

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

REGION 2
290 BROADWAY
NEW YORK, NY 10007-1866

MAR 15 2016

Mr. Weldin Ortíz
Chairman
Puerto Rico Environmental Quality Board
Environmental Agencies Building
San José Industrial Park
1375 Ponce De León Ave.
PO Box 11488
San Juan, Puerto Rico 00910

Dear Chairman ^{Weldin} ~~Ortíz~~:

On behalf of the U.S. Environmental Protection Agency (EPA), I would like to thank you for your December 21, 2015 submittal identifying sources to be characterized under the sulfur dioxide (SO₂) Data Requirements Rule (DRR).¹ I am writing to respond to your submittal and provide additional information about the next steps in this source characterization effort, which will result in important data that the Commonwealth and the EPA will use to protect public health.

On August 21, 2015, the EPA finalized the DRR, which requires state air agencies to characterize ambient SO₂ levels in areas with large sources of SO₂ emissions to help implement the 1-hour SO₂ National Ambient Air Quality Standard (NAAQS). Under the DRR, state air agencies must, at a minimum, model or monitor air quality around sources that emit 2,000 tons per year (tpy) or more of SO₂ and that are not located in an area already designated nonattainment. For a source listed because it emitted more than 2,000 tpy, an air agency may avoid this requirement by adopting federally enforceable emission limits by January 13, 2017, that ensure that the source will emit less than 2,000 tpy of SO₂.

Under the DRR implementation schedule, state air agencies were required to submit to the EPA by January 15, 2016, a list that identifies all sources within its jurisdiction with SO₂ emissions of 2,000 tpy or more during the most recent year for which emissions data are available. Air agencies or the EPA may also include additional sources on a state's source list with SO₂ emissions below 2,000 tpy to ensure that air quality around such sources is appropriately characterized.

The EPA has reviewed your agency's submittal, which consisted of the following sources to be characterized:

- Puerto Rico Electric Power Authority, Aguirre (Salinas)
- Puerto Rico Electric Power Authority, South Coast (Guayanilla)
- Puerto Rico Electric Power Authority (San Juan)
- Puerto Rico Electric Power Authority, Palo Seco (Toa Baja)

¹ "Data Requirements Rule for the 2010 1-Hour Sulfur Dioxide (SO₂) Primary National Ambient Air Quality Standard (NAAQS); Final Rule," 80 *Federal Register* 51052, August 21, 2015.

The EPA concurs with the list of sources provided. As such, EPA is not adding other sources to the list at this time.

The next key milestone for purposes of DRR implementation is July 1, 2016, the date by which each air agency must identify, for each listed source, the approach it will use to characterize air quality in the respective area (air quality modeling, ambient monitoring, or establishment of a federally enforceable emission limit).

For sources that an air agency decides to evaluate through air quality modeling, the DRR requires the air agency to submit to the EPA Regional Administrator a modeling protocol by July 1, 2016, and the completed modeling analysis by January 13, 2017.

For sources that an air agency decides to evaluate through ambient monitoring, the air agency will need to identify appropriate sites to characterize peak 1-hour SO₂ concentrations, and may need to relocate existing monitors or install new monitors at such sites. As further required under the DRR, the air agency must submit information about monitoring sites to the EPA Regional Administrator by July 1, 2016, as part of its annual monitoring network plan and in accordance with the EPA's monitoring requirements specified in 40 CFR part 58. The ambient monitoring approach should be consistent with the suggestions in EPA's Source-Oriented Sulfur Dioxide Monitoring Technical Assistance Document regarding siting criteria, number of monitors, screening modeling, etc. The specific elements of the network design, including the appropriate number of monitors and placement, would be determined through the air agencies analysis and the EPA evaluation during the network plan approval process.

The air agency must also ensure that ambient monitors will be operational by January 1, 2017. If the air monitors are not operational by then, EPA will designate the area by December 31, 2017 with any information available to us at the time of designation.

We would like to also note that EPA will not be able to provide any additional funding for either SO₂ monitoring or modeling source characterization.

As noted earlier, in lieu of characterizing air quality around a source with SO₂ emissions at or above 2,000 tpy, air agencies may indicate by the July 1, 2016 deadline that they will adopt federally enforceable emissions limitations that will limit the SO₂ emissions of a source to below 2,000 tpy. Such limits must be adopted and effective by January 13, 2017. The DRR requires that an air agency provide a description of the requirements and emission limits that the air agency intends to apply for the affected sources in their July 1, 2016, submittal.

We look forward to a continued dialogue with you and your staff as you prepare the required submittals that are due on July 1, 2016. Since this does not leave much time, we strongly suggest you start working on this as soon as possible. To assist in this process, we are available to discuss any technical issues that you may have concerning either modeling or monitoring in order to assist you in meeting this requirement.

Please note that a copy of each state air agency's submittal and a compiled national list of sources subject to DRR requirements are posted on EPA's SO₂ implementation website at www3.epa.gov/airquality/sulfurdioxide/implement.html. We also plan to post this letter on that site in the near future.

Again, thank you for your letter and for your efforts to implement this important standard. For additional information concerning the DRR, please visit our SO₂ implementation website listed above. For additional information regarding designations under the SO₂ standard, please visit our website at www.epa.gov/so2designations. Should you have any questions, please do not hesitate to call me, or have your staff contact Ariel Iglesias of my staff at 212-637-3315 or iglesias.ariel@epa.gov.

Sincerely,

Judith A. Enck
Regional Administrator
