Lower Explosive Limit (LEL) = 11,000 ppm

* The AEGL-2 values is higher than 10% of the lower explosive limit of n-hexane in air. Therefore, safety considerations against the hazard of explosion must be taken into account.

** The 10-min AEGL-3 value of 12,000 ppm (42,000 mg/m³) is higher than the lower explosive limit of n-hexane in air. Therefore, extreme safety considerations against the hazard of explosion must be taken into account.

*** The AEGL-3 values for the 30-min, 1-hr, 4-hr and 8-hr durations are each 8,600 ppm (30,000 mg/m³) which is higher than 50% of the lower explosive limit of n-hexane in air. Therefore, extreme safety considerations against the hazard of explosion must be taken into account.

Interim AEGLs (84)

Interim AEGLs are established following review and consideration of public comments by the National Advisory Committee for AEGLs (NAC/AEGL) of public comments on Proposed AEGLs that are published in the Federal Register. Interim AEGLs are available for use by organizations while awaiting NRC/NAS peer review and publication of Final AEGLs. (Dates) in parentheses refer to date of the NAC meeting when the decision was made to raise Proposed AEGLs to Interim status.
