

## Register for LMOP Webinar on Wellfield Operations and Technologies for Upgrading LFG

The U.S. EPA Landfill Methane Outreach Program (LMOP) is pleased to announce we are hosting a second webinar focused on landfill gas (LFG) energy projects that upgrade LFG into pipeline-quality (high-Btu) gas and fuel for vehicles.

As a follow-on to our May 2017 webinar on incentive programs for LFG-to-vehicle fuel projects, speakers at this event will discuss LFG wellfield operational considerations unique to upgraded LFG projects. In addition, the presentations will compare different treatment processes and technologies, including some discussion of recent technology advancements for high-Btu and vehicle fuel projects.

**Thursday, November 16, 2017 | 1:00 PM (EST) | 1 hour in length**

Presenters:

### **LFG Wellfield Operational Considerations for Pipeline Quality Gas or Vehicle Fuel Projects**

**Frank Terry** - Project Manager, Smith Gardner, Inc., contractor to U.S. EPA LMOP  
Mr. Terry has more than 18 years of experience operating LFG collection systems, including at landfills converting LFG into high-Btu gas.

### **Technologies for Processing LFG into Pipeline Quality Gas or Vehicle Fuel**

**Mark Hill** - Vice President, Operations, DTE Biomass Energy  
LMOP Industry Partner DTE Biomass Energy oversees operations at 19 LFG energy projects across the country, including three projects converting LFG into high-Btu gas.

There is no cost to participate in this webinar, but registration is required. Please register online at <https://attendee.gotowebinar.com/register/7990098607959770882>.

Sincerely,  
The LMOP team
