Re: Data Requirements Rule for the 2010 One-Hour Sulfur Dioxide Primary National  
Ambient Air Quality Standard

Dear Ms. Banister:

On August 21, 2015, the U.S. Environmental Protection Agency (EPA) promulgated the “Data Requirements Rule” (DRR) (80 Fed. Reg. 51052), which requires states to evaluate compliance with the 2010 one-hour sulfur dioxide (SO<sub>2</sub>) National Ambient Air Quality Standard (NAAQS) in areas surrounding specified SO<sub>2</sub> sources. Pursuant to the DRR, states must submit to EPA by January 15, 2016, a list identifying all sources in the state with SO<sub>2</sub> emissions that exceeded a 2,000 tons-per-year (tpy) threshold during the most recent year for which data are available.<sup>1</sup> Following submittal, states will evaluate listed facilities pursuant to DRR protocols.

For all sources in Florida, the most recent available annual emissions data are for calendar year 2014. As EPA is aware, SO<sub>2</sub> emissions in Florida have decreased more than 70% since 2005. Florida’s list of DRR-applicable sources based on 2014 SO<sub>2</sub> emissions is provided below:

<sup>1</sup> “The air agency shall submit a list of applicable SO<sub>2</sub> sources identified pursuant to § 51.1202 located in its jurisdiction to the EPA by January 15, 2016.” 40 CFR Subpart BB § 51.1203.
