

# Smart Automation Well Venting

Lessons Learned  
from Natural Gas STAR

Producers Technology Transfer Workshop

ExxonMobil Production Company,  
American Petroleum Institute and  
EPA's Natural Gas STAR Program

September 21, 2004

# Smart Automation Well Venting: Agenda

---

- ★ Methane Losses
- ★ Methane Recovery
- ★ Is Recovery Profitable?
- ★ Industry Experience
- ★ Discussion Questions

EPA POLLUTION PREVENTER

*Reducing Emissions, Increasing Efficiency, Maximizing Profits*

# Methane Losses

---

- ☆ 360,000 condensate and natural gas wells (on and offshore) in the U.S.<sup>1</sup>
- ☆ Accumulation of liquid hydrocarbons or water in the well bores reduces, and can halt, production
- ☆ Common “blow down” practices to temporarily restore production can vent 50 to 600 Mcf/yr to the atmosphere per well
- ☆ Estimate 7 Bcf/yr methane emissions from U.S. onshore well venting<sup>1</sup>

<sup>1</sup>Inventory of U.S. Greenhouse Gas Emissions and Sinks 1990 - 2002

# What is the Problem?

- ★ Conventional plunger lift systems use gas pressure buildups to repeatedly lift columns of fluid out of well
- ★ Fixed timer cycles may not match reservoir performance
  - ◆ **Cycle too frequently (high plunger velocity)**
    - Plunger not fully loaded
  - ◆ **Cycle too late (low plunger velocity)**
    - Shut-in pressure can't lift fluid to top
    - Gas slippage around plunger and fluid (waste of motive energy)

Source: Weatherford

# Conventional Plunger Lift Operations

---

- ★ Manual, on-site adjustments tuned plunger cycle time to well's parameters
  - ◆ **Not performed regularly**
  - ◆ **Do not account for gathering line pressure fluctuations, declining wells, plunger wear**
- ★ Manual vent to atmosphere when plunger lift is overloaded

EPA POLLUTION PREVENTER

*Reducing Emissions, Increasing Efficiency, Maximizing Profits*

# How Can Smart Automation Reduce Methane Emissions?

---

- ★ Smart automation continuously varies plunger cycling to match key reservoir performance indicators
  - ◆ Well flow rate
    - Measuring pressure
  - ◆ Successful plunger cycle
    - Measuring plunger travel time
- ★ Plunger lift automation allows producer to vent well to atmosphere less frequently

# Automated Controllers

Source: Weatherford

- ★ Low-voltage; solar and battery powered
- ★ Monitor well parameters
- ★ Adjust plunger cycling

Source: Weatherford

- ★ Remote well management
  - ◆ Continuous data logging
  - ◆ Remote data transmission
  - ◆ Receive remote instructions

# Plunger Lift Cycle

# Methane Savings

---

- ★ Methane emissions savings a secondary benefit
  - ◆ **Optimized plunger cycling to remove liquids increases well production by 10 to 20%<sup>1</sup>**
  - ◆ **Additional 10%<sup>1</sup> production increase from avoided venting**
- ★ 500 Mcf/yr emissions savings for average U.S. well

# Other Benefits

---

- ★ Reduced manpower cost per well
- ★ Continuously optimized production conditions
- ★ Remotely identify potential unsafe operating conditions
- ★ Monitor and log other well site equipment
  - ◆ Glycol dehydrator
  - ◆ Compressor
  - ◆ Stock Tank
  - ◆ VRU

EPA POLLUTION PREVENTER

# Is Recovery Profitable?

---

★ Smart automation controller installed cost: ~\$11,000

◆ **Conventional plunger lift timer: ~\$5,000**

★ Personnel savings: double productivity

★ Production increases: 10% to 20% increased production

★ Savings =

$$\begin{aligned} & (\text{Mcf/yr}) \times (10\% \text{ increased production}) \times (\text{gas price}) \\ & + (\text{Mcf/yr}) \times (1\% \text{ emissions savings}) \times (\text{gas price}) \\ & + (\text{personnel hours/yr}) \times (0.5) \times (\text{labor rate}) \end{aligned}$$

---

\$ savings per year

EPA POLLUTION PREVENTER

*Reducing Emissions, Increasing Efficiency, Maximizing Profits*

# Economic Analysis

---

★ Non-discounted savings for average U.S. Well =

$$\begin{aligned} & (50,000 \text{ Mcf/yr}) \times (10\% \text{ increased production}) \times (\$3/\text{Mcf}) \\ & + (50,000 \text{ Mcf/yr}) \times (1\% \text{ emissions savings}) \times (\$3/\text{Mcf}) \\ & + (500 \text{ personnel hours/yr}) \times (0.5) \times (\$30/\text{hr}) \\ & - (\$11,000) \text{ cost} \end{aligned}$$

---

\$13,000 savings in first year

★ 10 month simple payback

EPA POLLUTION PREVENTER

*Reducing Emissions, Increasing Efficiency, Maximizing Profits*

# Industry Experience

---

- ★ BP reported installing plunger lifts *with* automated control systems in ~2,200 wells
  - ◆ 900 Mcf reported annual savings per well
  - ◆ \$12 million costs including equipment and labor
  - ◆ \$6 million total annual savings
- ★ Another company shut in mountaintop wells inaccessible during winter
  - ◆ Installed automated controls allowed continuous production throughout the year<sup>1</sup>

# Discussion Questions

---

- ★ To what extent are you implementing these technologies?
- ★ What are the barriers (technological, economic, lack of information, regulatory, focus, manpower, etc.) that are preventing you from implementing this technology?
