

APPENDIX H

Data Quality Assessments

Data Quality Assessment

Collection of Stack Gas in all Isokinetic Sampling Trains

Analyte(s)	Method(s)
Particulate Matter	EPA Method 5
Hydrochloric Acid/Chlorine	EPA Method 26A
PCDD/PCDF	SW-846 Method 0023A
Metals	EPA Method 29

Preliminary Measurements	Sampling Location Measurements	All ports meet the minimum requirements for distance from upstream and downstream disturbances.
	Cyclonic Flow Check	Cyclonic flow demonstrated to be within constraints for isokinetic sampling.
Sample Collection	Minimum Sample Volume	All other runs met QAPP specifications. See table below.
	Minimum Sample Duration	All runs met QAPP specifications. See table below.
	Isokinetic Sampling Rate	All trains met method specifications. See table below.
Sampling Train Operation	Probe Temperature	See table below.
	Filter Temperature	All runs met method specifications. See table below.
	Transfer Line Temperature	All runs met method specifications. See table below.
	Condenser Exit Temperature	See table below.
	Impinger Exit Temperature	All runs met method specifications. See table below.
Leak Checks	Sampling Train – Pre Test	All runs met method specifications. See table below.
	Sampling Train – Port Changes	All runs met method specifications. See table below.
	Sampling Train – Post Test	All runs met method specifications. See table below.
	Pitot Tubes – Pre Test	All runs met method specifications. See table below.
	Pitot Tubes – Post Test	All runs met method specifications. See table below.

Sampling Documentation	Documentation of Calibration	All calibrations documented appropriately; All calibrations meet specifications.
	Correct Calibration Factors Used	Yes.
	Correct Molecular Weight Used	Yes. Spreadsheet links are to corrected values in CEMs spreadsheet
	Completed Data Sheets – Sample Collection	Yes. See table below.
	Completed Data Sheets – Sample Recovery	All required information collected on sampling data sheets. See table below.
Conclusions and Comments	These data are acceptable for the intended purpose.	

Sampling Details

	Particulate Matter EPA Method 5	HCl/Cl₂ EPA Method 26A	PCDD/PCDF EPA Method 23	Metals EPA Method 29
Sample Volume				
Target	30 dscf	30 dscf	88 dscf	60 dscf
Achieved	Yes	Yes	Yes	Yes
Sampling Duration				
Target	1 hour	1 hour	3 hours	2 hours
Achieved	Yes	Yes	Yes	Yes
Isokinetic Sampling Rate between 90&110%	Yes	Yes	Yes	Yes
Temperatures Within Specification				
Probe	Yes	Yes	Yes	Yes
Filter	Yes	Yes	Yes	Yes
Heat-Traced Line	--	--	Yes	--
Condenser Exit	--	--	Yes	--
Impinger Exit	Yes	Yes	Yes	Yes
Data Sheets Complete				
Sample Collection	Yes	Yes	Yes	Yes
Train Recovery	Yes	Yes	Yes	Yes
Train Leak Checks				
pre	Yes	Yes	Yes	Yes
port changes	Yes	Yes	Yes	Yes
Post (at proper vacuum)	Yes	Yes	Yes	Yes
Pitot Leak Checks				
pre	Yes	Yes	Yes	Yes
post	Yes	Yes	Yes	Yes

Data Quality Assessment

Analysis of Stack Gas for Polychlorinated Dibenzodioxins and Dibenzofurans

Parameter	PCDD/PCDF in Stack Gas
Sampling Method	SW-846 Method 0023A
Analytical Method	SW-846 Method 8290
Laboratory Project Number(s)	H3J140408, H3J190407, H3K010401, H3K010402
Preparation Batch Number(s)	3289014, 3289015, 3295023, 3295024, 3308029, 3308030
Sample Shipping and Receipt	All samples received intact and at or below 4°C. QAPP specifies <4°C.
Holding Time(s)	All samples prepared within 13 days of sampling and analyzed within 18 days of preparation. QAPP specifies 30 days until preparation and 45 days from preparation until analysis. See table below.
Blank Results	All target analytes except 2,3,7,8-TCDD were observed in a media check sample, laboratory blank or field blank. The levels observed in the blank samples are very low, typically near the detection limit. See tables below and in the main body of the report.
Laboratory Check Sample (LCS) and Laboratory Check Sample Duplicate (LCSD) Results	Recovery of all species in LCS between 70 and 120%. Relative percent difference (RPD) for all LCS/LCSD pairs were all below 25%. QAPP specifies the performance of a LCS once with recoveries between 70 and 130%. The QAPP has no specification for the performance of LCSD, or for RPD. The laboratory specification is RPD below 50%. See table below.
Surrogate and Internal Standard Spike Results	Recovery of internal standards between 40 and 130% with a pooled relative standard deviation below 25%. Recovery of pre-sampling surrogates between 70 and 115% with a pooled relative standard deviation below 15%. QAPP specifies internal standard recovery of 40-130% for tetra-hexa isomers and 25-130% for hepta and octa isomers, with no specification for pooled RSD. QAPP specifies recovery of surrogates between 70-130% with a pooled RSD below 30%. See tables below.
Data Quality Objectives	These are given in terms of surrogate spikes: Accuracy: 70-130% Recovery. Precisions: <30% pooled RSD. These objectives were met.
Conclusions and Comments	These data are acceptable for the intended purpose. As noted above, many analytes were found in the blank samples. Typically these levels are below the levels observed in the field samples. This indicates a potential positive bias in the field samples, which is conservative relative to the determination of emission rate. No data are qualified based on blank results.

Data Quality Assessment

Analysis of Waste Feeds for Physical & Chemical Parameters

Parameter	Physical & Chemical Parameters in Waste Feeds
Sampling Method	Tap Sampling
Analytical Method	Ash Content – ASTM D482 Density – ASTM D1963 Heat of Combustion – ASTM D240 or ASTM D5865 Kinematic Viscosity – ASTM D445 Total Chlorine – Knox WC-0016 Moisture/Water – EPA 160.3 or ASTM D4017
Laboratory Job ID Number(s)	H3J140415, H3J140417, H3J150401, H3J150402, H3J190415, H3J190416, H3J190417, H3J190418, H3K010415, H3K010416, H3K010418, H3K010419, H3K020402, H3K020403, H3K020404, H3K020405, H3K020406
Batch Numbers	3288017, 3288047, 3289046, 3291011, 3294014, 3294027, 3294063, 3295017, 3295055, 3296018, 3296033, 3296034, 3297012, 3297044, 3297045, 3298024, 3298026, 3298030, 3301015, 3301016, 3302022, 3304034, 3304036, 3304037, 3305056, 3305057, 3305068, 3308013, 3309013, 3309015, 3309044, 3309045, 3309048, 3310040, 3311015, 3311040, 3311042, 3311046, 3311049, 3312052, 3314010, 3314011, 3315023, 3316017, 3316041, 3316044, 3317013, 3318019, 3318020, 3318021, 3318038, 3319020, 3320010, 3321010, 3322015, 3322032, 3322033, 3322037, 3322038, 3323034, 3323036, 3323037, 3323038, 3323065, 3323064, 3323065, 3324028, 3324029, 3325013, 3328011, 3328012, 3328014, 3328015, 3328016, 3328017, 3330010, 3330011, 3330016
Sample Shipping and Receipt	Samples received intact and at ambient temperature. QAPP has no temperature specification.
Holding Time(s)	All analyses conducted within 29 days of sample collection. QAPP specifies analysis within 30 days of sample collection. See table below.
Blank Results	All laboratory blank results below or very near the detection limit. See table below and in main body of report.
Laboratory Check Sample (LCS) and Laboratory Check Sample Duplicate (LCSD) Results	LCS and LCSD were prepared and analyzed for the various analytical methods, as specified in the QAPP. All LCS and LCSD recoveries and relative percent differences met the laboratory and QAPP specifications. See table below.
Matrix Spike (MS) and Matrix Spike Duplicate (MSD) Results	MS and MSD were performed for analysis of chlorine. MS/MSD recoveries were between 80 and 105% recovery. RPDs were below 5%. See table below.

Duplicate Analysis	<p>Selected samples were analyzed in duplicate. 90 of 96 duplicate analyses met the QAPP specifications (see table below). The outliers are:</p> <ul style="list-style-type: none"> • Ash in VS2-HBW-13B-COMP2B; results of 582 and 646 mg/kg; RPD of 10.4% • Gross Calorific Value in VS2-LBW-15B-COMP2B; results of 178 and 152 BTU/lb; RPD of 15.8% • Chlorine in VS3-CS-11A-COMP 1; results of 253 and 325 mg/kg; RPD of 24.9% • Chlorine in VS4-BS-11A-COMP1; results of 171 and 221 mg/kg; RPD of 25.5% • Ash in VS4-HBW-12B-COMP2B-DUP; results of 943 and 1050 mg/kg; RPD of 10.7% • Ash VS4-HBW-13A-COMP1; results of 1,500 and 928 mg/kg; RPD of 47.1% <p>No duplicate analysis was performed for moisture in solid waste streams. This duplicate analysis was specified in the QAPjP.</p> <p>In addition, samples were collected in duplicate. There are no QAPP specifications for the analysis of duplicate samples. Reproducibility for these samples was good. .</p> <p>See tables below</p>
Quality Assurance Objective	<p>The QAPP specifies quality assurance objectives as follows:</p> <ul style="list-style-type: none"> • Chlorine <ul style="list-style-type: none"> ○ Precision: 10% RPD for MS/MSD ○ Accuracy: 80-120% Recovery of MS/MSD • Ash <ul style="list-style-type: none"> ○ Precision: 10% RPD for LCS/LCSD ○ Accuracy: 90-110% recovery for LCS • Water in liquid waste feed <ul style="list-style-type: none"> ○ Precision: 10% RPD for results greater than 1% ○ Accuracy: 95-105% recovery of LCS • Water in solid waste feed: <ul style="list-style-type: none"> ○ Precision: 25% RPD for duplicate analysis • Heating Value <ul style="list-style-type: none"> ○ Precision: 10% RPD for laboratory duplicates ○ Accuracy: 98-102% recovery of LCS • Density <ul style="list-style-type: none"> ○ Precision: 10% RPD for analytical duplicates ○ Accuracy: 99-101% recovery for LCS • Viscosity <ul style="list-style-type: none"> ○ Precision: 10% RPD for analytical duplicates ○ Accuracy: 99-101% recovery of LCS <p>Except as discussed above, these objectives were met.</p>

Conclusions and Comments	<p>These data are acceptable for the intended purposes.</p> <p>The outliers for duplicate analysis have a negligible impact on the usability of the data. The chlorine carried in containerized solids and bulk solids is negligible (<1%) compared to the chlorine provided by the spiking material. The ash carried in high BTU waste is negligible (<1%) compared to the ash provided by the bulk or containerized solids. The heat input results in low BTU waste are near the detection limit. Increased uncertainty is expected close to the detection limit.</p> <p>Although duplicate analysis was not performed for water in solid waste streams, this has no impact on the usability of the data. Moisture results are used only to characterize the waste feed materials, and are not used in any demonstration of compliance. No data are qualified or invalidated based on duplicate analysis.</p>

Data Quality Assessment

Stack Gas Continuous Emission Monitors

Parameter(s)	Oxygen, Carbon Dioxide, Total Hydrocarbon
Method(s)	EPA Methods 3A, 25A
Calibration Gas	Spans were set appropriately; gases were of appropriate and documented quality. Correct values of all calibration gases used in all calculations. See CEM data in appendix.
Interference	All analyzers used met the interference check criteria.
Stratification Check	Stratification check performed using one analyte (oxygen). Results of stratification check used to determine number of sampling points. See table below.
Calibration Error	All calibration error checks met method specifications. See tables below.
System Bias	All system bias checks met method specifications. See tables below.
Drift	All drift checks for oxygen and carbon dioxide met the method specifications. 70 of 72 drift checks for total hydrocarbons met method specifications. The two outliers were both during Unit 2 Run 1B. A drift of 8.0% was seen at 1800, and a drift of 8.3% was observed at 1909. See tables below
Data Quality Objectives	QAPP specifies these for THC only: Precision: Span and zero drift within 3% of span Accuracy: Calibration error within 5% of calibration gas value Except as noted, these specifications were achieved.

Conclusions and Comments	These data are acceptable for the intended purpose. In accordance with EPA Method 25A, the total hydrocarbon analyzer was immediately re-calibrated following each of the drift excursions. The data from the run was then recalculated using both calibration curves and the higher (more conservative) result reported. As the average THC was well below the standard, and that the conservative recalculation approach specified in the method was implemented, any uncertainty in these data has no impact on the conclusion of the report and the demonstration of compliance. No data are flagged or invalidated based on the calibration drift results.
---------------------------------	---

Stratification Check Results– Oxygen

Unit and Date	Traverse Point	Oxygen Concentration (%)	Difference from Mean (%)	% Difference from Mean
Unit 2 10/8/2013	1	6.23	0.16	2.48
	2	6.29	0.10	1.55
	3	6.65	0.26	4.03
Mean Concentration of all Traverse Points		6.39		
Do the concentrations at each traverse point differ from the mean concentration by no more than (a) $\pm 5.0\%$ of the mean or (b) ± 0.5 ppm (whichever is less restrictive)?		YES	Use 1 point	
Unit and Date	Traverse Point	Oxygen Concentration (%)	Difference from Mean (%)	% Difference from Mean
Unit 3 10/15/2013	1	15.47	0	0
	2	15.37	0.10	0.6
	3	15.58	0.11	0.7
Mean Concentration of all Traverse Points		6.39		
Do the concentrations at each traverse point differ from the mean concentration by no more than (a) $\pm 5.0\%$ of the mean or (b) ± 0.5 ppm (whichever is less restrictive)?		YES	Use 1 point	
Unit and Date	Traverse Point	Oxygen Concentration (%)	Difference from Mean (%)	% Difference from Mean
Unit 4 10/22/2013	1	12.16	0.06	0.49

Data Quality Assessment

Analysis of Waste Feeds for Metals

Parameter	Selected Metals in Waste Feeds
Sampling Method	Tap Sampling
Analytical Method	ICPES, SW-846 Method 6010B; CVAA, SW-846 Method 7471A
Work Order Number(s)	H3J140415, H3J140417, H3J150401, H3J150402, H3J150403, H3J190414, H3J190415, H3J190416, H3J190417, H3J190418, H3K010415, H3K010416, H3K010418, H3K010419, H3K010420, H3K010424, H3K020402, H3K020403, H3K020404, H3K020405, H3K020406
Preparation Batch Number(s)	3294020, 3294021, 3294022, 3294026, 3295019, 3295020, 3295059, 3296030, 3308021, 3308023, 3308024, 3308025, 3310018, 3310020, 3311018
Sample Shipping and Receipt	Samples received intact and at ambient temperature. QAPP has no temperature specification.
Holding Time(s)	All analyses conducted within 19 days of sample collection. QAPP specifies 28-day hold time for mercury, 6 months for all other analytes. See table below.
Blank Results	All method blanks below the detection limit. See table below.
Laboratory Check Sample (LCS) and Laboratory Check Sample Duplicate (LCSD) Results	All recoveries between 90 and 110%. This met the QAPP specification of recovery between 80 and 120%. All RPDs below 5%. There is no QAPP requirement for LCSD or specification for RPD. This met the laboratory specification of RPD below 20%. See table below.
Matrix Spike (MS) and Matrix Spike Duplicate (MSD) Results	QAPP specifications are 75-125% recovery, 0-20% RPD for mercury and 70-130% recovery, 20% RPD for others. 187 of 204 MS or MSD met the specifications for recovery. 100 of 102 MS/MSD pairs met the specification for RPD. The following samples were outside the specification: <ul style="list-style-type: none">• VS2-CS-11B-COMP2B: Arsenic recovery 67% in MS, arsenic RPD 23%, chromium recovery 149% and 172% in MS/MSD.• VS2-CS-15B-COMP2B: chromium recovery 150% in MSD• VS3-CS-12B-COMP 2B: chromium recovery 131 and 145% in MS/MSD• VS4-BS-13B-COMP2B: chromium recovery 132 and 134% in MS/MSD, lead recovery 208% in MSD• VS4-CS-13B-COMP2B: chromium recovery 164 and 186% in MS/MSD, lead recovery 406% in MS, lead RPD 49%, mercury recovery 61 and 45% in MS/MSD• VS4-LBW-12B-COMP2B: cadmium recovery 145% in MSD, mercury recovery 71 and 66% in MS/MSD. See table below.
Duplicate Results	Selected samples were analyzed in duplicate. Duplicate samples were collected and analyzed. The QAPP presents no specifications for duplicate analysis or analysis of duplicate samples. Good reproducibility was observed. See table below.

Conclusions and Comments	<p>These data are acceptable for the intended purpose.</p> <p>Metals feed rates are developed as a sum of totals fed to the system as LVM (arsenic, beryllium and chromium) SVM (cadmium and lead) and mercury. The MS/MSD outliers detailed above indicate increased uncertainty in the concentrations of the metals in those streams. The contribution of these streams to the total feed rates of LVM, SVM and mercury are negligible, and the increased uncertainty in these concentrations has no impact on the conclusions of the report. No data are qualified or invalidated based on MS/MSD results.</p>

Data Quality Assessment Analysis of Stack Gas for Metals

Parameter	Selected Metals in Stack Gas
Sampling Method	EPA Method 29
Analytical Method	ICPES, SW-846 Method 6010B CVAA, SW846 Method 7470A
Laboratory Job ID Number(s)	H3J150406, H3J190412, H3K010412, H3K010422
Preparation Batch Number(s)	3302012, 3302013, 3302049, 3302051, 3302053, 3308026, 3308027, 3308028, 3311021, 3311022, 3311038, 3311039
Sample Shipping and Receipt	Samples received intact and at ambient temperature. QAPP has no specification for temperature.
Holding Time(s)	All samples analyzed within 28 days of sample collection. QAPP specifies analysis within 28 days for mercury and 180 days for all other analytes. See table below.
Blank Results	29 of 31 laboratory blank analyses were below the detection limit. The outliers were for arsenic in batches associated with analysis of PNR/filter samples. Cadmium and mercury were each found in one field blank sample. Chromium was consistently observed in field blanks and media check samples. See tables below and in the main body of the report.
Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) Results	All recoveries are between 90 and 110%. All relative percent deviations are below 10%. The QAPP specifies LCS recovery between 80 and 120%. The QAPP has no specification for RPD; the laboratory specifications are for RPD below 20%. See tables below.
Matrix Spike (MS) and Matrix Spike (MSD) Results Post Digestion Spike (PDS) and Post Digestion Spike Duplicate (PDSD) Results	QAPP specifications are MS/MSD at 70-130% recovery, <20% RPD for everything except mercury, 75-125% recovery and 20% RPD for mercury. PDS/PDSD are to show recovery between 75 and 125% for metals excluding mercury and 80-120% recovery for mercury. There are no specifications for RPD on PDS/PDSD. . All MS/MSD and PDS/PDSD results met these criteria. Results are summarized in tables below.
Date Quality Objectives	These are given in terms of matrix spike/matrix spike duplicate. Precision: <20% relative percent difference. Accuracy: 75-125% recovery. For stack samples this is applied to the post-digestion spike and post-digestion spike duplicates. These data quality objectives were all met.

Conclusions and Comments	<p>These data are acceptable for the intended purpose.</p> <p>The blank results for arsenic in the laboratory blanks are near the detection limit, and similar or below the results for the field samples. This may indicate a slight positive bias in the field results.</p> <p>The single positive result for cadmium in one field blank is similar in magnitude to the field results. This may indicate a positive bias or false identification of cadmium in the field samples.</p> <p>The single positive result for mercury in one field blank is near the detection limit, and well below many of the field results. This may indicate a slight positive bias in the field samples.</p> <p>The consistent observation of chromium in field blank and media check samples is at a lower level than the field samples. This may indicate a slight positive bias in the results for the field samples.</p> <p>Any positive bias in these results is conservative in the demonstration of compliance. No results are invalidated or qualified based on blank results.</p>

Data Quality Assessment

Analysis of Stack Gas for Hydrogen Chloride and Chlorine

Parameter	Hydrogen Chloride and Chlorine in Stack Gas
Sampling Method	EPA Method 26A
Analytical Method	Ion Chromatography, EPA Method 26A
Laboratory Project ID Number(s)	H3J140410, H3J190409, H3K010414, H3K020401
Preparation Batch Number(s)	3295039, 3295058, 3301068, 3302015, 3312042, 3312045, 3316053
Sample Shipping and Receipt	Sample received intact and at ambient temperature. QAPP has no specification for preservation.
Holding Time(s)	All samples prepared and analyzed within 20 days of sample collection. QAPP specifies analysis within 28 days. See table below.
Blank Results	Nothing detected in laboratory blanks. Hydrogen chloride consistently detected in field blanks. See table below.
Laboratory Check Sample (LCS) and Laboratory Check Sample (LCSD) Results	All LCS recoveries are between 95 and 105%. All RPDs are below 5%. The QAPP specifies LCS recovery between 90 and 110%. There are no QAPP specifications for LCSD or for precision. See table below.
Matrix Spike (MS) and Matrix Spike Duplicate (MSD) Results	All recoveries are between 85 and 120%: all RPDs are less than 10%. QAPP specifies recovery between 75 and 125%. There are no QAPP specifications for RPD. See table below.
Duplicate Analyses	All samples analyzed in duplicate. RPD for all samples below 5%. QAPP specifies RPD below 10%. See table below.
Data Quality Objective	These are given as follows: <ul style="list-style-type: none">• Accuracy: matrix spike recovery between 75 and 125%.• Precision: RPD for duplicate analysis of each sample less than 10%. These objectives were met.
Conclusions and Comments	These data are acceptable for the intended purpose. The levels of hydrogen chloride observed in the field blank samples (approximately 60 µg per sample) are well below the levels observed in the field samples (all greater than 1800 µg per sample). These negligible levels have no impact on the data. No data are qualified or invalidated based on blank results.

¹ NC – Not Calculated. At least one result is below the detection limit.

Data Quality Assessment

Analysis of Stack Gas for Particulate Matter

Parameter	Particulate Loading in Stack Gas
Sampling Method	EPA Method 5
Analytical Method	Gravimetric Analysis – EPA Method 5
Laboratory ID Number(s)	H3J140413, H3J190410, H3K010423
Preparation Batch Number(s)	3293010, 3303016, 3312021
Sample Shipping and Receipt	Sample received intact and at ambient temperature. QAPP has no specification for preservation of these samples.
Holding Time(s)	All samples prepared and analyzed within 20 days of sampling. QAPP specifies analysis within 28 days. See table below.
Blank Results	Field blank PNR sample had observable levels near the detection limit. No particulate matter detected in media check samples. Field Blank below actual results. See tables below and in main body of report.
Results of Multiple Weighings	Final weighing stable within < 0.5 mg
Balance Calibration	Performed daily during applicable periods
Conclusions and Comments	These data are acceptable for the intended purpose. The levels of particulate material observed in the PNR samples were very low, and near the detection limit. Levels in the field samples were similar to these results, and may have a positive bias. As a positive bias is conservative relative to the estimation of emissions, no data are qualified or invalidated based on field blank results.
