## Introduction

### SUMMARY OF SURVEY RESULTS

Pollution abatement capital expenditures by manufacturing establishments amounted to \$3,542 million in 1980. Of this total, \$2,124 million was for air pollution abatement, \$1,163 million was for water pollution, and \$255 million was for solid waste pollution abatement. In addition, operating costs related to pollution abatement activities (including payments to governmental units) totaled \$8,209 million in 1980 of which \$3,324 million was spent for air pollution, \$3,220 million for water pollution, and \$1,666 million for solid waste pollution. These totals for 1980 compare with \$3,602 million in capital expenditures and \$7,462 million in operating costs for 1979. Although the overall decline in total pollution abatement capital expenditures was 2 percent, air and solid waste capital expenditures increased 2 and 1 percent respectively. Water pollution capital expenditures decreased \$99 million or 8 percent in 1980. All components of pollution abatement operating costs (air, water, and solid waste) registered increases as in the previous year. Total operating costs increased \$748 million or 10 percent.

Data in this publication are collected in the annual census report, Survey of Pollution Abatement Costs and Expenditures, (Form MA-200). See appendix A for a reproduction of the report form and instructions.

### POLLUTION ABATEMENT CAPITAL EXPENDITURES

Approximately 68 percent of the \$3,542 million new capital expenditures for pollution abatement were made by establishments classified in four major industry groups. In order of value, they include Chemicals and Allied Products (major group 28), Primary Metal Industries (major group 33), Petroleum and Coal Products (major group 29) and Paper and Allied Products (major group 26). These same industries also accounted for the largest amount of pollution abatement capital expenditures in previous years. Chart A illustrates this concentration, on a historical basis, for air, water, and solid waste capital expenditures by major industry group.

In 1980, new capital expenditures for pollution abatement are concentrated in the States of Texas, California, Pennsylvania, and Ohio, accounting for about 32 percent of the total pollution abatement capital expenditures. Chart B illustrates the pollution capital expenditures by State. Chart C shows the total capital expenditures for pollution abatement for the top 10 standard metropolitan statistical areas (SMSA) ranked by

employment size. (Appendix B contains the definitions for each SMSA.)

Within tables 2A, 2B, and 2C, both air and water pollution abatement capital expenditures are separated on the basis of abatement technique, distinguishing between plant and equipment designed to abate pollutants through end-of-line (EOL) techniques and those designed to reduce or eliminate the generation of pollutants through changes-in-production processes (CIPP). These data show that the major portion of pollution abatement capital expenditures is spent on EOL techniques.

Separate expenditure data are also shown in these tables for major types of air pollutants to be abated such as particulates; sulfur oxides; nitrogen oxides, hydrocarbons, and carbon monoxides; and heavy metals, radioactive and toxic substances, and other. These data show that the largest share of capital expenditures for air pollution abatement in 1980, as in earlier years, related to particulates. (Where expenditures occur for techniques that abate both sulfur oxides and particulates, the respondent was instructed to include all such expenditures with sulfur oxides.)

Pollution abatement capital expenditures reported in this survey exclude expenditures for the reduction of noise pollution and the improvement of aesthetics or employee comfort or safety. Also excluded are purchases of motor vehicles with pollution abatement devices and expenditures to assure an adequate water supply for production. Manufacturers of pollution abatement equipment or materials, such as electrostatic precipitators or desulfurized fuels, to be sold to others for pollution abatement purposes were instructed to exclude expenses associated with the development and production of these products.

### POLLUTION ABATEMENT OPERATING COSTS

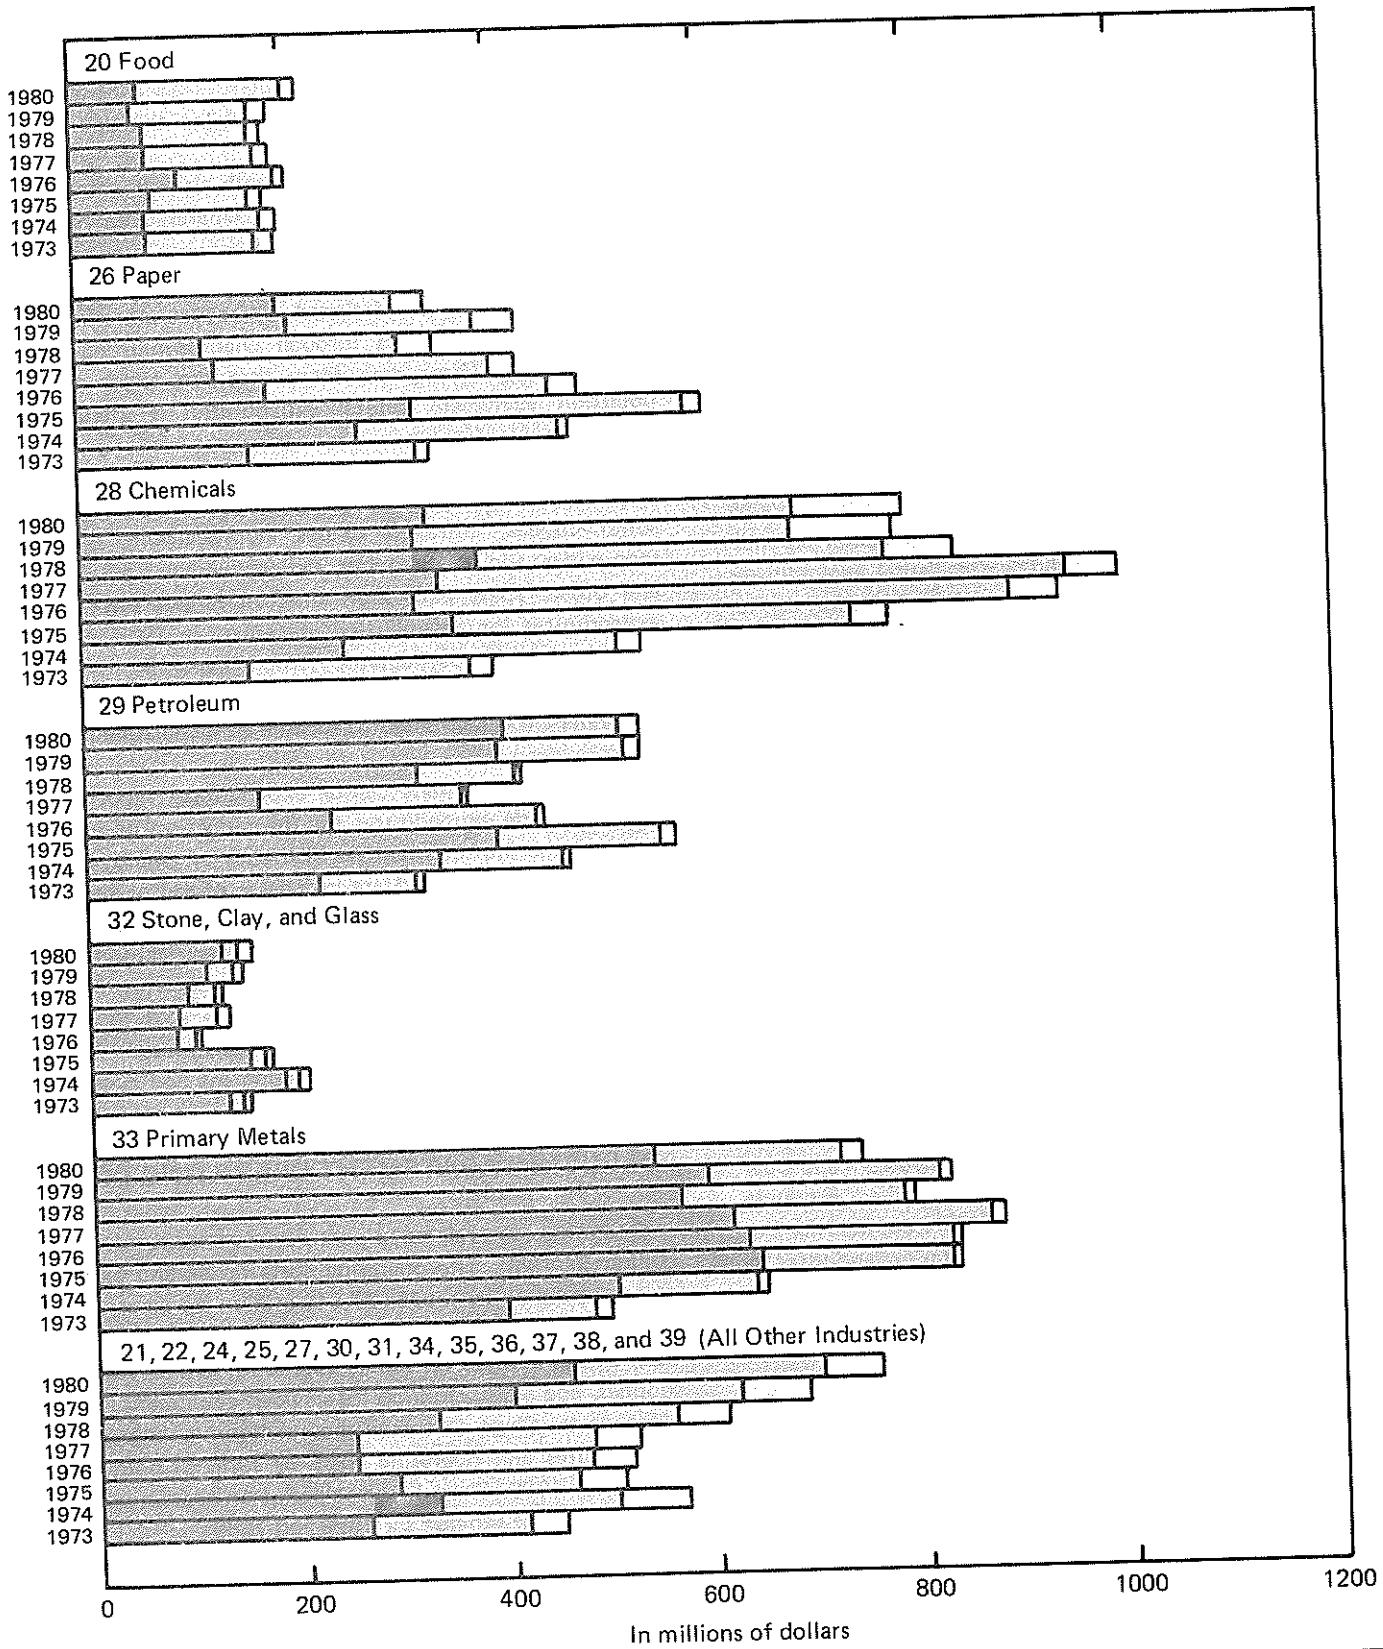

Operating costs related to pollution abatement totaled \$8,209 million in 1980. The operating costs (excluding payments to governmental units) totaled \$7,542 million for plants with 20 or more employees, and consisted of \$1,420 million for depreciation, \$1,627 million for labor, \$2,293 million for materials and supplies, and \$2,202 million for services, equipment leasing, and other costs. Chart D shows the relationship between capital expenditures and operating costs by form of pollutant being abated for 1980. Chart E shows pollution abatement operating costs by type of expense for 1979 and 1980.

Certain industries typically rely more on governmental units for pollution abatement activities rather than utilizing capital

investments and operations at their own plant. Those industries with the largest amounts are major groups 20 (Food and Kindred products), 28 (Chemicals and Allied Products), and 26 (Paper and Allied Products). (For another Census Bureau report on the pollution abatement activities in the public sector, see *Environmental Quality Control, Government Finances: Fiscal Year 1978-79.*)

## OTHER INFORMATION IN TABLES

In addition to the data highlighted previously in the text of this report, there are a number of other tables which present information of importance. Tables 4A, 4B, and 4C contain information on the costs recovered by manufacturers either by reuse in production or by sale. Tables 5A, 5B, and 5C present data on quantities of air, water, and solid waste pollutants removed in 1980.

For an explanation of the items used in this report, see Appendix A, which is a reproduction of the report form and accompanying instructions.

## DESCRIPTION OF THE SURVEY SAMPLE

The statistics presented in this report are estimates compiled from a survey or a probability sample of about 20,000 manufacturing establishments selected as a subsample of the 1977 Annual Survey of Manufactures (ASM). The 1977 ASM is, in turn, a probability sample of about 70,000 establishments selected from a total of about 312,000 establishments. The ASM sample was selected from the 1972 Census of Manufactures lists supplemented by Social Security Administration lists of new manufacturers that opened after 1972. The ASM sample is defined on a company rather than an establishment basis; that is, selected companies are required to report for all of their plants in the ASM so that new establishments of existing companies are included in the ASM sample.

The following specific differences between the ASM sample and the pollution abatement expenditures (PAE) sample are worthy of note:

- 1. Establishments in major group 23, Apparel and Other Textile Products, are excluded from the PAE survey. These establishments operate primarily in rented quarters where the abatement of pollution (probably most of which is solid waste) is generally arranged by the landlord. Capital expenditures for pollution abatement in such establishments are probably minimal.
- 2. The PAE sample was an establishment sample rather than a company sample; that is, a company included in the ASM sample with 10 manufacturing plants might be included in the PAE survey for only 4 of the plants.
- 3. The 1977 to 1980 PAE sample does not include any establishments with less than 20 employees. This is a departure from previous PAE (and the present ASM) panels which included establishments of all sizes. Previous PAE surveys had indicated that establishments with less than 20 employees contributed only about 2 percent to the pollution

estimates while constituting more than 10 percent of the sample size. To reduce the reporting burden for small establishments, plants with less than 20 employees were eliminated from the 1977 sampling frame. Data are estimated for these smaller plants in tables 1A and 1B.

The probabilities of selection assigned to establishments in the sampling frame (all in-scope ASM establishments) were determined so that the final probabilities of selection for the PAE sample were proportional to the establishments' value of shipments in the 1976 ASM. Out of a total fixed sample size of 20,000 plants, all establishments with a value of shipments in the 1976 ASM of \$30.1 million or more were included in the PAE survey. Establishments in the 1977 ASM sample with less than \$30.1 million value of shipments in 1976 were assigned probabilities of selection ranging from 0.99 to 0.005.

The smaller establishments were arrayed by industry and selected systematically to assure a proportionate representation from each major industry group. Establishments chosen for the PAE survey were assigned weights equal to the reciprocal of the establishments' probability of selection. Individual establishment data were inflated by their sampling weights to develop industry, State, or SMSA estimates.

## LIMITATIONS OF DATA

### Reporting Problems

In the 1973 survey, two significant factors resulted in an understatement of the published data. They were (1) a misunderstanding of the intent of the questionnaire and (2) a number of respondents' failure to return the form at all. For more detailed information regarding those reporting problems, refer to *Pollution Abatement Costs and Expenditures 1974*, MA-200(74)-1.

### Conceptual Problems

**Changes-in-production processes (CIPP) capital expenditures.** The survey respondent is instructed to report "the difference between expenditures on new plant and equipment that your establishment actually made for changes-in-production processes and what your establishment would have spent for comparable plant and equipment without pollution abatement features." Telephone conversations and interviews with survey respondents indicate that estimating such an incremental cost difference is very difficult in many instances. The net effect of this reporting problem is not known and hence, care should be exercised by the data user in interpreting the CIPP data.

**Cost recovered through abatement activities.** This question attempts to measure how much of pollution abatement costs are recovered through reuse or sale. Part of the instructions state: "Exclude the value of salable items such as scrap if the sale represents essentially an economic rather than pollution decision." This qualification makes it imperative that the data preparer be aware of the original motivation of the decision in order to adequately complete the form. The Bureau of the Census believes this is not always true.

**CHART D.**  
**Manufacturers' Pollution Abatement Capital Expenditures and Annual Operating Costs, by Form of  
 Abatement and Major Industry Group: 1980**

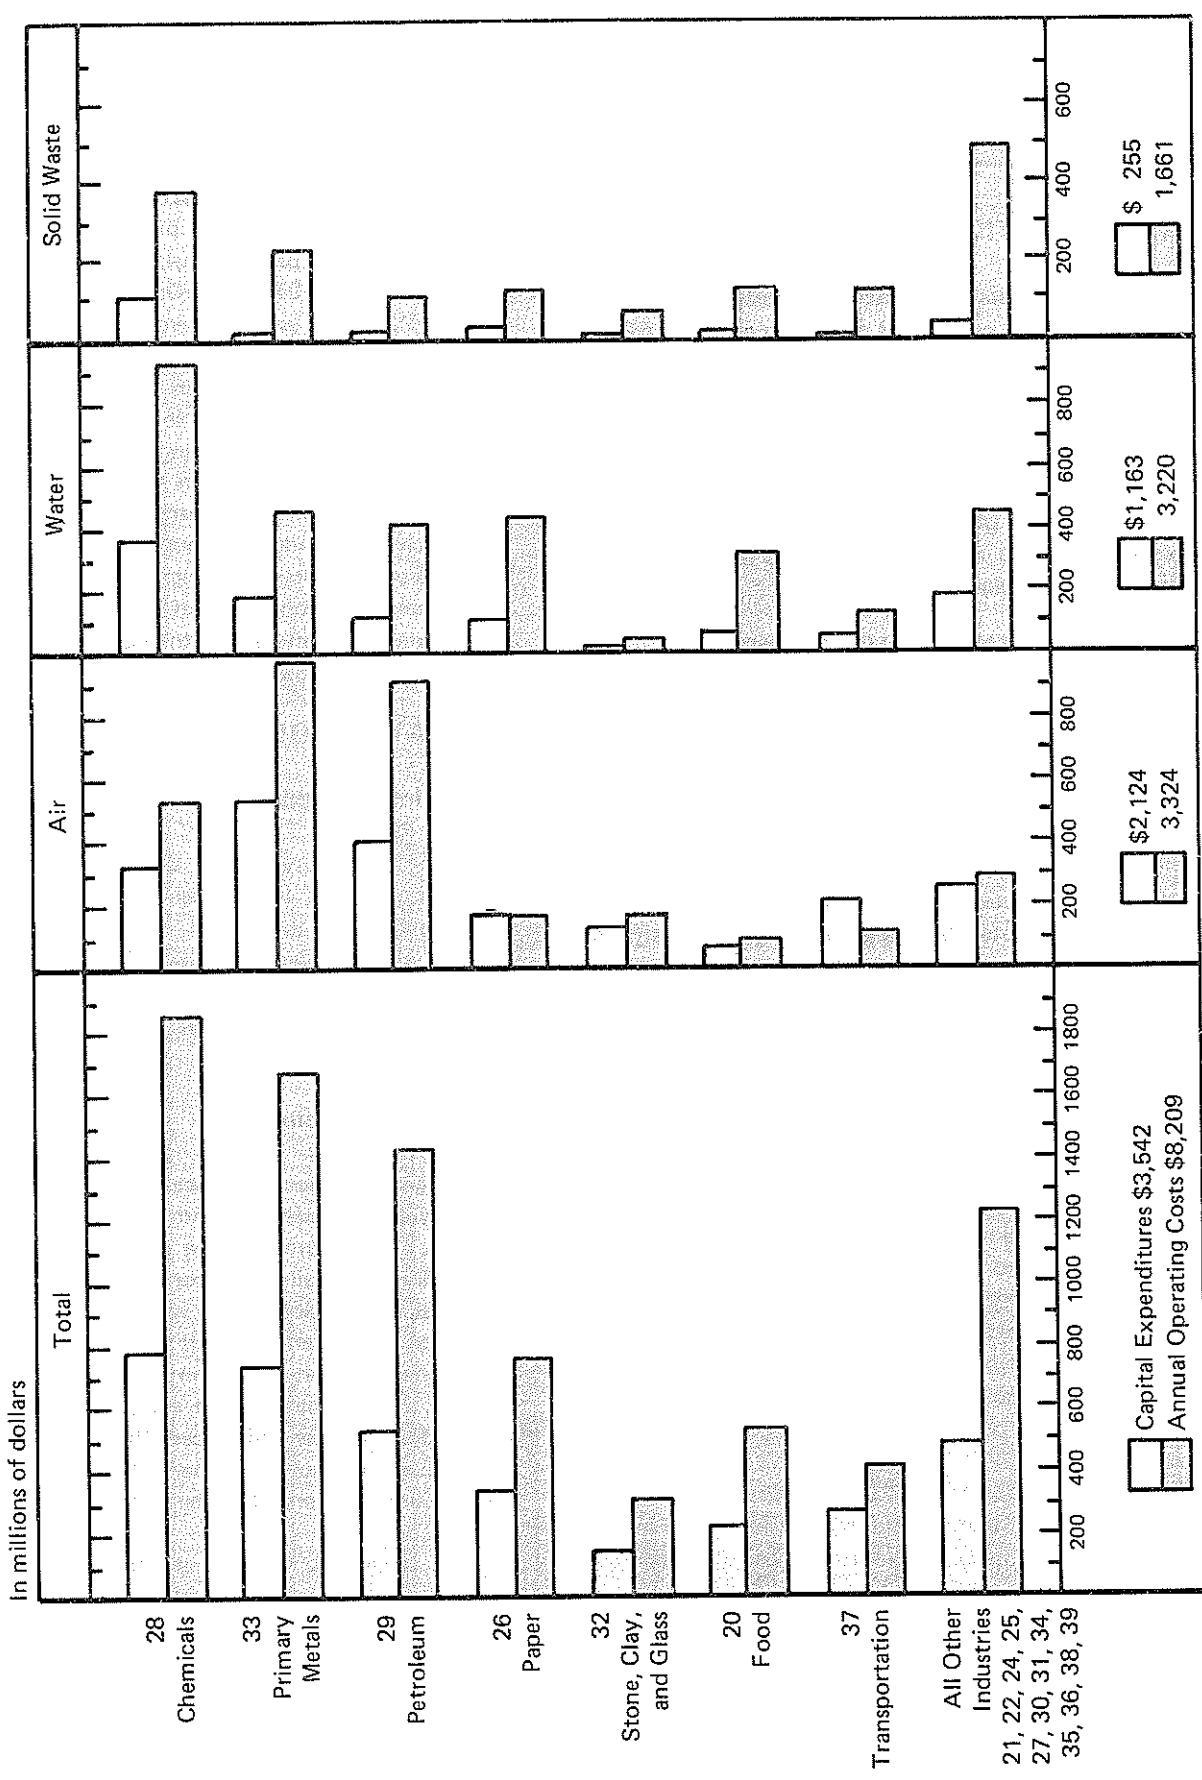

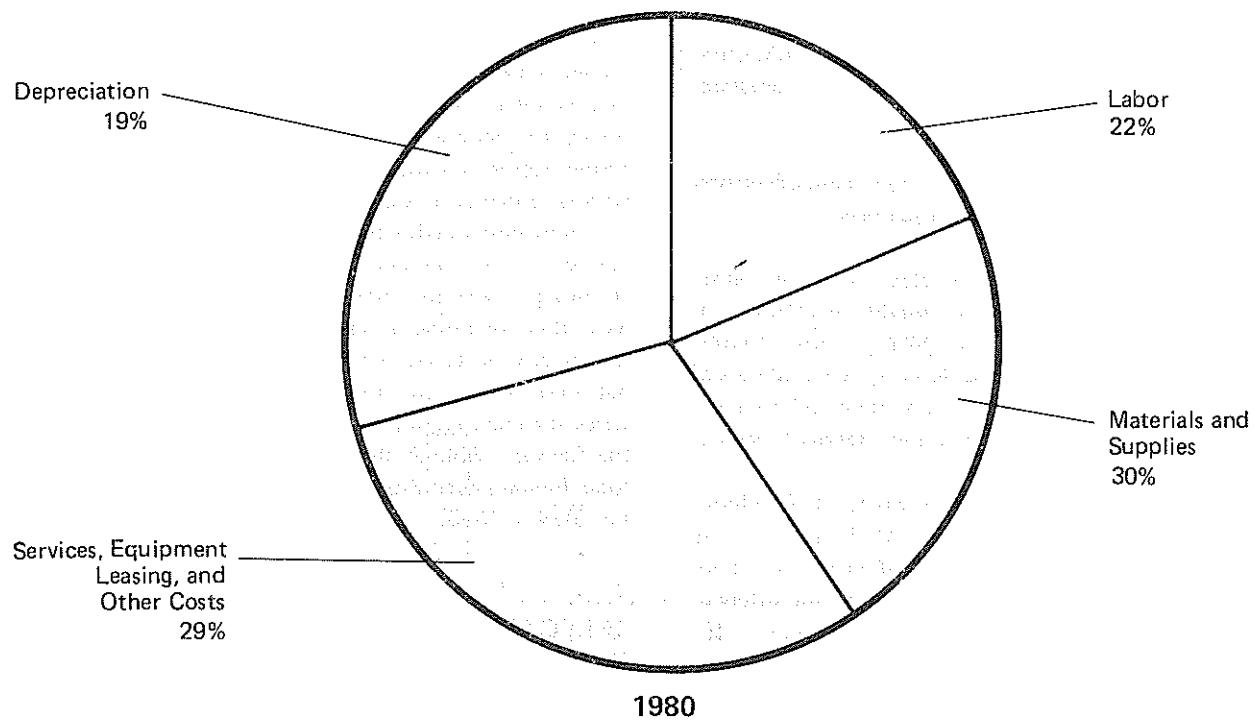

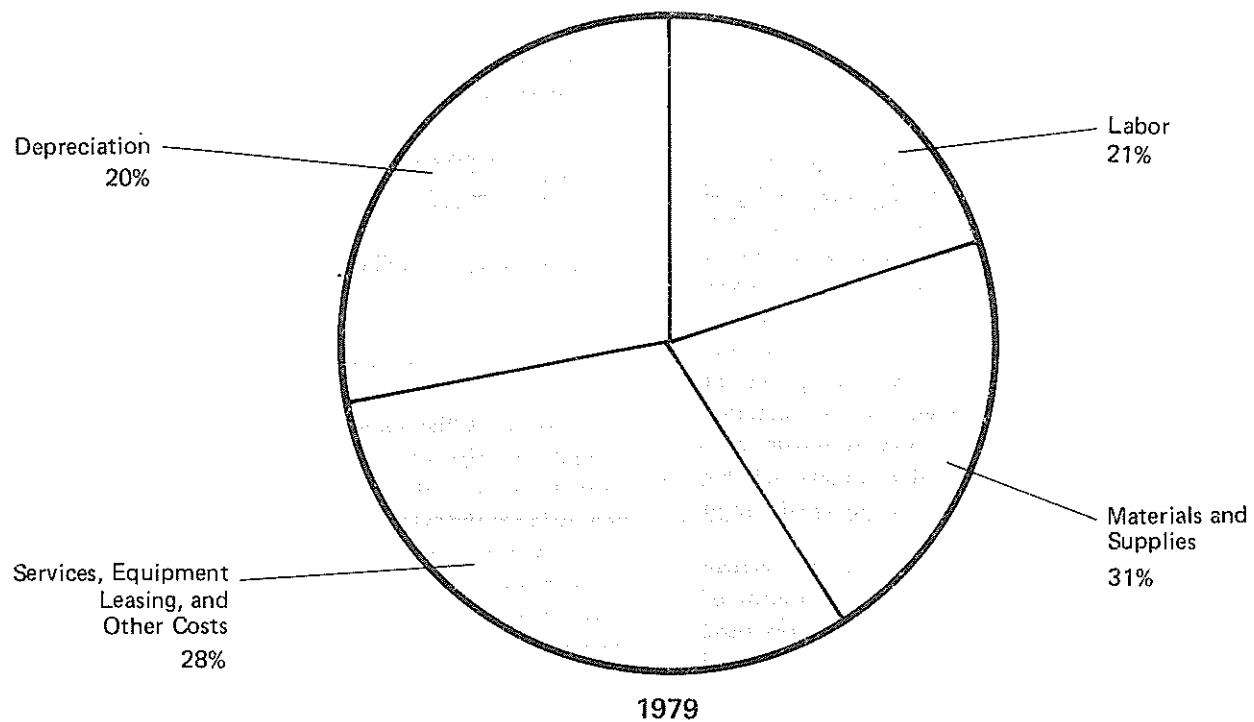

CHART E.

**Manufacturers' Pollution Abatement Operating Costs, by Type of Expense for All Industries: 1979 and 1980**

**Operating cost for pollution abatement.** The survey respondent is asked to estimate separately for depreciation, labor, materials and supplies, services and equipment leasing, and other costs. In many cases, interviews with survey respondents have revealed that with the exception of depreciation, book records are not kept for each category and must be estimated from other information.

#### Sampling Variation

The particular sample selected for this survey is one of a large number of similar probability samples of the same size that could have been selected, by chance, using the same sample design. Each of the possible samples would yield somewhat different sets of results. The sampling errors—the differences between the estimate obtained and the results theoretically obtainable from a comparable complete canvass of the same target universe—are unknown. Guides to the potential size of the sampling errors, however, are provided by the estimated relative standard errors of the estimates. These are shown for a few key data items in the report. On the average, relative standard errors tend to be somewhat higher for detailed figures than for larger aggregates.

In conjunction with its associated estimates, the relative standard error (computed as the estimated standard error of estimate divided by the value of the estimate itself) may be used to define confidence intervals, ranges which could be expected to include comparable complete coverage values for specified percentages of all possible samples. The complete coverage value would be included in the range:

1. From one standard error below to one standard error above the derived estimate for about two-thirds of all samples.
2. From 2 standard errors below to 2 standard errors above the derived estimate for about 19 out of 20 of all possible samples.
3. From three standard errors below to three standard errors above the derived estimate for nearly all samples.

An inference that the comparable complete coverage results would be within the indicated ranges would be correct in approximately the relative frequencies shown. Those proportions, therefore, may be interpreted as defining the confidence that the estimates shown would differ from complete-coverage results by as much as one, two, or three standard errors, respectively.

For example, if an estimated total is shown as \$20.0 million with an associated relative standard error of 2 percent, the standard error is \$0.4 million (2 percent of \$20.0 million). Then there is approximately 67 percent confidence that the interval \$19.6 to \$20.4 million includes the complete coverage total, about 95 percent confidence that the interval \$19.2 to \$20.8 million includes the complete coverage total, and almost certain confidence that the interval \$18.8 to \$21.2 million includes the complete coverage total.

#### Processing Errors

In addition to the sampling errors, the estimates are subject to various response and operational errors: errors of collection, reporting, transcription, etc. These operational errors would also occur if a complete canvass were to be conducted under the same conditions as this survey. Explicit measures of their effects generally are not available. However, it is believed that most of the important operational errors were detected and corrected in the course of the Census Bureau's review of the data for reasonableness and consistency.

### COMPARISON WITH BUREAU OF ECONOMIC ANALYSIS

The Bureau of the Census' estimates of pollution abatement capital expenditures are generally lower than those published by the Bureau of Economic Analysis (BEA) in the Survey of Current Business. In addition to normal sampling variations, another source of difference relates to the methodology employed for the two series.

The census data are based on a probability sample of 20,000 manufacturing establishments. All establishments which reported shipments in the 1976 ASM of \$30.1 million or more are included, while establishments with less than \$30.1 million are selected on a random sample basis. Each establishment is classified into a manufacturing industry based upon its primary activity and receives one report form.

The BEA estimates are based on questions incorporated in the BEA annual new plant and equipment survey which is mailed to approximately 10,000 companies. Each company receives one report form to supply data for its entire operation. The companies are designated either as manufacturing or nonmanufacturing based upon their primary activity as classified by 1967 Census of Enterprise Statistics. Currently, the BEA survey has about 4,000 companies classified in the manufacturing sector of which about 60 percent respond with data. Nonrespondents are estimated.

Companies classified as manufacturing include all establishments of the company, both manufacturing and nonmanufacturing. Likewise, companies classified as nonmanufacturing have their manufacturing establishments included in the non-manufacturing totals. The net effect of the different definitions has been to include more capital expenditures in the BEA series for manufacturing than those estimated by the Bureau of the Census. Table A shows a comparison of BEA and Census total capital expenditures and pollution abatement expenditures for 1978 to 1980.

### SELECTED INDUSTRIAL AIR POLLUTION CONTROL EQUIPMENT

Table B highlights annual manufacturing data for air pollution control equipment from 1973 to 1980. This information is

collected and published in the series MA-35J, *Selected Industrial Air Pollution Control Equipment*, by the Bureau of the Census. Data in this survey are collected for two types of manufactured air pollution equipment: particulate emissions collectors (e.g., electrostatic precipitators, wet scrubbers) and gaseous emission control devices (e.g., catalytic oxidation systems, gas absorbers). The published report is divided into two parts. The first presents data on quantity and value of new orders, shipments, and backlog of orders at the year-end. The second provides value of the equipment shipped by end use. As shown in the table, steam electric power plants are the largest end user of industrial air pollution control equipment (approximately 47 percent in 1980). In 1980, shipments increased for several manufacturers' end users.

## RESEARCH AND DEVELOPMENT FOR POLLUTION ABATEMENT PURPOSES

Tables C and D show the amount of money spent from 1976 to 1980 and 1973 to 1980, respectively, on research and development (R&D) for the purpose of pollution control. These data are collected by the Bureau of the Census and published by the National Science Foundation. As shown in the tables, approximately 93 percent of the R&D pollution control expenditures are company sponsored, and the remaining 7 percent are federally sponsored. Over an 8-year period, the motor vehicle and equipment industry accounted for more than half of all R&D expenditures for pollution abatement. In 1980, total R&D expenditures for pollution control increased to \$1,183 million compared with \$1,237 million in 1979.

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies.

<sup>r</sup>Revised by 5 percent or more from previously published CIR figures.

<sup>1</sup>Appeared separately for first time in 1977.

<sup>2</sup>Combined with iron and steel mills in 1976 and earlier years.

<sup>3</sup>Combined with steam electric utility powers in 1976 and earlier years.

Note: Totals may not agree precisely with detail because of independent rounding. See "Limitations of Data" in the text for specific limitations of the 1973 statistics.

<sup>1</sup> Represents zero. <sup>2</sup> Withheld to avoid disclosing operations of individual companies. <sup>(NA)</sup> Not available. <sup>3</sup> Revised. <sup>(S)</sup> Data suppressed because did not meet publication standards. This includes cells where PACE or GAC is less than \$5.0 million or the standard error is 20 or greater. See text. <sup>(X)</sup> Not applicable.

(Z) Represents less than \$50,000.

<sup>1</sup>The calculation of the percent change is based upon the change from the previous year to the subsequent year (e.g. 1973 to 1974). For 1977 through 1980, the comparison is done separately for all establishment totals and establishments with 20 or more employees.

<sup>2</sup>Major industry group 23, Apparel and Other Textile Products, is excluded from all but the U.S. totals of the first two columns.

<sup>3</sup>Two lines of data are presented for 1977 through 1980. The top line for each year represents the estimate for all establishments and is comparable to the estimates for 1973 to 1976. The bottom line is the estimate for establishments with 20 or more employees. See text.

**Table 2A. Pollution Abatement Capital Expenditures, by Industry for Establishments With 20 or More Employees: 1980**

(Millions of dollars)

Note: Totals may not agree precisely with detail because of independent rounding.

No 3- or 4-digit industries are shown where PACE is less than \$5.0 million or the standard error is 20 or greater.

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (S) Data suppressed because did not meet publication standards. This includes cells where PACE is less than \$5.0 million or the standard error is 20 or greater. See text. (X) Not applicable.

<sup>1</sup>Excludes major industry group 23, Apparel and Other Textile Products.

Note: Totals may not agree precisely with detail because of independent rounding. No 2-digit industries are shown where GAC is less than \$5.0 million or the standard error is 20 or greater.

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (S) Data suppressed because did not meet publication standards. This includes cells where GAC is less than \$5.0 million or the standard error is 20 or greater. See text. (X) Not applicable.

<sup>1</sup>Major industry group 23, Apparel and Other Textile Products, was not included in the survey and therefore is excluded from the U.S. and State totals.

Youngstown-Warren, Ohio.....	37.6	2.9	2.7	0.2	34.7	20.1	7.0	7.5	2

Note: Totals may not agree precisely with detail because of independent rounding. Major industry group 23, Apparel and Other Textile Products, was not included in the survey and therefore is excluded from the SMSA totals. No major industry groups are shown. No SMSA totals are shown where GAC is less than \$5.0 million or the standard error is 20 or greater.

- Represents zero.

Note: Total may not agree precisely with detail because of independent rounding. No data cells are shown where GAC is less than \$5.0 million or the standard error is 20 or greater.

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies.

<sup>1</sup>The standard error is calculated based on GAC (total gross annual cost) shown on table 3A.

<sup>2</sup>Excludes major industry group 23, Apparel and Other Textile Products.

Note: Totals may not agree precisely with detail because of independent rounding. No 2-digit industries are shown where GAC is less than \$5.0 million or the standard error is 20 or greater.

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (S) Data suppressed because did not meet publication standards. This includes cells where GAC is less than \$5.0 million or the standard error is 20 or greater. See text. (X) Not applicable.

<sup>1</sup>The standard error is calculated based on GAS (total gross annual cost) shown on table 3B.

<sup>2</sup>Major industry group 23, Apparel and Other Textile Products, was not included in the survey and therefore is excluded from the U.S. and State totals.

Table 4C. Pollution Abatement Operating Costs, by Kind of Cost and Cost Recovered, by Form of Pollutants, and by SMSA for Establishments With 20 or More Employees: 1980

Note: Totals may not agree precisely with detail because of independent rounding. Major industry group 23, Apparel and Other Textile Products, was not included in the survey and therefore is excluded from the SMSA totals. No major industry groups are shown. No SMSA totals are shown where GAC is less than \$5.0 million or the standard error is 20 or greater.

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies.

<sup>1</sup>The standard error is calculated based on GAC (total gross annual cost) shown on table 3C.

**Table 5A. Quantities of Pollutants Removed and Related Statistics, by Industry for Establishments With 20 or More Employees: 1980**

(Values in millions of dollars; quantities in thousands of short tons)

Note: Totals may not agree precisely with detail because of independent rounding. Major industry group 23, Apparel and Other Textile Products, was not included in the survey and therefore is excluded from the SMSA totals. No major industry groups are shown. No SMSA totals are shown where GAC is less than \$5.0 million or the standard error is 20 or greater.

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (S) Data suppressed because did not meet publication standards. This includes cells where PACE or GAC is less than \$5.0 million or the standard error is 20 or greater.

<sup>1</sup>The operating costs for solid waste include payment to governmental units (solid waste collection/disposal) and operating cost as reported in table 3.

## Appendix A. Pollution Abatement Form and Instructions

DUE DATE: 60 DAYS AFTER RECEIPT OF FORM

Form Approved: D.M.B. No. 41-R2807

<p>F-3010 MA-200 110-24-80</p> <p>U.S. DEPARTMENT OF COMMERCE BUREAU OF THE CENSUS</p> <p><b>SURVEY ON POLLUTION ABATEMENT COSTS AND EXPENDITURES 1980</b></p> <p><b>Please read</b> the instructions before completing this report.</p> <p><b>RETURN</b>  Bureau of the Census TO 1201 East Tenth Street Jeffersonville, Indiana 47132</p> <p><b>Change of operating status</b></p> <p>Mark <input type="checkbox"/> one if applicable</p> <p>This establishment has been</p> <p>Idle <input type="checkbox"/> Closed <input checked="" type="checkbox"/></p> <p>Sold - To whom? <input type="checkbox"/> Other - Specify <input checked="" type="checkbox"/></p>	<p><b>NOTICE</b> - Response to this inquiry is required by law (title 13, U.S. Code). By the same law, your report to the Census Bureau is confidential. It may be seen only by sworn Census employees and may be used only for statistical purposes. The law also provides that copies retained in your files are immune from legal process.</p> <p style="text-align: center;"><b>RETURN THIS COPY</b></p> <p>(Please correct any error in name and address including ZIP code)</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 65%;">Name of person to contact regarding this report</td> <td style="width: 35%;">Telephone</td> </tr> <tr> <td></td> <td style="text-align: center;">Area code    Number    Extension</td> </tr> </table> <p><b>GENERAL INSTRUCTIONS</b></p> <p>The purpose of the questionnaire is to collect total expenditures made by industry to abate pollutant emissions. The survey covers current operating costs and capital expenditures made to reduce pollution in its air, water, or solid forms.</p> <p>If you cannot answer a question from your company records, please estimate the answer carefully. In particular cases, identification of abatement expenditures may require the joint efforts of your establishment's financial and engineering staff.</p> <p>Report data on a calendar year basis for 1980. However, if your establishment uses a fiscal year that ends between 10-31 80 and 2-28 81, fiscal year data will be acceptable.</p> <p>Answer all questions. If data based on book records are not available, carefully prepared estimates are acceptable. If your establishment did not operate for a full year, please indicate the disposition by marking the appropriate box(es) in the above item pertaining to "Change of operating status." If you have any questions regarding this report, please call (301) 763-1755.</p> <p>Report all value figures in thousands of dollars.</p> <p>For example.</p> <table border="1" style="margin-left: auto; margin-right: auto; border-collapse: collapse;"> <tr> <td style="padding: 5px; text-align: center;"><i>If the value figure for the year is -</i></td> </tr> <tr> <td style="padding: 5px; text-align: center;">\$5,600,000 - Report as <input style="width: 100px;" type="text"/> 5 , 6 0 0</td> </tr> <tr> <td style="padding: 5px; text-align: center;">\$5,600 - Report as <input style="width: 100px;" type="text"/> 5 6</td> </tr> <tr> <td style="padding: 5px; text-align: center;">\$560 - Report as <input style="width: 100px;" type="text"/> 5 6</td> </tr> <tr> <td style="padding: 5px; text-align: center;">\$499 - Mark box less than \$500 and greater than 0</td> </tr> <tr> <td style="padding: 5px; text-align: center;">\$0 - Report as <input style="width: 100px;" type="text"/> 0 :zero</td> </tr> </table> <p>This report is required only for the establishment specified in the address block of the report form. DO NOT COMBINE this report with other establishments in your company even though both operations may jointly use the same pollution abatement facilities. When this occurs, apportion the expenditures and costs according to the rate of pollution abatement equipment utilization or the relative amounts of pollutants produced.</p> <p><b>Item 1 - IF NO CAPITAL EXPENDITURES, CURRENT COSTS, OR PAYMENTS TO GOVERNMENT INCURRED -</b></p> <p>Mark <input checked="" type="checkbox"/> in box for appropriate reason</p> <p>1. No pollutants generated</p> <p>2. Cost included in rent, taxes, lease agreement, or removal without charge or payment (such as scavenger services)</p> <p>3. All costs less than \$500</p> <p>4. <input type="checkbox"/> Other - Specify <input checked="" type="checkbox"/></p> <p><b>Important</b>  Before marking item 1, please review items 6 and 7 on page 2. Under normal operations those expenses such as sewage fees and trash removal in excess of \$500 should be reported on this form.</p>	Name of person to contact regarding this report	Telephone		Area code    Number    Extension	<i>If the value figure for the year is -</i>	\$5,600,000 - Report as <input style="width: 100px;" type="text"/> 5 , 6 0 0	\$5,600 - Report as <input style="width: 100px;" type="text"/> 5 6	\$560 - Report as <input style="width: 100px;" type="text"/> 5 6	\$499 - Mark box less than \$500 and greater than 0	\$0 - Report as <input style="width: 100px;" type="text"/> 0 :zero

## APPENDIX A

Page 2

**SPECIFIC INSTRUCTIONS**  
**CAPITAL EXPENDITURES FOR NEW PLANT AND EQUIPMENT FOR POLLUTION ABATEMENT - 1980**

- Capital expenditures for new plant and equipment include new plant and equipment acquisitions (both replacement and expansion) and expenditures for construction in progress. Capital expenditures are those chargeable to your establishment's accounts for plant and equipment that are subject to depreciation or to amortization. Total capital expenditures for abatement include expenditures for both end-of-line techniques and changes-in-production processes.
- Item 2a - End-of-line techniques treat air pollutants after their generation in your production processes by use of separately identifiable abatement (retrofit) facilities such as dust collectors, scrubbers, precipitators, or other treatment processes. These facilities are installed exclusively for the purpose of abating pollutant emissions from your plant or property.
- Item 2b - Changes-in-production processes reduce or eliminate the generation of pollutants by employing material substitution, improved catalysts, reuse of waste or water, and equipment alteration. These changes may involve converting equipment to handle the use of substitute fuels that generate less pollutants. Item 2b refers to new plant and equipment necessary for such changes-in-production processes. If your establishment has made expenditures for changes-in-production processes, estimate the expenditures as the difference between expenditures on new plant and equipment that your establishment actually made for changes-in-production processes and what your establishment would have spent for comparable plant and equipment without air pollution abatement features.
- Item 2d - To estimate the impact of emission standards upon capital investment for pollution abatement in industry, it is necessary to match investment expenditures to major types of air pollutants abated. Note: Some techniques abate both sulfur oxides and particulates. If your establishment uses any of these techniques, include the expenditures for these techniques under the category "sulfur oxides."
- Item 3a - Same as item 2a, except that it refers to waste water treatment techniques such as trickling filters, settling ponds, clarifiers, oil spill dikes, and other separately identifiable treatment techniques.
- Item 3b - Same as item 2b, except that it refers to abatement of water pollutants. The purpose of pollution abatement may be achieved by converting processes and equipment to enable recycling (closed or partially closed loop systems) or to enable additional uses of water prior to discharge. Do not include capital expenditures undertaken exclusively for the purpose of insuring adequate water supply for production.
- Item 4 - Disposal of solid waste refers to the containment, transfer, or other disposal of solid wastes by means acceptable to local, State, or Federal authorities and includes sanitary or other landfill methods, incineration, and dumping in designated authorized areas. Exclude capital expenditures made for new plant and equipment designed for the disposal of salable items such as scrap metal, scrap paper, scrap wood, etc.

► Item 2 - CAPITAL EXPENDITURES FOR ABATEMENT OF AIR POLLUTANTS		Expenditures in 1980 (Report in thousands of dollars)		
		Item code	Mark (X) here if less than \$500 and Millions      Thousands (\$000)      (000)	
			and greater than 0.	
a. Report your total expenditures in 1980 for new plant and equipment designed to abate air pollutants through end-of-line techniques	1010	\$	<input type="checkbox"/>	
b. In addition or as an alternative to end-of-line techniques, did this establishment make expenditures to acquire or modify plant and equipment for changes-in-production processes to abate air pollutants?	<input type="checkbox"/> YES → <input type="checkbox"/> NO - Skip to c	Report the difference between these expenditures for new plant and equipment and the expenditures that you would have made for comparable plant and equipment without air pollutant abatement features.	1040	<input type="checkbox"/>
c. TOTAL AIR CAPITAL (Sum of lines 2a and 2b) →	1050	\$	<input type="checkbox"/>	
d. Distribute total expenditures (item 2c) in terms of percent by type of pollutants abated. Please give your best estimates. For example, if you reported \$1,350,000 in item 2c, this equals the 100% in item 2d. Break this total expenditure figure into percents between the listed types of air pollutants abated.  <i>Example</i> (1) Particulates ..... 50% (2) Sulfur oxides ..... 0% (3) Nitrogen oxides, hydrocarbons, carbon monoxide ..... 35% (4) Other (heavy metals, radioactive and toxic substances) - Specify ..... 15% <b>TOTAL</b> ..... 100%		Percentage	1060	%
(1) Particulates	1070	%		
(2) Sulfur oxides	1080	%		
(3) Nitrogen oxides, hydrocarbons, carbon monoxide	1090	%		
(4) Other (heavy metals, radioactive and toxic substances) - Specify		%		
TOTAL PERCENTAGE →		100%		
► Item 3 - CAPITAL EXPENDITURES FOR ABATEMENT OF WATER POLLUTANTS		Expenditures in 1980 (Report in thousands of dollars)		
		Item code	Mark (X) here if less than \$500 and Millions      Thousands (\$000)      (000)	
			and greater than 0.	
a. Report your total expenditures in 1980 for new plant and equipment designed to abate water pollutants through end-of-line techniques	2010	\$	<input type="checkbox"/>	
b. In addition or as an alternative to end-of-line techniques, did this establishment make expenditures to acquire or modify plant and equipment for changes-in-production processes to abate water pollutants?	<input type="checkbox"/> YES → <input type="checkbox"/> NO - Skip to c	Report the difference between these expenditures for new plant and equipment and the expenditures that you would have made for comparable plant and equipment without water pollutant abatement features.	2040	<input type="checkbox"/>
c. TOTAL WATER CAPITAL (Sum of lines 3a and 3b) →	2050	\$	<input type="checkbox"/>	
► Item 4 - CAPITAL EXPENDITURES FOR SOLID WASTE DISPOSAL				
Report your total expenditures in 1980 on new plant and equipment designed for the disposal of solid waste	3010	\$	<input type="checkbox"/>	

## APPENDIX A

A-3

Page 3

### SPECIFIC INSTRUCTIONS FOR TONNAGES OF POLLUTANTS REMOVED

- Item 8 -- Report the annual total tonnages of the listed air pollutants abated during 1980. The tonnages should include all air pollutants abated during 1980 by new as well as previously existing pollution abatement equipment. If this information is not available from records, report engineering estimates where possible.
- Item 9 -- Report the annual total tonnages of the listed water pollutants during 1980. The tonnages should include all water pollutants abated during 1980 by new as well as previously existing pollution abatement equipment. If this information is not available from records, report engineering estimates where possible.
- Item 10 -- Report the annual tonnages of solid waste disposed of by means acceptable to local, State, and Federal authorities. Solid wastes disposed consists of all solid wastes including those wastes generated by air and water pollution abatement activities.

Item	Item code	Mark (X) here if less than 1/ ton and greater than 0.	
		Tonnage abated in 1980	Tons
<b>Item 8 – AIR POLLUTANTS ABATED BY WEIGHT</b>			
On the basis of your best judgment, estimate the total tonnages of specific air pollutants abated during 1980 by new as well as previously installed pollution abatement facilities.			
a. Particulates	9010	Tons	<input type="checkbox"/>
b. Sulfur oxides	9020	Tons	<input type="checkbox"/>
c. Nitrogen oxides, hydrocarbons, carbon monoxide	9030	Tons	<input type="checkbox"/>
d. Other (heavy metals, radioactive and toxic substances) – <i>Specify</i>  _____	9040	Tons	<input type="checkbox"/>
<b>Item 9 – WATER POLLUTANTS ABATED BY WEIGHT</b>			
On the basis of your best judgment, estimate the total tonnages of specific water pollutants abated during 1980 by new as well as previously installed pollution abatement facilities.			
a. Total suspended solids (dry weight basis)	9110	Tons	<input type="checkbox"/>
b. Biochemical oxygen demand (BOD <sub>5</sub> )	9120	Tons	<input type="checkbox"/>
c. Chemical oxygen demand (COD)	9130	Tons	<input type="checkbox"/>
d. Other (oil and grease, toxic substances, etc.) – <i>Specify</i>  _____	9150	Tons	<input type="checkbox"/>
<b>Item 10 – SOLID WASTE DISPOSAL BY WEIGHT</b>			
On the basis of your best judgment, estimate the tonnage of solid waste properly disposed during 1980, including those wastes generated by air and water pollution abatement activities (e.g., dust, fly ash, sludge, and contained liquids). Exclude the weight of any materials that are reclaimed and also exclude the weight of dissolved solids in the waste water effluent.			
	9510	Tons	<input type="checkbox"/>
<b>Item 11 – CERTIFICATION OF SUBSTANTIAL ACCURACY OF REPORT</b>			
Signature of authorized person	Title		
Address (Number, street, city, State, ZIP code)		Date	

## APPENDIX A

## SPECIFIC INSTRUCTIONS

## COST RECOVERED THROUGH ABATEMENT ACTIVITIES - 1980

► Item 5 — The estimate of costs recovered through abatement activities may have two parts: (1) the value of materials or energy reclaimed through abatement activities that were reused in production, and (2) revenue that was obtained from the sale of materials or energy reclaimed through abatement activities. Heat is an example of reclaimed energy. Value and revenue are net of any additional cost incurred for additional processing of materials or energy to make them reusable or salable. Do not reduce annual costs of abatement (item 7) by the estimate reported here.

Report cost recovered by form of pollution abated (air, water, or solid waste).

► Item 6a — Report all payments to governmental units for your industrial and/or sanitary sewage use. Include payments made to government for overstrength effluent charges, sewer district tax assessment, etc. Include sewage payments which are included in your local tax bill, estimate if necessary.

► Item 6b — Report all payments to governmental units for your solid waste collection/disposal services. Included are collection costs to municipal agency (haulers) and disposal cost such as dump or burial fees at a landfill or incinerator.

## COST OF POLLUTION ABATEMENT - Continued

► Item 7 — Report the annual operating costs and expenses for pollution abatement incurred in 1980. Include all costs and expenses to operate and maintain plant(s) and equipment to abate air or water pollutants or collect/dispense of solid waste, and/or services provided by private contractors.

Note: This item should include the operating cost for all pollution abatement equipment and processes in operation during 1980 regardless of the year the equipment was installed or the process initiated.

Do not include expenditures for pollution abatement research and development or health and safety.

Do not include interest for financing pollution abatement capital expenditures.

Include the estimated costs of materials, parts, fuel, power, labor, and depreciation (or amortization) due to the use of plant and equipment to abate air or water pollutant discharges or dispose of solid wastes. Include increased costs for fuel and power incurred to reduce pollution (for example, low sulfur fuel, increased fuel or power consumption). Include leasing costs of equipment used in abatement and cost of abatement services provided by private contractors.

If you abate pollutants (air, water, or solid waste), be sure to complete the corresponding quantity section (items 8-10).

## Item 5 - COSTS RECOVERED THROUGH ABATEMENT ACTIVITIES

Report your best estimate of the value of materials or energy reclaimed (costs recovered) through pollution abatement activities and either reused in production or sold by form of pollution abated. (Exclude the value of items if they would have been recovered, sold, or reused in production in the absence of any pollution control regulations.)

a. Air

b. Water

c. Solid waste

d. TOTAL (Sum of lines 5a through 5c) →

## Item 6 - PAYMENTS TO GOVERNMENT FOR POLLUTION REMOVAL

Total payments to governmental (Federal, State, county, local) units for —

a. Public sewage use

b. Municipal solid waste collection/disposal (If you report on this line, be sure to complete ITEM 10.)

## Item 7 - ANNUAL OPERATING COSTS FOR POLLUTION ABATEMENT

a. Report your best estimate of the annual costs of pollution abatement activities, including services provided by private contractors (trash removal, etc.)

NOTE: DO NOT reduce your estimate by costs recovered (item 5). DO NOT include the payments to governmental units (item 6).

**SPECIAL INSTRUCTIONS**  
Distribute total Operating and Maintenance cost (item code 6010) in terms of percent by Kind of Cost (7b) and Form of Pollution Abated (7c). Please give your best estimates.

For example, if you reported \$2,350,000 in item 7a, this equals 100% in 7b and 7c. Break this cost figure into percents between the listed types of costs in each section.

## EXAMPLES

## ► Section b

- (1) Depreciation . . . . . 10%
- (2) Labor . . . . . 40%
- (3) Equipment . . . . . 00%
- (4) Other . . . . . 50%

**TOTAL . . . . . 100%**

## ► Section c

- (1) Air. . . . . 10%
- (2) Water . . . . . 30%
- (3) Solid . . . . . 60%

**TOTAL. . . . . 100%**

Item code	Costs recovered in 1980 (Report in thousands of dollars)		
	Mark (X) here if less than \$500		and greater than 0.
	Millions (\$000)	Thousands ('000)	
4010	\$	:	<input type="checkbox"/>
4020	\$	:	<input type="checkbox"/>
4030	\$	:	<input type="checkbox"/>
4050	\$	:	<input type="checkbox"/>

Item code	Annual costs in 1980 (Report in thousands of dollars)		
	Mark (X) here if less than \$500		and greater than 0.
	Millions (\$000)	Thousands ('000)	
5010	\$	:	<input type="checkbox"/>
5020	\$	:	<input type="checkbox"/>
6010	\$	:	<input type="checkbox"/>

<b>SPECIAL INSTRUCTIONS</b>	b. Report your best estimate of percentage incurred by — KIND OF COST	Percentage of total annual costs in 1980 (Item 7a)	
		Item code	%
	(1) Depreciation	7010	%
	(2) Labor	7020	%
	(3) Materials and supplies	7030	%
	(4) Services, equipment, leasing, and other costs	7040	%
	(5) TOTAL (Sum of lines (1) through (4) should equal 100%) →		100%
	c. Report your best estimate of percentage incurred by — FORM OF POLLUTION ABATED		
	(1) Air pollutants (If you report on this line, be sure to complete item 8.)	8010	%
	(2) Water pollutants (If you report on this line, be sure to complete item 9.)	8020	%
	(3) Solid wastes (including private contract service) (If you report on this line, be sure to complete item 10.)	8030	%
	(4) TOTAL (Sum of lines (1) through (3) should equal 100%) →		100%

## Appendix B. Standard Consolidated Statistical Areas and Standard Metropolitan Statistical Areas

(Titles and definitions of the SMSA's in the State established by the Department of Commerce, Office of Federal Statistical Policy and Standards, as of December 1979)

### Standard Consolidated Statistical Areas

Boston-Lawrence-Lowell, Mass.-N.H. . . . .	Consists of Boston, Mass., SMSA; Lawrence-Haverhill, Mass.-N.H., SMSA; Lowell, Mass.-N.H., SMSA; and Brockton, Mass., SMSA
Chicago-Gary, Ill.-Ind. . . . .	Consists of Chicago, Ill., SMSA, and Gary-Hammond-East Chicago, Ind., SMSA
Cincinnati-Hamilton, Ohio-Ky.-Ind. . . . .	Consists of Cincinnati, Ohio-Ky.-Ind., SMSA, and Hamilton-Middletown, Ohio, SMSA
Cleveland-Akron-Lorain, Ohio . . . . .	Consists of Cleveland, Ohio, SMSA; Akron, Ohio, SMSA; and Lorain-Elyria, Ohio, SMSA
Detroit-Ann Arbor, Mich. . . . .	Consists of Detroit, Mich., SMSA, and Ann Arbor, Mich., SMSA
Houston-Galveston, Tex. . . . .	Consists of Houston, Tex., SMSA, and Galveston-Texas City, Tex., SMSA
Los Angeles-Long Beach-Anaheim, Calif. . . . .	Consists of Los Angeles-Long Beach, Calif., SMSA; Anaheim-Santa Ana-Garden Grove, Calif., SMSA; Riverside-San Bernardino-Ontario, Calif., SMSA; and Oxnard-Simi Valley-Ventura, Calif., SMSA
Miami-Fort Lauderdale, Fla. . . . .	Consists of Miami, Fla., SMSA, and Fort Lauderdale-Hollywood, Fla., SMSA
Milwaukee-Racine, Wis. . . . .	Consists of Milwaukee, Wis., SMSA, and Racine, Wis., SMSA
New York-Newark-Jersey City, N.Y.-N.J.-Conn.	Consists of New York, N.Y.-N.J., SMSA; Nassau-Suffolk, N.Y., SMSA; Newark, N.J., SMSA; Jersey City, N.J., SMSA; New Brunswick-Perth Amboy-Sayreville, N.J., SMSA; Paterson-Clifton-Passaic, N.J., SMSA; Long Branch-Asbury Park, N.J., SMSA; Stamford, Conn., SMSA; and Norwalk, Conn., SMSA
Philadelphia-Wilmington-Trenton, Pa.-Del.-N.J.-Md. . . . .	Consists of Philadelphia, Pa.-N.J., SMSA; Wilmington, Del.-N.J.-Md., SMSA, and Trenton, N.J., SMSA
San Francisco-Oakland-San Jose, Calif. . . . .	Consists of San Francisco-Oakland, Calif., SMSA; San Jose, Calif., SMSA, and Vallejo-Fairfield-Napa, Calif., SMSA
Seattle-Tacoma, Wash. . . . .	Consists of Seattle-Everett, Wash., SMSA, and Tacoma, Wash., SMSA

### Standard Metropolitan Statistical Areas

Abilene, Tex. . . . .	Consists of Callahan, Jones, and Taylor Counties, Tex.
Akron, Ohio . . . . .	Consists of Portage and Summit Counties, Ohio
Albany, Ga. . . . .	Consists of Dougherty and Lee Counties, Ga.
Albany-Schenectady-Troy, N.Y. . . . .	Consists of Albany, Montgomery, Rensselaer, Saratoga, and Schenectady Counties, N.Y.
Albuquerque, N. Mex. . . . .	Consists of Bernalillo and Sandoval Counties, N. Mex.
Alexandria, La. . . . .	Consists of Grant and Rapides Parishes, La.
Allentown-Bethlehem-Easton, Pa.-N.J. . . . .	Consists of Carbon, Lehigh, and Northampton Counties, Pa.; and Warren County, N.J.
Altoona, Pa. . . . .	Coextensive with Blair County, Pa.
Amarillo, Tex. . . . .	Consists of Potter and Randall Counties, Tex.
Anaheim-Santa Ana-Garden Grove, Calif. . . . .	Coextensive with Orange County, Calif.
Anchorage, Alaska . . . . .	Coextensive with Anchorage Division, Alaska
Anderson, Ind. . . . .	Coextensive with Madison County, Ind.

Ann Arbor, Mich.	Coextensive with Washtenaw County, Mich.
Anniston, Ala.	Coextensive with Calhoun County, Ala.
Appleton-Oshkosh, Wis.	Consists of Calumet, Outagamie, and Winnebago Counties, Wis.
Asheville, N.C.	Consists of Buncombe and Madison Counties, N.C.
Atlanta, Ga.	Consists of Butts, Cherokee, Clayton, Cobb, De Kalb, Douglas, Fayette, Forsyth, Fulton, Gwinnett, Henry, Newton, Paulding, Rockdale, and Walton Counties, Ga.
Atlantic City, N.J.	Coextensive with Atlantic County, N.J.
Augusta, Ga.-S.C.	Consists of Columbia and Richmond Counties, Ga., and Aiken County, S.C.
Austin, Tex.	Consists of Hays, Travis, and Williamson Counties, Tex.
Bakersfield, Calif.	Coextensive with Kern County, Calif.
Baltimore, Md.	Consists of Baltimore city and Anne Arundel, Baltimore, Carroll, Harford, and Howard Counties, Md.
Baton Rouge, La.	Consists of Ascension, East Baton Rouge, Livingston, and West Baton Rouge Parishes, La.
Battle Creek, Mich.	Consists of Barry and Calhoun Counties, Mich.
Bay City, Mich.	Coextensive with Bay County, Mich.
Beaumont-Port Arthur-Orange, Tex.	Consists of Hardin, Jefferson, and Orange Counties, Tex.
Billings, Mont.	Coextensive with Yellowstone County, Mont.
Biloxi-Gulfport, Miss.	Consists of Hancock, Harrison, and Stone Counties, Miss.
Binghamton, N.Y.-Pa.	Consists of Broome and Tioga Counties, N.Y., and Susquehanna County, Pa.
Birmingham, Ala.	Consists of Jefferson, St. Clair, Shelby, and Walker Counties, Ala.
Bismarck, N. Dak.	Consists of Burleigh and Morton Counties, N. Dak.
Bloomington, Ind.	Coextensive with Monroe County, Ind.

<b>Wheeling, W. Va.-Ohio</b> . . . . .	Consists of Marshall and Ohio Counties, W. Va. and Belmont County, Ohio
<b>Wichita, Kans.</b> . . . . .	Consists of Butler and Sedgwick Counties, Kans.
<b>Wichita Falls, Tex.</b> . . . . .	Consists of Clay and Wichita Counties, Tex.
<b>Williamsport, Pa.</b> . . . . .	Coextensive with Lycoming County, Pa.
<b>Wilmington, Del.-N.J.-Md.</b> . . . . .	Consists of New Castle County, Del.; Salem County, N.J.; and Cecil County, Md.
<b>Wilmington, N.C.</b> . . . . .	Consists of Brunswick and New Hanover Counties, N.C.
<b>Worcester, Mass.</b> . . . . .	Consists of Worcester city and Auburn, Berlin, Boylston, Brookfield, Charlton, East Brookfield, Grafton, Holden, Leicester, Millbury, Northborough, Northbridge, North Brookfield, Oxford, Paxton, Shrewsbury, Spencer, Sterling, Sutton, Upton, Uxbridge, Webster, Westborough, and West Boylston towns in Worcester County, Mass.
<b>Yakima, Wash.</b> . . . . .	Coextensive with Yakima County, Wash.
<b>York, Pa.</b> . . . . .	Consists of Adams and York Counties, Pa.
<b>Youngstown-Warren, Ohio</b> . . . . .	Consists of Mahoning and Trumbull Counties, Ohio

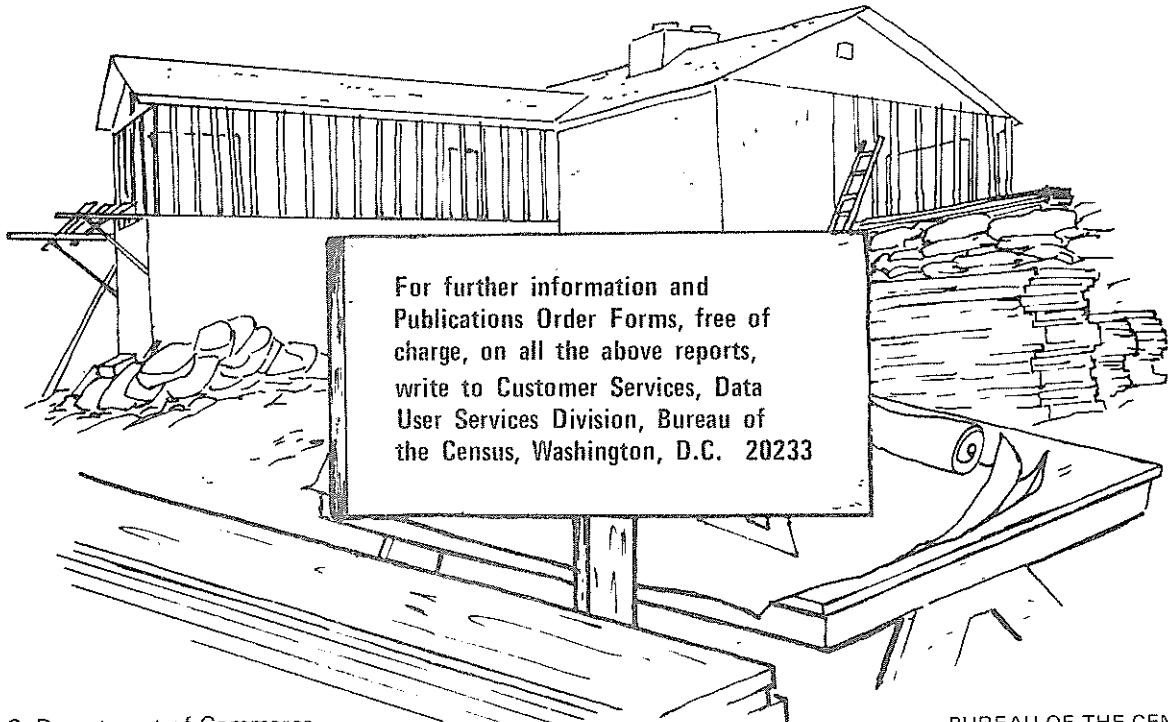

# CURRENT CONSTRUCTION REPORTS

**CONSTRUCTION accounts for approximately 11 percent of the gross national product!**

To assist industry representatives, research specialists, market analysts, and government officials interested in this vital segment of the Nation's economy, the Bureau of the Census issues monthly, quarterly, and annual reports on the value of new construction put in place, building permits, housing starts, housing completions, housing sales, and alterations and repairs.

**Current Construction Reports include:**

- C20 - Housing Starts
- C21 - New Residential Construction in Selected Standard Metropolitan Statistical Areas
- C22 - Housing Completions
- C25 - New One-Family Houses Sold and for Sale
