

2017 Construction Activities

Route 131 Staging Area and Secure Landfill

Grasse River Remediation Project

May 2017

Grasse River Project Work Since Release of 2013 Record of Decision

Environmental and habitat assessment

- ❑ Habitat studies including sturgeon and mussel work
- ❑ Geotechnical investigations
- ❑ Cultural resource assessments
- ❑ Additional sediment and soil sampling
- ❑ Surveying and mapping of the river bottom

Sturgeon Study

Mussel Study

What's New: 2017 Grasse River Remediation Project Activities

Land-based construction activities to prepare for future in-river remediation work

- ❑ Expand the secure landfill on the Arconic Massena West property
 - Expansion to safely store dredged material from the river during in-river work

- ❑ Construct a land-based “staging area” on the north shore of the river near the Route 131 bridge
 - Clear and grade the staging area location
 - Install a water transfer line along County Route 42 from the staging area to the Arconic Massena West Facility
 - Construct a dock facility along the riverfront
 - Remove a small amount of sediment along the shoreline (which will be taken to the secure landfill for disposal)

2017 Grasse River Project Schedule and Community Safety

Working with the contractors and local authorities to limit the impact to residents

❑ Construction Schedule

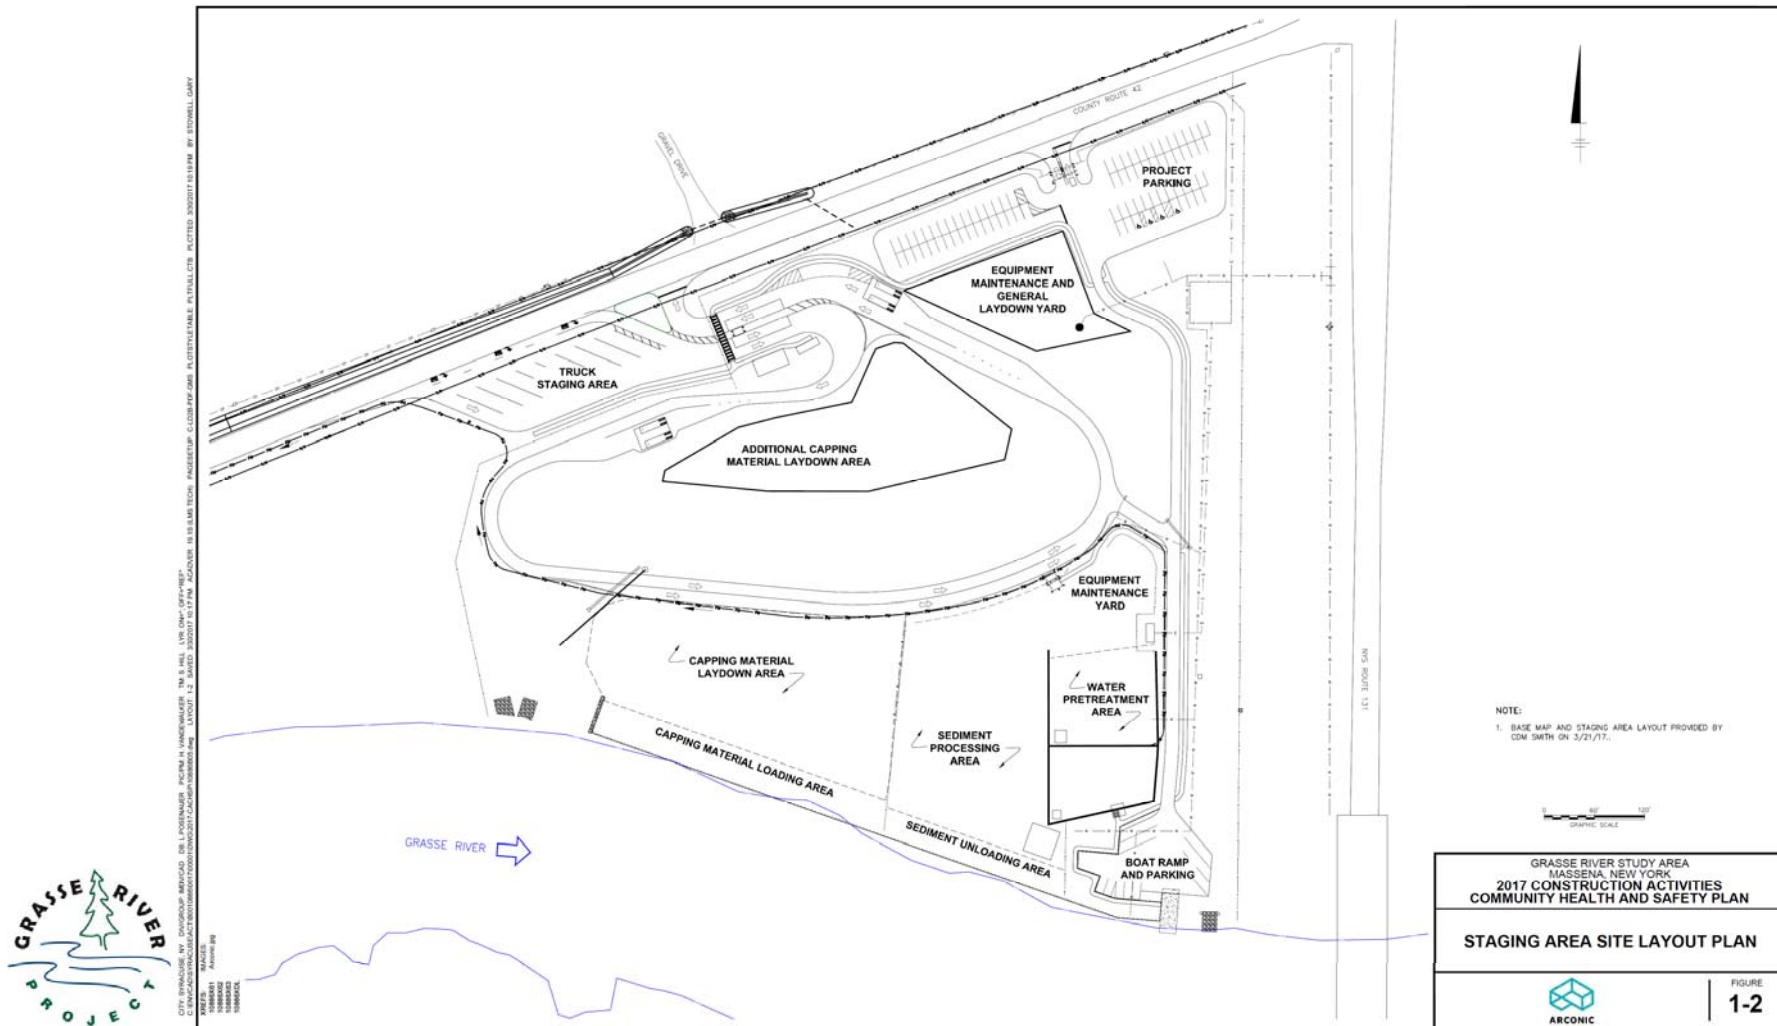

- April through November (prior to the onset of winter)
- Typically 5 days per week (Monday through Friday)
- Work may be performed on Saturday if needed
- No night construction activities planned

❑ Community Safety

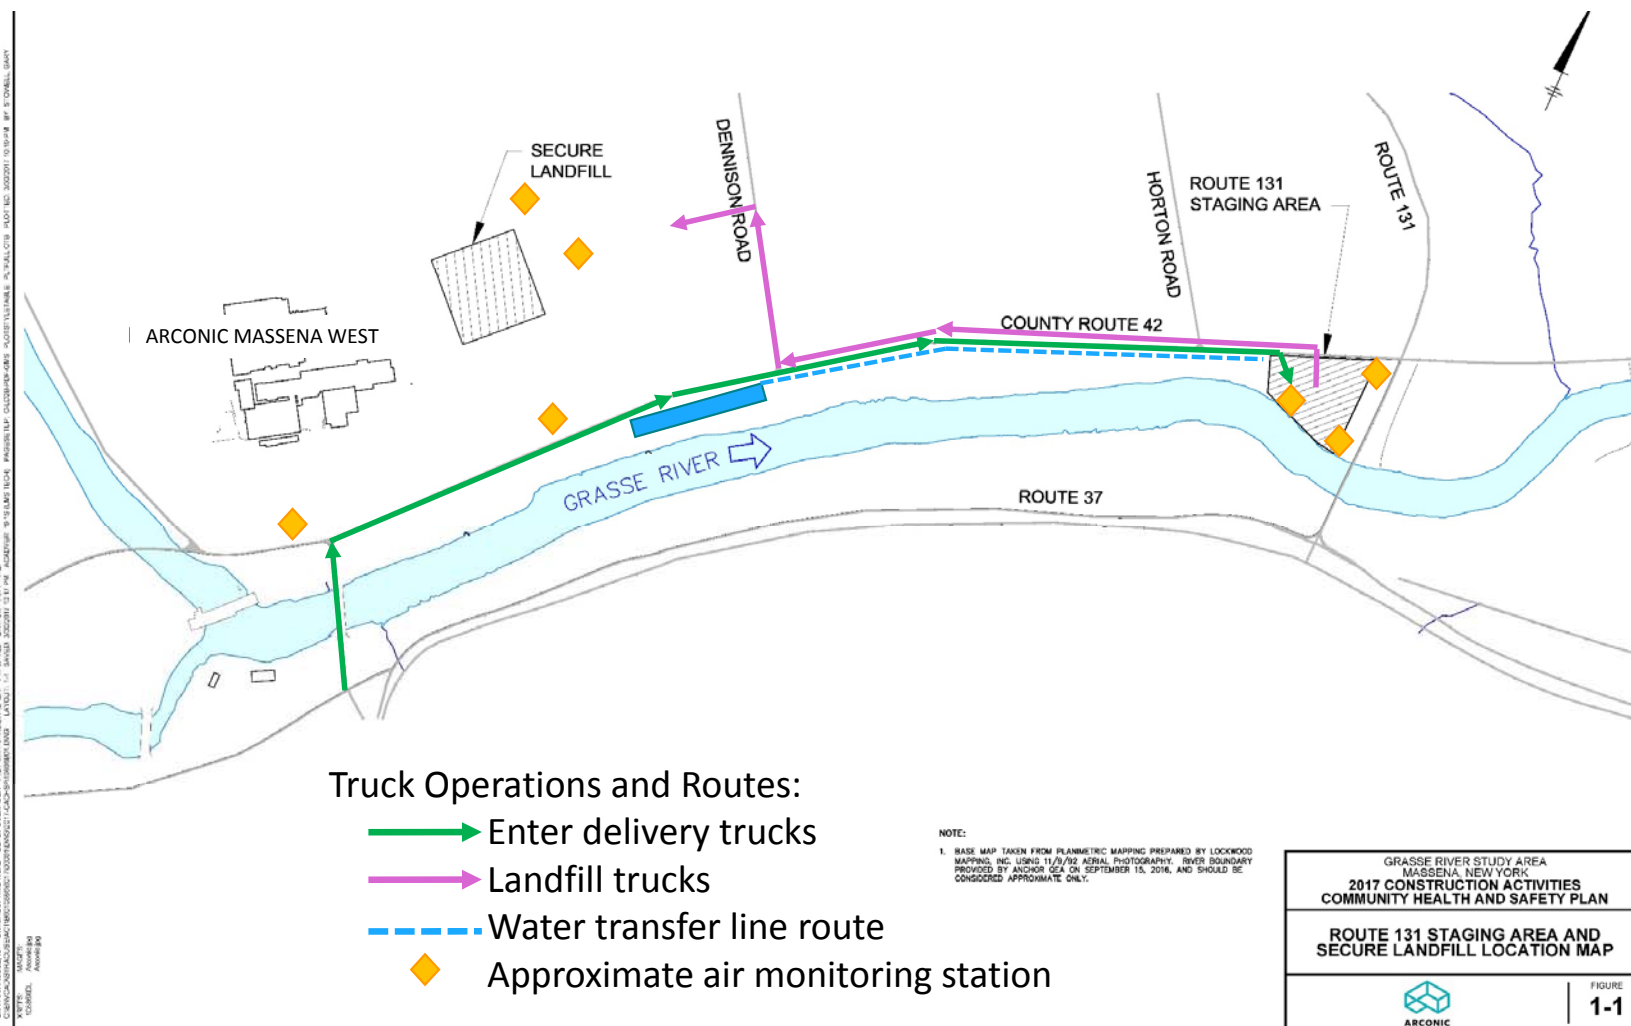

- Air and water monitoring
- Traffic plan due to increased traffic near the staging area from construction and worker vehicles
- No impact to recreational boating anticipated in 2017
