2/19/97 AQC

MEMORANDUM

DATE: February 5, 1997

TO: Air Quality Council

FROM: Larry Byrum, Director 
AIR QUALITY DIVISION

RE: Proposed new Part 3, Municipal Waste Combustors, to Subchapter 17.

On December 6, 1996 the U.S. Court of Appeals for the District of Columbia Circuit handed down a decision vacating, in their entirety, the EPA's 1995 standards for municipal waste combustors (MWC) contained in 40 CFR 60, Subpart Cb. An industry group petitioned the Court on the basis that the 1995 standards exceeded the EPA's statutory authority under the Clean Air Act. The standards were based on the aggregate municipal solid waste (MSW) combustion capacity of the plant, rather than on the MSW capacity of each MWC unit. The court found that section 129 of the Act established two size categories of MWC units based on unit, rather than facility, capacity. Thus, the Court vacated, in their entirety, the 1995 standards and agreed with the petitioners that EPA did not have the authority to ignore the categories Congress had established.

In August, the Air Quality Division (AQD) proposed MWC rules based on the 1995 standards. You, as a Council, held a hearing on the proposed rules on October 15, 1996 and decided to continue the hearing until your next regularly scheduled meeting, which will be on February 19, 1997. At that time, it is anticipated, AQD staff will advise the Council on the status of the 1995 standards and **recommend no action be taken, on the proposed State rule revision, until EPA has revised and reissued the federal rules.**

Enclosed is a copy of the Court's December 6, 1996 decision.

5501

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

**SUBCHAPTER 17. INCINERATORS
PART 1. GENERAL PROVISIONS**

252:100-17-1. Purpose

The purpose of this Subchapter is to deem it unlawful to burn refuse in any incinerator except in a multiple-chambered incinerator or in equipment determined by the Director to be equally effective for the purpose of air pollution control; and to set forth operating requirements and emission limitations for Municipal Waste Combustors.

252:100-17-2. Effective date; applicability

This Subchapter shall become operative one year from and after July 21, 1970. It will apply to any and all incinerators utilized within the State of Oklahoma.

252:100-17-3. Prohibition on density of emissions

(a) **Prohibition.** No person shall cause, suffer, allow, or permit the discharge of smoke from an incinerator of a density darker than number one (1) on the Ringelmann Chart or a visible emission of such an equivalent opacity as to obscure a certified visible emission evaluator's view to a degree greater than number one (1) on the Ringelmann Chart.

(b) **Exemptions.** Subsection 252:100-17-3(a) shall not apply to:

- (1) visible emissions consisting of uncombined water droplets; or,
- (2) smoke, the density of which is not darker than number three (3) of the Ringelmann Chart for a period aggregating no more than five (5) minutes in any sixty (60) consecutive minutes or more than twenty (20) minutes in any twenty-four (24) hour period.

252:100-17-4. Prohibition on pounds per hour of emissions

No person shall cause or allow to be emitted into the open air from any incinerator equipment, fly ash or other particulate matter in quantities greater than shown in 252:100-17-6. Solid fuels charged will be considered as part of the refuse weight, but No. 1 and No. 2 fuel oil and gaseous fuels and combustion air will not be so considered.

252:100-17-5. Incinerator design requirements

Hereafter no person shall operate an incinerator unless:

- (1) It is provided with an auxiliary burner for the purpose of maintaining a temperature of at least 800°F in the primary combustion chamber.
- (2) It has a secondary burner for use when necessary to eliminate smoke.
- (3) It is a type of incinerator design that can be demonstrated to the Director to be effective in accordance with the provisions of this Subchapter. The burden of proof shall rest upon the

owner of the proposed incinerator.

(4) It complies with generally recognized good practices and all applicable provisions of this Subchapter.

(5) Full and proper use is made of all components and appurtenances thereof.

252:100-17-6. Allowable emission of particulates

(a) Allowable emissions for incinerators with capacities in excess of 100 lb/hr are set forth in Appendix A of this Chapter.

(b) Allowable emissions for incinerators with capacities less than 100 lbs/hr are set forth in Appendix B of this Chapter.

PART 3. MUNICIPAL WASTE COMBUSTORS [NEW]

252:100-17-15. Applicability [NEW]

(a) Part 3 of this subchapter applies to each municipal waste combustor unit for which construction commenced on or before September 20, 1994, which is located at a municipal waste combustor plant with an aggregate plant combustion capacity greater than 35 megagrams (38.58 tons) of municipal solid waste per day.

(b) Any waste combustion unit located at a medical, industrial or other type of waste combustor plant that meets the capacity specifications in paragraph (a) of this section and is subject to a federally enforceable permit is not subject to this part. The federally enforceable permit must limit the maximum amount of municipal solid waste combusted at the plant to less than or equal to 10 megagrams (11.02 tons) per day. To obtain this exemption the owner or operator must:

(1) notify the Department of Environmental Quality (DEQ) of an exemption claim;

(2) provide the DEQ with a copy of the federally enforceable permit that limits the firing of municipal solid waste to less than 10 megagrams (11.02 tons) per day, and;

(3) keep records of the amount of municipal solid waste fired on a daily basis.

(c) Physical or operational changes made to an existing municipal waste combustor unit primarily for complying with this rule are not considered a modification or reconstruction. Therefore, they do not result in the unit becoming subject to Eb of 40 C.F.R. part 60 [or a State rule implementing subpart Eb of 40 C.F.R. Part 60].

(d) A qualifying small power production facility, (as defined in section 3(17)(C) of the Federal Power Act (16 U.S.C. 796(17)(C)), that produces electric energy from homogeneous waste is not subject to this part if the owner/operator of the facility:

(1) notifies the DEQ of an exemption claim, and

(2) provides the DEQ data documenting that the facility qualifies for this exemption.

(e) A qualifying cogeneration facility, (as defined in section 3(18)(B) of the Federal Power Act (16 U.S.C. 796(18)(B)), that burns homogeneous waste to produce electric energy, steam, or other useful energy used for industrial, commercial, heating, or cooling purposes, is not subject to this part if the owner or operator of

the facility:

- (1) notifies the DEQ of an exemption claim, and
- (2) provides the DEQ data documenting that the facility qualifies for this exemption.

(f) Any unit combusting a single-item waste stream of tires is not subject to this part if the owner or operator of the unit:

- (1) notifies the DEQ of an exemption claim, and
- (2) provides the DEQ with data documenting that the unit qualifies for this exemption.

(g) Any unit required to have a permit under section 3005 of the Solid Waste Disposal Act is not subject to this part.

(h) Any materials recovery facility (including primary or secondary smelters) that combusts waste for the primary purpose of recovering metals is not subject to this part.

(i) Any cofired combustor located at a plant that meets the capacity specifications in paragraph (a) of this section is not subject to this part if the owner or operator:

- (1) notifies the DEQ of an exemption claim;
- (2) provides the DEQ with a copy of the federally enforceable permit, and;
- (3) keeps separate records, on a calendar quarter basis, of the weight of municipal solid waste and the weight of all other fuels combusted at the cofired combustor.

(j) Air curtain incinerators that meet the capacity specifications in paragraph (a) of this section and combust a 100 percent yard waste fuel stream are exempt from all provisions of this part, except:

- (1) the opacity limit under Section 17 of this Subchapter;
- (2) the testing procedures under Section 26 or this Subchapter, and;
- (3) the reporting and recordkeeping provisions under Section 27 of this Subchapter.

(k) Air curtain incinerators that meet the capacity specifications in paragraph (a) of this section and combust municipal solid waste, other than yard waste, are subject to all provisions of this part.

(l) Pyrolysis/combustion units that are an integrated part of a plastics/rubber recycling unit are not subject to this part if the owner or operator of the unit maintains records of:

- (1) the weight of plastics, rubber, and/or rubber tires processed on a calendar quarter basis;
- (2) the weight of chemical plant feedstocks and petroleum refinery feedstocks produced and marketed on a calendar quarter basis, and;
- (3) the name and address of the purchaser of the feedstocks.

The combustion of gasoline, diesel fuel, jet fuel, fuel oils, residual oil, refinery gas, petroleum coke, liquefied petroleum gas, propane, or butane produced by chemical plants or petroleum refineries that use feedstocks produced by plastics/rubber recycling units are not subject to this part.

(m) Part 3 shall become effective [date to be inserted later].

252:100-17-16. Definitions [NEW]

Terms used but not defined in this part have the meaning given to them in the Oklahoma Clean Air Act and OAC 252:100-1-3 of this title and subpart A and Eb of 40 C.F.R. part 60.

"Administrator" for the purpose of this rule will mean the 'Executive Director' of the Department of Environmental Quality (DEQ).

"Affected facility" means each municipal waste combustor unit located within a municipal waste combustor plant with an aggregate municipal waste combustor plant capacity greater than 35 megagrams per day of municipal solid waste for which construction commenced on or before September 20, 1994.

"Air Curtain Incinerator" means an incinerator that operates by forcefully projecting air across an open chamber or pit in which burning occurs. Incinerators of this type can be constructed above or below ground and with or without refractory walls and floors.

"Cofired combustor" means a unit combusting municipal solid waste with non-municipal solid waste fuel (e.g., coal, industrial process waste) and subject to a federally enforceable permit which limits the unit to combusting a fuel feed stream that contains 30 percent or less (by weight of total fuel feed stream), of municipal solid waste as measured on a calendar quarter basis.

"Homogeneous waste" means wastes that consist of a single substance such as automotive tires or used oil, but does not include refuse-derived fuel.

"Large municipal waste combustor plant" means a municipal waste combustor plant with a municipal waste combustor aggregate capacity for affected facilities that is greater than 225 megagrams (248.02 tons) per day of municipal solid waste.

"Municipal waste combustor plant" means one or more municipal waste combustor units at the same location for which construction was commenced on or before September 20, 1994.

"Municipal waste combustor plant capacity" means the aggregate municipal waste combustor unit capacity of all municipal waste combustor units at a municipal waste combustor plant for which construction commenced on or before September 20, 1994.

"Pyrolysis/combustion unit" means a unit that produces gases, liquids or solids through the heating of municipal solid waste. The gases, liquids or solids produced are combusted and emissions are vented to the atmosphere.

"Small municipal waste combustor plant" means a municipal waste combustor plant with a municipal waste combustor capacity for affected facilities that is greater than 35 megagrams (38.58 tons) per day, but equal to or less than 225 megagrams (248.02 tons) per day of municipal solid waste.

252:100-17-17. Standards for particulate matter and opacity [NEW]
(a) Emission limits for particulate matter. No owner or operator of an affected facility located within a large or small municipal waste combustor plant shall cause to be discharged into the atmosphere from that affected facility, any gases that contain particulate matter in excess of:

(1) Large MWC plants: 27 milligrams per dry standard cubic meter, corrected to 7 percent oxygen;

(2) Small MWC plants: 70 milligrams per dry standard cubic meter, corrected to 7 percent oxygen.

(b) Emission limits for opacity. No owner or operator of an affected facility located within a large or small municipal waste combustor plant shall cause to be discharged into the atmosphere from that affected facility, any gases that exhibit greater than 10 percent opacity (6-minute average).

252:100-17-18. Standards for municipal waste combustor metals [NEW]

(a) Emission limits for cadmium. No owner or operator of an affected facility located within a large or small municipal waste combustor plant shall cause to be discharged into the atmosphere from that affected facility, any gases that contain cadmium in excess of:

(1) Large MWC plants: 0.040 milligrams per dry standard cubic meter, corrected to 7 percent oxygen;

(2) Small MWC plants: 0.10 milligrams per dry standard cubic meter, corrected to 7 percent oxygen.

(b) Emission limits for lead. No owner or operator of an affected facility located within a large or small municipal waste combustor plant shall cause to be discharged into the atmosphere from that affected facility, any gases that contain lead in excess of:

(1) Large MWC plants: 0.49 milligrams per dry standard cubic meter, corrected to 7 percent oxygen;

(2) Small MWC plants: 1.6 milligrams per dry standard cubic meter, corrected to 7 percent oxygen.

(c) Emission limits for mercury. No owner or operator of an affected facility located within a large or small municipal waste combustor plant shall cause to be discharged into the atmosphere from that affected facility, any gases that contain mercury in excess of 0.080 milligrams per dry standard cubic meter or 15 percent of the potential mercury emission concentration (an 85-percent reduction by weight), corrected to 7 percent oxygen, whichever is less stringent.

252:100-17-19. Standards for municipal waste combustor acid gases expressed as sulfur dioxide and hydrogen chloride [NEW]

(a) Emission limits for sulfur dioxide. No owner or operator of an affected facility located within a large or small municipal waste combustor plant shall cause to be discharged to the atmosphere from that affected facility, any gases that contain sulfur dioxide in excess of:

(1) Large MWC plants: 31 parts per million by volume or 25 percent of the potential sulfur dioxide emission concentration (75 percent reduction by weight or volume), corrected to 7 percent oxygen (dry basis), whichever is less stringent. Compliance with this emission limit is based on a 24-hour daily geometric mean.

(2) Small MWC plants: 80 parts per million by volume or 50 percent of the potential sulfur dioxide emission concentration

(50 percent reduction by weight or volume), corrected to 7 percent oxygen (dry basis), whichever is less stringent. Compliance with this emission limit is based on a 24-hour geometric mean.

(b) Emission limits for hydrogen chloride. No owner or operator of an affected facility located within a large or small municipal waste combustor plant shall cause to be discharged into the atmosphere from that affected facility, any gases that contain hydrogen chloride in excess of:

(1) Large MWC plants: 31 parts per million by volume or 5 percent of the potential hydrogen chloride emission concentration (95 percent reduction by weight or volume), corrected to 7 percent oxygen (dry basis), whichever is less stringent;

(2) Small MWC plants: 250 parts per million by volume or 50 percent of the potential hydrogen chloride emission concentration (50 percent reduction by weight or volume), corrected to 7 percent oxygen (dry basis), whichever is less stringent.

252:100-17-20. Standards for municipal waste combustor organics expressed as total mass dioxins/furans [NEW]

(a) No owner or operator of an affected facility located within a large municipal waste combustor plant shall cause to be discharged into the atmosphere from that affected facility, any gases that contain dioxins/furans in excess of the limits specified in either paragraph (a)(1) or (a)(2) of this section, as applicable.

(1) The emission limit for affected facilities that employ an electrostatic precipitator-based emission control system is 60 nanograms per dry standard cubic meter (total mass), corrected to 7 percent oxygen.

(2) The emission limit for affected facilities that do not employ an electrostatic precipitator-based emission control system is 30 nanograms per dry standard cubic meter (total mass), corrected to 7 percent oxygen.

(b) No owner or operator of an affected facility located within a small municipal waste combustor plant shall cause to be discharged into the atmosphere from that affected facility any gases that contain dioxins/furans in excess of 125 nanograms per dry standard cubic meter (total mass), corrected to 7 percent oxygen.

252:100-17-21. Standards for nitrogen oxides [NEW]

(a) No owner or operator of affected facilities located within a large municipal waste combustor plant shall cause to be discharged into the atmosphere from those affected facilities, any gases that contain nitrogen oxides in excess of the limits specified in this paragraph. Emission limits for the nitrogen oxides concentration level for each type of affected facility are as follows:

Nitrogen Oxides Guidelines

<u>Municipal Waste Combustor Technology</u>	<u>Nitrogen oxides emission limit (ppm by volume)^a</u>
<u>Mass burn waterwall</u>	<u>200</u>
<u>Mass burn rotary waterwall</u>	<u>250</u>
<u>Refuse-derived fuel combustor</u>	<u>250</u>
<u>Fluidized bed combustor</u>	<u>240</u>
<u>Mass burn refractory combustor</u>	<u>no limit</u>
<u>Other^b</u>	<u>200</u>

^a Corrected to 7 percent oxygen, dry basis.

^b Excludes mass burn refractory municipal waste combustors.

(b) Nitrogen oxides emissions averaging is allowed as specified in paragraphs (b)(1) through (b)(5) of this section.

(1) An owner or operator of a large municipal waste combustor plant may elect to implement a nitrogen oxides emissions averaging plan for the affected facilities that are located at that plant and that are subject to this part, except as specified in paragraphs (b)(1)(A) and (b)(1)(B) of this section.

(A) Municipal waste combustor units subject to subpart Ea or Eb of 40 C.F.R. part 60 cannot be included in the emissions averaging plan.

(B) Mass burn refractory municipal waste combustor units cannot be included in the emissions averaging plan.

(2) Prior to implementing the nitrogen oxides emissions averaging plan, the affected facilities to be included must be identified in the initial performance test report specified in 40 C.F.R. 60.59b(f) or in the annual report specified in 40 C.F.R. 60.59b(g), as applicable. The affected facilities which comprise the averaging plan may be redesignated each calendar year. Partial year redesignation is allowable with state approval.

(3) To implement the emissions averaging plan, the average daily (24-hour) nitrogen oxides emission concentration level discharged from the affected facilities to be included in the averaging plan must be no greater than the levels specified in this part. Emission limits for the nitrogen oxides concentration level for each type of affected facility are as follows:

Nitrogen Oxides Limits

<u>Municipal waste combustor technology</u>	<u>Nitrogen oxides emission limit (ppm by volume)^a</u>
<u>Mass burn waterwall</u>	<u>180</u>
<u>Mass burn rotary waterwall</u>	<u>220</u>
<u>Refuse-derived fuel combustor</u>	<u>230</u>
<u>Fluidized bed combustor</u>	<u>220</u>
<u>Other^b</u>	<u>180</u>

^a Corrected to 7 percent oxygen, dry basis.

^b Excludes mass burn refractory municipal waste combustors.

Mass burn refractory municipal waste combustors may not be included in an emissions averaging plan.

(4) Under the emissions averaging plan, the average daily nitrogen oxides emissions specified in paragraph (b) (3) of this section shall be calculated using the following equation. Affected facilities that are off-line shall not be included in calculating the average daily nitrogen oxides emission level.

$$\text{NOX}_{24\text{-hr}} = \frac{\sum_{i=1}^h (\text{NOX}_i) (S_i)}{\sum_{i=1}^h (S_i)}$$

where:

NOX_{24-hr} = 24-hour daily average nitrogen oxides emission concentration level for the emissions averaging plan (parts per million by volume corrected to 7 percent oxygen).

NOX_{i-hr} = 24-hour daily average nitrogen oxides emission concentration level for affected facility i (parts per million by volume, corrected to 7 percent oxygen), calculated according to the procedures in 40 C.F.R. 60.58b(h).

S_i = maximum demonstrated municipal waste combustor unit load for affected facility i (pounds per hour steam or feedwater flow as determined in the most recent dioxin/furan performance test).

h = total number of affected facilities being included in the daily emissions average.

(5) For any day an affected facility included in the emissions averaging plan is off-line, the owner or operator of the municipal waste combustor plant must demonstrate compliance according to either paragraph (b) (5) (A) or both paragraphs (b) (5) (B) and (b) (5) (C) of this section.

(A) Compliance with the applicable limits specified in (b) (3) of this part shall be demonstrated using the averaging procedure specified in paragraph (b) (4) of this section. The averaging procedure will include the affected

facilities in the plan that are on-line.

(B) For each of the affected facilities included in the emissions averaging plan, the nitrogen oxides emissions shall be calculated on a daily basis. The nitrogen oxides emissions level shall be equal to or less than the maximum daily nitrogen oxides emission levels achieved by that affected facility on any of the days during which the emissions averaging plan was achieved with all affected facilities on-line during the most recent calendar quarter. The requirements of this paragraph do not apply during the first quarter of operation under the emissions averaging plan.

(C) The average nitrogen oxides emissions (kilograms per day) calculated according to paragraph (b)(5)(C)(ii) of this section shall not exceed the average nitrogen oxides emissions (kilograms per day) calculated according to paragraph (b)(5)(C)(i) of this section.

(i) The average nitrogen oxides emissions shall be calculated for all days during which the emissions averaging plan was implemented and achieved and during which all affected facilities were on-line. The average nitrogen oxides emissions (kilograms per day) shall be calculated, on a calendar year basis, according to paragraphs (b)(5)(C)(i)(I) through (b)(5)(C)(i)(III) of this section.

(I) The daily amount of nitrogen oxides emitted (kilograms per day) shall be calculated for each affected facility included in the emissions averaging plan. The calculation shall be based on the hourly nitrogen oxides data required under 40 C.F.R. 60.58b(a) through (m) and specified under 40 C.F.R. 60.58b(h)(5), the flue gas flow rate is determined using table 19-1 of EPA Reference Method 19 [or a State approved method], and the hourly average steam or feedwater flow rate.

(II) The daily total nitrogen oxides emissions shall be calculated as the sum of the daily nitrogen oxides emissions from each affected facility calculated under paragraph (b)(5)(C)(i)(I) of this section.

(III) On a calendar year basis, the average nitrogen oxides emissions (kilograms per day), shall be calculated as the sum of all daily total nitrogen oxides emissions calculated under paragraph (b)(5)(C)(i)(II) of this section divided by the number of calendar days for which a daily total was calculated.

(ii) The average nitrogen oxides emissions shall be calculated for all days during which one or more of the affected facilities under the emissions averaging plan was off-line. The average nitrogen oxides emissions (kilograms per day) shall be calculated according to paragraphs (b)(5)(C)(ii)(I) through (b)(5)(C)(ii)(III) of

this section on a calendar year basis.

(I) The daily amount of nitrogen oxides emitted (kilograms per day), for each affected facility included in the emissions averaging plan, shall be calculated based on the hourly nitrogen oxides data required under 40 C.F.R. 60.58b(a) through (m) and specified under 40 C.F.R. 60.58b(h)(5), the flue gas flow rate is determined using table 19-1 of EPA Reference Method 19 [or a state approved method], and the hourly average steam or feedwater flow rate.

(II) The daily total nitrogen oxides emissions shall be calculated as the sum of the daily nitrogen oxides emissions from each affected facility as calculated under paragraph (b)(5)(C)(ii)(I) of this section.

(III) The average nitrogen oxides emissions (kilograms per day) on a calendar year basis shall be calculated as the sum of all daily total nitrogen oxides emissions calculated under paragraph (b)(5)(C)(ii)(II) of this section divided by the number of calendar days for which a daily total was calculated.

252:100-17-22. Standards for municipal-waste combustor operating practices [NEW]

(a) No owner or operator of an affected facility located within a small or large municipal waste combustor plant shall cause to be discharged into the atmosphere from that affected facility any gases that contain carbon monoxide in excess of the emission limits specified in this part. Carbon monoxide emission limits for each type of affected facility are as follows:

Municipal Waste Combustor Operating Guidelines

<u>Municipal waste combustor technology</u>	<u>Carbon monoxide emissions level (ppm by volume)^a</u>	<u>Averaging Time</u>
<u>Mass burn waterwall</u>	<u>100</u>	<u>4 hour</u>
<u>Mass burn refractory</u>	<u>100</u>	<u>4 hour</u>
<u>Mass burn rotary refractory</u>	<u>100</u>	<u>24 hour</u>
<u>Mass burn rotary waterwall</u>	<u>250</u>	<u>24 hour</u>
<u>Modular starved air</u>	<u>50</u>	<u>4 hour</u>
<u>Modular excess air</u>	<u>50</u>	<u>4 hour</u>
<u>Refuse-derived fuel stoker</u>	<u>200</u>	<u>24 hour</u>
<u>Bubbling fluidized bed</u>	<u>100</u>	<u>4 hour</u>
<u>Circulating fluidized bed</u>	<u>100</u>	<u>4 hour</u>
<u>Pulverized coal/refuse-derived fuel mixed fuel-fired combustor</u>	<u>150</u>	<u>4 hour</u>
<u>Spreader stoker coal/refuse-derived fuel mixed fuel-fired combustor</u>	<u>200</u>	<u>24 hour</u>

^aMeasured at the combustor outlet in conjunction with a measurement of oxygen concentration, corrected to 7 percent oxygen, dry basis. Calculated as an arithmetic average.

(b) An owner or operator of an existing municipal waste combustor shall comply with all provisions specified in 40 C.F.R. 60.53b(b) and (c).

252:100-17-23. Standards for municipal waste combustor operator training and certification [NEW]

(a) Each chief facility operator and shift supervisor of each affected facility, shall obtain and maintain a current provisional operator certification from either the American Society of Mechanical Engineers [ORO-1-1994 (incorporated by reference -- see 40 C.F.R. 60.17 of subpart A of 40 C.F.R. part 60)] or a State certification program by the appropriate date specified in paragraph (a)(1) or (a)(2) of this section.

(1) For affected facilities located within small municipal waste combustor plants, no later than the date 6 months after the startup of an affected facility or 18 months after [date of State plan approval], whichever is later.

(2) For affected facilities located within large municipal waste combustor plants, no later than the date 6 months after the startup of an affected facility or 12 months after [date of State plan approval], whichever is later.

(b) Each chief facility operator and shift supervisor of each affected facility, shall have completed full certification or scheduled a full certification exam with either the American Society of Mechanical Engineers [ORO-I1994 (incorporated by reference -- see § 60.17 of subpart A of 40 C.F.R. part 60)] or a State certification program by the appropriate date specified in paragraph (b)(1) or (b)(2) of this section.

(1) For affected facilities located within small municipal waste combustor plants, no later than the date 6 months after the startup of an affected facility or 18 months after [date of state plan approval], whichever is later.

(2) For affected facilities located within large municipal waste combustor plants, no later than the date 6 months after the startup of an affected facility or 12 months after [date of State plan approval], whichever is later.

(c) No owner or operator of an affected facility shall allow the facility to be operated at any time unless one of the following persons is on duty at the affected facility: A fully certified chief facility operator, a provisionally certified chief facility operator who is scheduled to take the full certification exam according to the schedule specified in paragraph (b) of this section, a fully certified shift supervisor, or a provisionally certified shift supervisor who is scheduled to take the full certification exam according to the schedule specified in paragraph (b) of this section.

(1) The requirement specified in paragraph (c) of this section shall take effect by the appropriate date specified in paragraph (c)(1)(A) or (c)(1)(B) of this section.

(A) For affected facilities located within small municipal waste combustor plants, no later than the date 6 months

after the startup of an affected facility or 18 months after [date of State plan approval], whichever is later.

(B) For affected facilities located within large municipal waste combustor plants, no later than the date 6 months after the startup of an affected facility or 12 months after [date of State plan approval], whichever is later.

(2) If one of the persons listed in paragraph (c) of this section must leave the affected facility during their operating shift, a provisionally certified control room operator who is on-site at the affected facility may fulfill the requirement in paragraph (c) of this section.

(d) All chief facility operators, shift supervisors, and control room operators at affected facilities located within a small or large municipal waste combustor plant must complete the EPA or State municipal waste combustor operator training course no later than the date 6 months after the date of startup of the affected facility or by 12 months after [date of State Plan approvals], whichever is later.

(e) The requirement specified in paragraph (d) of this section does not apply to chief facility operators, shift supervisors, and control room operators who have obtained full certification from the American Society of Mechanical Engineers on or before [date of State plan approval].

(f) The owner or operator may request that the Department of Environmental Quality waive the requirement specified in paragraph (d) of this section for chief facility operators, shift supervisors, and control room operators who have obtained provisional certification from the American Society of Mechanical Engineers on or before [date of State plan approval].

(g) The owner or operator of an affected facility located within a small or large municipal waste combustor plant shall develop and update on an annual basis, a site-specific operating manual. The operating manual shall, at a minimum, address the elements of municipal waste combustor unit operation specified in paragraphs (g)(1) through (g)(11) of this section.

(1) A summary of the applicable standards under this part;

(2) A description of basic combustion theory applicable to a municipal waste combustor unit;

(3) Procedures for receiving, handling, and feeding municipal solid waste;

(4) Municipal waste combustor unit start-up, shutdown, and malfunction procedures;

(5) Procedures for maintaining proper combustion air supply levels;

(6) Procedures for operating the municipal waste combustor unit within the standards established under this part;

(7) Procedures for responding to periodic upset or off-specification conditions;

(8) Procedures for minimizing particulate matter carryover;

(9) Procedures for handling ash;

(10) Procedures for monitoring municipal waste combustor unit emissions; and

(11) Reporting and recordkeeping procedures.

(h) The owner or operator of an affected facility located within a small or large municipal waste combustor plant shall establish a training program to review the operating manual according to the schedule specified in paragraphs (h)(1) and (h)(2) of this section. The training shall be provided to each person who has responsibilities affecting the operation of an affected facility including, but not limited to, chief facility operators, shift supervisors, control room operators, ash handlers, maintenance personnel, and crane/load handlers.

(1) Each person specified in paragraph (h) of this section shall undergo initial training no later than the date specified in paragraph (h)(1)(A), (h)(1)(B), or (h)(1)(C) whichever is later.

(A) The date 6 months after the date of startup of the affected facility.

(B) The date prior to the day the person assumes responsibilities affecting municipal waste combustor unit operation; or

(C) Twelve months after [date of State plan approval].

(2) Annually, following the initial review required by paragraph (h)(1) of this section.

(A) The operating manual required by paragraph (h) of this section shall be kept in a readily accessible location for all persons required to undergo training under paragraph (h) of this section no later than 6 months after start-up or 12 months after [date of State plan approval]. The operating manual and records of training shall be available for inspection by the Department of Environmental Quality upon request.

252:100-17-24. Standards for municipal waste combustor fugitive ash emissions [NEW]

An owner or operator of an existing municipal waste combustor shall comply with all provisions specified in 40 C.F.R. 60.55b.

252:100-17-25. Standards for air curtain incinerators [NEW]

An owner or operator of an air curtain incinerator located at a plant which meets the plant capacity specified in paragraph (a) of 252:100-17-15 and that combusts a fuel feed stream of 100 percent yard waste, shall not cause to be discharged into the atmosphere from that incinerator, any gases that exhibit greater than 10 percent opacity (6 minute average). An opacity level of up to 35 percent (6 minute average) is permitted during startup periods within the first 30 minutes of unit operation.

252:100-17-26. Compliance and performance testing [NEW]

(a) An owner or operator of an existing municipal waste combustor shall comply with all provisions specified in 40 C.F.R. 60.58b, except for the provisions specified in 40 C.F.R. 60.58b(g)(5)(iii).

(b) Performance testing and monitoring may be accomplished by

using methods other than those specified in 40 C.F.R. 60.58b provided they have prior approval from the Executive Director.

252:100-17-27. Reporting and recordkeeping requirements [NEW]

An owner or operator of an existing municipal waste combustor shall comply with all provisions specified in 40 C.F.R. 60.59b, except the provisions for siting requirements as specified in 40 C.F.R. 60.59b(a), b(5), and d(11).

252:100-17-28. Compliance schedules (under development) [NEW]

(a) All affected facilities must comply with all requirements of this part (except the performance test) or close within 3 years following the date of issuance of a revised construction or operating permit, if a permit modification is required, or by [date 3 years after approval of the state plan] if a permit modification is not required.

(b) All affected facilities for which construction, modification, or reconstruction commenced after June 26, 1987, that are located within a large municipal waste combustor plant shall comply with the emission limit for mercury and the emission limit for dioxans/furans specified in 252:100-17-20. Compliance shall be obtained within 1 year following issuance of a revised construction or operating permit, if a permit modification is required, or by [date 1 year following approval of state plan], whichever is later.

(c) All affected facilities located within large municipal waste combustor plants that comply with all the requirements of this part (except the performance test) or close in more than 1 year but less than 3 years following the date of issuance of a revised construction or operation permit, if a permit modification is required, or after [date 1 year after approval of the State plan] and before [date 3 years after approval of the State plan], shall comply with the requirements in paragraphs (c)(1) through (c)(2) of this section.

(1) If the affected facility will close, the owner or operator of the affected facility shall submit a closure agreement that includes the date of plant closure.

(2) If the affected facility will continue to operate, the owner or operator of the affected facility shall comply with the compliance schedule in paragraphs (c)(2)(A) through (c)(2)(D).

(A) The owner or operator of the affected facility shall submit a final control plan for the affected facility to the DEQ by [state to provide date].

(B) The owner or operator of the affected facility shall award all contracts for emission control systems or process modifications as necessary to comply with the requirements of this part, by [State to provide date].

(C) The owner or operator of the affected facility shall initiate on-site construction or installation of emission control equipment or process change, as necessary to comply with the requirements of this part, by [State to provide

date].

(D) The owner or operator of the affected facility shall ensure the completion of on-site construction or installation of emission control equipment or process change, as necessary to comply with the requirements of this part, by [State to provide date].

[The State has the option of including the following additional increments of Progress in the rule with enforceable dates or in the State plan as unenforceable increments of progress.

Date for obtaining services of an architectural and engineering firm regarding the air Pollution control device(s);

Date for obtaining design drawings of the air pollution control device(s);

Date for submittal of permit modifications, if necessary;

Date for obtaining the major components of the air pollution control device(s);

Date for initiation of site preparation for installation of the air pollution control devices);

Date for initial startup of the air pollution control device(s); and

Date for initial performance test(s) of the air pollution control device(s).

(d) All affected facilities located within large municipal waste combustor plants that comply with all the requirements of this part (except the performance test) in more than 1 year but less than 3 years following the date of issuance of a revised construction or operation permit, if a permit modification is required, or after [date 1 year after approval of the State plan] and before [date 3 years after approval of the State plan], shall submit performance test results for dioxin/furan emissions that have been conducted during or after 1990 by [State to provide date]. The performance test shall be conducted in accordance with the provisions specified in 252:100-17-26 (compliance and performance testing).

MINUTES
AIR QUALITY COUNCIL

PUBLIC MEETING

Notice of Public Meeting for February 19, 1997 was forwarded to the Secretary of State's Office giving the time, date, and place of the meeting. Agendas were posted at the entrance door of the meeting room.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken: Dr. Canter - aye; Mr. Branecky - aye; Mr. Glass - aye; Ms. Slagell - aye; Mr. Breisch - aye. Absent were: Mr. Fishback, Ms. Hinkle, Mr. Albright.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the October 15, 1996 Public Meeting/Hearing. Motion was made by Mr. Branecky to approve the Minutes and second to the motion was made by Mr. Glass. Roll call as follows: Dr. Canter - aye; Mr. Branecky - aye; Mr. Glass - aye; Ms. Slagell - aye; Mr. Breisch - aye.

1997 Meeting Schedule - Mr. Breisch pointed out that the meeting schedule had been discussed in the morning briefing session. The proposed dates were: February 19 / OKC; April 15 / OKC; June 17 / Tulsa; August 19 / OKC; October 21 / Tulsa; December 15 / OKC. No additional comments were mentioned. Motion was made by Ms. Slagell to accept the meeting schedule as presented in the packet and second was made by Dr. Canter. Roll was taken as follows: Dr. Canter - aye; Mr. Branecky - aye; Mr. Glass - aye; Ms. Slagell - aye; Mr. Breisch - aye.

Election of Officers CY 97 - Floor was opened for election of

Chairman for CY 97. Nomination was made by Dr. Canter to elect Mr. Breisch as Chairman with second made by Mr. Branecky. Roll call as follows: Dr. Canter - aye; Mr. Branecky - aye; Mr. Glass - aye; Ms. Slagell - aye; Mr. Breisch - abstain.

Mr. Branecky then nominated Dr. Canter as Vice-Chairman with second made by Ms. Slagell. Roll call as follows: Dr. Canter - abstain; Mr. Branecky - aye; Mr. Glass - aye; Ms. Slagell - aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-17 INCINERATORS, PART 3, MUNICIPAL WASTE COMBUSTORS [NEW]

As protocol officer, Larry Byrum convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51. Mr. Byrum then called upon Dr. Joyce Sheedy to give the staff's position on the proposed changes.

Dr. Sheedy stated that the proposed modification incorporated the EPA guidelines contained in 40 CFR 50, Subpart C(b) for existing municipal waste combustors. However, on December 6, 1996, the U.S. Court of Appeals for the District of Columbia Circuit vacated the EPA's 1995 standards in their entirety. Dr. Sheedy also stated that the modification proposed at the October hearing were a direct result of the requirements of the Federal Clean Air Act and mirrored the standard; and that staff recommends that the modifications be held in abeyance until such time as the issue addressed by the Court is resolved.

Mr. Byrum opened the floor for discussion and Mr. Frank Erwin, City of Tulsa, stated that the City of Tulsa supported the staff's recommendation. Also Mr. Don Shandy, attorney for McKinney, Stringer & Webster, spoke on behalf of Holnam, Inc. stating that he had extensive involvement with the EPA regarding the applicability of the proposed rule and said that Holnam is in agreement with staff's recommendation.

With no further comments from audience or Council, Mr. Breisch asked for motion. Mr. Branecky made the motion to continue the hearing with the second made by Ms. Slagell. Roll call as follows: Dr. Canter - aye; Mr. Branecky - aye; Mr. Glass - aye; Ms. Slagell - aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-15 MOTOR VEHICLE POLLUTION CONTROL DEVICES [REVOKED]

As protocol officer, Larry Byrum convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51. Mr. Byrum call upon Dr. Joyce Sheedy to give staff's recommendations.

Dr. Sheedy stated that since the rule is unenforceable, revocation is recommended to satisfy efforts being made by the Agency to streamline its rules.

Mr. Breisch asked what impact the revocation of this rule would have and what advantage could be seen for keeping it. Mr. Dennis Doughty, staff attorney, advised that the Department of Public Safety has been given legislative authority to enforce this rule, not the DEQ.

Dr. Canter stated that keeping the rule within Air Quality could keep a bridge between the Federal Clean Air Act requirements and the Department of Public Safety. Ms. Slagell remarked that keeping the rule would maintain clarification of Air Quality's commitment to maintaining clean air in Oklahoma. Mr. Branecky added that keeping the rule might continue to prove as a deterrent to tampering.

With no further discussion, Mr. Breisch stated that it appeared that Council might want to leave the rule as status quo and asked for a motion. Ms. Slagell made that motion and Dr. Canter made the second. Roll call as follows: Dr. Canter - aye; Mr. Branecky - aye; Mr. Glass - aye; Ms. Slagell - aye; Mr. Breisch - aye.

NEW BUSINESS - Council brought one new business item to the staff relating to Title V Fees and Revenue. Council requested staff to develop recommendations concerning these matters and obtain related materials prior to their next meeting.

Dr. Canter stated that the Clean Air Act indicates that the Title V permit fee is to be based on a demonstrated reasonable cost for operating the permit program and that the TBA study recommended fee of \$15.19/ton to be adjusted for Consumer Price Index. Dr. Canter stated that this fee amount has been used and that this fee was based on assumptions prior to experience now gained. Dr. Canter related there have been changes in overall program such as feed and grain requirements, synthetic minors, and others that have resulted in a reduced number of Title V sources. He stated the types of information that would be helpful to the Council would be:

- Estimate the number of Title V permits to be processed,
- Comparison of this estimate to TB&A report,
- Amount of personnel expenses attributable to Title V,
- Title V expenses associated to the Tulsa office,
- Amount of budget carried over to FY97,
- Listing of all sources of the Division's revenue,
- Estimates of future Title V fees, and
- Projected staffing needs.

Mr. Branecky added that he felt he should be able to affirm the expenditures: as a Council member, to the permittees paying the fees; and to his company, the largest fee payer in the State.

A sub-committee consisting of Larry Canter, Bill Fishback, and David Branecky was enacted to help staff put the requested information together.

ADJOURNMENT: With no further business, Mr. Breisch adjourned the meeting and announced that the next regularly scheduled meeting would be held on April 15, 1997, 1996, at the Lincoln Plaza Office Complex - Brown Room 4545 North Lincoln Boulevard, Oklahoma City, Oklahoma.

NOTE: The hearing records along with the sign-in sheets are attached as an official part of these Minutes.

please notify our Department three days in advance at (405) 290-8247.

MEMORANDUM

DATE: December 1, 1997

TO: Air Quality Council

FROM: David Dyke, Assistant Director
AIR QUALITY DIVISION *DD*

RE: Proposed Revisions to Subchapter 17

PROPOSED REVISIONS TO SUBCHAPTER 17, PARTS 1 & 3

The existing Subchapter 17 has been revised and redesignated as Part 1, General Provisions, and Part 3, Incinerators. Part 1 was added to include general information such as purpose, terminology related to 40 CFR, and definitions, which would apply to all incinerators subject to the Subchapter. Part 3 covers general incinerators not subject to Part 5, Municipal Waste Combustors. The revisions in Part 3 include the replacement of references to the obsolete "Ringelmann chart" with "relative opacity". Revisions were also made to Appendices A and B for reasons of clarification and simplification.

PROPOSED ADDITION OF PART 5 & APPENDIX K TO SUBCHAPTER 17

The proposed addition to Subchapter 17 of Part 5 and new Appendix K are necessary to meet the federal requirements set forth by the Environmental Protection Agency (EPA), at 40 CFR Part 60, Subpart Cb, Emission Guidelines (EG) for Municipal Waste Combustors (MWC). The EG apply to existing MWC units with the capacity to combust more than 250 tons per day of municipal solid waste (MSW) and for which construction commenced on the unit on or before September 20, 1994.

HISTORY OF EG

On December 19, 1995, the EPA promulgated the EG and New Source Performance Standards (NSPS) for Municipal Waste Combustors in the Federal Register. Following the promulgation, an industry group petitioned the U.S. Court of Appeals for the District of Columbia on the basis that the 1995 standards exceeded the EPA's statutory authority under the Clean Air Act (Act). The standards were based on the aggregate combustion capacity of the plant, rather than on the combustion capacity of each MWC unit. The court found that section 129 of the Act established two size categories of MWCs based on

unit, rather than facility, capacity. Thus, on December 6, 1996, the Court vacated, in their entirety, the 1995 standards and agreed with the petitioners that EPA did not have the authority to ignore the categories Congress had established. Subsequently, on March 21, 1997, the court amended its initial opinion leaving in place the NSPS and the EG lines for large MWC units other than cement kilns and on August 25, 1997, a revised final rule was published in the Federal Register.

EG STANDARDS

Existing MWCs that are subject to the EG must meet emission limitations for the following pollutants:

- Metals-cadmium (Cd), lead (Pb) and mercury (Hg)
- Particulate matter (PM)
- Acid gases-expressed as sulfur dioxide (SO₂) and hydrogen chloride (HCl)
- Organic compounds-expressed as dioxins and furans
- Nitrogen oxides (NO_x)
- Carbon monoxide (CO)
- Visible Emissions (opacity)

In addition, the EG require provisional or full ASME or state operator certification of the MWC chief facility operator and shift supervisors within six months after start-up or one year after state plan approval. A certified individual is required to be on-site at all times during operation of the MWC. Site-specific training is also required for all employees involved in the operation of the MWC. Testing and monitoring requirements for emissions, operating parameters and visible emissions are also specified. All MWC are to be in full compliance by December 19, 2000.

STATE 111(d) PLAN

The EG were developed under Section 111(d) and Section 129 of the Act. Section 111(d) requires EPA to establish procedures for submitting State Plans for implementing the EG. Section 129 was added to specifically address solid waste combustion. Subpart Cb differs from other EG adopted in the past because it addresses both Sections 111(d) and 129. Section 129 requirements override the States flexibility to consider the remaining useful life of the source, whereas 111(d) requires State Plans to be 'at least as protective as the guidelines'.

Oklahoma anticipates taking its State 111(d) Plan for MWC to the Air Quality Council meeting on February 18, 1998. This plan will include a minimum of the following:

- A demonstration of the state's legal authority to carry out the Section 111(d)/129 State Plan as submitted

- Identification of enforceable state mechanisms selected by the state for implementing the EG
- An inventory of MWC plants/units in the state affected by the EG, including MWC units that have ceased operation and are not partially or totally dismantled
- An inventory of emissions from MWC units in the state
- Emission limitations for MWC units that are at least as protective as those in the EG
- Compliance schedules, extending no later than December 19, 2000
- Testing, monitoring, recordkeeping and reporting requirements
- A record of public hearing(s) on the State Plan
- Provision for annual state progress reports to EPA on implementation of the State Plan

Oklahoma has only one facility subject to the EG--Ogden Martin Systems of Tulsa, Inc., (OMST). According to the 1995 emission inventory, OMST has three units, with each unit combusting approximately 336 tons per day of MSW and a permit limiting each unit to 375 tons per day. The City of Miami MWC is rated at 36 tons per day of MSW and thus, is not subject to the EG.

This rule was presented to the Council on October 15, 1996 and February 19, 1997. At that time, staff recommendation was that no action be taken on Subchapter 17 until the revised federal rules had been promulgated. If Oklahoma doesn't submit an acceptable State Plan implementing the EG, of which the state rule is an integral part, the EPA will develop, implement and enforce a Federal Plan that is applicable to MWC units in the state.

Enclosed please find a copy of the following:

- Subparts Cb and Eb*, promulgated in the December 19, 1995, Federal Register
- The August 25, 1997, amendments to Subparts Cb and Eb
- A MWC fact sheet
- A draft of the proposed revisions to Subchapter 17, Incinerators

The proposed revisions to Subchapter 17 will be brought to public hearing at the Air Quality Council meeting on December 16, 1997.

Enclosures

*Subpart Eb, containing the NSPS for MWC, is included here because it is referenced several times in Subpart Cb.

CHAPTER 100. AIR POLLUTION CONTROL

SUBCHAPTER 17. INCINERATORS

PART 1. GENERAL PROVISIONS

252:100-17-1. Purpose

The purpose of this Subchapter is to deem it unlawful to burn refuse in any incinerator except in a multiple chambered incinerator or in equipment determined by the Director to be equally effective for the purpose of air pollution control set design and operating requirements and emission limitations for incinerators and municipal waste combustors (MWC).

252:100-17-1.1. Reference to 40 CFR

When a provision of Title 40 of the Code of Federal Regulations (40 CFR) is incorporated by reference, all citations contained therein are also incorporated by reference.

252:100-17-1.2. Terminology related to 40 CFR

When these terms are used in rules incorporated by reference, the following definitions shall apply:

"EPA Administrator" is synonymous with "Executive Director".

"Affected facility" is synonymous with "large MWC unit".

"State" is synonymous with "Department of Environmental Quality" or "DEQ".

"State plan" is a program that the State is responsible for developing and implementing to achieve compliance with the emission guidelines in Subpart Cb of 40 CFR Part 60.

252:100-17-1.3. Definitions

The following words and terms when used in this Subchapter shall have the following meaning unless the context clearly indicates otherwise:

"Air curtain incinerator" means an incinerator that operates by forcefully projecting air across an open chamber or pit in which burning occurs. Incinerators of this type can be constructed above or below ground and with or without refractory walls and floors.

"Capacity" means amount of specified wastes a unit is designed to burn. Capacity may be expressed as pounds per hour or tons per day.

"Cofired combustor" means a unit combusting municipal solid waste with non-municipal solid waste fuel (e.g., coal, industrial process waste) and subject to a federally enforceable permit which limits the unit to combusting a fuel feed stream that contains 30 percent or less (by weight of total fuel feed stream) of municipal solid waste as measured on a calendar quarter basis.

"Fly Ash" means particulate matter capable of being gasborne or airborne consisting essentially of fused ash and/or burned or unburned material.

"Homogeneous waste" means wastes that consist of a single

substance such as automotive tires or used oil, but does not include refuse-derived fuel.

"Incinerator" means a combustion device specifically designed for the destruction of solid, semi-solid, liquid, or gaseous combustible wastes by high-temperature burning, and from which the solid residues contain little or no combustible material.

"Large municipal waste combustor unit" or "Large MWC unit" or "MWC" means any equipment that has the capacity to combust more than 250 tons per day of solid, liquid or gasified municipal solid waste for which construction commenced on or before September 20, 1994. "Equipment" includes field-erected incinerators, modular incinerators, boilers, furnaces, and pyrolysis/combustion units but does not include internal combustion engines, gas turbines or other combustion devices that combust landfill gases collected by landfill gas collection systems.

"Municipal solid waste" or "Municipal-type solid waste" or "MSW" means household, commercial/retail, and/or institutional waste. Household waste includes material discarded by single and multiple residential dwellings, hotels, motels, and other similar permanent or temporary housing establishments or facilities. Commercial/retail waste includes material discarded by stores, offices, restaurants, warehouses, nonmanufacturing activities at industrial facilities, and other similar establishments or facilities. Institutional waste includes material discarded by schools, nonmedical waste discarded by hospitals, material discarded by nonmanufacturing activities at prisons and government facilities, and material discarded by other similar establishments or facilities. Household, commercial/retail, and institutional waste does not include used oil; sewage sludge; wood pallets; construction, renovation, and demolition wastes (which includes but is not limited to railroad ties and telephone poles); clean wood; industrial process or manufacturing wastes; medical waste; or motor vehicles (including motor vehicle parts or vehicle fluff). Household, commercial/retail, and institutional wastes include yard waste, refuse-derived fuel and motor vehicle maintenance materials limited to vehicle batteries and tires except as specified in section 17-15 (d) of this Part.

"Opacity" means the degree to which emissions reduce the transmission of light and obscure the view of an object in the background.

"Particulate matter" means any material that exists in a finely divided form as a liquid or solid.

"Primary combustion chamber" means the initial incinerator chamber where waste is charged, ignited and burned.

"Pyrolysis/combustion unit" means a unit that produces gases, liquids or solids through the heating of MSW. The gases, liquids or solids produced are combusted and emissions are vented to the atmosphere.

"Refuse-derived fuel" means a type of MSW produced by processing MSW through shredding and size classification.

"Secondary burner" means a supplemental burner in the secondary

chamber for the purpose of maintaining a minimum temperature and to insure the complete combustion of volatile gases and smoke.

"Smoke" means small gas or airborne particles resulting from incomplete combustion. Such particles consist of carbon, ash, and other matter present in sufficient quantities to be observable.

"Visible emissions" means any air contaminant, vapor, or gas stream which contains or may contain an air contaminant which is passed into the atmosphere and which is perceptible to the human eye.

"Yard waste" means grass, grass clippings, bushes, shrubs, and clippings from bushes and shrubs that are generated as part of maintenance activities associated with yards or other private or public lands. Yard waste does not include clean wood or construction, renovation, and demolition wastes, which are exempt from the definition of MSW in this section.

PART 3. INCINERATORS

252:100-17-2. Effective date; applicability

This subchapter shall become operative one year from and after July 21, 1970. It will apply to any and all incinerators utilized within the State of Oklahoma. This Part became effective on July 21, 1971 and applies to incinerators not subject to New Source Performance Standards (NSPS) or any other Parts in this Subchapter.

252:100-17-2.1. Exemptions

Thermal oxidizers, flares and any other air pollution control devices are exempt from the requirements of this Part.

252:100-17-3. Prohibition on density of emissions Opacity

(a) Prohibition. No person shall cause, suffer, allow, or permit the discharge of smoke from an incinerator of a density darker than number one (1) on the Ringelmann Chart or a visible emission of such an equivalent opacity as to obscure a certified visible emission evaluator's view to a degree greater than number one (1) on the Ringelmann Chart.

(b) Exemptions. Subsection 252:100-17-3(a) shall not apply to:

- (1) visible emissions consisting of uncombined water droplets, or,
- (2) smoke, the density of which is not darker than number three (3) of the Ringelmann Chart for a period aggregating no more than five (5) minutes in any sixty (60) consecutive minutes or more than twenty (20) minutes in any twenty four (24) hour period. See 252:100-25-3.

252:100-17-4. Prohibition on pounds per hour of emissions Particulate matter

No person shall cause or allow to be emitted into the open air from any incinerator equipment, fly ash or other particulate matter in quantities greater than shown in 252:100-17-6. Solid fuels charged will be considered as part of the refuse weight, but No. 1

and No. 2 fuel oil and gaseous fuels and combustion air will not be so considered. Fly ash or other particulate matter shall not exceed quantities greater than the allowable emission rate. The allowable emissions for incinerators with capacities of 100 lb/hr or greater are set forth in Appendix A of this Chapter. The allowable emissions for incinerators with capacities less than 100 lb/hr are set forth in Appendix B of this Chapter. Solid fuels charged will be considered part of the refuse weight. No. 1 and No. 2 fuel oils (distillate oils), liquified petroleum gases, gaseous fuels and combustion air will not be considered as part of the refuse weight.

252:100-17-5. Incinerator design requirements

Hereafter no person shall operate an incinerator unless an incinerator under this Part must have:

- (1) It is provided with an auxiliary burner for the purpose of maintaining a primary burner that maintains a temperature of at least 800°F in the primary combustion chamber.
- (2) It has a secondary burner for use that shall be used when necessary to eliminate smoke.
- (3) It is a type of incinerator design a design that can be demonstrated to the Director DEQ to be effective in accordance with the provisions of this Subchapter. The burden of proof shall rest upon the owner of the proposed incinerator.
- (4) It complies with generally recognized good practices and all applicable provisions of this Subchapter.
- (5) Full and proper use is made of all components and appurtenances thereof.

252:100-17-6. Allowable emission of particulates [AMENDED AND RENUMBERED TO 252:100-17-4]

- (a) Allowable emissions for incinerators with capacities in excess of 100 lb/hr are set forth in Appendix A of this Chapter.
- (b) Allowable emissions for incinerators with capacities less than 100 lbs/hr are set forth in Appendix B of this Chapter.

252:100-17-7. Test methods

(a) Opacity shall be measured utilizing Method 9 - Visual Determination of the Opacity of Emissions from Stationary Sources found in the Code of Federal Regulations at 40 CFR Part 60, Appendix A. This method is hereby incorporated by reference as it exists on July 1, 1997.

(b) Particulate matter shall be measured utilizing the appropriate DEQ-approved Method 5 found in the Code of Federal Regulations at 40 CFR Part 60, Appendix A. This method is hereby incorporated by reference as it exists on July 1, 1997.

PART 5. MUNICIPAL WASTE COMBUSTORS

252:100-17-14. Effective date; applicability

This Part is effective as of March 23, 1997 and applies to large MWC units.

252:100-17-15. Exemptions

(a) Any MWC unit that is capable of combusting more than 250 tons per day of MSW and is subject to a federally enforceable permit limiting the maximum amount of MSW that may be combusted in the unit to less than or equal to 11 tons per day is not subject to this Part if the owner/operator:

- (1) Notifies the DEQ of an exemption claim.
- (2) Provides the DEQ with a copy of the federally enforceable permit that limits the firing of MSW to less than 11 tons per day.
- (3) Keeps records of the amount of MSW fired per day.

(b) A qualifying small power production facility, (as defined in section 3(17)(C) of the Federal Power Act (16 U.S.C. § 796(17)(C)), that produces electric energy from homogeneous waste is not subject to this Part if the owner/operator:

- (1) Notifies the DEQ of an exemption claim.
- (2) Provides the DEQ data documenting that the facility qualifies for this exemption.

(c) A qualifying cogeneration facility, (as defined in section 3(18)(B) of the Federal Power Act (16 U.S.C. § 796(18)(B)), that burns homogeneous waste to produce electric energy, steam, or other useful energy used for industrial, commercial, heating, or cooling purposes, is not subject to this Part if the owner/operator:

- (1) Notifies the DEQ of an exemption claim.
- (2) Provides the DEQ data documenting that the facility qualifies for this exemption.

(d) Any unit combusting a single-item waste stream of tires is not subject to this Part if the owner/operator:

- (1) Notifies the DEQ of an exemption claim.
- (2) Provides the DEQ with data documenting that the unit qualifies for this exemption.

(e) Any unit required to have a hazardous waste permit is not subject to this Part.

(f) Any materials recovery facility (including primary or secondary smelters) that combusts waste for the primary purpose of recovering metals is not subject to this Part.

(g) Any cofired combustor that meets the capacity specifications in paragraph (a) of this section is not subject to this Part if the owner/operator:

- (1) Notifies the DEQ of an exemption claim.
- (2) Provides the DEQ with a copy of the federally enforceable permit.
- (3) Keeps separate records, on a calendar quarter basis, of the weight of MSW and the weight of all other fuels combusted at the cofired combustor.

(h) Air curtain incinerators that meet the capacity specifications in 252:100-17-23 of this Subchapter and combust a 100 percent yard waste fuel stream are not subject to this Part, except:

- (1) The opacity limit under section 252:100-17-16 of this Subchapter.
- (2) The testing procedures under section 252:100-17-25 of this

Subchapter.

(3) The reporting and recordkeeping provisions under section 252:100-17-26 of this Subchapter.

(i) Pyrolysis/combustion units that are an integrated part of a plastics/rubber recycling unit are not subject to this Part if the owner/operator of the unit maintains records of:

(1) The weight of plastics, rubber, and/or rubber tires processed on a calendar quarter basis.

(2) The weight of chemical plant feedstocks and petroleum refinery feedstocks produced and marketed on a calendar quarter basis.

(3) The name and address of the purchaser of the feedstocks.

(j) The combustion of gasoline, diesel fuel, jet fuel, fuel oils, residual oil, refinery gas, petroleum coke, liquefied petroleum gas, propane, or butane produced by chemical plants or petroleum refineries that use feedstocks produced by plastics/rubber recycling units are not subject to this Part.

(k) Cement kilns firing MSW are not subject to this Part.

252:100-17-16. Standards for particulate matter and opacity

(a) Particulate matter. The concentration of particulate matter contained in the gases discharged to the atmosphere from a MWC unit shall not exceed 27 milligrams per dry standard cubic meter, corrected to 7 percent oxygen.

(b) Opacity. Opacity of gases discharged to the atmosphere from a MWC unit shall not exceed 10 percent (6-minute average).

252:100-17-17. Standards for municipal waste combustor metals

(a) Cadmium. The concentration of cadmium contained in the gases discharged to the atmosphere from a MWC unit shall not exceed 0.040 milligrams per dry standard cubic meter, corrected to 7 percent oxygen.

(b) Lead.

(1) By December 19, 2000, the concentration of lead contained in the gases discharged to the atmosphere from a MWC unit shall not exceed 0.49 milligrams per dry standard cubic meter, corrected to 7 percent oxygen.

(2) By December 19, 2002, the concentration of lead contained in the gases discharged to the atmosphere from a MWC unit shall not exceed 0.44 milligrams per dry standard cubic meter, corrected to 7 percent oxygen.

(c) Mercury. The concentration of mercury contained in the gases discharged to the atmosphere from a MWC unit shall not exceed 0.080 milligrams per dry standard cubic meter or 15 percent of the potential mercury emission concentration (85-percent reduction by weight), corrected to 7 percent oxygen, whichever is less stringent.

252:100-17-18. Standards for municipal waste combustor acid gases expressed as sulfur dioxide and hydrogen chloride

(a) Sulfur dioxide.

(1) By December 19, 2000, the concentration of sulfur dioxide contained in the gases discharged to the atmosphere from a MWC unit shall not exceed 31 parts per million by volume (ppmv) or 25 percent of the potential sulfur dioxide emission concentration (75 percent reduction by weight or volume), corrected to 7 percent oxygen (dry basis), whichever is less stringent. Compliance with this emission limit is based on a 24-hour daily geometric mean.

(2) By December 19, 2002, the concentration of sulfur dioxide contained in the gases discharged to the atmosphere from a MWC unit shall not exceed 29 ppmv or 25 percent of the potential sulfur dioxide emission concentration (75 percent reduction by weight or volume), corrected to 7 percent oxygen (dry basis), whichever is less stringent. Compliance with this emission limit is based on a 24-hour daily geometric mean.

(b) Hydrogen chloride.

(1) By December 19, 2000, the concentration of hydrogen chloride contained in the gases discharged to the atmosphere from a MWC unit shall not exceed 31 parts per million by volume (ppmv) or 5 percent of the potential hydrogen chloride emission concentration (95 percent reduction by weight or volume), corrected to 7 percent oxygen (dry basis), whichever is less stringent.

(2) By December 19, 2002, the concentration of hydrogen chloride contained in the gases discharged to the atmosphere from a MWC unit shall not exceed 29 ppmv or 5 percent of the potential hydrogen chloride emission concentration (95 percent reduction by weight or volume), corrected to 7 percent oxygen (dry basis), whichever is less stringent.

252:100-17-19. Standards for municipal waste combustor organics expressed as total mass dioxins/furans

(a) Dioxins/Furans. The concentration of organics, expressed as total mass dioxins/furans, contained in the gases discharged to the atmosphere from a MWC unit shall not exceed:

(1) With electrostatic precipitator: 60 nanograms per dry standard cubic meter (total mass), corrected to 7 percent oxygen.

(2) Without electrostatic precipitator: 30 nanograms per dry standard cubic meter (total mass), corrected to 7 percent oxygen.

252:100-17-20. Standards for nitrogen oxides

(a) Nitrogen oxides emission limits. The concentration of nitrogen oxides contained in the gases discharged into the atmosphere from a MWC unit shall not exceed the following:

NITROGEN OXIDES LIMITS

Municipal Waste Combustor
Technology

Nitrogen oxides
emission limit

(ppm by volume)^a

<u>Mass burn waterwall</u>	<u>205</u>
<u>Mass burn rotary waterwall</u>	<u>250</u>
<u>Refuse-derived fuel combustor</u>	<u>250</u>
<u>Fluidized bed combustor</u>	
<u>(by December 19, 2000)</u>	<u>240</u>
<u>Fluidized bed combustor</u>	
<u>(by December 19, 2002)</u>	<u>180</u>

^aCorrected to 7 percent oxygen, dry basis.

(b) Nitrogen oxides emissions averaging. The owner or operator of a MWC plant may elect to implement a nitrogen oxides emissions averaging plan for the MWC units that are located at that plant.

(1) The following units cannot be included in the emissions averaging plan:

(A) MWC units subject to Subpart Ea or Eb of 40 CFR Part 60.

(B) Mass burn refractory MWC units and other MWC technologies not listed in paragraph (b)(3) of this section may not be included in the emissions averaging plan.

(2) Prior to implementing the nitrogen oxides emissions averaging plan, the units to be included must be identified in the initial performance test report specified in 40 CFR 60.59b(f) or in the annual report specified in 40 CFR 60.59b(g), as applicable. The units which are included in the averaging plan may be redesignated each calendar year. Partial year redesignation is allowable with DEQ approval.

(3) To implement the emissions averaging plan, the average daily (24-hour) nitrogen oxides emission concentration level discharged from the units included in the emission averaging plan shall be no greater than the levels specified in this section. Emission limits for the nitrogen oxides concentration level for each type of unit are as follows:

NITROGEN OXIDES LIMITS FOR EXISTING DESIGNATED FACILITIES INCLUDED IN AN EMISSIONS AVERAGING PLAN AT A MUNICIPAL WASTE COMBUSTOR PLANT^a

<u>Municipal waste combustor technology</u>	<u>Nitrogen oxides emission limit (ppm by volume)^b</u>
---	---

<u>Mass burn waterwall</u>	<u>185</u>
<u>Mass burn rotary waterwall</u>	<u>220</u>
<u>Refuse-derived fuel combustor</u>	<u>230</u>
<u>Fluidized bed combustor</u>	<u>165</u>

^aMass burn refractory municipal waste combustors and other MWC technologies not listed above may not be included in an emissions averaging plan.

^bCorrected to 7 percent oxygen, dry basis.

(4) Under the emissions averaging plan, the average daily nitrogen oxides emissions specified in paragraph (b) (3) of this section shall be calculated using the equation in Appendix K of this Chapter. MWC units that are off-line shall not be included in calculating the average daily nitrogen oxides emission level.

(5) For any day a unit included in the emissions averaging plan is off-line, the owner or operator of the MWC plant must demonstrate compliance according to either paragraph (b) (5) (A) or both paragraphs (b) (5) (B) and (b) (5) (C) of this section.

(A) Compliance with the applicable limits specified in (b) (3) of this Part shall be demonstrated using the averaging procedure specified in paragraph (b) (4) of this section. The averaging procedure will include the MWC units in the plan that are on-line.

(B) For each of the units included in the emissions averaging plan, the nitrogen oxides emissions shall be calculated on a daily basis. The nitrogen oxides emissions level shall be equal to or less than the maximum daily nitrogen oxides emission levels achieved by that unit on any of the days during which the emissions averaging plan was achieved with all units on-line during the most recent calendar quarter. The requirements of this paragraph do not apply during the first quarter of operation under the emissions averaging plan.

(C) The average nitrogen oxides emissions (kilograms per day) calculated according to paragraph (b) (5) (C) (ii) of this section shall not exceed the average nitrogen oxides emissions (kilograms per day) calculated according to paragraph (b) (5) (C) (i) of this section.

(i) The average nitrogen oxides emissions shall be calculated for all days during which the emissions averaging plan was implemented and achieved and during which all MWC units were on-line. The average nitrogen oxides emissions (kilograms per day) shall be calculated, on a calendar year basis, according to paragraphs (b) (5) (C) (i) (I) through (b) (5) (C) (i) (III) of this section.

(I) The daily amount of nitrogen oxides emitted (kilograms per day) shall be calculated for each MWC unit included in the emissions averaging plan. The calculation shall be based on the hourly nitrogen oxides data required under 40 CFR 60.58b(a) through (m) and specified under 40 CFR 60.58b(h) (5). The flue gas flow rate is determined using the hourly average steam or feedwater flow rate and Table 19-1 of EPA Reference Method 19, which is hereby incorporated by reference as it exists on July 1, 1997.

(II) The daily total nitrogen oxides emissions shall be calculated as the sum of the daily nitrogen oxides emissions from each unit calculated under paragraph (b) (5) (C) (i) (I) of this section.

(III) On a calendar year basis, the average nitrogen oxides emissions (kilograms per day), shall be calculated

as the sum of all daily total nitrogen oxides emissions calculated under paragraph (b) (5) (C) (i) (II) of this section divided by the number of calendar days for which a daily total was calculated.

(ii) The average nitrogen oxides emissions shall be calculated for all days during which one or more of the MWC units under the emissions averaging plan was off-line. The average nitrogen oxides emissions (kilograms per day) shall be calculated according to paragraphs (b) (5) (C) (ii) (I) through (b) (5) (C) (ii) (III) of this section on a calendar year basis.

(I) For each MWC unit included in the emissions averaging plan, the daily amount of nitrogen oxides emitted (kilograms per day) shall be calculated based on the hourly nitrogen oxides data required under 40 CFR 60.58b(a) through (m) and specified under 40 CFR 60.58b(h) (5), the flue gas flow rate determined using Table 19-1 of the EPA Reference Method 19, which is hereby incorporated by reference as it exists on July 1, 1997, and the hourly average steam or feedwater flow rate.

(II) The daily total nitrogen oxides emissions shall be calculated as the sum of the daily nitrogen oxides emissions from each MWC unit as calculated under paragraph (b) (5) (C) (ii) (I) of this section.

(III) The average nitrogen oxides emissions (kilograms per day) on a calendar year basis shall be calculated as the sum of all daily total nitrogen oxides emissions calculated under paragraph (b) (5) (C) (ii) (II) of this section divided by the number of calendar days for which a daily total was calculated.

252:100-17-21. Standards for municipal waste combustor operating practices

(a) The concentration of carbon monoxide contained in the gases discharged to the atmosphere from a MWC unit shall not exceed the following limits for each type of affected equipment:

MUNICIPAL WASTE COMBUSTOR OPERATING LIMITS

<u>Municipal waste combustor technology</u>	<u>Carbon monoxide emissions level (ppm by volume)^a</u>	<u>Averaging Time^b (hours)</u>
<u>Mass burn waterwall</u>	<u>100</u>	<u>4</u>
<u>Mass burn refractory</u>	<u>100</u>	<u>4</u>
<u>Mass burn rotary refractory</u>	<u>100</u>	<u>24</u>
<u>Mass burn rotary waterwall</u>	<u>250</u>	<u>24</u>
<u>Modular starved air</u>	<u>50</u>	<u>4</u>
<u>Modular excess air</u>	<u>50</u>	<u>4</u>
<u>Refuse-derived fuel stoker</u>	<u>200</u>	<u>24</u>
<u>Bubbling fluidized bed</u>	<u>100</u>	<u>4</u>

<u>Circulating fluidized bed</u>	<u>100</u>	<u>4</u>
<u>Pulverized coal/refuse-derived fuel mixed fuel-fired combustor</u>	<u>150</u>	<u>4</u>
<u>Spreader stoker coal/refuse-derived fuel mixed fuel-fired combustor</u>	<u>200</u>	<u>24</u>

^aMeasured at the combustor outlet in conjunction with a measurement of oxygen concentration, corrected to 7 percent oxygen, dry basis. Calculated as an arithmetic average.

^bAveraging times are 4-hour or 24-hour block averages.

(b) An owner or operator of a MWC shall comply with all provisions specified in 40 CFR 60.53b(b) and (c), which is hereby incorporated by reference as it exists on October 24, 1997.

252:100-17-22. Standards for municipal waste combustor fugitive ash emissions

An owner or operator of a MWC shall comply with all provisions specified in 40 CFR 60.55b, which is hereby incorporated by reference as it exists on October 24, 1997.

252:100-17-23. Standards for air curtain incinerators

An owner or operator of an air curtain incinerator that meets the capacity specified in 252:100-17-14 and that combusts a fuel feed stream of 100 percent yard waste, shall not cause to be discharged into the atmosphere from that incinerator any gases that exhibit greater than 10 percent opacity (6-minute average). An opacity level of up to 35 percent (6-minute average) is permitted during startup periods within the first 30 minutes of unit operation.

252:100-17-24. Standards for municipal waste combustor operator training and certification

(a) Each chief facility operator and shift supervisor of each MWC unit shall obtain and maintain a current provisional operator certification from either the American Society of Mechanical Engineers [ORO-1-1994 Standard for the Qualification and Certification of Resource Recovery Facility Operators] or a State certification program no later than the date 6 months after the startup of a MWC unit or 12 months after the date of State plan approval, whichever is later.

(b) Each chief facility operator and shift supervisor of each MWC unit shall have completed full certification or scheduled a full certification exam with either the American Society of Mechanical Engineers [ORO-II1994 Standard for the Qualification and Certification of Resource Recovery Facility Operators] or a State certification program no later than the date 6 months after the startup of a MWC unit or 12 months after the date of State plan approval, whichever is later.

(c) No owner or operator of a MWC unit shall allow the unit to be operated at any time unless one of the following persons is on duty: a fully certified chief facility operator, a provisionally

certified chief facility operator who is scheduled to take the full certification exam according to the schedule specified in paragraph (b) of this section, a fully certified shift supervisor, or a provisionally certified shift supervisor who is scheduled to take the full certification exam according to the schedule specified in paragraph (b) of this section.

(1) The requirement specified in paragraph (c) of this section shall take effect no later than the date 6 months after the startup of a MWC unit or 12 months after the date of State plan approval, whichever is later.

(2) If one of the persons listed in paragraph (c) of this section must leave the unit during their operating shift, a provisionally certified control room operator who is on-site at the MWC may fulfill the requirement in paragraph (c) of this section.

(d) All chief facility operators, shift supervisors, and control room operators at MWC units must complete the EPA or State MWC operator training course no later than the date 6 months after the date of startup of the MWC or by 12 months after the date of State plan approval, whichever is later.

(e) The requirement specified in paragraph (d) of this section does not apply to chief facility operators, shift supervisors, and control room operators who have obtained full certification from the American Society of Mechanical Engineers on or before the date of State plan approval.

(f) The owner or operator may request that the DEQ waive the requirement specified in paragraph (d) of this section for chief facility operators, shift supervisors, and control room operators who have obtained provisional certification from the American Society of Mechanical Engineers on or before the date of State plan approval.

(g) The owner or operator of a MWC unit shall develop and update on an annual basis a site-specific operating manual. The operating manual shall, at a minimum, address the elements of MWC unit operation specified in paragraphs (g)(1) through (g)(11) of this section.

(1) A summary of the applicable standards under this Part.

(2) A description of basic combustion theory applicable to a MWC unit.

(3) Procedures for receiving, handling, and feeding MSW.

(4) MWC unit start-up, shutdown, and malfunction procedures.

(5) Procedures for maintaining proper combustion air supply levels.

(6) Procedures for operating the MWC unit within the standards established under this Part.

(7) Procedures for responding to periodic upset or off-specification conditions.

(8) Procedures for minimizing particulate matter carryover.

(9) Procedures for handling ash.

(10) Procedures for monitoring MWC unit emissions.

(11) Reporting and recordkeeping procedures.

(h) The owner or operator of a MWC unit shall establish a training program to review the operating manual according to the schedule specified in paragraphs (h)(1) and (h)(2) of this section. The training shall be provided to each person who has responsibilities affecting the operation of the unit including, but not limited to, chief facility operators, shift supervisors, control room operators, ash handlers, maintenance personnel, and crane/load handlers.

(1) Each person specified in paragraph (h) of this section shall undergo initial training no later than the date specified in paragraph (h)(1)(A), (h)(1)(B), or (h)(1)(C), whichever is later.

(A) The date 6 months after the date of startup of the unit.

(B) The date prior to the day the person assumes responsibilities affecting MWC unit operation.

(C) Twelve months after date of State plan approval.

(2) Annually, following the initial review required by paragraph (h)(1) of this section.

(i) The operating manual required by paragraph (h) of this section shall be kept in a readily accessible location for all persons required to undergo training under paragraph (h) of this section no later than 6 months after start-up or 12 months after the date of State plan approval. The operating manual and records of training shall be available for inspection by the DEQ upon request.

252:100-17-25. Compliance and performance testing

Except for the provisions of subsection 60.58b(g)(5)(iii), 40 CFR 60.58b is hereby incorporated by reference as it exists on October 24, 1997.

252:100-17-26. Reporting and recordkeeping requirements

Except for the provisions of subsection 60.59b(a), b(5), and d(11), 40 CFR 60.59b is hereby incorporated by reference as it exists on October 24, 1997.

252:100-17-27. Compliance schedules

(a) All MWC units must close or be in compliance with all requirements contained in this Part within 3 years following approval of the State plan. However, all MWC units for which construction, modification, or reconstruction is commenced after June 26, 1987 shall comply with the emission limit for mercury specified in 252:100-17-17(c) and the emission limit for dioxin/furans specified in 252:100-17-19 within 1 year following issuance of a revised construction or operating permit, if a permit modification is required, or within 1 year following approval of the State plan, whichever is later.

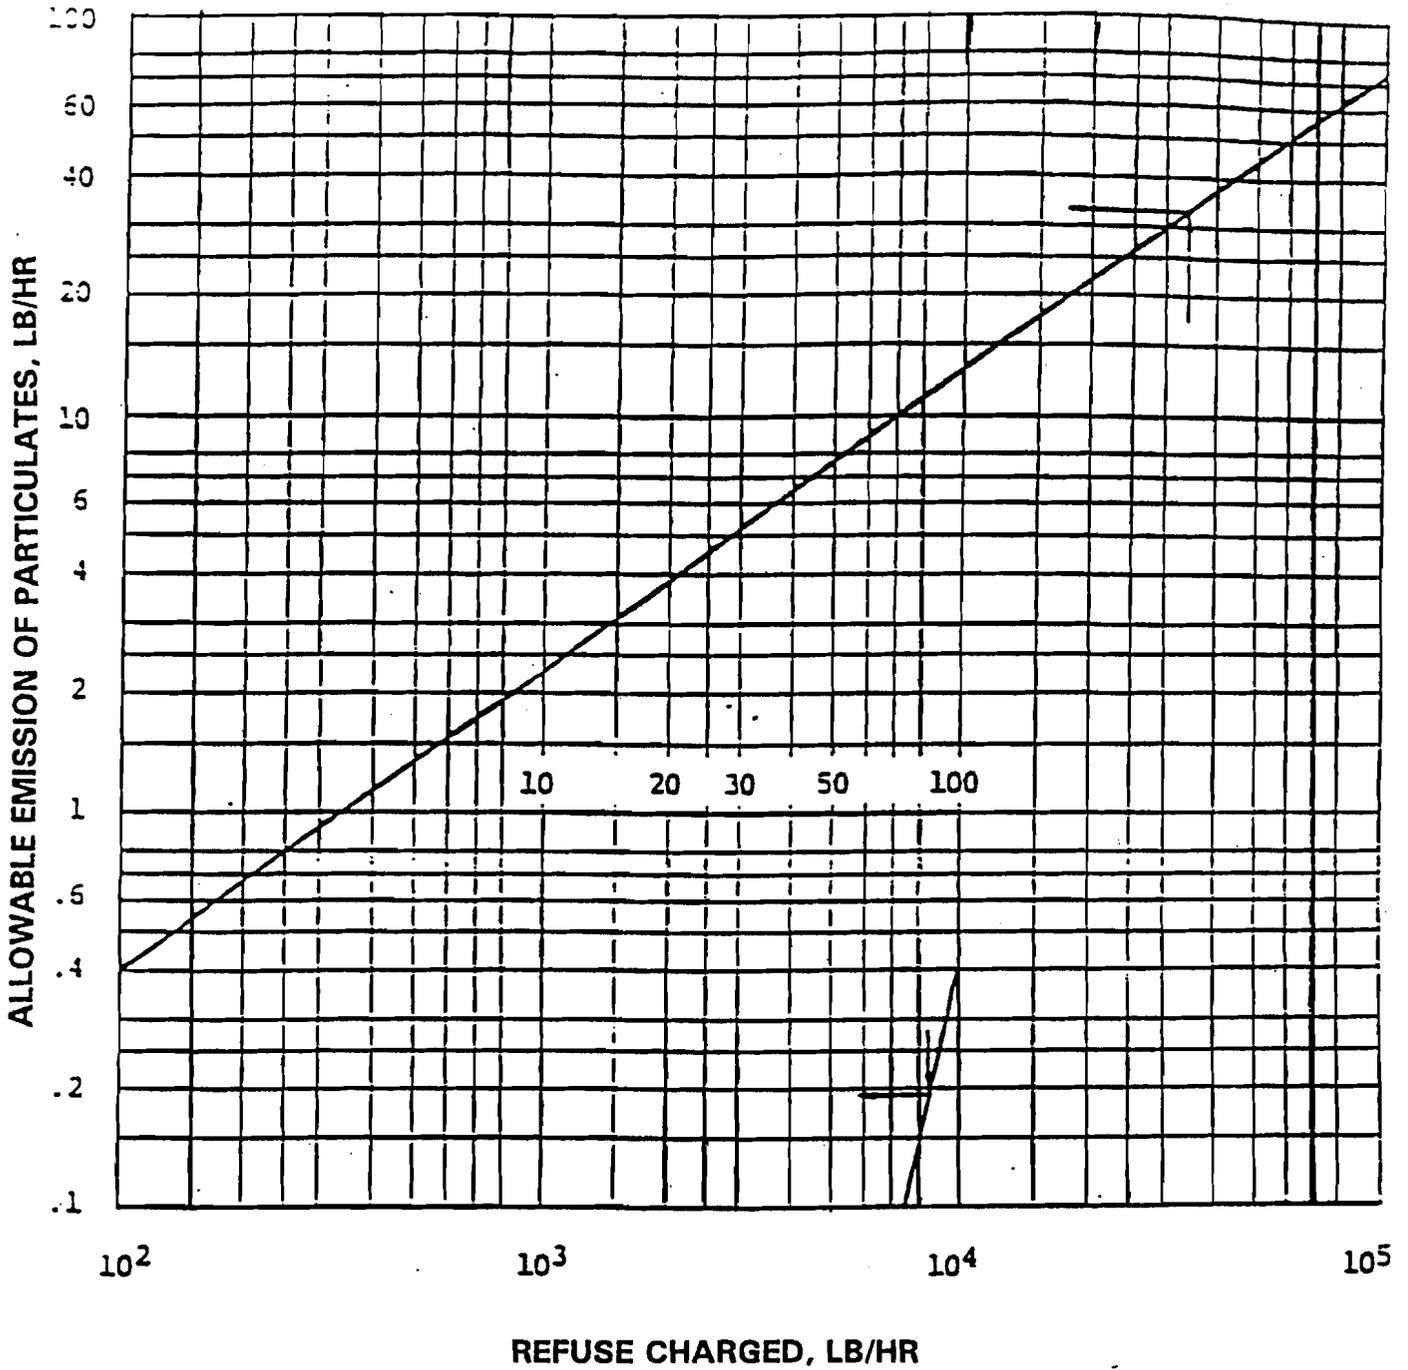

(b) All large MWC units choosing to comply with all requirements contained in this Part in more than 1 year but less than 3 years following the date of issuance of a revised construction or operation permit if a permit modification is required, or more than 1 year but less than 3 years following approval of the State plan

if a permit modification is not required, shall enter into a consent agreement that includes measurable and enforceable incremental steps of progress toward compliance. These steps are specified below:

- (1) Date for submittal of the final control plan to the DEO.
 - (2) Date for obtaining services of an architectural and engineering firm regarding the air pollution control device(s).
 - (3) Date for initiation of installation of the air pollution control device(s).
 - (4) Date for completion of installation of the air pollution control device(s).
 - (5) Date for final compliance.
- (c) All large MWC units with a compliance schedule of more than 1 year after approval of the State plan in accordance with paragraph (b) of this section, shall provide performance test results for dioxin/furan emissions for each unit. The performance test results shall have been conducted during or after 1990. The performance test shall be conducted according to the procedures in 252:100-17-25.
- (d) All large MWC units intending to close in more than 1 year but less than 3 years after State plan approval shall enter into a consent agreement to close. The closure agreement must include the date of plant closure.

[REVOKED]

APPENDIX A. ALLOWABLE EMISSIONS FOR INCINERATORS WITH CAPACITIES IN EXCESS OF 100 LB/HR

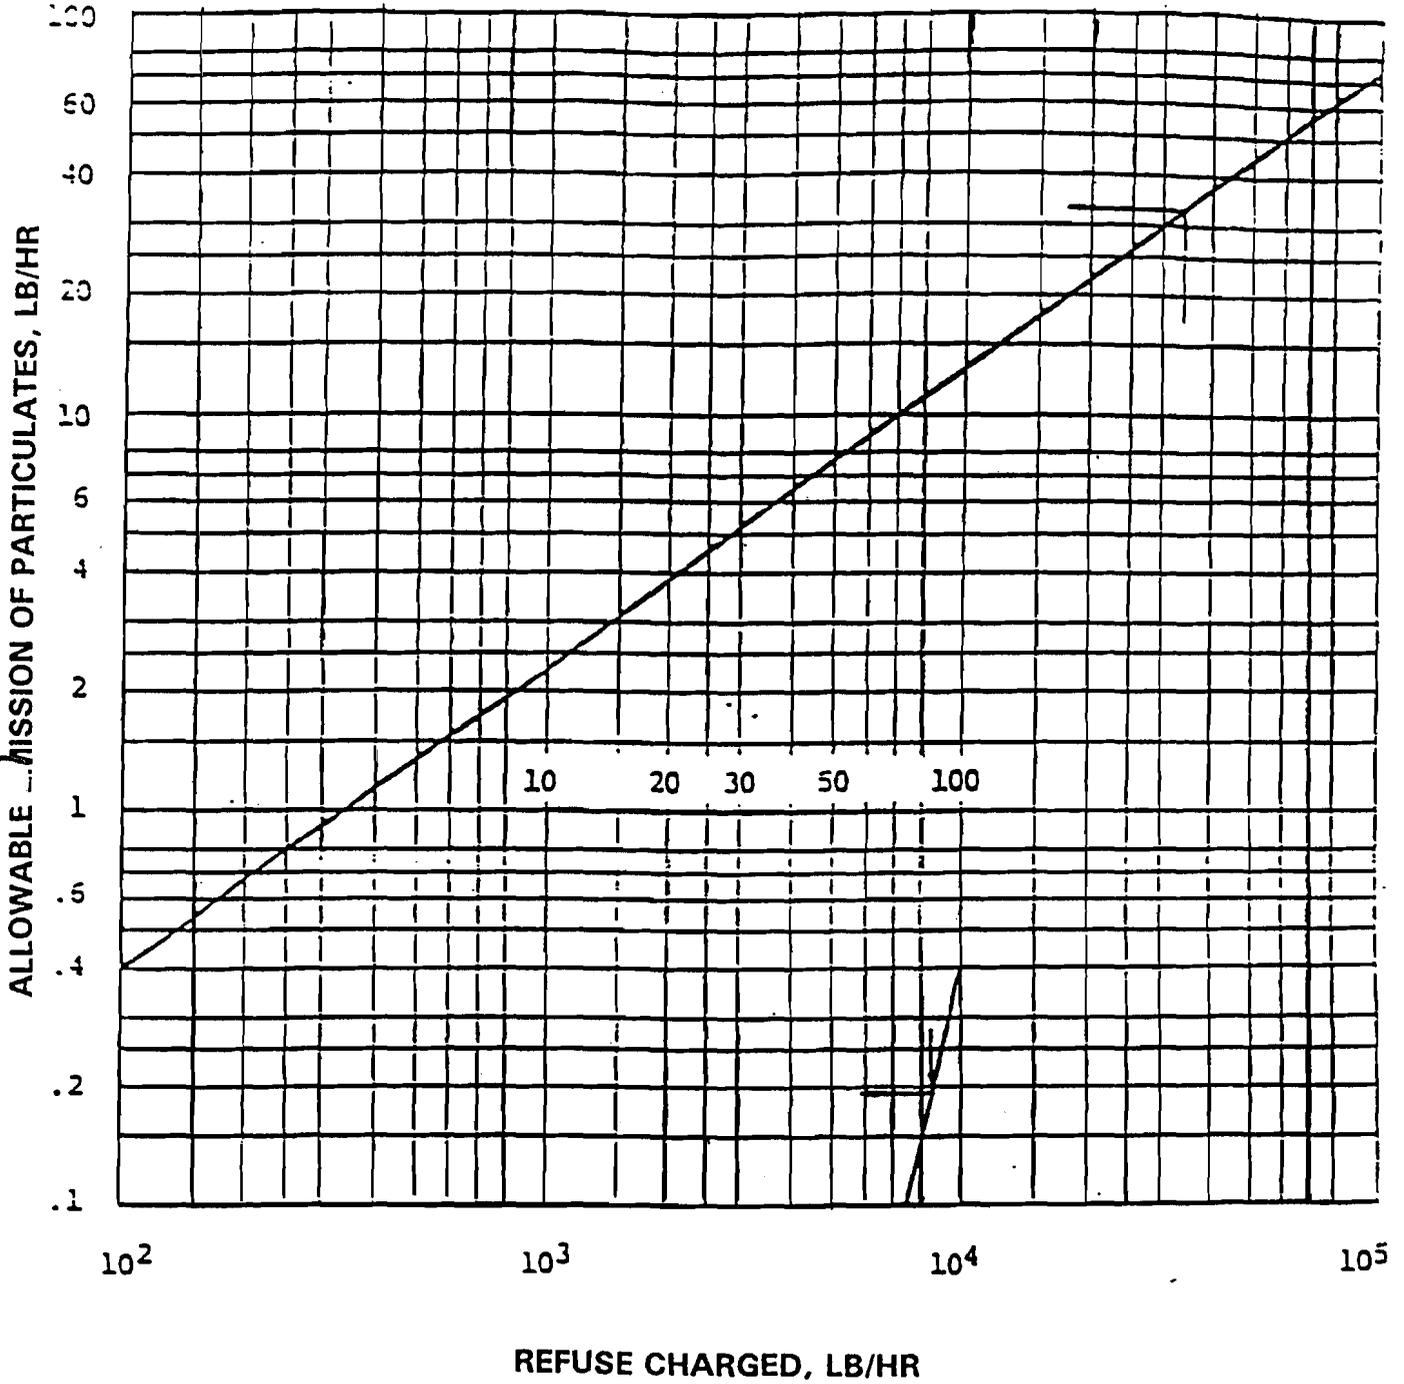

Allowable emission rate may be calculated using the following formula:

$$Y = (0.01221)(x^{+0.7577}); \text{ for values of } x \text{ } 100\text{lbs/hr,}$$

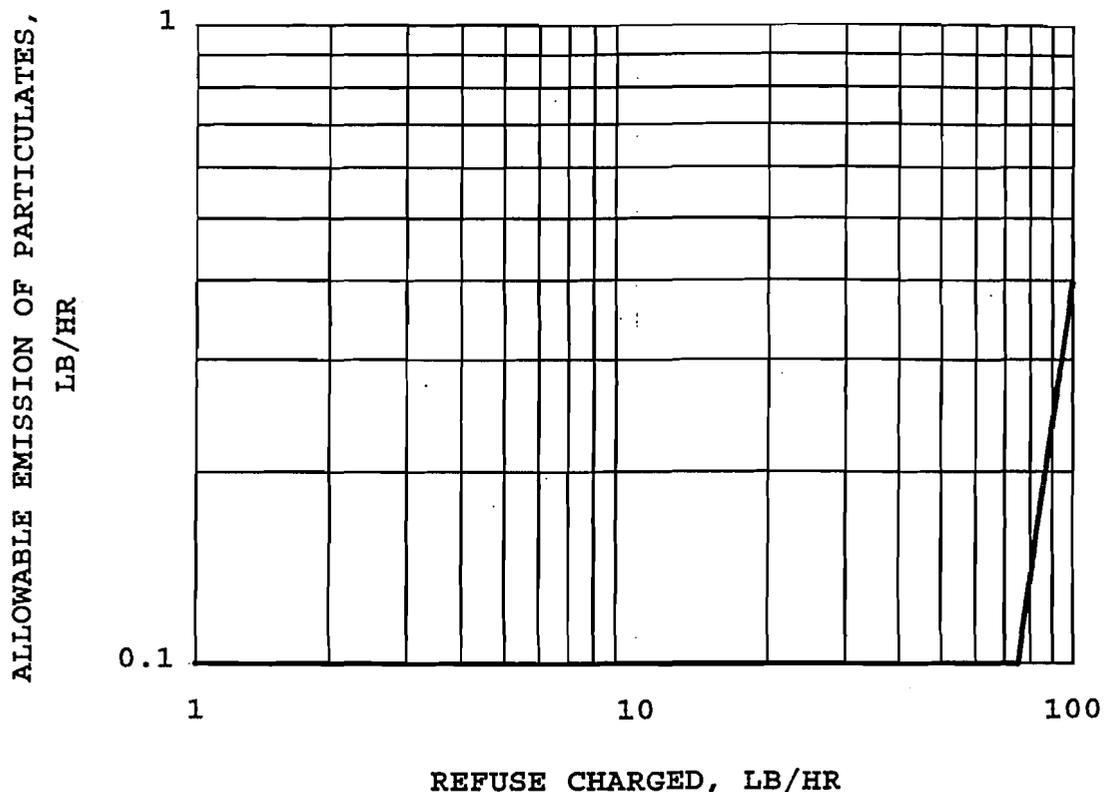

where: x = refuse charged, lb/hr, and
 Y = allowable emission, lb/hr.

[REVOKED]

APPENDIX B. ALLOWABLE EMISSIONS FOR INCINERATORS WITH CAPACITIES LESS THAN 100 LBS/HR

APPENDIX B. [NEW]
 ALLOWABLE EMISSIONS FOR INCINERATORS WITH CAPACITIES LESS THAN
 100 LB/HR

Allowable emission rate may be calculated using the following formulae:

Incinerators with capacities greater than 75, but less than or equal to 100 lb/hr

$$Y = 9.213 \times 10^{-11} X^{4.818}$$

Incinerators with capacities of 75 lb/hr or less

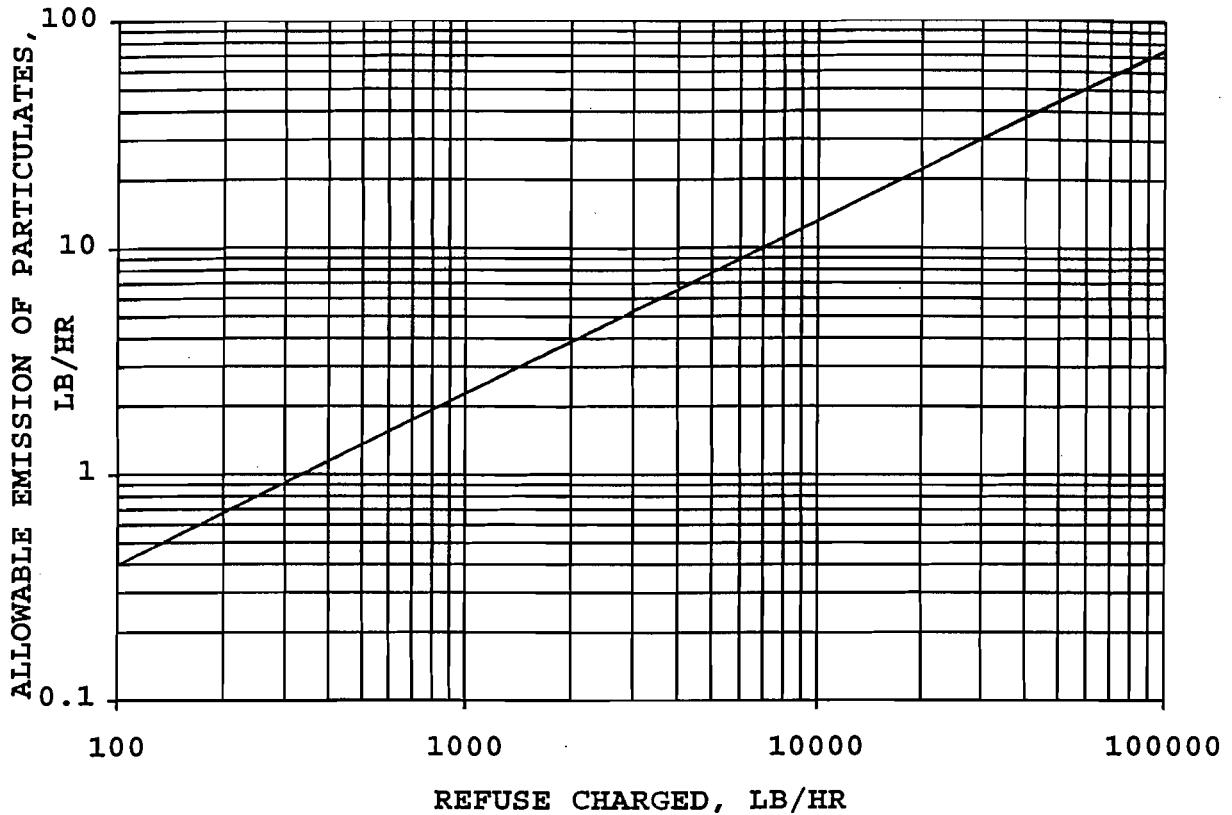

$$Y = 0.1$$

Where:

X = refuse charged, lb/hr on an as-loaded basis.

Y = allowable particulate matter emission rate, lb/hr.

APPENDIX A. [NEW]
 ALLOWABLE EMISSIONS FOR INCINERATORS WITH CAPACITIES OF 100
 LB/HR OR GREATER

Allowable emission rate may be calculated using the following formula:

$$Y = 0.01221X^{0.7577}$$

Where:

X = refuse charged, lb/hr on an as-loaded basis.

Y = allowable particulate matter emission rate, lb/hr.

APPENDIX K. [NEW]
AVERAGE DAILY NITROGEN OXIDES EMISSIONS

$$NOX_{24-hr} = \frac{\sum_{i=1}^h [(NOX_i) (S_i)]}{\sum_{i=1}^h (S_i)}$$

where:

NOX_{24-hr} = 24-hour daily average nitrogen oxides emission concentration level for the emissions averaging plan (parts per million by volume corrected to 7 percent oxygen).

NOX_i = 24-hour daily average nitrogen oxides emission concentration level for unit i (parts per million by volume, corrected to 7 percent oxygen), calculated according to the procedures in 40 CFR 60.58b(h).

S_i = maximum demonstrated municipal waste combustor unit load for affected facility i (pounds per hour steam or feedwater flow as determined in the most recent dioxin/furan performance test).

h = total number of units being included in the daily emissions average.

DECEMBER 16 AGENDA PACKET

CHAPTER 100. AIR POLLUTION CONTROL

SUBCHAPTER 17. INCINERATORS

PART 1. GENERAL PROVISIONS

252:100-17-1. Purpose

The purpose of this Subchapter is to deem it unlawful to burn refuse in any incinerator except in a multiple chambered incinerator or in equipment determined by the Director to be equally effective for the purpose of air pollution control. **specify** design and operating requirements and emission limitations for incinerators and municipal waste combustors (MWC).

252:100-17-1.1. Reference to 40 CFR

When a provision of Title 40 of the Code of Federal Regulations (40 CFR) is incorporated by reference, all citations contained therein are also incorporated by reference.

252:100-17-1.2. Terminology related to 40 CFR

When these terms are used in rules incorporated by reference, the following definitions shall apply:

"EPA Administrator" is synonymous with "Executive Director".

"Affected facility" is synonymous with "large MWC unit".

"State" is synonymous with "Department of Environmental Quality" or "DEQ".

"State plan" is a program that the State is responsible for developing and implementing to achieve compliance with the emission guidelines in Subpart Cb of 40 CFR Part 60.

PART 3. INCINERATORS

252:100-17-2. Effective date; applicability

This subchapter shall become operative one year from and after July 21, 1970. It will apply to any and all incinerators utilized within the State of Oklahoma. This Part became effective on July 21, 1971 and applies to incinerators not subject to New Source Performance Standards (NSPS) or any other Parts in this Subchapter.

252:100-17-2.1. Exemptions

Thermal oxidizers, flares and any other air pollution control devices are exempt from the requirements of this Part.

252:100-17-2.2. Definitions

The following words and terms when used in this Subchapter shall have the following meaning unless the context clearly indicates otherwise:

"Capacity" means amount of specified wastes a unit is designed to burn. Capacity may be expressed as pounds per hour or tons per

day.

"Primary combustion chamber" means the initial incinerator chamber where waste is charged, ignited and burned.

"Secondary burner" means a supplemental burner in the secondary chamber for the purpose of maintaining a minimum temperature and to insure the complete combustion of volatile gases and smoke.

~~252:100-17-3. Prohibition on density of emissions~~Opacity

~~(a) Prohibition. No person shall cause, suffer, allow, or permit the discharge of smoke from an incinerator of a density darker than number one (1) on the Ringelmann Chart or a visible emission of such an equivalent opacity as to obscure a certified visible emission evaluator's view to a degree greater than number one (1) on the Ringelmann Chart.~~

~~(b) Exemptions. Subsection 252:100-17-3(a) shall not apply to:~~

~~(1) visible emissions consisting of uncombined water droplets, or,~~

~~(2) smoke, the density of which is not darker than number three~~

~~(3) of the Ringelmann Chart for a period aggregating no more than five (5) minutes in any sixty (60) consecutive minutes or more than twenty (20) minutes in any twenty four (24) hour period. See 252:100-25-3.~~

~~252:100-17-4. Prohibition on pounds per hour of emissions~~Particulate matter

~~No person shall cause or allow to be emitted into the open air from any incinerator equipment, fly ash or other particulate matter in quantities greater than shown in 252:100-17-6. Solid fuels charged will be considered as part of the refuse weight, but No. 1 and No. 2 fuel oil and gaseous fuels and combustion air will not be so considered. Fly ash or other particulate matter shall not exceed quantities greater than the allowable emission rate. The allowable emissions for incinerators with capacities of 100 lb/hr or greater are set forth in Appendix A of this Chapter. The allowable emissions for incinerators with capacities less than 100 lb/hr are set forth in Appendix B of this Chapter. Solid fuels charged will be considered part of the refuse weight. No. 1 and No. 2 fuel oils (distillate oils), liquified petroleum gases, gaseous fuels and combustion air will not be considered as part of the refuse weight.~~

~~252:100-17-5. Incinerator design requirements~~

~~Hereafter no person shall operate an incinerator unless. An incinerator under this Part must have:~~

~~(1) It is provided with an auxiliary burner for the purpose of maintaining a primary burner that maintains a temperature of at least 800°F in the primary combustion chamber.~~

~~(2) It has a secondary burner for use that shall be used when necessary to eliminate smoke.~~

~~(3) It is a type of incinerator design a design that can be demonstrated to the Director DEQ to be effective in accordance~~

with the provisions of this Subchapter. The burden of proof shall rest upon the owner of the proposed incinerator.

~~(4) It complies with generally recognized good practices and all applicable provisions of this Subchapter.~~

~~(5) Full and proper use is made of all components and appurtenances thereof.~~

252:100-17-6. Allowable emission of particulates [AMENDED AND RENUMBERED TO 252:100-17-4]

~~(a) Allowable emissions for incinerators with capacities in excess of 100 lb/hr are set forth in Appendix A of this Chapter.~~

~~(b) Allowable emissions for incinerators with capacities less than 100 lbs/hr are set forth in Appendix B of this Chapter.~~

252:100-17-7. Test methods

(a) Opacity. Opacity shall be measured utilizing Method 9 - Visual Determination of the Opacity of Emissions from Stationary Sources found in the Code of Federal Regulations at 40 CFR Part 60, Appendix A. This method is hereby incorporated by reference as it exists on July 1, 1997.

(b) Particulate Matter. Particulate matter shall be measured utilizing the appropriate DEQ-approved Method 5 found in the Code of Federal Regulations at 40 CFR Part 60, Appendix A. This method is hereby incorporated by reference as it exists on July 1, 1997.

PART 5. MUNICIPAL WASTE COMBUSTORS

252:100-17-14. Effective date; applicability

This Part is effective as of March 23, 1997 and applies to large MWC units.

252:100-17-14.1. Definitions

The definitions in 40 CFR 60.51b are hereby incorporated by reference as they exist on October 24, 1997.

252:100-17-15. Exemptions

(a) Any MWC unit that is capable of combusting more than 250 tons per day of MSW and is subject to a federally enforceable permit limiting the maximum amount of MSW that may be combusted in the unit to less than or equal to 11 tons per day is not subject to this Part if the owner/operator:

(1) Notifies the DEQ of an exemption claim.

(2) Provides the DEQ with a copy of the federally enforceable permit that limits the firing of MSW to less than or equal to 11 tons per day.

(3) Keeps records of the amount of MSW fired per day.

(b) A qualifying small power production facility, (as defined in section 3(17)(C) of the Federal Power Act (16 U.S.C. § 796(17)(C)), that produces electric energy from homogeneous waste is not subject to this Part if the owner/operator:

- (1) Notifies the DEQ of an exemption claim.
- (2) Provides the DEQ data documenting that the facility qualifies for this exemption.
- (c) A qualifying cogeneration facility, (as defined in section 3(18)(B) of the Federal Power Act (16 U.S.C. § 796(18)(B)), that burns homogeneous waste to produce electric energy, steam, or other useful energy used for industrial, commercial, heating, or cooling purposes, is not subject to this Part if the owner/operator:
 - (1) Notifies the DEQ of an exemption claim.
 - (2) Provides the DEQ data documenting that the facility qualifies for this exemption.
- (d) Any unit combusting a single-item waste stream of tires is not subject to this Part if the owner/operator:
 - (1) Notifies the DEQ of an exemption claim.
 - (2) Provides the DEQ with data documenting that the unit qualifies for this exemption.
- (e) Any unit required to have a hazardous waste permit is not subject to this Part.
- (f) Any materials recovery facility (including primary or secondary smelters) that combusts waste for the primary purpose of recovering metals is not subject to this Part.
- (g) Any cofired combustor that meets the capacity specifications in paragraph (a) of this section is not subject to this Part if the owner/operator:
 - (1) Notifies the DEQ of an exemption claim.
 - (2) Provides the DEQ with a copy of the federally enforceable permit.
 - (3) Keeps separate records, on a calendar quarter basis, of the weight of MSW and the weight of all other fuels combusted at the cofired combustor.
- (h) Air curtain incinerators that meet the capacity specifications in 252:100-17-23 of this Subchapter and combust a 100 percent yard waste fuel stream are not subject to this Part, except:
 - (1) The opacity limit under section 252:100-17-23 of this Subchapter.
 - (2) The testing procedures under section 252:100-17-25 of this Subchapter.
 - (3) The reporting and recordkeeping provisions under section 252:100-17-26 of this Subchapter.
- (i) Pyrolysis/combustion units that are an integrated part of a plastics/rubber recycling unit are not subject to this Part if the owner/operator of the unit maintains records of:
 - (1) The weight of plastics, rubber, and/or rubber tires processed on a calendar quarter basis.
 - (2) The weight of chemical plant feedstocks and petroleum refinery feedstocks produced and marketed on a calendar quarter basis.
 - (3) The name and address of the purchaser of the feedstocks.
- (j) The combustion of gasoline, diesel fuel, jet fuel, fuel oils, residual oil, refinery gas, petroleum coke, liquefied petroleum gas, propane, or butane produced by chemical plants or petroleum

refineries that use feedstocks produced by plastics/rubber recycling units are not subject to this Part.

(k) Cement kilns firing MSW are not subject to this Part.

252:100-17-16. Standards for particulate matter and opacity

(a) Particulate matter. The concentration of particulate matter contained in the gases discharged to the atmosphere from a MWC unit shall not exceed 27 milligrams per dry standard cubic meter, corrected to 7 percent oxygen.

(b) Opacity. Opacity of gases discharged to the atmosphere from a MWC unit shall not exceed 10 percent (6-minute average).

252:100-17-17. Standards for municipal waste combustor metals

(a) Cadmium. The concentration of cadmium contained in the gases discharged to the atmosphere from a MWC unit shall not exceed 0.040 milligrams per dry standard cubic meter, corrected to 7 percent oxygen.

(b) Lead.

(1) By December 19, 2000, the concentration of lead contained in the gases discharged to the atmosphere from a MWC unit shall not exceed 0.49 milligrams per dry standard cubic meter, corrected to 7 percent oxygen.

(2) By **August 26, 2002**, or three years after EPA approval of the State plan, whichever is first, the concentration of lead contained in the gases discharged to the atmosphere from a MWC unit shall not exceed 0.44 milligrams per dry standard cubic meter, corrected to 7 percent oxygen.

(c) Mercury. The concentration of mercury contained in the gases discharged to the atmosphere from a MWC unit shall not exceed 0.080 milligrams per dry standard cubic meter or 15 percent of the potential mercury emission concentration (85-percent reduction by weight), corrected to 7 percent oxygen, whichever is less stringent.

252:100-17-18. Standards for municipal waste combustor acid gases expressed as sulfur dioxide and hydrogen chloride

(a) Sulfur dioxide.

(1) By December 19, 2000, the concentration of sulfur dioxide contained in the gases discharged to the atmosphere from a MWC unit shall not exceed 31 parts per million by volume (ppmv) or 25 percent of the potential sulfur dioxide emission concentration (75 percent reduction by weight or volume), corrected to 7 percent oxygen (dry basis), whichever is less stringent. Compliance with this emission limit is based on a 24-hour daily geometric mean.

(2) By **August 26, 2002**, or three years after EPA approval of the State plan, which ever is first, the concentration of sulfur dioxide contained in the gases discharged to the atmosphere from a MWC unit shall not exceed 29 ppmv or 25 percent of the potential sulfur dioxide emission

concentration (75 percent reduction by weight or volume), corrected to 7 percent oxygen (dry basis), whichever is less stringent. Compliance with this emission limit is based on a 24-hour daily geometric mean.

(b) Hydrogen chloride.

(1) By December 19, 2000, the concentration of hydrogen chloride contained in the gases discharged to the atmosphere from a MWC unit shall not exceed 31 parts per million by volume (ppmv) or 5 percent of the potential hydrogen chloride emission concentration (95 percent reduction by weight or volume), corrected to 7 percent oxygen (dry basis), whichever is less stringent.

(2) By August 26, 2002, or three years after EPA approval of the State plan, which ever is first, the concentration of hydrogen chloride contained in the gases discharged to the atmosphere from a MWC unit shall not exceed 29 ppmv or 5 percent of the potential hydrogen chloride emission concentration (95 percent reduction by weight or volume), corrected to 7 percent oxygen (dry basis), whichever is less stringent.

252:100-17-19. Standards for municipal waste combustor organics expressed as total mass dioxins/furans

(a) Dioxins/Furans. The concentration of organics, expressed as total mass dioxins/furans, contained in the gases discharged to the atmosphere from a MWC unit shall not exceed:

(1) With electrostatic precipitator: 60 nanograms per dry standard cubic meter (total mass), corrected to 7 percent oxygen.

(2) Without electrostatic precipitator: 30 nanograms per dry standard cubic meter (total mass), corrected to 7 percent oxygen.

252:100-17-20. Standards for nitrogen oxides

(a) Nitrogen oxides emission limits. The concentration of nitrogen oxides contained in the gases discharged into the atmosphere from a MWC unit shall not exceed the following:

NITROGEN OXIDES LIMITS

<u>Municipal Waste Combustor Technology</u>	<u>Nitrogen oxides emission limit (ppm by volume)^a</u>
<u>Mass burn waterwall</u>	<u>205</u>
<u>Mass burn rotary waterwall</u>	<u>250</u>
<u>Refuse-derived fuel combustor</u>	<u>250</u>
<u>Fluidized bed combustor (by December 19, 2000)</u>	<u>240</u>
<u>Fluidized bed combustor (by August 26, 2002, or three</u>	

years after EPA approval of the State plan, which ever is first) 180

^aCorrected to 7 percent oxygen, dry basis, 24 hr daily arithmetic average

(b) Nitrogen oxides emissions averaging. The owner or operator of a MWC plant may elect to implement a nitrogen oxides emissions averaging plan for the MWC units that are located at that plant.

(1) The following units cannot be included in the emissions averaging plan:

(A) MWC units subject to Subpart Ea or Eb of 40 CFR Part 60.

(B) Mass burn refractory MWC units and other MWC technologies not listed in paragraph (b)(3) of this section may not be included in the emissions averaging plan.

(2) Prior to implementing the nitrogen oxides emissions averaging plan, the units to be included must be identified in the initial performance test report specified in 40 CFR 60.59b(f) or in the annual report specified in 40 CFR 60.59b(g), as applicable. The units which are included in the averaging plan may be redesignated each calendar year. Partial year redesignation is allowable with DEQ approval.

(3) To implement the emissions averaging plan, the average daily (24-hour) nitrogen oxides emission concentration level discharged from the units included in the emission averaging plan shall be no greater than the levels specified in this section. Emission limits for the nitrogen oxides concentration level for each type of unit are as follows:

NITROGEN OXIDES LIMITS FOR EXISTING DESIGNATED FACILITIES INCLUDED IN AN EMISSIONS AVERAGING PLAN AT A MUNICIPAL WASTE COMBUSTOR PLANT^a

<u>Municipal waste combustor technology</u>	<u>Nitrogen oxides emission limit (ppm by volume)^b</u>
---	---

<u>Mass burn waterwall</u>	<u>185</u>
----------------------------	------------

<u>Mass burn rotary waterwall</u>	<u>220</u>
-----------------------------------	------------

<u>Refuse-derived fuel combustor</u>	<u>230</u>
--------------------------------------	------------

<u>Fluidized bed combustor</u>	<u>165</u>
--------------------------------	------------

^aMass burn refractory municipal waste combustors and other MWC technologies not listed above may not be included in an emissions averaging plan.

^bCorrected to 7 percent oxygen, dry basis, 24 hr daily arithmetic average

(4) Under the emissions averaging plan, the average daily nitrogen oxides emissions specified in paragraph (b)(3) of this section shall be calculated using the equation in Appendix K of

this Chapter. MWC units that are off-line shall not be included in calculating the average daily nitrogen oxides emission level.
(5) For any day a unit included in the emissions averaging plan is off-line, the owner or operator of the MWC plant must demonstrate compliance according to either paragraph (b) (5) (A) or both paragraphs (b) (5) (B) and (b) (5) (C) of this section.

(A) Compliance with the applicable limits specified in (b) (3) of this Part shall be demonstrated using the averaging procedure specified in paragraph (b) (4) of this section. The averaging procedure will include the MWC units in the plan that are on-line.

(B) For each of the units included in the emissions averaging plan, the nitrogen oxides emissions shall be calculated on a daily **average** basis. The nitrogen oxides emissions level shall be equal to or less than the maximum daily nitrogen oxides emission levels achieved by that unit on any of the days during which the emissions averaging plan was achieved with all units on-line during the most recent calendar quarter. The requirements of this paragraph do not apply during the first quarter of operation under the emissions averaging plan.

(C) The average nitrogen oxides emissions (kilograms per day) calculated according to paragraph (b) (5) (C) (ii) of this section shall not exceed the average nitrogen oxides emissions (kilograms per day) calculated according to paragraph (b) (5) (C) (i) of this section.

(i) The average nitrogen oxides emissions shall be calculated for all days during which the emissions averaging plan was implemented and achieved and during which all MWC units were on-line. The average nitrogen oxides emissions (kilograms per day) shall be calculated, on a calendar year basis, according to paragraphs (b) (5) (C) (i) (I) through (b) (5) (C) (i) (III) of this section.

(I) The daily amount of nitrogen oxides emitted (kilograms per day) shall be calculated for each MWC unit included in the emissions averaging plan. **The calculation shall be based on the hourly nitrogen oxides data required under 40 CFR 60.58b(h) and specified under 40 CFR 60.58b(h) (5).** The flue gas flow rate is determined using the hourly average steam or feedwater flow rate and Table 19-1 of EPA Reference Method 19, which is hereby incorporated by reference as it exists on July 1, 1997.

(II) The daily total nitrogen oxides emissions shall be calculated as the sum of the daily nitrogen oxides emissions from each unit calculated under paragraph (b) (5) (C) (i) (I) of this section.

(III) On a calendar year basis, the average nitrogen oxides emissions (kilograms per day), shall be calculated as the sum of all daily total nitrogen oxides emissions calculated under paragraph (b)(5)(C)(i)(II) of this section divided by the number of calendar days for which a daily total was calculated.

(ii) The average nitrogen oxides emissions shall be calculated for all days during which one or more of the MWC units under the emissions averaging plan was off-line. The average nitrogen oxides emissions (kilograms per day) shall be calculated according to paragraphs (b)(5)(C)(ii)(I) through (b)(5)(C)(ii)(III) of this section on a calendar year basis.

(I) For each MWC unit included in the emissions averaging plan, the daily amount of nitrogen oxides emitted (kilograms per day) shall be calculated based on the hourly nitrogen oxides data required under **40 CFR 60.58b(h) and specified under 40 CFR 60.58b(h)(5)**, the flue gas flow rate determined using Table 19-1 of the EPA Reference Method 19, which is hereby incorporated by reference as it exists on July 1, 1997, and the hourly average steam or feedwater flow rate.

(II) The daily total nitrogen oxides emissions shall be calculated as the sum of the daily nitrogen oxides emissions from each MWC unit as calculated under paragraph (b)(5)(C)(ii)(I) of this section.

(III) The average nitrogen oxides emissions (kilograms per day) on a calendar year basis shall be calculated as the sum of all daily total nitrogen oxides emissions calculated under paragraph (b)(5)(C)(ii)(II) of this section divided by the number of calendar days for which a daily total was calculated.

252:100-17-21. Standards for municipal waste combustor operating practices

(a) The concentration of carbon monoxide contained in the gases discharged to the atmosphere from a MWC unit shall not exceed the following limits for each type of affected equipment:

MUNICIPAL WASTE COMBUSTOR OPERATING LIMITS

<u>Municipal waste combustor technology</u>	<u>Carbon monoxide emissions level (ppm by volume)^a</u>	<u>Averaging Time^b (hours)</u>
<u>Mass burn waterwall</u>	<u>100</u>	<u>4</u>
<u>Mass burn refractory</u>	<u>100</u>	<u>4</u>
<u>Mass burn rotary refractory</u>	<u>100</u>	<u>24</u>
<u>Mass burn rotary waterwall</u>	<u>250</u>	<u>24</u>
<u>Modular starved air</u>	<u>50</u>	<u>4</u>

<u>Modular excess air</u>	<u>50</u>	<u>4</u>
<u>Refuse-derived fuel stoker</u>	<u>200</u>	<u>24</u>
<u>Bubbling fluidized bed</u>	<u>100</u>	<u>4</u>
<u>Circulating fluidized bed</u>	<u>100</u>	<u>4</u>
<u>Pulverized coal/refuse-derived fuel mixed fuel-fired combustor</u>	<u>150</u>	<u>4</u>
<u>Spreader stoker coal/refuse-derived fuel mixed fuel-fired combustor</u>	<u>200</u>	<u>24</u>

^aMeasured at the combustor outlet in conjunction with a measurement of oxygen concentration, corrected to 7 percent oxygen, dry basis. Calculated as an arithmetic average.

^bAveraging times are 4-hour or 24-hour block averages.

(b) An owner or operator of a MWC shall comply with all provisions specified in 40 CFR 60.53b(b) and (c), which is hereby incorporated by reference as it exists on October 24, 1997.

252:100-17-22. Standards for municipal waste combustor fugitive ash emissions

An owner or operator of a MWC shall comply with all provisions specified in 40 CFR 60.55b, which is hereby incorporated by reference as it exists on October 24, 1997.

252:100-17-23. Standards for air curtain incinerators

An owner or operator of an air curtain incinerator with the capacity to burn greater than 250 tons per day of MSW and for which construction commenced on or before September 20, 1994, and that combusts a fuel feed stream of 100 percent yard waste, shall not cause to be discharged into the atmosphere from that incinerator any gases that exhibit greater than 10 percent opacity (6-minute average). An opacity level of up to 35 percent (6-minute average) is permitted during startup periods within the first 30 minutes of unit operation.

252:100-17-24. Standards for municipal waste combustor operator training and certification

(a) Each chief facility operator and shift supervisor shall obtain and maintain a current provisional operator certification from either the American Society of Mechanical Engineers (ASME) [ORO-1-1994 Standard for the Qualification and Certification of Resource Recovery Facility Operators] or a State certification program no later than the date 6 months after the startup of a MWC unit or 12 months after the date of State plan approval, whichever is later.

(b) Each chief facility operator and shift supervisor shall have completed full certification or submitted an application, that has been

accepted by the appropriate certification program, for a full certification exam with either the ASME [QRO-1-1994 Standard for the Qualification and Certification of Resource Recovery Facility Operators] or a State certification program no later than the date 6 months after the startup of a MWC unit or 12 months after the date of State plan approval, whichever is later.

(c)(1) No owner or operator of a MWC unit shall allow the unit to be operated at any time unless one of the following persons is on duty:

(i) A fully certified chief facility operator.

(ii) A provisionally certified chief facility operator who has met the qualification requirements specified in ASME [QRO-1-1994 section 2.2.2] and has made an application for a full certification exam following the ASME [QRO-1-1994 section 4.3.1] application process, according to the schedule specified in paragraph (b) of this section.

(iii) A fully certified shift supervisor.

(iv) A provisionally certified shift supervisor who has met the qualification requirements specified in ASME [QRO-1-1994 section 2.2.2] and has made an application for a full certification exam following the ASME [QRO-1-1994 section 4.3.1] application process, according to the schedule specified in paragraph (b) of this section.

(2) The requirement specified in paragraph (c)(1) of this section shall take effect no later than the date 6 months after the startup of a MWC unit or 12 months after the date of State plan approval, whichever is later.

(3) If one of the persons listed in paragraph (c)(1) of this section must leave the unit during their operating shift, a

provisionally certified control room operator who is on-site at the MWC may fulfill the requirement in paragraph (c)(1) of this section.

(d) All chief facility operators, shift supervisors, and control room operators at MWC units must complete the EPA or State MWC operator training course no later than the date 6 months after the date of startup of the MWC or by 12 months after the date of State plan approval, whichever is later.

(e) The requirement specified in paragraph (d) of this section does not apply to chief facility operators, shift supervisors, and control room operators who have obtained full certification from the American Society of Mechanical Engineers on or before the date of State plan approval.

(f) The owner or operator may request that the DEQ waive the requirement specified in paragraph (d) of this section for chief facility operators, shift supervisors, and control room operators who have obtained provisional certification from the American Society of Mechanical Engineers on or before the date of State plan approval.

(g) The owner or operator of a MWC unit shall develop and update on an annual basis, a site-specific operating manual. The operating manual shall, at a minimum, address the elements of MWC unit operation specified in paragraphs (g)(1) through (g)(11) of this section.

(1) A summary of the applicable standards under this Part.

(2) A description of basic combustion theory applicable to a MWC unit.

(3) Procedures for receiving, handling, and feeding MSW.

(4) MWC unit start-up, shutdown, and malfunction procedures.

(5) Procedures for maintaining proper combustion air supply levels.

(6) Procedures for operating the MWC unit within the standards established under this Part.

(7) Procedures for responding to periodic upset or off-specification conditions.

(8) Procedures for minimizing particulate matter carryover.

(9) Procedures for handling ash.

(10) Procedures for monitoring MWC unit emissions.

(11) Reporting and recordkeeping procedures.

(h) The owner or operator of a MWC unit shall establish a training program to review the operating manual according to the schedule specified in paragraphs (h)(1) and (h)(2) of this section. The training shall be provided to each person who has responsibilities affecting the operation of the unit including, but not limited to, chief facility operators, shift supervisors, control room operators, ash handlers, maintenance personnel, and crane/load handlers.

(1) Each person specified in paragraph (h) of this section shall undergo initial training no later than the date specified in paragraph (h)(1)(A), (h)(1)(B), or (h)(1)(C), whichever is later.

- (A) The date 6 months after the date of startup of the unit.
- (B) The date prior to the day the person assumes responsibilities affecting MWC unit operation.
- (C) Twelve months after date of State plan approval.

(2) Annually, following the initial review required by paragraph (h)(1) of this section, each person specified in paragraph (h) of this section shall review the operating manual updates, any operational lessons learned/experiences of the past year, and provide for review of any section which an employee requests.

(i) The operating manual required by paragraph (h) of this section shall be kept in a readily accessible location for all persons required to undergo training under paragraph (h) of this section no later than 6 months after start-up or 12 months after the date of State plan approval. The operating manual and records of training shall be available for inspection by the DEQ upon request.

252:100-17-25. Compliance and performance testing

An owner or operator of a MWC shall comply with all provisions specified in 40 CFR 60.58b, which is hereby incorporated by reference as it exists on October 24, 1997.

252:100-17-26. Reporting and recordkeeping requirements

Except for the provisions of subsection 60.59b(a), b(5), and d(11), 40CFR 60.59b is hereby incorporated by reference as it exists on October 24, 1997.

252:100-17-27. Compliance schedules

(a) All MWC units must close or be in compliance with all requirements contained in this Part within 3 years following approval of the State plan. However, all MWC units for which construction, modification, or reconstruction is commenced after June 26, 1987 shall comply with the emission limit for mercury specified in 252:100-17-17(c) and the emission limit for dioxin/furans specified in 252:100-17-19 within 1 year following issuance of a revised construction or operating permit, if a permit modification is required, or within 1 year following approval of the State plan, whichever is later.

(b) All MWC units choosing to comply with all requirements contained in this Part in more than 1 year but less than 3 years following the date of issuance of a revised construction or operation permit if a permit modification is required, or more than 1 year but less than 3 years following approval of the State plan if a permit modification is not required, shall enter into a consent order that includes measurable and enforceable incremental

steps of progress toward compliance. These steps are specified below:

- (1) Date for submittal of the final control plan to the DEQ.
- (2) Date for obtaining services of an architectural and engineering firm regarding the air pollution control device(s).
- (3) Date for initiation of installation of the air pollution control device(s).
- (4) Date for completion of installation of the air pollution control device(s).
- (5) Date for final compliance.

(c) All MWC units with a compliance schedule of more than 1 year after approval of the State plan in accordance with paragraph (b) of this section, shall provide performance test results for dioxin/furan emissions for each unit. However, where the MWC owner or operator can demonstrate that multiple units have the same design, operate with the same fuel, have the same operating parameters, and are expected to have similar emission levels, the results of a dioxin/furan test from one unit may be provided as representative of all such units. The performance test results shall have been conducted during or after 1990. The performance test shall be conducted according to the procedures in 252:100-17-25.

(d) All MWC units intending to close in more than 1 year but less than 3 years after State plan approval shall enter into a consent order to close. The closure order must include the date of plant closure.

PUBLIC MEETING

Notice of Public Meeting for December 16, 1997 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance door of the meeting room.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Mr. Kilpatrick - aye; Ms. Slagell - aye; Mr. Fishback - aye; Dr. Canter - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye. Ms. Andrews was absent during the hearing session.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the October 21, 1997 Public Meeting/Hearing. Motion was made by Mr. Kilpatrick to approve the Minutes as presented and second to the motion was made by Mr. Branecky. Roll call as follows: Mr. Kilpatrick - aye; Ms. Slagell - aye; Mr. Fishback - aye; Dr. Canter - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-5-2.2(B)(2) PART 70 SOURCES ANNUAL OPERATING FEE [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51 and Title 27A Oklahoma Statutes, Section 2-5-101 through 2-5-118.. Mr. Dyke called upon Jeanette Buttram to give staff position on the proposed changes to the rule.

Ms. Buttram advised that staff's recommendation was that the annual operating fee billed in 1998 for Part 70 sources be adjusted by the Consumer Price Index as specified in the existing rule which would render a 2.2 % increase from \$16.03 to \$16.39 per ton. She also pointed out staff's intention to bring before the Council any proposed adjustments to the fee on an annual basis.

Dr. Canter introduced the committee's report *Title V Fee Committee Findings and Recommendations* dated December 15, 1997 into the record. Members of this committee were Dr. Canter, Mr. Fishback, and Mr. Branecky. The full report is made an official part of these Minutes. Mr. Kilpatrick made motion to accept the committee's report and second was made by Mr. Fishback. With discussion that perhaps Mr. Fishback should not make the second since he was on the committee, Ms. Myers made the second. Roll call as follows: Mr. Kilpatrick - aye; Ms. Slagell - aye; Mr. Fishback - aye; Dr. Canter - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

Ms. Myers made additional motion to leave the fees as stated for 1998 with only the Consumer Price Index increase from \$16.03 to \$16.39. Mr. Fishback made the second. Mr. Doughty, staff attorney, mentioned that Council is recommending no action; therefore, this portion of the rule would not go before the Environmental Quality Board specifically. Roll call was as follows: Mr. Kilpatrick - aye; Ms. Slagell - aye; Mr. Fishback - aye; Dr. Canter - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-8 OPERATING PERMITS (PART 70) [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Section 2-5-101 through Section 2-5-118. Mr. Dyke stated that since there was extensive discussion in the briefing session regarding continuation of this subchapter to a later date, Dr. Joyce Sheedy would stand ready to discuss staff proposal for the rule.

Mr. Kilpatrick made motion to continue the hearing to January 9, 1998 at 1:00. Mr. Branecky made the second. Roll call as follows: Mr. Kilpatrick - aye; Ms. Slagell - aye; Mr. Fishback - aye; Dr. Canter - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-17 INCINERATORS [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51

and Title 27A Oklahoma Statutes, Section 2-5-101 through Section 2-5-118. Mr. Dyke called upon Michelle Martinez to give staff position on the proposed changes to the rule. Staff's recommendation was for approval as both emergency and permanent adoption.

Mr. Kilpatrick made motion to continue this hearing until January 9, 1998 at 1:00 p.m. Second was made by Ms. Slagell. During discussion, it was noted that continuing this hearing to February would cause the rule to be adopted by the Board as an emergency rule only, which could possibly put the State Plan at risk. Roll call as follows: Mr. Kilpatrick – aye; Ms. Slagell – aye; Mr. Fishback – no; Dr. Canter – no; Ms. Myers - no; Mr. Branecky - no; Mr. Breisch - no.

After this discussion, Mr. Branecky made motion that Council accept Subchapter 17 as amended and recommend to the Environmental Quality Board for both emergency and permanent adoption. Ms. Myers made the second. Roll call as follows: Mr. Kilpatrick – no; Ms. Slagell – no; Mr. Fishback – aye; Dr. Canter – aye; Ms. Myers – aye; Mr. Branecky - aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:2-40 and OAC 252:2-41 UNIFORM PERMITTING PROCEDURES [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 Code of Federal Regulations Part 51, and Title 27A Oklahoma Statutes, Section 2-5-101 through Section 2-5-118. Mr. Dyke called upon Ms. Barbara Hoffman to give staff recommendations.

Staff requested that the Council recommend the revisions to the Environmental Quality Board for adoption as a permanent rule. After discussion, Ms. Myers made motion to approve the rule as amended and recommend to the Environmental Quality Board for permanent adoption. Mr. Branecky made the second. Roll call as follows: Mr. Kilpatrick – no; Ms. Slagell – aye; Mr. Fishback – aye; Dr. Canter – aye; Ms. Myers – aye; Mr. Branecky - aye; Mr. Breisch - aye.

OLD BUSINESS

OAC 252:100-5 REGISTRATION OF AIR CONTAMINANT SOURCE [AMENDED]

Mr. Dyke called upon Jeanette Buttram to give staff position on the proposed changes to this rule. After summarizing the changes, Ms. Buttram stated staff's recommendation was that Subchapter 5 be approved by Council and forwarded to the Environmental Quality Board at the same time that Subchapter 8 is approved.

Mr. Branecky moved that Council continue this hearing to January 9, 1998; and Ms. Myers made the second. Roll call as follows: Mr. Kilpatrick – aye; Ms. Slagell – aye; Mr. Fishback – aye; Dr. Canter – aye; Ms. Myers – aye; Mr. Branecky - aye; Mr. Breisch - aye.

**OAC 252:100-7 CONSTRUCTION PERMITS FOR MAJOR AND MINOR SOURCES;
OPERATING AND RELOCATION PERMITS FOR MINOR SOURCES [AMENDED]**

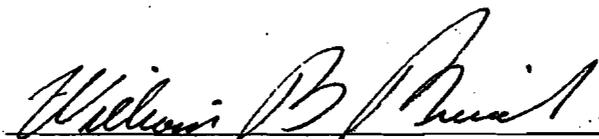

Mr. Dyke called upon Jeanette Buttram to give staff position on the proposed rule. After summarizing the changes, Ms. Buttram stated that staff recommended that Subchapter 7 be approved by Council at the same time that Subchapter 8 is approved.

Mr. Kilpatrick moved that Council continue the hearing on to the January 9, 1998 meeting. Second to the motion was made by Ms. Myers. Roll call as follows: Mr. Kilpatrick - aye; Ms. Slagell - aye; Mr. Fishback - aye; Dr. Canter - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Breisch - aye.

NEW BUSINESS Dr. Canter stated that no one member of the public could claim to represent all of the public, and that he believes Council hearings provide the proper forum to hear comments from the public on proposed rules. While it is sometimes difficult to decide what rule changes requested at hearings by AQD staff or the public are substantive, Dr. Canter said he resented the implication that the public was not given adequate opportunity to comment on Subchapter 17, since it had been presented at two Council meetings.

ADJOURNMENT With no further business, meeting was adjourned and an additional meeting scheduled for January 9, 1998 at the Lincoln Plaza Office Park Burgundy Room, 4545 North Lincoln Boulevard, Oklahoma City, Oklahoma.

NOTE: The sign-in sheet and the hearing records are attached as an official part of these Minutes.

AIR QUALITY COUNCIL
RULEMAKING RECOMMENDATION TO THE ENVIRONMENTAL QUALITY BOARD

Identification of Proposed Rulemaking:

Chapter Number and Title - OAC 252:100-17

INCINERATORS

Subchapters or Sections Involved - [new, amended or revoked]

On December 16, 1997 the members of this Council, by authority vested in them by the Oklahoma Environmental Quality Code (27 O.S.Supp. 1993, § 2-2-201), by roll call vote, recommended to the Environmental Quality Board that the rulemaking described above be adopted as:

permanent [take effect after legislative review]

emergency [temporary, to take effect upon approval by the Governor because of time; and/or special reason: _____]

(mark as appropriate)

This Council has considered the proposed rulemaking and comments about it and determined, to the best of its knowledge, that all applicable requirements of the Oklahoma Administrative Procedures Act have been followed.

This Council authorizes the Department to prepare this recommended rulemaking for the Board, making any changes approved by the Council, correcting typographical, grammatical and reference errors, and formatting them as required by the Office of Administrative Rules. This is to be done with the understanding that such changes shall neither alter the sense of what this Council recommends nor invalidate this recommendation.

Respectfully,

Chair or Designee

Date signed: 12/16/97

**AGENDA
AIR QUALITY COUNCIL
DEPARTMENT OF ENVIRONMENTAL QUALITY
HEARING/MEETING**

9:00 A.M.

**Wednesday, April 19, 2000
Lawton Great Plains Technology Center
4500 West Lee Blvd., Room 301
Lawton, Oklahoma**

1. Call to Order – David Branecky
2. Roll Call – Myrna Bruce
3. Approval of Minutes of the February 16, 2000 Regular Meeting
4. **PUBLIC RULEMAKING HEARINGS**

A. OAC 252:100-7 PERMITS FOR MINOR FACILITIES [AMENDED] *Continued*

The proposed changes to SC7 consist of the addition of sections 60.3, 60.4, and 60.5. Proposed sections 60.3 and 60.4 reference the existing permits by rule for VOC storage and loading facilities and particulate matter facilities, respectively. Section 60.5 is the proposed permit by rule for natural gas compression facilities. This section contains eligibility requirements, standards, testing and monitoring requirements, and recordkeeping requirements for natural gas compression facilities that qualify for permit by rule.

1. Presentation – Dr. Joyce Sheedy
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent and emergency adoption

B. OAC 252:100-9 EXCESS EMISSION AND MALFUNCTION REPORTING [AMENDED]

The proposed amendments to SC 9 include substantive changes such as adding new and amending existing definitions and requiring that a certification of truth, accuracy and completeness be submitted with any written report. Additional demonstration requirements for malfunctions and startups/shutdowns were added under proposed section 252:100-9-3.3, Demonstration of cause. New language sets forth the Division's interpretation that excess emissions occurring more than 1.5 percent of the time that a process operated in a calendar quarter may be indicative of inadequate design, operation, or maintenance, and the DEQ may initiate further investigation to determine if that is so. Prior notice to the DEQ by facilities of maintenance activities has been proposed to be deleted from the rule.

1. Presentation – Jeanette Buttram
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent adoption *passed*

C. OAC 252:100-11 ALTERNATIVE EMISSIONS REDUCTIONS PERMITS [AMENDED]

The proposed amendments to SC 11 will clarify and simplify the language as a part of the agency-wide re-right/de-wrong initiative. No substantive changes are being made to the Subchapter. This subchapter allows sources an alternative means for reducing the total burden of pollutants released into the atmosphere.

1. Presentation – Michelle Martinez
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent adoption *passed*

D. OAC 252:100-17 INCINERATORS [AMENDED]

The Department is proposing amendments to 252:100-17, Part 3, Incinerators. Section 2 of the Part would be amended to remove references to an effective date, and Section 5(3) would be deleted. A new Section 5.1, Alternative incinerator design requirements, would be added to clarify that the Division Director may approve incinerator designs that do not meet the requirements specified in 252:100-17-5.

1. Presentation – Cheryl Bradley
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent and emergency adoption

passed

E. OAC 252:100-33 CONTROL OF EMISSION OF NITROGEN OXIDES [AMENDED]

The proposed changes to Subchapter 33 are to primarily simplify and clarify requirements and to remove redundant requirements as part of the agency-wide re-right/de-wrong initiative.

1. Presentation – Dr. Joyce Sheedy
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent adoption

5. – Division Director's Report – Eddie Terrill

– proposed O3 designation

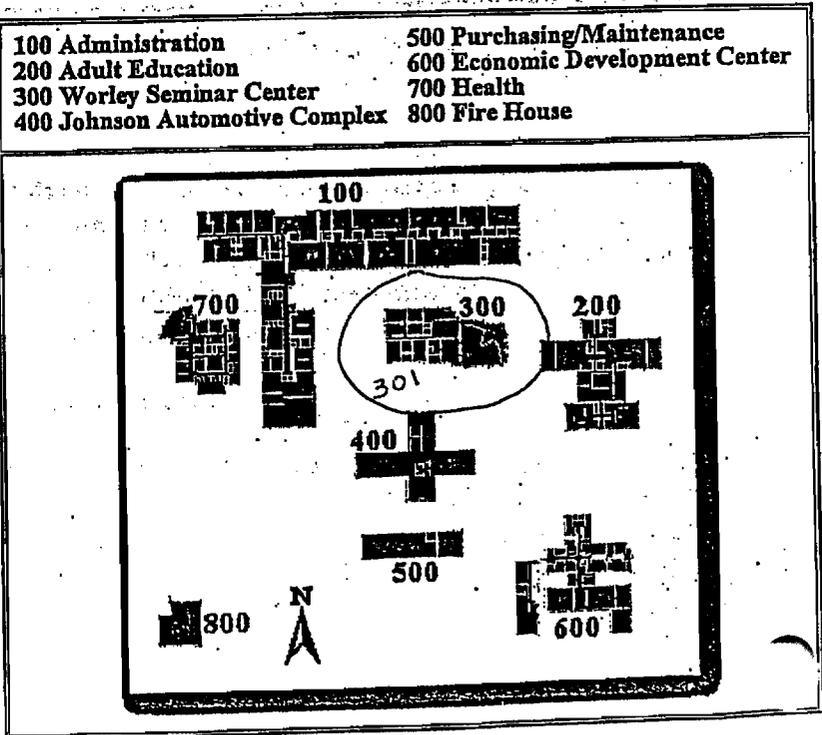

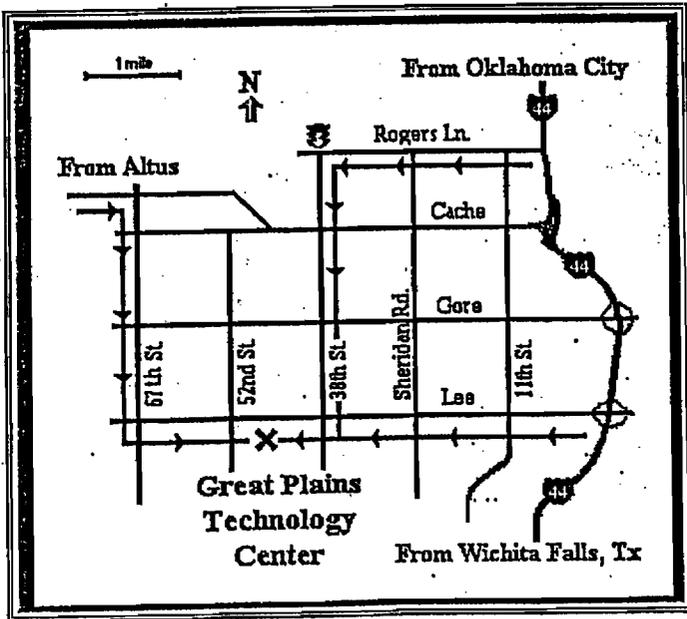

6. New Business – Any matter not known about, or which could not have been reasonably foreseen, prior to the time of posting the agenda.

7. Adjournment – Next Regular Meeting

Date and Time: June 14, 2000 @ 9:00 a.m.
Place: OSU @ Tulsa North Hall Room 150
700 North Greenwood, Tulsa, OK

Lunch Break, if necessary

MAP TO GREAT PLAINS

Should you desire to attend but have a disability and need an accommodation, please notify our Department three days in advance at (405) 702-4100.

April 3, 2000

MEMORANDUM

TO: Air Quality Council
FROM: Eddie Terrill, Director
Air Quality Division
Re: Modifications to Subchapter 17

Enclosed is a copy of the proposed amendments to OAC 252:100-17, Part 3, Incinerators. A new Section 5.1 will be added to authorize the Division Director to approve the construction and operation of incinerators that do not meet the design requirements specified in 252:100-17-5 if those incinerators can meet all other applicable requirements. Section 2 of the Part would be amended to remove the reference to an effective date as prescribed by the Administrative Rules of Rulemaking (OAC 655:10:5-18).

At the hearing, staff will suggest that the Council vote to recommend to the Environmental Quality Board adoption of the amendment as a permanent rule.

Enclosures: 2

SUBCHAPTER 17. INCINERATORS
PART 3. INCINERATORS

252:100-17-2. ~~Effective date; applicability~~ Applicability
[AMENDED]
252:100-17-2.1. Exemptions
252:100-17-2.2. Definitions
252:100-17-3. Opacity
252:100-17-4. Particulate matter
252:100-17-5. Incinerator design requirements
252:100-17-5.1 Alternative incinerator design requirements [NEW]
252:100-17-6. Allowable emission of particulates [REVOKED]
252:100-17-7. Test methods

SUBCHAPTER 17. INCINERATORS
PART 3. INCINERATORS

252:100-17-2. ~~Effective date; applicability~~ Applicability

This Part ~~became effective on July 21, 1971 and~~ applies to incinerators not subject to New Source Performance Standards (NSPS) or any other Parts in this Subchapter.

252:100-17-2.1. Exemptions

Thermal oxidizers, flares and any other air pollution control devices are exempt from the requirements of this Part.

252:100-17-2.2. Definitions

The following words and terms when used in this Subchapter shall have the following meaning unless the context clearly indicates otherwise:

"Capacity" means amount of specified wastes a unit is designed to burn. Capacity may be expressed as pounds per hour or tons per day.

"Primary combustion chamber" means the initial incinerator chamber where waste is charged, ignited and burned.

"Secondary burner" means a supplemental burner in the secondary chamber for the purpose of maintaining a minimum temperature and to insure the complete combustion of volatile gases and smoke.

252:100-17-3. Opacity

See 252:100-25-3.

252:100-17-4. Particulate matter

Fly ash or other particulate matter shall not exceed quantities greater than the allowable emission rate. The allowable emissions for incinerators with capacities of 100 lb/hr or greater are set forth in Appendix A of this Chapter. The allowable emissions for incinerators with capacities less than 100 lb/hr are set forth in Appendix B of this Chapter. Solid fuels charged will be considered part of the refuse weight. No. 1 and No. 2 fuel oils (distillate oils), liquified petroleum gases, gaseous fuels and combustion air will not be considered as part of the refuse weight.

252:100-17-5. Incinerator design requirements

An incinerator ~~under subject to this Part~~ must have:

(1) A primary burner that maintains a temperature of at least 800°F in the primary combustion chamber.

(2) A secondary burner that shall be used when necessary to eliminate smoke.

~~(3) A design that can be demonstrated to the DEQ to be effective in accordance with the provisions of this Subchapter. The burden of proof shall rest upon the owner of the proposed incinerator.~~

252:100-17-5.1. Alternative incinerator design requirements

The Director may approve an incinerator design that does not meet the design requirements in 252:100-17-5 if the owner of the proposed incinerator demonstrates to the DEQ that the incinerator can comply with all other applicable requirements.

252:100-17-6. Allowable emission of particulates [REVOKED]

252:100-17-7. Test methods

(a) **Opacity.** Opacity shall be measured utilizing Method 9 - Visual Determination of the Opacity of Emissions from Stationary Sources found in the Code of Federal Regulations at 40 CFR Part 60, Appendix A. This method is hereby incorporated by reference as it exists on July 1, 1997.

(b) **Particulate matter.** Particulate matter shall be measured utilizing the appropriate DEQ-approved Method 5 found in the Code of Federal Regulations at 40 CFR Part 60, Appendix A. This method is hereby incorporated by reference as it exists on July 1, 1997.

Notice of Public Meeting for April 19, 2000 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance doors to the Great Plains Technical Center and on the entrance doors of the DEQ Central Office in Oklahoma City.

Call to Order - Mr. Branecky, Chairman, called the meeting to order and roll call was taken as follows: Mr. Kilpatrick - aye; Mr. Wilson - aye; Dr. Grosz - aye; Mr. Treeman - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye. Mr. Breisch and Dr. Canter did not attend.

Approval of Minutes - Mr. Branecky entertained a motion to approve the Minutes of the February 16, 2000 Public Meeting/Hearings. Motion was made by Mr. Fallon to approve the Minutes as presented and second was made by Dr. Grosz. Roll call: Mr. Kilpatrick - aye; Mr. Wilson - aye; Dr. Grosz - aye; Mr. Treeman - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye.

Protocol Statement — As protocol officer, Mr. Dyke convened the hearings by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-201 through 2-5-101 - 2-5-118. Mr. Dyke entered the Agenda and the Oklahoma Register Notice into the record.

PUBLIC HEARING

OAC 252:100- 7

Permits for Minor Facilities

Mr. Terrill advised that it had been agreed to form workgroups for rules that would be modified extensively or that would affect a large group of industrial sources so as to allow input into the process from those effected sources. He added that there seemed to be a misunderstanding regarding how and when workgroups would be formed. Mr. Terrill stated that it was never intended to form these workgroups without first having a formal public hearing. He invited

those who wanted to participate in the workgroup process to contact our office and watch our website for meeting information.

Dr. Joyce Sheedy stated that the proposed changes consist of the addition of sections 60.3 and 60.4, which are not substantive changes. Additionally, section 60.5 is the proposed permit by rule for natural gas compression facilities. This section contains eligibility requirements, standards, testing and monitoring requirements, and recordkeeping requirements for natural gas compression facilities that qualify for permit by rule.

Dr. Sheedy advised that comments had been received from Tom Blachley which she entered into the record. She stated that the staff recommended that this rule be continued to the next regular meeting.

Following discussion, Mr. Branecky asked for volunteers from the Council to participate in the workgroup sessions. Mr. Wilson and Mr. Kilpatrick volunteered. Then Mr. Branecky entertained a motion to continue the hearing on this rule to the next regular meeting. Ms. Myers made the motion and the second was made by Mr. Fallon. Roll call: Mr. Kilpatrick - aye; Mr. Wilson - aye; Dr. Grosz - aye; Mr. Treeman - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-9

Excess Emission And Malfunction Reporting [AMENDED]

Ms. Jeanette Buttram presented the staff recommendation advising that earlier versions of SC 9 were brought before the Council on June 15, August 24, October 19, December 14, 1999 and on February 16, 2000. She stated that there had been several meetings between staff and regulated community which produced the current version. She entered into the record comments received from Michael Graves of Hall, Estill, Hardwick, Gable, Golden & Nelson; Michael Bernard, President of Mid Continent Oil & Gas Association of Oklahoma; Tom Blachley; and from EPA Region VI. After describing proposed changes that had been made in response to the comments received, Ms. Buttram advised that it was staff's recommendation that this rule be forwarded to the Environmental Quality Board for permanent adoption.

Mr. Branecky called for motion for approval as discussed. Mr. Fallon make the motion with Mr. Kilpatrick seconding. Roll call: Mr. Kilpatrick - aye; Mr. Wilson - aye; Dr. Grosz - aye; Mr. Treeman - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-11

Alternative Emissions Reductions Permits

Ms. Michelle Martinez was called to make the staff presentation for Subchapter 11. Ms. Martinez stated that the proposed changes followed the agency-wide re-right/de-wrong initiative to simplify and clarify the language with no substantive changes proposed. She pointed out the changes and related that comments had been received from EPA and from Mr. Tom Blachley which she entered into the record.

Following discussion, Mr. Branecky called for a motion to approve the rule with the changes as discussed and forward to the Environmental Quality Board for permanent adoption. Ms. Myers made the motion and second was made by Dr. Grosz. Roll call: Mr. Kilpatrick - aye; Mr. Wilson - aye; Dr. Grosz - aye; Mr. Treeman - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-17

Incinerators

Ms. Cheryl Bradley advised that proposed modifications to Part 3 would allow the Air Quality Division to issue permits for the construction and operation of incinerators that meet all applicable requirements except multiple chamber design; and to remove the references to an effective date per the Administrative Rules on Rulemaking. Ms. Bradley further advised that proposal would clarify that the Division Director may approve incinerator designs that do not meet the requirements specified in Part 5.

Ms. Bradley entered a letter of comment from EPA Region VI into the record and recommended that the rule go forward to the Environmental Quality Board for permanent and emergency adoption.

Following discussion, Mr. Branecky called for a motion to forward the rule to the Board. Mr. Kilpatrick made the motion and Mr. Treeman made the second. Roll call: Mr. Kilpatrick - aye; Mr. Wilson - aye; Dr. Grosz - aye; Mr. Treeman - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-33

Control of Emission of Nitrogen Oxides

Dr. Joyce Sheedy provided Council with staff recommendations pointing out revisions made since the February meeting. She remarked that written comments had been received from Michael Graves of Hall, Estill, Hardwick, Gable, Golden & Nelson; Tom Blachley; Gary Collins of Terra Nitrogen; and EPA Region VI. She entered these comments into the record. Dr. Sheedy advised that staff's suggestion was for Council to forward this rule to the Environmental Quality Board for permanent adoption.

Mr. Branecky called for a motion to forward this rule to the Environmental Quality Board with the changes suggested with the understanding that the DEQ would address the turbine issue not later than June, 2001 Council meeting. Mr. Fallon made the motion and the second was made by Dr. Grosz. Roll call: Mr. Kilpatrick - aye; Mr. Wilson - aye; Dr. Grosz - aye; Mr. Treeman - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

DIVISION DIRECTOR'S REPORT - Scott Thomas discussed the TexAQS 2000 air pollution research project stating that the study is being designed to improve understanding of the chemical and physical processes that control air pollutant formation in the greater Houston area and transport along the Gulf Coast of southeastern Texas and perhaps into neighboring states as well. He noted that measurements of gaseous, particulate and hazardous air pollutants will be made this summer throughout the eastern half of Texas and possibly portions of Oklahoma using both ground stations and aircraft. He stated that the Air Quality Division plans to participate in this study by sharing air quality data with the Texas Natural Resource Conservation Commission, and by supporting aircraft sampling activities in our State. Mr. Terrill added that \$50,000 has been set aside for collection of Oklahoma air quality data and remarked that the results of this study could prove to be invaluable in allowing us to better understand how ozone is formed and transported as well as what control strategies may be effective in the future.

Additionally, Mr. Terrill provided a brief summary of EPA's efforts to reinstate the 8-hour ozone standard by filing a petition with the U.S. Supreme Court over the D.C Circuit decision. He stated that while the enforceability of the standard is in question, EPA is going forward with the designation of areas that have not attained compliance with the 8-hour standard. He noted that Oklahoma may not submit to EPA any designations for our state as the final decision has yet to be made.

Ms. Myers presented the financial committee's update stating that she was pleased to report that the DEQ can now provide current financial information for planning activities.

NEW BUSINESS - None

ADJOURNMENT With no further business, meeting was adjourned with announcement that the next regularly scheduled meeting would be June 14, 2000 at 9:00 a.m. in Room 150 of the OSU Tulsa Campus located at 700 North Greenwood.

NOTE: The sign-in sheet is attached as an official part of these Minutes.

THE AIR QUALITY COUNCIL
RULEMAKING RECOMMENDATION
TO THE ENVIRONMENTAL QUALITY BOARD

Identification of Proposed Rulemaking:

Chapter Number and Title:
OAC: 252:100-17
INCINERATORS [AMENDED]

On April 19, 2000 _____ the members of this Council, by authority vested in them by the Oklahoma Environmental Quality Code (27 O.S. Sec. 2-2-201), by roll call vote, recommended to the Environmental Quality Board that the rulemaking described above be adopted as:

 X permanent [take effect after legislative review]
 X emergency [temporary, to take effect upon approval by the Governor because of time]

This Council has considered the proposed rulemaking and comments about it and determined, to the best of its knowledge, that all applicable requirements of the Oklahoma Administrative Procedures Act have been followed.

This council authorizes the Department to prepare this recommended rulemaking for the Board, making any changes approved by the Council, correcting typographical, grammatical and reference errors, and formatting them as required by the Office of Administrative Rules. This is to be done with the understanding that such changes shall neither alter the sense of what this Council recommends nor invalidate this recommendation.

Respectfully,

David Branecky
Chair or Designee:

Date Signed: 4/19/00

SUBCHAPTER 17. INCINERATORS

PART 1. GENERAL PROVISIONS

252:100-17-1. Purpose

The purpose of this Subchapter is to deem it unlawful to burn refuse in any incinerator except in a multiple chambered incinerator or in equipment determined by the Director to be equally effective for the purpose of air pollution control specify design and operating requirements and emission limitations for incinerators and municipal waste combustors (MWC).

252:100-17-1.1. Reference to 40 CFR

When a provision of Title 40 of the Code of Federal Regulations (40 CFR) is incorporated by reference, all citations contained therein are also incorporated by reference.

252:100-17-1.2. Terminology related to 40 CFR

When these terms are used in rules incorporated by reference, the following definitions shall apply:

"EPA Administrator" is synonymous with "Executive Director".

"Affected facility" is synonymous with "large MWC unit".

"State" is synonymous with "Department of Environmental Quality" or "DEQ".

"State plan" is a program that the State is responsible for developing and implementing to achieve compliance with the emission guidelines in Subpart Cb of 40 CFR Part 60.

PART 3. INCINERATORS

252:100-17-2. Effective date; applicability

This subchapter shall become operative one year from and after July 21, 1970. It will apply to any and all incinerators utilized within the State of Oklahoma. This Part became effective on July 21, 1971 and applies to incinerators not subject to New Source Performance Standards (NSPS) or any other Parts in this Subchapter.

252:100-17-2.1. Exemptions

Thermal oxidizers, flares and any other air pollution control devices are exempt from the requirements of this Part.

252:100-17-2.2. Definitions

The following words and terms when used in this Subchapter shall have the following meaning unless the context clearly indicates otherwise:

"Capacity" means amount of specified wastes a unit is designed to burn. Capacity may be expressed as pounds per hour or tons per day.

"Primary combustion chamber" means the initial incinerator chamber where waste is charged, ignited and burned.

"Secondary burner" means a supplemental burner in the secondary chamber for the purpose of maintaining a minimum temperature and to insure the complete combustion of volatile gases and smoke.

252:100-17-3. ~~Prohibition on density of emissions~~ Opacity
(a) ~~Prohibition.~~ No person shall cause, suffer, allow, or permit the discharge of smoke from an incinerator of a density darker than number one (1) on the Ringelmann Chart or a visible emission of such an equivalent opacity as to obscure a certified visible emission evaluator's view to a degree greater than number one (1) on the Ringelmann Chart.

(b) ~~Exemptions.~~ Subsection 252:100-17-3(a) shall not apply to:
(1) ~~visible emissions consisting of uncombined water droplets, or,~~
(2) ~~smoke, the density of which is not darker than number three~~
(3) ~~of the Ringelmann Chart for a period aggregating no more than five (5) minutes in any sixty (60) consecutive minutes or more than twenty (20) minutes in any twenty four (24) hour period~~ See 252:100-25-3.

252:100-17-4. ~~Prohibition on pounds per hour of emissions~~ Particulate matter

No person shall cause or allow to be emitted into the open air from any incinerator equipment, fly ash or other particulate matter in quantities greater than shown in 252:100-17-6. Solid fuels charged will be considered as part of the refuse weight, but No. 1 and No. 2 fuel oil and gaseous fuels and combustion air will not be so considered. Fly ash or other particulate matter shall not exceed quantities greater than the allowable emission rate. The allowable emissions for incinerators with capacities of 100 lb/hr or greater are set forth in Appendix A of this Chapter. The allowable emissions for incinerators with capacities less than 100 lb/hr are set forth in Appendix B of this Chapter. Solid fuels charged will be considered part of the refuse weight. No. 1 and No. 2 fuel oil (distillate oils), liquified petroleum gases, gaseous fuels and combustion air will not be considered as part of the refuse weight.

252:100-17-5. Incinerator design requirements

~~Hereafter no person shall operate an incinerator unless~~ An incinerator under this Part must have:

(1) ~~It is provided with an auxiliary burner for the purpose of maintaining~~ A primary burner that maintains a temperature of at least 800°F in the primary combustion chamber.

(2) ~~It has~~ A secondary burner for use that shall be used when necessary to eliminate smoke.

(3) ~~It is a type of incinerator design~~ A design that can be demonstrated to the Director/DEQ to be effective in accordance with the provisions of this Subchapter. The burden of proof shall rest upon the owner of the proposed incinerator.

(4) ~~It complies with generally recognized good practices and all applicable provisions of this Subchapter.~~

(5) ~~Full and proper use is made of all components and appurtenances thereof.~~

252:100-17-6. Allowable emission of particulates [AMENDED AND RENUMBERED TO 252:100-17-4]

(a) ~~Allowable emissions for incinerators with capacities in excess of 100 lb/hr are set forth in Appendix A of this Chapter.~~

(b) ~~Allowable emissions for incinerators with capacities less than~~

~~100 lbs/hr are set forth in Appendix B of this Chapter.~~

252:100-17-7. Test methods

(a) Opacity. Opacity shall be measured utilizing Method 9 - Visual Determination of the Opacity of Emissions from Stationary Sources found in the Code of Federal Regulations at 40 CFR Part 60, Appendix A. This method is hereby incorporated by reference as it exists on July 1, 1997.

(b) Particulate Matter. Particulate matter shall be measured utilizing the appropriate DEO-approved Method 5 found in the Code of Federal Regulations at 40 CFR Part 60, Appendix A. This method is hereby incorporated by reference as it exists on July 1, 1997.

PART 5. MUNICIPAL WASTE COMBUSTORS

252:100-17-14. Effective date; applicability

This Part is effective as of March 23, 1997 and applies to large MWC units.

252:100-17-14.1. Definitions

The definitions in 40 CFR 60.51b are hereby incorporated by reference as they exist on October 24, 1997.

252:100-17-15. Exemptions

(a) Any MWC unit that is capable of combusting more than 250 tons per day of MSW and is subject to a federally enforceable permit limiting the maximum amount of MSW that may be combusted in the unit to less than or equal to 11 tons per day is not subject to this Part if the owner/operator:

(1) Notifies the DEO of an exemption claim.

(2) Provides the DEO with a copy of the federally enforceable permit that limits the firing of MSW to less than or equal to 11 tons per day.

(3) Keeps records of the amount of MSW fired per day.

(b) A qualifying small power production facility, (as defined in section 3(17)(C) of the Federal Power Act (16 U.S.C. § 796(17)(C)), that produces electric energy from homogeneous waste is not subject to this Part if the owner/operator:

(1) Notifies the DEO of an exemption claim.

(2) Provides the DEO data documenting that the facility qualifies for this exemption.

(c) A qualifying cogeneration facility, (as defined in section 3(18)(B) of the Federal Power Act (16 U.S.C. § 796(18)(B)), that burns homogeneous waste to produce electric energy, steam, or other useful energy used for industrial, commercial, heating, or cooling purposes, is not subject to this Part if the owner/operator:

(1) Notifies the DEO of an exemption claim.

(2) Provides the DEO data documenting that the facility qualifies for this exemption.

(d) Any unit combusting a single-item waste stream of tires is not subject to this Part if the owner/operator:

(1) Notifies the DEO of an exemption claim.

(2) Provides the DEO with data documenting that the unit qualifies for this exemption.

(e) Any unit required to have a hazardous waste permit is not

subject to this Part.

(f) Any materials recovery facility (including primary or secondary smelters) that combusts waste for the primary purpose of recovering metals is not subject to this Part.

(g) Any cofired combustor that meets the capacity specifications in paragraph (a) of this section is not subject to this Part if the owner/operator:

(1) Notifies the DEO of an exemption claim.

(2) Provides the DEO with a copy of the federally enforceable permit.

(3) Keeps separate records, on a calendar quarter basis, of the weight of MSW and the weight of all other fuels combusted at the cofired combustor.

(h) Air curtain incinerators that meet the capacity specifications in 252:100-17-23 of this Subchapter and combust a 100 percent yard waste fuel stream are not subject to this Part, except:

(1) The opacity limit under section 252:100-17-23 of this Subchapter.

(2) The testing procedures under section 252:100-17-25 of this Subchapter.

(3) The reporting and recordkeeping provisions under section 252:100-17-26 of this Subchapter.

(i) Pyrolysis/combustion units that are an integrated part of a plastics/rubber recycling unit are not subject to this Part if the owner/operator of the unit maintains records of:

(1) The weight of plastics, rubber, and/or rubber tires processed on a calendar quarter basis.

(2) The weight of chemical plant feedstocks and petroleum refinery feedstocks produced and marketed on a calendar quarter basis.

(3) The name and address of the purchaser of the feedstocks.

(j) The combustion of gasoline, diesel fuel, jet fuel, fuel oils, residual oil, refinery gas, petroleum coke, liquefied petroleum gas, propane, or butane produced by chemical plants or petroleum refineries that use feedstocks produced by plastics/rubber recycling units are not subject to this Part.

(k) Cement kilns firing MSW are not subject to this Part.

252:100-17-16. Standards for particulate matter and opacity

(a) Particulate matter. The concentration of particulate matter contained in the gases discharged to the atmosphere from a MWC unit shall not exceed 27 milligrams per dry standard cubic meter, corrected to 7 percent oxygen.

(b) Opacity. Opacity of gases discharged to the atmosphere from a MWC unit shall not exceed 10 percent (6-minute average).

252:100-17-17. Standards for municipal waste combustor metals

(a) Cadmium. The concentration of cadmium contained in the gases discharged to the atmosphere from a MWC unit shall not exceed 0.040 milligrams per dry standard cubic meter, corrected to 7 percent oxygen.

(b) Lead.

(1) By December 19, 2000, the concentration of lead contained in the gases discharged to the atmosphere from a MWC unit shall not exceed 0.49 milligrams per dry standard cubic meter.

corrected to 7 percent oxygen.

(2) By August 26, 2002, or three years after EPA approval of the State plan, whichever is first, the concentration of lead contained in the gases discharged to the atmosphere from a MWC unit shall not exceed 0.44 milligrams per dry standard cubic meter, corrected to 7 percent oxygen.

(c) Mercury. The concentration of mercury contained in the gases discharged to the atmosphere from a MWC unit shall not exceed 0.080 milligrams per dry standard cubic meter or 15 percent of the potential mercury emission concentration (85-percent reduction by weight), corrected to 7 percent oxygen, whichever is less stringent.

252:100-17-18. Standards for municipal waste combustor acid gases expressed as sulfur dioxide and hydrogen chloride

(a) Sulfur dioxide.

(1) By December 19, 2000, the concentration of sulfur dioxide contained in the gases discharged to the atmosphere from a MWC unit shall not exceed 31 parts per million by volume (ppmv) or 25 percent of the potential sulfur dioxide emission concentration (75 percent reduction by weight or volume), corrected to 7 percent oxygen (dry basis), whichever is less stringent. Compliance with this emission limit is based on a 24-hour daily geometric mean.

(2) By August 26, 2002, or three years after EPA approval of the State plan, whichever is first, the concentration of sulfur dioxide contained in the gases discharged to the atmosphere from a MWC unit shall not exceed 29 ppmv or 25 percent of the potential sulfur dioxide emission concentration (75 percent reduction by weight or volume), corrected to 7 percent oxygen (dry basis), whichever is less stringent. Compliance with this emission limit is based on a 24-hour daily geometric mean.

(b) Hydrogen chloride.

(1) By December 19, 2000, the concentration of hydrogen chloride contained in the gases discharged to the atmosphere from a MWC unit shall not exceed 31 parts per million by volume (ppmv) or 5 percent of the potential hydrogen chloride emission concentration (95 percent reduction by weight or volume), corrected to 7 percent oxygen (dry basis), whichever is less stringent.

(2) By August 26, 2002, or three years after EPA approval of the State plan, whichever is first, the concentration of hydrogen chloride contained in the gases discharged to the atmosphere from a MWC unit shall not exceed 29 ppmv or 5 percent of the potential hydrogen chloride emission concentration (95 percent reduction by weight or volume), corrected to 7 percent oxygen (dry basis), whichever is less stringent.

252:100-17-19. Standards for municipal waste combustor organics expressed as total mass dioxins/furans

(a) The concentration of organics, expressed as total mass dioxins/furans, contained in the gases discharged to the atmosphere from a MWC unit shall not exceed:

(1) With electrostatic precipitator: 60 nanograms per dry standard cubic meter (total mass), corrected to 7 percent

oxygen.

(2) Without electrostatic precipitator: 30 nanograms per dry standard cubic meter (total mass), corrected to 7 percent oxygen.

(b) Large MWC units that achieve a dioxin/furan emission level less than or equal to 15 nanograms per dry standard cubic meter total mass, corrected to 7 percent oxygen, may elect the alternative performance testing schedule for dioxins/furans as specified in 40 CFR 60.58b(g)(5)(iii).

252:100-17-20. Standards for nitrogen oxides

(a) Nitrogen oxides emission limits. The concentration of nitrogen oxides contained in the gases discharged into the atmosphere from a MWC unit shall not exceed the following:

NITROGEN OXIDES LIMITS

Municipal Waste Combustor
Technology

Nitrogen oxides
emission limit
(ppm by volume)*

Mass burn waterwall

205

Mass burn rotary waterwall

250

Refuse-derived fuel combustor

250

Fluidized bed combustor

(by December 19, 2000)

240

Fluidized bed combustor

(by August 26, 2002, or three
years after EPA approval of the
State plan, which ever is first)

180

*Corrected to 7 percent oxygen, dry basis, 24 hr daily arithmetic average

(b) Nitrogen oxides emissions averaging. The owner or operator of a MWC plant may elect to implement a nitrogen oxides emissions averaging plan for the MWC units that are located at that plant.

(1) The following units cannot be included in the emissions averaging plan:

(A) MWC units subject to Subpart Ea or Eb of 40 CFR Part 60.

(B) Mass burn refractory MWC units and other MWC technologies not listed in paragraph (b)(3) of this section may not be included in the emissions averaging plan.

(2) Prior to implementing the nitrogen oxides emissions averaging plan, the units to be included must be identified in the initial performance test report specified in 40 CFR 60.59b(f) or in the annual report specified in 40 CFR 60.59b(g), as applicable. The units which are included in the averaging plan may be redesignated each calendar year. Partial year redesignation is allowable with DEO approval.

(3) To implement the emissions averaging plan, the average daily (24-hour) nitrogen oxides emission concentration level discharged from the units included in the emission averaging plan shall be no greater than the levels specified in this section. Emission limits for the nitrogen oxides concentration level for each type of unit are as follows:

NITROGEN OXIDES LIMITS FOR EXISTING DESIGNATED FACILITIES
INCLUDED IN AN EMISSIONS AVERAGING PLAN AT A MUNICIPAL WASTE
COMBUSTOR PLANT^a

<u>Municipal waste combustor technology</u>	<u>Nitrogen oxides emission limit (ppm by volume)^b</u>
---	---

<u>Mass burn waterwall</u>	<u>185</u>
----------------------------	------------

<u>Mass burn rotary waterwall</u>	<u>220</u>
-----------------------------------	------------

<u>Refuse-derived fuel combustor</u>	<u>230</u>
--------------------------------------	------------

<u>Fluidized bed combustor</u>	<u>165</u>
--------------------------------	------------

*Mass burn refractory municipal waste combustors and other MWC technologies not listed above may not be included in an emissions averaging plan.

^bCorrected to 7 percent oxygen, dry basis, 24 hr daily arithmetic average

(4) Under the emissions averaging plan, the average daily nitrogen oxides emissions specified in paragraph (b) (3) of this section shall be calculated using the equation in Appendix K of this Chapter. MWC units that are off-line shall not be included in calculating the average daily nitrogen oxides emission level.

(5) For any day a unit included in the emissions averaging plan is off-line, the owner or operator of the MWC plant must demonstrate compliance according to either paragraph (b) (5) (A) or both paragraphs (b) (5) (B) and (b) (5) (C) of this section.

(A) Compliance with the applicable limits specified in (b) (3) of this Part shall be demonstrated using the averaging procedure specified in paragraph (b) (4) of this section. The averaging procedure will include the MWC units in the plan that are on-line.

(B) For each of the units included in the emissions averaging plan, the nitrogen oxides emissions shall be calculated on a daily average basis. The nitrogen oxides emissions level shall be equal to or less than the maximum daily nitrogen oxides emission levels achieved by that unit on any of the days during which the emissions averaging plan was achieved with all units on-line during the most recent calendar quarter. The requirements of this paragraph do not apply during the first quarter of operation under the emissions averaging plan.

(C) The average nitrogen oxides emissions (kilograms per day) calculated according to paragraph (b) (5) (C) (ii) of this section shall not exceed the average nitrogen oxides emissions (kilograms per day) calculated according to paragraph (b) (5) (C) (i) of this section.

(i) The average nitrogen oxides emissions shall be calculated for all days during which the emissions averaging plan was implemented and achieved and during which all MWC units were on-line. The average nitrogen oxides emissions (kilograms per day) shall be calculated on a calendar year basis, according to paragraphs (b) (5) (C) (i) (I) through (b) (5) (C) (i) (III) of this section.

(I) The daily amount of nitrogen oxides emitted

(kilograms per day) shall be calculated for each MWC unit included in the emissions averaging plan. The calculation shall be based on the hourly nitrogen oxides data required under 40 CFR 60.58b(h) and specified under 40 CFR 60.58b(h) (5). The flue gas flow rate is determined using the hourly average steam or feedwater flow rate and Table 19-1 of EPA Reference Method 19, which is hereby incorporated by reference as it exists on July 1, 1997.

(II) The daily total nitrogen oxides emissions shall be calculated as the sum of the daily nitrogen oxides emissions from each unit calculated under paragraph (b) (5) (C) (i) (I) of this section.

(III) On a calendar year basis, the average nitrogen oxides emissions (kilograms per day), shall be calculated as the sum of all daily total nitrogen oxides emissions calculated under paragraph (b) (5) (C) (i) (II) of this section divided by the number of calendar days for which a daily total was calculated.

(ii) The average nitrogen oxides emissions shall be calculated for all days during which one or more of the MWC units under the emissions averaging plan was off-line. The average nitrogen oxides emissions (kilograms per day) shall be calculated according to paragraphs (b) (5) (C) (i) (I) through (b) (5) (C) (ii) (III) of this section on a calendar year basis.

(I) For each MWC unit included in the emissions averaging plan, the daily amount of nitrogen oxides emitted (kilograms per day) shall be calculated based on the hourly nitrogen oxides data required under 40 CFR 60.58b(h) and specified under 40 CFR 60.58b(h) (5), the flue gas flow rate determined using Table 19-1 of the EPA Reference Method 19, which is hereby incorporated by reference as it exists on July 1, 1997, and the hourly average steam or feedwater flow rate.

(II) The daily total nitrogen oxides emissions shall be calculated as the sum of the daily nitrogen oxides emissions from each MWC unit as calculated under paragraph (b) (5) (C) (ii) (I) of this section.

(III) The average nitrogen oxides emissions (kilograms per day) on a calendar year basis shall be calculated as the sum of all daily total nitrogen oxides emissions calculated under paragraph (b) (5) (C) (ii) (II) of this section divided by the number of calendar days for which a daily total was calculated.

252:100-17-21. Standards for municipal waste combustor operating practices

(a) The concentration of carbon monoxide contained in the gases discharged to the atmosphere from a MWC unit shall not exceed the following limits for each type of affected equipment:

MUNICIPAL WASTE COMBUSTOR OPERATING LIMITS

<u>Municipal waste combustor technology</u>	<u>Carbon monoxide emissions level</u>	<u>Averaging Time^b (hours)</u>
---	--	---

	(ppm by volume) ^a	
<u>Mass burn waterwall</u>	<u>100</u>	<u>4</u>
<u>Mass burn refractory</u>	<u>100</u>	<u>4</u>
<u>Mass burn rotary refractory</u>	<u>100</u>	<u>24</u>
<u>Mass burn rotary waterwall</u>	<u>250</u>	<u>24</u>
<u>Modular starved air</u>	<u>50</u>	<u>4</u>
<u>Modular excess air</u>	<u>50</u>	<u>4</u>
<u>Refuse-derived fuel stoker</u>	<u>200</u>	<u>24</u>
<u>Bubbling fluidized bed</u>	<u>100</u>	<u>4</u>
<u>Circulating fluidized bed</u>	<u>100</u>	<u>4</u>
<u>Pulverized coal/refuse-derived fuel mixed fuel-fired combustor</u>	<u>150</u>	<u>4</u>
<u>Spreader stoker coal/refuse-derived fuel mixed fuel-fired combustor</u>	<u>200</u>	<u>24</u>

*Measured at the combustor outlet in conjunction with a measurement of oxygen concentration, corrected to 7 percent oxygen, dry basis. Calculated as an arithmetic average.

^bAveraging times are 4-hour or 24-hour block averages.

(b) An owner or operator of a MWC shall comply with all provisions specified in 40 CFR 60.53b(b) and (c), which is hereby incorporated by reference as it exists on October 24, 1997.

252:100-17-22. Standards for municipal waste combustor fugitive ash emissions

An owner or operator of a MWC shall comply with all provisions specified in 40 CFR 60.55b, which is hereby incorporated by reference as it exists on October 24, 1997.

252:100-17-23. Standards for air curtain incinerators

An owner or operator of an air curtain incinerator with the capacity to burn greater than 250 tons per day of MSW and for which construction commenced on or before September 20, 1994, and that combusts a fuel feed stream of 100 percent yard waste, shall not cause to be discharged into the atmosphere from that incinerator any gases that exhibit greater than 10 percent opacity (6-minute average). An opacity level of up to 35 percent (6-minute average) is permitted during startup periods within the first 30 minutes of unit operation.

252:100-17-24. Standards for municipal waste combustor operator training and certification

(a) Each chief facility operator and shift supervisor shall obtain and maintain a current provisional operator certification from either the American Society of Mechanical Engineers (ASME) [ORO-1-1994 Standard for the Qualification and Certification of Resource Recovery Facility Operators] or a State certification program no later than the date 6 months after the startup of a MWC unit or 12 months after the date of State plan approval, whichever is later.

(b) Each chief facility operator and shift supervisor shall have completed full certification or submitted an application, that has been accepted by the appropriate certification program, for a full certification exam with either the ASME [ORO-1-1994 Standard for the Qualification and Certification of Resource Recovery Facility

Operators] or a State certification program no later than the date 6 months after the startup of a MWC unit or 12 months after the date of State plan approval, whichever is later.

(c) (1) No owner or operator of a MWC unit shall allow the unit to be operated at any time unless one of the following persons is on duty:

(i) A fully certified chief facility operator.

(ii) A provisionally certified chief facility operator who has met the qualification requirements specified in ASME [ORO-1-1994 section 2.2.2] and has made an application for a full certification exam following the ASME [ORO-1-1994 section 4.3.1] application process, according to the schedule specified in paragraph (b) of this section.

(iii) A fully certified shift supervisor.

(iv) A provisionally certified shift supervisor who has met the qualification requirements specified in ASME [ORO-1-1994 section 2.2.2] and has made an application for a full certification exam following the ASME [ORO-1-1994 section 4.3.1] application process, according to the schedule specified in paragraph (b) of this section.

(2) The requirement specified in paragraph (c) of this section shall take effect no later than the date 6 months after the startup of a MWC unit or 12 months after the date of State plan approval, whichever is later.

(3) If one of the persons listed in paragraph (c) of this section must leave the unit during their operating shift, a provisionally certified control room operator who is on-site at the MWC may fulfill the requirement in paragraph (c) of this section.

(d) All chief facility operators, shift supervisors, and control room operators at MWC units must complete the EPA or State MWC operator training course no later than the date 6 months after the date of startup of the MWC or by 12 months after the date of State plan approval, whichever is later.

(e) The requirement specified in paragraph (d) of this section does not apply to chief facility operators, shift supervisors, and control room operators who have obtained full certification from the American Society of Mechanical Engineers on or before the date of State plan approval.

(f) The owner or operator may request that the DEO waive the requirement specified in paragraph (d) of this section for chief facility operators, shift supervisors, and control room operators who have obtained provisional certification from the American Society of Mechanical Engineers on or before the date of State plan approval.

(g) The owner or operator of a MWC unit shall develop and update on an annual basis, a site-specific operating manual. The operating manual shall, at a minimum, address the elements of MWC unit operation specified in paragraphs (g)(1) through (g)(11) of this section.

(1) A summary of the applicable standards under this Part.

(2) A description of basic combustion theory applicable to a MWC unit.

(3) Procedures for receiving, handling, and feeding MSW.

(4) MWC unit start-up, shutdown, and malfunction procedures.

(5) Procedures for maintaining proper combustion air supply levels.

(6) Procedures for operating the MWC unit within the standards established under this Part.

(7) Procedures for responding to periodic upset or off-specification conditions.

(8) Procedures for minimizing particulate matter carryover.

(9) Procedures for handling ash.

(10) Procedures for monitoring MWC unit emissions.

(11) Reporting and recordkeeping procedures.

(h) The owner or operator of a MWC unit shall establish a training program to review the operating manual according to the schedule specified in paragraphs (h)(1) and (h)(2) of this section. The training shall be provided to each person who has responsibilities affecting the operation of the unit including, but not limited to, chief facility operators, shift supervisors, control room operators, ash handlers, maintenance personnel, and crane/load handlers.

(1) Each person specified in paragraph (h) of this section shall undergo initial training no later than the date specified in paragraph (h)(1)(A), (h)(1)(B), or (h)(1)(C), whichever is later.

(A) The date 6 months after the date of startup of the unit.

(B) The date prior to the day the person assumes responsibilities affecting MWC unit operation.

(C) Twelve months after date of State plan approval.

(2) Annually, following the initial review required by paragraph (h)(1) of this section, each person specified in paragraph (h) of this section shall review the operating manual updates, any operational lessons learned/experiences of the past year, and provide for review of any section which an employee requests.

(i) The operating manual required by paragraph (h) of this section shall be kept in a readily accessible location for all persons required to undergo training under paragraph (h) of this section no later than 6 months after start-up or 12 months after the date of State plan approval. The operating manual and records of training shall be available for inspection by the DEO upon request.

252:100-17-25. Compliance and performance testing

An owner or operator of a MWC shall comply with all provisions specified in 40 CFR 60.58b, which is hereby incorporated by reference as it exists on October 24, 1997.

252:100-17-26. Reporting and recordkeeping requirements

Except for the provisions of subsection 60.59b(a), b(5), and d(11), 40 CFR 60.59b is hereby incorporated by reference as it exists on October 24, 1997.

252:100-17-27. Compliance schedules

(a) All MWC units must close or be in compliance with all requirements contained in this Part within 3 years following approval of the State plan. However, all MWC units for which construction, modification, or reconstruction is commenced after June 26, 1987 shall comply with the emission limit for mercury

specified in 252:100-17-17(c) and the emission limit for dioxin/furans specified in 252:100-17-19 within 1 year following issuance of a revised construction or operating permit, if a permit modification is required, or within 1 year following approval of the State plan, whichever is later.

(b) All MWC units choosing to comply with all requirements contained in this Part in more than 1 year but less than 3 years following the date of issuance of a revised construction or operation permit if a permit modification is required, or more than 1 year but less than 3 years following approval of the State plan if a permit modification is not required, shall enter into a consent order that includes measurable and enforceable incremental steps of progress toward compliance. These steps are specified below:

(1) Date for submittal of the final control plan to the DEO.

(2) Date for obtaining services of an architectural and engineering firm regarding the air pollution control device(s).

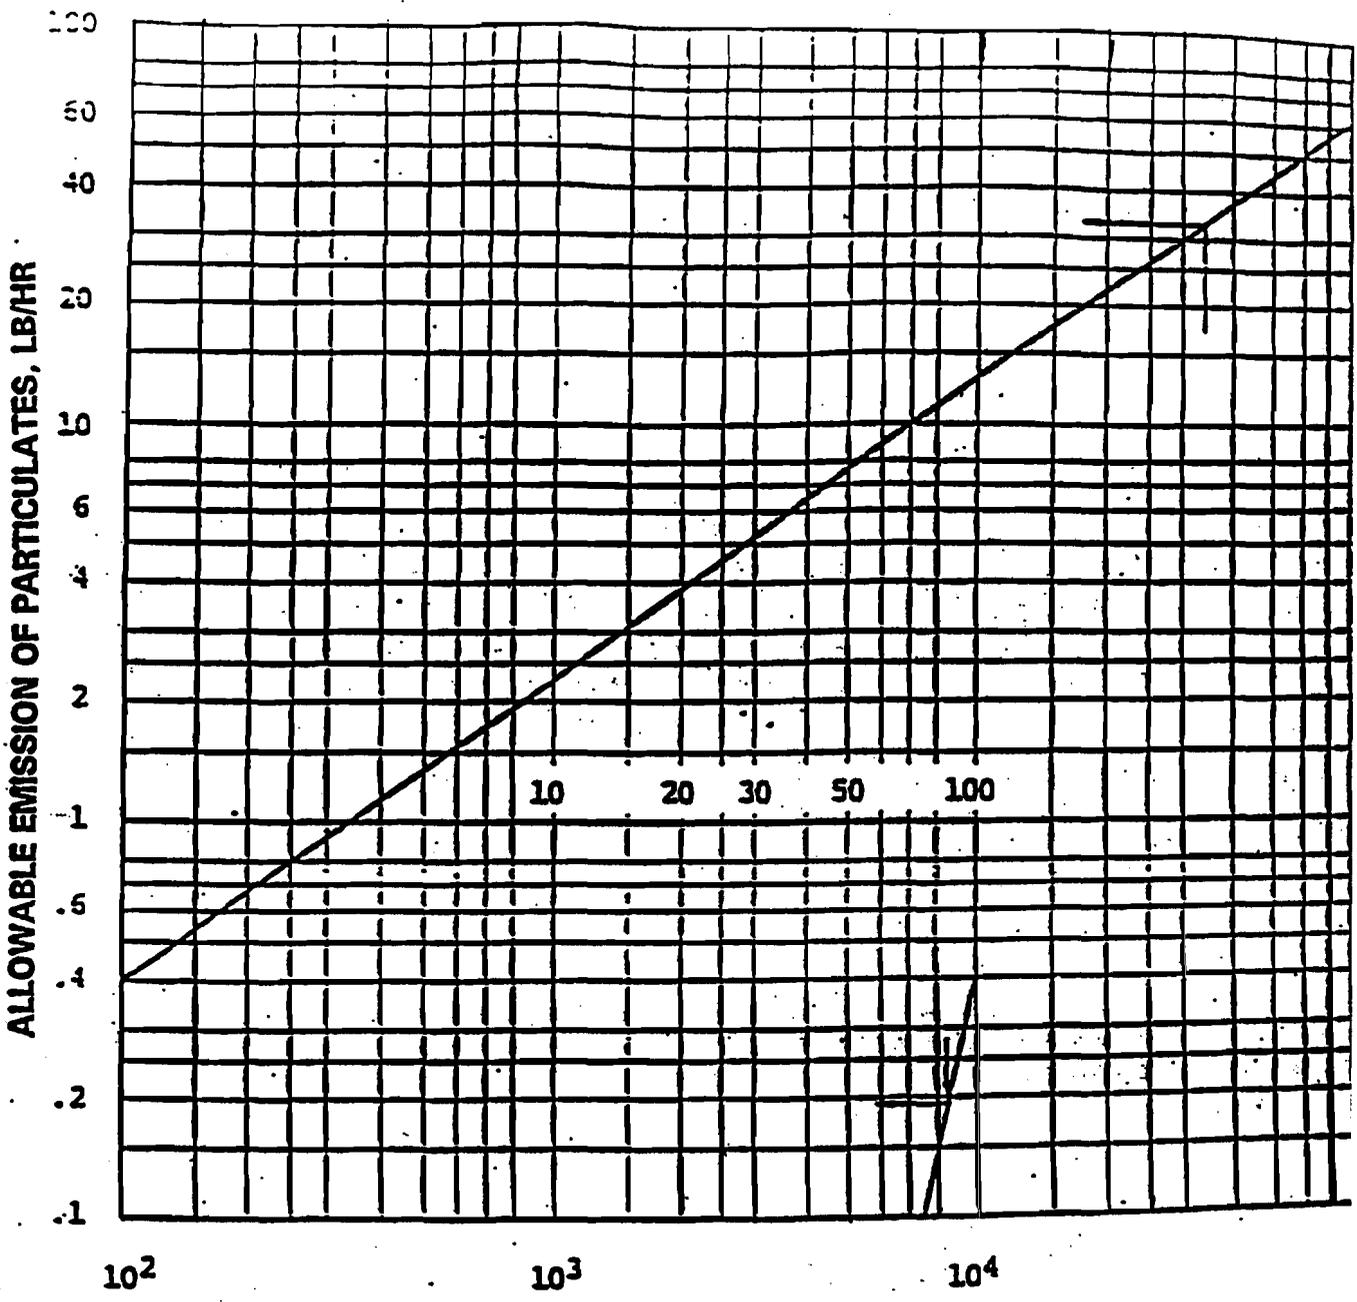

(3) Date for initiation of installation of the air pollution control device(s).

(4) Date for completion of installation of the air pollution control device(s).

(5) Date for final compliance.

(c) All MWC units with a compliance schedule of more than 1 year after approval of the State plan in accordance with paragraph (b) of this section, shall provide performance test results for dioxin/furan emissions for each unit. However, where the MWC owner/operator can demonstrate that multiple units have the same design, operate with the same fuel, have the same operating parameters, and are expected to have similar emission levels, the results of a dioxin/furan test from one unit may be provided as representative of all such units. The performance test results shall have been conducted during or after 1990. The performance test shall be conducted according to the procedures in 252:100-17-25.

(d) All MWC units intending to close in more than 1 year but less than 3 years after State plan approval shall enter into a consent order to close. The closure order must include the date of plant closure.

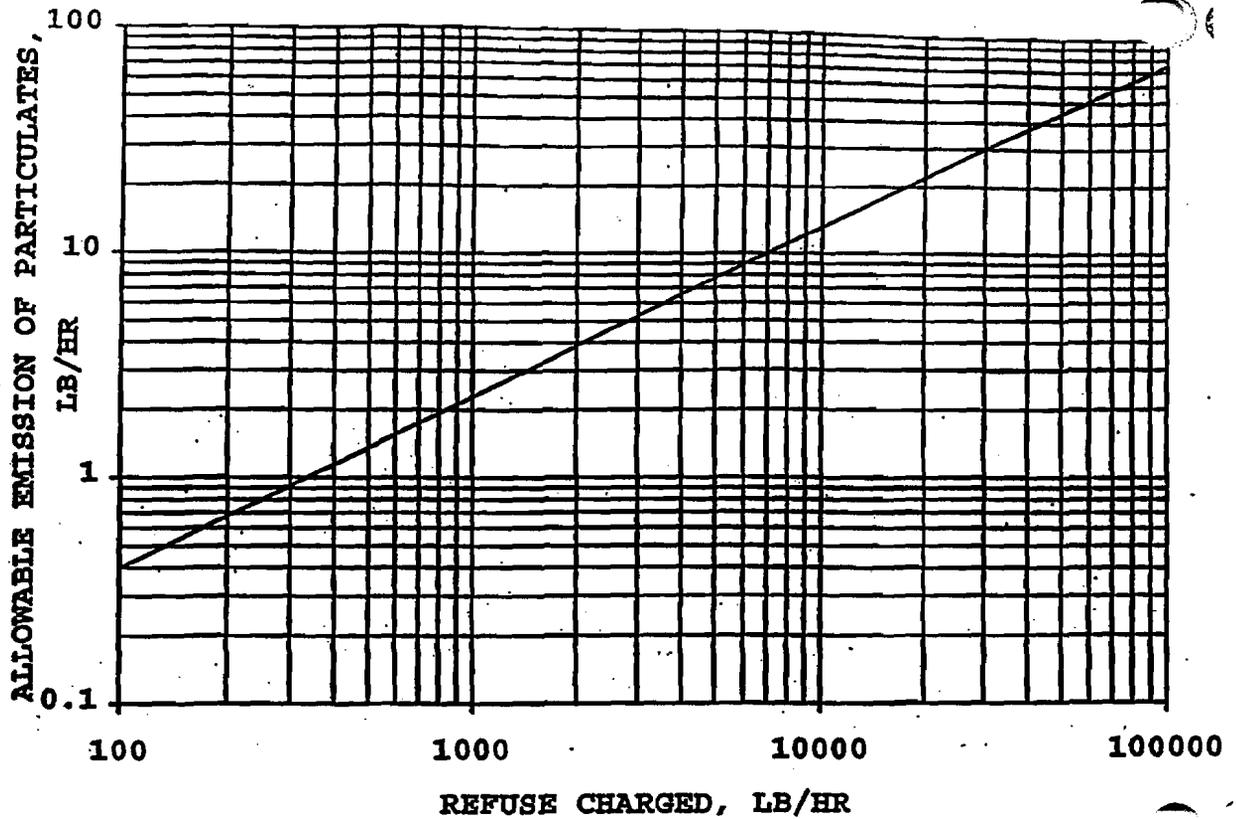

REFUSE CHARGED, LB/HR

Allowable emission rate may be calculated using the following formula:

$Y = (0.01221)(x^{+0.7577})$; for values of x 100lbs/hr,

where: x = refuse charged, lb/hr, and
Y = allowable emission, lb/hr.

APPENDIX A. (NEW)
ALLOWABLE EMISSIONS FOR INCINERATORS WITH CAPACITIES OF 100
LB/HR OR GREATER

Allowable emission rate may be calculated using the following formula:

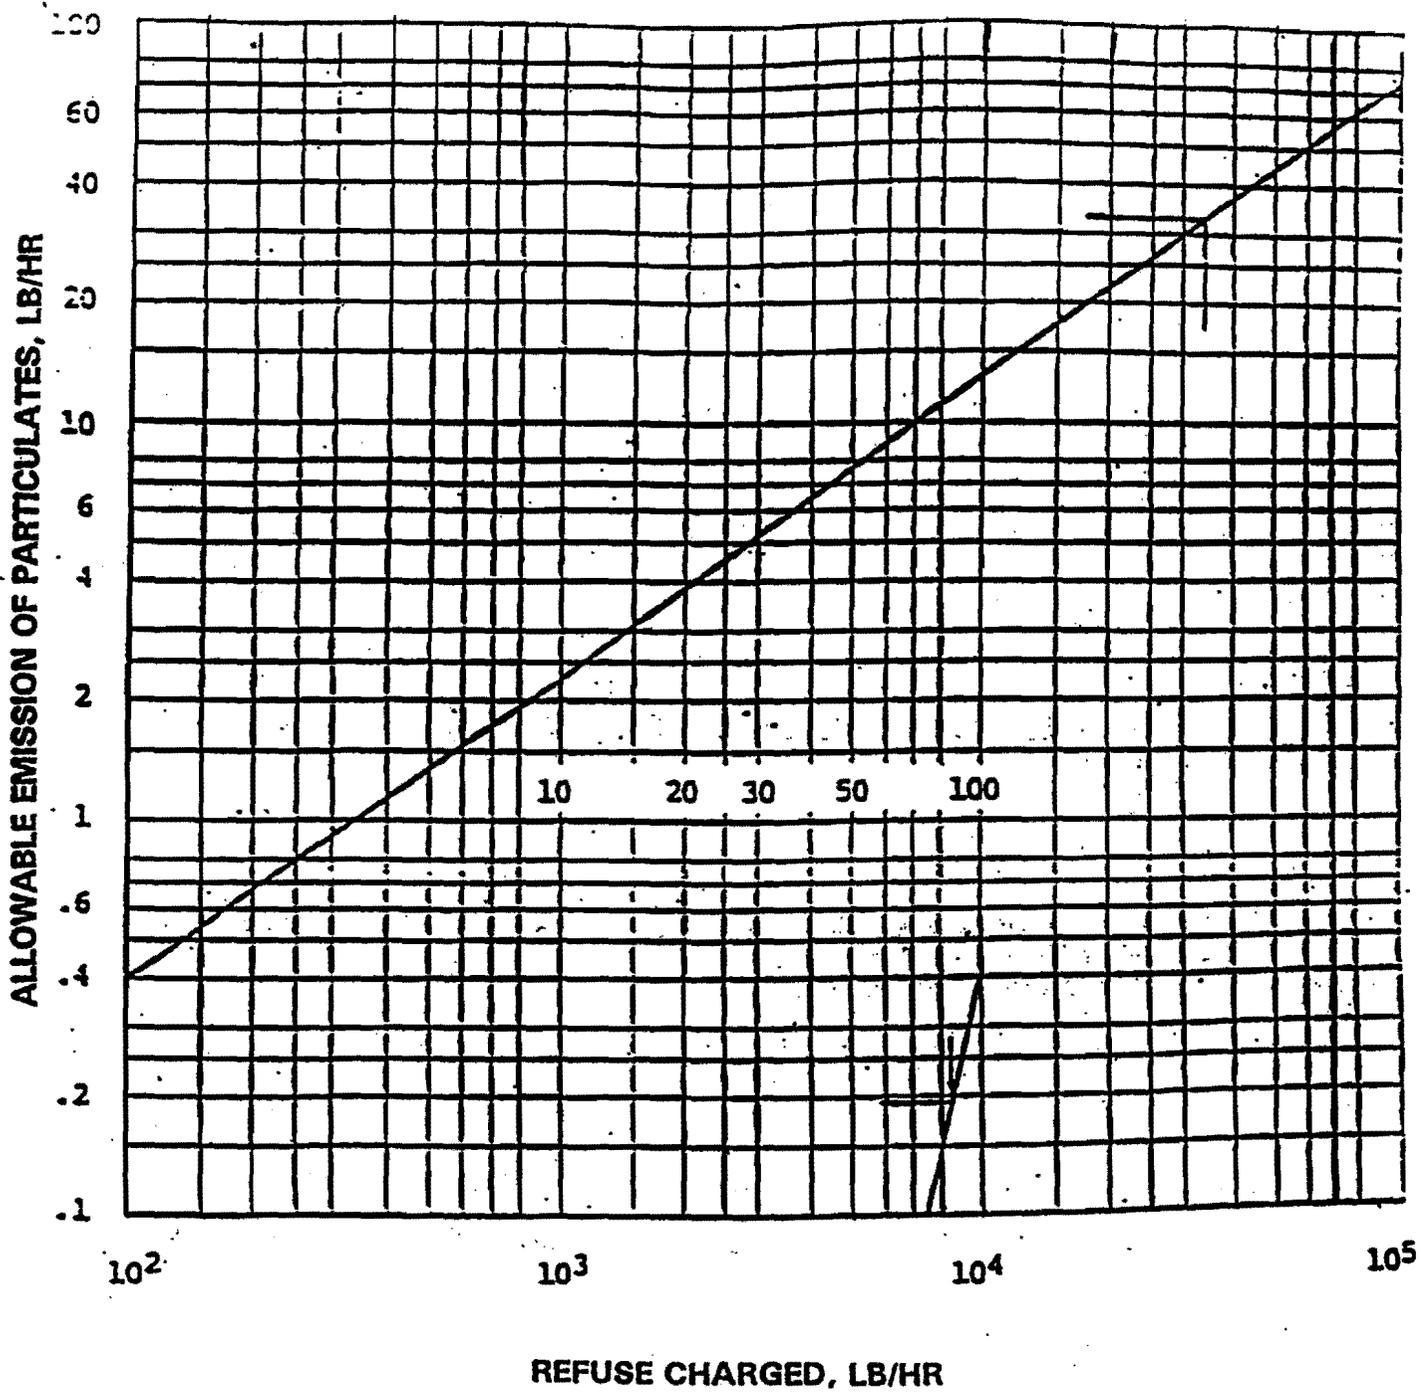

$$Y = 0.01221X^{0.7577}$$

Where:

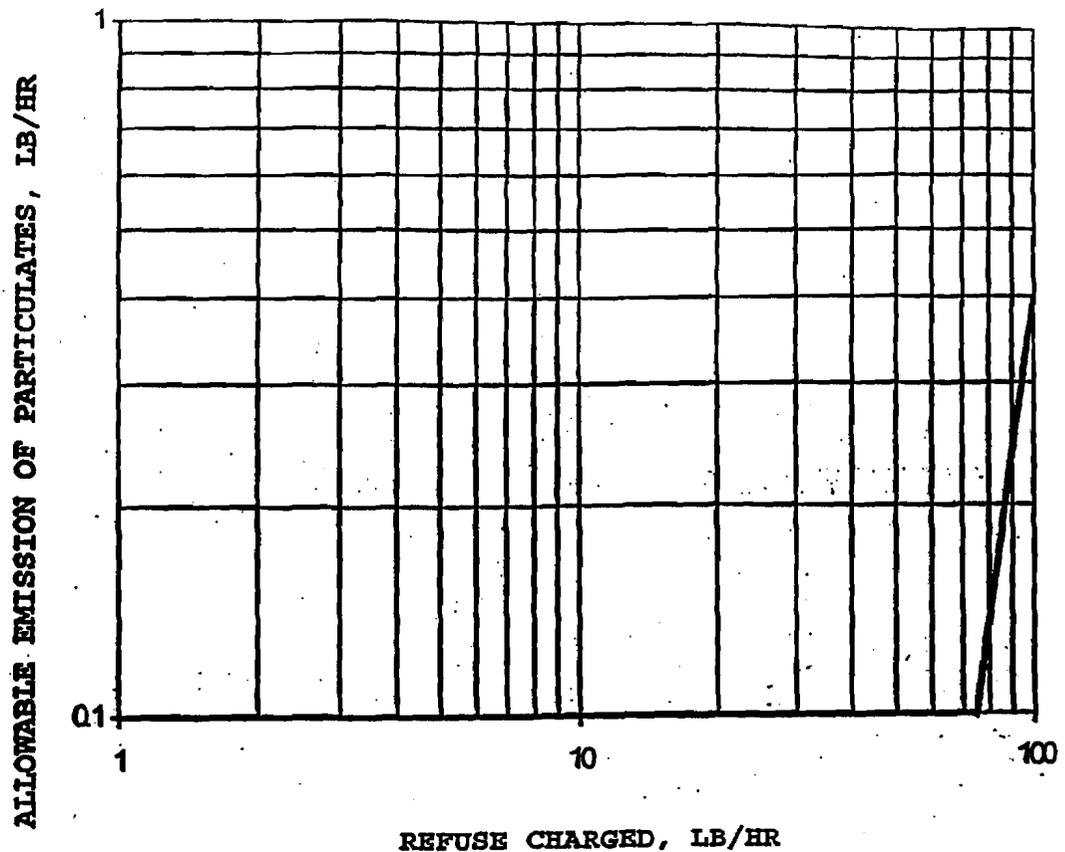

X = refuse charged, lb/hr on an as-loaded basis.

Y = allowable particulate matter emission rate, lb/hr.

APPENDIX B. ALLOWABLE EMISSIONS FOR INCINERATORS WITH CAPACITIES LESS THAN 100 LBS/HR

APPENDIX B. [NEW]
ALLOWABLE EMISSIONS FOR INCINERATORS WITH CAPACITIES LESS THAN
100 LB/HR

Allowable emission rate may be calculated using the following formulae:

Incinerators with capacities greater than 75, but less than or equal to 100 lb/hr

$$Y = 9213 \times 10^{-11} X^{4.218}$$

Incinerators with capacities of 75 lb/hr or less

$$Y = 0.1$$

Where,

X = refuse charged, lb/hr on an as-loaded basis.

Y = allowable particulate matter emission rate, lb/hr.

APPENDIX K. [NEW]
AVERAGE DAILY NITROGEN OXIDES EMISSIONS

$$NOX_{24-hr} = \frac{\sum_{i=1}^h [(NOX_i) (S_i)]}{\sum_{i=1}^h (S_i)}$$

where:

NOX_{24-hr} = 24-hour daily average nitrogen oxides emission concentration level for the emissions averaging plan (parts per million by volume corrected to 7 percent oxygen).

NOX_i = 24-hour daily average nitrogen oxides emission concentration level for unit i (parts per million by volume, corrected to 7 percent oxygen), calculated according to the procedures in 40 CFR 60.58b(h).

S_i = maximum demonstrated municipal waste combustor unit load for affected facility i (pounds per hour steam or feedwater flow as determined in the most recent dioxin/furan performance test).

h = total number of units being included in the daily emissions average.

Myrna Bruce

REGULAR MEETING AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
OKLAHOMA ENVIRONMENTAL QUALITY BOARD

A Public Meeting: 9:30 a.m., Tuesday, June 20, 2000
Oklahoma State University at Tulsa
700 N Greenwood
Tulsa, Oklahoma 73102

1. Call to Order – Cheryl Cohenour, Vice-Chair

2. Roll Call - Lynda Finch

3. Approval of Minutes of the February 25, 2000 Regular Meeting

4. **Rulemaking – OAC 252:100 Air Pollution Control**

Four sets of changes are proposed:

- Proposed amendments to Subchapter 9 (Excess Emission and Malfunction Reporting Requirements) include changes made as part of the DEQ's "re-right/de-wrong" effort to simplify its rules. The subchapter has been reorganized, typographical and grammatical errors have been corrected, and redundant language has been deleted. Additionally, some substantive changes were made. Among these are amendments relating to: definitions of *malfunction*, *bypass*, *regulated air pollutant*, *technological limitation* and *working day*; report certifications; demonstration requirements for emission limit exemptions; timing of excess emission reports; indicators of possible inadequate design, operation, or maintenance; and notice of maintenance activities.
- Proposed amendments to Subchapter 11 (Alternative Emissions Plans and Authorizations) are intended to clarify and simplify the language as part of the DEQ's "re-right/de-wrong" initiative.
- Proposed amendments to Subchapter 17 (Incinerators) include deletion of an outdated reference to an effective date. Language on design requirements is revised to authorize the Division Director to approve an incinerator design that does not meet the specific temperature and secondary burner requirements if the incinerator can meet all other applicable requirements.
- Proposed amendments to Subchapter 33 (Control of Emission of Nitrogen Oxides) are intended to clarify and simplify the language as part of the DEQ's "re-right/de-wrong" initiative.

A. Presentation – David Branecky, Air Quality Council Chair

B. Questions and discussion by the Board

C. Questions, comments and discussion by the public

D. Discussion by the Board

E. Roll call vote(s) on emergency* and permanent adoption of amendments to Subchapter 17, and on permanent adoption of amendments to Subchapters 9, 11 and 33

5. **Rulemaking -- OAC 252:610 and 611 General Water Quality**

Chapter 610 has been reviewed as part of the DEQ's "re-right/de-wrong" process of simplifying its rules. Language has been simplified and clarified, and rules deemed unenforceable have been removed. Because so many changes were identified, it is proposed that Chapter 610 be revoked and a new Chapter 611 created to replace it.

- A. Presentation— Robert Johnston, Water Quality Council Chair
 - B. Questions and discussion by the Board
 - C. Questions, comments and discussion by the public
 - D. Discussion by the Board
 - E. Roll call vote(s) on permanent adoption/revocation
6. **Rulemaking-- OAC 252:620 and 621 Non-Industrial Impoundments and Land Application**
 Chapter 620 has been reviewed as part of the DEQ's "re-right/de-wrong" process of simplifying its rules. Language has been simplified and clarified, and rules deemed unenforceable have been removed. Because so many changes were identified, it is proposed that Chapter 620 be revoked and a new Chapter 621 created to replace it. Also, the requirements for the land application of non-industrial wastewater are moved from Chapter 647 to Chapter 621 because that activity is more closely related to impoundments than to biosolids.
- A. Presentation— Robert Johnston, Water Quality Council Chair
 - B. Questions and discussion by the Board
 - C. Questions, comments and discussion by the public
 - D. Discussion by the Board
 - E. Roll call vote(s) on permanent adoption/revocation
7. **Rulemaking-- OAC 252:635 Reservoir Sanitation**
 Chapter 635 has been reviewed as part of the DEQ's "re-right/de-wrong" process of simplifying its rules. The DEQ has determined that all provisions contained in Chapter 635 appear in state statutes or other DEQ rules, so the DEQ is proposing that the chapter be revoked.
- A. Presentation— Robert Johnston, Water Quality Council Chair
 - B. Questions and discussion by the Board
 - C. Questions, comments and discussion by the public
 - D. Discussion by the Board
 - E. Roll call vote(s) on permanent revocation
8. **Rulemaking-- OAC 252:641 Individual and Small Public On-Site Sewage Disposal Systems**
 The proposed amendments authorize general permits for on-site sewage disposal systems, except for alternative systems, which will require individual permits subject to the Tier I permitting process. Certification for septic system installers will be a permit-by-rule process. Minor typographical corrections are also made.
- A. Presentation— Robert Johnston, Water Quality Council Chair
 - B. Questions and discussion by the Board
 - C. Questions, comments and discussion by the public
 - D. Discussion by the Board
 - E. Roll call vote on permanent adoption
9. **Rulemaking-- OAC 252:002 Procedures of the DEQ**
 This proposed rulemaking removes on-site sewage disposal systems, except for alternative systems, from Tier I permitting requirements. This corresponds to changes concurrently proposed for Chapter 641, Individual and Small Public On-Site Sewage Disposal Systems, to establish permits for on-site sewage disposal systems as general permits.

- A. Presentation – Robert Johnston, Water Quality Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote on permanent adoption

10. Rulemaking -- OAC 252:647 and 648 Sludge and Land Application of Wastewater (Chapter 647), Land Application of Biosolids (Chapter 648)

Chapter 647 has been reviewed as part of the DEQ's "re-right/de-wrong" process of simplifying its rules. Proposed changes include the deletion from Chapter 647 of rules for the land application of industrial wastewater and sludge because they were incorporated into Chapter 616 (Industrial Impoundments and Land Application) by Board action in February, and the deletion from Chapter 647 of rules for the land application of non-industrial wastewater because they are proposed for incorporation into Chapter 621 (Non-Industrial Impoundments and Land Application) (see agenda item 6). For the remaining rules on biosolids, Chapter 647 is revoked and replaced by Chapter 648.

- A. Presentation – Robert Johnston, Water Quality Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote(s) on permanent adoption/revocation

11. New Business (any matter not known about and which could not reasonably have been foreseen prior to the time of posting of agenda)

12. Executive Director's Report (including disclosure of employee financial interests as required by statute, and notification to the Board that no capital budget needs have been identified for State Fiscal Year 2002)

13. Adjournment

Public Forum: The Board meets four times a year at different locations across the State to hear the views and concerns of all Oklahomans about environmental issues. This opportunity is informal, and we invite you to sign the register to speak. The forum will also include a short presentation from Judy Duncan, giving an overview of the DEQ's State Environmental Laboratory.

Should you have a disability and need an accommodation, please notify the DEQ three days in advance at 702-7100.

* Specification of proposed adoption by emergency rulemaking, by permanent rulemaking, or by both, is based on the recommendations of the respective advisory councils. Adoption or amendment of rules as emergency rulemaking requires a finding by the Board that a compelling extraordinary circumstance warrants the seeking of emergency certification, so that the rules will take effect immediately upon the Governor's signature. Absent a finding and certification of emergency, rules adopted today will not become effective until May or June of 2001.

SUBCHAPTER 17. INCINERATORS
PART 3. INCINERATORS

252:100-17-2. ~~Effective date; applicability~~ Applicability

This Part ~~became effective on July 21, 1971~~ and applies to incinerators not subject to New Source Performance Standards (NSPS) or any other Parts in this Subchapter.

252:100-17-5. Incinerator design requirements

An incinerator ~~under subject to~~ this Part must have:

- (1) A primary burner that maintains a temperature of at least 800°F in the primary combustion chamber.
- (2) A secondary burner that shall be used when necessary to eliminate smoke.
- ~~(3) A design that can be demonstrated to the DEQ to be effective in accordance with the provisions of this Subchapter. The burden of proof shall rest upon the owner of the proposed incinerator.~~

252:100-17-5.1. Alternative incinerator design requirements

The Director may approve an incinerator design that does not meet the design requirements in 252:100-17-5 if the owner of the proposed incinerator demonstrates to the DEQ that the incinerator can comply with all other applicable requirements.

Additional Comments

TITLE 252. OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL
SUBCHAPTER 17. INCINERATORS

EXECUTIVE SUMMARY:

The Department is proposing amendments to 252:100-17, Part 3, Incinerators. Section 2 of the Part would be amended to remove references to an effective date, and Section 5(3) would be deleted. A new Section 5.1, Alternative incinerator design requirements, would be added to authorize the Division Director to approve incinerator designs that do not meet the requirements specified in 252:100-17-5 if those incinerators can meet all other applicable requirements.

DIFFERENCES FROM ANALOGOUS FEDERAL RULES:

None.

ENVIRONMENTAL BENEFIT STATEMENT:

Not required because these rules are not more stringent than corresponding federal rules.

SUMMARY OF COMMENTS AND RESPONSES:

Frank Condon, Environmental Quality Board, commented during the April 19, 2000, Air Quality Council hearing.

Comment 1: "Define Director".

Response: Director, as defined in the Oklahoma Clean Air Act, means Air Quality Division Director.

Comment 2: Does the Director have the authority to approve an alternative incinerator design?

Response: Yes. The amendment does not change who is authorized to sign a permit for the construction or operation of an incinerator.

CHAPTER 100. AIR POLLUTION CONTROL
SUBCHAPTER 17. INCINERATORS

EXECUTIVE SUMMARY:

The existing Subchapter 17 has been revised and redesignated as Part 1, General Provisions, and Part 3, Incinerators. Appendices A and B were also revised for reasons of clarification and simplification. The proposed addition of Part 5, Municipal Waste Combustors (MWC), and a new appendix K were necessary to meet the federal requirements published in the Federal Register on December 19, 1995 and amended on August 25, 1997. These standards would apply to MWC units with the capacity to combust more than 250 tons per day of municipal solid waste and for which construction commenced on the unit on or before September 20, 1994.

DIFFERENCES FROM ANALOGOUS FEDERAL RULES: None.

ENVIRONMENTAL BENEFIT STATEMENT: Not required because these rules are not more stringent than corresponding federal rules.

SUMMARY OF COMMENTS AND RESPONSES:

Comment: Replace the word "set" with "specify" under 252:100-17-1.

Response: Agreed.

Comment: Change the definition of "capacity" to be consistent with 40 CFR 60.51b.

. Add "calculated according to the procedures under 40 CFR 60.58b(j)" to definition of "municipal waste combustor unit capacity."

Add "as measured by EPA Reference Method 5" to the definition of "particulate matter."

Revise the definition of "yard waste" to exempt "clean wood".

Add the following definitions to Subchapter 17: batch MWC, bubbling fluidized bed combustor, chief facility operator, circulating fluidized bed combustor, clean wood, dioxin/furan, four hour block average, mass burn refractory MWC, mass burn rotary waterwall MWC, mass burn waterwall MWC, maximum demonstrated MWC unit load, maximum demonstrated particulate matter control device temperature, modular excess air MWC, modular starved air MWC, MWC acid gases, MWC metals, MWC plant, MWC unit load, MWC unit refuse derived fuel stoker, shift supervisor, spreader stoker coal/refuse derived fuel mixed fuel fired combustor, total mass dioxin/furan, 24 hour daily average, untreated lumber, waterwall furnace.

Response: Staff incorporated by reference all the definitions under 40 CFR 60.51b, which include the additional requested language and definitions.

Comment: Add the word "average" to the first sentence of 252:100-17-20(b)(5)(B) so it would read "on a daily average basis."

Response: Staff added "average."

Comment: Under 252:100-17-20(b)(5)(C)(i)(1) and 20(b)(5)(C)(ii)(1), the citation "40 CFR 60.58(a) through (m)" was said to be overly inclusive and it was requested that "60.58b(a) through (m)" be struck from the language and replaced by 60.38b.

Response: Staff agreed the language was overly inclusive and changed "(a) through (m)" to "(h)."

Comment: Request the date under 252:100-17-17(b), 17-18(a) and 17-18(b) be changed to August 26, 2002, to conform to federal requirements.

Response: Staff changed the date.

Comment: Under 252:100-17-24(a) and (b), it was requested that the phrase "of each MWC unit" be deleted.

Response: Staff removed the wording to clarify that multiple unit facilities are not required to have separate chief facility operators and shift supervisors for each unit.

Comment: Add "24 hour daily arithmetic average" to footnotes of the table in 252:100-17-20.

Response: Staff added the footnote.

Comment: In 252:100-17-24(b), replace "scheduled" with the phrase "has made application for".

In 252:100-17-24(c), replace the phrase "who is scheduled to take the full certification exam" with "who has made an application for a full certification exam."

In 252:100-17-24(c), replace "or a provisionally certified shift supervisor who is scheduled to take the full certification exam" with "a fully certified shift supervisor or a provisionally certified shift supervisor who has met the qualifications inand has made an application for a full certification exam...".

Response: Staff made the revision to avoid penalizing those who make timely applications but are not immediately scheduled to take the exam.

Comment: Under 252:100-17-24(c)(2) request that the phrase "...of this section....on an emergency/temporary basis" be added.

Response: Staff did not add the requested wording because no justification was provided and no benefit could be seen.

Comment: Under 252:100-17-24(f) request the Department of

Environmental Quality seek confirmation from the EPA that waiver authority will be granted to the State.

Response: Authority will remain with the EPA until the State plan is approved.

Comment: Add the following language to the end of 252:100-17-24(h)(2): "...each person specified in paragraph (h) of this section shall review the operating manual updates, any operational lessons learned/experiences of the past year, and provide for review of any sections which an employee requests."

Response: Staff added the language to clarify that initial training is not required annually.

Comment: One comment was made as to why air curtain incinerators are subject to testing procedures under the exemptions of Subchapter 17.

Response: The provisions for air curtain incinerators included under 17-15 were incorporated directly from the federal requirements because there is no flexibility under Section 129 of the federal Clean Air Act.

Comment: Request to incorporate language from 40 CFR 60.38b(b) to propose an alternative performance testing schedule for dioxins/furans as specified.

Response: Staff added the language to allow the alternative performance testing schedule for MWC units that achieve a dioxin/furan emission level less than or equal to 15 ng/dscm, corrected to 7% oxygen.

Comment: A representative from the City of Tulsa commented that they agreed on the adoption of the rule and felt it would be in the best interest of the City to have the DEQ implement the regulations as opposed to the EPA implementing a federal plan.

The EPA, Region 6, representative stated that the changes made to Subchapter 17 were basically clarifications and they were satisfied with the rule.

Ogden Martin also made it clear that they were satisfied with the rule and requested it be passed.

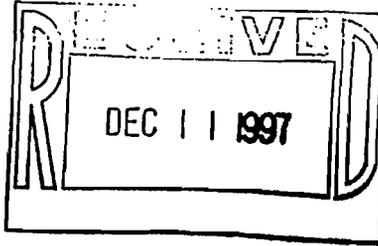

Response: Staff recommended that Subchapter 17 be passed as an emergency/permanent rule.

Comment: It was requested that the rule be carried over until the next Council meeting for further public comment.

Response: A vote of the Council to defer action failed and a second vote was taken which passed Subchapter 17.

Ms. Michelle Martinez
Air Quality Division
Oklahoma Department of Environmental Quality
4545 N. Lincoln Blvd., Suite 250
Oklahoma City, OK 73105

Re: Comments Concerning Proposed Revisions to OAC 252:100-17.

Dear Ms. Martinez:

As you are aware, Ogden Martin Systems of Tulsa, Inc. (OMST) operates a municipal waste combustor plant subject to the requirements of 40 CFR 60, Subpart Cb. As such, OMST will be substantially affected by the proposed revisions to OAC 252:100-17 as they incorporate the provisions of Subpart Cb into Oklahoma air quality regulations. OMST has appreciated the efforts of the Division staff in their consideration and development of these important revisions. OMST has performed a critical review of the proposed revisions and would offer the attached comments which reflect our understanding of the Division's goals and the requirements of the U.S. Environmental Protection Agency for state plans/rules developed pursuant to Subpart Cb.

OMST appreciates the opportunity to comment on these proposed rules. If you have any questions regarding our comments, please feel free to contact me at (973) 882-7058 or Bonnie McGilbra, OMST, at (918) 583-3925.

Sincerely,

Andrew T. Lehman
Assistant Vice President
Ogden Energy Group

COMMENTS REGARDING PROPOSED REVISIONS TO OAC 252:100-17
Submitted to the
Oklahoma Department of Environmental Quality
Air Quality Division
December 10, 1997

Ogden Martin Systems of Tulsa, Inc. (OMST) appreciates the opportunity to comment on the proposed revisions to OAC 252:100-17 pertaining to municipal waste combustors and incinerators and incorporating the requirements of 40 CFR Part 60, Subpart Cb into the state air quality regulations. These comments were developed based on the draft rule revisions dated December 3, 1997.

1. 252:100-17-1 Please replace the word "set" with "...specify design and operating requirements" to better reflect USEPA's performance standard approach to these regulations.
2. OAC 252:100-17-1.3. Definitions:

a. **Definition of Capacity.** The proposed definition of capacity is inconsistent with the definition of Municipal Waste Combustor (MWC) Unit Capacity contained in 40 CFR 60.51b which refers to calculation methods in 40 CFR 60.58b(j). This calculation method allows the use of maximum design heat input capacity and heating value as the basis for determining capacity for combustors that are designed on heat capacity. The OMST units are heat capacity limited units; therefore, this provision is appropriate for use at the OMST facility. However, the term of Capacity or its plural form is utilized in OAC 252:100-17, Part 3 which is not applicable to the OMST Facility; therefore, OMST recommends addition of a definition of Municipal Waste Combustor Unit Capacity to OAC 252:100-17-1.3. The suggested wording for the definition is as follows:

"Municipal Waste Combustor Unit Capacity" means the maximum charging rate of a municipal waste combustor unit expressed in tons per day of municipal solid waste combusted, calculated according to the procedures under 40 CFR 60.58b(j).

b. **Definition of Particulate Matter.** The proposed definition does not cite the reference method for determining particulate matter. OMST recommends that the phrase "as measured by EPA Reference Method 5" be added to the definition.

c. **Definition of Yard Waste.** The term "clean wood", addressed in both the second and third sentences of the definition, should read: "Yard Waste does not include clean wood or construction, renovation...". The definition also refers to "section" in sentences two and three which should be "subchapter".

d. **Additional Definitions.** There are several technical terms utilized in OAC 252:100-17 which are not defined in the text of the rule. OMST would recommend inclusion of USEPA's definitions for the following terms as presented in 40 CFR 60.31b or 60.51b:

Batch municipal waste combustor
Bubbling fluidized bed combustor

(Comment 252:100-17-1.3 - cont'd)

Chief facility operator
Circulating fluidized bed combustor
Clean wood
Dioxin/Furan
Four hour block average
Mass burn refractory municipal waste combustor
Mass burn rotary waterwall municipal waste combustor
Mass burn waterwall municipal waste combustor
Maximum demonstrated municipal waste combustor unit load
Maximum demonstrated particulate matter control device temperature
Modular excess air municipal waste combustor
Modular starved air municipal waste combustor
Municipal waste combustor acid gases
Municipal waste combustor metals
Municipal waste combustor plant
Municipal waste combustor plant capacity
Municipal waste combustor unit load
Municipal waste combustor unit
Refuse derived fuel stoker
Shift supervisor
Spreader stoker coal/refuse derived fuel mixed fuel fired combustor
Total mass dioxin/furan
Twenty four hour daily average
Untreated lumber
Waterwall furnace

3. 252:100-17-20(b)(5)(B). For consistency with the 40 CFR Subpart Cb regulation, OMST would recommend that the first sentence of (B) be amended as follows:

(B) For each of the units included in the emission averaging plan, the nitrogen oxides emissions shall be calculated on a daily average basis.

4. 252:100-17-20 (b)(5)(C)(i)(I), Second Sentence. The federal rule citation, "40 CFR 60.58(a) through (m)", appears to be overly inclusive; 60.58b is already incorporated by reference at 252:100-17-25 (Compliance and Performance Testing). Nitrogen oxides are addressed in 40 CFR 60.58b(h). OMST would recommend the following language as an alternative:

(I)... The calculation shall be based on the hourly nitrogen oxides data required under 40 CFR ~~60.58b(a) through (m)~~ 60.38b(a) and specified under 40 CFR 60.58b(h)(5).

5. 252:100-17-20(b)(5)(C)(ii)(I). The federal rule citation, "40 CFR 60.58b(a) through (m)", again appears to be overly inclusive. Nitrogen oxides are addressed in 40 CFR 60.58b(h). OMST would suggest the following language as an alternative:

(I) For each large MWC unit included in the emissions averaging plan, the daily amount of nitrogen oxides emitted (kilograms per day) shall be calculated based on the hourly nitrogen oxides data required under ~~40 CFR 60.58b(a) through (m)~~ 40 CFR 60.38b(a) and specified...

6. 252:100-17-17(b), 252:100-17-18(a), and 252:100-17-18(b). The December 19, 2002 date would appear to be inconsistent with the final compliance date of August 26, 2002 contained in 40 CFR 60.39(f). OMST would recommend that clarification be sought regarding the final compliance date and that the most appropriate date be included in the proposed revisions.
7. 252:100-17-24(a) and (b). These provisions appear to require a shift supervisor for each MWC unit within a MWC plant, which is not intended by USEPA nor is it industry practice. OMST utilizes a shift supervisor for each shift for the entire plant. OMST would suggest the following amendments to the proposed language:
 - (a) Each chief facility operator and shift supervisor ~~of each large MWC unit~~ shall obtain ...
 - (b) Each chief facility operator and shift supervisor ~~of each large MWC unit~~ shall have been completed ...
8. 252:100-17-20 Relative to NOx emissions limits, request addition of "24 hour daily arithmetic average" to the footnote ^m "Corrected to 7 percent oxygen, dry basis" to clarify consistency of the NOx averaging time with USEPA regulation.
9. 252:100-17-24 The following requested changes to this section of the regulations are offered to ensure that Oklahoma requirements are consistent with ASME standards and USEPA's certification model.
10. 252:100-17-24(b) Please delete the word "scheduled" and insert the phrase "has made application for" in this section of the regulation.
11. 252:100-17(c) 17-24(c) Please delete the following phrases in this section and substitute the rephrasing as noted:

~~"who is scheduled to take the full certification exam": "... chief facility operator... who has met the qualification requirements specified in ASME QRO-1-1994 sections 2.2.2; and has made an application for a full certification exam following the ASME QRO-1-1994 section 4.3.1 application process".~~

In the second instance, further on in this section, please delete "~~or a provisionally certified shift supervisor who is scheduled to take the full certification exam~~" and replace it with the following phrase "...a fully certified shift supervisor or a provisionally certified chief facility operator who has met the qualification requirements specified in ASME QRO-1-1994 sections 2.2.2; and has made an application for a full certification exam following the ASME QRO-1-1994 section 4.3.1 application process."
12. 252:100-17-24(c)(2) At the end of this section, please add the following note of clarification: "...of this section...on an emergency/temporary basis."
13. 252:100-17-24(f) OMST recommends that ODEQ seek confirmation from USEPA that waiver authority will be granted to the State.
14. 252:100-17-24(h)(2) To clarify that this section of the rule does not require complete employee retraining on the entire manual annually, it is requested that the following language be inserted as follows: "...paragraph (h)(1) of this section...each person

14. (cont'd) specified in paragraph (h)(1) of this section shall review the operating manual updates, any operational lessons learned/experiences of the past year, and provide for review of any sections which an employee requests"
15. 252:100-17-25 Please be advised that the effect of this rule section is under engineering evaluation by OMST, and further comment is reserved.

MEETING/HEARING AGENDA
OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY
AIR QUALITY COUNCIL
OCTOBER 15, 1996 1:00 P.M.
TULSA CITY-COUNTY HEALTH DEPARTMENT AUDITORIUM
4616 East 15 Street, Tulsa, Oklahoma

OAC 252:100-17 Incinerators, Part 3, Municipal Waste Combustors (New) Discussion by Council/Public Action by Council.

525 S. Main, Tulsa, OK 74103
(918) 583-5520

BYRUM: Ladies and gentlemen, my name is Larry Byrum. I am director of the Air Quality Division. As such I will act as protocol officer for the hearing. This hearing is convened by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act, Title 40 of the Code of Federal Regulations, Part 51, as well as the authority of Title 63 of the Oklahoma Statutes Sections 1, 1801 and following. This hearing was advertised in the Oklahoma Gazette for the purposes of receiving comments to OAC 252:100-17 incinerators and municipal waste combustors.

At this time I would like to call upon Mr. Scott Thomas to make the staff presentation. If you have comments on this subject I would advise you that there are forms at the rear of the room that you can fill out, and I will call upon you at the appropriate time.

Mr. Thomas.

MR. THOMAS: My name is Scott Thomas representing the staff of the Air Quality Revision. Before you today in your council packets and available for distribution of the audience it proposed new Part 3, Subchapter 3, entitled "Municipal Waste Combustors" that will be brought to public hearing today. The proposed amendments of Subchapter 17 are necessary to meet the federal requirements set forth by the environmental

525 S. Main, Tulsa, OK 74103
(918) 583-5520

protection agency in 40 C.F.R. Part 60, subpart Cd and emission guidelines Eg for municipal waste combustors.

The guidelines apply to existing municipal waste combustors of aggregate plant combustion capacity of 35 megagrams per day or greater of municipal waste and that prevents construction on or before September 20th, 1994.

We understand that there are two facilities in the state that would be affected by this proposed rule, one here in Tulsa and one here in Miami.

Proposed Subchapter 17, Part 3 rules were developed under the requirements of Eg through a cooperative effort between representatives, public industry, state and federal government.

The proposed Part 3 drafted by the Air Quality Division sets forth rules, the proposed rules for municipal waste combustors which meets all applicable requirements without being more or less stringent than the federal standards, that was the content of the staff on developing these rules and hopefully we have met that charge.

The staff is recommending that this hearing on this proposed rule be continued on to council's next meeting. We would especially solicit comments and input on the stringency of the rules as compared with the federal guidelines, as well as the rules direct and indirect impact on the community of Tulsa, Miami and the facilities. That

525 S. Main, Tulsa, OK 74103
(918) 583-5520

basically concludes my presentation.

MR. BYRUM: Questions for Mr. Thomas from council?

MR. BRANECKY: I have a question. On Page 3, Section J at the middle of the page it talks about air curtain incinerators are exempt from all provisions of this part except for, and it list one, two and three. And over on Page 5 -- no, I mean Page 13, you have got standards for air curtain incinerators. That Section 25 applies to air curtain incinerators. Section 25 is not listed in the three items that supposedly apply to air curtain incinerators in J.

MR. THOMAS: I personally can't answer that question but I would like to refer to the staff and --

MR. BRANECKY: See what I am saying, in Section J? It says everything that they are exempt from all provisions except for one, two and three. And then over on Section 25 it says standard for air curtain incinerators, and 25 is not listed in the three items that apply to air curtain incinerators on Page 3.

MR. THOMAS: It appears there maybe an inconsistency in the rules.

DR. SKEEDY: Yeah, we will check that out definitely.

MS. ALLTISER: I am Ann Alltizer with Air

525 S. Main, Tulsa, OK 74103
(918) 583-5520

1 Quality Division. I believe in Section . those are the
2 exemptions. The only thing that the air curtain
3 incinerators are subject to is, in Section 25, of this
4 entire rule that they are exempt from the things in J.

5 MR. BRANECKY: But J says the air curtain
6 incinerators that meet the capacity specifications in
7 paragraph (a) of this section and combust 100 percent yard
8 waste....fuel stream are exempt from all provisions of this
9 part except for these three. Am I reading that right?
10 They are exempted from everything except for items one, two
11 and three in Section J? But then over in 25 there is
12 another standard for air curtain incinerators. We will
13 have to -- are they exempted from 25 or does 25 apply?

14 MR. FISBACK: I agree completely, David. It
15 looks like to me like J ought to have in item number four
16 under it which refers to Section 25.

17 MR. BRISCH: Are they both applicable to new
18 facilities?

19 DR. SHEEDY: No, this whole rule is applicable
20 to existing facilities only. And, of course, we have no
21 air curtain facility in existence so that's the kind of
22 thing --

23 MR. THOMAS: This is the part of the public
24 hearing process and we can't answer you right now.

25 DR. SHEEDY: We will look into this right now.

525 S. Main, Tulsa, OK 74103
(918) 583-5520

1 MR. BRANECKY: My other question is kind of
2 general in nature. All of your numbers in this subchapter
3 are metric. When you go through and revise all of the
4 other air regulations are we going metric? If not to me
5 will be confusing to have some regulations in English and
6 some in metric.

7 MR. BYRUM: Well, I think as we mentioned
8 earlier staff tried to closely follow the EPA draft rule on
9 this. I believe I am probably stating this correct,
10 correct me if I am wrong, Scott. They state theirs in
11 metric terms. What we will probably do is go back in, as
12 part of the recommendation of the hearing, go in and put in
13 the English units.

14 MR. FISBACK: My recommendation on that point
15 would be if there is a requirement to express it in metric
16 terms that the equivalent English be put in parenthesis
17 right after it.

18 MR. THOMAS: We can do that.

19 MR. FISBACK: Because nobody knows what a
20 gigajoule is. I think that's left over from the Carter
21 administration attempt to metrify everything and it is
22 confusing in a lot of cases.

23 MR. BRISCH: I am glad this is being made
24 part of the record, Bill.

25 MR. FISBACK: So noted.

525 S. Main, Tulsa, OK 74103
(918) 583-5520

1 MR. BYRUM: Other questions for Mr. Thomas
2 from the council?

(No response.)

4 MR. BYRUM: Questions from the audience for
5 Mr. Thomas?

(No response.)

7 MR. BYRUM: Okay, I have three individuals who
8 have notified they wish to speak to the council.

Thank you, Mr. Thomas.

10 MS. PURSLEY: I would like to confer and allow
11 the City of Tulsa to go first if they wish.

MR. BYRUM: Mr. Hardt.

13 MR. HARDT: Thank you. I am Charles Hardt,
14 City of Tulsa. We are in the process of hiring outside
15 legal counsel for advising us on the installation of the
16 air emission requirements, and we would ask that this be
17 continued to your next meeting to give us an opportunity to
18 follow up on a written response.

MR. BYRUM: Any questions for Mr. Hardt?

20 MR. FISBACK: Is your pursuit of outside
21 legal counsel because you think the retrofit emission
22 controls may not need to be added or what is your -- what
23 is your charter to them, what are they going to develop for
24 you?

MR. HARDT: It is a multiscope issue. It's to

525 S. Main, Tulsa, OK 74103
(918) 583-5520

1 evaluate our contract with Ogden-Martin and it is also to
2 give us legal advice on two or three other issues and one
3 of which would be to look at standards and render an
4 opinion on that.

5 MR. BYRUM: Other questions from the council
6 for Mr. Hardt?

THE COUNCIL: No.

MR. BYRUM: Questions from the audience?

THE AUDIENCE: (No response.)

MR. BYRUM: Thank you, sir. Ms. Pursley.

11 MS. PURSLEY: My name is Kathy Pursley and I
12 work for Ogden-Martin Systems here in Tulsa where I am the
13 safety coordinator and environmental manager. Those of you
14 who were here earlier this morning in the briefing
15 understood pretty clearly how I felt and I will just
16 restate that. I felt that it was very important for the
17 Air Quality Council and DEQ here in Oklahoma to be aware of
18 what is most important for the City of Tulsa. And
19 Ogden-Martin is that the rules that developed out of this
20 process are as clearly in line with emission guidelines
21 that the federal EPA has established and not more stringent
22 in order not to put a heavier burden on the City of Tulsa
23 than is already going to exist. And with that urging then
24 to go ahead and take some kind of action as soon or as
25 quickly as you are able to so that we can proceed with the

525 S. Main, Tulsa, OK 74103
(918) 583-5520

1 huge amount of work that is ahead of us in conducting a
 2 retrofit to the facility in order to comply with these
 3 rules. Three years is a very short time span, when we are
 4 looking at beginning in 1977 and having everything rapped
 5 up by December of the year 2000. So I want to urge you to
 6 strongly consider it. I know it is an important issue and
 7 there is a lot of sides to examine, and I can understand
 8 why the City of Tulsa would like us to continue it for
 9 awhile, but I am urging you not to drag on so long that
 10 what we wind up with is a federal implementation plan and
 11 being subject to federal enforcement, and the fines and
 12 penalties and guidelines under which they enforce which are
 13 certainly more substantial in many ways than what we are
 14 subject to in the State of Oklahoma under DEQ
 15 authorization. So that's really all I have to say. Are
 16 there any questions?

17 MR. BYRUM: Questions from the council?

18 MR. BRANECKY: What is the danger of EPA? Are
 19 they at the doorstep getting ready to take over if we don't
 20 pass something today or December or what is the timeframe
 21 if we don't do anything with --

22 MR. DIGGS: What timeframe, this is Tom Diggs
 23 with EPA Agent 6 -- what the timeframe established is that
 24 EPA were put into place a federal implementation plan by
 25 December 1997, and so the State plan has to come forth to

525 S. Main, Tulsa, OK 74103
 (918) 583-5520

1 EPA and EPA being taken action on immediate advance of
 2 that date.

3 MR. BREISCH: Tom, that has never happened to
 4 the State of Oklahoma, has it?

5 MR. DIGGS: No, sir.

6 MR. BYRUM: Another question for Ms. Fursley.

7 MS. BARTON: Yes, I have a question. From the
 8 comments you have made it sounds as though you have already
 9 established criteria from going ahead and retrofitting, is
 10 that correct, that decision has already been made?

11 MS. FURSLEY: What we are aware of -- Kathy
 12 Fursley responding to Madine Barton's question -- what we
 13 are aware of is that the magnitude of the issue of retrofit
 14 is too huge and the timeframe too short not to consider all
 15 of those options. And so because of the size of that job
 16 one of my jobs as environmental manager at the facility is
 17 to focus as I want where that's the option that I am
 18 personally working on.

19 Now there maybe other people who work in Ogden
 20 Corporate in New Jersey who are negotiating with the City
 21 of Tulsa and worked with HDR, the City of Tulsa's
 22 consultant to the Tisr Board on a lot of other issues
 23 including finances. But I am strictly looking at the
 24 environmental issues and the engineering issues involved
 25 with the retrofit. And that's my concern, that is such a

525 S. Main, Tulsa, OK 74103
 (918) 583-5520

1 huge job. I can't bury my head in the sand and act like it
 2 is not going to happen when it is breathing down our necks
 3 or it won't happen.

4 MS. BARTON: So you are proceeding
 5 Ogden-Martin has proceedings that the City is going to go
 6 ahead and do the retrofit, that is your job, correct?

7 MS. FURSLEY: That's correct, that is -- there
 8 are other people who are considering other tracks, and
 9 closure is one of them. Alternatives in engineering issues
 10 is another one of them. We have got three or four
 11 different plans that we are looking at in terms of the
 12 equipment that maybe involved with the retrofit, all of
 13 that is presented fairly clearly in the HDR report in
 14 outline or, you know, bare bones kind of a sketch.

15 Okay, any other questions?

16 MR. BATE: Yes, I have a question. My name is
 17 Herb Bate and I am a citizen. As I understood your
 18 comments your concern about federal fines and penalties, I
 19 am curious as to who owns that place and who would be
 20 subject to those fines and penalties?

21 MS. FURSLEY: I think the City of Tulsa needs
 22 to address that because any -- I understand it is part of
 23 the contract with the City of Tulsa, and correct me if I am
 24 wrong, guys, any new regulations that were enacted after
 25 the original contract was made for us to operate the

525 S. Main, Tulsa, OK 74103
 (918) 583-5520

1 facility were the burden upon the City of Tulsa --

2 MR. BREISCH: Pardon me just a minute.

3 MS. FURSLEY: -- just some kind of a pass
 4 through town, is that correct, or is that part of what we
 5 are examining and disagreeing on?

6 MR. BYRUM: That is part of what we are
 7 disagreeing on.

8 MR. BREISCH: I was going to suggest this
 9 might not be part of what we need to hear as a council and
 10 if you don't mind let's try to stay on this issue.

11 MR. BRANECKY: Well, I guess not hearing what
 12 Tulsa has to say today and my concern about the one
 13 inconsistency we really might have difficulty acting on it
 14 today.

15 MR. BREISCH: I think we have got a lot more
 16 input here.

17 MR. BYRUM: Other questions for Ms. Fursley?

18 MR. BATE: Was my question out of order?

19 MR. BREISCH: No, Herb, it is just something
 20 that I think the counsel doesn't need to know to do our job
 21 at this point.

22 MR. BYRUM: I believe Mr. Fishback may have a
 23 question of Ms. Fursley.

24 MR. FISHBACK: Yes. I would like to know if
 25 there are any particular requirements of the proposed rule

525 S. Main, Tulsa, OK 74103
 (918) 583-5520

1 that either the operator or the City of Tulsa feels are
2 more stringent than the federal requirement as presently
3 written.

4 MR. HARDT: I am Charles Hardt. I have just
5 received these and I have not had a chance to make that
6 determination. We would like that opportunity to continue
7 at this time.

8 MR. BRANECKY: Has the City of Tulsa not been
9 involved all along? Or just the person that has been
10 involved is not here.

11 MR. BYNUM: Yeah, I believe the person who has
12 been involved is not here; is that correct?

13 THE AUDIENCE: Yes, I am. Yes, I am here.

14 MR. BYNUM: Okay, you are here.

15 MR. FISHBAC: The date on this draft is
16 September 17th which is nearly a month, but I don't know
17 how it was distributed.

18 MS. PURSLEY: Mr. Fishback, as clearly as I
19 can perceive, and you never know the effect of the
20 regulation that is written until after it's approved,
21 passed and acted on and applied and then you become more
22 aware, the effects of a rule. Sometimes we write things
23 that are applicable in the way we expect them to be, other
24 times we write things that are not. But based on the way
25 the emission guidelines are written those emission

525 S. Main, Tulsa, OK 74103
(918) 583-5520

1 guidelines appear, number for number, quantity for quantity
2 in this rule.

3 MR. FISHBAC: And there was a lot of
4 incorporation by reference also.

5 MS. PURSLEY: Correct. So I do not at this
6 time see anything in this rule that surprises me or
7 appeared differently than what I read out of all of the
8 promulgated, final rule, proposed rule, and all of the
9 documents that support that that I looked at. I don't see
10 anything that surprises me.

11 MR. BRANECKY: I guess my question is why, if
12 the City of Tulsa has been involved all along, why do they
13 need more time to formulate comments? Have they not
14 developed those comments --

15 MR. HARDT: Charles Hardt. As the authority
16 for this item that handles the energy facility operations
17 just recently at their last meeting authorized hiring
18 outside counsel to evaluate the contract and to evaluate
19 the regulations to see how these comply with the City of
20 Tulsa long-term objectives. So with your concerns we would
21 like an additional month to evaluate the issue please.

22 MR. BYNUM: Other questions?

23 (No response.)

24 MR. BYNUM: Mr. Diggs.

25 MR. DIGGS: Thank you. Mr. Chairman, members

525 S. Main, Tulsa, OK 74103
(918) 583-5520

1 of the council, ladies and gentlemen, my name is Tom Diggs.
2 For the court reporter that is D-I-G-G-S. I am the chief
3 of the air plan inspection with EPA Agent 6 in Dallas, and
4 I appreciate the opportunity to come before you this
5 afternoon and provide comments of the public hearing on the
6 proposed changes now to the regulations 17 on the emission
7 limits for municipal waste combustors.

8 With regards to Subchapter 17 we in Region 6 are
9 very pleased by the effort that has been put forth by the
10 Air Quality Service in developing this rule in a very
11 expeditious manner in working with the work route that is
12 established in Oklahoma towards developing the rule, also
13 being involved in having a workshop to get public input and
14 EPA's allowance for participation in that process.

15 In general we are very pleased with the format
16 and the content of the draft rule as written. I do have
17 just one comment to share with you based upon the review of
18 the September 17th version, and this is in Section
19 252:100-17-26. I believe that's on Page 13 of the document
20 entitled "Compliance and Performance Testing." It includes
21 in paragraph B an allowance for alternative performance
22 testing methods with prior executive director approval.
23 And one observation or concern that we have is that
24 alternative performance test appeared by the executive
25 director, that could result in a less stringent test than

525 S. Main, Tulsa, OK 74103
(918) 583-5520

1 the federal requirements. And one of the things that the
2 cleaner act under Section 129, one of the requirements is
3 that the State plan be at least as protective as the
4 guidelines established. So we would suggest that the order
5 of the regulation be revised to require that any request
6 for alternative performance tests be submitted to both the
7 executive director and EPA for the review and approval.
8 And so we would suggest in that section, including the
9 involvement of EPA, I believe that's consistent with the
10 way that the State's test method requirements is for
11 alternative test methods and some other sections of the
12 Oklahoma regulations. So suggests this for consistency
13 purposes and to ensure consistency with the -- at least as
14 protective as the guideline requirements of Section 129 of
15 the clean air act.

16 This comment was passed along in a letter dated
17 October 11th, 1996. I believe that a letter got up to the
18 State on Friday and I believe that counsel has received a
19 copy of that letter addressed both Subchapter 17 as well as
20 one comment on Subchapter 15.

21 There was quite a bit of discussion this morning
22 in regards to the timeframe for adoption of the regulation
23 and submittal of the regulation, and we would certainly
24 encourage action by the counsel to ensure submittal as soon
25 as possible for due date required which is December 1996

525 S. Main, Tulsa, OK 74103
(918) 583-5520

1 but no later than the Spring of 1997, and then to allow
 2 EPA the opportunity to approve this regulation in lieu of
 3 having to put in place a federal implementation plan. And,
 4 again, because this State has acted upon state
 5 implementations in the past we have not had to put in place
 6 federal implementation plans in the past and because of the
 7 expeditious movement that you are moving forth we just
 8 encourage you to continue them on that track with the
 9 strong work being done and to submit the regulation in
 10 advance to us so we can have approval of the Oklahoma
 11 regulation in lieu of the federal regulations.

12 And this completes my comments and I will be glad
 13 to answer any questions from the counsel or from the
 14 public.

15 MR. BYRUM: Questions from the council?

16 MR. BRANECKY: I guess maybe -- I don't know,
 17 I have faith in the executive director to do what is best
 18 for Oklahoma, and I don't know if I necessarily need to
 19 have EPA's approval. Also I don't know if you need to
 20 include EPA in on that or not, that's just my thoughts.

21 MR. FISBACK: I have the same reaction,
 22 David. I thought maybe we could achieve Mr. Diggs'
 23 objective by including wording to the effect that the
 24 approved alternate method should not be less stringent
 25 without actually requiring dual agency approval. But

525 S. Main, Tulsa, OK 74103
 (918) 583-5520

1 that's always the concern about the time that it takes, not
 2 that it would be approved or not, but just how quickly it
 3 would be approved. So as long as the executive director
 4 was acting under the overall objective that it be at least
 5 as stringent, is it necessary to actually get sign off by
 6 two different agencies?

7 MR. DIGGS: Well, the concern is if the State
 8 feels it is at least as stringent and then in looking at the
 9 position we feel different, there is a problem at that
 10 point of federal enforcement versus state. We are not
 11 calling for and what we are requesting is to come in as a
 12 provision of via supplemental to EPA the same time as the
 13 State. The opportunity of looking at the justification
 14 that the company has come forward with and making sure at
 15 that point in time there is not any question of the
 16 acceptance by both agencies, so say it doesn't come forth
 17 say a year or two down the road after the acceptance of the
 18 State the EPA will come forth and say that the requirements
 19 in our opinion are not as stringent and then it puts the
 20 company in some jeopardy down the road of -- we look at
 21 that stringency. What we see taking place is on a similar
 22 course of action as alternative test procedures from the
 23 ones who have already been incorporated by reference in the
 24 federal requirements as an alternate test procedure would
 25 come forth, then it would be brought to the State's

525 S. Main, Tulsa, OK 74103
 (918) 583-5520

1 attention and EPA's attention at the same time. And that
 2 if there is an agreement at that point in time then when
 3 the compliance testing is done there is not going to be a
 4 disagreement in a later period of time. And in certain
 5 circumstances and I can't think -- in Oklahoma under
 6 certain circumstances there have been situations where a
 7 State has adopted basis from executive director of
 8 position. And then at a later date EPA would come forth
 9 and feel that there was not equivalency. And it does cause
 10 some jeopardy and such of not having everything clarified
 11 in advance of when the compliance tests would take place.

12 MR. FISBACK: I agree with your concern, Tom.
 13 I think the issue is more of timing than anything else.
 14 And also if the EPA region is retained, basically approval
 15 rights, it seems to defeat the idea of a delegated program
 16 too. I mean, you entrusted basically that the executive
 17 direct of DEQ with a lot of discretionary power anyway
 18 under the delegation that's in place, this seems to be
 19 another good example. I think the idea of disagreements
 20 down the road, most facilities would probably have a good
 21 idea what common practice was on alternate testing methods,
 22 and I would think that most of the time, I venture to guess
 23 maybe nine out of ten times, there wouldn't be any question
 24 that the alternate was at least as stringent. And, you
 25 know, if I was advising any company about an alternate

525 S. Main, Tulsa, OK 74103
 (918) 583-5520

1 method you would want to make sure that there was some
 2 president for using it anyway, you wouldn't want to be out
 3 in left field doing something that nobody has ever heard
 4 of. So I think this may fall under the so-called 80/20
 5 rule. You know, if it is going to be right most of the
 6 time anyway why subject it to another level of approval and
 7 the concurrent delay in the process? That would be my
 8 feeling. But your concern is exactly correct. You want it
 9 to be at least as stringent but let's rely on Oklahoma to
 10 do that and the company because the company is going to
 11 want to avoid the important issues anyway.

12 MR. DIGGS: What we have certainly seen is
 13 states moving forward to try to avoid these situations, and
 14 in fact it comes in very seldom that alternative compliance
 15 methods are identified that the compliance method is
 16 identified within the Oklahoma regulations and as long as
 17 that regulation is -- that compliance method is carried
 18 forth then there is no question as to the acceptability. I
 19 believe under many of the federal state programs when it
 20 comes to alternative test methods for compliance testing,
 21 whether it be new source performance standards or whether
 22 it be the hazardous pollutant standards, the new standards
 23 that when there were alternate test methods that you are
 24 exposed to state law and EPA law approving an alternative
 25 test method.

525 S. Main, Tulsa, OK 74103
 (918) 583-5520

1 And it is very seldom that we see the situation
2 that would come forth with alternative test methods. I
3 know in the past that in order to have a state
4 implementation plan be acceptable that directors'
5 discretion on test methods has been a real problem towards
6 the approvability. And as we have gone through the
7 municipal waste combustor regulation that of the concerns
8 that we have identified out of the entire regulation it is
9 just one of the director's discretion. It may be that the
10 companies would not even be considering an alternative test
11 method, and possibly as the continuation of the hearing
12 takes place, if the companies are not going to take
13 consideration of an alternative test method maybe that
14 provision for alternative test methods need to be included
15 as part of the regulation, and that might be another
16 option.

17 MR. FISBACK: That is the question I was
18 going to ask the lady from the operation, the operating
19 company. Is this as an issue for you as far as you know?

20 MS. PURSLEY: I don't see it as one. There
21 maybe an engineer within the company nationally for whom it
22 would be an issue, but I don't see that as an issue. And
23 my question to Tom would be: Is this going to be a
24 sticking point in approval as we sit for these rules if
25 this isn't changed somehow, the wording?

525 S. Main, Tulsa, OK 74103
(918) 583-5520

1 MR. DIGGS: Probably so. For the case of the
2 state implementation plants as we have dealt with in the
3 past it has been a major sticking point for this type of
4 directors' discretions. So as we look at state
5 implementation plans VOC, the Oklahoma VOC (phonetic)
6 regulations or after 1990 Clean Air Act was required a
7 program called reasonable available control technology or
8 VOC (phonetic) regulation fix up, one of the requirements
9 was that if there was directors' discussion identify that
10 the regulation had to be revised giving -- includes both the
11 state approval and EPA's approval both. It has been very
12 seldom that under the VOC program that an alternative test
13 method has come up to Region 6's attention. I can't think
14 of one where it has come up. But it had come up in some
15 other regions. There had been some direct problems with
16 differences of positions between regions and states, and so
17 the 1990 Clean Air Act was necessary that the state
18 regulations reflect the EPA and state approval both. I
19 feel that is going to carry forth through the 111 B
20 approvals and the municipal waste combustors, one and two.
21 And I would just bring that to the council's attention and
22 the Air Quality Service's attention today.

23 MS. PURSLEY: This is Kathy Pursley responding
24 again. I think the only alternatives that we have ever
25 asked in consideration is acceptance of equivalent data

525 S. Main, Tulsa, OK 74103
(918) 583-5520

1 from equivalent units to save a little bit of money and not
2 test identical units in the same way once it has been
3 established that, yes, they do emit to the same levels. So
4 that in my mind can be possibly the only consideration we
5 would ask for in alternative, and I think that is well
6 addressed under these emission guidelines and testing
7 requirements anyway. Their provisions require it, the
8 frequency and the number of operating compliance tests.

9 MR. FISBACK: What emission control
10 technology are you likely to add on the tail end of the
11 incinerator, scrubbers, bag houses, that type of thing?

12 MS. PURSLEY: Yeah, that's what we are looking
13 at, line injection, or part of the injection, a bag house,
14 you know, deal with increased numbers of particulates and
15 size of particulates from that. And there are several
16 different models of brands out there that can be fabricated
17 so those are all little options that we have to look at.

18 MR. FISBACK: And the test methods for those
19 control devices are well established so it may not be an
20 issue.

21 MR. DIGGS: That is correct.

22 MR. FISBACK: I wouldn't want to see it hold
23 up SIC approval either if it wasn't an issue for -- I mean,
24 we have got one in Oklahoma shutting down. We have got one
25 that may continue to operate. So we have got one source,

525 S. Main, Tulsa, OK 74103
(918) 583-5520

1 and if it is not an issue for one source then why make it
2 an issue on the SIC approval?

3 MR. DIGGS: Yes, sir.

4 MR. BYNUM: Other questions for, Mr. Diggs?

5 MS. BARTON: My name is Madine Barton and I am
6 with Case Citizen's Action for State Environment. My
7 question for you is one for clarification. Because of the
8 deadline rules having to submit a state plan, at the
9 meeting, the workshop meeting that we had, I asked this
10 gentleman from the EPA -- I am sorry your name?

11 MR. COTE: My name is Mick Cote.

12 MS. BARTON: Mick Cote, all right. If there
13 would be a problem, if the City of Tulsa had not made a
14 decision as to which alternative they were going to select
15 as far as the facility is concerned, at that time I would
16 just like for public record for clarification that the
17 response to my question was that as long as they submitted
18 a plan showing that they are considering both alternatives
19 that they would be not in compliance with that date; does
20 that still stand?

21 MR. DIGGS: Yes. By the draft plan coming
22 forth it shows several projects that the State is making to
23 put in place the state regulation. If the State is not
24 making progress having a state regulation what the EPA will
25 have to do, or what the region would have to start on is go

525 S. Main, Tulsa, OK 74103
(918) 583-5520

1 towards duplicating the actions of the sta. putting in
2 place a federal implementation plan and towards that end we
3 would have to hold public hearings as well for federal
4 implementation plan, and having placed such a regulation by
5 December 19, 1997. And so as we see the State moving forth
6 to put in place a state plan and have the draft that is
7 developed uptaking through public hearing today, coming
8 forth at the next council meeting in December for this
9 regulation as well, it shows a strong commitment on their
10 part to put in place a regulation and will be submitted to
11 EPA in time that we can take an action on it.

12 However, if delays come about and the council is
13 not able to take an action on it, the region will have to
14 lay out fine lines and schedules as to what steps we would
15 have to take in order to put in place a federal
16 implementation plan. But from what I hear today I am
17 optimistic that the energy is going to take place that have
18 put in place a municipal combustor regulation for the State
19 of Oklahoma so the EPA can approve a state plan without
20 having to step in and do a federal plan.

21 MR. BYRUM: Other questions for Mr. Diggs?

22 (No response.)

23 MR. BYRUM: Thank you.

24 MR. DIGGS: Thank you very much.

25 MR. BYRUM: That is all of the notices that I

525 S. Main, Tulsa, OK 74103
(918) 583-5520

1 have that a. a wishes to speak. Is there anyone else who
2 wishes to speak to this subject?

3 (No response.)

4 MR. BYRUM: Mr. Chairman.

5 MR. BREISCH: I think we are ready for a
6 motion on this. It appears that we do want to continue the
7 hearing, and if that's the pleasure of the council I would
8 like a motion.

9 MR. ALBRIGET: Motion to continue.

10 DR. CANTER: Second.

11 MR. BREISCH: A motion and a second. Any
12 further discussion?

13 MR. FISBACK: Could we go on record as to
14 what the primary reason for the continuance is, and as the
15 council understands it, what is our objective in approving
16 the continuance if we do so?

17 MR. BYRUM: As far as I know you can put
18 anything you want in the record. Is that what you were
19 asking me?

20 MR. FISBACK: No, I just wanted to make sure
21 that we did record the reason for the continuance. And one
22 of the reasons was the requests for the City of Tulsa to
23 have additional time to evaluate the proposed rule based on
24 their retention of legal counsel, that was one
25 consideration. Are there others?

525 S. Main, Tulsa, OK 74103
(918) 583-5520

1 MR. BREISCH: Well generally, Bill, it is not
2 any more than an understood policy. Once we bring a rule
3 to this body we leave it open for comments for some period
4 of time. And to the best of my knowledge, I will stand
5 corrected, but we have seldom have ever passed a rule on
6 the first hearing. One that is as large and meaningful as
7 this rule, and that is a reason. Plus an absolute need, at
8 least in my opinion, to have input from the City of Tulsa.

9 MR. FISBACK: The thing that concerns me, Mr.
10 Chairman, is that the -- as you, I think, quite properly
11 noted in response to a comment from the audience, the issue
12 of the applicability and content of the rule is separate
13 and properly so from the issue of who pays for the
14 retrofits? That was you point earlier, I believe. And so
15 we really have agreement among the parties, I believe, in
16 response to earlier questions, that the rule contains
17 nothing more stringent than the federal rule, they
18 believe -- this is from the operator of the facility -- and
19 that in general EPA is satisfied with the state rule as it
20 reflects the federal rule requirements. The City of Tulsa
21 however still has concerns to the point where they retain
22 legal council. But if I understood them correctly it's
23 more to pursue who pays than what is in the rule. And if
24 that's not correct -- please correct me if that's not
25 correct.

525 S. Main, Tulsa, OK 74103
(918) 583-5520

1 MR. HARDT: Charles Hardt. I think we
2 certainly would want the opportunity to comment
3 specifically on the language of the rules. However, I have
4 not heard that defined as a real significant issue at this
5 point, but gives the opportunity to have council review it.

6 MR. FISBACK: Because there were members of
7 the City of Tulsa that were involved in developing this
8 draft up to its present state so they have not been a
9 silent partner certainly. So you are quite correct, we do
10 usually hear rules more than once, but in the issue of
11 efficiency if the remaining issue is a legal one about the
12 contract between the city and the operator of the
13 incinerator as you have said that is not this council's
14 business. And so if we have general agreement on what is
15 in the rule, I am not sure I see a reason for postponing a
16 decision.

17 MR. BREISCH: Mr. Hardt.

18 MR. HARDT: Charles Hardt. I would like the
19 City's opportunity to respond on the specific language that
20 is contained in rule, and set aside just the other issue,
21 the contract and who pays. But specifically I do not want
22 the record to show that they are satisfied with the
23 language of the rule and really don't have a desire to
24 comment. I am officially requesting that opportunity to
25 comment concerning the language that has been in the rule

525 S. Main, Tulsa, OK 74103
(918) 583-5520

1 regardless of past involvement that we may have had.
 2 MR. FISHBACK: Yeah, that was my question too,
 3 Mr. Hardt, considering I do believe Mr. Branecky's comment.
 4 If the City of Tulsa has been involved in this process all
 5 along what is that issue for them as pertaining to the
 6 rule?
 7 MR. BRANECKY: It was a staff level
 8 involvement, not involving the Board or legal counsel.
 9 MR. FISHBACK: So you have agreement at the
 10 staff level; you don't have an agreement at the executive
 11 level basically.
 12 MR. HARDT: We don't have any official
 13 agreement at all at the only level that makes any
 14 difference.
 15 MR. FISHBACK: Okay.
 16 MR. BREISCH: Does that answer really your
 17 question? Do you have a problem with that?
 18 MR. FISHBACK: I guess not a significant
 19 enough problem to overturn the motion --
 20 MR. BREISCH: Okay, any other --
 21 MR. FISHBACK: -- or to propose another
 22 motion.
 23 MR. BREISCH: You what?
 24 MR. FISHBACK: I say I don't have another
 25 enough problem with it to propose another motion.

525 S. Main, Tulsa, OK 74103
 (918) 583-5520

1 MR. BREISCH: Okay, any further comments or
 2 questions?
 3 MS. BARTON: I would like to applaud the
 4 chairman in the recommendation to give the public an
 5 opportunity to review these rules as you just stated before
 6 lunch, and to have notice publicized in the paper so that
 7 everybody gets to have their comment in and can't say that
 8 they didn't have an opportunity to participate in this.
 9 Being the public representative on that work force that
 10 information was not distributed widely to the population of
 11 the City of Tulsa so that they know what the rule contains
 12 in that. So I concur with the chairman's recommendation
 13 that the public was given every opportunity as it has in
 14 the past and I applaud that decision.
 15 MR. BREISCH: Thank you, Nadine. Any further
 16 comments from the council?
 17 (No response.)
 18 MR. BREISCH: Thank you. Myrna, call for the
 19 roll.
 20 MS. BRUCE: Dr. Canter.
 21 DR. CANTER: I.
 22 MS. BRUCE: Mr. Branecky.
 23 MR. BRANECKY: I.
 24 MS. BRUCE: Mr. Fishback.
 25 MR. FISHBACK: I.

525 S. Main, Tulsa, OK 74103
 (918) 583-5520

1 MS. BRUCE: Mr. Albright.
 2 MR. ALBRIGHT: I
 3 MS. BRUCE: Mr. Breisch.
 4 MR. BREISCH: I. We have to regress for just
 5 a minute to the previous portion of our hearing whereby I
 6 wanted to confirm that Mr. Fishback's motion did mean to
 7 recommend this to the DEQ Board for their approval.
 8 MR. FISHBACK: 7 and 8 for emergency --
 9 MR. BYRUM: The 7 and 8 -- and it's a
 10 permanent and it goes to the --
 11 MR. FISHBACK: Yeah, and we didn't include
 12 that language in the motion, is that the problem?
 13 MR. BREISCH: Well, we didn't but I think it
 14 was intended to.
 15 MR. FISHBACK: It was. We can make another
 16 motion if we need to?
 17 MR. BREISCH: I think -- Dennis, is that all
 18 right, the intent is there and he --
 19 MR. DOUGHTY: It was proposed and intended and
 20 understood, I think that is good enough.
 21 Mr. Chairman, I would make one, if I may make a
 22 point here, I understand that council voted to continue the
 23 hearing on the municipal waste incinerator --
 24 MR. BREISCH: Until the next --
 25 MR. DOUGHTY: Until the next meeting and I

525 S. Main, Tulsa, OK 74103
 (918) 583-5520

1 would like to just read into the record at this time that
 2 the next regular meeting is scheduled for December 7th
 3 1996, 9:30 a.m. and 1:00 p.m. at the Lincoln Plaza Office
 4 called the Park Brown Room, 4545 North Lincoln Boulevard,
 5 Oklahoma City.
 6 MR. FISHBACK: December 17th?
 7 MR. DOUGHTY: December 17th, correct.
 8 MR. BREISCH: We are ready for the next issue.

DEPARTMENT OF ENVIRONMENTAL QUALITY

.....

IN THE MATTER OF THE FIRST MEETING/HEARING

9

TAKEN ON BEHALF OF THE

DEPARTMENT OF ENVIRONMENTAL QUALITY

ON FEBRUARY 19, 1997 AT 1:00 P.M.,

AT LINCOLN PLAZA OFFICE PARK, BURGUNDY ROOM,

OKLAHOMA CITY, OKLAHOMA

.....

REPORTED BY: GENA BELCHER, CSR

1 MR. BREISCH: We'll go head and
 2 call the Meeting/Hearing to order. Roll call.
 3 MS. BRUCE: Dr. Canter.
 4 DR. CANTER: Present.
 5 MS. BRUCE: Mr. Branecky.
 6 MR. BRANECKY: Here.
 7 MS. BRUCE: Mr. Glass.
 8 MR. GLASS: Present.
 9 MS. BRUCE: Ms. Slagell.
 10 MS. SLAGELL: Present.
 11 MS. BRUCE: Mr. Breisch.
 12 MR. BREISCH: Present.
 13 MS. BRUCE: For the record, absent
 14 are Mr. Fishbeck, Mr. Albright, and Ms. Hinkle.
 15 MR. BREISCH: Okay. I need a
 16 motion on the minutes.
 17 MR. BRANECKY: I move that the
 18 minutes be approved.
 19 MR. GLASS: Second.
 20 MR. BREISCH: I got a motion and a
 21 second to the minutes, any discussion, comments?
 22 If not, Myrna call the roll.
 23 MS. BRUCE: Dr. Canter.
 24 DR. CANTER: Approved.
 25 MS. BRUCE: Mr. Branecky.

A P P E A R A N C E S

Page 2

COUNCIL MEMBERS PRESENT:

- Mr. Bill Breisch, Chairman
- Dr. Larry Canter
- Mr. David Branecky
- Mr. Ike Glass
- Ms. Meribeth Slagell
- Mr. Larry Byrum, Hearing Officer and Director of Air Quality Division

ALSO PRESENT:

- Ms. Myrna Bruce, Secretary

AIR QUALITY DIVISION STAFF PRESENT:

- Dr. Joyce Sheedy
- Ray Bishop
- Linn Wainner
- Dennis Doughty
- Barbara Hoffman

ATTORNEYS PRESENT:

- Donald K. Shandy
Attorney at Law
BancFirst Building
101 N. Broadway
Oklahoma City, Oklahoma 73102
- Kathy Pursley
Attorney at Law
Ogden & Martin
- Frank Erwin
Tulsa, Oklahoma

1 MR. BRANECKY: I.
 2 MS. BRUCE: Mr. Glass.
 3 MR. GLASS: I.
 4 MS. BRUCE: Ms. Slagell.
 5 MS. SLAGELL: I.
 6 MS. BRUCE: Mr. Breisch.
 7 MR. BREISCH: Yes. Meeting
 8 schedule. We've discussed this a little bit this
 9 morning, any comments on that? Does it meet with
 10 you all's approval? Do we need a motion on this?
 11 (Council indicating in agreement in
 12 discussion among themselves.)
 13 MR. BREISCH: Okay. We got a
 14 motion.
 15 DR. CANTER: Second.
 16 MR. BREISCH: Larry, did you
 17 second?
 18 DR. CANTER: Yes.
 19 MR. BREISCH: If there's no
 20 discussion, Myrna call the roll.
 21 MS. BRUCE: Dr. Canter.
 22 DR. CANTER: I.
 23 MS. BRUCE: Mr. Branecky.
 24 MR. BRANECKY: I.
 25 MS. BRUCE: Mr. Glass.

1 MR. GLASS: I.
 2 MS. BRUCE: Ms. Slagell.
 3 MS. SLAGELL: I.
 4 MS. BRUCE: Mr. Breisch.
 5 MR. BREISCH: I.
 6 MR. BREISCH: Okay. Next, election
 7 of offices. We need to elect a chairman,
 8 vice chairman, and that's it isn't it?
 9 MR. BYRUM: Uh-huh.
 10 DR. CANTER: I would like to place
 11 a nomination for Chairman of the Council,
 12 Mr. Breisch.
 13 MR. BREISCH: Can we do them
 14 separately, or should we do them together,
 15 chairman and vice chairman?
 16 (Council talking over each other.)
 17 MR. DOUGHTY: I would probably do
 18 them separately. If you only had one nomination
 19 it probably won't matter.
 20 MR. BRANECKY: I second that
 21 motion.
 22 MR. BREISCH: The motions been
 23 made, and seconded. Any other nominations, on
 24 the floor? Okay. How do we vote on that, call
 25 roll, or --

1 MR. GLASS: Yes.
 2 MS. BRUCE: Ms. Slagell.
 3 MS. SLAGELL: I.
 4 MS. BRUCE: Mr. Breisch.
 5 MR. BREISCH: Yes. All right.
 6 Item 6, is the continued hearing on Municipal
 7 Waste Combustion. And I'll turn this over to our
 8 Hearing Officer, Mr. Byrum.
 9 MR. BYRUM: Ladies and gentlemen,
 10 my name is Larry Byrum. I'm the director of the
 11 Air Quality Division, as such I will act as the
 12 personal officer for this hearing. This hearing
 13 is convened by the Air Quality Councilmen in
 14 compliance with the Oklahoma Administration
 15 Procedures Act, Title 40 of the code of Federal
 16 Regulations, Part 51, as well as the authority of
 17 Title 27A of the Oklahoma Statutes, Sections
 18 25101 and following.
 19 This hearing was advertised in the
 20 Oklahoma Register for purposes of receiving
 21 comments pertaining to proposed revisions to a
 22 new Part 3, Municipal Waste Combustors to our
 23 Subchapter 17. If you wish to make a statement,
 24 please complete the forms at the registration
 25 table and I will call upon you at the appropriate

1 MR. DOUGHTY: Yes, we would need to
 2 call roll.
 3 MR. BREISCH: Call roll, Myrna.
 4 MS. BRUCE: Dr. Canter.
 5 DR. CANTER: I.
 6 MS. BRUCE: Mr. Branecky.
 7 MR. BRANECKY: I.
 8 MS. BRUCE: Mr. Glass.
 9 MR. GLASS: I.
 10 MS. BRUCE: Ms. Slagell.
 11 MS. SLAGELL: I.
 12 MS. BRUCE: Mr. Breisch.
 13 MR. BREISCH: Sustained. Okay.
 14 Let's elect vice chairman.
 15 MR. BRANECKY: I'll nominate Dr.
 16 Canter as vice chairman.
 17 MR. SLAGELL: I second it.
 18 MR. BREISCH: Nomination been made
 19 and seconded. Any further nominations, or any
 20 further discussion? If not, Myrna call roll.
 21 MS. BRUCE: Dr. Canter.
 22 DR. CANTER: Sustained.
 23 MS. BRUCE: Mr. Branecky.
 24 MR. BRANECKY: I.
 25 MS. BRUCE: Mr. Glass.

1 time. At this time I would like to call on
 2 Dr. Joyce Sheedy to give the staff position on
 3 these proposed changes.
 4 DR. SHEEDY: Mr. Chairman, members
 5 of the Council, Ladies and Gentleman, my name is
 6 Joyce Sheedy, and I work in the Rules and
 7 Planning Unit of the Air Quality Division. In
 8 October 1996, the staff presented a draft
 9 modification to OAC 252:100-17 entitled
 10 "Incinerators".
 11 This proposed modification incorporated
 12 the EPA guidelines contained in 40 CFR 60,
 13 Subpart Cb for existing Municipal Waste
 14 Combustors at plants with an aggregate combustion
 15 capacity of 38.58 tons per day of municipal solid
 16 waste. The hearing for this proposed rule was
 17 continued to the December, 1996 Air Quality
 18 Council Meeting which was canceled. The notice
 19 for the February 1997 council meeting listed the
 20 proposed modification to Subchapter 17.
 21 However, on December 6, 1996 in first
 22 opinion, the U.S. Court of Appeals for the
 23 District of Columbia Circuit vacated the EPA'S
 24 1995 standards for existing municipal waste
 25 combustors contained in 40 CFR 60, Subpart C

1 their entirety and remanded to EPA without
2 reaching the additional challenges raised by
3 petitioners.

4 The Court held that EPA's use of
5 aggregate plant municipal solid waste capacity
6 rather than unit municipal solid waste capacity
7 in the 1995 standards to create categories of
8 municipal waste combustor units for MACT
9 purposes, violates the plain meaning of Section
10 129 of the Clean Air Act and exceeds the EPA's
11 statutory authority.

12 The modification proposed to our
13 Subchapter 17 at the October, 1996 meeting were a
14 direct result of the requirements of the Federal
15 Clean Air Act and mirrored the standards and
16 limits contained in 40 CFR 60 Subpart Cb.

17 Therefore, the staff recommends that the
18 modifications to Subchapter 17 be held in
19 abeyance until such time as the issue addressed
20 by the Court is resolved.

21
22 MR. BYRUM: Questions from the
23 Council for Dr. Sheedy?

24 MR. BREISCH: Do you expect these
25 to be resolved, or in one-way or the other hear

1 just wanted to state that we are in support of
2 the staff's recommendation that deferral of action
3 on this matter at this council level today occur,
4 and for the same reasons that she cited.

5 MR. BYRUM: Thank you. Questions
6 for Mr. Erwin?

7 (Council shakes heads.)

8 MR. BYRUM: Questions from the
9 audience for Mr. Erwin?

10 (Audience shakes heads.)

11 MR. BYRUM: Thank you, sir. Don
12 Shandy.

13 MR. SHANDY: Council members, my
14 name is Don Shandy. I'm an attorney with
15 McKinney, Stringer & Webster, here in Oklahoma
16 City. And I'm here on behalf of Homand Inc.,
17 which is a cement company, the largest cement
18 manufacturer in the United States with 13
19 facilities. And they also have a plant located
20 here in the state in Ada, Oklahoma.

21 Basically without belaboring the point,
22 we have reviewed on behalf of this particular
23 company, the Municipal Waste Combustion Rule over
24 the past year or so, and have had extensive
25 involvement with the Environmental Protection

1 from the Court or EPA concerning the actions to
2 be taken?

3 DR. SHEEDY: I'm sorry,
4 Mr. Breisch.

5 MR. BREISCH: But when do you
6 expect to hear something on this?

7 DR. SHEEDY: Well, I believe that
8 there might be some news by Friday, I think,
9 regarding what the Court is going to do. Now,
10 it's also -- they just acted on the first issue.
11 And if this issue was resolved, then according to
12 their opinion there are other issues that may
13 well be taken into account after that unless
14 they're addressed by EPA at the same time. So it
15 could be sometime before it's all resolved.

16 MR. BYRUM: Other questions from
17 the Council?

18 (No response.)

19 MR. BYRUM: Questions from the
20 audience of Dr. Sheedy?

21 (No response.)

22 MR. BYRUM: Thank you. Frank
23 Erwin.

24 MR. ERWIN: My name is Frank Erwin,
25 I'm with the City of Tulsa. And basically, I

1 Agency regarding applicability of the rule.

2 And one of the fundamental problems that
3 this particular industry sees with the rule that
4 EPA proposes, is that no one really is sure who,
5 and how broad it applies, and who it applies to.
6 So for that reason the Cement Recycling Coalition
7 joined as a party in a litigation in
8 Washington DC. And as has been discussed by
9 Dr. Sheedy previously, the Court in that
10 particular case has decided that the rule didn't
11 meet certain requirements and basically tossed
12 the rule out and remanded it for further action.

13 The issues of concern to CKRC were not
14 addressed in the litigation. And when EPA
15 appealed this case on February the 4th, even
16 though the Court may make a ruling the case will
17 still have to be heard by the Court to address
18 CKRC's issues.

19 For that reason Homand is in agreement
20 with the staff's recommendation that this rule
21 making not go forward, because quite honestly the
22 staff could spend a lot of time adopting and
23 preparing a rule. But the bottom line is the
24 rule could ultimately be tossed out, and it could
25 be a lot of wasted motion. So from a threshold

1 standpoint we would suggest that's reason enough
2 not go forward.

3 Again there's a big question regarding
4 the applicability of the rule, and some of these
5 issues need to be resolved with EPA. And as the
6 rules proposed here in Oklahoma, currently as I
7 understand it, there's only two facilities that
8 it applies to.

9 But Homand is concerned that it could be
10 broader, at least in EPA's mind and in the way
11 the State proceeds it. So those issues need to
12 be worked out. And, again we would encourage the
13 Council to forego any further action in
14 accordance with Ms. Sheedy's recommendation.

15 MR. BYRUM: Questions for
16 Mr. Shandy?

17 DR. CANTER: Yes. Don, the cement
18 kennel, that would potential come into play,
19 because these companies burn municipal waste for
20 energy supply. I don't know what the connection
21 is there.

22 MR. SHANDY: Dr. Canter, the
23 problem is, when you look at the rules -- first
24 of all kennels are enormous pieces of equipment,
25 so from the standpoint of capacities they easily

1 (response.)

2 MR. BREISCH: I believe we've got a
3 couple of alternates here. Number one, to just
4 revoke this hearing and readvertise it, or
5 continue it. Personally my feelings are, it
6 would be easier right now to continue this. And
7 I would entertain a motion to do that, if there's
8 no objection from our Council.

9 MR. DOUGHTY: I think that that
10 would be my recommendation because we could
11 continue indefinitely. I have no reason to
12 believe there's any time limit.

13 DR. CANTER: So if, for example,
14 something might come out as early as Friday of
15 this week, that would -- that might make us want
16 to have a continuance in our April meeting, then
17 this would let us do that. If we discontinue the
18 hearing now, then we can't have a hearing in
19 April because of the time we advertised it,
20 right?

21 MR. BYRUM: With the possible
22 exception of this advertising Friday for a
23 hearing.

24 DR. CANTER: Oh, that's right.

25 MR. BYRUM: Fridays our cutoff

1 meet or exceed the capacity requirements of the
2 rule. So you've got arguable applicability on
3 the capacity side.

4 The next question that you ask yourself
5 then is, what fuel supplies go into the kennel.
6 And to directly address your question, for
7 instance, there is a permit that Ada has right
8 now, they're operating under construction permit.
9 And it appears to me that arguably some of the
10 nonhazardous fuels that they could burn at that
11 facility would arguably fall under municipal
12 waste by definition. So there is some problems
13 related to definitions, and regulation, and how
14 those are interpreted.

15 DR. CANTER: Okay.

16 MR. BYRUM: Other questions for
17 Mr. Shandy in this case?

18 (Council shakes head.)

19 MR. BYRUM: Questions from the
20 audience?

21 (Audience shakes head.)

22 MR. BYRUM: Thank you. I have no
23 indications that anyone else wishes to speak on
24 this issue. Is there anyone else in the audience
25 that wishes to speak? Mr. Chairman.

1 date, after that we could not do that.

2 DR. CANTER: Okay.

3 MR. BRANECKY: Looking for a
4 motion.

5 MR. BREISCH: I'm looking for a
6 motion.

7 MR. BRANECKY: I motion that we
8 continue this hearing.

9 MS. SLAGELL: I second it.

10 MR. BREISCH: I have a motion, and
11 a second to continue the hearing. Any further
12 discussion, questions? If not, Myrna call the
13 roll.

14 MS. BRUCE: Dr. Canter.

15 DR. CANTER: I.

16 MS. BRUCE: Mr. Branecky.

17 MR. BRANECKY: I.

18 MS. BRUCE: Mr. Glass.

19 MR. GLASS: I.

20 MS. BRUCE: Ms. Slagell.

21 MS. SLAGELL: I.

22 MS. BRUCE: Mr. Breisch.

23 MR. BREISCH: Yes.

24 (Meeting/Hearing concluded)

- 7. MR. BREISCH - CHAIRMAN
- 8. MR. DYKE - PROTOCOL OFFICER
- 9. MS. BRUCE - SECRETARY

PROCEEDINGS

1
2 MR. DYKE: Next item for hearing
3 this afternoon would be Item Number 6 on
4 the agenda. I'm David Dyke. I'm the
5 Interim Director of the Air Quality
6 Division. This hearing is convened by the
7 Air Quality Council in compliance with the
8 Oklahoma Administrative Procedures Act, in
9 Title 40 of the Code of Federal
10 Regulations, Part 51, as well as the
11 Authority of Titles 27A of the Oklahoma
12 Statutes, Sections 2-2-201 and 2-5-101
13 through 2-5-118.

14 The hearing was advertised in the
15 Oklahoma Register for the purpose of
16 receiving comments pertaining to the
17 Proposed Revisions of OAC 252:100-17,
18 Incinerators. If you wish to make a
19 statement, please complete the form at the
20 registration table, and you will be called
21 upon at the appropriate time. I will call
22 upon Michelle Martinez to give the staff's
23 position on the proposed changes at this
24 time. Ms. Martinez.

25 MS. MARTINEZ: Members of the

Christy A. Myers
Certified Shorthand Reporter

1 Council, ladies and gentlemen, my name is
2 Michelle Martinez and I work for the Air
3 Quality Division of the Rules and Planning
4 Unit. Today I have been asked to provide
5 to you an overview of the proposed
6 revisions to Subchapter 17, incinerators.
7 Due to written comments received from Ogden
8 Martin Systems of Tulsa, revisions have
9 been made to the December 3rd Draft
10 included in your Council packets.

11 The current draft is dated December
12 15th, and all revisions in response to the
13 written comments are indicated in extra
14 large bold type. Before we get into
15 specific revisions, please allow me to give
16 you some background on the rules.

17 The emission guidelines are
18 guidelines for states -- I'm sorry, let me
19 start over. On December 19, 1995 the EPA
20 published emission guidelines, a New Source
21 Performance Standards for municipal waste
22 combustors in the Federal Register at 40
23 CFR 60, Subparts Eb and Cb. The New Source
24 Performance Standards are emission
25 standards for new municipal waste

Christy A. Myers
Certified Shorthand Reporter

1 combustors for which construction commenced
2 after September 20, 1994. The emission
3 guidelines are guidelines for states to
4 establish emission standards for existing
5 municipal waste combustors for which
6 construction commenced on or before
7 September 20, 1994. The guidelines, unlike
8 the New Source Performance Standards, do
9 not establish enforceable emission
10 standards directly, but require in our case
11 that the DEQ adopt rules and a state plan
12 to make these standards enforceable.

13 Following the promulgation, an
14 industry group petitioned the US Court of
15 Appeals on the basis that the 1995
16 Standards exceeded the EPA Statutory
17 Authority under the Clean Air Act. These
18 standards were based on the aggregate
19 combustion capacity of the plant rather on
20 the capacity of each incineration unit.
21 But the Court found that Section 129 of the
22 Act established two size categories under
23 the municipal waste combustors based on
24 unit rather than facility capacity. So in
25 December 6, 1996, the Court vacated in

Christy A. Myers
Certified Shorthand Reporter

1 their entirety, the 1995 Guidelines and
2 Standards.

3 Later, on March 21, 1997, the Court
4 amended it's initial opinions leaving in
5 place the guidelines and standard for large
6 units other than cement kilns. The
7 guidelines for large units apply to
8 existing units with a capacity to combust
9 more than two hundred and fifty (250) tons
10 per day in municipal solid wastes.

11 And finally, on August 25, 1997, the
12 EPA published a revised final rule in the
13 Federal Register. Existing large units
14 that are subject to the guidelines must
15 meet emission limitations for the metals
16 cadmium, lead, mercury, particulate matter,
17 acid gases expressed as sulfur dioxide and
18 hydrogen chloride, dioxins and furans,
19 nitrogen oxides, carbon monoxides, and
20 visible emissions which are referred to as
21 opacity.

22 In addition, the Guidelines
23 contained certification and training
24 requirements for operations personnel, and
25 testing the monitoring requirements for

1 emissions. In order to enforce the
2 standards specified in the guidelines the
3 State must have an enforceable mechanism,
4 which in Oklahoma is the state rule. Staff
5 has drafted a proposed addition of Part 5,
6 municipal waste combustors and a new
7 Appendix K, to meet the federal
8 requirements.

9 The EPA developed the guidelines in
10 accordance with Section 111D and Section
11 129 of the Clean Air Act. Section 111D
12 requires the EPA to establish procedures
13 for submitting state plans for the
14 implementation of guidelines. Section 129
15 was added to specifically address solid
16 waste combustion. Subpart Cb differs from
17 other guidelines adopted in the past
18 because it addresses both Sections 111D and
19 129. Although 60.24F of Subpart B,
20 provides for the State to allow less
21 stringent standards on a case by case
22 basis, Section 129 requires that the state
23 plan be at least as protective as the
24 guidelines which overrides the State's case
25 by case flexibility.

Christy A. Myers
Certified Shorthand Reporter

5659

1 Oklahoma anticipates taking its
2 state, 111D plan for municipal waste
3 combustors to the Air Quality Council
4 meeting on February 18, 1998. If Oklahoma
5 doesn't submit an acceptable state plan
6 implementing the guidelines of which the
7 state rule is an intricate part, the EPA
8 will enforce a federal plan.

9 The proposed Part 5, mirrors the
10 federal guidelines and is no less and no
11 more stringent. Oklahoma's plan will
12 include a minimum of the following: A
13 demonstration of the State's legal
14 authority to be prepared by the DEQ legal
15 staff; an identification of the enforceabl
16 state mechanism which is the state rule;
17 an inventory of municipal waste combustion
18 units and their emissions; a compliance
19 schedule for retrofit foreclosures which
20 will be contained in a consent order; a
21 record of the public hearings on the state
22 plan; and finally a provision for annual
23 state progress reports to EPA.

24 Oklahoma has only one facility
25 subject to the guidelines, Ogden Martin

Christy A. Myers
Certified Shorthand Reporter

1 Systems of Tulsa. According to the 1995
2 emission inventory, Ogden Martin has three
3 units with each unit combusting of
4 approximately three hundred and thirty-six
5 (336) tons per day of municipal solid
6 waste, and a permit limiting each unit to
7 three hundred and seventy-five (375) tons
8 per day. The City of Miami Municipal Waste
9 Combustors rated at thirty-six (36) tons
10 per day of municipal solid waste and, thus,
11 is not subject to the guidelines.

12 In addition to adding Part 5,
13 municipal waste combustors, staff is also
14 recommending revisions to the existing 17.
15 The redesignation and clarification of Part
16 1, general provisions, and Part 3,
17 incinerators, along with a simplification
18 of Appendices A and B was done to meet the
19 agency's rewrite de-wrong initiative. This
20 rule was presented to the Council on
21 October 15, 1996, and February 19, 1997.
22 Today's staff recommends the Council
23 approve these revisions, its proposed
24 revisions, as a permanent/emergency rule.

25 MR. DYKE: Questions of Ms.

Christy A. Myers
Certified Shorthand Reporter

1 Martinez from the Council?

2 MR. BRANECKY: Where did the date
3 -- on page 5, August 22, 2002, where does
4 that come from?

5 MS. MARTINEZ: There are three
6 dates identical on page 5 and page 6. In
7 the December 3rd draft, that was in your
8 Council packet. I believe it had December
9 19, 2002, and it was changed to August 26,
10 2002. And that was a mistake on our part.
11 Basically, the reason of August 26, is when
12 they came out with the revisions, EPA came
13 out with their revisions to the federal
14 rule, they came out with supplemental
15 emission limits, and they have to have five
16 years from the promulgation date of those
17 changes which that -- they came out on the
18 25th of August of 1997.

19 MR. BRANECKY: Thank you.

20 MR. FISHBACK: In your
21 judgement, what is the latest date that
22 Oklahoma could enact these proposed rules
23 without a federal program being implemented
24 in their place? What is your opinion of
25 the latest date that they could be

1 approved?

2 MS. MARTINEZ: Well, the
3 schedule that we're looking at right now,
4 if you were to propose these as an
5 emergency/permanent rule or vote for these
6 to pass as those, we would like to see
7 these go into the January DEQ Board
8 Meeting, be passed by them, go into the
9 legislative session which would allow us to
10 put a permanent rule in the state plan. If
11 all of that happens in line with our
12 schedule, we're hoping that these revisions
13 will be effective sometime in March. So as
14 far as the latest date, Barbara, do you
15 have an answer for that?

16 MR. COTE: And if I could address
17 the hearing. My name is Mick Cote and I'm
18 with the Environmental Protection Agency,
19 in Dallas. I'm the Regional Coordinator
20 for 111D Plans to include the combustor
21 rule. And what I could do for you is
22 outline, to the best of my knowledge what
23 our schedule is for implementation of the
24 federal plan and see what kind of schedule
25 we have. Keep in mind, I have to be able

Christy A. Myers
Certified Shorthand Reporter

5663

1 to approve and publish that approval of a
2 state plan from Oklahoma prior to the
3 effective date of the final federal plan.
4 And as I mentioned during the briefing, and
5 why I'm mentioning it again now, there is a
6 proposed federal plan that's in the Office
7 of Management and Budget right now for the
8 federal combustor rule. That in my
9 estimation would be signed by the
10 Administrator and published probably the
11 end of January, beginning of February,
12 given the holiday season. And we will
13 probably give a 90 day comment period, and
14 then we will publish a subsequent final
15 action that will be effective 30 days after
16 publication.

17 So we're saying, let's say, February
18 1st for a publication of the proposal,
19 March, April, May, we're looking at the end
20 of July, probably, before the federal plan
21 is effective and in place. And what we
22 need to be able to do if you want to have
23 the state plan in place before the federal
24 plan is in place, I would need at least,
25 two months to be able to administratively

Christy A. Myers
Certified Shorthand Reporter

1 and technically approve the package from
2 the State of Oklahoma. I need to have
3 something from the State of Oklahoma by --
4 safely by April.

5 MR. FISHBACK: In the absence of
6 the state approved plan, the federal plan
7 automatically takes the place -- takes
8 over.

9 MR. COTE: Yes.

10 MR. KILPATRICK: Am I correct in
11 stating that there is absolutely no
12 difference whether we approve this today or
13 whether we approve it on January the 9th,
14 since it has to be approved by DEQ and then
15 signed by the Governor to become official.

16 MR. COTE: That's correct.

17 MS. MARTINEZ: That's correct.

18 MR. COTE: I misspoke. I assume
19 he's talking to you.

20 MR. KILPATRICK: Yes.

21 MR. BRANECKY: The only danger I
22 would see, if for some reason we didn't end
23 up with a quorum on the 9th, and then we
24 would have to wait until February to act?
25 January has been known for snow storms and

1 things like that.

2 MR. FISHBACK: Mr. Doughty, can
3 Council Members be polled by telephone if
4 they're not physically present for a
5 council meeting?

6 MR. DOUGHTY: No.

7 MR. FISHBACK: Can't do that?

8 MR. DOUGHTY: No.

9 MR. FISHBACK: Okay.

10 MR. DOUGHTY: That is
11 specifically prohibited under the statute.
12 I might make one more comment. There is
13 also the issue of when the Governor signs
14 these things. I think the Governor has 45
15 days, so you may want to calculate that 45
16 days in there. Because he usually waits 44
17 days before he signs these things.

18 MR. DYKE: Is there any
19 additional questions of the Council of Ms.
20 Martinez?

21 DR. CANTER: I guess I had one
22 question. I'm not quite sure how to phrase
23 this, but of the changes that we were given
24 today, are there any of these that staff
25 would consider to be substantive changes in

1 the Subchapter 17?

2 MS. MARTINEZ: We don't consider
3 them substantive.

4 DR. CANTER: Okay.

5 MS. MYERS: They're more in line
6 with clarifying what the federal rule is
7 and the state rule.

8 MS. MARTINEZ: Intended for the
9 federal rule, that type of thing.

10 MR. BRANECKY: And EPA is happy
11 with these changes; is that true?

12 MR. COTE: I'm sorry.

13 MR. BRANECKY: EPA is satisfied
14 with the changes of Subpart 17, and don't
15 have any problems with the changes?

16 MR. COTE: Yes. EPA is satisfied
17 with the changes that were made. In my
18 opinion, they're clarifications.

19 MR. BRANECKY: Would be the same
20 Ogden Martin?

21 MS. MCGILBRA: Yes.

22 MR. BRANECKY: Same thing with
23 the City of Tulsa?

24 MR. COTE: Yes.

25 MR. DYKE: We've got notices of

1 comments.

2 MR. BRANECKY: Okay.

3 MR. FISHBACK: And as far as all
4 of those parties are concerned, no
5 additional time is needed by you to review
6 these changes. I mean, that's basically
7 saying the same thing, you're satisfied
8 with it as it stands?

9 MR. COTE: As it is written
10 today, I'm satisfied.

11 MR. FISHBACK: So the
12 continuance of this issue to January 9th
13 would be to entertain additional comment
14 from the public.

15 MR. DYKE: Right.

16 Is there any additional questions of
17 Ms. Martinez from the Council?

18 Is there any questions of Ms.
19 Martinez from the audience?

20 MR. MCWHIRTER: My name is Doyle
21 McWhirter. Let me find the section. In
22 17-15, in exemptions, paragraph H, Item
23 Number 2, it says agency exempts facilities
24 that burn yard waste. Item Number 1,
25 related to opacity limitations, and Item

1 Number 2 says the testing procedures under
2 section 252:100-17-25. What would
3 necessitate the testing procedures to be
4 required on air curtain incinerators when I
5 don't believe there is any standards of
6 testing emissions limitation, is there?
7 And also, how would you test it unless it's
8 specifically constructed to where it has a
9 specific stack; which I've never seen one
10 that does. You can't meet the -- the
11 testing requirements that I know of.

12 MS. HOFFMAN: If I could respond
13 to that. I'm Barbara Hoffman, staff
14 attorney. Frankly, we've just copied what
15 was in the EPA Emission Guidelines and that
16 was in the guidelines. So, technically, I
17 can't answer your question. But
18 procedurally, I can tell you that this was
19 in here because it was in the EPA Rules.

20 MR. MCWHIRTER: My comment then
21 would be that we need to know why that
22 we're putting that in to this regulation?
23 Because it makes it difficult for the
24 facility, I think.

25 MR. COTE: If I could carry that

1 one step further. Mick Cote, with the EPA,
2 and she is correct, that that's there
3 because that's in the federal regulation.
4 And I can't answer your question right now.
5 I can tell you what they've done is they
6 have incorporated the federal requirements
7 because there is no flexibility allowed
8 under this section of the Clean Air Act
9 that this authority was given to write this
10 rule. What I can do because this was
11 submitted to the hearing, I can provide a
12 comment at a later date to the state and
13 they can pass it along to you that that's
14 an appropriate answer for your question.
15 Or if this is continued to a later date, I
16 can supply it to the Council.

17 MR. MCWHIRTER: From an
18 application standpoint, it makes it
19 difficult, whenever you've got a -- at
20 least an indication that a test procedure
21 can be employed. Now what you're judging
22 that against, the test against, I don't see
23 this. So you've got an answer but you
24 didn't have a question to it.

25 I am just saying it makes it

1 difficult to apply the regulation whenever
2 you put something in that you can require a
3 testing procedure and you don't have anyone
4 to use it.

5 MR. DYKE: Additional questions
6 of Ms. Martinez.

7 MR. FISHBACK: Excuse me, Doyle,
8 could you give me the citation again? 17-
9 15?

10 MR. MCWHIRTER: Yes, 15,
11 paragraph H, item 2.

12 MR. FISHBACK: Okay.

13 MR. MCWHIRTER: Procedure
14 exempted but you could be required to meet
15 the testing procedures, and under 17-25 --
16 70.25, references the ESP.

17 MR. FISHBACK: I've got it.
18 Thank you.

19 MR. DYKE: Additional questions?

20 MS. BARTON: Nadine Barton with
21 CASE, Citizens Action for a Safe
22 Environment. On page 3 of the draft,
23 252:100-17-7, test methods, opacity.

24 "Opacity shall be measured utilizing
25 Method 9 - Visual Determination of the

1 Opacity of Emissions from Stationary
2 Sources."

3 Can you give me some technical
4 background as to what that means? Does
5 somebody just stand there and say, yeah,
6 they're not emitting, uh-huh. Is that what
7 it does?

8 MR. BRANECKY: That's the
9 accepted method.

10 MR. DYKE: One at a time, please.

11 MS. BARTON: Can somebody please
12 answer for the record for that, please?

13 MR. BRANECKY: They have to be
14 certified by DEQ as a visibility emissions
15 reader. They recertify every six months
16 and they have to pass a test. They just
17 can't go out and read it, they have to be a
18 certified reader.

19 MS. BARTON: Do we have someone
20 that is now doing that, a staff member, who
21 is certified to do that right now?

22 MR. DYKE: Approximately 50
23 percent of the staff is certified.

24 MS. BARTON: Seems like a real
25 good thing. I hope that they have good

1 eyesight.

2 The other thing is the particulate
3 matter. The reference that is made,
4 incorporated by reference here as it
5 existed July 1st. Is that the new EPA
6 particulate matter that we have all been
7 fretting over?

8 MR. COTE: What page are you
9 looking at?

10 MS. BARTON: I'm looking at the
11 same paragraph on page 3, of the draft.
12 252:100-17-7, test methods, (b) where is
13 talks about the particulate matter.

14 "Particulate matter shall be
15 measured utilizing the appropriate DEQ-
16 approved Method 5 found in the Code of the
17 Federal Regulations at 40 CFR Part 60,
18 Appendix A. This method is hereby
19 incorporated by reference as it exists on
20 July 1, 1997."

21 Does that take into consideration
22 the new particulate matter standards that
23 there has been such a controversy over that
24 the EPA has adopted and we're trying to
25 have set aside?

Christy A. Myers
Certified Shorthand Reporter

1 MR. COTE: No. That's not as the
2 existing PM --.

3 MS. BARTON: So the new
4 standards, would we need to incorporate
5 that in these regulations or we're going to
6 wait for congress to sit them aside?

7 DR. CANTER: We're talking about
8 two different things here. You're talking
9 about the ambient Air Quality standards.
10 But what this refers to is a method of
11 measurement.

12 MS. BARTON: All right.

13 DR. CANTER: It's a standard
14 protocol for measurement. It doesn't go
15 into it, you know, the ambient Air Quality
16 Standard, per se. It's the protocol for
17 the measurement.

18 MS. BARTON: Okay.

19 MR. COTE: Yeah. I misspoke
20 there, and he is correct.

21 MS. BARTON: Will we have to look
22 at that or is that two different things, we
23 don't even have to worry about this?
24 Doesn't matter?

25 MR. COTE: No.

1 MS. BARTON: Never will matter.

2 MR. COTE: Depends on the area
3 not on the source. If you have an air
4 quality problem in an area, then, at some
5 point in the future, a particulate matter
6 standard may come into play. But not on a
7 source by source basis just because it's
8 written --

9 MS. BARTON: If we went into
10 nonattainment, would we have to re-look at
11 that?

12 MR. COTE: Perhaps.

13 MR. DYKE: Additional questions
14 of Ms. Martinez? Seeing no more further
15 questions I have notices of oral comment,
16 and I guess we will start with Bonnie
17 McGilbra.

18 MS. MCGILBRA: I'm Bonnie
19 McGilbra from Ogden Martin Systems of
20 Tulsa. And I really hate to tell you this
21 but I have one more comment to add to these
22 regulations. And that is under 252:100-17-
23 19, it's on page 6. We would like to add a
24 paragraph b, and this is taken from 40 CFR
25 60.38b, paragraph b, and it's almost word

1 for word from that paragraph. And what it
2 says is -- what we're proposing is large
3 municipal waste combustor units which
4 achieve a dioxin and furan emission level
5 less than or equal to fifteen (15)
6 nanograms per dry standard cubic meter
7 total mass, corrected to seven (7) percent
8 oxygen may elect the alternative
9 performance testing schedule for dioxins
10 and furans as specified. And they -- it's
11 specified in 40, 60.58G and those
12 regulations are already adopted there.
13 It's just this one paragraph that's not.
14 So we're proposing that that was adopted,
15 also.

16 MS. BARTON: That's it?

17 MS. MCGILBRA: That's it.

18 MR. DYKE: Okay. I have a notice
19 here from Frank Erwin.

20 MR. ERWIN: My name is Frank
21 Erwin, I'm with the City of Tulsa. I'm
22 here representing the City of Tulsa and the
23 Tulsa Authority for the Recovery of Energy
24 which has an agreement with Ogden Martin
25 Systems of Tulsa for municipal waste

1 disposal services at a municipal combustor
2 facility. We've reviewed the proposed
3 rule, and outside of the continuing
4 concern, or a continuing concern about
5 unfunded mandates, we do not oppose
6 adoption of this rule. This position is
7 taken given the understanding that the
8 state rule is to implement the EPA
9 municipal waste combustor regulations and
10 the state rule imposes no requirements for
11 emissions limitations more stringent than
12 the EPA municipal waste combustor
13 regulations.

14 It is believed that it would be in
15 the best interest of the City of Tulsa to
16 have the Oklahoma State Department of
17 Environmental Quality implement the
18 regulations. I do appreciate the
19 assistance and the cooperation that we've
20 had from the DEQ, from the EPA and from the
21 Council in the process we have been through
22 developing these rules. Thank you, very
23 much.

24 MR. DYKE: Nadine?

25 MS. BARTON: My name is a Nadine

1 Barton. I'm with CASE, Citizens Action for
2 a Safe Environment. And I would like to
3 give public comment to Chapter 100,
4 Subchapter 17, incinerators. And I would
5 like to respectfully ask that the Council
6 defer action until the January 9th meeting
7 to give ample time for all interested
8 public citizens to give public comment
9 concerning this very important provision in
10 this Subchapter. I find it amazing and not
11 disrespectful that Ogden Martin is using
12 time extortion to have these
13 recommendations that they're recommending
14 placed before the Council for such rapid
15 action. And it's my understanding, and I
16 will stand corrected, that the Council
17 Members only received these today. I will
18 note for the public record that Ogden, the
19 date of their letter which makes these
20 recommendations for this rule, is dated
21 December the 10th. It was received on
22 December the 11th. That is less than a
23 week from today.

24 As today is the 16th, Monday was the
25 15th, we had two days which were the

Christy A. Myers
Certified Shorthand Reporter

1 weekend, the 14th and 13th, the 12th was
2 last Friday, so the DEQ received this last
3 Thursday. And a comment was made earlier
4 by the Ogden representative that there was
5 a time imperative. If that was the case,
6 then these recommendations should have been
7 made well in advance and the public and the
8 Council be given ample opportunity to look
9 at these very important recommendations so
10 that we can make comment. I, as a citizen,
11 am a slow learner and cannot sit down and
12 go through every recommendation step by
13 step, to make sure that the citizens are
14 well represented.

15 I, thank you, for the opportunity to
16 make this recommendation and I respectfully
17 plea that you do defer action until January
18 the 9th as you have with other recommended
19 rules, as that would still give us time to
20 present whatever the outcome is on these
21 actions at the Board meeting on January the
22 17th. Respectfully, thank you, Nadine
23 Barton.

24 MR. DYKE: Mick, do you have
25 anything else to say on this matter?

Christy A. Myers
Certified Shorthand Reporter

1 MR. COTE: No, sir. Thank you.

2 MR. DYKE: Is there anyone else
3 wishing to speak on this matter?

4 MS. MCGILBRA: Can I comment on
5 her last statement?

6 MR. DYKE: Please.

7 MS. MCGILBRA: I'm Bonnie
8 McGilbra, from Ogden Martin Systems of
9 Tulsa. And the published comment period
10 for those regulations was December 10th and
11 they were faxed to the staff by December
12 10th and then sent to them by December
13 11th. So they were there on time within
14 the -- within reason.

15 MR. DYKE: That's our
16 understanding, too, that is correct.

17 MR. BRANECKY: They were
18 received on the 10th?

19 MS. MCGILBRA: They were
20 received on the 10th.

21 MR. BRANECKY: And the comment
22 period closed on the 10th. Okay.

23 MR. DYKE: Anyone else wishing to
24 speak on this matter?

25 DR. CANTER: Could I -- I would

1 like to have that as part of the record.
2 Mr. Cote, from EPA, has indicated that he
3 has seen these revisions and I'm presuming
4 the ones from today, as well. And I would
5 like for that to be a part of this record
6 as opposed to -- my concern is is that
7 you're indicating that you have seen these
8 and they're approvable by EPA and I guess,
9 I'm a little concerned that we rush to
10 judgement here and then turn around three
11 months from now and EPA has thirty-eight
12 (38) comments on this document. So I would
13 just appreciate if you would state into the
14 record here what you said earlier.

15 MR. COTE: I sure will. I think
16 I've already done it once, but I'll do it
17 again.

18 DR. CANTER: Well, okay. Has he
19 already done that once? I heard you this
20 morning but I didn't hear you this
21 afternoon.

22 MR. COTE: My name is Mick Cote.
23 I'm with the Environmental Protection
24 Agency in Dallas. I'd like to state for
25 the record that the rule, as it's written

Christy A. Myers
Certified Shorthand Reporter

1 now is -- appears approvable to me. I
2 don't foresee any problems based on what
3 I've seen written today and the comments
4 that have been shown to me today.

5 MR. BRANECKY: One suggestion
6 that Ogden Martin made in a formal
7 presentation; is that acceptable? Did you
8 all understand, the DEQ and EPA, understand
9 where Ogden Martin is coming from on that
10 comment?

11 MR. COTE: Mick Cote. I see
12 where they're coming from in the
13 regulation. I'm not prepared to say that I
14 agree with that at this point in time.

15 MR. FISHBACK: I'd like to
16 explore that point a little bit further
17 with the Ogden representative. If I
18 understand you correctly, the standard is
19 sixty (60) nanograms, with an ESP of thirty
20 (30) nanograms without an ESP, and
21 basically you're saying, if you're at
22 fifteen (15) nanograms, well below either
23 of those standards, you want to invoke this
24 option for alternate compliance
25 demonstration which is test one, and

1 assume it's similar to the others; is that
2 correct? If you're fifty (50) percent
3 below the standards, you want some
4 flexibility?

5 MS. MCGILBRA: Yes, that's
6 basically correct, yeah. And that doesn't
7 say that is the way we're going to do it
8 but that's in the EPA regulations and so
9 therefore, we would like to have the state
10 regulations, in case that's the way it
11 comes up that we want to test the plant.

12 DR. CANTER: Are those same
13 levels sixty (60), thirty (30) and fifteen
14 (15), is that all in the CFR?

15 MS. MCGILBRA: Yes.

16 DR. CANTER: If you don't mind,
17 could you indicate what section of CFR
18 that's in? We've got copies here.

19 MS. MCGILBRA: 60.38b, paragraph
20 b. I have a copy here I can show you.

21 DR. CANTER: I think we've got it
22 here.

23 MR. DYKE: Barbara.

24 MS. HOFFMAN: If I could just
25 also state for the record. I'd like to

1 state something, please. I'm Barbara
2 Hoffman, DEQ staff attorney. And Ogden
3 Martin did run this change by us over
4 lunch. And staff has no objection to this
5 change. It is in the EPA rule, and we have
6 no objection to it.

7 MR. FISHBACK: Let's make sure
8 that we recognize that every member of the
9 public has the right to do exactly what
10 they did in this forum. Anybody can bring
11 proposed changes to a rule in this form.
12 That's what this forum is for. I object to
13 the implication that somehow that's not
14 appropriate, because that's exactly what a
15 public hearing is suppose to do. And so
16 I'd like to make sure that we allow the
17 public, no matter which side of the issue
18 they are on, the opportunity to comment in
19 this public hearing, because that's what
20 this is for.

21 MR. DYKE: Anything else on this
22 matter at this time?

23 MR. BREISCH: Okay. The Council
24 can take action at this time.

25 MR. KILPATRICK: I'd like to move

1 that we continue this hearing until January
2 the 9th, at 1:00 P.M., in the Burgundy
3 Room, Oklahoma City.

4 MS. SLAGELL: I'll second it.

5 MR. BREISCH: A motion has been
6 made and seconded that we continue this
7 hearing until the proposed or the, I guess,
8 designated January 9th hearing -- or date.

9 Any further comments from the
10 Council?

11 MR. FISHBACK: As Mr. Branecky
12 said earlier, what is our fall-back
13 position if we do not have a quorum on
14 January 9th?

15 MR. BREISCH: We can go ahead and
16 pass this on an emergency basis at our
17 regular meeting in February. Pass it on to
18 EPA and hope they --

19 MS. MYERS: I just want to make
20 sure that we get it processed quickly and
21 not that the State has the jurisdiction.

22 MR. BREISCH: Well, Sharon, I
23 don't know whether anybody wants to make a
24 comment on this but I think I've been told
25 that the probability -- we're pretty well

1 assured that EPA would take an emergency
2 rule and let us operate under that. And if
3 they care to comment on this, then fine.

4 MR. COTE: Mick Cote, again. And
5 I believe we, in a previous -- I don't
6 think it was an Air Quality Council
7 Meeting, but in previous discussions, this
8 issue has come up, phone conversations as
9 well, and Mr. Dyke, perhaps you can correct
10 me or verify this, that we have accepted
11 emergency rules in rule making in the past.
12 Perhaps --

13 MR. DYKE: Along those lines.

14 MR. COTE: Mobile Source
15 Programs, for instance.

16 MR. DYKE: Yes, you have.

17 MR. COTE: And it's our position
18 at this meeting, at this hearing that we
19 would accept the emergency rule as part of
20 the state plan. So, yes, we do accept it.

21 MR. BREISCH: And that's a fall-
22 back position.

23 Any further comment from the
24 Council?

25 MR. FISHBACK: Does the

1 emergency rule concept satisfy all of the
2 parties represented here? I see some heads
3 shaking. Can you share with us why not?

4 MS. COLEMAN: Nancy Coleman,
5 representing Ogden Martin. We feel that it
6 potentially puts the state plan at risk and
7 that it puts Ogden in a very risky position
8 as to how to proceed because of the
9 significant retrofit that has to take
10 place. They need to be proceeding on a
11 compliance schedule. They have to enter
12 into a compliance agreement with the state
13 in January, that puts in place a compliance
14 schedule and they're uncomfortable doing
15 that under an emergency rule.

16 MR. BRANECKY: I would hope that
17 we would pass this today. I think all of
18 the parties involved are satisfied. In
19 between other discussions, I've had a
20 chance to read through here and I'm ready
21 to -- we can pass it.

22 MR. BREISCH: We've got a motion
23 to continue it right now. So I guess we
24 need to vote on that. If that fails we can
25 make another motion. Any further comment?

Christy A. Myers
Certified Shorthand Reporter

1 MR. FISHBACK: I need to explore
2 the emergency rule concept, again. From a
3 legal standpoint, EPA said it's as
4 acceptable as a permanent rule. From a
5 legal standpoint, Barbara, do you think it
6 creates a risk for Ogden Martin?

7 MS. HOFFMAN: Well, it creates a
8 risk in the sense that if you then fail to
9 pass the permanent rule or the legislature
10 fails to approve it later, the permanent
11 rule, then we have an emergency rule that
12 will die next year and nothing to take its
13 place. And so in that sense, we will then
14 have a federal rule come into play.

15 MR. FISHBACK: So it's not the
16 use of the emergency rule in the interim,
17 it's the possibility that the permanent
18 rule would not be passed at the next
19 legislative session?

20 MS. HOFFMAN: Right.

21 MR. DOUGHTY: I might one
22 comment, also. This is Dennis Doughty.
23 Sometimes, even though you may make the
24 assumption that an emergency rule and a
25 permanent rule is going to be the same,

1 they don't always end up that way. And
2 I've seen it happen where we've passed an
3 emergency rule and then we have a permanent
4 rule that differs significantly from the
5 emergency rule. I'm not saying that would
6 happen here, but that is a possibility.

7 MR. BREISCH: Gary, hearing what
8 you have heard, do you still want to stand
9 with your motion?

10 MR. KILPATRICK: It's been made
11 and seconded. I'll stand on it.

12 MR. BREISCH: Any further
13 comments or questions from the Council?
14 All right. We have a motion and a second
15 to continue this hearing until January 9th
16 at a special meeting.

17 Myrna, call the roll.

18 MS. BRUCE: Mr. Kilpatrick.

19 MR. KILPATRICK: Aye.

20 MS. BRUCE: Ms. Slagell.

21 MS. SLAGELL: Aye.

22 MS. BRUCE: Mr. Fishback.

23 MR. FISHBACK: No.

24 MS. BRUCE: Dr. Canter.

25 DR. CANTER: No.

1 MS. BRUCE: Ms. Myers.

2 MS. MYERS: No.

3 MS. BRUCE: Mr. Branecky.

4 MR. BRANECKY: No.

5 MS. BRUCE: Mr. Breisch.

6 MR. BREISCH: No.

7 Okay. That motion being -- being
8 that that motion failed, do I hear another
9 motion?

10 MR. BRANECKY: I would like to
11 move that we accept the Subchapter 17 as
12 presented to us in the December 15th draft,
13 in addition with the comment that Ogden
14 Martin made this afternoon.

15 MS. MYERS: I'll second it.

16 MR. BREISCH: We've got a motion
17 and a second to adopt this rule as amended.
18 Any questions or comments from the Council?

19 MR. FISHBACK: Dr. Canter, did
20 you find 40 CFR 60.38b?

21 DR. CANTER: Yes, I did.

22 MR. FISHBACK: Where is that?

23 DR. CANTER: Just a minute, I've
24 lost it. Hang on a second.

25 MR. BREISCH: Again, any

1 questions from the Council or comments from
2 the Council?

3 MR. FISHBACK: Your motion, Mr.
4 Branecky, was to amend that section 17-19
5 by adding that letter b as a proposed --

6 MR. BRANECKY: Yes.

7 MR. FISHBACK: Okay. Which is
8 identical to the CFR and then what's the
9 citation, Sharon?

10 MS. MYERS: 60.38b of Part b,
11 under that.

12 MR. BREISCH: All right. Myrna,
13 call the roll.

14 MS. BRUCE: Mr. Kilpatrick.

15 MR. KILPATRICK: No.

16 MS. BRUCE: Ms. Slagell.

17 MS. SLAGELL: No.

18 MS. BRUCE: Mr. Fishback.

19 MR. FISHBACK: Aye.

20 MS. BRUCE: Dr. Canter.

21 DR. CANTER: Aye.

22 MS. BRUCE: Ms. Myers.

23 MS. MYERS: Aye.

24 MS. BRUCE: Mr. Branecky.

25 MR. BRANECKY: Aye.

1 MS. BRUCE: Mr. Breisch.

2 MR. BREISCH: Aye.

3 MS. BARTON: I would like, as a
4 member of the public, to make an additional
5 comment on the vote. My name is Nadine
6 Barton, with CASE, Citizens Action for a
7 Safe Environment. I would like the record
8 to reflect that due to the vote and the
9 seriousness of what the vote reflects, that
10 it appears that Ogden Martin has completed
11 their negotiations with the City of Tulsa
12 to go ahead and retrofit. And I feel that
13 it is sad that the general public does not
14 have an opportunity to look at these rules
15 and to scrutinize them a little bit further
16 than to have them out into the public view.
17 I appreciate the efforts of the Council,
18 and it's not disrespectful, the comments.
19 But I do feel that because of the
20 seriousness of what it means to all of us
21 in Tulsa that the remarks are appropriate.
22 And I find it unfortunate that industry can
23 come down to the wire and -- although I
24 realize that they can do this, just to ask
25 for whatever they want and basically they

1 get it.

2 MR. DYKE: Thank you.

3 (PROCEEDINGS CONCLUDED)

PROCEEDINGS

1
2 MR. DYKE: The next item on the
3 agenda is Item 4D, OAC 252:100-17,
4 Incinerators. I'll call on staff member,
5 Cheryl Bradley.

6 MS. BRADLEY: Good morning Mr.
7 Chairman, Members of the Council, ladies
8 and gentlemen. Staff is proposing
9 modifications to OAC 252:100-17, Part 3,
10 Incinerators. The rule changes will allow
11 the Air Quality Division to issue permits
12 for the construction and operation of
13 incinerators that meet all applicable
14 requirements except multiple chamber
15 design.

16 Section 2 of the part will be
17 amended to remove the references to an
18 effective date as prescribed by the
19 Administrative Rules on Rulemaking, OAC
20 655:10-5-18.

21 OAC 252:100-17-5(3) will be deleted
22 and its provisions modified and moved to a
23 new Section 5.1.

24 The new Section 5.1 will be added to
25 authorize the Division Director to approve

1 the construction and operation of
2 incinerators that do not meet the design
3 requirements specified in 252:100-17-5 if
4 those incinerators can meet all other
5 applicable requirements.

6 Notice for today's hearing was
7 published in the Oklahoma Register on March
8 15th, 2000. This is the first time the
9 Council will consider these amendments.

10 Staff received on April 17th a
11 letter from EPA Region 6, Air Planning
12 Section, deferring responsibility for their
13 agency's comments on the proposed changes
14 to their Permit Section. I would like to
15 enter this letter into the record. No
16 comments have been received, however, from
17 the Permit Section.

18 Staff suggests that the Council
19 recommend the proposed rules to the
20 Environmental Quality Board for emergency
21 and permanent adoption.

22 MR. DYKE: Questions from the
23 Council?

24 MR. WILSON: Why wouldn't we have
25 NESHAPS in the applicability section as

1 well as NSPS? Is there any reason why
2 NESHAPS is omitted from that?

3 MS. BRADLEY: Currently, we have
4 no NESHAPS that apply to incinerators.
5 There are NSPS standards that have been
6 adopted previously, but they are Part 60
7 Standards, not Part 63 Standards. The
8 methodology for promulgating those
9 standards follows the MACT protocol. So
10 the content of the standards is very
11 similar to the NESHAP. However, they are
12 located in another -- under the New Source
13 Performance Standards as opposed to
14 NESHAPS. EPA has indicated they will
15 continue to promulgate standards under the
16 129 Provision of the Clean Air Act
17 Amendments and those standards will also be
18 promulgated as Part 60 Standards.

19 MR. DYKE: Questions from the
20 public of Ms. Bradley?

21 MR. BRANECKY: Identify
22 yourself, Frank.

23 MR. CONDON: Frank Condon,
24 Environmental Quality Board.

25 MS. BRADLEY: Could you repeat

1 your question, Mr. Condon?

2 MR. CONDON: Define Director.

3 MS. BRADLEY: Director is
4 Division Director and within the Oklahoma
5 Clean Air Act, a reference to specific
6 titles to be used in reference to the
7 program and they reference the Executive
8 Director as such Executive Director. But
9 Division Director is referred to only as
10 Director. We have adopted those
11 definitions within our Subchapter 1 of
12 Chapter 100, the Air Pollution Regulations.

13 MR. CONDON: Doesn't director
14 have authority to have an alternate
15 approval under the statutes?

16 MS. BRADLEY: I will defer to our
17 counsel.

18 MS. HOFFMAN: I would think that
19 if this rule grants that authority, then he
20 does. If it doesn't, then you don't.

21 MR. CONDON: In the statutes, I
22 believe, say the Executive Director has the
23 authority to delegate, but I'm going by
24 memory and I'm not an attorney. It's not a
25 regulation, I think it's a statute.

1 MS. BRADLEY: Mr. Condon, I would
2 add this may have a direct relevance -- may
3 not have a completely direct relevance to
4 the question, however, we are attempting to
5 remedy a problem that was created in the
6 recodification of the rule. And with the
7 rules on rulemaking, the individual
8 requirements listed here, we have the three
9 previously, had to be linked with an and
10 statement. Legal counsel researched the
11 hearing records and determined it was the
12 intent of the Council that the -- I guess
13 incinerators all had a design that didn't
14 meet the -- that were not multiple chambers
15 and did not have a secondary burner, could
16 still be considered and approved for
17 operation. The previous rule did not
18 stipulate who had that approval authority,
19 which still doesn't address your direct
20 question but it was the intent of the
21 Council upon passage early on in passing
22 Subchapter 17, that we hope to consider
23 those incinerators.

24 MR. DYKE: Cheryl, Barbara, does
25 this change the protocol of who signs what

1 type of permits under our uniform
2 permitting process at the DEQ? Does this
3 rule modify any of our current processes as
4 to who signs -- who is the final signature
5 on our permits?

6 MS. HOFFMAN: No.

7 MR. DYKE: So that stays in
8 effect as it is today?

9 MS. MYERS: Would they not still
10 have to go through the permitting process?
11 This is an approval for a design.

12 MR. DYKE: It would, yes.

13 MS. MYERS: So that would be a
14 separate issue on the permitting itself,
15 would it not?

16 MR. DYKE: That's my point. The
17 permitting process and the ultimate
18 authority on the permitting process stays
19 the same. So this would not change who
20 signs the permits, I guess on these types
21 of things.

22 MR. WILSON: There has got to be
23 a reason for this thing coming before the
24 Council. What is the purpose of doing this
25 now?

1 MS. BRADLEY: We have some
2 incinerator designs that we would like to
3 approve. Specifically those used in
4 conjunction with oil and gas production
5 sites. Those particular incinerators have
6 a single chamber. We do restrict the type
7 of waste that may be burned in those
8 incinerators, excluding plastics, which can
9 be a source of dioxines and they just work
10 very efficiently and are much better at
11 dealing with or reducing the volume and
12 eliminating the problem with the waste.
13 Oily rags are one of the main problems at
14 these sites, as well as filters, paper
15 filters, and we would like to continue
16 approving these type of -- or would like to
17 be able to approve and issue permits for
18 these facility or for these units.

19 DR. SHEEDY: I would like to
20 support what Cheryl said. One time, I do
21 know that the rule was written in such a
22 way when I was writing revisions in earlier
23 days, that we were allowed to make
24 exceptions for a single chamber of
25 incinerator, if they could demonstrate that

1 they could use the same standards of
2 pollution control as a multiple chamber.
3 That used to be in the rule. I don't know
4 when that disappeared.

5 MS. BRADLEY: I think the changes
6 resulted when we did some streamlining of
7 the rule and in the recodification. Also,
8 the effect of rulemaking and interpretation
9 by the Office of Administrative Rules,
10 although our rule may not have changed, the
11 manner in which it can be interpreted at a
12 later date when we had a fine-line way of
13 linking those individual provisions, may
14 have effected the interpretation of the
15 rule. And I think that could be what has
16 happened here. We didn't add an, "or"
17 statement. The first two conditions would
18 have been linked as an, "and" statement and
19 the third one in the series should have
20 been an, "or" condition.

21 MR. DYKE: We have a comment
22 from the back row.

23 MR. ^{Blachley}~~BLACHLEY~~: I'm Tom Blachley,
24 I work for Reliant Energy. I just want to
25 clarify this. We have incinerators that

1 you described as ash (inaudible) generate a
2 lot of oily rags and so forth, at any point
3 we want to keep those under control and we
4 are permitted for that facility. What I'm
5 hearing is, they are single chamber units,
6 would allow those to be continued, which I
7 personally think is a good idea to fill up
8 our landfills with a lot of oily waste.

9 MR. WILSON: Those, Tom, are not
10 subject to NSPS because there is no NSPS
11 that governs them or --

12 MR. ^{Banckham} ~~BLANCHLEY~~: That's a good
13 question.

14 MS. BRADLEY: Currently, these
15 particular units have not been addressed as
16 an incinerator under EPA's regulations.
17 Also, EPA does not have rules currently for
18 -- they have proposed rules for commercial
19 and industrial incinerators for non-
20 hazardous-type waste, so we don't have an
21 NSPS. And the current proposal does not
22 address these type of incinerators because
23 they were excluded from the state and
24 therefore, would not be included in any
25 standard promulgated. They were put into a

1 separate category.

2 MR. ~~BLACHEY~~^{Bauckham}: Are these
3 incinerators allowed to burn hazardous
4 waste?

5 MS. BRADLEY: No, they are not.
6 The restriction -- the incineration of
7 hazardous waste would be covered under an
8 NSPS and also subject to regulations under
9 our Waste Management Division's rules.

10 MR. DYKE: Is there anyone
11 wishing to speak on this matter? Any other
12 questions of Cheryl? Further discussion by
13 the Council? Mr. Chairman.

14 MR. BRANECKY: Did Mr. Condon's
15 question, did it get resolved?

16 MR. CONDON: The only concern I
17 have is I don't want something to go to the
18 Board and be sent back.

19 MR. KILPATRICK: What concern
20 would the Board have with -- the fact that
21 we say direction^{of}, you think it ought to say
22 Executive Director?

23 MR. CONDON: Right. Executive
24 Director.

25 MS. HOFFMAN: Actually, we've

1 been changing through our re-write/de-wrong
2 in all of our regulations every time it
3 says Executive Director we have changed it
4 to Division Director and this has gone
5 through both our general counsel and our
6 Executive Director before we bring them to
7 the Council. So I think that our general
8 counsel and our Executive Director are in
9 full agreement with the changes of
10 Executive Director to Division Director.

11 MR. BRANECKY: Do we need to say
12 Division Director?

13 MS. HOFFMAN: We may need to say
14 that in there. I had not noticed that we
15 had that in there. We probably should.

16 MR. KILPATRICK: I thought you
17 said that director was defined to be a
18 Division Director.

19 MS. HOFFMAN: Actually, we
20 defined division in subchapter 1, I don't
21 think we defined director.

22 MS. BRADLEY: Did we not
23 reference the Oklahoma Clean Air Act and
24 then the OCAA then was the various offices
25 and entities referenced there?

1 MS. MYERS: To get it clarified,
2 why not say Division Director?

3 MS. BRADLEY: Well, we had gone
4 to using Director throughout the rules and
5 I was trying to be consistent with what was
6 done before. If you feel like we need to
7 change the rules to say Division Director,
8 we can adopt that.

9 MR. TERRILL: Let me add this,
10 before we take this to the Board, we'll
11 clarify your question and we won't bring it
12 to the Board if there's any conflict of the
13 Clean Air Act. I don't think there is, but
14 before we bring it to the Board we'll have
15 you an answer for that. And if there is,
16 we'll bring it back to the Council and fix
17 it before we bring it to the Board.

18 MR. BRANECKY: The definition --
19 I have a copy of the Oklahoma Clean Air
20 Act, and it says Director means the
21 Director of the Air Quality Division.

22 MR. DYKE: Any additional
23 comments from the public?

24 MR. WILSON: David, a comment on
25 the wording of the regulation. Again, Fred

1 pointed out that the design requirements
2 appear to accept only a primary burner when
3 a secondary burner is not needed to
4 eliminate smoke.

5 MS. BRADLEY: Joel, I didn't
6 understand your question.

7 MR. WILSON: The question is,
8 regarding the secondary burner and your
9 reference to these incinerators used in the
10 oil and gas production industry that only
11 have primary burners, and it looks to me
12 like the regulation is written such that
13 the secondary burner is only needed if
14 you've got an opacity problem. And that --
15 you know, a source would not have to apply
16 with some sort of an alternate design
17 approval for that incinerator that doesn't
18 require the secondary burn chamber to
19 control smoke.

20 MS. BRADLEY: In order for an
21 incinerator to have a secondary burner, it
22 has been my experience that they must have
23 multiple chambers. And our rule states an
24 incinerator under this part must have a
25 primary burner, a secondary burner. Now,

1 the secondary burner does not have to be
2 used under it as written, but they must
3 have a secondary burner. So in that case -
4 - and because secondary burners are only
5 found on multiple chamber incinerators,
6 it's not very clear as it's written right
7 now, but we really don't have the authority
8 to approve the -- or we can't authorize a
9 single chamber incinerator as the rules
10 read.

11 MR. WILSON: The single chamber
12 incinerator must be approved by the
13 Division Director?

14 MS. BRADLEY: That's correct.

15 MR. WILSON: Okay.

16 MR. BRANECKY: Any other
17 discussion from the Council? We're not
18 making any other changes, are we? And the
19 staff is asking for adoption as a permanent
20 rule?

21 MS. BRADLEY: Permanent and
22 emergency.

23 MR. BRANECKY: Permanent and
24 emergency. And I don't think we've made
25 any changes from what the staff has

1 proposed. So if there is no other
2 discussion, I will entertain a motion to
3 that effect.

4 MR. KILPATRICK: So moved.

5 MR. TREEMAN: Second.

6 MR. BRANECKY: I have a motion
7 and a second. Any other discussion?

8 Myrna.

9 MS. BRUCE: Mr. Kilpatrick.

10 MR. KILPATRICK: Aye.

11 MS. BRUCE: Mr. Wilson.

12 MR. WILSON: Aye.

13 MS. BRUCE: Dr. Grosz.

14 DR. GROSZ: Aye.

15 MS. BRUCE: Mr. Treeman.

16 MR. TREEMAN: Yes.

17 MS. BRUCE: Mr. Fallon.

18 MR. FALLON: Yes.

19 MS. BRUCE: Ms. Myers.

20 MS. MYERS: Yes.

21 MS. BRUCE: Mr. Branecky.

22 MR. BRANECKY: Aye.

DEPARTMENT OF ENVIRONMENTAL QUALITY

.....

IN THE MATTER OF THE FIRST MEETING/HEARING

¶

TAKEN ON BEHALF OF THE

DEPARTMENT OF ENVIRONMENTAL QUALITY

ON FEBRUARY 19, 1997 AT 1:00 P.M.,

AT LINCOLN PLAZA OFFICE PARK, BURGUNDY ROOM,

OKLAHOMA CITY, OKLAHOMA

.....

REPORTED BY: GENA BELCHER, CSR

1 MR. BREISCH: We'll go head and
 2 call the meeting/ hearing to order. Roll call.
 3 MS. BRUCE: Dr. Canter.
 4 DR. CANTER: Present.
 5 MS. BRUCE: Mr. Branecky.
 6 MR. BRANECKY: Here.
 7 MS. BRUCE: Mr. Glass.
 8 MR. GLASS: Present.
 9 MS. BRUCE: Ms. Slagell.
 10 MS. SLAGELL: Present.
 11 MS. BRUCE: Mr. Breisch.
 12 MR. BREISCH: Present.
 13 MS. BRUCE: For the record, absent
 14 are Mr. Fishbeck, Mr. Albright, and Ms. Hinkle.
 15 MR. BREISCH: Okay. I need a
 16 motion on the minutes.
 17 MR. BRANECKY: I move that the
 18 minutes be approved.
 19 MR. GLASS: Second.
 20 MR. BREISCH: I got a motion and a
 21 second to the minutes, any discussion, comments?
 22 If not, Myrna call the roll.
 23 MS. BRUCE: Dr. Canter.
 24 DR. CANTER: Approved.
 25 MS. BRUCE: Mr. Branecky.

1 MR. BRANECKY: I.
 2 MS. BRUCE: Mr. Glass.
 3 MR. GLASS: I.
 4 MS. BRUCE: Ms. Slagell.
 5 MS. SLAGELL: I.
 6 MS. BRUCE: Mr. Breisch.
 7 MR. BREISCH: Yes. Meeting
 8 schedule. We've discussed this a little bit this
 9 morning, any comments on that? Does it meet with
 10 you all's approval? Do we need a motion on this?
 11 (Council indicating in agreement in
 12 discussion among themselves.)
 13 MR. BREISCH: Okay. We got a
 14 motion.
 15 DR. CANTER: Second.
 16 MR. BREISCH: Larry, did you
 17 second?
 18 DR. CANTER: Yes.
 19 MR. BREISCH: If there's no
 20 discussion, Myrna call the roll.
 21 MS. BRUCE: Dr. Canter.
 22 DR. CANTER: I.
 23 MS. BRUCE: Mr. Branecky.
 24 MR. BRANECKY: I.
 25 MS. BRUCE: Mr. Glass.

1 MR. GLASS: I.
 2 MS. BRUCE: Ms. Slagell.
 3 MS. SLAGELL: I.
 4 MS. BRUCE: Mr. Breisch.
 5 MR. BREISCH: I.
 6 MR. BREISCH: Okay. Next, election
 7 of offices. We need to elect a chairman,
 8 vice chairman, and that's it isn't it?
 9 MR. BYRUM: Uh-huh.
 10 DR. CANTER: I would like to place
 11 a nomination for Chairman of the Council,
 12 Mr. Breisch.
 13 MR. BREISCH: Can we do them
 14 separately, or should we do them together,
 15 chairman and vice chairman?
 16 (Council talking over each other.)
 17 MR. DOUGHTY: I would probably do
 18 them separately. If you only had one nomination
 19 it probably won't matter.
 20 MR. BRANECKY: I second that
 21 motion.
 22 MR. BREISCH: The motions been
 23 made, and seconded. Any other nominations, on
 24 the floor? Okay. How do we vote on that, call
 25 roll, or --

1 MR. GLASS: Yes.
 2 MS. BRUCE: Ms. Slagell.
 3 MS. SLAGELL: I.
 4 MS. BRUCE: Mr. Breisch.
 5 MR. BREISCH: Yes. All right.
 6 Item 6, is the continued hearing on Municipal
 7 Waste Combustion. And I'll turn this over to our
 8 Hearing Officer, Mr. Byrum.
 9 MR. BYRUM: Ladies and gentlemen,
 10 my name is Larry Byrum. I'm the director of the
 11 Air Quality Division, as such I will act as the
 12 personal officer for this hearing. This hearing
 13 is convened by the Air Quality Councilmen in
 14 compliance with the Oklahoma Administration
 15 Procedures Act, Title 40 of the code of Federal
 16 Regulations, Part 51, as well as the authority of
 17 Title 27A of the Oklahoma Statutes, Sections
 18 25101 and following.
 19 This hearing was advertised in the
 20 Oklahoma Register for purposes of receiving
 21 comments pertaining to purposed revisions to a
 22 new Part 3, Municipal Waste Combustors to our
 23 Subchapter 17. If you wish to make a statement,
 24 please complete the forms at the registration
 25 table and I will call upon you at the appropriate

1 MR. DOUGHTY: Yes, we would need to
 2 call roll.
 3 MR. BREISCH: Call roll, Myrna.
 4 MS. BRUCE: Dr. Canter.
 5 DR. CANTER: I.
 6 MS. BRUCE: Mr. Branecky.
 7 MR. BRANECKY: I.
 8 MS. BRUCE: Mr. Glass.
 9 MR. GLASS: I.
 10 MS. BRUCE: Ms. Slagell.
 11 MS. SLAGELL: I.
 12 MS. BRUCE: Mr. Breisch.
 13 MR. BREISCH: Sustained. Okay.
 14 Let's elect vice chairman.
 15 MR. BRANECKY: I'll nominate Dr.
 16 Canter as vice chairman.
 17 MR. SLAGELL: I second it.
 18 MR. BREISCH: Nomination been made
 19 and seconded. Any further nominations, or any
 20 further discussion? If not, Myrna call roll.
 21 MS. BRUCE: Dr. Canter.
 22 DR. CANTER: Sustained.
 23 MS. BRUCE: Mr. Branecky.
 24 MR. BRANECKY: I.
 25 MS. BRUCE: Mr. Glass.

1 time. At this time I would like to call on
 2 Dr. Joyce Sheedy to give the staff position on
 3 these proposed changes.
 4 DR. SHEEDY: Mr. Chairman, members
 5 of the Council, Ladies and Gentleman, my name is
 6 Joyce Sheedy, and I work in the Rules and
 7 Planning Unit of the Air Quality Division. In
 8 October 1996, the staff presented a draft
 9 modification to OAC 252:100-17 entitled
 10 "Incinerators".
 11 This proposed modification incorporated
 12 the EPA guidelines contained in 40 CFR 60,
 13 Subpart Cb for existing Municipal Waste
 14 Combustors at plants with an aggregate combustion
 15 capacity of 38.58 tons per day of municipal solid
 16 waste. The hearing for this proposed rule was
 17 continued to the December, 1996 Air Quality
 18 Council Meeting which was canceled. The notice
 19 for the February 1997 council meeting listed the
 20 proposed modification to Subchapter 17.
 21 However, on December 6, 1996 in first
 22 opinion, the U.S. Court of Appeals for the
 23 District of Columbia Circuit vacated the EPA'S
 24 1995 standards for existing municipal waste
 25 combustors contained in 40 CFR 60, Subpart C, .n

1 their entirety and remanded to EPA without
2 receiving the additional challenges raised by
3 petitioners.

1 just wanted to state that we are in support of
2 the staff recommendation and the timing of action
3 on this matter at this council level today occur,
4 and for the same reasons that she cited.

4 The Court held that EPA's use of
5 aggregate plant municipal solid waste capacity
6 rather than unit municipal solid waste capacity
7 in the 1995 standards to create categories of
8 municipal waste combustor units for MACT
9 purposes, violates the plain meaning of Section
10 129 of the Clean Air Act and exceeds the EPA's
11 statutory authority.

5 MR. BYRUM: Thank you. Questions
6 for Mr. Erwin?

12 The modification proposed to our
13 Subchapter 17 at the October, 1996 meeting were a
14 direct result of the requirements of the Federal
15 Clean Air Act and mirrored the standards and
16 limits contained in 40 CFR 60 Subpart Cb.

7 (Council shakes heads.)

17 Therefore, the staff recommends that the
18 modifications to Subchapter 17 be held in
19 abeyance until such time as the issue addressed
20 by the Court is resolved.

8 MR. BYRUM: Questions from the
9 audience for Mr. Erwin?

22 MR. BYRUM: Questions from the
23 Council for Dr. Sheedy?

10 (Audience shakes heads.)

24 MR. BREISCH: Do you expect these
25 to be resolved, or in one-way or the other hear

11 MR. BYRUM: Thank you, sir. Don
12 Shandy.

13 MR. SHANDY: Council members; my
14 name is Don Shandy. I'm an attorney with
15 McKinney, Stringer & Webster, here in Oklahoma
16 City. And I'm here on behalf of Homand Inc.,
17 which is a cement company, the largest cement
18 manufacturer in the United States with 13
19 facilities. And they also have a plant located
20 here in the state in Ada, Oklahoma.

21 Basically without belaboring the point,
22 we have reviewed on behalf of this particular
23 company, the Municipal Waste Combustion Rule over
24 the past year or so, and have had extensive
25 involvement with the Environmental Protection

1 from the Court or EPA concerning the actions to
2 be taken?

1 Agency regarding applicability of the rule.

3 DR. SHEEDY: I'm sorry,
4 Mr. Breisch.

2 And one of the fundamental problems that
3 this particular industry sees with the rule that
4 EPA proposes, is that no one really is sure who,
5 and how broad it applies, and who it applies to.
6 So for that reason the Cement Recycling Coalition
7 joined as a party in a litigation in
8 Washington DC. And as has been discussed by
9 Dr. Sheedy previously, the Court in that
10 particular case has decided that the rule didn't
11 meet certain requirements and basically tossed
12 the rule out and remanded it for further action.

5 MR. BREISCH: But when do you
6 expect to hear something on this?

13 The issues of concern to CKRC were not
14 addressed in the litigation. And when EPA
15 appealed this case on February the 4th, even
16 though the Court may make a ruling the case will
17 still have to be heard by the Court to address
18 CKRC's issues.

7 DR. SHEEDY: Well, I believe that
8 there might be some news by Friday, I think,
9 regarding what the Court is going to do. Now,
10 it's also -- they just acted on the first issue.
11 And if this issue was resolved, then according to
12 their opinion there are other issues that may
13 well be taken into account after that unless
14 they're addressed by EPA at the same time. So it
15 could be sometime before it's all resolved.

19 For that reason Homand is in agreement
20 with the staff's recommendation that this rule
21 making not go forward, because quite honestly the
22 staff could spend a lot of time adopting and
23 preparing a rule. But the bottom line is the
24 rule could ultimately be tossed out, and it could
25 be a lot of wasted motion. So from a threshold

16 MR. BYRUM: Other questions from
17 the Council?

18 (No response.)

19 MR. BYRUM: Questions from the
20 audience of Dr. Sheedy?

21 (No response.)

22 MR. BYRUM: Thank you. Frank
23 Erwin.

24 MR. ERWIN: My name is Frank Erwin,
25 I'm with the City of Tulsa. And basically, I

1 standpoint we would suggest that's reason enough
2 not go forward.

3 Again there's a big question regarding
4 the applicability of the rule, and some of these
5 issues need to be resolved with EPA. And as the
6 rules proposed here in Oklahoma, currently as I
7 understand it, there's only two facilities that
8 it applies to.

9 But Homand is concerned that it could be
10 broader, at least in EPA's mind and in the way
11 the State proceeds it. So those issues need to
12 be worked out. And, again we would encourage the
13 Council to forego any further action in
14 accordance with Ms. Sheedy's recommendation.

15 MR. BYRUM: Questions for
16 Mr. Shandy?

17 DR. CANTER: Yes. Don, the cement
18 kennel, that would potential come into play,
19 because these companies burn municipal waste for
20 energy supply. I don't know what the connection
21 is there.

22 MR. SHANDY: Dr. Canter, the
23 problem is, when you look at the rules -- first
24 of all kennels are enormous pieces of equipment,
25 so from the standpoint of capacities they easily

1 (No response.)

2 MR. BREISCH: I believe we've got a
3 couple of alternates here. Number one, to just
4 revoke this hearing and readvertise it, or
5 continue it. Personally my feelings are, it
6 would be easier right now to continue this. And
7 I would entertain a motion to do that, if there's
8 no objection from our Council.

9 MR. DOUGHTY: I think that that
10 would be my recommendation because we could
11 continue indefinitely. I have no reason to
12 believe there's any time limit.

13 DR. CANTER: So if, for example,
14 something might come out as early as Friday of
15 this week, that would -- that might make us want
16 to have a continuance in our April meeting, then
17 this would let us do that. If we discontinue the
18 hearing now, then we can't have a hearing in
19 April because of the time we advertised it,
20 right?

21 MR. BYRUM: With the possible
22 exception of this advertising Friday for a
23 hearing.

24 DR. CANTER: Oh, that's right.

25 MR. BYRUM: Fridays our cutoff

1 meet or exceed the capacity requirements of the
2 rule. So you've got arguable applicability on
3 the capacity side.

4 The next question that you ask yourself
5 then is, what fuel supplies go into the kennel.
6 And to directly address your question, for
7 instance, there is a permit that Ada has right
8 now, they're operating under construction permit.
9 And it appears to me that arguably some of the
10 nonhazardous fuels that they could burn at that
11 facility would arguably fall under municipal
12 waste by definition. So there is some problems
13 related to definitions, and regulation, and how
14 those are interpreted.

15 DR. CANTER: Okay.

16 MR. BYRUM: Other questions for
17 Mr. Shandy in this case?

18 (Council shakes head.)

19 MR. BYRUM: Questions from the
20 audience?

21 (Audience shakes head.)

22 MR. BYRUM: Thank you. I have no
23 indications that anyone else wishes to speak on
24 this issue. Is there anyone else in the audience
25 that wishes to speak? Mr. Chairman.

1 date, after that we could not do that.

2 DR. CANTER: Okay.

3 MR. BRANECKY: Looking for a
4 motion.

5 MR. BREISCH: I'm looking for a
6 motion.

7 MR. BRANECKY: I motion that we
8 continue this hearing.

9 MS. SLAGELL: I second it.

10 MR. BREISCH: I have a motion, and
11 a second to continue the hearing. Any further
12 discussion, questions? If not, Myrna call the
13 roll.

14 MS. BRUCE: Dr. Canter.

15 DR. CANTER: I.

16 MS. BRUCE: Mr. Branecky.

17 MR. BRANECKY: I.

18 MS. BRUCE: Mr. Glass.

19 MR. GLASS: I.

20 MS. BRUCE: Ms. Slagell.

21 MS. SLAGELL: I.

22 MS. BRUCE: Mr. Breisch.

23 MR. BREISCH: Yes.

24 (Meeting/Hearing concluded)

25

CERTIFICATE

3 COUNTY OF CLEVELAND)

5 I, GENA C. BELCHER, Certified Shorthand
6 Reporter for the State of Oklahoma, certify that
7 the Meeting/Hearing was taken by me in stenotype
8 and thereafter transcribed and is a true and
9 correct transcript of the testimony of the
10 witnesses; that the Meeting/Hearing was taken on
11 the 19th day of February, 1997, at 1:00 P.M., at
12 Lincoln Plaza Office Park, Burgundy Room,
13 Oklahoma City, Oklahoma; that I am not an
14 attorney for or a relative of any party, or
15 otherwise interested in this action.

16 Witness my hand and seal of office on
17 this the 3rd day of March, 1997.

CHAPTER 100: AIR POLLUTION CONTROL

SUBCHAPTER 19. CONTROL EMISSIONS OF PARTICULATE MATTER EMISSIONS FROM FUEL-BURNING EQUIPMENT

Section

- 252:100-19-1. Purpose [AMENDED]
- 252:100-19-1.1. Definitions [NEW]
- 252:100-19-2. Emission of particulate matter prohibited [REVOKED]
- 252:100-19-3. Existing equipment [REVOKED]
- 252:100-19-4. New equipment [AMENDED]
- 252:100-19-5. Refuse burning prohibited [REVOKED]
- 252:100-19-6. Allowable emission of particulate matter [REVOKED]
- 252:100-19-7. Particulate matter emission limits [REVOKED]
- 252:100-19-10. Allowable particulate matter emission rates from indirectly fired wood fuel-burning units [NEW]
- 252:100-19-11. Allowable particulate matter emission rates from combined wood fuel and fossil fuel fired steam generating units [NEW]
- 252:100-19-12. Allowable particulate matter emission rates from directly fired fuel-burning units and industrial processes [NEW]
- 252:100-19-13. Permit by rule [NEW]

252:100-19-1. Purpose

The purpose of this Subchapter is to control the ~~amount of particulates released into the air by the use of fuel-burning equipment.~~ emission of particulate matter.

252:100-19-1.1. Definitions [NEW]

The following words and terms, when used in this Subchapter, shall have the following meaning unless the context clearly indicates otherwise:

“Directly fired” means that the hot gasses produced by the flame or heat source come into direct contact with the material being processed or heated.

“Fuel-Burning unit” means any internal combustion engines or gas turbine, or other combustion device used to convert the combustion of fuel into usable energy.

“Fossil fuel” means coal, petroleum, natural gas, or any fuel derived from coal, petroleum, or natural gas.

“Haul road” means a road on private property used to transport material or equipment by motorized vehicles.

“Indirectly fired” means that the hot gasses produced by the flame or heat source do not come into direct contact with the material, excluding air, being processed or heated.

“Industrial processes” means any source, activity or equipment, excluding fuel-burning units, which can reasonably be expected to emit particulate matter. The term includes, but is not limited to crushing, milling, screening, mixing and conveying. The term does not include maintenance activities unless maintenance is the primary activity of the facility.

“Particulate matter facility” means a facility from which particulate matter is the predominant emission, excluding fugitive emissions and emissions resulting from control equipment malfunctions.

“Wood fuel” means any fuel which, excluding air and water, is at least 80 percent by weight cellulose, hemicellulose and lignin, and has a heat value of less than 9,500 BTU per pound; or any wood derived fuel as approved by the Division.

252:100-19-2. Emission of particulate matter prohibited [REVOKED]

~~The emission or escape into the open air of particulates resulting from the combustion of fuel in any fuel-burning equipment or from any stack connected thereto in quantities in excess of that indicated in 252:100-19-6 or 252:100-19-7 is hereby prohibited.~~

252:100-19-3. Existing equipment [REVOKED]

~~Any fuel-burning equipment in operation prior to the effective date of this Subchapter shall not emit particulate matter in excess of 0.6 pounds per million B.T.U. heat input provided that all such existing equipment shall comply with 252:100-19-2 within eighteen (18) months from and after July 21, 1970.~~

252:100-19-4. New equipment Allowable particulate matter emission rates from fuel-burning units

~~The— Except as provided in 252:100-19-10, 252:100-19-11 and 252:100-19-12 the emission or escape into the open air of particulate matter resulting from the combustion of fuel in any new or existing fuel-burning equipment in quantities exceeding unit shall not exceed the limits specified in 252:100-19-6 for the size of equipment involved, is prohibited. These limitations shall apply when the fuel-burning equipment is operating at the maximum design heat input rating. The heat input rating of any unit discharging to a single stack shall be the maximum design input rating, including both heat available from burning of fuel and any sensible heat from materials introduced into the combustion zone of a standard temperature of 60°F. For a heat input between any two (2) consecutive heat inputs stated in 252:100-19-6, maximum allowable emissions of particulate matter are shown in 252:100-19-7. When one fuel-burning unit is connected to two or more stacks, the heat input of the equipment shall be the criterion for the maximum allowable total emission from all stacks combined Appendix C.~~

252:100-19-5. Refuse burning prohibited [REVOKED]

~~The burning of refuse in fuel-burning equipment is prohibited except in equipment specifically designed to burn refuse.~~

252:100-19-6. Allowable emission of particulate matter [REVOKED]

~~The emission limits described in 252:100-19-2 and 252:100-19-4 are as follows:~~

Heat Input in Million	Maximum Allowable Emissions
British Thermal Unit	of Particulate Matter in
Per Hour	Pounds Per Million
	British Thermal Units

Up to and including 10	0.60
100	0.35
1,000	0.20
10,000 and above	0.10

252:100-19-7. Particulate matter emission limits [REVOKED]

~~Particulate matter emission limits for fuel-burning equipment are set forth in Appendix C of this Chapter.~~

252:100-19-10. Allowable particulate matter emission rates from indirectly fired wood fuel-burning units [NEW]

The emission of particulate matter resulting from the combustion of wood fuel in any new or existing indirectly fired fuel-burning unit shall not exceed the limits specified in Appendix D.

252:100-19-11. Allowable particulate matter emission rates from combined wood fuel and fossil fuel fired steam generating units [NEW]

Any combined wood fuel and fossil fuel fired steam generating unit with a maximum design heat input of more than 250 million BTUs per hour which commenced construction after March 4, 1978, shall not emit particulate matter in excess of 0.1 pound per million BTUs.

252:100-19-12. Allowable particulate matter emission rates from directly fired fuel-burning units and industrial processes [NEW]

The emission of particulate matter from any new or existing directly fired fuel-burning unit or from any emission point in an industrial process shall not exceed the limits specified in Appendix G.

252:100-19-13. Permit by rule [NEW]

(a) Applicability. Any particulate matter facility may be constructed or operated under this section if:

- (1) it meets the requirements in 252:100-7-60, and
- (2) it is not subject to any New Source Performance Standard (NSPS), National Emission Standard for Hazardous Air Pollutants (NESHAP), Maximum Achievable Control Technology (MACT) standard or other Permit by Rule (PBR).

(b) Requirements. In addition to the requirements of 252:100, the owner or operator of a particulate matter facility permitted under this section shall comply with the following requirements.

- (1) All water sprays, bag houses, cyclones, or other particulate matter control equipment shall be properly maintained and operated.
- (2) Haul roads and material piles shall be watered or treated as necessary to minimize emissions of fugitive dust.

CHAPTER 100: AIR POLLUTION CONTROL

SUBCHAPTER 27. PARTICULATE MATTER EMISSIONS FROM INDUSTRIAL AND OTHER PROCESSES AND OPERATIONS

Section

252:100-27-1. Purpose [REVOKED]

252:100-27-2. Process emission limitations [AMENDED AND RENUMBERED]

252:100-27-3. Exception to emission limits [REVOKED]

252:100-27-4. Sampling and testing [REVOKED]

252:100-27-5. Allowable rate of emission [AMENDED AND RENUMBERED]

252:100-27-1. Purpose [REVOKED]

~~The purpose of this Subchapter is to control the emission of particulate matter from any operation, process or activity except fuel-burning equipment or refuse-burning equipment.~~

252:100-27-2. Process emission limitations [AMENDED AND RENUMBERED TO 252:100-19-12]

~~(a) Existing installations. Eighteen (18) months from and after the effective date of this Subchapter all existing installations must comply with the rates of emissions as specified in 252:100-27-5.~~

~~(b) New installations. From and after the effective date of this Subchapter, all new installations must comply with the rates of emission as specified in 252:100-27-5.~~

~~(c) General provision. No person shall cause, let, permit, suffer, or allow the emission from any general operation or general combustion operation of particulate matter from any emission point at a rate in excess of that specified in 252:100-27-5 for the process weight rate allocated to such emission point.~~

252:100-27-3. Exception to emission limits [REVOKED]

~~Emission of particulate matter during periods of cleaning or adjusting process equipment shall not exceed 150 percent of the limits as set forth in the 252:100-27-2 for a period or periods aggregating not more than six (6) minutes in any sixty (60) consecutive minutes. In those operations utilizing control devices which require regular intermittent cleaning, compliance with this Subchapter will be determined on the basis of the average hourly emission.~~

252:100-27-4. Sampling and testing [REVOKED]

~~(a) Testing. A person responsible for the emission of particulates from any source shall, upon written request of the Director, make or have made at his own expense, tests to determine the quantity or quality or both. Alternatively, said person shall be reasonably cooperative with the Director in securing such tests.~~

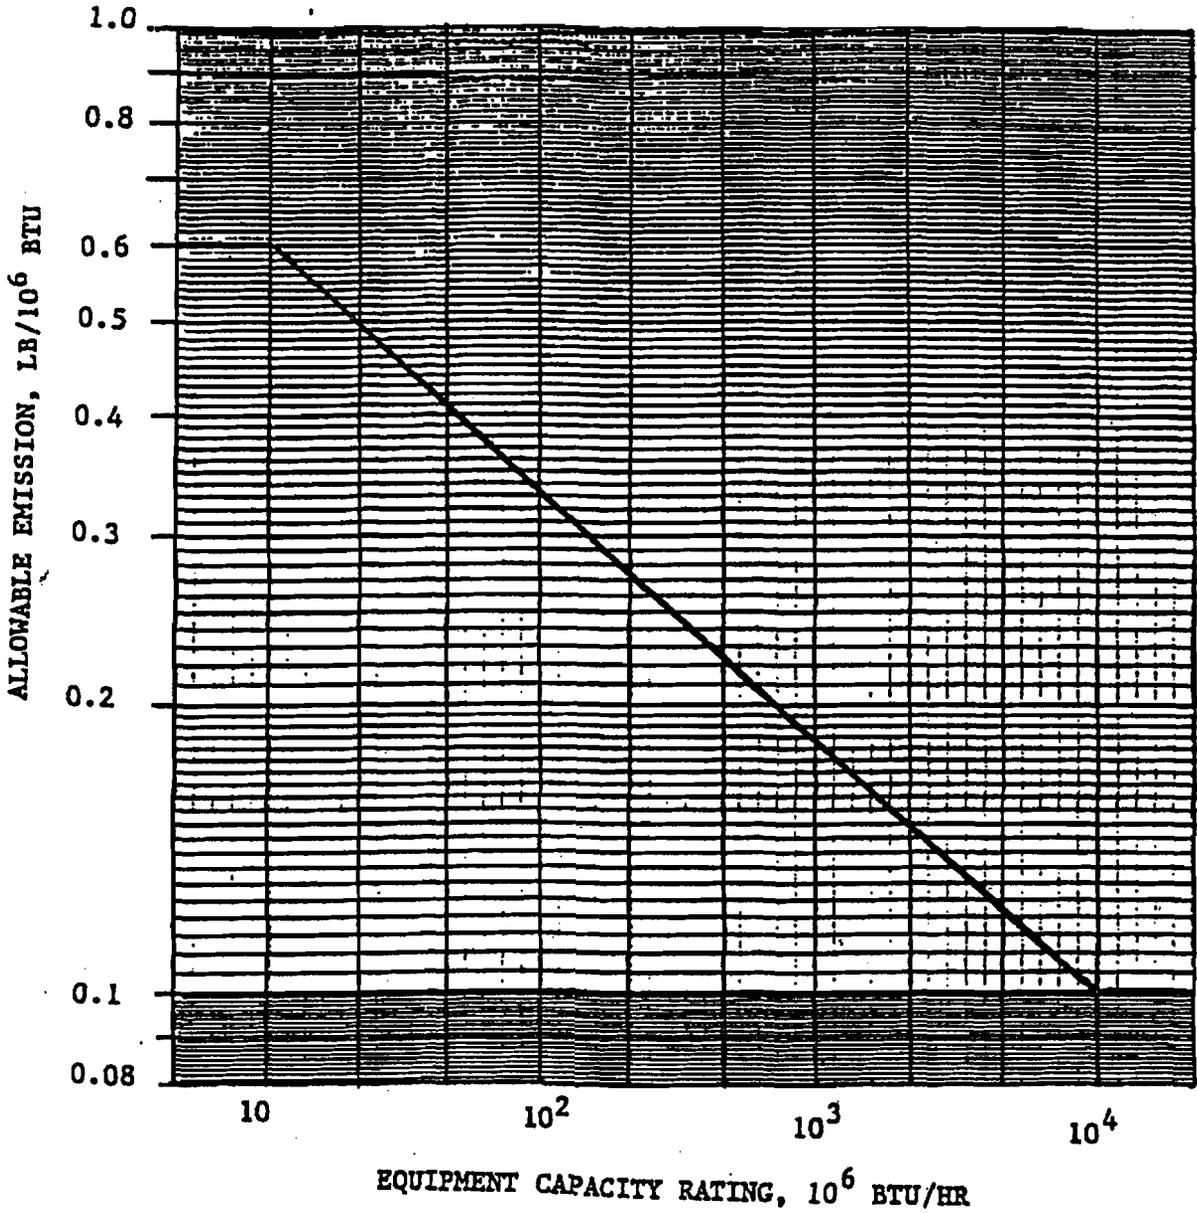

~~(b) **Methods.** Emission tests relating to this Subchapter shall be undertaken by generally recognized standards or methods of measurements. Methods found in the current ASME Test Code for Dust Separating Apparatus, the ASME Power Test Code, the Code for Determining Dust Concentrations in Gas Streams and the Los Angeles County Source Testing Manual may be used, but these may be modified or adjusted by the Director, in cooperation with the operator of the source, to suit specific sampling conditions or needs based upon good judgment and experience. Other methods found to produce reliable results and approved by the Director may be used.~~

~~(c) **Monitoring.** All tests shall be conducted, supervised or approved by a registered professional engineer.~~

252:100-27-5. Allowable rate of emission [AMENDED AND RENUMBERED TO 252:100-19-12]

~~Allowable rate of emissions based on actual process weight rate shall be as tabulated in Appendix G of this Chapter.~~

APPENDIX C. PARTICULATE MATTER EMISSION LIMITS FOR FUEL-BURNING EQUIPMENT [REVOKED]

CHAPTER 100: AIR POLLUTION CONTROL

APPENDIX C. ALLOWABLE RATE OF EMISSIONS FOR FUEL-BURNING UNITS [NEW]

Maximum Heat Input In Million British Thermal Units (MMBTU) Per Hour (X)	Allowable Particulate Matter Emissions In Pounds Per Million British Thermal Units (E)
10 or less	0.60
20	0.51
30	0.46
40	0.43
50	0.41
60	0.39
70	0.38
80	0.37
90	0.36
100	0.35
110	0.34
130	0.33
150	0.32
170	0.31
190	0.30
220	0.29
270	0.28
310	0.27
360	0.26
430	0.25
510	0.24
610	0.23
740	0.22
910	0.21
1,080	0.20
1,290	0.19
1,550	0.18
1,890	0.17
2,330	0.16
2,910	0.15
3,690	0.14
4,760	0.13
6,280	0.12
8,500	0.11
10,000 or more	0.10

Allowable emissions may be calculated by use of the following formulas:

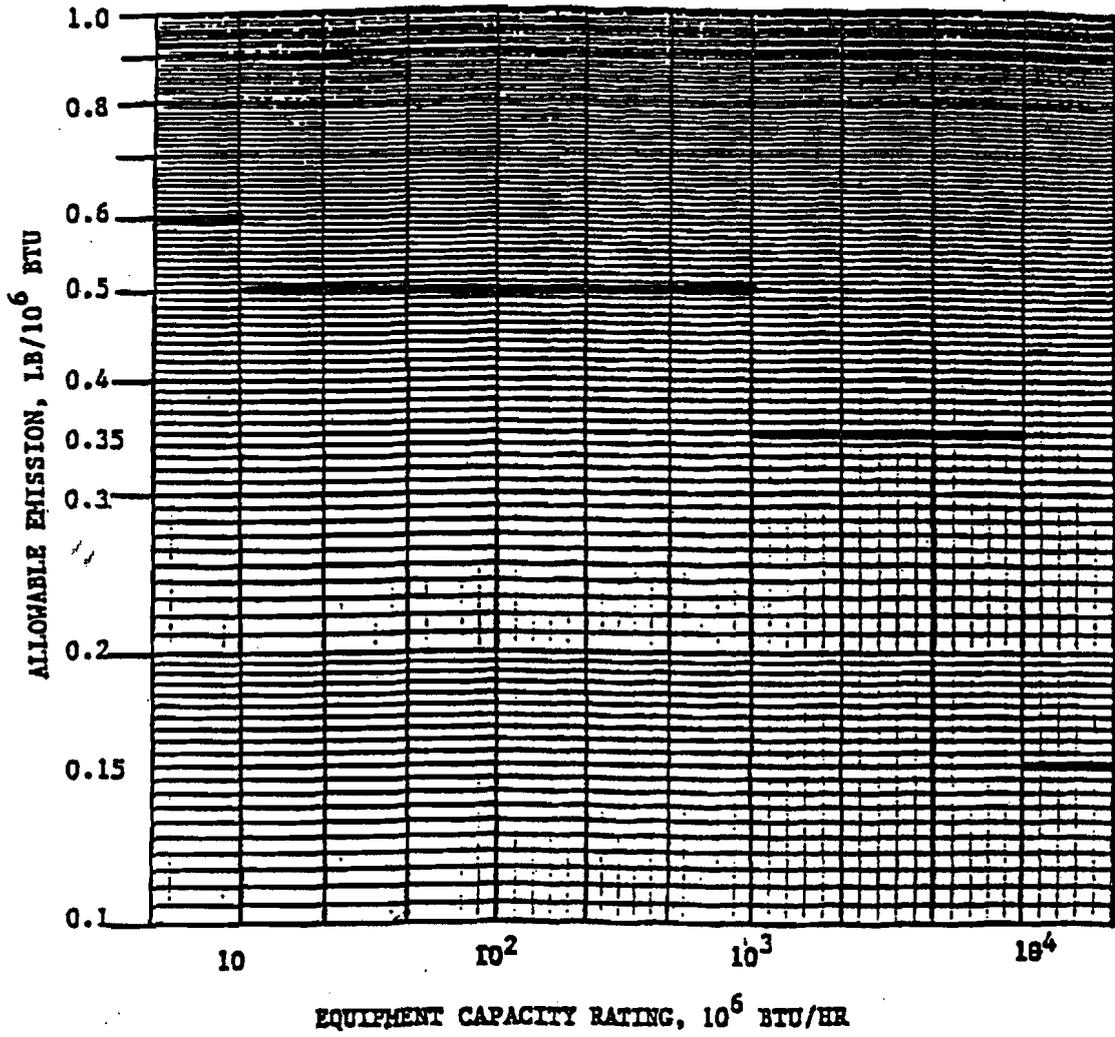

$$E = 1.042808X^{-0.238561} \text{ (for values for X greater than 10 MMBTU but less than 1,000 MMBTU) or}$$

$$E = 1.6X^{-0.30103} \text{ (for values for X greater than or equal to 1,000 MMBTU but less than 10,000 MMBTU).}$$

Where:

E = the particulate matter emission limit in pounds per MMBTU input and
X = the maximum heat input in MMBTU per hour.

APPENDIX D. PARTICULATE MATTER EMISSION LIMITS FOR WOOD-WASTE BURNING
EQUIPMENT [REVOKED]

CHAPTER 100: AIR POLLUTION CONTROL

**APPENDIX D. ALLOWABLE RATE OF EMISSIONS FOR WOOD FUEL
BURNING UNITS [NEW]**

Maximum Heat Input In Million British Thermal Units Per Hour	Allowable Particulate Matter Emissions In Pounds Per Million British Thermal Units
Less than 10	0.60
10 to less than 1,000	0.50
1,000 to less than 10,000	0.35
10,000 or more	0.15

Oklahoma Register

Notices of Rulemaking Intent

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must publish a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides other information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained. For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #99-1259]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

PROPOSED RULES:

- Subchapter 9. Excess Emission and Malfunction Reporting Requirements [AMENDED]
- Subchapter 19. Particulate Matter Emissions from Fuel-Burning Equipment [AMENDED]
- Subchapter 21. Particulate Matter Emissions from Wood-Waste Burning Equipment [REVOKED]
- Subchapter 27. Particulate Matter Emissions from Industrial and Other Processes and Operations [AMENDED]
- Subchapter 35. Control of Emission of Carbon Monoxide [AMENDED]
- Appendix C. Particulate Matter Emissions Limits for Fuel-Burning Equipment [REVOKED]
- Appendix C. Particulate Matter Emissions Limits for Fuel-Burning Equipment [NEW]
- Appendix D. Particulate Matter Emission Limits for Wood-Waste Burning Equipment [REVOKED]
- Appendix D. Particulate Matter Emission Limits for Wood-Waste Fuel-Burning Equipment [NEW]

SUMMARY:

The proposed changes to Subchapter 9 include correction of typographical and grammatical errors and deletion of redundant language. Also, the rule was simplified and clarified according to the agency-wide re-right/de-wrong initiative. Substantive changes to the rule include narrowing the scope of the rule to minor facilities only. New language is proposed for 252:100-9-4(b) to insure that any excess emissions occurring during maintenance procedures which were not accounted for in the report submitted pursuant to 252:100-9-4(a) will be reported according to the provisions of 252:100-9-5. A new condition was added to explain when excess emissions from a process are due to a malfunction and when they are due to negligent, marginal, or unsafe operation. The new language establishes a rebuttable presumption that the combined time of all excess emissions from a process due to a malfunction does not exceed eight hours or 1.5 percent of the process's operation time, whichever is greater, in a

rolling quarter. The burden of proving that excess emissions occurring more often are due to a malfunction rather than negligent, marginal, or unsafe operation is on the owner or operator of the process.

Subchapters 19, 21, and 27 are being revised at the same time because they are interrelated and deal with Particulate Matter (PM) emissions. 252:100-19, Particulate Matter Emissions From Fuel-Burning Equipment, complements Subchapter 27, Particulate Matter Emissions from Industrial and Other Processes, and both are being revised as part of the re-right/de-wrong process. In addition, a Permit by Rule for particulate matter sources is being proposed for Subchapter 27. The proposed changes will also merge the requirements of Subchapter 21, Particulate Matter Emissions from Wood-Waste Burning Equipment, into Subchapter 19 and revoke Subchapter 21. It is also being proposed that both Appendix C, Particulate Matter Emission Limits for Fuel-Burning Equipment, and Appendix D, Particulate Matter Emission Limits for Wood-Waste Burning Equipment, be revoked in favor of two new non-graphical appendices.

The proposed changes to Subchapter 35 will simplify and clarify the Subchapter as a part of the agency-wide re-right/de-wrong initiative. The scope of the Subchapter was narrowed to specific sources that are the primary contributors of carbon monoxide emissions. It is often impossible for small sources to achieve a 93% reduction in carbon monoxide emissions as required by the rule without increasing other emissions. Specific changes include the addition of the definitions "existing source" and "new source," along with the addition of the effective date of the rule. Also, Section 35-3, Performance Testing, was revoked because the Air Quality Division is given the authority to request this testing in the Oklahoma Clean Air Act and performance testing requirements are already provided for in Subchapters 8 and 43.

AUTHORITY:

Environmental Quality Board, 27A O.S.Supp. 1998, §§ 2-2-101 and 2-5-101, *et seq.*

COMMENT PERIOD:

Written comments will be accepted prior to and at the hearing on August 24, 1999. Oral comments may be made at the August 24, 1999, hearing, and at the September 28, 1999 hearing.

PUBLIC HEARINGS:

5741

Notices of Rulemaking Intent

Tuesday, August 24, 1999 - 9:30 a.m. hearing, at the Department of Environmental Quality, Room 101, 707 North Robinson, Oklahoma City, Oklahoma.

Scheduled before the Environmental Quality Board on Tuesday, September 28, 1999, 9:30 a.m., Braman, Oklahoma.

Contact Myrna Bruce at (405) 702-4177 for exact location.

COPIES OF PROPOSED RULES:

The proposed rules are available for review at the Air Quality Division office at 707 North Robinson, Suite 4100, Oklahoma City, Oklahoma, 73102, and on the DEQ website (www.deq.state.ok.us), Air Quality Division Current Events and Issues, or copies may be obtained from Myrna Bruce by calling (405) 702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statement may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Jeanette Buttram (252:100-9), Max Price (252:100-19, 252:100-21, 252:100-27, and Appendices C and D), Michelle Martinez (252:100-35), Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

ADDITIONAL INFORMATION:

Subchapter 9 was heard for the first time at the June 15, 1999, Council meeting.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #99-1259; filed 7-20-99]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #99-1260]

RULEMAKING ACTION:

Notice of proposed EMERGENCY and PERMANENT rulemaking

PROPOSED RULES:

Subchapter 17. Incinerators

Part 7. Hospital, Medical and Infectious Waste Incinerators [NEW]

Appendix M. Emission Limits for Hospital, Medical and Infectious Waste Incinerators [NEW]

SUMMARY:

The addition of 252:100-17, Part 7, Hospital, Medical and Infectious Waste Incinerators (HMIWI), is proposed to establish state emission standards and other enforceable requirements for existing HMIWI. Also, a new Appendix M is proposed which contains emission limits for HMIWI. These rules, together with an emission inventory, schedule of compliance, emission data, record of public hearings and legal analysis, will comprise Oklahoma's State 111(d)/129 Plan, which is also available for public inspection and comment. An HMIWI is defined as any device that combusts any amount of medical/infectious waste or hospital waste. Any HMIWI for which construction commenced on or before June 20, 1996, will be subject to the new rule. These proposed rules will be the enforceable mechanism for implementing the provisions of the Emission Guidelines (EG) for HMIWI (40 CFR 60 Subpart Ce). The new Part 7 incorporates by reference sections of the New Source Performance Standards for HMIWI (40 CFR 60 Subpart Ee). In addition to establishing emission standards for certain regulated pollutants, the new rule will establish requirements for HMIWI operator training and qualifications, waste management plans, and testing and monitoring of pollutants and operating parameters.

AUTHORITY:

Environmental Quality Board, 27A O.S.Supp. 1998, §§ 2-2-101 and 2-5-101, *et seq.*

COMMENT PERIOD:

Written comments on the proposed rules and State 111(d)/129 Plan will be accepted prior to and at the hearing on August 24, 1999. Oral comments may be made at the August 24, 1999, hearing and at the September 28, 1999, hearing.

PUBLIC HEARINGS:

Tuesday, August 24, 1999 - 9:30 a.m. hearing, at the Department of Environmental Quality, Room 101, 707 North Robinson, Oklahoma City, Oklahoma.

Also scheduled before the Environmental Quality Board on Tuesday, September 28, 1999, 9:30 a.m., Braman, Oklahoma.

Contact Myrna Bruce at (405) 702-4177 for exact location.

COPIES OF PROPOSED RULES:

Copies of the rules and the State 111(d)/129 Plan for HMIWI are available for review at the Air Quality Division office at 707 North Robinson, Suite 4100, Oklahoma City, Oklahoma, 73102, or may be obtained from Myrna Bruce by calling (405) 702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statements may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Cheryl Bradley, Department of Environmental Quality, Air Quality

(252:100-4, 252:100-35), Joyce Sheedy (252:100-41), Cheryl
Bradley (252:100-47). Department of Environmental
Quality, Air Quality Division, P.O. Box 1677, Oklahoma
City, Oklahoma 73101-1677; (405) 702-4100.

ADDITIONAL INFORMATION:

Subchapter 35 was brought to public hearing on August
24, 1999.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need
an accommodation, please notify the Air Quality Division
three (3) days in advance at (405) 702-4100.

[OAR Docket #99-1302; filed 8-26-99]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #99-1303]

RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

PROPOSED RULES:

Subchapter 5. Registration, Emission Inventory and
Annual Operating Fees [AMENDED]

Subchapter 9. Excess Emission and Malfunction
Reporting Requirements [AMENDED]

Subchapter 13. Prohibition of Open Burning
[AMENDED]

Subchapter 19. Particulate Matter Emissions from
Fuel-Burning Equipment [AMENDED]

Subchapter 21. Particulate Matter Emissions from
Wood-Waste Burning Equipment [REVOKED]

Subchapter 27. Particulate Matter Emissions from
Industrial and Other Processes and Operations
[REVOKED]

Appendix C. Particulate Matter Emission Limits for
Fuel-Burning Equipment [REVOKED]

Appendix C. Particulate Matter Emission Limits for
Fuel-Burning Equipment [NEW]

Appendix D. Particulate Matter Emission Limits for
Wood-Waste Burning Equipment [REVOKED]

Appendix D. Particulate Matter Emission Limits for
Wood-Waste Fuel-Burning Equipment [NEW]

SUMMARY:

The proposed changes to Subchapter 5 are designed to
allow the agency to bill annual operating fees on a flexible

schedule. The changes should also allow the fees to be
based on the most recent emission data possible. The
proposed rule language also requires an owner or operator
of a facility to report excess emissions on their annual
emission inventory. Substantive changes include requiring
inventories to be submitted one month earlier than
presently required, allowing fee payers five years after
payment is made to notify the DEQ that they overpaid and
to receive credit for such overpayment, and reducing the
period of time to six months in which either the DEQ or the
facility owner or operator can challenge the data or
methods used to calculate the facility's emissions.

The proposed changes to Subchapter 9 include
correction of typographical and grammatical errors and
deletion of redundant language. Also, the rule was
simplified and clarified according to the agency-wide
re-right/de-wrong initiative. Substantive changes to the rule
include narrowing the scope of the rule to minor facilities
only. A new condition was added to explain when excess
emissions from a process are due to a malfunction and when
they are due to negligent, marginal, or unsafe operation.
The new language establishes a rebuttable presumption
that the combined time of all excess emissions from a
process due to a malfunction does not exceed eight hours or
1.5 percent of the process's operation time, whichever is
greater, in a 3 month period. The burden of proving that
excess emissions occurring more often are due to a
malfunction rather than negligent, marginal, or unsafe
operation is on the owner or operator of the process.

The proposed changes to Subchapter 13 will simplify and
clarify the Subchapter as a part of the agency-wide
re-right/de-wrong initiative. Such changes include
consolidating the general conditions and requirements for
allowed open burning into a new section. A few substantive
changes were made such as adding definitions for "domestic
refuse" and "landclearing operation" and a section on
disaster relief procedures. In some instances, the
requirement to notify the DEQ or other appropriate official
for authorization to burn was added. In addition, the
open-pit incinerator requirements were moved to a new
section. The rule is proposed to be amended to require
owners or operators to register with their local DEQ office;
however, if the owner or operator anticipates operating an
open-pit incinerator in the same pit for more than 90 days in
a 365-day period, they would be required to obtain a permit
and pay the required permit fee. Also, hazardous materials
may not be burned in an open-pit incinerator unless prior
written approval has been obtained from both the local fire
chief and the DEQ.

Subchapters 19, 21 and 27 all deal with particulate matter
(PM) emissions. The proposed changes will merge the
requirements of Subchapter 21 and Subchapter 27 into
Subchapter 19. Subchapters 21 and 27 will then be revoked.

5743

Subchapter 19 as proposed will be simplified and clarified according to the agency-wide re-right/de-wrong initiative. In addition, a Permit by Rule for particulate matter facilities is being proposed for Subchapter 19. It is also being proposed that both Appendix C and Appendix D be revoked in favor of two new tabular appendices.

The DEQ is requesting comments on all of these proposed rule changes.

AUTHORITY:

Environmental Quality Board, 27A O.S.Supp. 1998, §§ 2-2-101 and 2-5-101, *et seq.*

REQUEST FOR COMMENTS:

The DEQ requests that business entities affected by these rules provide the DEQ, within the comment period, in dollar amounts if possible, the increase in the level of direct costs such as fees, and the indirect costs such as reporting, recordkeeping, equipment, construction, labor, professional services, revenue loss, or other costs expected to be incurred by a particular entity due to compliance with the proposed rules.

COMMENT PERIOD:

Written comments will be accepted prior to and at the hearing on October 19, 1999. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by October 12, 1999. Oral comments may be made at the October 19, 1999, hearing and at the November 16, 1999, hearing.

PUBLIC HEARINGS:

Tuesday, October 19, 1999 - 9:00 a.m. hearing, at the Tulsa City-County Health Department, 5051 South 129th East (Northeast corner of 51st and 129th), Tulsa, Oklahoma.

Scheduled before the Environmental Quality Board on Tuesday, November 16, 1999, 9:30 a.m., McAlester, Oklahoma.

Contact Myrna Bruce at (405) 702-4177 for exact location.

COPIES OF PROPOSED RULES:

The proposed rules are available for review at the Air Quality Division office at 707 North Robinson, Suite 4100, Oklahoma City, Oklahoma, 73102, and on the DEQ website (www.deq.state.ok.us), Air Quality Division Current Events and Issues, or copies may be obtained from Myrna Bruce by calling (405) 702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statement may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Jeanette Buttram (252:100-5, 252:100-9 and 252:100-13), Max Price (252:100-19, 252:100-21, 252:100-27 and Appendices C and D). Department of Environmental Quality, Air Quality

Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

ADDITIONAL INFORMATION:

Subchapters 9, 19, 21, 27, and Appendices C and D were brought to public hearing on August 24, 1999.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #99-1303; filed 8-26-99]

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 510. MUNICIPAL SOLID WASTE LANDFILLS [REVOKED]**

[OAR Docket #99-1304]

RULEMAKING ACTION:

Notice of proposed PERMANENT Rulemaking

PROPOSED RULES:

Chapter 510. Municipal Solid Waste Landfills [REVOKED]

SUMMARY:

Chapter 510 is being revoked subject to the adoption of Chapter 530 as part of the re-right/de-wrong process. Some rules which were in Chapter 510 were deleted. Others were amended and renumbered in Chapter 530. A conversion table is available from the DEQ upon request.

AUTHORITY:

Environmental Quality Board powers and duties, 27A O.S. § 2-2-101; and the Oklahoma Solid Waste Management Act, 27A O.S. § 2-10-101 *et seq.*

REQUEST FOR COMMENTS:

The DEQ requests that business entities affected by this rule provide the DEQ, within the comment period, in dollar amounts if possible, the increase in the level of direct costs such as fees, and the indirect costs such as reporting, recordkeeping, equipment, construction, labor, professional services, revenue loss, or other costs expected to be incurred by a particular entity due to compliance with the proposed rule.

COMMENT PERIOD:

Deliver or mail written comments to the contact person from September 15 through October 15, 1999.

PUBLIC HEARINGS:

Before the Solid Waste Management Advisory Council at 9:00 a.m. on October 21, 1999, at the Stillwater Public Library, 1107 S. Duck, Stillwater, Oklahoma, 74074. Before the Environmental Quality Board at 9:30 on November 16, 1999, in McAlester, Oklahoma, at a location to be announced.

Submitted to Senate:

November 29, 1999

Gubernatorial approval:

January 7, 2000

Legislative approval:

Failure of the Legislature to disapprove the rules resulted in approval on March 29, 2000

Final adoption:

March 29, 2000

Effective:

June 1, 2000

SUPERSEDED EMERGENCY ACTIONS:

None

INCORPORATION BY REFERENCE:

None

ANALYSIS:

The changes to Subchapters 19, 21 and 27 simplify and clarify the requirements applicable to stationary sources that emit particulate matter. The title of Subchapter 19 is being amended to "Control of Emission of Particulate Matter" and the requirements of Subchapter 21, Particulate Matter Emissions from Wood-Waste Burning Equipment, and Subchapter 27, Particulate Matter Emissions from Industrial and Other Processes and Operations, are being moved to Subchapter 19. A Permit By Rule for facilities that emit particulate matter as their primary emission is being added to Subchapter 19. Subchapters 21 and 27 are being revoked, and the formats of Appendices C and D are also being changed for easier reading.

SUMMARY OF DIFFERENCES FROM ANALOGOUS FEDERAL RULES:

There are no corresponding federal rules

CONTACT PERSON:

Max Price, Department of Environmental Quality, Air Quality Division, 707 N. Robinson, Suite 4100, Oklahoma City, Oklahoma 73101-1677. (405) 702-4100

PURSUANT TO THE ACTIONS DESCRIBED HEREIN, THE FOLLOWING RULES ARE CONSIDERED FINALLY ADOPTED AS SET FORTH IN 75 O.S., SECTION 308.1(A), WITH AN EFFECTIVE DATE OF JUNE 1, 2000.

SUBCHAPTER 19. CONTROL OF EMISSION OF PARTICULATE MATTER EMISSIONS FROM FUEL-BURNING EQUIPMENT

252:100-19-1. Purpose

The purpose of this Subchapter is to control the amount of particulates released into the air by the use of fuel-burning equipment emission of particulate matter.

252:100-19-1.1. Definitions

The following words and terms, when used in this

5745

Subchapter, shall have the following meaning unless the context clearly indicates otherwise:

"Directly fired" means that the hot gasses produced by the flame or heat source come into direct contact with the material being processed or heated.

"Fuel-Burning unit" means any internal combustion engine or gas turbine, or other combustion device used to convert the combustion of fuel into usable energy.

"Fossil fuel" means coal, petroleum, natural gas, or any fuel derived from coal, petroleum, or natural gas.

"Haul road" means a road on private property used to transport material or equipment by motorized vehicles.

"Indirectly fired" means that the hot gasses produced by the flame or heat source do not come into direct contact with the material, excluding air, being processed or heated.

"Industrial process" means any source, activity or equipment, excluding fuel-burning units, which can reasonably be expected to emit particulate matter. The term includes, but is not limited to crushing, milling, screening, mixing and conveying. The term does not include maintenance activities unless maintenance is the primary activity of the facility.

"Particulate matter facility" means a facility from which particulate matter is the predominant emission, excluding fugitive emissions and emissions resulting from control equipment malfunctions.

"Wood fuel" means any fuel which, excluding air and water, is at least 80 percent by weight cellulose, hemicellulose and lignin, and has a heat value of less than 9,500 BTU per pound; or any wood derived fuel as approved by the Division.

252:100-19-2. Emission of particulate matter prohibited [REVOKED]

The emission or escape into the open air of particulates resulting from the combustion of fuel in any fuel-burning equipment or from any stack connected thereto in quantities in excess of that indicated in 252:100-19-6 or 252:100-19-7 is hereby prohibited.

252:100-19-3. Existing equipment [REVOKED]

Any fuel-burning equipment in operation prior to the effective date of this Subchapter shall not emit particulate matter in excess of 0.6 pounds per million B.T.U. heat input provided that all such existing equipment shall comply with 252:100-19-2 within eighteen (18) months from and after July 21, 1970.

252:100-19-4. New equipment Allowable particulate matter emission rates from fuel-burning units

The Except as provided in 252:100-19-10, 252:100-19-11 and 252:100-19-12 the emission or escape into the open air of particulate matter resulting from the combustion of fuel in any new or existing fuel-burning equipment in quantities exceeding unit shall not exceed the limits specified in

252:100-19-6 for the size of equipment involved, prohibited. These limitations shall apply when the fuel-burning equipment is operating at the maximum design heat input rating. The heat input rating of any unit discharging to a single stack shall be the maximum design input rating, including both heat available from burning of fuel and any sensible heat from materials introduced into the combustion zone of a standard temperature of 60°F. For a heat input between any two (2) consecutive heat inputs stated in 252:100-19-6, maximum allowable emissions of particulate matter are shown in 252:100-19-7. When one fuel-burning unit is connected to two or more stacks, the heat input of the equipment shall be the criterion for the maximum allowable total emission from all stacks combined Appendix C.

252:100-19-5. Refuse burning prohibited [REVOKED]

The burning of refuse in fuel-burning equipment is prohibited except in equipment specifically designed to burn refuse.

252:100-19-6. Allowable emission of particulate matter [REVOKED]

The emission limits described in 252:100-19-2 and 252:100-19-4 are as follows:

Heat Input in Million British Thermal Unit Per Hour	Maximum Allowable Emissions of Particulate Matter in Pounds Per Million British Thermal Units
Up to and including	0.60
100	0.35
1,000	0.20
10,000 and above	0.10

252:100-19-7. Particulate matter emission limits [REVOKED]

Particulate matter emission limits for fuel-burning equipment are set forth in Appendix C of this Chapter.

252:100-19-10. Allowable particulate matter emission rates from indirectly fired wood fuel-burning units

The emission of particulate matter resulting from the combustion of wood fuel in any new or existing indirectly fired fuel-burning unit shall not exceed the limits specified in Appendix D.

252:100-19-11. Allowable particulate matter emission rates from combined wood fuel and fossil fuel fired steam generating units

Any combined wood fuel and fossil fuel fired steam generating unit with a maximum design heat input of more

Permanent Final Adoptions

than 250 million BTUs per hour which commenced construction after March 4, 1978, shall not emit particulate matter in excess of 0.1 pound per million BTUs.

252:100-19-12. Allowable particulate matter emission rates from directly fired fuel-burning units and industrial processes

The emission of particulate matter from any new or existing directly fired fuel-burning unit or from any emission point in an industrial process shall not exceed the limits specified in Appendix G.

252:100-19-13. Permit by rule

(a) Applicability. Any particulate matter facility may be constructed or operated under this section if:

- (1) it meets the requirements in 252:100-7-60, and
- (2) it is not subject to any New Source Performance Standard (NSPS), National Emission Standard for Hazardous Air Pollutants (NESHAP), Maximum Achievable Control Technology (MACT) standard or other Permit by Rule (PBR).

(b) Requirements. In addition to the requirements of 252:100, the owner or operator of a particulate matter facility permitted under this section shall comply with the following requirements.

- (1) All water sprays, bag houses, cyclones, or other particulate matter control equipment shall be properly maintained and operated.
- (2) Haul roads and material piles shall be watered or treated as necessary to minimize emissions of fugitive dust.

SUBCHAPTER 21. PARTICULATE MATTER EMISSIONS FROM WOOD-WASTE BURNING EQUIPMENT [REVOKED]

252:100-21-1. Purpose [REVOKED]

The purpose of this Subchapter is to control the amount of particulates released into the air by the use of wood-waste burning equipment.

252:100-21-2. Emission prohibition [REVOKED]

The emission or escape into the open air of particulates resulting from the combustion of wood-waste in any fuel-burning equipment in quantities in excess of that indicated in this Subchapter is hereby prohibited.

252:100-21-3. Limitations [AMENDED AND RENUMBERED TO 252:100-19-11]

(a) Wood-waste fuel-burning equipment. Any wood-waste fuel-burning equipment, operating or constructed to operate, shall not emit particulate matter in excess of that specified in 252:100-21-4 or 252:100-21-5 for the size of equipment involved. These limitations shall apply when the wood-waste burning equipment is operating at the

maximum design heat input rating. The heat input rating of any unit shall be the maximum design input rating, including both heat available from burning of wood-waste fuel and any sensible heat from materials introduced into the combustion zone at a standard temperature of 60°F.

(b) New combined wood-waste and fossil fuel-fired steam generating units. Any new combined wood-waste and fossil fuel-fired steam-generating unit of a designed capacity of more than 250 million BTUs per hour input shall not emit particulate matter in excess of 0.1 pound per million BTUs.

252:100-21-4. Allowable emissions [REVOKED]

The emission limits described in 252:100-21-3 are as follows:

Heat Input in Million British Thermal Unit Per Hour	Maximum Allowable Emissions of Particulate Matter in Pounds Per Million British Thermal Units
Up to and including 100	0.60
100	0.35
1,000	0.20
10,000 and above	0.10

252:100-21-5. Emission limits [AMENDED AND RENUMBERED TO 252:100-19-10]

Particulate matter emission limits for wood-waste burning equipment are set forth in Appendix D of this Chapter.

SUBCHAPTER 27. PARTICULATE MATTER EMISSIONS FROM INDUSTRIAL AND OTHER PROCESSES AND OPERATIONS [REVOKED]

252:100-27-1. Purpose [REVOKED]

The purpose of this Subchapter is to control the emission of particulate matter from any operation, process or activity except fuel-burning equipment or refuse-burning equipment.

252:100-27-2. Process emission limitations [AMENDED AND RENUMBERED TO 252:100-19-12]

(a) Existing installations. Eighteen (18) months from and after the effective date of this Subchapter all existing installations must comply with the rates of emissions as specified in 252:100-27-5.

(b) New installations. From and after the effective date of this Subchapter, all new installations must comply with the rates of emission as specified in 252:100-27-5.

(c) General provision. No person shall cause, let, permit, suffer, or allow the emission from any general operation or general combustion operation of particulate matter from

~~any emission point at a rate in excess of that specified in 252:100-27-5 for the process weight rate allocated to such emission point.~~

**252:100-27-3. Exception to emission limits
[REVOKED]**

~~Emission of particulate matter during periods of cleaning or adjusting process equipment shall not exceed 150 percent of the limits as set forth in the 252:100-27-2 for a period or periods aggregating not more than six (6) minutes in any sixty (60) consecutive minutes. In those operations utilizing control devices which require regular intermittent cleaning, compliance with this Subchapter will be determined on the basis of the average hourly emission.~~

252:100-27-4. Sampling and testing [REVOKED]

~~(a) Testing. A person responsible for the emission of particulates from any source shall, upon written request of the Director, make or have made at his own expense, tests to determine the quantity or quality or both. Alternatively, said person shall be reasonably cooperative with the Director in securing such tests.~~

~~(b) Methods. Emission tests relating to this Subchapter shall be undertaken by generally recognized standards or methods of measurements. Methods found in the current ASME Test Code for Dust Separating Apparatus, the ASME Power Test Code, the Code for Determining Dust Concentrations in Gas Streams and the Los Angeles County Source Testing Manual may be used, but these may be modified or adjusted by the Director, in cooperation with the operator of the source, to suit specific sampling conditions or needs based upon good judgment and experience. Other methods found to produce reliable results and approved by the Director may be used.~~

~~(c) Monitoring. All tests shall be conducted, supervised or approved by a registered professional engineer.~~

**252:100-27-5. Allowable rate of emission [AMENDED
AND RENUMBERED TO
252:100-19-12]**

~~Allowable rate of emissions based on actual process weight rate shall be as tabulated in Appendix G of this Chapter.~~

Permanent Final Adoptions

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

[OAR Docket #00-636]

Correction of Publication Error

The Office of Administrative Rules has discovered that two Appendices in the May 1, 2000 issue of the *Register* were published with the wrong contents. Although the Appendices were cited correctly, the wrong graphics were pasted into the Appendices when published in the *Register*. The OAR apologizes for this error and for any inconvenience it may cause.

The revoked and reenacted Chapter 100 Appendices C and D published for the Department of Environmental Quality on pages 1124 and 1125 of the May 1, 2000 issue should read as they now appear on the following two pages:

**APPENDIX C. PARTICULATE MATTER EMISSION LIMITS FOR FUEL-BURNING EQUIPMENT
[REVOKED]**

**APPENDIX C. ALLOWABLE RATE OF EMISSIONS FOR INDIRECTLY FIRED FUEL-BURNING UNITS
[NEW]**

Maximum Heat Input In Million British Thermal Units (MMBTU) Per Hour (X)	Allowable Particulate Matter Emissions In Pounds Per Million British Thermal Units (E)
10 or less	0.60
20	0.51
30	0.46
40	0.43
50	0.41
60	0.39
70	0.38
80	0.37
90	0.36
100	0.35
110	0.34
130	0.33
150	0.32
170	0.31
190	0.30

4,760	0.13
6,280	0.12
8,500	0.11
10,000 or more	0.10

Allowable emissions may be calculated by use of the following formulas:

$E = 1.042808X^{0.93354}$ (for values for X greater than 10 MMBTU but less than 1,000 MMBTU) or

$E = 1.6X^{-0.0001}$ (for values for X greater than or equal to 1,000 MMBTU but less than 10,000 MMBTU).

Where:

- E = the particulate matter emission limit in pounds per MMBTU input and
- X = the maximum heat input in MMBTU per hour.

AGENDA
AIR QUALITY COUNCIL
DEPARTMENT OF ENVIRONMENTAL QUALITY
*** HEARING/MEETING**
*** 9:30 A.M.**
**** Tuesday, August 24, 1999**
Multipurpose Room
707 North Robinson, Oklahoma City, OK

1. **Call to Order – Bill Breisch**
2. **Roll Call – Myrna Bruce**
3. **Approval of Minutes of the April 20, 1999 Regular Meeting**
4. **PUBLIC RULEMAKING HEARINGS**

A. OAC 252:100-9 Excess Emission and Malfunction Reporting [AMENDED]
Proposal would simplify the language under the agency-wide re-right/de-wrong initiative. Substantive changes include narrowing the scope of the rule to minor facilities only. A new condition was added to explain when excess emissions from a process are due to a malfunction and when they are due to negligent, marginal, or unsafe operation.

1. Presentation – Jeanette Buttram
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent adoption

B. OAC 252:100-17 Part 7 Hospital, Medical, and Infectious Waste Incinerators Appendix M Emission Limits for HMIWI [NEW]

Proposal would establish state emission standards and other enforceable requirements for existing HMIWI. A new Appendix M contains emissions limits for HMIWI. Continued from June 15, 1999 Air Quality Council meeting.

1. Presentation – Cheryl Bradley
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent and emergency adoption

C. OAC 252:100-19 Particulate Matter Emissions from Fuel-burning Equipment [AMENDED]
Appendix C Particulate Matter Emissions Limits for Fuel Burning Equipment [REVOKED]
Appendix C Particulate Matter Emissions Limits for Fuel Burning Equipment [NEW]

Proposal would simplify the language under the agency-wide re-right/de-wrong initiative and add provisions from Subchapter 21. In addition, the graphic in Appendix C has been replaced by a table.

August 9, 1999

MEMORANDUM

TO: Air Quality Council

FROM: Eddie Terrill, Director *ET*
Air Quality Division

SUBJECT: Proposed Revisions to 252:100-19, Particulate Matter Emissions from Fuel-Burning Equipment

The changes being proposed for Subchapter 19, Particulate Matter Emissions from Fuel-Burning Equipment, would incorporate the requirements of Subchapter 21, Particulate Matter Emissions from Wood-Waste Burning Equipment. Subchapter 21 would then be revoked. Subchapter 19 is also being modified as part of the re-right/de-wrong process to clarify the language. As part of the re-right/de-wrong process, revocation of the Appendix C graphic, Particulate Matter Emission Limits for Fuel-Burning Equipment, and the Appendix D graphic, Particulate Matter Emission Limits for Wood-Waste Burning Equipment, and adoption of two new tabular appendices are being proposed. These rules and appendices are being addressed at the same time because they all contain standards for particulate matter emissions. We are proposing that the requirements in the two subchapters that address fuel-burning equipment (19 and 21) be consolidated into one subchapter, and we are clarifying that a facility with particulate matter emissions (other than an incinerator subject to SC 17) must meet the standards in either SC 19 or SC 27, but not both.

Staff will be recommending that this Subchapter be held over until the October 19, 1999 Air Quality Council meeting to allow for further comment.

SUBCHAPTER 19. PARTICULATE MATTER EMISSIONS FROM
FUEL-BURNING EQUIPMENT

Section

- 252:100-19-1. Purpose
- 252:100-19-1.1. Definitions
- 252:100-19-2. Emission of particulate matter prohibited [REVOKED]
- 252:100-19-3. Existing equipment [REVOKED]
- 252:100-19-4. ~~New equipment~~ Allowable particulate matter emission rates
- 252:100-19-5. ~~Refuse~~Waste burning prohibited
- 252:100-19-6. Allowable emission of particulate matter [REVOKED]
- 252:100-19-7. Particulate matter emission limits [REVOKED]
- 252:100-19-10. Allowable particulate matter emission rates for wood-waste fuel
- 252:100-19-11. Combined wood-waste fuel and fossil fuel-fired steam generating units

252:100-19-1. Purpose

The purpose of this Subchapter is to control the amount of particulates released into the air by the use of emission of particulate matter from fuel-burning equipment.

252:100-19-1.1. Definitions

The following words and terms when used in this Subchapter shall have the following meaning unless the context clearly indicates otherwise.

"Fuel-burning equipment" means any internal combustion engine or gas turbine, or indirectly fired combustion device used to convert the combustion of fuel or waste into usable energy.

"Fossil fuel" means coal, petroleum, natural gas, or any fuel derived from coal, petroleum, or natural gas.

"Indirectly fired" means that the hot gasses produced by the flame or heat source do not come into direct contact with the material, excluding air, being processed or heated.

"Wood-waste fuel" means whole or chipped untreated wood or clean untreated lumber, tree stumps or tree limbs used as fuel in any fuel-burning equipment. This definition

252:100-19-6. Allowable emission of particulate matter [REVOKED]

~~The emission limits described in 252:100-19-2 and 252:100-19-4 are as follows:~~

Heat Input in Million Emissions British Thermal Unit Per Hour	Maximum Allowable of Particulate Matter in Pounds Per Million British Thermal Units
Up to and including 10	0.60
100	0.35
1,000	0.20
10,000 and above	0.10

252:100-19-7. Particulate matter emission limits [REVOKED]

~~Particulate matter emission limits for fuel burning equipment are set forth in Appendix C of this Chapter.~~

252:100-19-10. Allowable particulate matter emission rates for wood-waste fuel

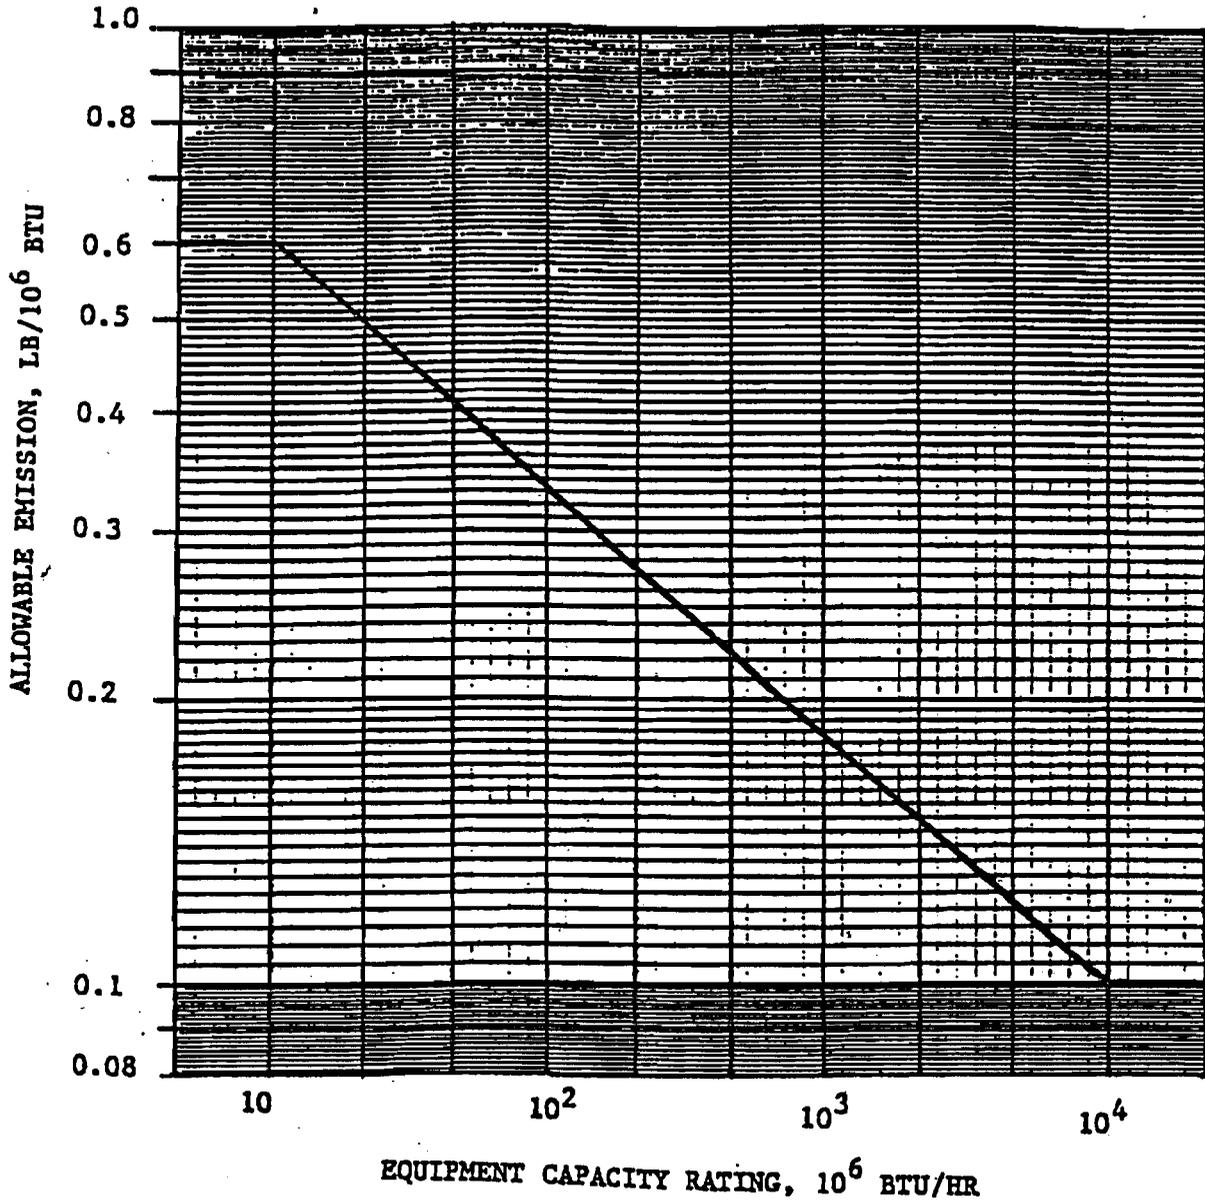

The emission of particulate matter resulting from the combustion of wood-waste fuel in any new or existing fuel-burning unit shall not exceed the limits specified in Appendix D.

252:100-19-11. Combined wood-waste fuel and fossil fuel fired steam generating units

Any combined wood-waste fuel and fossil fuel fired steam generating unit with a maximum design heat input of more than 250 million BTUs per hour which commenced construction after March 4, 1978, shall not emit particulate matter in excess of 0.1 pound per hour-million BTUs.

(draft 5/25/99)

APPENDIX C. PARTICULATE MATTER EMISSION LIMITS FOR FUEL-BURNING EQUIPMENT [REVOKED]

**APPENDIX C. PARTICULATE MATTER EMISSION LIMITS FOR FUEL-
BURNING EQUIPMENT [NEW]**

Maximum Design Heat Input In Million British Thermal Units Per Hour	Allowable Particulate Matter Emissions in Pounds Per Hour
10 or less	0.60
11 - 20	0.51
21 - 30	0.46
31 - 40	0.43
41 - 50	0.41
51 - 60	0.39
61 - 70	0.38
71 - 80	0.37
81 - 90	0.36
91 - 100	0.35
101 - 110	0.34
111 - 130	0.33
131 - 150	0.32
151 - 170	0.31
171 - 190	0.30
191 - 220	0.29
221 - 260	0.28
271 - 310	0.27
311 - 360	0.26
361 - 430	0.25
431 - 510	0.24
511 - 610	0.23
611 - 740	0.22
741 - 910	0.21
911 - 1,120	0.20
1,121 - 1,400	0.19
1,401 - 1,770	0.18
1,771 - 2,270	0.17
2,271 - 2,950	0.16
2,951 - 3,900	0.15
3,901 - 5,260	0.14
5,261 - 7,270	0.13
7,271 - 9,999	0.12
10,000 or more	0.10

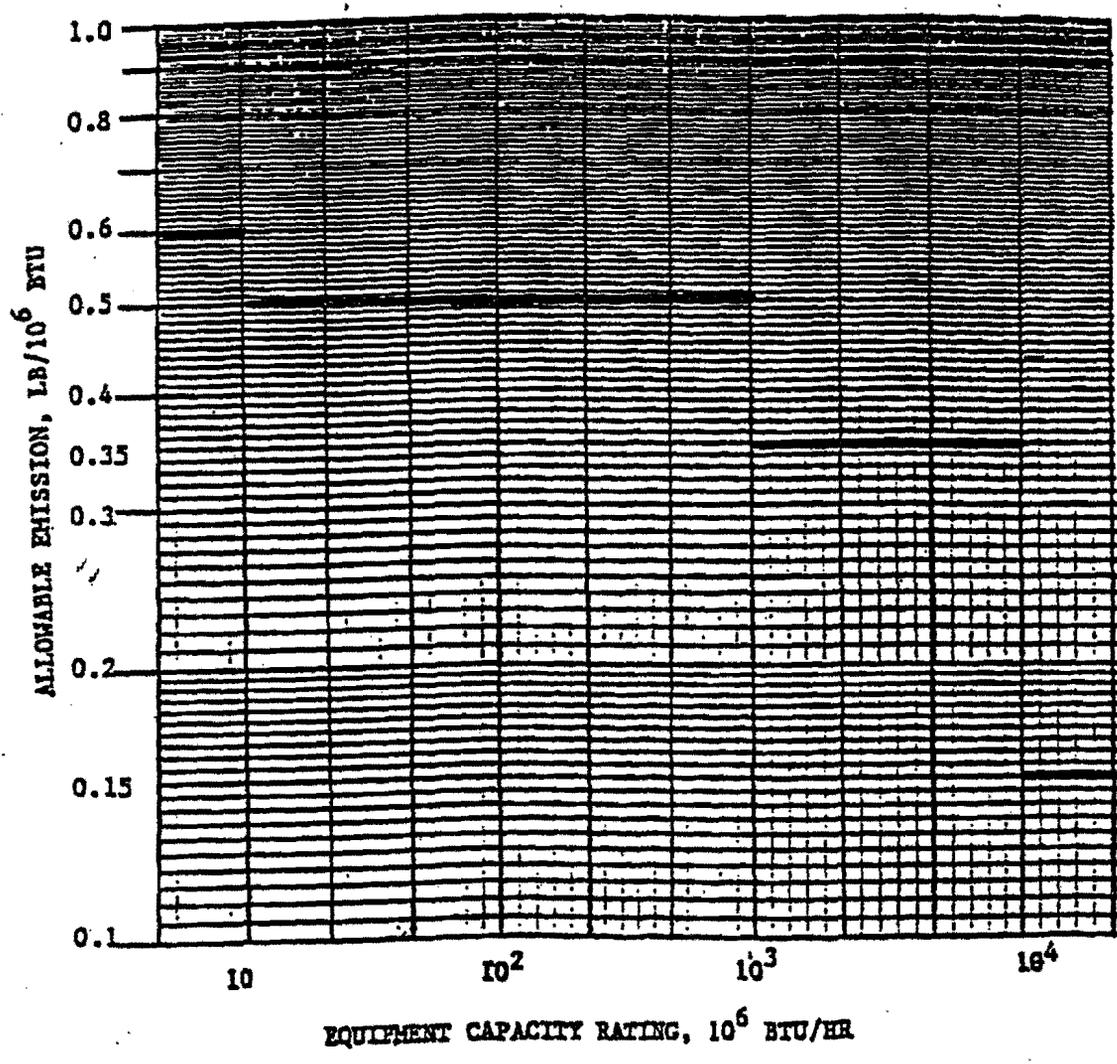

These values were calculated by the formula:

$$E = 1.042808X^{-0.238561}$$

Where:

E = the particulate matter emission limit in pounds per hour and
X = the maximum design heat input in million BTUs per hour.

APPENDIX D. PARTICULATE MATTER EMISSION LIMITS FOR WOOD-WASTE BURNING EQUIPMENT [REVOKED]

APPENDIX D. PARTICULATE MATTER EMISSION LIMITS FOR WOOD-
WASTE FUEL-BURNING EQUIPMENT [NEW]

Maximum Design Heat Input in Million British Thermal Units per Hour	Maximum Allowable Particulate Matter Emissions in Pounds per Hour
Less than 10	0.60
10 to less than 1,000	0.50
1,000 to less than 10,000	0.35
10,000 or more	0.15

August 9, 1999

MEMORANDUM

TO: Air Quality Council

FROM: Eddie Terrill, Director *ET*
Air Quality Division

SUBJECT: Status of Proposed 252:100-27, Particulate Matter Emissions From Industrial And Other Processes And Operations

On April 20, 1999 the Air Quality Council voted to send revised rule 252:100-27, Particulate Matter Emissions From Industrial And Other Processes And Operations, to the Environmental Quality Board for approval. However, several additional pertinent comments were received by staff following the recommendation by the Air Quality Council. Several commentors mistakenly believed that the Permit By Rule (PBR) relieved permitted sources of the responsibility of adhering to all applicable regulations. Legal staff also expressed concern that inclusion of the PBR as a separate subpart would make referencing it difficult in Subchapter 7. For these reasons, it was decided to not forward the proposed rule to the Board and to resubmit it to the Air Quality Council after the needed changes were made.

Subchapter 27 has been rescheduled again for public hearing at the August 24, 1999 Air Quality Council meeting. Staff also plans to offer revisions to Subchapter 19, Particulate Matter Emissions From Fuel-Burning Equipment, at the same meeting because modifications being proposed for Subchapter 19 reference changes proposed in Subchapter 27 and vice versa. Thus, staff believes both rules should be considered by the Council simultaneously. We regret any inconvenience in having to rehear the proposed rule.

Staff will be recommending the Air Quality Council vote to submit the revised Subchapter to the DEQ Board for approval.

SUBCHAPTER 27. PARTICULATE MATTER EMISSIONS FROM
INDUSTRIAL AND OTHER PROCESSES AND OPERATIONS

Section

252:100-27-1. Purpose

252:100-27-1.1 Definitions

252:100-27-2. Process weight rate emission limitations

252:100-27-3. Exception to emission limits

252:100-27-4. ~~Sampling and~~ Emission testing

252:100-27-5. Allowable rate of emission [REVOKED]

252:100-27-10. Permit by rule

252:100-27-1. Purpose

The purpose of this Subchapter is to control the emission of particulate matter from any ~~operation, process or activity except fuel burning equipment or refuse burning equipment~~ that is not regulated in Subchapter 19.

252:100-27-1.1. Definitions

The following words and terms when used in this Subchapter shall have the following meaning unless the context clearly indicates otherwise.

"Clay plant" means any facility used to process ball clay, bentonite or common clay.

"Concrete plant" means any facility used to bulk mix or truck mix aggregate and Portland cement to form concrete for use in construction. Plants engaged in the production of preformed concrete products are not included in this definition.

"Haul road" means a road on private property used to transport material or equipment by motorized vehicles.

"Particulate matter source" means any source of air pollution in which particulate matter is the predominant emission.

252:100-27-2. Process weight rate emission limitations

~~(a) Existing installations. Eighteen (18) months from and after the effective date of this Subchapter all existing installations must comply with the rates of emissions as specified in 252:100-27-5.~~

~~(b) New installations. From and after the effective date of this Subchapter, all new installations must comply with the rates of emission as specified in 252:100-27-5.~~

~~(c) General provision. No person shall cause, let, permit, suffer, or allow the emission of particulate matter in excess of the process weight rate emission limits specified in Appendix G from any general operation or general combustion operation of particulate matter from any emission point located at a rate in excess of that specified in 252:100-27-5 for the process weight rate allocated to such emission point~~ new or existing facility subject to this Subchapter.

252:100-27-3. Exception to emission limits

Emission of particulate matter during periods of cleaning or adjusting process equipment shall not exceed 150 percent of the limits as set forth in the ~~252:100-27-2~~ Appendix G for a period or periods more than six minutes (6) aggregating not more than six (6) minutes in any sixty (60) consecutive minutes. ~~In~~For those operations utilizing control devices ~~which~~that require regular intermittent cleaning, compliance with this Subchapter will be determined on the basis of the average hourly emission.

252:100-27-4. ~~Sampling and~~Emission testing

(a) ~~Testing.~~ A person responsible for the emission of particulates from any source shall, upon written request of by the Division Director, the owner or operator of a facility subject to this Subchapter shall conduct emission testing, make or have made at his the owner or operators own expense, tests to determine the quantity or quality or bethrate of particulate matter emissions per process weight rate. ~~Alternatively, said person shall be reasonably cooperative with the Director in securing such tests.~~

(b) ~~Methods~~Test methods. Emission tests relating to this Subchapter shall be ~~undertaken~~ performed in compliance with ~~by~~ generally recognized standards or methods of measurements. ~~Methods found in the current ASME Test Code for Dust Separating Apparatus, the ASME Power Test Code, the Code for Determining Dust Concentrations in Gas Streams and the Los Angeles County Source Testing Manual may be used, or applicable test methods contained in 40 CFR 60 Appendix A may be used. but these~~These test methods may be modified or adjusted by the Division Director, in cooperation with the owner or operator of the source, to suit specific sampling conditions or needssource-specific conditions. ~~based upon good judgment and experience. Other methods found to produce reliable results and approved by the Director may be used.~~

(c) ~~Monitoring~~Test monitoring. All emission tests shall be conducted, supervised or approved by a registered professional engineer or other personnel acceptable to the Division Director.

252:100-27-5. Allowable rate of emission [REVOKED]

~~Allowable rate of emissions based on actual process weight rate shall be as tabulated in Appendix G of this Chapter.~~

252:100-27-10. Permit by rule

(a) Applicability. Any new or existing particulate matter facility may be constructed or operated under this section if it meets the requirements in 252:100-7-60 and is one of the facilities described below.

(1) Any stand-alone screening operation that does not have associated crushing and/or grinding facilities.

(2) Any fixed sand and gravel plant or fixed crushed stone plant with a capacity of 25 tons (23 megagrams) per hour or less.

(3) Any portable sand and gravel plant or portable crushed stone plant with a capacity of 150 tons (136 megagrams) per hour or less.

(4) Any clay plant with capacity of 10 tons (9 megagrams) per hour or less.

(5) Any concrete plant.

(6) Any other particulate matter source to which no other specific PBR, NSPS, NESHAP or MACT standard applies.

(b) Requirements. In addition to the requirements of 252:100, the owner or operator of a particulate matter facility permitted under this section shall comply with the following requirements.

(1) Installed water sprays, bag houses, cyclones, or other particulate matter control equipment shall be properly maintained and operated.

(2) Haul roads and material piles shall be watered or treated as necessary to minimize emissions of fugitive dust.

Notice of Public Meeting for August 17, 1999 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. An error was made in publication of our Notice in the July 15 Oklahoma Register. This error necessitated the rescheduling of the meeting to August 24, 1999 in order to stay on track in getting rules to the Environmental Quality Board.

Agendas were posted at the entrance doors at DEQ.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Mr. Wilson - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Fallon - aye; Mr. Kilpatrick - aye; Dr. Grosz - aye; Mr. Breisch - aye. Dr. Canter, and Ms. Slagell did not attend.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the June 15, 1999 Public Meeting/Hearings. Motion was made by Mr. Branecky to approve the Minutes as presented and second was made by Mr. Fallon. Roll call as follows: Mr. Wilson - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Fallon - aye; Mr. Kilpatrick - aye; Dr. Grosz - aye; Mr. Breisch - aye.

Protocol Statement - As protocol officer, Mr. Dyke convened the hearings by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke entered into the hearing record the Hearing Agenda and the Oklahoma Register Notice.

PUBLIC HEARING

OAC 252:100-9

Excess Emission And Malfunction Reporting [AMENDED]

Mr. Dyke called upon Ms. Jeanette Buttram who advised that this rule had been presented to Council on June 15, 1999. She stated that additional clarification of the rule was suggested due to verbal comments received from the public. Also, section 252:100-9-4 was amended and renumbered to 252:100-9-3.2. Section 252:100-9-5 was amended and renumbered to 252:100-9-3.1; and 252:100-9-6 was amended and renumbered to 252:100-0-3.2.

Written comments were received the day before the Council meeting from Mid-continent Oil and Gas Association of Oklahoma. Due to the time frame, staff did not have adequate time to review the comments in depth but some appeared to be directed towards changes proposed in the draft rule presented to the June Council meeting. After accepting comments and concerns from Council and audience, Ms. Buttram advised that it was staff's suggestion that Council recommend this rule as amended to the Environmental Quality Board as a permanent rule.

Due to discussion and further amendments to be made, Mr. Breisch entertained motion to continue the hearing to Council's October 19 meeting. Ms. Myers made that motion and the second was made by Mr. Wilson. Roll call as follows: Mr. Wilson - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Fallon - aye; Mr. Kilpatrick - aye; Dr. Grosz - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-17, Part 7

Hospital, Medical and Infectious Waste Incinerators Appendix M Emission Limits for HMIWI [NEW]

Mr. Dyke called upon Ms. Cheryl Bradley who stated that the proposed rule had been presented to Council at its April 20 and June 15, 1999 meetings. She advised that staff was proposing an addition of a new Part 7 to the existing SC 17 which would establish state emission standards and other enforceable requirements for existing HMIWI; and a new Appendix M which contains emission limits for HMIWI. Ms. Bradley defined HMIWI as any device that combusts any amount of medical/infectious/hospital waste. She stated that any HMIWI for which construction commenced on or before June 20, 1996, would be subject to the new rule. Ms. Bradley added that these proposed rules would be included in Oklahoma's State 111(d)/129 Plan and would be the enforceable mechanism for implementing the provisions of the Emission Guidelines (EG) for HMIWI (40 CFR 60 Subpart Ce). She further stated that the new Part 7 incorporates by reference sections of the New Source Performance Standards for HMIWI (40 CFR 60 Subpart Ec). She noted that in addition to establishing emission standards for certain regulated pollutants, the new rule would establish requirements for HMIWI operator training and qualifications, waste management plans, and testing and monitoring of pollutants and operating parameters.

Mr. Wilson made a motion that Council continue the hearing until after lunch in order to incorporate some changes in wording to 252:100-17-48. Mr. Branecky seconded that motion and all members agreed. Following the recess, Ms. Bradley proposed the addition of a new paragraph (c) and (d) in 252:100-17-48, and set forth the proposed language. With no further comments from Council or audience on the proposed language, Ms. Bradley advised that it was staff's suggestion that Council recommend adoption of this rule to the Environmental Quality Board at its September 28, 1999 meeting as both emergency and permanent rule. That motion was made by Mr. Wilson and the second by Ms. Myers. Roll call as follows: Mr. Wilson - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Fallon - aye; Mr. Kilpatrick - aye; Dr. Grosz - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

State 111(d) /129 Plan For Hospital/Medical/Infectious Waste Incinerators (HMIWI)

Mr. Dyke called upon Ms. Cheryl Bradley for staff presentation regarding the State Plan. Ms. Bradley advised that although Council approval of the Plan was not required because it is not a rulemaking action in

and of itself, staff wanted to hear comments that the Council or public might have on the proposal. Ms. Bradley advised that the State Plan would be the mechanism to implement the Emission Guidelines for hospital/medical/infectious waste incinerators. She pointed out the necessary steps that were required to develop the State Plan.

Due to the fact that the hearing on Subchapter 17 was continued to after lunch, Council moved to continue the hearing on the Plan also. Mr. Kilpatrick made the motion to continue the hearing until after the hearing on SC 17 and the second was made by Mr. Branecky. All members agreed. After reconvening, Council voted to forward the proposed State Plan to EPA Region 6. Roll call as follows: Mr. Wilson - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Fallon - aye; Mr. Kilpatrick - aye; Dr. Grosz - aye; Mr. Breisch - aye.

PUBLIC HEARING (COMBINED HEARINGS ON SC 19 AND SC 21)

OAC 252:100-19

Particulate Matter Emissions From Fuel-Burning Equipment [AMENDED]

Appendix C Particulate Matter Emissions Limits For Fuel Burning Equipment [REVOKED]

Appendix C Particulate Matter Emissions Limits For Fuel Burning Equipment [NEW]

OAC 252:100-21

Particulate Matter Emissions From Wood-Waste Burning Equipment [REVOKED]

Appendix D Particulate Matter Emission Limits For Wood-Waste Burning Equipment [REVOKED]

Appendix D Particulate Matter Emission Limits For Wood-Waste Burning Equipment [NEW]

Mr. Dyke opened the hearing advising that both SC 19 and SC 21 would be heard together as they are related items and called upon Mr. Max Price for the staff presentation. Mr. Price stated that these revisions would satisfy the Agency's re-right/de-wrong initiative and clarify and simplify the language of SC 19 and incorporate the requirements of SC 21. Mr. Price explained that staff would ask that SC 21 be revoked and that the graphical Appendices C and D be revoked in favor of two new tabular appendices. Mr. Price pointed out that comments had been received and that it was staff's recommendation that these proposals be continued until Council's next meeting in October. After further discussion by Council and members of the audience, Mr. Breisch entertained a motion to continue this item to the next regular meeting on October 19. Dr. Grosz made the motion and the second was made by Mr. Branecky. Roll call as follows: Mr. Wilson - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Fallon - aye; Mr. Kilpatrick - aye; Dr. Grosz - aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-27

Particulate Matter Emissions From Industrial And Other Processes And Operations [AMENDED]

Mr. Dyke opened the next item and called upon Mr. Max Price to make staff presentation. Mr. Price advised that SC 27 compliments SC 19 and SC 21 and that these proposed changes would clarify and simplify language according to the Agency's re-right/de-wrong initiative. He reminded that Council had originally voted to send this subchapter to the Environmental Quality Board on April 20, 1999, however, some late comments prompted the withdrawal by the staff to make further refinements. He then pointed out the latest proposed changes.

Due to additional questions and comments from Council and members of the audience regarding the definition of wood-waste fuel, Mr. Breisch called for a motion to continue the hearing to the Council's October 19 meeting. Mr. Fallon made the motion and the second was made by Mr. Kilpatrick. Roll call

was taken as follows: Mr. Wilson - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Fallon - aye; Mr. Kilpatrick - aye; Dr. Grosz - aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-35

Control Of Emission Of Carbon Monoxide [AMENDED]

Mr. Dyke opened this item for consideration and called upon Ms. Michelle Martinez to make the staff presentation. Ms. Martinez discussed the proposed revisions stating that they would simplify and clarify the rule as a part of the agency-wide re-right/de-wrong initiative. Ms. Martinez added that the scope of the Subchapter was narrowed to specific sources that are the primary contributors of carbon monoxide emissions. She related that it is often impossible for small sources to achieve a 93% reduction in carbon monoxide emissions as required by the rule without increasing other emissions. She pointed out that specific changes include the addition of the definitions "existing source" and "new source" along with the addition of the effective date of the rule. Ms. Martinez added that Section 35-3, Performance Testing, was revoked because the Air Quality Division has been given the authority to request this testing in the Oklahoma Clean Air Act and performance testing requirements have already been provided for in SC 8 and in SC43. Ms. Martinez advised of comments that had been received stating that staff had not had sufficient time to consider these comments; and suggested that Council continue the hearing to its October meeting to allow further time. Ms. Myers made the motion to continue and Mr. Branecky made the second with roll call as follows: Mr. Wilson - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Fallon - aye; Mr. Kilpatrick - aye; Dr. Grosz - aye; Mr. Breisch - aye.

NEW BUSINESS - It was decided that the October 19 regular meeting would begin at 9:00 a.m. due to the number of agenda items and would follow the same format of eliminating the briefing session and would start immediately with the hearings on record.

ADJOURNMENT With no further business, meeting was adjourned with announcement that the next regularly scheduled meeting would be October 19, 1999 in the Auditorium of the Tulsa City-County Health Department at 9:00 a.m.

NOTE: The sign-in sheet is attached as an official part of these Minutes.

AGENDA
AIR QUALITY COUNCIL
DEPARTMENT OF ENVIRONMENTAL QUALITY
HEARING/MEETING

* 9:00 A.M.

Tuesday, October 19, 1999
Tulsa City-County Auditorium
5051 South 129 Street East Avenue
Tulsa, Oklahoma

1. Call to Order – Bill Breisch
 2. Roll Call – Myrna Bruce
 3. CY 2000 Meeting Schedule
 4. A. Discussion by Council
 5. Approval of Minutes of the August 24, 1999 Regular Meeting
 5. Public Rulemaking Hearings
- A. OAC 252:100-4 New Source Performance Standards**
Proposal would update the incorporations by reference of the federal NSPS from 7-1-97 to 7-1-99. Previously, incorporated NSPS subparts that have been amended by the USEPA since 7-1-97 are: AA, AAa, Da, Db, Eb, and WWW. A new Subpart Ec has been added to the NSPS. Subpart Ce was added to 252:100-4-5 as an exception.
1. Presentation – Michelle Martinez
 2. Questions and discussion by Council / Public
 3. Possible action by Council
 4. Roll call vote(s) for emergency and permanent adoption
- B. OAC 252:100-5 Registration, Emission Inventory and Annual Operating Fees**
Proposal is designed to allow the Agency to bill annual operating fees on a flexible schedule; to allow the fees to be based on the most recent emission data possible; requires an owner or operator of a facility to report excess emissions on their annual emission inventory; requires inventories to be submitted one month earlier than presently required allowing fee payers five years after payment is made to notify the DEQ that they overpaid and to receive credit for such overpayment; and reducing the period of time to six months in which either the DEQ or the facility owner or operator can challenge the data or methods used to calculate the facility's emissions.
1. Presentation – Jeanette Buttram
 2. Questions and discussion by Council / Public
 3. Possible action by Council
 4. Roll call vote(s) for permanent adoption
- C. OAC 252:100-9 Excess Emission and Malfunction Reporting [AMENDED]**
Proposal would simplify the language under the agency-wide re-right/de-wrong initiative including correction of typographical and grammatical errors and deletion of redundant language. Substantive changes include narrowing the scope of the rule to minor facilities only. A new condition was added to explain when excess emissions from a process are due to a malfunction and when they are due to negligent, marginal, or unsafe operation. The new language establishes a rebuttable presumption that the combined time of all excess emissions from a process due to a malfunction does not exceed eight hours or 1.5% of the process's operation time, whichever is greater, in a 3-month period. The burden of proving that excess emissions occurring more often are due to a malfunction rather than negligent, marginal, or unsafe operation is on the owner or operator of the process.
1. Presentation – Jeanette Buttram
 2. Questions and discussion by Council / Public
 3. Possible action by Council
 4. Roll call vote(s) for permanent adoption
- D. OAC 252:100-13. Prohibition of Open Burning**
Proposal would simplify the language under the agency-wide re-right/de-wrong initiative including consolidating the general conditions and requirements for allowed open burning into a new section. Substantive changes would add certain definitions and notification requirements.
1. Presentation – Jeanette Buttram
 2. Questions and discussion by Council / Public
 3. Possible action by Council
 4. Roll call vote(s) for permanent adoption

- E. COMBINED**
 OAC 252:100-19 Particulate Matter Emissions from Fuel-burning Equipment [AMENDED]
 OAC 252:100-21 Particulate Matter Emissions from Wood-Waste Burning Equipment [REVOKED]
 OAC 252:100-27 Particulate Matter Emissions from Industrial and Other Processes and Operation [REVOKED]
 Appendix C Particulate Matter Emissions Limits for Fuel Burning Equipment [REVOKED]
 Appendix D Particulate Matter Emission Limits for Wood-Waste Burning Equipment [REVOKED]
 Appendix C Particulate Matter Emissions Limits for Fuel Burning Equipment [NEW]
 Appendix D Particulate Matter Emission Limits for Wood-Waste Burning Equipment [NEW]
 Proposal would merge requirements into SC 19 and revoke SC 21 and SC 27. SC 19, as proposed, would simplify the language under the agency-wide re-right/de-wrong initiative. Also a Permit by Rule for particulate matter facilities is being proposed for SC 19. The graphics in Appendices C and D would be replaced by two new tabular appendices.
1. Presentation – Max Price
 2. Questions and discussion by Council / Public
 3. Possible action by Council
 4. Roll call vote(s) for permanent adoption
- F. OAC 252:100-35 Control of Emission of Carbon Monoxide [AMENDED]**
 Proposal would simplify and clarify the language under the agency-wide re-right/de-wrong initiative; and narrow the scope to specific sources that are the primary emitters of carbon monoxide. Other changes include addition of definitions "existing source" and "new source" and the replacement of "foundry cupola" with "gray iron cupola". Also, Section 35-3 would be revoked because performance testing requirements are already provided for in SC 8 and SC 43.
1. Presentation – Michelle Martinez
 2. Questions and discussion by Council / Public
 3. Possible action by Council
 4. Roll call vote(s) for emergency and permanent adoption
- H. OAC 252:100-41 Sections 15 and 16, Control of Emission of Hazardous and Toxic Air Contaminants [AMENDED]**
 Proposal would simplify and clarify the language under the agency-wide re-right/de-wrong initiative. The proposed changes to section 15 would incorporate by reference the MACT standards for hazardous air pollutants in 40 CFR 63 promulgated by EPA from 7-1-98 through 7-1-99. The proposed changes to section 16 would update to 7-1-99 the NESHAP found in 40 CFR 61.
1. Presentation – Cheryl Bradley
 2. Questions and discussion by Council / Public
 3. Possible action by Council
 4. Roll call vote(s) for emergency and permanent adoption
- I. OAC 252:100-47 Control of Emission from Existing Municipal Solid Waste Landfills [AMENDED]**
 Proposal would amend to update the incorporation by reference of 40 CFR 60.751 through 60.759 to 7-1-99.
1. Presentation – Cheryl Bradley
 2. Questions and discussion by Council / Public
 3. Possible action by Council
 4. Roll call vote(s) for emergency and permanent adoption
6. Division Director's Report – Eddie Terrill
 7. New Business – Any matter not known about, or which could not have been reasonably foreseen, prior to the time of posting the agenda.
 8. Adjournment – Next Regular Meeting
 Tuesday, December 14, 1999 DEQ Multi-Purpose Room

* Council decided at its August 24 meeting to begin early due to the number of agenda items

Lunch Break, if necessary

October 1, 1999

MEMORANDUM

TO: Air Quality Council
FROM: Eddie Terrill, Director
Air Quality Division
SUBJECT: Modifications to Subchapters 19, 21, and 27

Please find enclosed proposed revisions to OAC 252:100-19, Particulate Matter Emissions from Fuel-Burning Equipment; OAC 252:100-21, Particulate Matter Emissions From Wood-Waste Burning Equipment; and OAC 252:100-27, Particulate Matter Emissions From Industrial And Other Processes And Operations.

On August 24, 1999 the staff proposed to the Council that the requirements contained in Subchapters 19 and 21 be merged into a single subchapter (19) and that Appendices C and D be revoked in favor of new non-graphic appendices. The staff also recommended that the changes to subchapter 27 be approved and that the subchapter be sent to the Environmental Quality Board for final approval. Council voted to hold over all these proposals until its October meeting.

Since the last Council meeting, staff continued to revise the three subchapters and recommends the following changes:

1. merge the applicable requirements of Subchapter 27 into Subchapter 19 (the staff will ask that Subchapter 27 be revoked);
2. replace the definition of "wood-waste" with a definition for the term "wood fuel";
3. simplify section 252:100-19-13, Permit by Rule, by deleting some redundant language; and
4. refine Appendix C by the addition of a formula for calculating allowable emissions for BTU values between 1,000 and 10,000 MMBTU/hr.

At the October 19 Air Quality Council meeting, staff will suggest that Council approve revocation of Subchapters 21 and 27 and approve the changes to Subchapter 19, including the addition of the PBR, section 252:100-19-13, for small particulate matter facilities. In addition, staff will request that the Appendices C and D be revoked and replaced with new non-graphic Appendices C and D. Staff will then recommend that the Air Quality Council vote to submit all these revisions to the Environmental Quality Board for approval as a permanent rule.

Enclosures: 7

**SUBCHAPTER 19. CONTROL OF EMISSION OF PARTICULATE MATTER
FROM FUEL-BURNING EQUIPMENT**

Section

252:100-19-1. Purpose

252:100-19-1.1. Definitions

252:100-19-2. Emission of particulate matter prohibited[REVOKED]

252:100-19-3. Existing equipment[REVOKED]

252:100-19-4. ~~New equipment~~ Allowable particulate matter emission rates

252:100-19-5. Refuse burning prohibited[REVOKED]

252:100-19-6. Allowable emission of particulate matter[REVOKED]

252:100-19-7. Particulate matter emission limits[REVOKED]

252:100-19-10. Allowable particulate matter emission rates from indirectly fired wood fuel-burning units

252:100-19-11. Allowable particulate matter emission rates from combined wood fuel and fossil fuel fired steam generating units

252:100-19-12. Allowable particulate matter emission rates from directly fired fuel-burning units and industrial processes

252:100-19-13. Permit by rule

252:100-19-1. Purpose

The purpose of this Subchapter is to control the amount of particulates released into the air by the use of fuel-burning equipment. emission of particulate matter.

252:100-19-1.1. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning unless the context clearly indicates otherwise:

"Directly fired" means that the hot gasses produced by the flame or heat source come into direct contact with the material being processed or heated.

"Fuel-burning unit" means any internal combustion engine or gas turbine, or other combustion device used to convert the combustion of fuel into usable energy.

"Fossil fuel" means coal, petroleum, natural gas, or any fuel derived from coal, petroleum, or natural gas.

"Haul road" means a road on private property used to transport material or equipment by motorized vehicles.

"Indirectly fired" means that the hot gasses produced by the flame or heat source do not come into direct contact with the material, excluding air, being processed or heated.

"Industrial process" means any source, activity or equipment, excluding fuel-burning units, which can

reasonably be expected to emit particulate matter. The term includes, but is not limited to crushing, milling, screening, mixing and conveying. The term does not include maintenance activities unless maintenance is the primary activity of the facility.

"Particulate matter facility" means a facility from which particulate matter is the predominant emission, excluding fugitive emissions and emissions resulting from control equipment malfunctions.

"Wood fuel" means any fuel which, excluding air and water, is at least 95 percent by weight cellulose, hemicellulose and lignin, and has a heat value of less than 10,000 BTU per pound.

252:100-19-2. Emission of particulate matter prohibited[REVOKED]

~~The emission or escape into the open air of particulates resulting from the combustion of fuel in any fuel-burning equipment or from any stack connected thereto in quantities in excess of that indicated in 252:100-19-6 or 252:100-19-7 is hereby prohibited.~~

252:100-19-3. Existing equipment[REVOKED]

~~Any fuel-burning equipment in operation prior to the effective date of this Subchapter shall not emit particulate matter in excess of 0.6 pounds per million B.T.U. heat input provided that all such existing equipment shall comply with 252:100-19-2 within eighteen (18) months from and after July 21, 1970.~~

252:100-19-4. New equipmentAllowable particulate matter emission rates from fuel-burning units

Except as provided in 252:100-19-10, 252:100-19-11 and 252:100-19-12 ~~The~~ the emission or escape into the open air of particulate matter resulting from the combustion of fuel in any new or existing fuel-burning unitequipment in quantities exceeding ~~shall not exceed the limits specified in 252:100-19-6 for the size of equipment involved, is prohibited~~ Appendix C. able to that fuel burning unit. ~~These limitations shall apply when the fuel burning equipment is operating at the maximum design heat input rating. The heat input rating of any unit discharging to a single stack shall be the maximum design input rating, including both heat available from burning of fuel and any sensible heat from materials introduced into the combustion zone of a standard temperature of 60 F. For a heat input between any two (2) consecutive heat inputs stated in 252:100-19-6, maximum allowable emissions of particulate matter are shown in 252:100-19-6. When one fuel-burning unit is connected to~~

~~two or more stack equipment shall be the criterion for the maximum allowable total emission from all stacks combined.~~

252:100-19-5. Refuse burning prohibited[REVOKED]

~~The burning of refuse in fuel burning equipment is prohibited except in equipment specifically designed to burn refuse.~~

252:100-19-6. Allowable emission of particulate matter[REVOKED]

~~The emission limits described in 252:100-19-2 and 252:100-19-4 are as follows:~~

Heat Input in Million Emissions British Thermal Unit Per Hour	Maximum Allowable of Particulate Matter in Pounds Per Million British Thermal Units
Up to and including 10	0.60
100	0.35
1,000	0.20
10,000 and above	0.10

252:100-19-7. Particulate matter emission limits[REVOKED]

~~Particulate matter emission limits for fuel burning equipment are set forth in Appendix C of this Chapter.~~

252:100-19-10. Allowable particulate matter emission rates from indirectly fired wood fuel-burning units

The emission of particulate matter resulting from the combustion of wood fuel in any new or existing indirectly fired fuel-burning unit shall not exceed the limits specified in Appendix D.

252:100-19-11. Allowable particulate matter emission rates from combined wood fuel and fossil fuel fired steam generating units

Any combined wood fuel and fossil fuel fired steam generating unit with a maximum design heat input of more than 250 million BTUs per hour which commenced construction after March 4, 1978, shall not emit particulate matter in excess of 0.1 pound per million BTUs.

252:100-19-12. Allowable particulate matter emission rates from directly fired fuel-burning units and industrial processes

(a) Allowable particulate matter emission rates. The emission of particulate matter from any new or existing

directly fired fuel-burning unit or from any emission point in an industrial process shall not exceed the limits specified in Appendix G.

(b) Exception to the allowable particulate matter emission rates for industrial processes. Emission of particulate matter from an emission point during periods of cleaning or adjusting industrial process equipment shall not exceed 150 percent of the limits as set forth in Appendix G for more than six (6) minutes in any sixty (60) consecutive minutes. For those operations utilizing control devices that require regular intermittent cleaning, compliance with this Section will be determined on the basis of the average hourly emission.

252:100-19-13. Permit by rule

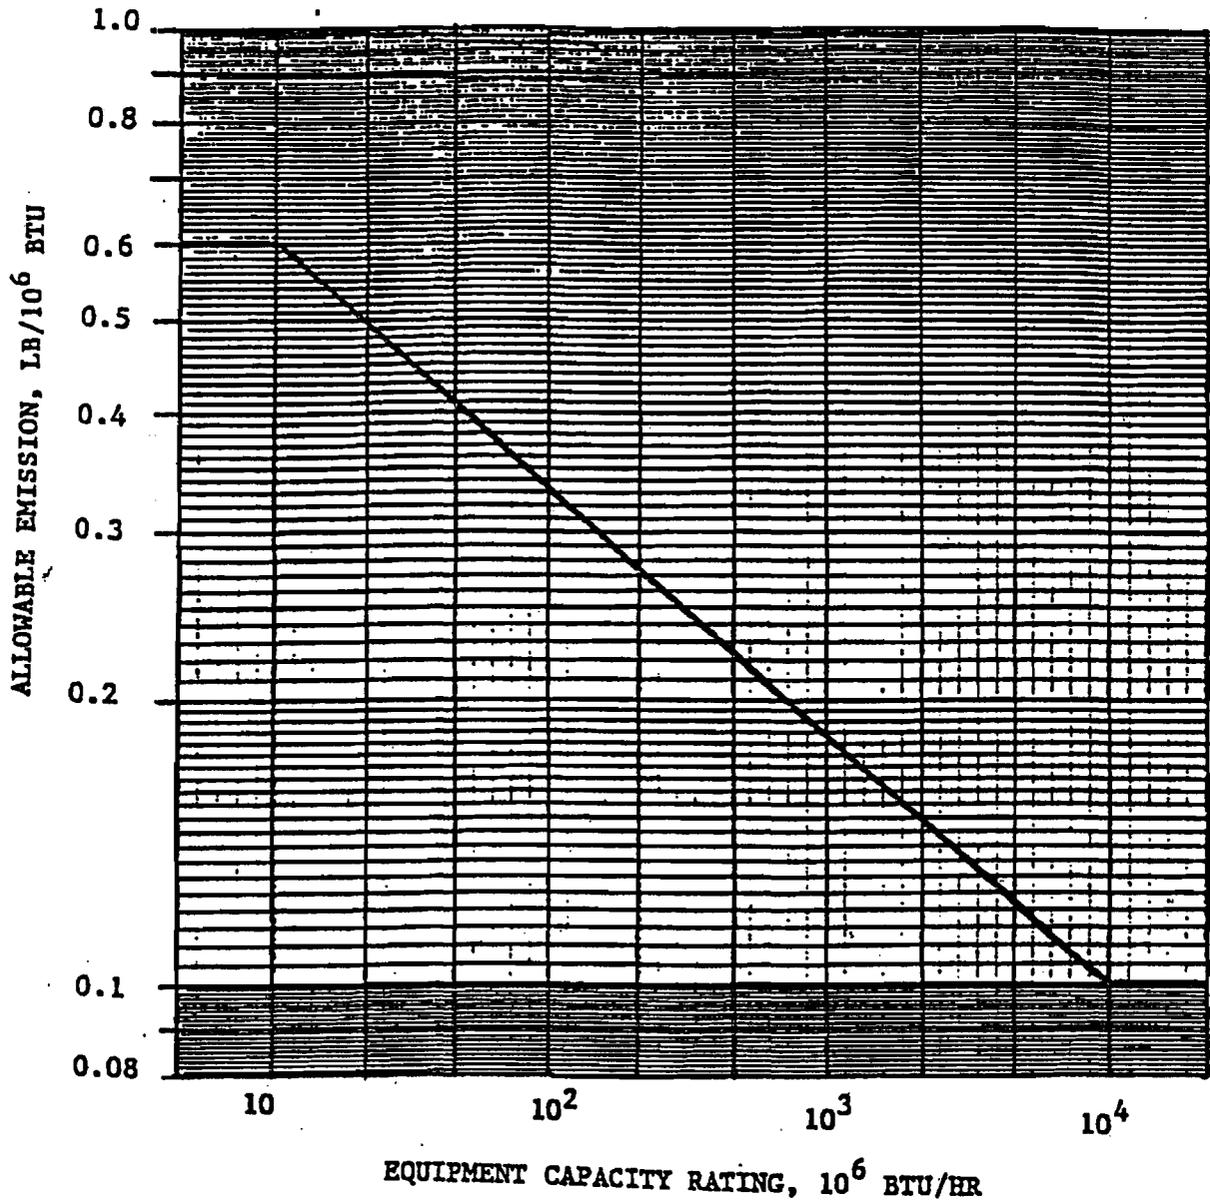

(a) Applicability. Any particulate matter facility may be constructed or operated under this section if:

- (1) it meets the requirements in 252:100-7-60, and
- (2) it is not subject to any New Source Performance Standard (NSPS), National Emission Standard for Hazardous Air Pollutants (NESHAP), Maximum Achievable Control Technology (MACT) standard or other Permit by Rule (PBR).

(b) Requirements. In addition to the requirements of 252:100, the owner or operator of a particulate matter facility permitted under this section shall comply with the following requirements.

- (1) All water sprays, bag houses, cyclones, or other particulate matter control equipment shall be properly maintained and operated.
- (2) Haul roads and material piles shall be watered or treated as necessary to minimize emissions of fugitive dust.

APPENDIX C. PARTICULATE MATTER EMISSION LIMITS FOR FUEL-BURNING EQUIPMENT [REVOKED]

APPENDIX C. ALLOWABLE RATE OF EMISSIONS [NEW]

1,890	0.17
2,330	0.16
2,910	0.15
3,690	0.14
4,760	0.13
6,280	0.12
8,500	0.11
10,000 or more	0.10

Allowable emissions may be calculated by use of the following formulas:

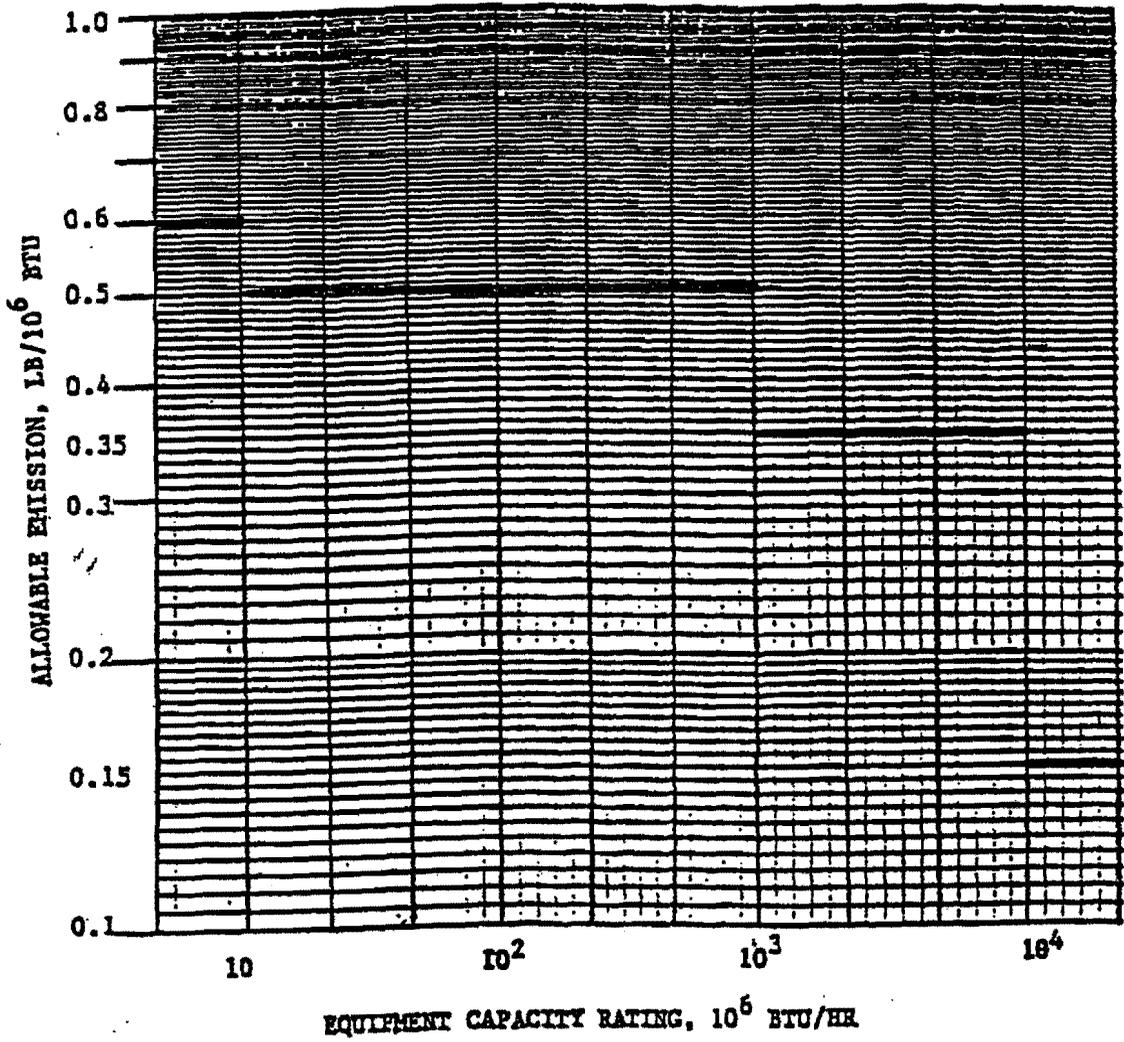

$$E = 1.042808X^{-0.238561} \text{ (for values for X greater than 10 MMBTU but less than 1,000 MMBTU) or}$$

$$E = 1.6X^{-0.30103} \text{ (for values for X greater than or equal to 1,000 MMBTU but less than 10,000 MMBTU).}$$

Where:

E = the particulate matter emission limit in pounds per MMBTU input and
X = the maximum heat input in MMBTU per hour.

APPENDIX D. PARTICULATE MATTER EMISSION LIMITS FOR WOOD-WASTE BURNING
EQUIPMENT [REVOKED]

APPENDIX D. ALLOWABLE RATE OF EMISSIONS[NEW]

Maximum Heat Input In
Million British Thermal
Units Per Hour

Allowable Particulate
Matter Emissions In Pounds Per
Million British Thermal Units

Less than 10	0.60
10 to less than 1,000	0.50
1,000 to less than 10,000	0.35
10,000 or more	0.15

**SUBCHAPTER 27. PARTICULATE MATTER EMISSIONS FROM
INDUSTRIAL AND OTHER PROCESSES AND OPERATIONS [REVOKED]**

Section

- 252:100-27-1. Purpose
- 252:100-27-2. Process emission limitations
- 252:100-27-3. Exception to emission limits
- 252:100-27-4. Sampling and testing
- 252:100-27-5. Allowable rate of emission

252:100-27-1. Purpose [REVOKED]

~~The purpose of this Subchapter is to control the emission of particulate matter from any operation, process or activity except fuel burning equipment or refuse burning equipment.~~

252:100-27-2. Process emission limitations [REVOKED]

~~(a) Existing installations. Eighteen (18) months from and after the effective date of this Subchapter all existing installations must comply with the rates of emissions as specified in 252:100-27-5.~~

~~(b) New installations. From and after the effective date of this Subchapter, all new installations must comply with the rates of emission as specified in 252:100-27-5.~~

~~(c) General provision. No person shall cause, let, permit, suffer, or allow the emission from any general operation or general combustion operation of particulate matter from any emission point at a rate in excess of that specified in 252:100-27-5 for the process weight rate allocated to such emission point.~~

252:100-27-3. Exception to emission limits [REVOKED]

~~Emission of particulate matter during periods of cleaning or adjusting process equipment shall not exceed 150 percent of the limits as set forth in the 252:100-27-2 for a period or periods aggregating not more than six (6) minutes in any sixty (60) consecutive minutes. In those operations utilizing control devices which require regular intermittent cleaning, compliance with this Subchapter will be determined on the basis of the average hourly emission.~~

252:100-27-4. Sampling and testing [REVOKED]

~~(a) Testing. A person responsible for the emission of particulates from any source shall, upon written request of the Director, make or have made at his own expense, tests to determine the quantity or quality or both. Alternatively, said person shall be reasonably cooperative with the Director in securing such tests.~~

~~(b) **Methods.** Emission tests relating to this Subchapter shall be undertaken by generally recognized standards or methods of measurements. Methods found in the current ASME Test Code for Dust Separating Apparatus, the ASME Power Test Code, the Code for Determining Dust Concentrations in Gas Streams and the Los Angeles County Source Testing Manual may be used, but these may be modified or adjusted by the Director, in cooperation with the operator of the source, to suit specific sampling conditions or needs based upon good judgment and experience. Other methods found to produce reliable results and approved by the Director may be used.~~

~~(c) **Monitoring.** All tests shall be conducted, supervised or approved by a registered professional engineer.~~

252:100-27-5. Allowable rate of emission [REVOKED]

~~Allowable rate of emissions based on actual process weight rate shall be as tabulated in Appendix C of this Chapter.~~

Guests Present

**see attached list

Notice of Public Meeting for October 19, 1999 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance doors at the Tulsa City-County Health Department.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye. Dr. Canter, and Dr. Grosz did not attend. Mr. Breisch announced that Ms. Slagell had offered her resignation to the Governor.

CY 2000 Meeting Schedule - Council was presented with dates emulating the past years of the third Tuesday in February, April, June, August, October, and December. There was discussion to change the day of week to Wednesday of these months which would accommodate both staff and Council. Council voted to continue this item to the December 14 meeting. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the August 24, 1999 Public Meeting/Hearings. Motion was made by Mr. Branecky to approve the Minutes as presented and second was made by Mr. Kilpatrick. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

Protocol Statement - As protocol officer, Mr. Dyke convened the hearings by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke entered the Agenda and the Oklahoma Register Notice into the record.

PUBLIC HEARING

OAC 252:100-4

New Source Performance Standards [AMENDED]

Ms. Michelle Martinez made staff presentation advising Council that the proposed amendments to Subchapter 4 would update the incorporations by reference of the federal NSPS from July 1, 1997 to July 1, 1999. She pointed out that previously incorporated NSPS subparts that had been amended by the EPA since July 1, 1997 were: AA, AAa, Da, Db, Eb, and WWW. She advised that a new Subpart Ec had been added to the NSPS and that Subpart Ce was added to 252:100-4-5. She advised that this was the first time for the proposal to be considered, but staff's recommendation would be to request that the rule be sent to the Environmental Quality Board for permanent and emergency adoption. She pointed out that since the amendments update the incorporation by reference of new federal rules, adoption as an emergency would allow the amended rule to take effect earlier than June 1, 2000 and make state rules consistent with federal rules.

Mr. Breisch entertained motion to forward this rule to the Environmental Quality Board for both emergency and permanent adoption. Motion was made by Mr. Kilpatrick and second to the motion was by Ms. Myers. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-5

Registration, Emission Inventory and Annual Operating Fees [AMENDED]

Ms. Jeanette Buttram made the staff presentation advising that the proposed changes to Subchapter 5 were designed to allow the agency to bill annual operating fees on a flexible schedule, and that the changes should also allow the fees to be based on the most recent emission data possible. Ms. Buttram advised that the proposed rule language would also require an owner or operator of a facility to report excess emissions on their annual emission inventory. Ms. Buttram pointed out that substantive changes included the requirement that inventories were to be submitted one month earlier than presently required which would allow fee payers five years after payment is made to notify the DEQ that they overpaid and to receive credit for such overpayment. That change would also reduce the period of time to six months in which either the DEQ or the facility owner or operator could challenge the data or methods used to calculate the facility's emissions.

Ms. Buttram advised that comments had been received from Fort James and EPA which were included in this proposal and that comments from Weyerhaeuser received the day before would be considered in the next draft of the rule; therefore, staff recommended that the rule be continued to the December meeting.

Comments and questions were discussed from Council members and the audience. Comments were heard from Stephen Landers of Ft. James; Mike Wood, Weyerhaeuser; Howard Ground, Central and Southwest; Bill Fishback; Mid-Continent Oil and Gas; Tom Bauckham, Reliant Energy; Gary Collins, Terra. Following discussion, Mr. Breisch entertained motion to continue

the rule to Council's December 14 meeting per staff recommendation. Motion to continue was made by Ms. Myers with the second made by Mr. Wilson. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-9

Excess Emission And Malfunction Reporting [AMENDED]

Ms. Jeanette Buttram gave the staff presentation advising that the proposed changes to Subchapter 9 included correction of typographical and grammatical errors and deletion of redundant language and was simplified and clarified according to the agency-wide re-right/de-wrong initiative. Ms. Buttram pointed out substantive changes to the rule which included narrowing the scope of the rule to minor facilities only. She advised that a new condition was added to explain when excess emissions from a process are due to a malfunction and when they are due to negligent, marginal, or unsafe operation advising that the new language would establish a rebuttable presumption that the combined time of all excess emissions from a process due to a malfunction does not exceed eight hours or 1.5 % of the process's operation time, whichever is greater, in a three-month period. Ms. Buttram added that the burden of proving that excess emissions occurring more often are due to a malfunction rather than negligent, marginal, or unsafe operation is on the owner or operator of the process.

Ms. Buttram entered into the record comments received from Mid-Continent Oil and Gas Association and from EPA. She further advised that the EPA comments indicated that further changes might need to be made to the rule due to their recent review of Oklahoma's SIP. Ms. Buttram advised that due to these comments, staff recommendation would be to continue this rule to the December meeting to allow staff more time to review the EPA guidance document. Mr. Tom Diggs, EPA, was asked to explain that document in detail and accepted comments regarding same. Additional comments were made by Bill Fishback.

Mr. Breisch entertained motion to continue this rule to the December meeting. Motion was made by Mr. Branecky with the second by Mr. Fallon. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-13

Prohibition of Open Burning [AMENDED]

Mr. Dyke again called upon Ms. Jeanette Buttram who advised that the proposed changes to Subchapter 13 would simplify and clarify the Subchapter as a part of the agency-wide re-right/de-wrong initiative. She pointed out that such changes include consolidating the general conditions and requirements for allowed open burning into a new section; and that a few substantive changes were made such as adding definitions for "domestic refuse" and "land clearing operation" and a section on disaster relief procedures. Ms. Buttram continued stating

that in some instances, the requirement to notify the DEQ or other appropriate official for authorization to burn was added and that the open-pit incinerator requirements were moved to a new section. She pointed out the proposal would require owners or operators to register with their local DEQ office; however, if the owner or operator anticipates operating an open-pit incinerator in the same pit for more than 90 days in a 365-day period, they would be required to obtain a permit and pay the required permit fee adding that hazardous materials may not be burned in an open-pit incinerator unless prior written approval has been obtained from both the local fire chief and the DEQ.

Ms. Buttram entered written comments from EPA and a letter from the City of Hobart into the record.

Following questions and discussion by Council, Mr. Breisch entertained motion to continue this rule to the December meeting. Motion was made by Ms. Myers with the second by Mr. Fallon. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARINGS (COMBINED HEARINGS ON SC 19, SC 21, and SC 27)

OAC 252:100-19 Particulate Matter Emissions from Fuel-burning Equipment [AMENDED]

OAC 252:100-21 Particulate Matter Emissions from Wood-Waste Burning Equipment [REVOKED]

OAC 252:100-27 Matter Emissions from Industrial and Other Processes and Operation [REVOKED]

APPENDIX C Particulate Matter Emissions Limits for Fuel Burning Equipment [REVOKED]

APPENDIX D Particulate Matter Emission Limits for Wood-Waste Burning Equipment [REVOKED]

APPENDIX C Particulate Matter Emissions Limits for Fuel Burning Equipment [NEW]

APPENDIX D Particulate Matter Emission Limits for Wood-Waste Burning Equipment [NEW]

Mr. Dyke called upon Mr. Max Price to make the staff presentation regarding these combined rules. Mr. Price advised that Subchapters 19, 21, and 27 all deal with particulate matter (PM) emissions and that the proposed changes merged the requirements of Subchapter 21 and Subchapter 27 into Subchapter 19; then Subchapters 21 and 27 would be revoked. Mr. Price pointed out that Subchapter 19 as proposed would be simplified and clarified according to the agency-wide re-right/de-wrong initiative. He advised that a permit by rule for particulate matter facilities is being proposed for Subchapter 19. Mr. Price also advised that the proposal included that Appendix C and Appendix D would be revoked in favor of two new tabular appendices.

Mr. Mike Wood, Weyerhaeuser, commented regarding the definition of "wood fuel". After much discussion, motion was made to by Mr. Wilson to amend Subchapter 19 to include the wording "for any wood derived fuel as approved by the Division"; to revoke subchapters 21 and 27; to revoke both Appendix C and Appendix D in favor of tabular appendices; and to send the rules to the Environmental Quality Board in one package for adoption as a permanent rule. Mr. Kilpatrick seconded that motion. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-35

Control Of Emission Of Carbon Monoxide [AMENDED]

Mr. Dyke called upon Ms. Michelle Martinez to make staff presentation. Ms. Martinez stated that the proposed changes to Subchapter 35 would simplify and clarify the Subchapter as a part of the agency-wide re-right/de-wrong initiative; and that the scope of the Subchapter would be narrowed to specific sources that are the primary contributors of carbon monoxide emissions. Ms. Martinez added that other changes included the addition of the definitions "existing source" and "new source" and the replacement of "foundry cupola" with "gray iron cupola". She further advised that Section 35-3, Performance Testing, would be revoked because performance testing requirements are already provided for in Subchapters 8 and 43.

Ms. Martinez advised that staff's recommendation was to send the rule to the Environmental Quality Board for adoption as permanent and emergency. Mr. Breisch entertained motion which was made by Mr. Fallon. The second was made by Ms. Myers. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-41 Sections 15 and 16

Control Of Emission Of Hazardous and Toxic Air Contaminants [AMENDED]

Mr. Dyke called upon Ms. Cheryl Bradley who advised that changes are being proposed for section 15 would incorporate by reference the Maximum Achievable Control Technology (MACT) standards for hazardous air pollutants in 40 CFR 63 that have been promulgated by the EPA from July 1, 1998, through July 1, 1999. These are subparts HH, SS, TT, UU, WW, YY, CCC, DDD, EEE, GGG, HHH, III, LLL, MMM, NNN, PPP, TTT, and XXX. Ms. Bradley continued that the DEQ is also proposing to update to July 1, 1999 the incorporation by reference in 252:100-41-16 of the National Emission Standards for Hazardous Air Pollutants (NESHAP) found in 40 CFR 61. She added that other minor revisions are proposed to Section 15 and 16 to clarify, simplify and correct these sections as required by statute.

Ms. Bradley advised that staff's recommendation would be to send to the rule to the Environmental Quality Board for adoption as permanent and emergency rule. She advised that since the amendments update the incorporation by reference of new federal rules, adoption as an emergency rule would allow the amended rules to take effect earlier and minimize the lag time in making the state program consistent with the federal program. Mr. Breisch entertained motion which was made by Mr. Kilpatrick. The second was made by Mr. Wilson. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-47

Control of Emissions from Existing Municipal Solid Waste Landfills [AMENDED]

Mr. Dyke again called upon Ms. Cheryl Bradley who advised that the modifications to Subchapter 47 would update the incorporation by reference of 40 CFR 60.751 through 60.759 to July 1, 1999. She advised that one comment had been received from the EPA in support of the proposed amendments. She continued that it would be staff's recommendation to send the rule to the Environmental Quality Board for permanent and emergency adoption as adoption as an emergency rule would allow the amended rule to take effect earlier than June 1, 2000 and thereby minimize confusion for regulated landfills. Mr. Breisch entertained motion which was made by Mr. Fallon. The second was made by Ms. Myers. Roll call as follows: Mr. Wilson - aye; Mr. Fallon - aye; Ms. Myers - aye; Mr. Branecky - aye; Mr. Kilpatrick - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes

DIVISION DIRECTOR'S REPORT

Mr. Dyke announced that the Council representative for agriculture, Meribeth Slagell, had turned in her letter of resignation from the Council. Also, Scott Thomas stated that due to a recent remand of the revised ozone, PM-2.5 and PM-10, staff plans on bringing this matter to public hearing at the December Council.

NEW BUSINESS - It was decided that the next meeting would again begin at 9:00 a.m. due to the number of agenda items and would follow the same format.

ADJOURNMENT With no further business, meeting was adjourned with announcement that the next regularly scheduled meeting would be December 14, 1999 in the Multipurpose Room of the DEQ in Oklahoma City beginning at 9:00 a.m.

NOTE: The sign-in sheet is attached as an official part of these Minutes.

AIR QUALITY COUNCIL
RULEMAKING RECOMMENDATION TO THE ENVIRONMENTAL QUALITY BOARD

Identification of Proposed Rulemaking:

Chapter Number and Title – OAC 252:100-19 OAC 252:100-21 OAC 252:100-27
Appendix C and Appendix D

Subchapters or Sections Involved – [new, amended or revoked]

COMBINED

OAC 252:100-19 Particulate Matter Emissions from Fuel-burning Equipment [AMENDED]

OAC 252:100-21 Particulate Matter Emissions from Wood-Waste Burning Equipment [REVOKED]

OAC 252:100-27 Particulate Matter Emissions from Industrial and Other Processes and Operation [REVOKED]

Appendix C Particulate Matter Emissions Limits for Fuel Burning Equipment [REVOKED]

Appendix D Particulate Matter Emission Limits for Wood-Waste Burning Equipment [REVOKED]

Appendix C Particulate Matter Emissions Limits for Fuel Burning Equipment [NEW]

Appendix D Particulate Matter Emission Limits for Wood-Waste Burning Equipment [NEW]

On October 19, 1999 the members of this Council, by authority vested in them by the Oklahoma Environmental Quality Code (27 O.S.Supp. 1993, § 2-2-201), by roll call vote, recommended to the Environmental Quality Board that the rulemaking described above be adopted as:

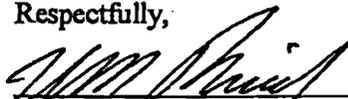

X permanent [take effect after legislative review]

emergency [temporary, to take effect upon approval by the Governor because of time; and/or special reason: _____]

This Council has considered the proposed rulemaking and comments about it and determined, to the best of its knowledge, that all applicable requirements of the Oklahoma Administrative Procedures Act have been followed.

This Council authorizes the Department to prepare this recommended rulemaking for the Board, making any changes approved by the Council, correcting typographical, grammatical and reference errors, and formatting them as required by the Office of Administrative Rules. This is to be done with the understanding that such changes shall neither alter the sense of what this Council recommends nor invalidate this recommendation.

Respectfully,

Chair or Designee

REGULAR MEETING AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
OKLAHOMA ENVIRONMENTAL QUALITY BOARD

A Public Meeting: 9:30 a.m., Tuesday, November 16, ~~1998~~ 1999
Southeast Oklahoma Expo Complex
4500 West Highway 270
McAlester, Oklahoma

1. Call to Order – Lee Paden, Chair
2. Roll Call - Lynda Finch
3. Approval of Minutes of the September 28, 1999 Regular Meeting
4. **Rulemaking-- OAC 252:100 Air Pollution Control:**

Several sets of changes are proposed:

- Subchapter 4 (New Source Performance Standards) is amended to update the incorporation by reference of the federal NSPS to July 1, 1999.
- Subchapters 19, 21 and 27 all deal with particulate matter (PM) emissions. The changes merge the requirements of Subchapter 21 and Subchapter 27 into Subchapter 19. Subchapters 21 and 27 will be revoked. Subchapter 19 as proposed is simplified and clarified according to the agency-wide "re-right/de-wrong" initiative. Also, a Permit by Rule for particulate matter facilities is being proposed for Subchapter 19. Both Appendix C and Appendix D are revoked in favor of two new tabular appendices.
- The changes to Subchapter 35 (Control of Emission of Carbon Monoxide) simplify and clarify the subchapter as a part of the agency-wide "re-right/de-wrong" initiative. The scope of the subchapter is narrowed to specific sources that are the primary contributors of carbon monoxide emissions. Other changes include definitional revisions and the revocation of redundant performance testing requirements.
- The revisions to Subchapter 41 (Control of Emission of Hazardous and Toxic Air Contaminants) update the adoption by reference of federal rules to include Maximum Achievable Control Technology (MACT) standards promulgated or amended between July 1, 1998 and July 1, 1999. The revisions also update the adoption by reference of the federal National Emission Standards for Hazardous Air Pollutants (NESHAP) to July 1, 1999, with certain exceptions. Minor revisions are proposed to Sections 15 and 16 to clarify, simplify and correct those sections as required by statute.
- Subchapter 47 (Control of Emission from Existing Municipal Solid Waste Landfills) is amended to update the incorporation by reference of 40 CFR 60.751 through 60.759 to July 1, 1999.

- A. Presentation – David Branecky, Vice Chair, Air Quality Council
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote(s) on permanent adoption of all proposed amendments and on emergency adoption of amendments to Subchapters 4, 35, 41 and 47

5. **Rulemaking – OAC 252:400 and 410 Radiation Management:**

This rulemaking proposal is part of the DEQ's "re-right/de-wrong" simplification and clarification of its existing rules. The changes are extensive enough that the DEQ believes it is simpler and more straightforward to revoke existing Chapter 400 and replace it with a new Chapter 410 than to amend Chapter 400. The rulemaking also supports Oklahoma's application to the Nuclear Regulatory Commission (NRC) for "State Agreement" status to shift regulation of source, byproduct and special nuclear material from the NRC to the DEQ. Additionally, the proposed rules include National Emission Standards for Hazardous Air Pollutants (NESHAP) for radionuclides.

- A. Presentation – Dr. David Gooden, Chair, Radiation Management Advisory Council
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote on permanent adoption

6. **Rulemaking -- OAC 252:002 Procedures of the Department of Environmental Quality:**

This rulemaking proposal supports Oklahoma's application to the Nuclear Regulatory Commission (NRC) for State Agreement status. It adds State Agreement licenses to DEQ tier classifications for radiation management permit applications and reflects changes corresponding to those made in connection with the DEQ's review and revision of Chapters 400/410, Radiation Management (see Item 7 above).

- A. Presentation-- Dr. David Gooden, Chair, Radiation Management Advisory Council
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote on permanent adoption

7. **Consideration of the Environmental Quality Report:**

The Oklahoma Environmental Quality Code requires the DEQ to prepare an "Oklahoma Environmental Quality Report" and to submit it to the Governor, Speaker of the House and Senate President Pro Tem by January 1st of each year. Despite the statutory title, the statutorily designated purpose of this report is to outline the DEQ's two-year needs for providing environmental services within its jurisdiction, reflect any new federal mandates, and recommended statutory changes. The Environmental Quality Board is to review, amend (as necessary) and approve the report.

- A. Presentation-- Steve Thompson, DEQ Deputy Executive Director
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote on approval

- 8. New Business (any matter not known about and which could not reasonably have been foreseen prior to the time of posting of agenda)
- 9. Executive Director's Report, including response to request from the Board at their last meeting for additional DEQ budget information
- 10. Discussion of and vote on 2000 Environmental Quality Board regular meeting dates
- 11. Adjournment

Public Forum: The Board meets four times a year at different locations across the State to hear the views and concerns of all Oklahomans about environmental issues. This opportunity is informal, and we invite you to sign the register to speak. The forum will also include a short presentation from the DEQ Water Quality Division about State Water Quality Standards implementation, the State "303(d)" (impaired waters) list, and related issues.

Should you have a disability and need an accommodation, please notify the DEQ three days in advance at 702-7100.

* Specification of proposed adoption by emergency rulemaking, by permanent rulemaking, or by both, is based on the recommendations of the respective advisory councils. Adoption or amendment of rules as emergency rulemaking requires a finding by the Board that a compelling extraordinary circumstance warrants the seeking of emergency certification, so that the rules will take effect immediately upon the Governor's signature. Absent a finding and certification of emergency, rules adopted today will not become effective until May or June of 2000.

SUBCHAPTER 19. CONTROL OF EMISSION OF PARTICULATE MATTER
EMISSIONS FROM FUEL-BURNING EQUIPMENT

252:100-19-1. Purpose

The purpose of this Subchapter is to control the amount of particulates released into the air by the use of fuel burning equipment emission of particulate matter.

252:100-19-1.1. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning unless the context clearly indicates otherwise:

"Directly fired" means that the hot gasses produced by the flame or heat source come into direct contact with the material being processed or heated.

"Fuel-Burning unit" means any internal combustion engine or gas turbine, or other combustion device used to convert the combustion of fuel into usable energy.

"Fossil fuel" means coal, petroleum, natural gas, or any fuel derived from coal, petroleum, or natural gas.

"Haul road" means a road on private property used to transport material or equipment by motorized vehicles.

"Indirectly fired" means that the hot gasses produced by the flame or heat source do not come into direct contact with the material, excluding air, being processed or heated.

"Industrial process" means any source, activity or equipment, excluding fuel-burning units, which can reasonably be expected to emit particulate matter. The term includes, but is not limited to crushing, milling, screening, mixing and conveying. The term does not include maintenance activities unless maintenance is the primary activity of the facility.

"Particulate matter facility" means a facility from which particulate matter is the predominant emission, excluding fugitive emissions and emissions resulting from control equipment malfunctions.

"Wood fuel" means any fuel which, excluding air and water, is at least 80 percent by weight cellulose, hemicellulose and lignin, and has a heat value of less than 9,500 BTU per pound; or any wood derived fuel as approved by the Division.

252:100-19-2. Emission of particulate matter prohibited [REVOKED]

The emission or escape into the open air of particulates resulting from the combustion of fuel in any fuel burning equipment or from any stack connected thereto in quantities in excess of that indicated in 252:100-19-6 or 252:100-19-7 is hereby prohibited.

252:100-19-3. Existing equipment [REVOKED]

Any fuel burning equipment in operation prior to the effective date of this Subchapter shall not emit particulate matter in excess of 0.6 pounds per million B.T.U. heat input provided that all such existing equipment shall comply with 252:100-19-2 within eighteen (18) months from and after July 21, 1970.

252:100-19-4. New equipment Allowable particulate matter emission rates from fuel-burning units

~~The Except as provided in 252:100-19-10, 252:100-19-11 and 252:100-19-12 the emission or escape into the open air of particulate matter resulting from the combustion of fuel in any new or existing fuel-burning equipment in quantities exceeding unit shall not exceed the limits specified in 252:100-19-6 for the size of equipment involved, is prohibited. These limitations shall apply when the fuel burning equipment is operating at the maximum design heat input rating. The heat input rating of any unit discharging to a single stack shall be the maximum design input rating, including both heat available from burning of fuel and any sensible heat from materials introduced into the combustion zone of a standard temperature of 60°F. For a heat input between any two (2) consecutive heat inputs stated in 252:100-19-6, maximum allowable emissions of particulate matter are shown in 252:100-19-7. When one fuel burning unit is connected to two or more stacks, the heat input of the equipment shall be the criterion for the maximum allowable total emission from all stacks combined Appendix C.~~

252:100-19-5. Refuse burning prohibited [REVOKED]

~~The burning of refuse in fuel burning equipment is prohibited except in equipment specifically designed to burn refuse.~~

252:100-19-6. Allowable emission of particulate matter [REVOKED]

~~The emission limits described in 252:100-19-2 and 252:100-19-4 are as follows:~~

Heat Input in Million	Maximum Allowable Emissions
British Thermal Unit	of Particulate Matter in
Per Hour	Pounds Per Million
	British Thermal Units

Up to and including 10	0.60
100	0.35
1,000	0.20
10,000 and above	0.10

252:100-19-7. Particulate matter emission limits [REVOKED]

~~Particulate matter emission limits for fuel burning equipment are set forth in Appendix C of this Chapter.~~

252:100-19-10. Allowable particulate matter emission rates from indirectly fired wood fuel-burning units

The emission of particulate matter resulting from the combustion of wood fuel in any new or existing indirectly fired fuel-burning unit shall not exceed the limits specified in Appendix D.

252:100-19-11. Allowable particulate matter emission rates from combined wood fuel and fossil fuel fired steam generating units

Any combined wood fuel and fossil fuel fired steam generating unit with a maximum design heat input of more than 250 million BTUs per hour which commenced construction after March 4, 1978, shall not emit particulate matter in excess of 0.1 pound per million BTUs.

252:100-19-12. Allowable particulate matter emission rates from directly fired fuel-burning units and industrial processes

The emission of particulate matter from any new or existing directly fired fuel-burning unit or from any emission point in an industrial process shall not exceed the limits specified in Appendix G.

252:100-19-13. Permit by rule

(a) Applicability. Any particulate matter facility may be constructed or operated under this section if:

- (1) it meets the requirements in 252:100-7-60, and
- (2) it is not subject to any New Source Performance Standard (NSPS), National Emission Standard for Hazardous Air Pollutants (NESHAP), Maximum Achievable Control Technology (MACT) standard or other Permit by Rule (PBR).

(b) Requirements. In addition to the requirements of 252:100, the owner or operator of a particulate matter facility permitted under this section shall comply with the following requirements.

- (1) All water sprays, bag houses, cyclones, or other particulate matter control equipment shall be properly maintained and operated.
- (2) Haul roads and material piles shall be watered or treated as necessary to minimize emissions of fugitive dust.

SUBCHAPTER 21. PARTICULATE MATTER EMISSIONS FROM WOOD-WASTE BURNING EQUIPMENT [REVOKED]

~~252:100-21-1. Purpose [REVOKED]~~

~~The purpose of this Subchapter is to control the amount of particulates released into the air by the use of wood waste burning equipment.~~

~~252:100-21-2. Emission prohibition [REVOKED]~~

~~The emission or escape into the open air of particulates resulting from the combustion of wood waste in any fuel burning equipment in quantities in excess of that indicated in this Subchapter is hereby prohibited.~~

~~252:100-21-3. Limitations [AMENDED AND RENUMBERED TO 252:100-19-11]~~

~~(a) Wood waste fuel burning equipment. Any wood waste fuel-burning equipment, operating or constructed to operate, shall not emit particulate matter in excess of that specified in 252:100-21-4 or 252:100-21-5 for the size of equipment involved. These limitations shall apply when the wood waste burning equipment is operating at the maximum design heat input rating. The heat input rating of any unit shall be the maximum design input rating, including both heat available from burning of wood waste fuel and any sensible heat from materials introduced into the combustion zone at a standard temperature of 60°F.~~

~~(b) New combined wood waste and fossil fuel fired steam generating units. Any new combined wood waste and fossil fuel-fired steam generating unit of a designed capacity of more than 250 million BTUs per hour input shall not emit particulate matter in~~

~~excess of 0.1 pound per million BTUs.~~

252:100-21-4. Allowable emissions [REVOKED]

~~The emission limits described in 252:100 21 3 are as follows:~~

Heat Input in Million British Thermal Units (BTU) Per Hour	Maximum Allowable Emission of Particulate Matter in Pounds Per Million British Thermal Units (BTU)
---	---

Less than 10	0.60
10 to less than 1,000	0.50
1,000 to less than 10,000	0.35
10,000 or more	0.15

252:100-21-5. Emission limits [AMENDED AND RENUMBERED TO 252:100-19-10]

~~Particulate matter emission limits for wood waste burning equipment are set forth in Appendix D of this Chapter.~~

SUBCHAPTER 27. PARTICULATE MATTER EMISSIONS FROM INDUSTRIAL AND OTHER PROCESSES AND OPERATIONS [REVOKED].

252:100-27-1. Purpose [REVOKED]

~~The purpose of this Subchapter is to control the emission of particulate matter from any operation, process or activity except fuel burning equipment or refuse burning equipment.~~

252:100-27-2. Process emission limitations [AMENDED AND RENUMBERED TO 252:100-19-12]

~~(a) Existing installations. Eighteen (18) months from and after the effective date of this Subchapter all existing installations must comply with the rates of emissions as specified in 252:100 27 5.~~

~~(b) New installations. From and after the effective date of this Subchapter, all new installations must comply with the rates of emission as specified in 252:100 27 5.~~

~~(c) General provision. No person shall cause, let, permit, suffer, or allow the emission from any general operation or general combustion operation of particulate matter from any emission point at a rate in excess of that specified in 252:100 27 5 for the process weight rate allocated to such emission point.~~

252:100-27-3. Exception to emission limits [REVOKED]

~~Emission of particulate matter during periods of cleaning or adjusting process equipment shall not exceed 150 percent of the limits as set forth in the 252:100 27 2 for a period or periods aggregating not more than six (6) minutes in any sixty (60) consecutive minutes. In those operations utilizing control devices which require regular intermittent cleaning, compliance with this Subchapter will be determined on the basis of the average hourly emission.~~

252:100-27-4. Sampling and testing [REVOKED]

~~(a) Testing. A person responsible for the emission of~~

~~particulates from any source shall, upon written request of the Director, make or have made at his own expense, tests to determine the quantity or quality or both. Alternatively, said person shall be reasonably cooperative with the Director in securing such tests.~~

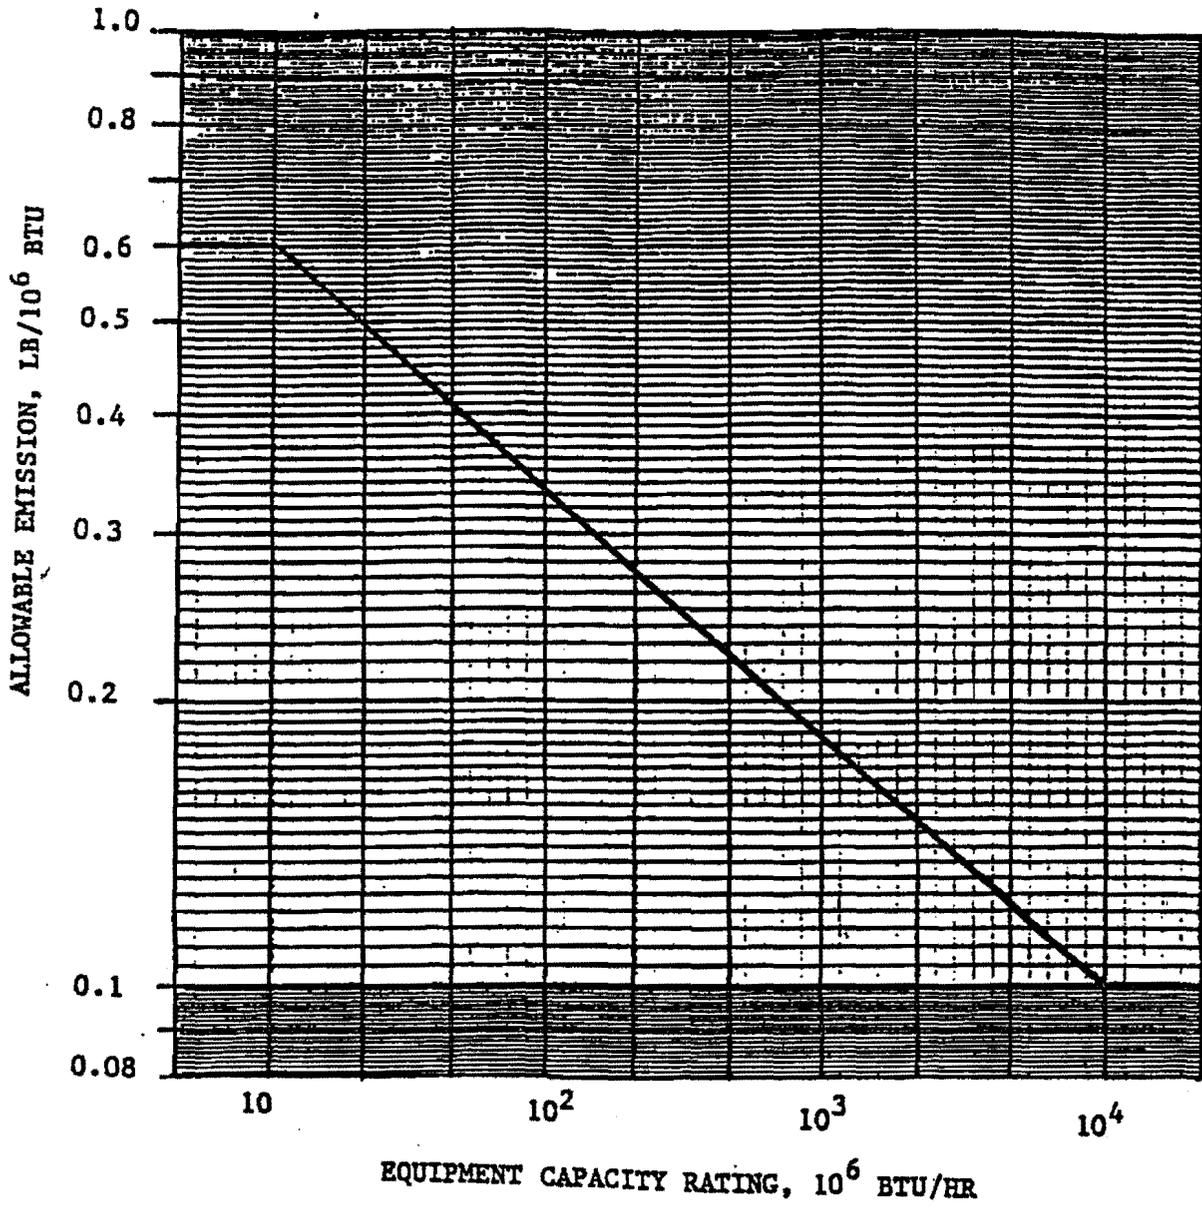

~~(b) Methods. Emission tests relating to this Subchapter shall be undertaken by generally recognized standards or methods of measurements. Methods found in the current ASME Test Code for Dust Separating Apparatus, the ASME Power Test Code, the Code for Determining Dust Concentrations in Gas Streams and the Los Angeles County Source Testing Manual may be used, but these may be modified or adjusted by the Director, in cooperation with the operator of the source, to suit specific sampling conditions or needs based upon good judgment and experience. Other methods found to produce reliable results and approved by the Director may be used.~~

~~(c) Monitoring. All tests shall be conducted, supervised or approved by a registered professional engineer.~~

252:100-27-5. Allowable rate of emission [AMENDED AND RENUMBERED TO 252:100-19-12]

~~Allowable rate of emissions based on actual process weight rate shall be as tabulated in Appendix C of this Chapter.~~

APPENDIX C. PARTICULATE MATTER EMISSION LIMITS FOR FUEL-BURNING EQUIPMENT [REVOKED]

APPENDIX C. ALLOWABLE RATE OF EMISSIONS FOR INDIRECTLY FIRED
FUEL-BURNING UNITS [NEW]

Maximum Heat Input In Million British Thermal Units (MMBTU) Per Hour (X)	Allowable Particulate Matter Emissions In Pounds Per Million British Thermal Units (E)
10 or less	0.60
20	0.51
30	0.46
40	0.43
50	0.41
60	0.39
70	0.38
80	0.37
90	0.36
100	0.35
110	0.34
130	0.33
150	0.32
170	0.31
190	0.30
220	0.29
270	0.28
310	0.27
360	0.26
430	0.25
510	0.24
610	0.23
740	0.22
910	0.21
1,080	0.20
1,290	0.19
1,550	0.18
1,890	0.17
2,330	0.16
2,910	0.15
3,690	0.14
4,760	0.13
6,280	0.12
8,500	0.11
10,000 or more	0.10

Allowable emissions may be calculated by use of the following formulas:

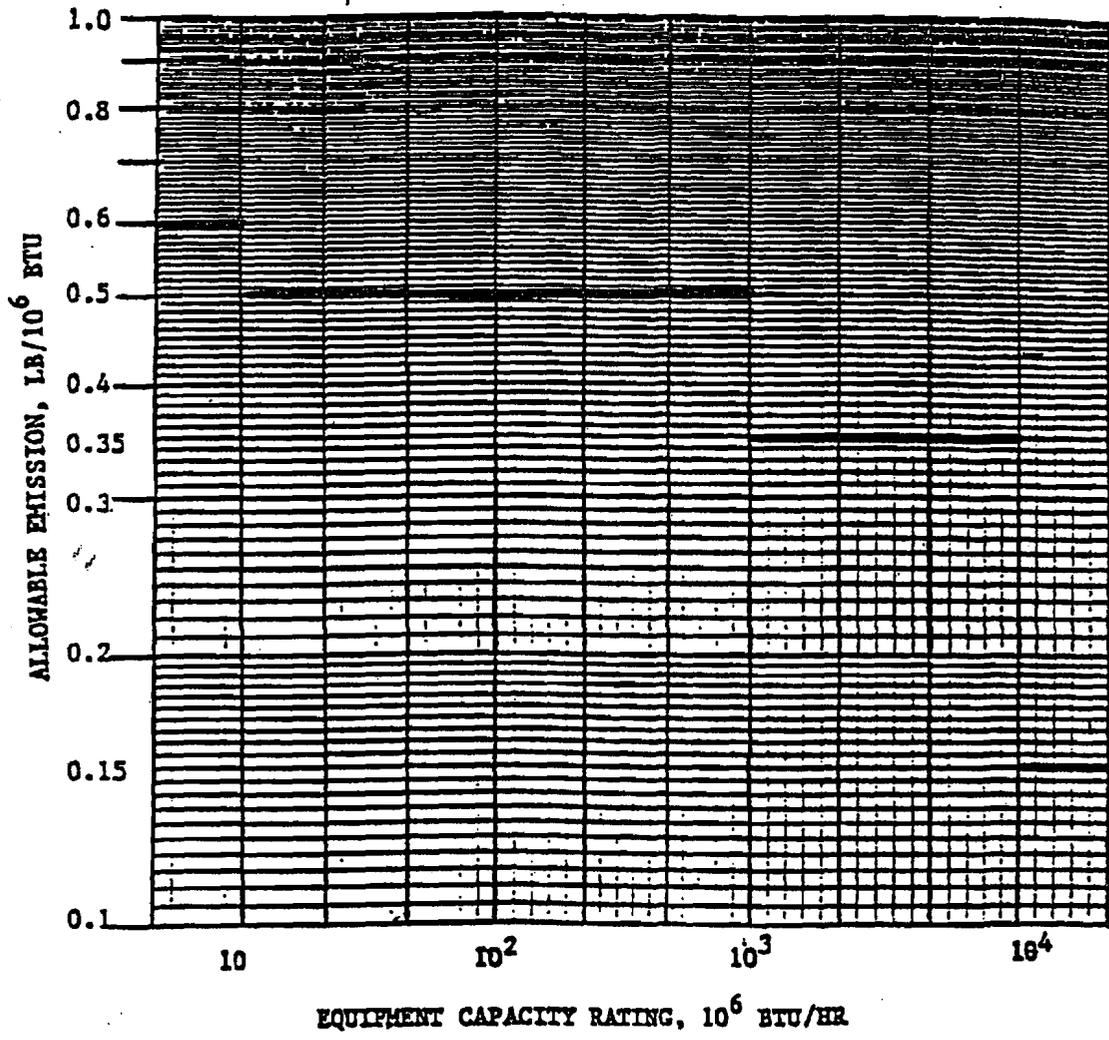

$E = 1.042808X^{-0.238561}$ (for values for X greater than 10 MMBTU but less than 1,000 MMBTU) or

$E = 1.6X^{-0.30103}$ (for values for X greater than or equal to 1,000 MMBTU but less than 10,000 MMBTU).

Where:

E = the particulate matter emission limit in pounds per MMBTU
input and
X = the maximum heat input in MMBTU per hour.

APPENDIX D. PARTICULATE MATTER EMISSION LIMITS FOR WOOD-WASTE BURNING
EQUIPMENT [REVOKED]

APPENDIX D. ALLOWABLE RATE OF EMISSIONS FOR INDIRECTLY FIRED
WOOD FUEL-BURNING UNITS [NEW]

Maximum Heat Input In Million British Thermal Units Per Hour	Allowable Particulate Million Matter Emissions In Pounds Per Million British Thermal Units
Less than 10	0.60
10 to less than 1,000	0.50
1,000 to less than 10,000	0.35
10,000 or more	0.15

AND OTHER PROCESSES AND OPERATIONS**

APPENDICES C AND D

EXECUTIVE SUMMARY:

The purpose of the changes to these rules is to simplify and clarify them in accordance with the agency-wide re-right/de-wrong process. The title of Subchapter 19 is being amended to, "Control of Emission of Particulate Matter" and the requirements of Subchapter 21, Particulate Matter Emissions from Wood-Waste Burning Equipment, and Subchapter 27, Particulate Matter Emissions from Industrial and Other Processes and Operations, are being moved to Subchapter 19. A Permit By Rule for facilities that emit particulate matter as their primary emission is being added to Subchapter 19. Subchapters 21 and 27 are being revoked, and Appendix C and D are also to be revoked in favor of new non-graphic appendices.

DIFFERENCES FROM ANALOGOUS FEDERAL RULES:

None.

ENVIRONMENTAL BENEFIT STATEMENT:

Not required because these rules are not more stringent than corresponding federal rules.

SUMMARY OF COMMENTS AND RESPONSES:

Attached.

SUMMARY OF COMMENTS AND RESPONSES

Please note that some of the following comments were received prior to the proposal to merge the requirements of Subchapter 27 with Subchapter 19. Because of this, the commentators references to Subchapter 27 have been addressed as if they concern Subchapter 19.

Comment 1:

Why is the definition of "fuel-burning equipment [unit]" in Subchapter 19 different that in 252:100-1-3?

Response 1:

The definition in 252:100-1-3 includes directly and indirectly fired fuel-burning equipment. Directly fired fuel-burning equipment typically can not meet the particulate emission limits of Appendix C because the material being processed becomes entrained in the exhaust stream from the heat source. Such sources have been handled under Appendix G. The change in the definition in Subchapter 19 was necessary to eliminate this confusion.

Comment 2:

The definition of "fuel-burning unit" needs to specify stationary sources because it can be interpreted to refer to mobile sources.

Response 2:

Staff disagrees because, with the exception of Subchapter 15, Motor Vehicle Pollution Control Devices, all our regulations are applicable to stationary sources only. The federal government has preempted the states from regulating the emissions of new motor vehicles under Section 209 of the federal Clean Air Act.

Comment 3:

The definition of "particulate matter source" is inconsistent with the term, "particulate matter facility" in the Permit by Rule section.

Response 3:

The term was changed in the definition section, 252:100-19-1.1, from "particulate matter source" to "particulate matter facility".

Comment 4:

The emission limits in Appendix C should be labeled "pounds per million BTU" instead of "pounds per hour".

Response 4:

The label was changed to "pounds per million BTU".

Comment 5:

A definition of "wood fuel" is unnecessary because the owners/operators of wood burning boilers know what "wood fuel" is.

Response 5:

The definition of "wood fuel" is necessary because any term used

in a regulation that specifies an emission standard must be clearly understood by regulated entities, the regulatory agency, and the public.

Comment 6:

For a waste-to-energy facility, which rule would apply; Subchapter 17 or Subchapter 19?

Response 6:

Subchapter 19 would apply because a waste-to-energy facility meets the definition of a "fuel-burning unit" in Subchapter 19, and Subchapter 17 would apply unless the facility qualified for one of the exemptions listed in that subchapter. If the particulate matter standards in both subchapters apply, the facility would be required to meet the more stringent of the two.

Comment 7:

The Permit By Rule requirement that all control equipment must be properly maintained and operated is not adequate to assure compliance and should specify specific operation and maintenance procedures.

Response 7:

Inclusion of specific operational and maintenance procedures for control equipment in the rule is impossible because of the wide range of covered sources. However, facilities wishing to be covered under the PBR must specify operational and maintenance procedures on their registration form, so these requirements are enforceable under the PBR.

SUMMARY OF VERBAL COMMENTS AND RESPONSES:

Comment 8:

Abrasive blasting for maintenance purposes is an applicable process under subchapter 19 and thus can not be considered "trivial" for Title V permitting purposes.

Response 8:

Staff agreed and defined "Industrial processes" to exclude processes used for maintenance only.

Comment 9:

There is no need for a definition of "wood fuel" in the regulation because the owners/operators of wood fueled boilers know what wood fuel is and the proposed definition would exclude many types of wood waste currently in use.

Response 9:

Staff disagreed. The definition of "wood fuel" was changed to include other types of wood fuel, such as pine bark. The commentor agreed with the changes, was agreeable to the commentator.

Comment 10:

The revocation of Subchapter 27 removes all emission standards

for industrial processes.

Response 10:

No, Section 252:100-19-12 includes directly fired fuel-burning units and industrial processes.

RESPONSE TO WRITTEN COMMENTS FROM THE PUBLIC AND INDUSTRY
SUBCHAPTER 19
SUBCHAPTER 27
APPENDIX C

Below is a summation of written comments along with staff responses regarding the proposed revisions to Subchapters 19 and 27, and Appendix C. This includes only those comments received prior to the mail-out of the Air Quality Council packets for the October 20, 1999, meeting.

McKinney & Stringer Letter (For Terra Nitrogen) dated August 18, 1999, and signed by Mr. Michael Peters

1. **COMMENT:** Why is the proposed definition of "fuel-burning equipment" in Subchapter 19 different from that in 252:100-1-3? The term "indirectly fired combustion device" is not defined in Subchapter 19.

RESPONSE: The definition in 252:100-1-3 includes directly and indirectly fired fuel-burning equipment. Directly fired equipment can't generally meet the particulate emission standards under Subchapter 19 because the material being processed becomes entrained in the exhaust stream from the heat source. Such sources have been handled as a matter of policy under Subchapter 27. The change to the definition in Subchapter 19 was designed to eliminate this confusion.

The term "indirectly fired combustion device" is indeed not defined in Section 100-19-1.1, but the term "indirectly fired" is defined. The staff also believes that the term "combustion device" is self-evident and need not be defined. An example of an indirectly fired combustion device would be a boiler as opposed to a "directly fired" aggregate drying kiln.

2. **COMMENT:** The definition of a "Particulate matter source" is inconsistent with the use of the term "Particulate matter facility" in the Permit By Rule section of Subchapter 27.

RESPONSE: Staff agrees and will propose to change the terminology in 252:100-1.1 from "Particulate matter source" to "Particulate matter facility".

3. **COMMENT:** The emission limits in Appendix C should be labeled "pounds per million BTU" instead of "pounds per hour".

RESPONSE: Staff agrees and will propose such a change.

1 Equipment, complement Subchapter 27,
 2 particulate matter emissions for industrial
 3 and other processes and operations, and
 4 regulate PM emissions resulting from the
 5 burning of fuel in fuel-burning equipment.
 6 They are being revised as part of the
 7 rewrite/dewrong process. These proposed
 8 changes will clarify and simplify the
 9 language of Subchapter 19 and incorporate
 10 the requirements of Subchapter 21. We will
 11 then ask that Subchapter 21 be revoked. We
 12 are also recommending that the graphical
 13 appendices C and D be revoked in favor of
 14 new tabular appendices.

15 A new definition section, 19-1.1, on
 16 page 1, is being proposed to clarify the
 17 terms used in the subchapter. Two
 18 definitions are of particular importance.
 19 The term "fuel-burning equipment" was
 20 redefined for the purposes of this
 21 subchapter to eliminate confusion
 22 concerning direct and indirectly fired
 23 fuel-burning equipment. Directly fired
 24 equipment generally can't meet the
 25 standards specified under Subchapter 19

1 PROCEEDINGS
 2 MR. DYKE: The next hearing will
 3 be on Items D and E on the hearing agenda.
 4 We'll take those items together. It will
 5 be OAC 252:100-19, Particulate Matter
 6 Emissions from Fuel-Burning Equipment,
 7 Appendix C, OAC 252:100-21, Particulate
 8 Matter Emissions from Wood-Waste Burning
 9 Equipment, Appendix D. I call on Max Price
 10 from the staff for the presentation.
 11 MR. PRICE: Good morning. Mr.
 12 Chairman, Members of the Council, and
 13 ladies and gentlemen, my name is Max Price,
 14 I am with the Rules group of the Air
 15 Quality Division.
 16 First off, I have to make a little
 17 correction here and I apologize. On
 18 Subchapter 19, I neglected to put the page
 19 numbers on it. It is only three pages, so
 20 I don't think it's too much of a problem.
 21 I hope not.
 22 Subchapter 19, Particulate Matter
 23 Emissions Limits for Fuel-Burning Equipment
 24 and Subchapter 21, Particulate Matter
 25 Emissions from Wood-Waste Burning

1 because the particulate matter from the
 2 material being processed is generally
 3 entrained in the exhaust gas stream. Of
 4 course, we generally use Subchapter 27 to
 5 permit or to regulate these types of
 6 facilities.

7 We propose to revoke Section 19-2,
 8 Emission of Particulate Matter Prohibited,
 9 on page 2, because the section refers to
 10 Sections 19-6 and 19-7, both of which are
 11 also being proposed to be revoked.

12 Section 19-3, Existing Equipment, on
 13 page 2, is being proposed to be revoked
 14 because the section refers to Section 19-2,
 15 which is also being revoked. This is a bit
 16 complicated, so let me explain what's going
 17 on here. This Section 19-3 states, in
 18 effect, that fuel-burning equipment which
 19 existed prior to the effective date of this
 20 subchapter, which is July 21, 1970, must
 21 comply with a .6 pound per million BTU
 22 emission limit. Okay. This same section
 23 also states that these very same facilities
 24 must come into compliance with Section 19-2
 25 within eighteen months. Section 19-2

Page 6

1 states that particulate emissions from
 2 combustion of fuel shall not exceed the
 3 standards specified in Section 19-6 or
 4 Section 19-7. Section 19-6 is a table of
 5 emission limits which are, for all intents
 6 and purposes, identical to those found in
 7 Appendix C referenced by Section 19-7.
 8 It's kind of a bouncing, following
 9 regulation type of thing. So we propose to
 10 eliminate all of that and go directly to
 11 Appendix C.
 12 We are requesting that Section 19-4,
 13 on page 2, New Equipment, be re-titled to
 14 "Allowable Particulate Matter Emission
 15 Rates" and that the section be reworded to
 16 indicate that new and existing fuel-burning
 17 equipment are subject to these new PM
 18 standards in Appendix C.
 19 We are proposing to revoke Section
 20 19-6, Allowable Emissions of Particulate
 21 Matter and Section 19-7, Particulate Matter
 22 Emission Limits on page 3, because both
 23 have been made redundant by the new wording
 24 in Section 19-4.
 25 252:100-19-10, Allowable Particulate

Page 7

1 Matter Emission Rates for Wood-Waste Fuel
 2 and 252:100-19-11, Combined Wood-Waste Fuel
 3 and Fossil Fuel Fired Steam Generating
 4 Units, on page 3, are the two new sections
 5 being proposed that incorporate the
 6 requirements in Subchapter 21. No changes
 7 were being made to the standards specified
 8 in Subchapter 21.
 9 You probably noticed that the new
 10 Appendix D appears in the section of the
 11 Council packet concerning Subchapter 19,
 12 and the current Appendix D appears in the
 13 section describing Subchapter 21. This
 14 conflicts somewhat with the agenda and we
 15 apologize for the confusion. Since the
 16 contents of 21 are being incorporated into
 17 19, this is why the Appendix D is appearing
 18 in 19 because it is being referenced
 19 therein that subchapter.
 20 We've had several comments, verbal
 21 and otherwise, that have come in pretty
 22 quickly and I want to run through those
 23 pretty quickly on this.
 24 Number 1, we recommended that the
 25 definition -- I'm just going to respond to

Page 8

1 the comments. We recommend that the
 2 definition of "wood-waste fuel" in Section
 3 19-1.1, on page 1, be changed by the
 4 substitution of the word "utility" in the
 5 place of "telephone". Telephone poles will
 6 now be utility poles.
 7 The second one, we also recommended
 8 the term "hour-million" be replaced by the
 9 word "million" in Section 19-11, that's on
 10 page 3. That was a typo that should have
 11 been corrected.
 12 We recommended that the labels in
 13 proposed Appendix D be changed. We're
 14 recommending that the word "design" be
 15 removed from the label in the first column
 16 and that the term "Million British Thermal
 17 Units" be substituted for the word "hour"
 18 in the second. They were mislabeled.
 19 These units are pounds per million BTU not
 20 per hour.
 21 MS. MYERS: Pounds per MMBTU?
 22 MR. PRICE: MMBTU, yes, ma'am.
 23 We're also recommending the same changes
 24 for Appendix C and we're recommending that
 25 the term "Million British Thermal Units" be

Page 9

1 substituted for the word "hour" in the
 2 definition of variable "E" in the text of
 3 that Appendix.
 4 MS. MYERS: That's MMBTU?
 5 MR. PRICE: Yes, ma'am.
 6 MS. MYERS: I mean into the label
 7 process?
 8 MR. PRICE: Yes, right. A
 9 million BTU into it.
 10 MS. MYERS: Okay.
 11 MR. PRICE: Finally, in response
 12 to verbal comments, we are proposing that
 13 Subsection 19-5, Refuse Burning Prohibited,
 14 page 2, be deleted and that all references
 15 to "waste" and "refuse", with the exception
 16 of "wood-waste", be stricken from the
 17 subchapter. We believe these terms are
 18 unnecessary because the subchapter only
 19 concerns particulate emissions from
 20 combustion of fuel. The actual nature of
 21 the fuel is not relevant except in the case
 22 of wood-waste fuel which has a slightly
 23 different standard. Concerns about waste
 24 derived fuels, homogenous waste fuels and
 25 hazardous waste fuels are addressed by

Page 10

1 other rules and it isn't necessary to
2 include them. It confuses the issue.
3 We received written comments on
4 August 16th from representatives of Terra
5 Nitrogen. Most of their concerns we have
6 already addressed in our presentation,
7 however, one minor comment remains to be
8 addressed. Terra has pointed out that the
9 term "indirectly fired combustion device"
10 is not defined. We would like to point out
11 the term "indirectly fired" is indeed
12 defined in Section 19-1.1, page 1, and we
13 believe that the term "combustion device"
14 is self-evident and really doesn't need to
15 be defined.
16 We also received comments from EPA
17 on August 20, and we're going to try to
18 reply to these comments now. EPA would
19 like the phrase "particulate emissions
20 limits" in this subchapter are not intended
21 to replace any limit established under the
22 federal program. But in Section 19-4, on
23 page 2, staff doesn't think this is
24 necessary because EPA didn't supply us with
25 a reason why we should do this, and we

Page 11

1 can't think of a good reason why we ought
2 to, either. First guess, no, I don't think
3 it ought to be. All right. Because of
4 these suggested changes and to allow time
5 for further consideration and comment, the
6 staff requests that action on these
7 proposals be continued until the next Air
8 Quality Council Meeting.
9 MR. DYKE: Questions of Mr. Price
10 from the Council?
11 MR. BRANECKY: Yeah, I had a
12 question on your -- this is probably more
13 of a syntax type question.
14 MR. PRICE: Sure.
15 MR. BRANECKY: You've got 19-2
16 and 19-3 as being revoked. Is that
17 language -- is that still going to be the
18 new regs, those titles?
19 MR. PRICE: The sections
20 themselves?
21 MR. BRANECKY: Yes. You've got
22 the titles, they're not crossed out.
23 MR. PRICE: No, sir, they'll be
24 gone, too, as well.
25 MR. BRANECKY: Will they be

Page 12

1 there?
2 MR. PRICE: No, they'll be gone.
3 MR. BRANECKY: Why are they
4 staying there?
5 MS. BUTTRAM: Because according
6 to the rules on rulemaking and also for the
7 future record, you can go back and you can
8 see which sections -- you can't use a
9 section over so you just say revoked and
10 the title will remain in the table of
11 contents.
12 MR. BRANECKY: You can't renumber
13 and use two over again?
14 MS. BUTTRAM: Right.
15 MR. BRANECKY: The question then,
16 on page 3 it jumps from 7 to 10, are there
17 not an 8 and 9 at one time?
18 MR. PRICE: No, sir. I did that
19 to allow in case there was a new section,
20 people want to put those in there and I
21 won't have to renumber anything.
22 MR. BRANECKY: Okay.
23 MR. DYKE: Any other questions
24 from the Council? Are there any questions
25 or comments from the audience?

Page 13

1 MR. WOOD: Mike Wood with
2 Weyerhaeuser Company. I have, I guess, one
3 concern about adding the definition for
4 wood-waste fuel. There is a significant
5 debate now at the federal level over that
6 definition, with respect to the development
7 of MACT rules for industrial combustion
8 units. And it seems premature to put a
9 definition in the state regs now that may
10 conflict with a federal definition at some
11 later point. I'm not sure it's important
12 to the rule. I guess I have a question
13 about the need for a definition for wood-
14 waste. Another question I have is
15 replacing the word refuse with the word
16 waste. Refuse is a defined term in the
17 regulations where waste is not.
18 MR. PRICE: To address your last
19 question first, we're proposing to take
20 both of those terms completely out of this
21 rule. It simply deals with particulate
22 emissions.
23 MR. WOOD: I would certainly -- I
24 would endorse that.
25 MR. PRICE: As for wood-waste, we

Page 14

1 use that terminology in the rule and I
 2 would think that we need some type of
 3 definition that would incorporate what we
 4 mean by that. Like creosote soaked fence
 5 post, that could be considered wood-waste.
 6 MR. WOOD: Sure, but the creosote
 7 is a fossil fuel, as well. So I don't --
 8 that particular point, I wouldn't see the
 9 problem of doing that. And that's part of
 10 the issue there, there certainly are some
 11 contaminants in wood -- we don't even like
 12 to refer to them as wood-waste fire, we
 13 just say there are wood-fired, because
 14 those residuals have a value and they are
 15 marketed. There are -- this definition
 16 excludes a lot of waste, for example, that
 17 we burn in our boiler at Wright City.
 18 MR. PRICE: What material do you
 19 use, for example?
 20 MR. WOOD: One of our best fuels
 21 there, wood derived fuel, is the trim from
 22 making plywood. There is glue in there
 23 that's burned along with the wood. But
 24 it's -- you know, formaldehyde glue, which
 25 is one of those compounds that are in the

Page 15

1 glue that's also present in the wood,
 2 anyway.
 3 MR. PRICE: Sure.
 4 MR. WOOD: We just changed the
 5 concentrations a little bit. So that would
 6 be excluded in this definition and there
 7 might be other things from other types of
 8 wood processing facilities that would cause
 9 concerns. Something else that we burn
 10 would be bark that's knocked off the logs
 11 during the handling on a log yard. We
 12 refer to those as yard waste. I'm not sure
 13 if that fits in this definition or not, I
 14 don't know if it's included or not. And I
 15 don't know it makes a difference whether
 16 it's in there or not. But my concern is
 17 that there will be different definitions at
 18 some later point in the not too distant
 19 future in the Federal MACT Regulations that
 20 would be different than a precedent that
 21 was set here in the state.
 22 MR. PRICE: Sure. I can see your
 23 point there. Barbara, do you want to help
 24 me out here?
 25 MR. TERRILL: I think we can take

Page 16

1 these under advisement, the comments, since
 2 we're going to continue it anyway. We'll
 3 have an opportunity to look at this and
 4 revise it some and then get you a different
 5 version.
 6 MS. MYERS: Mike, you would go
 7 with something like a wood derived fuel
 8 rather than a wood waste fuel that would be
 9 more comprehensive, that would take in
 10 other products as well, if it was wood
 11 derived?
 12 MR. WOOD: That would be my
 13 preference, yes.
 14 MS. MYERS: Okay.
 15 MR. WOOD: We already have a
 16 regulation for wood-waste. I mean, the
 17 term wood-waste is already used in the
 18 regulation.
 19 MR. PRICE: Right, correct.
 20 MR. WOOD: If we wanted to go to
 21 wood derived fuels, that would be
 22 preferable. I could offer some -- an
 23 expanded definition if it's going to be
 24 continued. I would be happy to do that.
 25 MR. PRICE: We would appreciate

Page 17

1 that.
 2 MR. WOOD: Okay. Thank you.
 3 MR. DYKE: Thank you. Any
 4 additional questions or comments from the
 5 Council? Is there anyone else who has any
 6 comments on these two items?
 7 MR. BREISCH: If there are no
 8 other comments or questions, I'll entertain
 9 a motion that this item be continued to our
 10 next regular meeting on October 19th.
 11 DR. GROSZ: So moved.
 12 MR. BRANECKY: Second.
 13 MR. BREISCH: I've got a motion
 14 and a second. Any other comments or
 15 questions? If not, Myrna, call the roll.
 16 MS. BRUCE: Mr. Wilson.
 17 MR. WILSON: Aye.
 18 MS. BRUCE: Ms. Myers.
 19 MS. MYERS: Yes.
 20 MS. BRUCE: Mr. Branecky.
 21 MR. BRANECKY: Aye.
 22 MS. BRUCE: Mr. Fallon.
 23 MR. FALLON: Aye.
 24 MS. BRUCE: Mr. Kilpatrick.
 25 MR. KILPATRICK: Aye.

Page 18

1 MS. BRUCE: Dr. Grosz.
2 DR. GROSZ: Aye.
3 MS. BRUCE: Mr. Breisch.
4 MR. BREISCH: Aye.
5 Not knowing whether the Hearing
6 Officer calls for recess or the Chairman,
7 I'm going to call for recess until after
8 lunch.

MEMBERS OF THE COUNCIL

- 1. MR. GARY KILPATRICK - MEMBER
- 2. MR. LEO FALLON - MEMBER
- 3. MR. JOEL WILSON - MEMBER
- 4. MS. SHARON MYERS - MEMBER
- 5. MR. DAVID BRANECKY - MEMBER
- 6. MR. BILL BREISCH - CHAIRMAN
- 7. MS. MYRNA BRUCE - SECRETARY
- 8. MR. DAVID DYKE - PROTOCOL OFFICER

clarification will address the problem raised by Ms. Perry with respect to the subchapter's effect on Title V trivial activities.

The second was to eliminate the proposed definition for "wood-waste" and substitute a more general definition for "wood fuel" based on chemical composition and heat value. This change should have addressed the concerns expressed by Mr. Wood of Weyerhaeuser at the August meeting.

But as we'll see later, it didn't.

The staff also took the opportunity to make three additional changes to the subchapter as it was proposed at the August hearing.

First, the staff eliminated some redundant language in the Permit by Rule section, 252:100-19-13, on page 4, to improve readability.

Second, the staff is proposing to incorporate the applicable requirements of Subchapter 27, Particulate Matter Emissions From Industrial and Other Processes and Operations, into Subchapter 19 and then

PROCEEDINGS

MR. DYKE: We will begin this afternoon with Item Number 5E on the agenda, OAC 252:100-19, 21, 27, Appendix C, D, New, and C, D, Revoked. I'll call on Max Price.

MR. WILSON: Is there any way for us to turn up the sound system in here? Do you have it maxed-out?

MR. DYKE: I'm not using a sound system. I think that this is working.

Speak right into the microphone. Go ahead.

MR. PRICE: Members of the Council and ladies and gentlemen, on August 24th the Air Quality Council voted to hold Subchapters 19 and 27 over until this meeting to allow time for the staff to make the changes suggested at the August hearing.

The staff is proposing two additional changes to the definition section, 252:100-19-1, on page 1. The first of these is the addition of a definition for "industrial process" to clarify the meaning of the term. We believe this

revoke Subchapter 27.

The new section, 252:100-19-12, Allowable Particulate Matter Emission Rates for Directly Fired Fuel-Burning Units and Industrial Processes, on page 3, contains the applicable requirements of Subchapter 27. The new section will also make

directly fired fuel-burning units subject to the emission limits specified under Appendix G. This change will create a single subchapter for particulate matter emissions instead of the current three.

Finally, at the urging of engineering staff, the proposed Appendix C was modified by; one, eliminating of heat input ranges in favor of distinct heat input values; two, the addition of a formula for calculating acceptable emission rates from 1,000 to 10,000 MMBTU per hour; and three, rewording the text to indicate that the formulas may be used to calculate the acceptable emission rates.

We received written comments on our proposed changes to this rule from EPA on October 15, and Ogden Martin Systems of

Page 6

1 Tulsa on October 14, and Weyerhaeuser
2 Corporation on October 19, which we haven't
3 had a chance to incorporate them but
4 they'll be put into the record. I'm going
5 to go ahead and summarize these comments
6 right now for the Council.

7 The EPA Air, Pesticides and Toxic's
8 Division seemed to be satisfied with the
9 wording of Subchapter 19. EPA's Air Permit
10 Section expressed the same concerns they
11 brought up at the August meeting concerning
12 the enforceability of Section 252:100-19-3,
13 on page 4. This is the operation and
14 maintenance of control equipment.

15 EPA wants us to revise the
16 registration form to include specific
17 operational and maintenance procedures to
18 be followed by owners/operators seeking
19 coverage under this Permit by Rule. Staff
20 has agreed to do this and we're in the
21 process of preparing those forms now.

22 Ogden Martin of Tulsa submitted
23 three comments. They commented that the
24 definition of "fuel-burning equipment" in
25 Subchapter 19 should specify "stationary

Page 6

1 its waste energy, it's fuel burning
2 equipment. That's the definition of it.
3 So that might cause some controversy. I
4 hope not.

5 Weyerhaeuser believes, at least in
6 their gist of their comments. I can
7 summarize it as there is no definition
8 necessary for wood fuel in this subchapter.
9 They think that the people who operate
10 boilers that are wood fired and this kind
11 of thing, know innately what we mean by
12 wood fuel and the definition isn't
13 necessary.

14 Staff disagrees with this because we
15 believe that any term used in the
16 regulation, especially one that designates
17 a standard, needs to be defined if it's not
18 universally understood in our regulation.
19 We came up with that definition by using
20 some data, I'm going to go ahead and read
21 it into the record.

22 The heat value of wood from the
23 sources we have ranges from 8,560 to 9,130
24 or 9,500 BTU per pound if it's pine bark.
25 The cellulose content of wood ranges from

Page 7

1 sources" because the rule could be applied
2 to mobile sources like automobiles, and
3 they pointed out that the units in Appendix
4 C were mislabeled. It was pretty obvious
5 to us that they had an older copy of the
6 rule. The units in Appendix C have already
7 been corrected and there is no definition
8 for "fuel-burning equipment" now. "Fuel-
9 burning unit" has been substituted for
10 that.

11 As for their concern about
12 Subchapter 19 being applied to mobile
13 sources, the only thing I can say is with
14 the exception of Subchapter 15, that's the
15 only thing that we regulate, so we don't
16 think that it's necessary to change the
17 definition to accommodate that.

18 Ogden Martin's last comment had to
19 do with whether or not a waste to energy
20 facility would be covered under Subchapter
21 17 or Subchapter 19. As is currently
22 configured, at least with the PM emissions,
23 Subchapter 19 would be the controlling
24 subchapter because it deals with fuel
25 burning equipment. If you mix steam and

Page 9

1 40 to 50 percent for an average of 45
2 percent. This is by weight. Hemicellulose
3 20 to 35 percent, or 27.5 percent as an
4 average. Lignin 15-35 percent or 25
5 percent for an average. And this is pretty
6 typical of most -- it's a wide range
7 different species of wood, of course, as it
8 ranges. So the range that they are dealing
9 with for a mixture of all different types
10 of species ranges from 75 to 120 percent of
11 these three particular compounds, and for
12 an average of 97.5 percent of total
13 constitute of the material.

14 Based on this data and our phone
15 conversation we've had with Weyerhaeuser,
16 we believe that this definition was
17 acceptable and would fly. But they, as I
18 said, were unhappy with it. So in the
19 spirit of compromise what I propose to do
20 is to change the percentages in the BTU
21 values on that definition. We would like
22 to put it as the same as pine bark, which
23 is the lowest cellulose, hemicellulose and
24 lignin material they use, and the highest
25 BTU because of all the resins. So what we

5843

1 want to do is change the definition instead
2 of 95 percent constitute of these three
3 compounds, change it to 80 percent and then
4 lower the BTU value to 9,500 BTUs per
5 pound. We kind of hope that this will
6 satisfy and give them enough to work with
7 in wood waste and forest material.

8 MR. DYKE: Max, please repeat
9 those figures.

10 MR. PRICE: Sure, which ones?

11 MR. DYKE: The percent of the
12 BTU.

13 MR. PRICE: It will change from
14 95 percent to 80 percent cellulose,
15 hemicellulose and lignin, and lower the BTU
16 value from the currently proposed 10,000
17 BTUs per pound to 9,500 BTUs per pound,
18 which is basically, as I said, what pine
19 bark is made of. This the characteristics
20 of that and has the highest BTU and lowest
21 percentage of these elements. I got off my
22 notes and I don't know where I am. Okay.
23 Yes, one more change to recommend.

24 Finally, in a conference we had this
25 morning, we are also going to recommend one

1 In summary, what we are asking for
2 is -- the staff is requesting that the Air
3 Quality Council recommend to the Board,
4 one, that Subchapter 21 and 27 and
5 Appendices C and D be revoked.

6 Two, the proposed Subchapter 19 as
7 we revised it, Appendix C, the new Appendix
8 C and the new Appendix D be adopted as a
9 permanent rule.

10 MR. DYKE: I have notice here
11 that Mike Wood from Weyerhaeuser wishes to
12 speak. Does the Council wish to hear from
13 him before we ask questions, or do we want
14 to go on?

15 MR. WILSON: I don't have any
16 copies or -- or any copy of Weyerhaeuser's
17 comment.

18 MR. PRICE: Well, it arrived as
19 we were going out the door, sir.

20 Literally, it was the last thing I picked
21 up on the way out the door to come to this
22 meeting. So we haven't had a chance to
23 give any comments. We'll put it in the
24 record and if you would like, I'll send you
25 a copy.

1 more change to the rule. We are
2 recommending to the Council that the strike
3 paragraph 19-9(b), exception to the
4 allowable particulate matter emission rates
5 on industrial processes, that's on page 4.
6 And that they remove the line from
7 paragraph (a), allow particulate matter
8 emission rates, and that's paragraph 19-
9 9(a).

10 And the reason for this is that
11 during these discussions this morning we
12 found out that this is part of the standard
13 and is brought over without much
14 forethought as to what it really said. And
15 it turns out that the technique that we're
16 using would be used to determine the extra
17 -- this part of the standard is basically a
18 technique where you go out and measure the
19 opacity and then you estimate the
20 particulate measurements from that
21 measurement. And of course we all heard
22 this morning that that is scientifically
23 insupportable. So to simplify the rule and
24 make it really a lot easier to read, we
25 prefer to take that out.

1 MR. WILSON; We have a
2 representative from Weyerhaeuser that wants
3 to speak?

4 MR. DYKE: Yes. I thought it
5 would be a good idea to go ahead and let
6 him speak and then we could ask questions
7 of all, if that is acceptable.

8 MR. WOOD: Mike Wood with
9 Weyerhaeuser Company. Thank you, Council,
10 for allowing us this opportunity to
11 comment. And I apologize for the lateness
12 of our comments. They were sent at the
13 last minute yesterday.

14 This definition for wood fuel really
15 is, in my mind, doesn't add much to this
16 particular rule and really don't think it's
17 necessary. And with the changes -- well,
18 let me back up. Wood is an incredibly
19 variable material and its composition
20 varies greatly within a species and then
21 among species even more, and then among
22 different classes of wood, whether it's
23 hard woods or soft woods, the composition
24 varies tremendously.

25 The way this definition was last

Page 14

1 proposed with the 95 percent composition
2 based on a water-free basis or a dry basis,
3 it would exclude, according to my reference
4 materials, most of the woods that are
5 commercially available. And if we had left
6 the rule that way, what it would mean was
7 we were subject to a less stringent
8 standard. Wood burning fuels in boilers
9 over 250 million BTU per hour heat input
10 are subject to a more stringent particulate
11 matter standard. For our facilities it
12 didn't make much difference, because there
13 are other limitations that are applicable
14 either by permit or by New Source
15 Performance Standards. But just for the
16 sake of accuracy, we would like to see an
17 accurate definition for wood fuel if there
18 is to be one.

19 And using 80 percent and the lower
20 BTU per pound value, the BTU per pound
21 value doesn't give much heartburn. But the
22 80 percent -- the only reference I had for
23 bark was for pine bark. There is very
24 little research on the cellulose,
25 hemicellulose and lignin content of bark.

Page 15

1 I don't know if 80 percent is acceptable or
2 not. It may very well be. And the numbers
3 I used -- I took averages like you did to
4 put the numbers in my comments and I don't
5 -- which means some of the values were
6 lower than 80 percent. But I don't recall
7 what they were, so I'm not certain where
8 that would fall. To be truthful to
9 Weyerhaeuser, right now it doesn't make any
10 difference where the definition is, our
11 permits will regulate our particulate
12 emissions. So I don't know how the Council
13 would like to address that. We would still
14 prefer that no definition be offered.
15 Thank you.

16 MR. WILSON: I have a question
17 for Mr. Woods.

18 MR. WOOD: Sure.

19 MR. WILSON: If I understand this
20 right, you are not too happy with the
21 definition of wood fuel in this regulation?
22 MR. WOOD: That's correct.

23 MR. WILSON: Are you the only
24 entity in this state that is regulated by
25 this regulation?

Page 1

1 MR. WOOD: I don't know. I don't
2 know if anyone else is using wood as a fuel
3 or not.

4 MS. MYERS: Let's say what if the
5 cement plant starts burning broken pallets
6 and other wood waste. How is that going to
7 impact this?

8 MR. WOOD: Again, I don't know
9 how you are limited now, but you would be
10 subject to a different emission standard
11 rather than if you are greater than 250
12 million BTU per hour heat input. Rather
13 than be limited by Appendix C, you would be
14 limited by 252:100-19-11.

15 MR. WILSON: You are recommending
16 that the definition for wood fuel be
17 stricken by the regulations?

18 MR. WOOD: That's right. I guess
19 another issue I would have just as an issue
20 would any type of limitation in a
21 definition, there should be a method
22 specified for determining percent
23 composition. And I don't know that there
24 are -- there are plenty of published
25 methods. I don't know if there are very

Page 17

1 many standardized methods for measuring
2 these components.

3 MR. WILSON: Now, that definition
4 was newly added to this regulation.

5 MR. WOOD: Right.

6 MR. WILSON: What is the state's
7 reasoning for including that in the
8 definition?

9 MR. PRICE: There are several
10 reasons, one I've already stated. I think
11 it's bad practice to have a term that's
12 used to set a standard that isn't defined
13 in the regulation. But there are other
14 reasons as well. When we combined these
15 different particulate matter rules, it soon
16 became obvious that we were actually #1
17 dealing with particulate matter emissions
18 based on the kind of fuel that a facility
19 was using. Appendix C conditions includes
20 everything that isn't wood as a different
21 fuel. And so we need a definition for
22 fossil fuel and wood fuel. And we have
23 fossil fuel defined. We need a definition
24 for wood fuel so people will know what we
25 are talking about. If you don't have a

5845

1 definition then frankly, you can call
2 anything wood fuel. And this is one of the
3 things we were trying to get around.
4 Originally it was wood waste. If you look,
5 there is no really good definition for
6 that, it's what's left over after forestry
7 operations. That can be anything. So we
8 thought that the chemical composition of
9 BTU value would prevent -- I've lost the
10 word I'm searching for, but limited to
11 forestry waste and other things as well.
12 Because there might be somebody out here
13 that wants to run a boiler on his farm or
14 he has a boiler out here in the woods, he's
15 got 50 acres and he wants to use trees,
16 fine, that's no problem, as long as he has
17 a different standard that he has to meet.
18 That's why we did it.

19 MR. WOOD: I might point out
20 there is no definition for coal or
21 petroleum or natural gas or any of the
22 things that are considered fossil fuels.

23 MR. WILSON: You can probably
24 have an appreciation for the need to create
25 some definition there.

1 to debate that definition pretty hard. But
2 yeah, I think that's -- you know, trying to
3 define wood precisely is just going to be
4 difficult.

5 MR. WILSON: Is there any portion
6 of your operation that could be impacted by
7 this definition adversely? Or could it
8 potentially be adversely impacted?

9 MR. WOOD: I'm not absolutely
10 certain. I don't believe there is. I
11 don't think so.

12 MR. WILSON: Where did the
13 restriction here for wood come from?

14 MR. PRICE: I got this
15 information from Mark Standard Handbook for
16 Mechanical Engineers, the Eighth Edition.

17 MR. WILSON: Can you offer up any
18 language for this definition that you would
19 like to see, that would create less
20 heartburn but still keep the definition of
21 wood fuel? For example, wood waste derived
22 from wood products or something of that
23 sort? The reason why I'm saying this is I
24 haven't had a chance to read your comments.
25 And although they were sent in late, I want

1 MR. WOOD: There may be a need.
2 In my opinion, it's intuitively obvious
3 what is wood and it's a derivative of a
4 tree. And I think trying to be so specific
5 with the composition is going to create
6 enforcement problems.

7 MR. WILSON: If you burn wood
8 that's covered with soil -- creosote, I
9 think that's the right term.

10 MR. WOOD: EPA doesn't bother to
11 define wood in the New Source Performance
12 Standards for wood-fired boilers. There
13 will be definitions for wood waste in the
14 MACT standards for boilers that are
15 currently being developed. Or at least
16 that's my understanding that there will be.
17 And it will try to not so much define wood
18 as define the things that are not wood,
19 such as treatment chemicals or glues or
20 other things that might be associated with
21 wood in burning wood waste.

22 MR. WILSON: You would support
23 the definition more in line with the
24 definition of wood waste in the NESHAP.

25 MR. WOOD: I would probably want

1 to give some credibility to them before we
2 pass this thing on.

3 MR. KILPATRICK: Is there
4 anything in this rule where it says you
5 can't burn wood that's been say, coated
6 with creosote? Is that not a --

7 MR. PRICE: Are you asking me,
8 sir?

9 MR. KILPATRICK: Yes.

10 MR. PRICE: No, sir. There is
11 nothing in this rule that covers that.
12 This rule only deals with particulate
13 emissions and any toxic emissions and
14 things like that are handled by different
15 rules anyway.

16 MR. KILPATRICK: So creosote
17 covered wood would be, as long as it met
18 the technical definition, say the 80
19 percent?

20 MR. PRICE: Right.

21 MR. KILPATRICK: And 9,500 BTUs?

22 MR. PRICE: Yes, sir.

23 MR. KILPATRICK: Then it
24 qualifies for -- so it's the 9,500 that
25 might knock out the creosote.

Page 22

1 MR. PRICE: Right. The reason
2 it's put in is to make sure -- say he's got
3 a whole bunch of old tires and wants to get
4 rid of them and he -- (inaudible) he can't
5 do that because the mix would bring the BTU
6 up too high.
7 MR. WILSON: What about more
8 reasonable types of fuels like cardboard or
9 particle board?
10 MR. PRICE: There shouldn't be
11 any problem with that.
12 MR. WOOD: I don't recall seeing
13 anything in here that would limit -- if you
14 burn those other things mixed with wood,
15 you would just have a more lenient
16 particulate standard. As I interpret the
17 rule, if you burn things -- if your wood
18 doesn't meet the definition of wood and you
19 had other materials in there, you would
20 simply have a more lenient particular
21 standard.
22 MR. PRICE: Wood fuel -- there is
23 actually two different sections here that
24 we're dealing with and I don't have my rule
25 with me, of course. Can I borrow that?

Page 23

1 Thank you, very much.
2 The section that you are talking
3 about is 19-11, Allowable Particulate
4 Matter Emissions Rates From Combined Wood
5 Fuel and Fossil Fuel Fired Steam Generating
6 Units; is that correct?
7 MR. WOOD: Right.
8 MR. PRICE: That has a 0.1 pound
9 emission standard, and that's the same as
10 it was in 21. But we also have a wood --
11 Appendix D also refers to the equipment
12 that burns wood.
13 MR. WOOD: Right.
14 MR. PRICE: And it's more
15 generous than Appendix C.
16 MR. WOOD: The indirectly fired.
17 MR. PRICE: Right, indirectly
18 fired wood fuel burning units. That's 19-
19 10 and that refers to Appendix D which is
20 more generous than Appendix C.
21 MR. KILPATRICK: Are you saying
22 that if I had wood coated with creosote and
23 say it's over 9,500 BTUs, so that throws it
24 out as not a wood fuel.
25 MR. PRICE: It's not a wood fuel

Page 1

1 anymore.
2 MR. KILPATRICK: Are you saying
3 that it falls under 19-11?
4 MR. PRICE: No, sir. It would
5 fall under Appendix C. It would kick out
6 of all wood, it's not wood fuel anymore,
7 and then Appendix C limits would apply to
8 it.
9 MR. KILPATRICK: Which paragraph
10 sends us to Appendix C?
11 MR. PRICE: Okay. 19-4, sir, on
12 page 2, Allowable Particulate Emission
13 Rates From Fuel-Burning Units, and that's
14 the catch-all. If it's not wood fuel or
15 combined wood fuel and fossil fuel burning
16 unit, then it automatically falls under
17 Appendix C.
18 MR. WILSON: I just got a copy of
19 the comments from Mike Wood. Mike, you
20 state that this definition would exclude
21 much of the material currently considered
22 wood fuel by owners and operators of wood
23 fire boilers in Oklahoma. So this
24 definition does impact?
25 MR. WOOD: At the 95 percent, it

Page 2.

1 excludes those from that definition. It
2 doesn't exclude anybody from burning it.
3 You can still burn it, it's still wood.
4 MS. MYERS: Does it need to be
5 defined as wood derived wood instead of
6 wood derived fuel? Wouldn't a wood derived
7 fuel include other portions and parts?
8 MR. KILPATRICK: I think what
9 will happen is if they were burning
10 something, it turned out to be less than 80
11 percent, if somebody went off and did a
12 test on particular fuel and we all agreed
13 on the test, as you pointed out there is no
14 test method specified here, you would then
15 fall back to Appendix C.
16 MR. PRICE: That's exactly right.
17 MR. KILPATRICK: Which would mean
18 that you have a much higher standard. So
19 you would have thought you were burning
20 wood, but because it was 79 percent instead
21 of 80, it would have a much higher
22 particulate source.
23 MR. PRICE: Right. That's
24 correct.
25 MR. WOOD: I don't think it would

5847

1 be tighter?
2 MR. PRICE: C is much tighter a
3 standard than D.
4 MR. KILPATRICK: It starts out
5 the same, but as soon as from there it
6 starts deviating. It gets tighter when you
7 get over 10,000 million BTUs. So it
8 appears to me what you are trying to do in
9 the definition of wood fuel is add some
10 specificity to it. But what you are trying
11 to say is it is supposed to be something
12 derived from wood, why don't we set the
13 percent, 5 or 10 percent lower than
14 whatever the lowest number in the table is?
15 MR. PRICE: You lost me on that
16 one, sir, I'm sorry. Are you talking about
17 the composition?
18 MR. KILPATRICK: Uh-huh.
19 MR. PRICE: The lowest number --
20 that would be agreeable as long as we kept
21 the BTU value down to 9,500.
22 MR. KILPATRICK: The intent is
23 just to make sure that people burn wood.
24 MR. PRICE: Right, exactly. And
25 the lowest number that my calculations show

1 for those three elements combined is 75
2 percent.
3 MR. KILPATRICK: The other
4 approach is why don't we just stick with
5 the other route and say anything derived
6 from wood, and then have the maximum BTU
7 requirement, which added something to it,
8 like creosote or something else.
9 MR. PRICE: That works as long as
10 we're not talking about any alcohols or
11 anything, but BTU value should work for
12 that, too. When you say derived, I'm going
13 to have to think of a fermentation process
14 for cellulose.
15 MR. KILPATRICK: What was the
16 pine bark? Was it 80 percent in the table?
17 MR. PRICE: 80 percent, yes, sir.
18 MR. KILPATRICK: And you took
19 that number right there?
20 MR. PRICE: Yes, sir. That's
21 from Weyerhaeuser data that they sent. And
22 pine bark happened to be listed in my
23 remarks as 9,500 BTU per pound, because of
24 the high resin content. I remember the
25 discussion. It had such a high resin

1 content.
2 MR. WILSON: Now, your concern,
3 Mike, is that this is going to be somehow
4 limiting or could be limiting in the
5 future?
6 MR. WOOD: Right. I'm concerned
7 for the precedent that might be set for
8 future rulemaking.
9 MR. WILSON: Why don't we just
10 add the words, or any wood derived fuel as
11 approved by the director or the Division?
12 MR. PRICE: To the definition?
13 MR. WILSON: Under wood fuel.
14 And what this would do is allow any future
15 disputes to be settled with the Air Quality
16 Division as opposed to trying to understand
17 what the definition means.
18 MS. HOFFMAN: Well, it's always a
19 good idea, in my opinion, to put some sort
20 of a limit in the rule so that everybody
21 knows what they are shooting at. But you
22 can also do that and then give the director
23 the discretion if it turns out there was
24 some situation that really would benefit or
25 really needs to be within that standard.

1 So perhaps you could do it that way, and
2 come up with something that we all think is
3 a pretty good definition of wood fuel but
4 then provide the director, discretion to
5 deviate from that if necessary.
6 MR. WILSON: The way that I see
7 this is that neither the DEQ wants to limit
8 necessarily and the industry doesn't want
9 to be limited necessarily. So really both
10 interested parties agree we just need to
11 come up with the language that would
12 facilitate that. And I would recommend
13 that it be put in the words of, for any
14 wood derived fuel as approved by the Air
15 Quality Division or the Division, I think
16 that's how it's being addressed.
17 MR. BRANECKY: Changing the 95 to
18 80, wouldn't you come up with 9,500?
19 MR. WILSON: And recommend that
20 the 95 be changed to 80 percent and the
21 10,000 BTU be changed to 9,500 BTU.
22 MS. MYERS: I'll make a --
23 MR. WOOD: Can I hear it read the
24 way it's going to read?
25 MR. WILSON: The new definition

Page 30

1 would be wood fuel, means any fuel which
2 excluding air and water is at least 80
3 percent or less cellulose, hemicellulose
4 and lignin, and has a heat value of less
5 than 9,500 BTUs per pound, or any fuel --
6 excuse me -- or any wood derived fuel as
7 approved by the Division.
8 MR. WOOD: Yes. We could live
9 with that.
10 MR. WILSON: Barbara?
11 MR. PRICE: That's fine with us,
12 too. That sounds good.
13 MR. DYKE: Division, Division
14 Director?
15 MR. PRICE: Is that the proper
16 wording, Division?
17 MS. HOFFMAN: Yes.
18 MR. DYKE: Bill.
19 MR. FISHBACK: I have a question,
20 I think, for Max. Just a clarification
21 related to the revocation of Subchapter 27
22 and its replacement with Subchapter 19.
23 Subchapter 27 included particulate
24 emissions from all industrial processes
25 including fuel burning equipment and things

1 MR. FISHBACK: It doesn't appear
2 that they are.
3 MR. PRICE: They are.
4 MR. FISHBACK: Okay. That's my
5 question. How are they covered?
6 MR. PRICE: In the definition
7 section where we define industrial process.
8 Industrial process includes any -- here we
9 go, industrial process means any source,
10 activity or equipment excluding fuel
11 burning equipment units, which can be
12 reasonably expected to emit particulate
13 matter. The term excludes but is not
14 limited -- includes but is not limited to
15 crushing, milling, screening, mixing or
16 conveying. The term does not include
17 maintenance activities, unless maintenance
18 is the primary activity of the facility.
19 That takes in your rock crushers and all
20 that stuff.
21 MR. FISHBACK: That's in the
22 definition, but where does the rule refer
23 to that definition and impose some kind of
24 limitation? Because all the limitations
25 are based on fuel firing regs.

Page 31

Page 33

1 like cement kilns and rock crushers and
2 things like that. So if I understand this
3 proposal correctly, Subchapter 27 is going
4 to be revoked in its entirety and replaced
5 with Subchapter 19. And Subchapter 19
6 relates just to fuel burning equipment, not
7 the whole range of particulate emission
8 equipment, with the exception of this last
9 section in Subchapter 19, 19-13, which is
10 Permit by Rule.
11 So my question is, if we revoke
12 Subchapter 27, which basically was this
13 process weight table from antiquity, I mean
14 it was there forever, and replace it with
15 Subchapter 19, are the other particulate
16 emission sources from equipment other than
17 fuel burning all going to be covered -- in
18 effect, do they all have their own Permit
19 by Rule? I know that some do, but my
20 question is, do all of them?
21 MR. PRICE: If I understand your
22 question correctly, you are saying that the
23 sources covered under Subchapter 27 that
24 were originally the process regulated
25 sources are not covered under 19?

1 MR. PRICE: ^{Allowable} particulate
2 matter emission rates from directly fired
3 fuel burning units and industrial
4 processes. Allowable particulate matter
5 emission rates, and it refers to Appendix
6 G, which is the same appendix that 27 just
7 referred to.
8 MR. FISHBACK: Okay. So that
9 same -- all right, that's the thing I
10 missed.
11 MR. PRICE: That's the same
12 thing.
13 MR. FISHBACK: So Appendix G in
14 Subchapter 19 replaces Appendix C in
15 Subchapter 27?
16 MR. PRICE: No. Appendix C,
17 Appendix ~~B~~, Appendix D are all part of 19
18 now. We revoked Appendix C and D, but we
19 left Appendix G alone, we didn't even mess
20 with it. It's okay. It's still the same
21 Appendix G it's always been.
22 MR. FISHBACK: Okay, I've got it.
23 Good. Thank you.
24 MR. KILPATRICK: Max, I have one
25 more question.

5849

1 MR. PRICE: Yes, sir?
 2 MR. KILPATRICK: You were
 3 discussing, I think, taking out one
 4 sentence in 252:100-19-9?
 5 MR. PRICE: No, sir. I made a
 6 mistake on that. I'm glad you brought that
 7 up, it slipped my mind completely. I made
 8 a boo-boo. I picked the wrong one. It's
 9 12.
 10 MR. KILPATRICK: Which one was
 11 coming out?
 12 MR. PRICE: On 252:100-19-12(b),
 13 Paragraph B was -- we were going to revoke
 14 that because it was --
 15 MR. KILPATRICK: You are revoking
 16 the exception part?
 17 MR. PRICE: Yes. We're revoking
 18 the exception. Then on Paragraph A we're
 19 going to remove the (a) allowable
 20 particulate matter emission rates, take
 21 that sentence out, so that the paragraph
 22 remains directly under the heading.
 23 MR. DYKE: Okay. As a point of
 24 clarification, we need to do three things
 25 on this rule. We need to revoke Subchapter

1 MR. BREISCH: I have a motion and
 2 a second. The motion that I am a little
 3 bit afraid to repeat. I'm sure the court
 4 reporter has it. Any other comments?
 5 MR. WILSON: These are not three
 6 votes; is that correct? We are going to
 7 take one vote?
 8 MR. DYKE: Yes.
 9 MR. BREISCH: Myrna, call the
 10 roll.
 11 MS. BRUCE: Mr. Wilson.
 12 MR. WILSON: Aye.
 13 MS. BRUCE: Mr. Fallon.
 14 MR. FALLON: Aye.
 15 MS. BRUCE: Ms. Myers.
 16 MS. MYERS: Yes.
 17 MS. BRUCE: Mr. Branecky.
 18 MR. BRANECKY: Aye.
 19 MS. BRUCE: Mr. Kilpatrick.
 20 MR. KILPATRICK: Aye.
 21 MS. BRUCE: Mr. Breisch.
 22 MR. BREISCH: Yes.

(End of Proceedings)

1 21 and 27, Appendix C and D, we need to
 2 amend Subchapter 19 and then we need to add
 3 new Appendix -- approved new Appendix C and
 4 D?
 5 MR. PRICE: That's correct.
 6 MR. DYKE: And recommend that it
 7 all go to the Board in one package as a
 8 permanent.
 9 MR. PRICE: That would be all the
 10 changes made at this meeting, sir. Yes,
 11 sir.
 12 MR. BREISCH: Are we through with
 13 comments?
 14 MR. DYKE: Any other comments?
 15 Thank you.
 16 MR. WILSON: I would like to make
 17 a motion that we revoke Chapter 21 and 27
 18 and amend Subchapter 19 and adopt new
 19 Sections C and D along with the word
 20 changes.
 21 MR. BREISCH: As a permanent
 22 rule?
 23 MR. WILSON: As a permanent rule.
 24 I make that motion.
 25 MR. KILPATRICK: I'll second.

OAC 252:100-23 SIP Revision

SUBCHAPTER 23. CONTROL OF EMISSIONS FROM COTTON GINS

252:100-23-1. Purpose

The purpose of this Subchapter is to control emissions from cotton gins, ~~in order to prevent the Oklahoma air quality standards from being exceeded and ensure that degradation of the present level of air quality in Oklahoma does not occur.~~

252:100-23-2. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"**Cotton gin**" means any facility ~~or plant which~~ that removes seed, lint, and trash from raw cotton and bales of lint cotton for further processing. Each equipment exhaust, including the trash and burr hopper, located at a cotton gin shall be considered ~~as being~~ an individual process emission source.

~~"Cotton gin site" means the land upon which a cotton gin is located and all contiguous land having common ownership or use.~~

"**Existing gin**" means a gin which was in existence and ~~has~~ had submitted a ~~current emission inventory~~ inventories to the ~~Air Quality Program Division~~ for the most recent two ginning seasons and ~~is~~ was in possession of a valid annual renewable fee receipt ~~preceding the effective date of this rule~~ prior to May 1, 1993. All other gins shall be considered "new".

"**Gin site**" means the land upon which a cotton gin is located and all contiguous land having common ownership or use.

"**High efficiency cyclone**" means any cyclone type collector of the 2D-2D or 1D-3D configuration. ~~These designations referring~~ refer to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion. A 2D-2D cyclone would exhibit a cylinder length of 2 x D and a cone length of 2 x D (90 percent collection efficiency for TSP). A 1D-3D cyclone would exhibit a cylinder length of 1 X D and a cone length of 3 x D (95 percent collection efficiency for TSP).

"**High pressure exhausts**" means the exhaust cotton handling air systems located at a cotton gin which are not defined as "low pressure exhausts".

"**Low pressure exhausts**" means the exhaust air systems at a cotton gin which ~~handles~~ handle air from the cotton lint handling system and battery condenser.

252:100-23-3. ~~General provisions; applicability~~ Applicability, general requirements

~~(a) (a) Applicability. The Effective May 1, 1993, the provisions of this Subchapter are applicable to all new, modified, and existing cotton gins operating in the State of Oklahoma. Cotton gins in compliance with this Subchapter are exempt from the requirements of OAC 252:100-25, 252:100-27, and 252:100-29.~~

(b) General requirements.

~~(b) (1) Permits required. In addition to the requirements of this Subchapter, each new or modified cotton gin shall comply with the permitting requirements of OAC 252:100-7.~~

~~(c) (2) Air toxics emissions. The requirements of this Subchapter are in addition to any which may be required under OAC 252:100-41.~~

~~(d)(3) Recordkeeping.~~ The owner or operator of a cotton gin shall maintain a log documenting the daily process weight and hours of operation ~~and air.~~ Air emission control equipment replacement/repair costs shall also be recorded. These records shall be maintained for a period of two years and shall be made available for inspection by the ~~Air Quality Program DEQ personnel or its representative~~ during normal business hours.

~~(e)(4) Test methods.~~

~~(1)(A)~~ Visible emissions testing shall be conducted using EPA reference method 9 contained in 40 CFR Part 60, Appendix A and. Testing shall be performed by an individual possessing current certification a Certified Visible Emissions Evaluator.

~~(2)(B)~~ Dispersion modeling for PM-10 shall be performed using an EPA approved modeling method.

~~(f) Effective date.~~ This Subchapter shall become effective May 1, 1993.

~~252:100-23-4. Smoke, visible emissions, and particulates~~ Visible emissions (opacity) and particulates

~~(a) Visible emissions limit.~~

~~(1) Emissions (a) Opacity limit.~~ No person shall cause, suffer, allow or permit the discharge of any fumes, aerosol, mist, gas, smoke, vapor, particulate matter or any combination thereof ~~a shade or density exhibiting greater than twenty (20) percent 20% equivalent opacity.~~ This requirement shall not apply to ~~smoke or visible emissions exhibiting greater than 20% opacity~~ emitted during short-term occurrences, ~~the shade or density of which is not greater than sixty (60) percent opacity for an period aggregating no more than five (5) minutes in any sixty (60) consecutive minutes and/or no more than twenty (20) minutes in any consecutive 24-hour period, which consist of not more than one six-minute period in any consecutive 60 minutes, not ot exceed three such periods in any consecutive 24 hours, during which the average of any six-minute period shall not exceed 60% opacity.~~

~~(2)(b) Alternative emissions opacity limit.~~ The ~~twenty (20) percent 20%~~ opacity limit as required under 252:100-23-4(a) may be increased for particulates only provided that the ~~owner/operator owner or operator~~ demonstrates to the satisfaction of the ~~Oklahoma~~ Air Quality Council at public hearing that those requirements listed in 252:100-25-4(a) through (c) have been met.

~~(b)(c) PM-10 emissions limit.~~ No cotton gin shall ~~impact the ambient air quality in such a manner as to violate~~ be operated so as to cause or contribute to a violation of the ~~primary PM-10 standard of 50 ug/m³ annual arithmetic mean or 150 ug/m³ 24-hour average or any other ambient air standard quality standards or any other ambient air quality standard established by OAC in 252:100-3.~~

~~252:100-23-5. Emission control equipment~~

~~(a) Low pressure exhausts.~~ For ~~emissions emission~~ control from low pressure exhausts, the use of screens with a mesh size of 70 by 70 or finer (U.S. Sieve), or the use of perforated condenser drums with holes not exceeding 0.045 inches in diameter or equipment of equivalent design efficiency as determined by the Executive Director shall be required.

~~(b) High pressure exhausts.~~ For emission control from high pressure exhausts, the use of 2D-2D cyclones shall be required for existing gins. Existing gins shall install and use

1D-3D cyclone collectors or equivalent when the capital cost of repair or replacement of the existing 2D-2D cyclone exceeds ~~fifty (50) percent~~ 50% of the capital cost of a new 1D-3D cyclone. New or modified cotton gins shall utilize a 1D-3D cyclone collector or equipment of equivalent collection efficiency upon commencement of operation.

(c) ~~Fugitive emissions~~ **Burr hoppers.** For emission control of fugitive emissions from burr hoppers during dumping, the use of total enclosure burr hoppers at existing gin sites located within the corporate city limits of any city or within 300 feet of two or more occupied establishments ~~is required~~ must be totally enclosed. All new gin sites shall install and use a total enclosure on the burr hopper.

252:100-23-6. Fugitive dust controls

(a) For control of fugitive dust, no person shall ~~cause or permit~~ allow the handling, transporting, or disposition of any substance or material ~~which that~~ is likely to be scattered by the air or wind, or is susceptible to being airborne, or windborne, or to and ~~no person shall operate or maintain or cause to be operated or maintained,~~ any gin ~~premises~~ site, open area, right-of-way, storage pile or materials, vehicle, or construction, or any other enterprise which involves any material or substance likely to be scattered by the wind or air, ~~or susceptible to being windborne or airborne~~ that would be classified as air pollution without taking reasonable precautions or measures to minimize atmospheric pollution.

(b) No person shall ~~cause or permit~~ allow the discharge of any visible fugitive dust emissions beyond the property line on which the emissions originate.

252:100-23-7. Permit by rule

(a) **Applicability.** Any new or existing facility may be constructed or operated under this section if it meets the requirements of 252:100-7-60 (a), (b), (c) and has the Standard Industrial Classification (SIC) code 0724 Cotton Ginning.

(b) **Requirements.**

- (1) In addition to the requirements in 252:100-7-60 (a), (b), and (c), an owner or operator of a facility subject to this section shall comply with all of the requirements of this Subchapter.
- (2) Maximum production rate of a facility subject to this section shall be 36,000 bales per year.

Oklahoma Register

Notices of Rulemaking Intent

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must publish a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides other information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained. For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-1216]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking.

Proposed rules:

252:100. Air Pollution Control

Appendix E. Primary Ambient Air Quality Standards [AMENDED]

Appendix F. Secondary Ambient Air Quality Standards [AMENDED]

Subchapter 7. Permits for Minor Sources [AMENDED]

Subchapter 23. Control of Emissions from Cotton Gins [AMENDED]

Subchapter 24. Control of Emissions from Grain Elevators [AMENDED]

Appendix L. PM-10 Emission Factors for Permit by Rule for Grain Elevators [NEW]

Subchapter 25. Smoke. Visible Emissions and Particulates [AMENDED]

Subchapter 37. Control of Emissions of Organic Materials [AMENDED]

Subchapter 39. Emission of Organic Materials in Nonattainment Areas [AMENDED]

Summary:

The proposed revisions to Appendices E and F will mirror the revised federal national ambient air quality standards for particulate matter (PM) and ozone announced by EPA in the July 18, 1997, Federal Register. The EPA revised the primary (health-based) PM standards by adding a new annual PM-2.5 standard set at 15 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) and a new 24-hr PM-2.5 standard set at $65 \mu\text{g}/\text{m}^3$. EPA is retaining the current annual PM-10 standard of $50 \mu\text{g}/\text{m}^3$ and changing the form of the PM-10 24-hr standard. The secondary (welfare-based) standards are also being adjusted to make them identical to the primary standards. Also, the previous 1-hr primary ozone standard is being phased out and replaced with a new 8-hr "concentration-based" standard of 0.08 ppm. The 3-yr average of the 4th highest daily maximum 8-hr ozone concentrations is used to determine compliance with the standard. The EPA also replaced the previous secondary standards with a standard identical to the new primary standard. The proposed revisions to Subchapter 7 will delete the lower limit of 5 tons per year for

Permit by Rule (PBR) facilities. This will allow those facilities with less than 5 tons per year emissions, which are subject to new source performance standards (NSPS) and national emissions standards for hazardous air pollutants (NESHAP), to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each Subchapter containing a PBR for specific facilities will be referenced under this new Part also. The proposed revisions to Subchapters 23 and 24 would simplify the language under the agency-wide re-write/de-wrong initiative. It is also proposed to add a new PBR section to both subchapters. The PBR will streamline the permitting process by creating a mechanism that will eliminate the necessity for some cotton gins and elevators to obtain an individual air quality permit. Also, a new Appendix L is proposed which contains PM-10 emission factors for PBR grain elevators. The proposed amendments to Subchapter 25 would fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the Department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P. Additionally, the Department proposes to exempt from Appendix P requirements those sources already subject to a new source performance standard and sources scheduled for retirement within 5 years after the amended rule takes effect. The amended rule would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include changing the time allowed for visible emissions during short-term occurrences to exceed the opacity standard to one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. A new subsection would contain methods for determining compliance with the opacity limits. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule. The proposed changes to Subchapters 37 and 39 are primarily intended to clarify, simplify and correct the rule and to respond to requests to exclude acetone and methylated siloxanes from the definition of volatile organic compound (VOC). The proposed changes to Subchapters 37 and 39 include clarification of language, correction of typographical errors, deletion of redundant language, and reformatting. Two substantive changes are proposed for

Notices of Rulemaking Intent

Subchapter 37 and one for Subchapter 39. One of those substantive changes affects both Subchapter 37 and 39. The definition of volatile organic compounds (VOC) in 252:100-37-2 and 252:100-39-2 has been revised in response to the Air Quality Council's direction to the staff to review the petition from the Chemical Manufacturers Association dated October 25, 1995, to exclude acetone from the definition of Volatile Organic Compounds (VOC); the request from American Airlines, Boeing, and Nordam, dated January 19, 1998, that acetone be excluded from the definition of VOC; and a request that methylated siloxanes be excluded from the definition of VOC. The definition of volatile organic compounds (VOC) has been modified to be consistent with the Environmental Protection Agency definition. The second substantive change for Subchapter 37 deals with the first sentence in 252:100-37-36 regarding fuel-burning and refuse-burning equipment, which has been deleted to resolve the contradiction between the first and second sentences. The Department is requesting comments on these proposed changes.

AUTHORITY:

Environmental Quality Board, 27A O.S. Supp. 1997, §§ 2-2-101 and 2-5-101 *et seq.*

COMMENT PERIOD:

Wednesday, July 15, 1998, through Tuesday, August 18, 1998. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by Tuesday, August 11, 1998. Also scheduled before the Environmental Quality Board at their meeting on Tuesday, September 15, 1998 - 9:30 a.m. in Alva (Location to be determined. See contact person.)

PUBLIC HEARINGS:

Tuesday, August 18, 1998 - 9:30 a.m. briefing and 1:00 p.m. hearing, Department of Environmental Quality, Air Quality Division, 707 N. Robinson, Room 101, Oklahoma City, Oklahoma.

COPIES OF PROPOSED RULES:

Copies of the rules will be available July 15, 1998, for review at the Air Quality Division office at the address listed above or may be obtained from Myrna Bruce at 405-702-4177.

RULE IMPACT STATEMENT:

A copy of the rule impact statements may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Michelle Martinez (Appendices E, F, L and Subchapter 24), Jeanette Buttram (Subchapters 7 and 25), Becky Mainord (Subchapter 23), Joyce Sheedy, Ph.D. (Subchapters 37 and 39). Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

ADDITIONAL INFORMATION:

Additional proposed revisions have been made to the version of Subchapter 25 that was the subject of a public hearing on June 16, 1998.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #98-1216; filed 6-25-98]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-1217]

INTENDED RULEMAKING ACTION:

Notice of proposed EMERGENCY and PERMANENT rulemaking.

Proposed rules:

252:100, Air Pollution Control: Subchapter 47, Control of Emissions from Existing Municipal Solid Waste Landfills [NEW]

Summary:

A new Subchapter 47 is proposed to establish state standards to control emissions from municipal solid waste (MSW) landfills that commenced construction, modification, or reconstruction before May 30, 1991, and accepted waste after November 8, 1987. These proposed rules will be included in Oklahoma's State 111(d) Plan and will provide the enforceable mechanism for implementing the provisions of the Emission Guidelines (EG) for MSW landfills (40 CFR 60 Subpart Cc). Subchapter 47 incorporates by reference sections of the New Source Performance Standards for MSW landfills (40 CFR 60 Subpart WWW). The proposed rules would affect privately and publicly owned MSW landfills that are actively accepting or are capable of accepting municipal solid waste as well as those that are closed. Landfill gas collection and control systems will be required for landfills that have design capacities greater than or equal to 2.5 million megagrams and 2.5 million cubic meters and have estimated emissions of at least 50 megagrams per year of non-methane organic compounds. The Department is requesting comments on this proposed rule.

AUTHORITY:

Environmental Quality Board, 27A O.S. Supp. 1997, §§ 2-2-101 and 2-5-101 *et seq.*

COMMENT PERIOD:

Wednesday, July 15, 1998, through Tuesday, August 18, 1998. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by Tuesday, August 11, 1998. Also scheduled

Notices of Rulemaking Inte

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must publish a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained. For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CO.

[OAR Docket #98-1259]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking
PROPOSED RULES:

252:100. Air Pollution Control

Subchapter 7. Permits for Minor Sources
[AMENDED]

Subchapter 23. Control of Emissions from Cotton Gins
[AMENDED]

Subchapter 24. Control of Emissions from Grain Elevators
[AMENDED]

[AMENDED]

Appendix L. PM-10 Emission Factors for Permit by Rule for Grain Elevators [NEW]

SUMMARY:

The proposed revisions to Appendices E and F will mirror the revised federal national ambient air quality standards for particulate matter (PM) and ozone announced by EPA in the July 18, 1997, Federal Register. The EPA revised the primary (health-based) PM standards by adding a new annual PM-2.5 standard set at 15 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) and a new 24-hr PM-2.5 standard set at $65 \mu\text{g}/\text{m}^3$. EPA is retaining the current annual PM-10 standard of $50 \mu\text{g}/\text{m}^3$ and changing the form of the PM-10 24-hr standard. The secondary (welfare-based) standards are also being adjusted to make them identical to the primary standards. Also, the previous 1-hr primary ozone standard is being phased out and replaced with a new 8-hr "concentration-based" standard of 0.08 ppm. The 3-yr average of the 4th highest daily maximum 8-hr ozone concentrations is used to determine compliance with the standard. The EPA also replaced the previous secondary standards with a standard identical to the new primary standard. The proposed revisions to

delete the lower limit of 5 tons per year (PBR) facilities. This will allow facilities with less than 5 tons per year emissions, which currently must meet NSPS standards for hazardous air pollutants, to obtain a PBR instead of having to obtain a permit. A new Part 9 is proposed that contains the amendments necessary for a facility to qualify for a PBR. Each Subchapter containing a PBR for specific facilities will be referenced under this new Part also. The proposed revisions to Subchapters 23 and 24 would simplify the language under the agency-wide re-write/delete initiative. It is also proposed to add a new PBR section to both subchapters. The PBR will streamline the permit process by creating a mechanism that will eliminate the necessity for some cotton gins and elevators to obtain individual air quality permits. Also, a new Appendix I is proposed which contains PM-10 emission factors for PM grain elevators. The proposed amendments to Subchapter 25 would fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the Department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries specified in 40 CFR 51, Appendix P. Additionally, the Department proposes to exempt from Appendix I requirements those sources already subject to a new source performance standard and sources scheduled for retirement within 5 years after the amended rule takes effect. The amended rule would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include changing the time allowed for visible emissions during short-term occurrences to exceed the opacity standard to one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. A new subsection would contain methods for determining compliance with the opacity limits. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule. The proposed changes to Subchapters 37 and 39 are primarily intended to clarify, simplify and correct the rule and to respond to requests to exclude acetone and methylated siloxanes from the definition of volatile organic compound (VOC). The proposed changes to Subchapters 37 and 39 include clarification of language, correction of typographical errors, deletion of redundant language, and

Notices of Rulemaking Intent

reformatting. Two substantive changes are proposed for Subchapter 37 and one for Subchapter 39. One of those substantive changes affects both Subchapter 37 and 39. The definition of volatile organic compounds (VOC) in 252:100-37-2 and 252:100-39-2 has been revised in response to the Air Quality Council's direction to the staff to review the petition from the Chemical Manufacturers Association dated October 25, 1995, to exclude acetone from the definition of Volatile Organic Compounds (VOC); the request from American Airlines, Boeing, and Nordam, dated January 19, 1998, that acetone be excluded from the definition of VOC; and a request that methylated siloxanes be excluded from the definition of VOC. The definition of volatile organic compounds (VOC) has been modified to be consistent with the Environmental Protection Agency definition. The second substantive change for Subchapter 37 deals with the first sentence in 252:100-37-36 regarding fuel-burning and refuse-burning equipment, which has been deleted to resolve the contradiction between the first and second sentences. The Department is requesting comments on these proposed changes.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #98-1259; filed 7-9-98]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-1260]

INTENDED RULEMAKING ACTION:

Notice of proposed EMERGENCY PERMANENT rulemaking.

PROPOSED RULES:

252:100. Air Pollution Control

Subchapter 47. Control of Emissions from Existing Municipal Solid Waste Landfills [NEW]

SUMMARY:

A new Subchapter 47 is proposed to establish state standards to control emissions from municipal solid waste (MSW) landfills that commenced construction, modification, or reconstruction before May 30, 1991, and accepted waste after November 8, 1987. These proposed rules will be included in Oklahoma's State 111(d) Plan and will provide the enforceable mechanism for implementing the provisions of the Emission Guidelines (EG) for MSW landfills (40 CFR 60 Subpart Cc). Subchapter 47 incorporates by reference sections of the New Source Performance Standards for MSW landfills (40 CFR 60 Subpart WWW). The proposed rules would affect privately and publicly owned MSW landfills that are actively accepting or are capable of accepting municipal solid waste as well as those that are closed. Landfill gas collection and control systems will be required for landfills that have design capacities greater than or equal to 2.5 million megagrams and 2.5 million cubic meters and have estimated emissions of at least 50 megagrams per year of non-methane organic compounds. The Department is requesting comments on this proposed rule.

Notices of Rulemaking Intent

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must publish a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides other information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained. For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-1358]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

PROPOSED RULES:

Subchapter 5. Registration, Emission Inventory and Annual Operating Fees [AMENDED]

Subchapter 7. Permits for Minor Sources [AMENDED]

Subchapter 8. Permits for Part 70 Sources [AMENDED]

Subchapter 23. Control of Emissions from Cotton Gins [AMENDED]

Subchapter 24. Control of Emissions from Grain Elevators [AMENDED]

Appendix L. PM-10 Emission Factors for Permit by Rule for Grain Elevators [NEW]

Subchapter 25. Smoke, Visible Emissions and Particulates [AMENDED]

Subchapter 37. Control of Emission of Organic Materials [AMENDED]

Subchapter 39. Emission of Organic Materials in Nonattainment Areas [AMENDED]

Subchapter 41. Control of Emission of Hazardous and Toxic Air Contaminants [AMENDED]

SUMMARY:

In Subchapter 5, the Department is considering possible increases in annual operating fees for both minor facilities and Part 70 sources.

The proposed revisions to Subchapter 7 will modify language applicable to de minimis facilities, Permit by Rule (PBR), and general permits. First, actual emissions of Total Suspended Particulates (TSP) will no longer be counted in determining whether a facility meets the definition of "de minimis facility." Second, the proposed revisions will delete the lower limit of 5 tons per year for PBR facilities. This will allow those facilities with less than 5 tons per year emissions, which are subject to New Source Performance Standards (NSPS) or National Emissions Standards for Hazardous Air Pollutants (NESHAP), to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a

PBR for specific facilities will be referenced under this new Part also. Third, the proposed revisions will delete the lower limit for general permits. This will allow facilities that may have less than 40 tons per year of emissions, but for which no PBR has been written, the opportunity to apply for coverage under an applicable general permit. The Department also proposes to delete the definition for "Volatile Organic Solvents (VOS)," because the proposed changes to Subchapters 37 and 39 would exclude that term from the rules.

The Department is considering increases in the permit application fees in both Subchapters 7 and 8.

The proposed revisions to Subchapters 23 and 24 would simplify the language under the agency-wide re-write/de-wrong initiative. It is also proposed to add a new PBR section to both subchapters. The PBR will streamline the permitting process by creating a mechanism that will eliminate the necessity for some cotton gins and elevators to obtain an individual air quality permit. Also, a new Appendix L is proposed which contains PM-10 emission factors for PBR grain elevators. Additional changes to both subchapters follow a proposed amendment of Subchapter 25 concerning short-term exceedances of the opacity standard. The revised rules would allow such exceedances during one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours.

The proposed amendments to Subchapter 25 would fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the Department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P. Additionally, the Department proposes to exempt from Appendix P requirements those sources already subject to a new source performance standard and sources scheduled for retirement within 5 years after the amended rule takes effect. The amended rule would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include exempting sources subject to opacity standards promulgated under Section 111 of the Federal Clean Air Act, along with a clarification of how the opacity standard will be determined at sources that have CEMs and how it will be determined at sources without CEMs. Other

5867

Notices of Rulemaking Intent

proposed amendments to Subchapter 25 are designed to simplify and clarify the rule.

The proposed changes to Subchapters 37 and 39 include clarification of language, correction of typographical errors, deletion of redundant language, and reformatting. Three substantive changes are proposed for each Subchapter. One of those substantive changes affects both Subchapter 37 and 39. The definition of "volatile organic compounds (VOC)" in 252:100-37-2 and 252:100-39-2 has been revised in response to the Air Quality Council's direction to the staff to review the petition from the Chemical Manufacturers Association dated October 25, 1995, to exclude acetone from the definition of VOC; the request from American Airlines, Boeing, and Nordam, dated January 19, 1998, that acetone be excluded from the definition of VOC; a request dated April 21, 1997, from the Halogenated Solvents Industry Alliance, requesting that perchloroethylene be excluded from the definition of VOC; a request from Dow Corning that methylated siloxanes be excluded from the definition of VOC; and a request on behalf of the Eastman Chemical Company dated August 18, 1998, that methyl acetate be excluded from the definition of VOC. The definition of VOC has been modified to be consistent with the EPA definition. The second substantive change to Subchapter 37 is the removal of the requirement for permits and best available control technology (BACT) for new sources of VOC contained in 252:100-37-3(a). The third substantive change for Subchapter 37 deals with the first sentence in 252:100-37-36 regarding fuel-burning and refuse-burning equipment, which has been deleted to resolve the contradiction between the first and second sentences. The second substantive change to Subchapter 39 is the correction of the placement of "prior to lease custody transfer" in 252:100-39-30(b)(2). The third substantive change is the addition of a minimum annual throughput of 120,000 gallons and a minimum storage capacity of 2,000 gallons to 252:100-39-41(c) to determine applicability of subsection (c). In addition, the Department is requesting comments on 252:100-39-47, Control of VOS Emissions from Aerospace Industries Coatings Operations. Options include (1) retain the present (ARACT) rule and enforce the emissions reduction plan specified therein; (2) repeal the present rule and promulgate new rules regulating specialty coatings; or (3) retain the present plan, promulgate new rules for specialty coatings, and allow the facility to choose which of the two they prefer. These options recognize that the new NESHAP for the aerospace industry controls VOC emissions except for specialty coatings. The proposed amendments to Subchapter 41 include adopting by reference the Maximum Available Control Technology (MACT) standards for hazardous air pollutants that have been promulgated in 40 CFR 63 from July 1, 1997, through July 1, 1998. These are Subparts S and LL. The Department is also updating in Subchapter 41 the incorporation by reference of the NESHAP found in 40

CFR 61 to July 1, 1998. The Department is requesting comments on these proposed changes.

AUTHORITY:

Environmental Quality Board, 27A O.S.Supp. 1997, §§ 2-2-101 and 2-5-101 *et seq.*

COMMENT PERIOD:

Tuesday, September 15, 1998, through Tuesday, October 20, 1998. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by Tuesday, October 13, 1998

Also scheduled before the Environmental Quality Board at their meeting on Tuesday, November 10, 1998 - 9:30 a.m. in Poteau (Location to be determined. See contact person)

PUBLIC HEARINGS:

Tuesday, October 20, 1998 - 9:30 a.m. briefing and 1:00 p.m. hearing, at the Tulsa City-County Health Department, 5051 South 129th East (Northeast corner of 51st and 129th), Tulsa, Oklahoma

COPIES OF PROPOSED RULES:

Copies of the rules will be available September 15, 1998, for review at the Air Quality Division office at 707 North Robinson, Suite 4100, Oklahoma City, Oklahoma, 73102, or may be obtained from Myrna Bruce at 405-702-4177.

RULE IMPACT STATEMENT:

Copies of the rule impact statements may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Shawna McWaters-Khalousi (Subchapters 5 and 8), Michelle Martinez (Subchapter 24), Jeanette Buttram (Subchapters 7 and 25), Becky Mainord (Subchapter 23), Joyce Sheedy, Ph.D. (Subchapters 37, 39 and 41). Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

ADDITIONAL INFORMATION:

Additional proposed revisions have been made to the versions of Subchapters 7, 23, 24, 25, 37 and 39 that were the subject of a public hearing on August 18, 1998.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #98-1358; filed 8-26-98]

Permanent Final Adop' ns

SUBCHAPTER 4. NEW SOURCE PERFORMANCE STANDARDS

252:100-4-1. Purpose

The purpose of this Subchapter is to establish state standards for certain new or modified facilities in accordance with the authority delegated by the EPA under Section 111(b) of the federal Clean Air Act.

252:100-4-2. [RESERVED]

252:100-4-3. Reference to 40 CFR

(a) Inclusion of CFR citations and definitions. When a provision of Title 40 of the Code of Federal Regulations (40 CFR) is incorporated by reference, all citations contained therein are also incorporated by reference.

(b) Inconsistencies or duplications. In the event that there are inconsistencies or duplications in the requirements of those provisions incorporated by reference in OAC 252:100-4-5 and the regulations in this Chapter, the provisions incorporated by reference shall prevail, except where the regulations in this Chapter are more stringent.

(c) Terminology related to 40 CFR. For purposes of interfacing with 40 CFR, the following terms apply:

- (1) "Administrator" is synonymous with Executive Director.
- (2) "EPA" is synonymous with Department of Environmental Quality (DEQ).

252:100-4-4. [RESERVED]

252:100-4-5. Incorporation by reference

40 CFR Part 60 is hereby incorporated by reference, as it exists on July 1, 1997, except for the following:

- (1) Sections 60. 4, 60.9, 60.10 and 60.16 of Subpart A. General Provisions.
- (2) Subpart B. Adoption and Submittal of State Plans for Designated Facilities.
- (3) Subpart C. Emission Guidelines and Compliance Times.
- (4) Subpart Ca. Emissions Guidelines and Compliance Times for Municipal Waste Combustors.
- (5) Subpart Cb. Emissions Guidelines and Compliance Times for Municipal Waste Combustors That Are Constructed on or Before September 20, 1994.
- (6) Subpart Cc. Emission Guidelines and Compliance Times for Municipal Solid Waste Landfills.
- (7) Subpart Cd. Emissions Guidelines and Compliance Times for Sulfuric Acid Production Units.
- (8) Subpart AAA. Standards of Performance for New Residential Wood Heaters.
- (9) Appendix G. Provisions for an Alternative Method of Demonstrating Compliance with 40 CFR 60.43 for

the Newton Power Station of Central Illinois Public Service.

ANALYSIS:

The proposed revisions to Oklahoma Administrative Code 252:100-23, Control of Emissions from Cotton Gins, will simplify the language under the agency-wide re-right/de-wrong initiative. It is also proposed to add a new Permit by Rule section to the subchapter that will streamline the permitting process by creating a mechanism that will eliminate the necessity for some cotton gins to obtain an individual air quality permit. Additional changes to the subchapter follow a proposed amendment of Subchapter 25 concerning short-term exceedances of the opacity standard. The revised rules would allow exceedances of not more than one

six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours.

SUMMARY OF DIFFERENCES FROM ANALOGOUS FEDERAL RULES:

None

PURSUANT TO THE ACTIONS DESCRIBED HEREIN, THE FOLLOWING RULES ARE CONSIDERED FINALLY ADOPTED AS SET FORTH IN 75 O.S., SECTION 308.1(A), WITH AN EFFECTIVE DATE OF JUNE 1, 1999.

SUBCHAPTER 23. CONTROL OF EMISSIONS FROM COTTON GINS

252:100-23-1. Purpose

The purpose of this Subchapter is to control emissions from cotton gins ~~in order to prevent the Oklahoma air quality standards from being exceeded and ensure that degradation of the present level of air quality in Oklahoma does not occur.~~

252:100-23-2. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Cotton gin" means any facility ~~or plant which~~ that removes seed, lint, and trash from raw cotton and bales of lint cotton for further processing. Each equipment exhaust, including the trash and burr hopper, located at a cotton gin shall be considered as being an individual process emission source.

"Cotton gin site" means ~~the land upon which a cotton gin is located and all contiguous land having common ownership or use.~~

"Existing gin" means a gin which was in existence and ~~has had~~ submitted a current emission ~~inventory~~ inventories to the ~~Air Quality Program~~ Division for the most recent two ginning seasons and ~~is~~ was in possession of a valid annual renewable fee receipt ~~preceding the effective date of this rule~~ prior to May 1, 1993. All other gins shall be considered "new".

"Gin site" means the land upon which a cotton gin is located and all contiguous land having common ownership or use.

"High efficiency cyclone" means any cyclone type collector of the 2D-2D or 1D-3D configuration. ~~These designations referring~~ refer to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion. A 2D-2D cyclone would exhibit a cylinder length of 2 x D and a cone length of 2 x D (90 percent collection efficiency for TSP). A 1D-3D cyclone would exhibit a cylinder length of 1 X D and a cone length of 3 x D (95 percent collection efficiency for TSP).

"High pressure exhausts" means the exhaust cotton handling air systems located at a cotton gin which are not defined as "low pressure exhausts".

"Low pressure exhausts" means the exhaust air ~~system~~ handle at a cotton gin which ~~handles~~ handle air from the cotton lint handling system and battery condenser.

252:100-23-3. General provisions; applicability Applicability, general requirements

(a) **Applicability.** ~~The~~ Effective May 1, 1993, the provisions of this Subchapter are applicable to all new, modified, or existing cotton gins operating in the State of Oklahoma. Cotton gins in compliance with this Subchapter are exempt from the requirements of OAC 252:100-25, 252:100-27, and 252:100-29.

(b) **General requirements.**

(b)(1) **Permits required.** In addition to the requirements of this Subchapter, each new or modified cotton gin shall comply with the permitting requirements of OAC 252:100-7.

(b)(2) **Air toxics emissions.** The requirements of this Subchapter are in addition to any which may be required under OAC 252:100-41.

(b)(3) **Recordkeeping.** The owner or operator of a cotton gin shall maintain a log documenting the daily process weight and hours of operation ~~and air.~~ A emission control equipment replacement/repair cost shall also be recorded. These records shall be maintained for a period of two years and shall be available for inspection by ~~the Air Quality Program~~ DEQ personnel or its representative during normal business hours.

(b)(4) **Test methods.**

(1)(A) Visible emissions testing shall be conducted using EPA reference method 9 contained in 40 CFR Part 60, Appendix A and, Testing shall be performed by an individual possessing current certification as a Certified Visible Emissions Evaluator.

(2)(B) Dispersion modeling for PM-10 shall be performed using an EPA approved modeling method.

(f) **Effective date.** This Subchapter shall become effective May 1, 1993.

252:100-23-4. Smoke, visible emissions, and particulates Visible emissions (opacity) and particulates

(a) **Visible emissions limit.**

(1) **Emissions (a) Opacity limit.** No person shall cause, suffer, allow or permit the discharge of any fumes, aerosol, mist, gas, smoke, vapor, particulate matter or any combination thereof ~~a shade or density exhibiting greater than twenty (20) percent equivalent~~ 20% opacity. This requirement shall not apply to smoke or visible ~~or exhibiting greater than 20% opacity emitted during short-term occurrences, the shade or density of which is not~~

Permanent Final Adoptions

~~greater than sixty (60) percent opacity for an period aggregating no more than five (5) minutes in any sixty (60) consecutive minutes and/or no more than twenty (20) minutes in any consecutive 24-hour period which consist of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours, during which the average of any six-minute period shall not exceed 60% opacity.~~

~~(2)(b) Alternative emissions opacity limit. The twenty (20) percent 20% opacity limit as required under 252:100-23-4(a) may be increased for particulates only provided that the owner/operator owner or operator demonstrates to the satisfaction of the Oklahoma Air Quality Council at public hearing that those requirements listed in 252:100-25-4(a) through (c) have been met.~~

~~(b)(c) PM-10 emissions limit. No cotton gin shall impact the ambient air quality in such a manner as to violate be operated so as to cause or contribute to a violation of the primary PM-10 standard of 50 ug/m³ annual arithmetic mean or 150 ug/m³ 24-hour average or any other ambient air standard quality standards or any other ambient air quality standard established by OAC in 252:100-3.~~

252:100-23-5. Emission control equipment

(a) ~~Low pressure exhausts. For emission emission control from low pressure exhausts, the use of screens with a mesh size of 70 by 70 or finer (U.S. Sieve), or the use of perforated condenser drums with holes not exceeding 0.045 inches in diameter or equipment of equivalent design efficiency as determined by the Executive Director shall be required.~~

(b) ~~High pressure exhausts. For emission control from high pressure exhausts, the use of 2D-2D cyclones shall be required for existing gins. Existing gins shall install and use 1D-3D cyclone collectors or equivalent when the capital cost of repair or replacement of the existing 2D-2D cyclone exceeds fifty (50) percent 50% of the capital cost of a new 1D-3D cyclone. New or modified cotton gins shall utilize a 1D-3D cyclone collector or equipment of equivalent collection efficiency upon commencement of operation.~~

(c) ~~Fugitive emissions Burr hoppers. For emission control of fugitive emissions from burr hoppers during dumping, the use of total enclosure burr hoppers at existing gin sites located within the corporate city limits of any city or within 300 feet of two or more occupied establishments is required must be totally enclosed. All new gin sites shall install and use a total enclosure on the burr hopper.~~

252:100-23-6. Fugitive dust controls

(a) ~~For control of fugitive dust, no person shall cause or permit allow the handling, transporting, or disposition of any substance or material which that is likely to be scattered by the air or wind, or is susceptible to being airborne, or windborne, or to and no person shall operate or maintain or cause to be operated or maintained, any gin premisesite, open area, right-of-way, storage pile or materials, vehicle, or construction, or any other enterprise which involves any~~

~~material or substance likely to be scattered by the wind or air, or susceptible to being windborne or airborne that would be classified as air pollution without taking reasonable precautions or measures to minimize atmospheric pollution.~~
(b) ~~No person shall cause or permit allow the discharge of any visible fugitive dust emissions beyond the property line on which the emissions originate.~~

252:100-23-7. Permit by rule

(a) ~~Applicability. Any new or existing facility may be constructed or operated under this section if it meets the requirements of 252:100-7-60(a), (b), and (c) and has the Standard Industrial Classification (SIC) code 0724 Cotton Ginning.~~

(b) ~~Requirements.~~

~~(1) In addition to the requirements in 252:100-7-60(a), (b), and (c), an owner or operator of a facility subject to this section shall comply with all of the requirements of this Subchapter.~~

~~(2) Maximum production rate of a facility subject to this section shall be 36,000 bales per year.~~

FINDING OF EMERGENCY:

The Environmental Quality Board finds that a compelling public interest necessitates the seeking of emergency certification of the rules and regulations adopted today. Sections 252:100-23-3 and 252:100-24-3 exempt affected facilities from the provisions of Subchapter 27. Subchapter 27 will be revoked and its substantive provisions moved to 252:100-19-12, effective June 1, 2000. These changes exempt affected facilities from the specific provisions of 252:100-19-12; otherwise, they would become subject to these provisions by default on June 1, 2000.

ANALYSIS:

The proposed changes replace references to Subchapter 27 in sections 252:100-23-3 and 252:100-24-3 with references to 252:100-19-12.

SUMMARY OF DIFFERENCES FROM ANALOGOUS FEDERAL RULES:

None

CONTACT PERSON:

Max Price, Department of Environmental Quality, Air Quality Division, 707 North Robinson, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677, (405) 702-4100

PURSUANT TO THE ACTIONS DESCRIBED HEREIN, THE FOLLOWING EMERGENCY RULES ARE CONSIDERED PROMULGATED UPON APPROVAL BY THE GOVERNOR AS SET FORTH IN 75 O.S., SECTION 253(D), WITH A LATER EFFECTIVE DATE OF JUNE 1, 2000.

SUBCHAPTER 23. CONTROL OF EMISSIONS FROM COTTON GINS

252:100-23-3. Applicability, general requirements

(a) **Applicability.** Effective May 1, 1993, the provisions of this Subchapter are applicable to all new, modified, and existing cotton gins operating in the State of Oklahoma. Cotton gins in compliance with this Subchapter are exempt from the requirements of 252:100-25, ~~252:100-27~~ ~~252:100-19-12~~, and 252:100-29.

(b) General requirements.

(1) **Permits required.** In addition to the requirements of this Subchapter, each new or modified cotton gin shall comply with the permitting requirements of OAG-252:100-7.

(2) **Air toxics emissions.** The requirements of this Subchapter are in addition to any which may be required under 252:100-41.

(3) **Recordkeeping.** The owner or operator of a cotton gin shall maintain a log documenting the daily process weight and hours of operation. Air emission control equipment replacement/repair costs shall also be recorded. These records shall be maintained for a period of two years and shall be made available for inspection by DEQ personnel during normal business hours.

(4) Test methods.

(A) Visible emissions testing shall be conducted using EPA reference method 9 contained in 40 CFR Part 60, Appendix A. Testing shall be performed by a Certified Visible Emissions Evaluator.

(B) Dispersion modeling for PM-10 shall be performed using an EPA approved modeling method.

SUBCHAPTER 24. PARTICULATE MATTER EMISSIONS FROM GRAIN, FEED OR SEED OPERATIONS

252:100-24-3. Applicability, general requirements

(a) **Applicability.** The provisions of this subchapter are applicable to all new, modified, and existing grain, feed, or seed facilities in the State of Oklahoma.

(1) Facilities in compliance with 252:100-25, ~~252:100-27~~ ~~252:100-19-12~~, and 252:100-29 are not required to comply with this subchapter.

(2) Facilities in compliance with this subchapter are exempt from the requirements of 252:100-25 (visible emissions), ~~252:100-27~~ ~~252:100-19-12~~ (process weight), and 252:100-29 (fugitive dust).

(b) General requirements.

(1) **Permits required.** In addition to the requirements of this subchapter, each new, modified or existing grain, feed, or seed facility shall comply with the permitting requirements of 252:100-7 or 252:100-8.

Air Quality Council

HEARING/MEETING AGENDA
Department of Environmental Quality
AIR QUALITY COUNCIL REGULAR MEETING
TUESDAY, AUGUST 18, 1998, 1:00 P.M.
4545 NORTH LINCOLN BOULEVARD
BURGUNDY ROOM
Oklahoma City, Oklahoma

- | | | |
|----|---|-----------|
| 1. | Call to Order | Chairman |
| 2. | Roll Call | Secretary |
| 3. | Approval of June 16, 1998 Minutes | Chairman |
| 4. | Resolutions – Bill Fishback – Marilyn Andrews | |

PUBLIC HEARINGS

5. **OAC 252:100-47 Control of Emissions from Existing Municipal Solid Waste Landfills [NEW]** Bradley
Proposes to establish state standards to control emissions from certain existing municipal solid waste landfills that commenced construction, modification, or reconstruction before May 30, 1991 and accepted waste after November 8, 1987. The proposed rules to be included in Oklahoma's State 111(d) Plan provide the enforceable mechanism for implementing the federal emission guidelines (40 CFR 60 subpart Cc.)
Discussion by Council/Public; possible action by Council
6. **State 111(d) Plan for Municipal Solid Waste Landfills** Bradley
The proposed State 111(d) Plan outlines Oklahoma's program to implement the emission guidelines for municipal solid waste landfills. Federal regulations (40 CFR 60 Subparts B and Cc) require that a public hearing be held to receive comments from the Council and public on the proposed plan.
Discussion by Council/Public; Council approval is not required.
7. **OAC 252:100 Air Pollution Control:** Martinez
Appendix E, Primary Ambient Air Quality Standards [AMENDED]
Appendix F, Secondary Ambient Air Quality Standards [AMENDED]
Proposed revisions to Appendices E and F will mirror the revised federal national ambient air quality standards for particulate matter and ozone announced by EPA in the July 18, 1997, *Federal Register*.
Discussion by Council/Public; possible action by Council
8. **OAC 272:100-7 Permits [AMENDED]** Buttram
Proposed revisions will delete the lower limit of 5 tons per year for Permit by rule (PBR) facilities allowing those facilities with less than 5 tons per year emissions which are subject to new source performance standards and national emissions standards for hazardous air pollutants to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a PBR for specific facilities will be referenced under this new Part also.
Discussion by Council/Public; possible action by Council

9. **OAC 252:100-25 Smoke, Visible Emissions and Particulates [AMENDED]** **Buttram**
 The proposed amendments to Subchapter 25 are needed to fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P. and would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include changing the time allowed for visible emissions during short-term occurrences to exceed the opacity standard to one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. A new subsection would contain methods for determining compliance with the opacity limits. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule.
 Discussion by Council/Public; possible action by Council
10. **OAC 252:100-23 Control of Emissions from Cotton Gins [AMENDED]** **Mainord**
 Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and add a new PBR section.
 Discussion by Council/Public; possible action by Council
11. **OAC 252:100-24 Control of Emissions from Grain Elevators [AMENDED]** **Martinez**
 Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and add a new PBR section.
 Discussion by Council/Public; possible action by Council
12. **OAC 252:100-37 Control of Emissions of Organic Materials [AMENDED]** **Sheedy**
 Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. A substantive change deletes a sentence regarding fuel-burning and refuse-burning equipment resolving a contradiction.
 Discussion by Council/Public; possible action by Council
13. **OAC 252:100-39 Emissions of Organic Materials in Nonattainment Areas [AMENDED]** **Sheedy**
 Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC.
 Discussion by Council/Public; possible action by Council
14. **New Business** **Chairman**
 Discussion/consideration of subjects/business arising within the past 24 hours
 Possible action by Council
15. **Adjournment** **Chairman**
 Next Regular Meeting **TUESDAY, OCTOBER 20, 1998**
 Tulsa City-County Auditorium
 5051 South 129th East Tulsa OK

July 27, 1998

MEMORANDUM

TO: Air Quality Council

FROM: David Dyke, Interim Division Director
Air Quality Division *RD*

SUBJECT: Proposed modifications to Subchapter 23, Control of Emissions from Cotton Gins

Enclosed is a copy of the proposed draft modifications to Subchapter 23, Control of Emissions from Cotton Gins. The proposed amendments to Subchapter 23 will simplify the language under the agency-wide re-write/de-wrong initiative. Additionally, the Department proposes to add a new Permit by Rule (PBR) section.

The PBR will streamline the permitting process by creating a mechanism that will eliminate the necessity for some cotton gins to obtain an individual air quality permit. Facilities that qualify for coverage under the PBR will simply register with AQD and certify their compliance with the rule. In order to qualify, a cotton gin:

- Must emit less than 40 tons per year of each regulated pollutant;
- Cannot be subject to Part 70 permitting; and
- Cannot be operated in conjunction with another facility that is subject to air quality permitting.

The proposed Subchapter 23, Control of Emissions from Cotton Gins, will be brought to public hearing on August 18, 1998. Staff will recommend the rule be considered again at the next Air Quality Council meeting on October 20, 1998.

Enclosure: 1

SUBCHAPTER 23. CONTROL OF EMISSIONS FROM COTTON GINS

Section

- 252:100-23-1. Purpose
- 252:100-23-2. Definitions
- 252:100-23-3. ~~General provisions; applicability~~ Applicability,
general requirements
- 252:100-23-4. ~~Smoke, visible emissions, and particulates~~ Visible
emissions (opacity) limit
- 252:100-23-5. Emission control equipment
- 252:100-23-6. Fugitive dust controls
- 252:100-23-7. Permit by rule

DRAFT

5881

252:100-23-1. Purpose

The purpose of this Subchapter is to control emissions from cotton gins. ~~in order to prevent the Oklahoma air quality standards from being exceeded and ensure that degradation of the present level of air quality in Oklahoma does not occur.~~

252:100-23-2. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Cotton gin" means any facility ~~or plant which~~ that removes seed, lint, and trash from raw cotton and bales of lint cotton for further processing. Each equipment exhaust, including the trash and burr hopper, located at a cotton gin shall be considered as ~~being an individual process emission source.~~

~~"Cotton gin site" means the land upon which a cotton gin is located and all contiguous land having common ownership or use.~~

"Existing gin" means a gin which was in existence and ~~has had~~ had submitted a current emission ~~inventory~~ inventories to the Air Quality Program Division for the most recent two ginning seasons and ~~is was~~ was in possession of a valid annual renewable fee receipt ~~preceeding the effective date of this rule prior to May 1, 1993.~~ All other gins shall be considered "new".

"Gin site" means the land upon which a cotton gin is located and all contiguous land having common ownership or use.

"High efficiency cyclone" means any cyclone type collector of the 2D-2D or 1D-3D configuration, These designations referring ~~refer~~ to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion. A 2D-2D cyclone would exhibit a cylinder length of 2 x D and a cone length of 2 x D (90 percent collection efficiency for TSP). A 1D-3D cyclone would exhibit a cylinder length of 1 X D and a cone length of 3 x D (95 percent collection efficiency for TSP).

"High pressure exhausts" means the exhaust cotton handling air systems located at a cotton gin which are not defined as "low pressure exhausts".

"Low pressure exhausts" means the exhaust air systems at a cotton gin which ~~handles~~ handle air from the cotton lint handling system and battery condenser.

252:100-23-3. ~~General provisions;~~ Applicability, general requirements

(a) Applicability. ~~The Effective May 1, 1993, the~~ provisions of this Subchapter are applicable to all new, modified, and existing cotton gins operating in the State of Oklahoma. Cotton gins in compliance with this Subchapter are exempt from the requirements of OAC 252:100-25, 252:100-27, and 252:100-29.

(b) General requirements.

~~(b)(1)~~ Permits required. In addition to the requirements of this Subchapter, each new or modified cotton gin shall comply with the permitting requirements of OAC 252:100-7.

~~(e)(2)~~ Air toxics emissions. The requirements of this Subchapter are in addition to any which may be required under OAC 252:100-41.

DRAFT

~~(d)~~ (3) **Recordkeeping.** The owner or operator of a cotton gin shall maintain a log documenting the daily process weight and hours of operation, and ~~air~~ Air emission control equipment replacement/repair costs shall also be recorded. These records shall be maintained for a period of two years and shall be made available for inspection by ~~the Air Quality Program~~ DEQ personnel ~~or its representative~~ during normal business hours.

~~(e)~~ (4) **Test methods.**

~~(1)~~ (A) Visible emissions testing shall be conducted using EPA reference method 9 contained in 40 CFR Part 60, Appendix A. ~~and Testing shall be performed by an individual possessing current certification.~~ a Certified Visible Emissions Evaluator.

~~(2)~~ (B) Dispersion modeling for PM-10 shall be performed using an EPA approved modeling method.

~~(f) Effective date. This Subchapter shall become effective May 1, 1993.~~

252:100-23-4. ~~Smoke, visible emissions, and particulates~~ Visible emissions (opacity) limit

(a) ~~Visible emissions Opacity limit.~~

(1) **Emissions limit.** No person shall cause, suffer, allow or permit the discharge of any fumes, aerosol, mist, gas, smoke, vapor, particulate matter or any combination thereof a ~~shade or density exhibiting greater than twenty (20) percent~~ 20% equivalent opacity. This requirement shall not apply to ~~smoke or visible emissions exhibiting greater than 20% opacity emitted during short-term occurrences, the shade or density of which is not greater than sixty (60) percent opacity for an period aggregating no more than five (5) minutes in any sixty (60) consecutive minutes and/or no more than twenty (20) minutes in any consecutive 24 hour period.~~ which may consist of one six-minute period in any consecutive 60 minutes not to exceed three such periods in any consecutive 24 hours during which the average opacity of emissions may not exceed 60%.

(2) **Alternative emissions limit.** The ~~twenty (20) percent~~ 20% opacity limit as required under 252:100-23-4(a)(1) may be increased for particulates only provided that the ~~owner/operator~~ owner or operator demonstrates to the satisfaction of the ~~Oklahoma~~ Oklahoma Air Quality Council at public hearing that those requirements listed in 252:100-25-4(a) through (c) have been met.

(b) **PM-10 emissions limit.** No cotton gin shall ~~impact the ambient air quality in such a manner as to violate~~ be operated so as to cause or contribute to the violation of the primary PM-10 standard of 50 ug/m³ annual arithmetic mean or 150 ug/m³ 24-hour average or any other ambient air standard established by ~~OAC~~ in 252:100-3.

252:100-23-5. **Emission control equipment**

(a) **Low pressure exhausts.** For ~~emission~~ emission control from low pressure exhausts, the use of screens with a mesh size of 70 by

DRAFT

5883

70 or finer (U.S. Sieve), or the use of perforated condenser drums with holes not exceeding 0.045 inches in diameter or equipment of equivalent design efficiency as determined by the Executive Director shall be required.

(b) **High pressure exhausts.** For emission control from high pressure exhausts, the use of 2D-2D cyclones shall be required for existing gins. Existing gins shall install and use 1D-3D cyclone collectors or equivalent when the capital cost of repair or replacement of the existing 2D-2D cyclone exceeds ~~fifty (50) percent~~ 50% of the capital cost of a new 1D-3D cyclone. New or modified cotton gins shall utilize a 1D-3D cyclone collector or equipment of equivalent collection efficiency upon commencement of operation.

(c) ~~Fugitive emissions.~~ **Burr hoppers.** For emission control ~~of fugitive emissions from burr hoppers during dumping, the use of total enclosure~~ burr hoppers at existing gin sites located within the corporate city limits of any city or within 300 feet of two or more occupied establishments ~~is required~~ must be totally enclosed. All new gin sites shall install and use a total enclosure on the burr hopper.

252:100-23-6. Fugitive dust controls

(a) For control of fugitive dust, no person shall ~~cause or permit~~ allow the handling, transporting, or disposition of any substance or material ~~which that~~ is likely to be scattered by the air or wind, ~~or is susceptible to being airborne, or windborne, or~~ and no person shall operate or maintain ~~or cause to be operated or maintained,~~ any gin ~~premise~~ site, open area, right-of-way, storage pile or materials, vehicle, or construction, or any other enterprise which involves any material or substance likely to be scattered by the wind or air, ~~or susceptible to being windborne or airborne~~ that would be classified as air pollution without taking reasonable precautions ~~or measures~~ to minimize atmospheric pollution.

(b) No person shall ~~cause or permit~~ allow the discharge of any visible fugitive dust emissions beyond the property line on which the emissions originate.

252:100-23-7. Permit by Rule

(a) Applicability. Any new or existing facility may be constructed or operated under this section if it meets the requirements of 252:100-7-60(a), (b), and (c) and has the Standard Industrial Classification (SIC) code 072 Crop Services.

(b) Requirements.

(1) In addition to the requirements in 252:100-7-60(a), (b), and (c), an owner or operator of a facility subject to this section shall comply with all of the requirements of this Subchapter.

(2) Maximum production rate of a facility subject to this section shall be 36,000 bales per year.

PUBLIC MEETING

Notice of Public Meeting for August 18, 1998 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance door of the meeting room and also at the DEQ Tower.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Ms. Myers - aye; Dr. Grosz - aye; Mr. Kilpatrick - aye; Mr. Wilson - aye; Mr. Branecky - aye; Ms. Slagell - aye. Dr. Canter did not attend.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the June 16, 1998 Public Meeting/Hearings. Motion was made by Mr. Kilpatrick to approve the Minutes as presented and second to the motion was made by Mr. Branecky. Roll call as follows: Ms. Myers - aye; Dr. Grosz - aye; Mr. Kilpatrick - aye; Mr. Wilson - aye; Mr. Branecky - aye; Ms. Slagell - aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-47 Control of Emissions from Existing Municipal Solid Waste Landfills [NEW]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Cheryl Bradley to give staff recommendations on this rule. Ms. Bradley advised that the rule was first considered by the Council on June 16, 1998 at which time the hearing was continued because EPA was in the process of amending the federal standards that are the basis for the draft rule. These amendments became effective August 17, 1998. Ms. Bradley stated that staff had made the revisions consistent with the amended federal regulations and addressed all comments received.

After discussion, Chairman Breisch entertained a motion to recommend adoption of this rule as emergency and permanent to the Environmental Quality Board at its September 15, 1998 meeting. Dr. Grosz made that motion with second made by Mr. Branecky. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

State 111(d) Plan for Municipal Solid Waste Landfills

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Cheryl Bradley for staff position regarding this State Plan. Ms. Bradley pointed out the criteria for approval of a state plan and advised that Oklahoma's mechanism to implement this Plan is OAC252:100-47. Ms. Bradley related that although no Council action was necessary, the staff requests to hear comments from the Council members and the public regarding the State Plan.

See attached transcript.

PUBLIC HEARING

OAC 252:100 Air Pollution Control:

Appendix E, Primary Ambient Air Quality Standards [AMENDED]

Appendix F, Secondary Ambient Air Quality Standards [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Michelle Martinez who stated that the revisions to these appendices would be identical to the revised federal National Ambient Air Quality Standards (NAAQS) for particulate matter and ozone

announced by EPA in the July 18, 1997 *Federal Register*. Ms. Martinez pointed out that according to the Secretary of State's Rules on Rulemaking, an appendix cannot be amended; therefore, staff recommended that Council vote to revoke the old appendices and pass the new appendices as permanent.

After discussion, Chairman Breisch entertained a motion to recommend this rule to the Environmental Quality Board as a permanent rule at its September 15, 1998 meeting. Mr. Kilpatrick moved that Council revoke the existing rule and replace them with the new rules as presented. Second to the motion was made by Mr. Branecky. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-7 Permits [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Jeanette Buttram for staff position regarding this rule. Ms. Buttram pointed out revisions made to date and advised that staff was recommending that the comment period be left open until August 24 after which staff would revise the rule based upon comments received from Council and public; and would bring again to the Council's October 20 meeting.

Following discussion and comments, Chairman Breisch entertained a motion to continue this rule to the Council's October 20, 1998 meeting. Ms. Myers made that motion with second made by Ms. Slagell. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-25 Smoke, Visible Emissions and Particulates [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Jeanette Buttram to give staff's position on this rule. Ms. Buttram advised that the rule was presented to Council's June 16 meeting where changes to simplify and clarify the rule and to fulfill an EPA State Implementation Plan (SIP) requirement concerning Continuous Emission Monitoring (CEM) were proposed. Ms. Buttram advised that comments received have been addressed and incorporated into the current draft rule. Following discussion with new comments, staff

recommended that the hearing be continued on this rule to the October 20 meeting to allow time for further comments.

Mr. Breisch asked for a motion to continue the hearing. Mr. Wilson made the motion and Ms. Slagell made the second. Roll call was as follows: Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Kilpatrick – aye; Dr. Grosz – aye; Ms. Myers – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-23 Control of Emissions from Cotton Gins [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Becky Mainord who related that the draft rule included simplification of language according to the Agency's re-write/de-wrong initiative and the addition of a Permit by Rule section. She then pointed out the changes made and stated that it was staff's recommendation to continue the hearing until Council's next meeting.

Following discussion, Mr. Breisch entertained a motion to continue this rule. Dr. Grosz made that motion with second made by Mr. Wilson. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-24 Control of Emissions from Grain Elevators [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Michelle Martinez who related that revisions were made to simplify the language according to the Agency's re-write/de-wrong initiative, the addition of a Permit By Rule section, and to add a new Appendix L which would include PM₁₀ emission factors for the Permit By Rule. Ms. Martinez pointed out that comments had been received and considered, and that staff's recommendation was to continue the hearing to the next meeting.

After discussion, Mr. Breisch entertained a motion to continue this rule to the Council's October 20, 1998 meeting. Ms. Myers made that motion with second made by Mr. Branecky. Roll call

as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-37 Control of Emissions of Organic Materials (AMENDED)

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy who stated that the revisions are part of the Agency's re-write/de-wrong initiative and respond to industry requests to exempt acetone, perchloroethylene, and methylated siloxanes from being considered VOCs. She advised that staff held a workshop on July 7 requesting public input and comments. She said there are numerous changes to be made in language, format and with the three substantive changes, staff recommended that the rule be continued to the next meeting.

Mr. Breisch entertained a motion to continue this rule. Mr. Branecky made motion with second made by Mr. Kilpatrick. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-39 Control of Organic Materials in Nonattainment Areas [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy who stated that there were numerous revisions as part of the Agency's re-write/de-wrong initiative and also five substantive changes to be considered; therefore, staff would recommend that the hearing be continued.

Mr. Breisch entertained a motion to continue this rule to the Council's October 20 meeting. Dr. Grosz made that motion with second made by Mr. Branecky. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

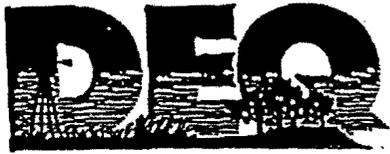

NEW BUSINESS – None

ADJOURNMENT With no further business, meeting was adjourned and next regularly scheduled meeting being October 20, 1998 at Tulsa City-County Health Department Auditorium, 5051 South 129th East, Tulsa, Oklahoma.

NOTE: The sign-in sheet and the hearing records are attached as an official part of these Minutes.

**BRIEFING AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
REGULAR MEETING
AIR QUALITY COUNCIL**

Tuesday October 20, 1998 9:30 A.M.
Tulsa City-County Health Department Auditorium
5051 South 129 East -- Tulsa, Oklahoma

1. **Call to Order -- Bill Breisch**

2. **Division Director's Report**
Informational update of current events and AQD activities
 - A. Discussion by Council / Public

3. **CY99 Meeting Schedule**
 - A. Discussion by Council

4. **OAC 252:100-5 Registration, Emission Inventory and Annual Operating Fees [AMENDED]**
OAC 252:100-7 Permits [AMENDED]
OAC 252:100-8 Permits for Part 70 Sources [AMENDED]
In Subchapter 5, the Department is considering possible increases in annual operating fees for both minor facilities and Part 70 sources with possible increases of permit application fees in Subchapters 7 and 8.
 - A. Presentation -- Shawna McWaters-Khalousi
 - B. Questions and discussion by Council / Public

5. **OAC 272:100-7 Permits [AMENDED]**
Proposed revisions will delete the lower limit of 5 tons per year for Permit by rule (PBR) facilities allowing those facilities with less than 5 tons per year emissions which are subject to new source performance standards and national emissions standards for hazardous air pollutants to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a PBR for specific facilities will be referenced under this new Part also. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation -- Jeanette Buttram
 - B. Questions and discussion by Council / Public

6. **OAC 252:100-25 Smoke, Visible Emissions and Particulates [AMENDED]**
Proposed amendments to Subchapter 25 are needed to fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P, and would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include exempting sources subject to opacity standards promulgated under Section 111 of the Federal Clean Air Act, along with a clarification of how the opacity standard will be determined at sources that have CEMs and how it will be determined at sources without CEMs. A new subsection would contain methods for determining compliance with the opacity limits. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation -- Jeanette Buttram
 - B. Questions and discussion by Council / Public

7. **OAC 252:100-23 Control of Emissions from Cotton Gins [AMENDED]**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and add a new PBR section. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Becky Mainord
 - B. Questions and discussion by Council / Public

8. **OAC 252:100-24 Control of Emissions from Grain Elevators [AMENDED]**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and add a new PBR section. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Michelle Martinez
 - B. Questions and discussion by Council / Public

9. **OAC 252:100-37 Control of Emissions of Organic Materials [AMENDED]**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. A substantive change deletes a sentence regarding fuel-burning and refuse-burning equipment resolving a contradiction. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public

10. **OAC 252:100-39 Emissions of Organic Materials in Nonattainment Areas [AMENDED]**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public

11. **OAC 252:100-41 Control of Emission of Hazardous and Toxic Air Contaminants [AMENDED]**
The proposed amendments to Subchapter 41 include adopting by reference the Maximum Available Control Technology (MACT) standards for hazardous air pollutants that have been promulgated in 40 CFR 63 from July 1, 1997, through July 1, 1998. These are Subparts S and LL. The Department is also updating in Subchapter 41 the incorporation by reference of the NESHAP found in 40 CFR 61 to July 1, 1998. The Department is requesting comments on these proposed changes.
 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public

October 6, 1998

MEMORANDUM

TO: Air Quality Council

FROM: Eddie Terrill, Division Director ^{E.T.}
Air Quality Division

SUBJECT: Proposed modifications to Subchapter 23, Control of Emissions from Cotton Gins

Enclosed is a copy of the proposed draft modifications to Subchapter 23, Control of Emissions from Cotton Gins. The proposed amendments to Subchapter 23 will simplify the language under the agency-wide re-write/de-wrong initiative. Also proposed are changes to the subchapter that follow a proposed amendment of Subchapter 25 concerning short-term exceedances of the opacity standard. The revised rules would allow exceedances of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours.

Additionally, the Department proposes to add a new Permit by Rule (PBR) section. The PBR will streamline the permitting process by creating a mechanism that will eliminate the necessity for some cotton gins to obtain an individual air quality permit. Facilities that qualify for coverage under the PBR will simply register with AQD and certify their compliance with the rule. In order to qualify, a cotton gin:

- Must emit less than 40 tons per year of each regulated pollutant;
- Cannot be subject to Part 70 permitting; and
- Cannot be operated in conjunction with another facility that is subject to air quality permitting.

The proposed Subchapter 23, Control of Emissions from Cotton Gins, will be brought to public hearing on October 20, 1998. Staff will recommend the rule be approved and sent to the Environmental Quality Board meeting on November 10, 1998.

Enclosures: 2

SUBCHAPTER 23. CONTROL OF EMISSIONS FROM COTTON GINS

Section

252:100-23-1. Purpose

252:100-23-2. Definitions

252:100-23-3. ~~General provisions; applicability~~ Applicability, general requirements

252:100-23-4. ~~Smoke, visible emissions, and particulates~~ Visible emissions (opacity) limit

252:100-23-5. Emission control equipment

252:100-23-6. Fugitive dust controls

252:100-23-7. Permit by rule

252:100-23-1. Purpose

The purpose of this Subchapter is to control emissions from cotton gins. ~~in order to prevent the Oklahoma air quality standards from being exceeded and ensure that degradation of the present level of air quality in Oklahoma does not occur.~~

252:100-23-2. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Cotton gin" means any facility ~~or plant which~~that removes seed, lint, and trash from raw cotton and bales of lint cotton for further processing. Each equipment exhaust, including the trash and burr hopper, located at a cotton gin shall be considered ~~as being~~ an individual process emission source.

~~"Cotton gin site" means the land upon which a cotton gin is located and all contiguous land having common ownership or use.~~

"Existing gin" means a gin which was in existence and ~~has had~~ had submitted a current emission ~~inventory~~ inventories to the Air Quality Program Division for the most recent two ginning seasons and ~~is was~~ in possession of a valid annual renewable fee receipt ~~preceding the effective date of this rule.~~ prior to May 1, 1993. All other gins shall be considered "new".

"Gin site" means the land upon which a cotton gin is located and all contiguous land having common ownership or use.

"High efficiency cyclone" means any cyclone type collector of the 2D-2D or 1D-3D configuration⁷. ~~These designations referring~~ refer to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion. A 2D-2D cyclone would exhibit a cylinder length of 2 x D and a cone length of 2 x D (90 percent collection efficiency for TSP). A 1D-3D cyclone would exhibit a cylinder length of 1 X D and a cone length of 3 x D (95 percent collection efficiency for TSP).

"High pressure exhausts" means the exhaust cotton handling air systems located at a cotton gin which are not defined as "low pressure exhausts".

"Low pressure exhausts" means the exhaust air systems at a cotton gin which ~~handles~~ handle air from the cotton lint handling system and battery condenser.

252:100-23-3. ~~General provisions;~~ applicability, general requirements

(a) Applicability. ~~The~~ Effective May 1, 1993, the provisions of this Subchapter are applicable to all new, modified, and existing cotton gins operating in the State of Oklahoma. Cotton gins in compliance with this Subchapter are exempt from the requirements of OAC 252:100-25, 252:100-27, and 252:100-29.

(b) General requirements.

~~(b)~~ (1) Permits required. In addition to the requirements of this Subchapter, each new or modified cotton gin shall comply with the permitting requirements of OAC 252:100-7.

~~(c)~~ (2) Air toxics emissions. The requirements of this

Subchapter are in addition to any which may be required under OAC 252:100-41.

~~(d)~~ (3) Recordkeeping. The owner or operator of a cotton gin shall maintain a log documenting the daily process weight and hours of operation, and ~~air~~ Air emission control equipment replacement/repair costs shall also be recorded. These records shall be maintained for a period of two years and shall be made available for inspection by ~~the Air Quality Program~~ DEQ personnel or its representative during normal business hours.

~~(e)~~ (4) Test methods.

~~(1)~~ (A) Visible emissions testing shall be conducted using EPA reference method 9 contained in 40 CFR Part 60, Appendix A. and Testing shall be performed by an individual possessing current certification, a Certified Visible Emissions Evaluator.

~~(2)~~ (B) Dispersion modeling for PM-10 shall be performed using an EPA approved modeling method.

~~(f)~~ Effective date. ~~This Subchapter shall become effective May 1, 1993.~~

252:100-23-4. Smoke, visible emissions, and particulates Visible emissions (opacity) and particulates

~~(a)~~ Visible emissions limit.

~~(1)~~ Emissions (a) Opacity limit. No person shall cause, suffer, allow or permit the discharge of any fumes, aerosol, mist, gas, smoke, vapor, particulate matter or any combination thereof ~~a shade or density exhibiting greater than twenty (20) percent~~ 20% equivalent opacity. This requirement shall not apply to ~~smoke or visible emissions exhibiting greater than 20% opacity~~ emitted during short-term occurrences, the shade or density of which is not greater than sixty (60) percent opacity for an period aggregating no more than five (5) minutes in any sixty (60) consecutive minutes and/or no more than twenty (20) minutes in any consecutive 24 hour period, which consist of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours, during which the average of any six-minute period shall not exceed 60% opacity.

~~(2)~~ (b) Alternative emissions opacity limit. The ~~twenty (20) percent~~ 20% opacity limit as required under 252:100-23-4(a)(1) may be increased for particulates only provided that the ~~owner/operator~~ owner or operator demonstrates to the satisfaction of the Oklahoma Air Quality Council at public hearing that those requirements listed in 252:100-25-4(a) through (c) have been met.

~~(b)~~ (c) PM-10 emissions limit. No cotton gin shall ~~impact the ambient air quality in such a manner as to violate~~ be operated so as to cause or contribute to a violation of the primary PM-10 standard of 50 ug/m³ annual arithmetic mean or 150 ug/m³ 24 hour average or any other ambient air standard quality standards or any other

ambient air quality standard established by OAC in 252:100-3.

252:100-23-5. Emission control equipment

(a) **Low pressure exhausts.** For ~~emissions~~emission control from low pressure exhausts, the use of screens with a mesh size of 70 by 70 or finer (U.S. Sieve), or the use of perforated condenser drums with holes not exceeding 0.045 inches in diameter or equipment of equivalent design efficiency as determined by the Executive Director shall be required.

(b) **High pressure exhausts.** For emission control from high pressure exhausts, the use of 2D-2D cyclones shall be required for existing gins. Existing gins shall install and use 1D-3D cyclone collectors or equivalent when the capital cost of repair or replacement of the existing 2D-2D cyclone exceeds ~~fifty (50) percent~~ 50% of the capital cost of a new 1D-3D cyclone. New or modified cotton gins shall utilize a 1D-3D cyclone collector or equipment of equivalent collection efficiency upon commencement of operation.

(c) ~~Fugitive emissions.~~ **Burr hoppers.** For emission control ~~of fugitive emissions from burr hoppers~~ during dumping, ~~the use of total enclosure burr hoppers~~ at existing gin sites located within the corporate city limits of any city or within 300 feet of two or more occupied establishments ~~is required~~ must be totally enclosed. All new gin sites shall install and use a total enclosure on the burr hopper.

252:100-23-6. Fugitive dust controls

(a) For control of fugitive dust, no person shall ~~cause or permit~~ allow the handling, transporting, or disposition of any substance or material ~~which~~ that is likely to be scattered by the air or wind, ~~or is susceptible to being airborne, or windborne, or~~ and no person shall operate or maintain ~~or cause to be operated or maintained,~~ any gin ~~premise~~ site, open area, right-of-way, storage pile or materials, vehicle, or construction, or any other enterprise which involves any material or substance likely to be scattered by the wind or air, ~~or susceptible to being windborne or airborne~~ that would be classified as air pollution without taking reasonable precautions ~~or measures~~ to minimize atmospheric pollution.

(b) No person shall ~~cause or permit~~ allow the discharge of any visible fugitive dust emissions beyond the property line on which the emissions originate.

252:100-23-7. Permit by Rule

(a) **Applicability.** Any new or existing facility may be constructed or operated under this section if it meets the requirements of 252:100-7-60(a), (b), and (c) and has the Standard Industrial Classification (SIC) code 0724 Cotton Ginning.

(b) **Requirements.**

(1) In addition to the requirements in 252:100-7-60(a), (b), and (c), an owner or operator of a facility subject to this section shall comply with all of the requirements of this

Subchapter.

(2) Maximum production rate of a facility subject to this section shall be 36,000 bales per year. This production rate, using 1996 revised emission factors in AP-42 Section 9.7 Cotton Gins, should result in less than 40 tons per year of PM-10 emissions.

PUBLIC MEETING

Notice of Public Meeting for October 20, 1998 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance door of the meeting room.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Mr. Branecky - aye; Ms. Myers - aye; Mr. Wilson - aye; Dr. Grosz - aye. Mr. Kilpatrick, Ms. Slagell and Dr. Canter did not attend.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the August 18, 1998 Public Meeting/Hearings. Motion was made by Mr. Wilson to approve the Minutes as presented and second to the motion was made by Dr. Grosz. Roll call as follows: Mr. Branecky - aye; Ms. Myers - aye; Mr. Wilson - aye; Dr. Grosz - aye; Mr. Breisch - aye.

1999 Meeting Schedule - Mr. Dyke presented Council with proposed scheduled for 1999 meetings with the suggestion that the December 21 date mentioned in the packet memo be changed to December 14. Ms. Myers made motion to accept the schedule as proposed: Wednesday, February 17, Tuesday, April 20, Tuesday, August 17, and Tuesday, December 14 at OKC, DEQ Multi-Purpose Room; with Tuesday, June 15 and October 19 at Tulsa, TCCHD Auditorium. Second to motion was made by David Branecky. Roll call as follows: Mr. Branecky - aye; Ms. Myers - aye; Mr. Wilson - aye; Dr. Grosz - aye; Mr. Breisch - aye.

Auditorium. Second to motion was made by David Branecky. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-7 Permits [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Jeanette Buttram for staff position regarding this rule. Ms. Buttram pointed out proposed revisions would modify language applicable to de minimis facilities, Permit by Rule (PBR), and general permits stating that actual emissions of Total Suspended Particulates (TSP) will no longer be counted in determining whether a facility meets the definition of “de minimis facility.” Also, she stated that proposed revision would delete the lower limit of five tons per year for PBR facilities allowing those facilities with less than five tons per year emissions which are subject to NSPS or NESHAP to apply for a PBR instead of having to obtain an individual permit. Ms. Buttram advised that staff proposed that a new Part 9 be added that would outline the requirements necessary for a facility to qualify for a PBR. A third point she brought out was the proposed revision to delete the lower limit for general permits allowing facilities that may have less than 40 tons per year of emissions, but for which no PBR had been written, the opportunity to apply for coverage under an applicable general permit. Lastly, she added that the Department proposed to amend 252-7-3 to increase fees for minor facilities for applicability determinations, relocation permits, and applications for individual permits.

Following discussion and comments, Chairman Breisch entertained a motion to continue this rule to the Council’s October 20, 1998 meeting. Ms. Myers made that motion with second made by Dr. Grosz. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-25 Smoke, Visible Emissions and Particulates [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Jeanette Buttram to give staff’s position on this rule. Ms. Buttram pointed out that the proposed amendments would fulfill an EPA requirement concerning Continuous Emissions Monitoring proposing to incorporate by reference the Federal opacity monitoring requirements for fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries and fossil fuel-fired steam generators as specified in 40 CFR 51, Appendix P. She noted that the Department proposed to exempt from Appendix P requirements for those sources already subject to a new source performance standard and for sources scheduled for retirement within five years after the

amended rule takes effect. Ms. Buttram added that the amended rule would also provide criteria for approval of alternative monitoring requirements with additional changes that would clarify how the opacity standard is determined.

Mr. Breisch asked for a motion to recommend the rule as proposed to the Environmental Quality Board for permanent adoption. Mr. Wilson made the motion with David Branecky making the second. Roll call was as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-23 Control of Emissions from Cotton Gins [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Michelle Martinez who related that the draft rule included simplification of language according to the Agency's re-write/de-wrong initiative and the addition of a Permit by Rule section. She then pointed out that the proposed revisions add a new Permit by Rule section that would streamline the permitting process by creating a mechanism that eliminates the necessity for some cotton gins to obtain an individual air quality permit. Ms. Martinez added that additional changes would allow exceedances of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours.

Following discussion, Mr. Breisch entertained a motion to recommend this rule to the Environmental Quality Board for permanent adoption. Ms. Myers made the motion with second made by Mr. Branecky. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-24 Control of Emissions from Grain Elevators [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Michelle Martinez who advised that the proposed revisions would simplify the language under the agency-wide re-right/de-wrong initiative and would add a new Permit by Rule section to streamline the permitting process by creating a mechanism that would eliminate the necessity for some grain elevators to obtain an individual air quality permit. Ms. Martinez added that a new Appendix L proposed would contain PM-10 emission factors for PBR grain elevators. Additional changes follow a proposed amendment of Subchapter 25 concerning short-term exceedances of the

opacity standard allowing exceedances of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours.

Mr. Breisch entertained a motion to recommend the rule to the Environmental Quality Board for permanent adoption at its November 10 meeting. Mr. Wilson made that motion with second made by Ms. Myers. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-37 Control of Emissions of Organic Materials (AMENDED)

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy who advised that proposed changes included language consistent with the re-right/de-wrong initiative. She then pointed out four substantive changes that were proposed for Subchapter 37 as well as Subchapter 39:

- 1) to change the definition of “volatile organic compounds (VOC)” per Council’s direction and requests from industry to exclude acetone, perchloroethylene, methylated siloxanes, methyl acetate from the definition of VOC and to modify the definition of VOC to be consistent with the EPA definition;
- 2) to remove of the requirement for permits and best available control technology (BACT) for new sources of VOC contained in 252:100-37-3(a);
- 3) a change regarding fuel-burning and refuse-burning equipment, which has been deleted to resolve the contradiction between the first and second sentences; and
- 4) to add a new Part 9, Permit by Rule for Volatile Organic Liquid Storage and Loading Facilities.

Mr. Breisch entertained a motion to continue this rule to Council’s December meeting. Ms. Myers made motion with second made by Dr. Grosz. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-39 Control of Organic Materials in Nonattainment Areas [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy who advised that proposed changes included language consistent with the re-right/de-wrong initiative. She stated that one substantive change affects both Subchapters 39 and 37

which is to change the definition of "volatile organic compounds" per Council's direction and requests from industry to exclude acetone, perchloroethylene, methylated siloxanes, methyl acetate from the definition of VOC and to modify the definition of VOC to be consistent with the EPA definition;

In Subchapter 39, Dr. Sheedy pointed out the need for correction of the placement of "prior to lease custody transfer" in 252:100-39-30(b)(2) which would be a substantive change along with the addition of a minimum annual throughput of 120,000 gallons and a minimum storage capacity of 2,000 gallons to 252:100-39-41(c) to determine applicability of subsection (c).

Following discussion, Mr. Breisch entertained a motion to continue this rule to the Council's December 15 meeting. Mr. Branecky made that motion with the second made by Mr. Wilson. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-41 Control of Emission of Hazardous and Toxic Air Contaminants [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy who stated that the proposed revisions would update the adoption by reference of 40 CFR Part 63 to include Maximum Achievable Control Technology (MACT) standards promulgated or amended between July 1, 1997 and July 1, 1998. She pointed out that the new standards are Subpart S – NESHAP for Pulp and Paper Production and Subpart LL – NESHAP for Aluminum Production Plants. The proposed revisions will also update the adoption by reference of the NESHAP as found in 40 CFR Part 61 (with the exception of Subparts B, H, I, K, Q, R, T, and W. and Appendices D and E which address radionuclides) to July 1, 1998. Dr. Sheedy advised the Council that these modifications were necessary to obtain EPA's delegation of authority to implement the federal hazardous air pollutant program in Oklahoma.

Mr. Breisch entertained a motion to recommend this rule to the Environmental Quality Board for permanent adoption. Mr. Wilson made that motion with the second made by Mr. Branecky. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

**OAC 252:100-5 Registration, Emission Inventory and Annual Operating Fees
[AMENDED]**

OAC 252:100-7 Permits [AMENDED]

OAC 252:100-8 Permits for Part 70 Sources [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Shawna McWaters-Khalousi for staff recommendation. Ms. Khalousi advised that the Department is proposing to amend 252:100-5-2.2 to increase annual operating fees assessed to minor facilities; amend 252:100-7-3 to increase fees for minor facilities for applicability determinations, relocation permits, and applications for individual permits; and amend 252:100-8-1.7 to increase applicability determination fees for Part 70 Sources. Ms. Khalousi stated that if was staff's recommendation that this rule be continued to Council's December 15 meeting.

Mr. Breisch entertained motion to continue these rules to the December meeting. Ms. Myers made the motion and second was made by Mr. Branecky. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes.

NEW BUSINESS – None

ADJOURNMENT With no further business, meeting was adjourned and next regularly scheduled meeting being December 15, 1998 at Lincoln Plaza Office Complex Burgundy Room, 4545 North Lincoln, Oklahoma City, Oklahoma.

NOTE: The sign-in sheet and the hearing records are attached as an official part of these Minutes.

AIR QUALITY COUNCIL
RULEMAKING RECOMMENDATION TO THE ENVIRONMENTAL QUALITY BOARD

Identification of Proposed Rulemaking:

Chapter Number and Title – OAC 252:100-23

Subchapters or Sections Involved – [new, amended or revoked]

Control of Emissions from Cotton Gins [AMENDED]

On OCTOBER 20, 1998 the members of this Council, by authority vested in them by the Oklahoma Environmental Quality Code (27 O.S.Supp. 1993, § 2-2-201), by roll call vote, recommended to the Environmental Quality Board that the rulemaking described above be adopted as:

permanent [take effect after legislative review]

emergency [temporary, to take effect upon approval by the Governor because of time; and/or special reason: _____]

This Council has considered the proposed rulemaking and comments about it and determined, to the best of its knowledge, that all applicable requirements of the Oklahoma Administrative Procedures Act have been followed.

This Council authorizes the Department to prepare this recommended rulemaking for the Board, making any changes approved by the Council, correcting typographical, grammatical and reference errors, and formatting them as required by the Office of Administrative Rules. This is to be done with the understanding that such changes shall neither alter the sense of what this Council recommends nor invalidate this recommendation.

Respectfully,

Date signed: 10-20-98

6. **Public Rulemaking Hearings**

A. OAC 252:100 Appendices E and F [AMENDED]

Appendix E Primary Ambient Air Quality Standards [REVOKED]

Appendix E Primary Ambient Air Quality Standards [NEW]

Appendix F Secondary Ambient Air Quality Standards [REVOKED]

Appendix F Secondary Ambient Air Quality Standards [NEW]

Proposal would restore the primary and secondary ambient air quality standards for ozone and particulate matter to what they were prior to June 1, 1999. The 8-hour ozone standard of 0.08 ppm would be revoked and the 1-hour standard of 0.12 ppm restored. The PM-2.5 standard would be revoked along with the revised form of the PM-10 standard and replaced with the previous form of the PM-10 standard.

2. **Questions and discussion by Council / Public**
3. **Possible action by Council**
4. **Roll call vote(s) for permanent adoption**

B. OAC 252:100- 5 Registration, Emission Inventory and Annual Operating Fees [AMENDED]

Proposal is designed to allow the Agency to bill annual operating fees on a flexible schedule; to allow the fees to be based on the most recent emission data possible; to require an owner or operator of a facility to report excess emissions on their annual emission inventory; to require inventories to be submitted one month earlier than presently required; to allow fee payers five years after payment is made to notify the DEQ that they overpaid and to receive credit for such overpayment; and to reduce the period of time to six months in which either the DEQ or the facility owner or operator can challenge the data or methods used to calculate the facility's emissions.

1. **Presentation – Jeanette Buttram**
2. **Questions and discussion by Council / Public**
3. **Possible action by Council**
4. **Roll call vote(s) for permanent adoption**

C. OAC 252:100-9 Excess Emission and Malfunction Reporting [AMENDED]

Proposal would simplify the language under the agency-wide re-right/de-wrong initiative, including correction of typographical and grammatical errors and deletion of redundant language. Substantive changes include establishing a time limit on excess emissions caused by properly reported malfunctions, startup/shutdowns, and maintenance procedures. The burden of proving that excess emissions occurring more than eight hours or 1.5 percent of the process's operation time in a 3-month period are due to excusable malfunctions, startup/shutdowns or maintenance procedures rather than negligent, marginal, or improper operation is on the owner or operator of the process. Language was added to explain that compliance with this Subchapter will not exempt sources from complying with any applicable federal requirement; and additional demonstration requirements for malfunctions, maintenance, and startup/shutdowns were added under proposed section 252:100-9-3.2, Demonstration of cause.

1. **Presentation – Jeanette Buttram**

2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent adoption

D. OAC 252:100-13. Prohibition of Open Burning [AMENDED]

Proposal would simplify the language under the agency-wide re-right/de-wrong initiative, including consolidating the general conditions and requirements for allowed open burning into a new section. Substantive changes would add definitions for "domestic refuse" and "land clearing operation" along with a section on disaster relief procedures. In some instances, the requirement to notify the DEQ or other appropriate official for authorization to burn was added. In addition, the open-pit incinerator requirements were expanded and moved to a new section. Also the rule would only allow material from a land clearing operation to be burned in an open-pit incinerator.

1. Presentation – Jeanette Buttram
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent adoption

E. OAC 252:100-23 Control of Emissions from Cotton Gins [AMENDED]

1. Presentation – Max Price
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for emergency adoption

Proposal would amend OAC 252:100-23-3(a) to remove references to OAC 252:100-27, which will be revoked effective June 1, 2000, and replace them with new section OAC 252:100-19-12, to take effect June 1, 2000.

F. OAC 252:100-24 Control of Emissions from Grain Elevators [AMENDED]

1. Presentation – Max Price
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for emergency adoption

Proposal would amend OAC 252:100-24-3(a)(1) and (2) to remove references to OAC 252:100-27, which will be revoked effective June 1, 2000, and replace them with new section OAC 252:100-19-12, to take effect June 1, 2000.

G. OAC 252:2-15 Environmental Permit Processing Times [AMENDED]

The proposal would change the terms used in 252:2-15-40, 41 and 72 to be consistent with those used in 252:100, Air Pollution Control. The terms "minor source(s)" and "major facility(ies)" would be changed to "minor facility(ies)" and "Part 70 source(s)", respectively.

1. Presentation – Cheryl Bradley
2. Questions and discussion by Council / Public
3. Possible action by Council
4. Roll call vote(s) for permanent adoption

7. Division Director's Report – Eddie Terrill

8. New Business – Any matter not known about, or which could not have been reasonably foreseen, prior to the time of posting the agenda.

9. Adjournment – Next Regular Meeting

Date and Time: To Be Announced

Place: DEQ Multi-Purpose Room - OKC

* Council decided at its October 19 meeting to begin at 9:00 a.m. due to the number of agenda items.

Lunch Break, if necessary

Should you desire to attend but have a disability and need an accommodation, please notify our Department three days in advance at (405) 720-4100.

November 30, 1999

MEMORANDUM

To: Air Quality Council

FROM: Eddie Terrill, Director *CT.*
Air Quality Division

SUBJECT: Proposed modifications to 252:100-23-3 "Control of Emissions from Cotton Gins" and 252:100-24-3 "Particulate Matter Emissions from Grain, Feed or Seed Operations"

Enclosed are copies of the proposed changes to 252:100-23-3 and 252:100-24-3, which will substitute references to 252:100-19-12 for references to Subchapter 27. These revisions are necessary because the substantive requirements of Subchapter 27 will be moved to 252:100-19-12 and Subchapter 27 will be revoked in June of 2000 (recommended by the Council on October 19, 1999 and adopted by the Environmental Quality Board on November 16, 1999). Thus, the references to Subchapter 27 will become meaningless unless they are replaced by references to 252:100-19-12. Staff will recommend that the Air Quality Council vote to submit these revisions to the Environmental Quality Board for approval as an emergency rule effective June 1, 2000. Also enclosed is the Rule Impact Statement.

Enclosures: 3

SUBCHAPTER 23. CONTROL OF EMISSIONS FROM COTTON GINS

252:100-23-3. Applicability, general requirements

(a) **Applicability.** Effective May 1, 1993, the provisions of this Subchapter are applicable to all new, modified, and existing cotton gins operating in the State of Oklahoma. Cotton gins in compliance with this Subchapter are exempt from the requirements of 252:100-25, ~~252:100-27~~252:100-19-12, and 252:100-29.

(b) **General requirements.**

(1) **Permits required.** In addition to the requirements of this Subchapter, each new or modified cotton gin shall comply with the permitting requirements of ~~OAC~~252:100-7.

(2) **Air toxics emissions.** The requirements of this Subchapter are in addition to any which may be required under 252:100-41.

(3) **Recordkeeping.** The owner or operator of a cotton gin shall maintain a log documenting the daily process weight and hours of operation. Air emission control equipment replacement/repair costs shall also be recorded. These records shall be maintained for a period of two years and shall be made available for inspection by DEQ personnel during normal business hours.

(4) **Test methods.**

(A) Visible emissions testing shall be conducted using EPA reference method 9 contained in 40 CFR Part 60, Appendix A. Testing shall be performed by a Certified Visible Emissions Evaluator.

(B) Dispersion modeling for PM-10 shall be performed using an EPA approved modeling method.

MINUTES
AIR QUALITY COUNCIL
DECEMBER 14, 1999
Department of Environmental Quality
MultiPurpose Room - 707 North Robinson, OKC

Council Members Present

Guests Present

**see attached list

Notice of Public Meeting for December 14, 1999 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance doors.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Mr. Wilson - aye; Mr. Branecky - aye; Mr. Treeman - aye; Mr. Fallon - aye; Dr. Grosz - aye; Mr. Breisch - aye. Dr. Canter, Ms. Myers, and Mr. Kilpatrick did not attend. Mr. Breisch and Mr. Terrill presented Meribeth Slagell a Resolution from the Council and Certificate of Appreciation from Mr. Coleman and thanked her for her years of dedicated service on the Council. Mr. Breisch introduced new Council member, Rick Treeman, who was appointed by the Governor to replace the position vacated by Mrs. Slagell.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the August 24, 1999 Public Meeting/Hearings. Motion was made by Mr. Fallon to approve the Minutes as presented and second was made by Dr. Grosz. Roll call as follows: Mr. Wilson - aye; Mr. Branecky - aye; Mr. Treeman - aye; Mr. Fallon - aye; Dr. Grosz - aye; Mr. Breisch - aye.

CY 2000 Meeting Schedule - Staff suggested the following Year 2000 meeting dates:

- Wednesday, February 16 at Tulsa
- Wednesday, April 19 at Lawton
- Wednesday, June 14 at Tulsa
- Wednesday, August 16 at Ponca City
- Wednesday, October 18 at Oklahoma City
- Wednesday, December 14 at Oklahoma City

Motion to accept the schedule was made by Mr. Fallon with second by Mr. Branecky with following vote: Mr. Wilson - aye; Mr. Branecky - aye; Mr. Treeman - aye; Mr. Fallon - aye; Dr. Grosz - aye; Mr. Breisch - aye

Protocol Statement — As protocol officer, Mr. Dyke convened the hearings by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke entered the Agenda and the Oklahoma Register Notice into the record.

PUBLIC HEARING

OAC 252:100- Appendices E & F

Appendix E Primary Ambient Air Quality Standards [AMENDED]

Appendix F Secondary Ambient Air Quality Standards [AMENDED]

Ms. Michelle Martinez made the staff presentation stating that the proposed amendments to Appendices E and F would restore the primary and secondary ambient air quality standards for ozone to what they were prior to June 1, 1999. She advised that the 8-hour ozone standard of 0.08 ppm would be revoked and the 1-hour standard of 0.12 ppm restored; and that the PM-2.5 standards would be revoked along with the revised form of the PM-10 standard and replaced with the previous form of the PM-10 standard.

Ms. Martinez entered into the record a fax received from EPA Region 6 dated December 10, 1999 which stated that updating these appendices was timely and appropriate. Ms. Martinez then asked that Council recommend proposed Appendices E and F to the Environmental Quality Board for permanent adoption.

Following discussion, Mr. Breisch asked for a motion to recommend the rule for adoption. Mr. Branecky made motion to recommend to the Board for permanent/emergency adoption. Second was made by Mr. Fallon. The roll call vote: Mr. Wilson - aye; Mr. Branecky - aye; Mr. Treeman - aye; Mr. Fallon - aye; Dr. Grosz - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-5

Registration, Emission Inventory and Annual Operating Fees [AMENDED]

Ms. Jeanette Buttram presented the staff presentation and advised that the proposed changes to Subchapter 5 were designed to allow the agency the ability to bill annual operating fees on a flexible schedule, and that these changes would also allow the fees to be based on the most recent emission data possible. Ms. Buttram pointed out that the proposed rule clarified that an owner or operator of a facility must report quantifiable excess emissions on their annual emission inventory. She stated that substantive changes included the requirement that all inventories be submitted prior to March 1, and the Agency would provide up to a 30-day extension upon request. Council made a recommendation that the language be changed to allow an additional 30-day extension for good cause shown. Also, the rule will allow fee payers five years after payment is made to notify the DEQ that they overpaid and receive

credit for such overpayment. Also, new language was proposed to reduce to six months after inventories are due or submitted, the period of time in which either the facility owner/operator or the DEQ, respectively, can challenge the methods used to calculate the facility's emissions for "fee calculation purposes."

Ms. Buttram advised that comments had been received from Central and Southwest Services and she entered them into the record. She stated that it was staff's recommendation that Council forward this rule to the Environmental Quality Board for adoption as a permanent rule.

Following comments from Council members and the audience, changes were made in the wording and Mr. Wilson made a motion to forward this rule, with changes, to the Environmental Quality Board for adoption. Second was made by Mr. Branecky. The roll call vote: Mr. Wilson - aye; Mr. Branecky - aye; Mr. Treeman - aye; Mr. Fallon - aye; Dr. Grosz - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-9

Excess Emission And Malfunction Reporting [AMENDED]

Ms. Jeanette Buttram was called upon to make the staff recommendation for this rule. She stated that the proposed changes to Subchapter 9 included correction of typographical and grammatical errors and deletion of redundant language; and that the rule was simplified and clarified according to the agency-wide re-right/de-wrong initiative.

Substantive changes include the addition of new definitions and the addition of a new subsection for certification of the information submitted.

Also, language was added under 100-9-3.3, Demonstration of cause, which states excess emissions caused by malfunction and maintenance, start-up/shutdown, can be exempt from compliance which air emission limitations established in permits, rules, orders of the DEQ if the owner/operator properly complies with the requirements in 252:100-9-3.1 and 252:100-9-3.2, respectively; and meets the demonstrations listed in those subsections. Then additional subsections added to 100-9-3.3 were discussed.

Ms. Buttram advised that comments had been received from EPA Region 6 and from Central and Southwest Services and entered them into the record. She stated that staff suggested that the rule be recommended for adoption by the Environmental Quality Board.

After much discussion with staff, Council, and audience members, Mr. Breisch called for a motion. Mr. Fallon made motion to continue this rule to the next regular meeting. Mr. Branecky made the second. The roll call vote: Mr. Wilson - aye; Mr. Branecky - aye; Mr. Treeman - aye; Mr. Fallon - aye; Dr. Grosz - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-13

Prohibition of Open Burning [AMENDED]

Ms. Jeanette Buttram was called upon to give the staff recommendation concerning this rule. She stated that the proposed changes to Subchapter 13 would simplify and clarify the Subchapter as a part of the agency-wide re-right/de-wrong initiative. She added that such changes included consolidating the general conditions and requirements for allowed open burning into a new section. She pointed out that a few substantive changes were made such as adding definitions for "domestic refuse" and "landclearing operation" and a section on disaster relief procedures; and that in some instances, the requirement to notify the DEQ or other appropriate official for authorization to burn was added. Ms. Buttram stated that new language was added under "land management and land clearing operations" requiring those who clear land in areas that are or have been designated nonattainment to burn their vegetation in open-pit incinerators. She stated that existing language on open-pit incinerators was expanded it would now prohibit accepting any material owned by other persons and from transporting any material to be burned to the property where the open-pit incinerator is located. She advised that it was staffs recommendation that Council forward this rule to the Environmental Quality Board for adoption as a permanent rule.

Ms. Buttram entered written comments from Central and Southwest Services into the record. Following questions and discussion by Council, changes were made in the wording after which Mr. Breisch entertained motion to accept the changes made and forward the rule to the Board for adoption as a permanent rule. The roll call vote: Mr. Wilson - aye; Mr. Branecky - aye; Mr. Treeman - aye; Mr. Fallon - aye; Dr. Grosz - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:100-23 Control of Emissions from Cotton Gins [AMENDED]

OAC 252:100-24 Control of Emissions from Grain Elevators [AMENDED]

Mr. Dyke called upon Mr. Max Price who advised Council that the proposed changes to 100-23-3 and 100-24-3, would substitute references to 252:100-19-12 for references to Subchapter 27. He added that these revisions were necessary because the substantive requirements of Subchapter 27 would be moved to 100-19-12 and Subchapter 27 would be revoked in June of 2000. He added that the references to Subchapter 27 would become meaningless unless they are replaced by references to 100-19-12. Mr. Price stated that it was staff's recommendation that Council refer these rules to the Environmental Quality Board for emergency adoption effective June 1, 2000.

Mr. Breisch stated that these two rules would be voted on separately and called for a motion on Subchapter 23. Mr. Wilson made the motion to forward to the Board as recommended

by staff. The second made by Mr. Branecky. The roll call vote: Mr. Wilson - aye; Mr. Branecky - aye; Mr. Treeman - aye; Mr. Fallon - aye; Dr. Grosz - aye; Mr. Breisch - aye.

Mr. Breisch then called for the same motion for Subchapter 24. Mr. Branecky made the motion and Dr. Grosz made the second. The roll call vote: Mr. Wilson - aye; Mr. Branecky - aye; Mr. Treeman - aye; Mr. Fallon - aye; Dr. Grosz - aye; Mr. Breisch - aye.

A copy of the hearing transcript is attached and made an official part of these minutes.

PUBLIC HEARING

OAC 252:2-15

Environmental Permit Processing Times [AMENDED]

Mr. Dyke called upon Ms. Cheryl Bradley who stated that the proposed amendments to Sections 40, 41, and 72 would make them consistent with 252:100, Air Pollution Control; and that the references to "minor source(s)" and "major facility(ies)" would be changed to "minor facility(ies)" and Part 70 source(s)", respectively. She added that changes were also made at the Council meeting to section 2-15-72(1)(A) such that the phrase "and part 70 sources" was added along with changing the number of days from 540 to 365. Ms. Bradley stated that comments had been received from EPA Region 6 and she entered them into the record. Following discussion Ms. Bradley advised that it was staff's recommendation that Council refer this rule to the Board for permanent adoption of the proposed amendments. Mr. Breisch called for a motion. Mr. Branecky made motion to accept the changes as stated and forward the rule to the Board for adoption. Mr. Fallon made the second. The roll call vote: Mr. Wilson - aye; Mr. Branecky - aye; Mr. Treeman - aye; Mr. Fallon - aye; Dr. Grosz - aye; Mr. Breisch - aye.

DIVISION DIRECTOR'S REPORT - Mr. Terrill advised that he and Mr. Dyke would be attending a meeting with Central States Air Resources Board (CenSARA) to discuss, among other things, the status of the Regional Planning Body activities. He stated that he would like to take a few minutes at the next regular meeting for an update on these activities.

NEW BUSINESS - None

ADJOURNMENT With no further business, meeting was adjourned with announcement that the next regularly scheduled meeting would be February 16, 2000 at 9:00 a.m. in the Auditorium at OSU-Tulsa (formerly UCAT).

NOTE: The sign-in sheet is attached as an official part of these Minutes.

AIR QUALITY COUNCIL
RULEMAKING RECOMMENDATION TO THE ENVIRONMENTAL QUALITY BOARD

Identification of Proposed Rulemaking:

Chapter Number and Title – OAC 252:100-23

Subchapters or Sections Involved – [new, amended or revoked]

OAC 252:100-23 – Control of Emissions from Cotton Gins

On December 14, 1999 the members of this Council, by authority vested in them by the Oklahoma Environmental Quality Code (27 O.S.Supp. 1993, § 2-2-201), by roll call vote, recommended to the Environmental Quality Board that the rulemaking described above be adopted as:

permanent [take effect after legislative review]

emergency [temporary, to take effect upon approval by the Governor because of time; and/or special reason: _____]

This Council has considered the proposed rulemaking and comments about it and determined, to the best of its knowledge, that all applicable requirements of the Oklahoma Administrative Procedures Act have been followed.

This Council authorizes the Department to prepare this recommended rulemaking for the Board, making any changes approved by the Council, correcting typographical, grammatical and reference errors, and formatting them as required by the Office of Administrative Rules. This is to be done with the understanding that such changes shall neither alter the sense of what this Council recommends nor invalidate this recommendation.

Respectfully,

Chair or Designee

Date signed: December 14, 1999

Environmental Quality Board

REGULAR MEETING AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
OKLAHOMA ENVIRONMENTAL QUALITY BOARD

A Public Meeting: 9:30 a.m., Tuesday, November 10, 1998
Kerr Country Mansion and Conference Center
1507 South McKenna
Poteau, Oklahoma

1. Call to Order - Herschel Roberts
2. Roll Call - Lynda Finch
3. Approval of Minutes of the September 15, 1998 Regular Meeting
4. **OAC 252:002 Procedures of the Department of Environmental Quality:**

Subchapter 17 of OAC 252:002 deals with the processing of citizen complaints received by the DEQ. The proposed amendment to Section 17-2 expands the definition of "enforcement action" to include a referral by a DEQ division to the Oklahoma Attorney General's Office, a district attorney's office, a state or federal law enforcement agency, or the DEQ's Environmental Crimes Investigation Team for investigation of possibly criminal environmental violations. Because criminal referral processes and criminal investigations typically are relatively involved and lengthy, this amendment is proposed to allow the DEQ to pursue possible criminal enforcement actions while still meeting agency complaint procedures and timelines.

Because this is an amendment to the procedural rules of the DEQ, it is not within the jurisdiction of an advisory council. Thus, the opportunity for public comment on this agenda item constitutes the rulemaking hearing on the proposal.

- A. Presentation – Jimmy Givens, DEQ General Counsel
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote for permanent adoption

5. **OAC 252:100 Air Pollution Control:**

Three sets of changes are proposed:

- The proposed revisions to Subchapters 23 (Cotton Gins) and 24 (Grain Elevators) simplify the language under the DEQ's "re-right/de-wrong" rules simplification initiative. It is also proposed to add a new Permit by Rule section to both subchapters. The Permit by Rule will streamline the permitting process by creating a mechanism that will eliminate the need for some cotton gins and elevators to obtain an individual air quality permit. Also, a new Appendix L is proposed which contains Particulate Matter (PM)-10 emission factors for Permit by Rule grain elevators. Additional changes to both subchapters track proposed amendments of Subchapter 25 concerning opacity.

- In addition to “re-right/de-wrong” simplification changes, the proposed revisions to Subchapter 25 (Smoke, Visible Emissions and Particulates) incorporate by reference the federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries, subject to certain exceptions. Additional changes include exempting sources subject to opacity standards promulgated under the Federal Clean Air Act from the state opacity standard, and clarifying how the opacity standard will be determined at sources that have Continuous Opacity Monitors and those that do not.
- The proposed revisions to Subchapter 41 (Control of Emission of Hazardous and Toxic Air Contaminants) update the adoption by reference of federal rules to include Maximum Achievable Control Technology (MACT) standards promulgated or amended between July 1, 1997 and July 1, 1998. The new standards relate to pulp and paper production and to aluminum production plants. The proposed revisions also update the adoption by reference of the federal National Emission Standards for Hazardous Air Pollutants (NESHAP) to July 1, 1998, with certain exceptions.

These changes were recommended by the Air Quality Council at their meeting on October 20, 1998.

- A. Presentation - David Branecky, Air Quality Council member
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote(s) for permanent adoption

6. Consideration of the Environmental Quality Report:

The Oklahoma Environmental Quality Code requires the DEQ to prepare an Environmental Quality Report and to submit it to the Governor, Speaker of the House and Senate President Pro Tem by January 1st of each year. Contrary to the statutory title, the purpose of this report for a fairly small targeted audience is to outline the DEQ’s two-year needs for providing environmental services within its jurisdiction, and to reflect any new federal mandates and recommended statutory changes. The Environmental Quality Board is to review, amend and approve the report.

- A. Presentation – Mark Coleman, DEQ Executive Director
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote

- 7. New Business (any matter not known about and which could not reasonably have been foreseen prior to the time of posting of agenda)
- 8. Executive Director's Report
- 9. Vote on 1999 Environmental Quality Board meeting dates
- 10. Adjournment

Public Forum: The Board meets four times a year at different locations across the State to hear the views and concerns of all Oklahomans about environmental issues. This opportunity is informal, and we invite you to sign the register to speak.

Should you have a disability and need an accommodation, please notify the DEQ three days in advance at 702-7100.

SUBCHAPTER 23. CONTROL OF EMISSIONS FROM COTTON GINS

Section

- 252:100-23-1. Purpose
- 252:100-23-2. Definitions
- 252:100-23-3. ~~General provisions; applicability~~Applicability, general requirements
- 252:100-23-4. ~~Smoke, visible emissions, and particulates~~Visible emissions (opacity) limit
- 252:100-23-5. Emission control equipment
- 252:100-23-6. Fugitive dust controls
- 252:100-23-7. Permit by rule

SUBCHAPTER 23. CONTROL OF EMISSIONS FROM COTTON GINS

252:100-23-1. Purpose

The purpose of this Subchapter is to control emissions from cotton gins ~~in order to prevent the Oklahoma air quality standards from being exceeded and ensure that degradation of the present level of air quality in Oklahoma does not occur.~~

252:100-23-2. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Cotton gin" means any facility ~~or plant which~~ that removes seed, lint, and trash from raw cotton and bales of lint cotton for further processing. Each equipment exhaust, including the trash and burr hopper, located at a cotton gin shall be considered as being an individual process emission source.

~~"Cotton gin site" means the land upon which a cotton gin is located and all contiguous land having common ownership or use.~~

"Existing gin" means a gin which was in existence and ~~has had~~ has had submitted a current emission ~~inventory~~ inventories to the Air Quality Program Division for the most recent two ginning seasons and ~~is was~~ is in possession of a valid annual renewable fee receipt ~~preceding the effective date of this rule~~ prior to May 1, 1993. All other gins shall be considered "new".

"Gin site" means the land upon which a cotton gin is located and all contiguous land having common ownership or use.

"High efficiency cyclone" means any cyclone type collector of the 2D-2D or 1D-3D configuration. ~~These designations referring~~ refer to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion. A 2D-2D cyclone would exhibit a cylinder length of 2 x D and a cone length of 2 x D (90 percent collection efficiency for TSP). A 1D-3D cyclone would exhibit a cylinder length of 1 X D and a cone length of 3 x D (95 percent collection efficiency for TSP).

"High pressure exhausts" means the exhaust cotton handling air systems located at a cotton gin which are not defined as "low pressure exhausts".

"Low pressure exhausts" means the exhaust air systems at a cotton gin which ~~handles~~ handle air from the cotton lint handling system and battery condenser.

252:100-23-3. ~~General provisions; applicability~~ Applicability, general requirements

(a) Applicability. ~~The~~ Effective May 1, 1993, the provisions of this Subchapter are applicable to all new, modified, and existing cotton gins operating in the State of Oklahoma. Cotton gins in compliance with this Subchapter are exempt from the requirements of ~~OAC~~ 252:100-25, 252:100-27, and 252:100-29.

(b) General requirements.

~~(b)(1)~~ (1) Permits required. In addition to the requirements of this Subchapter, each new or modified cotton gin shall comply

with the permitting requirements of OAC 252:100-7.

~~(e)(2)~~ Air toxics emissions. The requirements of this Subchapter are in addition to any which may be required under OAC 252:100-41.

~~(d)(3)~~ Recordkeeping. The owner or operator of a cotton gin shall maintain a log documenting the daily process weight and hours of operation ~~and air.~~ Air emission control equipment replacement/repair costs shall also be recorded. These records shall be maintained for a period of two years and shall be made available for inspection by ~~the Air Quality Program~~ DEQ personnel ~~or its representative~~ during normal business hours.

~~(e)(4)~~ Test methods.

~~(1)(A)~~ Visible emissions testing shall be conducted using EPA reference method 9 contained in 40 CFR Part 60, Appendix A ~~and.~~ Testing shall be performed by an individual possessing current certification as a Certified Visible Emissions Evaluator.

~~(2)(B)~~ Dispersion modeling for PM-10 shall be performed using an EPA approved modeling method.

~~(f)~~ Effective date. ~~This Subchapter shall become effective May 1, 1993.~~

252:100-23-4. ~~Smoke, visible emissions, and particulates~~ Visible emissions (opacity) and particulates

~~(a)~~ Visible emissions limit.

~~(1)~~ Emissions (a) Opacity limit. No person shall cause, suffer, allow or permit ~~the~~ discharge of any fumes, aerosol, mist, gas, smoke, vapor, particulate matter or any combination thereof ~~a shade or density exhibiting greater than twenty (20) percent equivalent~~ 20% opacity. This requirement shall not apply to ~~smoke or visible emissions exhibiting greater than 20% opacity~~ emitted during short-term occurrences, ~~the shade or density of which is not greater than sixty (60) percent opacity for an period aggregating no more than five (5) minutes in any sixty (60) consecutive minutes and/or no more than twenty (20) minutes in any consecutive 24 hour period.~~ which consist of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours, during which the average of any six-minute period shall not exceed 60% opacity.

~~(2)(b)~~ Alternative emissions opacity limit. The ~~twenty (20) percent~~ 20% opacity limit as required under 252:100-23-4(a)(1) may be increased for particulates only provided that the ~~owner/operator~~ owner or operator demonstrates to the satisfaction of the ~~Oklahoma~~ Oklahoma Air Quality Council at public hearing that those requirements listed in 252:100-25-4(a) through (c) have been met.

~~(b)(c)~~ PM-10 emissions limit. No cotton gin shall ~~impact the ambient air quality in such a manner as to violate~~ be operated so as to cause or contribute to a violation of the primary PM-10 standard of 50 ug/m³ annual arithmetic mean or 150 ug/m³ 24 hour average or any other ambient air standard quality standards or any other

ambient air quality standard established by OAC in 252:100-3.

252:100-23-5. Emission control equipment

(a) **Low pressure exhausts.** For ~~emissions~~emission control from low pressure exhausts, the use of screens with a mesh size of 70 by 70 or finer (U.S. Sieve), or the use of perforated condenser drums with holes not exceeding 0.045 inches in diameter or equipment of equivalent design efficiency as determined by the Executive Director shall be required.

(b) **High pressure exhausts.** For emission control from high pressure exhausts, the use of 2D-2D cyclones shall be required for existing gins. Existing gins shall install and use 1D-3D cyclone collectors or equivalent when the capital cost of repair or replacement of the existing 2D-2D cyclone exceeds ~~fifty (50) percent~~50% of the capital cost of a new 1D-3D cyclone. New or modified cotton gins shall utilize a 1D-3D cyclone collector or equipment of equivalent collection efficiency upon commencement of operation.

(c) ~~Fugitive emissions~~Burr hoppers. For emission control ~~of fugitive emissions from burr hoppers~~ during dumping, ~~the use of total enclosure burr hoppers~~ at existing gin sites located within the corporate city limits of any city or within 300 feet of two or more occupied establishments ~~is required~~must be totally enclosed. All new gin sites shall install and use a total enclosure on the burr hopper.

252:100-23-6. Fugitive dust controls

(a) For control of fugitive dust, no person shall ~~cause or permit~~allow the handling, transporting, or disposition of any substance or material ~~which~~that is likely to be scattered by the air or wind, ~~or is susceptible to being airborne, or windborne, or~~ ~~and no person shall~~ operate or maintain ~~or cause to be operated or maintained,~~ any gin ~~premises~~site, open area, right-of-way, storage pile or materials, vehicle, or construction, or any other enterprise which involves any material or substance likely to be scattered by the wind or air, ~~or susceptible to being windborne or airborne~~ that would be classified as air pollution without taking reasonable precautions ~~or measures~~ to minimize atmospheric pollution.

(b) No person shall ~~cause or permit~~allow the discharge of any visible fugitive dust emissions beyond the property line on which the emissions originate.

252:100-23-7. Permit by Rule

(a) Applicability. Any new or existing facility may be constructed or operated under this section if it meets the requirements of 252:100-7-60(a), (b), and (c) and has the Standard Industrial Classification (SIC) code 0724 Cotton Ginning.

(b) Requirements.

(1) In addition to the requirements in 252:100-7-60(a), (b), and (c), an owner or operator of a facility subject to this section shall comply with all of the requirements of this

Subchapter.

(2) Maximum production rate of a facility subject to this section shall be 36,000 bales per year.

REGULAR MEETING AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
OKLAHOMA ENVIRONMENTAL QUALITY BOARD

A Public Meeting: 9:30 a.m., Friday, February 25, 2000
Department of Environmental Quality
707 North Robinson
Oklahoma City, Oklahoma 73102

NOTE: The business meeting of the Board will be preceded at 8:30 a.m. by a continental breakfast. No business will be conducted, but there will be opportunity for an informal interchange among attendees, particularly on matters of interest raised by individual Board members. Board members and DEQ staff will be present, and the public may attend.

1. Call to Order – Lee Paden, Chair
2. Roll Call - Lynda Finch
3. Approval of Minutes of the November 16, 1999 Regular Meeting
4. **Election of Officers**
Election of Chair and Vice-Chair for 2000
5. **Rulemaking – OAC 252:002 Procedures of the DEQ (Administrative Fees)**
The proposed rule relates to administrative fees. The Oklahoma Open Records Act allows an agency to charge a document copying fee, a fee for certified copies, and a reasonable fee for document searches when the search request is solely for a commercial purpose or clearly would cause an excessive disruption of the agency's essential functions. Fees must be promulgated as rules under the Administrative Procedures Act (1999 Okl.Op.Atty.Gen. 55, August 17, 1999). The proposed rule establishes a photocopy fee of \$0.25 per page, a certified copy fee of \$1.00 per document, and a document search fee of \$5.00 per one-half (1/2) hour (with the first 15 minutes free).
 - A. Presentation – Jimmy Givens, DEQ General Counsel
 - B. Questions and discussion by the Board
 - C. Questions, comments and discussion by the public
 - D. Discussion by the Board
 - E. Roll call vote on permanent adoption
6. **Rulemaking – OAC 252:100 Air Pollution Control**
Four sets of changes are proposed:
 - Subchapter 5: The proposed amendments are designed to allow the agency to bill on a flexible schedule those owners and operators with sources that produce emissions. The changes also allow the fees to be based on the most recent emission data possible. The proposal clarifies that an owner or operator of a facility must report quantifiable excess emissions on the annual emission inventory, which must be submitted prior to March 1 unless an extension is granted. The proposal also establishes time frames for requests for credit based on overpayment and for challenges to the method used to calculate the facility's emissions for fee calculation purposes.
 - Subchapter 13: The proposed amendments simplify and clarify the rule as part of the agency-wide re-right/de-wrong initiative. Such changes include consolidating the general conditions and requirements for allowed open burning into a new section. Some substantive changes were made,

including adding a section on disaster relief procedures; requiring notification to the DEQ or other appropriate official for authorization to burn in some circumstances; requiring those who clear land in areas that are or have been designated nonattainment to burn their vegetation in open-pit incinerators; and prohibiting burning of off-site material in open-pit incinerators.

- Subchapters 23 and 24: The changes replace references to Subchapter 27 with references to 252:100-19-12. These changes are necessary because, based on Board action last November, the substantive requirements of Subchapter 27 will be moved to section 252:100-19-12 and Subchapter 27 will be revoked, effective June of 2000.
- Appendices E and F: The proposed amendments restore the primary and secondary ambient air quality standards to what they were prior to June 1, 1999. The 8-hour ozone standard of 0.08 ppm would be revoked and the 1-hour standard of 0.12 ppm restored. The PM-2.5 standard would be revoked along with the revised form of the PM-10 standard and replaced with the previous form of the PM-10 standard.

- A. Presentation-- David Branecky, Air Quality Council Member
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote(s) on permanent adoption of amendments to Subchapters 5 and 13, on emergency adoption* (only) of amendments to Subchapters 23 and 24, and on both permanent and emergency adoptions of amended Appendices E and F

7. Rulemaking-- OAC 252:002 Procedures of the DEQ (Air Quality-Related)

The Department is proposing amendments to the air quality provisions of OAC 252:2-15, Environmental Permit Processing Times, to make them consistent with 252:100, Air Pollution Control. The terms "minor source(s)" and major "facility(ies)" would be changed to "minor facility(ies)" and "Part 70 source(s)", respectively.

- A. Presentation-- David Branecky, Air Quality Council Member
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote on permanent adoption

8. Rulemaking-- OAC 252:205 Hazardous Waste Management

Two sets of changes are proposed:

- Subchapter 3: The proposed amendment to OAC 252:205-3-1 updates the adoption by reference of federal hazardous waste regulations to July 1, 1999. Proposed revisions to 252:205-3-3 incorporate new or superseding amendments to 40 CFR contained in 64 FR 36465-36490, published July 6, 1999, which add hazardous waste lamps as a universal waste at the federal level. Corresponding changes are made in other sections.
- Subchapters 5 and 9: The proposed revisions to 252:205-5 move language from 252:205-5-5(b) to 252:205-5-3(b)(5). The amendment to 252:205-9-6 provides alternative waste characterization mechanisms for off-site hazardous waste facilities.

- A. Presentation-- Jody Reinhart, Hazardous Waste Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote(s) on emergency* and permanent adoption of amendments to Subchapter 3, and on permanent adoption of amendments to Subchapters 5 and 9

9. Rulemaking— OAC 252:220 Brownfields

The proposed language is the result of recent legislation. It states the criteria by which the DEQ will verify loan application eligibility of Brownfields sites for loans from the Wastewater Facility Construction Revolving Loan Account and other state funding sources.

- A. Presentation— Jody Reinhart, Hazardous Waste Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote(s) on emergency* and permanent adoption

10. Rulemaking— OAC 252:615 and 616 Industrial Wastewater Systems

Chapter 615 has been reviewed as part of the "re-right/de-wrong" process of simplifying DEQ rules. Because so many changes were made, it is proposed that Chapter 615 be revoked and a new Chapter 616 created to replace it. Language has been simplified and clarified and rules deemed unenforceable have been removed.

- A. Presentation— Robert Johnston, Water Quality Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote on permanent adoption

11. Rulemaking— OAC 252:630 and 631 Public Water Supply Operation

Chapter 630 has been reviewed as part of the "re-right/de-wrong" process of simplifying DEQ rules. Because so many changes were made, it is proposed that Chapter 630 be revoked and a new Chapter 631 created to replace it. Language has been simplified and clarified and unenforceable rules have been removed. The most recent federal requirements for maintaining primacy over the Safe Drinking Water Act program have been included.

- A. Presentation— Robert Johnston, Water Quality Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote on permanent adoption

12. Rulemaking— OAC 252:641 On-Site Sewage Disposal Systems

The proposed rule amendments eliminate the document search fee, combination fee (soil percolation test and final inspection or existing system evaluation report) and residential plat review fees, and reduce the soil percolation/soil profile fee, final inspection fee, existing system evaluation fee and the certified installer final inspection fee.

- A. Presentation – Gary Collins, Director, DEQ Environmental Complaints and Local Services Division
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote on permanent adoption

13. **Rulemaking-- OAC 252:700 and 710 Waterworks/Wastewater Works Operator Certification**
Chapter 700 has been reviewed as part of the "re-right/de-wrong" process of simplifying DEQ rules. Because so many changes were made, it is proposed that Chapter 700 be revoked and a new chapter 710 created to replace it. New subchapters have been created; many rules have been simplified and/or broken into several shorter rules for clarity; and statutory citations have been updated. The rules for landfill operator certification are being revoked as inappropriate to these chapters.

- A. Presentation-- Rick Stebbens, Waterworks and Wastewater Works Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote on permanent adoption

14. **Rulemaking-- OAC 252:002 Procedures of the DEQ (Operator Certification-Related)**
The DEQ proposes that Section 252:2-15-49 be revoked as part of the "re-right/de-wrong" rules simplification process. This revocation does not affect the operator certification program or the proposed rules in Chapter 710. The basic Tier I permitting process was designed for environmental permits where notice was given to landowners. The DEQ believes that personal licensure should not have been included in the Tier categories.

- A. Presentation-- Rick Stebbens, Waterworks and Wastewater Works Council Chair
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote on permanent adoption

15. **New Business (any matter not known about and which could not reasonably have been foreseen prior to the time of posting of agenda)**

16. **Executive Director's Report**

17. **Adjournment**

Public Forum: The Board meets four times a year at different locations across the State to hear the views and concerns of all Oklahomans about environmental issues. This opportunity is informal, and we invite you to sign the register to speak. The forum will also include a short presentation from the DEQ Water Quality Division about State Water Quality Standards implementation, the State "303(d)" (impaired waters) list, and related issues.

Should you have a disability and need an accommodation, please notify the DEQ three days in advance at 702-7100.

* Specification of proposed adoption by emergency rulemaking, by permanent rulemaking, or by both, is based on the recommendations of the respective advisory councils. Adoption or amendment of rules as emergency rulemaking requires a finding by the Board that a compelling extraordinary circumstance warrants the seeking of emergency certification, so that the rules will take effect immediately upon the Governor's signature. Absent a finding and certification of emergency, rules adopted today will not become effective until on or about June 1st.

SUBCHAPTER 23. CONTROL OF EMISSIONS FROM COTTON GINS

252:100-23-3. Applicability, general requirements

(a) **Applicability.** Effective May 1, 1993, the provisions of this Subchapter are applicable to all new, modified, and existing cotton gins operating in the State of Oklahoma. Cotton gins in compliance with this Subchapter are exempt from the requirements of 252:100-25, ~~252:100-27~~ 252:100-19-12, and 252:100-29.

(b) **General requirements.**

(1) **Permits required.** In addition to the requirements of this Subchapter, each new or modified cotton gin shall comply with the permitting requirements of ~~OAC~~-252:100-7.

(2) **Air toxics emissions.** The requirements of this Subchapter are in addition to any which may be required under 252:100-41.

(3) **Recordkeeping.** The owner or operator of a cotton gin shall maintain a log documenting the daily process weight and hours of operation. Air emission control equipment replacement/repair costs shall also be recorded. These records shall be maintained for a period of two years and shall be made available for inspection by DEQ personnel during normal business hours.

(4) **Test methods.**

(A) Visible emissions testing shall be conducted using EPA reference method 9 contained in 40 CFR Part 60, Appendix A. Testing shall be performed by a Certified Visible Emissions Evaluator.

(B) Dispersion modeling for PM-10 shall be performed using an EPA approved modeling method.

SUBCHAPTER 24. CONTROL OF EMISSIONS FROM GRAIN ELEVATORS

252:100-24-3. Applicability, general requirements

(a) **Applicability.** The provisions of this subchapter are applicable to all new, modified, and existing grain, feed, or seed facilities in the State of Oklahoma.

(1) Facilities in compliance with 252:100-25, ~~252:100-27~~ 252:100-19-12, and 252:100-29 are not required to comply with this subchapter.

(2) Facilities in compliance with this subchapter are exempt from the requirements of 252:100-25 (visible emissions), ~~252:100-27~~ 252:100-19-12 (process weight), and 252:100-29 (fugitive dust).

(b) **General requirements.**

(1) **Permits required.** In addition to the requirements of this subchapter, each new, modified or existing grain, feed, or seed facility shall comply with the permitting requirements of 252:100-7 or 252:100-8.

(2) **Air toxics emissions.** Grain, feed, or seed facilities that emit toxic air pollutants above the de minimis levels specified in 252:100-41 are subject to all applicable requirements contained therein.

(3) **Record-keeping.** The owner or operator of a facility shall maintain a daily log documenting commodity receipts and load-outs and hours of operation for each. These records shall be maintained for a period of two years and shall be made available for inspection by the DEQ during normal business hours.

(4) **Visible emissions test.** Visible emissions (opacity) testing shall be conducted using EPA reference method 9 contained in 40 CFR, Part 60, Appendix A and must be performed by a Certified Visible Emission Evaluator.

(5) **Determination of emissions.** Emissions from grain, feed, or seed facilities shall be determined by the best available data. This may include actual emissions as determined by stack testing, mass balance calculations, emission calculations using approved published emissions factors, or any other reasonably accurate method approved in advance by the DEQ.

Additional Comments

CHAPTER 100. AIR POLLUTION CONTROL
SUBCHAPTER 23. CONTROL OF EMISSIONS FROM COTTON GINS

EXECUTIVE SUMMARY: The proposed revisions to Oklahoma Administrative Code 252:100-23, Control of Emissions from Cotton Gins, will simplify the language under the agency-wide re-right/de-wrong initiative. It is also proposed to add a new Permit by Rule section to the subchapter that will streamline the permitting process by creating a mechanism that will eliminate the necessity for some cotton gins to obtain an individual air quality permit. Additional changes to the subchapter follow a proposed amendment of Subchapter 25 concerning short-term exceedances of the opacity standard. The revised rules would allow exceedances of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours.

DIFFERENCES FROM ANALOGOUS FEDERAL RULES: None.

ENVIRONMENTAL BENEFIT STATEMENT: Not required because these rules are not more stringent than corresponding federal rules.

SUMMARY OF COMMENTS AND RESPONSES:

Comment: During the first comment period, EPA suggested the AP-42 Section 9.7, Cotton Ginning, be referenced in the rule to demonstrate how the maximum production rate was derived.

Response: Staff agreed and the following sentence was added to 23-7(b)(2): "This production rate, using 1996 revised emission factors in AP-42 Section 9.7, Cotton Gins, should result in less than 40 tons per year of PM-10 emissions." At the October 20, 1998, hearing on the proposed rule, Council thought the language should be more definite, and decided to delete the sentence after concluding that the reference did not need to be in the rule since the hearing record will indicate how the production rate was derived.

Comment: Council suggested the title of 23-4(a), "emission limit", be changed to "opacity limit" to be consistent with the same section in SC24, Grain Elevators.

Response: Staff agreed and the reference was added.

COMMENT: A comment was received that section 23-4(b) states that "no cotton gin shall be operated so as to cause or contribute to a violation of a primary PM-10 standard," but makes no mention of the secondary standard.

Response: Staff agreed and section 23-4(b) was changed to read "No cotton gin shall be operated so as to cause or contribute to a violation of the PM-10 ambient air quality standards or any other ambient air quality standard established in 252:100-3."

Comment: EPA commented that 252:100-23-7(b)(2) must specify a practically enforceable method or procedure to verify compliance with the 36,000 bales per year limitation.

Response: No changes were necessary since section 23-7(b)(1) requires compliance with "all of the requirements of this Subchapter." Thus, the cotton gin is already required to keep records in accordance with 23-3(b)(3).

**TITLE 252. OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

**SUBCHAPTER 23. CONTROL OF EMISSIONS FROM COTTON GINS
SECTION 252:100-23-3**

**SUBCHAPTER 24. PARTICULATE MATTER EMISSIONS FROM GRAIN,
FEED OR SEED OPERATIONS
SECTION 252:100-24-3**

EXECUTIVE SUMMARY:

The purpose of these changes is to replace references to Subchapter 27 in sections 252:100-23-3 and 252:100-24-3 with references to 252:100-19-12. These changes are necessary because the substantive requirements of Subchapter 27 will be moved to section 252:100-19-12 and Subchapter 27 will be revoked, effective June of 2000. (Adopted by the Environmental Quality Board on November 16, 1999)

DIFFERENCES FROM ANALOGOUS FEDERAL RULES:

None.

ENVIRONMENTAL BENEFIT STATEMENT:

Not required because these rules are not more stringent than corresponding federal rules.

SUMMARY OF WRITTEN COMMENTS AND RESPONSES:

Comment: Environmental Protection Agency, December 10, 1999.

"Subchapter 23 is part of the approved SIP. By removing references to Subchapter 27 now, how will the provisions of Subchapter 27 be covered in the interim period?"

Response:

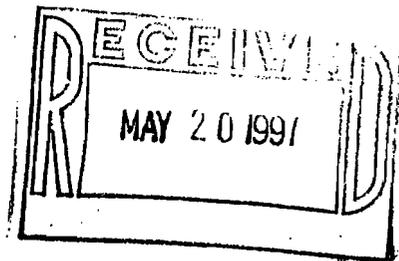

The proposed changes to Subchapters 23 and 24 will not take effect until the adopted changes to Subchapter 19 and the revocation of Subchapter 27 take effect, which will be on June 1, 2000. The references in question actually exempt cotton gins from the requirements of Subchapter 27, thus there would be no impact to the enforceability of Subchapter 27.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

REGION 6
1445 ROSS AVENUE, SUITE 1200
DALLAS, TX 75202-2733

MAY 16 1997

Mr. Larry Byrum,
Director
Oklahoma Department of Environmental Quality
4545 North Lincoln Blvd. Suite 250
Oklahoma City, OK 73105-3483

Dear Mr. Byrum:

We are pleased to announce to you that the enclosed Federal Register notice adopting the Oklahoma cotton gin rule and revising the Particulate Matter State Implementation Plan (SIP) was signed by the Regional Administrator on April 24, 1997, and published on May 14, 1997. The final rule action will become effective on July 14, 1997, if no comments are received by June 13, 1997.

This action serves to strengthen the SIP and provides source specific rules that help protect air quality in Oklahoma. We appreciate your efforts and those from your staff during the development and approval of this action. If you have any questions or comments on this action you may call me directly, or have your staff contact Ms. Petra Sanchez at (214) 665-6686.

Sincerely yours,

Thomas H. Diggs
Chief
Air Planning Section

 Assistant Attorney General for
 Administration.

Pursuant to the authority vested in the Attorney General by 5 U.S.C. 552a and delegated to me by Attorney General Order No. 793-78, it is proposed to amend part 16 of Title 28 of the Code of Federal Regulations as follows:

1. The authority for part 16 continues to read as follows:

Authority: 5 U.S.C. 301, 552, 552a, 552b(g), 553; 18 U.S.C. 4203(a)(1); 28 U.S.C. 509, 510, 534, 31 U.S.C. 3717, 9701.

2. It is proposed to amend 28 CFR 16.99 by adding paragraphs (i) and (j) to read follows:¹

§ 16.99 Exemption of the Immigration and Naturalization Service Systems-limited access.

* * * * *

(i) The Law Enforcement Support Center Database (LESC) (Justice/INS-023) system of records is exempt under the provisions of 5 U.S.C. 552a (j)(2) from subsections (c) (3) and (4); (d); (e) (1), (2), (5), (8) and (g); but only to the extent that this system contains records within the scope of subsection (j)(2), and to the extent that records in the system are subject to exemption

therefrom. In addition, this system of records is also exempt in part under the provisions of 5 U.S.C. 552a (k) (2) from subsections (c)(3); (d); (e)(1), but only to the extent that this system contains records within the scope of subsection (k)(2), and to the extent that records in the system are subject to exemption therefrom.

(j) The following justifications apply to the exemptions from particular subsections:

(1) From subsection (c)(3) for reasons stated in paragraph (h)(1) of this section.

(2) From subsection (c)(4) from reasons stated in paragraph (h)(2) of this section.

(3) From the access and amendment provisions of subsection (d) because access to the records contained in this system of records could inform the subject of a criminal or civil investigation of the existence of that investigation; of the nature and scope of the information and evidence obtained as to their activities; and of information that may enable the subject to avoid detection or apprehension. Such disclosures would present a serious impediment to effective law enforcement where they prevent the successful completion of the investigation or other law enforcement operation such as deportation or exclusion. In addition, granting access to these records could result in a disclosure that would constitute an unwarranted invasion of the privacy third parties. Amendment of the records would interfere with ongoing investigations and law enforcement activities and impose an impossible administrative burden by requiring investigations to be continuously reinvestigated.

(4) From subsection (e)(1) for reasons stated in paragraph (h)(4) of this section.

(5) From subsection (e)(2) for reasons stated in paragraph (h)(5) of this section.

(6) From subsection (e)(3) because the requirement that individuals supplying information be provided with a form stating the requirements of subsection (e)(3) would constitute a serious impediment to criminal law enforcement in that it could compromise the existence of a confidential investigation.

(7) From subsection (e)(5) for reasons stated in paragraph (h)(7) of this section.

(8) From subsection (e)(8) for reasons stated in paragraph (h)(8) of this section.

(9) From subsection (g) to the extent that this system is exempt from the access and amendment provisions of subsection (d).

40 CFR Part 52

[OK-13-1-7080b; FRL-6822-4]

State of Oklahoma; Approval of State Implementation Plan (SIP) Revision; Oklahoma Cotton Gln Emissions Control SIP Revision

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: This action proposes to approve the SIP revisions submitted by the State of Oklahoma on May 16, 1994, to satisfy the Federal Clean Air Act requirements of section 110. The May 16, 1994, submittal adopts opacity rules for cotton gin operations in Oklahoma to control particulate matter and visible emissions. In the Rules and Regulation section of this *Federal Register*, the EPA is approving the State's request as a direct final rule without prior proposal because the EPA views this action as noncontroversial and anticipates no adverse comments. The rationale for the approval is set forth in the direct final rule. If no adverse comments are received in response to that direct final rule, no further activity is contemplated in relation to this proposed rule. If the EPA receives adverse comments, the direct final rule will be withdrawn and all public comments received will be addressed in a subsequent final rule based on the proposed rule. The EPA will not institute a second comment period on this action. Any parties interested in commenting on this action should do so at this time.

DATES: Comments on this proposed rule must be received on or before June 13, 1997.

ADDRESSES: Comments should be mailed to Thomas H. Diggs, Chief, Air Planning Section (6PD-L), Environmental Protection Agency Region 6, 1445 Ross Avenue, Dallas, Texas 75202-2733. Copies of the State's petition and other information relevant to this action are available for inspection during normal hours at the above location and at the following locations:

Environmental Protection Agency, Region 6, Air Planning Section (6PD-L), 1445 Ross Avenue, Suite 1200, Dallas, TX 75202-2733.
 Oklahoma Department of Environmental Quality, Air Quality Division, 4545 N. Lincoln, Suite 250, Oklahoma City, Oklahoma 73105-5220.

Anyone wishing to review this petition at the EPA office is asked to

¹ Proposed paragraphs (g) and (h) were published in the *Federal Register* on March 7, 1997 (62 FR 10495).

contact the person below to schedule an appointment 24 hours in advance.

FOR FURTHER INFORMATION CONTACT: Ms. Petra Sanchez, Air Planning Section (6PD-L), Environmental Protection Agency, Region 6, 1445 Ross Avenue, Dallas, Texas 75202-2733, telephone (214) 665-6686.

SUPPLEMENTARY INFORMATION: For additional information, see the direct final rule published in the rules section of this Federal Register.

Authority: 42 U.S.C. 7401-7671q.

Dated: April 24, 1997.

Jerry Clifford,

Acting Regional Administrator.

Approval and Promulgation of Implementation Plans; State of Missouri

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The EPA proposes to approve the State Implementation Plan (SIP) revision submitted by the state of Missouri for the purpose of meeting the requirements of the EPA's general conformity rule. In the final rules section of the Federal Register, the EPA is approving the state's SIP revision as a direct final rule without prior proposal because the Agency views this as a noncontroversial revision amendment and anticipates no adverse comments. An explanation for the approval is set forth in the direct final rule. If no adverse comments are received in response to this proposed rule, no further activity is contemplated in relation to this rule. If the EPA receives adverse comments, the direct final rule will be withdrawn and all public comments received will be addressed in a subsequent final rule based on this proposed rule. The EPA will not institute a second comment period on this document. Any parties interested in commenting on this document should do so at this time.

DATES: Comments on this proposed rule must be received in writing by June 13, 1997.

ADDRESSES: Comments may be mailed to Christopher D. Hess, Environmental Protection Agency, Air Planning and

Development Branch, 726 Minnesota Avenue, Kansas City, Kansas 66101.

FOR FURTHER INFORMATION CONTACT: Christopher D. Hess at (913) 551-7213.
SUPPLEMENTARY INFORMATION: See the information provided in the direct final rule which is located in the rules section of the Federal Register.

Dated: April 9, 1997.

[CA 12-2-0039; FRL-5825-8]

Approval and Promulgation of Implementation Plans; California State Implementation Plan Revision; San Joaquin Valley Unified Air Pollution District and South Coast Air Quality Management District State Implementation Plan Revisions

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: EPA is proposing a limited approval and limited disapproval of revisions to the California State Implementation Plan (SIP) which concern the control of volatile organic compound (VOC) emissions from facilities that load organic liquids into tank trucks, trailers, or railroad tank cars and the control of emissions during the transfer of organic liquids between storage units and delivery vessels.

The intended effect of proposing limited approval and limited disapproval of these rules is to regulate emissions of VOCs in accordance with the requirements of the Clean Air Act, as amended in 1990 (CAA or the Act). EPA's final action on this proposed rulemaking document will incorporate these rules into the federally approved SIP. EPA has evaluated the rules and is proposing a simultaneous limited approval and limited disapproval under provisions of the CAA regarding EPA action on SIP submittals and general rulemaking authority because these revisions, while strengthening the SIP, also do not fully meet the CAA provisions regarding plan submissions and requirements for nonattainment areas.

DATES: Comments must be received on or before June 13, 1997.

ADDRESSES: Comments may be mailed to: Christine Vineyard, Rulemaking

Office [AIR-4], Air Division, U.S. Environmental Protection Agency, Region IX, 75 Hawthorne Street, San Francisco, CA 94105-3901.

Copies of the rules and EPA's evaluation report of the rules are available for public inspection at EPA's Region 9 office during normal business hours. Copies of the submitted rules are also available for inspection at the following locations:

California Air Resources Board, Stationary Source Division, Rule Evaluation Section, 2020 "L" Street, Sacramento, CA 95812.

San Joaquin Valley Unified Air Pollution Control District, 1999 Tuolumne Street, Fresno, CA 93721.

South Coast Air Quality Management District, 21865 E. Copley Drive, Diamond Bar, CA 91765-4182.

FOR FURTHER INFORMATION CONTACT: Christine Vineyard, Rulemaking Office, [AIR-4], Air Division, U.S. Environmental Protection Agency, Region IX, 75 Hawthorne Street, San Francisco, CA 94105-3901, Telephone: (415) 744-1197.

SUPPLEMENTARY INFORMATION:

I. Applicability

The rules being proposed for approval into the California SIP include: San Joaquin Valley Unified Air Pollution Control District (SJVUAPCD) Rule 463.3, Organic Liquid Loading, and South Coast Air Quality Management District (SCAQMD) Rule 462, Organic Liquid Loading. These rules were submitted by the California Air Resources Board (CARB) to EPA on January 28, 1992 and October 13, 1995, respectively.

II. Background

On March 3, 1978, EPA promulgated a list of ozone nonattainment areas under the provisions of the 1977 Clean Air Act (1977 CAA or pre-amended Act), that included the Los Angeles-South Coast Air Basin (LA Basin) and the San Joaquin Area that encompassed the following eight air pollution control districts (APCDs): Fresno County APCD, Kern County APCD,¹ King County APCD, Madera County APCD, Merced County APCD, San Joaquin County APCD, Stanislaus County APCD, and Tulare County APCD. 43 FR 8964; 40 CFR 81.305. The San Joaquin Valley Air Basin which includes all the above eight

¹ At that time, Kern County included portions of two-air basins: The San Joaquin Valley Air Basin and the Southeast Desert Air Basin. The San Joaquin Valley Air Basin portion of Kern County was designated as nonattainment, and the Southeast Desert Air Basin portion of Kern County was designated as unclassified, see 40 CFR 81.305 (1991).

means including use of an existing facsimile notification network.

Dated: April 29, 1997.

M.W. Brown,
Captain, U.S. Coast Guard, Captain of the Port, Chicago.

40 CFR Part 52

[OK-13-1-7080a, FRL-5822-3]

Approval of a Revision to a State Implementation Plan; Oklahoma; Revision to Particulate Matter Regulations

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rule.

SUMMARY: The EPA is approving revisions to the Oklahoma State Implementation Plan (SIP) submitted by the Governor on May 16, 1994. This action approves revisions to the Oklahoma SIP by adopting new rules and opacity requirements to control particulate matter emissions from new, modified, and existing cotton gin operations. Approval of this revision will strengthen the SIP by making it Federally enforceable. In addition, the new rules will simplify the process weight regulations in the State.

DATES: This action is effective on July 14, 1997, unless critical or adverse comments are received by June 13, 1997. If the effective date is delayed, timely notice will be published in the Federal Register.

ADDRESSES: Comments should be mailed to Mr. Thomas Diggs, Chief, Air Planning Section (6PD-L), EPA Region 6, 1445 Ross Avenue, Suite 700, Dallas, Texas 75202-2733. Copies of the State's submittal and other information relevant to this action are available for inspection during normal business hours at the following locations:

Environmental Protection Agency,
Region 6, Air Planning Section (6PD-L), 1445 Ross Avenue, Suite 700,
Dallas, Texas 75202-2733.

Air and Radiation Docket and
Information Center, Environmental
Protection Agency, 401 M Street, SW.,
Washington, DC 20460.

Oklahoma Department of Environmental
Quality, Air Quality Division, 4545 N.
Lincoln, Suite 250, Oklahoma City,
Oklahoma 73105-5220.

Anyone wishing to review these documents at the EPA office is asked to

contact the person below to schedule an appointment 24 hours in advance.

FOR FURTHER INFORMATION CONTACT: Ms. Petra Sanchez, Air Planning Section (6PD-L), Environmental Protection Agency, Region 6, 1445 Ross Avenue, Suite 700, Dallas, Texas 75202-2733, telephone (214) 665-6686.

SUPPLEMENTARY INFORMATION:

I. Background

The revisions to this SIP action respond to the requirements of Section 110 of the Federal Clean Air Act (the Act), as amended in 1990. Section 110 requires States to adopt and submit to the Administrator a plan which provides for implementation, maintenance, and enforcement of the primary and secondary standards for the State. Code of Federal Regulations (CFR), 40 Part 50.6 defines the level of the National primary and secondary 24-hour ambient air quality standards (NAAQS) for particulate matter as 150 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$), 24-hour average concentration and 50 $\mu\text{g}/\text{m}^3$, annual arithmetic mean. Although Oklahoma is in attainment of the standards for particulate matter, submission and approval of this revision serves to strengthen the SIP in Oklahoma by making it federally enforceable.

This SIP action approves the new cotton gin requirements and opacity rules developed by the State of Oklahoma in consultation with EPA and the affected industry. The new rules require cotton gins to install specific control equipment and to meet a 20 percent visible emissions limit. The affected sources from this action are located throughout the State, but predominately in rural areas. Previously, Oklahoma did not have specific rules for cotton gin operations. Instead, this category of source was regulated under existing general particulate matter rules. These rules serve to strengthen the existing SIP by superseding the general requirements and by making them federally enforceable. In addition, they are applicable to new, existing, and modified gins.

During the development of the State rules, Oklahoma referenced various other State requirements and the EPA Visible Emissions (VE) performance testing methods in 40 CFR Part 60, Appendix A. The approved method for determining VE is Reference Method 9 (Method 9 or RM 9). Method 9 discusses how to make visual determinations of opacity for emissions from stationary sources. The mechanism for determining VE by States has often

included the use of an opacity regulation to assist in meeting or maintaining the particulate matter air quality standard.

II. Analysis of State Submittal

Emission Limit

Fugitive emissions from the cotton gin burr hopper dumping area have been a major source of complaints from inhabited areas. Amendments to the State rules update the control requirements for cotton gins throughout Oklahoma by specifying the emissions limitations and specific control measures to be utilized by new, modified, or existing cotton gins. To control fugitive emissions from burr hoppers during dumping, the use of total enclosure at existing gin sites located within the corporate city limits of any city or within 300 feet of two or more occupied establishments is required. All new gin sites are required to install and use a total enclosure on the burr hopper. Action must also be taken to minimize fugitive dust emissions during transportation and other operations. An opacity limit of 20 percent is set for discharges. This opacity limit, however, may be increased for particulates but only after the owner/operator can demonstrate to the satisfaction of the Oklahoma Air Quality Council at a public hearing that their controls meet State requirements and do not violate the National Ambient Air Quality Standards (NAAQS).

Emission Control Equipment

The Oklahoma cotton gin rule specifies the 1D/3D cyclone as the approved control equipment on high-pressure exhausts. This gives higher control efficiencies than the 2D/2D cyclone which is commonly used in cotton gin operations and has a comparable cost. Some facilities in Oklahoma have voluntarily installed 1D/3D cyclones prior to the adoption of this State regulation. However, to minimize the adverse economic impact, a phased-in approach is taken on existing facilities allowing continued use of 2D/2D cyclones until repair costs are no longer cost effective. Facilities will then be required to replace the older equipment with 1D/3D equipment.

For low-pressure exhausts, the use of 70 mesh or finer screens (or approved equivalent) is required. This is the most effective of the sizes considered (70, 80, and 100 mesh). The new rules provide equal or superior control of emissions compared with that provided for the cotton gin industry by the existing

general particulate matter control rules and guidelines.

Recordkeeping

All new, modified, or existing cotton gins are required to comply with the State rules and are required to maintain a log documenting the daily process weight, hours of operation, and air emission control equipment replacement schedule or repair costs.

III. Final Action

These rules have been developed with the cooperation of the affected industry, and use a control technology basis for determination of compliance. The rules are needed because the industry represents a significant source of particulate matter emissions and fugitive dust previously controlled by general particulate matter control rules and guidelines.

The EPA is approving the State's SIP revision and the adopted new rules pertaining to opacity requirements for cotton gin operations in Oklahoma. The EPA has reviewed the submittal for consistency with the Act, EPA regulations, and EPA policy. The EPA has determined that the rules meet the Act's requirements for revision to the SIP and today is approving under section 110 the above mentioned cotton gin rules.

The EPA is publishing this action without prior proposal because the Agency views this as a noncontroversial amendment and anticipates no adverse comments. However, in a separate document in this FR publication, the EPA is proposing to approve these SIP revisions should adverse or critical comments be received. This action will be effective July 14, 1997, unless adverse or critical comments are received by June 13, 1997.

If the EPA receives such comments, this action will be withdrawn before the effective date by publishing a subsequent action that will withdraw the final action. All public comments received will be addressed in a subsequent final rule based on this action serving as a proposed rule. The EPA will not institute a second comment period on this action. Any parties interested in commenting on this action should do so at this time. If no such adverse comments are received, the public is advised that this action will be effective on July 14, 1997.

Nothing in this action should be construed as permitting or allowing or establishing a precedent for any future request for revision to any SIP. Each request for revision to the SIP shall be considered separately in light of specific technical, economical, and

environmental factors and in relation to relevant statutory and regulatory requirements.

IV. Administrative Requirements

A. Executive Order (E.O.) 12866

This action has been classified as a Table 3 action for signature by the Regional Administrator under the procedures published in the Federal Register on January 19, 1989 (54 FR 2214-2225), as revised by a July 10, 1995, memorandum from Mary Nichols, Assistant Administrator for Air and Radiation. The Office of Management and Budget has exempted this regulatory action from Executive Order 12866 review.

B. Regulatory Flexibility Act

Under the Regulatory Flexibility Act, 5 U.S.C. 600 *et seq.*, EPA must prepare a regulatory flexibility analysis assessing the impact of any proposed or final rule on small entities. See 5 U.S.C. 603 and 604. Alternatively, the EPA may certify that the rule will not have a significant impact on a substantial number of small entities. Small entities include small businesses, small not-for-profit enterprises, and government entities with jurisdiction over population of less than 50,000.

The SIP approvals under section 110 and subchapter I, part D of the Act do not create any new requirements but simply approve requirements that the State is already imposing. Therefore, because the Federal SIP approval does not impose any new requirements, I certify that it does not have a significant impact on any small entities affected. Moreover, due to the nature of the Federal-State relationship under the Act, preparation of a regulatory flexibility analysis would constitute Federal inquiry into the economic reasonableness of State action. The Act forbids EPA to base its actions concerning SIPs on such grounds. See *Union Electric Co. v. U.S. EPA*, 427 U.S. 246, 256-66 (1976); 42 U.S.C. 7410(a)(2)).

C. Unfunded Mandates

Under section 202 of the Unfunded Mandates Reform Act of 1995, signed into law on March 22, 1995, EPA must prepare a budgetary impact statement to accompany any proposed or final rule that includes a Federal mandate that may result in estimated costs to State, local, or tribal governments in the aggregate; or to private sector, of \$100 million or more. Under section 205, the EPA must select the most cost-effective and least burdensome alternative that achieves the objectives of the rule and

is consistent with statutory requirements. Section 203 requires the EPA to establish a plan for informing and advising any small governments that may be significantly or uniquely impacted by the rule.

The EPA has determined that the approval action promulgated does not include a Federal mandate that may result in estimated costs of \$100 million or more to either State, local, or tribal governments in the aggregate, or to the private sector. The Federal action approves preexisting requirements under State or local law, and imposes no new Federal requirements. Accordingly, no additional costs to the State, local, or tribal governments, or to the private sector, result from this action.

D. Submission to Congress and the General Accounting Office

Under 5 U.S.C. 801(a)(1)(A) as added by the Small Business Regulatory Enforcement Fairness Act of 1996, the EPA submitted a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives and the Comptroller General of the General Accounting Office prior to publication of this rule in today's Federal Register. This rule is not a "major rule" as defined by 5 U.S.C. 804(2).

E. Petitions for Judicial Review

Under section 307(b)(1) of the Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by July 14, 1997. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this rule for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action.

This action may not be challenged later in proceedings to enforce its requirements. See section 307(b)(2).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Particulate matter, Reporting and recordkeeping requirements.

Dated: April 24, 1997.

Jerry Clifford,

Acting Regional Administrator.

Part 52, Chapter I, title 40 of the Code of Federal Regulations is amended as follows:

PART 52—[AMENDED]

1. The authority citation for Part 52 continues to read as follows:

Authority: 42 U.S.C. 7401-7671q.

Subpart LL—Oklahoma

2. Section 52.1920 is amended by adding paragraph (c)(44) to read as follows:

§ 52.1920 Identification of plan.

* * * * *

(c) * * *
(44) A revision to the Oklahoma SIP to include Oklahoma Administrative Code, Chapter 310:200, Subchapter 23, entitled, "Control of Emissions From Cotton Gins," submitted by the Governor on May 16, 1994.

(i) Incorporation by reference.
(A) Addition of Oklahoma Administrative Code, Chapter 310:200, Subchapter 23, entitled, "Control of Emissions From Cotton Gins," as adopted by the Oklahoma Air Quality Council on April 30, 1992, and effective June 1, 1993.

(ii) Additional material—None.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[MO 023-1023(a); FRL-5922-9]

Approval and Promulgation of Implementation Plans; State of Missouri

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rule.

SUMMARY: By this action the EPA grants final approval to the State Implementation Plan (SIP) submitted by the state of Missouri for the purpose of meeting the requirements of the EPA's general conformity rule. This fulfills the conditions of the approval granted on March 11, 1996, which became effective May 10, 1996.

DATES: This action is effective July 14, 1997 unless by June 13, 1997 adverse or critical comments are received.

ADDRESSES: Copies of the documents relevant to this action are available for public inspection during normal business hours at the: Environmental Protection Agency, Air Planning and Development Branch, 726 Minnesota Avenue, Kansas City, Kansas 66101; and the EPA Air & Radiation Docket and Information Center, 401 M Street, SW., Washington, DC 20460.

FOR FURTHER INFORMATION CONTACT: Christopher D. Hess at (913) 551-7213.

SUPPLEMENTARY INFORMATION:

I. Background

The EPA granted conditional approval to Missouri's SIP revision (containing rule 10 CSR 10-6.300), regarding Conformity of General Federal Actions to State Implementation Plans, in a rulemaking dated March 11, 1996 (61 FR 9642-9644). This conditional approval was necessary because the state used a model rule developed by the State and Territorial Air Pollution Program Administrators/Association of Local Air Pollution Control Officials (STAPPA/ALAPCO) that made two provisions of the Missouri rule more stringent than the Federal general conformity rule. The rationale for the conditional approval and for the EPA's determination regarding these provisions is explained in detail in the Technical Support Document which accompanied the March 11, 1996, conditional approval.

Under section 110(k)(4) of the Act, the EPA granted a conditional approval based on Missouri's commitment to correct the noted deficiencies not later than one year after the date of approval of the plan revision. Missouri committed to correct these deficiencies within one year from December 7, 1995. On November 20, 1996, Missouri submitted a revision to the SIP that corrects the deficiencies and meets the requirements of the conditional approval.

As requested by the EPA, this revised SIP specifically amends sections (3)(C)4 and (9)(B) of 10 CSR 10-6.300 regarding conformity analyses timeframes. Prior to the amendment, these cited sections contained sentences regarded as clarifying language in the STAPPA/ALAPCO model rule.

II. Final Action

The EPA is taking final action to approve revisions submitted on November 20, 1996, which fulfills the conditional approval effective May 10, 1996. This meets the Federal requirements set forth in 40 CFR 51.851 and 93.151.

The EPA is publishing this action without prior proposal because the Agency views this as a noncontroversial amendment and anticipates no adverse comments. However, in a separate document in this Federal Register publication, the EPA is proposing to approve the SIP revision should adverse or critical comments be filed. This action is effective July 14, 1997 unless, by June 13, 1997, adverse or critical comments are received.

If the EPA receives such comments, this action will be withdrawn before the effective date by publishing a subsequent document that will withdraw the final action. All public comments received will then be addressed in a subsequent final rule based on this action serving as a proposed rule. The EPA will not institute a second comment period on this action. Any parties interested in commenting on this action should do so at this time. If no such comments are received, the public is advised that this action is effective July 14, 1997.

Nothing in this action should be construed as permitting or allowing or establishing a precedent for any future request for revision to any SIP. Each request for revision to the SIP shall be considered separately in light of specific technical, economic, and environmental factors, and in relation to relevant statutory and regulatory requirements.

Under the Regulatory Flexibility Act, 5 U.S.C. 600 et seq., the EPA must prepare a regulatory flexibility analysis assessing the impact of any proposed or final rule on small entities (5 U.S.C. 603 and 604). Alternatively, the EPA may certify that the rule will not have a significant impact on a substantial number of small entities. Small entities include small businesses, small not-for-profit enterprises, and government entities with jurisdiction over populations of less than 50,000.

SIP approvals under section 110 and subchapter I, Part D of the Clean Air Act (CAA) do not create any new requirements but simply approve requirements that the state is already imposing. Therefore, because the Federal SIP approval does not impose any new requirements, the Administrator certifies that it does not have a significant impact on any small entities affected. Moreover, due to the nature of the Federal-state relationship under the CAA, preparation of a regulatory flexibility analysis would constitute Federal inquiry into the economic reasonableness of state action. The CAA forbids the EPA to base its actions concerning SIPs on such grounds (*Union Electric Co. v. U.S. E.P.A.*, 427 U.S. 246, 256-66 (S.Ct. 1976); 42 U.S.C. 7410(a)(2)).

III. Administrative Requirements

A. Executive Order 12866

This action has been classified as a Table 3 action for signature by the Regional Administrator under the procedures published in the Federal Register on January 19, 1989 (54 FR 2214-2225), as revised by a July 10, 1995, memorandum from Mary Nichols,

1 PROCEEDINGS

2 MR. DYKE: The next item on the
3 Hearing Agenda today is Item Number 10.
4 This hearing is convened by the Air Quality
5 Council in compliance with the Oklahoma
6 Administrative Procedures Act, Title 40 of
7 the Code of Federal Regulations, as well as
8 the Authority of Title 27A of the Oklahoma
9 Statutes.

10 The hearing was advertised in the
11 Oklahoma Register for the purpose of
12 receiving comments pertaining to the
13 proposed new rule, OAC 252:100-23, Control
14 of Emissions from Cotton Gins. If you wish
15 to make a statement, please complete the
16 form at the registration table.

17 At this time, I will call upon Ms.
18 Becky Mainord to give staff position on the
19 proposed rule.

20 MS. MAINORD: Members of the
21 Council, ladies and gentlemen, I am Becky
22 Mainord of the Air Quality Rules and
23 Planning Unit.

24 The proposed revisions to Subchapter
25 23, Control of Emissions from Cotton Gins,
26 includes simplification of the language
27 according to the agency-wide rewrite
28 devroeg initiative and the addition of a
29 Permit By Rule section.

30 On the second page of the rule,
31 under Section 23-2, the definition "cotton
32 gin site" was deleted because it is the

1 same language used to define "gin site."
2 Also, the phrase "cotton gin site" is not
3 used in this rule.

4 Under Section 23-3, also on the
5 second page, the effective date of this
6 rule has been added to the applicability
7 requirements of Subsection (a). Subsection
8 (c) has been deleted.

9 On the third page of the rule in
10 Section 23-4(a), Opacity Limit, the
11 language changes for emissions limits to
12 reflect the proposed changes in 252:100-25-
13 3, Opacity Limits for Short-term
14 Occurrences, previously discussed by
15 Jeanette Buttram.

16 On the fourth page of the rule a new
17 Section 23-7 is proposed to provide a
18 Permit By Rule. This section includes
19 applicability and substantive requirements
20 for cotton gins. Last Friday, staff
21 received comments from EPA, which I would
22 like to enter into the record at this time.
23 This afternoon, staff will recommend
24 the Council continue the hearing until the
25 October 20, 1990, Air Quality Council
26 Meeting.

27 MR. DYKE: Any questions from the
28 Council of Ms. Mainord, or comments?

29 MR. BRANECKY: We're on 217
30 MR. DYKE: 23.

31 MR. BRANECKY: Yes, two. 23-
32 4(b), PM-10 emission limit says no cotton

1 gins shall be operated so as to cause or
 2 contribute to a violation of a primary PM-
 3 10 standard. It makes no mention of
 4 secondary standard, of secondary PM-10
 5 standards. So I would suggest it would
 6 probably be best just to have it read no
 7 cotton gin shall be operated so as to cause
 8 or contribute to the violation of the PM-10
 9 ambient standards established in 252.100-3.
 10 That would cover both the primary and the
 11 secondary PM-10 standards.
 12 MR. MALMROD: Staff agrees with
 13 that change.
 14 MR. BRANECKY: And then the other
 15 comment is on the paragraph above
 16 alternative emissions limit. There is a
 17 similar paragraph in Subchapter 24 which we
 18 haven't addressed yet. The title and
 19 wording is almost exactly the same. The
 20 title in that one is alternate opacity
 21 limit. I would suggest that those two
 22 paragraphs be consistent in the titles.
 23 MR. MALMROD: Yes, that change
 24 has been made, also.
 25 MR. BRANECKY: Okay.
 26 MR. DYKE: Any additional
 27 comments or questions from the Council?
 28 Any questions from the audience or the
 29 public? Anyone else wishing to make
 30 comments on this item? Anything else from
 31 the Council? Hearing none.
 32 MR. CHAIRMAN: I'll entertain a

1 motion to continue this hearing until the
 2 October 20th, next regular meeting.
 3 DR. GROSS: So moved.
 4 MR. WILSON: Second.
 5 MR. CHAIRMAN: We've got a motion
 6 and a second. Any more comments or
 7 questions? Myrna, call the roll.
 8 MS. BRUCE: Ms. Myers?
 9 MS. MYERS: Aye.
 10 MS. BRUCE: Dr. Gross?
 11 DR. GROSS: Aye.
 12 MS. BRUCE: Mr. Kilpatrick?
 13 MR. KILPATRICK: Aye.
 14 MS. BRUCE: Mr. Wilson?
 15 MR. WILSON: Aye.
 16 MS. BRUCE: Mr. Branecky?
 17 MR. BRANECKY: Aye.
 18 MS. BRUCE: Ms. Staggell?
 19 MS. STAGGELL: Aye.
 20 MS. BRUCE: Mr. Braisch?
 21 MR. BRAISCH: Aye.

(HEARING CONCLUDED.)

10. MS. BRUCE - SECRETARY

PROCEEDINGS

MR. DYKE: The next item on the hearing agenda is Item Number 8. I will act as the Protocol Officer for this hearing.

This hearing is convened by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act, applicable to State Statutes and Title 40 of the Code of Federal Regulations.

The hearing was advertised in the Oklahoma Register for the purpose of receiving comments pertaining to the proposed new Rule, OAC 252:100-23, Control of Emissions from Cotton Gins.

If you wish to make a statement, please complete the form at the registration table. At this time, I will call upon Ms. Michelle Martinez, to give the staff position on the proposed rule.

MS. MARTINEZ: Members of the Council, ladies and gentlemen, the proposed revisions to Subchapter 23, Control of Emissions from Cotton Gins, which were presented at the August 18th, 1998, Council meeting include simplification of the language, the addition of a Permit by Rule Section, the deletion of the definition "cotton gin site", which is not used in the rule, the addition of the effective date of this rule to the applicability requirements in Section 23-3(a), the deletion of Section 23-1(f).

As a result of comments made previous to or during

Christy A. Myers
Certified Notarized Reporter

the August 18th, 1998, Council meeting, the following changes have been made. On page 3, under Section 23-4(a), Opacity Limit, the language change reflects the proposed changes in the opacity limit recommended by Jeanette Buttram in Subchapter 25-3(a)(1). On page 5, under Section 23-7(b)(2), a reference to the AP-42 Section 9.7, Cotton Gin, was added in response to comments from the EPA.

In addition, after receiving a comment from the Council regarding 23-4(b), page 3, PM-10 emission limits, the wording in the subsection was changed to read, "No cotton gin shall be operated so as to cause or contribute to a violation of the PM-10 ambient air quality standards or any other ambient air quality standard established in 252:100-3."

Also, on page 3, following a comment from the Council regarding the title of 23-4(a), the title was changed from emissions limit to opacity limit, to be consistent with the same section in Subchapter 24, Grain Elevators.

Finally, on page 4, the SIP code under the PBR section was changed from 072, Crop Services, to 0724, Cotton Ginning, to make it more specific.

Staff also recommends one additional change not shown in the rule. On page 2, under "existing gin", change Air Quality Division to Division.

A comment was -- actually, two comments were received from EPA yesterday afternoon, which I would like to enter into

Christy A. Myers
Certified Notarized Reporter

the record. The first comment states, under a Permit By Rule section, 252-100-23-7(b)(2), must specify a practically enforceable method or procedure to verify compliance with the 36,000 bales per year limitation. This may be accomplished by using the recordkeeping requirements in 252:100-23-3(b)(3), which requires the owner or operator of a cotton gin to maintain a log documenting the daily process weight and hours of operation, along with the replacement/repair costs of air emission control equipment, for a period of two years.

As a response to that, under Section 23-7(b)(1), that does already comply with all of the requirements of this subchapter. The cotton gin will be required to keep records in accordance with 23-3(b)(3). The second comment received from EPA was in support of the proposed changes.

At this time, staff suggests the proposed rule be recommended to the Board for permanent adoption.

MR. DYKE: Questions and discussion by the Council?

MR. WILSON: Question. In Section 23-7, Permit by Rule, (b)(2), what is the purpose of the last sentence that states, this production rate, using 1996 revised emission factors in AP-42, Section 9.7, Cotton Gins, should result in less than 40 tons per year of PM-10 emissions?

MS. MARTINEZ: In Subchapters 23 and 24, we put the same type of statement in the Permit by Rule section, for

Christy A. Sporn
Certified Marshall Inspector

the industry to be able to look at the figures that we have come up with, to know where we got those, and to be able to tell if they fit in the Permit by Rule section.

MR. WILSON: Would it be cleaner to remove the word should result and replace it with results?

MS. MARTINEZ: Barbara, are you okay with that, to take the "should" out?

MS. HOFFMAN: Well, I guess we could. It seems to me that it's -- that we're -- this is not a given, but we're hoping that it does -- we're assuming that it will be. But I don't know that we can state that -- I suppose we could say, "will result".

MS. MYERS: Perhaps -- perhaps you need to phrase it, production rate using 1996 revised emission factors in AP-42 indicate less than 40 tons per year PM-10 emissions. Maybe that would be a little bit cleaner.

MR. WILSON: Isn't AP-42 an equation where you multiply the number of bales you have times an emission factor, and you come up with something less than 40 tons per year. And the only -- the only way it wouldn't is if you miscalculated. I think, "will result" is appropriate.

MS. BRADLEY: Well, I could make a statement that --

MR. DYKE: Excuse me, Cheryl, would you identify yourself?

Christy A. Sporn
Certified Marshall Inspector

MS. BRADLEY: Cheryl Bradley. The production rate is based upon AP-42, Section 9.7, for Cotton Gins, and results in -- I think we need to somehow state that it is (inaudible) which I think is what Barbara was getting at.

DR. SHEEDY: Yeah, this is Joyce Sheedy. I -- we don't really need to have that sentence in there at all. I mean the rule is that the maximum production rate of a facility shall be 36,000 bales per year. It is necessary.

MS. MARTINEZ: Joyce, we did that so --

DR. SHEEDY: Yeah, I know. I know --

MS. MARTINEZ: So, industry will have the numbers that we came up with so they'll know where we got those. That's the reason we put those in there.

DR. SHEEDY: Yeah, I see the reason, but is it really needed as part of the rule?

MS. MYERS: Maybe it needs to be a footnote not put directly in the rule, itself. Is that possible?

MS. HOFFMAN: No.

MR. DYKE: It was my understanding it was put in to provide clarification. So, everyone knew how to apply this section to their -- to their industry. Would it be, since it has been discussed and discussed, would it be more clear to leave that last statement out. Does Council believe that that would help clarify things?

MR. WILSON: Either that, or replace the word

Christy A. Sporn
Certified Marshall Inspector

"should" with "will". I want to be definite on that. I don't mind the clarity and I understand what you're trying to do. But "should" means may or may not.

MS. MYERS: I kind of like the idea of striking it.

MR. DYKE: Could we go on with additional comments and questions, and then we'll take care of this in some motion?

MR. WILSON: I have another question. What is the purpose for requiring -- I'm sorry. In 23-3(b)(3), what is the purpose of requiring the documentation of the hours of operation? I understand the daily process weight for keeping records to demonstrate compliance with the 36,000 bales. But the hours of operation, what -- what is the purpose of the requirement?

MS. MARTINEZ: Barbara, under Subchapter 24 we struck that. Is there a reason we kept it in 23 under the recordkeeping on page 3.

You are specifically asking about the hours of operation?

MR. WILSON: Yes.

MS. HOFFMAN: I think the reason -- I don't know for sure why it was in there to begin with. However, this rule was written in conjunction with owners and operators of cotton gins at the time. And none of them have asked for any language

Christy A. Sporn
Certified Marshall Inspector

to be struck, so we just left it in. . . wasn't around at the time that this rule was promulgated, so I can't tell you exactly why they came up with that. Like I said, I think this is language that was arrived at through negotiations at the time.

MR. WILSON: It appears to me like it's a requirement that no longer is useful in demonstrating the compliance with -- with the rule.

MR. DYKE: Bill Fishback.

MR. FISHBACK: Bill Fishback. Mr. Wilson is exactly right. That's a superfluous requirement. I've worked quite a bit, not on the Cotton Gin rule, but on the Grain Elevator rule about 3 or 4 years ago. And I think Debbie Farry did, too. And the reason those hours of operation are in there is because the intent was to try to say which hourly (inaudible) it was multiplied by \$760, and come up with some ridiculous number of annual (inaudible) tons and therefore, ridiculously high emissions. And whether that was negotiated at the time with the industry involved or not, I agree with Mr. Wilson completely that it should be removed. It's absolutely superfluous. Because you have -- you have an annual limit on number of bales, so the hours of operation is useless. If you process 36,000 bales in one hour, or if it takes you all year, it's irrelevant for the purpose of this rule. So, I agree with him completely.

Charley A. Spore
Certified shorthand Reporter

MS. HOFFMAN: Could I just make one quick comment? The 36,000 bales is only for the Permit by Rule facilities. This particular requirement applies to all cotton gins. And it might be useful for determining that. So, I don't -- I really would hesitate at this point to delete this language without us doing some background checking on the origin of this language and that type of thing. Because I think -- I think that there was a reason for it at the time but I don't know off the top of my head what it was.

MR. BREISCH: I would suggest, maybe, that some reasoning was they wanted a record when it was operating in case of complaints.

MR. FISHBACK: That's possible, Mr. Breisch, but that's very often -- it's very seldom done to my knowledge. Because you don't report that you operated from midnight to 3 a.m. You report hours -- that you operated a certain number of hours per week or hours per day. I understand the purpose for which you might use that, but that's usually not the way those records are kept.

MR. WILSON: I'm okay with the requirement, as long as it -- it is serving a useful purpose. Otherwise, it requires an operator to record something that has no purpose.

MS. MYERS: It was based on cotton gins that are larger than Permit by Rule facilities. We may need that information too as a source for emitting.

Charley A. Spore
Certified shorthand Reporter

MR. DYKE: Rick Treeman.

MR. TREEMAN: I'm Rick Treeman. I was involved in the tests on the grain elevator rule. If I'm not mistaken, the hours are put in there for (inaudible) you can take that times your (inaudible) rate and come up with a number (inaudible).

MR. DYKE: Okay. Yes, ma'am?

MS. PARRY: Debra Parry. I do believe that there was a purpose of putting it in there for calculating emissions, but I'm not sure that it is still applicable. But it may be helpful, too, on a individual permit basis where it's needed. It's definitely -- (inaudible) looked into if it's needed or not.

MR. DYKE: Additional questions and comments from the Council at this time? Additional comments or discussion from the public?

MS. RENNIE: I'm Sandra Rennie, EPA. EPA would prefer that you leave this in until you can do further research, for the reason for it being in there. One reason I can see is that the numbers of calculated (inaudible) number of hours that you operated, you need to have a record of when you operated. So, whether it's used for other calculations later, that remains to be seen.

MR. DYKE: Ms. Rennie, do you have an opinion, or does EPA have anything to say about the other issue that we

Charley A. Spore
Certified shorthand Reporter

addressed, regarding the "should" and "will result" language on 100-23-7(2)?

MS. RENNIE: I would suggest another way to do it, as to the first sentence -- this is just a suggestion. 36,000 bales per year based on 1996 revised emission factors from AP-42, Section 9.7. That is a suggestion how you could put it in and you might want to consider that.

MR. DYKE: Thank you.

THE REPORTER: I'm sorry, what was your last name?

MS. RENNIE: Rennie, R-e-n-n-i-e.

THE REPORTER: Thank you.

MR. DYKE: Any additional comments from the public, or anyone wishing to speak on this particular rule?

MS. MEDLEY: I just want to state --

MR. DYKE: Go ahead.

MS. MEDLEY: -- let's continue with the 24 hours -- I mean, the hours of operation. At times, it varies, you know, the facilities that I've had to deal with there is, whatever it is, sometimes the hours of operation per day can make a difference on what you're trying to find out when you have a problem.

MR. DYKE: Thank you. Stanley?

MR. SPRUILL: Stanley Spruill, Environmental Protection Agency, Region Six. I just want to -- to kind of

Charley A. Spore
Certified shorthand Reporter

clarify our comment that we made. We suggest recordkeeping of 36,000 bales per year would qualify for a Permit by Rule. Our comment was based upon -- we're not sure a mechanism, whereby, you know, you can verify that a source is actually meeting that limitation. We suggested the existing recordkeeping requirements. I guess one thing I'm still not clear on, is there nothing in the Permit by Rule that said these records are being used to help us with compliance? Can you respond to that?

MS. MARTINEZ: Barbara, would you like to respond?

MS. HOFFMAN: If the records are available, then that's what our enforcement people will look at to determine compliance. I don't understand what the problem is.

MR. TREEMAN: We don't feel there is any need for more explicit records -- Permit by Rule records being used to show compliance.

MS. HOFFMAN: I don't think that's necessary.

MR. TREEMAN: I wanted to get that in the record.

MR. DYKE: Thank you. Would you repeat our recommendation, please?

MS. MARTINEZ: EPA's or ours?

MR. DYKE: Ours.

MS. MARTINEZ: The maximum production rate of a

Christy A. Spivey
Certified shorthand reporter

facility subject. This section shall be 36,000 bales per year. This production rate, using 1996 revised emission factors in AP-42, Section 9.7, Cotton Gins, should result in less than 40 tons per year of PM-10 emissions.

MR. DYKE: It's my understanding that we'll -- we recommend it as it stands, subject to any changes that the Council might wish to, in any fashion, amend it. So, with that --

MS. MYERS: When do you want it amended, right now?

MR. WILSON: I would -- I would make a motion that we approve it as it stands, with the amendment as follows, remove the last sentence of 252-100-23-7(b)(2).

MR. BRANECKY: And you're recommending number 3, is that right?

MR. BREISCH: Leaving that in.

MR. BRANECKY: Leaving that in.

MR. DYKE: As it reads.

MS. MARTINEZ: I believe that there was a comment from EPA the last time, wanting us to put in a reference to the AP-42, so I feel like we do need to put that in there somewhere.

MS. MYERS: Well, if we're going to put that in there, I'll still go with the statement earlier that calculations based on AP-42 indicate this production rate will

Christy A. Spivey
Certified shorthand reporter

result in less than 40 tons per year PM-10 emissions. That makes it more clear to me, anyway. That would give you your reference, too.

MR. WILSON: I'll remove my motion.

MR. DYKE: That -- was that your motion?

MS. MYERS: That was -- yeah, I'll make that motion.

MS. MARTINEZ: So, can I read it, just to make sure I have this straight. This production rate, using 1996 revised emission factors in AP-42, Section 9.7, Cotton Gins, indicate less than 40 tons per year of PM-10 emissions.

MR. WILSON: I would make a motion to use Sharon's, and add the final words and will be used to determine compliance with this standard.

MS. MARTINEZ: Will you read the whole thing for me, Sharon?

MS. MYERS: Christy, can you read that back to us on what I said or not?

THE REPORTER: On what part?

MS. MYERS: Calculations based on AP-42, where -- however I said it a while ago. I thought I said it right the first time.

THE REPORTER: I'm not sure where you're talking about.

MS. MYERS: Never mind.

Christy A. Spivey
Certified shorthand reporter

THE REPORTER: I'm sorry. Let me look.

(Whereupon, a short break was taken where Ms. Myers' request was read back, after which the following took place).

MR. DYKE: Staff has a recommendation.

MS. MARTINEZ: Staff would like to recommend a change to 252:100-23-7(b)(2), to read as follows: Maximum production rate of a facility subject to this section shall be 36,000 bales per year. Calculations based on AP-42, Section 9.7, Cotton Gins -- let me start that sentence over. Calculations based on AP-42 emission factors, Section 9.7, Cotton Gins, indicate less than 40 tons per year of PM-10 emissions.

MR. WILSON: I make a motion to accept the change as read.

MR. BREISCH: We could accept or make a motion to adopt the rule as changed, without voting on this change, because there might be another change before we're through, or somebody else might want to comment.

MR. DYKE: Okay. Ray, identify yourself, please.

MR. BISHOP: My name is Ray Bishop with the DRQ. Leaving out the first part of the sentence, this production rate, we do not have that in there, we do not have the 36,000 bales to calculate the production rate on by using AP-42 factors. If you just say calculations, you're leaving out one

Christy A. Spivey
Certified shorthand reporter

part of that calculation that is the 16,000 bales. Without that, you can't do the calculations to show you're less than 40 tons. You just said calculations --

MS. MYERS: Right, right, I understand. Okay, we can include that on the tonnage -- I mean the bales. How would you like to see that worded, Ray? Calculations for 16,000 bales?

MR. BISHOP: That would work, yes.

MS. MARTINEZ: Say that again.

MS. MYERS: Calculations for 16,000 bales, based on AP-42, Section 9.7, Cotton Gins. AP-42 emission factors, Section 9.7, Cotton Gins, indicate less than 40 tons per year PM-10.

MS. MARTINEZ: Okay, I'm going to read this one more time. Section 252:100-23-7(b)(2) will read, maximum production rate of a facility subject to this section shall be 16,000 bales per year. Calculations for 16,000 bales, based on AP-42 emission factors, Section 9.7, Cotton Gins, indicate less than 40 tons per year of PM-10 emissions.

MR. DYKE: Barbara Hoffman?

MS. HOFFMAN: I think the sentence basically says the same thing but it's a little more confusing. I would suggest just deleting it, if you really don't like it. Let's just delete it. The main thing is -- have to -- there is a maximum production rate be no more than 16,000 bales. We know

Charley A. Spivey
Certified Shorthand Reporter

how we arrived at the 16,000 bales. They don't have to -- the cotton gin folks don't have to know how we arrived at it. But we know how we arrived at it. We've got it in the record in the meantime. So, let's just delete that sentence.

MS. MEDLEY: I think the cotton gin operators probably ought to know how this was reached. I think to say that some facility doesn't need to know how this is figured is wrong.

MS. HOFFMAN: It's in the hearing record.

MR. DYKE: Debbie, did you have a comment?

MS. PARRY: Well, the comment I was going to make is the same thing you said. What are we actually requiring cotton gins to do, other than (inaudible) calculations? Do they have to do any type of calculations, or do they just have to demonstrate their production rates. If all they have to do is demonstrate the production rate, then why do we need to amend AP-42? Can you get all the information from the agency or it's in the record. However, if they want to know how to calculate it, they really don't need to calculate, all they have to do is demonstrate production limits.

MS. MYERS: I'll withdraw my motion and move to strike it.

MS. MARTINEZ: Staff recommends, then, that 23-7(b)(2), just read maximum production rate of a facility subject

Charley A. Spivey
Certified Shorthand Reporter

to this section shall be 16,000 bales per year, and just strike the last sentence.

MR. DYKE: Motion or a second?

MR. BREISCH: Just a minute. I want to see if there is any other comments that are going to effect the wording of this rule.

MR. DYKE: Bill?

MR. FISBACK: Bill Fishback. The point Ms. Myers made this morning, I believe it was Sharon, I believe was written before the deletion that ties into this specific edition of AP-42 which has the factor change, the calculation with change. Contrary to what's been said, the real intent is to have this particular Permit by Rule be available to sources that emit less than 40 tons. We have had some significant experience with, not the Cotton Gins, but with the Feed and Grain industry several years ago, where the AP-42 factors published at that time were extremely high. When they were revised, they came way down. I would hate to see this tied to a brake line and sand at 16,000 bales. Which based on this factor, is equivalent to 40 tons. If in the future the emission factors come down, many more bales could be processed and still emit less than 40 tons. So, what I would propose you do is tie this to a 40 ton emission rate and not a 16,000 bale production rate. Because that's really the intent here. Then you disassociate it from any particular fact. As long as the

Charley A. Spivey
Certified Shorthand Reporter

applicant can demonstrate by whatever factor is in effect at that time, that they emit less than 40 tons, then the production rate is irrelevant.

MR. BREISCH: Bill, why couldn't you put 40,000 tons in parenthesis after the 16,000 bales? 40 tons, I'm sorry.

MR. FISBACK: Well, you could, but it doesn't account for future changes in the factor that resulted in those two now being equivalent. As the emission factor goes down, the tonnage can go up -- the amount of process can go up without the emissions going up. And that's my point. The real intent here is to keep the emissions under 40 tons under Permit by Rule. So, just say that. In the future, it could be 100,000 bales, if factors are bales that show those emissions are still under 40 tons. The only thing -- remember, we're here not to control production, we're here to regulate emissions. So the focus ought to be on emissions.

MR. DYKE: Barbara?

MS. HOFFMAN: I would strongly urge you to have a production limit in this rule. And the reason why is that the Permit by Rule is for small facilities as we said that emits less than 40 tons per year. And what we're trying to do is make a rule simple enough for small facilities to be able to read and immediately know what they need to do to comply with them, not looking to them for how to know AP-42 or work up

Charley A. Spivey
Certified Shorthand Reporter

1 emission factors and multiply this times . We want them to
2 pick up this rule, to look at it and say, that's me, I'm Permit
3 by Rule, all I have to do is go and get registered. That's the
4 whole point of out permit continuum, is to make it easier for
5 those who have less emissions and more stringent and harder for
6 those who emit more. And -- and I would strongly urge you to
7 keep this rule as it is, and the fact -- the emission factors
8 change and they could actually produce more cotton bales
9 (inaudible) 40 tons per year, then we'll come back and we will
10 ask to change it and to raise it each year.

MR. DYKE: Bill.

MR. FISHBACK: The only problem with that is
that once you put this in a rule, it can't be changed easily
and quickly, and you have a lot of time go by where people are
basically incorrectly covered or not covered by this rule. If
you -- and I disagree with Barbara that -- that the calculation
is difficult. The calculation is simple. It's A times B
equals C. And anybody can do that calculation. You don't have
to be sophisticated at all to be able to do it. And if you tie
it to 40 tons, then you have fixed this forever. You never
have to revisit it.

MR. BRANECKY: Was there any input from the
cotton gin industry on this?

MS. MARTINEZ: Barbara, do you know if there
were any comments? You didn't receive any comments, did you?

Christy A. Myers
Certified Shorthand Reporter

HOFFMAN: Not one.

MS. MYERS: How many cotton gins have we got in
Oklahoma?

MS. HOFFMAN: Less than 10, I think.

MR. BREISCH: I think we're back asking for a
motion. And if you don't think we are, we are. So, somebody
make a motion on this, and I believe it's striking that one
sentence at this point. Do I have that motion?

MS. MYERS: I made that motion a while ago,
Bill.

MR. DYKE: I believe you did.

MR. BREISCH: Do I have a second?

MR. BRANECKY: Second.

MR. BREISCH: Motion has been made and seconded.
Do we have any comments or questions? If not, Myrna, call the
roll.

Wait, I'm sorry, for my clarification, are we voting
on the rule as changed, to be recommended to the DEQ, is that
your motion?

MS. MYERS: Yes.

MR. BREISCH: With this one --

MS. MYERS: With this one sentence struck.

MR. BREISCH: So the motion actually is
recommending this for permanent adoption by the DEQ.

MS. MYERS: With the changes that have been

Christy A. Myers
Certified Shorthand Reporter

discussed, which include striking that last sentence.

MR. BREISCH: Everybody's clear. Myrna, call
the roll.

MS. BRUCE: Mr. Branecky.

MR. BRANECKY: Aye.

MS. BRUCE: Ms. Myers.

MS. MYERS: Aye.

MR. BRUCE: Mr. Wilson.

MR. WILSON: Aye.

MS. BRUCE: Dr. Gross.

DR. GROSS: Aye.

MS. BRUCE: Mr. Breisch.

MR. BREISCH: Aye.

(PROCEEDINGS CONCLUDED)

Page 4

1 252:100-23-3 actually exempts cotton gins
2 from the provisions of Subchapter 27. Thus
3 EPA's comments on the enforceability of
4 Subchapter 27 in context of Subchapter 23
5 is a null proposition. It makes no
6 difference.
7 We recommend that the Council vote
8 to submit these revisions to the
9 Environmental Quality Board for approval as
10 emergency rules, effective June 1, 2000.
11 MR. DYKE: Questions of Mr. Price
12 from the Council? Is there anyone wishing
13 to speak on this rule?
14 MR. BREISCH: I think we're ready
15 to make a motion. Do we take these
16 separately, 23 and 24?
17 MR. DYKE: Yes.
18 MR. BREISCH: I entertain a
19 motion on 23.
20 MR. WILSON: So moved.
21 MR. BRANECKY: Second.
22 MR. BREISCH: I've got a motion
23 and a second that we recommend this for the
24 permanent adoption.
25 MR. PRICE: For emergency.

Page 3

1 **PROCEEDINGS**
2 MR. DYKE: We would like to take
3 the next two items together. Items 6E and
4 6F, OAC 252:100-23, Control of Emissions
5 from Cotton Gins, and OAC 252:100-24,
6 Control of Emissions from Grain Elevators.
7 I'll call on Max Price.
8 MR. PRICE: Mr. Chairman, Members
9 of the Council, ladies and gentlemen, the
10 purpose of the proposed changes to Sections
11 252:100-23-3 and 252:100-24-3 is to
12 substitute references to Section 252:100-
13 19-12 for references to Subchapter 27,
14 because Subchapter 27 will be revoked and
15 its substantive requirements moved to
16 Section 252:100-19-12, in June of 2000.
17 We received one comment concerning
18 these revisions from EPA on December 10,
19 1999, quoting "Subchapter 23 is part of the
20 approved SIP. By removing references to
21 Subchapter 27, now, how will the provisions
22 to Subchapter 27 be covered in the interim
23 period?"
24 Our response is that the Section
25

CHAPTER 100: AIR POLLUTION CONTROL

SUBCHAPTER 24. CONTROL OF EMISSIONS FROM GRAIN ELEVATORS PARTICULATE MATTER EMISSIONS FROM GRAIN, FEED OR SEED OPERATIONS

Section:

- 252:100-24-1. Purpose [AMENDED]
- 252:100-24-2. Definitions [AMENDED]
- 252:100-24-3. ~~General provisions: applicability, determination of emissions~~ Applicability, general requirements [AMENDED]
- 252:100-24-4. ~~Visible emissions (opacity) limit~~ Visible emissions (opacity) limit [AMENDED]
- 252:100-24-5. ~~Emission control equipment and certification~~ Certification [AMENDED]
- 252:100-24-6. Fugitive dust controls [AMENDED]
- 252:100-24-7. Permit by rule [NEW]

252:100-24-1. Purpose

The purpose of this Subchapter is to control emissions from facilities that handle, store or process grains, feeds or seeds. ~~All facilities handling bulk agriculture commodities through grain handling equipment can apply this subchapter to emission sources at the facilities.~~

252:100-24-2. Definitions

The following words and terms when used in this subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Enclosed Grain Handling Equipment" means equipment that is totally self-contained or is enclosed within a structure at a grain, feed, or seed facility. Emissions from this equipment shall not be exhausted to the atmosphere except through non-pressurized vents/openings, and shall not be considered a source subject to emission calculations.

~~**"Fugitive Emission"** means those emissions that could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening.~~

"Grain, Feed, or Seed Facility" means the contiguous or adjacent area under common control upon which a grain elevator, feed mill, or grain and seed processing equipment or structures are located, and all contiguous sites having common control, ~~which have SIC codes with the first two digits that are identical to the first two digits of the SIC code for grain elevators, feed mills, or grain and seed processing equipment.~~

"Grain, Feed, or Seed Operation" means any facility or installation at which grain, feed, or seed is loaded, handled, cleaned, dried, stored, treated, or otherwise processed.

"Leg Capacity" means the maximum process rate for which the manufacturer designs the elevating portion of a grain, feed, or seed facility on a per leg basis.

"Loading-out hours of operation" means the hours calculated by dividing the cumulative total quantity loaded out for a given time period by 75% of the rated leg capacity. This quotient is equivalent hours (not actual hours) of operation required to process the material loaded out. Actual leg capacity may be adjusted to more or less than 75% by individual facilities if documentation supporting the proposed adjustment is submitted to and approved by the ~~Director of the Air Quality Division~~ Director.

"Non-pressurized Vent or Opening" means any vent or opening which allows the emissions of air and/or contaminants at pressures substantially equivalent to atmospheric pressure without the use of mechanically-induced air flow.

"Pressurized Vent or Opening" means any vent or opening which allows the emissions of air and/or contaminants at pressures greater than atmospheric pressure indicating the use of mechanically-induced air flow.

~~"Process Emission" means emissions from a process equipment point source.~~

"Receiving hours of operation" means hours calculated by dividing the cumulative total quantity received for a given time period by 75% of the rated leg capacity. This quotient is equivalent hours (not actual hours) of operation required to process the material received. Actual leg capacity may be adjusted to more or less than 75% by individual facilities if documentation supporting the proposed adjustment is submitted to and approved by the ~~Director of the Air Quality Division~~ Director.

"Total hours of operation" means the sum of the receiving hours of operation and the loading out hours of operation. Actual hours may be less since receiving and loading-out operations may occur simultaneously.

252:100-24-3. General provisions: applicability, determination of emissions
Applicability, general requirements

(a) **Applicability.** The provisions of this subchapter are applicable to all new, modified, and existing grain, feed, or seed facilities in the State of Oklahoma.

(1) Facilities in compliance with OAC 252:100-25, 252:100-27, and 252:100-29 are not required to comply with this subchapter.

(2) Facilities in compliance with this subchapter are exempt from the requirements of OAC 252:100-25 (visible emissions), 252:100-27 (process weight), and 252:100-29 (fugitive dust).

(b) General requirements.

~~(b)(1)~~ **Permits required.** In addition to the requirements of this subchapter, each new, modified or existing grain, feed, or seed facility shall comply with the permitting requirements of OAC 252:100-7 and/or 252:100-8.

~~(c)(2)~~ **Air toxics emissions:** ~~Grain, feed, or seed facilities which that emit toxic air pollutants above the de minimis levels specified in 252:100-41 are subject to all applicable requirements contained therein.~~

~~(d)(3)~~ **Record-keeping.** The owner or operator of a facility shall maintain a daily log documenting the commodity receipts and load-outs and hours of operation for each. These records shall be maintained for a period of two years and shall be made available for inspection by the ~~Air Quality Division personnel or its representative~~ DEQ during normal business hours.

~~(e)(4)~~ **Visible emissions test.** Visible emissions (opacity) testing shall be conducted using EPA reference method 9 contained in 40 CFR, Part 60, Appendix A and must be performed by individual(s) possessing current certification as a Certified Visible Emission Evaluator.

~~(f)(5)~~ **Determination of emissions.** Emissions from grain, feed, or seed facilities shall be determined by the best available data. This may include actual emissions as determined by stack testing, mass balance calculations, emission calculations using approved published emissions factors, or any other reasonably accurate method which can be shown to be

~~reasonably accurate when supported by engineering data and calculations, and approved in advance by the Air Quality Division DEQ.~~

252:100-24-4. ~~Smoke, Visible Emissions and Particulates~~ Visible emissions (opacity) limit

(a) ~~Visible emissions limits~~ **Opacity limit.** No person shall cause, suffer, allow or permit the discharge of any fumes, aerosol, mist, gas, smoke, vapor, particulate matter or any combination thereof ~~with a shade density exhibiting greater than twenty percent (20%) equivalent~~ 20% opacity. This requirement shall not apply to ~~smoke or visible emissions exhibiting greater than 20% opacity emitted during short-term occurrences, the shade or density of which is not greater than sixty percent (60%) opacity for a period aggregating no more than five minutes in any sixty consecutive minutes and/or no more than twenty minutes in any consecutive twenty-four hour period which consist of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours, during which the average of any six-minute period shall not exceed 60% opacity.~~

(b) **Alternate emissions opacity limit.** The 20% opacity ~~limits, as~~ limit required under 252:100-24-4 (a) may be increased for particulates only provided that the ~~owner/operator~~ owner or operator demonstrates to the satisfaction of the ~~Oklahoma~~ Air Quality Council at public hearing that those requirements listed in 252:100-25-4(a) through (c) have been met.

(c) **Exceptions.** Exceptions to the requirements described in 252:100-24-4(a)(1) are provided as follows:

- (1) Visible emissions from loading-out (shipping) shall be no more than 65% ~~equivalent~~ opacity, and visible emissions from unloading (receiving) shall be no more than 55% ~~equivalent~~ opacity.
- (2) ~~Emissions from pressurized or non-pressurized vents or openings with control devices shall be limited to no greater than twenty percent (20%) opacity at any time.~~
- (3)(2) Emissions from pressurized vents or openings without control devices shall either be enclosed, exhausted through a control device, or shall be limited to no greater than 10% opacity at any time.
- (4)(3) Emissions from non-pressurized vents or openings without control devices shall be limited to no greater than 10% opacity at any time.

252:100-24-5. ~~Emission control equipment and certification~~ Certification

(a) ~~Standards.~~ Emission control equipment where required by (40 CFR 60.300) ~~must meet the standards set under the Federal New Source Performance Standards (NSPS Subpart DD), or as mandated by other Federal requirements for major sources. Additional controls may be required to reduce nuisance emissions.~~

(b) ~~Affected facilities.~~ Affected facilities shall make best efforts to reduce dust emissions during load out by minimizing the distance from the load out spout to the top of the receiving vessel.

(c) ~~Certification.~~ Each new, modified, or existing grain, feed or seed facility in the state of Oklahoma shall provide written certification of compliance with this subchapter within one year of the adoption of this Subchapter by the DEQ Board. Annual certification of receiving, loading out, and total annual hours of operation, quantity received and loaded out, visible emissions, and the operation and proper maintenance of any required control equipment shall be completed by the owner, operator or other designated responsible party and submitted as part of the annual emissions inventory reporting form.

(a) Initial certification. Any grain, feed or seed facility in existence on September 28, 1994, shall provide written certification of compliance with this subchapter by September 28, 1995, or within six months of receiving an initial certification form from DEQ.

(b) Annual certification. The owner, operator or other designated responsible party of a grain, feed or seed facility shall submit along with the annual emissions inventory, an annual certification of quantities received and loaded-out.

252:100-24-6. Fugitive dust controls

(a) All facilities will take reasonable precautions to prevent the discharge of any ~~visible~~fugitive dust emissions beyond the property line from which the emissions originate.

(b) No persons shall allow ~~visible~~fugitive dust emissions beyond the property line in such a manner as to damage or to interfere with the use of adjacent properties.

(c) All facilities shall make best efforts to reduce fugitive dust emissions during load-out by minimizing the distance from the load-out spout to the top of the receiving vessel.

252:100-24-7. Permit by Rule [NEW]

(a) Applicability. Any new or existing source may be constructed or operated under this section if it meets the requirements of 252:100-7-60(a), (b), and (c) and has the Standard Industrial Classification (SIC) code 5153, Grain and Field Beans.

(b) Requirements.

(1) In addition to the requirements in 252:10-7-60(a), (b), and (c), an owner or operator of a facility subject to this section shall comply with all of the requirements of this Subchapter, with the exception of 252:100-24-5(a) and (b).

(2) The total annual emissions of PM-10 shall be calculated using the equation provided in Appendix L, which was derived from AP-42 9.9.1, Grain Elevators and Processes.

(3) For grain storage elevators located at any wheat flour mill, wet corn mill, dry corn mill, rice mill or soybean oil extraction plant, with a permanent grain storage capacity of 35,200 m³, or grain terminal elevators with a permanent storage capacity of more than 88,100 m³, which have commenced construction, modification, or reconstruction after August 3, 1978, the requirements of 40 CFR, Part 60, Subpart DD are also applicable.

CHAPTER 100: AIR POLLUTION CONTROL

Appendix L. PM-10 Emission Factors for Permit by Rule for Grain Elevators

$$\left[\frac{R}{45} + \frac{S}{92} \right] \times 40 = \text{Combined Emissions (TPY)}^*$$

[NOTE: THE FORMULA BELOW IS A TEXT VERSION OF THE GRAPHIC FORMULA ABOVE]

$$\text{Combined Emissions (TPY)} = 40 \times (R/45 + S/92)$$

Where, R = Annual Grain Received (millions of bushels)
 S = Annual Grain Shipped (millions of bushels)

*To qualify for Permit by Rule, the total annual combined emissions must be less than 40 TPY.

Oklahoma Register

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking.

Proposed Rules: OAC 252:100-24, Control of Emissions from Grain Elevators. [NEW]

Summary: This new subchapter would subject all new and existing feed, seed, and grain facilities to state permitting requirements, and establish industry-specific emission and control standards.

AUTHORITY: Environmental Quality Board; 27A O.S. Supp. 1993, § 2-5-106 (Laws 1993, c. 145, § 43).

COMMENT PERIOD: Written comments will be accepted prior to and during the regularly scheduled meeting of the Oklahoma Air Quality Council. The meeting will be held Tuesday, March 8, 1994, in the Brown Room, Lincoln Plaza Office Complex, 4545 N. Lincoln Blvd., Oklahoma City, Oklahoma 73105. Briefing at 9:30 AM; meeting and hearing at 1:00 PM. Oral comments will be accepted during the hearing; written comments on the permit provisions may be mailed to the above-listed address, c/o Mr. Doyle McWhirter.

PUBLIC HEARINGS: Tuesday, March 8, in the Brown Room of the Lincoln Plaza Office Complex, as noted above.

COPIES OF PROPOSED RULES: Copies of the proposed rules may be obtained from the Department of Environmental Quality, Air Quality Division, Suite 250 of the Lincoln Plaza Office Complex, 4545 N. Lincoln Blvd., Oklahoma City, OK 73105.

RULE IMPACT STATEMENT: A rule impact statement will be prepared, prior to the final action by the Environmental Quality Board. The rule impact statement may be obtained from the Air Quality Division, at the above address.

CONTACT PERSON: Mr. Doyle McWhirter (405) 271-5220.

[Okla. Reg. 94-47; filed January 14, 1994]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking.

Proposed Rules: OAC 252:100-24, Control of Emissions from Grain Elevators. [NEW]

Summary: This new subchapter would subject all new and existing feed, seed, and grain facilities to state permitting requirements, and establish industry-specific emission and control standards.

AUTHORITY: Environmental Quality Board; 27A O.S.Supp. 1993, § 2-5-106 (Laws 1993, c. 145, § 43).

COMMENT PERIOD: Written comments will be accepted prior to and during the regularly scheduled meeting of the Oklahoma Air Quality Council. The meeting will be held Tuesday, April 12, 1994, in the Auditorium of the Tulsa City-County Health Department, 4616 E. 15th St., Tulsa 74112. Briefing at 9:30 AM; meeting and hearing at 1:00 PM. Oral comments will be accepted during the hearing; written comments on the permit provisions may be mailed to the contact person listed below.

PUBLIC HEARINGS: Tuesday, April 12, in the Auditorium of the Tulsa City-County Health Department, as noted above.

COPIES OF PROPOSED RULES: Copies of the proposed rules may be obtained from the contact person listed below.

RULE IMPACT STATEMENT: A rule impact statement will be prepared, prior to the final action by the Environmental Quality Board. The rule impact statement may be obtained from the contact person listed below.

CONTACT PERSON: Mr. Doyle McWhirter, Department of Environmental Quality, Air Quality Division, Suite 250, Lincoln Plaza Office Complex, 4545 N. Lincoln Blvd., Oklahoma City, OK 73105. (405) 271-5220.

[Okla. Reg. 94-250; filed February 14, 1994]

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking.

Proposed Rules: OAC 252:100-24, Control of Emissions from Grain Elevators [NEW]; OAC 252:100-31, Control of Emissions of Sulfur Compounds [AMENDED].

Summary: Subchapter 252:100-24 would subject all new and existing grain facilities to state permitting requirements, and establish industry-specific emission and control standards. Industry proposals would include seed, feed, and milling operations.

The intent of the revision in 252:100-31 is to resolve any discrepancies and inequities as applied to all sulfur recovery units in the state, and to provide that emissions standards are consistent with, and not more stringent than the New Source Performance Standards.

AUTHORITY: Environmental Quality Board; 27A O.S.Supp. 1993, § 2-5-106 (Laws 1993, c. 145, § 43).

COMMENT PERIOD: Written comments will be accepted prior to and during the regularly scheduled meeting of the Oklahoma Air Quality Council. The meeting will be held Tuesday, June 14, 1994, in the Brown Room, Lincoln Plaza Office Complex, 4545 N. Lincoln Blvd, Oklahoma City 73105. Briefing at 9:30 AM; meeting and hearing at 1:00 PM. Oral comments will be accepted during the hearing; written comments on the permit provisions may be mailed to the contact person listed below.

PUBLIC HEARINGS: Tuesday, June 14, in the Brown Room of the Lincoln Plaza Office Complex, as above.

COPIES OF PROPOSED RULES: Copies of the proposed rules may be obtained from the Department of Environmental Quality, Air Quality Division, Suite 250 of the Lincoln Plaza Office Complex, 4545 N. Lincoln Blvd., Oklahoma City, OK 73105.

RULE IMPACT STATEMENT: A rule impact statement will be prepared, prior to the final action by the Environmental Quality Board. The rule impact statement may be obtained from the Air Quality Division, at the above address.

CONTACT PERSON: (405) 271-5220, Lincoln Plaza Office Complex, 4545 N. Lincoln Blvd, Oklahoma City 73105.

Contact person for Subchapter 252:100-24 - Mr. Doyle McWhirter.
Contact person for Subchapter 252:100-31 - Dr. Joyce Sheedy.

Volume 11 NUMBER 21, SEP 1, '94

5991

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL

RULEMAKING ACTION: PERMANENT final adoption.

RULES: OAC 252:100-24, Control of Emissions from Grain Elevators
(NEW)

AUTHORITY: Environmental Quality Board; 27A O.S.Supp. 1993, §§ 2-2-101, 2-5-101 et seq.

DATES:

Comment period: September 1, 1994 through September 28, 1994.

Public hearing: September 28, 1994.

Adoption: September 28, 1994

Submitted to Governor: October 7, 1994

Submitted to House: October 7, 1994

Submitted to Senate: October 7, 1994

Gubernatorial approval: November 17, 1994.

Legislative approval: Failure of the Legislature to disapprove the rules resulted in approval on March 29, 1995.

Final adoption: March 29, 1995.

Effective: July 1, 1995.

SUPERSEDED EMERGENCY ACTIONS:

Superseded rules: OAC 252:100-24, Control of Emissions from Grain Elevators (NEW).

Gubernatorial approval: November 17, 1994.

Register publication: 12 Ok Reg 353.

Docket number: 94-1535.

INCORPORATIONS BY REFERENCE: None.

ANALYSIS: This new subchapter would subject all new and existing grain facilities to state permitting requirements and establish industry-specific emission and control standards. Included are facilities that handle, store or process grain.

The Air Quality Council recommended the permanent adoption of this new subchapter at their meeting on June 14, 1994. The Air Quality Council began receiving comments on these new rules on February 1, 1994, and also considered these rules in public meetings on March 3, March 8, and April 12, 1994.

CONTACT PERSON: Mr. Doyle McWhirter, DEQ Air Quality Division, Suite 250, Lincoln Plaza Office Complex, 4545 N. Lincoln Blvd., Oklahoma City, Oklahoma 73105. 405 271-5220.

PURSUANT TO THE ACTIONS DESCRIBED HEREIN, THE FOLLOWING RULES ARE CONSIDERED FINALLY ADOPTED AS SET FORTH IN 75 O.S., SECTION 308.1(A), WITH AN EFFECTIVE DATE OF JULY 1, 1995.

[NEW]

SUBCHAPTER 24. CONTROL OF EMISSIONS FROM GRAIN ELEVATORS

252:100-24-1. Purpose

The purpose of this Subchapter is to control emissions from facilities that handle, store or process grains. All facilities handling bulk agricultural commodities through grain handling equipment can apply this subchapter to emission sources at the facilities. This Subchapter is an interim rule effective until July 1, 1995 or until the date (whichever is earlier) that measured particulate emission rates from grain handling are developed under protocols approved or accepted by the Air Quality Division to replace the factored emission rates in this interim rule.

252:100-24-2. Definitions

The following words and terms when used in this subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Dust Suppression Additives" means FDA or FGIS-approved additives applied commercially for dust suppression. The dust suppression efficiencies of these additives is accepted to be 90% when applied at a proper application rate per manufacturer's recommendations or as approved by the director of the Air Quality Division.

"Enclosed Grain Handling Equipment" means equipment that is totally self-contained or is enclosed within a structure at a grain, feed, or seed facility. Emissions from this equipment shall not be exhausted to the atmosphere except through non-pressurized vents/openings, and shall not be considered a source subject to emission calculations.

"Existing Grain, Feed, or Seed Operation" means a facility which was in existence in 1993 and has submitted a current emission inventory to the Air Quality Division for the 1993 reporting period year. All other grain, feed, and seed operations shall be considered new.

"Fabric Filter" means any control device or system in which particulate matter is collected on a dust cake supported on either a woven or felted fabric that can demonstrate a particulate collection efficiency of not less than 95 percent.

"Fugitive Emission" means those emissions that could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening.

"Grain, Feed, or Seed Operation" means any facility installation at which grain, feed, or seed is loaded, handled, cleaned, dried, stored, treated, or otherwise processed.

"Grain, Feed, or Seed Operations Facility" means the contiguous or adjacent area under common control upon which a grain elevator, feed mill, or grain and seed processing equipment or structures are located, and all contiguous sites having common control, which have SIC codes with the first two digits that are identical to the first two digits of the SIC code for grain elevators, feed mills, or grain and seed processing equipment.

"High Efficiency Cyclone" means any cyclone type collector of the 2D-2D or 1D-3D configuration. These designations refer to the ratio of cylinder to cone length, where D is the diameter of the

5993

[NEW]

cylinder portion. A 2D-2D cyclone would exhibit a cylinder length of 2 x D and a cone length of 2 x D (90% collection efficiency for TSP). A 1D-3D cyclone would exhibit a cylinder length of 1 x D and a cone length of 3 x D (95% collection efficiency for TSP).

"Hours of Operation" is calculated by dividing the cumulative throughput total for a given time period by 75% of the rated leg capacity. This quotient is equivalent hours (not actual hours) of operation required to process the throughput. Actual leg capacity may be adjusted to more or less than 75% by individual facilities if documentation supporting the proposed adjustment is submitted to and approved by the Director of the Air Quality Division.

"Leg Capacity" means the maximum process rate for which the manufacturer designs the elevating portion of a grain, feed, or seed facility on a per leg basis.

"Medium Efficiency Cyclone" means any cyclone type collector less than 2D-2D configuration. These designations refer to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion. A 1D-1D cyclone would exhibit a cylinder of 1 x D and a cone length of 1 x D. These cyclones shall be capable of demonstrating a collection efficiency of 75% for particulate matter.

"Non-pressurized Vent or Opening" means any vent or opening which allows the emissions of air and/or contaminants at pressures substantially equivalent to atmospheric pressure without the use of mechanically-induced air flow.

"Pressurized Vent or Opening" means any vent or opening which allows the emissions of air and/or contaminants at pressures greater than atmospheric pressure indicating the use of mechanically-induced air flow.

"Process Emission" means emissions from a process equipment point source.

"Throughput" means the pounds, tons, or bushels received by a facility added to the pounds, tons, or bushels loaded-out from the facility during any time period of interest divided by two.

252:100-24-3. General provisions: applicability, determination of emissions

(a) Applicability. The provisions of this subchapter are applicable to all new, modified, and existing grain, feed, or seed operations in the State of Oklahoma.

(1) Facilities in compliance with OAC 252:100-25, 252:100-27, and 252:100-29 are not required to comply with this subchapter.

(2) Facilities in compliance with this subchapter are exempt from the requirements of OAC 252:100-25 (visible emissions), 252:100-27 (process weight), and 252:100-29 (fugitive dust).

(b) Permits required. In addition to the requirements of this subchapter, each new, modified or existing grain, feed, or seed operation shall comply with the permitting requirements of OAC 252:100-7 and 252:100-8.

(c) Air toxics emissions. Grain, feed, or seed operations which emit toxic air pollutants above the de minimis levels specified in OAC 252:100-41 are subject to all applicable requirements contained therein.

(d) Record-keeping. The owner or operator of a facility shall

[NEW]

maintain a daily log documenting the commodity throughput and hours of operation. These records shall be maintained for a period of two years and shall be made available for inspection by the Air Quality Division personnel or its representative during normal business hours.

(e) Visible emissions test. Visible emissions (opacity) testing shall be conducted using EPA reference method 9 contained in 40 CFR, Part 60, Appendix A and must be performed by individual(s) possessing current certification.

(f) Determination of emissions. Emissions from grain, feed, or seed operations shall be based on the best available data. This may include actual emissions as determined by stack testing, mass balance calculations, emission calculations using approved published emissions factors, or other methods approved by the Air Quality Division. The following factored emissions are allowed by this interim rule only until July 1, 1995 or until the date (whichever is earlier) that measured particulate emission rates from grain handling are developed under protocols approved or accepted by the Air Quality Division. For this interim rule, emissions shall be calculated as follows for three classes of emissions:

- (1) Class I:
 - (A) Unloading (Receiving) - 0.6 lbs/ton.
 - (B) Loading (Shipping) - 0.3 lbs/ton.
 - (C) Opacity limits - Refer to OAC 252:100-24-4.
- (2) Class II - Emission Sources with Control Devices:
 - (A) AP-42 factor X (1-EFF). (EFF means fractional efficiency of control device.)
 - (B) Opacity limits - Refer to 252:100-24-4 for opacity limits.
- (3) Class III - Uncontrolled Vents:
 - (A) Pressurized - opacity limit only (Refer to OAC 252:100-24-4 for opacity limits).
 - (B) Non-pressurized - opacity limit only (Refer to OAC 252:100-24-4 for opacity limits).

252:100-24-4. Smoke, visible emissions and particulates

(a) Visible emissions limit. No person shall cause, suffer, allow or permit the discharge of any fumes, aerosol, mist, gas, smoke, vapor, particulate matter or any combination thereof with a shade density greater than twenty percent (20%) equivalent opacity. This requirement shall not apply to smoke or visible emissions emitted during short-term occurrences, the shade or density of which is not greater than sixty percent (60%) opacity for a period aggregating no more than five minutes in any sixty consecutive minutes and/or no more than twenty minutes in any consecutive twenty-four hour period.

(b) Alternate emissions limit. The (20%) opacity limits, as required under OAC 252:100-24-4 (a) may be increased for particulates only provided that the owner/operator demonstrates to the satisfaction of the Oklahoma Air Quality Council at public hearing that those requirements listed in OAC 252:100-25-4 (1) through (3) have been met.

(c) Exceptions. Exceptions to the requirements described in OAC

[NEW]

252:100-24-4 (a) are provided as follows:

(1) Visible emissions from loading (shipping) shall be no more than sixty-five percent (65%) equivalent opacity, and visible emissions from unloading (receiving) shall be no more than fifty-five percent (55%) equivalent opacity.

(2) Emissions from pressurized or non-pressurized vents or openings with control devices shall be limited to no greater than twenty percent (20%) opacity at any time.

(3) Emissions from pressurized vents or openings without control devices shall either be enclosed, exhausted through a control device, or shall be limited to no greater than ten percent (10%) opacity at any time.

(4) Emissions from non-pressurized vents or openings without control devices shall be limited to no greater than ten percent (10%) opacity at any time.

252:100-24-5. Emission control equipment and certification

(a) Standards. Emission control equipment where required by (40 CFR 60.300) must meet the standards set under the Federal New Source Performance Standards (NSPS Subpart DD), or as mandated by other Federal requirements for major sources. Additional controls may be required to reduce nuisance emissions.

(b) Certification. Each existing grain elevator in the state of Oklahoma shall provide written certification of compliance with this subchapter within one year of the adoption of this Subchapter by the Air Quality Council. Annual certification of hours of operation and throughput and the operation and proper maintenance of required control equipment shall be completed by the owner, operator or other designated responsible party and submitted as part of the annual emissions inventory reporting form.

252:100-24-6. Fugitive dust controls

(a) All facilities will take reasonable precautions to prevent the discharge of any visible fugitive dust emissions beyond the property line from which the emissions originate.

(b) No persons shall allow visible emissions beyond the property line in such a manner as to damage or to interfere with the use of adjacent properties.

[Okla. Reg. 95-616; filed April 26, 1995]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT and EMERGENCY rulemaking.

Proposed Rules: OAC 252:100-24, Control of Emissions from Grain Elevators [NEW]

Summary: This rule would amend the existing rule that subjects all new and existing grain facilities to state permitting requirements and establishes industry-specific emission and control standards.

AUTHORITY: Environmental Quality Board; 27A O.S. Supp. 1993, §§2-2-101; 2-5-1-1 et seq.

COMMENT PERIOD: Written comments will be accepted prior to and during the regularly scheduled meeting of the Oklahoma Air Quality Council. The meeting will be held Wednesday, February 22, 1995, in the Lincoln Plaza Office Complex, Brown Room, 4545 N. Lincoln Blvd., Oklahoma City, OK. Briefing is scheduled for 9:30 AM; meeting and hearing, for 1:00 PM. Oral comments will be accepted during the hearing; written comments on the proposed change may be mailed to Air Quality Division, 4545 N. Lincoln Blvd., Suite 250, Oklahoma City, OK 73105-3483, c/o Mr. Scott Thomas

PUBLIC HEARINGS: Wednesday, February 22, 1995, in the Lincoln Plaza Office Complex, Brown Room, 4545 N. Lincoln Blvd., Oklahoma City, OK.

COPIES OF PROPOSED RULES: Copies of the proposed rules may be obtained from the Department of Environmental Quality, Air Quality Division, 4545 N. Lincoln Blvd., Suite 250, Oklahoma City, OK.

RULE IMPACT STATEMENT: A rule impact statement will be prepared prior to the final action by the Environmental Quality Board. The rule impact statement may be obtained from the Air Quality Division at the above address.

CONTACT PERSON: Mr. Scott Thomas or Deborah Perry (405) 271-5220

[Okla. Reg. 94-1689; filed December 21, 1994]

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT and EMERGENCY rulemaking.

Proposed Rules: OAC 252:100-24, Control of Emissions from Grain Elevators [AMENDED].

Summary: The revision to Subchapter 24 would amend the existing rule that subjects all new and existing grain facilities to state permitting requirements and establishes industry-specific emission and control standards.

AUTHORITY: Environmental Quality Board; 27A O.S. Supp. 1993, §§ 2-5-106.

COMMENT PERIOD: Interested persons may informally discuss the proposed rules with the Air Quality Program or may, before June 27, 1995, submit written comments to the Department of Environmental Quality, c/o Robert Kellogg, 1000 N.E. 10th Street, Oklahoma City, OK 73117-1212. Comments will be accepted during the Environmental Quality Board meeting scheduled for 9:30 a.m., Tuesday, June 27, 1995, at 1000 NE 10th Street, Oklahoma City, Oklahoma. The location of the meeting may be changed.

PUBLIC HEARINGS: Tuesday, June 27, 1995, at 9:30 a.m. in Oklahoma City, Oklahoma, as noted above.

COPIES OF PROPOSED RULES: Copies of the proposed rules may be obtained from the Department of Environmental Quality, Air Quality Program, 4545 North Lincoln, Suite 250, Oklahoma City, Oklahoma.

RULE IMPACT STATEMENT: A rule impact statement will be prepared prior to the final action by the Environmental Quality Board. The rule impact statement may be obtained from the Air Quality Division at the above address.

CONTACT PERSON: Mr. Scott Thomas (405) 271-5220.

ADDITIONAL INFORMATION: These rules were recommended by the Air Quality Council pursuant to the public hearing on February 22, 1995.

[Okla. Reg. 95-650; filed May 4, 1995]

TITLE 252 DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL

RULEMAKING ACTION: PERMANENT FINAL ADOPTION.

RULES: OAC 252:100-24, Control of Emissions from Grain Elevators [AMENDED].

AUTHORITY: Environmental Quality Board; 27A O.S. Supp. 1993, §§ 2-2-101, 2-5-101 et seq.

DATES:

Comment period: June 1, 1995 through June 27, 1995

Public hearing: June 27, 1995

Adoption: June 27, 1995

Submitted to Governor: July 7, 1995.

Submitted to House: July 7, 1995.

Submitted Senate: July 7, 1995.

Gubernatorial approval: August 21, 1995.

Legislative approval: Failure of the Legislature to disapprove the rules resulted in approval on March 27, 1996.

Final adoption: March 27, 1996.

Effective: July 1, 1996.

SUPERSEDED EMERGENCY ACTIONS:

Superseded rules: 252:100-24-1 through 24-5 [AMENDED].

Gubernatorial approval: August 21, 1995.

Register publication: 13 Ok Reg 815.

Docket number: 96-25.

INCORPORATIONS BY REFERENCE: None.

ANALYSIS: The revision to Subchapter 24 would amend the existing rule that subjects all new and existing grain facilities to state permitting requirements and establishes industry-specific emission and control standards.

The Air Quality Council recommended the permanent adoption of this revision at their meeting on February 22, 1995. The Air Quality Council began receiving comments on this new rule on February 1, 1995, and also considered this rule in a public meeting on February 22, 1995.

CONTACT PERSON: Mr. Scott Thomas, DEQ Air Quality Division, Suite 250, Lincoln Plaza Office Complex, 4545 N. Lincoln Blvd., Oklahoma City, Oklahoma 73105. (405) 271-5220

PURSUANT TO THE ACTIONS DESCRIBED HEREIN, THE FOLLOWING RULES ARE CONSIDERED FINALLY ADOPTED AS SET FORTH IN 75 O.S., SECTION 308.1(A), WITH AN EFFECTIVE DATE OF JULY 1, 1996.

SUBCHAPTER 24. CONTROL OF EMISSIONS FROM GRAIN ELEVATORS

252:100-24-1. Purpose

The purpose of this Subchapter is to control emissions from facilities that handle, store or process grains. All facilities handling bulk agricultural commodities through grain handling equipment can apply this subchapter to emission sources at the facilities. ~~This rule is an interim rule effective until July 1, 1995 or until the date (whichever is earlier) that measured particulate emission rates from grain handling are developed under protocols approved or accepted by the Air Quality Division to replace the factored emission rates in this interim rule.~~

252:100-24-2. Definitions

The following words and terms when used in this subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

~~"Dust Suppression Additives" means FDA or FGIC approved additives applied commercially for dust suppression. The dust suppression efficiencies of these additives is accepted to be 90% when applied at a proper application rate per manufacturer's recommendations or as approved by the director of the Air Quality Division.~~

"Enclosed Grain Handling Equipment" means equipment that is totally self-contained or is enclosed within a structure at a grain, feed, or seed facility. Emissions from this equipment shall not be exhausted to the atmosphere except through non-pressurized vents/openings, and shall not be considered a source subject to emission calculations.

~~"Existing Grain, Feed, or Seed Operation" means a facility which was in existence in 1993 and has submitted a current emission inventory to the Air Quality Division for the 1993 reporting period year. All other grain, feed, and seed operations shall be considered new.~~

~~"Fabric Filter" means any control device or system in which particulate matter is collected on a dust cake supported on either a woven or felted fabric that can demonstrate a particulate collection efficiency of not less than 95 percent.~~

"Fugitive Emission" means those emissions that could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening.

"Grain, Feed, or Seed Operation" means any facility or installation at which grain, feed, or seed is loaded, handled, cleaned, dried, stored, treated, or otherwise processed.

"Grain, Feed, or Seed Operations Facility" means the contiguous or adjacent area under common control upon which a grain elevator, feed mill, or grain and seed processing equipment or structures are located, and all contiguous sites having common control, which have SIC codes with the first two digits that are identical to the first two digits of the SIC code for grain elevators, feed mills, or grain and seed processing equipment.

~~"High Efficiency Cyclone" means any cyclone type collector of the 2D-2D or 1D-3D configuration. These designations refer to the~~

ratio of cylinder to cone length, where D is the diameter of the cylinder portion. A 2D 2D cyclone would exhibit a cylinder length of 2 x D and a cone length of 2 x D (90% collection efficiency for TSP). A 1D 2D cyclone would exhibit a cylinder length of 1 x D and a cone length of 3 x D (95% collection efficiency for TSP).

"Hours of Operation" is calculated by dividing the cumulative throughput total for a given time period by 75% of the rated leg capacity. This quotient is equivalent hours (not actual hours) of operation required to process the throughput. Actual leg capacity may be adjusted to more or less than 75% by individual facilities if documentation supporting the proposed adjustment is submitted to and approved by the Director of the Air Quality Division.

"Leg Capacity" means the maximum process rate for which the manufacturer designs the elevating portion of a grain, feed, or seed facility on a per leg basis.

"Loading-out hours of operation" means the hours calculated by dividing the cumulative total quantity loaded out for a given time period by 75% of the rated leg capacity. This quotient is equivalent hours (not actual hours) of operation required to process the material loaded out. Actual leg capacity may be adjusted to more or less than 75% by individual facilities if documentation supporting the proposed adjustment is submitted to and approved by the Director of the Air Quality Division.

"Medium Efficiency Cyclone" means any cyclone type collector less than 2D 2D configuration. These designations refer to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion. A 1D 1D cyclone would exhibit a cylinder of 1 x D and a cone length of 1 x D. These cyclones shall be capable of demonstrating a collection efficiency of 75% for particulate matter.

"Non-pressurized Vent or Opening" means any vent or opening which allows the emissions of air and/or contaminants at pressures substantially equivalent to atmospheric pressure without the use of mechanically-induced air flow.

"Pressurized Vent or Opening" means any vent or opening which allows the emissions of air and/or contaminants at pressures greater than atmospheric pressure indicating the use of mechanically-induced air flow.

"Process Emission" means emissions from a process equipment point source.

"Receiving hours of operation" means hours calculated by dividing the cumulative total quantity received for a given time period by 75% of the rated leg capacity. This quotient is equivalent hours (not actual hours) of operation required to process the material received. Actual leg capacity may be adjusted to more or less than 75% by individual facilities if documentation supporting the proposed adjustment is submitted to and approved by the Director of the Air Quality Division.

"Total hours of operation" means the sum of the receiving hours of operation and the loading out hours of operation. Actual hours may be less since receiving and loading-out operations may occur simultaneously.

"Throughput" means the pounds, tons, or bushels received by a facility added to the pounds, tons, or bushels loaded out from the facility during any time period of interest divided by two.

252:100-24-3. General provisions: applicability, determination of emissions

(a) Applicability. The provisions of this subchapter are applicable to all new, modified, and existing grain, feed, or seed operations facilities in the State of Oklahoma.

(1) Facilities in compliance with OAC 252:100-25, 252:100-27, and 252:100-29 are not required to comply with this subchapter.

(2) Facilities in compliance with this subchapter are exempt from the requirements of OAC 252:100-25 (visible emissions), 252:100-27 (process weight), and 252:100-29 (fugitive dust).

(b) Permits required. In addition to the requirements of this subchapter, each new, modified or existing grain, feed, or seed operations facility shall comply with the permitting requirements of OAC 252:100-7 and 252:100-8.

(c) Air toxics emissions. Grain, feed, or seed operations facilities which emit toxic air pollutants above the de minimis levels specified in 252:100-41 are subject to all applicable requirements contained therein.

(d) Record-keeping. The owner or operator of a facility shall maintain a daily log documenting the commodity throughput receipts and load-outs and hours of operation for each. These records shall be maintained for a period of two years and shall be made available for inspection by the Air Quality Division personnel or its representative during normal business hours.

(e) Visible emissions test. Visible emissions (opacity) testing shall be conducted using EPA reference method 9 contained in 40 CFR, Part 60, Appendix A and must be performed by individual(s) possessing current certification.

(f) Determination of emissions. Emissions from grain, feed, or seed operations facilities shall be based on determined by the best available data. This may include actual emissions as determined by stack testing, mass balance calculations, emission calculations using approved published emissions factors, or other methods approved any other method which can be shown to be reasonably accurate when supported by engineering data and calculations, and approved in advance by the Air Quality Division. The following factored emissions are allowed by this interim rule only until July 1, 1995 or until the date (whichever is earlier) that measured particulate emission rates from grain handling are developed under protocols approved or accepted by the Air Quality Division. For this interim rule, emissions shall be calculated as follows for three classes of emissions:

(1) Class I-

(A) Unloading (Receiving) 0.6 lbs/ton.

(B) Loading (Shipping) 0.3 lbs/ton.

(C) Opacity limits Refer to 252:100-24-4.

(2) Class II Emission Sources with Control Devices.

6003

- ~~(A) AP 42 factor X (1 EFF). (EFF means fractional efficiency of control device.)~~
~~(B) Opacity limits Refer to 252:100-24-4 for opacity limits.~~
 (3) ~~Class III Uncontrolled Vents~~
~~(A) Pressurized opacity limit only (Refer to 252:100-24-4 for opacity limits.)~~
~~(B) Non-pressurized opacity limit only (Refer to 252:100-24-4 for opacity limits.)~~

252:100-24-4. Smoke, Visible Emissions and Particulates

(a) Visible emissions limits. No person shall cause, suffer, allow or permit the discharge of any fumes, aerosol, mist, gas, smoke, vapor, particulate matter or any combination thereof with a shade density greater than twenty percent (20%) equivalent opacity. This requirement shall not apply to smoke or visible emissions emitted during short-term occurrences, the shade or density of which is not greater than sixty percent (60%) opacity for a period aggregating no more than five minutes in any sixty consecutive minutes and/or no more than twenty minutes in any consecutive twenty-four hour period.

(b) Alternate emissions limit. The (20%) opacity limits, as required under 252:100-24-4 (a) may be increased for particulates only provided that the owner/operator demonstrates to the satisfaction of the Oklahoma Air Quality Council at public hearing that those requirements listed in 252:100-25-4 (a) through (c) have been met.

(c) Exceptions. Exceptions to the requirements described in 252:100-24-4 (a) (1) are provided as follows:

(1) Visible emissions from loading-out (shipping) shall be no more than sixty-five percent (65%) equivalent opacity, and visible emissions from unloading (receiving) shall be no more than fifty-five percent (55%) equivalent opacity.

(2) Emissions from pressurized or non-pressurized vents or openings with control devices shall be limited to no greater than twenty percent (20%) opacity at any time.

(3) Emissions from pressurized vents or openings without control devices shall either be enclosed, exhausted through a control device, or shall be limited to no greater than ten percent (10%) opacity at any time.

(4) Emissions from non-pressurized vents or openings without control devices shall be limited to no greater than ten percent (10%) opacity at any time.

252:100-24-5 Emission control equipment and certification

(a) Standards. Emission control equipment where required by (40 CFR 60.300) must meet the standards set under the Federal New Source Performance Standards (NSPS Subpart DD), or as mandated by other Federal requirements for major sources. Additional controls may be required to reduce nuisance emissions.

(b) Affected facilities. Affected facilities shall make best efforts to reduce dust emissions during load-out by minimizing the

distance from the load-out spout to the top of the receiving vessel.

(c) Certification. Each new, modified, or existing grain, elevator feed or seed facility in the state of Oklahoma shall provide written certification of compliance with this subchapter within one year of the adoption of this Subchapter by the Air Quality Council/DEO Board. Annual certification of receiving, loading-out, and total annual hours of operation, quantity received and loaded-out, visible emissions, and throughput and the operation and proper maintenance of any required control equipment shall be completed by the owner, operator or other designated responsible party and submitted as part of the annual emissions inventory reporting form.

[Okla. Reg. 96-530; filed April 25, 1996]

009

Notices of Rulemaking Intent

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must publish a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides other information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained.

For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-1216]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking.

Proposed rules:

252:100. Air Pollution Control

Appendix E. Primary Ambient Air Quality Standards [AMENDED]

Appendix F. Secondary Ambient Air Quality Standards [AMENDED]

Subchapter 7. Permits for Minor Sources [AMENDED]

Subchapter 23. Control of Emissions from Cotton Gins [AMENDED]

Subchapter 24. Control of Emissions from Grain Elevators [AMENDED]

Appendix L. PM-10 Emission Factors for Permit by Rule for Grain Elevators [NEW]

Subchapter 25. Smoke. Visible Emissions and Particulates [AMENDED]

Subchapter 37. Control of Emissions of Organic Materials [AMENDED]

Subchapter 39. Emission of Organic Materials in Nonattainment Areas [AMENDED]

Summary:

The proposed revisions to Appendices E and F will mirror the revised federal national ambient air quality standards for particulate matter (PM) and ozone announced by EPA in the July 18, 1997, Federal Register. The EPA revised the primary (health-based) PM standards by adding a new annual PM-2.5 standard set at 15 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) and a new 24-hr PM-2.5 standard set at $65 \mu\text{g}/\text{m}^3$. EPA is retaining the current annual PM-10 standard of $50 \mu\text{g}/\text{m}^3$ and changing the form of the PM-10 24-hr standard. The secondary (welfare-based) standards are also being adjusted to make them identical to the primary standards. Also, the previous 1-hr primary ozone standard is being phased out and replaced with a new 8-hr "concentration-based" standard of 0.08 ppm. The 3-yr average of the 4th highest daily maximum 8-hr ozone concentrations is used to determine compliance with the standard. The EPA also replaced the previous secondary standards with a standard identical to the new primary standard. The proposed revisions to Subchapter 7 will delete the lower limit of 5 tons per year for

Permit by Rule (PBR) facilities. This will allow those facilities with less than 5 tons per year emissions, which are subject to new source performance standards (NSPS) and national emissions standards for hazardous air pollutants (NESHAP), to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each Subchapter containing a PBR for specific facilities will be referenced under this new Part also. The proposed revisions to Subchapters 23 and 24 would simplify the language under the agency-wide re-write/de-wrong initiative. It is also proposed to add a new PBR section to both subchapters. The PBR will streamline the permitting process by creating a mechanism that will eliminate the necessity for some cotton gins and elevators to obtain an individual air quality permit. Also, a new Appendix L is proposed which contains PM-10 emission factors for PBR grain elevators. The proposed amendments to Subchapter 25 would fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the Department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P. Additionally, the Department proposes to exempt from Appendix P requirements those sources already subject to a new source performance standard and sources scheduled for retirement within 5 years after the amended rule takes effect. The amended rule would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include changing the time allowed for visible emissions during short-term occurrences to exceed the opacity standard to one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. A new subsection would contain methods for determining compliance with the opacity limits. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule. The proposed changes to Subchapters 37 and 39 are primarily intended to clarify, simplify and correct the rule and to respond to requests to exclude acetone and methylated siloxanes from the definition of volatile organic compound (VOC). The proposed changes to Subchapters 37 and 39 include clarification of language, correction of typographical errors, deletion of redundant language, and reformatting. Two substantive changes are proposed for

Notices of Rulemaking Content

Subchapter 37 and one for Subchapter 39. One of those substantive changes affects both Subchapter 37 and 39. The definition of volatile organic compounds (VOC) in 252:100-37-2 and 252:100-39-2 has been revised in response to the Air Quality Council's direction to the staff to review the petition from the Chemical Manufacturers Association dated October 25, 1995, to exclude acetone from the definition of Volatile Organic Compounds (VOC); the request from American Airlines, Boeing, and Nordam, dated January 19, 1998, that acetone be excluded from the definition of VOC; and a request that methylated siloxanes be excluded from the definition of VOC. The definition of volatile organic compounds (VOC) has been modified to be consistent with the Environmental Protection Agency definition. The second substantive change for Subchapter 37 deals with the first sentence in 252:100-37-36 regarding fuel-burning and refuse-burning equipment, which has been deleted to resolve the contradiction between the first and second sentences. The Department is requesting comments on these proposed changes.

AUTHORITY:

Environmental Quality Board, 27A O.S. Supp. 1997, §§ 2-2-101 and 2-5-101 *et seq.*

COMMENT PERIOD:

Wednesday, July 15, 1998, through Tuesday, August 18, 1998. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by Tuesday, August 11, 1998. Also scheduled before the Environmental Quality Board at their meeting on Tuesday, September 15, 1998 - 9:30 a.m. in Alva (Location to be determined. See contact person.)

PUBLIC HEARINGS:

Tuesday, August 18, 1998 - 9:30 a.m. briefing and 1:00 p.m. hearing, Department of Environmental Quality, Air Quality Division, 707 N. Robinson, Room 101, Oklahoma City, Oklahoma.

COPIES OF PROPOSED RULES:

Copies of the rules will be available July 15, 1998, for review at the Air Quality Division office at the address listed above or may be obtained from Myrna Bruce at 405-702-4177.

RULE IMPACT STATEMENT:

A copy of the rule impact statements may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Michelle Martinez (Appendices E, F, L and Subchapter 24), Jeanette Buttram (Subchapters 7 and 25), Becky Mainord (Subchapter 23), Joyce Sheedy, Ph.D. (Subchapters 37 and 39). Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

ADDITIONAL INFORMATION:

Additional proposed revisions have been made to the version of Subchapter 25 that was the subject of a public hearing on June 16, 1998.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #98-1216; filed 6-25-98]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-1217]

INTENDED RULEMAKING ACTION:

Notice of proposed EMERGENCY and PERMANENT rulemaking.

Proposed rules:

252:100, Air Pollution Control: Subchapter 47, Control of Emissions from Existing Municipal Solid Waste Landfills [NEW]

Summary:

A new Subchapter 47 is proposed to establish state standards to control emissions from municipal solid waste (MSW) landfills that commenced construction, modification, or reconstruction before May 30, 1991, and accepted waste after November 8, 1987. These proposed rules will be included in Oklahoma's State 111(d) Plan and will provide the enforceable mechanism for implementing the provisions of the Emission Guidelines (EG) for MSW landfills (40 CFR 60 Subpart Cc). Subchapter 47 incorporates by reference sections of the New Source Performance Standards for MSW landfills (40 CFR 60 Subpart WWW). The proposed rules would affect privately and publicly owned MSW landfills that are actively accepting or are capable of accepting municipal solid waste as well as those that are closed. Landfill gas collection and control systems will be required for landfills that have design capacities greater than or equal to 2.5 million megagrams and 2.5 million cubic meters and have estimated emissions of at least 50 megagrams per year of non-methane organic compounds. The Department is requesting comments on this proposed rule.

AUTHORITY:

Environmental Quality Board, 27A O.S. Supp. 1997, §§ 2-2-101 and 2-5-101 *et seq.*

COMMENT PERIOD:

Wednesday, July 15, 1998, through Tuesday, August 18, 1998. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by Tuesday, August 11, 1998. Also scheduled

Notices of Rulemaking Inter

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must put a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides other information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained. For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-1259]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking.

PROPOSED RULES:

252:100. Air Pollution Control

Subchapter 7. Permits for Minor Sources
[AMENDED]

Subchapter 23. Control of Emissions from Cotton Gins
[AMENDED]

Subchapter 24. Control of Emissions from Grain Elevators [AMENDED]

Subchapter 25. Smoke, Visible Emissions and Particulates [AMENDED]

Subchapter 37. Control of Emissions of Organic Materials [AMENDED]

Subchapter 39. Emission of Organic Materials in Nonattainment Areas [AMENDED].

Appendix E. Primary Ambient Air Quality Standards [AMENDED]

Appendix F. Secondary Ambient Air Quality Standards [AMENDED]

Appendix L. PM-10 Emission Factors for Permit by Rule for Grain Elevators [NEW]

SUMMARY:

The proposed revisions to Appendices E and F will mirror the revised federal national ambient air quality standards for particulate matter (PM) and ozone announced by EPA in the July 18, 1997, Federal Register. The EPA revised the primary (health-based) PM standards by adding a new annual PM-2.5 standard set at 15 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) and a new 24-hr PM-2.5 standard set at $65 \mu\text{g}/\text{m}^3$. EPA is retaining the current annual PM-10 standard of $50 \mu\text{g}/\text{m}^3$ and changing the form of the PM-10 24-hr standard. The secondary (welfare-based) standards are also being adjusted to make them identical to the primary standards. Also, the previous 1-hr primary ozone standard is being phased out and replaced with a new 8-hr "concentration-based" standard of 0.08 ppm. The 3-yr average of the 4th highest daily maximum 8-hr ozone concentrations is used to determine compliance with the standard. The EPA also replaced the previous secondary standards with a standard identical to the new primary standard. The proposed revisions to

Subchapter 7 will delete the lower limit of 5 tons per year Permit by Rule (PBR) facilities. This will allow the facilities with less than 5 tons per year emissions, which are subject to new source performance standards (NSPS) and national emissions standards for hazardous air pollutants (NESHAP), to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each Subchapter containing a PBR for specific facilities will be referenced under this new Part also. The proposed revisions to Subchapters 23 and 24 would simplify the language under the agency-wide re-write/delete initiative. It is also proposed to add a new PBR section to both subchapters. The PBR will streamline the permitting process by creating a mechanism that will eliminate the necessity for some cotton gins and elevators to obtain an individual air quality permit. Also, a new Appendix L is proposed which contains PM-10 emission factors for PBR grain elevators. The proposed amendments to Subchapter 25 would fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the Department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P. Additionally, the Department proposes to exempt from Appendix L requirements those sources already subject to a new source performance standard and sources scheduled for retirement within 5 years after the amended rule takes effect. The amended rule would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include changing the time allowed for visible emissions during short-term occurrences to exceed the opacity standard to one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. A new subsection would contain methods for determining compliance with the opacity limits. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule. The proposed changes to Subchapters 37 and 39 are primarily intended to clarify, simplify and correct the rule and to respond to requests to exclude acetone and methylated siloxanes from the definition of volatile organic compound (VOC). The proposed changes to Subchapters 37 and 39 include clarification of language, correction of typographical errors, deletion of redundant language, and

6009

Notices of Rulemaking Intent

reformatting. Two substantive changes are proposed for Subchapter 37 and one for Subchapter 39. One of those substantive changes affects both Subchapter 37 and 39. The definition of volatile organic compounds (VOC) in 252:100-37-2 and 252:100-39-2 has been revised in response to the Air Quality Council's direction to the staff to review the petition from the Chemical Manufacturers Association dated October 25, 1995, to exclude acetone from the definition of Volatile Organic Compounds (VOC); the request from American Airlines, Boeing, and Nordam, dated January 19, 1998, that acetone be excluded from the definition of VOC; and a request that methylated siloxanes be excluded from the definition of VOC. The definition of volatile organic compounds (VOC) has been modified to be consistent with the Environmental Protection Agency definition. The second substantive change for Subchapter 37 deals with the first sentence in 252:100-37-36 regarding fuel-burning and refuse-burning equipment, which has been deleted to resolve the contradiction between the first and second sentences. The Department is requesting comments on these proposed changes.

AUTHORITY:

Environmental Quality Board, 27A O.S.Supp. 1997, §§ 2-2-101 and 2-5-101 *et seq.*

COMMENT PERIOD:

Wednesday, July 15, 1998, through Tuesday, August 18, 1998. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by Tuesday, August 11, 1998. Also scheduled before the Environmental Quality Board at their meeting on Tuesday, September 15, 1998 - 9:30 a.m. in Alva (Location to be determined. See contact person.)

PUBLIC HEARINGS:

Tuesday, August 18, 1998 - 9:30 a.m. briefing and 1:00 p.m. hearing, Lincoln Plaza, 4545 N. Lincoln Blvd., Burgundy Room, Oklahoma City, Oklahoma.

COPIES OF PROPOSED RULES:

Copies of the rules will be available July 15, 1998, for review at the Air Quality Division office at the address listed above or may be obtained from Myrna Bruce at 405-702-4177.

RULE IMPACT STATEMENT:

A copy of the rule impact statements may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Michelle Martinez (Appendices E, F, L and Subchapter 24), Jeanette Buttram (Subchapters 7 and 25), Becky Mainord (Subchapter 23), Joyce Sheedy, Ph.D. (Subchapters 37 and 39). Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

ADDITIONAL INFORMATION:

Additional proposed revisions have been made to a version of Subchapter 25 that was the subject of a public hearing on June 16, 1998.

AN IDENTICAL NOTICE WAS PUBLISHED IN THE OKLAHOMA REGISTER ON JULY 15, 1998. AFTER PUBLICATION, THE COUNCIL MEETING LOCATION WAS CHANGED TO 4545 N. LINCOLN BLVD., BURGUNDY ROOM, OKLAHOMA CITY, OKLAHOMA. NO OTHER CHANGES WERE MADE TO THIS NOTICE.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #98-1259; filed 7-9-98]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-1260]

INTENDED RULEMAKING ACTION:

Notice of proposed EMERGENCY and PERMANENT rulemaking.

PROPOSED RULES:

252:100. Air Pollution Control

Subchapter 47. Control of Emissions from Existing Municipal Solid Waste Landfills [NEW]

SUMMARY:

A new Subchapter 47 is proposed to establish state standards to control emissions from municipal solid waste (MSW) landfills that commenced construction, modification, or reconstruction before May 30, 1991, and accepted waste after November 8, 1987. These proposed rules will be included in Oklahoma's State 111(d) Plan and will provide the enforceable mechanism for implementing the provisions of the Emission Guidelines (EG) for MSW landfills (40 CFR 60 Subpart Cc). Subchapter 47 incorporates by reference sections of the New Source Performance Standards for MSW landfills (40 CFR 60 Subpart WWW). The proposed rules would affect privately and publicly owned MSW landfills that are actively accepting or are capable of accepting municipal solid waste as well as those that are closed. Landfill gas collection and control systems will be required for landfills that have design capacities greater than or equal to 2.5 million megagrams and 2.5 million cubic meters and have estimated emissions of at least 50 megagrams per year of non-methane organic compounds. The Department is requesting comments on this proposed rule.

Notices of Rulemaking Intent

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must publish a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides other information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained.

For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-1358]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

PROPOSED RULES:

Subchapter 5. Registration, Emission Inventory and Annual Operating Fees [AMENDED]

Subchapter 7. Permits for Minor Sources [AMENDED]

Subchapter 8. Permits for Part 70 Sources [AMENDED]

Subchapter 23. Control of Emissions from Cotton Gins [AMENDED]

Subchapter 24. Control of Emissions from Grain Elevators [AMENDED]

Appendix L. PM-10 Emission Factors for Permit by Rule for Grain Elevators [NEW]

Subchapter 25. Smoke, Visible Emissions and Particulates [AMENDED]

Subchapter 37. Control of Emission of Organic Materials [AMENDED]

Subchapter 39. Emission of Organic Materials in Nonattainment Areas [AMENDED]

Subchapter 41. Control of Emission of Hazardous and Toxic Air Contaminants [AMENDED]

SUMMARY:

In Subchapter 5, the Department is considering possible increases in annual operating fees for both minor facilities and Part 70 sources.

The proposed revisions to Subchapter 7 will modify language applicable to de minimis facilities, Permit by Rule (PBR), and general permits. First, actual emissions of Total Suspended Particulates (TSP) will no longer be counted in determining whether a facility meets the definition of "de minimis facility." Second, the proposed revisions will delete the lower limit of 5 tons per year for PBR facilities. This will allow those facilities with less than 5 tons per year emissions, which are subject to New Source Performance Standards (NSPS) or National Emissions Standards for Hazardous Air Pollutants (NESHAP), to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a

PBR for specific facilities will be referenced under this new Part also. Third, the proposed revisions will delete the lower limit for general permits. This will allow facilities that may have less than 40 tons per year of emissions, but for which no PBR has been written, the opportunity to apply for coverage under an applicable general permit. The Department also proposes to delete the definition for "Volatile Organic Solvents (VOS)," because the proposed changes to Subchapters 37 and 39 would exclude that term from the rules.

The Department is considering increases in the permit application fees in both Subchapters 7 and 8.

The proposed revisions to Subchapters 23 and 24 would simplify the language under the agency-wide re-write/de-wrong initiative. It is also proposed to add a new PBR section to both subchapters. The PBR will streamline the permitting process by creating a mechanism that will eliminate the necessity for some cotton gins and elevators to obtain an individual air quality permit. Also, a new Appendix L is proposed which contains PM-10 emission factors for PBR grain elevators. Additional changes to both subchapters follow a proposed amendment of Subchapter 25 concerning short-term exceedances of the opacity standard. The revised rules would allow such exceedances during one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours.

The proposed amendments to Subchapter 25 would fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the Department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P. Additionally, the Department proposes to exempt from Appendix P requirements those sources already subject to a new source performance standard and sources scheduled for retirement within 5 years after the amended rule takes effect. The amended rule would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include exempting sources subject to opacity standards promulgated under Section 111 of the Federal Clean Air Act, along with a clarification of how the opacity standard will be determined at sources that have CEMs and how it will be determined at sources without CEMs. Other

6011

Notices of Rulemaking Intent

proposed amendments to Subchapter 25 are designed to simplify and clarify the rule.

The proposed changes to Subchapters 37 and 39 include clarification of language, correction of typographical errors, deletion of redundant language, and reformatting. Three substantive changes are proposed for each Subchapter. One of those substantive changes affects both Subchapter 37 and 39. The definition of "volatile organic compounds (VOC)" in 252:100-37-2 and 252:100-39-2 has been revised in response to the Air Quality Council's direction to the staff to review the petition from the Chemical Manufacturers Association dated October 25, 1995, to exclude acetone from the definition of VOC; the request from American Airlines, Boeing, and Nordam, dated January 19, 1998, that acetone be excluded from the definition of VOC; a request dated April 21, 1997, from the Halogenated Solvents Industry Alliance, requesting that perchloroethylene be excluded from the definition of VOC; a request from Dow Corning that methylated siloxanes be excluded from the definition of VOC; and a request on behalf of the Eastman Chemical Company dated August 18, 1998, that methyl acetate be excluded from the definition of VOC. The definition of VOC has been modified to be consistent with the EPA definition. The second substantive change to Subchapter 37 is the removal of the requirement for permits and best available control technology (BACT) for new sources of VOC contained in 252:100-37-3(a). The third substantive change for Subchapter 37 deals with the first sentence in 252:100-37-36 regarding fuel-burning and refuse-burning equipment, which has been deleted to resolve the contradiction between the first and second sentences. The second substantive change to Subchapter 39 is the correction of the placement of "prior to lease custody transfer" in 252:100-39-30(b)(2). The third substantive change is the addition of a minimum annual throughput of 120,000 gallons and a minimum storage capacity of 2,000 gallons to 252:100-39-41(c) to determine applicability of subsection (c). In addition, the Department is requesting comments on 252:100-39-47, Control of VOS Emissions from Aerospace Industries Coatings Operations. Options include (1) retain the present (ARACT) rule and enforce the emissions reduction plan specified therein; (2) repeal the present rule and promulgate new rules regulating specialty coatings; or (3) retain the present plan, promulgate new rules for specialty coatings, and allow the facility to choose which of the two they prefer. These options recognize that the new NESHAP for the aerospace industry controls VOC emissions except for specialty coatings. The proposed amendments to Subchapter 41 include adopting by reference the Maximum Available Control Technology (MACT) standards for hazardous air pollutants that have been promulgated in 40 CFR 63 from July 1, 1997, through July 1, 1998. These are Subparts S and LL. The Department is also updating in Subchapter 41 the incorporation by reference of the NESHAP found in 40

CFR 61 to July 1, 1998. The Department is requesting comments on these proposed changes.

[OAR Docket #98-1358; filed 8-26-98]

Permanent Final Adoptions

~~greater than sixty (60) percent opacity for an period aggregating no more than five (5) minutes in any sixty (60) consecutive minutes and/or no more than twenty (20) minutes in any consecutive 24-hour period which consist of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours, during which the average of any six-minute period shall not exceed 60% opacity.~~

~~(2)(b) Alternative emissions opacity limit. The twenty (20) percent 20% opacity limit as required under 252:100-23-4(a) may be increased for particulates only provided that the owner/operator owner or operator demonstrates to the satisfaction of the Oklahoma Air Quality Council at public hearing that those requirements listed in 252:100-25-4(a) through (c) have been met.~~

~~(b)(c) PM-10 emissions limit. No cotton gin shall impact the ambient air quality in such a manner as to violate be operated so as to cause or contribute to a violation of the primary PM-10 standard of 50 ug/m³ annual arithmetic mean or 150 ug/m³ 24-hour average or any other ambient air standard quality standards or any other ambient air quality standard established by OAC in 252:100-3.~~

252:100-23-5. Emission control equipment

(a) ~~Low pressure exhausts. For emissionsemission control from low pressure exhausts, the use of screens with a mesh size of 70 by 70 or finer (U.S. Sieve), or the use of perforated condenser drums with holes not exceeding 0.045 inches in diameter or equipment of equivalent design efficiency as determined by the Executive Director shall be required.~~

(b) ~~High pressure exhausts. For emission control from high pressure exhausts, the use of 2D-2D cyclones shall be required for existing gins. Existing gins shall install and use 1D-3D cyclone collectors or equivalent when the capital cost of repair or replacement of the existing 2D-2D cyclone exceeds fifty (50) percent 50% of the capital cost of a new 1D-3D cyclone. New or modified cotton gins shall utilize a 1D-3D cyclone collector or equipment of equivalent collection efficiency upon commencement of operation.~~

(c) ~~Fugitive emissions Burr hoppers. For emission control of fugitive emissions from burr hoppers during dumping, the use of total enclosure burr hoppers at existing gin sites located within the corporate city limits of any city or within 300 feet of two or more occupied establishments is required must be totally enclosed. All new gin sites shall install and use a total enclosure on the burr hopper.~~

252:100-23-6. Fugitive dust controls

(a) For control of fugitive dust, no person shall cause or permit allow the handling, transporting, or disposition of any substance or material which that is likely to be scattered by the air or wind, or is susceptible to being airborne, or windborne, or to and no person shall operate or maintain or cause to be operated or maintained, any gin premisesite, open area, right-of-way, storage pile or materials, vehicle, or construction, or any other enterprise which involves any

material or substance likely to be scattered by the wind or air, or susceptible to being windborne or airborne that would be classified as air pollution without taking reasonable precautions or measures to minimize atmospheric pollution.

(b) No person shall cause or permit allow the discharge of any visible fugitive dust emissions beyond the property line on which the emissions originate.

252:100-23-7. Permit by rule

(a) ~~Applicability. Any new or existing facility may be constructed or operated under this section if it meets the requirements of 252:100-7-60(a), (b), and (c) and has the Standard Industrial Classification (SIC) code 0724 Cotton Ginning.~~

(b) Requirements.

(1) ~~In addition to the requirements in 252:100-7-60(a), (b), and (c), an owner or operator of a facility subject to this section shall comply with all of the requirements of this Subchapter.~~

(2) ~~Maximum production rate of a facility subject to this section shall be 36,000 bales per year.~~

ANALYSIS:

The proposed revisions to Oklahoma Administrative Code 252:100-24, Control of Emissions from Grain Elevators, will simplify the language under the agency-wide re-right/de-wrong initiative. It is also proposed to add a new Permit by Rule section to the subchapter that will streamline the permitting process by creating a mechanism that will eliminate the necessity for some grain elevators to obtain an individual air quality permit. Also, a new Appendix L is proposed which contains PM-10 emission factors for PBR grain elevators. Additional changes to the subchapter follow a proposed amendment of Subchapter 25 concerning short-term exceedances of the opacity standard. The revised rules would allow exceedances of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours.

PURSUANT TO THE ACTIONS DESCRIBED HEREIN, THE FOLLOWING RULES ARE CONSIDERED FINALLY ADOPTED AS SET FORTH IN 75 O.S., SECTION 308.1(A), WITH AN EFFECTIVE DATE OF JUNE 1, 1999.

SUBCHAPTER 24. CONTROL OF EMISSIONS FROM GRAIN ELEVATORS PARTICULATE MATTER EMISSIONS FROM GRAIN, FEED OR SEED OPERATIONS

252:100-24-1. Purpose

The purpose of this Subchapter is to control emissions from facilities that handle, store or process grains, feeds or seeds. All facilities handling bulk agricultural commodities through grain handling equipment can apply this subchapter to emission sources at the facilities.

252:100-24-2. Definitions

The following words and terms when used in this subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Enclosed Grain Handling Equipment" means equipment that is totally self-contained or is enclosed within a structure at a grain, feed, or seed facility. Emissions from this equipment shall not be exhausted to the atmosphere

except through non-pressurized vents/openings, and s not be considered a source subject to emission calculati

"Fugitive Emission" means those emission ee not reasonably pass through a stack, chimney, vent, or of functionally equivalent opening.

"Grain, Feed, or Seed Facility" means the contiguous adjacent area under common control upon which a gr elevator, feed mill, or grain and seed processing equipm or structures are located, and all contiguous sites hav common control, which have SIC codes with the first 4 digits that are identical to the first two digits of the SIC c for grain elevators, feed mills, or grain and seed process equipment.

"Grain, Feed, or Seed Operation" means any facility installation at which grain, feed, or seed is loaded, handl cleaned, dried, stored, treated, or otherwise processed.

"Leg Capacity" means the maximum process rate which the manufacturer designs the elevating portion o grain, feed, or seed facility on a per leg basis.

"Loading-out hours of operation" means the ho calculated by dividing the cumulative total quantity load out for a given time period by 75% of the rated leg capaci This quotient is equivalent hours (not actual hours) operation required to process the material loaded o Actual leg capacity may be adjusted to more or less than 75 by individual facilities if documentation supporting t proposed adjustment is submitted to and approved by t Director of the Air Quality Division Director.

"Non-pressurized Vent or Opening" means an opening which allows the emissions of air and/ contaminants at pressures substantially equivalent atmospheric pressure without the use mechanically-induced air flow.

"Pressurized Vent or Opening" means any vent opening which allows the emissions of air and/ contaminants at pressures greater than atmospher pressure indicating the use of mechanically-induced air flow

"Process Emission" means emissions from a proce equipment point source.

"Receiving hours of operation" means hours calculate by dividing the cumulative total quantity received for a give time period by 75% of the rated leg capacity. This quotie is equivalent hours (not actual hours) of operation require to process the material received. Actual leg capacity may t adjusted to more or less than 75% by individual facilities documentation supporting the proposed adjustment submitted to and approved by the Director of the Air Quali Division Director.

"Total hours of operation" means the sum of th receiving hours of operation and the loading out hours operation. Actual hours may be less since receiving ar loading-out operations may occur simultaneously.

252:100-24-3. General provisions: applicability, determination of emissions, Applicability, general requirements

(a) **Applicability.** The provisions of this subchapter a

applicable to all new, modified, and existing grain, feed, or seed facilities in the State of Oklahoma.

(1) Facilities in compliance with ~~OAC~~ 252:100-25, 252:100-27, and 252:100-29 are not required to comply with this subchapter.

(2) Facilities in compliance with this subchapter are exempt from the requirements of ~~OAC~~ 252:100-25 (visible emissions), 252:100-27 (process weight), and 252:100-29 (fugitive dust).

(b) General requirements.

~~(b)(1)~~ **Permits required.** In addition to the requirements of this subchapter, each new, modified or existing grain, feed, or seed facility shall comply with the permitting requirements of ~~OAC~~ 252:100-7 and/or 252:100-8.

~~(e)(2)~~ **Air toxics emissions.** Grain, feed, or seed facilities which that emit toxic air pollutants above the deminimis levels specified in 252:100-41 are subject to all applicable requirements contained therein.

~~(d)(3)~~ **Record-keeping.** The owner or operator of a facility shall maintain a daily log documenting the commodity receipts and load-outs and hours of operation for each. These records shall be maintained for a period of two years and shall be made available for inspection by the Air Quality Division personnel or its representative DEQ during normal business hours.

~~(e)(4)~~ **Visible emissions test.** Visible emissions (opacity) testing shall be conducted using EPA reference method 9 contained in 40 CFR, Part 60, Appendix A and must be performed by individual(s) possessing current certification a Certified Visible Emission Evaluator.

~~(e)(5)~~ **Determination of emissions.** Emissions from grain, feed, or seed facilities shall be determined by the best available data. This may include actual emissions as determined by stack testing, mass balance calculations, emission calculations using approved published emissions factors, or any other reasonably accurate method which can be shown to be reasonably accurate when supported by engineering data and calculations, and approved in advance by the Air Quality Division DEQ.

252:100-24-4. Smoke, Visible Emissions and Particulates Visible emissions (opacity) limit

(a) ~~Visible emissions limits~~ **Opacity limit.** No person shall cause, suffer, allow or permit the discharge of any fumes, aerosol, mist, gas, smoke, vapor, particulate matter or any combination thereof with a shade density exhibiting greater than twenty percent (20%) equivalent 20% opacity. This requirement shall not apply to smoke or visible emissions exhibiting greater than 20% opacity emitted during short-term occurrences, the shade or density of which is not greater than sixty percent (60%) opacity for a period aggregating no more than five minutes in any sixty consecutive minutes and/or no more than twenty minutes in

~~any consecutive twenty-four hour period which consist of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours, during which the average of any six-minute period shall not exceed 60% opacity.~~

(b) **Alternate emissions opacity limit.** The 20% opacity limits, ~~as a limit~~ required under 252:100-24-4 (a) may be increased for particulates only provided that the ~~owner/operator/owner or operator~~ demonstrates to the satisfaction of the ~~Oklahoma~~ Air Quality Council at public hearing that those requirements listed in 252:100-25-4 (a) through (c) have been met.

(c) **Exceptions.** Exceptions to the requirements described in 252:100-24-4 (a) ~~(1)~~ are provided as follows:

(1) Visible emissions from loading-out (shipping) shall be no more than sixty-five percent (65%) equivalent opacity, and visible emissions from unloading (receiving) shall be no more than fifty-five percent (55%) equivalent opacity.

~~(2) Emissions from pressurized or non-pressurized vents or openings with control devices shall be limited to no greater than twenty percent (20%) opacity at any time.~~

~~(3)(2)~~ Emissions from pressurized vents or openings without control devices shall either be enclosed, exhausted through a control device, or shall be limited to no greater than ten percent (10%) opacity at any time.

~~(4)(3)~~ Emissions from non-pressurized vents or openings without control devices shall be limited to no greater than 10% opacity at any time.

252:100-24-5. Emission control equipment and certification Certification

(a) **Standards.** Emission control equipment where required by (40 CFR 60.300) must meet the standards set under the Federal New Source Performance Standards (NSPS-Subpart DD), or as mandated by other Federal requirements for major sources. Additional controls may be required to reduce nuisance emissions.

(b) **Affected facilities.** Affected facilities shall make best efforts to reduce dust emissions during load-out by minimizing the distance from the load-out spout to the top of the receiving vessel.

(c) **Certification.** Each new, modified, or existing grain, feed or seed facility in the state of Oklahoma shall provide written certification of compliance with this subchapter within one year of the adoption of this Subchapter by the DEQ Board. Annual certification of receiving, loading-out, and total annual hours of operation, quantity received and loaded-out, visible emissions, and the operation and proper maintenance of any required control equipment shall be completed by the owner, operator or other designated responsible party and submitted as part of the annual emissions inventory reporting form.

(a) **Initial certification.** Any grain, feed or seed facility in existence on September 28, 1994, shall provide written

6015

certification of compliance with this subchapter by September 28, 1995, or within six months of receiving an initial certification form from DEQ.

(b) Annual certification. The owner, operator or other designated responsible party of a grain, feed or seed facility shall submit along with the annual emissions inventory, an annual certification of quantities received and loaded-out.

252:100-24-6. Fugitive dust controls

(a) All facilities will take reasonable precautions to prevent the discharge of any visible fugitive dust emissions beyond the property line from which the emissions originate.

(b) No persons shall allow visible fugitive dust emissions beyond the property line in such a manner as to damage or to interfere with the use of adjacent properties.

(c) All facilities shall make best efforts to reduce fugitive dust emissions during load-out by minimizing the distance from the load-out spout to the top of the receiving vessel.

252:100-24-7. Permit by rule

(a) Applicability. Any new or existing source may be constructed or operated under this section if it meets the requirements of 252:100-7-60(a), (b), and (c) and has the Standard Industrial Classification (SIC) code 5153, Grain and Field Beans.

(b) Requirements.

(1) In addition to the requirements in 252:100-7-60(a), (b), and (c), an owner or operator of a facility subject to this section shall comply with all of the requirements of this Subchapter, with the exception of 252:100-24-5(a) and (b).

(2) The total annual emissions of PM-10 shall be calculated using the equation provided in Appendix L, which was derived from AP-42 9.9.1, Grain Elevators and Processes.

(3) For grain storage elevators located at any wheat flour mill, wet corn mill, dry corn mill, rice mill or soybean oil extraction plant, with a permanent grain storage capacity of 35,200 m³, or grain terminal elevators with a permanent storage capacity of more than 88,100 m³, which have commenced construction, modification, or reconstruction after August 3, 1978, the requirements of 40 CFR, Part 60, Subpart DD are also applicable.

Permanent Final Adoptions

APPENDIX L. PM-10 EMISSION FACTORS FOR PERMIT BY RULE FOR GRAIN ELEVATORS [NEW]

$$\left[\frac{R}{45} + \frac{S}{92} \right] \times 40 = \text{Combined Emissions (TPY)}$$

Where, R = Annual Grain Received (millions of bushels)
S = Annual Grain Shipped (millions of bushels)

*To qualify for Permit by Rule, the total annual combined emissions must be less than 40 TPY.

January 3, 1993

M E M O R A N D U M

TO: Air Quality Council

FROM: *LD* Larry D. Byrum, Director
DMC Air Quality Division

SUBJECT: Feed and Grain Rule Update

During the public hearing to adopt revised subchapter 7 and new subchapter 8, the Oklahoma Feed and Grain Association made comments concerning the need for rules specific to their industry. In response to these comments, the staff indicated it would update the Council of the status of efforts to draft grain storage and handling technology specific rules.

The staff has been working with the grain industry for over two years to assure they were aware of the potential impacts of the forthcoming major source operating permit program requirements under 40 CFR Part 70 and to minimize these impacts as much as possible. And to draft a technology based rule specific to the grain storage and handling industry similar to what has been developed for the cotton ginning industry via subchapter 23. Several discussion meetings have been held and some progress has been made in enlightening the industry of the impacts of Part 70 permitting, but we have experienced difficulties in drafting a proposed rule for grain storage and handling sources. These difficulties include the determination of reliable emission factors, central equipment collection efficiencies, and reasonable economically available control methodology.

In the spring of 1993, the staff proposed a draft rule (attached) to the Grain Industry for their consideration and comments. Their response (attached) was received December 7, 1993. As you can see, there is considerable differences between the two proposals; however, both the grain industry and AQD have contacted Dr. Bill Barfield and his staff of the Oklahoma State University Agricultural Economics Section for assistance and advice in developing a grain storage and handling technology specific rule that is appropriate for the State of Oklahoma.

DRAFT

SUBCHAPTER 24. Control of Emissions from Grain Elevators

Section

- 310:200-24-1 Purpose
- 310:200-24-2 Definitions
- 310:200-24-3 General provisions: applicability
- 310:200-24-4 Smoke, visible emissions, and particulate
- 310:200-24-5 Emissions control equipment
- 310:200-24-6 Fugitive dust controls

310:200-24-1. Purpose

The purpose of this rule is to control particulate emissions from grain elevators.

310:200-24-2. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Elevator site" means the area upon which a grain elevator is located and all contiguous land having common ownership or control.

"Existing elevator" means a grain elevator which was in existence and has submitted a current accurate emission inventory to the Air Quality Service for the years 1990 and 199³. All other grain elevators shall be considered "new".

"Fabric filter" means any control device or system in which particulate matter is collected within a dust cake supported on either a woven or felted fabric that can demonstrate a particulate collection efficiency of not less than 95 percent.

"High efficiency cyclone" means any cyclone type collector of the 2D-2D or 1D-3D configuration, designations referring to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion. A 2D-2D cyclone would exhibit a cylinder length of 2 X D and a cone length of 2 X D (90 percent collection efficiency for TSP). A 1D-3D cyclone would exhibit a cylinder length of 1 X D and a cone length of 3 X D (95 percent collection efficiency for TSP).

"Grain elevator" means any plant or installation at which grain is loaded, unloaded, handled, cleaned, dried, stored, or treated for commercial purposes.

310:200-23-3. General Provisions; applicability

(a) Applicability. The provisions of this Subchapter are applicable to all new, modified, and existing grain elevators operating in the State of Oklahoma. Grain Elevators in compliance with this Subchapter are exempt from the requirements of OAC 310:200-25, 310:200-27, and 310:200-29.

(b) Permits required. In addition to the requirements of this Subchapter, each new or modified Grain elevator shall comply with the permitting requirements of OAC 310:200-7.

(c) Air Toxics emissions. The requirements of this Subchapter are in addition to any which may be required under OAC 310:200-41.

(d) Record-keeping. The owner or operator of a grain elevator shall maintain a log documenting the daily process weight and hours of operation and air emissions control equipment replacement/repair cost. These records shall be maintained for a period of two years and shall be made available for inspection by the Air Quality Service personnel or its representative during normal business hours.

(e) Test methods.

(1) Visible emissions testing shall be conducted using EPA reference method 9 contained in 40 CFR Part 60, Appendix A and be performed by an individual possessing current certification.

(2) Dispersion modeling for PM-10 shall be performed using an EPA approved modeling method.

(f) Effective date. This Subchapter shall become effective ??????.

300:200-24-4. Smoke, visible emissions, and particulates

(a) Visible Emissions limit.

(1) Emissions limit. No person shall cause, suffer, allow or permit discharge of any fume, aerosol, mist, gas, smoke, vapor, particulate

matter or any combination thereof a shade or density greater than twenty (20) percent equivalent opacity. This requirement shall not apply to smoke or visible emissions emitted during short-term occurrences, the shade or density of which is not greater than sixty (60) percent opacity for an period aggregating no more than five (5) minutes in any sixty (60) consecutive minutes and/or no more than twenty (20) minutes in any consecutive 24-hour period.

(2) Alternative emissions limit. The twenty (20) percent opacity limit as required under 310:200-23-4(a) may be increased for particulates only provided that the owner/operator demonstrates to the satisfaction of the Oklahoma Air Quality Council at public hearing that those requirements listed in 310:200-25-4(a) through (c) will be met.

(b) PM-10 emissions limit. No grain elevator shall impact the ambient air quality in such a manner as to violate the primary PM-10 standard of 50 ug/m³ annual arithmetic mean or 150 ug/m³ 24-hour average or any other ambient air standard established by OAC 310:200-3.

310:200-24-5. Emissions Control Equipment

(a) Grain turning and Conditioning.

(1) Elevators with a rated turning rate equal to or greater than 10,000 bushels per hour shall for emission control utilize, at a minimum, a fabric filter or other control equipment of equivalent collection efficiency.

(2) Elevators with a rated turning rate of less than 10,000 bushels per hour shall for emission control utilize, at a minimum, an A.E.C. long cone high efficiency cyclone or other control equipment of equivalent efficiency.

(b) Grain loading and unloading.

(1) Elevators located within the corporate city limits of any city or within 300 feet of two or more occupied establishments shall for the control of fugitive emissions utilize the following: wind screening/enclosure on at least three sides (without truck lift) or wind screening/enclosure on two sides (with a truck lift); and negative air pressure (suction) on the dumping area or pit created by a properly sized suction fan which will be exhausted through a properly sized A.E.C. long cone high efficiency cyclone or other control equipment of equivalent collection efficiency; or other control equipment of equivalent collection efficiency.

(2) Elevators located outside the corporate city limits of any city and greater than 300 feet from two or more occupied establishments shall for the control of fugitive emissions, at a minimum, utilize wind screening on at least two sides of the dumping area or pit, or control equipment of equivalent collection efficiency.

310:200-24-6. Fugitive dust controls

(a) For control of fugitive dust; except as provided in OAC 310:200-24-5(b) (1) and (4); no person shall cause or permit the handling,

transporting, or disposition of any substance or material which is likely to be scattered by the air or wind, or is susceptible to being airborne, or wind-borne, or to operate or maintain or cause to be operated or maintained, any grain elevator premise, open area, right-of-way, storage pile or materials, vehicle, or construction, or any other enterprise which involves any material or substance likely to be scattered by the wind or air, or susceptible to being wind-born or air-born that would be classified as air pollution without taking reasonable precautions or measures to minimize atmospheric pollution.

(b) No person shall cause or permit the discharge of any visible fugitive dust emissions beyond the property line on which the emissions originate.

rev. # 3 (9/11/92)

AIR QUALITY COUNCIL

Minutes

January 11, 1994

1:00 p.m.

OKLAHOMA STATE DEPARTMENT OF ENVIRONMENTAL QUALITY

Council Members Absent

Mary Tillman

Guests Present

(See attached list)

PUBLIC MEETING

Notice of Public Meeting was forwarded to the Secretary of State's Office giving the time, date, and place of the meeting. Agendas were posted at the basement entrance, first floor entrance at the Oklahoma State Department of Health building and the entrance door of the meeting room at the Lincoln Plaza location.

Call to Order - Mr. Breisch called the meeting to order and roll call was taken. All members were present except Ms. Tillman. Mr. Breisch stated that the items on the Meeting portion of the Agenda would be discussed along with continuation of discussion of the resolutions from the morning briefing.

Approval of Minutes - Mr. Kilpatrick made detailed suggestions for corrections to the October 19, 1993 Minutes. Ms. Hinkle made motion to accept the Minutes as amended with second by Mayor Taron. Roll call was taken as follows: Mayor Taron - aye; Dr. Canter - aye; Ms. Hinkle - aye; Dr. Hughes - aye; Mr. Fishback - aye; Mr. Kilpatrick - aye; Ms. Slagell - aye; Mr. Breisch - aye.

Approval of 1994 Meeting Schedule - Discussion was held regarding having a regularly scheduled meeting in Stillwater or at places other than Oklahoma City or Tulsa. If a new location became an option, Council would be notified and scheduling would be made. A motion was made by Mayor Taron to accept the meeting dates as presented:

March 8 in OKC	--	April 12 in Tulsa
June 14 in OKC	--	August 9 in Tulsa
October 11 in OKC	--	December 13 in OKC.

Second was made by Mr. Kilpatrick. Roll call taken as follows: Mayor Taron - aye; Dr. Canter - aye; Ms. Hinkle - aye; Dr. Hughes - aye; Mr. Fishback - aye; Ms. Slagell; Mr. Breisch - aye.

Election of Officers - Mr. Breisch entertained a motion that a chairman and a vice chairman be elected in accordance with the Oklahoma Clean Air Act. Dr. Hughes moved that Mr. Breisch be elected as Chairman and that Dr. Canter be elected as Vice-Chairman. Motion seconded by Mr. Kilpatrick. With no discussion or other nominations; roll call was taken as follows: Mayor Taron - aye - Dr. Canter - aye - Ms. Hinkle - aye; Dr. Hughes - aye; Mr. Fishback - aye; Mr. Kilpatrick - aye; Ms. Slagell - aye; Mr. Breisch - aye.

RESOLUTIONS

GREEN LIGHTS PROGRAM

Mr. Breisch reiterated statements from the morning briefing. With discussion, Mr. Kilpatrick moved that the Council pass a resolution substantially like the draft presented by the Staff except that it would apply to the Green Lights Program only and the fourth paragraph should be in the singular not the plural. Second made by Mr. Fishback. Roll call was taken on this resolution as follows: Mayor Taron - aye; Dr. Canter - aye; Ms. Hinkle - aye; Dr. Hughes - aye; Mr. Fishback - aye; Mr. Kilpatrick - aye; Ms. Slagell - aye; Mr. Breisch - aye. A copy of the Resolution is attached as an addendum to the Minutes.

UNIFORM PUBLIC PARTICIPATION IN THE PERMITTING PROCESS

Mr. Breisch stated that according to discussion held in the Briefing Session that the Council has insufficient information to approve this resolution.

Mr. Byrum pointed out that the issue concerns statutory language to define uniform public participation in the permit review; that the Council would be supporting the Department in developing statutory language that would require this public participation process, and the major change in this process requires major sources to advertise the opportunity for a meeting when they file an application.

Mr. Kilpatrick felt one of the key issues was the lack of ability for the Air Quality Council or any of the other Councils to get involved in the drafting of language.

Ms. Hinkle felt that a reasonable legislation needs to be pursued.

Mr. Steve Thompson addressed the Council stating that the Agency would like to go to the legislature with a united front. He stated that it is the position of the Executive Director's office to make the processes under the DEQ as open to all the citizens as resources and capabilities allow. Mr. Thompson pointed out that the Statutes reflected the specific permitting process for Hazardous Waste, Solid Waste, Air Quality, and Water Quality and that changes were needed to bring them into conformity with the single permitting process. He stated the issue concerned refining the public participation process by statute in each one of these areas, and that it was logical outgrowth that the DEQ be a one-stop shop.

Dr. Hughes commented that he was personally not opposed and would encourage public participation, but would not support any resolution without sufficient information.

Mr. Thompson stated it was very important for DEQ to go to the legislature with support of the Councils and that the process would probably go forward, but it certainly would be in the best interest of the uniform process to have all the Councils' support.

Mr. Fishback asked the Council to craft a resolution that could be supported.

Mr. Breisch felt the Council was being asked to support legislation that would allow for tracking of permits and he expressed he could support a uniform application, as there was a need for it.

Ms. Slagell stated that she could not support this resolution without sufficient information.

Ms. Hinkle agreed that more information should have been made available but she could support the concept with details being filled in later.

Dr. Hughes remarked he would not vote to endorse specific legislation at this time; but could support a concept.

Mr. Breisch stated that industry needs something like this concept and felt that progress should not be stopped.

Mr. Kilpatrick read his suggestion for wording of the resolution: starting with the second paragraph and say "WHEREAS, the DEQ Board is evaluating the need for amendments or additions to Oklahoma Statutes regarding uniform public participation in the permitting process, and; WHEREAS, the implementation of such legislation should provide the citizens of Oklahoma with a more healthful environment through effective, efficient measures; NOW, THEREFORE, BE IT RESOLED BY THE AQC that the Council supports and endorses Board's efforts in this legislative initiative and encourages the AQD staff to assist in it's development."

Dr. Hughes stated he was in favor of participation, but was concerned that the Council's strength was being dwindled away and that the Council was having less input. He remarked he did not feel comfortable with the situation.

Mayor Taron stated that he would strongly support the concept of uniform public participation but it should be made clear that the Council is supporting a concept and not some unseen statute.

Ms. Hinkle felt that the Council should encourage development of the legislation.

Mr. Fishback endorsed the concept, but remarked that he wanted to encourage the Board to solicit advice from the Councils.

Mr. Kilpatrick made a new proposal to the beginning of the original draft resolution by adding, "We do not believe that we have received sufficient facts or information about the details of the Board's deliberations for a legislative initiative regarding uniform public participation in the permitting process in order to pass the proposed resolution."

Dr. Canter suggested that this paragraph be put at the bottom because that is the conclusion.

Mr. Kilpatrick suggested adding the wording "We encourage the Board to solicit input from the Air Quality Council in the development of such legislation."

A motion made by Mr. Kilpatrick to accept a resolution on uniform public participation as read and amended. Second was made by Ms. Slagell with roll call as follows: Mayor Taron - aye; Dr. Canter - aye; Ms. Hinkle - no; Dr. Hughes - aye; Mr. Fishback - aye; Mr. Kilpatrick - aye; Ms. Slagell - aye; Mr. Breisch - aye. A copy of the Resolution is attached as an addendum to the Minutes.

INSPECTION-MAINTENANCE RESOLUTION (I&M)

Mr. Breisch pointed out how close Tulsa has come to nonattainment and what a nonattainment classification would mean to the State. He acknowledged that he wanted this legislation and for several years had hoped to get something underway in the form of I&M. He stated that I&M is supported by the numerous communities within several states that they have had it in place for several years. He suggested that the Council support this legislation.

Mr. Byrum added that the author of the House Bill is Representative Larry Rice and that his skeleton bill directs the Agency and Air Quality Council to develop rules and regulations that will cover details of the program including model years of cars covered, cut-points, failure rates, repair costs, and fee structure. Mr. Byrum stated that all of these things will be discussed and decided in this forum.

Mr. Fishback related that he definitely supported an I&M program to maintain attainment in Tulsa and Oklahoma Counties subject to the results of comparative cost benefit analysis for available VOC control options.

Mr. Kilpatrick agreed with the analysis and supported the legislation.

The staff pointed out to the Council that I&M has benefits not obtained through the fuels program in that I&M offers control on both hydrocarbons, carbon monoxide and NOX. It was stated that Oklahoma City has had a problem with CO, and that Tulsa CO levels appear to be climbing, and that the I&M Program is about the only technology available other than oxygenated fuels for CO controls. It was pointed out that in Tulsa, the best control strategy might involve a mix of fuel control and I&M. It was pointed out that the oxygenated fuels program is receiving criticism because of possible health effects and that there are not any negative health effects from the I&M Program.

Mr. Fishback wanted to see in any legislation the Council endorses or proposes that antique vehicles (like '57 T-Bird) are certified legal prior to the implementation of the program and would get a waiver to continue.

Mr. Byrum pointed out that this program would involve passenger cars and one-ton and smaller trucks and that the fee is a cap derived from number of things.

Mr. Breisch entertained a motion to support legislation on the Inspection and Maintenance Program.

Mr. Kilpatrick moved the same motion that was passed for Green Lights except to substitute "Automobile Inspection & Maintenance" for "Green Lights".

Dr. Canter made the suggestion to add the word "and" between Inspection/Maintenance.

With second made by Ms. Hinkle, roll call taken as follows: Mayor Taron - aye; Dr. Canter - aye; Ms. Hinkle - aye; Dr. Hughes - aye; Mr. Fishback - aye; Mr. Kilpatrick - aye; Ms. Slagell - aye; Mr. Breisch - aye. A copy of this Resolution is attached as an addendum to the Minutes.

LEAD-BASED PAINT RESOLUTION

In discussion, Mr. Byrum advised that this bill will address the risks associated with children subjected to lead-based paint in pre-1978 homes. He said that the focus of the legislation would be to license and train contractors to do the removal or the capsuling of the hazard, and set up a certification process for laboratories that test to ascertain the presence of lead. He related that this is a retry of what was attempted in last year's legislation.

Mr. Kilpatrick offered to write a specific resolution stating that the Council supports legislation to protect contractor's involved in lead remediation projects and is concerned about contractors who are removing lead; but that the Council has not been given sufficient information. He recommended a resolution like the uniform public participation but changing the wording to involve lead-based paint only. Motion was made by Ms. Slagell to adopt a resolution using Mr. Kilpatrick's wording. Second was made by Dr. Canter with roll call as follows: Mayor Taron - aye; Dr. Canter - aye; Ms. Hinkle -no; Dr. Hughes -aye; Mr. Fishback - aye; Mr. Kilpatrick - aye; Ms. Slagell - aye; Mr. Breisch - aye. A copy of the Resolution is attached as an addendum to the Minutes.

Since the Resolutions were not immediately redone showing the new wording for each, blank signature pages were signed by the Council members.

Other Business - None.

Next Meeting - The next regular meeting will be held March 8 at the Lincoln Plaza Office Complex BROWN ROOM, Oklahoma City.

Meeting adjourned with a unanimous roll call vote.

William B. Breisch, Chairman
Air Quality Council

Larry B. Byrum, Director
Air Quality Division

AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
SPECIAL MEETING
AIR QUALITY COUNCIL

A Public Meeting: March 3, 1994, 1:00 p.m.
WHEELER BROTHERS GRAIN COMPANY
WATONGA, OKLAHOMA
KINGFISHER, OKLAHOMA

MEETING

- | | |
|--|------------------|
| 1. Call to Order | Chairman |
| 2. Roll Call | Secretary |
| 3. TOUR OF GRAIN HANDLING AND STORAGE FACILITY
Wheeler Brothers Grain
501 Russworm Drive
Watonga, OK | |
| then time permitting, to:
Wheeler Brothers Grain
13th & Robberts
Kingfisher, OK | |
| 4. ADJOURNMENT
Next meeting - March 8, 1994
Lincoln Plaza Office Complex
4545 N. Lincoln Boulevard
BROWN ROOM | Chairman |

SUBCHAPTER 24. Particulate Matter Emissions from Grain Elevators, Feedmills and Grain or Seed Operations.

252:100-24-1. Purpose

The purpose of this rule is to modify existing state air quality rules and to control the amount of particulates from facilities that handle, store or process grains, feed, or seed, as required by the 1990 Federal Clean Air Act. This subchapter supersedes other rules and regulations which are more stringent than Federal requirements, or which may be demonstrated to not adversely affect the environment.

252:100-24-2. Definitions

The following words and terms when used in this subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Grain, Feed, and Seed Operation" means any commercial plant or installation at which grain, feed, or seed is loaded, handled, cleaned, dried, stored, treated, or otherwise processed.

"Grain Feed and Seed Operations Site" means the area upon which a grain elevator, feedmill, or grain and seed processing equipment or structures are located, and all contiguous sites having common ownership or control, which have the same two digits of their SIC code.

"Existing Grain Feed and Seed operation" means a facility which is in existence and has submitted a current, accurate emission inventory to the Air Quality Division for the 1993 reporting period year. All other Grain Feed and Seed operations shall be considered new.

"Fabric filter" means any other control device or system in which particulate matter is collected within a dust cake supported on either a woven or felted fabric that can demonstrate a particulate collection efficiency of not less than 95 percent.

"Fugitive Emission" means those emissions that could not reasonably pass through a stack, chimney, vent or other functionally equivalent opening.

"High efficiency cyclone" means any cyclone type collector of the 2D-2D or 1D-3D configuration, designations referring to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion. A 2D-2D cyclone would

exhibit a cylinder length of 2 x D and a cone length of 2 x D. A 1D-3D cyclone would exhibit a cylinder length of 1 x D and a cone length of 3 x D. The efficiencies of these cyclones are 90% and 95% respectively.

"Dust suppression additives" means FDA or FGIS approved additives applied commercially for dust suppression. The efficiencies of these additives are 90%.

"Process Emission" means particulate matter that is emitted from a point source that can cross property boundaries.

"Throughput" Shall mean the pounds, tons, or bushels recieved added to the pounds, tons, or bushels loaded out divided by two.

252:100-24-3. General Provisions; applicability, calculations

(a) Applicability. The provisions of this Subchapter are applicable to all new, modified, and existing Grain, Feed, and Seed operations in the State of Oklahoma. Facilities in compliance with this subchapter are exempt from the requirements of OAC 310:200-25, 310:200-27 and 310:200-29.

(b) Permits required. In addition to the requirements of this subchapter, each new or modified facility shall comply with the permitting requirements of OAC 310:200-7,

(1) Except when the following exemptions for commercial facilities apply:

(A) The total storage capacity of the new and any existing facility or facilities does not exceed 1,500,000 bushels.

(B) The facility shall be located at least 1/2 mile from any recreational area or residence or other structure not occupied or used solely by the owner or operator of the facility or the owner of the property upon which the facility is located.

(C) Before construction of the facility begins, written site approval shall be received from the Director of the Air Quality Division.

(2) The installation of additional grain storage capacity which satisfies the following conditions:

(A) There shall be no increase in hourly grain handling capacity.

(B) Existing grain recieving and loadout facilities are utilized.

(C) Grain shall be conveyed by closed conveying systems and air suction shall not be pulled on any conveying unit.

(3) The minor source facilities subject to this subchapter shall be exempt from annual operating fees as required in OAC 252:100-7-4 (b).

(c) Record-keeping. The owner or operator of a facility shall maintain (daily) log documenting the commodity throughput or hours of operations required by the permit. These records shall be maintained for a period of two years and shall be made available for inspection by the Air Quality Division personnel or its representative during normal business hours.

(d) Visible emissions (opacity) will not be monitored ^{or} enforced except as required on facilities subject to the Federal New Source Performance Standards, the required testing will be performed using criteria as established by EPA reference Method 9 contained in 40 CFR, Part 60, Appendix

(e) Process Weight Rate; Maximum process weight rate emissions shall be calculated as follows:

ALLOWABLE RATE OF EMISSION
BASED ON PROCESS WEIGHT RATE

PROCESS WEIGHT RATE pounds/hour	RATE OF EMISSIONS pounds/hour
1,000	1.6
1,500	2.4
2,000	3.1
2,500	3.9
3,000	4.7
3,500	5.4
4,000	6.2
5,000	7.7
6,000	9.2
7,000	10.7
8,000	12.2
9,000	13.7
10,000	15.2
12,000	18.2
14,000	21.2
16,000	24.2
18,000	27.2
20,000	30.1
30,000	44.9
40,000	59.7
50,000	64.0
60,000	67.4
70,000	70.5
80,000	73.2
90,000	75.7
100,000	78.1
150,000	87.7
200,000	95.2
250,000	101.5
500,000	123.9

Interpolation of the data in this table for process weights

up to 40,000 pounds per hour (lb/hr) shall be accomplished by the use of the equation $E = 3.12 (p 0.985)$, and interpolation and extrapolation of the data for process weight rates in excess of 40,000 lb/hr shall be accomplished by use of the equation $E = 25.4 (p 0.287)$ where E = rate of emission in lb/hr and P = process weight rate in tons per hour.

(f) Emission Calculations for uncontrolled emissions points; Appropriate emission factors shall be obtained using the PM-10 factors found in the AIRS facility subsystem source classification codes (SCCs) and emission factor listing criteria pollutants (EPA-450/4-90-003), or a 70% reduction adjustment from the appropriate AP-42 table factors. Reduction Sources; [Sieve analysis, Table 16, Midwest Research Institute Report "Potential Dust Emissions From Grain Elevators", Kansas City, MO. May, 1974..... AP-42 Appendices 11-2....Chapter 3, Estimates of Atmospheric Dispersion, Bruce Turner, EPA Research, Triangle Park, NC "Prevention of Dust Explosions In Grain Elevators- An Achievable Goal" United States Department of Agriculture, Task Force Report..... "Impact Study of Prohibiting Recombining Recirculation Dust at Export Elevators" Department of Agricultural Engineering, Texas A&M University.

(g) Emission calculations for controlled emission points; shall be calculated as above, times the efficiency of the control equipment.

Emissions shall be calculated from the following facility sources:

- i] receiving
- ii] load-out
- iii] exhausts from pneumatic dust control
- iiii] any non- enclosed transition that not entirely enclosed within the facility, or transitions that are exposed directly to the atmosphere.

Enclosed grain handling equipment that is without pneumatic dust control equipment shall not be considered a point subject to emission calculations.

252:100-24-4. Emission Control Equipment

Emission Control Equipment must meet the standards set under the Federal New Source Performance Standards, or as mandated by other Federal requirements for major sources. Additionally controls may be required to circumvent nuisance emissions which effect surrounding people or establishments.

252:100-24-5. Fugitive Dust Controls.

All facilities will take reasonable precautions to

prevent the discharge of any visible fugitive dust emissions beyond the property line from which the emissions originate.

AIR QUALITY COUNCIL
Minutes
Special Meeting March 3, 1994
Wheeler Brothers Grain Facilities
Watonga and Kingfisher, Oklahoma
1:00 p.m.

OKLAHOMA STATE DEPARTMENT OF ENVIRONMENTAL QUALITY
AIR QUALITY DIVISION
4545 NORTH LINCOLN, SUITE 250
OKLAHOMA CITY, OKLAHOMA

Council Members Present

William B. Breisch, Chairman
Gary A. Kilpatrick
Kathryn Hinkle
Meribeth Slagell
Bill Fishback
Michael Hughes

Staff Present

Larry Byrum
Doyle McWhirter
Larry Trent
Deborah Perry
Myrna Bruce

Council Members Absent

Mary Tillman
Pierre Taron
Larry Canter

Guests Present

(See attached list)

PUBLIC MEETING

Notice of Public Meeting was forwarded to the Secretary of State's Office giving the time, date, and place of the meeting. Agendas were posted at the Wheeler Brothers Facility in Watonga, OK and at their Facility in Kingfisher, Ok.

Call to Order - Mr. Breisch called the meeting to order and roll call was taken. All members were present except Ms. Tillman, Dr. Canter, and Mayor Taron. Mr. Breisch stated that after the presentations, the Council would tour the facility, then go to Kingfisher and would automatically adjourn in Kingfisher.

Rick Treman, Safety Director, W. B. Johnston Company, introduced Ronald T. Noyes, P.E., Extension Agricultural Engineer, Agricultural Engineering and Biosystems, Oklahoma State University, who presented slides of the Watonga facility and explained what would be seen during the tour. Phil Kenkel, Extension Economist, Agricultural Economist, Oklahoma State University, presented a handout written in "layman's" terms and answered questions from the Council. Then Mr. Treman presented diagrams of the structure. The Council and guests were taken on the tour of the facility.

Individual questions were answered by guides furnished by the Grain and Feed Association.

The Tour then left Watonga and visited the Wheeler Brothers Grain Company in Kingfisher where demonstrations of the processes were witnessed.

Next Meeting - The next regular meeting will be held March 8 at the Lincoln Plaza Office Complex BROWN ROOM, Oklahoma City.

 4/12/94

February 23, 1994

MEMORANDUM

TO: AIR QUALITY COUNCIL

FROM: *DM* Doyle McWhirter

SUBJECT: Proposed Subchapter 24, Control of Emissions From Grain Elevators

To understand the intent of proposed Subchapter 24 it should be understood that existing Subchapters 25, 27 and 29 have been applicable to the grain elevator industry since January 1973 and are now part of the SIP. Application of these rules has been slow due to limited AQD staff, except for complaint investigations. Historically, determination of compliance for grain elevators has been difficult because of emission factors reliability, expense of stack test, etc. However, with the recent passage of CAAA 90 and 40 CFR Part 70 permitting requirements, many of the Oklahoma grain elevators will be defined as Part 70 major sources. The intent of the proposed Subchapter 24 is to allow for:

1. Easier and less expensive determination of compliance status by elevator managers and AQD staff;
2. Establishment of enforceable limitations for grain elevators to avoid Part 70 permitting requirements;
3. Increasing VE allowable from 20% to 30% opacity for loading and unloading processes.

Attached is a copy of proposed OAC 252 100-24, entitled Control of Emissions from Grain Elevators. Subchapter 24 has been drafted to be very similar to the recently adopted Subchapter 23 - Control of Emissions from Cotton Gins. Proposed Subchapter 24 is a technology/performance standard-based and industry-specific rule. One of the major advantages of this rule is that grain elevator operators who are VE certified can make self determinations of their own compliance status. This should result in more facilities being able to maintain compliance status. Compliance with proposed Subchapter 24 exempts grain elevators from Subchapters 25, 27 and 29. However, it is not a relaxation of any compliance requirement except that section 24-4(a)(3)(A) increases allowable VEs from 20% to 30% opacity for loading and unloading processes. This change was made as a result of grain elevator industry representatives having indicated that the 20% opacity limitation for these processes was too restrictive and often could not be complied with.

The AQD staff has participated in several meetings and discussions with grain elevator representatives, as depicted in the attached chronology, in drafting proposed Subchapter 24. Since the January 1994 Council meeting it has been concluded that the various feed manufacturing, seed cleaning and milling facilities proposed in previous drafts submitted by the Grain and Feed Association should not be included in this rule.

Most feed manufacturing and flour milling operations are well controlled since particulate emissions equate to valuable product and Part 70 permitting requirements to these facilities is probable. These types of facilities utilize various processes which are designed for specific products. Therefore, developing a generic rule which would encompass all possible variations of these facilities would be far more complex than time allows. Also, nearly all discussions with the Feed and Grain Industry regarding proposed Subchapter 24 have centered around issues associated with the grain elevation and storage processes.

Section 24-5 Emission Control Equipment establishes enforceable limitations and requires certification of these limitations. This procedure provides the grain industry the opportunity to avoid Part 70 permitting requirements without the necessity of obtaining a permit. The certification is necessary to allow for review to assure that Part 70 permitting requirements have been avoided. There are situations where Part 70 permitting cannot or may not have been avoided, For instance, a 100 ton/yr emitted (controlled) will be a Part 70 source.

In conclusion, copies of materials which are pertinent to consideration of Subchapter 24 are included for your review. It is appropriate also to point out that proposed Subchapter 24 does not involve permit fees. The topic of fee is addressed in Subchapter 7 which is now an emergency rule. The only way that Subchapter 24 can affect fees is by changing an elevator from a Part 70 major source to State minor source.

The AQD staff while drafting this rule has received input from the affected industry, neighboring states and EPA has accomplished literature research. The staff feels that an appropriate draft proposal is being provided which does not result in a relaxation except for 24-4 (a) (3) (A) of currently existing applicable state and SIP rules. This proposal contains several advantages for the affected industry, one of which is the potential to avoid Part 70 permitting requirement.

SUBCHAPTER 24. CONTROL OF EMISSIONS FROM GRAIN ELEVATORS

252:100-24-1 Purpose

The purpose of this rule is to control emissions from grain elevators, which elevate and store grains.

252:100-24-2 Definitions

The following words and terms when used in this subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Grain elevator" means any commercial plant or installation at which grain is loaded, handled, stored, treated, or otherwise processed.

"Grain elevator site" means the area upon which a grain elevator is located, and all contiguous or adjacent properties having common ownership or control, which have the same first two digits of their SIC code.

"Fabric filter" means any control device or system in which particulate matter is collected within a dust cake supported on either a woven or felted fabric that can demonstrate a particulate collection efficiency of not less than 99%.

"High efficiency cyclone" means any cyclone type collector of the 2D-2D or 1D-3D configuration (refers to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion). A 2D-2D cyclone would exhibit a cylinder length of 2 X D and a cone length of 2 X D. A 1D-3D cyclone would exhibit a cylinder length of 1 X D and a cone length of 3 X D. These cyclones shall be capable of demonstrating collection efficiencies of 90% (2D-2D) and 95% (1D-3D) for particulate matter.

"Leg capacity" means the maximum process rate for which the elevating portion of a grain elevator is designed. When multiple legs are present only those which could operate simultaneously would contribute to the overall maximum leg capacity.

"Medium efficiency cyclone" means any cyclone type collector of the 1D-1D configuration (refers to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion). A 1D-1D cyclone would exhibit a cylinder of 1 X D and a cone length of 1 X D. These cyclones shall be capable of demonstrating a collection efficiency of 75% for particulate matter.

"Non-pressurized vents or emission points" means any vent or opening which allows the flow of air and/or contaminants at atmospheric pressure without the use of mechanically-induced air flow.

252:100-24-3 General provisions; applicability

(a) **Applicability.** The provisions of this subchapter are applicable to all new, modified and existing grain elevators in the state of Oklahoma.

(1) Grain elevators in compliance with OAC 252:100-25, 252:100-27 and 252:100-29 are not required to comply with this subchapter.

(2) Grain elevators in compliance with this subchapter are exempt from the requirements of OAC 252:100-25, 252:100-27 and 252:100-29.

(b) **Permits required.** In addition to the requirements of this Subchapter, each new or modified grain elevator shall comply with the permitting requirements of OAC 252:100-7 and 252:100-8.

(c) **Air toxics emissions.** Grain elevators which emit toxic air pollutants above the de minimus levels specified in 252:100-41 are

subject to all applicable requirements contained therein.

(d) **Recordkeeping.** The owner or operator of a grain elevator shall maintain a daily log documenting the commodity throughput and hours of operation. These records shall be maintained for at least two years and shall be made available for inspection by the Air Quality Division personnel or its representative during normal business hours.

(e) **Test methods.** Visible emissions (opacity) testing shall be conducted using EPA reference Method 9 contained in 40 CFR, Part 60, Appendix A and be performed by an individual possessing current certification.

(f) **Determination of emissions.** Emissions from grain elevators shall be based on the best available data. This may include actual emissions as determined by stack testing, mass balance calculations, emissions calculations using approved published emissions factors or other methods approved by the Air Quality Division.

252:100-24-4 Smoke, visible emissions and particulates

(a) **Visible emissions limit.**

(1) **Emissions limit.** No person shall cause, suffer, allow or permit discharge of any fumes, aerosol, mist, gas, smoke, vapor, particulate matter or any combination thereof with a shade or density greater than twenty (20) percent equivalent opacity. This requirement shall not apply to smoke or visible emissions emitted during short-term occurrences, the shade or density of which is not greater than sixty (60) percent opacity for a period aggregating no more than five (5) minutes in any sixty (60) consecutive minutes and/or no more than twenty (20) minutes in any consecutive 24-hour period.

(2) **Alternative emissions limit.** The opacity limits, as required under 252:100-24-4(a) may be increased for particulates only provided that the owner/operator demonstrates to the satisfaction of the Oklahoma Air Quality Council at public hearing that those requirements listed in 252:100-25-4(a) through (c) have been met.

(3) **Exceptions.** Exceptions to the requirements described in 252:100-24-4(a)(1) are provided as follows:

(A) emissions from loading (shipping) and unloading (receiving) shall be limited to no greater than thirty (30) percent opacity. This requirement shall not apply to smoke or visible emissions emitted during short-term occurrences, the shade or density of which is not greater than sixty (60) percent opacity for a period aggregating no more than five (5) minutes in any sixty (60) consecutive minutes and/or no more than twenty (20) minutes in any consecutive 24-hour period.

(B) emissions from non-pressurized vents or emission points shall either be exhausted through the required control equipment described in 252:100-24-5 or shall be limited to no greater than ten (10) percent opacity at any time.

(b) **PM-10 emissions limit.** No grain elevator shall impact the ambient air quality in such a manner as to violate the primary PM-10 standard of 50 ug/m³ annual arithmetic mean or 150 ug/m³ 24-hour average or any

other ambient air standard established by OAC 252:100-3.

252:100-24-5 Emission control equipment

(a) **Minimum requirements.** Grain elevators shall achieve a minimum collection efficiency and not exceed the maximum daily throughput or annual hours of operation based upon the maximum leg capacity as stipulated in Table I.

TABLE I: REQUIRED CONTROL EQUIPMENT FOR GRAIN ELEVATORS

Maximum Leg Capacity (bushels/hour)	Minimum Collection Efficiency	Maximum Daily Throughput (bushels)	Maximum Annual Hours of Operation
5,000	75% medium efficiency cyclone or demonstrated equivalent efficiency	120,000	1600
10,000	90% high efficiency cyclone (2D-2D) or demonstrated equivalent efficiency	240,000	2000
10,000	95% high efficiency cyclone (1D-3D) or demonstrated equivalent efficiency	240,000	4000
15,000	90% high efficiency cyclone (2D-2D) or demonstrated equivalent efficiency	360,000	1300
15,000	95% high efficiency cyclone (1D-3D) or demonstrated equivalent efficiency	360,000	2600
15,000	99% fabric filter or demonstrated equivalent efficiency	360,000	8760

(b) **Certification.** Each existing grain elevator in the state of Oklahoma shall provide written certification of compliance with Table I by September 1, 1994. Annual certification of hours of operation and the operation and proper maintenance of required control equipment shall be completed by the owner, operator or other designated responsible party

and submitted as part of the annual emissions inventory reporting form.

(c) **Minor source.** Except for nonattainment areas, facilities certifying compliance with this subchapter and having no greater than 1,750,000 bushels per year throughput shall not be considered a major source for a regulated pollutant for purposes of Title V.

252:100-24-6 Fugitive dust controls

(a) For control of fugitive dust, no person shall cause or permit the handling, transporting or disposition of any substance or material which is likely to be scattered by the air or wind, or is susceptible to being airborne, or windborne, or to operate or maintain or to cause to be operated or maintained, any grain elevator site, open area, right-of-way, storage pile or materials, vehicle, or construction, or any other enterprise which involves any material or substance likely to be scattered by the wind or air, or susceptible to being windborne or airborne that would be classified as air pollution without taking reasonable precautions or measures to minimize atmospheric pollution.

(b) No person shall cause or permit the discharge of any visible fugitive dust emissions beyond the property line on which the emissions originate.

24

AIR QUALITY COUNCIL BRIEFING NOTES

March 8, 1994
Lincoln Plaza Office Complex
Brown Room
1:00 p.m.

OKLAHOMA STATE DEPARTMENT OF ENVIRONMENTAL QUALITY
AIR QUALITY DIVISION
4545 NORTH LINCOLN, SUITE 250
OKLAHOMA CITY, OKLAHOMA

Council Members Present

William B. Breisch, Chairman
Bill Fishback
Kathryn Hinkle
Meribeth Slagell

Council Members Absent

Gary Kilpatrick
Larry Canter
Michael Hughes
Mary Tillman
Mayor Taron

Staff Present

Larry Byrum
Doyle McWhirter
Dennis Doughty
Joyce Sheedy
Scott Thomas
Deborah Perry
Don Whitney
Myrna Bruce

Guests Present

(see attached list)

Due to extreme weather conditions, a quorum was not present to hold the Public Hearing and Meeting. After waiting for others to arrive, the Briefing began at 10:15 a.m. with those present. Council members absent were: Mr. Kilpatrick, Dr. Canter, Dr. Hughes, Ms. Tillman, and Mayor Taron.

Mr. Byrum gave an update of Title V status, a report on the workload analysis contractor, I and M activities, and current legislation. He presented the Council with a handout entitled "Cost Effectiveness of VOC Control Strategies".

Item 3 (A) on the Briefing Agenda (OAC 252:003 *Procedures of the Environmental Councils*, was not discussed or acted upon due to the lack of a quorum.

The absence of a quorum presented a significant dilemma for those persons who had come prepared to speak on behalf of the grain industry. Indications were that several had traveled considerable distance and some had flown from out of state in spite of the adverse weather conditions. It was made clear that the Council could take no action, and in fact the gathering could not even be considered a meeting. The visitors were further instructed that they would need to repeat their presentations when the public

6059

rulemaking hearing was held. However, in deference to their obvious desire to speak, they were allowed to make their presentations to the audience. The presentations were recorded, and will be available for distribution to the Council for future reference. Copies of all handouts were mailed to those Council members who were not present.

Mr. Doyle McWhirter discussed the staff recommendations for regulating emissions from grain elevators; Mr. Byrum then called upon Joe N. Hampton, Executive Vice-President, Oklahoma Grain & Feed Association. Mr. Hampton recognized audience members Phil Kenkel, Extension Economist, Agricultural Economist, Oklahoma State University; and Ronald T. Noyes, P.E., Extension Agricultural Engineer, Biosystems & Agricultural Engineering Department, Oklahoma State University. Handouts entitled "A Review and Critique of MRI Final Report, Potential Dust Emissions from a Grain Elevator in Kansas City, Missouri by Dr. Noyes and "Grain Elevators and Grain Dust Management Options" by Phil Kenkel and Ronald T. Noyes were distributed to the Staff and Council.

Thomas C. O'Connor, Director of Technical Services, National Grain and Feed Association spoke and distributed a handout entitled "Worker Exposure to Dust in the Grain Industry"; a research project sponsored by the National Grain and Feed Association, Washington, DC. Mr. O'Connor also left copies of his letter to Mr. Dallas Safriet, Environmental Protection Agency, Emissions Inventory Branch, Research Triangle Park, North Carolina.

Dr. Calvin B. Parnell, Jr., P.E., Professor, Department of Agricultural Engineering, Texas A&M University, College Station, Texas, and former member of the Texas Air Control Board, made a presentation on the subject of dust emissions from grain elevators and distributed a handout entitled "Testimony".

Mr. Rick Treeman, Safety Director, W.B. Johnston Company, thanked the Council for touring the Watonga and Kingfisher facilities and for hearing the presentations from the grain and feed industry. He referred to a handout entitled "Sieve Analysis of Collected Dust from a Terminal Grain Elevator". He also referred to three handouts too large to reproduce for each of the Council members: "Prevention of Dust Explosion in Grain Elevators--an Achievable Goal from the United States Department of Agriculture, Office of the Special Coordinator for Grain Elevator Safety and Security"; "Potential Dust Emissions from a Grain Elevator in Kansas City, Missouri, Final Report prepared for EPA by Midwest Research Institute"; and "Impact Study of Prohibiting Recombining Recirculation Dust at Export Elevators" provided by Department of Agricultural Engineering, Texas A & M University. These are filed at the Air Quality Division for viewing upon request. Copies of the Grain and Feed Industries' recommendation for subchapter 24 were also handed out.

Next Meeting - The next regular meeting will be held April 12, 1994, at the Tulsa City-County Health Department Auditorium.

(see attached list)

PUBLIC MEETING

Notice of Public Meeting was forwarded to the Secretary of State's Office giving the time, date, and place of the meeting. Agendas were posted at the entrance to the meeting room.

Call to Order - Mr. Breisch called the meeting to order and roll call was taken as follows: Dr. Canter - absent; Mr. Fishback - aye; Ms. Hinkle - aye; Dr. Hughes - aye; Mr. Kilpatrick - aye; Ms. Slagell - aye; Mayor Taron - aye; Ms. Tillman - aye; Mr. Breisch - aye.

Approval of Minutes - Minutes to the January 11, 1994 and the March 3, 1994 meeting were presented. Motion to approve was made by Dr. Hughes and second made by Mr. Kilpatrick. Roll call vote as follows: Dr. Canter - absent; Mr. Fishback - aye; Ms. Hinkle - aye; Dr. Hughes - aye; Mr. Kilpatrick - aye; Ms. Slagell -absent for this vote; Mayor Taron - aye; Ms. Tillman - aye; Mr. Breisch - aye.

Procedures of the Environmental Councils - OAC 252:003 - As protocol officer, Mr. Larry Byrum convened the Hearing and called upon Mr. Dennis Doughty to give the staff position on this rule.

Mr. Doughty noted that this Procedural rule had previously been before the Council and that the Council had passed it once as an

Emergency Rule. Mr. Doughty clarified some points brought up during the Briefing including a concern regarding the passing of non-binding resolutions by other Councils. Mr. Doughty suggested new language "This paragraph shall not be construed to limit the authority of the Air Quality Council to pass binding resolutions under the Oklahoma Clean Air Act".

Concerning rulemaking hearings before the Council, Mr. Doughty suggested that language be added to the second sentence as follows: "Hearings before the Council shall be conducted by the Chair or the Chair's designee or at the request of the Council by Hearing Officer recommended by the Department". The Council shall also have the option to appoint Hearing Officers on their own motion." This language is in conformance with authority under the Oklahoma Clean Air Act.

The staff recommended that the Council recommend these changes to the Department of Environmental Quality Board.

Mr. Kilpatrick moved that the Council pass the resolution as proposed and amended by Mr. Doughty. Second by Dr. Hughes. Discussion was had and the Council voted as follows: Mr. Fishback - aye; Ms. Hinkle - aye; Dr. Hughes - aye; Mr. Kilpatrick - aye; Ms. Slagell - aye; Mayor Taron - aye; Ms. Tillman - aye; Mr. Breisch - aye.

Mr. Breisch pointed out that there was currently a motion on the table to adopt these procedures as corrected. Gary Kilpatrick amended his motion to agree with the second correction with a second by Michael Hughes. Roll was called as follows: Mr. Fishback - aye; Ms. Hinkle - aye; Dr. Hughes - aye; Mr. Kilpatrick - aye; Ms. Slagell - aye; Mayor Taron - aye; Ms. Tillman - aye; Mr. Breisch - aye.

Mr. Kilpatrick advised that the prior vote was to amend the original motion and made motion to vote on the original motion with second by Michael Hughes. Roll call as follows: Mr. Fishback - aye; Ms. Hinkle - aye; Dr. Hughes - aye; Mr. Kilpatrick - aye; Ms. Slagell - aye; Mayor Taron - aye; Ms. Tillman - aye; Mr. Breisch - aye.

OAC 252:100-24 CONTROL OF EMISSIONS FROM GRAIN HANDLING AND PROCESSING INDUSTRY

As protocol officer Larry Byrum convened the Hearing and called on Mr. Doyle McWhirter to give staff position.

Mr. McWhirter stated that the Department and the Oklahoma Grain and Feed Association had several meetings but were unable to agree upon a mutually acceptable rule; therefore, the Department withdrew the proposed Subchapter 24 and requested that the Air Quality Council take no action concerning this matter.

With no questions of Mr. McWhirter from the Council or the audience, Mr. Byrum called upon those wishing to comment.

Mr. Steve Poag, Poag Grain, Inc., declined comment.

Mr. Curt Roggow, Oklahoma Ag Co-op Council also declined.

Mr. Dan Kent, Triangle Cooperative Service Company, declined.

Mr. Lew Meibergen, Johnston Enterprises, requested that in lieu of the Department's recommendation to withdraw, that the Council exempt the grain industry from these standards until such time of a mutual agreement. With the rules that are currently in place, he was concerned about what would happen to the grain dealers the day harvest starts.

Gary Kilpatrick questioned the immediate concern for the Council to pass a regulation which would affect this harvest and pointed out to Mr. Meibergen that nothing the Council does today will change what happens this harvest. Mr. Kilpatrick pointed out that an exemption does not take effect immediately because of all the regulatory processes it must go through.

Mr. Meibergen was concerned that if the current rule was enforced, the grain handlers could not comply without spending in excess of one million dollars.

Mr. Fishback asked Mr. McWhirter whether fugitive emissions and point source emissions through a stack or functional equivalent opening are subject to different opacity rules or the same opacity rules. Mr. McWhirter answered this inquiry stating that fugitive dust is not subject to opacity, but fugitive process emissions are subject to an opacity rule. Mr. McWhirter explained that the position taken by DEQ and EPA is that the dust from grain loading and unloading is considered a fugitive process emission. Mr. McWhirter stated that an example of fugitive dust would be dust that was generated by a vehicle or the wind blowing dust on the yard; and process emissions would be emissions that can be reasonably passed through a stack chimney or other functional means attributable to processing.

Mr. Meibergen was hopeful that an exemption could be in effect until such time that a committee could meet with the industry and the Department and a mutual agreement could be reached.

Mr. Fishback pointed out that except for Title V regulations, the industry would not have a specific concern at this time because the inability to meet opacity and the inability to meet process weight limitations goes back many years. Mr. Hasselwander added that the basis of the urgency in resolving this now was having to file the Title V application and there was no advantage in waiting. He expressed that Oklahoma could be a leader in filing a plan that was in the best interest to all.

Mr. Mike Mahoney, Oklahoma Grain and Feed Association, commented that the committee has worked on the proposal at least two days per week for many weeks and was drained; therefore, he would like to get something decided. He wanted to know how the DEQ staff could be sure that Region VI was going to kick this plan out when no other state's plan had been kicked out or accepted. Mr. Byrum pointed out that DEQ has sent copies of both proposals to EPA for comment. He expressed that EPA has stated in telephone conversations that neither proposal is approvable; but had Friday's agreement with the grain industry stood, staff was going to try to send that package to EPA. Mr. Byrum stated that staff has sent a copy of the rule that is in this packet to EPA for comment and has received their comments. Mr. Byrum pointed out that EPA was present at a previous meeting and has commented on the rule in public session, and will continue to make comments on the revisions.

Mr. Mahoney stated that industry would appreciate it if the Council would submit this plan to EPA for their decision as Texas did in March, 1993, and that the Texas plan has not been approved or disapproved. Mr. Mahoney advised that the reason industry turned down Friday's proposal was that Mr. Byrum told them that every elevator in the state of Oklahoma would have to file a Title V permit; and that industry has been working since December of 1991 to stay out of Title V. He expressed that in industry's proposal, there is a certification program to keep all out Title V if their emissions are below 100 tons.

Mr. Byrum stated that the objections are that EPA sees both rules as a relaxation of the SIP relative to opacity process weight and other problems and that if EPA adopts the 70/30 split, a precedent would be set nationwide.

Dr. Parnell said that the process of using .3 lbs for unloading and loadout is not in the SIP, therefore, EPA does not have the option to disallow or disapprove. Dr. Parnell stated that he believes that EPA sees this as only a Title V issue; but from his perspective it is also a grain dust explosion issue. Dr. Parnell stated he felt that the Council can win this with EPA Region VI because of the grain dust explosion problem.

Mr. Fishback asked the staff if the Council has to force this rule to be part of our SIP or can it be a work practice like Texas where EPA does not have the right to disapprove.

Mr. Byrum pointed out that each state controls air pollution differently and that Texas uses the nuisance rule per Dr. Parnell's statement. He also said that every grain elevator in Texas is permitted and that if all of Oklahoma's grain elevators were permitted, we probably would not be here today.

Dr. Parnell remarked that there were a number of elevators in Texas that are grandfathered.

Mr. Byrum noted that there is a different way that things are

handled from state to state and that there are at least 5 or 6 types of rules that are applicable to grain elevators.

Mr. Fishback stated that Mr. Kilpatrick was correct in stating that the reason Oklahoma cannot do what Texas is doing is because the rules currently applicable to the grain industry are in the approved SIP.

Mr. Byrum remarked that at the point the DEQ Board adopts the rule and it becomes effective, the State is bound by the rule, EPA is not and that EPA will continue to enforce the approved SIP. Mr. Byrum pointed out that the SIP will be different than the new rule the State has in place.

Butch Meiburgen with Johnston Grain stated that for three years the grain industry has been told to present a grain specific subchapter for acceptance as a change to the SIP and now it is not going to be presented as a change to the SIP. He related that industry has been asked to provide the best available technology and in lieu of no other technology available he did not know why this is not debatable with EPA or why industry can't prove its point with EPA.

Council reminded industry that Mr. Byrum said he was willing to present this to EPA as a SIP revision, but that he had indicated the chances were high that it would be disapproved. Once it was disapproved, the possibility of enforcement action exists and that if the industry were willing to accept that risk, it would be reasonable to pursue it directly with EPA.

Mr. Kilpatrick expressed that there were other issues that still have not been worked out such as whether the rule applies to or does not apply to just grain elevators. He stated that we can't arbitrarily take an industry and not apply our opacity rule to that industry. Mr. Kilpatrick stated that he would not vote to accept what the grain industry has put on the table without straightening out all the issues and understanding the ramifications. He stressed that Council relies upon industry and staff together to come up with a proposal that jointly can be justified and submitted to EPA and whether we think EPA is going to pass the rule or not, the Council must be sure it is the best thing for all.

Mr. Byrum mentioned that if opacity requirements were relaxed for one industry without justification, then every other industry in the State will ask for their opacity requirements to be relaxed.

Mr. Mahoney stated that the grain industry had no problem with the National Clean Air Act and the regulations, but does have a problem with the existing State code. He stated that if there is any fairness left in this world, we should not be held to something that was done in the early 70's that we are all out of compliance with every day and that we ought to be able to change the SIP plan and bring things up to the 90's.

Mr. Kilpatrick stated he did not think just passing what was on the

table was the right way for this to be handled because it will get disapproved by EPA. He pointed out that Council has gone all the way to the National EPA and won with industry in the past but it was done because we had our facts together and knew it was the best thing for the industry and for the people of Oklahoma. He expressed that we were not anywhere near that on this regulation.

Mr. Mahoney said that the way the process has been explained to industry by Mr. Byrum and Mr. McWhirter was that if EPA kicks it back we have a time period to come to the Council and get the plan back up to specs. He stated that they are just asking for that chance. Mr. Byrum said that EPA generally gives a period of time to work on a rule, but if you are in noncompliance, there is no grace period.

Ms. Tillman stated that the Council does not have enough information to make a decision and as the Chair suggested, maybe we should start a committee to assist staff and industry in coming to a conclusion.

Dr. Hughes added that the Council was sympathetic to the industry's plight and has tried to listen and understand all sides of the issue. He entertained an idea of establishing a working committee within the Council, grain industry and staff.

Mr. Phil Kenkel, Department of Ag Economics OSU commented about the OSU Shrink Study or the Mass Balance Study. He stated that there was not enough time for a study before the last Council meeting, as near full bins were needed but that OSU is still interested in providing unbiased information. Mr. Byrum advised that the staff is still interested in seeing this study performed.

Mr. Rick Treeman asked for the presentation made by Tom O'Connors at the March 8 meeting be entered into the record. This was agreed to by Mr. Doughty. Mr. Treeman also questioned if the SIP could be changed to a 20% opacity or on a process weight to which Mr. Byrum said that we can't just unilaterally relax the SIP. Mr. Treeman said he understood the need for justification for other industries, but wanted the Council to understand that other industries such as coal, rock, wood, etc. can add water for control; but the grain industry cannot because of Federal Grain Inspection Service rules as water adds weight to the grain.

Dr. Parnell, OGFA, stated that EPA is not all powerful and felt Oklahoma could take them on and win. He also commended the Council on the idea of having Council become involved in the mediatory process to come up with something that will be beneficial to the citizens and the industry of the State.

Mr. Joe Neal Hampton thanked the Chairman for the idea of the Council working with staff and industry.

Ms. Lisa Rodgers, Program Director of the American Lung Association of Green Country, Oklahoma read testimonials from Martin H. Welch,

M.D., Professor of Medicine, Pulmonary Disease and Critical Care Section, University of Oklahoma Health Sciences Center; and from Mrs. Anna Clapper. Both were presented for the record.

There was much discussion with Dr. Kenneth R. Hart, OU College of Medicine, regarding safety in the workplace vs. exposure to the general public.

With no other comments, Mr. Breisch pointed out several possible actions that could be taken. He indicated that the information should be in presentable form for the next meeting and requested a Council committee to work with industry and staff. Those from the Council volunteering for this committee were Mr. Fishback, Ms. Slagell, Dr. Hughes, Mr. Kilpatrick with Mr. Byrum to monitor the meetings. Mr. Breisch invited all Council members to attend these meetings but asked for coordination as to not have a quorum.

Ms. Tillman made a motion to continue the hearing until the next regular meeting which is June 14. Second was made by Dr. Hughes and roll call was taken as follows: Mr. Fishback - aye; Ms. Hinkle - aye; Dr. Hughes - aye; Mr. Kilpatrick - aye; Ms. Slagell - aye; Mayor Taron - aye; Ms. Tillman - aye; Mr. Breisch - aye.

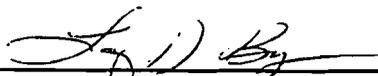

Other Business - None.

Next Meeting - The next regular meeting will be held June 14 at the Lincoln Plaza Office Complex BROWN ROOM, Oklahoma City.

Meeting adjourned with a unanimous roll call vote.

**SUBCHAPTER 24. PARTICULATE MATTER EMISSIONS FROM GRAIN,
FEED OR SEED OPERATIONS.**

- 252:100-24-1. Purpose
- 252:100-24-2. Definitions
- 252:100-24-3. General Provisions; applicability, calculations
- 252:200-24-4. Smoke, Visible Emissions and Particulates
- 252:100-24-5. Emission Control Equipment
- 252:100-24-6. Fugitive Dust Controls
- 252:100-24-7. Applicability to other Agriculture Sources

252:100-24-1. Purpose

The purpose of this rule is to control emissions from facilities that handle, store or process grains. All facilities handling bulk agricultural commodities through grain handling equipment can apply this subchapter to emission sources at the facilities. This rule is an interim rule effective until July 1, 1995 or until the date (whichever is earlier) that measured particulate emission rates from grain handling are developed under protocols approved or accepted by the Air Quality Division to replace the factored emission rates in this interim rule.

252:100-24-2. Definitions

The following words and terms when used in this subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Dust Suppression Additives" means FDA or FGIS-approved additives applied commercially for dust suppression. The dust suppression efficiencies of these additives is accepted to be 90% when applied at a proper application rate per manufacturer's recommendations or as approved by the director of the Air Quality Division.

"Enclosed Grain Handling Equipment" means equipment that is totally self-contained or is enclosed within a structure at a grain, feed, or seed facility. Emissions from this equipment shall not be exhausted to the atmosphere except through non-pressurized vents/openings, and

shall not be considered a ~~point~~ source subject to emission calculations.

"Existing Grain, Feed, or Seed Operation" means a facility which ~~is~~ was in existence in 1993 and has submitted a current emission inventory to the Air Quality Division for the 1993 reporting period year. All other grain, feed, and seed operations shall be considered new.

"Fabric Filter" means any control device or system in which particulate matter is collected on a dust cake supported on either a woven or felted fabric that can demonstrate a particulate collection efficiency of not less than 95 percent.

"Fugitive Emission" means those emissions that could not reasonably pass through a stack, chimney, vent or other functionally equivalent opening.

"Grain, Feed, or Seed Operation" means any facility or installation at which grain, feed, or seed is loaded, handled, cleaned, dried, stored, treated, or otherwise processed.

"Grain, Feed, or Seed Operations Facility" means the contiguous or adjacent area under common control upon which a grain elevator, feed mill, or grain and seed processing equipment or structures are located, and all contiguous sites having common ~~ownership or~~ control, which have SIC codes with ~~identical~~ the first two digits that are identical to the first two digits of the SIC code for grain elevators, feed mills, or grain and seed processing equipment.

"High Efficiency Cyclone" means any cyclone type collector of the 2D-2D or 1D-3D configuration. These designations refer to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion. A 2D-2D cyclone would exhibit a cylinder length of 2 x D and a cone length of 2 x D (90% collection efficiency for TSP). A 1D-3D cyclone would exhibit a cylinder length of 1 x D and a cone length of 3 x D (95% collection efficiency for TSP).

"Hours of Operation" is calculated by dividing the cumulative throughput total for a given time period by 75% of the rated leg capacity. This quotient is equivalent hours (not actual

hours) of operation required to process the throughput. Actual leg capacity may be adjusted to more or less than 75% by individual facilities if documentation supporting the proposed adjustment is submitted to and approved by the Director of the Air Quality Division.

"Leg Capacity" means the maximum process rate for which the manufacturer designs the elevating portion of a grain, feed, or seed facility on a per leg basis.

"Medium Efficiency Cyclone" means any cyclone type collector less than 2D-2D configuration. These designations refer to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion. A 1D-1D cyclone would exhibit a cylinder of 1 x D and a cone length of 1 x D. These cyclones shall be capable of demonstrating a collection efficiency of 75% for particulate matter.

"Non-pressurized Vent or Opening" means any vent or opening which allows the emissions of air and/or contaminants at pressures substantially equivalent to atmospheric pressure without the use of mechanically-induced air flow.

"Pressurized Vent or Opening" means any vent or opening which allows the emissions of air and/or contaminants at pressures greater than atmospheric pressure indicating the use of mechanically-induced air flow.

"Process Emission" means emissions from a process equipment point source.

"Throughput" means the pounds, tons, or bushels received by a facility added to the pounds, tons, or bushels loaded-out from the facility during any time period of interest divided by two.

(a) Applicability. The provisions of this subchapter are applicable to all new, modified, and existing grain, feed, or seed operations in the State of Oklahoma.

(1) Facilities in compliance with OAC 252:100-25, 252:100-27, and 252:100-29 are not required to comply with this subchapter.

(2) Facilities in compliance with this subchapter are exempt from the requirements of OAC 252:100-25 (visible emissions), 252:100-27 (process weight), and 252:100-29 (fugitive dust).

(b) Permits required. In addition to the requirements of this subchapter, each new, modified or existing grain, feed, or seed operation shall comply with the permitting requirements of OAC 252:100-7 and 252:100-8.

(c) Air toxics emissions. Grain, feed, or seed operations which emit toxic air pollutants above the de minimis levels specified in 252:100-41 are subject to all applicable requirements contained therein.

(d) Record-keeping. The owner or operator of a facility shall maintain a daily log documenting the commodity throughput and hours of operation. These records shall be maintained for a period of two years and shall be made available for inspection by the Air Quality Division personnel or its representative during normal business hours.

(e) Visible emissions test. Visible emissions (opacity) testing shall be conducted using EPA reference method 9 contained in 40 CFR, Part 60, Appendix A and must be performed by individual(s) possessing current certification.

(f) Determination of emissions. Emissions from grain, feed, or seed operations shall be based on the best available data. This may include actual emissions as determined by stack testing, mass balance calculations, emission calculations using approved published emissions

factors, or other methods approved by the Air Quality Division. The following factored emissions are allowed by this interim rule only until July 1, 1995 or until the date (whichever is earlier) that measured particulate emission rates from grain handling are developed under protocols approved or accepted by the Air Quality Division.

For this interim rule, emissions shall be calculated as follows for three classes of emission emissions points:

Class I: Unloading (Receiving) 0.6 lbs/ton
 Loading (Shipping) 0.3 lbs/ton
 Refer to 252:100-24-4 for opacity limits.

Class II: Vents Emission Sources with Control Devices
 AP-42 factor X (1-EFF)
 Refer to 252:100-24-4 for opacity limits.
 EFF means fractional efficiency of control device.

Class III: Uncontrolled Vents
 A. Pressurized - opacity limit only
 B. Non-pressurized - opacity limit only
 Refer to 252:100-24-4 for opacity limits.

252:100-24-4. Smoke, Visible Emissions and Particulates

(a) Visible emissions limit.

(1) Visible emissions limits. No person shall cause, suffer, allow or permit the discharge of any fumes, aerosol, mist, gas, smoke, vapor, particulate matter or any combination thereof with a shade density greater than twenty percent (20%) equivalent opacity. This requirement shall not apply to smoke or visible

- emissions emitted during short-term occurrences, the shade or density of which is not greater than sixty percent (60%) opacity for a period aggregating no more than five minutes in any sixty consecutive minutes and/or no more than twenty minutes in any consecutive twenty-four hour period.
- (2) Alternate emissions limit. The (20%) opacity limits, as required under 252:100-24-4 (a) may be increased for particulates only provided that the owner/operator demonstrates to the satisfaction of the Oklahoma Air Quality Council at public hearing that those requirements listed in 252:100-25-4 (a) through (c) have been met.
- (3) Exceptions. Exceptions to the requirements described in 252:100-24-4 (a) (1) are provided as follows:
- (a) Visible emissions from loading (shipping) shall be no more than sixty-five percent (65%) equivalent opacity, and visible emissions from unloading (receiving) shall be no more than fifty-five percent (55%) equivalent opacity.
- (b) Emissions from pressurized or non-pressurized vents or openings with control devices shall be limited to no greater than twenty percent ~~20%~~ (20%) opacity at any time.
- (c) Emissions from pressurized vents or openings without control devices shall either be enclosed, exhausted through a control device, or shall be limited to no greater than ten percent (10%) opacity at any time.
- (d) Emissions from non-pressurized vents or openings without control devices shall be limited to no greater than ten percent (10%) opacity at any time.

252:100-24-5

Emission Control Equipment and Certification

(a) Emission control equipment where required by (40 CFR 60.300) must meet the standards set under the Federal New Source Performance Standards (NSPS Subpart DD), or as mandated by other Federal requirements for major sources. Additional controls may be required to reduce nuisance emissions.

(b) Certification. Each existing grain elevator in the state of Oklahoma shall provide written certification of compliance with this subchapter within one year of the adoption of this rule by the Air Quality Council. Annual certification of hours of operation and throughput and the operation and proper maintenance of required control equipment shall be completed by the owner, operator or other designated responsible party and submitted as part of the annual emissions inventory reporting form.

252:100-24-6

Fugitive Dust Controls

(a) All facilities will take reasonable precautions to prevent the discharge of any visible fugitive dust emissions beyond the property line from which the emissions originate.

(b) No persons shall allow visible emissions beyond the property line in such a manner as to damage or to interfere with the use of adjacent properties.

PUBLIC MEETING

Notice of Public Meeting was forwarded to the Secretary of State's Office giving the time, date, and place of the meeting. Agendas were posted at the basement entrance, first floor entrance at the Oklahoma State Department of Health building, the entrance door of the meeting room at the Lincoln Plaza location, and the entrance to the Air Quality Division.

Call to Order - Mr. Breisch called the meeting to order and roll call was taken. Members not in attendance were Ms. Slagell, Ms. Hinkle, and Mayor Taron. Mr. Breisch turned the meeting over to Mr. Byrum, who acted as protocol officer for Public Rulemaking Hearing OAC 252:100-24 Control of Emissions From Grain Elevators.

Mr. Doyle McWhirter presented the staff comments concerning this rule entitled "Particulate Matter Emissions from Grain, Feed, or Seed Operations." Mr. McWhirter advised that a committee made up of Air Quality Division staff members, Air Quality Council members, and Oklahoma grain and feed representatives reached an agreement after having met on three occasions to discuss and draft proposed subchapter 24.

Mr. McWhirter suggested that certain changes discussed in the briefing be added to the rule. The recommended changes are shown as underlined and deleted language in the copy of the rule attached as part of these Minutes. The recommended changes are denoted on pages 2, 5 and 6. With the inclusion of these changes, Mr.

McWhirter recommended the Council forward this rule to the Department of Environmental Quality Board for adoption.

Mr. Breisch entertained a motion to recommend adoption of this rule to the Department of Environmental Quality Board. Mr. Fishback made the motion as stated by Mr. Breisch with second by Ms. Tillman. Roll call as follows: Dr. Canter - aye; Mr. Fishback - aye; Ms. Hinkle - absent; Dr. Hughes - aye; Mr. Kilpatrick - aye; Ms. Slagell - absent; Mayor Taron - absent; Ms. Tillman - aye; Mr. Breisch - aye.

Mr. Gary Kilpatrick asked to place in the record a thank you to the industry, to the staff, and to the Council members, particularly Bill Fishback who chaired the committee, for the hard work done to resolve this issue. Dr. Hughes added an appreciation to Doyle McWhirter and Debbie Perry for the amount of emphasis and time devoted to this issue and to all the members of industry who participated and endured Council questioning and for allowing Council members to see the grain operations.

On behalf of the industry, Mr. Joe Hampton, Oklahoma Grain and Feed Association, gave a special thank you to the members of the Council who served on the committee, especially Mr. Fishback, and to members of the staff, especially Doyle and Debbie, for all the work put into this effort.

The next item on the agenda was public rulemaking hearing for OAC 252:100-31 Control of Emissions of Sulfur Compounds. Mr. Byrum acted as protocol officer and called up Mr. Scott Thomas and Dr. Joyce Sheedy to give the staff proposal on a suggested revision to this rule. Mr. Thomas recommended that the hearing be continued to the Council's August 9, 1994 meeting in Tulsa for the purpose of receiving as many comments as possible from all interested parties and from EPA. Dr. Sheedy provided technical information and answered questions from the audience and Council.

Chairman Breisch entertained a motion to continue the hearing until the next regular Council meeting as per the recommendation from staff. Mr. Kilpatrick made the motion as stated with second by Dr. Hughes. Roll call as follows: Dr. Canter - aye; Mr. Fishback - abstain; Ms. Hinkle - absent; Dr. Hughes - aye; Mr. Kilpatrick - aye; Ms. Slagell - absent; Mayor Taron - absent; Ms. Tillman - aye; Mr. Breisch - aye.

Approval of Minutes - Chairman Breisch reconvened the meeting and requested a motion for the approval of the Minutes of the April 12 meeting. In discussion, it was found on page 3, the words "of fugitive dust" needed to be added; and on page 2 change 'Dr.' Kilpatrick to "Mr." Ms. Tillman made the motion to approve the minutes as corrected with second by Dr. Hughes. Roll call as follows: Dr. Canter - aye; Mr. Fishback - aye; Ms. Hinkle - absent; Dr. Hughes - aye; Mr. Kilpatrick - aye; Ms. Slagell - absent; Mayor Taron - absent; Ms. Tillman - aye; Mr. Breisch - aye.

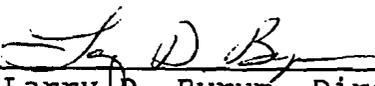

Other Business - No new business from staff. Mr. Tom Lay from audience discussed his interest in the TB&A contract stating that he was making an appearance on behalf of the Environmental Federation of Oklahoma in support of the draft study and pointed out that it was evidenced that the staff put a lot of hard work into the report.

Next Meeting - The next regular meeting will be held August 9, 1994 at the Auditorium, City-County Health Department, Tulsa, OK.

Meeting adjourned with a unanimous roll call vote.

 8/9/94

**RECOMMENDATION
TO THE
ENVIRONMENTAL QUALITY BOARD
FROM THE
AIR QUALITY COUNCIL**

The members of this Council, acting pursuant to the authority vested in them by the Oklahoma Environmental Quality Code (27 O.S.Supp. 1993, Section 2-2-201, by roll call vote, make formal recommendation to the Environmental Quality Board that the rules specified below be adopted as permanent rules.

OAC 252:100-24
Control of Emissions From Grain Elevators

Prior to making this recommendation, this Council considered the rules and comments received thereon and determined, to the best of its knowledge, that all requirements of the Oklahoma Administrative Procedures Act applicable to this rulemaking have been followed.

With the understanding that such changes shall not invalidate this recommendation, this Council authorizes the Department staff to make any amendments approved by the Council, appropriate corrections of typographical errors, additions and deletions indicated by strikeout/underline, and formatting as required by the Office of Administrative Rules.

Respectfully,

W.B. Breisch
Chair or Designee

Signed this 14 day of June, 1994.

**RECOMMENDATION
TO THE
ENVIRONMENTAL QUALITY BOARD

FROM THE
AIR QUALITY COUNCIL**

The members of this Council, acting pursuant to the authority vested in them by the Oklahoma Environmental Quality Code (27 O.S.Supp. 1993, Section 2-2-201, by roll call vote, make formal recommendation to the Environmental Quality Board that the rule(s) specified below be adopted as (a) permanent rule(s) and by emergency and that the Board find that adoption of the rule(s) by emergency is warranted by the compelling extraordinary circumstance of the Federal Clean Air Act possibly becoming effective prior to this rule going into effect through normal channels, therefore, not affording the

OAC 252:100-24

CONTROL OF EMISSIONS FROM GRAIN ELEVATORS

**see
below

Prior to making this recommendation, this Council considered the rules and comments received thereon and determined, to the best of its knowledge, that all requirements of the Oklahoma Administrative Procedures Act applicable to this rulemaking have been followed.

With the understanding that such changes shall not invalidate this recommendation, this Council authorizes the Department staff to make any amendments approved by the Council, appropriate corrections of typographical errors, additions and deletions indicated by strikeout/underline, and formatting as required by the Office of Administrative Rules.

Respectfully,

Bill Buis
Chair or Designee

PUBLIC MEETING

Notice of Public Meeting was forwarded to the Secretary of State's Office giving the time, date, and place of the meeting. Agendas were posted at the entrance door of the meeting room at the Lincoln Plaza location, and the entrance to the Air Quality Division.

Call to Order - Mr. Breisch called the meeting to order and roll call was taken as follows: Mr. Kilpatrick - here; Mayor Taron - here; Ms. Slagell - here; Dr. Canter - here; Mr. Fishback - here, Mr. Branecky - here; Mr. Breisch - here. Ms. Tillman and Ms. Hinkle were absent.

Resolution was read by Mr. Breisch accommodating Dr. Michael Hughes for his years of service to the Council. Dr. Hughes was not present. Motion to approve made by Mayor Taron with second by Mr. Kilpatrick. Roll call as follows: Dr. Canter - aye; Mr. Fishback - aye; Mr. Kilpatrick - aye; Ms. Slagell - aye; Mayor Taron - aye; Mr. Branecky - aye; Mr. Breisch - aye.

Mr. Breisch noted the next item on the Agenda was the Schedule of Calendar Year 1995 Meetings and pointed out that the two alternate

6097

schedules had been discussed in the Briefing Session and that the second alternate was selected. With no further discussion, Mayor Taron made the motion to approve the following dates: February 22, Lincoln Plaza Brown Room; April 18, Lincoln Plaza Brown Room; June 20, Tulsa City-County Auditorium; August 15, Lincoln Plaza Brown Room; October 17, Tulsa City-County Auditorium; December 19, Lincoln Plaza Brown Room. Second was made by Dr. Canter and roll call taken as follows: Mr. Branecky - aye; Dr. Canter - aye; Mr. Fishback - aye; Mr. Kilpatrick - aye; Ms. Slagell - aye; Mayor Taron - aye; Mr. Breisch - aye.

Mr. Breisch requested a motion to approve the Minutes of the October 11, 1994 Meeting/Hearing. Motion was made to approve the Minutes as presented by Mr. Kilpatrick with second by Dr. Canter. Roll call vote as follows: Mr. Branecky - aye; Dr. Canter - aye; Mr. Fishback - aye; Mr. Kilpatrick - aye; Ms. Slagell - aye; Mayor Taron - aye; Mr. Breisch - aye.

Deborah Perry gave staff position (outline attached) regarding the OSU Grain Study and Chairman Breisch opened the floor for discussion.

Representing the Grain and Feed Industry, Mr. Rick Treeman responded to staff position in these areas:

1. He was concerned that much effort had already gone into writing subchapter 24 to this point and regression is not wanted by anyone. He pointed out that through the efforts of Dr. Hughes, Mr. Fishback, Ms. Slagell, and Mr. Kilpatrick, an interim rule was prepared based upon the OSU study proposed by Mr. Fishback. He stressed that industry fulfilled completion of the study and felt it necessary to get subchapter 24 made permanent because the emission factors used there are imperative to the grain industry for permitting purposes. He noted that with the permitting process beginning, the current factors were needed to make it possible to know whether permits are to be for a true minor, synthetic minor, or Title V source. He related that the protocol for the study was accepted and followed explicitly. He pointed out that there are variables, but that the OSU Study was probably more appropriate than the MRI Study because the MRI Study pulled dust out of the air, not dust out of the grain stream.
2. To clarify the staff's comment that the grain was not directly from the field, Mr. Treeman pointed out that the grain coming from the field comes from combines with sophisticated fan systems which blow the dust and the weeds out of the wheat before it comes to the elevator. He stated that the more it is handled within the elevator, the more dust is generated.
3. He related that the fans that were used in the protocol were not creating a steady stream through the dump shed but the intent of those fans was to keep as much dust as possible suspended in the air so that it could be filtered out.

4. He said that the protocol did not actually direct sweeping the floor every time; its purpose was to get an upper limit on the total amount of dust in grain that would be subject to becoming airborne.
5. He pointed out that industry is not disputing visible emissions, but is disputing the quantity of those emissions, and that the intent in writing subchapter 24 was not necessarily for emission factors, but was to modify the state rules to be more appropriate for the grain and feed industry.
6. He stated that Ms. Perry had also mentioned record keeping and general permits similar to a Title V permit. He stressed that if recordkeeping is going to be an option, that the grain industry needs to know what recordkeeping will be needed in order that necessary records be kept.

Mike Mahoney, also from the grain industry, commented that at the June 1994 Air Quality Council Hearing the interim rule was passed. He said that in preparation for that meeting, the DEQ did some modeling that showed that the grain industry exceeded the limits, (NAAQS) and put monitors at the Weatherford Co-op. He stated that the emissions were less than what the model showed. He said that since the June meeting, industry has tried to get a synthetic minor permit approved by DEQ and that since the deadline is November 15, 1995, there is an urgency to get this rule passed. He pointed out that the first meeting between DEQ and grain and feed industry was in November, 1990; that there have been to a lot of meetings, the staff approved the protocol, and the study was done in September.

Mr. Joe Hampton echoed what Mr. Mahoney and Mr. Treeman said in pointing out that this battle has been fought for a long time; we have data from an unbiased third-party and had hoped that we go forward with this data from an unbiased third party.

Mr. Fishback commented that the intent as expressed by the industry representatives was to create a rule based on emission factors that reflected true emissions as accurately as possible. He acknowledged the fact that the 1972 MRI study gave numbers that were extremely high and pushed a number of sources into Title V status that would not normally be there. Mr. Fishback stated that he was very impressed with the thoroughness of the protocol development and the actual testing itself on the part of OSU. He also wanted to make sure that the audience and the Council understood that the intent of that study was to drive a truck into the building, close the doors, pull suction on that building, dump the grain from the truck, pull everything that is airborne out of the building, weigh it, divide what is collected by what is dumped, and come up with factors. He stressed that concerns about wind velocity through that building, what is the aerodynamic mean diameter of the particle, and whether the floor sweepings are included, really did not matter because the purpose was to establish a maximum limit. He stated that based on some very conservative modeling, concern was that grain elevators would have

a problem with the National Ambient Air Quality Standards, but the actual data shows there is not any problem at all. He said that a very careful distinction between what is emitted by the process and what is emitted off property or from the entire facility has to be shown. As a professional engineer he felt a maximum had been established. As a Council, and as an industry, and as a State, he felt we would be much better served to go forward, rather than to postpone because the deadlines are coming. He stated he had no doubt the date is the best for that set of circumstances. He shared the frustration that the industry expressed about the length of time taken writing this rule and that giant strides have been made toward getting good representative, repeatable data. He then proposed to adopt a rule with an agreeable emission factor, whether that number is EPA's proposed number or the OSU Study number, as action is better than inaction. He stated that he wanted to convey that there is now a very well conducted, well thought out, scientifically founded, accurately performed, defensible test.

Ms. Slagell stated that she also observed this study and felt the OSU Study was more than adequate and suggested that it is time to take a stand.

Mr. Kilpatrick questioned whether other emission factors besides loadout and receiving applied to this rule. Ms. Perry answered that in the study there was nothing else addressed because an agreement was made in subchapter 24 that elevator legs, headhouse handling, etc. would be considered totally enclosed. Ms. Perry stated that this is an issue still under consideration because the proposed AP42 did say there was an emission factor that should be attributable to headhouse handling.

Mr. Kilpatrick added that he felt this was a good set of data, that it was reasonably in the area of proposed AP42, and he would have no problem with proceeding ahead. He stated that he was a little concerned whether there would be some benefit in looking at a generic general permit.

Mr. Fishback related that if appropriate emission limits based on this test data were established, then a facility could know whether or not it was a synthetic minor. He pointed out that then the issue of whether it is permitted under a separate synthetic minor permit or a general permit could be decided separately. He added that it would be very convenient for all concerned to have 500 elevator facilities that were synthetic minors be handled as a general permit; but the determination of applicability is the issue. Are they subject, or not, based on the emission factors used and the amount of grain handled.

Dr. Sheedy, Program Director in the Permit Section stated the Permit Section was looking into doing a number of synthetic minors by another process once EPA accepts a federally enforceable rule. Some other federally enforceable type of rule may be very worthwhile, but that is a separate issue from the determination of what this emission factor should be. She added that knowing the

emission factor will allow people to determine whether or not they will be a Title V source.

Mr. Breisch asked the Council subcommittee, staff, and members of the grain and feed industry to consider all approaches to this matter, list them, comment upon them either negatively or positively and bring them before the next Council meeting. He felt that in this manner when and if EPA challenges, all issues will have been addressed.

Mr. Kilpatrick felt that the test which the staff and Council has to consider is whether this data is reasonably representative of the conditions we have here in the Oklahoma industry; document that, and proceed ahead with a common recommendation at the February meeting.

DEQ Permit Section staff member, Rita Buetcher, voiced her concern regarding staff's efforts in writing a permit based on this interim rule, with emissions factors as a part of a rule. She related that this had never been done in the past and EPA readily admits that AP42 is guidance, not a rule. She said that in the past, staff has been able to accept other sources of data when considering a permit application, and making a factor into a rule eliminates the opportunity for engineering judgements.

Mr. Breisch asked for a volunteer from Council to replace Dr. Hughes as the fourth member of the subcommittee. Dr. Canter volunteered to serve. Since members of the grain and feed industry, staff, and Council members were present, the subcommittee arranged for a meeting after the Council Meeting to discuss issues.

With no new business Mr. Breisch adjourned the meeting with a unanimous roll call vote.

Next Meeting - The next regular meeting will be held Wednesday, February 22, 1995 at 4545 North Lincoln Boulevard, Brown Room, Oklahoma City.

2/22/95

William B. Breisch, Chairman
Air Quality Council

Larry D. Byrum, Director
Air Quality Division

OUTLINE FOR GRAIN DUST STUDY DISCUSSION

Members of the Oklahoma Grain and Feed Association, OSU Division of Agricultural Sciences and Natural Resources and the Oklahoma Department of Environmental Quality met on September 26th and 27th in Alva, Oklahoma to observe and/or take part in the Grain Elevator Dust Emission Study.

- no surprises, AP-42 overstated
- purpose was to try to accurately quantify emissions
- to gain an understanding of what emission factors should be used to represent true emissions from grain elevators
- general agreement that the data produced from this study is quite valuable for this purpose
- preliminary review by the Air Quality staff, review continuing
- several issues to consider:
 - 1-tests performed according to the protocol?
 - 2-issues which may not have been accounted for in the study?
 - 3-other data available which should also be considered?
- some initial answers to these questions and some additional questions and concerns
- staff's opinion that the test procedures in accordance with the protocol, with exception of particle sizing of collected dust
- tests performed according to the protocol?
 - protocol stated dust collected from floor sweepings and filter bags would be separated through a sonic sifter
 - very lengthy process
 - would not provide aerodynamic mean diameter
 - OSU will retain samples
- issues which may not have been accounted for in the study?
 - we know that dust emissions vary from different grain elevators, and over time at an individual elevator
 - many variables which can effect air emissions
 - difficult to develop set of emission factors that will represent the industry as a whole
 - cannot account for all possible scenarios
 - observations did reveal some issues that had not been identified or considered adequately when the protocol was being developed
- 1-grain used was not directly from the field
 - grain was loaded out from bin at the elevator
 - grain went through the receiving, elevating, and load out processes and possibly additional transfer or turning processes before study
- two schools of thought regarding this issue
 - no data to support either
 - first says dust is generated through the movement of grain
 - previous handling would not be a significant factor
 - second, says larger amount of dust will be generated from foreign material carried with grain from field
 - effects of both occuring simultaneously
 - tend to generate more emissions
 - test would not be representative

2-draft AP-42 states "wind-tunnel effect" created when receiving operations located inside drive-through receiving shed
-air blows through receiving area at speeds greater than surrounding wind speeds

-protocol specified fans would be used to simulate typical air flows and keep smaller particles airborne
-fans were positioned such that air flow was circulating in a converging pattern, creating area of turbulence, rather than directional flow (as with winds)

-"wind-tunnel effect" observed during the testing procedures
-after sweeping floor doors were opened and large gust of wind blew through receiving area carrying visible dust with it

-perhaps some of dust swept from floor would have become airborne if doors were open

-some dust which settled on trucks and equipment not accounted for

-further supported by test data showing half the amount of dust was collected when doors were open

-particle size analysis of the test samples could possibly provide some insight

3-emissions observed during testing from top of headhouse

-three emission points on the headhouse
-Two cyclone exhausts, other some type of vent
-visible emissions from two points

-uncertain the origin of these emissions
-must be considered in evaluation of data

4-inconsistency was observed in the emissions from the truck loading (load out)
-visible emissions from truck loading from bin via outside spout much greater than load out from inside spout

-height of outside spout 5-7 feet above the truck
-inside spout only 1-2 feet above truck

-seems other factors such as drop height, wind exposure, and grain speed may have greater effect on quantity of emissions generated during load out

other data available which should also be considered?

-EPA sent Air Quality a draft copy of proposed revisions to AP-42
-indicated would be finalized in approximately 30 days

-EPA has withdrawn June draft
-working with National Grain and Feed Assoc. and states to obtain additional data to support new AP-42 section

-results of study sent to EPA contractor (MRI) to be considered with other available data when revising new AP-42 section

-Air Quality will continue to review the study data, as well as any data which becomes available

-review of the June AP-42 draft revealed additional issues which are also being considered:

-data indicated there should be distinction between country and terminal elevators
-based on test data that demonstrates much higher emission rates from terminal elevators
-no clear definition of "country" vs "terminal"
-explanation states country elevator receives grain directly from

- farmer, terminal elevator will receive large portion from other elevators
- terminal elevator has capacity to move grain faster
- draft AP-42 contains emission factors for "headhouse and internal handling operations"
- test results from controlled (cyclones) and uncontrolled operations
 - some emissions may be attributable to operations we are now considering totally enclosed (not emission points)

Other AQD concerns

- concerned that our actions are not in conflict with final actions taken by EPA in AP-42
- if ODEQ adopts emission factors which are lower than those approved by EPA, and these are used to permit synthetic minors, EPA will have strong reason to question the permits
 - EPA wants to review our synthetic minor permits
 - they have interest in grain elevators and will likely look at some of these permits
 - EPA can reject or rewrite these permits
- emission factors in Subchapter 24 will draw EPA attention to issue
- AQD's ability to write federally enforceable synthetic minor permits based on Subchapter 24 depends on getting EPA approval
 - important to be consistent with EPA's direction in new AP-42
- considering other ways to create synthetic minor sources
 - 1-facility can obtain a permit under existing rules
 - 2-possibly some type of generic "umbrella" permit
 - would involve setting criteria for inclusion and documentation or registration process
 - would streamline process for the industry
 - would lighten the permit load on staff
 - 3-possibly revise Subchapter 24 to sets up criteria for synthetic minors ("permit-by rule" concept)

MEMORANDUM

TO: Air Quality Council

FROM: Larry Byrum, Director
AIR QUALITY DIVISION *LB*

SUBJECT: GRAIN RULES

Please find attached proposed language for revisions to Subchapter 24 "Particulate Matter Emissions from Grain, Feed, or Seed Operations". These proposed revisions have been arrived at through discussions held by the Council's subcommittee and Air Quality staff with representatives from the grain industry.

The staff is also interested in pursuing a "permit by rule" concept which will allow certain grain facilities to certify that they are not a major source and consequently could be exempted from the Title V process. This will be discussed at the hearing.

Also attached is a summary of the proposed emission factors resulting from the OSU study. This summary was requested at the January 4, 1995 grain industry task force meeting.

Supplement 7/22/95
w/ Ray Siskin
changes

SUBCHAPTER 24. PARTICULATE MATTER EMISSIONS
FROM GRAIN, FEED, OR SEED OPERATIONS

252:100-24-1.	Purpose
252:100-24-2.	Definitions
252:100-24-3.	General Provisions; applicability, calculations
252:200-24-4.	Smoke, Visible Emissions and Particulates
252:100-24-5.	Emission Control Equipment
252:100-24-6.	Fugitive Dust Controls
252:100-24-7.	Applicability to other Agriculture Sources

252:100-24-1. Purpose

The purpose of this rule is to control emissions from facilities that handle, store or process grains. All facilities handling bulk agricultural commodities through grain handling equipment can apply this subchapter to emission sources at the facilities. ~~This rule is an interim rule effective until July 1, 1995 or until the date (whichever is earlier) that measured particulate emission rates from grain handling are developed under protocols approved or accepted by the Air Quality Division to replace the factored emission rates in this interim rule.~~

252:100-24-2. Definitions

The following words and terms when used in this subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

~~"Dust Suppression Additives" means FDA or FGIS approved additives applied commercially for dust suppression. The dust suppression efficiencies of these additives is accepted to be 90% when applied at a proper application rate per manufacturer's recommendations or as approved by the director of the Air Quality Division.~~

"Enclosed Grain Handling Equipment" means equipment that is totally self-contained or is enclosed within a structure at a grain, feed, or seed facility. Emissions from this equipment shall not be exhausted to the atmosphere except through non-pressurized vents/openings, and shall not be considered a source subject to emission calculations.

~~"Existing Grain, Feed, or Seed Operation" means a facility which was in existence in 1993 and has submitted a current emission inventory to the Air Quality Division for the 1993 reporting period year. All other grain, feed, and seed operations shall be considered new.~~

~~"Fabric Filter" means any control device or system in which particulate matter is collected on a dust cake supported on either a woven or felted fabric that can demonstrate a particulate collection efficiency of not less than 95 percent.~~

"Fugitive Emission" means those emissions that could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening.

"Grain, Feed, or Seed Operation" means any facility or

installation at which grain, feed, or seed is loaded, handled, cleaned, dried, stored, treated, or otherwise processed.

"**Grain, Feed, or Seed Operations Facility**" means the contiguous or adjacent area under common control upon which a grain elevator, feed mill, or grain and seed processing equipment or structures are located, and all contiguous sites having common control, which have SIC codes with the first two digits that are identical to the first two digits of the SIC code for grain elevators, feed mills, or grain and seed processing equipment.

~~"High Efficiency Cyclone" means any cyclone type collector of the 2D 2D or 1D 3D configuration. These designations refer to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion. A 2D 2D cyclone would exhibit a cylinder length of 2 x D and a cone length of 2 x D (90% collection efficiency for TSP). A 1D 3D cyclone would exhibit a cylinder length of 1 x D and a cone length of 3 x D (95% collection efficiency for TSP).~~

~~"Hours of Operation" is calculated by dividing the cumulative throughput total for a given time period by 75% of the rated leg capacity. This quotient is equivalent hours (not actual hours) of operation required to process the throughput. Actual leg capacity may be adjusted to more or less than 75% by individual facilities if documentation supporting the proposed adjustment is submitted to and approved by the Director of the Air Quality Division.~~

"**Leg Capacity**" means the maximum process rate for which the manufacturer designs the elevating portion of a grain, feed, or seed facility on a per leg basis.

"Loading-out hours of operation" means the hours calculated by dividing the cumulative total quantity loaded out for a given time period by 75% of the rated leg capacity. This quotient is equivalent hours (not actual hours) of operation required to process the material loaded out. Actual leg capacity may be adjusted to more or less than 75% by individual facilities if documentation supporting the proposed adjustment is submitted to and approved by the Director of the Air Quality Division.

~~"Medium Efficiency Cyclone" means any cyclone type collector less than 2D 2D configuration. These designations refer to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion. A 1D 1D cyclone would exhibit a cylinder of 1 x D and a cone length of 1 x D. These cyclones shall be capable of demonstrating a collection efficiency of 75% for particulate matter.~~

"**Non-pressurized Vent or Opening**" means any vent or opening which allows the emissions of air and/or contaminants at pressures substantially equivalent to atmospheric pressure without the use of mechanically-induced air flow.

"**Pressurized Vent or Opening**" means any vent or opening which allows the emissions of air and/or contaminants at pressures greater than atmospheric pressure indicating the use of mechanically-induced air flow.

"**Process Emission**" means emissions from a process equipment point source.

"Receiving hours of operation" means hours calculated by dividing

the cumulative total quantity received for a given time period by 75% of the rated leg capacity. This quotient is equivalent hours (not actual hours) of operation required to process the material received. Actual leg capacity may be adjusted to more or less than 75% by individual facilities if documentation supporting the proposed adjustment is submitted to and approved by the Director of the Air Quality Division.

"Total hours of operation" means the sum of the receiving hours of operation and the loading out hours of operation. Actual hours may be less since receiving and loading-out operations may occur simultaneously.

"Throughput" means the pounds, tons, or bushels received by a facility added to the pounds, tons, or bushels loaded out from the facility during any time period of interest divided by two.

252:100-24-3. General Provisions: Applicability, Determination of Emissions

(a) **Applicability.** The provisions of this subchapter are applicable to all new, modified, and existing grain, feed, or seed operations facilities in the State of Oklahoma.

(1) Facilities in compliance with OAC 252:100-25, 252:100-27, and 252:100-29 are not required to comply with this subchapter.

(2) Facilities in compliance with this subchapter are exempt from the requirements of OAC 252:100-25 (visible emissions), 252:100-27 (process weight), and 252:100-29 (fugitive dust).

(b) **Permits required.** In addition to the requirements of this subchapter, each new, modified or existing grain, feed, or seed operation facility shall comply with the permitting requirements of OAC 252:100-7 and 252:100-8.

(c) **Air toxics emissions.** Grain, feed, or seed operations facilities which emit toxic air pollutants above the de minimis levels specified in 252:100-41 are subject to all applicable requirements contained therein.

(d) **Record-keeping.** The owner or operator of a facility shall maintain a daily log documenting the commodity throughput receipts and load-outs and hours of operation for each. These records shall be maintained for a period of two years and shall be made available for inspection by the Air Quality Division personnel or its representative during normal business hours.

(e) **Visible emissions test.** Visible emissions (opacity) testing shall be conducted using EPA reference method 9 contained in 40 CFR, Part 60, Appendix A and must be performed by individual(s) possessing current certification.

(f) **Determination of emissions.** Emissions from grain, feed, or seed operations facilities shall be based on the best available data. This may include actual emissions as determined by stack testing, mass balance calculations, emission calculations using approved published emissions factors, or other methods developed under protocols approved by the Air Quality Division. ~~The following factored emissions are allowed by this interim rule only until July 1, 1995 or until the date (whichever is earlier) that measured particulate emission rates from grain handling are~~

~~developed under protocols approved or accepted by the Air Quality Division.~~

~~For this interim rule, emissions shall be calculated as follows for three classes of emissions:~~

~~Class I: Unloading (Receiving) 3.6 lbs/ton
Loading (Shipping) 3.3 lbs/ton
Refer to 252:100-24-4 for opacity limits.~~

~~Class II: Emission Sources with Control Devices
AP 42 factor X (1 EFF)
Refer to 252:100-24-4 for opacity limits.
EFF means fractional efficiency of control device.~~

~~Class III: Uncontrolled Vents
A. Pressurized opacity limit only
B. Non-pressurized opacity limit only
Refer to 252:100-24-4 for opacity limits.~~

252:100-24-4. Smoke, Visible Emissions and Particulates

(a) Visible emissions limit.

(1) Visible emissions limits. No person shall cause, suffer, allow or permit the discharge of any fumes, aerosol, mist, gas, smoke, vapor, particulate matter or any combination thereof with a shade density greater than twenty percent (20%) equivalent opacity. This requirement shall not apply to smoke or visible emissions emitted during short-term occurrences, the shade or density of which is not greater than sixty percent (60%) opacity for a period aggregating no more than five minutes in any sixty consecutive minutes and/or no more than twenty minutes in any consecutive twenty-four hour period.

(2) Alternate emissions limit. The (20%) opacity limits, as required under 252:100-24-4 (a) may be increased for particulates only provided that the owner/operator demonstrates to the satisfaction of the Oklahoma Air Quality Council at public hearing that those requirements listed in 252:100-25-4 (a) through (c) have been met.

(3) Exceptions. Exceptions to the requirements described in 252:100-24-4 (a) (1) are provided as follows:

(a) Visible emissions from loading-out (shipping) shall be no more than sixty-five percent (65%) equivalent opacity, and visible emissions from unloading (receiving) shall be no more than fifty-five percent (55%) equivalent opacity.

(b) Emissions from pressurized or non-pressurized vents or openings with control devices shall be limited to no greater than twenty percent (20%) opacity at any time.

(c) Emissions from pressurized vents or openings without control devices shall either be enclosed, exhausted through a control device, or shall be limited to no greater than ten percent (10%) opacity at any time.

(d) Emissions from non-pressurized vents or openings without

control devices shall be limited to no greater than ten percent (10%) opacity at any time.

252:100-24-5 Emission Control Equipment and Certification

(a) Emission control equipment where required by (40 CFR 60.300) must meet the standards set under the Federal New Source Performance Standards (NSPS Subpart DD), or as mandated by other Federal requirements for major sources. Additional controls may be required to reduce nuisance emissions.

(b) Affected facilities shall make best efforts to reduce dust emissions during load-out by minimizing the distance from the load-out spout to the top of the receiving vessel.

(c) Certification. Each new, modified, or existing grain, elevator feed or seed facility in the state of Oklahoma shall provide written certification of compliance with this subchapter within one year of the adoption of this rule by the Air Quality Council/DEQ Board. Annual certification of receiving, loading-out, and total annual hours of operation, quantity received and loaded-out, visible emissions, and throughput and the operation and proper maintenance of any required control equipment shall be completed by the owner, operator or other designated responsible party and submitted as part of the annual emissions inventory reporting form.

252:100-24-6 Fugitive Dust Controls

(a) All facilities will take reasonable precautions to prevent the discharge of any visible fugitive dust emissions beyond the property line from which the emissions originate.

(b) No persons shall allow visible emissions beyond the property line in such a manner as to damage or to interfere with the use of adjacent properties.

PUBLIC MEETING

Notice of Public Meeting was forwarded to the Secretary of State's Office giving the time, date, and place of the meeting. Agendas were posted at the entrance door of the meeting room at the Lincoln Plaza location, and the entrance to the Air Quality Division offices.

Call to Order - Mr. Breisch called the meeting to order and roll was taken: Mr. Branecky - aye; Dr. Canter - aye; Mr. Fishback - aye; Ms. Hinkle - aye; Mr. Kilpatrick - absent; Ms. Slagell - aye; Mayor Taron - aye; Ms. Tillman - aye; Mr. Breisch - aye.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the December 13, 1994 Meeting/Hearing. Motion was made to approve the Minutes as presented by Mayor Taron with a second by Ms. Tillman. Roll call as follows: Mr. Branecky - aye; Dr. Canter - aye; Mr. Fishback - aye; Ms. Hinkle - aye; Ms. Slagell - aye; Mayor Taron - aye; Ms. Tillman - aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-24 CONTROL OF EMISSIONS FROM GRAIN ELEVATORS

As protocol officer, Larry Byrum convened the hearing on OAC 252:100-24 Control of Emissions from Grain Elevators. The hearing was advertised in the Oklahoma Register for the purpose of receiving comments.

Mr. Ray Bishop presented the staff position on the rule, designed specifically to control emissions from facilities that handle, store, or process grains. Mr. Bishop stated this rule is the result of several years and hundreds of hours of cooperative efforts of Council members, the feed and grain industry, and the Air Quality staff. The agreement reached included specific changes listed below. Staff recommended that Council consider adoption of proposed Subchapter 24 rule and that a recommendation be forwarded to the Department of Environmental Quality Board for consideration as an emergency and permanent rule.

Specific changes to OAC 252:100-24:

- The emissions factors for grain handling were removed from the rule with emission factors being included in a background information document (guidance document). -- Mr. Bishop stated that removal of emissions factors precludes the need for EPA to verify the accuracy of emissions factors when approving the rule and will allow for flexibility in permitting facilities which may not be accurately represented by AP-42 emission factors.
- OAC 252:100-24-3(f) Determination of Emissions was changed to make the language identical to that found in 252:100-7-4(e)(9) Method of calculation.
- In the same subchapter, "based on" was changed to "determined by" for clarification. A few items were deleted because they were unnecessary and/or had no relevance to this subchapter.
- The citing of 252-100-24-7 Applicability to Other Agricultural Sources was deleted because this section of the rule no longer exists.
- Definitions of terms not referenced in the text of the rule were deleted to be included in the guidance document.
- Since the proposed rule is to be permanent and final, the language regarding interim status was removed from 252:100-24-1 and 252:100-24-3(f). Existing rules and interim measures are to be effective until July 1, 1995 or until particulate emissions rates of grain handling are developed.

Dr. Canter felt that the "Guidance Document" should reference the OSU Study as the fundamental study done to develop the emissions factors (.053). The OSU Study provides scientific rational for

those emissions standards. He added that the importance was the OSU Study emissions factors are less than the EPA AP-42 factors. Mr. Byrum advised that there was a need for other additions to the document and the staff would soon be meeting with the grain industry to discuss these items.

Robert Poppe, C.H. Guernsey & Company, questioned the definition of fugitive emissions. This definition now reads "those emissions which could not reasonably pass through a stack chimney, vent, or other functionally equivalent opening". Mr. Poppe's opinion was that the wording should read "do not pass thru ...". Ms. Tillman felt it incredibly important that the word "reasonably" be used.

Mr. Poppe mentioned the wording "visible" and "adjacent" contained in 252:100-24-6 be stricken. His rationale was the rule as currently written indicates if dust emissions gets on properties beyond adjacent properties the rule would not apply. The wording needed to be corrected to reflect that property beyond adjacent properties is furthermore subject to damage. He suggested adding the definition for "fugitive dust" to the guideline document. His rationale was this change would better reflect the health aspects of the emissions.

Mr. Byrum advised that the definition for "fugitive dust" is exactly the same as the definition in other portions of our rules. Mr. Doughty commented that the definition was designed to include facilities that may not have a stack and implies possible controls could be placed on the stack.

Mr. Fishback stated that health effects were not considered in the OSU Study because it was an emissions quantification study.

With no further comments, Mr. Breisch entertained a motion to recommend this proposed rule to the Environmental Quality Board for approval as an emergency and permanent rule.

Mr. Fishback made motion to adopt OAC 252:100-24 Control of Emissions from Grain Elevators with the specific changes. Dr. Canter made the second.

Ms. Tillman felt that Mr. Poppe's changes should be added to the motion. Ms. Tillman's rationale was that if there is a parking lot adjacent to the facility and a home next to the parking lot, the home might be affected but the parking lot would not be affected.

Mr. Fishback thought Ms. Tillman's reasoning was valid, therefore, the word 'visible' should be retained and presented no problem in emissions modeling. Often, the adjacent property is not impacted, however, the impact could be downwind. Ms. Tillman was not opposed to changing the word "visible", but she thought the wording should be "to interfere with the use of other properties".

Ms. Hinkle suggested the wording "or to interfere with other properties".

Ms. Tillman's proposal was to have the wording read "no person shall allow visible emissions beyond the property line in such a manner as to damage or interfere with the use of other property".

Mr. Fishback affirmed the motion and a second made to leave the language with the minor changes as proposed.

With no further discussion, roll call vote was taken: Mr. Branecky - aye; Dr. Canter - aye; Mr. Fishback - aye; Ms. Hinkle - aye; Ms. Slagell - aye; Mayor Taron - aye; Ms. Tillman - aye; Mr. Breisch - aye.

Election of Officers for the Calendar Year 1995 - Mayor Taron made a motion to nominate Bill Breisch as Chairman for 1995 to be made by unanimous acclamation. A second was made by Dr. Canter. Roll call was as follows: Mr. Branecky - aye; Dr. Canter - aye; Mr. Fishback - aye; Ms. Hinkle - aye; Ms. Slagell - aye; Mayor Taron - aye; Ms. Tillman - aye; Mr. Breisch - abstain.

A motion was made by Ms. Hinkle to elect Mary Tillman as Vice-Chairman for Calendar Year 1995. Mayor Taron made the second requesting unanimous acclamation. Roll call as follows: Mr. Branecky - aye; Dr. Canter - aye; Mr. Fishback - aye; Ms. Hinkle - aye; Ms. Slagell - aye; Mayor Taron - aye; Ms. Tillman - abstain; Mr. Breisch - aye.

New Business Joint Resolution for approval of:

Mr. Paden, Environmental Quality Board (EQB) member addressed the Council regarding the approving signature on the following four rules:

- OAC 252:100-8 OPERATING PERMITS (PART 70);
- OAC 252:100-8-6 ACID RAIN;
- OAC 252:100-31 CONTROL OF EMISSIONS OF SULFUR COMPOUNDS;
- OAC 252:100-45 MONITORING OF EMISSIONS

Mr. Paden advised that these rules were sent to Governor Walters after consideration and adoption by the EQB. Governor Walters signed these rules on November 30, 1994, as Permanent rules, but not as Emergency rules. The Legislature is working to correct this procedural oversight.

Mr. Paden complimented the Council on an excellent job when working closely with Theodore Barry & Associates (TB&A) on the management study. Mr. Paden acknowledged the amount of work performed when readying rules for the EQB's consideration and adoption.

As specified by the Administrative Procedures Act, rules are sent to the Governor, the President Pro Tempore, and the Speaker of the House. Rules have to go to the Governor in ten days. The Governor has 45 days to accept or reject the rule. Mr. Paden explained a mandate of the Federal Clean Air Act and the Oklahoma Clean Air Act to enforce the Clean Air Act Amendments of 1990. Because of verbal assurance from the Governor's office that the rules had been signed, the Air Quality Division billed \$16.19 per ton for

emissions pursuant to the TB&A study.

The solution would be a Joint Resolution asking the Legislature to approve the actions of both the Air Quality Council and the Environmental Quality Board, avoiding notification requirements and the Council's reinvolvement. The Permanent rule takes effect on March 23, 1995. The Joint Resolution should be the same date.

Ms. Tillman thanked Mr. Paden for informing the Council. Mr. Breisch extended the appreciation of the Council and thanked Mr. Paden.

Adjournment - Chairman Breisch adjourned the meeting with a unanimous roll call vote announcing that the next regular meeting will be held Tuesday, April 18, 1995 at 4545 North Lincoln Boulevard, Burgundy Room, Oklahoma City.

Mary Tillman, Vice Chairman
Air Quality Council

Larry D. Byrum, Director

RECOMMENDATION
TO THE
ENVIRONMENTAL QUALITY BOARD
FROM THE
AIR QUALITY COUNCIL

The members of this Council, acting pursuant to the authority vested in them by the Oklahoma Environmental Quality Code (27 O.S. Supp. 1993, Section 2-2-201, by roll call vote, make formal recommendation to the Environmental Quality Board the rule(s) specified below be adopted as (a) permanent rule(s) and by emergency and that the Board find that adoption of the rule(s) by emergency is warranted by the compelling extraordinary circumstance of the Federal Clean Air Act possibly becoming effective prior to this rule going into effect through normal channels, therefore, not affording the Grain and Feed Industry the protection they desire under this rule from the provisions of the Federal permitting requirements.

OAC 252:100-24
CONTROL OF EMISSIONS FROM GRAIN ELEVATORS

Prior to making this recommendation, this Council considered the rules and comments received thereon and determined, to the best of its knowledge, that all requirements of the Oklahoma Administrative Procedures Act applicable to this rulemaking have been followed.

With the understanding that such changes shall not invalidate this recommendation, this Council authorizes the Department staff to make any amendments approved by the Council, appropriate corrections of typographical errors, additions and deletions indicated by strikeout/underline, and formatting as required by the Office of Administrative Rules.

Respectfully,

Chair or Designee

Signed this 22 day of Feb, 1995.

BRIEFING AGENDA
Department of Environmental Quality
AIR QUALITY COUNCIL REGULAR MEETING
TUESDAY, AUGUST 18, 1998, 9:30 A.M.
4545 NORTH LINCOLN BOULEVARD
BURGUNDY ROOM
Oklahoma City, Oklahoma

1. **Call to Order** Chairman
2. **Division Director's Report** Dyke
Informational update of current events and AQD activities

PUBLIC HEARINGS

3. **OAC 252:100-47 Control of Emissions from Existing Municipal Solid Waste Landfills [NEW]** Bradley
Proposes to establish state standards to control emissions from certain existing municipal solid waste landfills that commenced construction, modification, or reconstruction before May 30, 1991 and accepted waste after November 8, 1987. The proposed rules to be included in Oklahoma's State 111(d) Plan provide the enforceable mechanism for implementing the federal emission guidelines (40 CFR 60 subpart Cc.)
Discussion by Council/Public
4. **State 111(d) Plan for Municipal Solid Waste Landfills** Bradley
The proposed State 111(d) Plan outlines Oklahoma's program to implement the emission guidelines for municipal solid waste landfills. Federal regulations (40 CFR 60 Subparts B and Cc) require that a public hearing be held to receive comments from the Council and public on the proposed plan.
Discussion by Council/Public; Council approval is not required.
5. **OAC 252:100 Air Pollution Control:** Martinez
Appendix E, Primary Ambient Air Quality Standards [AMENDED]
Appendix F, Secondary Ambient Air Quality Standards [AMENDED]
Proposed revisions to Appendices E and F will mirror the revised federal national ambient air quality standards for particulate matter and ozone announced by EPA in the July 18, 1997, *Federal Register*.
Discussion by Council/Public
6. **OAC 272:100-7 Permits [AMENDED]** Buttram
Proposed revisions will delete the lower limit of 5 tons per year for Permit by rule (PBR) facilities allowing those facilities with less than 5 tons per year emissions which are subject to new source performance standards and national emissions standards for hazardous air pollutants to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a PBR for specific facilities will be referenced under this new Part also.
Discussion by Council/Public

7. **OAC 252:100-25 Smoke, Visible Emissions and Particulates [AMENDED]** **Buttram**
The proposed amendments to Subchapter 25 are needed to fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P. and would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include changing the time allowed for visible emissions during short-term occurrences to exceed the opacity standard to one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. A new subsection would contain methods for determining compliance with the opacity limits. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule.
Discussion by Council/Public
8. **OAC 252:100-23 Control of Emissions from Cotton Gins [AMENDED]** **Mainord**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and add a new PBR section.
Discussion by Council/Public
9. **OAC 252:100-24 Control of Emissions from Grain Elevators [AMENDED]** **Martinez**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and add a new PBR section.
Discussion by Council/Public
10. **OAC 252:100-37 Control of Emissions of Organic Materials [AMENDED]** **Sheedy**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. A substantive change deletes a sentence regarding fuel-burning and refuse-burning equipment resolving a contradiction.
Discussion by Council/Public
11. **OAC 252:100-39 Emissions of Organic Materials in Nonattainment Areas [AMENDED]** **Sheedy**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC.
Discussion by Council/Public

MEMORANDUM

TO: Air Quality Council

FROM: David R. Dyke, Interim Director
Air Quality Division

RE: Proposed modifications to Subchapter 24, Control of Emissions from Grain Elevators

Enclosed is a copy of the proposed draft modifications to Subchapter 24, Control of Emissions from Grain Elevators. The revisions to this Subchapter include simplification of the language, the addition of a new Permit by Rule (PBR) section and the addition of a new Appendix L, which contains PM-10 emission factors. Also, staff proposes to change the title of the Subchapter to Particulate Matter Emissions from Grain, Feed, or Seed Operations. It was not our intent to make substantive changes to the existing standards and their related requirements.

The PBR will streamline the permitting process by creating a mechanism that will eliminate the necessity for some elevators to obtain an individual air quality permit. Facilities that qualify for coverage under the PBR will simply register with AQD and certify their compliance with the rule. In order to qualify, an elevator:

- Must emit less than 40 tons per year of each regulated pollutant;
- Cannot be subject to Part 70 permitting; and
- Cannot be operated in conjunction with another facility that is subject to air quality permitting.

According to the AQD 1996 Emissions Report for Grain Elevators, there are approximately seven facilities in the state that will qualify for coverage under PBR because they emit over 5 tons per year of a regulated pollutant. The remaining grain elevators will likely be considered de minimis and not subject to air quality permitting.

A workgroup comprised of AQD staff and industry representatives met on June 30, 1998. Input from both parties resulted in a better proposal by facilitating the exchange of information and ideas among those affected.

The proposed Subchapter 24, Control of Emissions from Grain Elevators, will be brought to public hearing on August 18, 1998. Staff will recommend the rule be considered again at the next Air Quality Council meeting on October 20, 1998.

Enclosure: 1

SUBCHAPTER 24. CONTROL OF EMISSIONS FROM GRAIN
ELEVATORS PARTICULATE MATTER EMISSIONS FROM GRAIN, FEED OR SEED
OPERATIONS

Section

- 252:100-24-1. Purpose
- 252:100-24-2. Definitions
- 252:100-24-3. ~~General provisions: a~~Applicability, determination
of emissions general requirements
- 252:100-24-4. ~~Smoke, visible emissions and particulates~~ Visible
emissions (opacity) limit
- 252:100-24-5. Emission control equipment and certification
- 252:100-24-6. Fugitive dust controls
- 252:100-24-7. Permit by rule

252:100-24-1. Purpose

The purpose of this Subchapter is to control emissions from facilities that handle, store or process grains, feeds or seeds. ~~All facilities handling bulk agricultural commodities through grain handling equipment can apply this subchapter to emission sources at the facilities.~~

252:100-24-2. Definitions

The following words and terms when used in this subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Enclosed Grain Handling Equipment" means equipment that is totally self-contained or is enclosed within a structure at a grain, feed, or seed facility. Emissions from this equipment shall not be exhausted to the atmosphere except through non-pressurized vents/openings, and shall not be considered a source subject to emission calculations.

~~"Fugitive Emission" means those emissions that could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening.~~

"Grain, Feed, or Seed Operation" means any facility or installation at which grain, feed, or seed is loaded, handled, cleaned, dried, stored, treated, or otherwise processed.

"Grain, Feed, or Seed Facility" means the contiguous or adjacent area under common control upon which a grain elevator, feed mill, or grain and seed processing equipment or structures are located, and all contiguous sites having common control, ~~which have SIC codes with the first two digits that are identical to the first two digits of the SIC code for grain elevators, feed mills, or grain and seed processing equipment.~~

"Leg Capacity" means the maximum process rate for which the manufacturer designs the elevating portion of a grain, feed, or seed facility on a per leg basis.

"Loading-out hours of operation" means the hours calculated by dividing the cumulative total quantity loaded out for a given time period by 75% of the rated leg capacity. This quotient is equivalent hours (not actual hours) of operation required to process the material loaded out. Actual leg capacity may be adjusted to more or less than 75% by individual facilities if documentation supporting the proposed adjustment is submitted to and approved by the Director of the Air Quality Division.

"Non-pressurized Vent or Opening" means any vent or opening which allows the emissions of air and/or contaminants at pressures substantially equivalent to atmospheric pressure without the use of mechanically-induced air flow.

"Pressurized Vent or Opening" means any vent or opening which allows the emissions of air and/or contaminants at pressures greater than atmospheric pressure indicating the use of mechanically-induced air flow.

~~"Process Emission" means emissions from a process equipment point source.~~

"Receiving hours of operation" means hours calculated by dividing the cumulative total quantity received for a given time period by 75% of the rated leg capacity. This quotient is equivalent hours (not actual hours) of operation required to process the material received. Actual leg capacity may be adjusted to more or less than 75% by individual facilities if documentation supporting the proposed adjustment is submitted to and approved by the Director of the Air Quality Division.

"Total hours of operation" means the sum of the receiving hours of operation and the loading out hours of operation. Actual hours may be less since receiving and loading-out operations may occur simultaneously.

252:100-24-3. ~~General provisions: a~~Applicability, determination of emissions~~general requirements~~

(a) **Applicability.** The provisions of this subchapter are applicable to all new, modified, and existing grain, feed, or seed facilities in the State of Oklahoma.

(1) Facilities in compliance with OAC 252:100-25, 252:100-27, and 252:100-29 are not required to comply with this subchapter.

(2) Facilities in compliance with this subchapter are exempt from the requirements of OAC 252:100-25 (visible emissions), 252:100-27 (process weight), and 252:100-29 (fugitive dust).

(b) **General requirements.**

~~(b)~~(1) **Permits required.** In addition to the requirements of this subchapter, each new, modified or existing grain, feed, or seed facility shall comply with the permitting requirements of OAC 252:100-7 ~~and~~ or 252:100-8.

~~(e)~~(2) **Air toxics emissions.** Grain, feed, or seed facilities ~~which~~that emit toxic air pollutants above the de minimis levels specified in 252:100-41 are subject to all applicable requirements contained therein.

~~(d)~~(3) **Record-keeping.** The owner or operator of a facility shall maintain a daily log documenting ~~the~~ commodity receipts and load-outs and hours of operation for each. These records shall be maintained for a period of two years and shall be made available for inspection by the ~~Air Quality Division personnel or its representative~~DEQ during normal business hours.

~~(e)~~(4) **Visible emissions test.** Visible emissions (opacity) testing shall be conducted using EPA reference method 9 contained in 40 CFR, Part 60, Appendix A and must be performed by ~~individual(s) possessing current certification.~~a Certified Visible Emission Evaluator.

~~(f)~~(5) **Determination of emissions.** Emissions from grain, feed, or seed facilities shall be determined by the best available data. This may include actual emissions as determined by stack testing, mass balance calculations, emission calculations using approved published emissions factors, or any other reasonably accurate method ~~which can be shown to be reasonably accurate when supported by engineering~~

~~data and calculations, and approved in advance by the Air Quality Division-DEQ.~~

252:100-24-4. ~~Smoke, Visible Emissions and Particulates~~Visible emissions (opacity) limit

(a) ~~Visible emissions~~Opacity limits. No person shall cause, suffer, allow or permit the discharge of any fumes, aerosol, mist, gas, smoke, vapor, particulate matter or any combination thereof ~~with a shade density exhibiting greater than twenty (20) percent 20% equivalent opacity. This requirement shall not apply to smoke or visible emissions exhibiting greater than 20% opacity emitted during short-term occurrences, the shade or density of which is not greater than sixty percent (60%) opacity for a period aggregating no more than five minutes in any sixty consecutive minutes and/or no more than twenty minutes in any consecutive twenty four hour period which may consist of one six-minute period in any consecutive sixty (60) minutes not to exceed three such periods in any consecutive 24 hours during which the average opacity of emissions may not exceed 60%.~~

(b) ~~Alternate emissions~~opacity limit. The 20% opacity limits, as required under 252:100-24-4 (a) may be increased for particulates only provided that the owner/ or operator demonstrates to the satisfaction of the Oklahoma Air Quality Council at public hearing that those requirements listed in 252:100-25-4 (a) through (c) have been met.

(c) **Exceptions.** Exceptions to the requirements described in 252:100-24-4 (a) ~~(1)~~ are provided as follows:

(1) Visible emissions from loading-out (shipping) shall be no more than 65% equivalent opacity, and visible emissions from unloading (receiving) shall be no more than 55% equivalent opacity.

~~(2) Emissions from pressurized or non-pressurized vents or openings with control devices shall be limited to no greater than twenty percent (20%) opacity at any time.~~

~~(3)~~(2) Emissions from pressurized vents or openings without control devices shall either be enclosed, exhausted through a control device, or shall be limited to no greater than 10% opacity at any time.

~~(4)~~(3) Emissions from non-pressurized vents or openings without control devices shall be limited to no greater than 10% opacity at any time.

252:100-24-5. ~~Emission control equipment and e~~Certification

~~(a) Standards. Emission control equipment where required by (40 CFR 60.300) must meet the standards set under the Federal New Source Performance Standards (NSPS Subpart DD), or as mandated by other Federal requirements for major sources. Additional controls may be required to reduce nuisance emissions.~~

~~(b) Affected facilities. Affected facilities shall make best efforts to reduce dust emissions during load out by minimizing the distance from the load out spout to the top of the receiving vessel.~~

~~(e)(a) Initial certification. Each new, modified, or existing grain, feed or seed facility in the state of OklahomaAny grain, feed or seed facility in existence on September 28, 1994, shall provide written certification of compliance with this subchapter within one year of the adoption of this Subchapter by the DEQ Board, by September 28, 1995-, or within six months of receiving an initial certification form from DEQ. Annual certification of receiving, loading out, and total annual hours of operation, quantity received and loaded out, visible emissions, and the operation and proper maintenance of any required control equipment shall be completed by the owner, operator or other designated responsible party and submitted as part of the annual emissions inventory reporting form.~~

(b) Annual certification. The owner, operator or other designated responsible party of a grain, feed or seed facility shall submit along with the annual emissions inventory, an annual certification of receiving, loading out, and total annual hours of operation; quantity received and loaded-out; visible emissions; and the operation and proper maintenance of any required control equipment.

252:100-24-6. Fugitive dust controls

(a) All facilities will take reasonable precautions to prevent the discharge of any visible fugitive dust emissions beyond the property line from which the emissions originate.

(b) No persons shall allow ~~visible~~fugitive dust emissions beyond the property line in such a manner as to damage or to interfere with the use of adjacent properties.

(c) All facilities shall make best efforts to reduce fugitive dust emissions during load-out by minimizing the distance from the load-out spout to the top of the receiving vessel.

252:100-24-7. Permit by Rule

(a) Applicability. Any new or existing source may be constructed or operated under this section if it meets the requirements of 252:100-7-60(a), (b), and (c) and has the Standard Industrial Classification (SIC) code 5153, Grain and Field Beans.

(b) Requirements.

(1) In addition to the requirements in 252:100-7-60(a), (b), and (c), an owner or operator of a facility subject to this section shall comply with all of the requirements of this Subchapter, with the exception of 252:100-24-5(a) and (b).

(2) The total annual emissions of PM-10 shall be calculated using the equation provided in Appendix L.

**Appendix L. PM-10 Emission Factors for Permit by Rule for Grain Elevators
[NEW]**

$$\left[\frac{R}{45} + \frac{S}{92} \right] \times 40 = \text{Combined Emissions (TPY)}^*$$

Where, R = Annual Grain Received (millions of bushels)
 S = Annual Grain Shipped (millions of bushels)

*To qualify for Permit by Rule, the total annual combined emissions must be less than 40 TPY.

PUBLIC MEETING

Notice of Public Meeting for August 18, 1998 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance door of the meeting room and also at the DEQ Tower.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Ms. Myers - aye; Dr. Grosz - aye; Mr. Kilpatrick - aye; Mr. Wilson - aye; Mr. Branecky - aye; Ms. Slagell - aye. Dr. Canter did not attend.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the June 16, 1998 Public Meeting/Hearings. Motion was made by Mr. Kilpatrick to approve the Minutes as presented and second to the motion was made by Mr. Branecky. Roll call as follows: Ms. Myers - aye; Dr. Grosz - aye; Mr. Kilpatrick - aye; Mr. Wilson - aye; Mr. Branecky - aye; Ms. Slagell - aye; Mr. Breisch - aye.

PUBLIC HEARING

**OAC 252:100-47 Control of Emissions from Existing Municipal Solid Waste Landfills
[NEW]**

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Cheryl Bradley to give staff recommendations on this rule. Ms. Bradley advised that the rule was first considered by the Council on June 16, 1998 at which time the hearing was continued because EPA was in the process of amending the federal standards that are the basis for the draft rule. These amendments became effective August 17, 1998. Ms. Bradley stated that staff had made the revisions consistent with the amended federal regulations and addressed all comments received.

After discussion, Chairman Breisch entertained a motion to recommend adoption of this rule as emergency and permanent to the Environmental Quality Board at its September 15, 1998 meeting. Dr. Grosz made that motion with second made by Mr. Branecky. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

State 111(d) Plan for Municipal Solid Waste Landfills

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Cheryl Bradley for staff position regarding this State Plan. Ms. Bradley pointed out the criteria for approval of a state plan and advised that Oklahoma's mechanism to implement this Plan is OAC252:100-47. Ms. Bradley related that although no Council action was necessary, the staff requests to hear comments from the Council members and the public regarding the State Plan.

See attached transcript.

PUBLIC HEARING

OAC 252:100 Air Pollution Control:

Appendix E, Primary Ambient Air Quality Standards [AMENDED]

Appendix F, Secondary Ambient Air Quality Standards [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Michelle Martinez who stated that the revisions to these appendices would be identical to the revised federal National Ambient Air Quality Standards (NAAQS) for particulate matter and ozone

announced by EPA in the July 18, 1997 *Federal Register*. Ms. Martinez pointed out that according to the Secretary of State's Rules on Rulemaking, an appendix cannot be amended; therefore, staff recommended that Council vote to revoke the old appendices and pass the new appendices as permanent.

After discussion, Chairman Breisch entertained a motion to recommend this rule to the Environmental Quality Board as a permanent rule at its September 15, 1998 meeting. Mr. Kilpatrick moved that Council revoke the existing rule and replace them with the new rules as presented. Second to the motion was made by Mr. Branecky. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-7 Permits [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Jeanette Buttram for staff position regarding this rule. Ms. Buttram pointed out revisions made to date and advised that staff was recommending that the comment period be left open until August 24 after which staff would revise the rule based upon comments received from Council and public; and would bring again to the Council's October 20 meeting.

Following discussion and comments, Chairman Breisch entertained a motion to continue this rule to the Council's October 20, 1998 meeting. Ms. Myers made that motion with second made by Ms. Slagell. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-25 Smoke, Visible Emissions and Particulates [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Jeanette Buttram to give staff's position on this rule. Ms. Buttram advised that the rule was presented to Council's June 16 meeting where changes to simplify and clarify the rule and to fulfill an EPA State Implementation Plan (SIP) requirement concerning Continuous Emission Monitoring (CEM) were proposed. Ms. Buttram advised that comments received have been addressed and incorporated into the current draft rule. Following discussion with new comments, staff

recommended that the hearing be continued on this rule to the October 20 meeting to allow time for further comments.

Mr. Breisch asked for a motion to continue the hearing. Mr. Wilson made the motion and Ms. Slagell made the second. Roll call was as follows: Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Kilpatrick – aye; Dr. Grosz – aye; Ms. Myers – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-23 Control of Emissions from Cotton Gins [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Becky Mainord who related that the draft rule included simplification of language according to the Agency's re-write/de-wrong initiative and the addition of a Permit by Rule section. She then pointed out the changes made and stated that it was staff's recommendation to continue the hearing until Council's next meeting.

Following discussion, Mr. Breisch entertained a motion to continue this rule. Dr. Grosz made that motion with second made by Mr. Wilson. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-24 Control of Emissions from Grain Elevators [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Michelle Martinez who related that revisions were made to simplify the language according to the Agency's re-write/de-wrong initiative, the addition of a Permit By Rule section, and to add a new Appendix L which would include PM₁₀ emission factors for the Permit By Rule. Ms. Martinez pointed out that comments had been received and considered, and that staff's recommendation was to continue the hearing to the next meeting.

After discussion, Mr. Breisch entertained a motion to continue this rule to the Council's October 20, 1998 meeting. Ms. Myers made that motion with second made by Mr. Branecky. Roll call

as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-37 Control of Emissions of Organic Materials (AMENDED)

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy who stated that the revisions are part of the Agency's re-write/de-wrong initiative and respond to industry requests to exempt acetone, perchloroethylene, and methylated siloxanes from being considered VOCs. She advised that staff held a workshop on July 7 requesting public input and comments. She said there are numerous changes to be made in language, format and with the three substantive changes, staff recommended that the rule be continued to the next meeting.

Mr. Breisch entertained a motion to continue this rule. Mr. Branecky made motion with second made by Mr. Kilpatrick. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

PUBLIC HEARING

OAC 252:100-39 Control of Organic Materials in Nonattainment Areas [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy who stated that there were numerous revisions as part of the Agency's re-write/de-wrong initiative and also five substantive changes to be considered; therefore, staff would recommend that the hearing be continued.

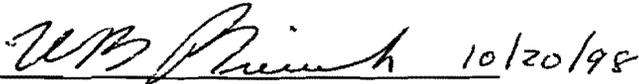

Mr. Breisch entertained a motion to continue this rule to the Council's October 20 meeting. Dr. Grosz made that motion with second made by Mr. Branecky. Roll call as follows: Ms. Myers – aye; Dr. Grosz – aye; Mr. Kilpatrick – aye; Mr. Wilson – aye; Mr. Branecky – aye; Ms. Slagell – aye; Mr. Breisch – aye.

See attached transcript.

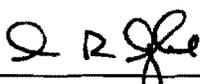

NEW BUSINESS – None

ADJOURNMENT With no further business, meeting was adjourned and next regularly scheduled meeting being October 20, 1998 at Tulsa City-County Health Department Auditorium, 5051 South 129th East, Tulsa, Oklahoma.

NOTE: The sign-in sheet and the hearing records are attached as an official part of these Minutes.

**BRIEFING AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
REGULAR MEETING
AIR QUALITY COUNCIL**

**Tuesday October 20, 1998 9:30 A.M.
Tulsa City-County Health Department Auditorium
5051 South 129 East — Tulsa, Oklahoma**

1. **Call to Order – Bill Breisch**

2. **Division Director's Report**
Informational update of current events and AQD activities
 - A. Discussion by Council / Public

3. **CY99 Meeting Schedule**
 - A. Discussion by Council

4. **OAC 252:100-5 Registration, Emission Inventory and Annual Operating Fees [AMENDED]**
OAC 252:100-7 Permits [AMENDED]
OAC 252:100-8 Permits for Part 70 Sources [AMENDED]
In Subchapter 5, the Department is considering possible increases in annual operating fees for both minor facilities and Part 70 sources with possible increases of permit application fees in Subchapters 7 and 8.
 - A. Presentation – Shawna McWaters-Khalousi
 - B. Questions and discussion by Council / Public

5. **OAC 272:100-7 Permits [AMENDED]**
Proposed revisions will delete the lower limit of 5 tons per year for Permit by rule (PBR) facilities allowing those facilities with less than 5 tons per year emissions which are subject to new source performance standards and national emissions standards for hazardous air pollutants to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each subchapter containing a PBR for specific facilities will be referenced under this new Part also. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Jeanette Buttram
 - B. Questions and discussion by Council / Public

6. **OAC 252:100-25 Smoke, Visible Emissions and Particulates [AMENDED]**
Proposed amendments to Subchapter 25 are needed to fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P, and would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include exempting sources subject to opacity standards promulgated under Section 111 of the Federal Clean Air Act, along with a clarification of how the opacity standard will be determined at sources that have CEMs and how it will be determined at sources without CEMs. A new subsection would contain methods for determining compliance with the opacity limits. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Jeanette Buttram
 - B. Questions and discussion by Council / Public

7. **OAC 252:100-23 Control of Emissions from Cotton Gins [AMENDED]**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and add a new PBR section. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – ~~Becky Mainord~~ *Mohr*
 - B. Questions and discussion by Council / Public

8. **OAC 252:100-24 Control of Emissions from Grain Elevators [AMENDED]**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and add a new PBR section. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Michelle Martinez
 - B. Questions and discussion by Council / Public

9. **OAC 252:100-37 Control of Emissions of Organic Materials [AMENDED]**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. A substantive change deletes a sentence regarding fuel-burning and refuse-burning equipment resolving a contradiction. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public

10. **OAC 252:100-39 Emissions of Organic Materials in Nonattainment Areas [AMENDED]**
Proposal would simplify the language under the agency-wide re-write/de-wrong initiative and exclude acetone and methylated siloxanes from the definition of VOC. Continued from August 18, 1998 Air Quality Council meeting.
 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public

11. **OAC 252:100-41 Control of Emission of Hazardous and Toxic Air Contaminants [AMENDED]**
The proposed amendments to Subchapter 41 include adopting by reference the Maximum Available Control Technology (MACT) standards for hazardous air pollutants that have been promulgated in 40 CFR 63 from July 1, 1997, through July 1, 1998. These are Subparts S and LL. The Department is also updating in Subchapter 41 the incorporation by reference of the NESHAP found in 40 CFR 61 to July 1, 1998. The Department is requesting comments on these proposed changes.
 - A. Presentation – Joyce Sheedy
 - B. Questions and discussion by Council / Public

AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
REGULAR MEETING/HEARING
AIR QUALITY COUNCIL

Tuesday October 20, 1998 1:00 p.m.
Tulsa City-County Health Department Auditorium
5051 South 129 East — Tulsa, Oklahoma

1. Call to Order – Bill Breisch
2. Roll Call – Myrna Bruce
3. Approval of Minutes of the August 18, 1998 Regular Meeting
4. CY99 Meeting Schedule
 - A. Discussion by Council
 - B. Possible action by Council
 - C. Roll call vote
5. OAC 252:100-5 Registration, Emission Inventory and Annual Operating Fees [AMENDED]
OAC 252:100-7 Permits [AMENDED]
OAC 252:100-8 Permits for Part 70 Sources [AMENDED]
In Subchapter 5, the Department is considering possible increases in annual operating fees for both minor facilities and Part 70 sources with possible increases of permit application fees in Subchapters 7 and 8.

 - B. Possible action by Council
14. **ADJOURNMENT – Next Regular Meeting** **TUESDAY, DECEMBER 15, 1998**
 Lincoln Plaza Office Park · Burgundy Room 4545 North Lincoln Boulevard, Oklahoma City, Oklahoma

Should you desire to attend but have a disability and need an accommodation,
 please notify our Department three days in advance at (405) 702-4100.

October 6, 1998

MEMORANDUM

TO: Air Quality Council
FROM: Eddie Terrill, Director *E.T.*
AIR QUALITY DIVISION
RE: Proposed modifications to Subchapter 24, Control of Emissions from Grain Elevators

Enclosed are copies of the proposed draft of Subchapter 24, Control of Emissions from Grain Elevators, and the rule impact statement. Subchapter 24 was brought to public hearing before the Air Quality Council on August 18, 1998, and it was recommended that the rule be continued until the October 20, 1998, Council meeting. The revisions to Subchapter 24 are a result of comments received during or before the August 18, 1998, hearing.

The first revision involves adding a reference to AP-42 9.9.1, Grain Elevators and Processes, under the new Permit by Rule section. Secondly, visible emissions and control equipment were deleted from the list of items requiring certification in the annual certification section. Finally, the language dealing with short-term exceedances of the opacity limits was changed under the opacity limits section to reflect the proposed changes to Subchapter 25.

Staff will suggest that the proposed rule be recommended to the Board for permanent adoption.

Enclosure: 2

SUBCHAPTER 24. CONTROL OF EMISSIONS FROM GRAIN
ELEVATORS PARTICULATE MATTER EMISSIONS FROM GRAIN, FEED OR SEED
OPERATIONS

Section

- 252:100-24-1. Purpose
- 252:100-24-2. Definitions
- 252:100-24-3. ~~General provisions: applicability, determination of emissions~~general requirements
- 252:100-24-4. ~~Smoke, visible emissions and particulates~~Visible emissions (opacity) limit
- 252:100-24-5. Emission control equipment and certification
- 252:100-24-6. Fugitive dust controls
- 252:100-24-7. Permit by rule

252:100-24-1. Purpose

The purpose of this Subchapter is to control emissions from facilities that handle, store or process grains, feeds or seeds. ~~All facilities handling bulk agricultural commodities through grain handling equipment can apply this subchapter to emission sources at the facilities.~~

252:100-24-2. Definitions

The following words and terms when used in this subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Enclosed Grain Handling Equipment" means equipment that is totally self-contained or is enclosed within a structure at a grain, feed, or seed facility. Emissions from this equipment shall not be exhausted to the atmosphere except through non-pressurized vents/openings, and shall not be considered a source subject to emission calculations.

~~"Fugitive Emission" means those emissions that could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening.~~

"Grain, Feed, or Seed Operation" means any facility or installation at which grain, feed, or seed is loaded, handled, cleaned, dried, stored, treated, or otherwise processed.

"Grain, Feed, or Seed Facility" means the contiguous or adjacent area under common control upon which a grain elevator, feed mill, or grain and seed processing equipment or structures are located, and all contiguous sites having common control, ~~which have SIC codes with the first two digits that are identical to the first two digits of the SIC code for grain elevators, feed mills, or grain and seed processing equipment.~~

"Leg Capacity" means the maximum process rate for which the manufacturer designs the elevating portion of a grain, feed, or seed facility on a per leg basis.

"Loading-out hours of operation" means the hours calculated by dividing the cumulative total quantity loaded out for a given time period by 75% of the rated leg capacity. This quotient is equivalent hours (not actual hours) of operation required to process the material loaded out. Actual leg capacity may be adjusted to more or less than 75% by individual facilities if documentation supporting the proposed adjustment is submitted to and approved by the Director of the Air Quality Division.

"Non-pressurized Vent or Opening" means any vent or opening which allows the emissions of air and/or contaminants at pressures substantially equivalent to atmospheric pressure without the use of mechanically-induced air flow.

"Pressurized Vent or Opening" means any vent or opening which allows the emissions of air and/or contaminants at pressures greater than atmospheric pressure indicating the use of mechanically-induced air flow.

~~"Process Emission" means emissions from a process equipment point source.~~

"Receiving hours of operation" means hours calculated by dividing the cumulative total quantity received for a given time period by 75% of the rated leg capacity. This quotient is equivalent hours (not actual hours) of operation required to process the material received. Actual leg capacity may be adjusted to more or less than 75% by individual facilities if documentation supporting the proposed adjustment is submitted to and approved by the Director of the Air Quality Division.

"Total hours of operation" means the sum of the receiving hours of operation and the loading out hours of operation. Actual hours may be less since receiving and loading-out operations may occur simultaneously.

252:100-24-3. ~~General provisions: applicability, determination of emissions~~ general requirements

(a) **Applicability.** The provisions of this subchapter are applicable to all new, modified, and existing grain, feed, or seed facilities in the State of Oklahoma.

(1) Facilities in compliance with OAC 252:100-25, 252:100-27, and 252:100-29 are not required to comply with this subchapter.

(2) Facilities in compliance with this subchapter are exempt from the requirements of OAC 252:100-25 (visible emissions), 252:100-27 (process weight), and 252:100-29 (fugitive dust).

(b) **General requirements.**

~~(b)~~ (1) **Permits required.** In addition to the requirements of this subchapter, each new, modified or existing grain, feed, or seed facility shall comply with the permitting requirements of OAC 252:100-7 ~~and~~ or 252:100-8.

~~(c)~~ (2) **Air toxics emissions.** Grain, feed, or seed facilities ~~which~~ that emit toxic air pollutants above the de minimis levels specified in 252:100-41 are subject to all applicable requirements contained therein.

~~(d)~~ (3) **Record-keeping.** The owner or operator of a facility shall maintain a daily log documenting the commodity receipts and load-outs and hours of operation for each. These records shall be maintained for a period of two years and shall be made available for inspection by the ~~Air Quality Division personnel or its representative~~ DEQ during normal business hours.

~~(e)~~ (4) **Visible emissions test.** Visible emissions (opacity) testing shall be conducted using EPA reference method 9 contained in 40 CFR, Part 60, Appendix A and must be performed by ~~individual(s) possessing current certification.~~ a Certified Visible Emission Evaluator.

~~(f)~~ (5) **Determination of emissions.** Emissions from grain, feed, or seed facilities shall be determined by the best available data. This may include actual emissions as determined by stack testing, mass balance calculations, emission calculations using approved published emissions factors, or any other reasonably accurate method ~~which can be shown to be reasonably accurate when supported by engineering~~

~~data and calculations, and approved in advance by the Air Quality Division-DEQ.~~

252:100-24-4. ~~Smoke, Visible Emissions and Particulates~~Visible emissions (opacity) limit

(a) ~~Visible emissions~~Opacity limits. No person shall cause, suffer, allow or permit the discharge of any fumes, aerosol, mist, gas, smoke, vapor, particulate matter or any combination thereof ~~with a shade density exhibiting greater than twenty (20) percent~~ 20% equivalent opacity. This requirement shall not apply to smoke or visible emissions ~~exhibiting greater than 20% opacity~~ emitted during short-term occurrences, ~~the shade or density of which is not greater than sixty percent (60%) opacity for a period aggregating no more than five minutes in any sixty consecutive minutes and/or no more than twenty minutes in any consecutive twenty four hour period which consist of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours, during which the average of any six-minute period shall not exceed 60% opacity.~~

(b) ~~Alternate emissions~~opacity limit. The 20% opacity limits, as required under 252:100-24-4 (a) may be increased for particulates only provided that the owner/ or operator demonstrates to the satisfaction of the Oklahoma Air Quality Council at public hearing that those requirements listed in 252:100-25-4 (a) through (c) have been met.

(c) Exceptions. Exceptions to the requirements described in 252:100-24-4 (a) ~~(1)~~ are provided as follows:

(1) Visible emissions from loading-out (shipping) shall be no more than 65% equivalent opacity, and visible emissions from unloading (receiving) shall be no more than 55% equivalent opacity.

~~(2) Emissions from pressurized or non-pressurized vents or openings with control devices shall be limited to no greater than twenty percent (20%) opacity at any time.~~

~~(3)~~ (2) Emissions from pressurized vents or openings without control devices shall either be enclosed, exhausted through a control device, or shall be limited to no greater than 10% opacity at any time.

~~(4)~~ (3) Emissions from non-pressurized vents or openings without control devices shall be limited to no greater than 10% opacity at any time.

252:100-24-5. ~~Emission control equipment and~~ eCertification

~~(a) Standards.~~ Emission control equipment where required by ~~(40 CFR 60.300)~~ must meet the standards set under the Federal New Source Performance Standards (NSPS Subpart DD), or as mandated by other Federal requirements for major sources. Additional controls may be required to reduce nuisance emissions.

~~(b) Affected facilities.~~ Affected facilities shall make best efforts to reduce dust emissions during load out by minimizing the distance from the load out spout to the top of the receiving vessel.

~~(e)(a) Initial certification. Each new, modified, or existing grain, feed or seed facility in the state of OklahomaAny grain, feed or seed facility in existence on September 28, 1994, shall provide written certification of compliance with this subchapter within one year of the adoption of this Subchapter by the DEQ Board, by September 28, 1995-, or within six months of receiving an initial certification form from DEQ. Annual certification of receiving, loading out, and total annual hours of operation, quantity received and loaded out, visible emissions, and the operation and proper maintenance of any required control equipment shall be completed by the owner, operator or other designated responsible party and submitted as part of the annual emissions inventory reporting form.~~

~~(b) Annual certification. The owner, operator or other designated responsible party of a grain, feed or seed facility shall submit along with the annual emissions inventory, an annual certification of quantities received and loaded-out.~~

252:100-24-6. Fugitive dust controls

(a) All facilities will take reasonable precautions to prevent the discharge of any ~~visible~~ fugitive dust emissions beyond the property line from which the emissions originate.

(b) No persons shall allow ~~visible~~ fugitive dust emissions beyond the property line in such a manner as to damage or to interfere with the use of adjacent properties.

(c) All facilities shall make best efforts to reduce fugitive dust emissions during load-out by minimizing the distance from the load-out spout to the top of the receiving vessel.

252:100-24-7. Permit by Rule

(a) **Applicability.** Any new or existing source may be constructed or operated under this section if it meets the requirements of 252:100-7-60(a), (b), and (c) and has the Standard Industrial Classification (SIC) code 5153, Grain and Field Beans.

(b) **Requirements.**

(1) In addition to the requirements in 252:100-7-60(a), (b), and (c), an owner or operator of a facility subject to this section shall comply with all of the requirements of this Subchapter, with the exception of 252:100-24-5(a) and (b).

(2) The total annual emissions of PM-10 shall be calculated using the equation provided in Appendix L, which was derived from AP-42 9.9.1, Grain Elevators and Processes.

(3) For grain storage elevators located at any wheat flour mill, wet corn mill, dry corn mill, rice mill or soybean oil extraction plant, with a permanent grain storage capacity of 35,200 m³, or grain terminal elevators with a permanent storage capacity of more than 88,100 m³, which have commenced construction, modification, or reconstruction after August 3, 1978, the requirements of 40 CFR, Part 60, Subpart DD are also applicable.

**Appendix L. PM-10 Emission Factors for Permit by Rule for Grain Elevators
[NEW]**

$$\left[\frac{R}{45} + \frac{S}{92} \right] \times 40 = \text{Combined Emissions (TPY)}^*$$

Where, R = Annual Grain Received (millions of bushels)
 S = Annual Grain Shipped (millions of bushels)

*To qualify for Permit by Rule, the total annual combined emissions must be less than 40 TPY.

PUBLIC MEETING

Notice of Public Meeting for October 20, 1998 was forwarded to the Office of the Secretary of State giving the time, date, and place of the meeting. Agendas were posted at the entrance door of the meeting room.

Call to Order - Mr. Breisch, Chairman, called the meeting to order and roll call was taken as follows: Mr. Branecky - aye; Ms. Myers - aye; Mr. Wilson - aye; Dr. Grosz - aye. Mr. Kilpatrick, Ms. Slagell and Dr. Canter did not attend.

Approval of Minutes - Mr. Breisch entertained a motion to approve the Minutes of the August 18, 1998 Public Meeting/Hearings. Motion was made by Mr. Wilson to approve the Minutes as presented and second to the motion was made by Dr. Grosz. Roll call as follows: Mr. Branecky - aye; Ms. Myers - aye; Mr. Wilson - aye; Dr. Grosz - aye; Mr. Breisch - aye.

1999 Meeting Schedule - Mr. Dyke presented Council with proposed scheduled for 1999 meetings with the suggestion that the December 21 date mentioned in the packet memo be changed to December 14. Ms. Myers made motion to accept the schedule as proposed: Wednesday, February 17, Tuesday, April 20, Tuesday, August 17, and Tuesday, December 14 at OKC, DEQ Multi-Purpose Room; with Tuesday, June 15 and October 19 at Tulsa, TCCHD Auditorium. Second to motion was made by David Branecky. Roll call as follows: Mr. Branecky - aye; Ms. Myers - aye; Mr. Wilson - aye; Dr. Grosz - aye; Mr. Breisch - aye.

Auditorium. Second to motion was made by David Branecky. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; Mr. Breisch - aye.

PUBLIC HEARING

OAC 252:100-7 Permits [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Jeanette Buttram for staff position regarding this rule. Ms. Buttram pointed out proposed revisions would modify language applicable to de minimis facilities, Permit by Rule (PBR), and general permits stating that actual emissions of Total Suspended Particulates (TSP) will no longer be counted in determining whether a facility meets the definition of "de minimis facility." Also, she stated that proposed revision would delete the lower limit of five tons per year for PBR facilities allowing those facilities with less than five tons per year emissions which are subject to NSPS or NESHAP to apply for a PBR instead of having to obtain an individual permit. Ms. Buttram advised that staff proposed that a new Part 9 be added that would outline the requirements necessary for a facility to qualify for a PBR. A third point she brought out was the proposed revision to delete the lower limit for general permits allowing facilities that may have less than 40 tons per year of emissions, but for which no PBR had been written, the opportunity to apply for coverage under an applicable general permit. Lastly, she added that the Department proposed to amend 252-7-3 to increase fees for minor facilities for applicability determinations, relocation permits, and applications for individual permits.

Following discussion and comments, Chairman Breisch entertained a motion to continue this rule to the Council's October 20, 1998 meeting. Ms. Myers made that motion with second made by Dr. Grosz. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-25 Smoke, Visible Emissions and Particulates [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Jeanette Buttram to give staff's position on this rule. Ms. Buttram pointed out that the proposed amendments would fulfill an EPA requirement concerning Continuous Emissions Monitoring proposing to incorporate by reference the Federal opacity monitoring requirements for fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries and fossil fuel-fired steam generators as specified in 40 CFR 51, Appendix P. She noted that the Department proposed to exempt from Appendix P requirements for those sources already subject to a new source performance standard and for sources scheduled for retirement within five years after the

amended rule takes effect. Ms. Buttram added that the amended rule would also provide criteria for approval of alternative monitoring requirements with additional changes that would clarify how the opacity standard is determined.

Mr. Breisch asked for a motion to recommend the rule as proposed to the Environmental Quality Board for permanent adoption. Mr. Wilson made the motion with David Branecky making the second. Roll call was as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-23 Control of Emissions from Cotton Gins [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Michelle Martinez who related that the draft rule included simplification of language according to the Agency's re-write/de-wrong initiative and the addition of a Permit by Rule section. She then pointed out that the proposed revisions add a new Permit by Rule section that would streamline the permitting process by creating a mechanism that eliminates the necessity for some cotton gins to obtain an individual air quality permit. Ms. Martinez added that additional changes would allow exceedances of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours.

Following discussion, Mr. Breisch entertained a motion to recommend this rule to the Environmental Quality Board for permanent adoption. Ms. Myers made the motion with second made by Mr. Branecky. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-24 Control of Emissions from Grain Elevators [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Michelle Martinez who advised that the proposed revisions would simplify the language under the agency-wide re-right/de-wrong initiative and would add a new Permit by Rule section to streamline the permitting process by creating a mechanism that would eliminate the necessity for some grain elevators to obtain an individual air quality permit. Ms. Martinez added that a new Appendix L proposed would contain PM-10 emission factors for PBR grain elevators. Additional changes follow a proposed amendment of Subchapter 25 concerning short-term exceedances of the

opacity standard allowing exceedances of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours.

Mr. Breisch entertained a motion to recommend the rule to the Environmental Quality Board for permanent adoption at its November 10 meeting. Mr. Wilson made that motion with second made by Ms. Myers. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-37 Control of Emissions of Organic Materials (AMENDED)

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy who advised that proposed changes included language consistent with the re-right/de-wrong initiative. She then pointed out four substantive changes that were proposed for Subchapter 37 as well as Subchapter 39:

- 1) to change the definition of “volatile organic compounds (VOC)” per Council’s direction and requests from industry to exclude acetone, perchloroethylene, methylated siloxanes, methyl acetate from the definition of VOC and to modify the definition of VOC to be consistent with the EPA definition;
- 2) to remove of the requirement for permits and best available control technology (BACT) for new sources of VOC contained in 252:100-37-3(a);
- 3) a change regarding fuel-burning and refuse-burning equipment, which has been deleted to resolve the contradiction between the first and second sentences; and
- 4) to add a new Part 9, Permit by Rule for Volatile Organic Liquid Storage and Loading Facilities.

Mr. Breisch entertained a motion to continue this rule to Council’s December meeting. Ms. Myers made motion with second made by Dr. Grosz. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-39 Control of Organic Materials in Nonattainment Areas [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy who advised that proposed changes included language consistent with the re-right/de-wrong initiative. She stated that one substantive change affects both Subchapters 39 and 37

which is to change the definition of "volatile organic compounds" per Council's direction and requests from industry to exclude acetone, perchloroethylene, methylated siloxanes, methyl acetate from the definition of VOC and to modify the definition of VOC to be consistent with the EPA definition;

In Subchapter 39, Dr. Sheedy pointed out the need for correction of the placement of "prior to lease custody transfer" in 252:100-39-30(b)(2) which would be a substantive change along with the addition of a minimum annual throughput of 120,000 gallons and a minimum storage capacity of 2,000 gallons to 252:100-39-41(c) to determine applicability of subsection (c).

Following discussion, Mr. Breisch entertained a motion to continue this rule to the Council's December 15 meeting. Mr. Branecky made that motion with the second made by Mr. Wilson. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

OAC 252:100-41 Control of Emission of Hazardous and Toxic Air Contaminants [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Dr. Joyce Sheedy who stated that the proposed revisions would update the adoption by reference of 40 CFR Part 63 to include Maximum Achievable Control Technology (MACT) standards promulgated or amended between July 1, 1997 and July 1, 1998. She pointed out that the new standards are Subpart S – NESHAP for Pulp and Paper Production and Subpart LL – NESHAP for Aluminum Production Plants. The proposed revisions will also update the adoption by reference of the NESHAP as found in 40 CFR Part 61 (with the exception of Subparts B, H, I, K, Q, R, T, and W. and Appendices D and E which address radionuclides) to July 1, 1998. Dr. Sheedy advised the Council that these modifications were necessary to obtain EPA's delegation of authority to implement the federal hazardous air pollutant program in Oklahoma.

Mr. Breisch entertained a motion to recommend this rule to the Environmental Quality Board for permanent adoption. Mr. Wilson made that motion with the second made by Mr. Branecky. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; and Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes

PUBLIC HEARING

**OAC 252:100-5 Registration, Emission Inventory and Annual Operating Fees
[AMENDED]**

OAC 252:100-7 Permits [AMENDED]

OAC 252:100-8 Permits for Part 70 Sources [AMENDED]

As protocol officer, Mr. Dyke convened the hearing by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act and Title 40 CFR Part 51, and Title 27A, Oklahoma Statutes, Sections 2-5-101 through 2-5-118. Mr. Dyke then called upon Ms. Shawna McWaters-Khalousi for staff recommendation. Ms. Khalousi advised that the Department is proposing to amend 252:100-5-2.2 to increase annual operating fees assessed to minor facilities; amend 252:100-7-3 to increase fees for minor facilities for applicability determinations, relocation permits, and applications for individual permits; and amend 252:100-8-1.7 to increase applicability determination fees for Part 70 Sources. Ms. Khalousi stated that it was staff's recommendation that this rule be continued to Council's December 15 meeting.

Mr. Breisch entertained motion to continue these rules to the December meeting. Ms. Myers made the motion and second was made by Mr. Branecky. Roll call as follows: Mr. Branecky – aye; Ms. Myers – aye; Mr. Wilson – aye; Dr. Grosz – aye; Mr. Breisch - aye.

Hearing transcripts will be attached and made an official part of these minutes.

NEW BUSINESS – None

ADJOURNMENT With no further business, meeting was adjourned and next regularly scheduled meeting being December 15, 1998 at Lincoln Plaza Office Complex Burgundy Room, 4545 North Lincoln, Oklahoma City, Oklahoma.

NOTE: The sign-in sheet and the hearing records are attached as an official part of these Minutes.

AIR QUALITY COUNCIL
RULEMAKING RECOMMENDATION TO THE ENVIRONMENTAL QUALITY BOARD

Identification of Proposed Rulemaking:

Chapter Number and Title – OAC 252:100

Subchapters or Sections Involved – [new, amended or revoked]

24 – Control of Emissions from Grain Elevators

Appendix L PM-10 Emission Factors for Permit by Rule for Grain Elevators [NEW]

On OCTOBER 20, 1998 the members of this Council, by authority vested in them by the Oklahoma Environmental Quality Code (27 O.S.Supp. 1993, § 2-2-201), by roll call vote, recommended to the Environmental Quality Board that the rulemaking described above be adopted as:

permanent [take effect after legislative review]

emergency [temporary, to take effect upon approval by the Governor because of time; and/or special reason: _____]

This Council has considered the proposed rulemaking and comments about it and determined, to the best of its knowledge, that all applicable requirements of the Oklahoma Administrative Procedures Act have been followed.

This Council authorizes the Department to prepare this recommended rulemaking for the Board, making any changes approved by the Council, correcting typographical, grammatical and reference errors, and formatting them as required by the Office of Administrative Rules. This is to be done with the understanding that such changes shall neither alter the sense of what this Council recommends nor invalidate this recommendation.

Respectfully,

Date signed: 10-20-98

**ENVIRONMENTAL QUALITY
BOARD MEETING**

SEPTEMBER 28, 1994

BROKEN BOW, OKLAHOMA

[NEW]

SUBCHAPTER 24. PARTICULATE MATTER EMISSIONS
FROM GRAIN, FEED, OR SEED OPERATIONS

252:100-24-1.	Purpose
252:100-24-2.	Definitions
252:100-24-3.	General Provisions; applicability, calculations
252:200-24-4.	Smoke, Visible Emissions and Particulates
252:100-24-5.	Emission Control Equipment
252:100-24-6.	Fugitive Dust Controls
252:100-24-7.	Applicability to other Agriculture Sources

252:100-24-1. Purpose

The purpose of this rule is to control emissions from facilities that handle, store or process grains. All facilities handling bulk agricultural commodities through grain handling equipment can apply this subchapter to emission sources at the facilities. This rule is an interim rule effective until July 1, 1995 or until the date (whichever is earlier) that measured particulate emission rates from grain handling are developed under protocols approved or accepted by the Air Quality Division to replace the factored emission rates in this interim rule.

252:100-24-2. Definitions

The following words and terms when used in this subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Dust Suppression Additives" means FDA or FGIS-approved additives applied commercially for dust suppression. The dust suppression efficiencies of these additives is accepted to be 90% when applied at a proper application rate per manufacturer's recommendations or as approved by the director of the Air Quality Division.

"Enclosed Grain Handling Equipment" means equipment that is totally self-contained or is enclosed within a structure at a grain, feed, or seed facility. Emissions from this equipment shall not be exhausted to the atmosphere except through non-pressurized vents/openings, and shall not be considered a source subject to emission calculations.

"Existing Grain, Feed, or Seed Operation" means a facility which was in existence in 1993 and has submitted a current emission inventory to the Air Quality Division for the 1993 reporting period year. All other grain, feed, and seed operations shall be considered new.

"Fabric Filter" means any control device or system in which particulate matter is collected on a dust cake supported on either a woven or felted fabric that can demonstrate a particulate collection efficiency of not less than 95 percent.

"Fugitive Emission" means those emissions that could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening.

"Grain, Feed, or Seed Operation" means any facility or installation at which grain, feed, or seed is loaded, handled, cleaned, dried, stored, treated, or otherwise processed.

[NEW]

"Grain, Feed, or Seed Operations Facility" means the contiguous or adjacent area under common control upon which a grain elevator, feed mill, or grain and seed processing equipment or structures are located, and all contiguous sites having common control, which have SIC codes with the first two digits that are identical to the first two digits of the SIC code for grain elevators, feed mills, or grain and seed processing equipment.

"High Efficiency Cyclone" means any cyclone type collector of the 2D-2D or 1D-3D configuration. These designations refer to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion. A 2D-2D cyclone would exhibit a cylinder length of $2 \times D$ and a cone length of $2 \times D$ (90% collection efficiency for TSP). A 1D-3D cyclone would exhibit a cylinder length of $1 \times D$ and a cone length of $3 \times D$ (95% collection efficiency for TSP).

"Hours of Operation" is calculated by dividing the cumulative throughput total for a given time period by 75% of the rated leg capacity. This quotient is equivalent hours (not actual hours) of operation required to process the throughput. Actual leg capacity may be adjusted to more or less than 75% by individual facilities if documentation supporting the proposed adjustment is submitted to and approved by the Director of the Air Quality Division.

"Leg Capacity" means the maximum process rate for which the manufacturer designs the elevating portion of a grain, feed, or seed facility on a per leg basis.

"Medium Efficiency Cyclone" means any cyclone type collector less than 2D-2D configuration. These designations refer to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion. A 1D-1D cyclone would exhibit a cylinder of $1 \times D$ and a cone length of $1 \times D$. These cyclones shall be capable of demonstrating a collection efficiency of 75% for particulate matter.

"Non-pressurized Vent or Opening" means any vent or opening which allows the emissions of air and/or contaminants at pressures substantially equivalent to atmospheric pressure without the use of mechanically-induced air flow.

"Pressurized Vent or Opening" means any vent or opening which allows the emissions of air and/or contaminants at pressures greater than atmospheric pressure indicating the use of mechanically-induced air flow.

"Process Emission" means emissions from a process equipment point source.

"Throughput" means the pounds, tons, or bushels received by a facility added to the pounds, tons, or bushels loaded-out from the facility during any time period of interest divided by two.

252:100-24-3. General Provisions: Applicability, Determination of Emissions

(a) **Applicability.** The provisions of this subchapter are applicable to all new, modified, and existing grain, feed, or seed operations in the State of Oklahoma.

(1) Facilities in compliance with OAC 252:100-25, 252:100-27, and 252:100-29 are not required to comply with this subchapter.

(2) Facilities in compliance with this subchapter are exempt

[NEW]

from the requirements of OAC 252:100-25 (visible emissions), 252:100-27 (process weight), and 252:100-29 (fugitive dust).

(b) **Permits required.** In addition to the requirements of this subchapter, each new, modified or existing grain, feed, or seed operation shall comply with the permitting requirements of OAC 252:100-7 and 252:100-8.

(c) **Air toxics emissions.** Grain, feed, or seed operations which emit toxic air pollutants above the de minimis levels specified in 252:100-41 are subject to all applicable requirements contained therein.

(d) **Record-keeping.** The owner or operator of a facility shall maintain a daily log documenting the commodity throughput and hours of operation. These records shall be maintained for a period of two years and shall be made available for inspection by the Air Quality Division personnel or its representative during normal business hours.

(e) **Visible emissions test.** Visible emissions (opacity) testing shall be conducted using EPA reference method 9 contained in 40 CFR, Part 60, Appendix A and must be performed by individual(s) possessing current certification.

(f) **Determination of emissions.** Emissions from grain, feed, or seed operations shall be based on the best available data. This may include actual emissions as determined by stack testing, mass balance calculations, emission calculations using approved published emissions factors, or other methods approved by the Air Quality Division. The following factored emissions are allowed by this interim rule only until July 1, 1995 or until the date (whichever is earlier) that measured particulate emission rates from grain handling are developed under protocols approved or accepted by the Air Quality Division.

For this interim rule, emissions shall be calculated as follows for three classes of emissions:

Class I: Unloading (Receiving) 0.6 lbs/ton
Loading (Shipping) 0.3 lbs/ton
Refer to 252:100-24-4 for opacity limits.

Class II: Emission Sources with Control Devices
AP-42 factor X (1-EFF)
Refer to 252:100-24-4 for opacity limits.
EFF means fractional efficiency of control device.

Class III: Uncontrolled Vents
A. Pressurized - opacity limit only
B. Non-pressurized - opacity limit only
Refer to 252:100-24-4 for opacity limits.

252:100-24-4. Smoke, Visible Emissions and Particulates

(a) **Visible emissions limit.**

(1) **Visible emissions limits.** No person shall cause, suffer, allow or permit the discharge of any fumes, aerosol, mist, gas,

[NEW]

smoke, vapor, particulate matter or any combination thereof with a shade density greater than twenty percent (20%) equivalent opacity. This requirement shall not apply to smoke or visible emissions emitted during short-term occurrences, the shade or density of which is not greater than sixty percent (60%) opacity for a period aggregating no more than five minutes in any sixty consecutive minutes and/or no more than twenty minutes in any consecutive twenty-four hour period.

(2) Alternate emissions limit. The (20%) opacity limits, as required under 252:100-24-4 (a) may be increased for particulates only provided that the owner/operator demonstrates to the satisfaction of the Oklahoma Air Quality Council at public hearing that those requirements listed in 252:100-25-4 (a) through (c) have been met.

(3) Exceptions. Exceptions to the requirements described in 252:100-24-4 (a) (1) are provided as follows:

(a) Visible emissions from loading (shipping) shall be no more than sixty-five percent (65%) equivalent opacity, and visible emissions from unloading (receiving) shall be no more than fifty-five percent (55%) equivalent opacity.

(b) Emissions from pressurized or non-pressurized vents or openings with control devices shall be limited to no greater than twenty percent (20%) opacity at any time.

(c) Emissions from pressurized vents or openings without control devices shall either be enclosed, exhausted through a control device, or shall be limited to no greater than ten percent (10%) opacity at any time.

(d) Emissions from non-pressurized vents or openings without control devices shall be limited to no greater than ten percent (10%) opacity at any time.

252:100-24-5 Emission Control Equipment and Certification

(a) Emission control equipment where required by (40 CFR 60.300) must meet the standards set under the Federal New Source Performance Standards (NSPS Subpart DD), or as mandated by other Federal requirements for major sources. Additional controls may be required to reduce nuisance emissions.

(b) Certification. Each existing grain elevator in the state of Oklahoma shall provide written certification of compliance with this subchapter within one year of the adoption of this rule by the Air Quality Council. Annual certification of hours of operation and throughput and the operation and proper maintenance of required control equipment shall be completed by the owner, operator or other designated responsible party and submitted as part of the annual emissions inventory reporting form.

252:100-24-6 Fugitive Dust Controls

(a) All facilities will take reasonable precautions to prevent the discharge of any visible fugitive dust emissions beyond the property line from which the emissions originate.

(b) No persons shall allow visible emissions beyond the property line in such a manner as to damage or to interfere with the use of adjacent properties.

**ENVIRONMENTAL QUALITY
BOARD MEETING**

JUNE 27, 1995

OKLAHOMA CITY, OKLAHOMA

SUBCHAPTER 24. PARTICULATE MATTER EMISSIONS
FROM GRAIN, FEED, OR SEED OPERATIONS

252:100-24-1.	Purpose
252:100-24-2.	Definitions
252:100-24-3.	General Provisions; applicability, calculations
252:200-24-4.	Smoke, Visible Emissions and Particulates
252:100-24-5.	Emission Control Equipment
252:100-24-6.	Fugitive Dust Controls
252:100-24-7.	Applicability to other Agriculture Sources

252:100-24-1. Purpose

The purpose of this rule is to control emissions from facilities that handle, store or process grains. All facilities handling bulk agricultural commodities through grain handling equipment can apply this subchapter to emission sources at the facilities. ~~This rule is an interim rule effective until July 1, 1995 or until the date (whichever is earlier) that measured particulate emission rates from grain handling are developed under protocols approved or accepted by the Air Quality Division to replace the factored emission rates in this interim rule.~~

252:100-24-2. Definitions

The following words and terms when used in this subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

~~"Dust Suppression Additives" means FDA or FGIS approved additives applied commercially for dust suppression. The dust suppression efficiencies of these additives is accepted to be 90% when applied at a proper application rate per manufacturer's recommendations or as approved by the director of the Air Quality Division.~~

"Enclosed Grain Handling Equipment" means equipment that is totally self-contained or is enclosed within a structure at a grain, feed, or seed facility. Emissions from this equipment shall not be exhausted to the atmosphere except through non-pressurized vents/openings, and shall not be considered a source subject to emission calculations.

~~"Existing Grain, Feed, or Seed Operation" means a facility which was in existence in 1993 and has submitted a current emission inventory to the Air Quality Division for the 1993 reporting period year. All other grain, feed, and seed operations shall be considered new.~~

~~"Fabric Filter" means any control device or system in which particulate matter is collected on a dust cake supported on either a woven or felted fabric that can demonstrate a particulate collection efficiency of not less than 95 percent.~~

"Fugitive Emission" means those emissions that could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening.

"Grain, Feed, or Seed Operation" means any facility or

installation at which grain, feed, or seed is loaded, handled, cleaned, dried, stored, treated, or otherwise processed.

"Grain, Feed, or Seed Operations Facility" means the contiguous or adjacent area under common control upon which a grain elevator, feed mill, or grain and seed processing equipment or structures are located, and all contiguous sites having common control, which have SIC codes with the first two digits that are identical to the first two digits of the SIC code for grain elevators, feed mills, or grain and seed processing equipment.

"High Efficiency Cyclone" means any cyclone type collector of the 2D 2D or 1D 3D configuration. These designations refer to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion. A 2D 2D cyclone would exhibit a cylinder length of $2 \times D$ and a cone length of $2 \times D$ (90% collection efficiency for TSP). A 1D 3D cyclone would exhibit a cylinder length of $1 \times D$ and a cone length of $3 \times D$ (95% collection efficiency for TSP).

"Hours of Operation" is calculated by dividing the cumulative throughput total for a given time period by 75% of the rated leg capacity. This quotient is equivalent hours (not actual hours) of operation required to process the throughput. Actual leg capacity may be adjusted to more or less than 75% by individual facilities if documentation supporting the proposed adjustment is submitted to and approved by the Director of the Air Quality Division.

"Leg Capacity" means the maximum process rate for which the manufacturer designs the elevating portion of a grain, feed, or seed facility on a per leg basis.

"Loading-out hours of operation" means the hours calculated by dividing the cumulative total quantity loaded out for a given time period by 75% of the rated leg capacity. This quotient is equivalent hours (not actual hours) of operation required to process the material loaded out. Actual leg capacity may be adjusted to more or less than 75% by individual facilities if documentation supporting the proposed adjustment is submitted to and approved by the Director of the Air Quality Division.

"Medium Efficiency Cyclone" means any cyclone type collector less than 2D 2D configuration. These designations refer to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion. A 1D 1D cyclone would exhibit a cylinder of $1 \times D$ and a cone length of $1 \times D$. These cyclones shall be capable of demonstrating a collection efficiency of 75% for particulate matter.

"Non-pressurized Vent or Opening" means any vent or opening which allows the emissions of air and/or contaminants at pressures substantially equivalent to atmospheric pressure without the use of mechanically-induced air flow.

"Pressurized Vent or Opening" means any vent or opening which allows the emissions of air and/or contaminants at pressures greater than atmospheric pressure indicating the use of mechanically-induced air flow.

"Process Emission" means emissions from a process equipment point source.

"Receiving hours of operation" means hours calculated by dividing

the cumulative total quantity received for a given time period by 75% of the rated leg capacity. This quotient is equivalent hours (not actual hours) of operation required to process the material received. Actual leg capacity may be adjusted to more or less than 75% by individual facilities if documentation supporting the proposed adjustment is submitted to and approved by the Director of the Air Quality Division.

"Total hours of operation" means the sum of the receiving hours of operation and the loading out hours of operation. Actual hours may be less since receiving and loading-out operations may occur simultaneously.

"Throughput" means the pounds, tons, or bushels received by a facility added to the pounds, tons, or bushels loaded out from the facility during any time period of interest divided by two.

252:100-24-3. General Provisions: Applicability, Determination of Emissions

(a) **Applicability.** The provisions of this subchapter are applicable to all new, modified, and existing grain, feed, or seed operations facilities in the State of Oklahoma.

(1) Facilities in compliance with OAC 252:100-25, 252:100-27, and 252:100-29 are not required to comply with this subchapter.

(2) Facilities in compliance with this subchapter are exempt from the requirements of OAC 252:100-25 (visible emissions), 252:100-27 (process weight), and 252:100-29 (fugitive dust).

(b) **Permits required.** In addition to the requirements of this subchapter, each new, modified or existing grain, feed, or seed operation facility shall comply with the permitting requirements of OAC 252:100-7 and 252:100-8.

(c) **Air toxics emissions.** Grain, feed, or seed operations facilities which emit toxic air pollutants above the de minimis levels specified in 252:100-41 are subject to all applicable requirements contained therein.

(d) **Record-keeping.** The owner or operator of a facility shall maintain a daily log documenting the commodity throughput receipts and load-outs and hours of operation for each. These records shall be maintained for a period of two years and shall be made available for inspection by the Air Quality Division personnel or its representative during normal business hours.

(e) **Visible emissions test.** Visible emissions (opacity) testing shall be conducted using EPA reference method 9 contained in 40 CFR, Part 60, Appendix A and must be performed by individual(s) possessing current certification.

(f) **Determination of emissions.** Emissions from grain, feed, or seed operations facilities shall be ~~based on~~ determined by the best available data. This may include actual emissions as determined by stack testing, mass balance calculations, emission calculations using approved published emissions factors, or ~~other methods~~ approved any other method which can be shown to be reasonably accurate when supported by engineering data and calculations, and approved in advance by the Air Quality Division. ~~The following factored emissions are allowed by this interim rule only until July~~

~~1, 1995 or until the date (whichever is earlier) that measured particulate emission rates from grain handling are developed under protocols approved or accepted by the Air Quality Division.~~

~~For this interim rule, emissions shall be calculated as follows for three classes of emissions:~~

~~Class I: Unloading (Receiving) 0.6 lbs/ton
Loading (Shipping) 0.3 lbs/ton
Refer to 252:100-24-4 for opacity limits.~~

~~Class II: Emission Sources with Control Devices
AP 42 factor X (1 EFF)
Refer to 252:100-24-4 for opacity limits.
EFF means fractional efficiency of control device.~~

~~Class III: Uncontrolled Vents
A. Pressurized opacity limit only
B. Non pressurized opacity limit only
Refer to 252:100-24-4 for opacity limits.~~

252:100-24-4. Smoke, Visible Emissions and Particulates

(a) Visible emissions limit.

(1) Visible emissions limits. No person shall cause, suffer, allow or permit the discharge of any fumes, aerosol, mist, gas, smoke, vapor, particulate matter or any combination thereof with a shade density greater than twenty percent (20%) equivalent opacity. This requirement shall not apply to smoke or visible emissions emitted during short-term occurrences, the shade or density of which is not greater than sixty percent (60%) opacity for a period aggregating no more than five minutes in any sixty consecutive minutes and/or no more than twenty minutes in any consecutive twenty-four hour period.

(2) Alternate emissions limit. The (20%) opacity limits, as required under 252:100-24-4 (a) may be increased for particulates only provided that the owner/operator demonstrates to the satisfaction of the Oklahoma Air Quality Council at public hearing that those requirements listed in 252:100-25-4 (a) through (c) have been met.

(3) Exceptions. Exceptions to the requirements described in 252:100-24-4 (a) (1) are provided as follows:

(a) Visible emissions from loading-out (shipping) shall be no more than sixty-five percent (65%) equivalent opacity, and visible emissions from unloading (receiving) shall be no more than fifty-five percent (55%) equivalent opacity.

(b) Emissions from pressurized or non-pressurized vents or openings with control devices shall be limited to no greater than twenty percent (20%) opacity at any time.

(c) Emissions from pressurized vents or openings without control devices shall either be enclosed, exhausted through a control device, or shall be limited to no greater than ten percent (10%) opacity at any time.

(d) Emissions from non-pressurized vents or openings without control devices shall be limited to no greater than ten percent (10%) opacity at any time.

252:100-24-5 Emission Control Equipment and Certification

(a) Emission control equipment where required by (40 CFR 60.300) must meet the standards set under the Federal New Source Performance Standards (NSPS Subpart DD), or as mandated by other Federal requirements for major sources. Additional controls may be required to reduce nuisance emissions.

(b) Affected facilities shall make best efforts to reduce dust emissions during load-out by minimizing the distance from the load-out spout to the top of the receiving vessel.

(c) Certification. Each new, modified, or existing grain, elevator feed or seed facility in the state of Oklahoma shall provide written certification of compliance with this subchapter within one year of the adoption of this rule by the Air Quality Council+DEQ Board. Annual certification of receiving, loading-out, and total annual hours of operation, quantity received and loaded-out, visible emissions, and throughput and the operation and proper maintenance of any required control equipment shall be completed by the owner, operator or other designated responsible party and submitted as part of the annual emissions inventory reporting form.

252:100-24-6 Fugitive Dust Controls

(a) All facilities will take reasonable precautions to prevent the discharge of any visible fugitive dust emissions beyond the property line from which the emissions originate.

(b) No persons shall allow visible emissions beyond the property line in such a manner as to damage or to interfere with the use of adjacent properties.

REGULAR MEETING AGENDA
DEPARTMENT OF ENVIRONMENTAL QUALITY
OKLAHOMA ENVIRONMENTAL QUALITY BOARD

A Public Meeting: 9:30 a.m., Tuesday, November 10, 1998
Kerr Country Mansion and Conference Center
1507 South McKenna
Poteau, Oklahoma

1. Call to Order - Herschel Roberts
2. Roll Call - Lynda Finch
3. Approval of Minutes of the September 15, 1998 Regular Meeting
4. **OAC 252:002 Procedures of the Department of Environmental Quality:**

Subchapter 17 of OAC 252:002 deals with the processing of citizen complaints received by the DEQ. The proposed amendment to Section 17-2 expands the definition of "enforcement action" to include a referral by a DEQ division to the Oklahoma Attorney General's Office, a district attorney's office, a state or federal law enforcement agency, or the DEQ's Environmental Crimes Investigation Team for investigation of possibly criminal environmental violations. Because criminal referral processes and criminal investigations typically are relatively involved and lengthy, this amendment is proposed to allow the DEQ to pursue possible criminal enforcement actions while still meeting agency complaint procedures and timelines.

Because this is an amendment to the procedural rules of the DEQ, it is not within the jurisdiction of an advisory council. Thus, the opportunity for public comment on this agenda item constitutes the rulemaking hearing on the proposal.

- A. Presentation -- Jimmy Givens, DEQ General Counsel
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote for permanent adoption

5. **OAC 252:100 Air Pollution Control:**

Three sets of changes are proposed:

- The proposed revisions to Subchapters 23 (Cotton Gins) and 24 (Grain Elevators) simplify the language under the DEQ's "re-right/de-wrong" rules simplification initiative. It is also proposed to add a new Permit by Rule section to both subchapters. The Permit by Rule will streamline the permitting process by creating a mechanism that will eliminate the need for some cotton gins and elevators to obtain an individual air quality permit. Also, a new Appendix L is proposed which contains Particulate Matter (PM)-10 emission factors for Permit by Rule grain elevators. Additional changes to both subchapters track proposed amendments of Subchapter 25 concerning opacity.

- In addition to “re-right/de-wrong” simplification changes, the proposed revisions to Subchapter 25 (Smoke, Visible Emissions and Particulates) incorporate by reference the federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries, subject to certain exceptions. Additional changes include exempting sources subject to opacity standards promulgated under the Federal Clean Air Act from the state opacity standard, and clarifying how the opacity standard will be determined at sources that have Continuous Opacity Monitors and those that do not.
- The proposed revisions to Subchapter 41 (Control of Emission of Hazardous and Toxic Air Contaminants) update the adoption by reference of federal rules to include Maximum Achievable Control Technology (MACT) standards promulgated or amended between July 1, 1997 and July 1, 1998. The new standards relate to pulp and paper production and to aluminum production plants. The proposed revisions also update the adoption by reference of the federal National Emission Standards for Hazardous Air Pollutants (NESHAP) to July 1, 1998, with certain exceptions.

These changes were recommended by the Air Quality Council at their meeting on October 20, 1998.

- A. Presentation - David Branecky, Air Quality Council member
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote(s) for permanent adoption

6. Consideration of the Environmental Quality Report:

The Oklahoma Environmental Quality Code requires the DEQ to prepare an Environmental Quality Report and to submit it to the Governor, Speaker of the House and Senate President Pro Tem by January 1st of each year. Contrary to the statutory title, the purpose of this report for a fairly small targeted audience is to outline the DEQ’s two-year needs for providing environmental services within its jurisdiction, and to reflect any new federal mandates and recommended statutory changes. The Environmental Quality Board is to review, amend and approve the report.

- A. Presentation – Mark Coleman, DEQ Executive Director
- B. Questions and discussion by the Board
- C. Questions, comments and discussion by the public
- D. Discussion by the Board
- E. Roll call vote

- 7. New Business (any matter not known about and which could not reasonably have been foreseen prior to the time of posting of agenda)
- 8. Executive Director’s Report
- 9. Vote on 1999 Environmental Quality Board meeting dates
- 10. Adjournment

Public Forum: The Board meets four times a year at different locations across the State to hear the views and concerns of all Oklahomans about environmental issues. This opportunity is informal, and we invite you to sign the register to speak.

Should you have a disability and need an accommodation, please notify the DEQ three days in advance at 702-7100.

**SUBCHAPTER 24. ~~CONTROL OF EMISSIONS FROM GRAIN~~
~~ELEVATORS~~PARTICULATE MATTER EMISSIONS FROM GRAIN,
FEED OR SEED OPERATIONS**

Section

**SUBCHAPTER 24. ~~CONTROL OF EMISSIONS FROM GRAIN~~
~~ELEVATORS~~PARTICULATE MATTER EMISSIONS FROM GRAIN,
FEED OR SEED OPERATIONS**

252:100-24-1. Purpose

The purpose of this Subchapter is to control emissions from facilities that handle, store or process grains, feeds or seeds. ~~All facilities handling bulk agricultural commodities through grain handling equipment can apply this subchapter to emission sources at the facilities.~~

252:100-24-2. Definitions

The following words and terms when used in this subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Enclosed Grain Handling Equipment" means equipment that is totally self-contained or is enclosed within a structure at a grain, feed, or seed facility. Emissions from this equipment shall not be exhausted to the atmosphere except through non-pressurized vents/openings, and shall not be considered a source subject to emission calculations.

~~"Fugitive Emission" means those emissions that could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening.~~

"Grain, Feed, or Seed Operation" means any facility or installation at which grain, feed, or seed is loaded, handled, cleaned, dried, stored, treated, or otherwise processed.

"Grain, Feed, or Seed Facility" means the contiguous or adjacent area under common control upon which a grain elevator, feed mill, or grain and seed processing equipment or structures are located, and all contiguous sites having common control, ~~which have SIC codes with the first two digits that are identical to the first two digits of the SIC code for grain elevators, feed mills, or grain and seed processing equipment.~~

"Leg Capacity" means the maximum process rate for which the manufacturer designs the elevating portion of a grain, feed, or seed facility on a per leg basis.

"Loading-out hours of operation" means the hours calculated by dividing the cumulative total quantity loaded out for a given time period by 75% of the rated leg capacity. This quotient is equivalent hours (not actual hours) of operation required to process the material loaded out. Actual leg capacity may be adjusted to more or less than 75% by individual facilities if documentation supporting the proposed adjustment is submitted to and approved by the ~~Director of the Air Quality Division~~ Director.

"Non-pressurized Vent or Opening" means any vent or opening which allows the emissions of air and/or contaminants at pressures substantially equivalent to atmospheric pressure without the use of mechanically-induced air flow.

"Pressurized Vent or Opening" means any vent or opening which allows the emissions of air and/or contaminants at pressures greater than atmospheric pressure indicating the use of mechanically-induced air flow.

~~"Process Emission" means emissions from a process equipment point source.~~

"Receiving hours of operation" means hours calculated by dividing the cumulative total quantity received for a given time period by 75% of the rated leg capacity. This quotient is equivalent hours (not actual hours) of operation required to process the material received. Actual leg capacity may be adjusted to more or less than 75% by individual facilities if documentation supporting the proposed adjustment is submitted to and approved by the ~~Director of the Air Quality Division~~ Director.

"Total hours of operation" means the sum of the receiving hours of operation and the loading out hours of operation. Actual hours may be less since receiving and loading-out operations may occur simultaneously.

252:100-24-3. ~~General provisions: applicability, determination of emissions~~ Applicability, general requirements

(a) Applicability. The provisions of this subchapter are applicable to all new, modified, and existing grain, feed, or seed facilities in the State of Oklahoma.

(1) Facilities in compliance with ~~OAC~~ 252:100-25, 252:100-27, and 252:100-29 are not required to comply with this subchapter.

(2) Facilities in compliance with this subchapter are exempt from the requirements of ~~OAC~~ 252:100-25 (visible emissions), 252:100-27 (process weight), and 252:100-29 (fugitive dust).

(b) General requirements.

~~(b)(1)~~ (1) Permits required. In addition to the requirements of this subchapter, each new, modified or existing grain, feed, or seed facility shall comply with the permitting requirements of ~~OAC~~ 252:100-7 and/or 252:100-8.

~~(c)(2)~~ (2) Air toxics emissions. Grain, feed, or seed facilities ~~which~~ that emit toxic air pollutants above the de minimis levels specified in 252:100-41 are subject to all applicable requirements contained therein.

~~(d)(3)~~ (3) Record-keeping. The owner or operator of a facility shall maintain a daily log documenting ~~the~~ commodity receipts and load-outs and hours of operation for each. These records shall be maintained for a period of two years and shall be made available for inspection by the ~~Air Quality Division personnel or its representative~~ DEQ during normal business hours.

~~(e)(4)~~ (4) Visible emissions test. Visible emissions (opacity) testing shall be conducted using EPA reference method 9 contained in 40 CFR, Part 60, Appendix A and must be performed by ~~individual(s) possessing current certification~~ a Certified Visible Emission Evaluator.

~~(f)(5)~~ (5) Determination of emissions. Emissions from grain, feed, or seed facilities shall be determined by the best available data. This may include actual emissions as determined by stack testing, mass balance calculations, emission calculations using approved published emissions factors, or any other reasonably accurate method which can be shown to be reasonably accurate when supported by engineering data and calculations, and approved in advance by the ~~Air Quality Division~~ DEQ.

252:100-24-4. ~~Smoke, Visible Emissions and Particulates~~ Visible emissions (opacity) limit

(a) ~~Visible emissions limits~~ Opacity limit. No person shall cause,

~~suffer, allow or permit the discharge of any fumes, aerosol, mist, gas, smoke, vapor, particulate matter or any combination thereof with a shade density exhibiting greater than twenty (20) percent equivalent 20% opacity. This requirement shall not apply to smoke or visible emissions exhibiting greater than 20% opacity emitted during short-term occurrences, the shade or density of which is not greater than sixty percent (60%) opacity for a period aggregating no more than five minutes in any sixty consecutive minutes and/or no more than twenty minutes in any consecutive twenty four hour period which consist of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours, during which the average of any six-minute period shall not exceed 60% opacity.~~

(b) ~~Alternate emissions opacity limit.~~ The 20% opacity limits, ~~as limit~~ required under 252:100-24-4 (a) may be increased for particulates only provided that the ~~owner/operator~~ owner or operator demonstrates to the satisfaction of the ~~Oklahoma~~ Air Quality Council at public hearing that those requirements listed in 252:100-25-4 (a) through (c) have been met.

(c) ~~Exceptions.~~ Exceptions to the requirements described in 252:100-24-4 (a) ~~(1)~~ are provided as follows:

(1) Visible emissions from loading-out (shipping) shall be no more than 65% ~~equivalent~~ opacity, and visible emissions from unloading (receiving) shall be no more than 55% ~~equivalent~~ opacity.

~~(2) Emissions from pressurized or non-pressurized vents or openings with control devices shall be limited to no greater than twenty percent (20%) opacity at any time.~~

~~(3)~~ (2) Emissions from pressurized vents or openings without control devices shall either be enclosed, exhausted through a control device, or shall be limited to no greater than 10% opacity at any time.

~~(4)~~ (3) Emissions from non-pressurized vents or openings without control devices shall be limited to no greater than 10% opacity at any time.

252:100-24-5. ~~Emission control equipment and certification~~ Certification

~~(a) Standards.~~ Emission control equipment where required by (40 CFR 60.300) must meet the standards set under the Federal New Source Performance Standards (NSPS Subpart DD), or as mandated by other Federal requirements for major sources. Additional controls may be required to reduce nuisance emissions.

~~(b) Affected facilities.~~ Affected facilities shall make best efforts to reduce dust emissions during load out by minimizing the distance from the load out spout to the top of the receiving vessel.

~~(c) Certification.~~ Each new, modified, or existing grain, feed or seed facility in the state of Oklahoma shall provide written certification of compliance with this subchapter within one year of the adoption of this Subchapter by the DEQ Board. Annual certification of receiving, loading out, and total annual hours of operation, quantity received and loaded out, visible emissions, and the operation and proper maintenance of any required control equipment shall be completed by the owner, operator or other

~~designated responsible party and submitted as part of the annual emissions inventory reporting form.~~

(a) Initial certification. Any grain, feed or seed facility in existence on September 28, 1994, shall provide written certification of compliance with this subchapter by September 28, 1995, or within six months of receiving an initial certification form from DEQ.

(b) Annual certification. The owner, operator or other designated responsible party of a grain, feed or seed facility shall submit along with the annual emissions inventory, an annual certification of quantities received and loaded-out.

252:100-24-6. Fugitive dust controls

(a) All facilities will take reasonable precautions to prevent the discharge of any ~~visible~~ fugitive dust emissions beyond the property line from which the emissions originate.

(b) No persons shall allow ~~visible~~ fugitive dust emissions beyond the property line in such a manner as to damage or to interfere with the use of adjacent properties.

(c) All facilities shall make best efforts to reduce fugitive dust emissions during load-out by minimizing the distance from the load-out spout to the top of the receiving vessel.

252:100-24-7. Permit by Rule

(a) Applicability. Any new or existing source may be constructed or operated under this section if it meets the requirements of 252:100-7-60(a), (b), and (c) and has the Standard Industrial Classification (SIC) code 5153, Grain and Field Beans.

(b) Requirements.

(1) In addition to the requirements in 252:100-7-60(a), (b), and (c), an owner or operator of a facility subject to this section shall comply with all of the requirements of this Subchapter, with the exception of 252:100-24-5(a) and (b).

(2) The total annual emissions of PM-10 shall be calculated using the equation provided in Appendix L, which was derived from AP-42 9.9.1, Grain Elevators and Processes.

(3) For grain storage elevators located at any wheat flour mill, wet corn mill, dry corn mill, rice mill or soybean oil extraction plant, with a permanent grain storage capacity of 35,200 m³, or grain terminal elevators with a permanent storage capacity of more than 88,100 m³, which have commenced construction, modification, or reconstruction after August 3, 1978, the requirements of 40 CFR, Part 60, Subpart DD are also applicable.

**Appendix L. PM-10 Emission Factors for Permit by Rule for Grain Elevators
[NEW]**

$$\left[\frac{R}{45} + \frac{S}{92} \right] \times 40 = \text{Combined Emissions (TPY)}^*$$

Where, R = Annual Grain Received (millions of bushels)
 S = Annual Grain Shipped (millions of bushels)

*To qualify for Permit by Rule, the total annual combined emissions must be less than 40 TPY.

Additional Comments

**SUBCHAPTER 24. PARTICULATE MATTER EMISSIONS
FROM GRAIN, FEED, OR SEED OPERATIONS**

EXECUTIVE SUMMARY:

Under the Federal Clean Air Act Amendments of 1990, sources with the potential to emit in excess of 100 T/Y of any regulated air pollutant would be subject to the permitting requirements of Title V of the Act. Facilities which handle seed, feed, and grain have high "potentials"; but are largely seasonal and, therefore, actually emit substantially less than their potential. These rules would subject all new and existing grain facilities to state permitting requirements; set limitations upon air emissions; and, for a majority of sources, bypass the more onerous Title V permitting requirements. This rule also attempts to establish industry-wide emission standards and bring them together in a single rule. The rule is effective *only* until actual test protocols are approved and empirical emissions standards are established by the industry, or until July 1, 1995, whichever is earlier. In the case empirical emission standards are not established, current AP-42 engineering factors will be utilized to determine emissions. Accurate emission factors are also important since they will provide the basis for annual operating fees under the permitting rules.

SUMMARY OF DIFFERENCES FROM ANALOGOUS FEDERAL RULES:

There are no analogous rules. These rules are an aid to compliance with Part 70 permitting requirements meant to assist industry.

ENVIRONMENTAL BENEFIT STATEMENT:

Applicable federal rules allow for state permits which in effect restrict emissions and remove certain facilities from the applicability of Title V. This takes advantage of this situation by setting emission standards and operational parameters which would limit the potential to emit of affected facilities, and therefore applicability of Title V. The state rule is actually less stringent than the federal rule; therefore the Environmental Benefit Statement requirement does not apply.

Comments and Response

1. Comment: EPA indicated that they could not approve a new rule which resulted in a relaxation of an existing State Implementation Plan without adequate technical and/or scientific data to justify such action.

Response: Staff agrees. Proposed Subchapter 24 provides for an opportunity for the affected industry to demonstrate any area of the existing applicable rules and provide data for making any appropriate changes to these rules.

2. Comment: What is the specific calculation process currently used to determine "potential to emit" under AP-42 guidelines?

Response: A source's emissions are to be calculated using its maximum capacity. Maximum emission capacity would then be the designed capacity times the total hours per year, times an emission factor, equals a source's potential to emit. Control equipment and restrictions of the hours of operations or other items which would reduce the potential to emit can be used in the calculations only if these limitations are enforceable by the Administrator, i.e., an enforceable permit.

3. Comment: Are there other allowable calculation procedures and, if so, would they result in a lower determination of "potential to emit"?

Response: Staff recommends using material balance, stack testing on identical equipment, mfg. guaranteed specifications, or any other method approved by AQS as equivalent. The probability of lowering the determination of "potential to emit" is difficult to answer because any one of these methods may depend upon several variables. However, it would be appropriate to indicate that stack testing would be most accurate followed by mfg. specifications, material balance, etc.

4. Comment: What are the necessary requirements of grain elevators which are determined to emit less than 100 tons of dust per year.

Response: Applicability to the Title V, Major Source Operating Permit, will be determined based upon potential to emit 100 tons per year or more, but has actual annual emissions of less than 100 tons per year (i.e., does not have enforceable limitations for less than 100 tons per year), then Title V permitting requirements will be applicable and the source will be required to submit a Title V permit application when Title V, Operating

Permit Program is implemented. If a source has the potential to emit 100 tpy or more but has enforceable limitations (i.e., a permit) for less than 100 tpy, A Title V permit will not be applicable and an application will not be required to be submitted when the Title V, Operating Permit Program is implemented. A grain elevator which has the potential to emit less than 100 tpy will not be applicable to the Title V Operating Permit Program, but will remain applicable to appropriate state air quality rules. Facilities which are applicable to a New Source Performance Standard such as Subpart DD - Standards of Performance for Grain Elevators, are defined as major sources and will be applicable to Title V operating permit requirements.

5. Comment: How will the use of mineral oil additives to the grainstream be incorporated into the calculation process?

Response: Upon receipt of acceptable documentation (mfg specs., stack test results, etc.) of demonstration that introduction of mineral oil additives have an established effect on ambient air emissions reductions and a quantification of such reduction, the AQS will be in a position to accept the mineral oil additive as an equivalent method of control for grain processing and handling emissions.

6. Comment: How will ODEQ-AQD classify and make determination of fugitive dust?

Response: Staff considers "fugitive emissions" as emissions which could not reasonably pass through a stack, chimney, vent, or other functionally-equivalent opening. This would include fugitive dust. "Process Fugitives" mean any emissions which are the result of any process such as receiving, turning, and handling, but are not classified as fugitive emissions because they could reasonably pass through a stack, chimney, vent, or other functionally-equivalent opening.

7. Comment: Will all grain elevators have the "potential to emit" over 100 tons of dust if operated 24 hpd/365 days per year?

Response: AQS has not calculated the potential to emit of all grain processing facilities in the state. Applicability would depend upon the maximum capacity of all the process equipment, the number and type of all processes at a facility. In other words, it must be determined on a case by case basis.

8. Comment: Does ODEQ_AQD make no distinction as to the portion of dust emissions which is considered PM-10?

Response: Staff references CFR Part 70.2 Definition, "Major Source" (2) states: A major stationary source of air pollutants, as defined in section 302 of the Act, that directly emits or has

the potential to emit, 100 tpy or more of any air pollutant (including any major source fugitive emissions of any such pollutant, as determined by rule by the Administrator). The fugitive emissions of a stationary source shall not be considered in determining whether it is a major stationary source for the purpose of section 302(j) of the Act, unless the source belongs to one of the following categories of stationary source.

The list of source categories has not been included because grain elevators are not on the list.

This definition includes, "as determined by rule by the Administrator"; this includes state rules which have been adopted as part of the state implementation plan. OAC 310:200-25, Smoke, Visible Emissions and Particulates, and OAC 310:200-27, Particulate Matter Emissions from Industrial and Other Processes and Operations, have been adopted as part of the Oklahoma SIP. These two rules establish the allowable visible emissions and TSP emissions are considered to be a regulated pollutant. PM-10 is considered separately for purposes of compliance with NAAQS.

9. Comment: What are the upcoming deadlines as to permitting requirements?

Response: Each state is required to submit a Title V Operating Permit Plan to EPA by Nov. 15, 1993. EPA must approve or disapprove a state's plan by Nov. 15, 1994.

Major Sources must submit an application for a Title V permit within 12 months of EPA's approval of a state's plan. Therefore, if EPA approves Oklahoma's plan by November 15, 1994, major source Title V permit applications will be required to be submitted on or before November 15, 1995.

10. Comment: What is the process involved of the Council changing the state's SIP as it pertains to the grain industry in a manner that will be approved by EPA. Is this what we are attempting to do via our subchapter?

Response: Staff concur, proposed subchapter 24, Control of Emissions from Grain Elevators, upon fulfillment of the Administrative Procedures Requirement imposed by Oklahoma State Statutes, will be submitted to EPA as a SIP revision as a state air quality rule specific to the grain elevators, and therefore removing grain elevators from the requirements of existing applicable subchapters 25-27-29. EPA reviews SIP submittal for their appropriateness. Some of the things which are considered in EPA review include: is the need for the proposed changes documented; does this documentation demonstrate the need for the change; and can the changes be defended from any challenges which may be presented.

EPA has the final authority whether to accept the proposed SIP revision, ask for additional information or changes from the state or to deny the proposal as a SIP revision. The state has always worked closely with EPA when preparing a proposed SIP revision in an effort to minimizing EPA's concerns and therefore improve the likelihood of submitting an approvable rule as a SIP revision.

11. Comment: The industry committee does not have a problem with the 55%-65% opacity levels tied to a study so long as we have some idea of the study parameters. Could staff possibly have their proposed study parameters available for industry's consideration prior to the first meeting?

Response: Staff presented the proposal for a study to your organization on Friday, April 8, 1994 and your group later declined that opportunity to go forward with such a study, therefore a detailed protocol for the study was not developed. The staff is certainly willing to develop a study protocol, however it would better serve the grain elevator industry and AQD alike to jointly develop the study protocol.

12. Comment: Could we have further explanation on what would be involved with the Title V permit process if we opt for the two year delay? We are confused between staff comments on April 8 and April 12 on this issue. How does staff anticipate this process will occur? How many elevators will be involved? Does staff have an idea of what a generic permit will look like?

Response: 1) The staff has said and will continue to take the position that any source which has the potential to emit 100 tpy of a regulated pollutant or any level of emission which makes that source applicable to Part 70 permitting requirement, will be expected to comply with the Part 70 permit application. However the staff has indicated that due to recent clarification of emission points at grain elevators, there is a likelihood that fewer elevators than originally estimated would have a 100 tpy actual or potential to emit.

2) During conversations with EPA on April 5, 1994 about the Part 70 Permitting Program, we became aware of new information which will allow for the staggering of applicability reviews and issuance of Part 70 permit applications. EPA indicated that a state has the option to clarify their Part 70 Permit Plan Submittal by providing a schedule for review and issuance of Part 70 permits. If it is determined at the time of the Part 70 permit reviews that a source or categories of source are not applicable to the Part 70 Permitting requirement, based upon newly developed emission data or any other information which may not have been available at the time when required to submit the application, a Permit 70 permit will not be required.

Preparation of the Part 70 permitting plan clarification could be utilized to allow those source categories that do not currently have reliable emission data time to research and develop representative emission data for their respective industry to be used as the basis of determining applicability to Part 70 permitting requirement.

3) AQD cannot at this time quantify the number of grain elevators which will be applicable to submitting a Part 70 permit application. However, we feel that the number will be relatively small.

4) The staff has a basic idea of what a "generic" permit for grain elevators would look like. That is, it would include all the appropriate items necessary to establish all the federally enforceable limitations to avoid applicability to the Part 70 permitting requirements. We believe that it would basically be a simplified version of the presently issued permit.

13. Comment: We believe that feed mills and seed processors need to be included in Subchapter 24.

Response: AQD staff does not believe sufficient review has been given to this issue to know all the ramifications which could result from inclusion of this segment of industry in proposed subchapter 24. Therefore, we do not feel it would be appropriate to take the action your organization is requesting until appropriate review has been accomplished. We proposed that subchapter should be applicable to only the grain elevating processes at this time and could be revised later to include feed mills and seed processor if determined appropriate to do so.

14. Comment: We believe that sufficient data has been submitted to support the 70% reduction of AP-42 emission factors.

Response: AQD staff has determined several issues that need resolution before staff can concur with this position. These issues were presented in a report dated April 1, 1994.

15. Comment: Which emission points will be considered in determining annual emission estimates?

Response: Staff has included section 24-3(f), which addresses the emission points and factors in Subchapter 24.

16. Comment: Industry is concerned that fees assessed from following current AP-42 factors will force country elevators out of business.

Response: Staff state that Subchapter 24 does not address fees. However, realizing that fees are a result of emission estimates, methods of calculating emissions are included in Subchapter 24.

OAC 252:100-24 PARTICULATE MATTER EMISSIONS
FROM GRAIN, FEED, OR SEED OPERATIONS

EXECUTIVE SUMMARY:

Under the Clean Air Act Amendments of 1990, sources with the potential to emit in excess of 100 tons per year of any regulated air pollutant would be subject to the permitting requirements of Title V of the Act. Facilities which handle seed, feed, and grain have high "potentials" but are largely seasonal and, therefore, actually emit substantially less than their potential. The intent of the revision to OAC 252:100-24 is to simplify and clarify the existing rule by: omitting the rule expiration date, removing many unnecessary definitions, and removing emission factors for grain handling. New language is added concerning Loading operations, Hours of operation, and Determination of emissions.

SUMMARY OF COMMENTS AND RESPONSES:

Comment: A member of the Air Quality Council felt the "Guidance Document" accompanying this rule should reference the OSU Study as the fundamental study done to develop the emissions factors. This study provides a scientific rationale that is of importance since the OSU emission factors are less than the EPA AP-42 factors.

Response: The staff has met with representatives of the grain industry to discuss this and other additions to the document.

Comment: A representative from a local environmental firm questioned wording of the definition of fugitive emissions. Concern was expressed that as currently worded, the rule indicates if the dust emissions get on properties beyond adjacent properties, the rule would not apply. It was requested that the definition for "fugitive dust" be added to the guidance document to better reflect the health effects of the emissions.

Response: The staff stated the definition for "fugitive dust" is exactly the same as in other portions of Oklahoma Air Quality rules and that the definition was designed to include facilities that may not have a stack and implies possible controls could be placed on the stack. Further, health effects were not part of the OSU Study as it was an emissions quantification study. After discussion, it was agreed minor changes in wording be made.

SUMMARY OF DIFFERENCES FROM ANALOGOUS FEDERAL RULES

There are no analogous rules. These rules are an aid with Part 70 permitting requirements meant to assist

for future reference, the should also say this is to assist with obtaining permits

CHAPTER 100. AIR POLLUTION CONTROL
SUBCHAPTER 24. CONTROL OF EMISSIONS FROM GRAIN ELEVATORS

EXECUTIVE SUMMARY: The proposed revisions to Oklahoma Administrative Code 252:100-24, Control of Emissions from Grain Elevators, will simplify the language under the agency-wide re-right/de-wrong initiative. It is also proposed to add a new Permit by Rule section to the subchapter that will streamline the permitting process by creating a mechanism that will eliminate the necessity for some grain elevators to obtain an individual air quality permit. Also, a new Appendix L is proposed which contains PM-10 emission factors for PBR grain elevators. Additional changes to the subchapter follow a proposed amendment of Subchapter 25 concerning short-term exceedances of the opacity standard. The revised rules would allow exceedances of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours.

DIFFERENCES FROM ANALOGOUS FEDERAL RULES: None.

ENVIRONMENTAL BENEFIT STATEMENT: Not required because these rules are not more stringent than corresponding federal rules.

SUMMARY OF COMMENTS AND RESPONSES:

Comment: EPA suggested the AP-42 Section 9.9.1, Grain Elevators and Processes, be referenced in the rule.

Response: Staff agreed and the reference was added.

Comment: Staff and Public requested the certification of visible emissions and operation and proper maintenance of any required control equipment be taken out of section 24-5(b), Annual certification.

Response: Staff agreed and the deletion was made.

Comment: EPA commented that 252:100-24-7 should include a practically enforceable method or procedure to verify compliance through recordkeeping and maintenance.

Response: No changes were necessary since section 24-7(b)(1) requires compliance with all of the requirements of the Subchapter, except 24-5(a) and (b). Thus, the recordkeeping requirements of 24-3(b)(3) are already applicable to Permit by Rule facilities.

Comment: Council recommended the word "equivalent" in section 24-4(c)(1) be deleted for reasons of consistency.

Response: Staff agreed and the two deletions were made in the section.

5 (The following public meeting was held before
6 the Oklahoma Department of Environmental Quality.)

7 THE CHAIRMAN: We'll have to call our meeting
8 officially to order. That's done. We'll have roll
9 call.

10 THE SECRETARY: Mayor Taron?

11 MR. TARON: Here.

12 THE SECRETARY: Dr. Tanner?

13 (No response.)

14 THE SECRETARY: Ms. Tillman?

15 MS. TILLMAN: Here.

16 THE SECRETARY: Dr. Hughes?

17 DR. HUGHES: Here.

18 THE SECRETARY: Ms. Hinkle?

19 MS. HINKLE: Here.

20 THE SECRETARY: Ms. Slagell?

21 MS. SLAGELL: Here.

22 THE SECRETARY: Mr. Fishback?

23 MR. FISHBACK: Here.

24 THE SECRETARY: Mr. Kilpatrick?

25 MR. KILPATRICK: Here.

1 THE SECRETARY: Mr. Breisch?

2 THE CHAIRMAN: Here.

3 Okay. If it's all right with you all, I want
4 to take care of the approval of the minutes of the
5 January 11th meeting and March 3rd meeting.

6 MR. TARON: Move to be approved.

7 DR. HUGHES: Second.

8 THE CHAIRMAN: Moved and seconded. Any
9 questions, comments?

10 (No response.)

11 THE CHAIRMAN: Call the roll.

12 THE SECRETARY: Mayor Taron?

13 MR. TARON: Aye.

14 THE SECRETARY: Ms. Tillman?

15 MS. TILLMAN: Aye.

16 THE SECRETARY: Dr. Hughes?

17 DR. HUGHES: Aye.

18 THE SECRETARY: Ms. Hinkle?

19 MS. HINKLE: Aye.

20 THE SECRETARY: Ms. Slagell?

21 (No response.)

22 THE SECRETARY: Mr. Fishback?

23 MR. FISHBACK: Aye.

24 THE SECRETARY: Mr. Kilpatrick?

25 MR. KILPATRICK: Aye.

1 THE SECRETARY: Mr. Breisch?

2 MR. BREISCH: Aye.

3 THE CHAIRMAN: Okay. At this time then we'll
4 go ahead and proceed with our rule making. Larry, you
5 will act as protocol officer for this portion of the
6 meeting.

7 MR. BYRUM: Ladies and gentlemen, my name is
8 Larry Byrum; I am the director of the Air Quality
9 Division. As such, I will act as protocol officer for
10 the hearing. The hearing is convened by the Air Quality
11 Council in compliance with the Oklahoma Administrative
12 Procedures Act in Title 40 of the Code of Federal
13 Regulations, Part 51, as well as the authority of Title
14 63 of the Oklahoma Statutes, Section 11801 and
15 following.

16 This hearing was advertised in the Oklahoma
17 Register for the purposes of receiving comments
18 pertaining to the procedures of the Environmental
19 Council, and if you wish to make a statement, please
20 complete the form that's back at the registration table,
21 and I will call upon you at the appropriate time.

22 At this time I will call upon Mr. Dennis
23 Doughty to give the staff position on this rule.

24 MR. DOUGHTY: Thank you, Larry. My name is
25 Dennis Doughty, staff attorney for the Air Quality

1 Service. And we have a procedural rule here which has
2 been before the Council a time or two before. It's a
3 rule which the Council has passed once as an emergency.
4 We had some discussion this morning. I was able to
5 retrieve the first page of the rule, and I hope each and
6 every one of you has a copy of the first page of the
7 rule.

8 In response to the comments this morning, I
9 would say that the very first -- the very first page,
10 the cover page, is extraneous and not meant to be part
11 of the rule. It's meant to be part of the
12 administrative procedures requirement that particular
13 information be included with the rule when it's sent
14 through the system.

15 On page 3, I was requested to look at the
16 jurisdiction issue. It says the Air Quality Council,
17 that the jurisdiction, although not necessarily limited
18 to specific articles, are generally set forth as
19 follows, and it says Article 5 of the Oklahoma
20 Environmental Quality Code. Article 5 happens to be the
21 Oklahoma Clean Air Act, which I think was what the
22 concern was. So that refers specifically to the Clean
23 Air Act, which should cover that particular problem.

24 There was a change that was requested in
25 duties, and what I did was come up with some new

1 language to add at the very end of (E) under Duties.
2 The language I have drafted says that this paragraph
3 shall not be construed to limit the authority of the Air
4 Quality Council to pass binding resolutions under the
5 Oklahoma Clean Air Act. And that was a concern that was
6 voiced this morning concerning the passing of nonbinding
7 resolutions for other councils.

8 MR. KILPATRICK: Which page is that on, Dennis?

9 MR. DOUGHTY: That's on page 3 under (E),
10 Duties.

11 Mr. Peyton had expressed some concern that the
12 Air Quality Council in a sense has authority to pass
13 binding resolutions, which I assume he was speaking of
14 the rule-making capacity and also the authority under
15 individual proceedings.

16 MR. HUGHES: Would you repeat that, please.

17 MR. DOUGHTY: What I added was: "This
18 paragraph shall not be construed to limit the authority
19 of the Air Quality Council to pass binding resolutions
20 under the Oklahoma Clean Air Act."

21 That doesn't grant any more authority. It just
22 says that it won't detract from what authority we
23 already have. And I hope that would be satisfactory.

24 There was one more comment this morning
25 concerning rule-making hearings before the Council, that

1 language be added to say that the Council has the -- or
2 at least to confirm the authority that the Council has
3 the authority to appoint hearing officers. What I did
4 was change the second sentence to read as follows:

5 "Hearings before the Council shall be conducted by the
6 chair or the chair's designee or at the request of the
7 Council by a hearing officer," and I changed the word
8 "appointed" to "recommended" by the department.

9 I added the following sentence: "The Council
10 shall also have the option to appoint hearing officers
11 on their own motion," which is in conformance with the
12 authority under the Clean Air Act.

13 THE CHAIRMAN: Now, you didn't change the
14 original paragraph any?

15 MR. DOUGHTY: Yeah. I changed the word
16 "appointed" to "recommended." It says that language in
17 effect referring to a hearing officer "appointed" by the
18 department; it says a hearing officer "recommended" by
19 the department.

20 THE CHAIRMAN: Okay.

21 MR. DOUGHTY: That's what I changed.

22 THE COURT: Okay. I didn't hear recommended.
23 In other words "appointed" is out.

24 MR. DOUGHTY: The language that I'm suggesting
25 would take out the word "appointed" and insert the word

1 "recommended," and then adding the language that says
2 that under their own authority they can by motion
3 appoint a hearing officer.

4 I believe that addresses the concerns of the
5 Council, as I recall. I think we would recommend that
6 if the Council sees fit to go ahead and recommend this
7 to the Board, these changes to the Board.

8 THE CHAIRMAN: Okay. Dennis, then can we go
9 ahead and pass this with these changes if we want to?

10 MR. DOUGHTY: Yes, of course.

11 MR. KILPATRICK: I so move that we pass the
12 resolution as proposed and amended by Mr. Doughty.

13 MR. HUGHES: Second.

14 MR. DOUGHTY: May I -- excuse me. May I
15 interrupt? We might want to ask for any comments --
16 before you actually vote on, you might ask for comments
17 or questions.

18 MR. BYRUM: Any more questions from the Council
19 for Mr. Doughty?

20 MS. HINKLE: I've got one question. Did I
21 understand you to say that page 1 that had been left
22 out --

23 MR. DOUGHTY: Yeah.

24 MS. HINKLE: -- was not intended -- it was
25 something that would be transferred with it, that it was

1 not a necessary part --

2 MR. DOUGHTY: I'm sorry, but the copy I
3 received just didn't have the first page in it, and it
4 went into the packet, and it just wasn't there.

5 MS. HINKLE: But it is definitely --

6 MR. DOUGHTY: Oh, absolutely. It's part of the
7 packet and part of the rule as passed previously.

8 MR. BYRUM: Any other questions of the Council
9 for Mr. Doughty?

10 DR. HUGHES: Call for the question.

11 MR. BYRUM: Should we hear from the audience,
12 perhaps?

13 Is there anyone in the audience who wishes to
14 address this subject?

15 MR. FOGDEN: I'm Frank Fogden representing
16 the DEQ. I guess I had a question on the last
17 recommendation if in fact any of the other councils
18 except the Air Quality Council has the authority to
19 appoint a hearing officer. Do you know if that's true,
20 Dennis?

21 MR. DOUGHTY: I haven't read all of their --
22 their implementing legislation, I certainly don't know.

23 You mean under the statutes?

24 MR. FOGDEN: Uh-huh.

25 MR. DOUGHTY: I'm not aware. We have some

1 other issues that come in here with the Council, too,
2 and that is the Council's authority to conduct
3 individual proceedings, which none of the other councils
4 do. And I think that issue is part of what's involved
5 here.

6 (A discussion was held off the record.)

7 MR. DOUGHTY: Okay. But I think the question
8 that he asked me was: Did any of the other councils
9 have the authority to appoint hearing examiners, and I
10 have to admit that I don't know the answer to that.

11 I'm not sure that they do.

12 FRANK FOGDEN: My recommendation is that it be
13 changed to specify Air Quality Council, because if it
14 goes to the Board and it does become issues that other
15 councils can't appoint, we can't change it, basically, I
16 don't believe.

17 MR. BYRUM: That's correct.

18 MR. FOGDEN: And then --

19 MR. TARON: If they want to change, it.
20 Whether or not --

21 MR. FOGDEN: -- emergency involved.

22 MR. BYRUM: What I believe he's saying is if
23 you make it specific that the Air Quality Council has
24 this authority and we pass it that way, it becomes
25 negative whether the other councils have that authority

1 or not. Is that correct?

2 MR. FOGDEN: Yes.

3 MR. BYRUM: And I think that's what he's asking
4 is if you make it specific for the Air Quality Council,
5 then if the other councils don't have that authority,
6 it's negative, the Board does not have to send it back
7 to us to put that wording back in. If the other
8 councils aren't granted by the law that authority, then
9 if we leave the language the way it is now, their choice
10 would be to grant that authority by passing what you
11 send forward or send it back to us to be modified.

12 MR TARON: I have a question. Who is the
13 authority? The legislature or the Department of
14 Environmental Quality? Who is the authority? Didn't
15 the legislature --

16 MR. BYRUM: Sure. And he's agreeing with that.

17 MR. KILPATRICK: Gave us the authority.

18 MR. BYRUM: But what he's saying is they may
19 not have given the other councils this authority.

20 MR. FOGDEN: I understood they didn't.

21 MR. BYRUM: Yeah, that's what he's saying. Go
22 ahead and say just the Air Quality Council here.

23 MR. DOUGHTY: Is the very last change that you
24 find exception to that we need to do something with? If
25 we added where we say council, if we say specifically

1 Air Quality Council, do you think that would be
2 satisfactory?

3 MR. FOGDEN: Yeah, I think so.

4 MR. KILPATRICK: I think you'd want to go back
5 and change the recommended back to appointed.

6 THE CHAIRMAN: I think you need another
7 sentence.

8 MR. KILPATRICK: Yeah. You have this sentence
9 down here. But you change the Council to the Air
10 Quality Council shall have the authority to point their
11 own.

12 I think -- I don't disagree with that, and it
13 may be a fact of law. I think it's unfortunate if the
14 other councils don't have the authority. I think if
15 it's a point that's not spoken to, they ought to pass
16 this rule so they have the authority rather than the
17 department.

18 But --

19 MR. DOUGHTY: If we change --

20 MR. KILPATRICK: That's not our problem; it's
21 their problem.

22 MR TARON: No. It's their problem.

23 MR. DOUGHTY: Well, if we change it back to
24 appointed and then in the last sentence say the Air
25 Quality Council shall have the sole option to appoint

1 its own hearing officers on their own motion, do you
2 think that would be satisfactory?

3 MS. HINKLE: What?

4 MR. DOUGHTY: If we change the word appointed
5 back to -- or recommended back to appointed, we can
6 change the last sentence to something to the effect of
7 saying: "However, the Air Quality Council shall have
8 the sole option of appointing its own hearing officers."

9 MR. KILPATRICK: Yeah. That will straighten it
10 out for us.

11 MR. DOUGHTY: Okay. The amended language will
12 read as follows, the very last sentence: "However, the
13 Air Quality Council shall also have the sole option to
14 appoint their own hearing officers."

15 Is that satisfactory?

16 (No response.)

17 MR. BYRUM: Are there questions for Dennis? I
18 see no further questions.

19 THE CHAIRMAN: Okay. We had a motion on the
20 floor, or the table, to adopt this as corrected. Does
21 that motion still stand?

22 MR. KILPATRICK: Do I need to amend my motion
23 to --

24 DR. HUGHES: I would say that you would have to
25 amend the motion and vote on the amendment and vote on

1 the motion.

2 MR. KILPATRICK: I will amend my motion to
3 agree with the second -- last correction.

4 MR TARON: Second.

5 THE CHAIRMAN: Any other comments or questions
6 from the Council?

7 (No response.)

8 THE CHAIRMAN: Okay, Merna, call the roll.

9 THE SECRETARY: Mayor Taron?

10 MR. TARON: Aye.

11 THE SECRETARY: Ms. Tillman?

12 MS. TILLMAN: Aye.

13 THE SECRETARY: Dr. Hughes?

14 DR. HUGHES: Aye.

15 THE SECRETARY: Ms. Hinkle?

16 MS. HINKLE: Aye.

17 THE SECRETARY: Ms. Slagell?

18 MS. SLAGELL: Aye.

19 THE SECRETARY: Mr. Fishback?

20 MR. FISHBACK: Aye

21 THE SECRETARY: Mr. Kilpatrick?

22 MR. KILPATRICK: Aye.

23 THE SECRETARY: Mr. Breisch?

24 THE CHAIRMAN: Aye.

25 (A discussion was held off the record.)

1 DR. HUGHES: You voted on the amendment. Now
2 we're voting on the motion itself.

3 MR. BYRUM: Original motion.

4 THE CHAIRMAN: Okay. Now, we'll entertain a
5 motion. We'll entertain a motion on the motion.

6 MR. KILPATRICK: We're just voting again on the
7 motion. We just voted on the amendment that passed.
8 Now, we are going to vote on the original motion. We
9 voted to amend the original motion.

10 MR. BYRUM: Now we need to vote on the original
11 motion.

12 MR. KILPATRICK: Now we're going to vote on the
13 motion.

14 THE CHAIRMAN: Okay. Well, what was the
15 original motion?

16 MR. FISHBACK: That was the one I made, and
17 then we changed it.

18 THE CHAIRMAN: Okay. All right.

19 All right. Okay. We'll vote on the original
20 motion, and it has been made and seconded.

21 DR. HUGHES: As amended.

22 THE CHAIRMAN: Okay, Myrna, call the roll.

23 THE SECRETARY: Mayor Taron?

24 MR. TARON: Aye.

25 THE SECRETARY: Ms. Tillman?

1 MS. TILLMAN: Aye.

2 THE SECRETARY: Dr. Hughes?

3 DR. HUGHES: Aye.

4 THE SECRETARY: Ms. Hinkle?

5 MS. HINKLE: Aye.

6 THE SECRETARY: Ms. Slagell?

7 MS. SLAGELL: Aye.

8 THE SECRETARY: Mr. Fishback?

9 MR. FISHBACK: Aye.

10 THE SECRETARY: Mr. Kilpatrick?

11 MR. KILPATRICK: Aye.

12 THE SECRETARY: Mr. Breisch?

13 THE CHAIRMAN: Aye.

14 MR. BYRUM: In acting as protocol officer, I
15 would say that this hearing is a continuation of the
16 previous hearing that was advertised in the Oklahoma
17 Register for purposes of receiving comments on Oklahoma
18 air pollution control rules, 252:100-24, Control of
19 Emissions from Grain Industry, Handling and Processing
20 Industry.

21 If you wish to make statements, please complete
22 the forms at the registration table, and I will call
23 upon you at the appropriate time.

24 At this time, I would like to call upon
25 Mr. Doyle McWhirter to give the staff position on these

1 changes.

2 MR. McWHIRTER: Mr. Chairman, members of the
3 counsel and the audience: My name is Doyle McWhirter,
4 and I am the Director of the Enforcement and Compliance
5 Section for the Air Quality Division in the Department
6 of Environmental Quality. I will give the Department's
7 position concerning proposed Subchapter 24.

8 The Department and the Oklahoma Feed and Grain
9 Association have had several meetings, as indicated in
10 your packets, plus a meeting was held on last Friday.
11 However, the Department and the Oklahoma Feed and Grain
12 Association have been unable to agree upon a mutually
13 acceptable rule.

14 Therefore, the Department withdraws its
15 proposed Subchapter 24 and requests that the Air Quality
16 Council take no action concerning this matter.

17 MR. BYRUM: Any questions for Doyle from the
18 Council?

19 (No response.)

20 Any questions from the audience?

21 (No response.)

22 Thank you, Doyle.

23 As I call -- I have received several slips up
24 here. As I call your name, if you choose -- if you
25 choose not to speak, say so. If you do choose to speak,

1 please come to the podium; and we would appreciate it if
2 you have prepared copies of your statement that you
3 would submit those to our recorder that we might be able
4 to include them as part of the transcript.

5 Mr. Steve Poag.

6 MR. POAG: I decline at this time.

7 MR. BYRUM: Okay.

8 Mr. Curt Roggow.

9 MR. ROGGOW: I will also decline.

10 MR. BYRUM: Okay.

11 Ray Hasselwander.

12 (No response.)

13 A VOICE: He's not here. He left.

14 MR. BYRUM: I apologize if I get some of these
15 names wrong. Dan Kent?

16 MR. KENT: I will pass at this point.

17 MR. BYRUM: Lew Meiburgen.

18 MR. LEW MEIBURGEN: Ray came in. Do you want
19 to hear from him first?

20 MR. BYRUM: We can.

21 MR. LEW MEIBURGEN: I'll be real brief, because
22 I wasn't going to say anything; I promised my son I
23 would keep quiet.

24 I am Lew Meiburgen. I'm president of Johnston
25 Enterprises in Enid, Oklahoma. We operate approximately

1 18 country elevators, 3 terminal elevators and 3 port
2 facilities, and we've been in business well over 100
3 years. And to be truthful with you, I can't believe
4 what I am hearing and what's going on, but it is, and we
5 have to face it.

6 The only thing I would have to say is that we
7 do service several customers, farm customers, as well as
8 nonag customers. That in lieu of the Department's
9 position that Doyle had just stated, I would like to ask
10 the Council to exempt us from these standards until such
11 time that we can come to a mutual agreement.

12 The thing that concerns me is what's going to
13 happen to me the day before harvest starts or the day
14 after harvest, with the rules and regs that we have
15 already in place.

16 With that I will be glad to try to answer any
17 questions that anyone may have.

18 MR. BYRUM: Any questions for Mr. Meiburgen
19 from the Council?

20 MR. LEW MEIBURGEN: Yes, sir.

21 MR. KILPATRICK: I get the impression your
22 immediate concern is for us to pass a regulation which
23 you think is going to affect you during this harvest.

24 MR. LEW MEIBURGEN: No. The way I understand
25 it, there is already a law and regulations on the books

1 for us to comply with today. Is that right?

2 MR. McWHIRTER: That's correct.

3 MR. LEW MEIBURGEN: And I cannot comply.

4 MR. KILPATRICK: Okay. But nothing we do today
5 is going to change what you do this harvest.

6 MR. LEW MEIBURGEN: Not unless you all would
7 exempt us until something --

8 MR. KILPATRICK: Even if we exempt you, all of
9 the regulatory processes have to go through. That
10 exemption does not take effect immediately, does it?
11 Even if we do that, there's no legal way, I don't think,
12 that you would be exempted in time for this harvest,
13 just because of the way the process works.

14 MR. LEW MEIBURGEN: I'm not an attorney.

15 MR. KILPATRICK: You've got to go to the
16 Governor. You've got to do all sorts of things.

17 MR. LEW MEIBURGEN: I am concerned of what
18 happened to our livelihood.

19 MR. KILPATRICK: What happened last year?

20 MR. LEW MEIBURGEN: Nothing. We paid the
21 emission fee or whatever fee it is that we pay.

22 MR. McWHIRTER: Annual renewal.

23 THE CHAIRMAN: And the year before?

24 MR. LEW MEIBURGEN: The same thing.

25 THE CHAIRMAN: I don't know where you're big

1 concern is this year.

2 MR. LEW MEIBURGEN: Well, my concern is, to be
3 truthful with you, that if they were to enforce what's
4 on the books today, we can't comply without spending in
5 excess of over a million bucks that's
6 nonrevenue-producing, and we couldn't be ready by
7 harvest time.

8 That's my concern.

9 MR. FISHBACK: But that's not a new issue.
10 That's a long-standing issue.

11 MR. LEW MEIBURGEN: That's right. But even
12 back after '72 when we built new facilities, we came to
13 the Department and made applications, and we were told
14 to comply and this and that. And then I guess the 1990
15 act threw all of that out.

16 We have tried our best to comply with -- and to
17 the best of my knowledge always have. We want to in the
18 future and will. But that's one thing that concerns me
19 is something.

20 MR. KILPATRICK: What regulation specifically
21 can't you comply with and in what operation does that --

22 MR. LEW MEIBURGEN: I would have to ask Rick.
23 What is it?

24 MR. TREEMAN: Subchapter 25 and 27 are two
25 areas.

1 MR. BYRUM: That's opacity.

2 MR. TREEMAN: Opacity.

3 MR. KILPATRICK: Opacity. And opacity is what?
4 On the fugitive emissions of loading and unloading?

5 MR. TREEMAN: That's kind of a gray area as far
6 as how that is defined. Through the rule, whether it
7 can reasonably pass through a functional vent, chimney,
8 stack, or other opening.

9 But opacity is one area that we cannot attain
10 20 percent on at this time and process with the
11 restrictions on process weight.

12 MR. McWHIRTER: More specifically, Rick, you
13 are talking about opacity on the unloading and the
14 load-out?

15 MR. TREEMAN: That's correct.

16 MR. BYRUM: I need to caution everybody to
17 identify yourselves, please, for the court reporter --
18 as we speak.

19 MR. FISHBACK: Mr. Fishback. Is it true
20 that -- this is a question for Mr. McWhirter. Is it
21 true that fugitive emissions and point source emissions
22 through a stack or functionally equivalent opening are
23 subject to different opacity rules? Or are fugitive
24 emissions and point source emissions subject to the same
25 opacity rules?

1 MR. McWHIRTER: The fugitive dust is not
2 subject to opacity rules. Fugitive process emission is
3 subject to an opacity ruling.

4 MR. FISHBACK: Is the dust from grain loading
5 and unloading considered fugitive dust?

6 MR. McWHIRTER: Fugitive process.

7 MR. FISHBACK: Fugitive process. So that makes
8 it subject to opacity.

9 MR. McWHIRTER: That is the position that we
10 have taken, and that is the position we have had
11 reconfirmed by the, I believe, March 16th letter from
12 EPA, the letter we received from EPA. I don't remember
13 the date.

14 MR. FISHBACK: Can you give us an example of
15 fugitive dust as opposed to fugitive processed dust?
16 What's an example? Grain loading and --

17 MR. McWHIRTER: Fugitive dust would be dust
18 that was generated by a vehicle or even the wind
19 blowing dust on the yard. Where the process emissions
20 would be emissions that can't be reasonably passed
21 through stack, chimney, or other functional vents.

22 MR. FISHBACK: And attributable to a process?

23 MR. McWHIRTER: Yes, sir.

24 I would point out to Mr. Meiburgen at this
25 time, that we have not -- that we have not and do not

1 anticipate bargaining the grain industry in the state of
2 Oklahoma anything above normal than what we've done for
3 the last several years, and that is basically respond to
4 citizens' complaints, which they are a high priority.
5 And other than that, Lord only knows we've got enough
6 work to do. We're not going to purposely target the
7 grain industry, or any other industry as far as that
8 goes.

9 MR. LEW MEIBURGEN: I appreciate that very
10 much, and I'm sure the rest of the grain people do also.

11 MR. BYRUM: Any other questions for
12 Mr. Meiburgen?

13 MR. TAYLOR: How long would you ask them for on
14 that temporary extension? One year? Two years?

15 MR. BYRUM: Would you identify yourself,
16 please, sir.

17 MR. TAYLOR: Steve Taylor with Port 33.

18 MR. LEW MEIBURGEN: I was just asking until --
19 I'm hopeful that they will have a committee to meet with
20 the industry and the Department and come to something
21 that's mutually agreeable and works for everybody and
22 meets all of the concerns with everyone.

23 I'm asking for until such time as it can be
24 agreed on. That's my request. But Doyle has relieved
25 me considerably over his statement.

1 MR. FISHBACK: Is it safe to say, sir, that
2 except for Title V regulations, the industry would not
3 have a specific concern at this time because your
4 inability to meet opacity and your inability to meet
5 process weight limitations goes back many years?

6 MR. LEW MEIBURGEN: That's right.

7 MR. FISHBACK: So this is really brought to
8 focus now because of Title V?

9 MR. LEW MEIBURGEN: Yes, sir.

10 MR. FISHBACK: Okay.

11 MR. BYRUM: Any other questions for
12 Mr. Meiburgen?

13 MR. LEW MEIBURGEN: Thank you very much.

14 MR. BYRUM: Thank you, sir.

15 Ray Hasselwander.

16 MR. HASSELWANDER: I am Ray Hasselwander, the
17 General Manager of the Farmers Quality Association in
18 Tonkawa and Ponca City, Oklahoma.

19 I would like the committee to expedite this
20 matter as quick as possible in whatever means is
21 necessary to do so.

22 We've spent a lot of time on this in the grain
23 industry. I think we're real close to an agreement that
24 will work for all of us. This needs to be done as quick
25 as possible.

1 MR. BYRUM: Any questions for this gentleman?
2 Any questions from the audience?

3 Thank you, sir.

4 MR. FISHBACK: I am sorry. I did have a
5 question.

6 MR. BYRUM: Go ahead.

7 MR. FISHBACK: I need to raise my hand higher.
8 What is the basis for the sense of urgency in
9 resolving this now, as opposed to at some point in the
10 past? What deadline do you see approaching that you're
11 most concerned about?

12 MR. HASSELWANDER: Well, I think one of the
13 main reasons that we have here is the Title V
14 application. In the grain industry you're not under it.
15 I don't want to go through that nor do that.

16 I think that's one of our main concerns, and I
17 don't think there's any advantage to wait. I don't know
18 why Oklahoma cannot be a leader in this industry to be
19 one of the first to file a plan that is good and the
20 best interest to be looked at for someone to follow us,
21 rather than we follow someone else.

22 I think we ought to be a leader in this great
23 nation of ours.

24 MR. FISHBACK: If the Title V permit process
25 could be standardized so that it would not be a burden

1 to the individual grain facility, so that it was almost
2 a standardized form with prearranged conditions, if it
3 didn't take hours and hours of someone's time that you
4 had to pay, obviously. If that could be arranged so
5 that it was less of an administrative or paper work
6 burden, would that lessen your concern?

7 MR. HASSELWANDER: It would be very helpful.

8 MR. FISHBACK: Okay.

9 MR. BYRUM: Thank you, sir.

10 Mr. Mike Mahoney.

11 MR. MAHONEY: My name is Mike Mahoney. I'm the
12 Executive Vice-president of White Brothers Grain
13 Company. I would just like to say that I've been
14 involved with our committee on working on our proposal
15 that we have for you today. We've been spending at
16 least two days per week working on this proposal.

17 We're drained. We're -- we would like to get
18 something decided. And I would like to know how the DEQ
19 staff can be 100 percent sure that Region 6 is going to
20 kick our plan out, when no plan has been kicked out or
21 accepted.

22 I would like to ask Mr. Byrum a question. Are
23 you batting a thousand percent whenever you speculate as
24 to what EPA is going to approve or regulate on?

25 MR. BYRUM: I would say that I'm not batting a

1 thousand percent, but we have sent copies of your
2 proposal, as well as our proposals, to EPA for comment,
3 which is typical; we do that on every rule we pass.
4 We've been told in phone conversations that neither one
5 of those are approvable by EPA.

6 I don't speak from my judgment as to whether or
7 not your plan is approvable; I speak from the comments
8 that we've received from their staff that have looked at
9 it in depth. We have several other rules that are down
10 there now that they are providing comments to us on, and
11 that's a typical process that we go through.

12 When we look at doing regs, whether it's for
13 aerospace in Tulsa or feed and grain in the remainder of
14 the state, we try to -- we try not to send something
15 down that we know they've already told us is not
16 approvable. That's a long-term exercise. The rule goes
17 to the Council, to the Board, through the Governor and
18 down to EPA. They send comments back or send a
19 disapproval back. At that point in time, then we start
20 back through the front door of the process again.

21 I think what we agreed with you the other day
22 on Friday was that had that agreement stood, we were
23 going to try to go forward and send that package down
24 whether or not we thought EPA would approve it.

25 MR. MAHONEY: I heard you say this morning that

1 you got a surprise from EPA on this deferment.

2 MR. BYRUM: On What?

3 MR. MAHONEY: On the deferment process.

4 MR. BYRUM: That's true.

5 MR. MAHONEY: You misinterpreted their intent.
6 My point is you are not batting a thousand percent when
7 you're trying to read EPA's every move.

8 MR. BYRUM: I would not say -- this is not
9 similar to that, in that what we were doing is looking
10 at an interpretation of a new program that's coming
11 down.

12 What we have done in your specific instance in
13 the grain industry's instances, we have sent a copy of
14 the rule that's in the packet to them for comments, and
15 they have given us their comments back.

16 So it's a little different. If you will recall
17 we had a gentleman from EPA at either the last meeting
18 or the meeting previous to that, and they made comments
19 on that rule in the public session, and they continued
20 to make comments on the revisions to that rule that
21 we've sent forward.

22 So, no, I don't bat a thousand on trying to
23 interpret EPA. I probably bat less than 10 percent on
24 trying to interpret EPA. In this instance, I am not
25 interpreting EPA; I'm just telling you what EPA has told

1 us.

2 MR. MAHONEY: Our group would very much
3 appreciate the Council at least submitting our plan to
4 EPA and let them decide on it. That is our goal. Why
5 should we be different than the state of Texas? They
6 are in EPA Region 6.

7 What we are asking you for is exactly what
8 Texas submitted in March of '93 to EPA. It has not been
9 approved; it hasn't been disapproved. We are just
10 asking this Council for the same shot. If EPA kicks it
11 out, we will come back to you; they will tell us why it
12 was kicked out, and we will work it out. I assure you
13 we will work it out with you.

14 The reason we turned down the proposal from
15 Friday is Mr. Larry Byrum told us that every elevator in
16 the state of Oklahoma would have to file a Title V
17 permit.

18 We have been working since --

19 MR. BYRUM: Objection.

20 MR. MAHONEY: -- December of 1991 to stay out
21 of Title V. In our proposal there's a certification
22 program to keep us all out of Title V if our emissions
23 are below 100 tons.

24 So that's what we couldn't understand from
25 Friday's meeting.

1 MR. FISHBACK: If your emissions are under 100
2 tons based on 70 percent --

3 MR. MAHONEY: No. We can do that however you
4 want to. In our proposal, yes, 70 percent.

5 MR. FISHBACK: One thing that hasn't been
6 shared with the Council, I don't believe, and again
7 because we haven't been part of the ongoing process
8 between the industry and the staff, what has been EPA's
9 objections? If I understood you right, Larry, you said
10 the staff's proposal and the industry's proposal had
11 been rejected by EPA.

12 MR. BYRUM: Yes.

13 MR. FISHBACK: What are their objections?

14 MR. BYRUM: EPA says both rules -- their rule,
15 our rule -- as a relaxation of the SIP.

16 MR. FISHBACK: Relative to opacity?

17 MR. BYRUM: Relative to opacity and processed
18 weight. They have some other problems, also. If
19 they -- if they adopt the 70/30 split that we're
20 proposing in a rule, then their setting a precedent
21 nationwide. It's not adopted in Texas; it's a rule of
22 practice of the Texas Air Control Board. So they have
23 some problems.

24 I don't wish to speak for EPA. We have
25 letters. We can get EPA to come, et cetera, et cetera.

1 If I try to predict EPA, I fail. But what I'm speaking
2 to is the things they have told us in phone
3 conversations in regards to this rule.

4 What we are trying to do is negotiate in good
5 faith with the industry and tell them the pitfalls that
6 lie ahead. We're not opposed to sending something down
7 that we know EPA is not going to agree to. But it is
8 simply not going to do any of us any good.

9 MR. FISHBACK: Did I hear Dr. Parnell this
10 morning say that the gentleman he had talked to at
11 EPA -- I was looking for you; I see you there now. The
12 gentleman he was talking to at EPA had indicated that
13 Region 6 did not have a problem with this identical
14 rule. Is that correct?

15 DR. PARNELL: Larry is telling you correct.
16 There's a difference in Texas in that we don't submit
17 our rule to be approved by EPA Region 6 -- pardon me, I
18 mean the practice. The process of using .3 pounds for
19 unloading and load-out is not in the SIP. It's not in
20 our SIP. They don't have the option to disallow or
21 disapprove that.

22 What I said this morning was in talking with
23 TNRCC, there is no anticipated problem with EPA in terms
24 of how they permit grain elevators in the state of
25 Texas.

1 MR. TARON: And that's not.

2 DR. PARNELL: Stan Meiburg is working on a
3 lawsuit that he lost out here on some kind of IMA
4 program someplace. And he -- my concern with Stan is --
5 in EPA Region 6; he's Gerald's boss -- he's thinking
6 that this is only a Title V issue. And I know most of
7 these people are talking Title V.

8 But from my perspective it is also a grain dust
9 explosion issue. If you poor people put controls on and
10 they blow up, we're in trouble here. We've got people
11 that are going to lose their lives in this issue. And
12 it's a nuisance dust issue, and I'm concerned.

13 Now, I really think -- to correspond with what
14 Mike is saying here, I really think this is a unique
15 situation in regard to grain dust and grain elevators
16 in EPA Region 6. I think this is one where this Council
17 can win that battle -- because of the grain dust
18 explosion problem.

19 If you're talking raw pressure, you're not
20 worried about grain dust explosion. Most of these
21 industries you are not worried about it. This industry
22 is going to increase the number of dust explosions, and
23 you're forced to put controls on, and you're going to do
24 it. Point six pounds per ton on unloading. You cannot
25 comply with the process weight limit. It's absolutely

1 impossible without controls.

2 You are forcing them to handle dust. You are
3 going to increase the number of dust explosions. This
4 is unique. I think this one you can win with EPA
5 Region 6.

6 MR. FISHBACK: Then a question for the staff
7 -- thank you. The question for the staff is: Do we
8 have to force this rule to be part of our SIP, or can we
9 have a work practice standard like the state of Texas
10 does, where EPA does not have the right to disapprove
11 it?

12 MR. KILPATRICK: It will change the SIP. We've
13 already got rules that are in the SIP.

14 MR. BYRUM: Let me go back to the fact that
15 each state did how they did differently. Texas uses the
16 nuisance rule, for example. You heard Dr. Parnell say
17 that if the little lady in tennis shoes gets dust on her
18 porch, they go out. He also said that every grain
19 elevator in Texas is permitted.

20 If all of our elevators were permitted, we
21 probably wouldn't be here today.

22 DR. PARNELL: Let me correct that, Larry. Not
23 all of grain elevators are permitted. We have a number
24 that are grandfathered in Texas.

25 MR. BYRUM: Okay. But you have a number that

1 are permitted,

2 But, anyway, there's a different way that
3 things are handled from state to state to state to
4 state.

5 We make a change here in a small portion, we
6 have to look at what it does in another portion, of our
7 total plan. And it's the same way with Texas: If they
8 make a change here, they look at it in toto. That's why
9 these folks are regulated by more than one rule. There
10 are, what, at least five or six rules that are
11 applicable or maybe applicable to them.

12 MR. FISHBACK: And Gary is correct. The reason
13 we can't do what Texas is doing is because the rules
14 currently applicable to the grain industry are in the
15 SIP --

16 MR. BYRUM: And approved.

17 MR. FISHBACK: And we know that for sure,
18 because you made the comment this morning that it is
19 difficult to tell what's in the SIP and what's approved.
20 We know for sure that those are part of the approved
21 SIPs.

22 MR. BYRUM: Yes. These we happen to know.

23 MR. FISHBACK: All right.

24 MR. BYRUM: The other thing that we have is
25 that if we choose to -- you all choose to pass the rule,

1 okay? You pass the rule: The Board passes the rule.
2 The Governor signs the rule, and we send the package to
3 EPA. At the point the Board passes the rule and it
4 becomes effective, then we are bound by the rule. EPA
5 is not.

6 EPA will be enforcing under the approved SIP.
7 The approved SIP will be different than the rule we have
8 in place.

9 If we take that action, then there is a chance,
10 a possibility -- they haven't done it; I don't know what
11 the possibilities are -- but there is a chance that they
12 may choose to take enforcement action if they disapprove
13 the rule. And I know some of you are familiar with
14 that.

15 MS. SLAGELL: Is this not where he's talking
16 about OSHA coming in and our chances of -- by changing
17 our SIP because of this?

18 MR. BYRUM: OSHA -- really the only thing OSHA
19 has to do with this, as far as I can tell, is the
20 workers' safety, and that's why the controls --
21 basically the controls you have in place now, Mike, are
22 in place; is that not right? For worker's safety and
23 OSHA?

24 MR. MAHONEY: That's the primary concern.

25 MR. FISHBACK: If the grain industry is willing

1 to accept the possibility of enforcement because the
2 state rule violates an approved SIP -- let me rephrase
3 that. Is the grain industry willing to accept the
4 possibility of enforcement because a state rule that we
5 would pass today violates an approved SIP? Is the
6 industry willing to accept that?

7 MR. MAHONEY: Yes, sir, we are.

8 MR. FISHBACK: Is that unanimous among all of
9 your representatives?

10 MR. BUTCH MEIBURGEN: I am Butch Meiburgen with
11 Johnston Grain. I am sure I don't understand the
12 question, and the reason being is that for three years
13 now we've been told that: Let's write grain specific
14 subchapter and present it and get our -- get it accepted
15 as our SIP or changed to the SIP.

16 Now I think what I'm hearing is: Okay. You
17 guys go ahead and pass it, but now we're not going to
18 present it as a change to our SIP.

19 Also, all along we have been told to present
20 you with the best available technology. That's what
21 we're trying to do. And in lieu of not being any other
22 technology available, I don't know why that is not
23 debatable with the EPA or, you know, why we can't prove
24 our point with the EPA.

25 MR. FISHBACK: I think Mr. Byrum said he is

1 willing to present this to EPA as a SIP revision, but
2 the chances are fairly high that they would disapprove
3 it. And once it's disapproved, if there are facilities
4 operating under that rule, the probability of
5 enforcement exists.

6 MR. BYRUM: I think we've already had that
7 offer on the table.

8 MR. FISHBACK: And if the industry is willing
9 to accept that risk, then I think it's reasonable to, as
10 this gentleman suggested, pursue it directly with EPA.

11 MR. KILPATRICK: I don't agree with that.
12 There's a lot of other issues. If you take their
13 proposal and compare it to the staff's proposal, there
14 is a lot of issues that still -- as Council members have
15 not been worked out. There's the issue of whether it
16 just applies to grain elevators or not applies.

17 They basically want -- they propose going all
18 the way back to NSPS, dropping out opacity. Our whole
19 rule-making procedure is based on opacity. It is not
20 like Texas. We have done things different. We can't
21 just arbitrarily now take an industry and say: We're
22 not going to apply opacity to this industry.

23 There's a lot of issues that to me that no
24 way I would at all vote to accept what the grain
25 industry has put on the table, without probably a week's

1 worth of hearings to straight out all of these issues
2 and understand what the ramifications are.

3 What we've relied on, I think, is a council
4 that's for the industry and for the staff to get
5 together and hopefully to come up with an agreement and
6 proposal that they can make to us that jointly they can
7 justify to us why we ought to accept it and submit it to
8 EPA.

9 I don't care whether we think EPA is going to
10 pass it or not. But I want to be sure when I pass it
11 that I know that I think it's the best thing to be
12 doing. And I don't think we're anywhere near that stage
13 and no way agree that we ought to, just because the
14 industry wants to propose we pass their thing and run it
15 down to EPA and give it a whirl. That's not good
16 regulatory action at all.

17 There is a lot of things in there I agree with.
18 I think there's a strong case for reducing some of these
19 things. But that doesn't mean we just pass that
20 language. We would have to sit here for a long time to
21 work out language we think might be acceptable.

22 I'm strongly in favor that there needs to be
23 more work. I certainly have heard or heard earlier this
24 morning, Larry mentioned that one of the reasons we
25 asked for a study on opacity -- I realize it wasn't a

1 protocol and from a practical standpoint you don't know
2 what to do -- but I can certainly understand if we're
3 going to relax opacity standards for this industry,
4 we've got to have some basis when we do that on why
5 we've done that.

6 It can't just be: Well, we thought it was a
7 good idea. Because we are going to have every industry
8 in the state of Oklahoma tramping in here wanting us to
9 relax opacity standards just because they think it would
10 be great for them too.

11 So I can certainly understand why the staff and
12 Mark Coleman were suggesting that there had to be
13 opacity studies.

14 I can understand that it's hard for the
15 industry to accept: We don't know what to do. Well,
16 that just says you've got to sit down and talk some
17 more -- that's all that says -- and figure out what
18 you're going to do, what the study is going to do.

19 No, I guess I would have to say I am not in
20 favor at all of passing any regulation just because we
21 think we ought to send it down there.

22 MR. MAHONEY: Please understand, we have no
23 problem with the national Clean Air Act. We have no
24 problem with all of those regulations.

25 MR. KILPATRICK: Well, I do.

1 MR. MAHONEY: Our problem is the existing state
2 code. And if there's any fairness left in this world,
3 we shouldn't be held to something that was done back in
4 the early '70s that we are all out of compliance with
5 every day. If there's any fairness, we ought to be able
6 to change that SIP plan.

7 I don't care if it is EPA Region 1 through 6,
8 whatever, this is still the United States of America,
9 and there ought to be a process of bringing things up to
10 the 1990s.

11 MR. KILPATRICK: I agree with you, but I don't
12 think the process you're suggesting, that we just pass
13 what you've got on the table, is the right one, because
14 I will guarantee you it will get disapproved.

15 What I'm suggesting is if we want -- and we've
16 gone all the way to national EPA and won on industry.
17 And one of the few states that I know of that's done
18 that. But we did it because we had our facts, and we
19 knew every issue why we were going to do that and why we
20 thought that was the best thing for the industry and the
21 best thing for the people of Oklahoma. But we had to
22 have our facts down. And I don't think we are anywhere
23 near that on this piece of regulation.

24 MS. TILLMAN: I don't know that that's even
25 true, because taking everything we've heard here today

1 and reading the literature, I'm not so sure it's not all
2 there: We just haven't seen it pulled together yet.

3 And that's one of the sad things. I think this
4 came to us way before its time. It's been two years
5 already. I agree that it's been too long. But passing
6 it -- when you are calling in -- when you're daring EPA
7 to come enforce on you, I have seen that fail.

8 MR. MAHONEY: We're not worried about that at
9 all.

10 MS. TILLMAN: Well, I am glad you're not, but
11 there is a reality. I was one of the people enforced
12 upon when it did happen.

13 They are absolutely right. When you go to EPA
14 with something, you need your facts.

15 MR. MAHONEY: But, ma'am, the way the process
16 has been explained to us, if EPA kicks it back, we have
17 a time period to come to the Council and get the plan
18 back up to specs. That's what Mr. Byrum and Doyle have
19 told us. We are just asking for the chance --

20 MS. TILLMAN: If you're in noncompliance,
21 you're in noncompliance. There's no grace period that
22 Larry can extend to you.

23 MR. BYRUM: EPA generally on a rule can
24 retroactively give a period of time to work on it, but
25 if you're in noncompliance, again, she's got a point.

1 MR. MAHONEY: I guess I will stop there. Thank
2 you.

3 MR. BYRUM: Any other questions for
4 Mr. Mahoney?

5 MR. BUTCH MEIBURGEN: I have one for
6 Ms. Tillman. Butch Meiburgen again. What would you
7 suggest the industry do --

8 MR. BYRUM: Butch, would you hold just a
9 second. They've got to change the tape.

10 (A short interruption was had in the
11 proceeding.)

12 MR. BUTCH MEIBURGEN: What would you suggest
13 that the industry do? We were told to present the
14 Council with our documentation. We did that prior to
15 the March meeting. We still do not believe that the
16 staff has read all of the documentation. That is why
17 we're still apart on one of the issues. That's this 70
18 percent issue where, you know, we're willing to live
19 with the 70 percent adjustment, even though the
20 information we have indicates maybe a 98 percent
21 adjustment.

22 You keep making the comment that we've come to
23 you too early. Well, how do you pull teeth, you know?
24 How do you get them to read the information or all of
25 it?

1 Another question, also, is on method 9. I
2 don't think, you know -- now this is what I've been told
3 on opacity. We have been told to read opacity, it has
4 to be six consecutive minutes. We don't have an
5 emission for six consecutive minutes.

6 So DEQ has told us: Okay. We will stop at the
7 stop watch, and then we will start it, and then we'll
8 stop it, and then we'll start it. Is this accurate?
9 You know, that's something we don't know about either on
10 opacity.

11 Also, there's a point of your double plumes.
12 On the points that we can't live with opacity, it's the
13 point of the double plume and the fugitive versus
14 process emissions.

15 MS. TILLMAN: Okay. To answer your first
16 question first.

17 For the Council to make a decision on these
18 items, it is here to soon. There's nothing here for us
19 to decide except for the fact, like our Chair said, that
20 we start a committee to maybe help you guys come to a
21 conclusion and be a part of that as it develops into one
22 presentation, instead of two.

23 MR. BUTCH MEIBURGEN: That's been our goal all
24 along to come with one.

25 MS. TILLMAN: If we can assist in that process

1 that's great.

2 MR. BUTCH MEIBURGEN: I believe our industry
3 would appreciate it.

4 DR. HUGHES: I don't -- I've just tried to sit
5 here and be quiet, which is unusual for me, but I don't
6 think there's a person on the Council that's not
7 sympathetic to your plight. I don't think there is a
8 person on the Council that hasn't tried to listen and
9 understand all sides of the issue. And I can understand
10 why everybody may be a little frustrated at this point.

11 But I think Mr. Kilpatrick has a good point.
12 When we get through with whatever it is that we're
13 getting ready to do, we want to be sure that your
14 industry is served well; we can turn around to other
15 industries and feel like we can face them with the same
16 kinds of approaches that we've afforded you, not to
17 mention the private citizens that might come in and
18 maybe want some of the changes to go in the reverse
19 direction. We have to sit here and balance both causes,
20 if you want to look at it that way.

21 But I don't think that there's a person up here
22 that is not sympathetic to your plight, and I don't
23 think that any of us are unwilling to try to help you
24 find some ground.

25 I guess my words to you is: At this point is

1 not a good time to back off and throw rocks at one
2 another, because we've got a very, very difficult
3 situation, and I can understand that harvest is getting
4 ready to start and people are going to have 19,000 other
5 things to be worrying about.

6 I would suggest, just from my standpoint, that
7 it might be wise to just back off from this thing a
8 little while. Sometimes we get too close to it, and it
9 gets personal. When you spend the amount of hours that
10 everybody has spent here, whether you be a member of the
11 industry or member of the staff, and you're not getting
12 anywhere, maybe a cooling-off period would not be too
13 bad.

14 And I would like to entertain the thought that
15 we do have a working committee within the Council and
16 the grain industry and the staff to sit down and try to
17 work through some rather rigorous calculations and
18 technical issues, and let's see if we can't create
19 something that all of us feel like we can support that
20 we can go home and go to bed at night and feel like
21 we've done what we think is correct.

22 MR TARON: You make that in the form of a
23 motion, Mike?

24 DR. HUGHES: I think we have --

25 MR. BYRUM: You have several more to hear from.

1 MS. TILLMAN: Would that take care of your
2 second question? Would that take care of your second
3 comment and question?

4 MR. BUTCH MEIBURGEN: That will suffice.

5 MR. BYRUM: We didn't offer an opportunity for
6 the Council or the audience to ask questions of
7 Mr. Mahoney.

8 Anyone wish to ask questions of Mr. Mahoney?

9 Thank you. Phil Kenkel.

10 We have several more to go.

11 MR. KENKEL: Phil Kenkel, Department of Ag
12 Economics O.S.U. Just want a couple points of
13 clarification on what's been called the O.S.U. Strict
14 Study or the Mass Balance Study, and I guess in
15 reference to the fact why that wasn't done.

16 Just to kind of go back through the chronology:
17 We submitted that on January 25th and heard back on
18 February 14th from DEQ. It was designed to measure the
19 total strength of handling process of grain, and we
20 tried to identify the moisture and tried to identify
21 what was swept up -- in other words, what was
22 accountable -- and assume that would be whatever was
23 left was an upper limit. And that's the way we
24 determined it of the amount of grain dust that could be.

25 DEQ indicated they had about four concerns,

1 that is, what they would look at when they were doing
2 their results. Two of them I guess would seem to be
3 philosophical. One was that they wanted to consider the
4 results, whether they were higher or lower than the
5 AP-42 estimate. And at this time we are working with
6 the 8.6 pounds per ton. And they also point out, of
7 course, that that would only be a facilitywide estimate.
8 There would be no way to determine what was coming from
9 each process.

10 And then they had two concerns that really
11 related to the timing of it, that wondered how much
12 variation we could get in grades of grain and the fact
13 of how much it affected the bins. The bins would not be
14 full. We were working with near empty bins rather than
15 near full bins.

16 Those last two, of course, were a problem
17 because there's not very much grain left in any of the
18 elevators at this point.

19 As I said, that happened on February 14th. And
20 it was just decided that -- again, our position was that
21 we didn't want to conduct the study until both sides
22 were in agreement how it was going to be used, and
23 February 14th was not enough time before the Council
24 meeting. So that's why the study did not take place.

25 It is kind of a crude study in that you could

1 possibly have as much as 40 pounds of moisture lost in
2 that handling of grain that we would be trying to
3 account for. So when we are trying to put an upper
4 limit on 8.6 pounds, it still seemed like maybe
5 something could provide some information.

6 And so we get down to now if we were thinking
7 about one pound of grain and trying to put an upper
8 limit on it, it would be more difficult, I guess, to get
9 that kind of accuracy.

10 But O.S.U. still would be glad in any way we
11 can to assist in providing unbiased information in any
12 way this process goes by. I just did want to comment on
13 what the proposed study did and why it didn't happen.
14 And basically it was because, I guess, from the
15 combination of the grain left in the industry and the
16 short time that we would have had to conduct that before
17 the March 8th meeting.

18 MR. BYRUM: Excuse me. Questions for
19 Mr. Kenkel?

20 MR. FISHBACK: Is it the consensus now of the
21 staff and the industry that this study would have value
22 and would be useful or not?

23 MR. BYRUM: I don't see many people from the
24 staff. Debbie, do have a comment on that?

25 MS. PERRY: I think we would still be

1 interested in seeing the results of it.

2 MR. BYRUM: I believe we would still be
3 interested in your participating. I believe that there
4 is information that can be gained that is indicative of
5 Oklahoma industry.

6 What we would like to do is sit down and talk
7 with the industry and with O.S.U. about how that can be
8 set up. We did provide comments back to them.

9 We understand the timing with the harvest
10 season coming up, this is something that we would have
11 to look at and might have to occur after the harvest
12 season. I understand it would be very difficult during
13 the harvest season, because they are going probably -- I
14 don't know what speed you go on -- but full tilt I would
15 think.

16 But it's still something I think that could
17 produce some useful information. And it would be
18 Oklahoma-specific. We believe that that's something we
19 can utilize to go to Dallas to plead their case, once
20 again.

21 MR. KENKEL: Again, let me reiterate. The
22 essential point to work out would be that it would
23 function as an upper limit. And so the fact -- and that
24 was not clear that that was their concern, I guess, when
25 the industry looked at the response.

1 MR. BYRUM: Correct. We would want -- we would
2 like to sit down with the industry and with O.S.U.,
3 considering them to be to experts in this, and look at
4 setting the parameters for the study to be done.

5 And we sent comments back preparatory to doing
6 that type of thing, I would think.

7 THE CHAIRMAN: Well, it seemed to me, though,
8 in one statement you made, you're dealing with such a
9 wide range of moisture that when you start reducing down
10 to what we're considering now a pound, the accuracy
11 might not be any good.

12 You know. And I just want the staff or anybody
13 that might have to spend any time or money on this
14 thing, is what would you use it for? I mean, what good
15 is it at all?

16 Because, you know, the accuracy of it wouldn't
17 get to any point that we're after.

18 MR. FISHBACK: Well, it depends on how
19 accurately the moisture content can be measured. His
20 concern is: If you're looking for one pound and you've
21 a shrink of 40, that easily masks it. But if the weight
22 loss due to moisture loss alone can be accurately
23 measured, then you can be pretty precise about what's
24 left over.

25 MR. KENKEL: We would attempt to account for

1 that 40, but we would be less confident accounting for
2 the 40 when we were worrying about one versus --

3 MR. BYRUM: And we understand those realities.
4 And I would say probably before a study such as this
5 would be even -- would move forward very far, we would
6 have lengthy discussions on what they believe their
7 ability to measure the moisture, et cetera, et cetera,
8 would be.

9 Other questions?

10 MS. HINKLE: I don't remember. Who's incurring
11 the expense of this study?

12 MR. KENKEL: The industry agreed to incur the
13 major expense, and then we would just provide personnel
14 from O.S.U. so it's an unfunded study from O.S.U. that
15 the industry would actually support, which a substantial
16 amount of money could move that much grain.

17 MR. BYRUM: Any other questions from the
18 Council?

19 MR. BUTCH MEIBURGEN: Butch Meiburgen again. I
20 don't know if you heard what Phil said. This was -- we
21 are trying to do this study prior to the March 8th
22 meeting. This is in dispute of the 8.6 pounds per ton
23 number. Because industrywide shrink, the total shrink
24 doesn't even equal the 8.6 pounds, let alone your dust
25 emissions.

1 That's what we had proposed that study for
2 before we pursued other avenues, as in having the
3 Council come out and tour the elevator; those types of
4 things.

5 Also, you know, the industry would like to see
6 the study -- I don't think it has anything to do with
7 the air quality standpoint now -- just to show the
8 managers in the industry the importance of shrink in a
9 country elevator.

10 MR. BYRUM: Other comments or questions? Thank
11 you. B.J. Medley. I believe B.J. is no longer here.

12 Rick Treeman.

13 MR. TREEMAN: I'm Rick Treeman with Johnston
14 Grain Company. I been taking notes all along, so this
15 is not going to be in any orderly fashion. One thing I
16 would like the Council to do is permit us to have Tom
17 O'Connors presentation from last time, the March 8th
18 meeting, be allowed to be entered into the record. Is
19 that possible?

20 MR. BYRUM: I believe it was entered in the
21 record as part of the last meeting.

22 MR. TREEMAN: That meeting, from what I
23 understand, never occurred because of lack of a quorum.

24 MR. BYRUM: Dennis?

25 MR. DOUGHTY: Larry, I think it would be okay

1 if it were referenced in the record and copies were made
2 available to anybody in the public that wanted to look
3 at it and comment on it and hear that particular
4 commentary.

5 MR. TREEMAN: One other thing before I go a
6 little further: Dr. Parnell has to leave real shortly,
7 so if there are any other questions that might be
8 addressed to --

9 MR. BYRUM: Dr. Parnell will be called on next,
10 so you're dependent on how long.

11 MR. TREEMAN: Okay. I'll be quick. I promise
12 I'll be quick. Just a couple of people have asked me a
13 couple of questions to ask you.

14 One of the things that you all said concerned
15 you about our rule and EPA's lack of okaying our rules
16 is going to be a relaxation of our existing SIP. So is
17 it possible to change our SIP on a 20 percent opacity or
18 on a process weight, or have we just be doing this for
19 the last 2 1/2 or three years for nothing? Is that even
20 possible to do?

21 MR. BYRUM: What you're attempting to do right
22 now is make a change in the SIP.

23 MR. TREEMAN: Correct. But any change that we
24 do in order --

25 MR. BYRUM: If we scientifically change the

1 SIP, for example, we had mentioned earlier that you had
2 in your load-out facility there are concerns for
3 explosions; there are concerns for health; there's
4 concerns for this, that, and the other.

5 As I mentioned to you Friday, I believe it was,
6 if we come up with that kind of information, then EPA
7 can, has a justification -- much the same as we've done
8 in other rules -- to relax the SIP in this one specific
9 area and hold it firm in other areas.

10 If we just unilaterally relax it, then we have
11 a problem with everyone in the world wanting a
12 relaxation in their specific case. We need
13 justification for it.

14 To answer your question simply: It's possible.

15 MR. TREEMAN: Okay. That answered my question.
16 I have been working real close with the staff, and I
17 wanted to let you know that. We have not been in an
18 adversarial role at all. We have worked real close with
19 each other and have gotten a lot accomplished. I will
20 say that. Doyle and Debbie are both to be commended.

21 Basically, back in October, Debbie Perry and I
22 got together to see what it would be like to permit one
23 of our facilities and found out due to existing state
24 rules, we cannot be granted a permit to operate. And
25 that really expedited what we're trying to do at this

1 point, because every day since then and every day we
2 operate we are -- a lot of us are in violation of state
3 rules and that's under process weight and that's under
4 opacity.

5 And that's one of the reasons we've had an
6 urgency on this, and we've tried to work toward that
7 same goal.

8 Second thing, we tried to address some of these
9 issues with a parallel document, you know, the things
10 that we provided were things as far as directives,
11 calculations of emissions, and things like that that
12 were not intended to be a part of the rule nor a portion
13 of the SIP. Similar to what Texas has done. That's in
14 our portion, in our rule where we defined emissions
15 points, the emission adjustments and things like that;
16 the protocol, the O.S.U. protocol.

17 The one thing that I have a concern about, and
18 I think Ms. Perry did a good job in critiquing the stuff
19 that we had, but she keeps referring to aerodynamic mean
20 particulate or something like that.

21 And the fact is -- and the bottom says we
22 wished we had that protocol. That protocol is not going
23 to give us any of that information. And that is
24 something that we were looking at to fund as an
25 industry. But as time goes on, the less and less

1 applicable I think that protocol is going to be to this
2 cause, as far as air emissions go.

3 Another area of concern of mine is the feed
4 mills and the seed processors are once again out of the
5 picture in their draft, the draft you got this morning.

6 They've been a very integral portion of going
7 through this, and I apologize -- excuse me -- because I
8 just recently got some particulate sizes done of various
9 feed ingredients. Feed ingredients are unique in one
10 thing. Normally they come in the smallest state they
11 are going to be in. You don't grind a feed ingredient
12 any more, for the most part. We've got the particulate
13 sizes on the products that will be ground.

14 The process weight table that Texas uses is
15 about half as stringent as ours. If I'm not mistaken
16 it's been modeled from California and Arizona. We're
17 back up there. That's one of the reasons we do need
18 some type of an adjustment to AP-42, because the process
19 weight table uses bad numbers to calculate those process
20 weights, or emissions from those processors. And that's
21 the AP-42 numbers.

22 One other thing, and the last thing I guess I'm
23 going to talk about, some of the other industries -- and
24 I understand your concern if you relax it to us you're
25 going to have to justify it to others. Some of the

1 other industries on opacity, whether it be coal, rock,
2 things like that, wood, you can use water on a lot of
3 those. We can't use water. I mean, a very minor
4 amount, just a very minor amount. But FGIS is doing
5 away with water. That's altering the grain, adding
6 weight to the grain.

7 So we're really tied as far as some of the
8 controls we can utilize without increasing these dust
9 levels to the minimum explosive concentration.

10 That's all I've got. I appreciate your time.

11 MR. BYRUM: Questions for Mr. Treeman?

12 MR. LEW MEIBURGEN: What's FGIS?

13 MR. TREEMAN: Federal Grain Inspection Service.

14 MR. BYRUM: Questions from the Council for
15 Mr. Treeman? Any other questions from the audience?

16 Thank you, sir.

17 MR. TREEMAN: Thank you.

18 MR. BYRUM: Dr. Parnell.

19 DR. PARNELL: Just a few comments. We do use
20 our process weight limit in Texas very extensively on
21 cotton ginning and grain elevators, etc. But that
22 process weight limit is about twice what you have in the
23 state of Oklahoma.

24 I think that's a problem you have in this state
25 with regard to agricultural industries. I would like to

6267

1 say that EPA is not above that and not all-powerful.
2 We've taken them on and we've won some battles. Those
3 battles we took on when I was on the Texas Air Control
4 Board were taken on because we were looking out for the
5 best interest of not only the industry but the citizens
6 of the state of Texas, and we were successful. And I
7 think you can be in Oklahoma.

8 Let me stop right there and see if there's any
9 question.

10 MR. BYRUM: Any questions for Dr. Parnell?

11 MR. KILPATRICK: This is the only question I
12 have. I am not up to speed on this process weight
13 calculation, but it seems to be a big impediment here.
14 What in your opinion -- obviously we have to look at our
15 system that we have here in Oklahoma. But if we were to
16 in essence, say, increase our process weight limits,
17 what is the trade off from EPA's standpoint? What is
18 the other control factors that it ties in with?

19 DR. PARNELL: Process weight is an alternative
20 control measure for regulatory agency to use. If you
21 take in so many tons of product and you take out so many
22 tons of product, whatever is the difference between
23 those two, there's a certain limit of what you can be in
24 compliance or noncompliance with that. And it's a
25 method a regulatory agency can use to control the

1 industry. And it's used extensively in what we call
2 Reg 1 in Texas on ag industries.

3 It helps develop emissions factors. We don't
4 disuse EPA's AP-42, as you well know after my discussion
5 this morning, emission factors. In fact, we use
6 emission factors on some industries that are half of
7 what AP-42 states.

8 They are allowed. That's a two-way story, I
9 might add; because if you come back and look at a low
10 emission factor it also limits the concentration that
11 can come out of that system in terms of dust control.
12 And so if you get into a situation where you say you
13 have a permitted allowable here of, say, one pound per
14 ton, and they're emitting more than one pound per ton,
15 they are in violation of that. And they can in effect
16 be subject to fines. And we have had this situation in
17 Texas. So it's not a simple process.

18 Let me commend the Chairman here and the
19 Council. I think the idea of having Council be involved
20 in some mediatory process to come up with something
21 that's going to benefit the citizens in the state of
22 Texas (sic) I think is an excellent idea. And I think
23 you can be successful in that regard.

24 I think there's a little bit of concern on my
25 part -- I hope I don't have to see you folks anymore --

6269

1 about being defensive on the part of your staff, and I
2 think you have an excellent staff, but the tendency to
3 try to defend EPA's numbers, which are absolutely
4 horrendous. There's no possible way that you can defend
5 those numbers. And wanting to defend EPA.

6 I see EPA as one tier that you have to work
7 with, by law, and yet they make mistakes, and if they
8 have in AP-42 in grain elevators, they need to be called
9 to the carpet and they need to find a way to correct
10 that.

11 MR. BYRUM: Other questions for Dr. Parnell?

12 MS. TILLMAN: I hope you didn't take it that
13 we were defending EPA. I think what we are saying is
14 when we go to present these to EPA that we want the
15 principal measures to be accurate.

16 DR. PARNELL: I think the difference --
17 Ms. Tillman; is that correct?

18 MS. TILLMAN: Yes.

19 DR. PARNELL: -- in -- when I was on the Board
20 in Texas, we had much less contact with Region 6 in
21 terms of would you approve this or would you approve
22 that. You very seldom ever heard that.

23 We went on several situations practically. We
24 have a dual permitting system in Texas: The state
25 permitting system and federal permitting systems. And

1 EPA says you can't do it, and we did it anyway. Because
2 that was the only way we can get it to work in Texas.

3 We have some 4,000 fellow operators of this
4 kind. We have some additional 200 engineers. While I'm
5 on that topic and since I am on the record, I would like
6 to make this comment. I want to mention Anna, Richard,
7 Lois, Mike, Kathryn, Thomas, and David, which are all
8 agricultural engineers I had the opportunity to teach
9 that now are on the permit engineering staff at TNRCC.

10 And, so, Mr. Byrum, when you go to looking for
11 engineers, we have some real good engineers in Texas.

12 (Laughter from the audience.)

13 MR. BYRUM: I think probably a couple of the
14 fellows from O.S.U. want to put a pitch in too. So
15 we're going to have to give them equal time.

16 DR. PARNELL: One of those young fellows is a
17 graduate of Texas A&M too. Stand up, Jim. Where are
18 you at Jim? He is standing up.

19 (Laughter from the audience.)

20 But, Ms. Tillman, I wasn't saying that the
21 Council was defending EPA.

22 MS. TILLMAN: We don't really have a problem
23 with going up against them.

24 DR. PARNELL: Sure. Exactly. Some discussion
25 between the staff and the Oklahoma Grain and Feed. My

1 perception is that there's a tendency of your staff to
2 want to be defending EPA, and that's a perception I
3 have. And maybe it's incorrect.

4 So I think that the goal here is to come up
5 with something that is going to benefit the system of
6 the state of Oklahoma, whether it be the industry. At
7 the same time there is an obligation to protect the
8 public. So you've got to come up with something here
9 that's going to be workable from the standpoint of your
10 staff, and you don't want to impose something on your
11 staff, because that's the worst thing to possibly do.
12 I've been there before; you don't want to do that.

13 Yet at the same time you want to do something
14 that's going to be beneficial to the citizens and the
15 industry in the state. And the grain industry is an
16 important part of your state.

17 MR. BYRUM: Any other questions for
18 Dr. Parnell?

19 (No response.)

20 Thank you, sir.

21 Joe Neal Hampton.

22 MR. HAMPTON: Thank you. I am Joe Neal Hampton
23 with the Oklahoma Grain and Feed Association. I will be
24 very brief and just say that, Mr. Chairman, I think your
25 idea of the committee and the Council working with our

1 committee and with the staff, we believe, is an
2 excellent idea. But while it's fresh on everybody's
3 mind and while I've still got some industry people
4 available the next month, we would like to go ahead, if
5 we could, and pursue this further and see what we could
6 end up on this.

7 And also we would like to know from the staff
8 that on the delay process, about how many Oklahoma
9 elevators possibly would have to fill out a Title V
10 permit, or is there possibly some way if we were in one
11 of that industry that was delayed could there be one
12 application for everybody?

13 MR. BYRUM: There could not be --

14 MR. HAMPTON: Simplify the application at the
15 same time.

16 MR. BYRUM: I think, as we told you Friday,
17 that we would work with you in every means possible to
18 simplify the application. Correct me if I'm wrong,
19 but -- I'm talking to my staff -- but you do not get the
20 protection of the permit shield and some of the other
21 advantages unless you do individual applications. And
22 I'm not sure that a generic application is allowed at
23 all. However, we would work with you to make as simple
24 of an application as possible.

25 I think there has been a misstatement in the

1 fact that it has been said that you have to obtain a
2 permit. That's not the case. You have to apply for a
3 permit, and it be deemed administratively complete.

4 MR. HAMPTON: Is there any way to do one permit
5 for the whole works?

6 MR. BYRUM: No. Not that I'm aware of.

7 MR. HAMPTON: Could you check? We'd appreciate
8 it.

9 MR. BYRUM: We'll sure check. Anybody --
10 Doyle? Dennis?

11 MR. McWHIRTER: The only thing that comes to my
12 mind. Doyle McWhirter for the staff. The only thing
13 that comes to my mind is a general permit, and that's
14 basically where you develop a permit that is applicable
15 to a general category of sources such as grain elevators
16 and then you go before a public hearing and in turn as
17 part of the public hearing, you know, to meet all of the
18 requirements of the part 7.

19 MR. BYRUM: I don't believe that we would be
20 able to cover all of your industry under that because
21 you have some that are going to pop out of that. Hang
22 on a second --

23 MR. DOUGHTY: I'm trying to recall the language
24 of the Clean Air Act. I think the burden is on the
25 individual or owner-operator to submit these

1 applications. I don't think you can do it in mass at
2 all -- unless it's under a general permit.

3 MR. BYRUM: That's my recollection of it, and
4 I'm not sure we could do every one of your industries
5 under that. We could do a large portion of it.

6 Questions from the Council for Mr. Hampton?

7 MR. HAMPTON: Thank you for your time.

8 MR. BYRUM: Any questions from the audience for
9 Mr. Hampton?

10 MR. CASSIDY: Mike Cassidy, Cassidy Grain
11 Company in Frederick. Joe Calvin just related to the
12 way our staff deals with EPA. I kind of like to compare
13 it to an IRS audit. When you're dealing with the IRS,
14 you don't volunteer all the information that you've got.
15 You give them what they need to know and do your best.

16 What I would like to do is ask the staff to
17 take more of a defensive when dealing with this industry
18 and back us up when dealing with the EPA.

19 MR. BYRUM: Any further questions for
20 Mr. Hampton?

21 MS. PERRY: Debbie Perry. I was just going to
22 ask if you have any idea how many elevators might be
23 over that 6 1/2 million.

24 MR. HAMPTON: I don't recall really. I'm sure
25 we could probably work on that. I'm sure we would be

1 willing to work with you to find out, but I can't answer
2 that.

3 MR. TREEMAN: Was that 6 1/2 based on how
4 many -- what's your emission factor?

5 MS. PERRY: It's based on approximately a
6 pound.

7 MR. TREEMAN: One pound. Okay.

8 MR. BYRUM: We would also -- Joe, to any extent
9 that you are able to effect this, we would also like to
10 know how many grain elevators are in Oklahoma. Not all
11 of them are members of your association, and there's a
12 lot of them that I think are going to have problems that
13 are totally unaware.

14 MR. HAMPTON: I would say between us and the
15 co-ops, Triangle Co-op Service and Co-op Council, there
16 would be 98 percent.

17 MR. BYRUM: Okay.

18 MR. HAMPTON: And those -- and I could --
19 between Dan and I, we have a list of every facility,
20 whether a member of ours or not. I'm sure we would get
21 the word to them one way or the other.

22 MR. BYRUM: Okay. You have one other question
23 here.

24 MR. FISHBACK: I think I can clarify the issue
25 of general permits. This is Section 504(D). It is very

1 short, so I will read it into the record: "The
2 permitting authority may, after notice and opportunity
3 for public hearing, issue a general permit covering
4 numerous similar sources. Any general permit shall
5 comply with all requirements applicable to permits under
6 this Title" -- meaning Title V -- "no source covered by
7 a general permit shall thereby be relieved from the
8 obligation to file an application under Section 503,"
9 which means a Title V application. "The general permit
10 is a paper work expedition -- expediting method for
11 issuing the permits, not for applying for the
12 application."

13 MR. HAMPTON: So if we were on this delayed
14 list, every elevator that came in would have to apply
15 for a Title V permit.

16 MR. FISHBACK: That's right. That was over the
17 hundred ton threshold.

18 MR. HAMPTON: Based on potential to emit, and
19 that's every elevator in the state.

20 MR. FISHBACK: Even with the one pound limit?

21 MR. BYRUM: We don't believe that's the case
22 with the one pound limit, Joe.

23 MR. HAMPTON: There are would be a lot of them
24 based on 365 days a year.

25 MR. BYRUM: Debbie, you said it's over --

1 MS. PERRY: That's where I was getting the
2 6 1/2 million per year. That would be kind of
3 approximate.

4 MR. TREEMAN: We would have to look it up.

5 MR. HAMPTON: Yes, we would have to take a look
6 at it.

7 MR. FISHBACK: Let me offer a suggestion in
8 responding to potential to emit issue. Since it is
9 obvious that they are not operating 8760 hours a year --
10 and I think this has been discussed before -- you can
11 write into your permit application an enforceable
12 condition to restrict yourselves to a certain number of
13 hours of operation that will thereby reduce your
14 potential to emit.

15 And I don't know what the permitting authority
16 would think, but if you were to -- you don't want to
17 pick 12 hours a day, because there might be days when
18 you need to run 24; and you don't want to pick 168 hours
19 a week, because there might be periods of time when you
20 need to exceed that. But if you pick 6000 hours a year
21 or 5500 hours a year or 7200 hours a year, it might give
22 you the flexibility to do what you need to do and still
23 bring your potential to emit down.

24 That's an approach you need to --

25 MR. HAMPTON: We looked at that as well as

1 three foot, but we felt like two foot was probably --

2 MR. FISHBACK: Okay.

3 MR. HAMPTON: That's mainly what most other
4 states are doing, is 3 foot.

5 MR. FISHBACK: Okay.

6 MR. BYRUM: Any other questions for
7 Mr. Hampton? Thank you.

8 Lisa Rodgers.

9 MS. RODGERS: I'm Lisa Rodgers, Program
10 Director of the American Lung Association of Green
11 Country, Oklahoma. The American Lung Association is not
12 here today to make a specific recommendation for policy
13 action. I would however like to present two
14 testimonials concerning the lung health effects
15 associated with inhaling grain dust. And I do have
16 copies.

17 (Passing out copies.)

18 The first one is by Martin H. Welch, M.D.,
19 Professor of Medicine, Pulmonary Disease and Critical
20 Care Section, University of Oklahoma Health Sciences
21 Center.

22 "The effects of silica dust exposure on the
23 lungs are well characterized. This dust causes a
24 distinctive disease called silicosis, which can be
25 recognized by the changes it produces in the chest

1 radiograph and the pulmonary function tests. Preventive
2 measures are likewise well understood and defined.

3 "Grain dust, in contrast, contains a number of
4 injurious substances which produce an increase in the
5 presence of a variety of symptoms which are nonspecific
6 and which also occur in people who are not grain dust
7 workers. These include chronic bronchitis, asthma,
8 chronic obstructive pulmonary disease, and allergic
9 alveolitis.

10 "In addition to these lung diseases, grain
11 workers are subject to rhinitis, conjunctivitis, and
12 dermatitis, and to a febrile flulike illness known as
13 grain fever.

14 "In most cases, the chest radiograph is not
15 abnormal in these conditions.

16 "Grain dust contains a number of substances
17 which may produce these disorders by way of an allergic
18 reaction, but the mechanisms are incompletely
19 understood. The grain itself, as well as fungus
20 particles and bacteria, may be involved. In contrast to
21 silicosis, there appears to be a great deal of variation
22 in the sensitivity of individual workers to the
23 components of grain dust.

24 "Because of these major differences between the
25 health effects of silica and grain dust exposure, there

1 has been a great deal of interest over the past two
2 decades in developing environmental control practices
3 specific to grain dust.

4 "In Canada where the problem has been well
5 recognized, control measures involving bag filter
6 systems have been designed with a goal of reducing dust
7 levels to 10 milligrams per cubic meter.

8 "Because of unique characteristics of grain
9 dust and its well recognized effects on health of grain
10 workers, it is recommended that the environmental
11 control regulations affecting grain workers be written
12 in a manner specific to this form of air pollution."

13 His reference was "Occupational Pulmonary
14 Disease: Focus on Grain Dust and Health," edited by
15 James A. Doseman and David J. Cotton, New York: Academic
16 Press, 1980.

17 And the second one I would like to present is
18 from Mrs. Anna Clapper.

19 "Mr. Chairman, members of the Air Quality
20 Council, ladies and gentlemen:

21 "My name is Anna Clapper. I live at 12104
22 Camelot Place, Oklahoma City, Oklahoma, 73120. I am a
23 former teacher, and now I am a homemaker, mother of
24 three children, and a grandmother of four. I have lived
25 in Maine, Pennsylvania, New Jersey, Idaho, Salt Lake

1 City, Utah; Boulder City, Nevada; and Whittier,
2 California before coming to Oklahoma 25 years ago.
3 Hence, I have personally experienced a vast range of air
4 quality, both good and polluted.

5 "For over 20 years I have been on the board of
6 the American Lung Association of Oklahoma and have
7 studied the health effects of air pollution. I am a
8 charter member of the Oklahoma Coalition for Clean Air
9 and have attended and participated in workshops and
10 seminars on the Clean Air Act in Denver, Colorado; Estes
11 Park, Colorado; Dallas, Texas; Houston, Texas; San
12 Antonio, Texas; Chicago, Illinois; Airlie, Virginia;
13 Washington, D.C., and Antigonish, Nova Scotia; so I have
14 a working familiarity of the Clean Air Act.

15 "I have attended meetings of the Air Quality
16 Council since the first regulation was adopted in the
17 Oklahoma Clean Air Act over 20 years ago and have given
18 testimony when appropriate and have taken part in
19 seminars in various areas of Oklahoma. My objective is
20 to obtain and maintain air quality that is consistent
21 with good health and a wholesome environment for those
22 who live in our state.

23 "Kindly visualize this pastoral scene as
24 exemplified by the words of this song:

25 'O, beautiful for spacious skies

1 'For amber waves of grain . . .'

2 "What a vivid picture this is our plains where
3 grain is grown, harvested, and stored. However,
4 something happens when the golden grains are harvested
5 and then stored in the grain elevators. There both
6 organic and inorganic composition of the stored product
7 complement each other. This is where illusion ends and
8 reality begins. As far back as 1713 it was documented
9 that 'grain sifters had asthma due to wheat, grain smut,
10 grain molds, grain mites, durum wheat, durum wheat dust,
11 and grain insects.'

12 "In the publication Occupational Lung Disease,
13 edited by J. Bernard L. Gee, M.D., of Yale University
14 School of Medicine, 1984, page 154, it states that
15 'Grain dust is a complex mixture of materials derived
16 from cereal grains as well as natural contaminants, for
17 example, silica, fungi, bacteria, endotoxin, insects,
18 mites, rat hair, pollens, and human additives
19 (pesticides and their residues). The biologic potency
20 of the dust is likely to vary with the grain and the
21 type of concentration of the contaminants
22 . . Cross-sectional epidemiologic surveys indicate a
23 high prevalence of chronic bronchitis and asthma as well
24 as conjunctival, laryngeal, nasal and systemic (grain
25 fever) symptoms in grain handlers. In addition,

1 exposure to pesticides may provide acute neurologic,
2 gastrointestinal, hepatic and pulmonary symptoms and can
3 cause chronic neurobehavioral effects.'

4 "Disease statistics of grain elevator operators
5 may not apply to the farmers since the patterns of
6 exposure, and composition of the dust may be different
7 in the various types of grain elevators and farm
8 operations, but the respiratory problems resulting in
9 exposure to grain dust appear to be identical...The
10 grain elevator operator and longshoremen are exposed
11 during loading and unloading of trucks, railroad cars,
12 and ships, during grain distribution and transport
13 within the elevator components, weighing, cleaning
14 operations, equipment maintenance, and grain
15 inspection....'

16 "To give some idea of the scope of the
17 situation in Oklahoma, I quote from Dr. Calvin B.
18 Parnell of Texas A&M University's testimony to the Air
19 Quality Council on March 8, 1994, page 2. 'Oklahoma has
20 a total of 354 grain handling facilities. Each of these
21 operations will typically handle 6,000 to 12,000 bushels
22 per hour unloading and loading grain. (This is usually
23 determined by leg capacity). One bushel of wheat weighs
24 60 pounds. Hence, a 12,000 bushel per hour elevator
25 will handle 360 tons per hour.'

1 "According to reports in 1993, the total amount
2 was about 5 million tons; therefore, this regulation can
3 have a marked impact on Oklahoma's occupational health.

4 "To clarify the possibilities of air
5 contamination, I quote from an Iowa study, Unit 3, page
6 2. 'Twenty-seven pounds of dust are emitted for every
7 ton of grain handled, resulting in 1.7 million tons of
8 grain dust produced every year. The concentration of
9 particles varies widely but may reach very high levels.
10 Measurements in elevators have ranged from .18 to 781
11 milligrams per cubic meter of total dust with the
12 respirable range extending up to 76.3 milligrams per
13 cubic meter. Airborne concentrations of fungal spores
14 often exceed one million spores per cubic meter.'

15 "If one is bewildered why there may not be too
16 many health complaints from workers in grain elevators,
17 it is documented on page 156 of the previous article
18 that, 'allergic workers who develop severe asthma will
19 likely leave the industry early in their employment.'
20 On page 4 of the Iowa study, 'persons with asthma
21 allergies either do not seek employment as grain
22 handlers or leave this employment rapidly because of an
23 increase of asthmatic symptoms. However, the prevalence
24 of occupational asthma has been reported to be five
25 times that of workers in other professions (50% grain

1 handlers, rather than 11% others, who are nonsmokers.)

2 "On page 157 of the Yale study, it states that,
3 'Labor Canada adopted a TLV of 10 milligrams per cubic
4 meter of total grain dust to protect workers. Cyclones
5 have been replaced by bag filters which are
6 theoretically 99.9% efficient. No such standard exists
7 in the United States where nuisance dust standard of 15
8 milligrams per cubic meter is used. Studies show,
9 however, that the respiratory effects can be found in
10 workers exposed to dust levels below the current TLV.'
11 Reduction in exposure levels can be accomplished by
12 following procedures listed in the article.

13 "Further documentation on the health effects of
14 grain dust may be found in the following: Occupational
15 Pulmonary Disease by James Dosman and David Cotton,
16 analysis of grain dust and effects on the respiratory
17 system; Occupational Lung Disease," 2nd Edition by
18 W. Keith Morgan, M.D., and Anthony Seaton, M.D., as well
19 as the publications "Agricultural Respiratory Hazards,"
20 Unit 3--Grain Dusts, by the American Lung Association of
21 Iowa in collaboration with The Institute of Agricultural
22 Medicine and Occupational Health, The University of
23 Iowa.

24 "Since the American Lung Association of
25 Oklahoma is vitally concerned with lung health, it is

1 urged that the members of the Air Quality Council be
2 cognizant of the adverse health effects of grain dust
3 and take these into consideration in your deliberations
4 on this regulation.

5 "Thank you for this opportunity to express the
6 concerns of a citizen who is dedicated to clean air for
7 Oklahoma as a necessity for a good quality of life.

8 Respectfully, Anna Clapper."

9 MR. BYRUM: Questions for Ms. Rodgers?
10 Questions from the audience for Ms. Rodgers?

11 MR. TREEMAN: It seems to me that all of the
12 studies you did -- Rick Treeman, Johnston Grain. The
13 studies you did and all the reference material was in
14 reference to employees and worker exposures.

15 This deal is not dealing with worker exposure.
16 That's OSHA's ballpark, not EPA's.

17 MS. RODGERS: I will tell Ms. Clapper that.

18 MR. TREEMAN: Well, even the first one you
19 read. You referred to the candidate study bag houses 10
20 milligrams per cubic meter of air. That's the OSHA PEL
21 for airborne dust in the work environment. That has
22 nothing to do with the public.

23 MR. KENT: Dan Kent, Triangle Co-op Service
24 Company. I would just like to ask if you knew that you
25 had a bad back, would you work at a job where you're

1 required lifting continually throughout the day?

2 MS. RODGERS: I did not write these.

3 Obviously, I wouldn't. But I think the main concern for
4 the Lung Association, maybe this did address employees,
5 but they are just as important as the little old lady
6 across the street. So if these are statements, even if
7 they apply to employees as well as the person who lives
8 across the street.

9 MR. BYRUM: Any other questions for
10 Ms. Rodgers?

11 MR. FISHBACK: Well, I think the point is that
12 there's a key difference between the employees and the
13 people who live across the street, and it's the
14 concentration level they are exposed to.

15 And the standard is written for protection of
16 the general public under EPA has previous discussion has
17 said today, are usually PELs divided by a hundred or a
18 thousand.

19 The reason for that, the premise for that, is
20 always that the public is continuously exposed; the
21 worker is only exposed 40 hours a week.

22 MR. BYRUM: The other way around.

23 MR. FISHBACK: Okay. The public is exposed 168
24 hours a week if they live within the impact zone of the
25 emitter.

1 So I think it's -- this data that you presented
2 is correct, but it's not an EPA jurisdictional question;
3 it's an OSHA jurisdictional question.

4 You can't translate workplace exposure and
5 health effects to what would occur in the general
6 population, because the exposure levels are much, much
7 different.

8 DR. HUGHES: Would you thank Ms. Clapper for
9 her usual diligence in bringing information to us. I
10 appreciate that.

11 MR. BYRUM: Thank you, Lisa.

12 MR. McWHIRTER: I've got a question. Perhaps
13 I'll wait until after --

14 MR. BYRUM: Okay. Dr. Hart.

15 DR. HART: I am not going to bring my testimony
16 up, and I am going to somewhat defend Lisa's comments up
17 here. She in fact presented what she thought was
18 appropriate for the group. And what she did present in
19 fact were facts taken from the appropriate authors and
20 studies. And what we were advised was that we would
21 prepare testimony based on our impression of the adverse
22 health effects associated with workers in the workplace
23 in the grain industries, and that is precisely what she
24 reported on.

25 I looked at other areas in my review of the

6289

1 studies, and essentially there are none. We really have
2 no good studies at all that would address adverse health
3 effects of the general public exposed to grain dust.

4 We have some pretty good data on the adverse
5 effects associated with farmers in general. And as a
6 result of these exposures in farmers in general -- and
7 I'm not sure we could really consider them general
8 public -- they in fact have surpassed the problems
9 associated with health, surpassed the incidents in the
10 prevalence of miners today. In fact, they are the
11 highest occupational ill-health rate of all workers in
12 the United States, all farmers and agricultural, which
13 would suggest to me, certainly, by any means, that we
14 indeed have a problem relative to that. The question
15 is: What concentration is really going to create the
16 problem? And we have to deal with that.

17 Even in the workplace today, it's very
18 difficult for us to actually measure or to quantify the
19 actual concentrations that are going to create the
20 problems that we are seeing. There are problems; we
21 know that. We have a pretty good idea of what those
22 problems are. We're not quite certain what causes those
23 problems, but we're working on it.

24 So I think it's appropriate relative to my
25 testimony, which in fact concentrates on the workplace

1 and that's where my expertise lies, as a matter of fact,
2 is in the workplace. But perhaps I could withhold that
3 and any information that I have I might offer it to the
4 staff to support them in the future.

5 And, Lisa, I know how it feels to be in a
6 circumstance like that. You did present the appropriate
7 facts as you were advised to present, and that was
8 entirely correct. And the testimony that she had from
9 Dr. Welch and from Anna Clapper were right on track.
10 They were perfect. Thank you.

11 MR. BYRUM: Any questions for Dr. Hart from the
12 Council?

13 Okay. Questions.

14 MR. HAMPTON: Sir, are you aware of the
15 independent study done by the National Grain Feed
16 Association to show there was no adverse effect on
17 workers other than those who smoked?

18 DR. HART: I have the results of that. I
19 haven't reviewed that yet. Again, we were told to
20 single only on the workplace, and so I didn't review
21 that in detail.

22 The cursory review that I did, I can track
23 pretty much with what was found in the workplace
24 relative to smoking. There were several studies that
25 were done that found that the level of disease

6291

1 associated with smoking was equivalent to that of people
2 exposed to grain dust in the workplace, that is,
3 nonsmokers. So I was curious about that, and I do want
4 to look into it, and I will.

5 MR. HAMPTON: I would like to respectfully
6 request that the copy to be presented at the March 8th
7 meeting would be entered as part of the record, that
8 study that I just referred to.

9 MR. BYRUM: Other questions for Dr. Hart?

10 MR. FISHBACK: Do I understand your comment
11 correctly that farmers as a group have more severe
12 health effects than any other occupational group?

13 DR. HART: That has finally arrived at that.
14 Now that's relative to -- we looked at miners as being
15 the worst. Now, what we are saying is the mortality
16 rate in farmers due to occupational illnesses is now
17 greater than any other occupation in the United States.

18 MR. FISHBACK: But are you trying to say that
19 that is related to grain dust exposure or everything
20 else?

21 DR. HART: Everything.

22 MS. SLAGELL: Everything. Because of the
23 machinery we drive; everything.

24 DR. HART: The incidents of death in teenagers
25 in the farms is greater than what we see in other

1 occupations.

2 MR. FISHBACK: And you would agree that that's
3 usually accidents.

4 DR. HART: That is. However with the pulmonary
5 diseases that we are seeing, the grain dust is a factor,
6 but there are many other factors. There is fertilizers,
7 pesticides. All of these factors were --

8 MR. FISHBACK: That was the question I was
9 going to ask, because it came across differently. You
10 didn't intend to apply that their health risk is because
11 of grain dust only.

12 DR. HART: Absolutely no way.

13 MR. FISHBACK: Does their respiratory disease
14 frequency exceed that of other occupational groups?

15 DR. HART: There are several kinds of pulmonary
16 diseases. But if we look at the chronic obstructive
17 lung disease, it does. It exceeds that. It's only one
18 of the diseases.

19 MR. FISHBACK: With nonsmokers in both groups?

20 DR. HART: Absolutely, that's been mixed. We
21 have had mixed studies in which that is done. Smoking
22 seems to be an additive effect, but it's still higher in
23 nonsmoking farmers than it is who are exposed.

24 MR. FISHBACK: But again the respiratory
25 disease could be from the inhalation of grain dust or

1 the inhalation of pesticides or --

2 DR. HART: Pesticides, fertilizers; absolutely
3 every one of these factors.

4 MR. FISHBACK: So we can't pin it on grain
5 dust.

6 DR. HART: No at all. Not at all.

7 MR. LEW MEIBURGEN: Isn't the farmer, though,
8 the largest work force in the nation?

9 DR. HART: It is indeed. May I just add to
10 that. An interesting thing I read the other day having
11 done that in another industry covered fairly recently,
12 and I was very curious.

13 The mining industry had the highest level of
14 occupational illnesses and diseases at one time. What
15 the mining industry has had a lot more standards and
16 regulations now enforced upon them. The question is:
17 What is really happening here? That's what we really
18 need to look at. It's a curiosity, and I'm not sure I
19 can pin anything on it.

20 DR. HUGHES: Your numbers, are you talking
21 about gross numbers or incident rates, in other words,
22 the number of cases per thousand workers?

23 DR. HART: These are what we call the
24 proportioned mortality ratios.

25 DR. HUGHES: Right. And the mortality that you

1 were talking about earlier was not only diseases; it
2 also included injuries?

3 DR. HART: Injuries, that's correct, yes.

4 MS. SLAGELL: Also bankruptcies.

5 DR. HART: I am sure that could do it.

6 MS. SLAGELL: Well, really. Western Oklahoma's
7 farmers are.

8 DR. HART: It's just a curiosity. And that we
9 all need to take that into consideration. I was really
10 surprised. I have been involved in other industries,
11 and I was really surprised to find that that was a
12 problem. Grain dust is one of these; it has to be
13 considered.

14 MR. KILPATRICK: In the study that was brought
15 up, they say that -- there are some health effects of
16 grain workers usually show that rates of chronic
17 bronchitis and abnormal pulmonary function were not
18 higher than usually encountered in other populations.
19 Later on it says that it was found that long-term grain
20 dust exposure may result in mild chest symptoms
21 especially tightness and a mild decline of pulmonary
22 function.

23 I know you haven't seen the data, what they
24 meant, but in your opinion, what's the difference
25 between an abnormal pulmonary function and a mild

1 decline in pulmonary function. I'm an engineer; I think
2 of numbers. I don't know what he --

3 DR. HART: I would do, and I'd have to look at
4 that. But in reading some of the other studies, I have
5 seen that used. And I think what they're referring to
6 is that if you take a photo -- just a frame at that
7 particular time or a photograph at that particular time
8 or do a pulmonary function study, that you may find a
9 decline when exposed. But take them out of the exposure
10 and it returns to normal.

11 The other is where you have a reduction in
12 pulmonary function studies, and it remains that way and
13 continues to decline. I think that's what they're
14 referring to, but I would have to look at those details.
15 Because we found in the grain dust workers in the
16 workplace that we can do pulmonary function studies on
17 individuals and find that there is a decline while they
18 are working. Take them out of the environment, in some
19 of the diseases -- not all of them, but some of those --
20 it is reversible, and they can come back to normal. And
21 it may be what they're referring to.

22 MR. KILPATRICK: I am glad to hear it's
23 reversible, because I'm the only Council member that
24 entered the grain elevator on our tour when we turned
25 off the vacuum system, and for three days afterwards I

1 can testify that I suffered from mild pulmonary function
2 disorder.

3 DR. HART: And that's entirely possible. It is
4 reversible, but we're talking about those that are
5 irreversible in the grain process which occur after
6 about six years' exposure.

7 Sorry to take so long.

8 MR. BYRUM: Other questions for Dr. Hart?

9 MR. McWHIRTER: This -- what was the PEL? Is
10 that the exposure limit?

11 DR. HART: No. The TLV. Threshold limit value
12 is what we were talking about.

13 MR. McWHIRTER: I thought there was an OSHA
14 standard. A standard in millimeters.

15 DR. HART: We're talking about ten milligrams
16 per cubic meter. Is that the parameter you are talking
17 about?

18 MR. McWHIRTER: No. What is --

19 MS. TILLMAN: PELs and TLVs are often the same
20 thing. They mean the same thing.

21 MR. McWHIRTER: We can probably relate that to
22 our occupational exposure level that is contained in
23 Subchapter 41. See if there's an occupational exposure
24 level established for this material.

25 MR. BYRUM: Other questions for Dr. Hart?

6297

1 Thank you, sir.

2 I find no one else wishing to speak. Is there
3 anyone else who wishes to speak to the Council? We had
4 called some names previously that had indicated they did
5 not wish to speak at that time. Does anyone wish to
6 speak to the Council?

7 I find no one wishing to speak.

8 THE CHAIRMAN: Is there any further discussion
9 or questions from the Council on this matter?

10 Okay. There's, I guess, several possible
11 actions that we could take. One I would like to at
12 least ask some questions about. It appears that the
13 industry has no fear if the state takes an action that
14 is not either sent to EPA or is sent to EPA and might
15 not get approved. And I don't know what kind of a
16 shield that puts up for them. But would there be such
17 an action that due to the rarity of an industry that
18 functions six weeks out of the year or something like
19 that that we shield them from having to make an
20 application under Title V at this time?

21 Don't everybody speak at once, staff.

22 MR. BYRUM: Okay. I will try that one for you.

23 I think that we -- it will not -- if they meet
24 the qualifications for being a major source under
25 Title V, it would not shield them from having to have a

1 permit. Whatever we do, we cannot take action such as
2 just to ignore this class, in my opinion.

3 Dennis, put you on the spot.

4 MR. DOUGHTY: I think I missed something there.
5 I thought I heard you say what's the scenario that we
6 can anticipate --

7 THE CHAIRMAN: My question is: Realizing that
8 EPA would not recognize a state rule if we passed one to
9 shield them from having to make an application under --
10 for a Title V permit. We know that; we can't do that on
11 a federal -- on a federal level or hope to get EPA
12 approval.

13 But if we justified it and found that we could,
14 based on their type of operations, a very few weeks out
15 of the year, and for some reason it's justified in our
16 opinion, shielding them on the state level, regardless
17 of what the feds might want to do, and if the industry
18 says that's acceptable to them -- and they evidently
19 have said such a thing -- is that possible to do?

20 MR. KILPATRICK: You're asking --

21 MR. DOUGHTY: Bill, I'm still struggling with
22 what your question is. There's a couple of ways we can
23 shield them.

24 I'm not sure that I particularly like that
25 term, but what we can do is issue them permits as

6299

1 synthetic miners, which will shield them, and you
2 understand that.

3 THE CHAIRMAN: I understand that.

4 MR. DOUGHTY: We can write a standard that we
5 send to EPA that they approve that is federally
6 enforceable that will shield them.

7 If we write something that is arbitrary or if
8 it's unapprovable by EPA, what we have is a situation
9 where the state is unable to act because they are in
10 compliance. If it is not approved by EPA and their
11 neighbor complains to EPA and EPA goes out and inspects
12 them -- generally, they will refer it to us and we'll
13 say: They are in compliance. Then more than likely
14 what could happen is EPA would come out and do an
15 inspection, and say: You're not in compliance; state,
16 what are you doing to do about it? And they will say:
17 They're in compliance with our rules.

18 Then EPA would take an enforcement action
19 against them based on the SIP, which they can enforce,
20 which happens to be our own rules of opacity, process
21 weight grain, and so on and so forth.

22 I don't know if that answers your question, but
23 in my mind that's the way I see the situation.

24 THE CHAIRMAN: Well, right now we have a
25 concern about us enforcing the regs that are on the book

6301

1 now, the rules that are on the books now. We had a
2 concern about that.

3 If we -- if we in Oklahoma reversed that rule
4 as a state rule --

5 MR. DOUGHTY: You mean just exempt them?

6 THE CHAIRMAN: Right.

7 MR. DOUGHTY: Will that shield them from EPA?

8 THE CHAIRMAN: Uh-huh.

9 MR. DOUGHTY: No way.

10 THE CHAIRMAN: No, I'm sorry. Not shield them
11 from EPA. There is no way we can shield them from EPA
12 right now, and in time to stop them from having to make
13 application under Title V, as of today. There's nothing
14 to prevent -- there's nothing -- there's nothing that
15 says -- or shields them from having to do it. We're
16 helpless. They've got to submit, as it stands now, an
17 application.

18 MR. DOUGHTY: Unless there's some other
19 enforceable limit that reduces their potential to emit.

20 One thing that Doyle and I talked about, that
21 we might think about, and it's just sort of a
22 preliminary thought, that we might be able to -- and we
23 might be able to use the present standards and pass
24 something that would limit hours of operation and so
25 forth that would exempt maybe a large portion of the

1 industry just simply based on the standards that we
2 have.

3 As far as potential to emit and Title V, it
4 would not exempt opacity and some of the other things.
5 But at least it would eliminate them from the burden of
6 having to submit a Title V application. That wouldn't
7 take care of some of the top facilities, but at least
8 it's a thought, and it's a starting place.

9 MS. TILLMAN: I think that was the major
10 concern we heard here today from the industry was that
11 they didn't want everyone one of their people to have to
12 submit Title V applications.

13 MR. DOUGHTY: I think we have two issues:
14 Opacity process weight rate versus Title V. I think we
15 can for some purposes perhaps separate the two and maybe
16 get us part way where we're going.

17 MR. BYRUM: I think we have already gone a long
18 ways. If we don't know -- what is it, how many bushels
19 again?

20 MS. PERRY: Six and a half million.

21 MR. BYRUM: -- six and a half million bushels
22 will do for the industry. I just don't know how many of
23 those -- how many facilities are at that level or below.
24 I don't know the answer to that. But we're already
25 there on that. So that's part of what Dennis is saying.

6303

1 MS. TILLMAN: And that's -- the rush issue is
2 that. The opacity thing is not so hot on the burner,
3 correct?

4 MR. DOUGHTY: I think so. This is a reg we've
5 had around for a long time. I keep hearing the
6 arguments, and what I fail to hear is that traditionally
7 if we've gone to EPA with a relaxation, we needed some
8 real hard facts or data, something that says: This
9 opacity is way too stringent, or this process weight
10 rate is way too stringent and there's no way they can
11 meet it. There are other ways that they might be able
12 to meet this.

13 Am I responding to your questions, Bill?

14 THE CHAIRMAN: Well, no, I guess really not.
15 Let's refer back to something that happened years ago.

16 We passed a rule that would have protected
17 Sheffield, and it didn't because EPA didn't accept that
18 rule, didn't put it on the books. We didn't realize
19 they didn't. But where they got fined was EPA came
20 around and did it; we didn't.

21 We tried to defend our position.

22 MR. DOUGHTY: It was a little bit different
23 situation. What we had was they had a variance, as I
24 recall, to one of our rules. The variance was never
25 sent to them as a SIP revision; therefore, it was not --

1 it was not -- EPA was not obligated to comply with that
2 variance, because it was never approved.

3 THE CHAIRMAN: I think it was a bubble deal
4 that we passed or something like that, wasn't it?

5 MR. DOUGHTY: That was part of it. That was
6 part of their permit, but in order for them to get their
7 equipment on and get the opacity down, it seems like
8 they spent like \$3 million or something. And EPA
9 referred it to us, and we said, "We can't do anything
10 about it; they've got a variance." And they said,
11 "Okay, we will."

12 And they went in, and I don't know what the
13 fine was, but it was pretty heavy.

14 MR. BYRUM: Several million dollars.

15 MR. DOUGHTY: And it didn't do much for the
16 EPA-state relationship; I will say that. But they
17 certainly proved their point.

18 THE CHAIRMAN: Yeah, but from the time that we
19 passed that rule or variance to the time EPA did
20 anything about it, how long was that?

21 MR. DOUGHTY: I don't know the exact time
22 frame. I know it was precipitated by complaint.
23 Somebody complained.

24 I think they had -- at that time we could only
25 do a variance for one year. So the variance could not

6305

1 have -- I mean --

2 MR. BYRUM: It occurred within a year.

3 MR. DOUGHTY: It may have been a year or more.

4 But the catch in that was that somewhere in the
5 interim they approved our opacity rate which has never
6 been part of the SIP. And then they turned around and
7 used it against them because of the variance. I think
8 we've got -- what we would have here is a similar
9 situation.

10 I do know that once we submit a SIP revision,
11 EPA has cause to take a look at it. So I don't know if
12 they would jump right out and do an enforcement action,
13 but I have no idea how long it would slow them up,
14 either.

15 MR TARON: Mr. Chairman, did I misunderstand
16 Larry awhile ago? Did he not say that we might be
17 better not even to address this at this time?

18 Did you make that statement awhile ago?

19 MR. BYRUM: In what context? Address the whole
20 rule?

21 MR TARON: The whole rule.

22 MR. BYRUM: That's a possibility that you have
23 is to not address it.

24 MR. TARON: That's what I think.

25 MR. KILPATRICK: I'm a little confused, because

1 I think Mr. Hampton at the end seemed to agree with the
2 committee approach. Earlier we had heard testimony from
3 the industry suggesting that they were recommending that
4 we pass their rules.

5 I'm not quite sure where industry stands. I
6 know where I stand, but I don't know what they're
7 recommending.

8 MR TARON: What about our suggestion to work
9 with them?

10 MR. KILPATRICK: That's what I'm saying. I
11 think Mr. Hampton -- I thought the last thing he said
12 was in agreement with that.

13 MR TARON: Should we have a motion here,
14 Mr. Chairman, to agree with that and go on with it? If
15 so I move.

16 THE CHAIRMAN: I think that would be fine.
17 I just -- you know, in item 2, under 3(B), we're to
18 explore any possible action that we might want to take.
19 And rather than to just jump in and do one thing, I
20 wanted to see if there were some other things that we
21 haven't discussed at this time.

22 So that's why I brought this one subject up.

23 MR. FISHBACK: Let me ask what I think is a
24 fundamental question.

25 We have subchapters, whatever they are, Doyle,

1 25, 27?

2 MR. McWHIRTER: Twenty-nine.

3 MR. FISHBACK: -- 29 on the books right now,
4 and I've heard several things today. Industry
5 acknowledges they can't meet the opacity and process
6 weight requirements of the existing rules which have
7 been on the books for 20 years. You also said that the
8 DEQ and the air quality program is not taking an
9 aggressive enforcement stance against those affected
10 facilities and has not.

11 But the fundamental question I see here is:
12 What is the difference between having a rule that's been
13 on the books for 20 years that the industry can't meet
14 and could -- EPA could have overfiled on; I mean, these
15 subchapters are part of the SIP, and if EPA wanted to
16 come to a grain elevator and say: Your opacity is --
17 whether your state agency enforces on you or not, your
18 opacity is too high. They could have done it and they
19 haven't.

20 So what is the difference between having a 20
21 year old rule you can't meet and having a brand new rule
22 that you can't meet?

23 I don't see the difference.

24 MS. SLAGELL: Common sense and logic.

25 MR. FISHBACK: And so --

1 MR. DOUGHTY: Bill, are you convinced -- is the
2 Council convinced that there's been enough evidence that
3 says they can't meet the opacity rule?

4 I'm not sure the staff is convinced that they
5 can't meet any of the standards; there's not some
6 alternative way. I would question that assumption, at
7 least at this point.

8 MR TARON: That's the reason for my suggestion
9 to go ahead and have the committee work with them. I
10 thought that's what we wanted.

11 MR. FISHBACK: I think there's a consensus to
12 do that, but I'm trying to understand here, because we
13 heard testimony from the industry that they didn't see
14 any risk in us -- even though Gary is uncomfortable with
15 it, they didn't see any risk in us proposing this rule
16 to EPA because it may or may not pass. Well, we've
17 already got a rule on the books they can't meet, so
18 what -- to me there is no difference.

19 MR. KILPATRICK: Well, there's a big
20 difference. We're passing the rule. I'm voting on it
21 saying, yes, I think this is a good rule for the state
22 of Oklahoma and the industry. There ain't no way.

23 MR. FISHBACK: If that's what's true, we ought
24 to revoke the existing rule right now. We ought to wipe
25 that rule off the books.

1 MR. KILPATRICK: No. You've got to have some
2 basis for doing that. What are you going to replace it
3 with?

4 MR. FISHBACK: If you have an industry group
5 that can't meet an existing rule, then it might as well
6 not be on the books. How can you defend a rule that is
7 impossible to meet?

8 MR. BYRUM: If you take that action --

9 MR. KILPATRICK: See those green marks, all of
10 those green marks? Those are the things that industry
11 has in that aren't in the proposal. We haven't even
12 talked about the green marks on here. All we have
13 talked about is one or two major issues. You know me,
14 am going to read every word. I want to know every word
15 before I am going to vote on it.

16 MR. FISHBACK: All I am saying is if we have an
17 unattainable situation here, then we have to rectify it.
18 And if we can't rectify it by supporting any rule today,
19 then we better rectify it by getting rid of an existing
20 rule.

21 MR. KILPATRICK: The existing rule applies to
22 all industries. So are you going to draft out a new
23 rule that says just for the agricultural industry, we
24 exempt them from --

25 MR. FISHBACK: That's one of the --

1 THE CHAIRMAN: That's kind of what I was
2 saying. And I just wanted to explore that.

3 MR. KILPATRICK: If you're going to do a
4 exemption, you better have the basis for the exemptions.

5 MS. SLAGELL: That's right, but we can discuss
6 that.

7 THE CHAIRMAN: That's right. Our only basis
8 would have been because of the peculiarity of the
9 operations of the mills.

10 MR. KILPATRICK: Oh, the basis for you right
11 now is because the industry says they can't meet the
12 rule. That's not a valid reason for an exemption.

13 MR. FISHBACK: And because -- if you accept the
14 testimony we've heard and because decreasing emissions
15 to the atmosphere increase concentrations inside the
16 equipment and increase the probability of grain
17 explosions. That is the key point that Dr. Parnell was
18 making over and over again.

19 MS. TILLMAN: But that's not in a presentable
20 form at this time.

21 MR. FISHBACK: Well, maybe not.

22 MS. TILLMAN: From what I think I am hearing
23 here today, what we're trying to do is help get the
24 industry to where they are not into immediate trouble
25 with the regs.

1 Okay. The air quality staff has already said
2 they are not going to go in and try to enforce the
3 opacity rule until they have time to work it out. The
4 next hot item is obviously the applications.

5 And we've already heard a good possibility that
6 most of them are going to be knocked out of having to do
7 the Title V permits.

8 I think those are the things we need to be
9 working on with them now is get those application
10 situations solved and at the same time have the
11 committee go in to take care of the opacity items and
12 the rest of the things that are in question.

13 That way when we do, we can get -- I agree
14 with you. I think most of the stuff is here; it's just
15 not in a presentable form. So let's get all of this
16 stuff moving and go with it.

17 THE CHAIRMAN: Okay. Let me ask a question,
18 then. If we continue this hearing, do we have to
19 continue it to a known date, or can we continue it until
20 either the next regular meeting or special meeting?

21 MR. DOUGHTY: Well, our next regular meeting is
22 a known date; is it not?

23 THE CHAIRMAN: That's right. But what if we
24 wanted a meeting -- what if we could expedite this thing
25 and we wanted it before that time?

1 MR. DOUGHTY: I think you would need to tell
2 them what that date is today. Otherwise, we would have
3 to go through our promulgation and rigmarole and
4 advertise and set a date, unless we wanted to do it as
5 an emergency or such.

6 MR. BYRUM: Next regular scheduled meeting is
7 June 14th.

8 SCOTT THOMAS: We have already taken the
9 liberty of advertising the June 14th meeting.

10 THE CHAIRMAN: Well, if we continued it, would
11 you have to readvertise it?

12 MR. BYRUM: No. It's currently advertised.

13 DR. HUGHES: I am confused. Could we meet next
14 week?

15 MR. BYRUM: You can call a special meeting. We
16 would have to go through some special advertising
17 problems, but, yes.

18 THE CHAIRMAN: Do we have a time frame that
19 would necessitate a special meeting on this?

20 MR TARON: Forty-eight hours is what the state
21 law says.

22 THE CHAIRMAN: No, I don't mean that. But I
23 mean -- is there some action we need to take, if we can,
24 prior to the next regular meeting?

25 MS. TILLMAN: Get your committee together

63B

1 that's going to work with the other two groups. You
2 could do that.

3 MR. FISHBACK: That's not even a meeting.

4 MR. DOUGHTY: We could work most of this out at
5 the staff level, I would think.

6 I don't see -- if the Council ultimately
7 decides to pass a rule; I think it can be done on an
8 emergency basis and also on a regular basis.

9 Larry, I don't know; I haven't heard from EPA,
10 but if we get it in before November 15th -- have you
11 gotten anything from EPA on that?

12 MR. BYRUM: No. They won't be able to even --
13 I don't see their being able to react to it.

14 I don't think that getting the rule in or not
15 getting the rule in will have any effect until the
16 date -- well, unless we were trying to shield them from
17 applying for a permit.

18 THE CHAIRMAN: That's what I'm attempting to
19 do.

20 MR. BYRUM: I don't know the number, and I
21 think feed and grain will need to provide us the number
22 that Debbie's comment exempts -- or not exempts but
23 takes care of. And I don't know what the remaining
24 numbers are. But the application for a permit is coming
25 closer and closer. I know of no way to do that.

1 And to answer Dennis's question: Do we know if
2 we get a proposed rule in to EPA prior to that date,
3 will they -- would that exempt them from doing a permit?
4 And I don't know the answer to that question.

5 Again, I am not going to try to say what EPA
6 would say on that. We'll ask them.

7 THE CHAIRMAN: The chances are we're going to
8 submit a rule to EPA that on the surface they're not
9 going to accept. I don't have a problem with that, but
10 I would expect that that's what is going to happen.
11 Even with the committee working with the Council and the
12 industry.

13 And I say that simply because I'm not convinced
14 that we want to cost the industry what it would cost to
15 meet -- or to put in the emission control devices to
16 meet the opacity that I'm afraid that EPA is going to
17 want.

18 MR. BYRUM: Again, EPA would look at the cost,
19 the relative cost and all of that, and I don't know
20 we've seen data on that.

21 THE CHAIRMAN: We sure haven't seen any data
22 that says that at their property line there's a health
23 hazard because of any of these emissions, have we?

24 MS. TILLMAN: Not only that, they had a very
25 good argument as to why the control mechanisms are not

6315

1 always a good thing to have. I think we have a very
2 good place for backing a stand if we can just get it
3 together in a presentable form. I don't see a problem
4 with EPA accepting it if we can back what we've been
5 saying here.

6 THE CHAIRMAN: Okay. Is the Council willing to
7 go along with the committee? Do you believe that that's
8 worthwhile and worth your time? Bill?

9 (Mr. Fishback Nods yes.)

10 THE CHAIRMAN: Okay. First of all, who would
11 volunteer for the committee?

12 MR. FISHBACK: I will.

13 MS. SLAGELL: I will too.

14 (Dr. Hughes raising his hand.)

15 THE COURT: One, two, three. I would like one
16 more. Mary?

17 Okay. We have four. Now, I would like anybody
18 that wants to come to these to be able to come, but I
19 want Larry to monitor and not put the burden of a
20 meeting on us.

21 MR. FISHBACK: We need to be careful of a
22 quorum, don't we?

23 THE CHAIRMAN: That's right.

24 MR. BYRUM: If you have four, you're going to
25 have to be basically the four.

1 THE CHAIRMAN: That's right. I'm just saying I
2 would like anybody on the Council to come to these
3 meetings, except for one reason: I don't want to be
4 burdened with a formal meeting.

5 So I would like Larry to monitor when you're
6 getting together that there are only four of you. First
7 of all, the four volunteers; next, if one of the
8 volunteers can't, somebody else can come along. And if
9 somebody wants to come to the meeting, they've got to
10 talk with Larry to assure that they won't make a meeting
11 of it.

12 Is that understood? Okay. Now, can we just
13 continue this meeting until next time with this type of
14 activity going on?

15 MR. DOUGHTY: I think that's a good idea, Bill,
16 and I think we can do that. We can continue the hearing
17 until the next regularly scheduled meeting. That ought
18 to give you enough time to resolve some of these issues
19 and draft some language and so on and so forth.

20 THE CHAIRMAN: Okay. Do we need a motion to
21 form a committee, or do we just simply need a motion to
22 continue the hearing?

23 MR. DOUGHTY: I would say a motion to continue
24 the hearing, but we've already got scheduled for a
25 hearing. So at this point, I don't think it really

1 matters.

2 THE CHAIRMAN: Then we don't have to concern
3 ourselves about continuing the hearing. That's set.

4 SCOTT THOMAS: It's in the Gazette.

5 MR. DOUGHTY: If you believe that the Register
6 will publish it the first of the month, then you're in
7 good shape. You may want to go ahead and vote to
8 continue the meeting until the next -- or the hearing
9 until the next meeting to be sure.

10 THE CHAIRMAN: First of all, I would like a
11 motion to continue this hearing until the next regular
12 meeting, which is June 14th.

13 MS. TILLMAN: So moved.

14 DR. HUGHES: Second.

15 THE CHAIRMAN: We've got a motion and a second
16 to continue the hearing until our next regular meeting,
17 which is June 14th.

18 MR. DOUGHTY: Is that here or in Oklahoma City?

19 THE CHAIRMAN: I think it's in Oklahoma City.

20 MR. BYRUM: Yeah.

21 THE CHAIRMAN: Call the roll.

22 THE SECRETARY: Mayor Taron?

23 MR TARON: Aye.

24 THE SECRETARY: Ms. Tillman?

25 MS. TILLMAN: Aye.

1 THE SECRETARY: Dr. Hughes?

2 DR. HUGHES: Aye.

3 THE SECRETARY: Ms. Hinkle?

4 MS. HINKLE: Aye.

5 THE SECRETARY: Ms. Slagell?

6 MS. SLAGELL: Aye.

7 THE SECRETARY: Mr. Fishback?

8 MR. FISHBACK: Aye.

9 THE SECRETARY: Mr. Kilpatrick?

10 MR. KILPATRICK: Aye.

11 THE SECRETARY: Mr. Breisch?

12 MR. BREICH: Aye.

13 THE CHAIRMAN: Okay. Now we have had
14 volunteers for the committee to work with the staff and
15 industry. I don't think we need a motion to formally
16 appoint that, but I would like to put it on the record
17 that, let's see, it was Mike, Mary Beth, Bill, and Gary;
18 is that right? And again I extend an invitation to
19 anybody or anybody on the Council to be at that meeting
20 subject to clearing it through Larry.

21 MR. FISHBACK: And who from the staff and who
22 from the industry will be working with us? Can we get
23 that on the record too?

24 MR. BUTCH MEIBURGEN: I'm Butch Meiburgen, and
25 I believe the industry would probably like to have the

6319

1 same two individuals that have -- doing the small
2 concentrated meeting: Mike Mahoney and Rick Treeman, if
3 Larry doesn't have any objection to that.

4 MR. BYRUM: I don't have any objection.

5 MR. BUTCH MEIBURGEN: And work with Doyle and
6 Debbie.

7 THE CHAIRMAN: I don't care who you all have.
8 I'd like to limit it to some reasonable number.

9 MR. BUTCH MEIBURGEN: Would the two be
10 reasonable?

11 THE CHAIRMAN: Four, five, or six; you know,
12 that number is reasonable. But have the same ones at
13 each meeting. How many?

14 MR. BUTCH MEIBURGEN: Normally I would say no
15 more than four.

16 THE CHAIRMAN: No more than four. Okay. One
17 more thing. These will have the power, or the authority
18 I should say, to make a binding agreement between the
19 staff and themselves that can be brought to the Council.
20 No last minute mind changes is what I'm getting at.

21 MR. LEW MEIBURGEN: It's a two-way street.

22 THE CHAIRMAN: That's right. The Council is
23 going to be there to make sure the staff doesn't do
24 that.

25 MR. BYRUM: And we'll have no more than 40

1 people.

2 MR. FISHBACK: And who from the staff?

3 MR. BYRUM: I would say that we'll probably
4 have Doyle and Debbie, and we have a couple of others.
5 I want to reserve the right to bounce in and out,
6 because I have to go to meetings all the time. But I
7 would like to sure know what is going on.

8 We'll have no more than four, except for me
9 bouncing in and out.

10 THE CHAIRMAN: Well, Larry that will conclude
11 the Council's part of this hearing.

12 (The hearing concluded.)

INCIDENTS OF COMMISSION MEETING

	<u>PAGE</u>
MOTION BY MR. FISHBACK.	09
SECONDED BY MS. TILLMAN	09
ROLL CALL VOTE.	10

1 June 14, 1994

2 Oklahoma City, Oklahoma

3 1:30 o'clock p.m.

4 * * * * *

5 THE CHAIRMAN: I'll call this hearing to order. Do you
6 want to call the roll.

7 MS. BRUCE: Dr. Canter.

8 DR. CANTER: Here.

9 MS. BRUCE: Mr. Fishback.

10 MR. FISHBACK: Here.

11 MS. BRUCE: Ms. Hinkle.

12 (No response.)

13 MS. BRUCE: Dr. Hughes.

14 DR. HUGHES: Here.

15 MS. BRUCE: Mr. Kilpatrick.

16 MR. KILPATRICK: Here.

17 MS. BRUCE: Ms. Slagell.

18 (No response.)

19 MS. BRUCE: Mayor Taron.

20 (No response.)

21 MS. BRUCE: Ms. Tillman.

22 MS. TILLMAN: Here.

23 MS. BRUCE: Mr. Breisch.

24 MR. BREISCH: Here.

25 THE CHAIRMAN: Okay. At this time, I'll turn the

6325

1 meeting over to Larry Byrum, who will act as our protocol
2 officer.

3 MR. BYRUM: Ladies and gentlemen, my name is Larry
4 Byrum. I'm the director of the air quality division of the DEQ.
5 As such, I will act as the protocol officer for this hearing.
6 This hearing is convened by the air quality council in
7 compliance with the Oklahoma Administrative Procedures Act and
8 Title 40 of the Code of Federal Regulations, part 51, as well as
9 the authority of Title 63 of the Oklahoma Statutes, section
10 1-1801 and following. This hearing was advertised in the
11 Oklahoma Register for the purposes of receiving comments
12 pertaining to the proposed revision of a rule for the feed and
13 grain industry. The Rule Number is 252:100-24-4. If you wish
14 to make a statement concerning this issue, please complete the
15 form which is located at the registration table. I will call
16 upon you at the appropriate time.

17 At this time, I would like to call upon Mr. Doyle
18 McWhirter of the staff to propose the staff position on these
19 changes. Mr. McWhirter.

20 MR. MCWHIRTER: Thank you, Mr. Chairman and members of
21 the council and guests in the audience. I'm Doyle McWhirter.
22 I'm the director of enforcement and compliance section for the
23 air quality division. I will give the staff's comments
24 concerning proposed Rule 252:100-24, commonly referred to as
25 subchapter 24, entitled, "Particulate Matter Emmissions from

1 Grain, Feed or Seed Operations."

2 A committee made up of four council members, Oklahoma
3 grain and feed industry representatives, and air quality
4 division staff, with Mr. -- with Dr. Fishback as the chair was
5 established by the air quality council meeting on April 12,
6 1994. The committee has met on three occasions to discuss and
7 draft proposed subchapter 24. The list of attendees, the
8 agendas, and the notes of these meetings was provided in the
9 council packets.

10 I'm happy to report that members of the committee have
11 reached agreement upon proposed subchapter 24, which is included
12 in the packets. And there is also copies available -- were
13 copies available at the table at the entrance.

14 I won't read all of the proposed subchapter 24 to this
15 group. There has been some suggested changes be made to the
16 language that was contained in what was in the -- been included
17 in the packet. I will read those suggested changes into the
18 rule, and then give the staff's recommendation.

19 On page 1, the definition included in 252:100-24-2
20 definitions, the definition for "Enclosed Grain Handling
21 Equipment," it has been suggested that the last sentence be
22 changed to read as follows: Emissions from this equipment shall
23 not be exhausted to the atmosphere except through
24 non-pressurized vents/openings, and shall not be considered a
25 source subject to emissions calculations. And that language --

1 what it does is it removes "point," the word "point," in that
2 sentence and changes it with "source."

3 In the next definition, which is on page 2, the
4 definition for "Existing Grain, Feed and Seed Operations"
5 suggested that the first sentence read as follows: Means a
6 facility which was -- remove the word "is" and replace it with
7 "was" -- in existence in 1993 and has submitted a current
8 emission inventory to the Air Quality Division for the 1993
9 reporting period year.

10 There is no other changes on that page until you get to
11 the definition of "Grain, Feed or Seed Operations Facilities."
12 And it's recommended that that be reworded to read as follows:
13 Means the contiguous or adjacent area under common control up
14 which a grain elevator, feed mill, or grain and seed processing
15 equipment or structure are located, and all contiguous sites
16 having common control, which have a SIC code with the first two
17 digits that are identical to the first two digits in the SIC
18 code for grain elevators, feed mills, or grain and seed
19 processing equipment.

20 The next suggested change would then be on page 5,
21 which page 5 is under section 24-3 in the middle of the page
22 where it is referring to the classes of emissions. It is
23 recommended that that sentence be changed to read as follows:
24 For this interim rule, emissions shall be calculated as follows
25 for three classes of emissions, colon. That is adding the

1 letter "S" to emission and removing the word "points."

2 The next recommended change is under Class II. Change
3 the word -- remove the word "vents" and replace it with the
4 words "emission sources" so that that line reads: Class II:
5 Emission sources with control devices.

6 The next recommended change is the last line in the
7 Class II portion. Suggested that it be reworded to read as
8 capital E capital F F means -- insert the word "fractional"
9 efficiency of control device.

10 The next recommended changes is on page 6 in paragraph
11 (3) (b). It is recommended to submit or -- not submit, but to
12 include the word -- the written words twenty percent in front of
13 the numerical 20%, so that paragraph B reads as follows:
14 Emissions from pressurized or non-pressurized vents or openings
15 with control devices shall be limited to no greater than "twenty
16 percent," written words, followed by the numerical writing of
17 20% opacity --

18 MR. BYRUM: Place that in parenthesis.

19 MR. MCWHIRTER: Placed in parenthesis, yes. I'm sorry.
20 -- at any time.

21 It is also suggested in paragraph c be changed to read
22 as follows: Emissions from pressurized vents or openings
23 without control devices shall either be enclosed, exhausted
24 through a control device, or shall be limited to no greater than
25 "ten percent" -- written, two words -- ten percent written and

1 insert in parenthesis the numerical figures of 10 with percent
2 sign, end of parenthesis, before opacity at any time.

3 In paragraph d, it is recommended that it be changed to
4 read as follows: Emissions from non-pressurized vents or
5 openings without control devices shall be limited to no greater
6 than ten percent and insert, open parenthesis, the numerical
7 10%, close parenthesis, followed by opacity at any time.

8 I believe that includes all of the recommended changes
9 that have been -- or changes that have been recommended be made
10 to this rule. With the inclusion of those changes into this
11 rule, it would be the staff's recommendation that the council
12 consider adoption of the proposed subchapter 24 with the
13 recommendation to forward it to the Department of Environmental
14 Quality Board for their consideration. I would be happy to try
15 to answer any questions.

16 MR. BYRUM: Any questions from council of
17 Mr. McWhirter?

18 (No response.)

19 MR. BYRUM: Any questions from the audience of
20 Mr. McWhirter?

21 (No response.)

22 MR. BYRUM: Thank you.

23 MR. MCWHIRTER: Thank you.

24 MR. BYRUM: I have a notice that Mr. Lay would like to
25 speak on the subject. Is he here? Is this the subject you want

1 to speak to?

2 MR. LAY: Actually, it was the contractor issue I
3 thought we were going to come back to this afternoon. It was
4 from this morning. Is that --

5 MR. BYRUM: Not right at this time. We'll be happy to
6 meet with you and address your concerns. Okay.

7 Anyone else who wishes to speak to this issue?

8 MR. KYLE: Let me ask a question, please. John Kyle
9 with the Oklahoma Railroad Association. These rules apply only
10 to the feed and seed operations and not really the
11 transportation type company. Is that true or not true?

12 MR. BYRUM: I believe that's true. It would not apply
13 to transportation companies per se unless they handled --

14 MR. KYLE: -- except for those kind of operations.

15 MR. BYRUM: Right. Right. Other questions?

16 Mr. Chairman, I see no further discussion of this
17 issue.

18 THE CHAIRMAN: Is there any discussion or questions
19 from council at this time? If not, I will entertain a motion to
20 recommend adoption of this rule to the DEQ.

21 MR. FISHBACK: So moved.

22 MS. TILLMAN: Second.

23 THE CHAIRMAN: I've got a motion and a second. Any
24 further discussion or questions?

25 MR. KILPATRICK: Question. That motion includes

6331

1 adoption of the rule as Doyle read it in the amendments?

2 THE CHAIRMAN: All right. Does the motion need to be
3 changed, or is that understood?

4 MR. KILPATRICK: It's understood.

5 THE CHAIRMAN: Okay. Call the roll.

6 MS. BRUCE: Dr. Hughes.

7 DR. HUGHES: Yes.

8 MS. BRUCE: Ms. Tillman.

9 MS. TILLMAN: Yes.

10 MS. BRUCE: Dr. Canter.

11 DR. CANTER: Yes.

12 MS. BRUCE: Mr. Kilpatrick.

13 MR. KILPATRICK: Yes.

14 MS. BRUCE: Mr. Fishback.

15 MR. FISHBACK: Yes.

16 MS. BRUCE: Mr. Breisch.

17 MR. BREISCH: Yes.

18 THE CHAIRMAN: That ends that item --

19 MR. KILPATRICK: Can I put one thing in the record,
20 Mr. Chairman? I would like to just place in the record -- I
21 think we ought to place in the record a thank-you to the
22 industry, to the service, and to the council members, and
23 particularly to Bill Fishback as the chair of the committee, who
24 has worked on this. I think they did a lot of work in the last
25 couple of months to bring this rule to fruition. I think we owe

1 them a debt of gratitude or something to get it resolved.

2 DR. HUGHES: I guess I would like to add to that. Both
3 Doyle and Debbie both placed a lot of emphasis and a lot of time
4 on this, and I appreciate that. And all of the members of the
5 industry that has participated and endured everybody's
6 questioning and even allowed to us see their operations was most
7 helpful. So I appreciate your willingness to work with us to
8 come to this point.

9 MR. HAMPTON: Mr. Chairman, I'm Joe Hampton. I'm
10 Executive Vice-President of the Oklahoma Grain and Feed
11 Association. And on behalf of the industry, we, too, want to
12 give a special thank-you to the members of the council who
13 served on this committee, especially Mr. Fishback, and to
14 members of the staff, especially Doyle and Debbie, for all the
15 work we put into this effort. It took well over a year to get
16 this accomplished. It was definitely a learning process for us;
17 we hope it was a two-way street.

18 And, again, we appreciated the opportunity to be able
19 to work together and come to the conclusion that benefits both
20 the industry and the people of Oklahoma. Thank you.

21 THE CHAIRMAN: I have observed that is getting written
22 into the record. We appreciate your comments.

23 (The meeting concluded at 1:50 o'clock p.m.)

HEARING BEFORE THE OKLAHOMA AIR QUALITY CONTROL COUNCIL
ON OAC 252:100-24
HELD ON FEBRUARY 22, 1995
AT OKLAHOMA CITY, OKLAHOMA
* * * * *

COUNCIL MEMBERS PRESENT:

Mr. Breisch, Chairman
Mr. Branecky
Mayor Taron
Dr. Canter
Ms. Slagell
Mr. Fishback
Ms. Hinkle
Ms. Tillman

Also Present:

Mr. Larry Byrum, Protocol Officer
Ms. Myrna Bruce, Secretary of Council

* * * * *

THE CHAIRMAN: We'll go ahead and call the meeting to order. It's our regular meeting of the Air Quality Council of the DEQ. First of all, we'll call the roll.

THE SECRETARY: Mr. Branecky?

MR. BRANECKY: Here.

THE SECRETARY: Dr. Canter?

DR. CANTER: Here.

THE SECRETARY: Mr. Fishback?

MR. FISHBACK: Here.

THE SECRETARY: Ms. Hinkle?

MS. HINKLE: Here.

THE SECRETARY: Ms. Slagell?

MS. SLAGELL: Here.

THE SECRETARY: Mayor Taron?

MAYOR TARON: Here.

THE SECRETARY: Ms. Tillman?

MS. TILLMAN: Here.

THE SECRETARY: Mr. Breisch?

MR. BREISCH: Here.

6337

1 THE CHAIRMAN: Approval of the minutes?

2 MAYOR TARON: I move the minutes be approved.

3 MS. TILLMAN: Second.

4 THE CHAIRMAN: I've got a motion and second.

5 Any questions or corrections? If not, call the roll.

6 THE SECRETARY: Mr. Branecky?

7 MR. BRANECKY: Aye.

8 THE SECRETARY: Dr. Canter?

9 DR. CANTER: Aye.

10 THE SECRETARY: Mr. Fishback?

11 MS. FISHBACK: Aye.

12 THE SECRETARY: Ms. Hinkle?

13 MS. HINKLE: Aye.

14 THE SECRETARY: Ms. Slagell?

15 MS. SLAGELL: Aye.

16 THE SECRETARY: Mayor Taron?

17 MAYOR TARON: Aye.

18 THE SECRETARY: Ms. Tillman?

19 MS. TILLMAN: Aye.

20 THE CHAIRMAN: Next on the agenda is public
21 hearing for the feed and grain facilities. Larry Byrum
22 will act as protocol officer, and I'll turn it over to
23 Larry.

24 MR. BYRUM: Ladies and gentlemen, members of
25 the Council: My name is Larry Byrum; I am the director

1 of the air quality division; and as such, I will act as
2 protocol officer for the hearing. This hearing was
3 convened by the Oklahoma Air Quality Council in
4 compliance with the Oklahoma Administrative Procedures
5 Act, Title 40 of the Code of Federal Regulations, Part
6 51, as well as the authority of Title 63 of the Oklahoma
7 Statutes, Sections 11801 et seq.

8 This hearing was advertised in the Oklahoma
9 Register for the purpose of receiving comments for the
10 proposed revisions to the OAC 252:100-24, control of
11 emissions from grain elevators.

12 If you wish to make a statement pertinent to
13 this rule, please complete the form at the registration
14 table at the back of the room. I will call upon you at
15 the appropriate time.

16 At this time I would like to call upon Mr. Ray
17 Bishop of the staff to give the staff's position on
18 these proposed changes.

19 Mr. Bishop.

20 MR. BISHOP: Mr. Chairman, members of the
21 Council, ladies and gentlemen: My name is Ray Bishop.
22 Today I am representing the staff of the air quality
23 division of the Oklahoma Department of Environmental
24 Quality and as such will give the staff's position
25 concerning proposed Rule 252:100-24, commonly referred

6339

1 to as Subchapter 24, entitled Particulate Matter
2 Emissions from Grain, Feed, or Seed Operations.

3 Many years have passed since we first began
4 drafting the rule designed specifically to control
5 emissions from facilities that handle, store, or process
6 grains. The rule before you today is the result of
7 hundreds of hours of cooperative effort by Council
8 members, the feed and grain industry, and members of the
9 air quality staff.

10 I'm happy to report that the Council's
11 subcommittee, members of the grain, feed, and seed
12 community, and air quality staff have reached an
13 agreement on the proposed Subchapter 24 rule.

14 Changes made to the rule since the last Council
15 meeting reflect agreements made regarding emission
16 factors to be used for this industry and a few minor
17 changes for clarification. The specific changes are as
18 follows:

19 References to the emission factors for grain
20 handling have been removed from the rule. Emission
21 factors are addressed in a background information
22 document which is separate from the rule.

23 Removal of emission factors precludes the need
24 for EPA to verify their accuracy when approving the
25 rule. This will also allow more flexibility in

1 permitting of facilities which may not be accurately
2 represented by the standard emission factors.

3 A portion of 252:100-24-3-(f), determination of
4 emissions, was changed. On page 3, the last paragraph,
5 the fifth line down, beginning with "or other methods"
6 and ending with "Air Quality Division" was changed to
7 make the language identical to that found in subchapter
8 252:100-7-4(e)(9), method of calculation.

9 A second change in the same paragraph on the
10 second line, "based on" has been changed to "determined
11 by" for clarification.

12 A few items were deleted simply because they
13 were unnecessary or had no relevance to this subchapter.
14 The citing of 252:100-24-7, applicability to other
15 agricultural sources, has been deleted, since this
16 section of the rule no longer exists. Definition of
17 terms which are not referenced anywhere in the text of
18 the rule have also been removed. These definitions have
19 been included in the background information document
20 which is not a part of the rule.

21 The existing rule is an interim measure which
22 was to be effective until July 1, 1995, or until the
23 date that measured particulate emissions rates are
24 developed. The rule you bring before you today is meant
25 to be permanent and final; therefore, the language

1 regarding interim status has been removed from
2 252:100-24-1 and 252:100-24-3-(f).

3 With the inclusion of these changes, it is the
4 staff's recommendation that the Council consider
5 adoption of the proposed Subchapter 24 rules with the
6 recommendation to forward them to the Department of
7 Environmental Quality Board for their consideration as
8 emergency and permanent rules.

9 I would be happy to try to answer any
10 questions.

11 MR. BYRUM: Any questions for Mr. Bishop from
12 the Council?

13 DR. CANTER: I am a little confused in one
14 sense. There was a sheet of paper on the back table
15 called a guidance document. Is that what you're
16 referring to when you say a background document?

17 MR. BISHOP: Yes, sir.

18 DR. CANTER: It is? Okay. And the guidance
19 document -- I realize it's a draft; at least that's my
20 understanding at this point. It does not refer to the
21 O.S.U. study, and it seems to me that the O.S.U. study
22 is a fundamental study that was done to come up with the
23 emission factors that are included in the document.

24 What I'm concerned about is what happens five
25 years down the road when no one that was a part of this

1 scenario is here and then somebody comes and says:
2 Well, where did that .053 come from? And the next thing
3 is no one knows.

4 And it seems to me the guidance document in
5 some fashion ought to refer to that study and refer to
6 the rationale that was used to develop .053. That was
7 time and effort. Bill Fishback led that effort, and
8 there is a solid scientific rationale for those
9 emissions standards.

10 And I think that's particularly important in
11 light of the fact that these standards are -- these are
12 not emission standards; these factors are lower than
13 what is currently in the EPA 1842. And I just feel like
14 that needs to be documented either in this, the guidance
15 document, or by referring to the O.S.U. study in the
16 guidance document so that information doesn't get lost
17 along the way. Because I suspect that it won't be too
18 long and we will be trying to figure out where those
19 numbers came from.

20 And right now we know, but it's got to be put
21 down for a paper trail.

22 MR. BYRUM: We had a discussion yesterday
23 afternoon with the folks from feed and grain. In fact,
24 they called yesterday morning, and I told them I had not
25 read the document that you're referring to. We had a

6343

1 discussion with them yesterday afternoon and told them
2 that we believed it needed some things added to it, and
3 we will be meeting with them, hopefully, within the next
4 week or so to do that sort of thing.

5 And I concur to that totally. We should refer
6 to the O.S.U. study. And there are several other items
7 that need to be included in that.

8 MR. FISHBACK: And does the industry agree with
9 including that reference?

10 MR. BYRUM: I would assume they do.

11 THE CHAIRMAN: Including it in the guidance
12 document.

13 MR. BYRUM: Yes.

14 MR. FISHBACK: I think that's a good point, and
15 I would agree with that, too.

16 MR. BYRUM: I think that's something that we
17 intend to do.

18 Other questions for Mr. Bishop? Of Council?
19 Of the audience?

20 (No response.)

21 Thank you, Ray.

22 I have one person who's indicated that they
23 wish to speak. Are there others that wish to speak to
24 the subject? Please fill out the form at the back, and
25 we'll have someone bring them up here to me.

1 Mr. -- I believe it's Robert Poppe.

2 MR. POPPE: Right.

3 Ladies and gentlemen of the Council, and the
4 public: My name is Robert Poppe, and I'm with C.H.
5 Guernsey & Company, for architects, engineers, and
6 consultants. We have on our staff one ex-Air Quality
7 employee, and I have coordinated a few little comments
8 with him.

9 What I want to go over is on the first page
10 under 252:100-24-2, under definitions, down under where
11 it calls out fugitive emissions reads: "Means those
12 emissions that could not reasonably pass through a stack
13 chimney, vent, or other functionally equivalent
14 openings."

15 We would propose that that reads "fugitive
16 emissions, which means those emissions that do not pass
17 through a stack, chimney, or a vent or other
18 functionally equivalent and openings." Take out the
19 words "could not reasonably." We feel reasonably is an
20 interpretation. Okay?

21 The other major point is back on the last page,
22 page 5. Under 252:100-24-6. We feel that the words
23 "visible" and the words "adjacent" need to be stricken.
24 And where that paragraph (a) reads "all facilities will
25 take reasonable precautions to prevent the discharge of

6345

1 any fugitive dust emissions beyond the property line
2 from which the emissions originate," and (b) "no person
3 shall allow emissions beyond the property line in such a
4 manner to damage or to interfere with other properties."

5 The way it reads now, is -- the way I read it,
6 anyway, is if this dust gets on properties beyond the
7 adjacent properties, then I would say legally that
8 that -- that that portion of the rule wouldn't apply. I
9 think something needs to be added to where properties
10 beyond the adjacent properties is also subject to the
11 capabilities of damages.

12 And also from that -- I have not found; it
13 probably is somewhere, but I haven't found where
14 fugitive dust itself is defined. So over on the
15 guideline document, I put down there at the bottom that
16 "fugitive dust means."

17 MR. BYRUM: Okay.

18 MR. POPPE: And it looks to me like it is --
19 that this will really be able to help and control not
20 only the emissions but help in some health aspects of
21 various locations.

22 MR. BYRUM: Any questions from the Council for
23 Mr. Poppe?

24 MR. FISHBACK: On your definition of fugitive
25 emission?

1 MR. POPPE: No. Definition for fugitive dust.
2 Oh, okay.

3 MR. FISHBACK: No. The first point you made
4 about the change in the definition of fugitive emission.

5 MR. POPPE: Yes.

6 MR. FISHBACK: What do you see as the impact in
7 changing the verb from "could" to "do"?

8 MR. BYRUM: Bill, before you go into that, I
9 would say that this definition, I think, is identical to
10 the definitions we have in other portions of our regs.

11 MR. FISHBACK: I think it is. I just wanted to
12 know what you expected to gain by that change.

13 MR. POPPE: I don't -- it appears to me that
14 when it says "that could not reasonably pass," it
15 appears to me that something either does or it doesn't.
16 I mean, it either can or it can't. And I don't see
17 where reasonably is an adjective there that -- you know,
18 it says it reasonably can or it reasonably can't.

19 MS. TILLMAN: I think it's a very important
20 thing, too?

21 MR. FISHBACK: I misunderstood, then. I didn't
22 understand you were striking the word "reasonably."

23 MS. TILLMAN: I didn't either until just now.

24 MR. FISHBACK: I thought you were just changing
25 the verb.

1 MS. TILLMAN: I think that word reasonably is
2 incredibly important to be left there.

3 MR. BYRUM: I think when we originally passed
4 this rule, if my memory serves me -- I don't have hair
5 now and probably had hair when we originally did it --
6 but I think the discussions centered around could
7 reasonably -- it might not reasonably pass through it if
8 you didn't build a stack. And I think there was a lot
9 of discussion that went on in the terms of art that went
10 into this.

11 So we would have to look at that change.

12 MR. POPPE: Could that be defined, then, back
13 under the guidance document what reasonably is defined
14 as for this -- for these rules?

15 MR. BYRUM: I think -- as I said, I think this
16 particular definition appears other places in our rules.

17 MR. POPPE: Okay.

18 MR. BYRUM: I don't know that through the
19 history of this rule being in place we've had any
20 problem with anyone defining what reasonably meant.

21 Dennis, are you aware of any?

22 MR. DOUGHTY: For the record, my name is Dennis
23 Doughty. I would make this comment, that the way this
24 definition is designed, it's meant to include those
25 facilities that may not have a stack, but they could

1 reasonably run the emissions through a stack, which also
2 implies that there is a possible control that you can
3 put on that particular stack. If you have something --
4 if you have -- let's say you have a, I don't know,
5 right-of-way where traffic and it's not reasonable to
6 put a stack on a right-of-way, and there may be some
7 pieces of equipment, but it's not reasonable to put a
8 stack on and therefore not reasonable to put control
9 equipment on.

10 But -- there are a lot of things that go into
11 whether or not it's reasonable: Is it technically
12 feasible to design a piece of control equipment or a
13 stack to go on this piece of equipment? Is it
14 economically feasible to spend thousands or millions of
15 dollars to run emissions through a stack?

16 So, granted, it is subject to interpretation,
17 but it's not an insurmountable problem. It's something
18 that we can handle, and I believe it is a good
19 definition that we've worked with and used.

20 MR. BYRUM: For a number of years.

21 MR. POPPE: Okay.

22 MR. BYRUM: Other questions of Mr. Poppe?

23 MR. FISHBACK: On your comment on the very last
24 section of the Rule 24-6, I believe I understand you to
25 say that you wanted to strike the word visible where it

1 appears in both subsection (a) and (b); is that correct.

2 MR. POPPE: Yes.

3 MR. FISHBACK: I believe I understand your
4 intent there, and don't let me put words in your mouth;
5 but let me ask the question.

6 Is your concern that dust that is not visible
7 can be harmful?

8 MR. POPPE: Yes.

9 MR. FISHBACK: In other words, just because you
10 can't see it doesn't mean it's not there.

11 MR. POPPE: That's correct.

12 MR. FISHBACK: I understand that concern, and
13 yet these are really opacity based rules, which in turn
14 are based on the dust being visible. And I think we
15 would have a real enforcement problem without that word
16 visible there, because that is the detection method.
17 The method nonopacity determination method is really
18 what it is, visible method.

19 The presumption there is that the emissions are
20 inconsequential if they pass the opacity stability test.
21 If you strike the word visible here, then you would
22 actually have to substitute some other test method for
23 the determination of whether the emission was present or
24 not, and I don't know of any measurement method that's
25 approved in that case.

1 I mean, you could presumably have some kind of
2 collection device. But you make enforcement -- By
3 deleting -- please understand, I understand your
4 concern. But by deleting that and calling any fugitive
5 emission -- requiring any fugitive emission to be
6 preventable, I think you've got an impossible detection
7 and enforcement situation.

8 That would be my concern. So, I would -- as
9 much as I -- you know, there is a lot of things that are
10 very harmful to human health that are impossible to
11 detect visibly, like carbon monoxide or benzene or other
12 things that obviously are gasses and have no visibility.

13 The intent here was that if you really can't
14 see it, then it's not present in a concentration high
15 enough to be harmful. And I think that -- I am not a
16 epidemiologist or toxicologist, but I think that
17 presumption is probably true in the case of grain dust.

18 So I understand your concern, but I think if we
19 struck that word, what enforcement tool is left?

20 So that's my concern about that change.

21 MR. POPPE: My only comment on that would be it
22 would be a collection system, you know, a collection pan
23 or something that you could collect that material in, in
24 different locations on different properties.

25 MR. FISHBACK: But then would you require every

1 source to have perimeter monitoring? I mean, that's a
2 pretty significant -- see, that's the beauty of Method
3 9: It's cheap and it's fast. And if you required every
4 source to have perimeter monitoring to prove -- You
5 see, there's another word in here that's very
6 significant, the word "any," prevent the discharge of
7 "any" fugitive dust.

8 Now, if we strike the word "visible," we've got
9 "any dust." It's very difficult to prove a negative.

10 You know, so, I just -- I just think that the
11 compliance demonstration aspect of this and the
12 enforcement aspect of it, from a practical matter, is
13 very difficult. And the cost of doing perimeter
14 monitoring, I mean --

15 MR. POPPE: I'm not talking about perimeter
16 monitoring.

17 MR. FISHBACK: Oh, you -- what was your
18 thought?

19 MR. POPPE: Just making a sample pan or
20 something on adjacent property or a sample pan on other
21 properties.

22 MR. FISHBACK: Then how do you determine from
23 what point of origin that material came?

24 MR. POPPE: Just by comparison.

25 MR. FISHBACK: So you have to have upwind and

1 downwind.

2 MR. BRANECKY: And what standard do you compare
3 them to?

4 MS. TILLMAN: And what are you trying to
5 achieve?

6 MR. BRANECKY: What's a violation or what's an
7 excessive number?

8 MR. FISHBACK: It's a good idea, but I think
9 the enforceability -- in fact, maybe we should ask some
10 of the enforcement people. The whole idea of visible
11 fugitive emissions limits was the fact that if there was
12 a complaint, the agency could be called, an enforcement
13 officer could come out and do a visible emission -- you
14 know, they're certified; they're called smoke readers,
15 you know, the certified visible emission readers. And
16 then they could determine if there was a violation based
17 on that. And it was quick and easy and inexpensive.

18 I just think this would create a lot of
19 additional problems. I don't disagree with your intent.
20 Everybody would like to have no dust. But from a
21 practical standpoint, I don't think it's enforceable.

22 MR. POPPE: What I'm talking about would be
23 that dust which has the capability of damaging or
24 interfering with other properties. Not all dust. It
25 wouldn't necessarily be it all is, but that which can

1 damage or interfere with other properties.

2 MS. TILLMAN: Well, for someone that doesn't
3 understand this, and I don't quite understand what your
4 point is, give me an example of what that would be.
5 That's totally out of a lack of understanding.

6 MR. POPPE: Okay.

7 MS. TILLMAN: What would be an instance where
8 nonvisible dust would be?

9 MR. POPPE: Well, I don't know that -- I take
10 not visible as not being able to see it but visible as a
11 possibility of interpretation as to whether someone can
12 see it or not. And my concern is that some of these
13 particles carry molds on them, and I'm concerned about
14 the fact in some situations that these emissions are
15 carrying molds and causing allergies.

16 And that's my concern.

17 MS. TILLMAN: Can we ask --

18 MR. POPPE: I'm asking for an interpretation
19 of whether you can visibly see it or not maybe that it
20 still is causing a problem and doing damage, but you're
21 not able to see it coming out of the stack or something.

22 Anyway, that's just my concern and why I marked
23 these in this language.

24 MS. TILLMAN: Bill, did you guys cover that
25 aspect of what the dust carries with it when you did a

1 study?

2 MR. FISHBACK: The O.S.U. study?

3 MS. TILLMAN: Right.

4 MR. FISHBACK: Did we address molds carried
5 with -- no, we did not. We did not.

6 In fact, it was not a health effect study at
7 all; it was an emissions and quantification study.

8 I don't think the intent originally was
9 anything other than to develop emission factors and not
10 try to speciate, if you want to use that word, what
11 might be emitted.

12 I think the health effects concern is valid;
13 and, in fact, if you will remember the previous Council
14 meetings, we had testimony from -- I don't remember the
15 gentleman's name, but we had testimony about the health
16 effects of inhaled grain dust. And I think our
17 conclusion at that time was that the level of
18 concentration and exposure of property was low enough
19 that it was not of fundamental concern.

20 The testimony that we heard, and I don't know
21 if you attended that Council meeting, had to do with
22 health effects on grain industry workers where obviously
23 the exposure levels are a lot higher; the exposure is a
24 great deal more frequent, more continuous.

25 And that was -- the health effects was a

6355

1 completely separate issue that we did not address in the
2 O.S.U. study.

3 MR. POPPE: Okay.

4 MR. BYRUM: Other questions for Mr. Poppe?

5 (No response.)

6 MR. BYRUM: Thank you, sir.

7 MR. POPPE: Thank you.

8 MR. BYRUM: I have no one else that's
9 indicating a desire to speak to this subject. Is there
10 anyone else that wishes to speak to the subject?

11 Mr. Chairman, I would find no one else is
12 wishing to speak on this subject.

13 THE CHAIRMAN: Okay. At this time we entertain
14 a motion to recommend this to the DEQ Board for
15 approval.

16 (A discussion was held off the record.)

17 THE CHAIRMAN: Larry reminds me it should be
18 permanent and emergency.

19 MR. FISHBACK: I would make a motion that we
20 adopt the Subchapter 24 rule as presented by Mr. Bishop
21 with the minor changes proposed or recommended by
22 Mr. Bishop.

23 THE CHAIRMAN: I've got a motion. I need a
24 second.

25 DR. CANTER: Second.

1 THE CHAIRMAN: I've got a motion and second.
2 Any further discussion or questions?

3 MS. TILLMAN: Yes. The last change that was
4 proposed by the last speaker of other properties instead
5 of adjacent properties.

6 THE CHAIRMAN: A motion wasn't made to approve
7 those changes.

8 MS. TILLMAN: Right. I'm not so sure that one
9 shouldn't be added in, though.

10 THE CHAIRMAN: Well, it seems to me if they
11 would affect the adjacent properties, that would be done
12 prior to adjacent -- affecting other properties.

13 MR. BRANECKY: Why would you leave the word
14 visible?

15 MS. TILLMAN: Well, I don't know. If you had a
16 cleared-off parking lot adjacent and you had a home next
17 to the cleared-off parking lot, it might affect the home
18 where it wouldn't affect the parking lot.

19 MR. FISHBACK: What you're referring to is the
20 very last section of the rule?

21 MS. TILLMAN: Yes.

22 MR. FISHBACK: And of the gentleman's concern,
23 Mr. Popper, was it?

24 THE CHAIRMAN: Poppe.

25 MR. FISHBACK: I'm sorry. His concern there

1 was that properties other than those immediately
2 adjacent might be affected?

3 MS. TILLMAN: Yes.

4 MR. BRANECKY: But those adjacent wouldn't be.

5 MS. TILLMAN: No, that's not saying that they
6 wouldn't. But maybe -- maybe not, you know. Every case
7 wouldn't be that they would definitely; the one next
8 door would be affected.

9 MR. FISHBACK: I think your point is well
10 taken, and I think if we retain the word visible in
11 there that we don't have a problem with that.

12 It is many times true in emissions modeling
13 that the adjacent property -- it's a skip effect. The
14 adjacent property is not necessarily affected; the
15 impact can be downwind.

16 MS. TILLMAN: Yes.

17 MR. FISHBACK: So I guess really substituting
18 any off-property receptors or any off-property locations
19 for just adjacent properties, that would be acceptable
20 to me.

21 MS. HINKLE: There was another change in what
22 he recommended.

23 MR. FISHBACK: The word visible.

24 MS. TILLMAN: No. We opposed the change in
25 that.

1 MS. HINKLE: It wasn't just substituting other
2 for adjacent; it was deleting the use of.

3 MR. BRANECKY: To interfere with other
4 properties.

5 MS. TILLMAN: It should be the use of other
6 properties, I would think.

7 MR. BRANECKY: He was suggesting with other
8 properties.

9 MS. HINKLE: So rather than just saying "or to
10 interfere with the use of adjacent properties"; it would
11 be "or to interfere with other properties."

12 MS. TILLMAN: And I don't like the deletion of
13 all of that, but I like "to interfere with the use of
14 other properties."

15 MR. FISHBACK: Your proposal, Mary, is to have
16 it read "no person shall allow visible emissions beyond
17 the property line in such a manner as to damage or
18 interfere with use of other properties."

19 MS. TILLMAN: Right.

20 Just because of the fact that you could have a
21 skip.

22 MR. FISHBACK: We leave the word visible; we
23 leave the word use; we change adjacent to other.

24 Dennis is standing up.

25 MR. DOUGHTY: I did want to make -- for the

1 record again: My name is Dennis Doughty.

2 I did want to make a comment. If I'm not
3 mistaken, this language was taken directly out of our
4 fugitive dust rule and just transferred over to this
5 particular rule.

6 I think there's another paragraph in that
7 fugitive dust rule that says that you shall not handle
8 materials in a manner that will cause them to be
9 dispersed and blown.

10 So if it goes over into the other properties,
11 we've never had a problem. We've always liberally
12 interpreted these wording adjacent to mean those
13 properties in that area that are affected by these
14 particular emissions.

15 So, if they're skipping one house and getting
16 another, we'll get them under this rule.

17 MR. FISHBACK: It doesn't say immediately
18 adjacent.

19 MR. DOUGHTY: Yeah. It doesn't say immediately
20 adjacent.

21 MS. TILLMAN: Okay.

22 MR. DOUGHTY: We've never had a problem with
23 that.

24 The other issue about -- let's see, what was
25 it?

1 MS. HINKLE: Use of?

2 MR. DOUGHTY: No. It had to do -- what was the
3 other? There's been a comment on that, and it slipped
4 my mind. Had to be visible.

5 I believe that if the emissions were visible
6 that would -- I mean, we could still use visibility as a
7 criteria for concluding that the emissions were coming
8 from this facility and going on adjacent properties. If
9 you limit it to visible, it makes it a lot easier to
10 enforce, as Mr. Fishback was saying.

11 The problem we have that we run into is if you
12 get out there somewhere distant from a particular
13 source, you don't know where those emissions are coming
14 from. They may be coming from their facility, they may
15 be coming from one somewhere else, or they may be coming
16 from Texas. We don't know.

17 So without the visible aspect in there, you do
18 have a proof problem.

19 MS. TILLMAN: If adjacent means in the vicinity
20 or --

21 MR. DOUGHTY: We have always interpreted that
22 if it's in the immediate area and it's coming visible
23 from a particular facility.

24 MS. TILLMAN: Then I agree.

25 MR. FISHBACK: Also, to address the gentleman's

1 concern about nonvisible emissions having potentially
2 adverse health effects. There is a standard in place
3 called the National Ambient Air Quality Standard For
4 Particulate Matter, and this is an enforceable standard
5 that's been on the books for a long time. And if there
6 was a situation where an off-property receptor, somebody
7 living on an adjacent property, felt that nonvisible
8 emissions were impacting them, testing could be done;
9 and it's basically ambient air sampling to find out what
10 the concentration is; and if in fact that standard is
11 being violated, then additional controls may be
12 required.

13 So there's protection in the existing law for
14 somebody being impacted by nonvisibility emissions. So
15 I think we're okay.

16 MR. BYRUM: And I would add to what Bill said.
17 We did do a study as part of this rule-making to measure
18 the PM-10 days in and around operating grain elevators.
19 And they were not significantly different than they were
20 in other areas of the state.

21 I don't remember the numbers, so don't --

22 MS. TILLMAN: Oh, come on.

23 MR. BYRUM: I can get you that data, but I
24 don't have that off the top of my head.

25 MR. FISHBACK: So procedurally we have a motion

1 on the table without a second --

2 THE CHAIRMAN: The motion stands as made and
3 seconded.

4 MR. FISHBACK: And the motion was to leave the
5 language as proposed by Mr. Bishop with the minor
6 changed proposed by Mr. Bishop.

7 THE CHAIRMAN: And that was seconded.

8 MS. TILLMAN: Yes.

9 THE CHAIRMAN: Now, any more discussion?

10 (No response.)

11 THE CHAIRMAN: Okay. Ready for the vote.

12 THE SECRETARY: Mr. Branecky.

13 MR. BRANECKY: Aye.

14 THE SECRETARY: Dr. Canter?

15 DR. CANTER: Aye.

16 THE SECRETARY: Mr. Fishback?

17 MR. FISHBACK: Aye.

18 THE SECRETARY: Ms. Hinkle?

19 MS. HINKLE: Aye.

20 THE SECRETARY: Ms. Slagell?

21 MS. SLAGELL: Aye.

22 THE SECRETARY: Mayor Taron?

23 MAYOR TARON: Aye.

24 THE SECRETARY: Ms. Tillman.

25 MS. TILLMAN: Aye.

1 THE SECRETARY: Mr. Breisch?

2 THE CHAIRMAN: Aye.

3 That concludes our hearing. We will take a
4 short break while the court recorder puts her equipment
5 away.

6 (The hearing concluded.)

SUBCHAPTER 24. PARTICULATE MATTER EMISSIONS
FROM GRAIN, FEED, OR SEED OPERATIONS

252:100-24-1.	Purpose
252:100-24-2.	Definitions
252:100-24-3.	General Provisions; applicability, calculations
252:200-24-4.	Smoke, Visible Emissions and Particulates
252:100-24-5.	Emission Control Equipment
252:100-24-6.	Fugitive Dust Controls
252:100-24-7.	Applicability to other Agriculture Sources

252:100-24-1. Purpose

The purpose of this rule is to control emissions from facilities that handle, store or process grains. All facilities handling bulk agricultural commodities through grain handling equipment can apply this subchapter to emission sources at the facilities. ~~This rule is an interim rule effective until July 1, 1995 or until the date (whichever is earlier) that measured particulate emission rates from grain handling are developed under protocols approved or accepted by the Air Quality Division to replace the factored emission rates in this interim rule.~~

252:100-24-2. Definitions

The following words and terms when used in this subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

~~"Dust Suppression Additives" means FDA or FGIS approved additives applied commercially for dust suppression. The dust suppression efficiencies of these additives is accepted to be 90% when applied at a proper application rate per manufacturer's recommendations or as approved by the director of the Air Quality Division.~~

"Enclosed Grain Handling Equipment" means equipment that is totally self-contained or is enclosed within a structure at a grain, feed, or seed facility. Emissions from this equipment shall not be exhausted to the atmosphere except through non-pressurized vents/openings, and shall not be considered a source subject to emission calculations.

~~"Existing Grain, Feed, or Seed Operation" means a facility which was in existence in 1993 and has submitted a current emission inventory to the Air Quality Division for the 1993 reporting period year. All other grain, feed, and seed operations shall be considered new.~~

~~"Fabric Filter" means any control device or system in which particulate matter is collected on a dust cake supported on either a woven or felted fabric that can demonstrate a particulate collection efficiency of not less than 95 percent.~~

"Fugitive Emission" means those emissions that could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening.

"Grain, Feed, or Seed Operation" means any facility or

the cumulative total quantity received for a given time period by 75% of the rated leg capacity. This quotient is equivalent hours (not actual hours) of operation required to process the material received. Actual leg capacity may be adjusted to more or less than 75% by individual facilities if documentation supporting the proposed adjustment is submitted to and approved by the Director of the Air Quality Division.

"Total hours of operation" means the sum of the receiving hours of operation and the loading out hours of operation. Actual hours may be less since receiving and loading-out operations may occur simultaneously.

~~"Throughput" means the pounds, tons, or bushels received by a facility added to the pounds, tons, or bushels loaded out from the facility during any time period of interest divided by two.~~

252:100-24-3. General Provisions: Applicability, Determination of Emissions

(a) **Applicability.** The provisions of this subchapter are applicable to all new, modified, and existing grain, feed, or seed operations facilities in the State of Oklahoma.

(1) Facilities in compliance with OAC 252:100-25, 252:100-27, and 252:100-29 are not required to comply with this subchapter.

(2) Facilities in compliance with this subchapter are exempt from the requirements of OAC 252:100-25 (visible emissions), 252:100-27 (process weight), and 252:100-29 (fugitive dust).

(b) **Permits required.** In addition to the requirements of this subchapter, each new, modified or existing grain, feed, or seed operation facility shall comply with the permitting requirements of OAC 252:100-7 and 252:100-8.

(c) **Air toxics emissions.** Grain, feed, or seed operations facilities which emit toxic air pollutants above the de minimis levels specified in 252:100-41 are subject to all applicable requirements contained therein.

(d) **Record-keeping.** The owner or operator of a facility shall maintain a daily log documenting the commodity ~~throughput receipts~~ and load-outs and hours of operation for each. These records shall be maintained for a period of two years and shall be made available for inspection by the Air Quality Division personnel or its representative during normal business hours.

(e) **Visible emissions test.** Visible emissions (opacity) testing shall be conducted using EPA reference method 9 contained in 40 CFR, Part 60, Appendix A and must be performed by individual(s) possessing current certification.

(f) **Determination of emissions.** Emissions from grain, feed, or seed operations facilities shall be based on the best available data. This may include actual emissions as determined by stack testing, mass balance calculations, emission calculations using approved published emissions factors, or other methods developed under protocols approved by the Air Quality Division. ~~The following factored emissions are allowed by this interim rule only until July 1, 1995 or until the date (whichever is earlier) that measured particulate emission rates from grain handling are~~

control devices shall be limited to no greater than ten percent (10%) opacity at any time.

252:100-24-5 Emission Control Equipment and Certification

(a) Emission control equipment where required by (40 CFR 60.300) must meet the standards set under the Federal New Source Performance Standards (NSPS Subpart DD), or as mandated by other Federal requirements for major sources. Additional controls may be required to reduce nuisance emissions.

(b) Affected facilities shall make best efforts to reduce dust emissions during load-out by minimizing the distance from the load-out spout to the top of the receiving vessel.

(c) Certification. Each new, modified, or existing grain, elevator feed or seed facility in the state of Oklahoma shall provide written certification of compliance with this subchapter within one year of the adoption of this rule by the Air Quality Council-DEQ Board. Annual certification of receiving, loading-out, and total annual hours of operation, quantity received and loaded-out, visible emissions, and throughput and the operation and proper maintenance of any required control equipment shall be completed by the owner, operator or other designated responsible party and submitted as part of the annual emissions inventory reporting form.

252:100-24-6 Fugitive Dust Controls

--(a) All facilities will take reasonable precautions to prevent the discharge of any visible fugitive dust emissions beyond the property line from which the emissions originate.

(b) No persons shall allow visible emissions beyond the property line in such a manner as to damage or to interfere with the use of adjacent properties.

1 PROCEEDINGS

2
3 MR. DYER: The next item on the
4 agenda today is Item Number 11. This
5 hearing is convened by the Air Quality
6 Council in compliance with the Oklahoma
7 Administrative Procedures Act and Title 40
8 of the Code of Federal Regulations, as well
9 as the authority of Title 27A of the
10 Oklahoma Statutes.

11 The hearing was advertised in the
12 Oklahoma Register for the purpose of
13 receiving comments pertaining to the
14 proposed new rule OAC 252:100-24, Control
15 of Emissions from Grain Elevators. If you
16 wish to make a statement, please complete
17 the form at the registration table.

18 At this time, I will call upon Ms.
19 Michelle Martinez to give staff position on
20 this proposed rule.

21 MS. MARTINEZ: Members of the
22 Council, ladies and gentlemen, the
23 revisions to Subchapter 24, Control of
24 Emissions from Grain Elevators, include
25 simplification of the language, the
26 addition of a Permit By Rule section and a
27 new Appendix L which includes PM-10
28 emission factor -- factors for the Permit
29 By Rule.

30 The title of the subchapter is being

3

1 changed to reflect what was recommended to
2 the Board at the June 14, 1994, Air Quality
3 Council meeting, which was Particular
4 Matter Emissions from Grain, Feed, or Seed
5 Operations. A shortened title was given on
6 the agenda for the June 1994 meeting, and
7 was mistakenly carried over into the actual
8 rule.

9 Under Section 24-4 (a), Opacity
10 limit, the language change reflects the
11 proposed changes in the opacity limit
12 recommended by Jeanette Buttram in
13 Subchapter 25-3(a)(2).

14 Under Section 24-5 (a), was deleted
15 because it didn't create any substantive
16 requirements and was considered
17 unnecessary, and (b) was moved to 24-6.

18 A new Section 24-7, is proposed to
19 provide a Permit By Rule, which includes
20 applicability and requirements for grain
21 elevators. Also a new Appendix L is
22 proposed for the industry to calculate
23 combined emissions, which will allow them
24 to see if their total emissions will be
25 under 40 tons per year, as required for
26 Permit By Rule coverage.

27 A meeting between Air Quality
28 Division staff and industry representatives
29 was held on June 30, 1998. Input from both
30 parties resulted in a better proposal by

4

6377

1 facilitating the exchange of information
2 and ideas among those affected.

3 We received comments from the EPA,
4 which I would like to enter into the
5 record. These comments brought to our --
6 I'm sorry. These comments asked us to
7 reference the AP-42, Section 9.9.1, Grain
8 Elevators and processes in Subchapter 24.
9 A copy of these comments have been made
10 available to the Council. Staff agrees
11 with this reference -- or with this
12 comment, and this reference will be added
13 to Subchapter 24 before the next meeting in
14 October.

15 We also received an oral comment
16 from a representative of the Oklahoma Feed
17 and Grain Association, requesting that we
18 delete the visible emissions certification
19 from the annual certification requirement.
20 Staff agrees, and we will take out visible
21 emissions before the next hearing.

22 This afternoon, staff recommends
23 that the Council continue the hearing until
24 the October 20, 1998, Air Quality Council
25 meeting.

26 MR. DYKE: Is there a
27 continuation comment period?

28 MS. MARTINEZ: No.

29 MR. DYKE: Any questions of Ms.
30 Buttram from the Council? Ms. Martinez?

5

1 MS. MARTINEZ: I'll let her
2 answer.

3 MR. DYKE: I'm sorry. Any
4 questions of Ms. Martinez from the
5 audience? From the public? Anything
6 further on this matter?

7 MS. MYERS: I have a comment. In
8 line with what David Branecky said earlier
9 about consistency, I didn't catch it a
10 while ago. I'm a little bit slow. In the
11 previous subchapter it refers to emissions
12 limit. This one refers to opacity limits.
13 For consistency through these various
14 rules, I think we need to take a look at
15 that.

16 MS. MARTINEZ: They'll be called
17 opacity limits.

18 MS. MYERS: Okay. Thank you.

19 MR. DYKE: Anything further on
20 this matter? Mr. Chairman?

21 MR. CHAIRMAN: I'll entertain a
22 motion that we continue this hearing until
23 our next regular meeting on October 20.

24 MS. MYERS: I'll make a motion.

25 MR. BRANECKY: Second.

26 MR. CHAIRMAN: Motion has been
27 made and seconded. Any more comments or
28 questions? If not, Myrna, call the roll.

29 MS. BRUCE: Ms. Myers?

30 MS. MYERS: Aye.

6

1 MS. BRUCE: Dr. Gross?

2 DR. GROSS: Aye.

3 MS. BRUCE: Mr. Kilpatrick?

4 MR. KILPATRICK: Aye.

5 MS. BRUCE: Mr. Wilson?

6 MR. WILSON: Aye.

7 MS. BRUCE: Mr. Branecky?

8 MR. BRANECKY: Aye.

9 MS. BRUCE: Ms. Slagell?

10 MS. SLAGELL: Aye.

11 MS. BRUCE: Mr. Breisch?

12 MR. BREISCH: Aye.

- 10. MS. BRUCE - SECRETARY

PROCEEDINGS

MR. DYKE: Item Number 9, that's OAC 252:100-24.

I will continue to act as Protocol Officer.

This hearing is convened by the Air Quality Council in compliance with the Oklahoma Administrative Procedures Act, applicable State Statutes and Title 40 of the Code of Federal Regulations.

This hearing was advertised in the Oklahoma Register for the purpose of receiving comments pertaining to the proposed new Rule, OAC 252:100-24, Control of Emissions from Grain Elevators.

At this time, I will call upon Michelle Martinez to give the staff position on this proposed rule.

MS. MARTINEZ: Members of the Council, ladies and gentlemen, the proposed revisions to Subchapter 23 -- I'm sorry. The previously proposed revisions to Subchapter 24, Control of Emissions from Grain Elevators, which were presented at the August 18th, 1998, Council meeting include simplification of the language, the addition of a Permit by Rule section, the addition of a new Appendix L, which includes the new PM-10 emission factors for the PBR, changing the title to "Particulate Matter from Grain, Feed and Seed Operations, deleting Section 24-5(a) because it didn't create any substantive requirements and was considered unnecessary, and moving 24-5(b) to 24-6.

Christy A. Myers
Certified shorthand Reporter

As a result of the comments made previous to or during the August 18th, 1998 Council meeting, the following changes have been made.

On page 4, under Section 24-4(a), Opacity limit, the language change reflects the proposed changes in the opacity limit recommended by Jeanette Buttram in Subchapter 25-3(a)(1).

On page 5, under Section 24-7(b)(1), a reference to the AP-42, Section 9.9.1, Grain Elevators and Processes, was added in response to comments from the EPA.

In addition, after receiving staff comments and a comment from a representative from the Oklahoma Grain and Feed Association, on page 5, both the visible emission certification and the control equipment certification were deleted from 24-5(b).

And, finally, on page 5, since the PBR must contain all applicable requirements, we also added 24-7(b)(3), which is the MSPS for Grain Elevators.

Staff recommends two additional changes for reason of simplification not shown in the rule. On page 2, under "loading our hours of operation", change "Director of the Air Quality Division" to "Division Director". And on page 3, under "receiving hours of operation", change "Director of the Air Quality Division" to "Division Director."

On page 4, under 24-4(c)(1), the phrase "equivalent opacity" is used twice. After a comment received from the

Christy A. Myers
Certified shorthand Reporter

6373

1 Council this morning in the briefing, staff recommends the word
2 "equivalent" be struck from language for reasons of
3 consistency.

4 We also received two comments from the EPA yesterday
5 afternoon for Subchapter 24, which I would like to enter into
6 the record. The first comment states 252:100-24-7, should
7 include a practically enforceable method or procedure to verify
8 compliance through recordkeeping and maintenance. This may be
9 accomplished by using recordkeeping requirements of 252:100-24-
10 3(b)(3), which require the owner or operator to maintain a
11 daily log documenting particulate matter nominally 10 microns
12 and less emission factors for a period of 2 years.

13 As a response, Section 24-7(b)(1), does require
14 compliance with all the requirements of the Subchapter 24-5(a)
15 and (b). Thus, the recordkeeping requirements of 24-3(b) are
16 applicable to Permit by Rule facilities. The second comment
17 received from the EPA was in support of the proposed rule.

18 At this time, staff suggests the proposed rule be
19 recommended to the Board for permanent adoption.

20 MR. DYKE: Thank you. Questions of Ms. Martinez
21 from the Council? Questions or comments on this rule from the
22 public? Does EPA have any additional comments? Any further
23 comments on this rule?

24 MR. BREISCH: I'll entertain a motion that this
25 rule be recommended to the DEQ Board for permanent adoption.

Christy A. Myers
Certified Shorthand Reporter

1 WILSON: So moved.

2 MS. MYERS: I'll second it.

3 MR. BREISCH: We've got a motion and a second.

4 Any other questions or comments?

5 Myrna, call roll.

6 MS. BRUCE: Mr. Braneky.

7 MR. BRANECKY: Aye.

8 MS. BRUCE: Ms. Myers.

9 MS. MYERS: Aye.

10 MS. BRUCE: Mr. Wilson.

11 MR. WILSON: Aye.

12 MS. BRUCE: Dr. Gross.

13 DR. GROSZ: Aye.

14 MS. BRUCE: Mr. Breisch.

15 MR. BREISCH: Aye.

16 (PROCEEDINGS CONCLUDED)

17 C E R T I F I C A T E

Christy A. Myers
Certified Shorthand Reporter

TO: Air Quality Council
Tulsa City-County Health Dept.
Tulsa, Oklahoma

FROM: Anna A. Clapper
12104 Camelot Place
Oklahoma City, Oklahoma 73120

Date: April 12, 1994

RE: OAC 252:100-24, Control of Emissions From Grain
Handling and Processing Industry- Health Aspects

Mr. Chairman, members of the Air Quality Council, ladies and gentlemen:

My name is Anna Clapper. I live at 12104 Camelot Place, Oklahoma City, Oklahoma 73120. I am a former teacher, and now I am a homemaker, mother of three children and grandmother of four. I have lived in Maine, Pennsylvania, New Jersey, Idaho, Salt Lake City, Utah; Boulder City, Nevada; and Whittier, California before coming to Oklahoma twenty-five years ago. Hence, I have personally experienced a vast range of air quality, both good and polluted.

For over 20 years I have been on the board of the American Lung Association of Oklahoma and have studied the health effects of air pollution. I am a charter member of the Oklahoma Coalition for Clean Air and have attended and participated in workshops and seminars on the Clean Air Act in Denver, Colorado; Estes Park, Colorado; Dallas, Texas; Houston, Texas; San Antonio, Texas; Chicago, Illinois; Airlie, Virginia; Washington, D.C. and Antigonish, Nova Scotia, so have a working familiarity of the Clean Air Act.

I have attended meetings of the Air Quality Council since the first regulation was adopted in the Oklahoma Clean Air Act over twenty years ago, and have given testimony when appropriate, and have taken part in seminars in various areas of Oklahoma. My objective is to obtain and maintain air quality that is consistent with good health and a wholesome environment for those who live in our state.

Kindly visualize this pastoral scene as exemplified by the words of this song:

"O, beautiful for spacious skies,
For amber waves of grain ...

What a vivid picture this is of our plains where grain is grown, harvested and stored! However, something happens when the golden grains are harvested and then stored in the grain elevators.

There both organic and inorganic composition of the stored product complement each other. This is where illusion ends and reality begins. As far back as 1713 it was documented that "grain sifters had asthma due to wheat, grain smut, grain molds, grain mites, durum wheat, durum wheat dust and grain insects."

In the publication, Occupational Lung Disease, edited by J. Bernard L. Gee, M.D. of Yale University School of Medicine, 1984, page 154, it states that " Grain dust is a complex mixture of materials derived from cereal grains as well as natural contaminants, for example, silica, fungi, bacteria, endotoxin, insects, mites, rat hair, pollens, and human additives (pesticides and their residues). The biologic potency of the dust is likely to vary with the grain and the type of concentration of the contaminants....Cross-sectional epidemiologic surveys indicate a high prevalence of chronic bronchitis and asthma as well as conjunctival, laryngeal, nasal and systemic (grain fever) symptoms in grain handlers. In addition exposure to pesticides may provide acute neurologic, gastrointestinal, hepatic, and pulmonary symptoms and can cause chronic neurobehavioral effects".

"Disease statistics of grain elevator operators may not apply to farmers since the patterns of exposure, and composition of the dust may be different in the various types of grain elevators and farm operations, but the respiratory problems resulting in exposure to grain dust appear to be identical...The grain elevator operator and longshoremen are exposed during loading and unloading of trucks, railroad cars and ships, during grain distribution, and transport within the elevator components, weighing, cleaning operations, equipment maintenance, and grain inspection...."

To give some idea of the scope of the situation in Oklahoma, I quote from Dr. Calvin B. Parnell of Texas A&M University's testimony to the Air Quality Council on March 8, 1994, page 2, " Oklahoma has a total of 354 grain handling facilities. Each of these operations will typically handle 6,000 to 12,000 bushels per hour (bu/hr) unloading and loading grain. (This is usually determined by leg capacity). One bushel of wheat weighs 60 pounds. Hence, a 12,000 bu/hr elevator will handle 360 tons per hour."

According to reports, in 1993 the total amount was about 5.0 million tons. Therefore, this regulation can have a marked impact on Oklahoma's occupational health.

To clarify the possibilities of air contamination I quote from an Iowa study, Unit 3, page 2 "27 pounds of dust are emitted for every ton of grain handled, resulting in 1.7 million tons of grain dust produced per year. The concentration of particles varies widely, but may reach very high levels: Measurements

in elevators have ranged from 0.18 to 781 mg/m³ of total dust with the respirable range extending up to 76.3 mg/m³. Airborne concentrations of fungal spores often exceed one million spores per cubic meter."

If one is bewildered why there may not be too many health complaints from workers in grain elevators, it is documented on page 156 of the previous article that "... allergic workers who develop severe asthma will likely leave the industry early in their employment." On page 4 of the Iowa study, "... persons with asthma allergies either do not seek employment as grain handlers or leave this employment rapidly because of an increase of asthmatic symptoms. However, the prevalence of occupational asthma has been reported to be five times that of workers in other professions (50% grain handlers, rather than 11% others, who are non-smokers.)"

On page 157 of the Yale study, it states that " Labor Canada adopted a TLV of 10 mg/m³ of total grain dust to protect workers. Cyclones have been replaced by bag filters which are theoretically 99.9% efficient. No such standard exists in the United States where nuisance dust standard of 15 mg/m³ is used. Studies show however, that the respiratory effects can be found in workers exposed to dust levels below the current TLV." Reduction in exposure levels can be accomplished by following procedures listed in the article.

Further documentation on the health effects of grain dust may be found in the following: Occupational Pulmonary Disease by James Dosman and David Cotton; analysis of grain dust and effects on the respiratory system, Occupational Lung Disease, 2nd edition by W. Keith Morgan, M.D. and Anthony Seaton, M.D. as well as the publications " Agricultural Respiratory Hazards", Unit 3- Grain Dusts by the American Lung Association of Iowa in collaboration with The Institute of Agricultural Medicine and Occupational Health, The University of Iowa.

Since the American Lung Association of Oklahoma is vitally concerned with lung health, it is urged that the members of the Air Quality Council be cognizant of the adverse health effects of grain dust and take these into consideration in your deliberations on this regulation.

Thank you for this opportunity to express the concerns of a citizen who is dedicated to clean air for Oklahoma as a necessity for a good quality of life.

Respectfully,

Anna A. Clapper

SUBJECT: Health Aspects of Grain Handling

DATE : April 12, 1994

Mr. Chairman, Members of the Air Quality Council, Ladies and Gentlemen:

My name is Dr. Kenneth R. Hart. I am an Associate Professor of Occupational and Environmental Medicine at the University of Oklahoma College of Medicine. At the request of Mr. Terry Carlton of the Oklahoma Lung Association, I am here to provide you testimony regarding the medical aspects of grain handling and the potential of adverse health effects associated with exposure to grain dust.

I am Board Certified by the American Board of Preventive Medicine, a specialist in Aerospace Medicine and Occupational and Environmental Medicine. I received my pre-medical training from Kansas State College, my medical training from the University of Health Sciences - Kansas City and a Masters Degree in Public Health from the University of Texas - Houston. My specialty training was received from the University of Texas - Houston, Johnson Space Center and the United States Air Force School of Aerospace Medicine. I recently joined the faculty at the University of Oklahoma College of Medicine after a long career in the United States Air Force as an Air Force Physician.

My remarks today will focus strictly on the health aspects of exposures to grain dust as provided through several studies that have been conducted over the past several years. In response to the health concerns of exposure to grain dust in the grain industry, I will provide you with my understanding of the results and conclusions of studies that were conducted because of concerns with the potential of risks associated with grain dust exposure. I would like to approach this in three parts. First, a review of the general hazards of grain dust, general health effects of grain dust exposure addressing acute diseases, chronic diseases, then discuss the findings and conclusions of the principle investigators who published the several papers that I have reviewed.

It is generally accepted by most of the investigators in the field of which we are discussing that several hazards exist in association with exposure to grain dust. One must consider first, the particles from the grain which can consist of protein and starch granules, husks and other particles from the grain itself. Fungi that grow on the grain must be considered with the insects and mites that live in the grain. Rodents may infest grain and leave their spore. Bacteria are also a consideration, as well as, bacterial waste products which consist of endotoxins, pesticide residues, and of course, silica. All of these factors present a certain hazard when coming in contact with very sensitive areas of the human body. Some of the symptoms one would expect from this would be conjunctivitis, rhinitis, and perhaps even dermatitis. Our major concern, however, is the ill effects associated with the inhalation of these particulates and the reaction within the lungs, as well as, reactions within the body, generally. The vast majority of the studies that have been conducted would suggest that there is a relatively high prevalence in association with skin disease, eye and nasal problems, as well as, other pulmonary problems such as bronchitis, pneumonitis, pulmonary fibrosis and asthma.

This brings me to the second point, which is general health effects of grain dust exposure. The health effects can be divided into two distinct areas with the first being acute disease. Acute diseases could consist of organic dust syndrome or an entity termed grain fever or farmers lung. This disorder is characterized by fever and general malaise that occurs following re-exposure to grain dust after one or two weeks outside the environment. This disorder would be more suggestive of a hypersensitivity reaction created by the initial exposure with symptoms developing to subsequent exposures. Another acute disorder would be occupational asthma. Based on the studies that we have seen, however, this is extremely rare when associated with grain dust exposure, but never the less a consideration. Mucous membrane irritation is relatively common and prevalent in workers exposed to grain dust. Allergic reactions are another consideration, but relatively rare in the grain dust environment. Microbial infections are infections by bacteria. This is another consideration, but not a serious one.

The next aspect associated with general health effects of grain dust exposure is that of chronic diseases. The first that has been demonstrated in animal studies is that of hypersensitivity pneumonitis. Chronic bronchitis appears to be another one of the major concerns based on the studies that I have reviewed. Finally, chronic obstructive lung disease is a condition that is seen relatively commonly within the grain dust industry. The majority of the acute symptoms, thus far discussed, were usually relieved within one or more hours after cessation of exposure. Some persons, however, continue to have symptoms throughout the day, night and sometimes into the next morning and working day. Symptoms of the chronic disorders occurred daily, weekly or monthly depending on the grain handled and the concentration of the dust. Job location, time of the year and atmospheric conditions also appeared to be factors.

The vast majority of the studies that were conducted included pulmonary function studies to measure the level of pulmonary function or the loss of function relative to the duration or concentration of exposure. The majority of the studies that are in the literature today, focused on several aspects of problems associated with grain dust exposure. Initially, these studies focused on adverse pulmonary effects of grain dust.

The latest studies have focused on the dose-response relationship with an attempt to establish a threshold limit value that would in fact eliminate or nearly eliminate the majority of symptoms or adverse effects. Concern was expressed throughout the majority of the studies with the potential of bias due to the healthy worker effect. This situation would occur when the only workers that would be reviewed or studied would be those who were healthy enough to tolerate the symptoms or not develop the disease for a long period of time. There were no studies that reviewed adequately the health effects in those individuals who may not have continued their work in the grain industry as a result of symptoms of exposure to grain dust or other reasons.

Finally, the studies in general, indicated the magnitude of the problems to be only modest. Here, however, the healthy worker effect must be considered. The pulmonary function changes which result from grain dust exposure are both acute and chronic - meaning the effects could become apparent within minutes of initial exposure to grain dust and could be reversible over hours or days while the chronic effects are at least partially reversible over a period of months. Most investigators generally agreed that the conditions were consistent with the presence of a pulmonary restrictive defect and that grain handlers showed an increased non-specific bronchial reactivity that is experienced from continuing exposure to grain dust. It is generally agreed that the adverse pulmonary effects of grain dust are most likely due to an irritant effect. While these are conclusions of the investigators, most still feel that further investigation is required to delineate conclusively the adverse health effects of grain dust exposure. Because of a probable strong dose-response relationship between grain dust exposure and respiratory symptoms and lung function studies, the allowable exposure level is probably too high.

I conclude my testimony with these comments and will be available to answer questions relative to the factors that led to these conclusions. I will plan to offer a more detailed explanation in any of those areas I have discussed. I want to thank you for the opportunity to meet with all of you today and to offer my assistance in this very interesting area of environmental concern.

Respectfully,

Kenneth R. Hart, DO, MPH

6. OBJECTIVE II: WHAT IS THE EFFECT ON GRAIN QUALITY OF PROHIBITING THE RECOMBINING OF RECIRCULATION DUST TO THE GRAIN STREAM AT EXPORT ELEVATORS?

The issue of prohibiting R/R partly focuses on foreign discontent with U.S grain quality. Because of the implication that grain dust is related to quality, it is important to quantify the amount of dust in the grain and its relation to grain quality.

6.1 PROCEDURES

1. Approximately 454 grams (1 pound) of grain from each sample was used in the tumbler-airwash procedure developed in the Department of Agricultural Engineering at Texas A&M University to determine the amount of dust concentration in the grain. The grain was tumbled using the tumbler box covered with fine mesh (opening size of 178 microns) for three minutes to determine the amount of free fine dust in the grain. The grain sample was then transferred to the tumbler with 2 mm holes and tumbled for three minutes to determine the amount of material with sizes between 178 microns and 2 mm. For wheat samples, the grain was not tumbled in the 2 mm tumbler box because some wheat kernels were smaller than 2 mm and passed through the holes.
2. FGIS standard grading was performed on a portion of each grain sample. A standard FGIS grade includes test weight, moisture, heat damaged kernels, broken kernels, and foreign material.

6.2 RESULTS

Table 3 shows the average dust contents of inbound and outbound corn from Elevators 3, 4, and 7. At every elevator, there was an increase in total dust content between the time grain entered an elevator and when it left, but the fine dust contents and coarse dust contents did not necessarily increase at every elevator. Most likely, the changes in dust contents were the result of blending. Coincidentally, Elevator 3, which used 100% R/R dust, showed a much higher dust content than the other two elevators. In fact, both the inbound and outbound corn from Elevator 3 showed higher dust contents. However, at most elevators, it is common to have R/R dust systems on inbound conveying equipment to reduce losses due to shrinkage, and this was the case at these three elevators. Likely, the inbound corn at Elevator 3 had deteriorated during storage at another elevator, causing the high dust content. If the presence of R/R dust systems had caused the high dust content in Elevator 3's corn, then the other two elevators would have shown high dust contents in their inbound corn samples also. This was not the case, and the data from soybean dust extraction helps to further demonstrate this point.

TABLE 3. AVERAGE DUST CONTENTS FOR CORN SAMPLES.

Corn	Dust	Inbound	Outbound
Elevator 3	Fine	0.256% ± 0.151	0.183% ± 0.049
	Coarse	0.323% ± 0.229	0.409% ± 0.328
	Total	0.579% ± 0.339	0.592% ± 0.367
Elevator 4	Fine	0.136% ± 0.041	0.177% ± 0.021
	Coarse	0.175% ± 0.087	0.160% ± 0.041
	Total	0.312% ± 0.123	0.337% ± 0.047
Elevator 7	Fine	0.103% ± 0.039	0.134% ± 0.031
	Coarse	0.142% ± 0.106	0.173% ± 0.098
	Total	0.245% ± 0.132	0.307% ± 0.118

Table 4 shows the average dust contents of inbound and outbound soybeans for three elevators. Like the corn, soybeans generally showed an increase in total dust content from inbound to outbound. In all cases, the increase in total dust content can be attributed largely to the dramatic increase in coarse dust (>2mm). By inspection of the dust sieving data in Objective IV, it can be seen that the soybean dust captured by dust control systems is composed largely of particles smaller than 1mm. Thus recombination of dust should not be responsible for the increase in total dust for soybeans.

TABLE 4. AVERAGE DUST CONTENTS FOR SOYBEAN SAMPLES.

Soybeans	Dust	Inbound	Outbound
Elevator 3	Fine	0.055% ± 0.039	0.051% ± 0.013
	Coarse	0.378% ± 0.264	0.523% ± 0.331
	Total	0.433% ± 0.304	0.575% ± 0.344
Elevator 4	Fine	0.033% ± 0.008	0.059% ± 0.009
	Coarse	0.385% ± 0.201	0.770% ± 0.234
	Total	0.418% ± 0.208	0.830% ± 0.241
Elevator 7	Fine	0.031% ± 0.008	0.033% ± 0.006
	Coarse	0.065% ± 0.031	0.111% ± 0.068
	Total	0.096% ± 0.037	0.144% ± 0.073

Table 5 shows the average fine dust contents of the wheat samples. Results for the wheat samples also show the same increase in dust content from inbound to outbound as the other grains. Elevator 5, which had the highest percentage of bin dust systems, had the largest increase in fine dust content for wheat samples.

TABLE 5. AVERAGE DUST CONTENTS FOR WHEAT SAMPLES.

Wheat	Dust	Inbound	Outbound
Elevator 2 (SRW)	Fine	0.029% ± 0.005	0.029% ± 0.008
Elevator 5 (HRW)	Fine	0.028% ± 0.004	0.056% ± 0.036
Elevator 6 (HRW)	Fine	0.025% ± 0.004	0.029% ± 0.004

Grain samples were sent to FGIS in an attempt to find a linear correlation between FGIS grade factors and the amount of fine dust extracted with the tumbler device. In this regression, each FGIS grade factor was the independent variable, and fine dust content was the dependent variable. Results of the regression analysis are in Table 6.

Every grain had one instance where dust content was found to be correlated to a grade factor with a probability of 90% or higher. In three of the four grains, fine dust content was correlated with the grade factor referred to as Total Damaged Kernels (DKT). It is reasonable to expect that dust content be correlated to this factor, since damaged kernels would likely produce more dust after repeated handling. However, only in the case of soybeans did a grade factor account for more than 50% of the correlation. This indicates that while grade somewhat influences the dust content of the grain, there are still factors other than grade that affect the amount of dust in the grain.

9. OBJECTIVE V: WHAT ARE THE PHYSICAL AND CHEMICAL CHARACTERISTICS OF THE DUST IN QUESTION?

Prohibition of R/R will likely result in the removal of approximately 3.2 pounds of dust per ton of grain. In order to provide a reasonable justification for disallowing R/R, it will be important to know the characteristics of the dust removed to: (1) estimate the impacts on the grain of removing the dust, and (2) suggest alternative uses for the dust.

9.1 PROCEDURES

1. A proximate analysis was performed on a small portion of corn, soybeans, wheat, R/R dust, and bin dust to compare the nutrient values of the grain and the dust samples.
2. Dust samples collected from elevators were divided into smaller lots of about 454 grams (1 pound). From each lot approximately 100 grams were placed in a shaker sieve to find the distribution of large particles in the dust. The screens used in the sieve had opening sizes of 1000, 500, 250, and 106 microns.
3. A few grams of each dust was used in the wet sieving procedure described by Jones (1986) to determine the fraction of dust smaller than 100 microns in each dust type.
4. A few grams of dust from each lot were analyzed with the Coulter Counter Model TA-II in the Processing Laboratory in the Department of Agricultural Engineering at Texas A&M University. The Coulter Counter determines particle size distribution (PSD) of particles with a diameter of less than 100 microns.
5. Dust filters used in the fine dust tumbler were also analyzed with the Coulter Counter to determine the particle size distribution of the dust extracted with the tumbler.
6. 250 grams from each grain sample were allocated for determination of mycotoxin levels. Along with the grain samples, 250 grams of R/R dust and/or bin dust from each facility were allocated for the same tests. Aflatoxin B1 was the principle mycotoxin studied.
7. 100 grams of corn, R/R corn dust, and bin corn dust were tested for activity levels of three commonly used pesticides. The three pesticides were Malathion, Actellic (Pirimiphos-Methyl), and Reldan (Chlorpyrisos-Methyl).
8. A procedure and equipment developed by Lesikar (1991) was used to determine the minimum explosive concentration (MEC) of three types of grain dust. In the procedure, the explosion chamber was fitted with a paper diaphragm, and the dust

TABLE 22. RESULTS OF DRY SIEVING FOR HARD RED WINTER WHEAT DUSTS.

Sample	< 106	106 < 250	250 < 500	500 < 1000	> 1000
Elev 5 Bin Dust (10 samples)	0.306	0.346	0.176	0.065	0.107
Elev 6 Bin Dust (15 samples)	0.353	0.297	0.083	0.063	0.204
Elev 6 R/R Wheat Dust (10 samples)	0.493	0.332	0.070	0.031	0.074

Table 23 shows the results of the wet sieving for hard red winter wheat dusts. Typically, wheat dust contains a higher amount of chaff, hulls, and other large particles which tend to flake. The additional vibrations from the ultrasonic bath likely caused the large difference between the dry sieving and wet sieving data. Similarly, there is some natural cohesiveness between the dust particles which was destroyed by the action of the dispersant and vibration of the procedure.

TABLE 23. RESULTS OF WET SIEVING FOR HARD RED WINTER WHEAT DUSTS.

Sample	% less than 100 microns
Elev 5 Bin Dust	54.5 ± 0.8
Elev 6 Bin Dust	58.1 ± 1.6
Elev 6 R/R Dust	73.7 ± 5.6

SOYBEANS

Results of the dry sieving tests for soybean dust samples are shown in Table 24. Particle sizes are in microns. Both of the R/R soybean dust samples had an extremely high amount of fine dust. Like the wheat dust samples, the bin soybean dusts contained higher amounts of large particles compared to the R/R dust samples. This indicates that bin dust contains more hulls, trash, and dirt than R/R dust. The bin dust samples also contained significantly less fine dust since they were mixtures of different grain dusts and floor sweepings.

THE IMPLEMENTATION OF THE FEDERAL CLEAN AIR ACT ITS IMPACT ON THE GRAIN INDUSTRY IN OKLAHOMA

INTRODUCTION

Let me introduce myself. I am a professor in the Department of Agricultural Engineering at Texas A&M University. In that capacity I teach and conduct research. I served as a member of the nine member citizen board that function as the governing body of our state air pollution regulatory agency (SAPRA) - The Texas Air Control Board from January, 1990 until September, 1993. I teach 2 to 3 courses during the fall and spring semesters. They include: AGEN 365 - Unit Operations, AGEN 360 - Systems Engineering, AGEN - 300 Management Science, MEEN/AGEN 477 Air Pollution Engineering. My research has included the following: (1) Dispersion Modeling of SO₂ from coal fired power plants, (2) Cyclone Design. The 1D3D cyclone design was developed in my lab. This cyclone is BACT in California and Arizona and we are currently conducting research on new cyclone and abatement system designs, (3) Grain Dust Explosions., (4) Biomass conversion. One of my colleagues is developing a correction to the AP-42 cattle feed lot emission factor. I have conducted particulate matter source and area sampling. In 1972, I was responsible for conducting a study that involved isokinetically sampling 10 exhausts from a cotton gin, simultaneously. The results of this were that particulate emission rates from cotton gins will range from less than 1 to over 4 pounds per bale. The current AP-42 emission factor for cotton gins is 2.24 lbs/bale. Throughout my career, I have been involved with air pollution and air pollution abatement.

What is air pollution?

"Air pollution is the presence in the outdoor atmosphere of any one or more substances or pollutants in quantities which are or may be harmful or injurious to human health or welfare, animal or plant life, or unreasonably interfere with the enjoyment of life or property, including outdoor recreation." (Cooper and Alley, 1990)

Grain elevators can only pollute air by violating the "nuisance" aspect of the definition. "Nuisance" is in reference to the part of the definition that refers to unreasonable interference with "enjoyment ..." It is the responsibility of a SAPRA to regulate nuisance violators and it is in this context that your state DEQ is regulating grain elevators. The regulation of grain elevators is different than regulating industries emitting toxics or hazardous waste incinerators, etc.. Concerns for public health are a higher priority.

The implementation of the Federal Clean Air Act (FCAA) amendments is difficult for most states. With the exception of California, most states must expand their staffs so that they can implement this act. The Texas Air Control Board was faced with hiring 700 plus personnel in less than 4 years, establishing a Title V Federal Operating Permit (FOP) program and collecting fees to fund the work as required by the FCAA. We were faced with losing one billion dollars of federal highway funds if we were unsuccessful. I suspect that

Oklahoma is faced with a similar situation. The state funding for the expanded mission mandated by the FCAA is supposed to be derived from fees imposed on polluters. Any industry that emits 100 tons of a criteria pollutant must be classified as a Title V "major source" and must pay annual emission fees at a minimum rate of \$25 per ton. One method for determining which industries are major sources is to use the document published by EPA that lists emission factors for industries that emit pollutants - AP-42. Table 1 is the AP-42 listing of the uncontrolled emission factors from grain elevators in the U.S.. I've added another column to show emission factors in units of pounds per ton. Note that for country elevators, the emission factor is 8.6 lbs/ton.

The U.S. Grain handling and marketing system is the envy of the world. We have 7,000 country elevators, 300 inland terminals and 60 export facilities. Grain elevators are basically simple systems. Grain is transported to the elevator, unloaded, elevated, conveyed to bins and stored. In many country elevators, the grain passes through a dryer prior to being conveyed to storage. When it is time for the grain to progress in the marketing system, it moves from the storage bin through a spout to a belt conveyor, elevated and conveyed to a rail car or ship.

Oklahoma has a total of 345 grain handling facilities. Each of these operations will typically handle 6,000 to 12,000 bushels per hour (bu/hr) unloading and loading grain. (This is usually determined by the leg capacity.) One bushel of wheat weighs 60 pounds. Hence, a 12,000 bu/hr elevator will handle 360 tons per hour. Based upon the AP-42 emission factor of 8.6 lbs/ton, the estimate of particulate matter emission rate would be over 3000 pounds per hour. This is not happening. This is a weight loss (shrink) as a consequence of emissions of particulate matter of 0.43%. For some elevators, a shrink exceeding 0.3% is an indication of theft.

It is my understanding that the Oklahoma Department of Environmental Quality (DEQ) is attempting to use this factor (8.6 lbs/ton) to determine whether an elevator can be classified as a Title V "major source" i.e. emitted over 100 tons of particulate per year. A country elevator would be a "major source" if it handled 775,000 bushels per year and emitted 8.6 lbs per ton. Many of the country elevators in Oklahoma have receipts exceeding one million bushels. It is not uncommon for a country elevator to handle 10 to 20 million bu/yr. Using this emission factor, a 10 million bu/yr facility would emit 1290 tons and would be required to pay \$32,250 per year at \$25 per ton of emissions. This same elevator would have an estimated emission rate of 45 tons per year in Texas and would not be required to pay annual fees because it would not be a Title V "major source" (less than 100 tons of particulate emitted). The difference is that the permit engineers with the Texas Natural Resource Conservation Commission (TNRCC) use a 0.3 lb/ton emission factor for grain elevators. I believe that 0.3 lbs/ton is too high.

Oklahoma produced 171 million bushels of wheat in 1992 and approximately 5 million bushels of grain sorghum. Disregarding grain handled by an elevator that crossed into Oklahoma from another state, the 8.6 lb/ton emission factor could result in a bill for

6393

\$576,000 annually for emission fees as Title V "major source" fees at \$25 per ton. Many of the 345 grain elevators in Oklahoma will be inappropriately classified as a "major source". The cost of installed controls to reduce hypothetical emissions listed in AP-42 could be devastating to this industry.

Serious problems can result from unfair or inappropriate implementation of the 1990 FCAA amendments relative to grain handling. This will occur if the state Department of Environmental Quality (DEQ) were to characterize emissions from grain handling facilities using emission factors published by EPA. If the Oklahoma DEQ were to use AP-42 emission factors, a large number of the Oklahoma country elevators will be classified as "major sources" and will be required to pay annual emission fees. This is improper, inappropriate and wrong. They are not "major sources"! Hence, they should not be required to pay annual emission fees. Regulating air pollution is required but unfair and inappropriate application of rules and regulations do not serve the public.

The AP-42 emission factors for grain elevators are totally wrong and should not be used by state air pollution regulatory agencies (SAPRAS) to characterize air pollution emissions from grain handling operations.

PROBLEMS WITH THE MRI STUDY

How could the EPA publish data in AP-42 that totally misrepresents the emission of particulate from grain elevators? The answer is that they were using the results of a study performed by Midwest Research Institute (MRI) completed in 1974. The MRI scientists performed their study at a terminal grain elevator in Kansas City. They collected data on the mass of dust collected by each of the seven bag filters and the mass of grain moving through the elevator during the same time period and reported the ratio as "uncontrolled" emission factors. The protocol of the study was flawed. The MRI investigators assumed that the dust control systems with associated dust collection systems (filters) would be required at any grain elevator for normal operations and that if the bag filters were not present the dust captured by these systems would be emitted. Both of these assumptions were wrong!

The reasons for having dust control systems at grain elevators are as follows: (1) to prevent dust explosions, (2) housekeeping (reduce the amount of grain dust settling on floors that must be periodically swept up) and (3) compliance with air pollution regulations at the unloading pit and the rail car or truck load-out area. The emissions from this facility that could have impacted the public were the "fugitive" emissions from the incoming and exiting grain functions and the emissions from the filter collectors. The grain dust captured by the filters was not emitted.

I am going to attempt to illustrate how serious this error was with the following example: The emission factor for "Headhouse (legs)" is 5 lbs/ton. (See Table 1.) A leg at a grain elevator is a bucket elevator designed to elevate grain so that it can be dropped into a bin. No dust control is required to perform the elevation function. In other words, an enclosed leg, without dust control has zero emissions. The elevator used in the MRI study was pulling suction from the "boot" and "head" of the leg to lower the concentration of dust entrained in the air at the grain transfer points to prevent grain dust explosions. The dust captured by the "leg" dust control system was captured by the bag filter, weighed and returned to the grain stream. Because this dust was returned to the grain stream, it potentially was captured by other dust control systems downstream. Dust captured by six of the bag filters in this study was returned to the grain stream. (This is a common practice.) Yet, the MRI scientists used the mass of dust captured by the bag filters divided by the grain stream mass as their estimate of grain elevator emission factors. This was **WRONG!** This dust was not emitted!

Can you comprehend the frustration of a grain elevator manager when he attempts to explain to a regulator that his elevator leg is enclosed and he is not pulling any suction from the leg but he is told that according to EPA, the leg is emitting 5 lbs/ton. The regulator is looking for the air pollution abatement system (controls) and if the leg has no cyclone or bag filter, it must be emitting 5 lbs/ton according to AP-42. The manager tries to get the regulator to show him where his enclosed leg is emitting dust but the regulator points to the AP-42 emission factors and says that he must be emitting 5 lbs/ton because he has no controls. In other words, the regulator has received "guidance" from EPA to use the emission factor in "the book" (AP-42) even though it is obvious that the enclosed leg is not emitting dust. This is wrong!

Many country elevators have no suction on their legs. I've been told that the regulator has suggested that the manager should install suction and dust control on the leg to lower the legs emission rate. This is ludicrous. If the manager were to install suction on the boot and head pulley with associated bag filters, negative consequences can result: (1) The emissions of the bag filter will in effect increase the emission rate of the leg. Prior to the dust control system being installed, the enclosed leg was emitting "zero" particulate. Assuming the bag filter emission rate is 0.01 grains per dry standard cubic foot (gr/dscf), a 10,000 cfm dust collector will be emitting 6.5 grams per minute. (2) The elevator manager will spend \$50,000 to \$100,000 for the system that will not improve his productivity. (3) The re-introduction of the captured dust will increase the chances of a dust explosion. This is especially true if the dust control system were to re-introduce the captured dust to the boot of the leg.

Another problem with the protocol of the MRI study was the lack of consideration of the particle size distribution of the material captured by the 7 bag filters. Dust control systems capture large particles such as broken kernels, etc.. These large dust particles are not an air pollution problem in that they settle out very close to the source. Turner (1970) indicated that only particles less than 20 microns in diameter should be included in dispersion modeling. In AP-42 under "Fugitive Dust Sources" the following statement is made:

"Smaller particles, particularly those less than 10 to 15 micrometers in diameter, have much slower gravitational settling velocities and are much more likely to have their settling rate retarded by atmospheric turbulence. Thus, based on the presently available data, it appears appropriate to report only those particles smaller than 30 micrometers." In other words, dust particles larger than 30 microns should not be an air pollution problem since they settle out close to the source and are not transported across the property line.

Wallin et.al (1992) published sieve analyses of samples collected by MRI during their 1974 study. (See Table 2.) Mr. Wallin obtained this information from MRI to establish a more realistic emission factor for Texas grain elevators. Note that the fraction less than 44 microns was 2% and 0.57% for truck receiving and railcar loading, respectively. Corn cleaning, gallery belt, tunnel belt and head house (legs) will have no emissions unless a dust control system has been installed. If we were to take the AP-42 uncontrolled emission factors for receiving and loadout, 0.6 and 0.4 lbs per ton, respectively; multiplied times the fraction less than 45 microns, it would result in an emission factor of 0.035 lbs per ton of dust that can be transported across the property line affecting the public. The TNRCC uses 0.3 lbs/ton.

WHAT IS THE EMISSION FACTOR FOR AN ELEVATOR HANDLING WHEAT?

I have been involved with numerous studies relative to grain dust explosions. One measurement that I have routinely made is the fine dust (dust less than 100 microns) content of grain. Typically, wheat will contain less than 0.03% or 0.6 lbs per ton fine dust. Of this 0.6 lbs/ton, 50% is larger than 15 microns. This is the total fine dust content of wheat. In the process of moving through the elevator, only a fraction of this fine dust is entrained in the air and transported across property lines (air pollution). There is no way that a grain elevator handling wheat can emit 8.6 lbs/ton.

In my work with wheat dust (Parnell et.al, 1986), I have found that approximately 34% of the wheat dust captured by a bag filter is fine dust (less than 100 microns). (See Table 3.) Approximately 50 % of the fine dust is less than 15 microns. (See Table 4.) In other words, approximately 17% of wheat dust captured by a bag filter is less than 15 microns. This is a very conservative number because the methodology used to determine the fraction of fine dust was wet sieving using alcohol. Dry sieving results in a much lower fine dust fraction. Approximately 30 % of the dust captured by a bag filter of a dust control system in an elevator handling wheat is less than 30 microns. This means that the total amount of dust in grain that has the possibility of being emitted is 0.18 lbs per ton. This can only occur if 100 % of this dust is extracted from the grain and emitted. It is likely that less than 50 % of this total will be emitted. Hence, I estimate that an uncontrolled emission factor from a grain elevator should be less than 0.1 lb/ton.

If one were to assume that 20% of the total trash and fine dust emitted by the elevator were less than 30 microns and that the 1 lb per ton emission factor for unloading and load-out emission factors (Table 1) were accurate, a measure of the amount of dust transported

across property lines in an uncontrolled situation would be equivalent to an emission factor of 0.2 lbs/ton.

GRAIN DUST EXPLOSIONS

A grain dust explosion at an elevator or feed mill can be devastating. Schoeff (1994) reported that 13 explosions occurred in 1993 up from a record low of 6 in 1992. Property damage was \$3.5 million. How could implementing air pollution regulations impact grain dust explosions? You must understand the mechanism of grain dust explosions.

In order to have a grain dust explosion 4 ingredients are required: (1) fuel - Grain dust suspended in air at or above the minimum explosive concentration (MEC). The value of 50 grams per cubic meter (g/m^3) is the accepted MEC for grain dust. If the concentration of grain dust is less than this, an explosion will not occur. (2) Ignition source. (3) Oxygen. (4) Containment - Most assume that containment is needed so that rupture of the rapidly burning grain dust can occur (explosion). Containment is needed, in the case of primary explosions, to achieve an MEC. Elevator legs are the leading location of primary explosions.

A grain dust explosion is usually a series of explosion. The first is usually small (<2psi). It usually referred as the "primary". The primary propagates a pressure wave and a fire front. The pressure wave moves away from the primary location at 1000 feet per second (fps) followed by a relatively slow moving fire front (10 fps). This pressure wave entrains layered dust into another MEC that is ignited by the fire front resulting in secondary explosions. The multiple secondary explosions result in numerous fatalities and devastating property loss. Secondary explosions generate pressures in excess of 80 psi and can result in 10 ton segment of concrete being moved 100 yards. The primary method for preventing grain dust explosions is to prevent MECs from occurring. There are only three methods that can be used to lower the dust concentration at a grain transfer point: (1) dust control systems - These are in reality "dust management systems" in that only a fraction of the dust in grain is captured. Properly designed and maintained dust control systems can effectively lower the dust concentration at a grain transfer point to below 50 g/m^3 . (2) mineral oil application systems - A small amount of food grade mineral oil is applied to the grain surface. Fine dust particles "stick" to the grain surface and are not entrained in air at the grain transfer points. FDA limits the amount of oil that can be applied to less than 200 ppm (1.5 gallons per 1000 bushels). (3) Water sprays - This is controversial and FGIS is attempting to ban this method.

Any requirement by EPA or a SAPRA that results in increasing the number of MECs in a grain handling facility will increase the probability of a dust explosion. MECs are present in bag filters when the dust layer on the surface of bags is removed and settles to the bottom to be collected. MECs can occur as dust is conveyed.

The implementation of the FCAA for grain handling facilities can and in my opinion

will have an impact on the number of grain dust explosions at grain handling facilities in the U.S.. I believe that if EPA were to insist that all states use their AP-42 emission factors, the number of Minimum Explosive Concentrations (MECs) will increase. As a consequence, the probability of a dust explosion at grain handling facilities will increase.

SUMMARY

I believe that the published AP-42 emission factors for grain elevators are wrong and over-estimate particulate matter emissions from grain elevators by a factor of at least 20. I've attempted to illustrate how bad these numbers are in this testimony and I have been critical of the MRI study that served as the basis for the erroneous emission factors. This is an important issue. The regulation of air pollution will impact the economics of the grain industry in your state and could result in relatively small elevators being forced to cease operations. This can impact producers who were customers of that elevator. Another major factor is that improper imposition of air pollution regulations on grain elevators can result in an increase in grain dust explosions. I believe that the emission factor of a grain elevator handling wheat should be less than 0.3 lbs per ton (total) and I presented data to support this position.

The decision you make will impact the grain industry. I hope that I have been able to "shed some light" on this controversial issue.

GRAIN ELEVATOR EMISSION FACTORS

Testimony to the

Oklahoma Air Quality Council

April 12, 1994

by

Calvin B. Parnell, Jr. PhD, PE
Professor

GRAIN ELEVATOR EMISSION FACTORS

I testified to this council on March 8, 1994 with a specific purpose of discrediting the EPA AP-42 Emission Factors that specify that an uncontrolled grain elevator would have an emission factor of 8.6 pounds of dust per ton. It is my understanding that the DEQ staff does not dispute that these factors are in error. If these numbers are in error then what should be the emission factor for grain elevators? I have read the memorandum prepared for you by Deborah Perry in reference to "Analysis of Documents Submitted by Oklahoma Grain and Feed Association to Support a 70% Reduction of AP-42 when Calculating Emissions from Grain Elevators". I believe that some issues are unclear and I hope to "add some light" to these issues with this testimony.

A state air pollution regulatory agency (SAPRA) must have an emission factor for a source of pollution. I outlined in my testimony the "Texas Model" which is being used by the permit engineers with the TNRCC. They have had the experience of permitting grain elevators for over 20 years. The Texas Model for an elevator with no drying or dust control is as follows:

(1) Only the unloading and loading AP-42 emission factors are used. It is assumed that only these two operations will entrain dust in the air to be moved by air currents across property lines to affect the public (air pollution). The sum of these two AP-42 emission factors is 1 lb/ton.

(2) The sieve analysis performed by MRI on the dust captured during the study indicated that only 2% of the dust captured during the unloading operation was less than 44 microns and only 0.57% of the dust captured during rail car loading was less than 44 microns. This same sieve analysis showed that only 16% and 4% of the dust captured during unloading and loading, respectively were less than 63 microns. The TNRCC chose to use 30% of the 1 lb/ton was dust of the size that would be entrained in the air at the loading and unloading points of an elevator. In effect, this 30% used by the TNRCC is an assumption that 70% of the dust emitted at these points will settle out near the source.

The subject of Ms. Perry's memo is addressing this 70% reduction of the AP-42 emission factors associated with unloading and loading operations at a grain elevator which sums to 1 lb/ton. In effect the original AP-42 emission factor of 8.6 lbs/ton has been reduced to 1 lb/ton. Now the question is how much of that 1 lb/ton would contribute to air pollution or be transported across the property line.

Ms. Perry has indicated that she does not feel that I "provided accurate and appropriate documentation to support reducing AP-42 factors by 70%" I described the "Texas Model" in my recommendation for the Oklahoma DEQ staff which reduces the 8.6 lbs/ton to 0.3 lbs/ton. Ms. Perry suggests that the sieve analysis performed by MRI was insufficient data and based upon her conversation with Dr. Lundgren, sieve analyses will not provide a good measure of the aerodynamic particle diameter. She is correct with regard to sieve analyses and aerodynamic particle size. However, the only data available for the dust captured by the bag filter is their sieve analyses.

What will the Oklahoma DEQ use for an emission factor for grain elevators? I believe that if Oklahoma were to use the 1 lb/ton for uncontrolled elevators, this decision would be

inappropriate. It is obvious that MRI captured broken kernels and trash particles when their sieve analyses indicated that less than 2% was less than 44 microns. In addition, their data was based upon the capture of material at a grain transfer point with a dust control system. There was no attempt at sampling dust concentrations at the emitting points with high volume samplers. It is likely that the actual concentration of dust entrained in air at the loading and unloading points was much less than the 1 lb/ton total. Even sampling with a high volume air sampler would have eliminated the broken kernels and trash that was captured and weighed in their study. A 70% reduction from 1 lb/ton to 0.3 lb/ton is in my opinion a conservative approach for the Oklahoma DEQ. It is a much higher emission factor than the factor that would be associated with the 98% reduction that is indicated by the reported sieve analysis. The actual emission rate should be less than 0.1 lb/ton for wheat.

Ms. Perry stated that all the data I referenced was based upon particle size distributions using sieve analyses. This was incorrect. I routinely use a Coulter Counter to obtain particle size distributions for particulate less than 100 microns in my research. (I've provided the staff with some of my publications describing this process.)

Dr. Dale Lundgren Ph.D., P.E. has excellent credentials. I also have spent a number of years conducting research on topics related to air pollution. My graduate students and I developed the 1D3D cyclone that is BACT in California and Arizona. I have directed research projects that included sampling downwind from emitting sources with PM10 and TSP samplers. I directed the graduate student whose research resulted in a new PM10 cotton dust sampler (McFarland et al., 1987). I have spent a number of years conducting research directed at preventing dust explosions (Lesikar et al., 1991 and Wardlaw et al., 1989). In 1972, I conducted the "sampling" study where the emission concentrations from control devices from a gin processing stripped cotton were measured (Parnell and Baker, 1973). These data were used to develop emission factors from cotton gins and are currently being used by the TNRCC in their permitting process. I also teach the only undergraduate engineering class on air pollution engineering at Texas A&M University.

Ms. Perry stated that I did not provide accurate and appropriate documentation to support reducing AP-42 by 70%. I believe what she meant was she does not believe that there is sufficient documentation to reduce the 1 lb/ton emission factor (the sum of loading and unloading emission factors from AP-42) to 0.3 lb/ton. AP-42 lists a total of 8.6 lbs/ton. I submit that reducing the 8.6 lbs/ton to 1 lb/ton is merely common sense. The legs, gallery and tunnel do not emit dust. The MRI sieve analysis was sufficient documentation for the TNRCC to reduce the 1 lb/ton to 0.3 lbs/ton.

In an attempt to provide an alternative justification, I presented recent data on the quantity of fine wheat dust per ton of grain obtained by an air wash procedure and the fraction of fine dust of the total dust captured by a filter using a wet sieving procedure. (See the enclosed excerpts from the Final Report of the "Impact Study of Prohibiting Dust at Export Elevators" (1992)). Both of these procedures incorporate a screen to separate trash from fine dust. However, the air wash and wet sieving procedures are far different than the sieve analyses used by MRI in their study. The average fine dust (< 178 μm) content of wheat using tumbler-air wash procedure for "inbound" wheat in my most recent research

indicates that wheat will contain 0.029%, 0.028% and 0.025% (0.6 lbs of fine dust per ton). "Inbound refers to grain entering the terminal elevator in a condition similar to its condition leaving a country elevator. This is the most accurate data that I have on the dust content of wheat. In my opinion, less than 5% of the dust in grain will be entrained in air at the unloading or loading operation of an elevator. I suggested that if 10% of the dust in grain were to be entrained in air and transported across property lines, the resulting emission factor would be less than 0.1 lb/ton.

It would be ideal to have the results of a well planned study that demonstrates that the emission factor for the combined unloading and loading operations of an uncontrolled grain elevator handling wheat is 0.1 lb/ton. However, these results do not exist. It is my opinion that a 0.3 lb/ton emission factor is too high but appropriate until these data are produced. My major concern is that states will attempt to force country elevators into installing dust control systems based on the inaccurate AP-42 emission factors and the result will be a dramatic increase in grain dust explosions with associated loss of life of employees.

Ms. Perry made the point that sieve analysis results are not equivalent to "aerodynamic diameter" of grain dust. She is correct. She used the example of a cylindrical particle with a diameter of 5 microns and a length of 80 microns. In my experience, this physical description is not typical of grain dust particles. Enclosed is a reprint of one of my papers published in the Environmental Health Perspectives entitled "Physical Properties of Five Grain Dusts". The particle size distributions (PSD) of the different grain dusts reported were obtained with the Coulter Counter Model TA II. With the exception of soybeans, grain dust will have a particle density (ρ_p) of 1.5 g/cm³. We routinely utilize a Coulter Counter to obtain particle size distributions of particulate less than 100 microns. This sizing process yields data for the equivalent spherical diameter of particulate. The definition of aerodynamic diameter is the diameter of a unit density sphere that has the same settling velocity as the particle in question. It can be calculated with the following equation: (Cooper and Alley)

$$d_a = (18\mu v_t / C\rho_w g)^{1/2}$$

where

d_a = aerodynamic diameter,

μ = gas viscosity,

v_t = settling velocity,

ρ_w = density of water, and

g = gravitational acceleration.

To convert a PSD obtained with a Coulter Counter which is a function of equivalent spherical diameter of unit density particles, we use the following equation:

$$d_a = (\rho_p)^{1/2} d_s$$

where

d_a = aerodynamic diameter,

ρ_p = particle density (g/cm³) or specific gravity, and

d_s = spherical diameter.

McFarland and Ortiz (1982) used this same procedure in their research evaluating PM10 samplers.

The issue is that the MRI screen analyses do not provide a measure of aerodynamic diameter. I submit that the TNRCC considered this in their decision to use 70% instead of 98% of the dust settling out near the source in their estimation of emission factors from unloading and loading. I also submit that the 1 lb/ton AP-42 emission factor is too high in that MRI used the mass of dust, broken kernels and trash captured by a dust control system to obtain the 1 lb/ton factor. Hence a 0.3 lb/ton factor for unloading and loading is "conservative" from a regulatory perspective.

Ms. Perry did not accept the assumption made by the TNRCC staff that particles larger than 30 microns would settle out near the source and suggested that "particulate matter measured by the high-volume method ... describes the acceptable method..." See enclosed paper by McFarland and Ortiz (1983) where they tested High Volume samplers and state "At wind speeds of 2 and 8 km/h, the Hi-Vol has a cutpoint of $\approx 45 \mu\text{m}$ (aerodynamic particle diameter for which the penetration is 50 percent) whereas at 24 km/h the cutpoint is reduced to $\approx 30 \mu\text{m}$ ". EPA states the following in AP-42:

"Thus high volume samplers do not provide definitive particle size information for emission factors. However, an effective cutpoint of 30 micrometers aerodynamic diameter is frequently assigned to the standard high volume sampler."

I believe that there is sufficient documentation in the literature to assume that particulate matter larger than 45 microns (AD) will settle near the source and should not be considered in the emission factor calculations. In other words, these larger particles will not cause air pollution off the property.

SUMMARY

The Oklahoma Air Quality Council and DEQ staff have some difficult decisions to make. My testimony on March 8, 1994 and April 12, 1994 were an attempt provide a scientific basis for your decision process. Hopefully, I have made the following points:

(1) The AP-42 emission factors indicating an emission factor of 8.6 lbs/ton for an uncontrolled grain elevator are wrong and should not be used.

(2) The "Texas Model" uses a 1 lb/ton total emission factor for unloading and loading and assumes that 70% will settle out near the source. The result is that the total emission factor for the unloading and loading operations of an uncontrolled grain elevator is 0.3 lb/ton.

(3) I am of the opinion that 0.3 lbs/ton for these two operations is too high. However, I understand why the TNRCC uses this number. It can be corrected with results from a credible study.

(4) Inappropriate application of air pollution regulations can increase the number of grain dust explosions.

Pulmonary Disease and Critical Care Section
University of Oklahoma Health Sciences Center

The effects of silica dust exposure on the lungs are well characterized. This dust causes a distinctive disease called silicosis, which can be recognized by the changes it produces in the chest radiograph and in pulmonary function tests. Preventive measures are likewise well understood and defined.

Grain dust, in contrast, contains a number of injurious substances which produce an increase in the presence of a variety of symptoms which are non-specific, and which also occur in people who are not grain dust workers. These include chronic bronchitis, asthma, chronic obstructive pulmonary disease, and allergic alveolitis.

In addition to these lung diseases, grain workers are subject to rhinitis, conjunctivitis, and dermatitis, and to a febrile flu-like illness known as grain fever.

In most cases, the chest radiograph is not abnormal in these conditions.

Grain dust contains a number of substances which may produce these disorders by way of an allergic reaction, but the mechanisms are incompletely understood. The grain itself, as well as fungus particles and bacteria may be involved. In contrast to silicosis, there appears to be a great deal of variation in the sensitivity of individual workers to the components of grain dust.

Because of these major differences between the health effects of silica and grain dust exposure, there has been a great deal of interest over the past two decades in developing environmental control practices specific to grain dust.

In Canada where the problem has been well recognized, control measures involving bag filter systems have been designed with a goal of reducing dust levels to 10 mgm/m³.

Because of unique characteristics of grain dust and its well recognized effects on health of grain workers, it is recommended that environmental control regulations affecting grain workers be written in a manner specific to this form of air pollution.

CURRICULUM VITAE

MARTIN HENRY WELCH, M.D.

April, 1994

I. PERSONAL

A. Vital Statistics

1. Date of Birth August 21, 1936
2. Place of Birth Edgerton, Wisconsin
3. Citizenship U.S.
4. Marital Status Married - Jane Elizabeth Harris
5. Children Julie Elizabeth - 1973
Michael Edward - 1974
Martha Jane - 1977
Mary Katherine - 1984
6. Social Security Number 389-34-7932
7. Home Address 8704 Old Brompton Road
Oklahoma City, OK 73114
8. Home Phone Number 405-720-0712
9. Office Address University of Oklahoma Health
Sciences Center
Department of Medicine
Pulmonary Disease and
Critical Care Section
P.O. Box 26901
Oklahoma City, OK 73190
10. Office Phone Number 405-271-6173

II. EDUCATION

- A. Pulmonary Disease Trainee (Clinical Assistant
in Medicine)
University of Oklahoma Medical Center
Oklahoma City, OK 1967-1968
- B. Resident in Medicine
University of Oklahoma Medical Center
Oklahoma City, OK 1966-1967

- C. Fellow in Medicine
University of Minnesota
Minneapolis, MN 1964-1966
- D. Resident in Medicine
Anker Hospital
St. Paul, MN 1964-1966
- E. U.S.P.H.S. Heart Disease Control Officer
(Surgeon) 1962-1964
- F. Rotating Internship
Minneapolis General Hospital
Minneapolis, MN 1961-1962
- G. University of Wisconsin 1961
M.D. Degree
- H. University of Wisconsin 1958
B.A. Degree

III. CERTIFICATIONS

- A. Diplomat, American Board of Internal Medicine 1972
28316

IV. STATE LICENSURE

- A. Wisconsin
(Active) #14448 1962

SUPPLEMENTAL INFORMATION

COUNCIL MEETING

JANUARY 11, 1994

January 3, 1993

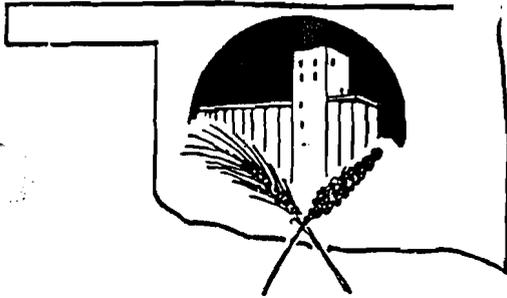

M E M O R A N D U M

TO: Air Quality Council
FROM: *LD* Larry D. Byrum, Director
DM Air Quality Division
SUBJECT: Feed and Grain Rule Update

During the public hearing to adopt revised subchapter 7 and new subchapter 8, the Oklahoma Feed and Grain Association made comments concerning the need for rules specific to their industry. In response to these comments, the staff indicated it would update the Council of the status of efforts to draft grain storage and handling technology specific rules.

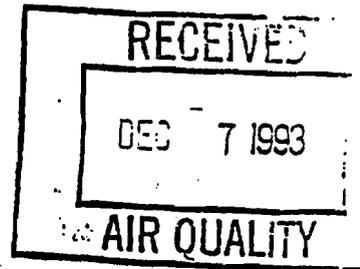

The staff has been working with the grain industry for over two years to assure they were aware of the potential impacts of the forthcoming major source operating permit program requirements under 40 CFR Part 70 and to minimize these impacts as much as possible. And to draft a technology based rule specific to the grain storage and handling industry similar to what has been developed for the cotton ginning industry via subchapter 23. Several discussion meetings have been held and some progress has been made in enlightening the industry of the impacts of Part 70 permitting, but we have experienced difficulties in drafting a proposed rule for grain storage and handling sources. These difficulties include the determination of reliable emission factors, central equipment collection efficiencies, and reasonable economically available control methodology.

In the spring of 1993, the staff proposed a draft rule (attached) to the Grain Industry for their consideration and comments. Their response (attached) was received December 7, 1993. As you can see, there is considerable differences between the two proposals; however, both the grain industry and AQD have contacted Dr. Bill Barfield and his staff of the Oklahoma State University Agricultural Economics Section for assistance and advice in developing a grain storage and handling technology specific rule that is appropriate for the State of Oklahoma.

December 6, 1993

Mr. Larry Byrum, Director
Air Quality Service
4545 N. Lincoln Boulevard
Oklahoma City, OK 73105

Dear Mr. Byrum:

Enclosed is our draft of Subchapter 24 to the Oklahoma Clean Air Act dealing with grain, feed mill, and grain or seed processors. Our committee looks forward to the meeting with you and your staff on Monday, December 13, 1993, at 1:30 p.m. at your office.

If possible, the committee would like to know the amount of the 5 year permit fee as proposed. They are aware of the proposed amount of the annual minor source fee, but are not aware of the level of the 5 year permit fee.

Since I will be recovering from back surgery, I will not be in attendance at this meeting. I trust you will have a productive one. Until I return to the office, Rick Treeman serve as our "point person".

Most sincerely,

Joe N. Hampton
Executive Vice President

JNH/gw

6925

SUBCHAPTER 24. Control of Emissions from Grain Elevators,
Feedmills and Grain or Seed Processors.

SECTIONS

310:200-24-1	Purpose
310:200-24-1	Definitions
310:200-24-3	General Provisions: applicability
310:200-24-4	Smoke, visible emissions, and particulates
310:200-24-5	Emissions Control Equipment
310:200-24-6	Fugitive Dust Controls

310:200-24-1. Purpose

The purpose of this rule is to control emissions from facilities that handle, store or process grains, feed or seed.

310:200-24-2. Definitions

The following words and terms when used in this subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Facility" means any plant or installation at which grain feed or seed is loaded, unloaded, handled, cleaned, dried, stored, treated, or otherwise processed for commercial purposes.

"Facility Site" means the land upon which a grain elevator, feedmill, or grain elevator, feedmill, or grain or seed processing equipment or structures are located.

"Existing facility" means a facility which is in existence and has previously been grandfathered or exempt. All facilities constructed after January 1, 1993 shall be considered new.

"Fabric filter" means any other control device or system in which particulate matter is collected within a dust cake supported on either a woven or felted fabric that can demonstrate a particulate collection efficiency of not less than 95 percent.

"High efficiency cyclone" means any cyclone type collector of 2D-2D or 1D-3D configuration, designations refereeing to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion. A 2D-2D cyclone would exhibit a cylinder length of 2 x D and a cone length of 2 x D. A 1D-3D cyclone would exhibit a cylinder length of 1 x D and a cone length of 3 x D. The efficiencies of these cyclones are 90% and 95% respectively. For TSP - ? in H₂O?

"Dust suppression additives" means FDA or FGIS approved additives applied commercially for dust suppression. The efficiencies of these additives are 90%.

"Air Baffles" means a series of inverted V baffles installed under the dump pit grating which diverts or restricts the air flow from escaping receiving pit, these baffles reduce free air at grating by approximately 85%, with a net reduction of emissions by 50%.

310:200-24-3. General Provisions: Applicability, Calculations

(a) Applicability. The provisions of this subchapter are applicable to all new, modified, and existing facilities operating in the State of Oklahoma. Facilities in compliance with this subchapter are exempt from the requirements of OAC 310:200-25, 310:200-27, 310:200-29, and 310:200-40.

(b) Permits required. In addition to the requirements of this subchapter, each new or modified facility (unless modification doesn't increase net emissions) shall comply with the permitting requirements of OAC 310:200-7. An agricultural specific, industry adaptable permit shall be adopted.

(c) Record-keeping. The owner or operator of a facility shall maintain a log documenting the annual commodity throughput. These records shall be maintained for a period of two years and shall be made available for inspection by the Air Quality Service personnel or its representative during normal business hours.

(d) Test methods.

(1) Visible emissions (opacity) testing shall be conducted using EPA reference method 9 contained in 40 CFR Part 60, Appendix A and be performed by an individual possessing current certification.

(2) Dispersion modeling for PM-10 shall be performed using an EPA approved modeling method.

(3) Effective date. This subchapter shall become effective upon approval by the Air Quality Division of the Oklahoma Department of Environmental Quality.

(e) Calculations. Appropriate emission factors shall be obtained using the PM-10 increments found in the AIRS facility subsystem source classification codes (SCCs) and emission factor listing criteria pollutants (EPA-450/4-90-003), with allowances for control efficiency. AP-42 could be substituted with allowances for control efficiencies in lieu of SCC factors.

Use what is contained in OAC 310:200-7.9

Impact on environment

310:200-24-4. Smoke, visual emissions, and particulates

(1) Emissions limit. No person shall cause, suffer, allow or permit discharge of any fume, aerosol, mist, gas, smoke, vapor, particulate matter of any combination thereof a shade or density greater than thirty (30) percent opacity.

21100-254(a) must apply

(2) Alternate emissions limit. The thirty (30) percent opacity limit as required under 310:200-24-4 (a) may be increased, for particulates only, to (50) percent in the receiving areas and to (60) percent at the loadout areas of the facilities. An average of no more than (30) percent opacity for the entire facility will be maintained. *what does it mean*

(3) PM-10 emissions limit. No facility shall impact the ambient air quality in such a manner as to violate the primary PM-10 standard of 50 ug/m3 annual arithmetic mean or 150 ug/m3 24-hour average or any other ambient air standard established by OAC 310:200-3.

310:200-24-5. Emission Control Equipment

Emissions that do not exceed the standards for ambient air, do not interfere with the use of adjacent properties, as well as do not make a facility become classified as major source should be controlled at the operators discretion.

we can not allow a single to interfere with the air quality standards

who makes these determinations

310:200-24-6. Fugitive Dust Controls

All facilities will take reasonable precautions to prevent the discharge of visible emissions of fugitive dust beyond the property line from which the emissions originate.

Try to mix these existing requirements together

This requires no control equipment and if has been determined that grain elevator do not comply will appear in the next rule without control equipment

DRAFT

SUBCHAPTER 24. Control of Emissions from Grain Elevators

Section

- 310:200-24-1 Purpose
- 310:200-24-2 Definitions
- 310:200-24-3 General provisions: applicability
- 310:200-24-4 Smoke, visible emissions, and particulate
- 310:200-24-5 Emissions control equipment
- 310:200-24-6 Fugitive dust controls

310:200-24-1. Purpose

The purpose of this rule is to control particulate emissions from grain elevators.

310:200-24-2. Definitions

The following words and terms, when used in this Subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Elevator site" means the area upon which a grain elevator is located and all contiguous land having common ownership or control.

"Existing elevator" means a grain elevator which was in existence and has submitted a current accurate emission inventory to the Air Quality Service for the years 1990 and 199³. All other grain elevators shall be considered "new".

6429

"Fabric filter" means any control device or system in which particulate matter is collected within a dust cake supported on either a woven or felted fabric that can demonstrate a particulate collection efficiency of not less than 95 percent.

"High efficiency cyclone" means any cyclone type collector of the 2D-2D or 1D-3D configuration, designations referring to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion. A 2D-2D cyclone would exhibit a cylinder length of 2 X D and a cone length of 2 X D (90 percent collection efficiency for TSP). A 1D-3D cyclone would exhibit a cylinder length of 1 X D and a cone length of 3 X D (95 percent collection efficiency for TSP).

"Grain elevator" means any plant or installation at which grain is loaded, unloaded, handled, cleaned, dried, stored, or treated for commercial purposes.

310:200-23-3. General Provisions; applicability

(a) Applicability. The provisions of this Subchapter are applicable to all new, modified, and existing grain elevators operating in the State of Oklahoma. Grain Elevators in compliance with this Subchapter are exempt from the requirements of OAC 310:200-25, 310:200-27, and 310:200-29.

(b) Permits required. In addition to the requirements of this Subchapter, each new or modified Grain elevator shall comply with permitting requirements of OAC 310:200-7.

(c) Air Toxics emissions. The requirements of this Subchapter are in addition to any which may be required under OAC 310:200-41.

(d) Record-keeping. The owner or operator of a grain elevator shall maintain a log documenting the daily process weight and hours of operation and air emissions control equipment replacement/repair cost. These records shall be maintained for a period of two years and shall be made available for inspection by the Air Quality Service personnel or its representative during normal business hours.

(e) Test methods.

(1) Visible emissions testing shall be conducted using EPA reference method 9 contained in 40 CFR Part 60, Appendix A and be performed by an individual possessing current certification.

(2) Dispersion modeling for PM-10 shall be performed using an EPA approved modeling method.

(f) Effective date. This Subchapter shall become effective ??????.

300:200-24-4. Smoke, visible emissions, and particulates

(a) Visible Emissions limit.

(1) Emissions limit. No person shall cause, suffer, allow or permit discharge of any fume, aerosol, mist, gas, smoke, vapor, particulate

matter or any combination thereof a shade or density greater than twenty (20) percent equivalent opacity. This requirement shall not apply to smoke or visible emissions emitted during short-term occurrences, the shade or density of which is not greater than sixty (60) percent opacity for an period aggregating no more than five (5) minutes in any sixty (60) consecutive minutes and/or no more than twenty (20) minutes in any consecutive 24-hour period.

(2) Alternative emissions limit. The twenty (20) percent opacity limit as required under 310:200-23-4(a) may be increased for particulates only provided that the owner/operator demonstrates to the satisfaction of the Oklahoma Air Quality Council at public hearing that those requirements listed in 310:200-25-4(a) through (c) will be met.

(b) PM-10 emissions limit. No grain elevator shall impact the ambient air quality in such a manner as to violate the primary PM-10 standard of 50 ug/m³ annual arithmetic mean or 150 ug/m³ 24-hour average or any other ambient air standard established by OAC 310:200-3.

310:200-24-5. Emissions Control Equipment

(a) Grain turning and Conditioning.

(1) Elevators with a rated turning rate equal to or greater than 10,000 bushels per hour shall for emission control utilize, at a minimum, a fabric filter or other control equipment of equivalent collection efficiency.

(2) Elevators with a rated turning rate of less than 10,000 bushels per hour shall for emission control utilize, at a minimum, an A.E.C. long cone high efficiency cyclone or other control equipment of equivalent efficiency.

(b) Grain loading and unloading.

(1) Elevators located within the corporate city limits of any city or within 300 feet of two or more occupied establishments shall for the control of fugitive emissions utilize the following: wind screening/enclosure on at least three sides (without truck lift) or wind screening/enclosure on two sides (with a truck lift); and negative air pressure (suction) on the dumping area or pit created by a properly sized suction fan which will be exhausted through a properly sized A.E.C. long cone high efficiency cyclone or other control equipment of equivalent collection efficiency; or other control equipment of equivalent collection efficiency.

(2) Elevators located outside the corporate city limits of any city and greater than 300 feet from two or more occupied establishments shall for the control of fugitive emissions, at a minimum, utilize wind screening on at least two sides of the dumping area or pit, or control equipment of equivalent collection efficiency.

310:200-24-6. Fugitive dust controls

(a) For control of fugitive dust; except as provided in OAC 310:200-24-5(b) (1) and (4); no person shall cause or permit the handling,

6933

transporting, or disposition of any substance or material which is likely to be scattered by the air or wind, or is susceptible to being airborne, or wind-borne, or to operate or maintain or cause to be operated or maintained, any grain elevator premise, open area, right-of-way, storage pile or materials, vehicle, or construction, or any other enterprise which involves any material or substance likely to be scattered by the wind or air, or susceptible to being wind-born or air-born that would be classified as air pollution without taking reasonable precautions or measures to minimize atmospheric pollution.

(b) No person shall cause or permit the discharge of any visible fugitive dust emissions beyond the property line on which the emissions originate.

RE: CLARIFICATION OF ISSUES REGARDING GRAIN ELEVATORS

Dear Ms. Luehrs:

I want to express our appreciation for the opportunity to have Nick Stone attend our January 5 meeting with the Oklahoma Feed and Grain Committee. His participation was very helpful for all involved in this somewhat difficult issue. We are moving forward in our efforts to develop a mutually acceptable rule which will be specific to the feed and grain industry. However, there are two key issues which were discussed in our meeting which need further clarification before we can proceed:

1. Definition of fugitive source.

Emissions from receiving (dump) pits and unloading stations, including railcar loadouts at grain elevators are a significant percentage of the total particulate emissions. Emissions from these points are typically difficult to effectively control. How we address these emissions will depend on whether they are considered fugitive emissions, process fugitives or point sources.

Our latest draft included opacity limits for these points which would be very difficult for the facilities to meet. In addition, our experience with site investigations at grain elevators has demonstrated the difficulty in making visual emissions readings at receiving and loadout points. Please provide us guidance in addressing these emissions. Does EPA consider these point source, process fugitive or fugitive emissions?

2. Regulated air pollutant for Part 70.

The Oklahoma Feed and Grain Committee has requested that emissions calculations and determinations of applicability to Part 70 operating permits be based on PM-10 rather than PM (TSP). Please provide EPA's position regarding the use of PM-10 emissions instead of PM (TSP) when calculating source emissions for Part 70 determinations.

6439

Ms. Jole C. Luehrs

January 7, 1993

Page 2

We need to resolve these questions before we can decide the direction to proceed with this new rule. Your attention to this matter will be greatly appreciated.

Thank you for your continued help and cooperation,

Sincerely,

RE: Protocol for Field Study of Grain Dust Emissions

Dear Drs. Kenkel and Noyes:

I have reviewed the proposed protocol for the grain dust emissions field study and have discussed it with other members of our staff. I believe the proposal will provide us some valuable data for comparison with the emission factors provided in AP-42. The mass balance approach seems to be the best method available to us in this short time frame. The results of this study should provide us with scientifically sound, unbiased data that can be used to make acceptable adjustments to the AP-42 factors if warranted.

We do have some concerns that will have to be considered when we are examining the results. Due to financial and time constraints certain issues cannot be addressed in this study, however, they must be considered in our final analysis of the data produced from this study. For this reason we would like to clearly voice these concerns now so that they will be known to everyone involved and any possible revisions of the protocol can be made at this time to address these concerns where possible.

We must look carefully at the results of this study and consider the implications regarding grain dust emissions. If everyone involved accepts the study as unbiased and scientific, then we will consider the results regardless of whether they are lower or higher than the AP-42 calculated emissions.

In addition, we need to take into account the quality or grade of the grain used in each test run. I think we would prefer that more than one test be performed using different grades of grain in each. However, I realize this may not be possible due to time limitations and availability of grain. At a minimum the grade of the grain used must be well documented.

6441

Drs. Kenkel and Noyes
February 14, 1994
Page 2

There are many situations at grain elevators which can cause variations in dust emissions and we will not be able to account for each of these in this study. However, certain situations must at least be considered when analyzing the results. We will want to consider possible differences in the emissions from elevators which are very near capacity versus those which are nearly empty. In addition, we must consider if the results are representative of emissions from grain which has been turned/handled several times as well as for freshly harvested grain.

We feel the biggest drawback of this method is the fact that the results will be facility-wide. Thus, we will not have results which can be compared with AP-42 factors for each point/process at the facility. We will only be able to compare the results with the sum of the AP-42 calculated emissions for each point. However, we feel this is the best method available at this time considering the economic and time limitations. We will make appropriate adjustments to AP-42 emission factors (if the study warrants) with this and any other considerations in mind.

A response to these comments is not necessary unless certain changes to the protocol will be implemented to account for these concerns. Otherwise, we will discuss any concerns when analyzing the results.

Please contact our office as soon as possible testing facilities have been identified. We are anxious to get the project underway and would like to have the opportunity to be present during the testing. Please feel free to contact me at 271-5220 ext.116 if you have any questions. Thank you for your continued cooperation.

RE: Request for Assistance on Fugitive Dust Emissions by the Oklahoma Department of Environmental Quality and the Oklahoma Grain Elevator Industry

Dear Mr. Byrum;

On January 3, we met with representatives of the Oklahoma Department of Environmental Quality. During that meeting, they indicated the need for technical assistance in working with the grain elevator fugitive dust issue. In our discussion, they indicated a concern with the accuracy of emission data in Table AP-42, but felt that there was not suitable data available to support alternative emission factors. While they were sympathetic with the grain industries concern over the economic impact of the proposed grain dust regulations, they emphasized their need to base emission factors on realistic, scientifically based estimates of grain elevator dust emissions.

Shortly after our meeting with DEQ representatives, the Oklahoma Grain Elevator Task Force involved in developing Sub-Chapter 24 of Oklahoma Air Quality Regulations contacted us with similar concerns over basing the fugitive dust emission calculations on the EPA Table AP-42, and asked for technical assistance from OSU.

During the past week, we reviewed the Final Report, Contract No. 68-02-0228, Task No. 24 prepared by Midwestern Research Institute for EPA where the AP-42 data was developed. From this review, a number of concerns are raised about this research, including the weighing systems and the reintroduction of the dust to the grain stream, where it appears that the researchers may have recovered and measured part of the same dust more than once. The measurement process we propose in this study eliminates that type of problem.

In recognition of the importance of this issue and in response to these requests for fugitive dust emission information, we are proposing that OSU conduct a study of overall grain dust emissions. We have developed the protocol for a model field study of three categories of elevators. Given the time and budgetary constraints, we feel that this study represents the best avenue of providing scientifically sound, unbiased data on this important issue.

6943

We understand from our discussions with the DEQ representatives that the draft regulations need to be finalized during the next two months. This time frame works best within our regular university work schedules, as we have heavy time commitments from mid-March through mid-May. If you and the Air Quality Council concur with the need for this research, the protocol and field study preparations should be quickly finalized.

Our objective is to serve as an unbiased third party in conducting research which addresses the concerns of DEQ and the grain elevator industry. If all of the concerned parties agree with this important study, we would hope to work closely with the council and DEQ in finalizing the research protocol. In light of the time pressures involved it would be helpful if you could review this proposal and let us know your response within the next week. If needed, we will meet with you, your staff, and representatives of DEQ to discuss this proposed study.

We look forward to your response.

Sincerely

SITUATION

The 1990 Federal Clean Air Act amendments (FCAA) require states to regulate industries and facilities that emit air pollutants. The EPA must approve state plans to enforce the FCAA within the set standards of the amendments. The interpretation and definition of the amendments have not been completed or specified in some commercial agricultural areas in Oklahoma, including grain elevators and feed mills.

An EPA document entitled AP-42 contains tables of emission factors for various air pollutants from different sources, including agriculture and the grain industry. The emission factors for commercial grain handling facilities are based on EPA sponsored research reported by Midwest Research Institute in "Potential Dust Emissions from a Grain Elevator in Kansas City, Missouri", the Final Report, Contract No. 68-02-0228, Task No. 24 prepared by Midwestern Research Institute for EPA where the AP-42 data was developed.

Our review of the Midwest Research document indicates several serious research problems. Three significant problems were: 1] the grain dust weighing system, which did not operate accurately part of the time; 2] the grain dust routing system where the dust was discharged back into the grain, where in some cases, the same dust may have been recovered more than once; and 3] the fact that their tests involved extracting data from a high velocity negative air aspiration filtering system, which collected grain dust, fine grain particles, and foreign material, some of which did not have the potential to become airborne, this was not a true fugitive dust collection study.

6445

Grain elevator industry managers and university stored grain research and extension scientists in several states, including Oklahoma, are concerned about the accuracy of AP-42 table values because of biased research techniques, they believe the AP-42 table contains unrealistically high grain handling emission factors.

PROPOSED STUDY

If AP-42 emission data are biased and do not represent a valid and reasonable representation of dust emissions from grain transfer systems in elevators, the use of this data imposes an unrealistic loss penalty to Oklahoma grain handlers. Government and industry personnel agree that research is needed to validate or refute AP-42 emission factors. The appropriateness of AP-42 emission factors for Oklahoma elevators is extremely important since controlling grain dust will have a large economic impact on the Oklahoma grain industry. Resources and time are not available to conduct the complex engineering and economic studies needed to reconstruct and validate all emission source data points listed by AP-42.

The Oklahoma Department of Environmental Quality has expressed intention to work with the grain industry to develop a plan which complies with the 1990 Federal Clean Air Act requirements but minimizes the adverse economic impact on the industry. If the AP-42 emission factors are inappropriate for Oklahoma grain elevators, any alternative measures or adjustments to the AP-42 estimates must be based on sound, unbiased research.

Requests have been made by DEQ leaders and the Oklahoma elevator task force that OSU specialists develop a study to document levels of emissions from representative grain elevators. In keeping with its public service role, it is proposed that faculty specialists and technicians from the Division of Agricultural Sciences and Natural Resources, Oklahoma State University assist in providing additional information on this important issue. OSU has a strong, multidisciplinary team of specialists working in stored grain who are qualified, unbiased (as evidenced by national publications, receipts of unsolicited federal grants, and invitations to present at national and international stored grain conferences) and are willing to assist in this effort.

Based on these requests, the following model research project is developed to determine overall levels of grain dust emitted during grain handling operations, typical in both country and terminal elevators.

RESEARCH OBJECTIVES

Within the existing time and budget constraints, resources are not available to replicate and validate the original research on which AP-42 is based. The following study has been designed to document general composite estimates of potential fugitive grain dust emissions for typical Oklahoma grain elevator facility operations.

Specific objectives include:

1. Determine the total weight loss (shrinkage) from complete and partial handling cycles in typical types of grain elevator facilities (concrete silos in country elevators, steel tanks at country elevators, and concrete facility at terminal elevators).
2. Determine the proportion of the previously identified weight loss that can be accounted for by measured moisture loss and recovered grain (sweepings) within the elevator facility and premises.
3. Based on the results of objectives 1 and 2, determine upper limits of dust which could be emitted by each type of elevator facility. If these upper limits are lower than the amounts implied by the AP-42, procedures for adjusting the AP-42 estimates will be proposed.

RESEARCH BASIS

Grain dust emissions are measured on the basis of units weight of dust per weight of product (i.e. pounds dust/ton of grain). If a specified lot [weight] of grain is brought into a grain facility, unloaded, moved through specific processes, held in storage until the entire lot is received, then loaded out and weighed again immediately during load out, the difference in the original weight of the incoming grain and the outgoing weight of grain will be the *maximum potential amount of dust emitted* by the sum of the processes involved.

At that point, total weight in minus total weight out = gross weight differential. The gross weight differential does not account for other losses which may occur during normal handling that do not constitute fugitive dust emissions. For example, recovered grain materials like grain dust, kernel particles and foreign material (sweepings) that were part of the total weight in that are released from the grain but fall or settle to the floor, ground, driveway or other parts of the elevator facility and are retained within the facility premises. The net difference between the gross weight differential determined by scale weights minus the recovered grain materials that are weighed and moisture loss is the net fugitive grain dust that is emitted to atmosphere, or gross weight differential - recovered grain material - moisture loss - sweepings = fugitive grain dust emitted.

STUDY DESIGN

Several elevator locations identified by the OSU research team will be reviewed to select the three locations to be used as test sites. Testing is estimated at one day per elevator site, or three days total.

Hard red winter wheat will be brought into the elevator by truck, weighed on the truck scale, unloaded at the grain pit, elevated through the leg, discharged through the distributor and down spouts directly into a steel bin or concrete silo, or discharged onto a conveyor belt, conveyed down a belt and discharged through a tripper into a concrete silo. All grain in each test will be accumulated in the storage tank or silo before any unloading begins. Unloading will be continuous until the storage structure is empty.

A steel bin will be unloaded either by auger, by side draw gravity spout or elevated through the leg and loaded onto trucks, then weighed. A country elevator concrete silo will be unloaded via a belt, leg and down spout into trucks, then weighed. A terminal elevator concrete silo will be unloaded via a belt and leg and down spouts to trucks, then weighed. Each storage structure and the remainder of the elevator where dust settled from conveyors or spouts will be cleaned and the sweepings weighed.

A minimum volume of at least 25,000 bushels (1,500,000 lbs.) of Oklahoma hard red winter wheat will be unloaded, handled, and outloaded through three different representative elevators within the state. The actual volume may be higher, based on the elevator selected for the test. The incoming and outgoing grain will be weighed on certified scales checked by a state licensed inspector. Scales with weight increments of 20 lbs. that are accurate to within 0.10% of the maximum capacity of the scale will be used. Thus, if the weight loss of 7,816 is off by 0.10% or 0.001, that would be 7.8 lbs.

All areas of the elevator involved in these grain handling tests will be cleaned immediately before the test at each elevator, be inspected by OSU representatives and sealed off during the test. Cleanup of dust, trash and grain particles will be conducted under the supervision of OSU specialists immediately after the last grain is weighed, to allow for adjustment of the weight differential.

In order to test both country and terminal elevators using steel and concrete storage facilities, three types of facilities are proposed for testing:

1. A country elevator using steel bin storage and a leg capacity of 7,000-12,000 bu/hr with a direct unload auger, tank side draw unload spout, or leg and down spout loadout to trucks for weighing out.
2. A country elevator with concrete silo storage and leg capacity of 7,000-12,000 bu/hr. Leg can dump directly into the silo from down spout, and grain can return to leg for down spout load out to trucks for weighing out.

3. A terminal elevator with concrete silo storage and leg capacity of 10,000-20,000 bu/hr. Leg to dump on gallery belt with tripper discharge into concrete silo; silo unloads onto tunnel belt to leg for down spout load out to trucks for weighing out.

Note: It is not necessary to evaluate steel tanks at terminal elevators since each bin size at terminal facilities are similar in size to tanks at country elevators.

Both accountable (moisture loss and floor sweepings) and unaccountable (potential fugitive dust) grain handling weight loss will be measured in three typical elevator facilities. Each facility will be cleaned before the test lot of grain is transferred through the facility and loaded back out; dust, trash and grain kernel particles accumulated on the floors and equipment will be collected and weighed. These sweepings will be combined with computed moisture loss, and will be subtracted from the test lot weight loss differential to determine the actual product weight loss emitted as fugitive dust - - dust which actually leaves the premises.

Grain handling at many country elevators often does not involve head house or tunnel belt conveying operations. Grain is typically unloaded directly out of steel grain bins and silos by down spout or inclined auger conveyors, without returning to the main leg. In the test model for country elevators, we propose to use a modified handling path that elevates the grain one time through the main elevator leg, with unloading coming from the storage unit directly back into the truck for weighing.

Moisture is a potential component that can be accounted for by accurately measuring grain moisture content and weight before and after each complete transfer process. **Example:** 25,000 bushels of HRW wheat weighed in at 1,500,000 lbs. and weighed out at 1,494,340 lbs., with a gross weight loss of 5,660 lbs. Assume the housekeeping cleanup operation sweepings weighed 1,880 lbs. and that the average moisture level of incoming wheat was 11.23% [wet basis] and outgoing wheat averaged 11.18% [wet basis].

The weight loss of the original grain lot due to moisture loss is computed by the formula:

$$FGW = IGW \times \left[1 - \frac{IMC}{100} \right] / \left[1 - \frac{FMC}{100} \right]; \quad \text{[Equation 1]}$$

$$MWL = IGW - FGW; \quad \text{[Equation 2]}$$

Substituting Equation 1 for FGW in Equation 2,

$$MWL = IGW - IGW \times \left[1 - \frac{IMC}{100} \right] / \left[1 - \frac{FMC}{100} \right]. \quad \text{[Equation 3]}$$

6949

where:

MWL = Moisture Weight Loss
IGW = Initial Grain Weight
FGW = Final Grain Weight
IMC = Initial Moisture Content
FMC = Final Moisture Content

$$\text{Then, MWL} = 1,500,000 - 1,500,000 \times \frac{[1 - 0.1123]}{[1 - 0.1118]} = 1,500,000 - 1,499,155.6;$$

MWL = 844.40 lbs. of water lost during the handling process.

Thus, the total loss of fugitive grain dust would be 1,500,000 - 1,494,340 - 1,880 - 844 = 2,936 lbs. Dividing 2,936 lbs. by 1,500,000 lbs. = 0.0019573, or 0.196% fugitive emission dust loss.

PROCEDURAL GUIDELINES

Procedural guidelines proposed by OSU grain handling specialists are:

1. OSU specialists and technicians will act as third party representatives to monitor all test functions and activities, certifying that truck or elevator batch scales used in the test have been inspected within the normal allotted time specified by state law for weights and measures.
2. Tests will be conducted at three Oklahoma grain elevators with facilities that are representative of operations typical of Oklahoma grain elevator operations.
3. Test lots of about 25,000 bushels [approximately 1,500,000 lbs.] of hard red winter wheat will be transferred at each of three selected elevator facilities, with OSU specialists selecting typical grain lots to be transferred.
4. Grain facilities will be swept clean immediately prior to the test so that test grain lot fractions, foreign material and dust that falls or settles on the premises can be recovered for weighing to compute the fugitive grain dust component of the test. All areas involved in handling the test lot of grain will be inspected and sealed off or monitored by OSU specialists or technicians.
5. Since AP-42 is based on a grain elevator with no dust control, all dust control devices in the elevator system will be shut off during the entire test and controls to these devices will be sealed off by OSU specialists.

6. Grain bins or silos that receive, accumulate and hold the test lot of grain will be cleaned, inspected by OSU specialists, and sealed off prior to and during the tests. Cleanup of the bins or silos will be under the supervision of OSU specialists.

7. Trucks used for transporting will be inspected, fuel tanks topped off, and fuel will be added at periodic intervals to maintain the truck tare weight at the initial test weight for weighing operations, or each empty truck will be re-weighed after five loads to see if the tare weight has changed significantly.

8. Each truck load of wheat going in and coming out will be sampled for moisture and a composite moisture will be established for the total initial lot weight and final lot weight so that the grain lot moisture differential weight can be computed for each test.

9. Fugitive dust emissions for each elevator test will be computed by taking the initial lot weight minus final lot weight, minus sweepings, minus moisture loss differential.

10. Fugitive dust emissions weight for each of the three elevator tests will be computed as a percentage of grain handled, and this value will be used as a ratio factor multiplier for a given type of elevator to adjust the total emission value for each type of elevator grain handling operation.

11. Department of Environmental Quality and Elevator Industry representatives are invited to be on hand during the tests to observe the test operations, so each group fully understands and is in agreement with test procedures.

12. Test result modifiers of AP-42 table values can be included in Sub-Chapter 24 language as relates to fugitive dust emissions [in place of original AP-42 data only]. These can then be submitted for approval by the Air Quality Council and Region 6 EPA administrators.

IMPLICATIONS

The results of this experiment are expected to demonstrate the relative maximum amounts of dust emitted by handling grain through complete processes at facilities which are typical of dust emission processes that normally occur in country and terminal elevators.

The sum of the emission factors from AP-42 for the cumulative processes by which the grain is handled can be compared to the losses that actually occur during each composite handling experiment. If the actual emissions are significantly less, then a correction factor can be applied to AP-42 values to provide more reasonable emission factors for the Oklahoma grain industry.

MEMORANDUM

SUBJECT: Definition of Regulated Air Pollutant for Purposes of Title V

FROM: Lydia N. Wegman, Deputy Director
Office of Air Quality Planning and Standards (MD-10)

TO: Air Division Director, Regions I-X

In response to requests for guidance on the definition of "regulated air pollutant," this memorandum clarifies the approach set forth by the definition in the 40 CFR part 70 regulations and indicates the ways in which the class of regulated air pollutants can change. The attachment provides a compilation of the lists of pollutants which are considered "regulated air pollutants" for purposes of the operating permits programs under title V of the Clean Air Act (Act). This memorandum also provides guidance on the Environmental Protection Agency's (EPA) definition of "air pollutant," as that term is used in determining major source status pursuant to section 302 of the Act. Finally, this memorandum emphasizes the ability of permitting authorities to designate certain quantities of emissions of regulated air pollutants as "insignificant" with respect to the obligation to report emissions of those pollutants in permit applications. The policies set out in this memorandum and attachment are intended solely as guidance, not final agency action, and cannot be relied upon to create any rights enforceable by any party.

I. Regulated Air Pollutant

The definition of regulated air pollutant, found at 40 CFR 70.2 is important because it determines which pollutants and emissions units must be addressed in a source's title V permit application. In addition, this definition can affect whether a State's fee revenue is presumed adequate to fund its title V program and in some cases, the amount of permit fees a source must pay. Each of these roles is discussed below.

Once a source is subject to a title V permitting program, its emissions of all regulated air pollutants (except those which meet the permitting authority's criteria for "insignificant" emissions) must be described in the permit application along with all emissions of pollutants for which the source is considered major. Similarly, applications must describe all emissions units

which emit regulated air pollutants (except those deemed insignificant).

In addition, the concept of regulated air pollutant plays an important role in the area of permit fees. First, regulated air pollutants are the starting point for determining which pollutants must be included when relying on the \$25 ton per year (as adjusted by the consumer price index) presumptive minimum program cost as a basis for demonstrating the adequacy of a State's projected fee revenue. As part of this demonstration, the State projects its revenue using a subset of regulated air pollutants [i.e., regulated pollutant (for presumptive fee calculation)]. Second, many States are developing fee schedules which impose fees based on emissions of regulated air pollutants."

The population of regulated air pollutants is composed of the following categories of pollutants:

(1) Nitrogen oxides (NO_x) and volatile organic compounds (VOC's). The definition of regulated air pollutant specifically includes these two significant precursors to ozone formation. This approach is consistent with the Act's treatment of VOC's and NO_x pursuant to part D of title I of the Act. (These ozone precursors are combined with the criteria pollutants for purposes of the attached list of regulated pollutants);

(2) Any pollutant for which a national ambient air quality standard has been promulgated [i.e., particulate matter (measured as PM-10: particles with an aerodynamic diameter less than or equal to a nominal 10 micrometers), sulfur dioxide, ozone, nitrogen dioxide, carbon monoxide, and lead];

(3) Any pollutant that is subject to a new source performance standard promulgated under section 111 of the Act [including section 111(d)], which require new and modified sources to satisfy emissions standards, work practice standards, and other requirements;

(4) Any of the ozone depleting substances specified as a Class I (primarily chlorofluorocarbons) or Class II substance (hydrochlorofluorocarbons) under title VI of the Act [all of which became regulated pollutants when they became subject to standards and requirements for (1) servicing of motor vehicle air conditioners and (2) restrictions on the sale of ozone-depleting substances promulgated into 40 CFR part 82 (57 FR 31242, July 14, 1992)]; and

(5) Any pollutant subject to a standard promulgated under section 112 or other requirements established under section 112 of the Act, including sections 112(g)(2), (j), and (r) of the Act.

It is important to note that, if a pollutant is regulated

for one source category by a standard or other requirement, then the pollutant is considered a regulated air pollutant for all source categories. This rule is relevant to all the pollutants listed under items (3), (4), and (5) above with one exception: those which are the subject of case-by-case MACT determinations under section 112(g)(2).

The issue of when a substance regulated under section 112 becomes a regulated air pollutant merits further discussion:

- When a permitting authority makes a case-by-case MACT determination under section 112(g)(2), then the pollutant for which the determination is made is regulated even though EPA has not issued a standard for that pollutant. However, the pollutant is considered regulated only with respect to the individual source for which the MACT determination was made.
- A pollutant will become regulated under section 112(j) of the Act (the "MACT hammer") if the Administrator fails to promulgate a standard by the date established pursuant to section 112(e) of the Act. Pursuant to section 112(j), permitting authorities will be required to make case-by-case MACT equivalent determinations. The pollutants become regulated nationwide upon the date this provision takes effect for the pollutant (i.e., 18 months after the missed deadline for the standard but not prior to 42 months after the enactment of the Act Amendments of 1990). Pollutants so regulated are considered regulated air pollutants for all sources that emit the pollutant because the hammer provision is a broadly applicable surrogate for the promulgation of a MACT standard. This is in contrast to the section 112(g)(2) determinations which are triggered only for the single source subject to the requirement, rather than nationwide.
- The EPA's proposed rule required by section 112(r)(3), lists substances which could cause or may reasonably be anticipated to cause death, injury, or serious adverse effects to human health or the environment if accidentally released, was published in the Federal Register on January 19, 1993 (58 FR 5102). All of the listed pollutants will become regulated air pollutants upon promulgation of the list.

The attachment to this memorandum contains a list of pollutants which are regulated as well as a list of pollutants which are subject to regulation under section 112 in the future, as discussed above. It is also important to note that the attached lists are dynamic and subject to change. For example, the EPA is required to review periodically the statutory list of pollutants in section 112(b) and is authorized to delete and add substances if the scientific data demonstrate that such a change

is appropriate.

We have attempted to note the likely near-term changes in the regulations that determine which pollutants are "regulated air pollutants," and we will provide updates to this guidance periodically.

The definition of regulated air pollutants does not limit the air pollutants which a State may choose to regulate nor does it limit the information (such as for permit applications) which a State may require of a source. States are free to adopt more expansive approaches to the regulation of toxic air pollutants than is required by part 70.

II. Definition of "Air Pollutant" Pursuant to Section 302

Considerable interest has been expressed in a related, but distinct, area: the definition of "air pollutant" contained in section 302(g) of the Act. This definition governs which pollutants are to be considered in determining whether a source is "major" pursuant to section 302(j) of the Act. This is important to the operating permit program because all major sources must obtain a title V permit. Although section 302(g) can be read quite broadly, so as to encompass virtually any substance emitted into the atmosphere, EPA believes that it is more consistent with the intent of Congress to interpret this provision more narrowly. Were this not done, a variety of sources that have no known prospect for future regulation under the Act would nonetheless be classified as major sources and be required to apply for title V permits. Of particular concern would be sources of carbon dioxide or methane.

As a result, EPA is interpreting "air pollutant" for section 302(g) purposes as limited to all pollutants subject to regulation under the Act. This would include, of course, all regulated air pollutants plus others specified by the Act or by EPA rulemaking. This approach results in the inclusion of the pollutants on the list of hazardous air pollutants in section 112(b) that are not otherwise regulated. It should be noted that the 1990 Amendments to the Act did include provisions with respect to carbon dioxide (section 821) and methane (section 603), but these requirements involve actions such as reporting and study, not actual control of emissions. Therefore, these provisions do not preempt EPA's discretion to exclude these pollutants in determining whether a source is major. If the results of the studies required by the 1990 Amendments to the Act suggest the need for regulation, these pollutants could be reconsidered at that time for classification as pollutants subject to regulation under the Act.

This approach to interpreting section 302(g) is similar to

the traditional practice of the prevention of significant deterioration (PSD) program under part C of title I of the Act [see, e.g., Implementation of North County Resource Recovery PSD Remand, Gerald Emison, Director, OAQPS, dated September 22, 1987].

III. De Minimis Thresholds

With the 1990 Amendments, the Act expressly addresses a significantly broader range of pollutants. The EPA believes that this will confer real benefits to air quality management and that the title V permit program offers the flexibility for efficient implementation of these requirements. This function includes providing information about emissions of these pollutants, through the permit application process, even if the particular pollutant is not currently required to be controlled at the individual source. The EPA also realizes, though, that in many cases these pollutants are emitted in amounts of no significance to air quality management. It would be unduly burdensome to require permit applicants to quantify all emissions of these pollutants, especially given their considerable number and, in some cases, difficulty in quantification.

The part 70 promulgation recognized this fact but gave only very general guidance as to the approvable options for States in developing their part 70 programs. Section 70.5(c) provides that "[T]he Administrator may approve as part of a State program a list of insignificant activities and emissions levels which need not be included in permit applications." The regulation further provides that "[T]he permitting authority shall require additional information related to the emissions of air pollutants sufficient to verify which requirements are applicable to the source, and other information needed to collect any permit fees owed under the fee schedule approved pursuant to §70.9(b) of this part." §70.5(c)(3)(i).

The EPA understands the need for States to establish de minimis thresholds for emissions reporting purposes in permit applications and recognizes that the particular thresholds selected by individual States can vary based on their air quality management needs and professional judgement. The EPA will work with States to develop part 70 programs that will best meet their program needs.

For further information, call Kirt Cox at (919) 541-5399 or Candace Carraway at (919) 541-3189.

LIST OF REGULATED AIR POLLUTANTS
 (As of April 1993)

I. Pollutants for Which an NAAQS Has Been Established

lead
 sulfur dioxide
 nitrogen dioxide
 carbon monoxide
 particulate matter (PM10)
 ozone, including precursors:
 nitrogen oxides (NO, NO₂, NO₃, N₂O, N₂O₃, N₂O₄, N₂O₅)
 volatile organic compounds (VOC's)

As defined in 40 CFR 51.100(s), the term VOC includes any compound of carbon (excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate) which participates in atmospheric photochemical reactions. The EPA has developed a list of substances (which is subject to change) which are excluded from the VOC definition because of their negligible reactivity. The EPA's proposal to exclude perchloroethylene from the definition was published in 57 FR 48490 (October 26, 1992).

The following organic compounds are excluded from the definition of VOC because of they have been determined to have negligible photochemical reactivity:

methane
 ethane
 methylene chloride (dichloromethane)
 1,1,1-trichloroethane (methyl chloroform)
 1,1,1-trichloro-2,2,2-trifluoroethane (CFC-113)
 trichlorofluoromethane (CFC-11)
 dichlorodifluoromethane (CFC-12)
 chlorodifluoromethane (CFC-22)
 trifluoromethane (FC-23)
 1,2-dichloro 1,1,2,2-tetrafluoroethane (CFC-114)
 chloropentafluoroethane (CFC-115)
 1,1,1-trifluoro 2,2-dichloroethane (HCFC-123)
 1,1,1,2-tetrafluoroethane (HFC-134a)
 1,1-dichloro 1-fluoroethane (HCFC-141b)
 1-chloro 1,1-difluoroethane (HCFC-142b)
 2-chloro-1,1,1,2-tetrafluoroethane (HCFC-124)
 pentafluoroethane (HFC-125)
 1,1,2,2-tetrafluoroethane (HFC-134)

1,1,1-trifluoroethane (HFC-143a)
 1,1-difluoroethane (HFC-152a)

perfluorocarbon compounds which fall into these classes:

- (i) Cyclic, branched, or linear, completely fluorinated alkanes;
- (ii) Cyclic, branched, or linear, completely fluorinated ethers with no unsaturations;
- (iii) Cyclic, branched, or linear, completely fluorinated tertiary amines with no unsaturations; and
- (iv) Sulfur containing perfluorocarbons with no unsaturations and with sulfur bonds only to carbon and fluorine.

II. Pollutants Regulated Under New Source Performance Standards

Criteria pollutants (including VOC's and NO_x) plus:

dioxin/furan (defined in 40 CFR 60.53a to mean total tetra through octachlorinated dibenzo-p-dioxins and dibenzofurans)
 fluorides
 hydrogen chloride
 hydrogen sulfide (H₂S)
 sulfuric acid mist
 total reduced sulfur
 reduced sulfur compounds
 total suspended particulate

* The new source performance standard (NSPS) for municipal waste combustors (MWC) controls emissions of dioxin/furans and hydrogen chloride gas (40 CFR 60.53a and 60.54a) as surrogates for controlling emissions of organic compounds and acid gases which are emitted in the exhaust gases from MWC units. Thus, the indicated dioxin/furan compounds and hydrogen chloride are regulated pollutants.

Note that the EPA has drafted a proposed revision to the NSPS for MWC's which will regulate substances like cadmium which are not currently regulated air pollutants. As this revised NSPS and other standards are developed, there may be additions to the list of regulated pollutants.

III. Class I and Class II Substances Under Title VI

Class I Substances

carbon tetrachloride
chlorofluorocarbon-11 (CFC-11)
chlorofluorocarbon-12 (CFC-12)
chlorofluorocarbon-13 (CFC-13)
chlorofluorocarbon-111 (CFC-111)
chlorofluorocarbon-112 (CFC-112)
chlorofluorocarbon-113 (CFC-113)
chlorofluorocarbon-114 (CFC-114)
chlorofluorocarbon-115 (CFC-115)
chlorofluorocarbon-211 (CFC-211)
chlorofluorocarbon-212 (CFC-212)
chlorofluorocarbon-213 (CFC-213)
chlorofluorocarbon-214 (CFC-214)
chlorofluorocarbon-215 (CFC-215)
chlorofluorocarbon-216 (CFC-216)
chlorofluorocarbon-217 (CFC-217)
halon-1211
halon-1301
halon-2402
methyl chloroform

Class II Substances

hydrochlorofluorocarbon-21 (HCFC-21)
hydrochlorofluorocarbon-22 (HCFC-22)
hydrochlorofluorocarbon-31 (HCFC-31)
hydrochlorofluorocarbon-121 (HCFC-121)
hydrochlorofluorocarbon-122 (HCFC-122)
hydrochlorofluorocarbon-123 (HCFC-123)
hydrochlorofluorocarbon-124 (HCFC-124)
hydrochlorofluorocarbon-131 (HCFC-131)
hydrochlorofluorocarbon-132 (HCFC-132)
hydrochlorofluorocarbon-133 (HCFC-133)
hydrochlorofluorocarbon-141 (HCFC-141)
hydrochlorofluorocarbon-142 (HCFC-142)
hydrochlorofluorocarbon-221 (HCFC-221)
hydrochlorofluorocarbon-222 (HCFC-222)
hydrochlorofluorocarbon-223 (HCFC-223)
hydrochlorofluorocarbon-224 (HCFC-224)
hydrochlorofluorocarbon-225 (HCFC-225)
hydrochlorofluorocarbon-226 (HCFC-226)
hydrochlorofluorocarbon-231 (HCFC-231)
hydrochlorofluorocarbon-232 (HCFC-232)

hydrochlorofluorocarbon-233 (HCFC-233)
hydrochlorofluorocarbon-234 (HCFC-234)
hydrochlorofluorocarbon-235 (HCFC-235)
hydrochlorofluorocarbon-241 (HCFC-241)
hydrochlorofluorocarbon-242 (HCFC-242)
hydrochlorofluorocarbon-243 (HCFC-243)
hydrochlorofluorocarbon-244 (HCFC-244)
hydrochlorofluorocarbon-251 (HCFC-251)
hydrochlorofluorocarbon-252 (HCFC-252)
hydrochlorofluorocarbon-253 (HCFC-253)
hydrochlorofluorocarbon-261 (HCFC-261)
hydrochlorofluorocarbon-262 (HCFC-262)
hydrochlorofluorocarbon-271 (HCFC-271)

IV. Pollutants Regulated Under Section 112

pollutants for which national emission standards for hazardous air pollutants (NESHAP's) have been established:

arsenic
asbestos
beryllium
benzene
mercury
radionuclides
vinyl chloride

POLLUTANTS SUBJECT TO REGULATION UNDER SECTION 112

I. Pollutants listed in Section 112(b):

The 189 pollutants listed in section 112(b) are not considered regulated air pollutants until addressed in a requirement that it be controlled by a source. None of the listed pollutants meets the definition except: asbestos, benzene, and vinyl chloride (for which NESHAP's have been established); and hydrogen chloride (gas), dibenzofurans, and 2,3,7,8-Tetrachlorodibenzo-p-dioxin (regulated under the municipal waste combustor NSPS). Most of the listed pollutants will become regulated when EPA promulgates the Hazardous Organic NESHAP (HON) which is discussed below. The remaining pollutants will become regulated: (1) when EPA promulgates a Maximum Achievable Control Technology (MACT) standard for the pollutant under section 112(d), (2) for a particular source, when case-by-case MACT determinations are made under section 112(g) for the source, or (3) the later of June 15, 1994 or 18 months after EPA fails to issue emissions standards for categories of sources in compliance with the timetable promulgated pursuant to section 112(e) as mandated by Section 112(j).

The section 112(b) list contains some technical errors which will be corrected in subsequent rulemaking. The majority of the technical corrections likely to be made are noted below. Also, the pollutants from the 112(b) list which are addressed in the proposed HON are followed by an asterisk.

CAS number	Chemical name
75070	Acetaldehyde*
60355	Acetamide*
75058	Acetonitrile*
98862	Acetophenone*
53963	2-Acetylaminofluorene*
107028	Acrolein*
79061	Acrylamide*
79107	Acrylic acid*
107131	Acrylonitrile*
107051	Allyl chloride*
92671	4-Aminobiphenyl*
62533	Aniline*
90040	o-Anisidine*
1332214	Asbestos
71432	Benzene (including benzene from gasoline)*
92875	Benzidine*

6461

98077 Benzotrichloride*
 100447 Benzyl chloride*
 92524 Biphenyl*
 117817 Bis(2-ethylhexyl)phthalate (DEHP)*
 542881 Bis(chloromethyl)ether*
 75252 Bromoform*
 106990 1,3-Butadiene*
 156627 Calcium cyanamide
 105602 Caprolactam*
 133062 Captan
 63252 Carbaryl
 75150 Carbon disulfide*
 56235 Carbon tetrachloride*
 463581 Carbonyl sulfide*
 120809 Catechol*
 133904 Chloramben
 57749 Chlordane
 7782505 Chlorine
 79118 Chloroacetic acid*
 532274 2-Chloroacetophenone*
 108907 Chlorobenzene*
 510156 Chlorobenzilate
 67663 Chloroform*
 107302 Chloromethyl methyl ether*
 126998 Chloroprene*
 1319773 Cresols/Cresylic acid (isomers and mixture)*
 95487 o-Cresol*
 108394 m-Cresol*
 106445 p-Cresol*
 98828 Cumene*
 94757 2,4-D (2,4-Dichlorophenoxyacetic acid, including salts and esters)*
 DDE* [recommended technical correction: CAS number 72559] (1,1-dichloro-2,2-bis(p-chlorophenyl)ethylene)
 334883 Diazomethane*
 132649 Dibenzofurans* [recommended technical correction: Dibenzofuran]
 96128 1,2-Dibromo-3-chloropropane*
 84742 Dibutylphthalate*
 106467 1,4-Dichlorobenzene(p)* [recommended technical correction: 1,4-Dichlorobenzene]
 91941 3,3-Dichlorobenzidene* [recommended technical correction: 3,3'-Dichlorobenzidine]
 111444 Dichloroethyl ether (Bis(2-chloroethyl)ether)*
 542756 1,3-Dichloropropene*
 62737 Dichlorvos
 111422 Diethanolamine*
 121697 N,N-Diethyl aniline (N,N-Dimethylaniline)*
 [recommended technical correction: N,N-Dimethylaniline]

64675 Diethyl sulfate*
 119904 3,3-Dimethoxybenzidine* [recommended technical
 correction: 3,3'-Dimethoxybenzidine]
 60117 Dimethyl aminoazobenzene*
 119937 3,3',-Dimethyl benzidine* [recommended technical
 correction: 3,3',-Dimethylbenzidine]
 79447 Dimethyl carbamoyl chloride* [recommended
 technical correction: Dimethylcarbamoyl chloride]
 68122 Dimethyl formamide* [recommended technical
 correction: N,N-Dimethylformamide]
 57147 1,1-Dimethyl hydrazine* [recommended technical
 correction: 1,1-Dimethylhydrazine]
 131113 Dimethyl phthalate*
 77781 Dimethyl sulfate*
 4,6-Dinitro-o-cresol, and salts* [recommended
 technical correction to remove CAS number]
 51285 2,4-Dinitrophenol*
 121142 2,4-Dinitrotoluene*
 123911 1,4-Dioxane (1,4-Diethyleneoxide)*
 122667 1,2-Diphenylhydrazine*
 106898 Epichlorohydrin (1-Chloro-2,3-epoxypropane)*
 106887 1,2-Epoxybutane*
 140885 Ethyl acrylate*
 100414 Ethyl benzene* [recommended technical correction:
 Ethylbenzene]
 51796 Ethyl carbamate (Urethane)*
 75003 Ethyl chloride (Chloroethane)*
 106934 Ethylene dibromide (Dibromoethane)*
 107062 Ethylene dichloride (1,2-Dichloroethane)*
 107211 Ethylene glycol*
 151564 Ethylene imine (Aziridine) [recommended technical
 correction: Ethyleneimine (Aziridine)]
 75218 Ethylene oxide*
 96457 Ethylene thiourea*
 75343 Ethylidene dichloride (1,1-Dichloroethane)*
 50000 Formaldehyde*
 76448 Heptachlor
 118741 Hexachlorobenzene*
 87683 Hexachlorobutadiene*
 77474 Hexachlorocyclopentadiene
 67721 Hexachloroethane*
 822060 Hexamethylene-1,6-diisocyanate*
 680319 Hexamethylphosphoramide*
 110543 Hexane*
 302012 Hydrazine*
 7647010 Hydrochloric acid [recommended technical
 correction: Hydrochloric acid (hydrogen
 chloride)(gas only)]
 7664393 Hydrogen fluoride (Hydrofluoric acid)
 123319 Hydroquinone*
 78591 Isophorone*

	Lindane (all isomers) [Recommended technical correction: 1,2,3,4,5,6-Hexachlorocyclohexane (all stereo isomers, including lindane)]
108316	Maleic anhydride*
67561	Methanol*
72435	Methoxychlor
74839	Methyl bromide (Bromomethane)*
74873	Methyl chloride (Chloromethane)*
71556	Methyl chloroform (1,1,1-Trichloroethane)*
78933	Methyl ethyl ketone (2-Butanone)*
60344	Methyl hydrazine* [recommended technical correction: Methylhydrazine]
74884	Methyl iodide (Iodomethane)*
108101	Methyl isobutyl ketone (Hexone)*
624839	Methyl isocyanate*
80626	Methyl methacrylate*
1634044	Methyl tert butyl ether* [recommended technical correction: Methyl tert-butyl ether]
101144	4,4-Methylene bis(2-chloroaniline)* [recommended technical correction: 4,4'-Methylenebis(2-chloroaniline)]
75092	Methylene chloride (Dichloromethane)*
101688	Methylene diphenyl diisocyanate (MDI)* [recommended technical correction: 4-4' Methylene diphenyl diisocyanate (MDI)]
101779	4,4,-Methylenedianiline*
91203	Naphthalene*
98953	Nitrobenzene*
92933	4-Nitrobiphenyl*
100027	4-Nitrophenol*
79469	2-Nitropropane*
684935	N-Nitroso-N-methylurea*
62759	N-Nitrosodimethylamine*
59892	N-Nitrosomorpholine*
56382	Parathion
82688	Pentachloronitrobenzene (Quintobenzene)
87865	Pentachlorophenol
108952	Phenol*
106503	p-Phenylenediamine*
75445	Phosgene*
7803512	Phosphine
7723140	Phosphorus
85449	Phthalic anhydride*
1336363	Polychlorinated biphenyls (Aroclors)*
1120714	1,3-Propane sultone*
57578	beta-Propiolactone*
123386	Propionaldehyde*
114261	Propoxur (Baygon)*
78875	Propylene dichloride (1,2-Dichloropropane)*
75569	Propylene oxide*
75558	1,2-Propylenimine (2-Methyl aziridine)*

91225	Quinoline
106514	Quinone
100425	Styrene
96093	Styrene oxide
1746016	2,3,7,8-Tetrachlorodibenzo-p-dioxin
79345	1,1,2,2-Tetrachloroethane
127184	Tetrachloroethylene (Perchloroethylene)
7550450	Titanium tetrachloride
108883	Toluene
95807	2,4-Toluene diamine [recommended technical correction: 2,4-Toluenediamine]
584849	2,4-Toluene diisocyanate
95534	o-Toluidine
8001352	Toxaphene (chlorinated camphene)
120821	1,2,4-Trichlorobenzene
79005	1,1,2-Trichloroethane
79016	Trichloroethylene
95954	2,4,5-Trichlorophenol
88062	2,4,6-Trichlorophenol
121448	Triethylamine
1582098	Trifluralin
540841	2,2,4-Trimethylpentane
108054	Vinyl acetate
593602	Vinyl bromide
75014	Vinyl chloride
75354	Vinylidene chloride (1,1-Dichloroethylene)
1330207	Xylenes (isomers and mixture)
95476	o-Xylenes [recommended technical correction: o-Xylene]
108383	m-Xylenes [recommended technical correction: m-Xylene]
106423	p-Xylenes [recommended technical correction: p-Xylene]
0	Antimony Compounds
0	Arsenic Compounds (inorganic including arsine)
0	Beryllium Compounds
0	Cadmium Compounds
0	Chromium Compounds
0	Cobalt Compounds
0	Coke Oven Emissions
0	Cyanide Compounds [1]
0	Glycol ethers [2]
0	Lead Compounds
0	Manganese Compounds
0	Mercury Compounds
0	Fine mineral fibers [3]
0	Nickel Compounds
0	Polycyclic Organic Matter [4] [recommended technical correction: Polycyclic Organic Matter]
0	Radionuclides (including radon) [5]
0	Selenium Compounds

NOTE: For all listings above which contain the word "compounds" and for glycol ethers, the following applies: Unless otherwise specified, these listings are defined as including any unique chemical substance that contains the named chemical (i.e., antimony, arsenic, etc.) as part of that chemical's infrastructure.

1 $X'CN$ where $X = H'$ or any other group where a formal dissociation may occur.

For example KCN or $Ca(CN)_2$

2 Includes mono- and di- ethers of ethylene glycol, diethylene glycol, and triethylene glycol $R-(OCH_2CH_2)_n-OR'$ where

$n = 1, 2, \text{ or } 3$

$R = \text{alkyl or aryl groups}$

$R' = R, H, \text{ or groups which, when removed, yield glycol ethers with the structure: } R-(OCH_2CH)_n-OH.$ [recommended technical correction: $R-(OCH_2CH_2)_n-OH$] Polymers are excluded from the glycol category.

3 Includes mineral fiber emissions from facilities manufacturing or processing glass, rock, or slag fibers (or other mineral derived fibers) of average diameter 1 micrometer or less.

4 Includes organic compounds with more than one benzene ring, and which have a boiling point greater than or equal to $100^\circ C$. [recommended technical correction: Limited to, or refers to, products from incomplete combustion of organic compounds (or material) and pyrolysis processes having more than one benzene ring, and which have a boiling point greater than or equal to $100^\circ C$.]

5 A type of atom which spontaneously undergoes radioactive decay.

II. Pollutants subject to the Hazardous Organic NESHA (HON):

As part of the effort to regulate pollutants listed in section 112(b), the EPA has developed the (HON) which will apply to the synthetic organic chemical manufacturing industry and will control emissions of 149 volatile hazardous air pollutants (HAP's). All of the pollutants listed in the HON are among the 189 HAP's listed in section 112(b) and are identified (with an asterisk) in the preceding section of this document. Pollutants addressed by the HON will become regulated on the effective date specified in the HON.

III. Pollutants listed under Section 112(r):

Section 112(r)(3) requires that EPA promulgate an initial list of at least 100 substances with threshold quantities which would cause or may reasonably be anticipated to cause death, injury, or serious adverse effects to human health or the environment if accidentally released. The EPA's proposed rule to implement 112(r)(3) was published in the Federal Register on January 19, 1993 (58 FR 5102). The proposed list of substances includes 100 acutely toxic substances, 62 flammable gases and volatile flammable liquids, and commercial explosives (classified by the Department of Transportation in Division 1.1). The listed pollutants will become "regulated" for purposes of title V upon final promulgation of the list.

The toxic and flammable substances listed in the proposed rule are arranged alphabetically and by CAS number on the attached lists.

NOTICE

The policies set out in this guidance document are intended solely as guidance and do not represent final agency action and are not ripe for judicial review. They are not intended, nor can they be relied upon, to create any rights enforceable by any party in litigation with the United States. The EPA officials may decide to follow the guidance provided in this guidance document, or to act at variance with the guidance, based on an analysis of specific circumstances. The EPA may also change this guidance at any time without public notice.

GRAIN DUSTS

Summary

Grain dust, a complex and variable mixture of particles from plants, insects, soil, microorganisms, and other sources, produces a number of responses within the respiratory tract. These range from an acute inflammatory response (manifest as nasal stuffiness, rhinorrhea, sore throat, and acute bronchitis) to asthma, chronic obstructive pulmonary disease (including bronchitis and airways obstruction), and rarely, when grain has spoiled, hypersensitivity pneumonitis. An acute febrile response, the toxic organic dust syndrome (TODS), may occur with heavy exposure. Most of these responses are common among grain handlers who work with grain regularly, such as grain elevator workers or grain transporters; dusts are especially prevalent when grain is being moved. Farmers, who inhale grain dusts sporadically, appear to be affected less frequently and severely.

Diagnosis, treatment and prevention of these respiratory responses depend on linking an individual's symptoms to the specific occupational exposure. Reduction of the exposure is crucial, and can be accomplished by good husbandry and housekeeping, good design and ventilation of storage structures, or removal of a grain handler to a less dusty work place. Early recognition of airways obstruction through medical surveillance will help prevent chronic respiratory illness among grain handlers.

I. GRAIN DUSTS IN AGRICULTURE

Dusts from grain consist of a complex mixture of organic and inorganic particles from sources as diverse as leaves, soil, and insect parts. (See Fig. 1) The mixture varies with the type of grain, where it is grown, growing conditions, and methods of harvest, storage, and processing. Most grain dust particles are biologically active vegetable dusts, and a significant amount are respirable (less than 10μ in diameter). Dusts of certain grains such as durum wheat and barley are reported to be more irritating than others.¹ Adverse health effects also increase as moisture content and spoilage increase.

The bulk of particles are from fruits of grasses such as wheat, legumes such as soybeans, or oil seeds such as rape seed. Bits of leaves and stems also may be present. Nonplant contaminants are numerous. Animal material (bits of insects, rodents, or birds, or their excreta), mites, chemical residues (pesticides used to grow or

later treat the grain), and inorganic matter (soil including silica particles) all may be intermixed in small quantities. A variety of fungi and bacteria, their spores, and their by-products also pose a respiratory hazard. Species of microorganisms vary with regional climate and change from harvest through storage. In North America major fungi are *Penicillium* and *Aspergillus* species; thermophilic actinomycetes increase in wet and overheated grain. Many of the components of grain dust are capable of affecting the respiratory tract individually; together, they produce a heterogeneous array of biological effects as outlined in Section II.

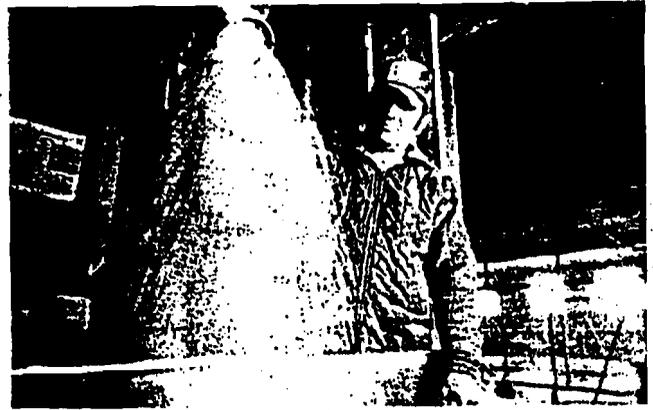

Figure 1

Grain dusts, which may include particles from plants, animals, insects, soil, and microorganisms, as well as chemical residues, can induce a variety of human respiratory responses. Here, grain dusts are being aerosolized as livestock feed is being ground.

Who is exposed to grain dust, and when?

Anyone involved in production, storage, transportation, or processing of grain can suffer the effects of regular inhalation of grain dusts. Exposure starts with farmers and farm workers who grow, harvest, sometimes store, and then transport grain to local storage facilities. These farmers are exposed to grain dust sporadically. Exposure extends far beyond the farm to workers in feed mills, grain elevators, and grain transportation industries. (See Fig. 2) These workers, who are routinely exposed to grain dust, suffer from respiratory responses more commonly and severely than do farmers. Small grain elevator agents and workers store and clean grain, and

may grind and mix it into animal feed. Other workers load and transport it by truck or rail to larger elevators, where it is handled by additional workers, and eventually to terminal elevators at harbors or milling centers that store millions of bushels of grain. Grain is then prepared by dock workers and longshoremen for transport abroad, or is processed by millworkers in feed, flour, or seed mills. This unit covers effects of grain dust inhalation detected among this great variety of agricultural workers, concentrating on the grain handlers who work with grain on a daily basis. Occupational asthma from processed grains is well documented,² but effects of flour dust and other processed grain products among bakers and food handlers are not discussed here.

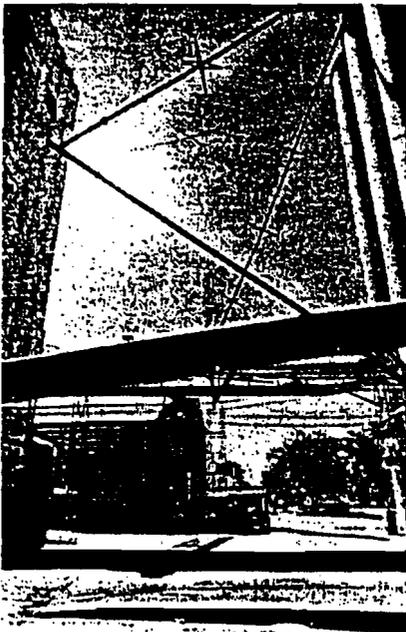

Figure 2

Workers in grain elevators, feed mills, and grain transportation industries are exposed to grain dusts most frequently, and thus suffer from specific respiratory responses more commonly and severely than do farmers.

Exposure to grain dusts can occur at any stage of the above process. Clouds of grain dusts are most evident whenever grain is moved, and especially heavy exposures among any grain handlers occur during dumping and loading grain. (See Fig. 3) In elevators, highest total dust exposures occur during performance of housekeeping and maintenance chores and in towermen working in transfer galleries.³

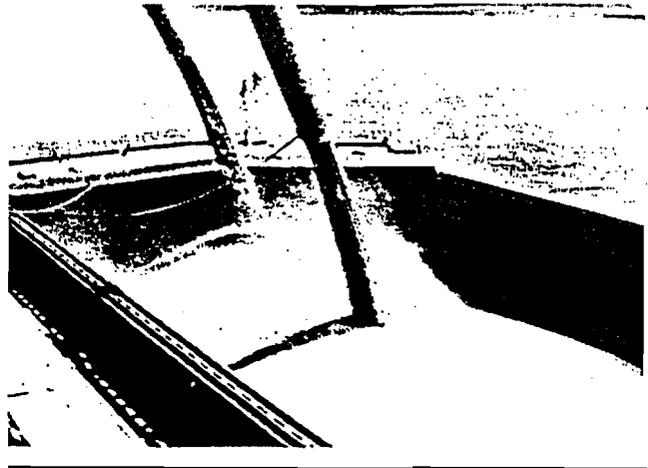

Figure 3

Large quantities of grain dust become aerosolized when grain is moved, such as here, where grain is being loaded onto a barge.

How common is exposure to grain dust?

Grain dust potentially affects a large population: an estimated half million workers (excluding farmers) are involved in storage, transportation, and processing of grain. In addition, huge quantities of dust are known to be generated by the grain industry, making the grain industry a major source of industrial pollution: 27 pounds of dust are emitted for every ton of grain handled, resulting in 1.7 million tons of grain dust produced per year.⁴ The concentration of particles varies widely, but may reach very high levels. Measurements in elevators have ranged from 0.18 to 781 mg/m³ of total dust, with the respirable range extending up to 76.3 mg/m³.⁵ Airborne concentrations of fungal spores often exceed one million spores per cubic meter.

Agricultural workers clearly may be exposed to large quantities of dust. The prevalence of resulting respiratory responses is less well defined. Although prevalence of respiratory responses to grain dust varies from study to study, the presence of cough and phlegm, indicators of bronchitis, are consistently high, generally about twice that of nonexposed populations. Studies also find evidence of airways obstruction and chronic lung disease among greater-than-expected numbers of workers.⁶ Prevalence rates are thought to be higher than those documented, since studies are completed on "survivor populations," those who have not vacated because of adverse effects of grain dust; this is especially common among those with allergic reactions to grain dust. The variation in prevalence of disease probably

stems from the heterogeneous nature of grain dust, as well as from variations in study populations and research techniques.

II. RESPIRATORY EFFECTS OF GRAIN DUST INHALATION

Grain dust reactions represent multiple and simultaneous potential reactions to multiple causative agents. The many reactions and causative agents may create a complex clinical presentation that at times confounds specific diagnosis, causes physicians to describe health effects in general terms, and makes predictions of future health problems difficult.

Further confusing diagnosis is the fact that a single biological response may be caused by different types of grain dust, and a single type of grain dust may cause different types of reactions. In addition, multiple pulmonary responses may occur simultaneously, with involvement of immunological, pharmacological, or physical responses, or a combination of these. Since dust particles range from over 20 μ to less than 5 μ in diameter, they can initiate responses in large and small airways or penetrate the alveoli to initiate biological effects there. Responses may be influenced by smoking history and by length and type of employment in grain handling. Thus, a specific response often cannot be identified with a specific type of grain dust or specific agent within the dust.

Although mechanisms of many of the respiratory responses have not been fully defined, a distinct set of acute and chronic health effects have been correlated with occupational handling of grain. The biological responses to grain dust are summarized in Table 1. Links between these responses and specific constituents of grain dust are outlined in Table 2. These tables and the following descriptions concentrate on responses of workers routinely exposed to grain dusts, as opposed to farmers or others exposed occasionally.

Inhalation of grain dusts may cause an acute inflammatory reaction of the upper airways, including the nasal mucosa, sinuses, and pharynx, manifest in many cases as nasal stuffiness, sore throat, or rhinorrhea. This nuisance effect of grain dusts is a complaint of nearly all grain workers.

"Grain asthma", a form of occupational asthma producing bronchoconstriction with cough, wheezing, and dyspnea, may immediately follow exposure, be delayed several hours, include a dual (immediate and delayed) response, or recur successive nights following exposure. The asthmatic reaction may be caused by any number of grain dust components, but the mechanism for producing the response is not always clear. It is now recognized that delayed asthma (IgG-mediated) may be induced in addition to the classical IgE-mediated immediate response, and that asthma also may be induced through physical or pharmacological

Table 1

Biological Effects of Grain Dust

Effect	Prevalence Among Grain Handlers
Acute respiratory inflammatory response: nasal stuffiness, rhinorrhea, sore throat acute bronchitis	quite common common
Occupational asthma	common
Chronic obstructive pulmonary disease: chronic bronchitis airways obstruction	common occasional to common
Toxic organic dust syndrome (TODS)	occasional
Hypersensitivity pneumonitis	very rare; potentially results from exposure to spoiled grain
Additional irritant effects: eye irritation dermatitis	extremely common occasional to common
Deaths from explosions	rare

6473

mechanisms. The prevalence of grain asthma is thought to be artificially low because persons with asthma allergies either do not seek employment as grain handlers or leave this employment rapidly because of an increase in asthmatic symptoms. However, the prevalence of occupational asthma has been reported to be five times that of workers in other professions [50% (grain handlers) rather than 11% (others) among nonsmokers].⁸

Many complaints associated with grain dust fall into the category of **chronic obstructive pulmonary disease**. Bronchitis, characterized by chronic cough and phlegm production, is the most consistent response induced by grain dust. Chronic exposure to grain dusts is thought to lead to increased bronchial reactivity and chronic bronchitis, either with or without airways obstruction. Loss of lung function is greater among grain handlers than that expected for a comparable group not handling grain, but of the same age. At first airflow obstruction (measured by decreased forced expiratory volumes, or FEV₁) is observed during work but is reversible,

improving when the grain handler is not at work. With repeated exposure, this obstruction may become chronic. There is also evidence that workers who have an acute response to grain dust (decline in lung function over a work shift) are more likely to have accelerated baseline declines in lung function over time.⁹

While bronchitis and airways obstruction are common among nonsmoking grain handlers, these are more common among grain handlers who smoke cigarettes. It is thought that cigarette smoke and grain dust work additively, accelerating changes in the peripheral airways so the respiratory symptoms occur sooner, or at a younger age, and are more frequent and severe. There is some evidence that cigarette smoke and grain dust may act synergistically in decreasing expiratory flow rates.

An acute systemic reaction may result from inhalation of grain dusts. The **toxic organic dust syndrome (TODS)**, commonly referred to as "grain fever" is characterized by chills, fever, flushed face, myalgia, and malaise, sometimes with cough, wheezing, and shortness of breath. The

illness typically occurs in new workers, or commences following heavy exposure in a worker who has been temporarily removed from grain dust such as on a Monday following vacation. Symptoms typically commence after work, and may last several hours or a few days. Some researchers feel that this is a response to inhalation of endotoxins.¹⁰ A similar syndrome (sometimes called pulmonary mycotoxicosis, atypical farmer's lung, or silo unloader's syndrome) is caused by spoiled grain or silage containing high concentrations of fungal and bacterial spores and by-products, and is seen among farmers. Malaise, myalgia, and chills typically commence a few hours after exposure. This biological response is described in depth in Unit 2.

A few cases of hypersensitivity pneumonitis (See Unit 2) have been reported following exposure to moldy or contaminated grain.

Grains stored in elevators are commonly fumigated. Fumigants inhaled either during the fumigation process or from residues immediately after grain is removed from storage can be lethal. Respiratory effects of fumigants are discussed in Unit 6.

In addition to reactions of the respiratory system, grain dust can produce dermatitis and conjunctivitis among workers. Explosions of high concentrations of grain dusts have killed many grain elevator employees, and continue to pose a potentially severe hazard.

Diagnosis

Because of the complexity of causative agents and potential biological responses, each patient's reaction to grain dust inhalation varies. Diagnosis depends on a thorough occupational history documenting type and time of exposure, and correlating these to onset of symptoms. Workers in grain elevators, feed mills, or grain transportation industries may experience any of the responses listed in Table 2 (excluding hypersensitivity pneumonitis) fairly commonly. Farmers who are not routinely exposed to grain dust might experience acute inflammatory responses or TODS, especially when exposed to massive quantities of bacterial or fungal-laden dusts, such as when shoveling moldy grain or working with spoiled corn silage in an enclosure. (See Fig. 4) Exposure to grain dusts also could trigger asthma or hypersensitivity pneumonitis in a sensitized farmer. Onset of chronic obstructive pulmonary disease in a farmer would probably result from multiple occupational exposures, one of which could be exposure to grain dust.

Figure 4

Although farmers often are not exposed to grain dusts routinely enough to suffer specific adverse effects, they may suffer from TODS after inhaling massive quantities of dusts from spoiled grain. This type of exposure can occur in situations such as this, when a farmer cleans the residual moldy grain out of a bin.

Diagnostic tests for occupational asthma include pulmonary function tests, in particular assessment of FEV₁ or peak flow rates before and after work. Skin tests usually are not useful; reactions to grain dust usually cannot be linked to a specific dust component.

Diagnosis of chronic obstructive pulmonary disease is dependent on assessment of respiratory symptoms, lung function (typically, an obstructive pattern is detected), and chest radiographs. Chest radiographs typically reveal nonspecific signs of airways obstruction, and are useful for excluding other pulmonary diseases. The importance of monitoring grain industry and agricultural workers for early onset of chronic obstructive pulmonary disease cannot be overemphasized. Spirometry should be performed annually to document changes in lung function, especially when workers are symptomatic.

Diagnosis of TODS or "grain fever," which is common among grain industry workers, depends on presentation with appropriate symptoms and signs following a known exposure to grain dust. Individuals usually lack serum precipitins to antigens of spoiled grain, have normal pulmonary functions, and usually have a clear chest radiograph. A similar syndrome seen among farmers is characterized by massive exposure to bacterial and fungal-laden dusts from spoiled grain or silage.

Diagnosis of hypersensitivity pneumonitis and

distinctions of acute hypersensitivity pneumonitis and TODS are described in depth in Unit 2.

Treatment

The major thrust of any treatment program among both grain industry workers and farmers should be to control exposure sources. This is critical to prevent repeated episodes of acute responses, and (in the case of chronic obstructive pulmonary disease and hypersensitivity pneumonitis) to prevent permanent damage, disability, and possibly death. Grain industry workers with occupational asthma, progressive chronic obstructive pulmonary disease, or hypersensitivity pneumonitis should be relocated to low or no-exposure areas. Farmers with these illnesses often can alter work practices to prevent exposure; treatment procedures and the dramatic steps taken by some farmers with hypersensitivity pneumonitis are outlined in Unit 2. Use of personal protective equipment, medical surveillance, and other preventive steps are discussed in the following section.

No specific treatment is required for either acute inflammatory responses or TODS. Both are self-limiting. Medication for patients with occupational asthma is similar to that for other asthmatics, but should be combined with job changes to reduce exposure to grain dusts. Desensitization is not helpful. Both smoking cessation and decreased exposure are critical to patients with chronic obstructive pulmonary disease; bronchodilators or antibiotics should be given as indicated.

III. PREVENTION OF GRAIN DUST INDUCED ILLNESS

As with any occupational disease, prevention rests primarily on reducing exposure to the source of illness. Because of the threat of grain dust explosions, attempts to reduce dust levels in grain elevators have been made since the turn of the century. More recent controls on the farm include structural improvements such as combines or tractor cabs with filtered air. In newer grain elevators, totally enclosed conveyor belts, dust collectors, and good ventilation systems have greatly reduced dust. These improvements are lacking on older farm equipment and in older or smaller rural elevators. Adding them, while desirable, is both costly and difficult. Thus, farmers and other grain handlers should be taught the hazards of grain dust inhalation, and

techniques for decreasing these hazards based on good husbandry techniques in growing, harvesting, and storing the grain, and on good housekeeping and work practices in elevators. Complete drying of grain is crucial to reduce spoilage and resulting bacterial and fungal spores and toxins. Fumigating the grain also will help. Grain placed in storage should always be top quality, with insect and animal contamination kept to a minimum. When grain dust levels are above 10 mg/m³, or when workers are especially sensitive, personal protective equipment (a certified dust mask, see Unit 9) should be used.

Because exposure to grain dust cannot be fully controlled, medical surveillance must be a second major component of any preventive program. New workers of a grain handling business should have a preemployment examination that includes an occupational and medical history, physical examination, and spirometry. Anyone who demonstrates respiratory symptoms or disease, pulmonary function abnormalities, or evidence of airways obstruction should ideally be placed in a job where less exposure to dusts will occur. Regular medical workups, which include lung function tests performed as close as possible to the place of employment, will allow detection of developing airflow obstruction while it is still reversible. Inquiries should be made into the cause of absenteeism and complaint of respiratory or other grain dust-related symptoms. Workers who develop airflow obstruction or significant respiratory symptoms should transfer to low dust jobs. Reduction of dust inhalation through use of a respirator may be possible for some workers. Because of the apparent additive effect of smoking and grain dust, smoking cessation programs should be recommended for anyone in regular contact with grain dust. Medical evaluation also should address nonrespiratory effects of grain dust exposure, such as skin rash and eye irritation.

DRAFT

Larry Byrum
Oklahoma Department of Environmental Quality
Air Quality Program
4545 North Lincoln Blvd., Suite 250
Oklahoma City, Oklahoma 73105-3483

Re: Questions Concerning Grain & Feed Operations

Dear Mr. Byrum:

Thank you for your letter dated January 7, 1994, requesting clarification on issues concerning grain and feed operations in the State of Oklahoma.

Your first question concerns emissions from grain receiving and loadout points. Specifically, you asked if these emissions were point source, process fugitive, or fugitive emissions. The term "process fugitive emissions" is not recognized in the Clean Air Act (CAA) or the regulations promulgated under the CAA.

The regulations define "fugitive emissions" at 40 CFR §§ 51.166(b)(20) and 70.2, as "those emissions which could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening." The Environmental Protection Agency (EPA) takes the position that emissions associated with the loading and unloading of grain into a facility would constitute a process emission and would require application of controls to meet the National Ambient Air Quality Standards for PM-10. This position is based on the fact that grain elevators and handling facilities are covered under the New Source Performance Standards for Grain Elevators, 40 CFR Part 60, Subpart DD. In these regulations, loading and unloading activities are subject to emission standards and fugitive emissions are defined as emissions not collected by the control system.

Your second question concerns the use of PM-10 instead of Total Suspended Particles (TSP) to determine applicability of Part 70. Part 70 applies to "major sources", one category of which is "a major stationary source of air pollutants, as defined in Section 302 of the CAA, that directly emits or has the potential to emit, 100 [tons per year] or more of any air pollutant". EPA interprets the term "air pollutant", for Section 302(g) purposes, as those pollutants subject to regulation under the CAA.

Particulate matter is a pollutant subject to regulation under the CAA (i.e. under the New Source Performance Standards for Grain Elevators, 40 CFR Part 60, Subpart DD). Therefore, a facility which emits or which has the potential to emit more than 100 tons per year of any particulate matter would be considered a major source under the Part 70 regulations.

I hope this information helps in your negotiations with the Grain & Feed Association. Region 6 fully supports the efforts of your team to successfully implement the Title V program. If I can provide further information or answer any questions, please call me at (214) 655-7205 or Nick Stone of my staff at (214) 655-7226.

Sincerely yours,

FILE COPY

The Honorable Ed Long
Oklahoma State Senate
State Capitol, Room 414
Oklahoma City, Oklahoma 73105

Dear Senator Long:

The correspondence indicated in your letter related to the Oklahoma Feed and Grain Association (OFGA) has been received by the Department of Environmental Quality (DEQ). As you indicated, OFGA sent correspondence on January 10, 17, 27, and again on February 2. The questions posed in the correspondence required verification for accuracy. I am told that we would be trying to finish off the response to one letter when a new piece of correspondence would be received from OFGA. Finally, all letters from OFGA were responded to by one letter, rather than four, dated February 4, 1994. (attached)

I am aware of no industry with which the DEQ has spent more time and effort to resolve issues than the time spent with OFGA. When the Clean Air Act amendments of 1990 were passed by Congress, it became apparent that literally thousands of businesses would be subject to air quality regulations which had previously not been regulated or had experienced limited regulation. Among the associations notified by DEQ related to this potential regulation was OFGA.

Air emissions sources which will be subject to the more stringent and costly regulation are known as Title V sources. Each industry including the grain industry wanted to avoid the more stringent and costly regulation and so advised DEQ. DEQ suggested that OFGA propose industry specific rules and permitting scenarios which would allow this avoidance and yet comply with federal and state regulations. DEQ met with OFGA on a number of occasions throughout 1992 and early 1993 to update them on the developing federal regulations and encourage them to submit their proposal. Many times industrial associations from several states will bond together nationally to propose a regulation that most states will use.

- In early spring of 1993, OFGA advised DEQ that it did not possess the legal or technical expertise to draft proposed changes to the existing rule and requested that DEQ draft changes for them. In order to assist OFGA, DEQ drafted a grain industry specific rule which it forwarded to OFGA for comment in late spring of 1993.

6481

The Honorable Ed Long
February 14, 1994
Page Three

- Late in January the EPA official advised DEQ that Mr. Hampton had called seeking an opinion. Although nothing has been committed to writing, the EPA official advised Mr. Hampton that its ruling would be unfavorable to OFGA. The EPA official also indicated that TSP would be used region wide, including Texas, unless some scientific data were forthcoming to change that opinion.

Two additional issues have surfaced. The first is the calculation of permit fees. Changes to fee calculation have been made to favorably accommodate facilities which install emission reduction equipment. This rule change occurred at the request of OFGA. To accommodate this change, the rule now calculates fees based on potential emissions rather than a flat rate. TSP is the method of measurement in the current rule. Some members of OFGA may now object to this method, or they may just not like the current regulations.

Secondly, federal law requires that certain industries complete an emission inventory. The grain industry is among those. OFGA objected that the inventory was too difficult to complete. DEQ simplified the inventory and mailed a new version to the grain industry. DEQ volunteered to perform the necessary calculations for the grain industry, an accommodation it has offered no other industry. Regardless, OFGA still believes the inventory is too complex. Federal law also requires the submittal of information related to potential toxic releases. Mr. Hampton, against our direct advise, has advised OFGA members not to fulfill this requirement of federal law.

The DEQ continues to believe that the grain industry can comply with state and federal law and yet avoid the tremendous potential economic and operational effects of Title V. To exempt them from state control would, we believe, accomplish exactly what they wish to avoid. In order to do so, however, OFGA must decide to work within the constraints of the existing laws and rules. It would also be helpful if they would decide to try a little harder to help us to help them. More patience is something we could all use.

Regardless, we will continue to try to resolve these issues and move forward in a reasonable way to implement this new, federally driven program.

Very truly yours,

Mark S. Coleman
Executive Director

SUMMARY OF TEXAS EMISSIONS CALCULATIONS METHODS FOR GRAIN ELEVATORS

Members of the Texas Air Control Board, "TACB", (now the Texas Natural Resources Conservation Commission) presented a paper entitled "Emission Factors May Cost Agricultural Operations Big Bucks" at the 1992 International Summer Meeting of the American Society of Agricultural Engineers. The paper described Texas approach for calculating air emissions from agricultural sources.

The paper compares the effects on the agricultural industry when using EPA definitions and AP-42 emission factors versus using Texas definitions and adjustments to AP-42 emission factors.

Texas defines fugitive emissions as "any gaseous or particulate contaminant entering the atmosphere without first passing through a vent designed to direct or control its flow". This differs from EPA's definition which states that fugitive emissions include "those emissions which could not reasonably pass through a stack, chimney, vent or other functionally equivalent opening". The Texas definition allows emissions from loading and unloading areas at grain elevators to be considered fugitive. This is significant since fugitive emissions do not have to be included in the total emissions used to determine if a source is subject to Title V permitting (i.e. major source with greater than 100 TPY of any regulated pollutant).

The paper also describes a method for adjusting the emissions calculated using AP-42 emission factors. According to the paper, Texas makes an assumption that only 30% of the AP-42 particulate emissions actually remain airborne and leave the site. Additionally, they assume that only 15% of AP-42 emissions are PM-10 emissions. These assumptions are based on an examination of the methods used to develop the AP-42 emission factors.

AP-42 emission factors for grain elevators are based primarily on a 1974 report from Midwest Research Institute. The TACB paper described the Midwest study as follows:

"Midwest weighed bag filter catches from a Kansas City terminal elevator for several months during its operation. This was a well controlled elevator with suction pulled from many areas all venting to different baghouses...Midwest was concerned about the large particulate such as whole or half kernels of grain captured by the suction system and performed a one time sieve analysis of the collected dust...The results show how large the particulates were; as much as 98 percent of the particulate were greater than 44 microns in size for truck unloading stations."

Authors of the Texas paper confess there is no direct relationship between results of the Midwest sieve analysis and the 70% reduction of AP-42 factors used by Texas. They felt AP-42 was not representative of actual emissions and simply chose to reduce it by 70%.

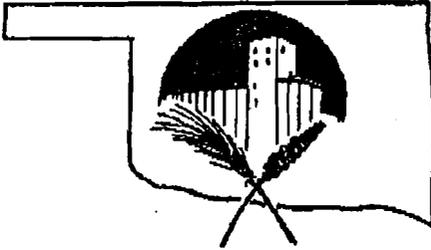

6483

Our staff has discussed this matter with Dr. Dale Lundgren, professor of environmental engineering at the University of Florida. Dr. Lundgren currently teaches the EPA training course "Source Sampling for Particulate Pollutants" and has done extensive research studying the behavior of particles in the atmosphere. Dr. Lundgren explained that a sieve analysis may not provide data representative of true aerodynamic diameter of particulates. Moisture can drastically effect the accuracy of sieve analysis results. Lundgren stated that a sieve analysis will give correct results about 10% of the time. He added that truly accurate results can only be obtained from atmospheric sampling.

Particle velocities are just as important as particle size when determining ability of a particle to remain airborne. Dr. Lundgren explained that there is no specific size range in which particles will remain airborne. Exit velocities, wind speed and direction, moisture, chemical properties and many other factors effect a particle's travel distance. For example, it is possible that particles greater than 100 microns could be carried off-site if released at high velocities or caught in a strong wind current. Obviously, the distance from the point of release to the property line is also a relevant factor.

The Oklahoma Air Quality staff does not feel we have adequate data pointing to any particular number or percentage to allow an adjustment to AP-42 emission factors at this time. We are encouraged by the proposed study which was prepared by the Biosystems and Agricultural Engineering Division of the OSU Cooperative Extension Service. Results of this study may provide scientific data to allow Oklahoma to use emission factors for grain elevators which are more realistic than AP-42.

TO: Mark Coleman and Larry Byrum

FROM: Joe N. Hampton, Executive Vice President

Gentlemen:

Enclosed is our draft of a grain elevator, feed mill, and seed processing subchapter to the Oklahoma Clean Air Act. I am certain there are many technical changes that need to be made to make it conform with certain language requirements, and I trust this can be done at a later date.

Regarding the referenced material, we are in the process of obtaining complete copies. We will pass them on to you as soon as they are available.

Please give me a call if you have any questions.

6485

SUBCHAPTER 24. Particulate Matter Emissions from Grain Elevators, Feed Mills and Grain or Seed Operations.

252:100-24-1. Purpose

The purpose of this rule is to modify existing state air quality rules and to control the amount of particulates from facilities that handle, store or process grains, feed, or seed, as required by the 1990 Federal Clean Air Act. This subchapter supersedes other rules and regulations which are more stringent than Federal requirements, or which may be demonstrated to not adversely affect the environment.

252:100-24-2. Definitions

The following words and terms when used in this subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Grain, Feed, and Seed Operation" means any commercial plant or installation at which grain, feed, or seed is loaded, handled, cleaned, dried, stored, treated, or otherwise processed.

"Grain, Feed, and Seed Operations Site" means the area upon which a grain elevator, feed mill, or grain and seed processing equipment or structures are located, and all contiguous sites having common ownership or control, which have the same two digits of their SIC code.

"Existing Grain, Feed, and Seed Operation" means a facility which is in existence and has submitted a current, accurate emission inventory to the Air Quality Division for the 1993 reporting period year. All other grain, feed, and seed operations shall be considered new.

"Fabric filter" means any other control device or system in which particulate matter is collected within a dust cake supported on either a woven or felted fabric that can demonstrate a particulate collection efficiency of not less than 95 percent.

"Fugitive Emission" means those emissions that could not reasonably pass through a stack, chimney, vent or other functionally equivalent opening.

"High efficiency cyclone" means any cyclone type collector of the 2D-2D or 1D-3D configuration; designations referring to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion. A 2D-2D cyclone would exhibit a cylinder length of 2 x D and a cone length of 2 x D. A 1D-3D cyclone would exhibit a cylinder length of 1 x D and a cone length of 3 x D. The efficiencies of these cyclones are 90% and 95% respectively.

"Dust suppression additives" means FDA or FGIS approved additives applied commercially for dust suppression. The efficiencies of these additives are 90%.

"Process Emission" means particulate matter that is emitted from a point source that can cross property boundaries.

"Throughput" shall mean the pounds, tons, or bushels received added to the pounds, tons, or bushels loaded out divided by two.

252:100-24-3. General Provision; applicability, calculations

(a) Applicability. The provisions of this Subchapter are applicable to all new, modified, and existing grain, feed, and seed operations in the State of Oklahoma. Facilities in compliance with this subchapter are exempt from the requirement of OAC 310:200-25, 310:200-27 and 310:200-29.

(b) Permits required. In addition to the requirements of this subchapter, each new or modified facility shall comply with the permitting requirements of OAC 310:200-7,

(1) Except when the following exemptions for commercial facilities apply:

(A) The total storage capacity of the new and any existing facility or facilities does not exceed 1,500,000 bushels.

(B) The facility shall be located at least 1/2 mile from any recreational area or residence or other structure not occupied or used solely by the owner or operator of the facility or the owner of the property upon which the facility is located.

(C) Before construction of the facility begins, written site approval shall be received from the Director of the Air Quality Division.

(2) The installation of additional grain storage capacity which satisfied the following conditions:

(A) There shall be no increase in hourly grain handling capacity.

(B) Existing grain receiving and load-out facilities are utilized.

(C) Grain shall be conveyed by closed conveying systems and air suction shall not be pulled on any conveying unit.

(c) Recordkeeping. The owner or operator of a facility shall maintain a (daily) log documenting the commodity throughput or hours of operations required by the permit. These records shall be maintained for a period of two years and shall be made available for inspection by the Air Quality Division personnel or its representative during normal business hours.

(d) Visible emissions (opacity). Opacity will not be monitored or enforced except as required on facilities subject to the Federal New Source Performance Standards, the required testing will be performed using criteria as established by EPA reference Method 9 contained in 40 CFR, Part 60, Appendix.

(e) Process Weight Rate. Maximum process weight rate emissions shall be calculated as follows:

6487

**ALLOWABLE RATE OF EMISSION
BASED ON PROCESS WEIGHT RATE**

PROCESS WEIGHT RATE pounds/hour	RATE OF EMISSIONS pounds/hour
1,000	1.6
1,500	2.4
2,000	3.1
2,500	3.9
3,000	4.7
3,500	5.4
4,000	6.2
5,000	7.7
6,000	9.2
7,000	10.7
8,000	12.2
9,000	13.7
10,000	15.2
12,000	18.2
14,000	21.2
16,000	24.2
18,000	27.2
20,000	30.1
30,000	44.9
40,000	59.7
50,000	64.0
60,000	67.4
70,000	70.5
80,000	73.2
90,000	75.7
100,000	78.1
150,000	87.7
200,000	95.2
250,000	101.5
500,000	123.9

Interpolation of the data in this table for process weights up to 40,000 pounds per hour (lb/hr) shall be accomplished by the use of the equation $E = 3.12 (p 0.985)$, and interpolation and extrapolation of the data for process weights rates in excess of 40,000 lb/hr shall be accomplished by use of the equation $E = 25.4 (p 0.287)$ where E = rate of emission in lb/hr and P = process weight rate in tons per hour.

(f) Emission Calculations for Uncontrolled Emissions Points. Appropriate emission factors shall be obtained using the PM-10 factors found in the AIRS facility subsystem source classification codes (SCCs) and emission factor listing criteria pollutants (EPA-450/4-90-003), or a 70% reduction adjustment from the appropriate AP-42 table factors. SUPPLEMENTAL INFORMATION

COUNCIL MEETING

APRIL 12, 1994

DATE: April 6, 1994

MEMORANDUM

TO: Air Quality Council

FROM: *DMC* Doyle McWhirter, Program Director
Enforcement and Compliance Section

SUBJECT: PROPOSED SUBCHAPTER 24
CONTROL OF EMISSIONS FROM GRAIN ELEVATORS

A committee organized to jointly develop a final version of subchapter 24 has attended the following work sessions.

March 4, 1994	Mr. Rick Treeman, OGFA Ms. Deborah Perry, AQD Mr. Doyle McWhirter, AQD
March 15, 1994	Mr. Rick Treeman, OGFA Ms. Deborah Perry, AQD Mr. Doyle McWhirter, AQD
March 25, 1994	Mr. Rick Treeman, OGFA Mr. Mike Mahoney, OGFA Ms. Deborah Perry, AQD Mr. Doyle McWhirter, AQD
March 30, 1994	Mr. Rick Treeman, OGFA Mr. Mike Mahoney, OGFA Ms. Deborah Perry, AQD Mr. Doyle McWhirter, AQD

Some progress was accomplished, however, three main issues still remain. These issues are:

- 1) appropriate emission factors;
- 2) whether or not subchapter 24 should be applicable to only the grain elevating portion of a facility or should all processes involving grain processing such as milling, seed cleaning, feed manufacturing etc. be included, and;
- 3) opacity allowables for the loading and unloading processes.

Therefore, the Air Quality Division and the Oklahoma Grain and Feed Association are each submitting a draft of subchapter 24 for Council's consideration (Attachments I and II).

6491

These three issues remain unresolved because:

- 1) The OFGA prefers that emissions calculations be performed utilizing the same methodology as the Texas Natural Resources Conservation Commission (TNRCC). The AQD does not believe that the TNRCC methodology is scientifically defensible or appropriate to incorporate into the Oklahoma Air Program (Attachments III and IV). There are other factors and implications involved in the Texas program which do not exist and perhaps are not appropriate in our program.
- 2) As indicated in the memo contained in the March 8, 1994 Council Meeting packet, the AQD does not believe that sufficient specific detail particular to the other process involved (milling, seed cleaning, feed manufacturing, etc.) has been properly evaluated. Also, due to the wide range of diversity which exists within the industry over the State of Oklahoma, it would not be appropriate for these other processes to be applicable to subchapter 24 except for the grain elevator portion.
- 3) The OFGA does not feel they can meet any opacity limit standard for the loading and receiving processes. AQD feels that the allowables as contained in subchapter 24-4(2)(3) are the maximum relaxation acceptable. The AQD is not sure this new standard will be acceptable to EPA as a SIP revision.

During the March 8, 1994 meeting, the Council requested information pertaining to complaints, particularly, those received involving grain elevators. This information is being provided at this time in Attachment V. During the January meeting, the Council requested information pertaining to the potential health effects associated with grain dust. The staff has arranged for Dr. Kenneth R. Hart, of the Oklahoma University Health Sciences Center, Department of Family Medicine, Division of Occupational and Environmental Medicine to make comment to the Council concerning this issue.

ATTACHMENT I

SUBCHAPTER 24.

CONTROL OF EMISSIONS FROM GRAIN ELEVATORS

252:100-24-1 Purpose

The purpose of this rule is to control emissions from grain elevators, which elevate and store grains. This rule also applies to the grain elevating portion of any other facility which handles grain.

310:200-24-2 Definitions

The following words and terms when used in this subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Enclosed grain handling equipment" means equipment which is totally self-contained or enclosed within a structure at a grain elevator that is not exhausted to the atmosphere except through a non-pressurized vent or opening.

"Fabric filter" means any control device or system in which particulate matter is collected within a dust cake supported on either a woven or felted fabric that can demonstrate a particulate collection efficiency of not less than 99%.

"Grain elevator" means any commercial plant or installation at which grain is loaded, handled, or stored.

"High efficiency cyclone" means any cyclone type collector of the 2D-2D or 1D-3D configuration (refers to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion). A 2D-2D cyclone would exhibit a cylinder length of 2 X D and a cone length of 2 X D. A 1D-3D cyclone would exhibit a cylinder length of 1 X D and a cone length of 3 X D. These cyclones shall be capable of demonstrating collection efficiencies of 90% for particulate matter.

"Hours of operation" means any hour or part thereof, that the elevator leg is elevating grain.

"Leg capacity" means the maximum process rate for which the elevating portion of a grain elevator is designed.

"Medium efficiency cyclone" means any cyclone type collector of the 1D-1D configuration (refers to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion). A 1D-1D cyclone would exhibit a cylinder of 1 X D and a cone length of 1 X D. These cyclones shall be capable of demonstrating a collection efficiency of 75% for particulate matter.

"Non-pressurized vents or emission points" means any vent or opening which allows the flow of air and/or contaminants at atmospheric pressure without the use of mechanically-induced air flow.

"Site" means the area upon which a grain elevator is located, and all contiguous or adjacent properties having common ownership or control, which have the same first two digits of their SIC code.

"Throughput" means the pounds, tons or bushels received added to the pounds, tons or bushels loaded out divided by two.

252:100-24-3 General provisions; applicability

(a) **Applicability.** The provisions of this subchapter are applicable to all new, modified and existing grain elevators in the state of Oklahoma. Grain elevators in compliance with this subchapter are exempt from the requirements of OAC 252:100-25, 252:100-27 and 252:100-29.

(b) **Permits required.** In addition to the requirements of this Subchapter, each new or modified grain elevator shall comply with the permitting requirements of OAC 252:100-7 and 252:100-8.

(c) **Air toxics emissions.** Grain elevators which emit toxic air pollutants above the de minimus levels specified in 252:100-41 are

subject to all applicable requirements contained therein.

(d) **Recordkeeping.** The owner or operator of a grain elevator shall maintain a daily log documenting the commodity throughput and hours of operation. These records shall be maintained for at least two years and shall be made available for inspection by the Air Quality Division personnel or its representative during normal business hours.

(e) **Test methods.** Visible emissions (opacity) testing shall be conducted using EPA reference Method 9 contained in 40 CFR, Part 60, Appendix A and be performed by an individual possessing current certification.

(f) **Determination of emissions.** Emissions from grain elevators shall be based on the best available data. This may include actual emissions as determined by stack testing, mass balance calculations, emissions calculations using approved published emissions factors or other methods approved by the Air Quality Division.

252:100-24-4 Smoke, visible emissions and particulates

(a) **Visible emissions limit.**

(1) **Emissions limit.** No person shall cause, suffer, allow or permit discharge of any fumes, aerosol, mist, gas, smoke, vapor, particulate matter or any combination thereof with a shade or density greater than twenty (20) percent equivalent opacity. This requirement shall not apply to smoke or visible emissions emitted during short-term occurrences, the shade or density of which is not greater than sixty (60) percent opacity for a period aggregating no more than five (5) minutes in any sixty (60) consecutive minutes and/or no more than twenty (20) minutes in any consecutive 24-hour period.

(2) **Alternative emissions limit.** The twenty (20) percent opacity limit, as required under 252:100-24-4(1)(a) may be increased for particulates only provided that the owner/operator demonstrates to the satisfaction of the Oklahoma Air Quality Council at public hearing that those requirements listed in 252:100-25-4(a) through (c) have been met.

(3) **Exceptions.** Exceptions to the requirements described in 252:100-24-5(a) (1) and (2) are provided as follows:

(A) receiving and unloading points shall be limited to no greater than forty (40) percent opacity. This requirement shall not apply to smoke or visible emissions emitted during short-term occurrences, the shade or density of which is not greater than sixty (60) percent opacity for a period aggregating no more than fifteen (15) minutes in any sixty (60) consecutive minutes and/or no more than seventy-five (75) minutes in any consecutive 24-hour period.

(B) emissions from non-pressurized vents or emission points shall either be exhausted through the required control equipment described in 252:100-24-7 or shall be limited to no greater than ten (10) percent opacity at any time.

252:100-24-5 Emission control equipment

(a) **Minimum requirements.** Grain elevators shall achieve a minimum collection efficiency and not exceed the maximum annual hours of operation based upon the maximum leg capacity as stipulated in table below:

TABLE I: REQUIRED CONTROL EQUIPMENT FOR GRAIN ELEVATORS

Maximum Leg Capacity (bushels/hour)	Minimum Collection Efficiency	Maximum Daily Throughput (bushels)	Maximum Annual Hours of Operation
5,000	75% medium efficiency cyclone or demonstrated equivalent efficiency	120,000	1600
10,000	90% high efficiency cyclone (2D-2D) or demonstrated equivalent efficiency	240,000	2000
10,000	95% high efficiency cyclone (1D-3D) or demonstrated equivalent efficiency	240,000	4000
15,000	90% high efficiency cyclone (2D-2D) or demonstrated equivalent efficiency	360,000	1300
15,000	95% high efficiency cyclone (1D-3D) or demonstrated equivalent efficiency	360,000	2600
15,000	99% fabric filter or demonstrated equivalent efficiency	360,000	8760

(b) **Certification.** Each existing grain elevator in the state of Oklahoma shall provide written certification of compliance with Table I by September 1, 1994. Annual certification of hours of operation and the operation and proper maintenance of required control equipment shall be completed by the owner, operator or other designated responsible party and submitted as part of the annual emissions inventory reporting form.

252:100-24-6 Fugitive dust controls

(a) For control of fugitive dust, no person shall cause or permit the handling, transporting or disposition of any substance or material which is likely to be scattered by the air or wind, or is susceptible to being airborne, or windborne, or to operate or maintain or to cause to be

operated or maintained, any grain elevator site, open area, right-of-way, storage pile or materials, vehicle, or construction, or any other enterprise which involves any material or substance likely to be scattered by the wind or air, or susceptible to being windborne or airborne that would be classified as air pollution without taking reasonable precautions or measures to minimize atmospheric pollution.

(b) No person shall cause or permit the discharge of any visible fugitive dust emissions beyond the property line on which the emissions originate.

OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY
AIR QUALITY DIVISION

STANDARD POLICY FOR DETERMINING EMISSIONS POINTS AND CALCULATING
PARTICULATE EMISSIONS AT GRAIN ELEVATORS

DETERMINATION OF EMISSION POINTS

The following points shall be considered emissions points:

- 1 - Receiving (unloading)
- 2 - Shipping (load-out)
- 3 - Exhausts from dust control equipment
- 4 - Any open transition, or other grain handling operation, which is exposed directly to the atmosphere

Equipment, such as elevator legs or tunnel belts, which is totally enclosed will not be considered a point of emissions.

CALCULATION OF EMISSIONS

Particulate emissions from grain elevators will be based on AP-42 emission factors for the emission points identified above. Further explanation of this calculation method is provided below.

1 - Receiving (unloading)

Use AP-42 EF of 0.6 lb/ton of grain received.

2 - Shipping (loading)

Use AP-42 EF of 0.3 lb/ton of grain shipped out.

3 - Exhausts from control equipment

Use the AP-42 EF for the operation for which the control equipment is applied. The following examples illustrate this method:

Elevator leg

1.5 lb/ton X tons grain elevated X (1 - control efficiency)

Tunnel belt

1.0 lb/ton X tons grain handled X (1 - control efficiency)

Control equipment for multiple operations

Cyclone with 90% collection efficiency used to control dust from tunnel belt, cleaning operation and bucket elevator:

(1.5 + 1.0 + 3.0) X tons grain handled X (1 - 0.90)

4 - Open transition

Use the AP-42 EF which applies to the particular operation which is exposed to the atmosphere.

ATTACHMENT II

SUBCHAPTER 24. PARTICULATE MATTER EMISSIONS FROM GRAIN, FEED OR SEED OPERATIONS.

- 252:100-24-1. Purpose
- 252:100-24-2. Definitions
- 252:100-24-3. General Provisions; applicability
- 252:100-24-4. Smoke, Visible Emissions and Particulates
- 252:100-24-5. Emission Control Equipment
- 252-100-24-6. Fugitive Dust Controls

252:100-24-1. Purpose

The purpose of this rule is to control emissions from facilities that handle, store or process, grains, feed or seed.

252:100-24-2. Definitions

The following words and terms when used in this subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Dust Suppression Additives" means FDA or FGIS approved additives applied commercially for dust suppression. The efficiencies of these additives is 90%.

"Enclosed Grain Handling Equipment" means equipment that is totally self-contained and is enclosed within a structure on the grain, feed, or seed facility. This equipment shall not be exhausted to the atmosphere except through non-pressurized vents/openings, and shall not be considered a point subject to emission calculations.

"Existing Grain, Feed, or Seed Operation" means a facility which is in existence and has submitted a current emission inventory to the Air Quality Division for the 1993 reporting period year. All other grain, feed, and seed operations shall be considered new.

"Fabric Filter" means any control device or system in which particulate matter is collected within a dust cake supported on either a woven or felted fabric that can demonstrate a particulate collection efficiency of not less than 95 percent.

"Fugitive Emission" means those emissions that could not reasonably pass through a stack, chimney, vent or other functionally equivalent opening.

"Grain, Feed, or Seed Operation" means any commercial plant or installation at which grain, feed, or seed is loaded, handled, cleaned, dried, stored, treated, or otherwise processed.

"Grain, Feed, or Seed Operations Site" means the area upon which a grain elevator, feed mill, or grain and seed processing equipment or structures are located, and all contiguous sites having common ownership or control, which have the same first two digits of their SIC code.

"High Efficiency Cyclone" means any cyclone type collector of the 2D-2D or 1D-3D configuration, designations referring to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion. A 2D-2D cyclone would exhibit a cylinder length or $2 \times D$ and a cone length of $2 \times D$. A 1D-3D cyclone would exhibit a cylinder length of $1 \times D$ and a cone length of $3 \times D$. The efficiencies of these cyclones are 90% and 95% respectively.

"Medium Efficiency Cyclone" Means any cyclone type collector of the 1D-1D configuration, designations referring to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion. A 1D-1D cyclone would exhibit a cylinder of $1 \times D$ and a cone length of $1 \times D$. These cyclones shall be capable of demonstrating a collection efficiency of 75% for particulate matter.

"Hours of Operation" means taking the throughput totals and dividing it by the leg capacity, this will give hours of operation required to handle products processed.

"Leg Capacity" means the maximum process rate for which the elevating portion of a grain, feed, or seed facility is designed on a per leg basis.

"Non-pressurized Vents or Openings" means any vent or opening which allows the flow of air and/or contaminants at atmospheric pressure without the use of mechanically-induced air flow.

"Process Emission" means particulate matter that is emitted from a point source that can cross property boundaries.

"Throughput" means the pounds, tons, or bushels received added to the pounds, tons, or bushels loaded out divided by two.

252:100-24-3. General Provisions: applicability

(a) **Applicability.** The provisions of this subchapter are applicable to all new, modified, and existing grain, feed, or seed operations in the State of Oklahoma.

(1) Facilities in compliance with OAC 252:100-25, 252:100-27, and 252:100-29 are not required to comply with this subchapter.

(2) Facilities in compliance with this subchapter are exempt from the requirements of OAC 252:100-25, 252:100-27, and 252:100-29.

(b) **Permits required.** In addition to the requirements of this subchapter, each new, modified or existing grain, feed, or seed operation shall comply with the permitting requirements of OAC 252:100-7 and 252:100-8,

(1) Except when the following exemptions for commercial facilities apply:

(a) The installation of additional grain storage capacity which satisfies the following conditions:

- (1) There shall be no increase in hourly grain handling capacity.
- (2) Existing grain receiving loadout facilities are utilized.
- (3) Grain shall be conveyed by enclosed handling equipment and pneumatic dust controls will not be utilized on any handling equipment.

(c) Air toxics emissions. Grain, feed, or seed operations which emit toxic air pollutants above the de minimis levels specified in 252:100-41 are subject to all applicable requirements contained therein.

(d) Record-keeping. The owner or operator of a facility shall maintain a (daily) log documenting the commodity throughput and hours of operations. These records shall be maintained for a period of two years and shall be made available for inspection by the Air Quality Division personnel or its representative during normal business hours.

(e) Visible emissions. Visible emissions (opacity) testing shall be conducted using EPA reference method 9 contained in 40 CFR, Part 60, Appendix A and be performed by an individual possessing current certification.

(f) Determination of emissions. Determination of emissions from grain, feed, or seed operations shall be based on the best available data and technology. This may include actual emissions as determined by stack testing, mass balance calculations, emission calculations using approved published emissions factors, or other methods approved by the Air Quality Council.

252:100-24-4. Smoke, Visible Emissions and Particulates

(a) Visible emissions. Visible emission (opacity) will be regulated as required on facilities or the portion of a facility that is regulated by Subpart DD of the New Source Performance Standards (NSPS). All facilities exempt from regulation under NSPS will be exempt from opacity regulations.

252:100-24-5 Emission Control Equipment

(a) Minimum requirements. Grain, feed, or seed operations shall achieve a minimum collection efficiency and not exceed the maximum daily throughput or annual hours of operation based upon the maximum individual leg capacity as stipulated in Table 1. These controls will be required only on bucket elevator legs and then only if they are considered emission points.

TABLE 1; REQUIRED CONTROL EQUIPMENT FOR GRAIN ELEVATORS
Equipment required will be of the type listed or other of demonstrated equivalent efficiency.

Maximum leg capacity BU/HR	Minimum Collection Efficiency, only if leg is an emission point	Max Daily Throughput (bushels)	Max Annual Hours of Operation at leg capacity
5,000	75% Med Efficiency cyclone (1D-1D)	120,000	1,600
10,000	90% High Efficiency cyclone (2D-2D)	240,000	2,000
10,000	95% High Efficiency cyclone (1D-3D)	240,000	4,000
15,000	90% High Efficiency cyclone (2D-2D)	360,000	1,300

Maximum leg capacity BU/HR	Minimum Collection Efficiency, only if leg is an emission point	Max Daily Throughput (bushels)	Max Annual Hours of Operation at leg capacity
15,000	95% High Efficiency cyclone (1D-3D)	360,000	2,600
15,000	99% Fabric Filter	360,000	8,760

Emission Control Equipment where required by subpart DD must meet the standards set under the Federal New Source Performance Standards, or as mandated by other Federal requirements for major sources. Additionally controls may be required to circumvent nuisance emissions.

- (b) **Certification.** Each existing grain elevator in the State of Oklahoma shall provide written certification of compliance with Table 1 within one year of the acceptance of this rule. Annual certification of hours of operation and the operation and proper maintenance of required control equipment shall be completed by the owner, operator or other designated responsible party and submitted as part of the annual emissions inventory reporting form.
- (c) **Minor Sources.** Except for non-attainment areas, facilities certifying compliance with this subchapter shall not be considered a major source for a regulated pollutant for purposes of Title V.

252:100-24-6. Fugitive Dust Controls

All facilities will take reasonable precautions to prevent the discharge of any visible fugitive dust emissions beyond the property line from which the emissions originate.

**OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY/
GUIDANCE POLICY FOR EMISSION CALCULATIONS
FOR GRAIN, FEED, OR SEED OPERATIONS**

The following points shall be considered emission points and emission calculated from each;

- 1) Receiving (unloading)
- 2) Shipping (load-out)
- 3) Exhausts from pneumatic dust controls
- 4) Any open transition that is not enclosed within a facility or is otherwise exposed directly to the atmosphere.

1) Emission calculations for uncontrolled emissions points; Emission factors shall be obtained using a 70% reduction adjustment from the appropriate AP-42 table factors. Reduction Reference Sources: (Sieve analysis, Table 16, Midwest Research Institute Report "Potential Dust Emissions from Grain Elevators" Kansas City, MO May, 1974 . . . AP-42 Appendixes 11-2 . . RE: ANALYSIS OF DOCUMENTS SUBMITTED BY OKLAHOMA GRAIN AND FEED
ASSOCIATION TO SUPPORT A 70% REDUCTION OF AP-42 WHEN
CALCULATING EMISSIONS FROM GRAIN ELEVATORS

"Sieve Analysis, Table 16", Midwest Research Institute, Addendum to
"Potential Dust Emissions from Grain Elevators", Kansas City, Missouri,
May 1974.

This data is based on a single sieve analysis and therefore may not be
representative.

A sieve analysis is not an accurate method for determining aerodynamic
particulate diameter. A sieve analysis, at best, will only provide the
physical diameter of the particles. Physical diameter is not appropriate
when characterizing particle behavior in the atmosphere. In order to
account for irregular-shaped particles and other factors, such as
variations in particle density and wind speeds, **aerodynamic mean
diameter** is used to study atmospheric dispersion of particulate matter.
A cascade impactor is typically used to determine aerodynamic diameter.
This device inertially separates particles by aerodynamic diameter.

For example, a particle may have physical dimensions of 80 micrometers
by 5 micrometers. This particle would probably be retained in a sieve
analysis as greater than 80 micrometers in diameter. However, the
aerodynamic diameter may only be 25 micrometers.

The text above Table 16 includes the following statement:

"Particles 30 and less are normally assumed to be the particles that
can be suspended in air and are used in dispersion modeling to
determine off property impacts."

Although this statement seems to be repeated in other supporting
documents, there is no data provided to substantiate it. This statement
would imply that PM-30 should be the criteria for regulating
particulates. We have no data or other guidance to support this.

I have discussed this matter with Dale Lundgren, Ph.D, P.E., professor
of environmental engineering at the University of Florida. Dr. Lundgren
currently teaches the EPA training course "Source Sampling for
Particulate Pollutants" and has done extensive research studying the

behavior of particles in the atmosphere and has, through his graduate study program, compiled years of data in this area. In our telephone conversations and during my attendance at the EPA training course recently taught by Dr. Lundgren in December of 1993, he explained that there is a curve which represents (aerodynamic) particle size vs. settling velocity. He emphasized that there is not a certain size range which can be used to represent particles which could remain suspended.

Dr. Lundgren continues to have an ongoing program in which he and his students take atmospheric samples and make particle size distribution studies. These studies have shown that ambient air typically has particles in the 1-100 micrometer size range.

"Prevention of Dust Explosions In Grain Elevators - An Achievable Goal", A Task Force Report, United States Department of Agriculture.

The excerpt from this document which was submitted by the Oklahoma Grain and Feed Association includes a section entitled "4.2.5 Dust Generation". This section discusses estimates of quantities of dust generated by grain handling as it relates to explosive hazards in grain elevators. There is no definition, explanation or description offered in this material of what the USDA considers to be "grain dust". Therefore it is difficult to determine if the USDA definition of grain dust concurs with that used in the context of air quality management.

This section provides estimates of total tonnage of dust generated from exports of wheat, corn and soybeans. These estimates are based on inspections of these grain exports and the assumption that dust generated for all grains amounts to 0.1 percent of the total volume of grain handled. It also explains that their results are about doubled when using the weight of grain rather than volume. This would imply approximately 4 pounds of dust is generated per ton of grain handled.

The information provided did not include any supporting data. Additionally, the following statements from the document reinforce the fact that this information is only an estimation:

"...different grains produce different amounts of dust ... and each successive handling creates additional dust."

"...the precise effect of successive handling, processing, and storage operations cannot be determined."

"AP-42, Section 11.2 FUGITIVE DUST SOURCES", May 1983.

This section of AP-42 discusses fugitive dust emissions, especially from unpaved roads. The following statements are of concern:

"... particles larger than about 100 micrometers are likely to settle out within 6 to 9 meters (20 to 30 ft) from the edge of the road. Particles that are 30 to 100 micrometers in diameter are likely to undergo impeded settling... likely to settle within a few hundred feet

6507

from the road. Smaller particles, particularly those less than 10 to 15 micrometers in diameter, have much slower gravitational settling velocities and are much more likely to have their settling rate retarded by atmospheric turbulence. Thus, based on presently available data, it appears appropriate to report only those particles smaller than 30 micrometers."

This implies that only PM-30 should be regulated (at least in terms of fugitive dust emissions). However, we do not have any guidance from EPA to substantiate this. Additionally, our SIP does not exempt particles greater than 30 micrometers. "TSP" is defined in our state rules as particulate matter measured by the high-volume method described in Appendix B of 40 CFR Part 50. Appendix B describes the acceptable method for determining TSP in the atmosphere. This sampling method favors the collection of particles up to 25-50 micrometers (aerodynamic diameter), depending on wind conditions, and is 99% effective in collecting particles as small as 0.3 micrometers, according to Appendix B.

This further indicates that particles larger than PM-30 may be found in the atmosphere and are regulated as TSP in our SIP. Also, reinforced is the fact that all reference to particle size in the atmosphere should address aerodynamic diameter.

"Impact Study of Prohibiting Recombining Recirculation Dust at Export Elevators", Department of Agricultural Engineering, Texas A&M University, Revised February 1992.

The excerpt from this document which was provided (page 15) includes a table of average fine dust contents in wheat samples and discusses how fine dust content correlates to grain quality (grade factor). "Fine dust" is not defined and the method for determining the fine dust content was not explained. The table provides average dust contents listed as percentages of "inbound" and "outbound" at three different elevators. I am not sure what these percentages relate to or exactly what "inbound" and "outbound" mean.

Testimony by Dr. Calvin B. Parnell, Jr., P.E., Professor of Agricultural Engineering, Texas A&M University, Presented March 8, 1994.

Dr. Parnell states that an emission factor of 0.3 lb of dust/ton of grain is an appropriate and conservative factor to use for all grain elevators. He explains that based on his work and experience with grain handling and dust measurement this is probably too high. However, all the data which he references is based on particle size determinations using sieve analysis. This does not provide an accurate indication of aerodynamic diameter as discussed previously.

I believe there is little or no disagreement from anyone involved with Dr. Parnell's assessment of the inappropriateness and inaccuracy of the MRI study and resulting AP-42 emission factors. However, I do not feel that he has provided accurate and appropriate documentation to support reducing AP-42 factors by 70%.

"Workbook of Atmospheric Dispersion Estimates", D. Bruce Turner, EPA, Office of Air Programs, Research Triangle Park, Revised 1970.

This document provides very little relevant material other than the implication that particles should be less than about 20 microns in order to perform dispersion estimates using the mathematical relationship provided. This procedure includes many assumptions, including assuming particles will behave like a gas. This method is obsolete and not particularly relevant since whether particles behave like a gas is not an issue in our discussion. I think it is clear that larger particles will not be suspended indefinitely with gas-like behavior. However, while particles may eventually settle out, it is not clear how far they may be transported before this actually occurs. There are many factors which determine whether this will occur on or off the facility property. These include wind speed (atmospheric turbulence), particle density and distance from the point of release to the property boundary.

"Emission Factors May Cost Agricultural Operations Big Bucks", by TACB Permit Engineers for presentation at the 1992 International Summer Meeting of The American Society of Agricultural Engineers, June 1992.

This paper explains that regulators in Texas use a 70% reduction in AP-42 emission factors for TSP at grain elevators and why they believe it is appropriate. The reasoning is based on two closely-related issues.

The first issue is what portion of particulate matter emitted from grain elevators is too large to be transported off property. TACB justifies the 70% reduction based on the results of the MRI one time sieve analysis which showed greater than 98% of particulates collected were greater than 44 microns for truck unloading areas.

The second issue is what is the actual particulate size which will settle out of the atmosphere and remain on site. TACB proposes that particles greater than 30 microns will not be transported off site.

I have discussed both of these issues previously. Accurate data has not been presented to represent particle size distribution of emissions from grain elevators based on **aerodynamic diameter**. Documentation to support that PM-30 is the only particulate matter of concern is also lacking.

CONCLUSIONS

There has not been substantial data available to me to support a 70% reduction of the AP-42 emission factors. Unfortunately, the current values are somewhat easily disputed as well. For this reason, the AQD was very hopeful that the study proposed by the Agricultural Extension Engineers at OSU would provide data which could be supported and relied upon. However, since time is now very limited, as well as available grain to conduct the study, this may no longer be a possibility. Without additional data to demonstrate the actual aerodynamic diameter of particulates emitted from grain elevators and the relative ability of these particles to be transported off the source property, I cannot support the 70% reduction in AP-42 emission factors as proposed by the Oklahoma Grain and Feed Association.

TEXAS NATURAL RESOURCE CONSERVATION COMMISSION

STANDARD EXEMPTION LIST

**Incorporated By Reference Into 30 TAC 116,
Control of Air Pollution By Permits For New Construction
or Modification, §116.211**

ADOPTED AUGUST 16, 1993

Preface to the Standard Exemption List

This revision incorporates changes adopted by the former Texas Air Control Board on August 16, 1993 and effective September 20, 1993. This document is incorporated by reference into Regulation VI, Control of Air Pollution By Permits For New Construction or Modification, and is, therefore, not published in the Texas Register.

Please contact the Texas Natural Resource Conservation Commission (TNRCC) Regional Office that serves your area if you have any questions about your compliance status under TNRCC regulations. Information on permit requirements for construction of new facilities or for modification of existing facilities may be obtained from the Permits Division of the TNRCC, 12124 Park 35 Circle, Austin, Texas 78753, (512) 908-1000. If you have questions about the interpretation of the Standard Exemption List or have suggestions for changes to it, please call the Permits Division or Regulation Development Division at the same address and telephone number.

The TNRCC is an equal opportunity employer and does not discriminate on the basis of race, color, religion, sex, national origin, age or disability in employment or in the provision of services, programs, or activities.

In compliance with the Americans With Disabilities Act, this document may be requested in alternate formats by contacting Air Quality Planning Division staff at (512) 908-1457, (512) 908-1500 FAX or 1-800-RELAY-TX (TDD), or by writing; P.O. Box 13087, Austin, Texas 78711-3087 or visiting at 12124 Park 35 Circle, Austin, Texas.

74. Any grain handling, storage, and drying facility which meets conditions (a), (b), or (c) below.
- (a) The facility is in noncommercial use only - that is, used only to handle, dry, and/or store grain produced by the owner(s) of the facility if the following conditions are satisfied:
 - (1) The total storage capacity does not exceed 750,000 bushels.
 - (2) The grain handling capacity does not exceed 4,000 bushels per hour.
 - (3) The facility is located at least 500 feet from any recreational area or residence or business not occupied or used solely by the owner of the facility.
 - (b) The facility is in commercial use and the following conditions are satisfied:
 - (1) The total storage capacity of the new and any existing facility or facilities does not exceed 1,500,000 bushels.
 - (2) The facility shall be located at least $\frac{1}{4}$ mile from any recreational area or residence or other structure not occupied or used solely by the owner or operator of the facility or the owner of the property upon which the facility is located.
 - (3) Before construction of the facility begins, written site approval shall be received from the Executive Director of the TNRCC and the facility shall be registered with the appropriate regional office using Form PI-7.
 - (c) The installation of additional grain storage capacity which satisfies the following conditions:
 - (1) There shall be no increase in hourly grain handling capacity.
 - (2) Existing grain receiving and loadout facilities are utilized.
 - (3) Grain shall be conveyed by closed conveying systems and air suction shall not be pulled on any conveying unit.
 - (4) Written site approval shall be received from the Executive Director of the TNRCC before construction begins for facilities utilizing existing grain receiving facilities when new gravity or auger loadout systems are to be installed.
75. Surface coating facilities in which no metal spraying or metalizing is done, if the total emission of VOC used for cleanup and contained in the coating materials as applied is less than 6.0 lb/hr, averaged over any 4-hour period, and 500 pounds per week, and:
- (a) The surface coating operations are performed indoors or in an enclosed work area and the following conditions apply:
 - (1) If the facility is a spraying operation, all spraying is conducted in a spray booth or work area in which the emissions of particulate matter are controlled by either a water wash system or a dry filter system. For either system, the particulate removal efficiency shall be not less than 90%; and:

Department of Environmental Quality
Air Quality Division

March 14, 1994

MEMORANDUM

TO: *DSM* Doyle McWhirter, Director
Enforcement and Compliance Section

FROM: Kevin Barnard *KB*
Enforcement and Compliance Section

SUBJECT: air quality complaints on feed and grain facilities

Attached is a list of all air quality complaints received by the Department of Environmental Quality statewide from July 1, 1994 to March 7, 1994. A total of 944 air quality related complaints were received in this period. Of these 11 complaints were on grain elevators and flour mills. The complete records of these complaints are attached as well. Of the total air quality complaints, the percentage of feed and grain complaints is 1.17 percent.

It might also be noted that of the 944 total complaints, 419 were related to refinery odors in Tulsa.

11/10 - MR. PHIPPS CALLED AND SAID TO COME AT ANY TIME. DUST IS ESPECIALLY BAD IN MORNING AND LATE EVENING WHEN WIND IS FROM THE SOUTH.
11/18 - COMPLAINANT NOT AT HOME. NO DUST VISIBLE FROM FACILITY. WENT TO CITY HALL/POLICE DEPT AND OFFIER ON DUTY REPORTED NO COMPLAINTS OF DUST. WILL CALL IF COMPLAINTS RECEIVED. WILL RECHECK AT LATER DATE. WIND FROM THE SOUTH ON THIS DATE.
11/29 - MET WITH COMPLAINANT AND DROVE PAST PLANT. REQUEST REVIEW/INSPECTION BY AQS ADDRESSING THE FOLLOWING POINTS BY THE COMPLAINANT:
1) AT TIMES THE EMISSIONS FROM ONE OF THE STACKS ON THE BUCKLEE SEPARATORS EXCEEDS 20% OPACITY. THESE STACKS SHOULD ALSO BE EXTENDED TO DISTRIBUTE DUST OVER LARGER AREAS.
2) AT NIGHT THE PLANT SEEMS TO PURGE OR BLOW DOWN DUST COLLECTING EQUIPMENT AND PRODUCES A LOT OF DUST.
3) TRUCK AND RAILCAR UNLOADING AREAS SHOULD BE CHECKED DURING UNLOADING OPERATIONS FOR FUGITIVE DUST VIOLATIONS.
4) THE GRAIN USED IS MOLDED OR OTHERWISE COMPROMISED. AFLATOXIN PRODUCED BY THE MOLD IS RELEASED IN THE DUST FROM THE PLANT. AFLATOXINS CAN CAUSE ILLNESS AND POSSIBLY CANCER. THESE TOXINS MAY NOT BE REGULATED UNDER CURRENT LAW.

REFER TO AIR QUALITY SERVICE.

Date: 10/11/93 Time: 14:32:31

9/28-1530 - AFTER RECEIVING NOTICE THAT SOUTH ELEVATOR WAS AGAIN PRODUCING CHAFF I MADE A SITE VISIT OF THE FACILITY. NO VISIABLE EMISSIONS WERE NOTED UPON MY ARRIVAL AT THE ELEVATOR. I SPOKE TO AN ACUQUAINAN OF THE COMPLAINANT WHO STATED THAT THE EMISSIONS HAD RECENTLY CEASED. I THEN CONTACTED THE COOP MANAGER BILL BUTLER, AND ELEVATOR FOREMAN, DELVIN ABEI, AND WAS TOLD THE PROCESSING WAS CURRENTLY IN PROGRESS WITH NO CHANGE IN THEIR PROCEDURE SINCE THE START AT AROUND 8 AM THAT DAY.

WILL GIVE 2 WKS UPDATE.

9/29- REC COMPLAINT RE TO DUST AND CHAFF AGAIN AT TEH SOUTH ELEVATOR. WHEN I ARRIVED AT THE SITE I OBSERVED MATERIAL INTERMITTANLY BLOWING FROM THE TOP OF THE SOUTH ELEVATOR. AT TTHAT TIME WHEAT WAS BEING DROPPED FROM THE LOADING BAY OF THE SAME ELEVATOR. BOTH BAY DOOR WERE OPEN ALLOWING AIR CURRENTS TO CARRY DUST AND CHAFF AWAY FROM THE PROPERTY. THE SIT FOREMAN, SCHMITZ, EXPLAINED THAT DOORS WERE OPEN TO ALLEVIATE EXPLOSION HAZARD DUE TO DUST BUILD UP IN LOADING BAY. HE ALSO EXPLAINED THAT DUST CONTROL MEEASURES IN PLACE DO NOT REMOVE THE DUST AND CHAFF BUT REINTRODUCT IT INTO THE WHEAT STREAM AT A PALCE WERE AN EXPLOSION HAZARD IS LESS LIKELY. REFER TO AIR QUALITY.

Comments by: AHARRELL
Date: 11/02/93 Time: 16:36:06

10/28 - AN AIR QUALITY INSPECTION WAS CONDUCTED BY KEVIN BERNARD. BRANCH MANAGER, AEBI, SAID THAT IN THE PAST THERE WERE SOME PROBLEMS WITH WATER PLUGGING THE SPOUT ON THE CYCLONE. AT PRESENT, IT IS IN GOOD WORKING ORDER. WILL REINSPECT WHEN THE FACILITY IS IN OPERATION TO OBSERVE EMISSIONS.

Comments by: KGREER
Date: 11/24/93 Time: 14:52:07

ON 11/18/93 KEVIN BARNARD CONDUCTED AN AIR QUALITY INSPECTION OF CLYDE COOP IN RESPONSE TO THE ABOVE MENTIONED COMPLAINT. TWO EPA METHOD 9 VISIBLE EMISSION EVALUATIONS WERE CONDUCTED AT THE ELEVATOR WHILE IT WAS IN OPERATION. THE FIRST EVALUATION WAS OF THE NORTH LEG OF THE NORTH ELE3VATOR HOUSE. MR. AEBI SAID THAT A BEARING WAS OUT IN THE SOUH LEG OF THE NORTH HOUSE AND COULD NOT BE OPERATED. THE HIGHEST OPACITY AVERAGE OBSERVED AT THE CYCLONE FOR THE NORTH LEG FOR SIX CONSECUTIVE MINUTES WAS 6.9 PERCENT. THE SECOND EVALUATION WAS OF THE SOUTH ELEVATOR HOUSE. NO VISIBLE EMISSION WERE OBSERVED FROM THIS ELEVATOR. MR. AEBI SAID THAT THESE ELEVATORS WERE TURNING WHEAT AT A RATE OF 3000-3500 BUSHELS PER HOUR. HE SAID HE WAS TRYING TO OPERATE THE ELEVATOR TO CREATE A WORSE-CASE SCENARIO FOR THE INSPECTION. MR. AEBI SAID THAT THE WHEAT BEING TURNED WAS A YEAR OLD AND QUITE A BIT DUSTIER THAN NEWER WHEAT. HE ALSO STATED THAT HE WAS RUNNING THE OVERHEAD BINS DURING THE INSPECTION BECAUSE THESE CREATED DUST AS WELL. SOME FUGITIVE DUST WAS OBSERVED EMANTING FROM THE DRIVEWAY DOORS OF THE NORTH ELEVATOR HOUSE. THIS DUST BLEW NORTH ALONG THE PROPERTY OF CLYDE COOP AND MOSTLY DISSIPATED BEFORE CROSSING THE PROPERTY LINE. FUGITIVE DUST WAS NOT OBSERVED BLOWING ON THE COMPLAINANT'S PROPERTY. THERE WERE NO VIOLATIONS OBSERVED. THIS COMPLAINT WAS NOT CONFIRMED.

GARY COLLINS TALKED TO [REDACTED] ON 10/21/93.
NO DUST WAS COMING FROM THE CO-OP. HE SAID LINN
WOULD VISIT HER WHEN HE GOT BACK.

Complaint Number: 292-99-93-02188 Date Received: 10/19/93
Comments by: TPHAM
Date: 11/03/93 Time: 09:49:11

LKOTTKE TALKED [REDACTED] AND SHE SAID DUST WAS COVERING HER HOUSE, AND SHOW ME WHERE IT WAS COMING FROM. I TALKED WITH SHANE CLAYPOOL (MANAGER OF ELEVATOR) AND DID AN INSPECTION. HE SHOW ME HIS DUST COLLECTION UNIT WHICH WAS WORKING. I SHOWED HIM WHERE [REDACTED] DUST WAS COMING FROM. GRAIN WAS DUMPED INTO AN OVERHEAD BEN. THEN INTO A TRUCK. DUST WAS COMING OUT OF OVERHEAD BEN VENT. SHANE SAID THAT HE WAS DOING EVERYTHING POSSIBLE TO KEEP THE AIR CLEAN ACCORDING TO STANDARD. NO DUST WAS SEEN LEAVING THEIR PROPERTY TODAY. I WOULD LIKE TO REQUEST SOMEONE FROM AIR QUALITY TO DO A JOINT INSPECTION.
11-03-93: REFERED TO AIR QUALITY

Comments by: KGREER
Date: 11/24/93 Time: 15:30:22

ON 11/17/93 KEVIN BARNARD CONDUCTED AN AIR QUALITY INSPECTION OF COLLINGWOOD GRAIN, INC. THE COMPLAINANT INDICATED TO MR. KOTTKE THAT DUST FROM THE OVERHEAD BINS ABOVE THE LOADOUT AREA OF THE ELEVATOR WAS GETTING ON HIS PROPERTY. CORN WAS DUMPED INTO THE PIR FROM THE OVEHEAD BINS FOR THE VISIBLE EMISSION EVALUATION. A VISIBLE EMISSION EVALUATION WAS CONDUCTED OF THE MIDDLE VENT BETWEEN THE TWO OVERHEAD BINS. THE FIRST SIX MINUTES OF THE READING WERE INVALIDATED BECAUSE DUST FROM THREE VENTS WERE MIXING AT THE OBSERVATION POINT MAKING THE READING ARTIFICIALLY HIGH. THE OBSERVER POSITION WAS CHANGED TO TRY TO ISOLATE THE EMISSIONS FROM THE MIDDLE VENT. FROM THIS POSITION, THE HIGHEST OPACITY AVERAGE OBSERVED FOR SIX CONSECUTIVE MINUTES WAS 14.4 PERCENT.
ONE TRUCK WAS OBSERVED DUMPING CORN INTO THE LOADOUT PIT. FUGITIVE DUST WAS OBSERVED BEING GENERATED AT THIS POINT. THE BLUEPRINT FOR THIS FACILITY SHOWED THAT A FAN WAS INSTALLED IN LINE EITH THIS PIT TO PLACE IT UNDER NEGATIVE PRESSURE TO CONTROL DUST EMISSIONS. IT MAY BE THAT THIS FAN WAS NEVER INSTALLED AS INDICATED ON THE BLUEPRINT OR IT WAS NOT FUNCTIONING AT THE TIME OF THE INSPECTION. COLLINGWOOD GRAIN INDICATED THAT ALL THEIR EQUIPMENT WAS FUNCTIONING PROPERLY. FUGITIVE DUST WAS NOT OBSERVED LEAVING THE FACILITY PROPERTY. COLLINGWOOD GRAIN APPLIED FOR A PERMIT IN 1988 FOR THE FACILITY. THE PERMIT FOR THIS FACILITY WAS NEVER ISSUED BY AIR QUALITY. IT DOES NOT APPEAR AT THIS TIME THAT THE PERMIT WAS NOT ISSUED DUE TO A FAILURE BY THE COMPANY TO SUPPLY INFORMATION TO THE AIR QUALITY DIVISION. THIS WILL BE REFERED TO THE PERMIT SECTION FOR FURTHER EVALUATION.
THE BAGHOUSE WAS OBSERVED IN OPERATION AT THE FACILITY. NO VISIBLE EMISSIONS WERE OBSERVED FROM THE BAGHOUSE STACK DURING THE INSPECTION. THERE WAS SOME DUST GENERATED DURING THE INSPECTION BUT NOT ENOUGH TO CONSTITUTE A VIOLATION.

2/25/94 - COLLINS/KILMER - TALKED WITH ELEVATOR
GEN. MGR. DOUG FISHER. HE COULD NOT REMEMBER ANY
SPECIFIC PROBLEMS FROM NOVEMBER. ELEVATORS WERE
NOT CAUSING A PROBLEM WHILE WE WERE PRESENT ABOUT
15:50.

2/25/94 - COLLINS/KILMER - TALKED TO COMPLAINANT;
SHE INDICATED THAT THE ELEVATOR HAS NOT BEEN
CAUSING A PROBLEM RECENTLY (SINCE NOVEMBER). WE
AGREED TO CLEAR OUT THIS COMPLAINT AND WILL REOPEN
WHEN AND IF THE ELEVATOR AGAIN CAUSES A PROBLEM.
SHE WAS INSTRUCTED TO KEEP NOTES OF DATES AND
TIMES AND CALL ENID DEQ OR STATE DEQ IF THE
PROBLEM RECURS.

COMPLAINT CLOSED.

SUPPLEMENTAL INFORMATION

COUNCIL MEETING

JUNE 14, 1994

MEMORANDUM

DATE: JUNE 2, 1994

TO: AIR QUALITY COUNCIL

FROM: *DM.* DOYLE MCWHIRTER, PROGRAM DIRECTOR
ENFORCEMENT AND COMPLIANCE SECTION

SUBJECT: PROPOSED SUBCHAPTER 24
PARTICULATE MATTER EMISSIONS FROM GRAIN, FEED OR SEED
OPERATIONS

A Committee composed of Air Quality Council members, Oklahom Grain & Feed Industry Representatives and Air Quality staff members was established as a result of the April 12, 1994 Air Quality Council Meeting. This committee was charged with the responsibility to write a consolidated final draft of proposed Subchapter 24.

Meetings were held on May 6, 18 and 31, 1994. Agendas and notes on discussion of these meetings are provided (see Attachment I).

Members of the committee have reached agreement on proposed Subchapter 24 and provide the attached revision for your consideration (see Attachment II).

MEETING AGENDA
FRIDAY MAY 6, 1994
10:00 A. M.

AIR EMISSIONS ISSUES

OKLAHOMA GRAIN AND FEED ASSOCIATION

AND

OKLAHOMA STATE DEPARTMENT OF
ENVIRONMENTAL QUALITY
AIR QUALITY PROGRAM

AND

SELECTED MEMBERS OF THE
OKLAHOMA AIR QUALITY COUNCIL

- I. INTRODUCTIONS
- II. OBJECTIVES AND CONCERNS
- III. ISSUES
 - A. TITLE V APPLICABILITY
 - B. SYNTHETIC MINOR OPTION
 - C. AP-42 VS. OTHER EMISSION OPTIONS
 - 1. MATERIAL BALANCE
 - 2. STACK TESTING
 - D. PROCESS WEIGHT TABLE
 - E. OPACITY REGULATIONS
 - 1. MODELING
 - 2. OFFSETS
 - F. ENFORCEMENT ISSUES

GRAIN & FEED COMMITTEE MEETING NOTES

MAY 06, 1994

4545 N. LINCOLN BLVD.

OKLAHOMA CITY, OKLAHOMA

(BURGANDY ROOM)

FEED AND GRAIN COMMITTEE MEETING

Bill Fishback, council chairman, opened the meeting and ask each attendee to introduce themselves. He asked F&G to explain their goals and objectives.

Concerns of the Grain and Feed Association:

- Avoid Title V
- Achieving compliance with applicable rules.
 1. Modify existing rules so that compliance can be achieved.
 2. Develop a new rule.
- Want to be treated no more stringently than other states.

3 issues which remain unresolved in development of Subchapter 24:

- Opacity limits
- Emission factors
- Addition of feed and seed facilities

Reason for including other facilities such as feed mill and seed cleaning operations:

- All related, don't want to go through this process again for these facilities

DEQ Objectives (Doyle McWhirter)

- Wants no unfair advantages from other states.
- Wants to be similar in our program to other states.
- Wants to help F&G and other industries to avoid Part 70 applicability.
- Develop new rule that industry will be able to comply with - hopefully with self-determination of compliance.
- Considered using PM-10 monitors.

Bill Fishback attended a recent Title V workshop in Mississippi and explained some of the issues discussed there. The basic problem for grain industries in using AP-42 for each of the emission points listed is that this will cause many elevators to be Title V sources which are actually minor sources. An option to avoid this is a Synthetic Minor permit which provides federally enforceable limits. This seems logical since elevators don't typically run 8,760 hours per year.

All elevators in Mississippi using AP-42 and maximum capacity (8760 hrs/yr) are Title V sources. They are recommending all to apply for Synthetic Minor permits.

There is a strong argument that putting on control equipment may cause more deaths than leaving them off. But controls are not the only alternative - limiting hours of operation could also be used to limit emissions.

"Effective" operating hours could be obtained by taking throughput divided by capacity of leg. This may not account for variations in leg speed used. If load is 1 million bushels with cups full it will take a certain number of hours. If you load the

same amount half full it will take a different number of hours.

Emissions related to not only total throughput but total hours emissions are exposed to air.

Effective hours could be negotiated on a case-by-case basis based on variations in leg rate, when facilities know their typical leg rate and % full in leg cups. This would drop the majority of elevators out of Title V. Need to only count hours when grain is moving.

Example of 1 million bushels elevated with a 10,000 bushel per hour leg operating at 75% capacity gives 133 "effective" hours of operation.

Bill Fishback suggested that potential emissions could be calculated using AP-42 and a ratio of actual operating hours to the number of hours in a year. This is based on the assumption that AP-42 gives the maximum potential to emit for 8,760 hours in a year. DEQ staff indicated that AP-42 is believed to give an estimate of emissions based on throughput regardless of the hours.

Calculations:

1 million bu/yr maximum potential to emit

$$30,000 \text{ tons/yr} \times 8.6 \text{ lb/ton} = 129 \text{ tons/yr}$$

at only 876 bu/yr take 876/8760 ratio

$$\begin{aligned} &\text{times max potential to emit at 8760} \\ &= 129 \text{ ton/yr} \times 876/8760 = 12.9 \text{ ton/yr} \end{aligned}$$

Basis: Materials moved at half speed would have half the emissions. This type of calculation would help elevators avoid applicability to Title V, however, the validity of these calculations is questionable.

Everyone involved agrees that AP-42 factors are probably not representative. Taking a percentage reduction of AP-42 would only produce another unrepresentative estimate. Emission factors are a big area of disagreement. If a leg is not exposed, AQD agrees that it is not considered an emission point. Emissions need to be based on scientifically defensible data.

AQD encouraged G&FA to do material balance to get individual emissions at each facility. Even if MRI study was perfectly correct, it was only correct for that facility at which it was done.

Concerns expressed by G&FA:

- some facilities never empty
- doesn't account for dust which settles on site
- don't take moisture readings on all loads

Bill Fishback explained this method would not be appropriate on a daily basis because it wouldn't give an accurate account for each day since you would never know the change in inventory on a daily basis. A material balance would have to be on an annual basis (or

harvest).

input + change in accumulation = output

-take as many moisture samples as is necessary to represent moisture loss - industry would decide how often. The change in accumulation minus any documented losses would be considered the emissions.

How do you account for emissions settling on site?

- Impact modeling (treating facility as a single point source)
 - uses temperature, height, velocity/flow rate
 - ISCST
 - ISCLT
 - TSCREEN

-Models use stack parameters, emission rate, meteorology to determine impact and compliance with NAAQS for PM-10. Modeling is only an estimate with a wide margin of error. However, it is a good tool to help determine placement of ambient air monitors. Dispersion modeling is an acceptable means of evidence in a court of law.

-could use this in reverse to set limits on max emission rate which is below NAAQS standards

-emission rate is directionally proportional to predicted concentration

"Fishback's Formula" based on 1,000,000 bushels/year

$$\begin{array}{r} 1,000,000 \text{ Bu/yr} \\ \times \quad 60 \text{ lbs} \\ \hline 60,000,000 \text{ lbs/yr} \\ / \quad 2,000 \text{ lbs/ton} \\ \hline 30,000 \text{ ton/yr grain} \\ \times \quad 8.6 \text{ (AP-42) lbs/ton dust} \\ \hline 258,000 \text{ lbs/yr dust} \\ / \quad 2,000 \text{ ton/yr dust} \\ \hline 129 \text{ ton/yr dust} \\ \\ \frac{876}{8760} \times 129 = 12.9 \text{ ton/yr} \end{array}$$

If facility has maximum process capability of 1,000,000 bu/yr, Maximum potential to emit will allow you to safely use this formula.

Instead of AP-42:

- Get some other emissions estimate.
- Measure emissions from individual facilities.
- MRI study not truly representative of all grain elevators.

- Each facility do a material balance and find their own maximum capacity # instead of (AP-42).
- Measure losses during maximum working period to find maximum potential to emit.

Concern

- Some facilities are never empty therefore makes an accurate number difficult to find; doesn't account for settling.

Response

- Need to know change in level over a year or season.
- Whatever amount of loss is unaccountable is an emission. Do a material balance and compare to AP-42 to get the best #'s.

Concern:

- Is settlement on facility's property a concern under the Clean Air Act?
- Does AP-42 account for loss on-site?

Particulate Sizes:

- Is it appropriate to consider only particles less than 20 microns in size?
- To use 20 micron particle size is inaccurate because according to studies, even particles this size will carry long distances therefore it does not guarantee settlement on property. There is a great margin of error due to many variables.
- Even with good particle size data, it seems that even small particles will carry long distances.
- Monitor/sampler could be used to indicate how far particulate actually travels.

Monitoring

- AQD would prefer to work with G&FA to utilize their input on scheduling and site selection for the PM-10 Monitors.
- Monitoring study could show whether emissions do or don't impact surrounding area. Would show how much goes on/off property.
- Do modeling to find optimum placement of monitors.
- Find maximum impact area and put monitor there to prove that even at worse case scenario, facility does not exceed standards. Therefore, there is no need for additional equipment to control emissions.
- Monitoring does not necessarily keep facility out of Title V.
- this is EPA acceptable methodology.
- Modeling is not designed to replace monitoring however it does reduce the number of monitors used.
- Modeling could show there is no need for bags or other equipment.
- Opacity would be easier to lower if modeling shows it to be in compliance with NAAQS limits.
- Methodology is needed to determine compliance with rules.
- Methodology needs to be economical.
- Visible emissions are the most economic tool to determine compliance.

- Bullet testing with PM-10 monitors
- Individual location should keep notes on activities in their immediate surroundings (ie. harvest times, etc.) to help determine time and placement of monitors and to help rule out emissions from other sources.

Proposed Study to determine opacity levels

- Modeling and/or monitoring to look at compliance with NAAQS.
 - Modeling could allow each facility to set its own opacity levels?
 - Modeling could give individual opacity limits for each elevator site.
- Opacity study will be pending an agreement on reading times (6 minute consecutive readings, does that stop between loads?) and Method 9 procedures.
- AQD is willing to host a special smoke school to help grain industries get their personnel certified.
- Both AQD and G&FA would like to see many more opacity readings at loading and unloading areas at different facilities.
- Study would consider number of complaints received.
- Cost analysis for control equipment would be a factor.
- Study would consider the risk of potential employee exposure and explosive hazard due to requiring control equipment

What is the definition of Process Equipment?

Fugitive dust -vs- process emissions

- Need a resolution of the definitions of fugitive dust -vs- process emissions.
- Do readings to determine actual loading and unloading emissions.

How will Method 9 apply to facilities with sheds?

- Is the process continuous between cars/loads?
- Where is the reading taken?

Feed & Grain does not see the need for controls at load-out because few complaints are made against elevators and they are generally well supported by their communities.

Complaints

- At what point does AQ investigate? within 2 days of notification.
- Without standards how can there be an end to some complaints?
- F&GA feels that complaints could better be handled by AQD notifying facilities to allow them the opportunity to resolve the issue.

What is the deadline for Title V?

- Title V applications must be submitted within one year from the date AQD receives EPA approval of Title V program. (November 1995?)
- AQD believes that Synthetic Minor permits must be issued before approval of the Title V program. Therefore, AQD is

recommending all facilities wanting a Synthetic Minor permit submit the ASAP. AQD has asked EPA for clarification on this issue.

Process Weight Rate Allowable

- Using AP-42 violates process weight rate allowable and opacity.
- Could use results from monitoring to set a different allowable hourly emission based on process weight rate.
- Subchapter 24 could provide alternative process weight rate allowable as long as it can be shown that the rates would not violate the NAAQS.

Feed Mill and Seed Plants

- AQ contends that there is not enough background information/knowledge to deal with them yet
- Current rules are applicable now to Feed Mills, Seed Plants, and every other industry which emits.
- AQD believes most of these facilities are already in compliance.
- Expansion of rules will be considered pending further exploration of processes at these other types of facilities.

RECAP OF MAY 6 MEETING

Bill Fishback opened the meeting with a review of the previous meetings notes and last agenda.

1. Discussion of Title V subjectivity and AP-42.
 - It was agreed to use AP-42 factors (.9 lbs/ton) and to give credit for controls:
 - 90% for oil
 - 50% for baffells
 - It was agreed that AP-42 is flawed, but agreement has not been reached as to whether it is too high or too low.
2. Discussion of Synthetic Minor option to limit hours of operation and get below Title V.
 - Using AP-42 factors on a throughput basis does not account for hours of operation.
 - It was agreed that using wattage to obtain hours of operation is not practical for this industry.
3. Feed and Grain industry seeks relief from opacity limits.
 - This is reflected in the rewrite of Subchapter 24 and alternative opacity in Subchapter 25.
 - It is agreed that according to NAAQS, industry must show compliance.
 - Method 9 will be performed using 6 consecutive minute readings.
 - A 2 year study on opacity will be implemented.
4. Discussion of results of preliminary modeling by Debbie Perry and Bill Fishback on SCREEN.
 - Model overestimates and predicts major violations.
5. Discussion of Offsets.
 - As long as the end result (in terms of amount of emission reduction) is the same, one source can be controlled as opposed to 2 or more.

MAY 18 MEETING NOTES

I. Method 9 Discussion

- A. Method 9 was designed for continuous processes and is therefore not the most appropriate method for this industry.
- B. There are other methods available, however at this point in time Method 9 is written into the rule as the EPA accepted method of opacity readings.
- C. Need to develop a control/opacity methodology for industries with intermittent process like Feed & Grain utilizes.

II. Bill Fishback suggested that F&G has 3 main options/choices to help them achieve continuous compliance.

A. Control Equipment

- 1. F&G expressed that this option would be too costly.

B. Testing/Monitoring

- 1. Ambient concentration testing, Hi-Vol sampling with PM-10 monitors to find off-property impact.
 - a. AQD will provide PM-10 monitors and do analysis of data.
 - b. F&G will provide power on sites where monitors are placed.
 - c. Site selection will be done by AQD with consideration of input from F&G.
 - d. Monitors will be placed:
 - 1. At terminal elevators (for worse case scenario)
 - 2. Upwind
 - 3. Downwind
- 2. Emissions testing at the source.
 - a. F&G industry will do stack testing to determine elevator emissions.
 - b. Accurate emissions data from stack testing can be used to obtain more accurate results from modeling.
- 3. Opacity testing.
 - a. Opacity will be determined using Method 9.
- 4. If a correlation between the above occurs, then using opacity (Method 9) only to regulate would be justified.

C. One time EPA Method V stack testing.

- 1. Very costly to F&G (approx. \$5000/day).

III. Testing/Monitoring Discussions

A. Testing concerns and responses to those concerns.

- 1. Are results of tests representative?

2. Are particulates coming from the industry source or from other unrelated sources? High Vol samplers will be used to reduce other particulate (ie. from other sources such as wheat harvest fields, etc.).
3. Where would PM-10 monitors be located? Locations would be both upwind and downwind and suggestions from F&G on location will be considered.

B. If data was available for this industry, perhaps EPA would adopt them nationally.

IV. AP-42 discussions.

- A. Grain factors could be based on MRI study of iron ore.
- B. Processes of iron ore and F&G industries are not similar enough to make these types of comparisons.
- C. Should factors for fugitive dust be used instead?
- D. Could recalculate using iron ore factors adjusting the density for grain.
- E. Correct number probably somewhere in between fugitive dust and listed grain factors.
- F. It was agreed to do monitoring to discern more accurate factors for F&G.
- G. .9 can be used for facilities where emissions come predominantly from loading and unloading.
- H. Any facility with pressurized vents must install controls for those vents or seal them off.
- I. All pressurized vents not associated with loading and unloading must have control devices OR be enclosed if there are visible emissions. Control devices for these vents should be passive (eg. sock or manifold).
- J. Some grain handling facilities have emissions aside from loading and unloading. After Subchapter 24, these "other" emissions need to be addressed.
- K. Categories of emission points:
 1. Loading & unloading = 0.9%
55% unloading opacity
65% loading opacity
 2. Controlled vents = AP-42 X (1-efficiency)
20% opacity
 3. Uncontrolled vents
 - a. Pressurized: > or = 20% opacity ---> enclosure or passive control device
 - b. Unpressurized: 10% opacity only

V. Title V discussions.

- A. Title V includes all facilities. All emitters must file an application.
- B. Title V permitting determined on cumulative pollutant emissions.
- C. What defines "new" and "existing" facilities under Title V.
- D. What is the law concerning "shutdowns".
- E. Synthetic Minor permit applications to be filed by 11-95. After that date, Title V application/permit will be the only method of getting a permit.

VI. Discussion of a proposed method to capture and measure particulates from unloading.

- A. Trucks would be driven into an enclosed structure.
- B. Create a vacuum and filter out fugitive dust with a bag.

1. Locate hose intake for bag catch at a point remote from actual unloading.
- C. Divide bag catch (pounds) by amount of grain dumped (tons).
- D. Procedure would be repeated numerous times with several grain types in order to obtain a realistic average.
- E. Discussion occurred in regards to modifying the above procedure for use with railcar unloading.
 1. Railcar unloading does not occur inside an enclosed or enclosable structure.
 2. It is agreed that the above method is not feasible for railcar unloading.

VII. Determination of continuous compliance.

- A. AQD needs a short-term and long-term method of determining Maximum Allowable Throughput.
- B. F&G will provide cumulative throughput totals for any given point in the calendar year.

VIII. Next meeting scheduled for May 31, 1994 at 10am.

Notes from May 31, 1994 Meeting

- I. Review of last meeting.
- II. Discussion of changes to Subchapter 24.
 - A. Comments were heard from each attendee regarding Subchapter 24.
 - B. Minor adjustments in wording were made and agreed upon. (See Subchapter 24 revision.)
- III. Discussion of testing protocol.
 - A. Feed & Grain agreed to choose three locations for monitoring with the provision that monitoring be done correctly and expediently.
 - 1. It was agreed that data collected from monitors at volunteered sites will not be used against the site. Compliance or violation of the site will be determined on an equal basis as those sites not volunteering.
 - 2. Loading rates from the volunteering sites will be provided in order to make accurate calculations from monitoring.
 - B. It was suggested that some County Health Departments have PM-10 monitors already in place. Data from these monitors could potentially be analyzed for ambient air quality.

SUBCHAPTER 24. PARTICULATE MATTER EMISSIONS FROM GRAIN, FEED OR SEED OPERATIONS.

- 252:100-24-1. Purpose
- 252:100-24-2. Definitions
- 252:100-24-3. General Provisions; applicability, calculations
- 252:200-24-4. Smoke, Visible Emissions and Particulates
- 252:100-24-5. Emission Control Equipment
- 252:100-24-6. Fugitive Dust Controls
- 252:100-24-7. Applicability to other Agriculture Sources

252:100-24-1. Purpose

The purpose of this rule is to control emissions from facilities that handle, store or process grains. All facilities handling bulk agricultural commodities through grain handling equipment can apply this subchapter to emission sources at the facilities. This rule is an interim rule effective until July 1, 1995 or until the date (whichever is earlier) that measured particulate emission rates from grain handling are developed under protocols approved or accepted by the Air Quality Division to replace the factored emission rates in this interim rule.

252:100-24-2. Definitions

The following words and terms when used in this subchapter, shall have the following meaning, unless the context clearly indicates otherwise:

"Dust Suppression Additives" means FDA or FGIS-approved additives applied commercially for dust suppression. The dust suppression efficiencies of these additives is accepted to be 90% when applied at a proper application rate per manufacturer's recommendations or as approved by the director of the Air Quality Division.

"Enclosed Grain Handling Equipment" means equipment that is totally self-contained or is enclosed within a structure at a grain, feed, or seed facility. Emissions from this equipment shall not be exhausted to the atmosphere except through non-pressurized vents/openings, and shall

not be considered a point subject to emission calculations.

"Existing Grain, Feed, or Seed Operation" means a facility which is in existence and has submitted a current emission inventory to the Air Quality Division for the 1993 reporting period year. All other grain, feed, and seed operations shall be considered new.

"Fabric Filter" means any control device or system in which particulate matter is collected on a dust cake supported on either a woven or felted fabric that can demonstrate a particulate collection efficiency of not less than 95 percent.

"Fugitive Emission" means those emissions that could not reasonably pass through a stack, chimney, vent or other functionally equivalent opening.

"Grain, Feed, or Seed Operation" means any facility or installation at which grain, feed, or seed is loaded, handled, cleaned, dried, stored, treated, or otherwise processed.

"Grain, Feed, or Seed Operations Facility" means the contiguous or adjacent area under common control upon which a grain elevator, feed mill, or grain and seed processing equipment or structures are located, and all contiguous sites having common ownership or control, which have SIC codes with identical first two digits.

"High Efficiency Cyclone" means any cyclone type collector of the 2D-2D or 1D-3D configuration. These designations refer to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion. A 2D-2D cyclone would exhibit a cylinder length of 2 x D and a cone length of 2 x D (90% collection efficiency for TSP). A 1D-3D cyclone would exhibit a cylinder length of 1 x D and a cone length of 3 x D (95% collection efficiency for TSP).

"Hours of Operation" is calculated by dividing the cumulative throughput total for a given time period by 75% of the rated leg capacity. This quotient is equivalent hours (not actual hours) of operation required to process the throughput. Actual leg capacity may be adjusted to more

or less than 75% by individual facilities if documentation supporting the proposed adjustment is submitted to and approved by the Director of the Air Quality Division.

"Leg Capacity" means the maximum process rate for which the manufacturer designs the elevating portion of a grain, feed, or seed facility on a per leg basis.

"Medium Efficiency Cyclone" means any cyclone type collector less than 2D-2D configuration. These designations refer to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion. A 1D-1D cyclone would exhibit a cylinder of 1 x D and a cone length of 1 x D. These cyclones shall be capable of demonstrating a collection efficiency of 75% for particulate matter.

"Non-pressurized Vent or Opening" means any vent or opening which allows the emissions of air and/or contaminants at pressures substantially equivalent to atmospheric pressure without the use of mechanically-induced air flow.

"Pressurized Vent or Opening" means any vent or opening which allows the emissions of air and/or contaminants at pressures greater than atmospheric pressure indicating the use of mechanically-induced air flow.

"Process Emission" means emissions from a process equipment point source.

"Throughput" means the pounds, tons, or bushels received by a facility added to the pounds, tons, or bushels loaded-out from the facility during any time period of interest divided by two.

252:100-24-3.

General Provisions: Applicability, Determination of Emissions

(a) Applicability. The provisions of this subchapter are applicable to all new, modified, and existing grain, feed, or seed operations in the State of Oklahoma.

(1) Facilities in compliance with OAC 252:100-25, 252:100-27, and 252:100-29 are not required to comply with this subchapter.

(2) Facilities in compliance with this subchapter are exempt from the requirements of OAC 252:100-25 (visible emissions), 252:100-27 (process weight), and 252:100-29 (fugitive dust).

(b) Permits required. In addition to the requirements of this subchapter, each new, modified or existing grain, feed, or seed operation shall comply with the permitting requirements of OAC 252:100-7 and 252:100-8.

(c) Air toxics emissions. Grain, feed, or seed operations which emit toxic air pollutants above the de minimis levels specified in 252:100-41 are subject to all applicable requirements contained therein.

(d) Record-keeping. The owner or operator of a facility shall maintain a daily log documenting the commodity throughput and hours of operation. These records shall be maintained for a period of two years and shall be made available for inspection by the Air Quality Division personnel or its representative during normal business hours.

(e) Visible emissions test. Visible emissions (opacity) testing shall be conducted using EPA reference method 9 contained in 40 CFR, Part 60, Appendix A and must be performed by individual(s) possessing current certification.

(f) Determination of emissions. Emissions from grain, feed, or seed operations shall be based on the best available data. This may include actual emissions as determined by stack testing, mass balance calculations, emission calculations using approved published emissions

factors, or other methods approved by the Air Quality Division. The following factored emissions are allowed by this interim rule only until July 1, 1995 or until the date (whichever is earlier) that measured particulate emission rates from grain handling are developed under protocols approved or accepted by the Air Quality Division.

For this interim rule, emissions shall be calculated as follows for three classes of emission points:

Class I: Unloading (Receiving) 0.6 lbs/ton
 Loading (Shipping) 0.3 lbs/ton
 Refer to 252:100-24-4 for opacity limits.

Class II: Vents with Control Devices
 AP-42 factor X (1-EFF)
 Refer to 252:100-24-4 for opacity limits.
 EFF means efficiency of control device.

Class III: Uncontrolled Vents
 A. Pressurized - opacity limit only
 B. Non-pressurized - opacity limit only
 Refer to 252:100-24-4 for opacity limits.

252:100-24-4.

Smoke, Visible Emissions and Particulates

(a) Visible emissions limit.

(1) Visible emissions limits. No person shall cause, suffer, allow or permit the discharge of any fumes, aerosol, mist, gas, smoke, vapor, particulate matter or any combination thereof with a shade density greater than twenty percent (20%) equivalent opacity. This requirement shall not apply to smoke or visible emissions emitted during short-term occurrences, the shade or density of which is not greater

than sixty percent (60%) opacity for a period aggregating no more than five minutes in any sixty consecutive minutes and/or no more than twenty minutes in any consecutive twenty-four hour period.

- (2) Alternate emissions limit. The (20%) opacity limits, as required under 252:100-24-4 (a) may be increased for particulates only provided that the owner/operator demonstrates to the satisfaction of the Oklahoma Air Quality Council at public hearing that those requirements listed in 252:100-25-4 (a) through (c) have been met.
- (3) Exceptions. Exceptions to the requirements described in 252:100-24-4 (a) (1) are provided as follows:
 - (a) Visible emissions from loading (shipping) shall be no more than sixty-five percent (65%) equivalent opacity, and visible emissions from unloading (receiving) shall be no more than fifty-five percent (55%) equivalent opacity.
 - (b) Emissions from pressurized or non-pressurized vents or openings with control devices shall be limited to no greater than 20% opacity at any time.
 - (c) Emissions from pressurized vents or openings without control devices shall either be enclosed, exhausted through a control device, or shall be limited to no greater than ten percent opacity at any time.
 - (d) Emissions from non-pressurized vents or openings without control devices shall be limited to no greater than ten percent opacity at any time.

252:100-24-5

Emission Control Equipment and Certification

(a) Emission control equipment where required by (40 CFR 60.300) must meet the standards set under the Federal New Source Performance Standards (NSPS Subpart DD), or as mandated by other Federal requirements for major sources. Additional controls may be required to reduce nuisance emissions.

(b) Certification. Each existing grain elevator in the state of Oklahoma shall provide written certification of compliance with this subchapter within one year of the adoption of this rule by the Air Quality Council. Annual certification of hours of operation and throughput and the operation and proper maintenance of required control equipment shall be completed by the owner, operator or other designated responsible party and submitted as part of the annual emissions inventory reporting form.

252:100-24-6

Fugitive Dust Controls

(a) All facilities will take reasonable precautions to prevent the discharge of any visible fugitive dust emissions beyond the property line from which the emissions originate.

(b) No persons shall allow visible emissions beyond the property line in such a manner as to damage or to interfere with the use of adjacent properties.

SUPPLEMENTAL INFORMATION

COUNCIL MEETING

DECEMBER 13, 1994

December 5, 1994

MEMORANDUM

TO: Air Quality Council

FROM: Larry D. Byrum, Director
AIR QUALITY DIVISION *LDB*

SUBJECT: OSU GRAIN DUST STUDY

The OSU Division of Agricultural Sciences has completed its grain dust emission study. The purpose of this study was to help develop accurate emission factors to be applied to the Oklahoma grain industry. A copy of the study is attached for your review and will be an item of discussion at the December 13 Council meeting.

Debbie Perry

October 21, 1994

Mr. Larry Byrum, Director
Air Quality Division
4545 N. Lincoln Blvd.
Suite 250
Oklahoma City, OK 73105-3483

Dear Mr. Byrum:

I have attached a report containing the results of the grain elevator dust emission study conducted in Alva, Ok. on Sept. 26-27. I have also forwarded a copy of this report to the DEQ and AQC representatives who attended the test and I have provided a copy to the OGFA. These results should be useful in developing representative and scientifically defensible emission factors.

Please let me know if you have any questions, or if we can provide any further clarifications. We appreciate this opportunity to assist the Oklahoma Department of Environmental Quality and the Oklahoma grain industry.

Sincerely,

Phil Kenkel

Extension Agricultural Engineer

Background

The 1990 Clean Air Act required state environmental agencies, including the Oklahoma Department of Environmental Quality, to develop permit programs for a variety of industries, including the grain handling industry. This process involves the use of emission factors for grain elevator operations. The emission factors are an integral and important part of the determination of grain elevators' "potential to emit" airborne dust and in the calculation of operating fees. Unless they obtain a minor source permit from the state regulatory authority, firms with a potential to emit over 100 tons/year are classified as major source polluters and fall under federal EPA permitting process.

The implementation of the permitting process in Oklahoma highlighted an urgent need for accurate emission factors which are representative of typical Oklahoma grain elevators. The only existing source of emission factors for grain elevators is the EPA's AP-42 document. Examinations of the research methods used to develop the estimates in the AP-42 document along with the analysis of other available data caused the Oklahoma Grain and Feed Association task force, Oklahoma Department of Environmental Quality representatives, and members of the Oklahoma Air Quality Council to become concerned that the existing AP-42 emissions estimates were seriously flawed and overstated. (This same concern is being mirrored at the national level, as evidenced by negotiations between the National Grain and Feed Association and Federal EPA during a meeting in Raleigh, N.C. on Aug. 29, 1994.) The use of overstated emissions estimates would result in unnecessary operating restrictions, major investments in emission control equipment, and excessive annual emission fees.

Due to the concern over the existing emission factors and the critical need for accurate data, a team of faculty from the OSU Division of Agricultural Sciences and Natural Resources proposed a grain dust emission study from which accurate, representative, and scientifically defensible emission factors could be developed. This proposal was formally made to the Oklahoma Air Quality Council and the Oklahoma Department of Environmental Quality during a Grain and Feed Industry/Air Quality Council-Grain and Feed Industry Committee meeting on May 31, 1994. The Oklahoma Air Quality Council and Oklahoma Department of Environmental Quality

subsequently accepted the concept of a grain dust emission study. During the June 14th AQC meeting the Oklahoma DEQ, Oklahoma AQC, and grain industry task force agreed to the text for a grain industry subchapter of the Oklahoma Clean Air Act. The grain industry sub-chapter specified that the existing AP-42 emission estimates for receiving and loading would be used as interim values for a period not to exceed one year, during which time a grain dust emission study would be conducted to develop permanent emission factors. The sub-chapter was formally passed by the AQC on June 14th, 1994 and subsequently passed by the DEQ Board on September 28, 1994. The final protocol for the test was submitted to the Oklahoma DEQ and AQC by the OSU faculty team on September 16, 1994. The protocol was reviewed by DEQ staff and formally accepted on September 20, 1994.

Study Objectives

The primary objective of the study was to capture and measure the amount of grain dust emitted during typical receiving and load-out processes of a country elevator. The receiving study was sub-dividing into three parts to investigate the impact of truck type (hopper-bottomed versus end-dump) on dust emissions and to determine the efficiency of dump-pit baffles in reducing dust emissions at receiving. Dump pit baffles were included in the study due to the lack of any existing efficiency estimates for this fairly low cost emission control. The formal objectives of the study were:

- I. Capture and measure the amount of grain dust emitted (per ton of grain handled) during the receiving process of a typical Oklahoma elevator;
- II. Capture the amount of grain dust emitted (per ton of grain handled) during the truck load-out process of a typical Oklahoma elevator;
- III. Measure the impact of dump-pit baffles on grain dust emissions from receiving operations; and
- IV. Determine the impact of truck type (end-dump versus hopper bottomed) on dust emissions at receiving.

Test Site Selection

The proposed procedure for measuring the emitted dust required a country elevator facility with an enclosed dump-shed that could be adequately sealed. The need for an efficiency estimate for dump-pit baffles also required that the facility have a removable baffle system in place. A list compiled by the Oklahoma Grain and Feed Association indicated that four country elevator facilities located in Omega, Dacoma, and Alva had enclosed dump-pits equipped with dust control baffles. After a tour of the facilities, the Wheeler Brothers Elevator in Alva, Oklahoma was selected. This elevator was selected because it was the only facility in which the dump-pit baffles could be easily removed so that tests could be conducted with and without the baffle

system. (In the other elevators the dust control baffles were permanently welded or otherwise permanently secured.)

Test Procedures

Overview

The basic format of the receiving and load-out tests involved unloading or loading trucks containing a known amount of grain in a specially modified enclosed dump shed. A 7.5 h.p. centrifugal blower mounted outside the dump shed was used to evacuate the dust laden air from the shed through a set of fabric bag filters. The air movement generated by the centrifugal blower helped to keep all of the airborne particles in suspension until they reached the 13" diameter inlet pipe, positioned near the center of the dump shed, which exhausted to the filter bags. Two additional high volume propeller fans were stationed in the shed (see Figure 1) and operated during the test to simulate a 12-15 m.p.h. wind through the dump shed. These fans helped to further ensure that all of the small, light weight dust particles remained in suspension.

Dump Shed

The enclosed driveway portion of the concrete dump shed in which the test was conducted has a total volume of approximately 24,000 cu. ft. The dump shed had full height driveway doors on the east and west ends. A small office was located to the south of the dump shed area and was separated by a door. A man-lift access area was located along the north of the dump pit. A temporary plywood partition was constructed to separate the dump pit area from this access area. A 13 inch diameter steel air duct was routed through the plywood partition with the inlet positioned approximately 7' high and directly above the dump pit unloading point. The duct routed the dust laden air from the enclosed driveway area to the centrifugal blower and filter bag assembly which were mounted in the man-lift access area. All minor cracks between the plywood partition, the ducting, and the concrete walls were sealed with duct tape or other sealing material. The only air inlet into the enclosed driveway area of the shed was the small gaps around the truck doors on the east and west ends of the shed. The negative pressure generated by the 7.5 h.p. blower ensured that no dust escaped from these cracks. The primary air flow was around the doors, across and over the grain dump pit, and up to the outlet duct.

A small door was constructed in the plywood partition to allow the truck driver to exit the dump shed after loading or unloading processes were completed and to allow the test supervisors to monitor the test without disturbing the outer doors. The partition was also equipped with a plexiglass window which allowed test personnel to observe the test without entering the enclosed shed.

Dump-pit

The dump pit grate had a surface area of approximately 64 sq. ft. (8' by 8') and a depth of 12 ft. In order to simulate typical operating conditions the receiving test began with the pit empty and the elevator leg operating before and during the time the grain was being unloaded into the pit. The dump pit was equipped with removable dust control baffles (see Figure 2) which were designed to partially restrict dust laden air from leaving the dump pit. When all of the baffles were positioned in the fully closed position, approximately 14% of the surface area of the dump grate was open. During the receiving operation the baffles directly under the grain swung open allowing the grain to flow through, and generating additional open area. The dump pit baffles were removed for the initial receiving tests which involved both hopper-bottomed and end-dump trucks and were re-installed for the baffle efficiency test. The dump pit was equipped with a pneumatic dust control system but, this system was not operated during the test procedures.

Blower and Filter Bags

The outlet from the 7.5 h.p. centrifugal blower was attached to three, 6" diameter by 12' long high efficiency fabric bag filters through a specially constructed manifold. The blower provided approximately 2,400-2,500 c.f.m. which allowed for a complete air exchange of the dump shed in approximately 10 minutes. The blower was started when the grain unloading or loading process began and was operated for a sufficient amount of time to create 1 1/2 to 2 air exchanges for the dump shed area. During the test, manometer readings were taken periodically (Appendix 1) to measure the differential pressure across the blower. These measurements, along with the manufactures fan curve for the blower (Figure 3) were used to calculate the actual airflow through the filter bags.

The fabric filter bags and end clamps were weighed before each test to establish a tare weight. The bags were reweighed at the completion of each test to determine the amount (lbs.) of dust captured. After each test was completed and the bags had been weighed, the clamps were removed from the end of the bags and the bags were cleaned by exhausting air from the centrifugal blower through the bags with the ends opened. Periodically during the two day testing period, when the manometer readings indicated that the static pressure readings were increasing, one filter bag was replaced with a new, or hand-cleaned bag, prior to the next test.

Trucks

Two truck types, a hopper-bottomed semi-trailer and an end-dump tandem axle truck, were used during the open dump-pit (baffles removed) receiving test. Each truck had a capacity of approximately 17-18 tons (34,000-36,000 lbs). The unloading opening of the tandem end-dump truck started 4' 11" above the dump pit grate and ended up 2' 11" when the truck bed was in the fully raised position. The hopper bottom semi-trailer dump gate height was 17 3/4" above the dump grate. The trailer was equipped with three 15 3/4" by 10", air operated, rack and pinion slide gates which were fully opened during each receiving test. The end-dump truck had two slide gate openings, each 7" high by 15" wide, which were fully opened during each test.

Load Out Spout

The discharge spout in the dump-shed was of a fixed height design and was approximately 6 ft. above the bottom of the truck bed. The spout was in line with the inlet pipe to the centrifugal blower. Each load-out test took approximately 6 1/2 minutes, indicating an effective load-out speed of 5,700 bu./hr (170.8 tons/hr.).

Number of Truck Loads

Five loads from each truck type were used during the open dump-pit receiving study. The truck types were alternated during the test to prevent down time while the truck was being weighed, loaded, and re-weighed. The truck type was recorded for each test and all of the results were separated by truck type.

The baffle efficiency study involved an additional five loads from the tandem end-dump truck. The tandem end-dump represented the worst case scenario in terms of dust emitted and therefore, provided a conservative estimate of the baffle efficiency. All of the procedures for the baffle efficiency test were identical to the open dump-pit test. A ratio of the average amount of dust (lbs./ton) emitted from the tandem end-dump truck with and without the baffles installed was calculated to determine the efficiency of the dump-pit baffles.

Five truck loads with the tandem end-dump truck were used for the load-out study. Since the truck heights of the hopper bottom and end-dump trucks were almost identical, the load out results would not be expected to vary significantly with truck type.

Weights

Each truck load of wheat was weighed on the elevator scale which had a current certification. The filter bags and clamps were weighed on a Class I laboratory scale provided by the Oklahoma State Department of Agriculture, Weights and Measures Division. The scale provided (which is used by weights and measures inspectors to certify scales at commercial facilities) had an accuracy of + or - 1/1000 lb. Mr. Charles Carter, Oklahoma Department of Agriculture, Weights and Measures, set-up, leveled and calibrated the scale, and performed the weighing for the receiving end-dump and receiving hopper bottom tests. Dr. Phil Kenkel, OSU Agricultural Economics conducted the weighing for the baffle efficiency and load-out tests conducted on the second day.

October 21, 1994

6

Supplemental Tests

Two supplemental tests were conducted in conjunction with the primary receiving, load-out, and baffle efficiency tests. An "extra fan time" test was conducted to determine the impact of additional dump shed evacuation on the amount of dust collected. This test was conducted in conjunction with the last end-dump truck load of the receiving study. The filter bags were weighed after the fan had been run for the standard 20 minute interval. The bags were then re-attached to the fan (without being emptied) and the fan was run an additional 20 minutes. The bags were then re-weighed to determine the additional dust captured by doubling the fan time and air volume. The elapsed time between fan shut off and re-start was 3 minutes, 10 seconds.

The second supplemental test was the measurement of the non-airborne dust which settled on the floor during the standard receiving, receiving with baffles installed, and load-out tests. The dump shed was completely swept prior to each test. After the shed had been evacuated for the designated 20 minute time, the dust which settled to the floor was swept up and weighed. The collection of the floor dust occurred before the doors of the shed were opened. Since the samples of "floor dust" also contained whole and partial kernels of grain spilled during the loading and unloading processes, the samples were saved for sieving and/or particle size analysis. In addition, an open door "reference" test was conducted to determine the amount of floor dust which would be expected to be recovered during normal (OSHA mandated) housekeeping procedures. This "reference level" was determined by sweeping up and measuring the amount of dust which fell to the floor of the dump shed when trucks were unloaded with both doors to the shed open, and the outside winds flowing through the shed.

**Table 1
Summary of Emission Test Design**

Test Number	Purpose	Truck Type	# Loads	Avg. Load Weight (tons)	Avg. Unloading or loading time	Time of fan run
1	Receiving	End-dump	5	18.15	3.5	20 min
1	Receiving	Hopper bottom	5	17.63	1.5	20 min*
2	Baffle	End-dump	5	18.46	3.5	20 min
3	Load out	End-dump	5	18.50	6.5	20 min

* The first two repetitions for the hopper bottom truck used a fan time of 15 minutes since the dump shed was free of visible dust after that period of time. The fan time for the remainder of the tests were increased to 20 minutes after analysis of the preliminary manometer readings and calculated airflows.

Supplementary Tests

S1	Extra fan time	End-dump	1	18.15	3.5	20 min
Non-airborne dust (floor dust)* estimates						
S2	Receiving (no baffles)	End-dump	5	18.15	3.5	20 min
S2	Receiving (no baffles)	Hopper bottom	5	17.63	1.5	20 min
S2	Receiving (baffles)	End-dump	5	18.46	3.5	20 min
S2	Receiving open door reference level	End-dump	4	18.33	3.5	NA
S2	Load out	End-dump	5	18.50	6.5	20 min

*Performed concurrently with receiving and load-out studies.

RESULTS

Airflow

The average total airflow through the filter bags (Table 2) for each test/truck combination ranged from 43,914 ft³ to 49,092 ft³ (1.83 to 2.05 times the air volume of the dump shed). Analysis of the individual airflow and dust collection results provided ample evidence that the air volume was sufficient to capture all airborne dust.

First, results of the extra fan time test run in conjunction with the receiving study indicated that moving an additional 46,566 ft³ (1.94 times the dump shed volume) through the filter bags resulted in an insignificant increase (.0009 lbs./ton) in the amount of dust collected. This indicated that more than doubling the air volume increased the amount of dust collected by only about 2%.

Second, a statistical analysis (linear regression) was performed to determine if there was any significant relationship between the amount of dust collected from each truck load of each test and the amount of air moved through the filter bags for that test. The results indicated no statistically significant positive relationship between airflow and dust collected for any of the receiving or load out studies.

Table 2					
Total Calculated Airflow (ft³) Through the Filter Bags*					
	Receiving-hopper bottom	Receiving-end-dump	Receiving-baffle	Load-out	Extra fan time test
Load #1	37,542	47,928	46,108	50,490	
Load #2	37,409	47,732	45,839	48,820	
Load #3	48,082	41,670	47,004	50,644	
Load #4	47,683	44,463	46,150	47,424	
Load #5	48,853	46,500**	48,856	48,082	46,566**
Average	43,914	45,658	46,191	49,092	46,566

* Calculated from static pressure observations (inches of water column) taken by periodic (2-4 minute interval) manometer readings and the manufacture's fan curve (Figure 3).

** Extra fan time test conducted after completion of normal procedures for #5 end-dump load.

Grain Quality

Each truck load of wheat used for the test was officially sampled and graded by Enid Grain Inspection Service (licensed under the United States Grain Standard Act). Grain grades are a function of a number of variables including test weight (the density of the kernels, lbs/bu.), the percentage of foreign material (FM), shrunken and broken kernels (SB), damaged kernels (DK), and other factors. The grading standards provide lower limits for test weight and upper limits for all of the other factors. Any one grading factor can lower the final grade. For example, a low test weight would lower the final grade, regardless of the FM, SB, DK, and other factors. Wheat quality is affected by environmental conditions. The quality of wheat received by a particular elevator varies from year to year with the local growing and harvesting conditions.

The amount of dockage in the grain and the moisture content are not grade factors but, are recorded on the official grade sheet. Dockage in wheat is defined as *"all material other than the wheat which can be removed from the sample by use of an approved device according to procedures prescribed in FGIS instructions. Also, underdeveloped, shriveled, and small pieces of wheat kernels removed in properly separating the material other than wheat and that cannot be recovered by properly re-screening or recleaning."* (Federal Grain Inspection Service, Grain Inspection Handbook, 13.14). In simple terms, dockage consists of material either larger than or smaller than the average sized wheat kernel which can be separated by screening procedures. The most typical form of dockage in Oklahoma wheat is chess seeds. Chess seeds are about the same size as wheat kernels, but are lighter than wheat and have a more pointed appearance (OSU Cooperative Extension Circular E-920).

None of the grade and non-grade factors listed on the official grade sheet directly measures the amount of dust in the grain. The most relevant factors would probably be the amount of dockage, SB and FM. Since dockage represents both small and large material, it may or may not relate to grain dustiness. For example, chess seeds and large feed pellets in wheat would function as dockage. Shrunken, broken and underdeveloped wheat kernels, can officially function as either SB or dockage depending on where they lay after the grain is screened using official procedures. Most of the material removed during the official SB screening procedures is typically too large to become airborne. However, some portion of this material could be small enough to affect wheat dustiness. Foreign material represents any material other than wheat which is hand picked from a 30g. sample which has previously been screened for dockage and SB. Examples of foreign material in wheat would include corn, feed pellets the same size as wheat kernels, stones, weed seeds, dirt, and any unidentified substances. Most material hand separated as FM is not small enough to be considered grain dust since the fine materials have been previously removed in the dockage and SB screening procedures.

The official grades and relevant grade factors for the test samples are provided in Table 3. A five year average of quality factor data for hard red winter wheat is provided in Table 4. The grain used in the test appears to be representative of hard red winter wheat grown in Oklahoma. The test grain had virtually the same test

weight as the FGIS 5 year average. The test grain had a lower amount of FM and dockage relative to the FGIS 5 year average, and slightly less SB.

Dust Emission Estimates

The calculated dust emissions (amount of dust captured per ton of grain handled) are provided in Table 5. The average amount of dust collected during the receiving study was .0191 lbs./ton for the hopper bottom truck and .0388 for the end-dump truck for an overall average of .029 lbs./ton. The dust control baffles reduced the amount of dust collected by 20.9%. The amount of dust collected during load-out was .0084 lbs./ton. A comparison of the calculated dust emissions with the existing AP-42 emission factors is provided in Table 6.

The emission data for each test was consistent across the various repetitions. The receiving dump pit baffle test and the hopper bottom tests demonstrated the least load-to-load variations, while the receiving end-dump truck tests had the most variation. All of the tests resulted in fairly tight confidence intervals around the averages¹. The results indicated that the hopper bottom truck had approximately half (49.22%) the dust emissions of the end-dump truck.

The dump bit baffle design used in this test were installed about 4-5 years ago. They are one of a variety of baffle designs developed by millwrights in the Oklahoma region. More efficient designs are available that are reported to have higher efficiency compared to the baffles tested at this elevator.

¹ A 90% confidence interval indicates that, based on the variations within the sample, there is a 90% probability that the true average from repeating the experiment an infinite number of time would fall within the confidence limits.

Table 5
Summary of Airborne Dust Collected (lbs./ton)

	Receiving Hopper Bottom	Receiving End-dump	Receiving baffles	Load-out
Load 1	.0172	.0308	.0284	.0051
Load 2	.0193	.0273	.033	.0071
Load 3	.0181	.0537	.0308	.0077
Load 4	.0219	.0430	.0305	.0101

Results-Supplementary Non-airborne Dust

While not part of emission estimates, results on the amount of non-airborne dust which settled to the floor during each test provide useful indications of the approximate amount of grain dust which becomes separated from the grain flow during the handling process. The impact of truck type and baffles on the amount of non-airborne dust has important implications for elevator housekeeping procedures and worker safety. These results also support the contention that the original AP-42 emission estimates were grossly overstated since the total amount of airborne and non-airborne (settled) dust collected during the receiving tests was 7-11 times less than the AP-42 receiving emission factor.

The amount of non-airborne (settled) floor dust collected ranged from .0697 lbs/ton for the receiving/end-dump truck test to .0055 lbs./ton for the load-out test (Table 7). Table 7 also contains estimates of the portion of the settled dust which would be expected to be collected during normal (OSHA mandated) housekeeping procedures. These amounts were determined by measuring the average amount of dust which was gathered from the floor when the end-dump truck was unloaded using normal dumping procedures, i.e with both dump shed doors open. In the open-door receiving (reference) test the amount of dust normally recovered from the dump pit floor during housekeeping procedures averaged .0208 lbs./ton.

The results indicated that the dump pit baffles were more effective in limiting non-airborne dust than in limiting airborne dust. While reducing airborne dust by 20.9%, the baffles reduced the amount of dust collected on the floor by over 52%. The overall efficiency of the dump pit baffles in limiting both airborne and non-airborne dust was 39.17%.

Table 7 Supplementary Results (Non-Airborne) Floor Dust Collected (lbs./ton)				
	Receiving-Hopper bottom	Receiving-End-dump	Receiving Baffles	Load-out
Floor Dust Collected*	.0333	.0488	.0257	.0040
Floor dust recovered during normal housekeeping*	.0142**	.0208	.0100**	.0017**
Floor dust adjusted for dust recovered during normal housekeeping	.0191	.0280	.0157	.0023
Baffle efficiency-floor dust	52.89%			
Baffle efficiency-Floor Dust and Airborne Dust	39.17%			
* Amount of dust swept up from floor after end-dump truck was unloaded with all dump shed doors open. Data conducted for end-dump receiving test only. Dust was screened with a coarse (Standard #16) sieve to remove wheat kernels, stones (and in the case of one sample, a broken bolt).				
** Estimated based on the same ratio of dust collected in housekeeping procedures to total floor dust as the end-dump receiving test.

10 [Continued]

Weighed Filter Bags; Shook Dust Down to Bottom of Bags; Remounted Bags and Continued Test for 20 minutes before opening the Dump Shed and Moving Truck. Purpose of this test extension was to demonstrate that there was essentially no airborne dust in suspension after the initial 20 minutes of evacuation.

		4:48:20	18	3.1	2353
		4:50:20	20	3.1	2353

NOTES:

1. Tandem truck dump height started approx. 5 ft. and ended at about 2.5 ft. above dump pit grate.
2. Hopper bottom semi-trailer dump height was approx. 2 ft. above dump pit grate.
3. Discharge spout height above the tandem hoist truck bed was approximately 6 ft.

Dust Emission Test Protocol

Objectives:

- I. Capture and measure the amount of grain dust emitted (per ton of grain handled) during the receiving process of a typical Oklahoma elevator.
- II. Capture the amount of grain dust emitted (per ton of grain handled) during the truck load-out process of a typical Oklahoma elevator.
- III. Measure the impact of dump-pit baffles on grain dust emissions from receiving operations.
- IV. Determine the impact of truck type (end-dump versus hopper bottomed) on dust emissions at receiving.

Secondary Objective

- I. Determine the particle size distribution and aerodynamic mean diameter of the grain dust captured.
Note-This information is not needed for the current sub-chapter. However it could be used to determine what proportion of the dust captured is too large to stay airborne i.e. an off premise adjustment. It could also be important for modeling PM-10 levels. The determination of aerodynamic mean diameter would be contingent on obtaining access to a cascade impactor, or other similar equipment which inertially separates particles, through contacts at D.E.Q. or other sources.

Dust Emission Test Protocol

Procedures

Objective I: Capture and measure the amount of grain dust emitted (per ton of grain handled) during the receiving process of a typical Oklahoma elevator.

1. Blowers and Airflow

A 7.5 h.p. centrifugal blower will be attached to a fabric bag filter. The blower will provide approximately 2,500 c.f.m. at the 2" w.c. static pressure which has been measured when the fan is run with the filter bags attached (see attached fan curve). This will allow for a complete air exchange of the dump shed in approximately 10 minutes. The blower will be started one minute before the grain unloading begins and run a sufficient amount of time to complete 1 1/2 to 2 air exchanges. During the test, manometer readings will be used to measure the differential pressure across the blower to calculate the actual airflow through the blowers. Two "man-cooler" fans (about 1/3 h.p.) will be placed inside the dump shed and operated during the test. The purpose of these fans is to ensure that all emitted dust particles which are light enough to become airborne under typical atmospheric conditions remains suspended during the time period required to evacuate the dust laden air from the dump shed. These fans should simulate typical wind conditions through a dump shed while still allowing the heavier particles which do not normally become airborne to settle out. A portable anemometer will be used to measure the air speed generated by the fans at various points in the dump shed.

2. Trucks

4-5 loads from typical end-dump grain trucks (2,400-3,000 bu.--144,000-180,000 lbs) and 4-5 loads from hopper-bottomed dump trucks (of similar size) will be unloaded in the enclosed dump shed. (This volume should generate a 90% confidence interval of +/-10% of the reported emission factor for each truck type.) The truck type (end-dump versus hopper bottomed) will be included with each weight recorded. Each truck will be weighed on the facility's commercial scale, which will have a current certification. The trucks will be weighed before and after unloading in order to determine the tare weight of the truck and actual weight of the grain unloaded. A grain probe will be used to obtain a representative sample of the grain in each truck. The samples will be graded in accordance with the USDA-Federal Grain Inspection Service Guidelines ("Inspecting Grain-Practical Procedures for Grain Handlers", U.S. Government Printing Office 517-013/46532, July 1991-Summarized in OSU Fact Sheet #223 (attached)). An aggregate emission factor (for the combination of truck types) will be calculated along with separate sub-factors for each truck type.

Note: Since the grain in the elevator bin is already a composite of many

6677

Procedures (Continued)

Note: Since the grain in the elevator bin is already a composite of many delivered loads, and one truck should provide a sufficient volume of dust to measure accurately on a laboratory scale, the only advantage of more multiple loads is to account for the variation in dust emitted between loads and increase the overall validity and repeatability of the test. The proposed volume is near the upper limit of the amount which can be unloaded into trucks without switching to a second grain bin which would introduce another source of variation.

3. Dump Shed

The concrete dump shed proposed for the test has a total volume of approximately 24,000 cu. ft., can be totally enclosed, and has removable dump-pit baffles (see diagrams). The dump-pit dust control baffles will be removed for the initial test (Objective I). The grain shed doors will be closed before unloading begins. All major inlets will be sealed with tape or sealant with the exception of the small cracks around the doors. These small gaps should provide inlet air without allowing any dust laden air to escape. The outlet air will be ducted through a sealed doorway on the side of the dump shed and will lead to the blower and fabric filter through a duct system. The primary air flow will travel around the doors, across and over the grain dump pit, and up to the outlet duct.

4. Fabric Air Filter

Three fabric bag filters will be used to capture grain dust entrained in the air. The filters will be emptied after every truck load, and a new tare weight will be established. Samples of the dust in the filters will be obtained for particle size analysis.

The fabric filters will be weighed on a scale provided by (and certified by) the Oklahoma Department of Agriculture, Weights and Measures Division. The scale has an accuracy of + or - .001 lbs. and is capable of weighing from 0-200 lbs. (AP-42 emission factors imply that 90 lbs. dust could be captured from the 300,000 of grain handled.

Procedures (Continued)

- II. Capture the amount of grain dust emitted (per ton of grain handled) during the truck load-out process of a typical Oklahoma elevator.

The same test procedures described in Objective I will be used to measure the amount of dust emitted when a typical grain truck is loaded within the enclosed dump shed. 4-5 grain trucks (2,400-3,000 bu.--144,000-180,000 lbs) will be loaded in the enclosed dump shed with circulating fans running. The emitted dust will be captured and weighed using the procedures previously described in Objective I.

Procedures (Continued)

Objective III. Measure the impact of dump-pit baffles on grain dust emissions from receiving operations.

The procedures described in Objective I will be conducted in a dump pit in which dust control baffles (see diagram) are installed. The test procedure described in Objective I will be repeated with the dump pit baffles allowed to function, but without the pneumatic air control system operating. The dump-pit baffle design, and the percentage of the dump-pit surface which is blocked by the baffles will be documented.

Note: There is no "standard" configuration for dump-pit baffles. The baffle systems which are in place in Oklahoma elevators were individually designed by various millwrights. The results of this test should provide a base-line efficiency estimate for baffles with a similar degree of surface area closure. More recently designed baffle systems may have a higher degree of blockage, and thus be more efficient than the baffles used in this test.

Objective IV. Determine the impact of truck type (end-dump versus hopper bottomed) on dust emissions at receiving.

The data collected in Objective I will be separated by truck type to determine separate emission factors for each truck type and the impact of truck type on dust emissions at receiving.

Note:

In order to provide additional insight into the total amount of dust which is present in the grain the amount of large grain dust particles and other material which settles out of the air stream and on to the floor will be collected and weighed. Samples of this material will be gathered and analyzed to determine the particle size distribution, including the percentage (by weight) of whole and broken grain kernels. Since much of the material gathered from the floor would be normally be recovered through standard OSHA mandated housekeeping procedures, the material gathered from the floor is not a measure of emitted dust. The documentation of the weight of this material is designed to further increase confidence in the test by placing an absolute upper amount on the amount of grain dust which could be emitted from a dump shed under any possible conditions.

Procedures (Continued)

Secondary Objective I. Determine the particle size distribution and aerodynamic mean diameter of the grain dust captured in objective II and III.

Representative samples will be obtained from the bag filters and floor sweepings after they are weighed in the procedures in Objectives I-IV. The particle size distribution will be determined by using a sonic sifter separator which uses a vertical oscillating column of air and a repetitive mechanical pulse to provide a precise particle separation. Other methods including dry sieve and wet sieve analysis, and the use of a cascade impactor or other equipment designed to inertially separate particles may be used to determine the effective mean aerodynamic diameter of the collected grain dust.

PRACTICAL WHEAT SAMPLING AND HAND SIEVING PROCEDURES

Phil Kenkel
Extension Economist

Kim Anderson
Extension Economist

This publication provides practical procedures for sampling and grading wheat which can be used by producers, warehouse managers, and elevator managers. The procedures and portion sizes are based on the USDA Practical Procedures for Grain Handlers. The portions and hand sieving methods presented in this Current Report are not used by official grain inspectors licensed by the Federal Grain Inspection Service. Licensed graders must use larger portions and precision mechanical equipment that will provide the most accurate and most uniform results.

REPRESENTATIVE SAMPLE

Obtaining a representative grain sample is an essential part of grain inspection. Without a representative sample, the final grade will not reflect the true grade or value of the grain. In order for a sample to be considered representative, it must:

1. be obtained in accordance with recommended procedures;
2. be of the prescribed size (at least 1000 grams or approximately 1 1/4 quart); and
3. be handled securely, protected from manipulation, substitution, and careless handling.

The following pages explain the proper way to do probe sampling. Some of this information was taken from *Inspecting Grain-Practical Procedures for Grain Handlers*, Section 1, Sampling Grain.

Probe Sampling

A large percentage of grain, as it travels from the farm to the final consumer, is at one time or another sampled with a grain probe. Probe sampling is the only approved method for obtaining samples from stationary lots. If probe sampling is performed correctly, the samples drawn will consistently be representative.

The Equipment

1. Hand Probe

This standard piece of equipment, sometimes referred to as a trier, is constructed of brass or aluminum. Probes come in various sizes with standard lengths of 5, 6, 8, 10, and 12 feet. The type of carrier dictates which probe length should be used. There are two types of hand probes: compartmented probes in which slots in the outer tube match compartments in the inner tube and open throat probes in which the inner tube is open. Open-throat probes tend to draw more of their sample from the top portion of the grain, while compartmented probes draw a representative sample from each layer. All official grain probes are compartmented probes with a 1-3/8 inches diameter (outer tube).

Make sure the probe reaches the bottom of the carrier. A 5 or 6 ft. probe will be sufficient for most farm trucks while hopper-bottom carriers may require a longer (6, 8 or 10 ft.) probe.

2. Mechanical probe

There are two types of mechanical probes which are recommended for sampling stationary lots of grain in trucks, railcars, or other open-top carriers. The gravity-fill probe function is similar to compartmented hand probes except that after the compartment is filled it rotates to an inner tube where it is forced up by air. The core probe functions by forcing the sample up into the core as the probe is pushed down and then using air to transport the sample to the output point. A third type, the in-load suction probe which uses negative air pressure to suck the sample into the bottom of the probe, is not recommended since it tends to overestimate foreign material.

2. Sampling Canvas

Heavy canvas cloth or similar material can be used to display the sample from the compartmented probe. Another alternative is a short section of rain gutter, half section of pipe. The sampling canvas or other material should be at least 6 inches longer than the probe used to draw the sample. This size is necessary so that the grain from the entire length of each probe will not spill off the ends of the canvas. Sampling canvases must always be kept clean, dry, and free of holes.

3. Sampling Containers

Containers such as heavy cloth or canvas bags and metal buckets or plastic cans may be used to transport the sample to the inspection station. Sample containers should be free of all old grain, insects, and other waste material prior to use. Air-tight containers or bags lined with a polyethylene liner should be used to store grain to prevent loss of moisture and to protect the sample from adverse environmental conditions such as rain or humid weather.

General Procedures

Before sampling any carrier, record on your sample ticket the carrier's identification number. Visually examine the whole lot of grain. Take a handful of grain from several locations and check it for odor. Record any unusual conditions on your sample ticket. Next, spread your canvas and check to see that the probe and canvas are clean and dry. You are now ready to start sampling.

There are several ways to insert the probe into the grain. Regardless of which technique you use, the general rules are:

1. Insert the probe at a 10 degree angle from the vertical with the slots facing upward and completely closed. The 10 degree angle eases the resistance of the compacted grain against the probe while still allowing the probe to reach the bottom of the container. The slots must be kept closed until the probe is inserted as far as it will go. Otherwise, a disproportionate amount of grain from the top of the slot will fall into the probe compartments as it is being inserted. When sampling grain which contains sand or grit, insert the probe with the slots downward to avoid jamming it. After the probe is inserted, turn the slots upward before opening.

2. After the probe is fully inserted (with the slots facing upward), open the slots and move the probe up and down quickly in two short motions. Close the slots completely, grasp the probe by the outer tube, and withdraw it from the grain. Do not pull the probe by the wooden handle. This can result in the inner tube being pulled out of the outer tube. When this occurs, the probe must be emptied, reassembled, cleaned, and the area probed again.
3. Empty the probe onto the canvas and compare the grain from each depth of the probe for uniformity of kind, condition, and infestation. Also, compare the probe to others drawn from the same lot. If all probes and portions of probes are uniform with one another, they should be composited and placed in a sample bag along with a completed sample ticket. If the examination of the probes indicates that the lot of grain is made up of distinctly different parts in regard to condition (such as musty, sour, commercially objectionable foreign odor, or heating grain), the sampler must then draw a sample from each of the different parts, in addition to the sample that represents the carrier as a whole.
4. When transferring the grain from the canvas to the sampling bag, take care not to allow fine material to be blown from the canvas.

Where to Probe

Draw at least two samples from any truck or trailer that are 600 bushels or less. Larger lots of grain should be probed in 3 to 5 places. Recommended probe sites, which are shown in Figure 1, are anywhere in the carrier except the corners and the center of the load (which was directly underneath the loading spout). The probe sites should be varied between loads in a random manner. Elevators which routinely sample in the same location have found that bad grain seems to migrate to the areas in the load which are not sampled. Hopper bottomed carriers should be probed in the center of each hopper (Figure 2).

Figure 1. Sampling Sites-Truck or Trailer

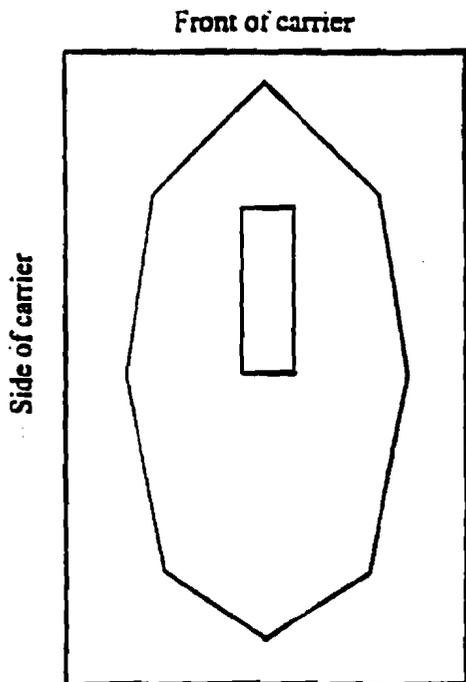

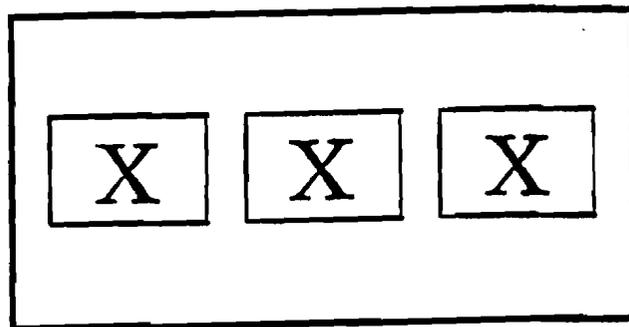

Figure 2. Sampling Sites-Hopper Bottomed Carriers

*Draw probe samples from the points marked with an X.
Avoid corners in the carrier floor.

INSPECTION PROCEDURES

The process of inspecting wheat begins when the sample is drawn and follows a prescribed path:

1. Obtain a representative sample of approximately 1,000 g.
2. Examine the sample for insect infestation, heating, or other harmful conditions.
3. Divide out a 250 g. portion (or the amount specified for your moisture meter) and determine the moisture content.
4. Recombine the 250 g. portion and test the entire sample for dockage.
5. Check for objectionable odor.
6. Determine the test weight.
7. Divide out a 250 g. sample and determine the percentage of shrunken and broken kernels (SBK).
8. Divide the sample into small portions for examination of foreign material (30 g.) and damaged kernels (15 g.)

STEP 1-OBTAIN A REPRESENTATIVE SAMPLE

Use the probing procedures described above, or a tailgate sampler to obtain a representative sample of approx. 1000 g.

STEP 2-INSECTS, AND HARMFUL CONDITIONS

The presence of two or more live insects injurious to stored grain causes the grain to be designated "infested", but does not affect the numerical grade. Heating is a condition common to grain which is spoiling and also causes the grain to be designated "U.S. Sample grade." Be careful not to confuse heating with sound grain which is warm due to storage in bins, railcars or other containers during hot weather. Other harmful substances which can cause the grain to be considered U.S. Sample grade include: castor beans, crotalaria seeds, glass, stones, and unknown foreign substances such as rock salt, fertilizer, or "pink wheat".

STEP 3-MOISTURE

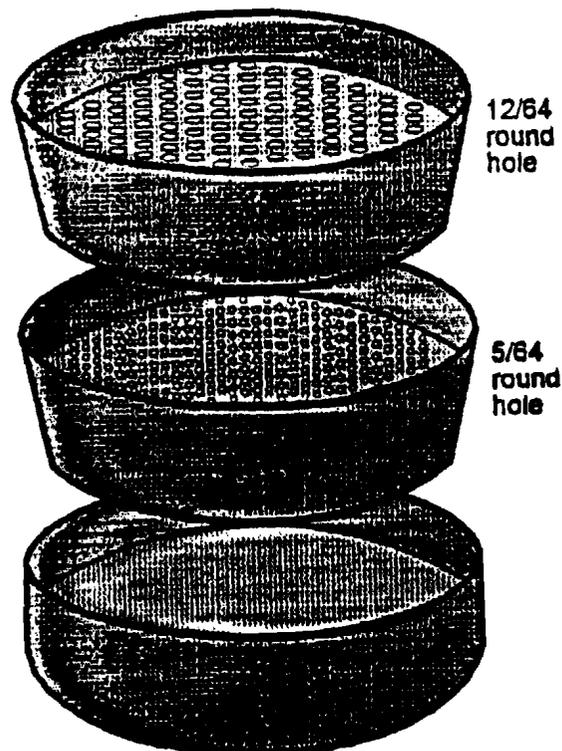

Moisture is an essential measure of wheat storability and value and should be determined prior to removing dockage. Moisture can be determined with any device which has been tested and approved by the Oklahoma Department of Agriculture. Moisture meters should be certified once a season and maintained in adherence with the manufacturer's recommendation. Many moisture meters (such as the Montomco) require that a specific weight sample be used. The use of an inexact sample weight will result in an inaccurate measure of moisture content. Additionally, some of the newer moisture meters also display an estimate of test weight. This test weight estimate cannot be legally used in determining grade since it is based on a small sample size (often 100 g. or less) and is made before the dockage is removed.

STEP 4-DETERMINATION OF DOCKAGE IN WHEAT USING HAND SIEVES

The entire sample (approximately 1000 g.) should be used to determine the level of dockage. Wheat dockage is certified to the nearest tenth percent (0.1%, 0.2%, 0.3% etc.). Dockage is weed seeds, weed stems, chaff, straw, grain other than wheat, sand, dirt, and any other material other than wheat, which can be removed readily from wheat by use of appropriate sieves. Following are the guide lines for hand sieving to determine dockage. (Elevators who use a one pint test weight kettle may determine use a smaller portion (500 g.) to determine dockage, provided there is sufficient dockage free wheat to overflow the kettle.)

1. Record the weight of sample used (approximately 1000 g.)
2. For sieving, assemble a 5/64 round-hole sieve on a bottom pan and then place a 12/64 round-hole sieve on top (Figure 3). Place approximately 1/3 of the sample at a time on top of sieve and shake vigorously until all of the wheat passes through the top sieve. Determine the percentage of dockage by combining and weighing all of the material which remained on top of the top sieve and which passed through the bottom sieve. The percentage is calculated by dividing the weight of the material on top of that passed through the sieves by the total sample weight.

Figure 3. Standard Hand-Sieve Set Up for HRW

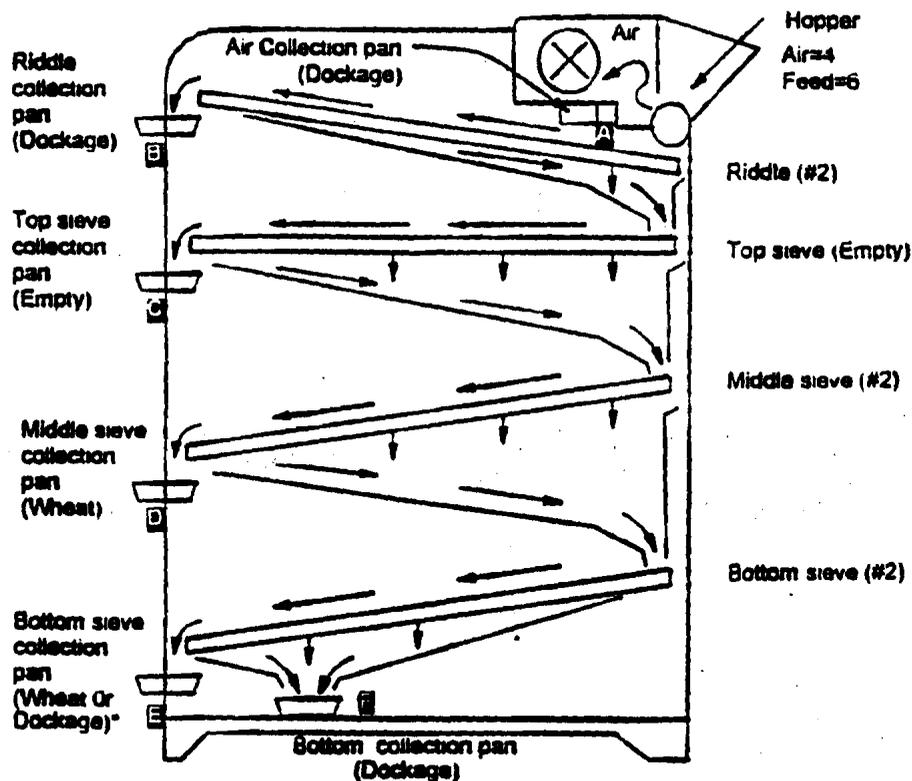

(Shake until all wheat goes through the top pan)

STEP 4-DETERMINATION OF DOCKAGE WITH A MECHANICAL DOCKAGE TESTER

1. Record the weight of sample used (approximately 1000 g.).
2. Clean the dockage tester, insert the appropriate sieves and riddle, and make adjustments recommended by the manufacturer which give results comparable to FGIS standard equipment (Figure 4).
3. Turn on the tester and pour the sample into the hopper.
4. After the sample has cleared the last sieve, turn the tester off.
5. Remove and weigh the dockage (Figure 4).

NOTE:IF THE SAMPLE CONTAINS MORE THAN .5% CHESS OR SIMILAR SEEDS IT MUST BE RUN USING SPECIAL CHESS PROCEDURES-REFER TO OSU FACT SHEET "GRADING CHEATY WHEAT".

Figure 4. Set Up Procedure for Carter Day Dockage Tester
Standard Procedure for HRW

*If the material in Pan E is 50% or more whole or broken kernels of wheat, it is added to the cleaned wheat in Pan D. If it is less than 50% wheat, it is considered dockage.

680

STEP 5-CHECK FOR OBJECTIONABLE ODORS

Except for smut or garlic odors, wheat which has a musty sour or commercially objectionable foreign odor (COFO) is "U.S. Sample grade." Use the entire sample to determine odor. Fumigant or insecticide odors are not considered COFO if they dissipate after aerating the sample for 4 hours.

STEP 6-DETERMINING TEST WEIGHT

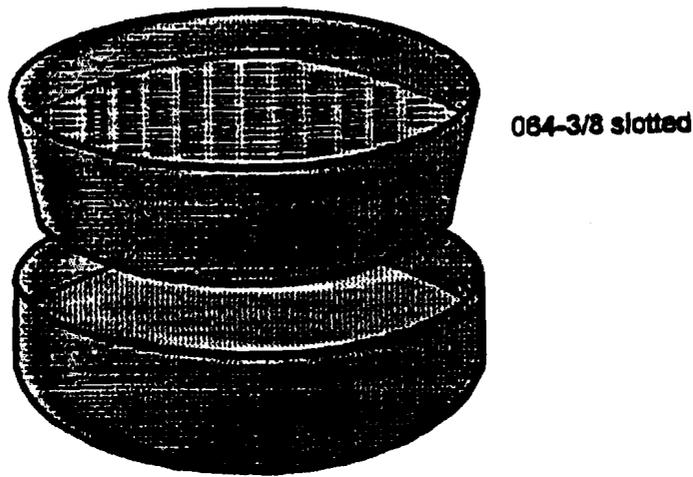

Test weight is a measure of the weight of grain required to fill a specific volume (pint, quart, or bushel). To determine test weight, pour the entire dockage free sample through a funnel into a kettle until the grain overflows the kettle. Level off the kettle making three, full-length, zigzag motions with a stoker. Test weight is determined by weighing the filled kettle on either a special beam scale, an electronic scale programmed to convert gram weight to test weight, or a standard laboratory scale. If a standard scale is used, the gram weight must be converted to test weight per bushel. (multiple the grams in a one quart kettle by .0705 to obtain the test weight in lbs./bu.)

STEP 7-DETERMINATION OF SHRUNKEN AND BROKEN KERNELS IN WHEAT USING HAND SIEVES.

Shrunken and broken kernels (S&B) affect the USDA Grade. If the sample is more than 3% S&B kernels, the USDA grade cannot be higher than USDA #2. Following is a procedure to determine the percent shrunken and broken kernels.

1. Divide out a representative dockage free portion of approximately 250 grams. Record the weight of the sample used.
2. Assemble an O64 by 3/8 slotted sieve on top of a bottom pan. The sieve should be held level in both hands directly in front of the body with the elbows close to the sides. The sieve should be held so that the grain will move lengthwise with the perforations. In a steady sieving motion, the sieve should be moved from right to left approximately 10 inches and returned from left to right 20 times (20 complete cycles). The material remaining in the slots should be returned to the wheat which remained on top of the sieve.
3. The material passing through the 0.064 x 3/8 inch sieve is weighed to determine the percentage of shrunken and broken kernels. The percent SBK is determined by dividing the weight of the sieved shrunken and broken kernels by the total weight of the sample sieved.

Figure 5. Standard Set Up Procedure for determining SBK in HRW.

STEP 8-FOREIGN MATERIAL AND DAMAGED KERNELS

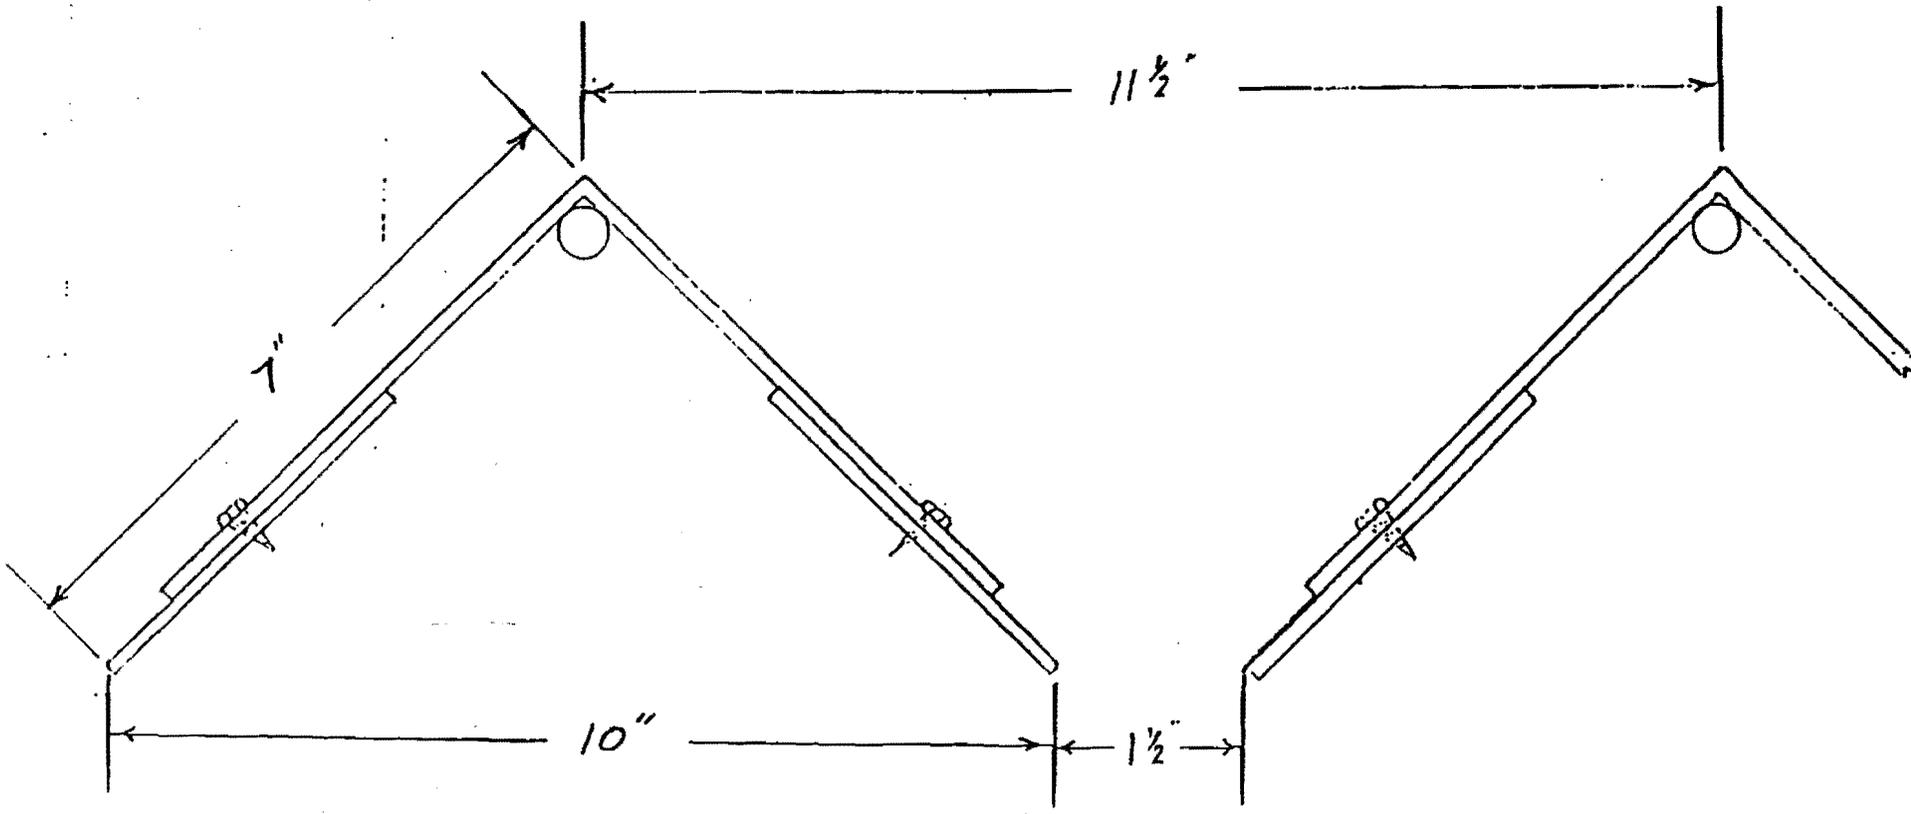

All material other than wheat that remains in the sample after the removal of dockage and shrunken and broken kernels is foreign material. The percentage of foreign material is determined by hand picking a representative 30 g. dockage and S&B free portion. The most common types of kernel damage are black tip fungus, germ, frost, heat, mold, scab, sprout, and insect damaged. The percentage of damaged kernels is determined by handpicking a 15 g. dockage and S&B free portion.

SUMMARY

It is important that grain handlers concentrate in determining the correct grade. Profit margins are too small to lose money because of improper grade determination. The procedures presented in this Current Report are not designed to produce official grades. The procedures should produce relatively accurate estimates of dockage, foreign material, damaged kernels, and other factors affecting grades and the value of the grain.

DISCUSSION OF GRAIN ELEVATOR DUST EMISSION STUDY RESULTS

Members of the Oklahoma Grain and Feed Association, OSU Division of Agricultural Sciences and Natural Resources and the Oklahoma Department of Environmental Quality met on September 26th and 27th in Alva, Oklahoma to observe and/or take part in the Grain Elevator Dust Emission Study. I believe that no one in attendance was particularly surprised by what we saw. We witnessed that dust emissions at grain elevators have been overstated by the emission factors found in the existing AP-42. This is the result we expected. The purpose was to try to accurately quantify emissions in order to gain an understanding of what emission factors should be used to represent true emissions from grain elevators.

I think there is general agreement that the data produced from this study is quite valuable for this purpose. The test results from the Grain Elevator Dust Emission Study have been through a preliminary review by the Air Quality staff and are continuing to be reviewed. The data will be evaluated considering several issues. For example, were the tests performed according to the protocol? Are there issues which effect the reliability and accuracy of emission factors which may not have been accounted for in the study? Is there other data available which should also be considered? We have arrived at some initial answers to these questions and some of them have led to additional questions and concerns.

It is the opinion of our staff that the test procedures were carried out in accordance with the protocol, with the exception of particle sizing of the collected dust. The protocol stated that dust collected from the floor sweepings and filter bags would be separated through a sonic sifter. OSU has a sonic sifter available, however, based on our conversations, it would be a very long process to perform on all samples. Additionally, this would not actually provide an analysis of aerodynamic mean diameter of the particles. OSU will retain these samples in case there is a need to analyze them at some point in the future.

We know that dust emissions will vary from different grain elevators, as well as over time at any individual elevator. There are many variables which can effect air emissions. This is the difficulty in developing a set of emission factors that will represent the industry as a whole. It is not conceivable to try to

account for all possible variations or scenarios. However, observations of the testing did reveal some issues that perhaps had not been identified or considered adequately when the protocol was being developed.

The grain which was used to conduct the study was not directly from the field. The grain was loaded out from a bin at the elevator, Thus, the grain had, at a minimum, gone through the receiving, elevating, and load out processes and possibly additional transfer or turning processes before being utilized in the study. There are two schools of thought regarding this issue. The first says that dust is generated through the movement of grain and thus previous handling should not be a significant factor. The other viewpoint is that a larger amount of dust will be generated from foreign material which is carried with the grain from the field. There is no data to support either. However, in the second case there will be the effects of both situations occurring simultaneously which might tend to generate more emissions.

EPA is in the process of revising the AP-42 section for grain elevators. In the draft version there is a discussion of the "wind-tunnel effect" created by receiving operations located inside a drive-through type of receiving shed. The narrative states that air blows through the receiving area at speeds greater than surrounding wind speeds. This effect was observed during the testing procedures. The protocol specified fans would be used to simulate typical air flows and keep smaller particles airborne. The fans were positioned such that air flow was circulating in a converging pattern, creating an area of turbulence, rather than a directional flow as would be created by winds. After the floors had been swept at the end of each test run, the doors were opened and a large gust of wind blew through the receiving area carrying visible dust with it. This raises the question that perhaps some dust which could have been emitted was not accounted for. Perhaps some of the dust which was swept up from the floor would have become airborne if the doors were open. There was also some dust which settled on the trucks and equipment which was not accounted for. This idea is further supported by the test data which shows that less than half the amount of dust was collected when the doors were left open. A particle size analysis of the test samples could possibly provide some insight regarding the likelihood of the particles becoming airborne.

Emissions were also observed during testing from the top of the headhouse. Elevator personnel explained that there three are emission points on the headhouse. Two were cyclone exhausts and another was some type of vent. At least two of these appeared to have visible emissions during the testing. It is uncertain the origin of these emissions, however, we must consider the possibility that these emissions could somehow effect the accuracy of the data.

An inconsistency was observed in the emissions from the truck loading (load out). The visible emissions from the process of loading the trucks from the bin via an outside spout appeared to be much greater than during the testing of the load out process which occurred inside the shed from a different spout. The height of the outside spout above the truck was approximately 5-7 feet, whereas the inside spout was only 1-2 feet above the truck. It seems that there are other factors such as drop height, wind exposure, and grain speed which may have a greater effect on the quantity of emissions generated during load out. These issues were not addressed by the study.

The results of the study were also sent to the EPA contractor (Midwest Research Institute) at their request to be considered with other available data when revising the new AP-42 section. EPA sent Air Quality a draft copy of the proposed revisions to AP-42 in June of this year. At that time they indicated that the section would be finalized in approximately 30 days. Since that time EPA has withdrawn that draft and is working with the National Grain and Feed Association and the states to obtain additional data to support a new AP-42 section. Air Quality will continue to review the study data, as well as any data which becomes available. A review of the June AP-42 draft revealed some additional issues which are also being considered.

The data provided in the June draft indicated there should be a distinction made between country and terminal elevators. This is based on test data that demonstrates much higher emission rates from terminal elevators. However, there is no clear definition given to determine whether an elevator is to be considered "country" or "terminal". An explanation is provided which states that a country elevator receives grain directly from the farmer, whereas the terminal elevator will receive a large portion of the grain handled from other elevators. A terminal elevator would also have the capacity to move grain at a faster rate than a country elevator.

The draft AP-42 contains emission factors for "headhouse and internal handling operations". The background document includes test results from uncontrolled operations, as well as some controlled by cyclones. Since these test results come from uncontrolled operations, it seems that some emissions may be attributable to operations which we are now considering to be totally enclosed and therefore not emission points.

The Air Quality Division is concerned that our actions taken regarding emission factors are not in conflict with final actions taken by EPA in AP-42. There are important issues which must be carefully considered. For example, if ODEQ adopts a set of emission factors for grain elevators which are lower than those approved by EPA, and these are used to permit sources as synthetic minors, EPA will have strong reason to question the permits. EPA is indicating

66

that they want to review our synthetic minor permits, although it does not seem practical that they would review all synthetic minors. They have shown an interest in grain elevators and will likely look at some of these permits. They have the ability to reject or rewrite these permits if they feel they are inadequate. The fact that our Subchapter 24 contains emission factors will certainly draw EPA attention to this issue as well.

Our ability to write federally enforceable synthetic minor permits which are based on Subchapter 24 is dependent on obtaining EPA approval of Subchapter 24. Therefore, we believe it is very important to be consistent with the direction that EPA is going in developing the new AP-42. We are considering other possibilities for creating synthetic minor sources as well. Any facility can obtain a permit by complying with the existing rules. It may also be possible to permit sources under some type of generic "umbrella" permit. This would likely involve setting some criteria for inclusion and documentation or registration process. This would streamline the process for the industry and lighten the permit load on our staff. Another similar approach would involve revising Subchapter 24 such that it sets up certain criteria for synthetic minors, thus creating the "permit-by rule" concept.

All of the issues and concerns related to emission factors, synthetic minor permits, federal enforceability, Subchapter 24 and Title V are being carefully considered by our staff. These are issues of great concern to us as well as the industry. However, there are some disadvantages to rushing ahead with Subchapter 24 before carefully considering the best path. EPA has indicated that synthetic minor permits are due within the same time frames as are Title V permits. Therefore we have adequate time to evaluate this process carefully and make the best choices through continued cooperation of all concerned parties.

COMPARISON OF PM EMISSION FACTORS FOR GRAIN ELEVATORS
(lb/ton)

	AP-42	PROPOSED AP-42 ¹ (June 94 Draft)	OSU TEST RESULTS
RECEIVING	0.60	0.065 ²	0.029 ⁴
SHIPPING (LOAD OUT)	0.30	0.002 ³	0.0084

¹ The proposed AP-42 has been withdrawn for further study and testing. The results from the OSU study will be some of the data which will be considered for the new revision.

² This factor is only for wheat.

³ This factor is for rail car loading of unspecified grain with cyclones in place. An estimate of the uncontrolled emission factor could be obtained by back-calculating assuming an efficiency for the cyclones. A cyclone with an efficiency of 95% would give a factor of 0.04 lb/ton; a 90% cyclone efficiency gives 0.02 lb/ton. An efficiency of 75% gives 0.008 lb/ton. Examination of the reference data indicates a series of two primary cyclones and a third smaller cyclone in place for this testing which occurred in 1972.

⁴ This is the overall average of the results from both the end-dump and hopper bottom trucks.

OUTLINE FOR GRAIN DUST STUDY DISCUSSION

Members of the Oklahoma Grain and Feed Association, OSU Division of Agricultural Sciences and Natural Resources and the Oklahoma Department of Environmental Quality met on September 26th and 27th in Alva, Oklahoma to observe and/or take part in the Grain Elevator Dust Emission Study.

- no surprises, AP-42 overstated
- purpose was to try to accurately quantify emissions
- to gain an understanding of what emission factors should be used to represent true emissions from grain elevators
- general agreement that the data produced from this study is quite valuable for this purpose
- preliminary review by the Air Quality staff, review continuing
- several issues to consider:
 - 1-tests performed according to the protocol?
 - 2-issues which may not have been accounted for in the study?
 - 3-other data available which should also be considered?
- some initial answers to these questions and some additional questions and concerns
- staff's opinion that the test procedures in accordance with the protocol, with exception of particle sizing of collected dust

tests performed according to the protocol?

- protocol stated dust collected from floor sweepings and filter bags would be separated through a sonic sifter
 - very lengthy process
 - would not provide aerodynamic mean diameter
 - OSU will retain samples

issues which may not have been accounted for in the study?

- we know that dust emissions vary from different grain elevators, and over time at an individual elevator
 - many variables which can effect air emissions
 - difficult to develop set of emission factors that will represent the industry as a whole
 - cannot account for all possible scenarios
- observations did reveal some issues that had not been identified or considered adequately when the protocol was being developed

1-grain used was not directly from the field

- grain was loaded out from bin at the elevator
- grain went through the receiving, elevating, and load out processes and possibly additional transfer or turning processes before study

-two schools of thought regarding this issue

- no data to support either
- first says dust is generated through the movement of grain
 - previous handling would not be a significant factor
- second, says larger amount of dust will be generated from foreign material carried with grain from field
 - effects of both occurring simultaneously
 - tend to generate more emissions
 - test would not be representative

- farmer, terminal elevator will receive large portion from other elevators
- terminal elevator has capacity to move grain faster
- draft AP-42 contains emission factors for "headhouse and internal handling operations"
- test results from controlled (cyclones) and uncontrolled operations
 - some emissions may be attributable to operations we are now considering totally enclosed (not emission points)

Other AQD concerns

- concerned that our actions are not in conflict with final actions taken by EPA in AP-42
- if ODEQ adopts emission factors which are lower than those approved by EPA, and these are used to permit synthetic minors, EPA will have strong reason to question the permits
 - EPA wants to review our synthetic minor permits
 - they have interest in grain elevators and will likely look at some of these permits
 - EPA can reject or rewrite these permits
- emission factors in Subchapter 24 will draw EPA attention to issue
- AQD's ability to write federally enforceable synthetic minor permits based on Subchapter 24 depends on getting EPA approval
 - important to be consistent with EPA's direction in new AP-42
- considering other ways to create synthetic minor sources
 - 1-facility can obtain a permit under existing rules
 - 2-possibly some type of generic "umbrella" permit
 - would involve setting criteria for inclusion and documentation or registration process
 - would streamline process for the industry
 - would lighten the permit load on staff
 - 3-possibly revise Subchapter 24 to sets up criteria for synthetic minors ("permit-by rule" concept)

Grain Elevators and Grain Dust Management Options
Background Report Prepared for the Oklahoma Air Quality Council

Phil Kenkel
Extension Economist

Ronald T. Noyes
P.E., Extension Agricultural Engineer
Agricultural Engineering and Biosystems

Introduction

The 1990 Federal Clean Air Act is necessitating state legislative bodies to enact regulations which are intended to reduce air emissions. These regulations and the interpretation of the 1990 Clean Air Act and related EPA regulations raise major environmental, economic, and technical issues. Grain handling firms are among the many industries which are being impacted by the air quality regulations. However, with respect to dust emissions, grain elevators are somewhat unique. Techniques, regulations, and standards designed for other industries do not necessarily represent efficient or practical solutions to the problem of managing grain elevator dust emissions. The purpose of this report is:

- (1) Describe the characteristics of grain dust;
- (2) Outline the processes within a typical grain elevator;
- (3) Identify emission points in a grain elevator; and
- (4) Identify options for managing and reducing grain dust emissions.

Grain Dust Characteristics

Grain dust is defined as solid particles which become airborne during grain handling. While wheat dust contains particles of soil picked up while combining, it is primarily wheat and plant material¹. According to a study conducted by Dr. C.R. Martin (USDA Grain Marketing Lab, Manhattan, Kansas), the major components of wheat dust are plant material carried over from harvesting, wheat hulls, outgrowths from the brush end of wheat kernels, and particles which are separated from the wheat kernel due to abrasion and impact during handling.

Grain dust has fairly large particular size with 70% to 99% being larger than 44 microns (Table 1). As the table also indicates, the particulate size of dust captured at various places in the elevator varies dramatically. The particle size distribution is important because it affects the potential for the dust to become airborne. According to an EPA report (Table AP-42, 11.2-1) at a typical wind speed of 10 miles/hr. particles larger than 100 microns are like to settle out within 20 to 30 ft., particles in the 30-100 micron range will settle within a few hundred feet while particles smaller than 30 microns will remain airborne.

Table 1

% < 1410	99.24	99.69	99.49	99.06	99.23	99.89

Wallin et al., 1992.

Wheat dust typically contains 8-12% protein and around 15% fiber (Table 1). The ash content (8-30%) is primarily due to the "soil" content. As Table 2 indicates, wheat dust (with the ash removed) has similar characteristics to the wheat grain although it typically has only around 75% as much protein and more fiber.

Table 1
Analysis of Wheat Dust from Commercial Grain Elevators

Moisture	Protein	Ash	Fat	Crude fiber	Starch
7%-13%	8%-12%	8%-29%	2%-3%	15%-17%	40%-56%

Table 2
Analysis of Wheat Dust and Wheat Grain
(calculated on a 0% Ash, 14% Moisture Basis)

	Protein %	Fat %	Fiber %	Starch %
Wheat dust	10.9	2.5	16.4	54.5
Wheat grain	14.0	2.0	3.0	68.0

C.R. Martin: Characterization of Grain Dust Properties, ASAE Vol. 24, No. 3, 1981

Components of a Grain Elevator

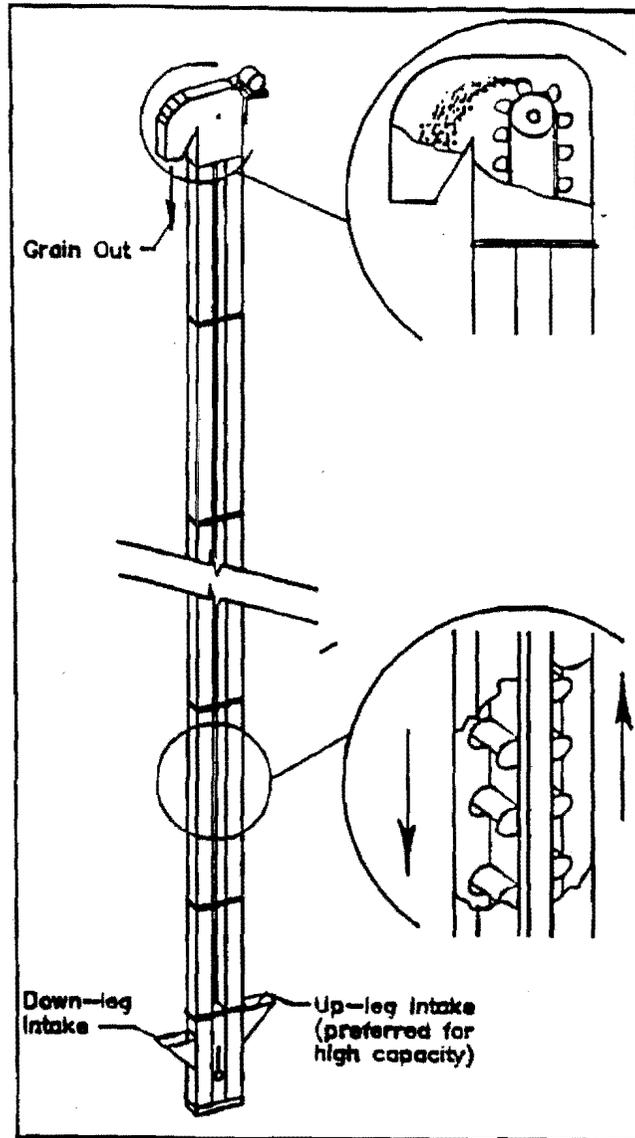

Commercial grain elevators encompass a variety of storage designs and conveying equipment. Major components include the receiving pit, elevating mechanism, distributors and/or conveyors, storage bins, and a truck and/or railcar load-out facility. Wheat is received at the dump-pit which, as its name implies, consists of a concrete or welded steel pit covered with a grate into which the trucks dump the wheat (Figure 1). A time and motion study conducted by OSU in 1993 indicated that during harvest trucks cycle through the dump-pit in country elevators at an average rate of one truck every 3 minutes.

Figure 1
Typical Dump-Pit

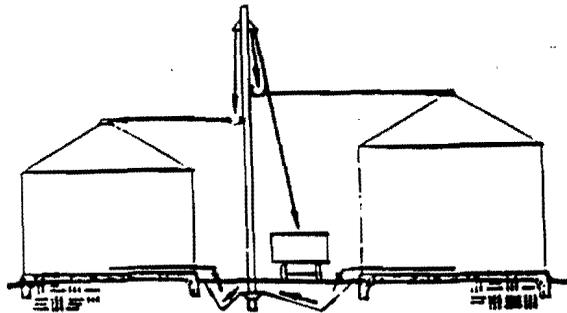

From the dump-pit the grain gravity flows or transported in an enclosed auger into the inlet hopper at the base (boot) of the bucket elevator which is also called a "leg" (Figure 2). The bucket elevator consists of a belt with plastic or metal cups. It is used to elevate the grain to the top of the elevator facility. The grain is discharged from the leg by gravity and centrifugal force at the top. From the top of the elevator leg the grain can either gravity-flow to the selected bin through enclosed distributors (Figure 3) or can feed into a horizontal conveyors from which it can be discharged into the desired bin (Figure 4). Horizontal conveyors can be either an enclosed screw conveyor, an enclosed drag conveyor or an unenclosed belt (called a gallery belt) which is used in some older, large concrete elevator. The gallery belt must be located inside an enclosed building to prevent moisture from entering the grain. According to a 1991 OSU survey, leg capacity in Oklahoma elevators range from 1,500 to 20,000 bu./hr. In addition, the survey indicates that a typical Oklahoma country elevator had a leg capacity of 5-6,000 bu./hr.

Bucket elevator with gravity spouts.

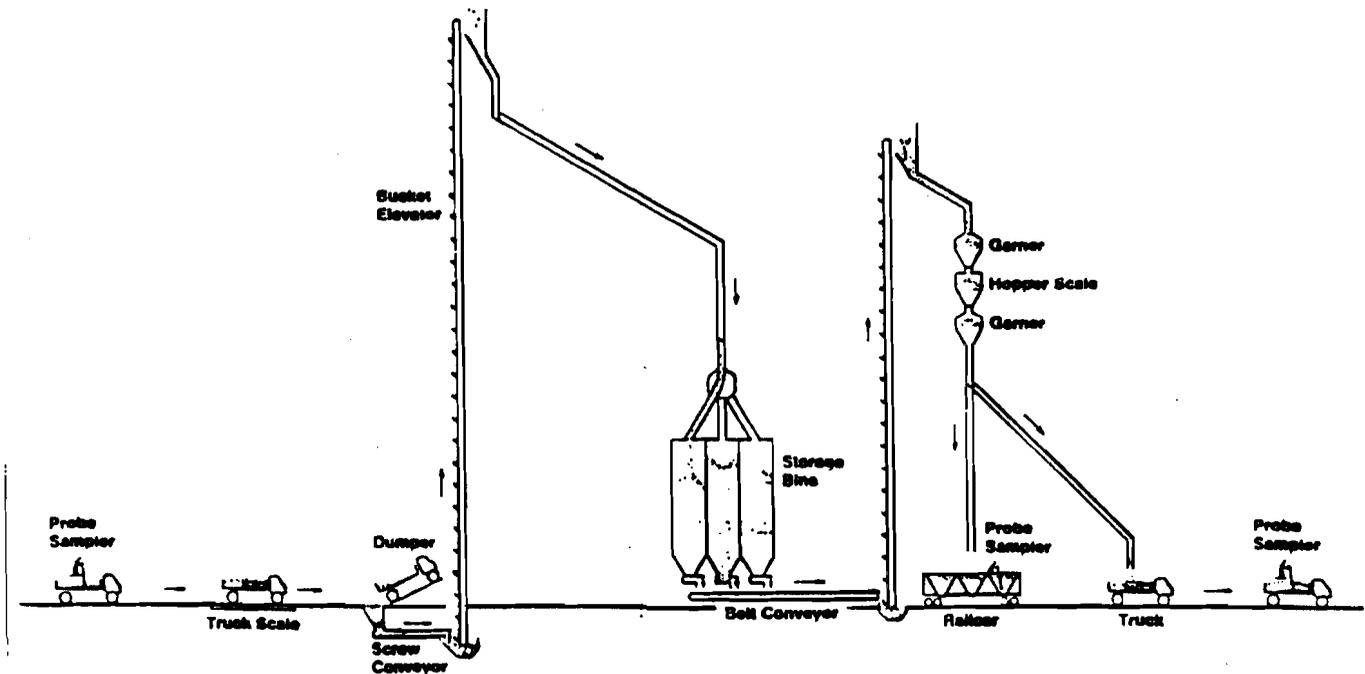

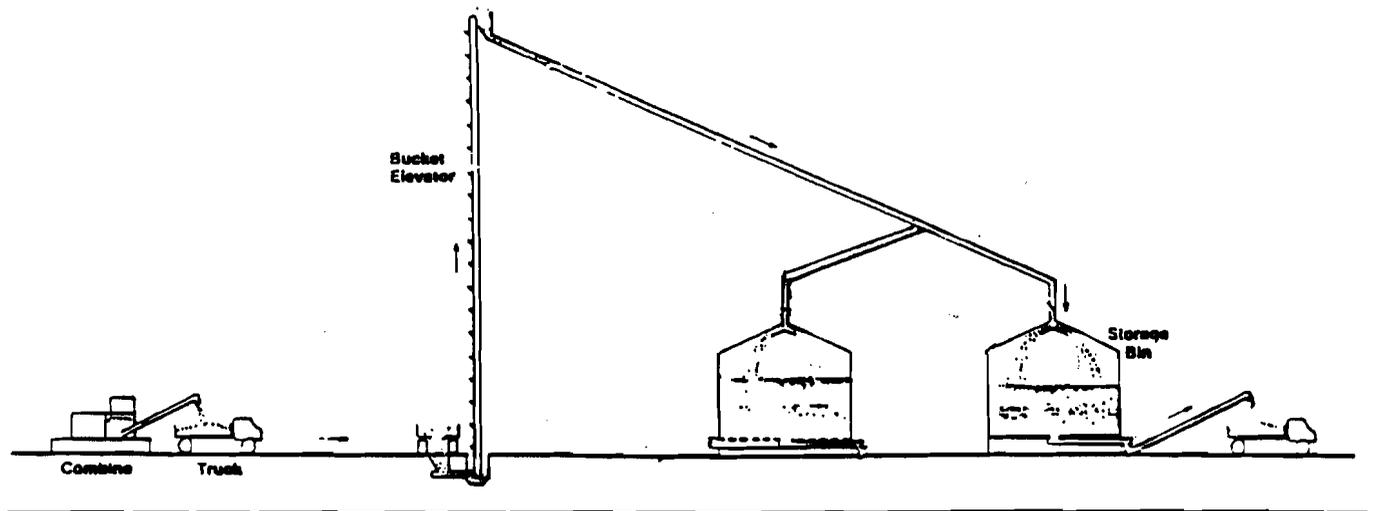

6-7-4

Figure 4
Concrete Elevator with Gallery Belt and Tunnel Belt

The two most common types of storage bins are round concrete silos and large round steel bins. Rectangular, flat steel storage is used less frequently. Approximately 35% of Oklahoma's rated storage capacity is concrete, 50% is round steel, and flat steel accounts for around 15%. However, due to the greater management costs of flat storage and excess capacity of concrete and steel storage capacity, most of the flat storage is idle or is being used for other purposes. A typical concrete silo would be 10-30' in diameter, 90-120' tall, and can hold 15,000 to 30,000 bushels. Round steel bins are typically 30-90' in diameter, 25-70' tall, and can hold 50,000 to 300,000 bushels. In all types of storage the grain is removed from the bottom of the bins. Because of the larger diameter, an enclosed auger is typically installed below a grated floor in steel bins which is used to transfer grain from the bin and convey it to the load-out point. Concrete bins typically empty by gravity, distributing the grain directly to the load-out point or to a horizontal conveyor (either an enclosed drag conveyor or an unenclosed belt called a tunnel belt. Grain may be re-elevated to an overhead bin to facilitate load-out (Figure 5).

Figure 5
Elevator Schematics of Gravity and Mechanical Unloading Systems

Processes in a Grain Elevator

The major processes in a commercial elevator include receiving, elevating, and load-out. Depending on the facility design, horizontal conveying at the top and/or bottom of the elevator may also be involved. In concrete facilities, (especially those without aeration equipment) the grain may also be "turned" to manage temperature and moisture and to blend or fumigate.

When grain is turned it is emptied from one silo, routed back into the leg, and emptied into another bin. Other processes such as seed wheat cleaners or feed grinding and mixing equipment may be incorporated into the same facility, but are independent functions from the grain elevator operation. Commercial grain elevators must be able to receive and load-out grain at high rates since, due to harvest and market conditions, their annual volume may be processed in a total time of 4-8 weeks or less. This process is followed by long periods of inactivity with loadout occurring periodically throughout the winter and spring. Many Oklahoma elevators could fill or empty their entire elevator in 100 hours or less of continuous operation and could elevate an amount several times greater than the total average Oklahoma's wheat crop if run year round. This high ratio of handling speed relative to storage capacity becomes an issues when the potential for dust emissions is based on the handling speed.

Dust Emission Points

Unlike other industries where the emission point may be obvious, such as a smoke stack or chimney, it is necessary to understand the grain elevator processes and technology in an elevator to define the potential points of grain dust emission. Wheat emits no dust unless it is disturbed. Wheat dust can be emitted when wheat is handled and when negative air (suction) is placed on the grain. However, many processes in an elevator are fully enclosed, semi-enclosed with pressure equalization vents, or are located in enclosed rooms within the facility. Therefore, inside the elevator, some or all the grain dust which is separated from the grain during a specific handling process may settle back into the grain stream or be retained in the facility where it is swept up during housekeeping operations. Most of the existing dust control devices in Oklahoma elevators were installed to allow the elevator to comply with OSHA and Federal Grain Handling Standards for grain dust within the elevator and/or to reduce housekeeping labor.

Attention has also focused on the small air pressure equalization vent which is located on the top of some legs, and vents on storage bins, and other equipment as possible emission points. However, these vents can serve either for air intake or air exhaust. The cups or buckets within a leg create "drag" on the air as they move so air moves by friction up the front side of the leg and down the back side of the leg. Since air is discharged with the grain into the enclosed distributor at the top of the leg, air has to be introduced into the leg somewhere else. Thus, under most conditions, air flows in to (and not out of) the equalization vent at the top of leg. Informal experiments at an Oklahoma elevator confirmed that the vent at the top of the elevator leg was typically intaking air. The points in a elevator which can most clearly be defined as emission points are the dump-pit, load-out point, and exhaust from any pneumatic system. However, even at these points, some of the larger grain dust particles (above 30 microns) may also settle to the ground without leaving the premises as suggested by EPA Table AP-42.

Difficulties in Estimating "Typical" Emission Levels

The characteristics of grain dust and grain elevator design have contributed to the

difficulty in understanding grain dust emission points and the amount of dust which is emitted at each point. One approach to determining the amounts of dust which are emitted during elevator processes is to place negative air (suction) at various points in the facility and capture the dust in fabric filters. The actual amount of negative pressure applied varies with the equipment and the extent to which the point in the elevator process is enclosed. Unfortunately, as negative air is applied, the amount of grain dust and material removed from the grain increases. At high enough levels, negative air velocity will pick up wheat kernels, which is the principle behind pneumatic conveying systems. The negative-air-filter test has the potential to underestimate emissions if the area is unenclosed and wind conditions are high or overestimate emissions if the process is enclosed and the air suction is drawing dust and/or kernel particles which would not have been emitted under neutral pressure. It is also impossible to define what portion of the dust collected in a negative air test would have fallen back into the grain stream or within the facility if it had not been captured.

Grain Dust Management Options

Management options to reduce grain dust emissions include reducing handling speeds, modifying grain handling equipment, modifying facilities to prevent dust from leaving the facility or grain stream, the use of oil additives, and mechanical dust collection systems. While numerous grain industry associations have opposed the addition of water to the grain due to food safety and marketing concerns, the use of water fogging systems away from the grain stream are an option for reducing dust emissions in the area around the dump-pit and load-out points.

Facility Modification

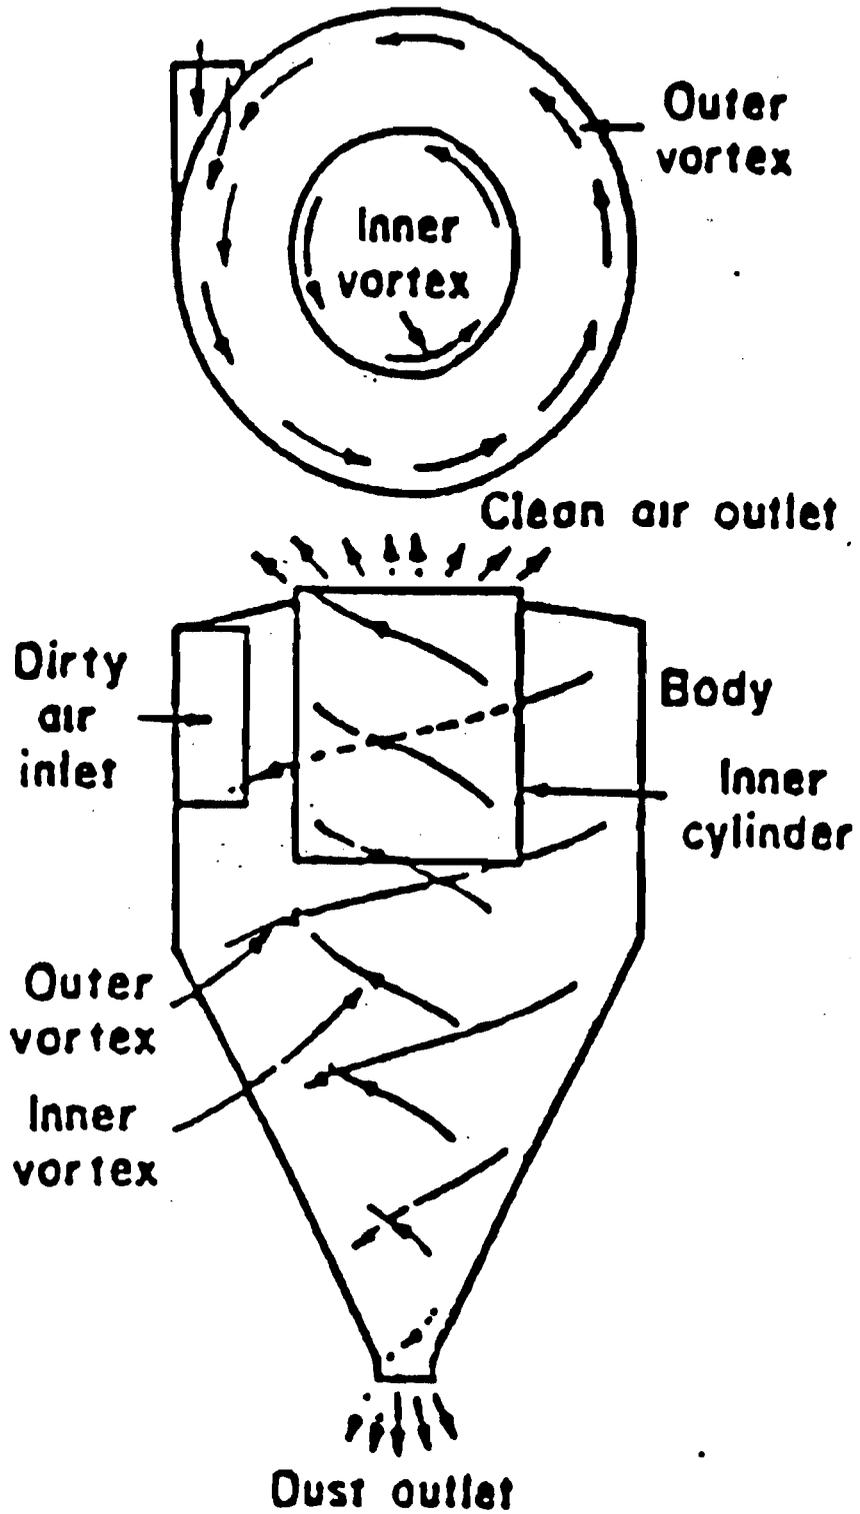

In general, increasing the rate at which grain is handled tends to increase dust emissions. Decreasing the total handling speed is often not a practical option since an elevator receives the majority of its annual volume during a short (2-3 week) period of time at harvest. Numerous surveys have shown that the speed of unloading is the most important factor which farmers consider when deciding which elevator to deliver their grain to. Enclosed conveyors are an option for reducing dust emissions. (Most elevators which have modified their conveying systems in the last 5-10 years have installed enclosed conveyors due advantages in worker safety, increased grain quality, reduced grain loss and reduced housekeeping labor.) When the distance and speed at which grain falls is a source of dust, a grain accumulation nozzle, or modifications to the distribution system can sometimes be used to slow the grain velocity without reducing throughput speed. Another physical modification which can, in some instances, reduce dust emissions are the installation of baffles on the grating of the dump-pit. While allowing the grain to fall through, the dump-pit air-baffles are designed to limit the amount of grain dust which leaves the pit. These systems are generally combined with a pneumatic dust control system in the dump pit. Because of the large surface area, the dump-pit area requires extremely high volume of negative air, which in many cases, exceeds the combined requirements for all other areas inside the elevator.

Mechanical Dust Control Systems

The two typical mechanical dust collection options involve drawing dust from a particular area of the elevator operation with negative air and routing the dust-laden air to either a cyclone separator or a fabric bag filter where the dust can be removed. Cyclone separators are cone-shaped devices which remove dust particles through centrifugal force (Figure 6). As particulate-laden air is forced into a downward spiral by the cyclones conical shape, centrifugal force causes the particles to move outward, collide with the outer wall, and slide to the bottom of the cyclone. Near the bottom of the cyclone the air-flow reverses its downward spiral and moves upward in an inner vortex. The cleaned air exits from the top of the cyclone and the dust falls from the bottom of the cyclone where it is typically reincorporated into the moving grain stream.

Cyclone separators are described by their dimensions. Two commonly used cyclones in the agricultural processing industry include the 2D-2D and the long-cone (1D-3D) cyclone. The dimensions refer to the length of the upper cylindrical portion and lower cone shaped portion, both expressed as a ratio of the diameter of the cylindrical portion. The long-conical (1D-3D) cyclone typically operates with a higher air velocity. The efficiency rating of a cyclone describes what portion, on average, of the dust particles which are pulled into the cyclone is captured by the device. Since the negative air systems which feeds into the cyclone sometimes pulls dust out of the grain which would not separate from the handling motion alone, the efficiency rating of the cyclone is only a rough indicator of the amount of dust which is not captured. An inefficient cyclone design using a high air volume to draw air from an unenclosed conveyor can actually cause dust emissions to increase since more grain dust is pulled from the grain. Any dust systems (which is less than 100% efficient) which is pulling air off of an enclosed conveyor will increase dust emissions since the dust would not otherwise leave the conveyor.

Figure 6
Schematic Diagram of Cyclone Separator

Fabric bag filters, often called bag-house filters, are large woven or felted bags into which particulate air is forced. A "cake" of dust is formed on the sides of the filter. Periodically, the dust cakes are vibrated off of the filter and are collected at the bottom of the device. The dust is can be reincorporated into the same lot of the grain or separated. Grain dust from bag-house filters is difficult to handle, must be stored in special facilities, and is typically sold as an animal feed ingredient.

Mechanical dust collections have several disadvantages. Some operations in a grain elevator such as the dump-pit or load-out occurs in unconfined areas where it is difficult to capture dust with a negative air system. Additionally, in some elevator designs, grain is weighed in overhead bins (Figure 5) before it is dropped into trucks or railcars. Since the market weight has already been determined, it is illegal to draw negative air (and remove dust and/or grain) at the load-out point. Additionally, dust control systems have both pros and cons with respect to worker safety. To the extent that they remove dust from inside the elevator, the systems improve working conditions and reduce the hazard of grain dust explosions in the elevator. However, because the systems concentrate grain dust, explosive mixtures can occur within the dust control system under some adverse conditions (Bartknecht, 1981). Because they are pneumatically linked to various areas within the elevator, dust control systems can become a source of fires and secondary grain dust explosions.

Dust control systems are also energy intensive and may require more energy than is required to move the grain (Lai, Martin and Miller, 1982) Capital costs for installation of these systems have been estimated at \$3-\$5 per cubic feet per minute (CFM) of air flow which amounts to between \$250,000 to \$1,000,000, depending on the size of the elevator (Maness, 1978). Installation costs for a single fan and cyclone collector for a country elevator are around \$20,000-\$40,000. While having higher efficiency ratings, bag-house filters are much more expensive (\$100,000-\$300,000) and have higher maintenance costs. If the grain dust is not reincorporated into the grain stream these systems have a hidden cost of additional weight loss "shrink", since otherwise salable material is being removed from the grain.

Oil Additives

A final management option for the control of grain dust is the addition of soybean oil or food grade mineral oil to the grain. The addition of small amounts of oil (.02% to .06% by weight) were shown to reduce dust emissions in wheat by 95% as measured by a high accuracy particle counter (Lai, Martin and Miller, 1982). The effectiveness of the oil was not reduced after the grain was stored for 3 months. However, the oil treatment was ineffective in the stages before the grain passed through the bucket elevator, which evidently played a role in mixing the oil into the grain. Oil systems cost around \$10,000 to install. The main disadvantage of oil is the cost (.5¢ to 1¢/bu.) and the flour millers' concerns over milling and baking quality. Initial laboratory tests of oil treated wheat revealed no adverse quality impacts. However, millers remained concerned that if oil treatments were used throughout the system, the same lot of grain could potentially be repetitively treated causing a reduction in milling and baking quality. A recent informal test at an Oklahoma elevator suggested that even wheat which has been treated

with oil may emit some visible dust when the elevator is equipped with a high-speed load-out system.

Summary

Wheat grain dust is primarily organic material from the wheat plant and kernel. When retained in the grain, in normal levels, wheat grain dust has nutritional and market value. Commercial grain elevators typically process most of their annual volume during a short period of time. Wheat grain dust is separated from the grain during handling operations and when negative air is applied. Therefore, most mechanical dust control systems increase the amount of dust which is separated from the grain. Since many operations in a grain elevator are enclosed or semi-enclosed, some portion of the grain dust which separates from the grain falls back into the grain stream or is captured within the premisses. Because of these factors, it has been difficult to determine how much grain dust is emitted by a typical elevator.

Grain dust management options include controlling the processing speed, physical modifications such as air baffles and grain nozzles, mechanical dust control systems, the use of oil treatments on the grain, and for some specific operations, the use of water fogs away from the grain stream. Many of these options involve significant investments, increased operating costs, and increased energy usage. Some of the alternatives also raise worker safety and food safety issues. Federal grain handling legislation also impacts how and where mechanical dust control systems can be used.

Endnote

1. Hosney and Faubion (Storage of Cereal Grains and their Products (4th ed.), 1992) describe grain dust as follows (p. 34):
"An examination of grain dust under a microscope demonstrates that it is composed primarily of free starch granules and other small fragments of grain. These are produced by the forces generated during handling of the grain. Grain rubs against itself and its container and is abraded to form dust. When a kernel breaks during handling, starch granules are set free along with other small pieces of endosperm. The rough surface of the broken kernel is then subjected to much more abrasion during additional handling. The dust particles are small and fill the inter-grain voids,..."

GUIDANCE DOCUMENT

The following definitions and emission factors are to be used by the Grain, Feed, and Seed industry in the figuring of annual emissions and compliance with Subchapter 24.

Definitions:

"Dust Suppression Additives" means FDA or FGIS approved additives applied commercially for dust suppression. The dust suppression efficiencies of these additives is accepted to be 90% when applied at a proper application rate per manufacturer's recommendations or as approved by the director of the Air Quality Division."

"Fabric Filter" means any control device or system in which particulate matter is collected on a dust cake supported on either a woven or felted fabric that can demonstrate a particulate collection efficiency of not less than 95 percent."

"High Efficiency Cyclone" means any cyclone type collector of the 2D-2D or 1D-3D configuration. These designations refer to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion. A 2D-2D cyclone would exhibit a cylinder length of 2 x D and a cone length of 2 x D (90% collection efficiency for TSP). A 1D-3D cyclone would exhibit a cylinder length of 1 x D and a cone length of 3 x D (95% collection efficiency for TSP).

"Loading-out hours of operation" means the hours calculated by dividing the cumulative total quantity loaded out for a given time period by 75% of the rated leg capacity. This quotient is equivalent hours (not actual hours) of operation required to process the material loaded out. Actual leg capacity may be adjusted to more or less than 75% by individual facilities if documentation supporting the proposed adjustment is submitted to and approved by the Director of the Air Quality Division.

"Medium Efficiency Cyclone" means any cyclone type collector less than 2D-2D configuration. These designations refer to the ratio of cylinder to cone length, where D is the diameter of the cylinder portion. A 1D-1D cyclone would exhibit a cylinder of 1 x D and a cone length of 1 x D. These cyclones shall be capable of demonstrating a collection efficiency of 75% for particulate matter.

"Receiving hours of operation" means hours calculated by dividing the cumulative total quantity received for a given time period by 75% of the rated leg capacity. This quotient is equivalent hours (not actual hours) of operation required to process the materials received. Actual leg capacity may be adjusted to more or less than 75% by individual facilities

if documentation supporting the proposed adjustment is submitted to and approved by the Director of the Air Quality Division.

"Throughput" means the pounds, tons, or bushels received by a facility added to the pounds, tons, or bushels loaded out from the facility during any time period of interest divided by two.

"Total hours of operation" means the sum of the receiving hours of operation and the loading out hours of operation. Actual hours may be less since receiving and loading-out operations may occur simultaneously.

Emissions calculations and opacity standards shall be as follows for the three classes of emissions:

Class I: Unloading (receiving) 0.053 lbs/ton
Loading (shipping) 0.011 lbs/ton
Refer to 252:100-24-4 for opacity limits

Class II: Emission Sources with Control Devices
AP-42 factors X (1 - EFF)
Refer to 252:100-24-4 for opacity limits.
EFF means fractional efficiency of control device.

Class III: Uncontrolled Vents
A. Pressurized - opacity limit only.
B. Non Pressurized - opacity limit only
Refer to 252:100-24-4 for opacity limits

SUBJECT Dust Study Summary and Proposed Emission Factors

We have attached a copy of the summary requested at the 1-4-95 grain industry taskforce meeting. The report summarizes the dust study results and provides a simple discussion of the calculation of the proposed emission factors. We have attempted to keep this report as simple as possible. It is intended as a supplement to our full report on the dust study which is referenced in this document.

Please let us know if you have any suggestions for other issues which should be summarized in this report. Otherwise, please forward it to the Air Quality Council members.

**Summary of OSU Grain Elevator Dust Emission Study
and
Proposed Grain Elevator Emission Factors
Report to Oklahoma Air Quality Council-February 2, 1995**

Phil Kenkel
Extension Economist-Agribusiness

Ron Noyes, P.E.
Extension Agricultural Engineer

Overview

This report is intended to summarize some of the key issues relating to estimating grain elevator dust emissions. It also provides a brief, non-technical, discussion of the design of the OSU Grain Elevator Dust Emission Study and the study's results. Proposed emission factors for grain elevator operations, based on the OSU study are also presented, and discussed. This report is intended as a supplement to the report on the results of the OSU study which was presented to the Oklahoma Department of Environmental Quality on October 21, 1994. Interested individuals are encouraged to refer to the report for full details of the results discussed in this summary.

Background

The 1990 Clean Air Act required state environmental agencies, including the Oklahoma Department of Environmental Quality (DEQ), to develop permit programs for a variety of industries, including the grain handling industry. This process involves the use of emission factors for grain elevator operations. The emission factors are an integral and important part of the permit process and are used in calculating a grain elevator's "potential to emit" airborne dust. Unless they obtain a minor source permit from the state regulatory authority, firms with a potential to emit over 100 tons/year are classified as major source polluters and fall under federal EPA permitting process.

The implementation of the permitting process in Oklahoma highlighted an urgent need for accurate emission factors which are representative of typical Oklahoma grain elevators. The only existing source of emission factors for grain elevators is EPA's AP-42 document. Examinations of the research methods used to develop the AP-42 estimates along with the analysis of other available data caused the Oklahoma Grain and Feed Association (OGFA) task

Kenkel & Noyes-Report to OAQC, 2-2-95 2

force, Oklahoma DEQ representatives, and members of the Oklahoma Air Quality Council (AQC) to become concerned that the existing AP-42 emissions estimates were seriously flawed and overstated. (This same concern is being mirrored at the national level, as evidenced by negotiations between the National Grain and Feed Association and Federal EPA during a meeting in Raleigh, N.C. on Aug. 29, 1994.) The use of overstated emissions estimates would result in unnecessary operating restrictions, major investments in emission control equipment, and excessive annual emission fees.

Proposal for a Dust Emission Study

Due to the concern over the existing emission factors and the critical need for accurate data, a team of faculty from the OSU Division of Agricultural Sciences and Natural Resources proposed a grain dust emission study from which accurate, representative, and scientifically defensible emission factors could be developed. The study was formally proposed to the Oklahoma AQC and DEQ during a Grain and Feed Industry Committee meeting on May 31, 1994. The Oklahoma AQC and DEQ subsequently accepted the concept of a grain dust emission study. During the June 14th AQC meeting the Oklahoma DEQ, Oklahoma AQC, and grain industry task force agreed to the text for a grain industry subchapter of the Oklahoma Clean Air Act. The grain industry sub-chapter specified that the existing AP-42 emission estimates for receiving and loading would be used as interim values for a period not to exceed one year, during which time a grain dust emission study would be conducted to develop permanent emission factors. Sub-chapter 24 was formally passed by the AQC on June 14th, 1994 and subsequently passed by the DEQ Board on September 28, 1994. The final protocol for the grain dust emission study was submitted to the Oklahoma DEQ and AQC by the OSU faculty team on September 16, 1994. The protocol was reviewed by DEQ staff and formally accepted on September 20, 1994. The tests were conducted at Wheeler Brothers Elevator in Alva, OK on September 26-27, 1994.

Kenkel & Noyes-Report to OAQC, 2-2-95 3

Overview of the Study Design

The OSU study was designed to provide a realistic estimate of dust emissions from receiving and load-out operations at a typical Oklahoma grain elevator. These operations are the primary potential sources of dust emissions since most other elevator handling processes involve enclosed conveying equipment, and/or are conducted inside an enclosed facility. The study had four components:

- (1) receiving-end dump truck,
- (2) receiving-hopper-bottom truck,
- (3) receiving-dump pit air baffle effectiveness, and
- (4) load out.

The receiving study was separated by truck type because the differences in height was expected to impact dust emissions. Truck type was not expected to significantly influence emissions during load-out operations.

The basic design of the emission test was to perform typical receiving and load-out operations in a totally enclosed dump shed and to evacuate all of the air in the shed through filter bags, capturing the airborne dust particles. The suction system used to capture grain dust was engineered to capture emitted grain dust while not artificially separating fine particles from the grain. Two high-volume propeller fans were used to keep all airborne dust in suspension until it could be evacuated through the filter bags.

The facility selected for the test is typical of many Oklahoma country elevators. Two truck types, a hopper-bottomed semi-trailer and an end-dump tandem axle truck, were used for the receiving tests. Most of the grain trucks delivering to Oklahoma elevators would be very similar to one of the two truck types used in the test. The unloading chute was approximately 2 feet above the top of the bed of the truck used for the load-out study. Unloading chute height varies somewhat between elevators. Most facilities are designed to minimize the open distance between the spout and the truck bed to limit that amount of grain lost (shrink) which occurs during loading. The dump pit dust control baffles used for the baffle efficiency test restricted 86% of the open area on the dump pit in their fully closed position.

Kenkel & Noyes-Report to OAQC, 2-2-95 4

Key Issues Addressed

Airflow

The major criticism of some past grain dust emission studies was representing material removed from the grain by a pneumatic system as a measure of uncontrolled dust emissions from that handling point. In other words, the systems were aspirating fine particles from the grain, not measuring emitted dust. It is critical to design the airflow used in a dust control study to not unduly increase the amount of fine material separated from the grain stream while still capturing the particles which would normally become airborne. On the other hand, the airflow has to be sufficient to capture the airborne particles in a reasonable period of time, before they settle to the floor.

The airflow rates used in the OSU study was carefully engineered to address these issues. The airflow used was more than sufficient to capture airborne dust, while minimizing the extent to which the grain was artificially "aspirated". The centrifugal blower used in the test created a total air exchange in the dump shed in approximately 10 minutes. Because the inlet pipe was positioned close to the emission point, most of the airborne dust was captured in less than this period of time. Based on visible observation, the system removed most of the airborne dust within 3-4 minutes. The two high volume propeller fans were designed to keep all airborne particles in suspension until they could be evacuated through the filter bags. The actual air volume evacuated through the filter bags was carefully documented during the tests. The airflow rates indicate that the system moved an air volume equal to 150% to 200% of the total volume of the dump shed, providing further evidence that all airborne dust should have been captured.

Grain Quality

Grain used in an emission study should be representative of grain handled by typical grain elevators. Oklahoma grain elevators typically co-mingle grain received from a variety of sources. Some of the grain received will be straight from the farmer's combine, some will have been stored in on-farm storage and some may be shipped from other elevators. Handling grain creates additional dust due to the kernel to kernel and handling equipment abrasions. Dust may also be removed (emitted) during some handling processes. Grain quality also varies from year-to-year, and from farm to farm.

These considerations were addressed by officially sampling and grading each load of grain used in the emission test. Official grades were obtained with Federal Grain Inspection Service five year average grade data for Oklahoma. The comparison indicated that the grain used in the test was representative of grain handled by Oklahoma elevators.

Test Results

The OSU Grain Elevator Dust Emission Study measured dust emissions during receiving and load-out operations. For the receiving operation, dust emission estimates were obtained for both hopper-bottom trailers and end-dump trucks. The efficiency of dump-pit air baffles were also examined. The results of the test are summarized in Table 1.

Table 1 OSU Grain Elevator Dust Emission Study Summary of Results	
	Airborne Dust (lbs/ton of grain handled)
Receiving- Hopper-Bottom Semi Trailer	.019
Receiving-End Dump Truck	.039
Receiving-Overall Average	.029
Load-out	.008
Receiving-Dump Pit Dust Control Baffle Efficiency	21%

Floor Dust

Two supplemental tests were also conducted as part of the OSU Grain Dust Emission Study. Prior to opening the dump shed doors the floor was completely swept after each test and the amount of material recovered was carefully weighed and bagged. These measurements were not intended to reflect dust emissions since the test had been carefully designed to capture all

Kenkel & Noyes-Report to OAQC, 2-2-95 6

airborne dust in the filter bag system. The amount of floor dust collected ranged from 50% to 178% of the airborne dust, depending on the operation and truck type. The load-out operation resulted in the lowest ratio of floor dust to airborne dust. The design of the dust capture system may have been partially responsible for the low ratio of floor dust captured during the load-out process. The suction inlet pipe was positioned directly in line with, and fairly close to the load-out spout. The air capture system may have been collecting both light, normally airborne, and heavier, not normally airborne, particles during the load-out tests.

The second supplemental study was designed to document the amount of "floor dust" normally recovered by elevator crews during OSHA mandated housekeeping procedures. This amount was determined by conducting the unloading operations with the doors open, sweeping the dump shed and weighing the amount of dust recovered. The material recovered during housekeeping procedures averaged 42% of the total floor dust. The results of these supplemental tests are provided in Table 2.

<p align="center">Table 2 OSU Grain Elevator Dust Emission Study Summary of Supplemental Tests</p>		
	Floor Dust (lbs/ton grain handled)	Housekeeping Adjustment* (lbs/ton grain handled)
Receiving-Hopper Bottom Semi Truck	.034	.015
Receiving-End Dump Truck	.049	.021
Receiving-Overall	.042	.018
Load-out	.004	.002
<p>*The housekeeping adjustment for the End-dump (.0208) was determined from four open door floor sweeping tests. The other adjustment factors were estimated using the same ratio (42.58%) of recovered floor dust to total floor dust.</p>		

Kenkel & Noyes-Report to OAQC, 2-2-95 7

Proposed Emission Factors

The proposed emission factors were designed to provide state regulatory agency with easily defensible estimates of grain elevator dust emissions. The factors were created by adding the weight of the floor dust, less the amount recovered during housekeeping procedures, to the airborne dust captured. Adding the adjusted floor dust measurements to the airborne dust collected provides an absolute upper limit on dust emissions since the combined total represents all of the particles separated from the grain, both airborne and non-airborne. While probably overstating actual dust emissions, the proposed emission factors also counter any possible arguments over the airflow rates used in the test. If, despite the documentation to the contrary, it was assumed the airflow was insufficient to capture some airborne dust particles, those particles would have been measured in the floor dust and thus are still included in the emission estimates.

The proposed emission factors are provided in Table 3. The calculations can be illustrated by considering the case of the receiving study with the hopper bottom truck (first line of numbers in Table 3). The amount of airborne dust captured was .019 lbs/ton. An amount of material equal to .034 lbs./ton of grain unloaded was swept from the floor. Based on the supplemental test, conducted with the dump shed doors open, .015 lbs./ton is recovered in normal housekeeping. The proposed emission factor for the receiving operation with hopper bottom trucks is .038 lbs/ton (airborne dust + floor dust - housekeeping adjustment). In this case the proposed emission factor is 200% of actual airborne dust emissions. The calculations for the remaining emission factors follow an identical format.

Kenel & Noyes-Report to OAQC, 2-2-95 8

Table 3 OSU Grain Elevator Dust Emission Study Calculation of Proposed Emission Factors				
	Airborne (A)	Floor Dust (B)	Housekeeping Adjustment (C)	Proposed Emission Factors (A+B-C)
Receiving-Hopper Bottom	.019	.034	.015	.038
Receiving-End Dump	.039	.049	.021	.067
Receiving-Overall	.029	.042	.018	.053
Load-out*	.008	.004	.002	.011
Receiving-Dump Pit Dust Control Baffle Efficiency	21%	**	Not Applicable	21%
*Columns do not add to proposed emission factor due to rounding				
** The baffles were more effective in controlling floor dust (52% efficiency)

CHAPTER 100: AIR POLLUTION CONTROL

SUBCHAPTER 25. ~~SMOKE, VISIBLE EMISSIONS AND PARTICULATES~~

Section

252:100-25-1. Purpose [AMENDED]

252:100-25-2. General prohibition [AMENDED]

252:100-25-2.1 Definitions [NEW]

252:100-25-3. ~~Smoke, visible emissions and particulates~~ Opacity limit [AMENDED]

252:100-25-4. Alternative for particulates [AMENDED]

252:100-25-5. Continuous emission monitoring for opacity [NEW]

252:100-25-1. Purpose

The purpose of this Subchapter is to control ~~the amount of smoke,~~ visible emissions and ~~particulates-particulate matter~~ from the operation of any air contaminant source.

252:100-25-2. General prohibition

(a) ~~No person owning, leasing, or controlling the operation of any air contaminant source shall willfully, negligently, or through failure to provide necessary equipment or facilities or to take necessary precautions, permit the emission from said air contaminant source of such quantities of air contamination as will cause a condition of air pollution~~ No owner or operator of any air contaminant source shall allow emissions from said source so as to cause or contribute to air pollution.

(b) ~~All installations shall comply with this Subchapter upon and after February 1, 1984.~~

252:100-25-2.1. Definitions

The following words and terms when used in this Subchapter shall have the following meaning unless the context clearly indicates otherwise:

“One-hour period” means, for units with an operable Continuous Opacity Monitor (COM), any 60-minute period commencing on the hour.

“Opacity” means the degree to which emissions reduce the transmission of light and obscure the view of an object in the background.

“Six-minute period” means, for units with an operable COM, any one of the ten equal parts of a one-hour period.

“Unit” means any piece of equipment that has the potential to emit air contaminants in the form of visible emissions.

252:100-25-3. ~~Smoke, visible emissions and particulates~~ Opacity limit

(a) Units subject to an opacity limit promulgated under section 111 of the Federal Clean Air Act are exempt from this section.

(a)(b) ~~No person shall cause, suffer, allow, or permit the discharge of any fumes, aerosol, mist, gas, smoke, vapor, particulate matter, or any combination thereof of a shade or density exhibiting greater than twenty (20) percent equivalent 20% opacity~~ except for:

~~(b) Subsection 252:100-25-3(a) shall not apply to:~~

- ~~(1) Smoke or visible emissions emitted during the cleaning of a fire, the building of a new fire or the blowing of soot from boilers, or other short term occurrences, the shade or density of which is not greater than sixty (60) percent opacity for a period aggregating no more than five (5) minutes in any sixty (60) consecutive minutes and/or no more than 20 minutes in any 24-hour period. Short term occurrences, which consist of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. For units with COMs operated and maintained in accordance with Performance Specification 1 (40 CFR Part 60, Appendix B), short term occurrences which consist of not more than one six-minute period in any one-hour period, not to exceed three such periods in any consecutive 24 hours. In neither case shall the average of any six-minute period exceed 60% opacity.~~
- (2) Smoke resulting from fires covered by the exceptions outlined in 252:100-13-7.
- (3) An emission, where the presence of uncombined water is the only reason for failure to meet the requirements of 252:100-25-3(a).
- (4) Smoke generated due to a malfunction in a facility, ~~wherein~~ when the source of the fuel, ~~which in being burned produces~~ producing the smoke, is not under the direct and immediate control of the facility and ~~wherein~~ the immediate constriction of the fuel flow at the facility would produce a hazard to life and/or property upstream from the facility to the point of the fuel source.

(c) To determine compliance with this Section, opacity shall be read by either:

- (1) A Certified Visible Emission Evaluator using Test Method 9 (40 CFR Part 60, Appendix, A).
- (2) A COM installed, calibrated, operated and maintained in accordance with Performance Specification 1 (40 CFR Part 60, Appendix B).

252:100-25-4. Alternative for particulates

(a) ~~The 20 percent~~ 20% opacity limit as required under 252:100-25-3 may be increased, for particulates only, provided that the ~~owner/operator~~ owner or operator demonstrates to the satisfaction of the Oklahoma Air Quality Council at public hearing that:

- ~~(1) that the owner/operator~~ The owner or operator has installed air pollution control equipment to attempt to control both visible and particulate matter emissions to the limit required by applicable Subchapters;
- ~~(2)(2) that the~~ The pollution control equipment ~~so installed has been properly maintained, is in good working order and is operated so as to minimize emissions;~~
 - (A) Has been properly maintained.
 - (B) Is in good working order.
 - (C) Is operated to minimize emissions.
- ~~(3) that the~~ The installed control equipment does not, ~~in fact,~~ control opacity to the limit required in 252:100-25-3;
- ~~(4) that the owner/operator~~ The owner or operator has conducted stack test(s) using appropriate test methods as approved by the ~~Air Quality~~ Division to determine mass emissions at maximum allowed capacity and has determined such emissions meet all applicable particulate matter requirements (i.e., permit limit, rule limit, process limit); and,

- (5) ~~that the owner/operator conducts~~ The owner or operator has conducted detailed modeling and/or and other measures (e.g., monitoring) deemed necessary by the Executive Director (e.g., monitoring) to demonstrate that the maximum impact of any increase of opacity will not exceed 5 ug/m³ 24-hour PM-10 24-hour average at any point of impact or 1 ug/m³ PM-10 annual average at any point of impact.
- (b) Upon completion of the demonstration specified in (a) of this Section, the opacity allowed will be as based on the opacity read by an Oklahoma a Certified Visible Emission Evaluator at the time of the maximum operation stack test.
- (c) ~~All applications~~ Applications for an alternative under 252:100-25-4 will be submitted to the Director of Air Quality the Division for his review and recommendation to the Air Quality Council for final action.

252:100-25-5. Continuous emission monitoring for opacity

- (a) Continuous monitoring of opacity is required for fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries and fossil fuel-fired steam generators in accordance with 40 CFR Part 51, Appendix P, which is hereby incorporated by reference as it existed on July 1, 1998.
- (b) Owners or operators of these emission sources shall:
- (1) Install, calibrate, operate, and maintain all monitoring equipment necessary for continuously monitoring opacity.
 - (2) Complete the installation and performance tests of such equipment and begin monitoring and recording by January 1, 2001.
- (c) This section shall not apply to:
- (1) Sources already subject to a new source performance standard promulgated in 40 CFR Part 60 pursuant to section 111 of the Clean Air Act..
 - (2) Sources scheduled for retirement within 5 years after the effective date of this rule, provided adequate evidence and guarantees are available to show the source will cease operations prior to such date.
- (d) Alternative monitoring requirements different from the provisions of Parts 1 through 5 of Appendix P may be approved by the DEQ and EPA on a case-by-case basis if continuous monitoring cannot be implemented by a source due to physical plant limitations or extreme economic reasons. For example, the following alternative monitoring requirements may be used for natural gas-fired facilities that burn oil on an emergency basis only (including periodic system testing not to exceed 40 hours per calendar year):
- (1) A Certified Visible Emission Evaluator shall read visual emissions once per day when fuel oils are burned.
 - (2) Visual emissions readings shall be conducted in accordance with EPA Test Method 9 (40 CFR Part 60, Appendix A).
 - (3) Records of fuel oil burned (including type, amount, and duration burned) and visible emissions read shall be maintained for 2 years.

Oklahoma Register

Notices of Rulemaking Intent

Becky

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must publish a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides other information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained. For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-304]

INTENDED RULEMAKING ACTION:

Notice of proposed EMERGENCY and PERMANENT rulemaking

Proposed rules:

252:100. Air Pollution Control

Subchapter 4. New Source Performance Standards

[NEW]

Summary:

A new Subchapter 4 is proposed for the purpose of establishing state standards for certain new or modified facilities in accordance with the authority delegated by the EPA under Section 111(c) of the federal Clean Air Act.

AUTHORITY:

Environmental Quality Board, 27A O.S. Supp. 1993, §§ 2-2-101 and 2-5-101 *et seq.*, Oklahoma Clean Air Act

COMMENT PERIOD:

Monday, March 16, 1998, through Tuesday, April, 21, 1998. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by Tuesday, April 14, 1998. Also scheduled before the Environmental Quality Board at their meeting on Tuesday, June 9, 1998 - 9:30 a.m. in Claremore (Location to be determined. See contact person.)

PUBLIC HEARINGS:

Tuesday, April 21, 1998 - 9:30 a.m. briefing and 1:00 p.m. hearing, Department of Environmental Quality, Air Quality Division, 4545 N. Lincoln Blvd., Burgundy Room, Oklahoma City, Oklahoma

COPIES OF PROPOSED RULES:

Copies of the rule will be available March 16, 1998, for review at the Air Quality Division office at the address listed below or may be obtained from the contact person.

RULE IMPACT STATEMENT:

The rule impact statement may be obtained from the Air Quality Division at the address below.

CONTACT PERSON:

Michelle Martinez, Department of Environmental Quality, Air Quality Division, 4545 N. Lincoln Blvd., Suite 250, Oklahoma City, Oklahoma 73105-3483; (405) 290-8247

ADDITIONAL INFORMATION:

None

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 290-8247.

[OAR Docket #98-304; filed 2-20-98]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-305]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

Proposed rules:

252:100. Air Pollution Control

Subchapter 25. Smoke, Visible Emissions and Particulates [AMENDED]

Summary:

The proposed amendments to Subchapter 25 are needed to fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule.

AUTHORITY:

Environmental Quality Board, 27A O.S. Supp. 1993, §§ 2-2-101 and 2-5-101 *et seq.*, Oklahoma Clean Air Act.

COMMENT PERIOD:

Monday, March 16, 1998, through Tuesday, April, 21, 1998. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by Tuesday, April 14, 1998. Also scheduled before the Environmental Quality Board at their meeting on Tuesday, June 9, 1998 - 9:30 a.m. in Claremore (Location to be determined. See contact person.)

PUBLIC HEARINGS:

Tuesday, April 21, 1998 - 9:30 a.m. briefing and 1:00 p.m. hearing, Department of Environmental Quality, Air

Notices of Rulemaking Intent

Quality Division, 4545 N. Lincoln Blvd., Burgundy Room, Oklahoma City, Oklahoma.

COPIES OF PROPOSED RULES:

Copies of the rule will be available March 16, 1998, for review at the Air Quality Division office at the address listed below or may be obtained from the contact person.

RULE IMPACT STATEMENT:

The rule impact statement may be obtained from the Air Quality Division at the address below.

CONTACT PERSON:

Jeanette Buttram, Department of Environmental Quality, Air Quality Division, 4545 N. Lincoln Blvd., Suite 250, Oklahoma City, Oklahoma 73105-3483; (405) 290-8247

ADDITIONAL INFORMATION:

None

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 290-8247.

[OAR Docket #98-305; filed 2-20-98]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 200. HAZARDOUS WASTE MANAGEMENT

[OAR Docket #98-315]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT Rulemaking

Proposed rules:

252:200. Hazardous Waste Management [AMENDED]

Summary:

The proposed rule-rewrite for all of 252:200 is an initiative by the DEQ to simplify and clarify hazardous waste rules without making substantive changes.

AUTHORITY:

Environmental Quality Board and Hazardous Waste Management Council powers and duties, 27A O.S.Supp. 1997 §§ 2-2-101, 2-2-104, 2-2-201 and 2-7-106

COMMENT PERIOD:

Deliver or mail written comments to the contact person from March 16, 1998 through April 6, 1998. Oral comments may be made at the meeting of the Hazardous Waste Management Advisory Council, April 8, 1998 at 10:00 a.m. at a location to be determined in Tulsa, Oklahoma, or at the meeting of the Environmental Quality Board, June 9, 1998 in Claremore, Oklahoma at a time and place to be determined.

PUBLIC HEARINGS:

Before the Hazardous Waste Management Advisory Council April 8, 1998, at 10:00 a.m. at a location to be determined in Tulsa, Oklahoma

COPY OF PROPOSED RULE:

The proposed rule may be obtained from the contact person and reviewed at the Department of Environmental Quality, 1000 N.E. Tenth Street, Oklahoma City, Oklahoma.

RULE IMPACT STATEMENT:

The rule impact statement for the proposed rule will be on file in Room 1214 of the Department of Environmental Quality, 1000 N.E. Tenth Street, Oklahoma City, Oklahoma and may be requested from the contact person.

CONTACT PERSON:

Jerry J. Sanger, (405) 271-5338, 1000 N.E. Tenth Street, Room 1204, Oklahoma City, Oklahoma, 73117-1212

ADDITIONAL INFORMATION:

Persons with disabilities who desire to attend the rulemaking hearing and need an accommodation should notify the contact person three days in advance of the hearing, TDD Number 232-0591.

[OAR Docket #98-315; filed 2-20-98]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 200. HAZARDOUS WASTE MANAGEMENT

[OAR Docket #98-315a]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT and EMERGENCY Rulemaking

Proposed Rules:

252:200-3. General Provisions [AMENDED]

Summary:

The proposed amendments to 252:200-3-2 in conjunction with proposed new 252:200-3-7 and federal regulations adds mercury-containing lamps to the state list of Universal Wastes.

AUTHORITY:

Environmental Quality Board and Hazardous Waste Management Council powers and duties, 27A O.S.Supp. 1997 §§ 2-2-101, 2-2-104, 2-2-201 and 2-7-106

COMMENT PERIOD:

Deliver or mail written comments to the contact person from March 16, 1998 through April 6, 1998. Oral comments may be made at the meeting of the Hazardous Waste Management Advisory Council, April 8, 1998 at 10:00 a.m. at a location to be determined in Tulsa, Oklahoma, or at the meeting of the Environmental Quality Board, June 9, 1998

Notices of Rulemaking Intent

COMMENT PERIOD:

Friday, May 15, 1998, through Tuesday, June 16, 1998. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by Tuesday, June 9, 1998. A hearing for these proposed rules is also scheduled before the Environmental Quality Board at their meeting on Tuesday, September 15, 1998 - 9:30 a.m. in Alva, Oklahoma. (Location to be determined. See contact person.)

PUBLIC HEARINGS:

Tuesday, June 16, 1998 - 9:30 a.m. briefing and 1:00 p.m. hearing, Tulsa City-County Health Department (newly located at the northeast corner of 51st and 129th), 5051 South 129th East, Tulsa, Oklahoma.

COPIES OF PROPOSED RULES:

Copies of the rules will be available May 15, 1998, for review at the Air Quality Division office at the address listed below or may be obtained from the contact person.

RULE IMPACT STATEMENT:

The rule impact statement may be obtained from the Air Quality Division at the address below.

CONTACT PERSON:

Cheryl Bradley, Department of Environmental Quality, Air Quality Division, 4545 N. Lincoln Blvd., Suite 250, Oklahoma City, Oklahoma 73105-3483; (405) 290-8247. The address and phone number for Ms. Bradley will change during May 1998. The exact date has not yet been determined. Before submitting any written comments, contact Ms. Bradley for the appropriate address.

ADDITIONAL INFORMATION:

The Air Quality Division will move in May 1998. The new address is Department of Environmental Quality, Air Quality Division, 707 North Robinson, Oklahoma City, Oklahoma, 73102. The Air Quality Division's new phone number will be (405) 702-4100.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 290-8247.

[OAR Docket #98-797; filed 4-24-98]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-798]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking.

Proposed rules:

252:100. Air Pollution Control

Subchapter 25. Smoke, Visible Emissions and Particulates [AMENDED]

Summary:

The proposed amendments to Subchapter 25 would fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the Department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P. Additionally, the Department proposes to exempt from Appendix P requirements those sources already subject to a new source performance standard and sources scheduled for retirement within 5 years after the amended rule takes effect. The amended rule would also provide criteria for approval of alternative monitoring requirements. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule.

AUTHORITY:

Environmental Quality Board, 27A O.S. Supp. 1993, §§ 2-2-101 and 2-5-101 *et seq.*

COMMENT PERIOD:

Friday, May 15, 1998, through Tuesday, June 16, 1998. Also scheduled before the Environmental Quality Board at their meeting on Tuesday, September 15, 1998 - 9:30 a.m. in Alva (Location to be determined. See contact person.)

PUBLIC HEARINGS:

Before the Air Quality Council on Tuesday, June 16, 1998, 9:30 a.m. briefing and 1:00 p.m. hearing, at the Tulsa City-County Health Department, 5051 South 129th East (Northeast corner of 51st and 129th), Tulsa, Oklahoma.

COPIES OF PROPOSED RULES:

Copies of the rule will be available May 15, 1998, for review at the Air Quality Division office at the address listed below or may be obtained from the contact person.

RULE IMPACT STATEMENT:

The rule impact statement may be obtained from the Air Quality Division at the address below.

CONTACT PERSON:

Jeanette Buttram, Department of Environmental Quality, Air Quality Division, 4545 N. Lincoln Blvd., Suite 250, Oklahoma City, Oklahoma 73105-3483; (405) 290-8247. The address and phone number for Ms. Buttram will change during May 1998. The exact date has not yet been determined. Before submitting any written comments, contact Ms. Buttram for the appropriate address.

ADDITIONAL INFORMATION:

This rule was originally scheduled for public hearing at the April 21, 1998, meeting of the Air Quality Council, which was cancelled for lack of a quorum. An updated version of the proposal, incorporating written comments received from the public, is now available.

The Air Quality Division will move in May 1998. The new address is Department of Environmental Quality, Air Quality Division, 707 North Robinson, Oklahoma City,

Oklahoma, 73102. The Air Quality Division's new phone number will be (405)702-4100.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 290-8247.

[OAR Docket #98-798; filed 4-24-98]

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

[OAR Docket #98-799]

INTENDED RULEMAKING ACTION:

Notice of proposed EMERGENCY and PERMANENT rulemaking.

Proposed rules:

- 252:100. Air Pollution Control
- Subchapter 4. New Source Performance Standards [NEW]

Summary:

A new Subchapter 4 is proposed for the purpose of establishing state standards for certain new or modified facilities in accordance with the authority delegated by the EPA under section 111(c) of the federal Clean Air Act.

AUTHORITY:

Environmental Quality Board, 27A O.S. Supp. 1993, §§ 2-2-101 and 2-5-101 *et seq.*

COMMENT PERIOD:

Friday, May 15, 1998, through Tuesday, June 16, 1998. Also scheduled before the Environmental Quality Board at their meeting on Tuesday, September 15, 1998 - 9:30 a.m. in Alva (Location to be determined. See contact person.)

PUBLIC HEARINGS:

Before the Air Quality Council on Tuesday, June 16, 1998, 9:30 a.m. briefing and 1:00 p.m. hearing, at the Tulsa City-County Health Department, 5051 South 129th East (Northeast corner of 51st and 129th), Tulsa, Oklahoma.

COPIES OF PROPOSED RULES:

Copies of the rule will be available May 15, 1998, for review at the Air Quality Division office at the address listed below or may be obtained from the contact person.

RULE IMPACT STATEMENT:

The rule impact statement may be obtained from the Air Quality Division at the address below.

CONTACT PERSON:

Michelle Martinez, Department of Environmental Quality, Air Quality Division, 4545 N. Lincoln Blvd., Suite 250, Oklahoma City, Oklahoma 73105-3483; (405) 290-8247. The address and phone number for Ms. Martinez will change during May 1998. The exact date has not yet been determined. Before submitting any written

comments, contact Ms. Martinez for the appropriate address.

ADDITIONAL INFORMATION:

The Air Quality Division will move in May 1998. The new address is Department of Environmental Quality, Air Quality Division, 707 North Robinson, Oklahoma City, Oklahoma, 73102. The Air Quality Division's new phone number will be (405) 702-4100.

This rule was originally scheduled for public hearing at the April 21, 1998, meeting of the Air Quality Council, which was cancelled for lack of a quorum.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 290-8247.

[OAR Docket #98-799; filed 4-24-98]

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 400. RADIATION MANAGEMENT**

[OAR Docket #98-789]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT Rulemaking.

Proposed rules:

- 252:400-1-1. Purpose [AMENDED]
- 252:400-1-3. Exemptions from the regulatory requirements [AMENDED]
- 252:400-1-4. General regulatory requirements [AMENDED]
- 252:400-1-5. Compliance required [NEW]
- 252:400-1-6. Incorporation statement [NEW]
- Subchapter 2. State Agreement Program [NEW]
- Subchapter 3. Registration of radiation machines, [AMENDED]
- Subchapter 4. Certification of industrial radiographers [NEW]
- Subchapter 5. Facility registration permitting and Fees [REVOKED]
- Subchapter 7. Authorization procedures [AMENDED]
- Subchapter 9. Standards for Protection Against Radiation [AMENDED]
- Subchapter 13. Industrial and Analytical X-Ray Equipment [AMENDED]
- Subchapter 14. Industrial Radiography [NEW]
- Subchapter 17. XRF Fluorescence Instruments Used for Lead-Based Paint Detection [AMENDED]
- Subchapter 21. Radionuclide NESHAPS [NEW]
- Appendices A through C [REVOKED]
- Appendix D. Acceptable surface contamination [REVOKED]
- Appendix E. Fee Schedule for Radiation Management [AMENDED]

Notices of Rulemaking Intent

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must publish a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained. For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-1216]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking.

Proposed rules:

252:100. Air Pollution Control

Appendix E. Primary Ambient Air Quality Standards [AMENDED]

Appendix F. Secondary Ambient Air Quality Standards [AMENDED]

Subchapter 7. Permits for Minor Sources [AMENDED]

Subchapter 23. Control of Emissions from Cotton Gins [AMENDED]

Subchapter 24. Control of Emissions from Grain Elevators [AMENDED]

Appendix L. PM-10 Emission Factors for Permit by Rule for Grain Elevators [NEW]

Subchapter 25. Smoke. Visible Emissions and Particulates [AMENDED]

Subchapter 37. Control of Emissions of Organic Materials [AMENDED]

Subchapter 39. Emission of Organic Materials in Nonattainment Areas [AMENDED]

Summary:

The proposed revisions to Appendices E and F will mirror the revised federal national ambient air quality standards for particulate matter (PM) and ozone announced by EPA in the July 18, 1997, Federal Register. The EPA revised the primary (health-based) PM standards by adding a new annual PM-2.5 standard set at 15 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) and a new 24-hr PM-2.5 standard set at $65 \mu\text{g}/\text{m}^3$. EPA is retaining the current annual PM-10 standard of $50 \mu\text{g}/\text{m}^3$ and changing the form of the PM-10 24-hr standard. The secondary (welfare-based) standards are also being adjusted to make them identical to the primary standards. Also, the previous 1-hr primary ozone standard is being phased out and replaced with a new 8-hr "concentration-based" standard of 0.08 ppm. The 3-yr average of the 4th highest daily maximum 8-hr ozone concentrations is used to determine compliance with the standard. The EPA also replaced the previous secondary standards with a standard identical to the new primary standard. The proposed revisions to Subchapter 7 will delete the lower limit of 5 tons per year for

Permit by Rule (PBR) facilities. This will allow the facilities with less than 5 tons per year emissions, which subject to new source performance standards (NSPS) national emissions standards for hazardous air pollutants (NESHAP), to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that outline the requirements necessary for a facility to qualify for PBR. Each Subchapter containing a PBR for specific facilities will be referenced under this new Part also. The proposed revisions to Subchapters 23 and 24 would simplify the language under the agency-wide re-write/delete initiative. It is also proposed to add a new PBR section to both subchapters. The PBR will streamline the permitting process by creating a mechanism that will eliminate the necessity for some cotton gins and elevators to obtain an individual air quality permit. Also, a new Appendix I is proposed which contains PM-10 emission factors for PM grain elevators. The proposed amendments to Subchapter 25 would fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the Department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries specified in 40 CFR 51, Appendix P. Additionally, the Department proposes to exempt from Appendix I requirements those sources already subject to a new source performance standard and sources scheduled for retirement within 5 years after the amended rule takes effect. The amended rule would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include changing the time allowed for visible emissions during short-term occurrences to exceed the opacity standard to one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. A new subsection would contain methods for determining compliance with the opacity limits. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule. The proposed changes to Subchapters 23 and 39 are primarily intended to clarify, simplify and correct the rule and to respond to requests to exclude acetone and methylated siloxanes from the definition of volatile organic compound (VOC). The proposed changes to Subchapters 37 and 39 include clarification of language, correction of typographical errors, deletion of redundant language, and reformatting. Two substantive changes are proposed for

Subchapter 37 and one for Subchapter 39. One of those substantive changes affects both Subchapter 37 and 39. The definition of volatile organic compounds (VOC) in 252:100-37-2 and 252:100-39-2 has been revised in response to the Air Quality Council's direction to the staff to review the petition from the Chemical Manufacturers Association dated October 25, 1995, to exclude acetone from the definition of Volatile Organic Compounds (VOC); the request from American Airlines, Boeing, and Nordam, dated January 19, 1998, that acetone be excluded from the definition of VOC; and a request that methylated siloxanes be excluded from the definition of VOC. The definition of volatile organic compounds (VOC) has been modified to be consistent with the Environmental Protection Agency definition. The second substantive change for Subchapter 37 deals with the first sentence in 252:100-37-36 regarding fuel-burning and refuse-burning equipment, which has been deleted to resolve the contradiction between the first and second sentences. The Department is requesting comments on these proposed changes.

AUTHORITY:

Environmental Quality Board, 27A O.S. Supp. 1997, §§ 2-2-101 and 2-5-101 *et seq.*

COMMENT PERIOD:

Wednesday, July 15, 1998, through Tuesday, August 18, 1998. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by Tuesday, August 11, 1998. Also scheduled before the Environmental Quality Board at their meeting on Tuesday, September 15, 1998 - 9:30 a.m. in Alva (Location to be determined. See contact person.)

PUBLIC HEARINGS:

Tuesday, August 18, 1998 - 9:30 a.m. briefing and 1:00 p.m. hearing, Department of Environmental Quality, Air Quality Division, 707 N. Robinson, Room 101, Oklahoma City, Oklahoma.

COPIES OF PROPOSED RULES:

Copies of the rules will be available July 15, 1998, for review at the Air Quality Division office at the address listed above or may be obtained from Myrna Bruce at 405-702-4177.

RULE IMPACT STATEMENT:

A copy of the rule impact statements may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Michelle Martinez (Appendices E, F, L and Subchapter 24), Jeanette Buttram (Subchapters 7 and 25), Becky Mainord (Subchapter 23), Joyce Sheedy, Ph.D. (Subchapters 37 and 39). Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

ADDITIONAL INFORMATION:

Additional proposed revisions have been made to the version of Subchapter 25 that was the subject of the hearing on June 16, 1998.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #98-1216; filed 6-25-98]

**TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY
CHAPTER 100. AIR POLLUTION CONTROL**

[OAR Docket #98-1217]

INTENDED RULEMAKING ACTION:

Notice of proposed EMERGENCY and PERMANENT rulemaking.

Proposed rules:

252:100, Air Pollution Control: Subchapter 47, Control of Emissions from Existing Municipal Solid Waste Landfills [NEW]

Summary:

A new Subchapter 47 is proposed to establish state standards to control emissions from municipal solid waste (MSW) landfills that commenced construction, modification, or reconstruction before May 30, 1991, and accepted waste after November 8, 1987. These proposed rules will be included in Oklahoma's State 111(d) Plan and will provide the enforceable mechanism for implementing the provisions of the Emission Guidelines (EG) for MSW landfills (40 CFR 60 Subpart Cc). Subchapter 47 incorporates by reference sections of the New Source Performance Standards for MSW landfills (40 CFR 60 Subpart WWW). The proposed rules would affect privately and publicly owned MSW landfills that are actively accepting or are capable of accepting municipal solid waste as well as those that are closed. Landfill gas collection and control systems will be required for landfills that have design capacities greater than or equal to 2.5 million megagrams and 2.5 million cubic meters and have estimated emissions of at least 50 megagrams per year of non-methane organic compounds. The Department is requesting comments on this proposed rule.

AUTHORITY:

Environmental Quality Board, 27A O.S. Supp. 1997, §§ 2-2-101 and 2-5-101 *et seq.*

COMMENT PERIOD:

Wednesday, July 15, 1998, through Tuesday, August 18, 1998. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by Tuesday, August 11, 1998. Also scheduled

Notices of Rulemaking Intent

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must put a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides other information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained. For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-1259]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking.

PROPOSED RULES:

252:100. Air Pollution Control

Subchapter 7. Permits for Minor Sources [AMENDED]

Subchapter 23. Control of Emissions from Cotton Gins [AMENDED]

Subchapter 24. Control of Emissions from Grain Elevators [AMENDED]

Subchapter 25. Smoke, Visible Emissions and Particulates [AMENDED]

Subchapter 37. Control of Emissions of Organic Materials [AMENDED]

Subchapter 39. Emission of Organic Materials in Nonattainment Areas [AMENDED].

Appendix E. Primary Ambient Air Quality Standards [AMENDED]

Appendix F. Secondary Ambient Air Quality Standards [AMENDED]

Appendix L. PM-10 Emission Factors for Permit by Rule for Grain Elevators [NEW]

SUMMARY:

The proposed revisions to Appendices E and F will mirror the revised federal national ambient air quality standards for particulate matter (PM) and ozone announced by EPA in the July 18, 1997, Federal Register. The EPA revised the primary (health-based) PM standards by adding a new annual PM-2.5 standard set at 15 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) and a new 24-hr PM-2.5 standard set at $65 \mu\text{g}/\text{m}^3$. EPA is retaining the current annual PM-10 standard of $50 \mu\text{g}/\text{m}^3$ and changing the form of the PM-10 24-hr standard. The secondary (welfare-based) standards are also being adjusted to make them identical to the primary standards. Also, the previous 1-hr primary ozone standard is being phased out and replaced with a new 8-hr "concentration-based" standard of 0.08 ppm. The 3-yr average of the 4th highest daily maximum 8-hr ozone concentrations is used to determine compliance with the standard. The EPA also replaced the previous secondary standards with a standard identical to the new primary standard. The proposed revisions to

Subchapter 7 will delete the lower limit of 5 tons per year Permit by Rule (PBR) facilities. This will allow the facilities with less than 5 tons per year emissions, which are subject to new source performance standards (NSPS) and national emissions standards for hazardous air pollutants (NESHAP), to apply for a PBR instead of having to obtain an individual permit. Also, a new Part 9 is proposed that will outline the requirements necessary for a facility to qualify for PBR. Each Subchapter containing a PBR for specific facilities will be referenced under this new Part also. The proposed revisions to Subchapters 23 and 24 would simplify the language under the agency-wide re-write/delete initiative. It is also proposed to add a new PBR section to both subchapters. The PBR will streamline the permitting process by creating a mechanism that will eliminate the necessity for some cotton gins and elevators to obtain an individual air quality permit. Also, a new Appendix L is proposed which contains PM-10 emission factors for PBR grain elevators. The proposed amendments to Subchapter 25 would fulfill an EPA requirement concerning Continuous Emission Monitoring (CEM). Specifically, the Department proposes to incorporate by reference the Federal opacity monitoring requirements for fossil fuel-fired steam generators and fluid bed catalytic cracking unit catalyst regenerators at petroleum refineries as specified in 40 CFR 51, Appendix P. Additionally, the Department proposes to exempt from Appendix L requirements those sources already subject to a new source performance standard and sources scheduled for retirement within 5 years after the amended rule takes effect. The amended rule would also provide criteria for approval of alternative monitoring requirements. Additional changes to the existing rule include changing the time allowed for visible emissions during short-term occurrences to exceed the opacity standard to one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. A new subsection would contain methods for determining compliance with the opacity limits. Other proposed amendments to Subchapter 25 are designed to simplify and clarify the rule. The proposed changes to Subchapters 37 and 39 are primarily intended to clarify, simplify and correct the rule and to respond to requests to exclude acetone and methylated siloxanes from the definition of volatile organic compound (VOC). The proposed changes to Subchapters 37 and 39 include clarification of language, correction of typographical errors, deletion of redundant language, and

Notices of Rulemaking Intent

reformatting. Two substantive changes are proposed for Subchapter 37 and one for Subchapter 39. One of those substantive changes affects both Subchapter 37 and 39. The definition of volatile organic compounds (VOC) in 252:100-37-2 and 252:100-39-2 has been revised in response to the Air Quality Council's direction to the staff to review the petition from the Chemical Manufacturers Association dated October 25, 1995, to exclude acetone from the definition of Volatile Organic Compounds (VOC); the request from American Airlines, Boeing, and Nordam, dated January 19, 1998, that acetone be excluded from the definition of VOC; and a request that methylated siloxanes be excluded from the definition of VOC. The definition of volatile organic compounds (VOC) has been modified to be consistent with the Environmental Protection Agency definition. The second substantive change for Subchapter 37 deals with the first sentence in 252:100-37-36 regarding fuel-burning and refuse-burning equipment, which has been deleted to resolve the contradiction between the first and second sentences. The Department is requesting comments on these proposed changes.

AUTHORITY:

Environmental Quality Board, 27A O.S. Supp. 1997, §§ 2-2-101 and 2-5-101 *et seq.*

COMMENT PERIOD:

Wednesday, July 15, 1998, through Tuesday, August 18, 1998. To be thoroughly considered by staff prior to the hearing, written comments should be submitted to the contact person by Tuesday, August 11, 1998. Also scheduled before the Environmental Quality Board at their meeting on Tuesday, September 15, 1998 - 9:30 a.m. in Alva (Location to be determined. See contact person.)

PUBLIC HEARINGS:

Tuesday, August 18, 1998 - 9:30 a.m. briefing and 1:00 p.m. hearing, Lincoln Plaza, 4545 N. Lincoln Blvd., Burgundy Room, Oklahoma City, Oklahoma.

COPIES OF PROPOSED RULES:

Copies of the rules will be available July 15, 1998, for review at the Air Quality Division office at the address listed above or may be obtained from Myrna Bruce at 405-702-4177.

RULE IMPACT STATEMENT:

A copy of the rule impact statements may be obtained from the Air Quality Division.

CONTACT PERSON:

Please send written comments to Michelle Martinez (Appendices E, F, L and Subchapter 24), Jeanette Buttram (Subchapters 7 and 25), Becky Mainord (Subchapter 23), Joyce Sheedy, Ph.D. (Subchapters 37 and 39). Department of Environmental Quality, Air Quality Division, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677; (405) 702-4100.

ADDITIONAL INFORMATION:

Additional proposed revisions have been made to a previous version of Subchapter 25 that was the subject of a public hearing on June 16, 1998.

AN IDENTICAL NOTICE WAS PUBLISHED IN THE OKLAHOMA REGISTER ON JULY 15, 1998. AFTER PUBLICATION, THE COUNCIL MEETING LOCATION WAS CHANGED TO 4545 N. LINCOLN BLVD., BURGUNDY ROOM, OKLAHOMA CITY, OKLAHOMA. NO OTHER CHANGES WERE MADE TO THIS NOTICE.

PERSONS WITH DISABILITIES:

Should you desire to attend but have a disability and need an accommodation, please notify the Air Quality Division three (3) days in advance at (405) 702-4100.

[OAR Docket #98-1259; filed 7-9-98]

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-1260]

INTENDED RULEMAKING ACTION:

Notice of proposed EMERGENCY and PERMANENT rulemaking.

PROPOSED RULES:

252:100. Air Pollution Control

Subchapter 47. Control of Emissions from Existing Municipal Solid Waste Landfills [NEW]

SUMMARY:

A new Subchapter 47 is proposed to establish state standards to control emissions from municipal solid waste (MSW) landfills that commenced construction, modification, or reconstruction before May 30, 1991, and accepted waste after November 8, 1987. These proposed rules will be included in Oklahoma's State 111(d) Plan and will provide the enforceable mechanism for implementing the provisions of the Emission Guidelines (EG) for MSW landfills (40 CFR 60 Subpart Cc). Subchapter 47 incorporates by reference sections of the New Source Performance Standards for MSW landfills (40 CFR 60 Subpart WWW). The proposed rules would affect privately and publicly owned MSW landfills that are actively accepting or are capable of accepting municipal solid waste as well as those that are closed. Landfill gas collection and control systems will be required for landfills that have design capacities greater than or equal to 2.5 million megagrams and 2.5 million cubic meters and have estimated emissions of at least 50 megagrams per year of non-methane organic compounds. The Department is requesting comments on this proposed rule.

Notices of Rulemaking Intent

Prior to adoption and gubernatorial/legislative review of a proposed PERMANENT rulemaking action, an agency must publish a Notice of Rulemaking Intent in the *Register*. In addition, an agency may publish a Notice of Rulemaking Intent in the *Register* prior to adoption of a proposed EMERGENCY or PREEMPTIVE rulemaking action.

A Notice of Rulemaking Intent announces a comment period, or a comment period and public hearing, and provides other information about the intended rulemaking action as required by law, including where copies of proposed rules may be obtained. For additional information on Notices of Rulemaking Intent, see 75 O.S., Section 303.

TITLE 252. DEPARTMENT OF ENVIRONMENTAL QUALITY CHAPTER 100. AIR POLLUTION CONTROL

[OAR Docket #98-1358]

INTENDED RULEMAKING ACTION:

Notice of proposed PERMANENT rulemaking

PROPOSED RULES:

Subchapter 5. Registration, Emission Inventory and Annual Operating Fees [AMENDED]

Subchapter 7. Permits for Minor Sources [AMENDED]

Subchapter 8. Permits for Part 70 Sources [AMENDED]
