

### **3.5 Methodology for Estimating CH<sub>4</sub> and CO<sub>2</sub> Emissions from Petroleum Systems**

For the public review draft, this annex contains tables presenting methane emissions (in kt CH<sub>4</sub>), activity data, average emission factors (in kg CH<sub>4</sub>/unit) for the full 1990-2015 time series, and a short description of data sources and methods for each source, also in tabular format. Previous GHG Inventory annexes included the most recent year of information on activity data and average emission factors, and text describing data sources and methods for activity data and emission factors. EPA is seeking stakeholder feedback on the presentation of information in this format versus the previous annex discussion text. For information on CO<sub>2</sub> emissions, which have not been updated in this public review draft, please see the annexes of the 2016 GHG Inventory (1990-2014).
