy of this information. I will discuss our alternative where it gets its authority in the law and where it gets its authority in the regulation. The AQS has a dual permitting system - where you have a construction permit and then an operating permit. In

formulating our alternative we tried to bear in mind "reasonable cost for services rendered". Fees for construction and operating permits - there is work done by the service. There is much more work done for a major source, and even more work done for a major source that is subject to PSD reviews. For a minor source there may not be as much work done. Where there is more work done the AQS deserved more money. Where a bubble permit is concerned - there is more work done, therefore they (the AQS) should receive more money. We question the legality of changing the permit to a one year renewable for those facilities already permitted. We propose a flat fee for a major source and a minor source, and establishing a maximum charge per facility. We do not feel that it is equitable to, for example, charge \$2000 for an initial permit and then have the facility pay \$4000 to renew. We feel that the cost for renewal of permits should not exceed the cost of the initial permit. Licensing and permitting of existing sources that are not currently permitted - the fee for these facilities could be no greater than the construction and operating permits could possibly be. Finally, there should be some difference in the permit and permit renewal fees for those facilities already permitted and opposed to those facilities not permitted previous to the implementation of this regulation. We propose that a base fee for each facility be set. There a fee could be set for each source at that facility. There should be a de minimus level. Also, we feel that there should be a maximum fee set for each facility. All invoices issued by AQS should be derived from their emission inventory. Limit the increase in these fees to a percent increase per year. People who live in the state also benefit from the air program - therefore we would like to see it set that the fees cannot exceed the fees set by the Oklahoma legislature. Remove the asbestos program from the fee schedule.

Charles Rupert - ??? - Kansas approach - January 1, 1984 fee schedule was in place. Handout was given and discussed. Monies to be raised by Oklahoma are close what Kansas has collected. If you do not meet the minimum level for a permit, then you will not need a permit and you will not be entered into the system. As a business you provide the Kansas air division with information about your facility, and they evaluate it. However, if they have any question about a part, the state may come back to you and require you to provide more information. Major facilities to be constructed in a nonattainment area would require a PSD permit. You do have the potential of paying \$5500 in Kansas if you are constructing a major facility, in a PSD area, and costs \$8 million. Billing dates - Bills mailed out January 1 of each year. You have until April 1 to pay, and thereafter you pay a \$5 per day fee that you pay on top of the renewal fee for 60 days. After June 1 you will receive another letter declaring your facility inactive and cancelling your permit rights. You now have to have your facility re-permitted. The chart provided in the handout is the system used to classify facilities.

John Drake, Chief AQS - The law, which we have already heard about, was written for the Health Department, not the AQS specifically. It does require a reasonable relationship between the cost of the service and the fee to be charged. We are looking for three things: to collect a specified amount; doing it within the authority of the law; and

collecting these fees with as much equity as possible. We have reviewed several approaches and none of them would have allowed us to collect fees within the confines of our three requirements. Under the old law the max we could charge for renewable permits was \$500. We anticipated 60 permits per year. If we charge \$500 for every construction permit and the charge \$500 for every operating permit and then assign \$100 one-time fee per facility, then we could collect the needed amount of money. We are looking for a rational multiplier by which we can multiply a set dollar amount that would provide us with the monies we need, and would be equitable. The number of emission points is the multiplier with which we ought to be working. It should be multiplied with a number calculated by figuring manhours and costs. \$65 per point source was derived. Considering that an actual cost of \$188 per point source was figured, the AQS feels that this is well within the confines of the law and is fair and equitable.

Questions/Answers -

Rachel Pappworth moderating - We are not here to fight for our own ideas, but to come to a meeting of the minds.

Are we talking dollars or methodology? John Drake responded by pointing out that in the course of talking methodology we cannot separate it from dollars. Rachel Pappworth also pointed out that while coming up with the method most desirable to the majority, we cannot lose sight of the ultimate goal - \$228,000.00.

Royce Bently - Had an argument with regard to the need to collect \$228,000.00. He feels that the AQS is "double dipping" by collecting that amount this year and in future years. John Drake explained about the \$100,000.00 and the \$128,000.00. (I don't think he was convinced.) Royce was concerned that if our appropriation increases, would we go through this process again and reduce the fees? The answer was "Yes."

The definition of a source was questioned. Some confused the definition with that of a facility. The point was made that there was a definite need for some better, more technical definitions.

Source operation is equivalent to emission point.

It was explained to the audience that the Annual Report was written for the public and not for technical reference. Further technical definitions could be found in the 0550.

The definitions for major and minor sources were questioned.

There was some concern that we were bringing in monies through the back door, and some still felt that the \$228,000.00 was unjustified. The legality of us collecting fees was again questioned. It was stated that if it was not legal we did not want to adopt it.

The emission inventory was questioned - we feel it is 90% correct. How would we collect information for the purpose of collecting fees? It was pointed out that we did not intend to change our method of

operation. We would still send out our inventory and rely on the information provided, which we feel is accurate for the most part. The inventory would be updated to cover sources that are periodically inactive.

Charges per source operation - 80 storage tanks in some operations - hard to believe that 6 hours are spent of each point source. That is an estimate based on the total hours spent divided by the total number of sources we have. There is some concern that that is not equitable. The numbers were again explained.

Question on statute - costs on review and permit - not the entire AQS.

One party was concerned that any modification to a major source would cost him an additional \$2,000.00. It was explained that it would not.

It was suggested that we put a cap on the renewal fees. A cap limit would decrease our income by about \$10,000.00 and we could stand that. The actual cost of doing a new source permit is more than \$2,000, but that is all the law allows. Therefore we have to make up the cost later.

Is it equitable without a cap set on these fees?

OKLAHOMA
STATE
CHAMBER
OF COMMERCE
& INDUSTRY

M E M O

TO: Natural Resources Committee

FROM: Julius E. Kubier

We have arranged two workshops with the staff of the Air Quality Service to exchange views and consider alternatives to the proposed amendments of 1.4 - etseq. (proposal attached).

Questions have been raised as to definitions, the approach and a possible cap.

The first workshop will be:

10:00 a.m.
August 5
The Auditorium, Room 426
Southwestern Bell
800 N. Harvey
Oklahoma City

The second workshop will be August 12, same time and place as the first. There will be a \$10 charge to cover lunch, coffee breaks and materials.

Please let us know if you are attending so we can make proper arrangements.

If enough of you are interested, we will try and arrange a tour for you of the refurbished Central High School which is now the headquarters here for Southwestern Bell.

The first session will be devoted to exploring the possible avenues and approaches. The second session will be reviewing and commenting on the revised proposal.

Draft 6/29/87

Proposed Revision to Regulation 1.4
Air Resources Management Permits Required

1.4.1 (a) Scope and Purpose

(1) Pursuant to the Oklahoma Clean Air Act as amended, this regulation is adopted to define Air Resource Management Requirements to protect and enhance Oklahoma Clean Air Resources and assure attainment/maintenance of the ambient air quality through the utilization of a construction/operation permit system.

1.4.1 (b) General Requirements

(1) Except as provided herein, no person may commence construction of, or operate any new source, or relocate any source without obtaining a permit from the Air Quality Service.

~~(2)~~ (2) Permits are required when the addition of a new source, or modification of an existing source, results in a net increase in air contaminant emissions as the Commissioner determines appropriate.

~~(3)~~ (3) Transfer of a source to a new owner or operator is not considered an increase in emissions and does not require new permits. However, any transfer shall be subject to existing permit conditions and/or compliance schedules. Notification of such transfers shall be made promptly in writing to the State Air Quality Service.

~~(4)~~ (4) The Commissioner may determine that a source is of minor significance and that permits are not required.

(5) Upon the effective date of this subsection, all operating permits, including those issued prior to the effective date, shall be for the term of one year, renewable on the first working day of February of each calendar year. Fee assessments shall include the year 1988.

(6) Any source for which the permit renewal fee or the annual permit renewal fee equivalent has not been received in the offices of the Air Quality Services by close of business on the first working day of March, shall be deemed to be operating without a permit.

1.4.1 (c)~~(1)~~ New Sources

(1) The Air Quality Service shall operate for the State of Oklahoma a dual permitting system for all new stationary/portable facilities/sources to be established in Oklahoma. The first permit is authorization to construct and is issued upon a determination by the Commissioner that the new source is so designed as to assure that the emission limitations of the several control regulations will be met.

The second permit is a permit to operate and is issued by the Commissioner upon demonstration the source was constructed as designed and the facility does meet the requirements of the several control regulations. Issuance of a permit is evidence that the source has met all requirements; however, upon proper showing this can be refuted by the State or a third party and in such a case the permit does not relieve the source of the responsibility to comply with all local, state or federal laws.

(2) Operating permits, issued subsequent to construction permit applications received on or after January 1, 1988, shall be subject to permit renewal fee payment on the first day of January following the first anniversary of the operating permit application due date.

1.4.1 (d) Existing Sources

(1) Any facility exempt from the requirement to obtain a permit based on date of construction or start-up shall be subject to an annual permit renewal fee equivalent. Permit renewal fee equivalents shall be equal to comparable permit renewal fees and shall be processed in the same manner and on the same basis as provided herein.

1.4.1 (e) Necessity to Obtain Permit

~~(1) Permits are required when the addition of a new source, or modification of an existing source, results in a net increase in air contaminant emissions as the Commissioner determines appropriate.~~

~~(2) Transfer of a source to a new owner or operator is not considered an increase in emissions and does not require new permits.~~

~~(3) The Commissioner may determine that a source is of minor significance and that permits are not required.~~

1.4.1 ~~(d)~~ (e) Permit Fees

(1) Definitions. For the purposes of section 1.4.1(c):

Major Source - shall have the same meaning as set forth in subsection 1.4.2(a)(2).

Minor Source - means any source for which a permit is required, but is not a major source.

Permit Renewal - means the yearly process of assessing and collecting permit renewal fees. In no case shall such term be construed to require any formal permit review.

Relocate - means to move a source from one geographical location to another. The term shall not include de minimis moves within the proximity of the original site, or convenience moves to contiguous areas when such moves are readily observable by inspectors.

Source Operation - means the last operation preceding the emission of an air contaminant, which operation (a) results in the separation of the air contaminant from the process materials or in the conversion of the process materials into air contaminants, as in the case of combustion of fuel; and (b) is not a pollution abatement operation. The term shall not be construed to include a source operation which is of minor significance and would not be permittable if it were a new source.

Annual Permit Renewal Fee Equivalent - means the annual fee assessed on source operations at facilities which, because of the date of start-up or construction, are exempt from the requirements to have a permit.

(2) All construction permits, the application for which is received after the effective date of this subsection, will be assessed a fee, which must accompany the application, in accordance with the following schedule:

(A) Major Source

<u>(i) Construction permit</u>	<u>\$2,000</u>
<u>(ii) Operating permit</u>	<u>No fee</u>

(B) Minor Source

<u>(i) Construction permit</u>	<u>\$750</u>
<u>(ii) Operating permit</u>	<u>No fee</u>

(3) A fee for the annual renewal of operating permits shall be assessed at the rate of sixty-five dollars (\$65) per source operation and payable in accordance with the provisions of subsection 1.4.1(b). Annual permit renewal fee equivalents shall be assessed at the same rate and be payable in the same manner.

(4) Except for the calendar year 1988, the Air Quality Service will, on or before the first working day of January of each year, present persons subject to annual permit renewal fees and annual permit renewal fee equivalents with a fee assessment. Fee assessments for 1988 renewals shall be presented on or about the effective date of this part.

(5) Permits to locate existing sources within the state shall be assessed a fifty dollar (\$50) fee payable upon application.

(6) Asbestos renovation/demolition projects as required under Air Pollution Control Regulation 3.8, Control of Emission of Hazardous and Toxic Air Contaminants, shall be assessed a one hundred dollar (\$100) permit fee per project. For the purposes of this subsection, the term "project" shall be defined to mean any renovation/demolition operation at any one facility submitted under separate notification. Any project not completed within one year from the date of notification shall pay a permit renewal fee of \$100 per year or part of a year until such time as the project is completed.

(7) Fees will be paid by check or money order (no cash will be accepted) made payable to the reviewing agency, e.g., Oklahoma State Department of Health, Air Quality Service.

(8) The fee provisions set forth in this regulation shall apply to those permits, renewals and renewal fee equivalents processed by the State Air Quality Service and are not intended to preempt any local fee program.

1.4.2 Construction Permit

1.4.2 (a) Standards Required

(1) No person shall cause or allow the construction or modification of any source without first obtaining an authority to construct or modify from the Commissioner as to comply with all applicable air pollution rules and regulations, and not to exceed ambient air quality standards or applicable federal new source performance standards (NSPS) and national emission standards for hazardous air pollutants (NESHAPS), Sections 111 and 112 of the Federal Clean Air Act.

(2) Major Sources. For purposes of this Section 1.4.2 (a), a major source is defined as any new or modified stationary source which directly emits or has the capability at maximum design capacity and, if appropriately permitted, authority to emit 100 tons per year or more of a given pollutant. A major source must demonstrate that the control technology to be applied is the best that is available for each pollutant controlled under air pollution control regulations if such pollutant would cause the source to be defined as a major source. This determination will be made by the Commissioner on a case by case basis taking into account energy, environmental, costs and economic impacts of alternative control systems.

(3) Any air quality modeling or ambient impact evaluation that is required shall be prepared in accordance with procedures acceptable to the Commissioner and accomplished by the applicant.

(4) If required by the Commissioner, the new source will be equipped with sampling ports, instrumentation to monitor and record emission data and other sampling and/or testing facilities.

1.4.2 (b) Stack Height Limitation

(1) Air quality modeling or ambient impact evaluation shall exclude the effect of that portion of the height of any stack which exceeds good engineering practice or the effect of any other dispersion techniques as defined in the following:

(A) Stack means any point in a source designed to emit solids, liquids or gases into the air, including a pipe or duct but not including flares.

(B) A stack in existence means that the owner or operator had (1) begun, or caused to begin, a continuous program of physical on-site construction of the stack or (2) entered into binding agreements or contractual obligations, which could not be cancelled or modified without substantial loss to the owner or operator, to undertake a program of construction of the stack to be completed in a reasonable

RECEIVED

MINUTES OF THE NATURAL RESOURCES WORKSHOP

AUGUST 5, 1987

AUG 19 1987

AIR QUALITY
SERVICE

Attached is the list of attendees and the agenda.

After a welcome by Bill Breisch, chairman of the Air Quality Council, and an explanation of the reasons for the fee schedule, Rachel Pappworth of Witco was introduced and became the moderator of the meeting. Rachel explained the purpose and procedure the meeting would follow. Presentations would be made suggesting possible alternative methods of levying the fees which individuals felt would be more equitable. Then John Drake would explain how and why the fee schedule was arrived at.

Mr. Doughty, legal counsel for the service, would explain the legal basis for the proposal.

The participants were asked not to interrupt until the presentations were completed in order to give the presentors ample time to make a full explanation.

Several alternatives were discussed. After the presentations, questions were asked, discussion ensued. Several participants objected to the fee increases, particularly those facilities which are grandfathered and do not now require a permit.

It was pointed out that the legislature had authorized such increases and the Governor's office had advised that the fees be levied to maintain a least current level operations (\$228,000 needed). The only thing left was what method would produce the most equitable method of raising the \$228,000.

Discussion continued to lunch.

After lunch, there was considerable discussion without a lot of agreement.

Three points seemed to be on everyone's mind: (1) Deminimis sources; (2) Definition of a source; and (3) A cap on yearly renewal fees.

It was agreed to meet on the 12th of August and attempt to work out language and other particulars to see if common ground could be found for recommended action.

A Summary of the Permit/Fee Workshop

August 5, 1987

The group was welcomed by Julius Kubier. It was at the request of the Air Quality Council that we are holding this workshop. He then introduced Mr. Bill Breisch, Chairman of the Air Quality Council.

On taking the floor, Bill Breisch explained the need for fees, and consequently, the need for this workshop. In 1987 we had \$360,000 from the general fund. In 1988 we are going to get \$232,000, leaving a deficit of \$128,000. To make up this erosion of funds, we are adding \$100,000, "Erosion Fees", as John Drake calls it, and will come up with \$228,000 as the total needed. A proposed regulation to collect these fees was presented at the last public hearing. At this public hearing it became apparent that some industries were not aware of this proposed change. As a result, the Air Quality Council requested that this workshop be held. Rachel Pappworth will be our moderator. She has a degree in Environmental and Civil Engineering from the University of Newcastle, England and has worked with Conoco for nine years, state-side and in England. She now has a Ph.D. and is employed at Witco Corporation in Houston, Texas as the Regional Environmental Engineer.

Our moderator, Rachel Pappworth, stated that at the previous public hearing it was apparent that some were opposed to regulations requiring them to pay fees. "We are going to have to start with this premise—that we are going to have to pay these fees, and we are going to have to come up with a method of paying them." She then introduced Dennis Doughty, the AQS Staff Attorney.

Dennis Doughty discussed the regulation as it applies to fees. In Title 63, Section 1-1802 of the Oklahoma Clean Air Act, Subsection D addresses authority of the Board of Health and the Air Quality Council to pass rules and regulations. The Clean Air Act itself addresses permit fees and the authority to promulgate rules and regulations. A copy of the latest statutory authority for permit fees was included in the invitational packet sent to and, hopefully, received by everyone here. This is in Title 63 Section 1-106.1 originally passed in 1984. It was recently amended as House Bill 1473 and signed by the Governor on July 17, 1987. Section 106.1a - allows the Board of Health to establish a system of fees to be charged for environmental and other health services. There are some limitations. The first one says that these rules will be passed according to the administrative procedures act. Thus, these rules and regulations will be passed via these procedures, not through individual proceedings as was suggested. Secondly, ranges were established for permit issuance. The range for permit issuance would be from \$50 to \$2000 and for renewal of a permit the range would be from \$10 to \$500. Another clause added states that a grandfather facility still has to pay renewal fees. Subsection C - addresses the reasonable cost of review and inspection which John Drake will discuss. Subsection D addresses exemptions due to unreasonable hardship. Subsection F explains licenses and permits issued by the Board of Health shall be for a one year period. That is basically the statutory authority with which we have to work. The law gives us the authority to establish this permit and fee schedule.

Dave Branecky, O G & E, presented information using overheads and passed out a copy of O G & E's position. He discussed an alternative fee structure, its authority under the Oklahoma Clean Air Act, and our regulation. He stated that the Air Quality Service has a dual permitting system - where you have a construction permit and then an operating permit. In formulating our alternative we tried to

bear in mind "reasonable cost for services rendered". There is work done by the service for construction and operating permits. There is much more work done for a major source that is subject to PSD reviews. Where there is more work done, the AQS deserves more money. Where a bubble permit is concerned, there is more work done, therefore, they, the AQS, should receive more money. We question the legality of changing the permit to a one year renewable for those facilities already permitted. We propose a flat fee for a major source and a minor source, and establishing a maximum charge per facility. We do not feel that it is equitable to, for example, charge \$2000 for an initial permit and then have the facility pay \$4000 to renew. We feel that the cost for renewal of permits should not exceed the cost of the initial permit. He said that O G & E felt that the fees for extant facilities which are not currently permitted should be no greater than the present construction or operating permit fees. Finally, there should be some difference in the permit and permit renewal fees for those facilities already permitted as opposed to those facilities not permitted previous to the implementation of this regulation. We propose that a base fee for each facility be set. Then a fee should be set for each source at that facility. There should be a de minimis level. Also, we feel that there should be a maximum fee set for each facility. All invoices issued by AQS should be derived from their emission inventory. We would like to see a limit on any increase in these fees to a percent increase per year. People who live in the state also benefit from the air program, therefore, we would like to see it set that the fees cannot exceed the fees set by the Oklahoma legislature. We also recommend that the asbestos program be removed from the fee schedule.

Charles Goodwin, Cities Service Company representing the Oklahoma Gas Processors - appealed for a permit fee program similar to the permit system used by the State of Kansas since January 1, 1984. He stated that the monies needed by the Oklahoma AQS were comparable to that amount collected by the Kansas permit fees. He pointed out that in Kansas, if you do not meet the minimum level for a permit, you will not need a permit and you will not be entered into a system. As a business you must provide the Kansas Air Division with information about your facility, and they evaluate it. However, if they have any question about your facility the State may come back to you and require you to provide more information. Major facilities to be constructed in a nonattainment area are required to have a PSD permit. Under these circumstances and if the facility costs eight million dollars or more, then the PSD permit may cost as much as \$5500. Mr. Goodwin stated that bills are mailed out on January 1 of each year. You have until April 1 to pay, and thereafter you pay a \$5 per day fee on top of the renewal fee for 60 days. After June 1 you will receive another letter declaring your facility inactive and cancelling your permit rights. You now have to have your facility re-permitted. The chart provided in the handout, presented at the beginning of this presentation, details the facility classification system used by Kansas to classify facilities by process.

John Drake, Chief AQS, replied that the law, which we have already heard about, was written for the Health Department, not the AQS specifically. It does require a reasonable relationship between the cost of the service and the fee to be charged. We are looking for three things: to collect a specified amount; doing it within the authority of the law; and collecting these fees with as much equity as possible. We have reviewed several approaches and none of them would have allowed us to collect fees within the confines of our three requirements. Under the old law the maximum fee we could charge for new permits was \$500. We anticipated 60 permits per year. If we charge \$500 for every construction permit and charge \$500 for every operating permit and then assign \$100 one-time fee per facility,

then we could collect the needed amount of money. We are looking for a rational multiplier by which we can multiply a set dollar amount that would provide us with the monies we need, and would be equitable. The number of emission points is the multiplier with which we ought to be working. It should be multiplied with a number calculated by figuring manhours and costs. \$65 per point source was derived. Considering that an actual cost of \$188 per point source was figured, the AQS feels that this is well within the confines of the law and is fair and equitable.

Questions/Answers -

Rachel Pappworth began by stating we are not here to fight for our own ideas, but to come to a meeting of the minds.

An unidentified participant asked, "Are we talking dollars or methodology?"

John Drake responded by pointing out that in the course of talking methodology we cannot separate it from dollars. Rachel Pappworth also pointed out that while coming up with the method most desirable to the majority, we cannot lose sight of the ultimate goal - \$228,000.

The Public Service Co. of Oklahoma representative argued the need to collect \$228,000. He felt that the AQS is "double dipping" by collecting that amount this year and in future years. John Drake explained about the \$100,000. and the \$128,000. ,discussion continued in this vein.. The representative was concerned that if the AQS appropriations increase, would these public hearings be repeated to reduce the fees? The answer was "Yes".

Some participants were confused with regard to the definitions of a "source" and a "facility". The point was made that there was a need for some better, more technical definition of these terms. It was explained to the audience that the Annual Report was written for the public and not as a technical reference. Technical definitions can be found in the 0550.

A participant felt that the AQS was bringing to monies "through the back door". Some still felt that the \$228,000 was unjustified. The legality of us collecting fees was again questioned. It was stated that if it was not legal we did not want to adopt it.

The emission inventory was questioned. John Drake replied that, "we feel it is 90% correct". He was then asked how the AQS intended to collect information for the purpose of collecting fees? He replied that the AQS did not intend to change its method of operation. "We would still send out our inventory and rely on the informaton provided, which we feel is accurate for the most part", he said. The inventory would be updated to cover sources that are periodically inactive.

A participant expressed some concern with regard to the equity of the states approach since he had as many as 80 sources at some facilities. He found it hard to believe that 6 hours were spent on each point source. It was pointed out that this was an estimate based on the total hours spent divided by the total number of sources that we have. There is some concern that that is not equitable. The numbers were again explained.

One party was concerned that any modification to a major source would cost him an additional \$2,000. It was explained that it would not.

One participant suggested that we put a cap on the renewal fees. John Drake pointed out that "A cap limit would decrease our income by about \$10,000, however, we could stand that." He also stated that the actual cost of doing a new source permit is more than \$2,000, but that could be made up later.

The cap, once set, would not be changed unless it came back to the AQC and the council changed the rule. A suggestion was made to put it into the rule that it would not be any more than the legislature would allow. That, according to the person making the suggestion, would cover it. John Drake pointed out that this would be a futile action, since the AQC puts things into these rules and therefore can take them out. Thus, if, in the future, there was a need to increase the fees, the AQC would do so.

What takes more time for the AQS to process - a new permit, a construction permit, or a permit renewal? It was explained that more time is actually spent on a new permit than on a permit renewal. A participant pointed out that there was no review involved in a permit renewal, making the inspection the only basis for fees. Dennis Doughty pointed out that we do not want renewable operating permits.

It was suggested by Rachel Pappworth that we look at the Kansas approach, because it does have some merit. A comment from the floor indicated that we could be years developing an approach such as the one Kansas uses because of categorizing various industries with regard to simpler methods of categorizing operations such as using SIC codes.

The question was raised as to who would receive the fee payments, the State or the City-County. It was explained that the system, as proposed, would be applicable only to the state. The City-County, however, would be free to adopt either their own fee schedule or this one, but not both.

Rachel Pappworth suggested that between today and August 12, 1987 (the next workshop) the AQS run some numbers with reference to the different approaches suggested here today. These numbers would be presented at the next workshop.

The comment was made that the setting up of the categories for the Kansas approach was at times somewhat a judgment call because of having to take into consideration the type of operation, the number of inspections, etc. It basically comes down to trying to figure out how much agency resources are involved and categorizing them from there.

It was pointed out that the Texas Air Control Board was recently told by their legislature that it would raise 50% of their revenues by fees. They have an annual budget of \$13 million, \$3 million of which is for research, so they have to raise \$10 million. Texas is holding its breath thinking that the legislature may come back and say "ok you can raise 80% of your budget through fees". The comment was made that, that same thing just happened in Louisiana. However, their monies can be raised through fines and fees, not fees only.

SIC codes were looked upon favorably with respect to the development of this fee system and creating the classification groups.

The question was raised about what class would be chosen should a facility fall between two classes. The gas processor representative pointed out that the

higher numbered class would prevail.

Several expressed concern with regard to where the de minimis level would be set.

It was suggested that the categories would not have to be numbered in the order 1, 2, 3, 4, 5, etc., but they could be numbered 1, 3, 7, etc. This would allow the collection of more money and still remain within the cap limit.

One participant suggested that we may have to go out looking for more sources, because there are those out there that the AQS knows nothing about. There are plenty out there who don't pay their fees. This in turn puts the burden on those companies that do pay their fees.

There will be a follow-up workshop on August 12, 1987 here at One Bell Central, 800 N. Harvey, Oklahoma City, Oklahoma at 10:00 A.M. At this workshop we will break up into groups and work on specific aspects of this issue.

MINUTES OF THE NATURAL RESOURCES WORKSHOP

AUGUST 5, 1987

RECEIVED

AUG 19 1987

AIR QUALITY
SERVICE

Attached is the list of attendees and the agenda.

After a welcome by Bill Breisch, chairman of the Air Quality Council, and an explanation of the reasons for the fee schedule, Rachel Pappworth of Witco was introduced and became the moderator of the meeting. Rachel explained the purpose and procedure the meeting would follow. Presentations would be made suggesting possible alternative methods of levying the fees which individuals felt would be more equitable. Then John Drake would explain how and why the fee schedule was arrived at.

Mr. Doughty, legal counsel for the service, would explain the legal basis for the proposal.

The participants were asked not to interrupt until the presentations were completed in order to give the presentors ample time to make a full explanation.

Several alternatives were discussed. After the presentations, questions were asked, discussion ensued. Several participants objected to the fee increases, particularly those facilities which are grandfathered and do not now require a permit.

It was pointed out that the legislature had authorized such increases and the Governor's office had advised that the fees be levied to maintain a least current level operations (\$228,000; needed). The only thing left was what method would produce the most equitable method of raising the \$228,000.

Discussion continued to lunch.

After lunch, there was considerable discussion without a lot of agreement.

Three points seemed to be on everyone's mind: (1) Deminimis sources; (2) Definition of a source; and (3) A cap on yearly renewal fees.

It was agreed to meet on the 12th of August and attempt to work out language and other particulars to see if common ground could be found for recommended action.

A Summary of the Permit/Fee Workshop

August 5, 1987

The group was welcomed by Julius Kubier. It was at the request of the Air Quality Council that we are holding this workshop. He then introduced Mr. Bill Breisch, Chairman of the Air Quality Council.

On taking the floor, Bill Breisch explained the need for fees, and consequently, the need for this workshop. In 1987 we had \$360,000 from the general fund. In 1988 we are going to get \$232,000, leaving a deficit of \$128,000. To make up this erosion of funds, we are adding \$100,000, "Erosion Fees", as John Drake calls it, and will come up with \$228,000 as the total needed. A proposed regulation to collect these fees was presented at the last public hearing. * * *

* * *

Dennis Doughty discussed the regulation as it applies to fees. In Title 63, Section 1-1802 of the Oklahoma Clean Air Act, Subsection D addresses authority of the Board of Health and the Air Quality Council to pass rules and regulations. The Clean Air Act itself addresses permit fees and the authority to promulgate rules and regulations. A copy of the latest statutory authority for permit fees was included in the invitational packet sent to and, hopefully, received by everyone here. This is in Title 63 Section 1-106.1 originally passed in 1984. It was recently amended as House Bill 1473 and signed by the Governor on July 17, 1987. Section 106.1a - allows the Board of Health to establish a system of fees to be charged for environmental and other health services. There are some limitations. The first one says that these rules will be passed according to the administrative procedures act. Thus, these rules and regulations will be passed via these procedures, not through individual proceedings as was suggested. Secondly, ranges were established for permit issuance. The range for permit issuance would be from \$50 to \$2000 and for renewal of a permit the range would be from \$10 to \$500. Another clause added states that a grandfather facility still has to pay renewal fees. Subsection C - addresses the reasonable cost of review and inspection which John Drake will discuss. Subsection D addresses exemptions due to unreasonable hardship. Subsection F explains licenses and permits issued by the Board of Health shall be for a one year period. That is basically the statutory authority with which we have to work. The law gives us the authority to establish this permit and fee schedule.

* * *

John Drake, Chief AQS, replied that the law, which we have already heard about, was written for the Health Department, not the AQS specifically. It does require a reasonable relationship between the cost of the service and the fee to be charged. We are looking for three things: to collect a specified amount; doing it within the authority of the law; and collecting these fees with as much equity as possible. We have reviewed several approaches and none of them would have allowed us to collect fees within the confines of our three requirements. Under the old law the maximum fee we could charge for new permits was \$500. We anticipated 60 permits per year. If we charge \$500 for every construction permit and charge \$500 for every operating permit and then assign \$100 one-time fee per facility, then we could collect the needed amount of money. We are looking for a rational multiplier by which we can multiply a set dollar amount that would provide us with the monies we need, and would be equitable. The number of emission points is the multiplier with which we ought to be working. It should be multiplied with a number calculated by figuring manhours and costs. \$65 per point source was derived. Considering that an actual cost of \$188 per point source was figured, the AQS feels that this is well within the confines of the law and is fair and equitable.

BOARD OF HEALTH

NOTICE OF RULEMAKING INTENT

NAME OF RULEMAKING AGENCY/ENTITY:
Oklahoma State Board of Health

INTENDED RULEMAKING ACTION:

Adoption by the Board of Health, of revisions to the permitting system and increases in the permit/renewal fees under Regulation 1.4, Air Resources Management - Permits Required.

Summary

* * *

Background

* * *

Need and Effect of the Rule:

Operating funds for the State Air Quality Service have been reduced annually for the past several years. The existing fee system cannot begin to cover the cost of permit service and other efforts expended by the Department annually in conjunction with the permit system. This new system should recoup those funds lost in previous years and provide a source of funds in the future. The new system, as devised, should place a more equitable portion of the regulatory costs on those facilities emitting air pollutants.

Contents of the Rules:

09/24/87

REGULATION 1.4

Air Resources Management
Permits Required

Permits

(Note: the Department of Libraries declined to publish the proposed amendments)

AUTHORITY FOR RULEMAKING:

63 O.S. 1981 Section 1-1801 et seq.
63 O.S. Supp. 1986, Section 1-106.1

COST/BENEFIT ANALYSIS:

A cost/benefit analysis will be prepared and will be available for inspection in Room 905 of the State Health Department Building, 1000 N.E. 10th Street, Oklahoma City, Oklahoma.

Gentlemen:

PROPOSED REVISION TO REGULATION 1.4 OKLAHOMA CLEAN AIR ACT AIR RESOURCES
MANAGEMENT PERMITS REQUIRED

Shell Pipe Line Corporation operates and maintains crude oil storage tanks in the State of Oklahoma. This letter is to express our opposition to that portion of the proposed revision of Regulation 1.4 of the Oklahoma Clean Air Act, which would require an annual permit renewal fee for each existing operating source.

Shell Pipe operates approximately 43 crude oil storage tanks which are properly permitted under the Oklahoma Clean Air Act and are the source of minor air contaminant emissions, if any. The annual fee for these minor emission sources is a tax which we believe should not be levied as long as we are in compliance with the regulations and file the required annual reports.

Shell Pipe Line Corporation shares the State of Oklahoma's goal to protect and enhance Oklahoma clean air resources and assure attainment of the ambient air quality. However, we believe that this should not be accomplished through an annual tax on facilities which have emissions well below the limitations of the Clean Air Act.

Sincerely,

A handwritten signature in cursive script that reads "G. H. Sherwin".

August 19, 1987

MEMORANDUM

To: John W. Drake, Chief
Air Quality Service

From: D. G. Doughty *DGD*

Subject: Permit Fee Workshop, August 12, 1987
Summary of Work Groups

(1) De Minimis

The de minimis work group consisted of representatives from the following companies:

Oklahoma Gas and Electric
Agrico
Dolese Brothers
Public Service Co. of Oklahoma
Western Farmers Co-op

The consensus was as follows:

Separate de minimis levels should be established both for permitting and for permit fee purposes. The levels should be established on individual pollutants (including fugitive emissions for the purpose of permit fees) and should be below 25 tons/year/pollutant.

(2) Alternative A

Representatives:

Sun Pipeline
Texas Oil & Gas
Oklahoma Gas & Electric
Total Petroleum

Consensus:

Annual fees should be invoiced based on emission inventory. Agree that a de minimis for fees is necessary and some method is needed to exempt small sources

Memorandum
John W. Drake

- 2 -

August 19, 1987

from permit requirements. Need definition of Minor Source. Also wanted provision which would not allow fees to generate more money than legislature appropriates.

Major aspect of this approach: all facilities renewals be charged a base rate of \$100 plus \$50 added per each source up to \$500 maximum.

Construction permit = Major \$2,000
Minor \$1,000

Operating permit = Major \$1,500
Minor \$750

(3) Alternative B (Kansas Approach)

Representatives:

St. Joe Resources
Sheffield Steel
Witco
Public Service Co. of Oklahoma
Okla. City-County Health Dept.
Cities Service
General Motors

Consensus:

Reaffirmed the Kansas approach of several categories, ranked in order of fee rate, and a multiplier assigned. Fee to equal \$50 per class number (classes 1 through 10). Renewal annually; assessment on a facility basis using the definition of facility found in Regulation 1.4 (#6).

New sources which have no predetermined category would be assigned a category based on the same criteria used to establish original categories. This assignment written into permit; such assignment appealable to Council. Existing sources not otherwise classified negotiated in same manner subject to appeal.

Renewals billed on January 1 with the payment due in 30 days. No enforcement action taken if received in offices within 10 days of due date.

Staff Analysis:

Without addressing the merits of either A or B, it would seem that nearly all of the suggestions of all three work groups can be incorporated into a final rule. The one suggestion not acceptable to the staff is the one which would link the amount of money obtained from fees to the amount of appropriations from the legislature. This is unworkable from several aspects.

Memorandum
John W. Drake

- 3 -

August 19, 1987

It is the intent of the AQS to raise only that amount of money necessary to make up for losses incurred by recent budget cuts. We believe this is what the legislature intended. The Service, however, has no control over what the legislature mandates. We believe that equating the income from fees to appropriations would not succeed in coercing the legislature, and could put us in the unenviable position of having to refund or refuse fees in a time of legislative cuts. We can think of no equitable way of refunding fees after the fact. We believe that the most manageable way of increasing or decreasing fees is at public hearing before the Council. In short, this recommendation is self-serving and would place an intolerable burden on the AQS.

The Kansas approach, in my opinion will be the easiest to administer and the easiest understood by both us and industry. I predict the greatest problem associated with this approach is objections based on particular classifications; it is however, my recommended approach.

Bill Skeith, Associated General Contractors

Absent were:

Mike Seney, Zapata Industries
Ron Bechtel, Halliburton Service
R.L. Thorstenberg, Conoco, Inc.
Ed Sexton, Midwest Carbide Corp.
Dave Blankenship, Rockwell International
Tom Carlile, Fansteel Metals
Jack Gallion, E.I.E. Associates, Inc.
S.S. Gambino, Ford Motor Co.
Paige Graening, Occidental Oil & Gas Corp.
Mike Rowten, Kerr-McGee Corp.
Jim Odendahl, Weyerhaeuser Company
Eldridge Lubber, ONG
Joe Klimoski, Waste Management
John Hughes, USPCI, Inc.
Joe Hodges, Occidental Oil & Gas Corp.
Guy Berry, American Nat'l Bank & Trust Co.

John Drake recapped Workshop I and provided statistical background on the two alternate proposals A and B.

The group then broke into 3 workgroups:

1. Deminimus definition
2. Outline and refine Alternate A
3. Outline and refine Alternate B

The workgroups, particularly the deminimus group, worked til report time.

The deminimus group did not reach a final conclusion, but made the following recommendations:

1. There should be a deminimus category.
2. The amount should be less than 25 tons. (What the precise number should be was not determined)
3. Each of the pollutants should have its own limits.

Alternative A was refined and a cap suggested.

Alternative B (copied from Kansas) using 10 classes instead of 20 was studied; recommended that a provision for new or industrial classes that had not been provided for in the 10 classes.

Several urge that the billing take place on the emission inventory which the department now has. There seemed to be a feeling that there were a number of sources and facilities which have not gotten into the system.

The Department will take the reports and come up with a proposed regulation by August 22, so a hearing can be held at the Tulsa meeting of the Air Quality Council on September 22, 1987.

Summary of the Permit/Fee Workshop Part II

August 12, 1987

Julius Kubier opened the workshop with comments and a brief summary of the previous workshop held on August 5, 1987. He stated that there were three points that needed to be addressed. The first one was the need for a de minimis to be set; the second was a need for a renewal amount to be set. It seemed that most at the previous workshop leaned toward the Kansas plan. As a result Mr. Drake and his staff were asked to apply numbers to each of the plans presented on August 5, 1987, and present them today.

The program was then turned over to John Drake. He pointed out that the staff did not have a great deal of time to work on this, but they were able to come up with some workable numbers.

The attached handout was passed out and discussed.

A participant raised the question with regard to those sources that are out there and are not reporting to us. John Drake responded that we would be naive to say that there were none out there. However, efforts would be made to locate such sources. There are also those out there that have not been contacted in several years, as the comment from the floor was made, and John Drake, responded that those facilities would in fact also receive an emission inventory update request as well as an invoice.

There was substantial concern that there were sources which would not accurately report their sources in order to avoid paying their fair share of fees. John Drake stated that we cannot send the facility on anything that we have not discussed with that facility. He invited the groups to come up with wording to be considered that would insure that such facilities did pay their part. We (the AQS) do not have an answer for this at the present time, and we need money by March. If we go out and look for these other sources, we won't have money by March. Dennis Doughty pointed out that once we become aware of a facility that is not in the system, we would send them a request for an emission inventory, which is standard procedure.

The alternatives A and B were reviewed briefly. Afterwards the participants broke up into three groups - one to work on the de minimis, one to work on the alternative A, and one to work on the alternative B. Grant Marburger of the Permit and Enforcement Division of the AQS worked with the de minimis group, while Angelo DeGiacomo of the Emission Inventory Section worked with the group on alternative A, and Larry Trent of the Emission Inventory Section worked with the group involved with alternative B.

Jim Pollard as the Chairman of the de minimis group stated that this is a very complicated issue. It was concluded that there should be a de minimis set, and that it should be set by type of pollutant. This group also felt that a category of class "O" should be added to the classification list and would include those industries with pollutant emissions which fell below the de minimis level. These facilities would in turn be charged no fee. The de minimis should be set below 25 tons per

year, but the group could not determine what that number should be. This de minimis would only apply to the fees. A comment from a participant suggested that this de minimis be tied to the Permit Division, because confusion could arise if we ended up trying to use two separate de minimis levels for separate issues. The question was asked if the zero category would still be needed, and the answer was "Yes". Dennis Doughty pointed out that it appeared that the criteria for assessing a fee might not be the same criteria for requiring a permit. Therefore, the two might be separate at first, but the common goal would be to use the same criteria in both instances. John Drake stated that he would not make a commitment then, but would go back to the office and think on it. He also pointed out that we were there to get as much input as possible from industry representatives in order to establish these fees in an equitable manner. It was pointed out that, although things were a little more set at the time of the next hearing, they could still come back and speak further.

Group A's presentation was not picked up by the recorder well enough to be deciphered.

The Kansas Approach was discussed. The first thing that was done was to set a billing date of January 1. The due date was set as thirty days after the billing date and late fees were deleted in favor of making the fees due to the AQS 10 days after the due date or enforcement action would be taken. This was proposed because there is wording in the law to cover that. They proposed that \$50 be set per class number. Regulation 1.4 definition 6 is the best definition the group could come up with for facility. The group decided that an annual renewal system would be acceptable. The concern was expressed that there be a way left to add to these classes in the event that a facility is found out there that does not fit into a class in our permitting system. Enforcement action would be taken in the form of notice of violation, if that was ignored we could come out with an administrative order and assess some fines for nonpayment. It was pointed out that we would need to drop the wording from the Kansas approach that would deem a facility to be "operating without a permit" for not paying fees.

Someone pointed out that it would simplify things if those facilities that were grandfathered were given a permit. Another party stated that it would be easier that way, but that seemed to be a gift that no one wanted to accept.

Dennis Doughty stated that the draft regulation presented would make a facility in violation of that regulation if they were operating without a permit.

It was explained that the due date was set to be 10 days after the billing date to avoid getting involved with the "we put it in the mail" excuses.

John Drake again explained that the regulation had to be made available to the public 20 days before the hearing, and as a policy the AQS has tried to make them available to the public 30 days before the hearing date for review. Then the Council holds the hearing and leaves the comment period open for 10 days after that. Then action would be taken in November. However, if the Council feels comfortable with it, they may take action in September.

Upon conclusion of the workshop, a form was provided for individuals to make their own comments and to express their preference of fee collection methodology. Seven preferred Alternative A, six preferred Alternative B, and one recommended the Alternative C. There were concerns expressed about the de minimis and the cap to be set on fees.

I. BACKGROUND

(A) AT THE MARCH 17, 1987, COUNCIL MEETING THE STAFF GAVE A PRESENTATION ON THE ERODING FUNDS OF THE AIR QUALITY SERVICE. AT THAT TIME, OUR BUDGET HAD BEEN CUT APPROXIMATELY \$100,000. THE STAFF PROPOSED TO RAISE THE CURRENT FEE SCHEDULE TO MAKE UP THESE LOSSES.

(B) THE FY-88 FUNDS WERE AGAIN REDUCED ANOTHER \$128,500 FROM THE FY-87 APPROPRIATIONS. AT THE MAY COUNCIL MEETING A PROPOSED REVISION TO REGULATION 1.4 WAS PRESENTED AT PUBLIC HEARING. THIS PROPOSAL, WHICH WAS CALCULATED TO RAISE APPROXIMATELY \$228,000 IN FEES, WAS VIGOROUSLY CHALLENGED AND CRITICIZED BY INDUSTRY. THIS HEARING WAS CONTINUED UNTIL THE JULY COUNCIL MEETING. THE COUNCIL ALSO INSTRUCTED THE STAFF TO MAIL OUT SUPPLEMENTAL NOTICES TO SMALLER OPERATIONS WHICH MAY NOT HAVE BEEN AWARE OF THESE PROPOSALS.

THE STAFF PREPARED AND MAILED OUT OVER 200 OF THESE SPECIAL NOTICES ON JUNE 12.

(C) A REVISED PROPOSAL WAS PRESENTED AT PUBLIC HEARING IN JULY. INDUSTRY WAS WELL REPRESENTED AND AGAIN VIGOROUSLY CHALLENGED THE STAFF PROPOSAL.

AFTER THE HEARING WAS CONCLUDED, THE COUNCIL AGAIN CONTINUED THE HEARING UNTIL SEPTEMBER. THE COUNCIL ALSO DIRECTED THE STAFF TO CONDUCT SUFFICIENT WORKSHOP MEETINGS TO INVESTIGATE ALTERNATIVE APPROACHES WHICH MIGHT RESOLVE THE INDUSTRY CONCERNS.

TWO WORKSHOPS WERE CONDUCTED ON AUGUST 5th AND AUGUST 12th. THESE WORKSHOPS WERE HOSTED BY THE STATE CHAMBER OF COMMERCE.

(D) WORKSHOP RESULTS

(1) AT THE FIRST WORKSHOP, THE STAFF PRESENTED THEIR APPROACH.

OG&E PRESENTED ALTERNATIVE "A", WHICH WOULD HAVE SET A BASE FEE FOR EACH FACILITY AND AN ADDITIONAL CHARGE FOR EACH POINT SOURCE UP TO A SET MAXIMUM.

ALTERNATIVE "B" WAS PRESENTED BY THE GAS PROCESSORS; THIS METHOD IS THE ONE CURRENTLY IN USE IN THE STATE OF KANSAS.

THE KANSAS METHOD CLASSIFIES ALL FACILITIES INTO ONE OF 20 CLASSES AND A DOLLAR AMOUNT IS MULTIPLIED BY THE CLASS NUMBER TO DETERMINE THE ANNUAL FEE.

(2) AT THE SECOND WORKSHOP, THREE WORK GROUPS WERE FORMED, EACH GROUP ADDRESSING RESPECTIVELY, THE ISSUES OF DE MINIMIS, ALTERNATIVE "A" AND ALTERNATIVE "B".

ALTHOUGH NO SPECIFIC LANGUAGE WAS FORTHCOMING FROM THESE WORK GROUPS, EACH GROUP TACKLED THE PROBLEMS ASSOCIATED WITH THEIR GROUP AND PRESENTED A CONSENSUS AT THE CONCLUSION OF THE SESSION. THE STAFF HAS ATTEMPTED TO INCORPORATE ALL OF THE SUGGESTIONS INTO THE PROPOSAL PRESENTED HERE TODAY. THE ONE SUGGESTION NOT ACCEPTABLE TO THE STAFF IS THE ONE WHICH WOULD NOT ALLOW FEES TO GENERATE MORE MONEY THAN THE LEGISLATURE APPROPRIATES. WE BELIEVE THIS WOULD BE

ADMINISTRATIVELY VERY DIFFICULT AND MORE APPROPRIATELY HANDLED BY A RULE CHANGE SETTING THE FEES BY REGULATION.

(3) SUMMARY OF WORKSHOP RESULTS

THE CONSENSUS OF THE WORK GROUPS IS AS FOLLOWS:

(a) SEPARATE DE MINIMIS LEVELS SHOULD BE ESTABLISHED BOTH FOR PERMITTING AND FOR PERMIT FEE PURPOSES. THE LEVELS SHOULD BE ESTABLISHED ON INDIVIDUAL POLLUTANTS AND SHOULD BE BELOW 25 T/YR. THIS SUGGESTION WAS INCORPORATED INTO THE STAFF PROPOSAL AT 1.4.1(b)(3)(A) WHICH SETS AN EMISSION RATE OF 1 LB/HR BEFORE THE REQUIREMENT FOR A PERMIT IS TRIGGERED, AND SECTION 1.4.1(c)(4)(B) WHICH SETS A DE MINIMIS RATE OF 10 TONS/YEAR FOR THE PURPOSES OF PERMIT RENEWAL FEES.

Consensus #2

(b) ANNUAL FEES SHOULD BE INVOICED BASED ON EMISSIONS INVENTORY. THIS IS SET FORTH IN THE STAFF PROPOSAL UNDER SECTION 1.4.1(c)(4)(C)(ii).

Consensus #3

(c) NEED DEFINITION OF MINOR SOURCE
THE STAFF PROPOSAL SETS FORTH A DEFINITION AT SECTION 1.4.1(c)(1)(C). THE DEFINITION IS THE SAME AS WAS PROPOSED IN JULY, BUT IS MORE MEANINGFUL BECAUSE OF THE DE MINIMIS QUANTITIES SET OUT IN THE CURRENT VERSION.

Consensus #4

AN UPPER LIMIT SHOULD BE SET FOR RENEWAL FEES.

THE STAFF PROPOSAL, AT SECTION 1.4.1(c)(4)(C) WOULD SET A MAXIMUM RENEWAL FEE OF \$500 PER YEAR. THIS WOULD BE A MAXIMUM PER FACILITY; A DEFINITION OF FACILITY HAS BEEN PROVIDED, AS WAS ALSO SUGGESTED.

II. STAFF PROPOSAL

(A) THE STAFF PROPOSAL WAS DISTRIBUTED AUGUST 21st, 1987. IT BASICALLY FOLLOWS THE KANSAS, OR ALTERNATIVE "B".

MAJOR SOURCE CONSTRUCTION PERMITS ARE SET AT \$2,000 AND OPERATING PERMITS AT \$1,500.

MINOR SOURCES GREATER THAN 25 TON/YEAR BUT LESS THAN 100 TON/YEAR WOULD BE ASSESSED A CONSTRUCTION PERMIT FEE OF \$1,000 AND AN OPERATING PERMIT FEE OF \$250.

MINOR SOURCES EMITTING ^{GREATER} ~~LESS~~ THAN 1 LB/HOUR BUT ^{LESS} ~~MORE~~ THAN 25 TON/YEAR WOULD BE ASSESSED A CONSTRUCTION PERMIT FEE OF \$200 AND AN OPERATING FEE OF \$100.

SHOULD THE STAFF REVIEW A PERMIT APPLICATION AND DETERMINE THAT A PERMIT IS NOT REQUIRED, THE ORIGINAL FEE WILL BE RETURNED UPON SUBMISSION OF A \$100 DETERMINATION FEE.

(B) PERMIT RENEWAL FEES AND RENEWAL EQUIVALENTS ARE BASED ON THE 10 CATEGORIES OF FACILITIES SET FORTH IN THE TABLE. EACH CLASS IS ASSIGNED A NUMBER FROM 1 TO 10. THE RENEWAL FEE IS DETERMINED BY MULTIPLYING \$50 TIMES THE CLASS NUMBER. EXAMPLE: IF THE SOURCE TYPE WERE A PETROLEUM REFINERY OR A COAL-FIRED ELECTRIC POWER GENERATING FACILITY, THE CLASS NUMBER ASSIGNED IS 10. $\$50 \times 10 = \500 RENEWAL PER YEAR. THIS IS THE MAXIMUM PER FACILITY.

(C) SELECTION OF APPROACH

THE STAFF BELIEVES THAT ALL OF THE APPROACHES HAVE MERIT. BASED ON THE WORKSHOP RESULTS, THERE WAS NO CLEAR CUT CONSENSUS AS TO WHICH APPROACH WAS FAVORED. IT SEEMED CLEAR THAT THE ORIGINAL STAFF APPROACH WAS FAVORED THE LEAST, AND THE KANSAS APPROACH, IF NOT A UNANIMOUS FAVORITE, WAS AT LEAST ACCEPTABLE TO INDUSTRY AS A WHOLE. THE APPROACH IS PERFECTLY ACCEPTABLE TO THE STAFF AND WE BELIEVE WILL SIMPLIFY THE ADMINISTRATION OF THE REGULATION FOR BOTH THE SERVICE AND INDUSTRY. THE STAFF, THEREFORE, CHOSE TO BASE TODAY'S PROPOSAL ON THE KANSAS APPROACH, OR THE ALTERNATIVE "B".

Staff recommends that the Council take action on this Reg. today.

AN EQUAL OPPORTUNITY EMPLOYER

August 21 1987

MEMORANDUM

To Oklahoma Patrons

From: John W. Drake, Chief
Air Quality Service

John Drake

Subject: Revision of Regulation 1.4 Air Resource Management,
Permits Required Concerning Permits Fees

At the March 1987 Air Quality Council meeting, the Air Quality Service made a presentation showing that the funds to operate the Service had been "eroding" each year and the work was increasing. The conclusion of the presentation indicated the staff would present a proposed revision to the fee schedule to make up the approximately \$100,000 in erosion plus any FY-88 reductions in appropriations. When the legislature made the OSDH appropriation for this fiscal year, the AQS was reduced \$128,500 from the FY-87 appropriations. Thus, the staff presented at the May and July meetings a revision to the Council at public hearing designed to secure \$228,000 per year in fees.

At the July hearing, the regulated industry challenged all aspects of the staff's proposal concerning annual fees including equity, legality and the substance of the proposal. There was also concern expressed about the New Source fees and their reasonableness. The Council, after this hearing, decided to continue the hearing until the September Council meeting. Further, they directed the staff to conduct workshop-type meetings with the regulated community to investigate alternative approaches that might achieve the goal. The State Chamber of Commerce was also requested to host such meeting with the staff. These workshops were conducted on August 5th and 12th.

At the first workshop, presentations were made on the staff's approach and two alternatives. Alternative "A" presented by OG&E suggested that there should be one fee for every facility being directly regulated by the Service and an additional charge for each point (source operation) within the facility up to a maximum. Alternative "B" was presented by the Gas Processors Association and is the Kansas method of charging annual fees. This approach classifies all facilities into one of 20 classes and then a dollar amount is multiplied by the class number to determine the annual fee. In Kansas, this system is applied against about 1400 facilities and raises approximately \$200,000 per year.

The staff was requested to expand on these approaches and have the second workshop to further discuss the detail. The format of the second workshop was a brief presentation by the staff recapping each alternative; three work groups to discuss alternative A, alternative B and de minimis; reports from the work groups; and an individual report of preferences and concerns.

2153

Memorandum
August 21, 1987
Page two

The individual reports did not give a clear consensus as to the preferred approach. Alternative "A" was preferred by six, alternative "B" was preferred by five, the State's approach was preferred by one and two indicated either A or B would be appropriate.

Without a clear consensus, the staff elected to develop and present the B alternative in the proposed regulation revision to the Council for hearing in September. The use of facilities from the AQS emission inventory data base unrelated to emission points (source operations) will be the most convenient from the AQS administrative standpoint.

We are also including proposed revisions to Regulation 1.1 Defining Terms Used in Oklahoma Air Pollution Control Regulations wherein a definition of PM-10 is added, and 1.2 Air Quality Standard and Increments to adopt the recently promulgated National Ambient Air Standard for PM-10 and deleting the current standard for total suspended particulate (TSP). These are necessary as part of the State's requirement to develop a State Implementation Plan (SIP) for PM-10.

I would also advise you that the September Air Quality Council meeting originally scheduled for September 15 has been rescheduled for September 22, but still to be held in Tulsa at the City-County Health Department.
