Mr. Hermann,

I have attached the final requested permits for XTO Energy, Inc.'s Tap 5 Compressor Station and River Bend Dehydration Site issued pursuant to the Title V Operating Permit Program at 40 CFR Part 71 (Part 71). We will also be posting each of the final Part 71 permits in PDF format on our website at: <u>https://www.epa.gov/caa-permitting/caa-permits-issued-epa-region-8</u>.

In accordance with the regulations at §71.11(i), both permits are effective immediately upon issuance, on September 22, 2017. Please review each condition carefully and note any restrictions placed on these sources. Procedures for appealing these permits can be found in 40 CFR 71.11(I). A petition to the Environmental Appeals Board (EAB) must be filed within 30 days of receipt of the corresponding final permit action.

If you have any questions or concerns regarding these final permit actions, please contact me.

Thank you,

Eric Wortman

| То:      | Wortman, Eric                                                                  |
| Subject: | Notice of Issuance of Title V Operating Permits on the Uintah and Ouray Indian |
|          | Reservation                                                                    |

This is to notify you that the EPA has issued two (2) final Clean Air Act (CAA) Title V operating permits for XTO Energy Inc.'s Tap 5 Compressor Station and the River Bend Dehydration Site pursuant to the Title V Operating Permit Program at 40 CFR Part 71 (Part 71). The final Part 71 permits will be available in PDF format on our website at: <a href="https://www.epa.gov/caa-permitting/caa-permits-issued-epa-region-8">https://www.epa.gov/caa-permitting/caa-permits-issued-epa-region-8</a>.

In accordance with the regulations at §71.11(i), the permits are effective immediately upon issuance, on September 22, 2017. Any person who failed to file comments on the draft permit may petition for administrative review only to the extent of the changes from the draft to the final permit decision or other new grounds that were not reasonably foreseeable during the public comment period on the draft permit. The 30-day period within which a person may request review under this section begins when we have fulfilled the notice requirements for these final permit decisions. Motions to reconsider a final order by the Environmental Appeals Board (EAB) must be filed within 10 days after service of the final order. A petition to the EAB is under Section 307(b) of the CAA, a prerequisite to seeking judicial review of the final agency action. For purposes of judicial review, final agency action occurs when we issue or deny a final permit and agency review procedures are exhausted.

Thank you,

Eric Wortman

### **Public Notice: Request For Comments**

### Draft Air Quality Permit to Operate for Federal Clean Air Act Title V to Control Air Pollutant Emissions from Multiple Facilities on the Uintah and Ouray Indian Reservation

#### Public notice issued:

August 18, 2017

#### Written comments due:

5 p.m., September 18, 2017

#### What is being proposed?

The EPA proposes to issue a Clean Air Act (CAA), Title V Permit to Operate in accordance with 40 Code of Federal Register, Part 71, for the following facilities owned and operated by XTO Energy, Inc. on Indian country lands within the Uintah and Ouray Indian Reservation: Tap 5 Compressor Station and River Bend Dehydration Site.

EPA issues CAA Title V operating permits in Indian country where EPA has not approved a tribe to implement the Title V operating permit program. The Ute Indian Tribe does not have an approved Title V operating permit program.

Air pollutant emissions come from equipment operating at the facilities. The draft operating permit includes all CAA control requirements that apply to the facilities and associated equipment emitting air pollutants.

#### Where are the facilities located?

Tap 5 Compressor Station: Uintah and Ouray Indian Reservation Uintah County, Utah Latitude: 39.9750760N Longitude: 109.6360850W

<u>River Bend Dehydration Site</u>: Uintah and Ouray Indian Reservation Uintah County, Utah Latitude: 39.94851N Longitude: 109.77057W

#### **Permit number:**

Tap 5 CS: V-UO-000018-2007.00 River Bend Dehy: V-UO-000026-2011.00

#### How can I review documents? What happens next?

You can review the draft CAA Title V Operating Permit, the application, and Statement of Basis at:

Uintah County Clerk's Office 147 East Main St #6 Vernal, Utah 84078

Ute Indian Tribe Energy and Minerals Department Office 988 South 7500 East, Annex Building Fort Duchesne, Utah 84026

U.S. EPA Region 8 Air Program Office (8P-AR) 1595 Wynkoop St. Denver, CO 80202 Phone: 303-312-6649

All documents will be available for review at the U.S. EPA Region 8 office Monday through Friday from 8:00 am to 4:00 pm (excluding Federal holidays).

Electronic copies of the draft Title V permits, Statement of Basis and all supporting materials may also be viewed at: <u>http://www.epa.gov/caa-</u> <u>permitting/caa-permit-public-</u> comment-opportunities-region-8

### What are EPA's responsibilities?

The U.S. EPA Region 8 Air Program is the regulatory agency that helps protect and preserve air quality on the Ute Indian Reservation.

One way the EPA does this is by issuing CAA Title V operating permits for major air emission sources that require air pollutant emissions control and monitoring. The purpose of this notice is to invite you to submit written comments on this proposed permit through the process detailed in this notice. The EPA will review and consider all comments received during the comment period.

Following this review, the EPA may issue the permit as drafted, issue the permits with revisions, or deny the permit.

#### **Public Comment Period:**

The EPA will accept written comments on the draft Title V Operating Permits beginning:

August 18, 2017 Through 5 p.m., September 18, 2017.

### Where can I send written comments?

The EPA accepts comments by mail and e-mail.

### How can I make comments by e-mail?

To make comments via email, click on the name of the contact person at the website below.

In accordance with 40 CFR 71.8 and 71.11(d)(2), the U.S. Environmental Protection Agency Region 8 is hereby providing notification to all affected states, tribes, and members of the public of the issuance of the draft title V federal operating permit for the following sources located on Indian country lands within the Uintah and Ouray Indian Reservation:

XTO Energy Inc. – Tap 5 Compressor Station XTO Energy Inc. – River Bend Dehydration Site

Part 71 Permit Contact - Eric Wortman, (617) 918-1624

A copy of the draft permits and Statement of Bases may be obtained by contacting the Part 71 Permit Contact. The permit applications and other supporting information pertinent to the permit decisions are available for review at the following locations:

| U.S. EPA Region 8   | Uintah & Ouray Indian Tribe           | Uintah County Clerk |
|---------------------|---------------------------------------|---------------------|
| Air Program (8P-AR) | Energy and Minerals Department Office | 147 E. Main St., #6 |
| 1595 Wynkoop St.    | 988 South 7500 East, Annex Building   | Vernal, UT 84078    |
| Denver, CO 80202    | Fort Duchesne, UT 84026               |                     |

Electronic copies of the draft permits, Statement of Bases, permit applications, and additional supporting information may also be viewed online at: <u>http://www.epa.gov/caa-permitting/caa-permit-public-comment-opportunities-region-8</u>.

In accordance with §71.11(d)(2), EPA Region 8 is providing a 30-day period from August 18, 2017 to September 18, 2017, for public comment on this draft permit. Comments must be received by 5 p.m. on September 18, 2017, to be considered in the issuance of the final permit. If a public hearing is held regarding this permit, you will be sent a copy of the public hearing notice at least 30 days in advance of the hearing date.

Please submit any written recommendations you may have concerning the terms and conditions of this permit to me by email or to the address listed above.

Sincerely,

Eric Wortman

#### <u>CERTIFIED MAIL</u> <u>RETURN RECEIPT REQUESTED</u>

Re: Transmittal of Draft Title V Permits to Operate on the Uintah and Ouray Indian Reservation

Dear Ms. Grant: .

In accordance with 40 CFR 71.8 and 71.11(d)(2), the U.S. Environmental Protection Agency (EPA) Region 8 is hereby providing notification to all affected states and tribes of the issuance of the draft Clean Air Act Title V Permit to Operate for the following sources located on Indian country lands within the Uintah and Ouray Indian Reservation:

XTO Energy Inc. – Tap 5 Compressor Station XTO Energy Inc. – River Bend Dehydration Site

Region 8 is providing a 30-day period, from August 18, 2017 to September 18, 2017 for comment. Please make the enclosed draft permits, Statement of Bases, permit applications, and additional supporting information for each permit action available for public inspection until the end of the public comment period.

Electronic copies of the draft permits and Statement of Bases may also be viewed online at: http://www.epa.gov/caa-permitting/caa-permit-public-comment-opportunities-region-8.

We have also enclosed copies of a public notice bulletin. Please post this bulletin in locations that you see fit to broadly advertise this public comment period.

In addition to maintaining the docket in your tribal office, please submit any written recommendations you may have concerning the terms and conditions of the draft permits to me at the following address:

Eric Wortman US EPA Region 8 Air Program, 8P-AR 1595 Wynkoop Street Denver, CO 80202 (617) 918-1624 wortman.eric@epa.gov Should EPA not accept any or all of these recommendations, you will be notified in writing and will be provided with the reasons for not accepting them. Comments must be received by 5 p.m. on September 18, 2017, to be considered in the issuance of the final permits for these facilities. If a public hearing is held regarding these permits, you will be sent a copy of the public hearing notice at least 30 days in advance of the hearing date.

Sincerely,

Grie Wart

#### CERTIFIED MAIL RETURN RECEIPT REQUESTED

Re: Draft Part 71 Operating Permits for XTO Energy, Inc.'s Tap 5 Compressor Station (Permit #V-UO-000018-2007.00) and River Bend Dehydration Site (Permit #V-UO-000026-2011.00)

Dear Mr. Herman:

The U.S. Environmental Protection Agency Region 8 has completed its review of XTO Energy, Inc.'s applications for the Tap 5 Compressor Station and River Bend Dehydration Site to obtain initial Clean Air Act Title V operating permits pursuant to the Title V Operating Permit Program at 40 CFR part 71 (Part 71).

Enclosed you will find the draft Part 71 operating permits and the corresponding Statement of Basis for each permit. The regulations at 40 CFR 71.11(d) require that an applicant, the public and affected states (as defined in 40 CFR 71.2) have the opportunity to submit written comments on any draft Part 71 operating permit. All written comments submitted within 30 calendar days after the public notice is published will be considered by the agency in making its final permit decision. Enclosed is a copy of the public notice which will be published on the EPA's website located at: <u>https://www.epa.gov/caa-permitting/caa-permit-public-comment-opportunities-region-8</u>, on August 18, 2017. The public comment period will end at 5:00 p.m. MDT on September 18, 2017.

The conditions contained in the permits will become effective and enforceable by the agency if the permits are issued final. If you are unable to accept any term or condition of the draft permits, please submit your written comments, along with the reason(s) for non-acceptance to:

Part 71 Permitting Lead U.S. EPA, Region 8 Air Program (8P-AR) 1595 Wynkoop Street Denver, Colorado 80202 If you have any questions concerning the enclosed draft permits or the respective Statement of Basis, please contact Eric Wortman of my staff at (617) 918-1624.

Sincerely,

Monica & Suorales

#### C. Description of Operations

Natural gas produced from area wells is compressed at existing offsite locations up to a line pressure of 850 to 1,000 pounds per square inch gauge (psig) and then sent to the River Bend natural gas dehydrator site through 6" and 10" gathering flowlines. Once the gas enters the site, it flows through two (2) two-phase separators in order to reduce water and condensable liquids content in the gas stream, prior to entry into the triethylene glycol (TEG) dehydration system. The liquid produced from the inlet separators is then sent to a 30,000-gallon pressurized flash separator. The purpose of the flash separator is to flash the high-pressured liquids and route the flash gas back to the high-pressure gathering system, thereby eliminating the flash emissions from being vented to the atmosphere. The pressurized flash separator is then set to discharge the separated liquids at a pressure of approximately 50 psig into either of the onsite 400-barrel (bbl) atmospheric liquid storage tanks. The 400-bbl liquid storage tanks are used for temporary storage prior to the liquids being hauled offsite by tanker truck.

Following the inlet separation, the gas is discharged into the TEG natural gas dehydration system for further water removal from the natural gas stream. The TEG natural gas dehydration system consists of a 45 million standard cubic feet per day (MMscfd)-capacity natural gas TEG dehydration process still vent, a 1.5 million British thermal units per hour (MMBTU/hr) natural gas-fired process heater, and a TEG regenerator. The TEG natural gas dehydration system emissions are controlled by a thermal oxidizer. The TEG natural gas dehydration system utilizes a benzene, toluene, ethylbenzene and xylene (BTEX) emissions control system that captures vapors from the still vent and the flash tank and sends the vapors to the thermal oxidizer for destruction. Following dehydration, the natural gas stream leaves the site via a metered sales pipeline. The station has on-site electrical power supplied by a 65 kilowatt (kW) Capstone natural-gas fired microturbine-driven generator. In addition, the pneumatic control devices are operated by plant air supplied by the on-site electric driven air compressor.

Other production equipment located at River Bend consists of three production wellsites (RBU 6-15E, RBU 7-15E, and RBU 11-15E). Each wellsite includes  $a \le 400$ -bbl storage tank, natural gas-fired heaters, as well as minimal fugitive and truck loading emissions. The RBU 11-15E wellsite also operates a small 0.20 MMscfd capacity TEG natural gas dehydration system. The RBU 6-15E wellsite is located within the property boundaries of River Bend but does not discharge directly into River Bend. The RBU 7-15E and RBU 11-15E wellsites are located on a separate surface sites within a quarter mile of River Bend. The gas produced at the three (3) wellsites enters the common field gathering system and ultimately into off-site compressor stations. One of these compressor stations, the Tap-1 Compressor Station (Tap-1), is also located within a quarter mile of River Bend and consists of two (2) natural gas-fired compression

engines, two (2) condensate tanks with natural gas-fired heaters, truck loading emissions, and fugitive emissions.

#### D. Emission Points

The Title V Operating Permit Program at 40 CFR part 71 (Part 71) allows the Permittee to separately list in the permit application units or activities that qualify as "insignificant" based on potential emissions below 2 tons per year (tpy) for all regulated pollutants that are not listed as hazardous air pollutants (HAP) under section 112(b) and below 1,000 lbs/year or the de minimis level established under section 112(g), whichever is lower, for HAP. However, the application may not omit information needed to determine the applicability of or to impose, any applicable requirement. Units and activities that qualify as "insignificant" for the purposes of the Part 71 application are in no way exempt from applicable requirements or any requirements of the Part 71 permit.

Tables 1 and 2 list emission units and emission generating activities, including any air pollution control devices.

| Unit I.D.      | Description                                                                                                                                                                                                        | Control Equipment                       |

| 0.25 MMBTU/hr** Separator Heater (Tap-1)                        |
| Two (2) 0.25 MMBTU/hr Tank Heaters (Tap-1)                      |
| Condensate Truck Loading Emissions (Tap-1)                      |
| Compressor Blowdown Emissions (Tap-1)                           |

\*Insignificant emission units can change at the facility as long as the new or replacement units meet the criteria for insignificance, and XTO supplies information as required under 40 CFR part 71 and this permit. The insignificant emission unit status does not exempt these emission units from the requirements of any standards that may apply under 40 CFR parts 60 or 63.

\*\* MMBtu/hr = million British Thermal units per hour.

#### **E. Potential to Emit**

Pursuant to 40 CFR 52.21, potential to emit (PTE) is defined as the maximum capacity of a stationary source to emit a pollutant under its physical and operational design. Any physical or operational limitation on the capacity of the source to emit a pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored or processed, shall be treated as part of its design <u>if</u> the limitation, or the effect it would have on emissions, is federally enforceable. Independently enforceable applicable

requirements are considered enforceable to the extent that the source is in compliance with the standard. In addition, beneficial reductions in non-targeted pollutants resulting from compliance with an independently enforceable applicable requirement may be counted towards PTE provided the emission reduction of the non-targeted pollutant is enforceable as a practical matter and compliance is being met. See the 1995 guidance memo signed by John Seitz, Director of the Office of Air Quality Planning and Standards titled, "Options for Limiting Potential to Emit of a Stationary Source under Section 112 and Title V of the Clean Air Act."<sup>1</sup>

XTO reported the controlled emission unit-specific PTE in their Part 71 permit application. The controlled emissions in Table 3 are based on the legally and practically enforceable requirements set forth in this proposed permit.

\*NO<sub>X</sub> = nitrogen oxide; CO = carbon monoxide; VOC = volatile organic compound; PM = particulate matter; SO<sub>2</sub> = sulfur dioxide; CH<sub>2</sub>O = formaldehy de; HAP = hazardous air pollutant; CO<sub>2</sub> = carbon dioxide; CH<sub>4</sub> = methane; N<sub>2</sub>O = nitrous oxide; CO<sub>2</sub>e = equivalent CO<sub>2</sub>; IEU = insignificant emission unit.

#### II. Applicable Requirement Review

The following sections discuss the information provided by XTO in their Part 71 application, certified to be true and accurate by the Responsible Official of this facility.

#### A. 40 CFR 52.21: Prevention of Significant Deterioration

The Prevention of Significant Deterioration (PSD) Permit Program at 40 CFR part 52 is a preconstruction review requirement of the CAA that applies to proposed projects that are sufficiently large (in terms of emissions) to be a "major" stationary source or "major modification" of an existing stationary source. Source size is defined in terms of PTE, which, as explained previously, is its capability at maximum design capacity to emit a pollutant, except as constrained by existing legally and practically enforceable conditions applicable to the source. A new stationary source or a modification to an existing minor stationary source is major if the proposed project has the PTE of any pollutant regulated under 40 CFR part 52 in amounts equal to or exceeding specified major source thresholds, which are 100 tpy for 28 listed industrial source categories and 250 tpy for all other sources. PSD also applies to modifications at existing major sources that cause a "significant net emissions increase" at that source. Significance levels for each pollutant are defined in the PSD regulations at 40 CFR 52.21.

According to the emissions information provided by XTO in their Part 71 application, this facility is currently not a major stationary source with respect to the PSD Permit Program, as the PTE of any pollutant does not exceed the thresholds of criteria pollutants regulated under the PSD Permit Program.

#### **B.** Source Determination

At 40 CFR 71.2, a major source is generally defined as any stationary source (or any group of stationary sources) that is located on one or more contiguous or adjacent properties, is under common control of the same person (or persons under common control)), and belongs to a single major industrial grouping. On June 3, 2016, the EPA published a final rule clarifying when oil and natural gas sector equipment and activities must be deemed a single source when determining whether major source permitting programs (PSD and New Source Review

preconstruction permit programs, and the Part 71 Permit Program) apply (81 FR 35622). By defining the term "adjacent," the rule specifies that equipment and activities in the oil and natural gas sector that are under common control will be considered part of the same source if they are located on the same surface site or on individual surface sites that share equipment and are within a quarter mile of each other.

According to information provided by XTO, the RBU 7-15E wellsite, RBU 11-15E wellsite, Tap-1 Compressor Station, and River Bend are located within a quarter mile of River Bend and share equipment with River Bend. In addition, the RBU 6-15E wellsite is located on the same surface site as River Bend. Therefore, the EPA has determined that the RBU 6-15E wellsite, RBU 7-15E wellsite, RBU 11-15E wellsite, and Tap-1 Compressor Station are adjacent to River Bend and thus part of the same stationary source. A more detailed source determination is included in the docket for this permit action.

#### C. 40 CFR Part 60, Subpart A: General Provisions

This subpart applies to the owner or operator of any stationary source which contains an affected facility, the construction or modification of which is commenced after the date of publication of any standard in 40 CFR part 60 (Part 60). The general provisions under subpart A apply to sources that are subject to the specific subparts of Part 60.

As explained below, River Bend is not subject to any specific subparts of Part 60; therefore, the General Provisions of Part 60 do not apply.

#### D. 40 CFR Part 60, Subpart GG: Standards of Performance for Stationary Gas Turbines

This rule applies to stationary gas turbines, with a heat input at peak load equal to or greater than 10.7 gigajoules per hour (10 MMBtu/hr), that commenced construction, modification or reconstruction after October 3, 1977.

Based on the information provided by XTO in their Part 71 application, the stationary gas turbines located at River Bend and Tap-1 Compressor Station have a maximum heat input less than 10.7 gigajoules per hour; therefore, this rule does not apply. The maximum heat input for each of the Capstone Microturbines is 0.2 MMBtu/hr.

#### E. 40 CFR Part 60, Subpart Kb: Standards of Performance for Volatile Organic Liquid Storage Vessels (Including Petroleum Liquid Storage Vessels) for which Construction, Reconstruction, or Modification Commenced After July 23, 1984

This subpart establishes requirements for controlling VOC emissions from storage vessels with a capacity greater than or equal to 75 cubic meters that are used to store volatile organic liquids for which construction, reconstruction or modification commenced after July 23, 1984.

Based on the information provided by XTO in their Part 71 application, the condensate tanks at River Bend, RBU 6-15E wellsite, RBU 7-15E wellsite, RBU 11-15E wellsite, and Tap-1

Compressor Station are exempt from these requirements because they have a capacity of less than 10,000 bbls.

# F. 40 CFR Part 60, Subpart KKK: Standards of Performance for Equipment Leaks of VOC from Onshore Natural Gas Processing Plants for Which Construction, Reconstruction, or Modification Commenced After January 20, 1984, and on or Before August 23, 2011

This subpart establishes requirements for controlling fugitive VOC emissions from onshore natural gas processing plants. It applies to natural gas processing plants that commenced construction, reconstruction, or modification after January 20, 1984 and on or before August 23, 2011.

Based on the information provided by XTO in their Part 71 application, River Bend, RBU 6-15E wellsite, RBU 7-15E wellsite, RBU 11-15E wellsite, and Tap-1 Compressor Station are not natural gas processing plants, therefore the facility is not subject to this subpart.

#### G. 40 CFR Part 60, Subpart LLL: Standards of Performance for SO<sub>2</sub> Emissions from Onshore Natural Gas Processing for Which Construction, Reconstruction, or Modification Commenced After January 20, 1984, and on or Before August 23, 2011

This subpart applies to sweetening units and sulfur recovery units at onshore natural gas processing facilities. As defined in this subpart, sweetening units are process devices that separate hydrogen sulfide ( $H_2S$ ) and  $CO_2$  from a sour natural gas stream. Sulfur recovery units are defined as process devices that recover sulfur from the acid gas (consisting of  $H_2S$  and  $CO_2$ ) removed by a sweetening unit.

Based on the information provided by XTO in their Part 71 application, neither sweetening nor sulfur recovery are performed at the facility. Therefore, this facility is not subject to this subpart.

#### H. 40 CFR Part 60, Subpart JJJJ: Standards of Performance for Stationary Spark Ignition Internal Combustion Engines

This subpart establishes emission standards and compliance requirements for the control of emissions from stationary spark ignition internal combustion engines that commenced construction, modification or reconstruction after June 12, 2006, and are manufactured on or after specified manufacture trigger dates. The manufacture trigger dates are based on the engine type, fuel used and maximum engine horsepower.

Based on the information provided by XTO in their Part 71 application, the engines operating at the facility were manufactured prior to the manufacture trigger dates in the rule (January 1, 2008 for engines T1C-1 and T1C-2). Therefore, this subpart does not apply.

#### I. 40 CFR Part 60, Subpart KKKK: Standards of Performance for Stationary Combustion Turbines

This subpart establishes emission standards and compliance schedules for the control of emissions from stationary combustion turbines that commenced construction, modification or reconstruction after February 18, 2005. The rule applies to stationary combustion turbines with a heat input at peak load equal to or greater than 10.7 gigajoules (10 MMBtu) per hour.

Based on the information provided by XTO in their Part 71 application, the stationary gas turbines located at River Bend and the Tap-1 Compressor Station have a maximum heat input less than 10.7 gigajoules per hour; therefore, this rule does not apply. The maximum heat input for each of the Capstone Microturbines is 0.2 MMBtu/hr.

#### J. 40 CFR Part 60, Subpart OOOO: Standards of Performance for Crude Oil and Natural Gas production, Transmission, and Distribution After August 23, 2011, and on or Before September 18, 2015

This subpart establishes emission standards for the control of VOC and SO<sub>2</sub> emissions from affected facilities that commence construction, modification or reconstruction after August 23, 2011 and on or before September 18, 2015. Affected facilities include, but are not limited to well completions, centrifugal compressors, reciprocating compressors, pneumatic controllers, storage vessels and sweetening units.

Based on the information provided by XTO in their Part 71 application, the two (2) 400-bbl storage vessels at the RBU 6-15E wellsite and RBU 7-15E wellsite commenced construction after August 23, 2011 and prior to September 18, 2015. However, according to XTO, the emissions from the storage vessels are below 6 tpy and do not satisfy the criteria for an affected source under the rule. XTO shall maintain records of each VOC emissions determination made under §60.5365(e) as specified in §60.5420(c)(5)(ii).

Based on the information provided by XTO in their Part 71 application, all of the remaining current equipment at River Bend, RBU 6-15E wellsite, RBU 7-15E wellsite, RBU 11-15E wellsite, and Tap-1 Compressor Station predates the applicability date for this subpart. Therefore, this subpart does not apply to any other emission units.

#### K. 40 CFR Part 60, Subpart OOOOa: Standards of Performance for Crude Oil and Natural Gas Facilities for which Construction, Modification or Reconstruction Commenced After September 18, 2015

This subpart establishes emission standards for the control of VOC and SO<sub>2</sub> emissions from affected facilities that commence construction, modification or reconstruction after September 18, 2015. Affected facilities include, but are not limited to well completions, centrifugal compressors, reciprocating compressors, pneumatic controllers, storage vessels and sweetening units.

Based on the information provided by XTO in their Part 71 application, the current equipment at River Bend, RBU 6-15E wellsite, RBU 7-15E wellsite, RBU 11-15E wellsite, and Tap-1 Compressor Station predates the applicability date for this subpart. Therefore, this subpart does not apply.

## L. 40 CFR Part 63, Subpart A: National Emission Standards for Hazardous Air Pollutants for Source Categories, General Provisions

The requirements of 40 CFR part 63, subpart A apply to sources that are subject to the specific subparts of 40 CFR part 63.

As explained below, River Bend is subject to 40 CFR part 63, subpart HH, National Emission Standards for Hazardous Air Pollutants from Oil and Natural Gas Production Facilities and subpart ZZZZ, National Emission Standards for Hazardous Air Pollutants for Stationary Reciprocating Internal Combustion Engines; therefore, the General Provisions of 40 CFR part 63 apply.

## M. 40 CFR Part 63, Subpart HH: National Emission Standards for Hazardous Air Pollutants from Oil and Natural Gas Production Facilities

This subpart establishes emission standards for the control of HAP emissions from affected units located at natural gas production facilities that process, upgrade or store natural gas prior to the point of custody transfer, or that process, upgrade or store natural gas prior to the point at which natural gas enters the natural gas transmission and storage source category or is delivered to a final end user. The affected units are glycol dehydration units, storage vessels with the potential for flash emissions (as defined in the rule) and the group of ancillary equipment and compressors intended to operate in volatile HAP service which are located at natural gas processing plants.

Based on the information provided by XTO in their Part 71 application, River Bend, RBU 6-15E wellsite, RBU 7-15E wellsite, RBU 11-15E wellsite, and the Tap-1 compressor station do not operate any storage vessels with the potential for flash emissions (as defined in the rule). Uncontrolled emissions from dehydration unit RBD-1 exceed the major source thresholds for HAP. Therefore, dehydration unit RBD-1 is subject to the major source requirements of this subpart for large glycol dehydration units.

As defined in §63.761, emissions from processes, operations or equipment that are not part of the same facility, as defined in this section, shall not be aggregated to determine whether such emission points are major sources. Therefore, the RBU 11-15E wellsite is an area source under the rule and dehydration unit RBU 11-15E D-1 is subject to the area source requirements of the rule. However, dehydration unit RBU 11-15E D-1 meets the exemption criteria in §63.764(e) because, according to the information provided by XTO in their Part 71 application, the actual annual average flowrate of natural gas to the dehydration unit is less than 85 thousand standard cubic meters per day. XTO is subject to the recordkeeping requirements for the exemption criteria at §63.774(d)(1).

#### N. 40 CFR Part 63, Subpart YYYY: National Emission Standards for Hazardous Air Pollutants from Stationary Combustion Turbines

This rule establishes national emission limitations and work practice standards for HAP emitted from Stationary Combustion Turbines. The affected source includes the stationary combustion turbine located at a major source of HAP emissions.

As defined in §63.6090(b)(3), an existing, new or reconstructed stationary combustion turbine with a rated peak power output of less than 1.0 megawatt (MW) does not have to meet the requirements of this subpart. Based on the information provided by XTO in their Part 71 application, although River Bend is a major source of HAP emissions, the 65 kW Capstone Microturbine Generator at the facility is exempt from the requirements of this subpart, because according to XTO it has a peak power output of less than 1.0 MW. This subpart does not apply to the Captone Microturbine Generator at the Tap-1 Compressor Station because the Tap-1 Compressor Station is an area source of HAP emissions.

#### O. 40 CFR Part 63, Subpart ZZZZ (MACT ZZZZ): National Emission Standards for Hazardous Air Pollutants for Stationary Reciprocating Internal Combustion Engines

This subpart establishes emission standards and operating limitations for the control of HAP emissions from spark ignition and compression ignition reciprocating internal combustion engines.

Based on the information provided by XTO in their Part 71 application, there are no reciprocating internal combustion engines operating at River Bend, RBU 6-15E wellsite, RBU 7-15E wellsite or RBU 11-15E wellsite. According to the regulations at §63.6585(b), a major source of HAP emissions is a plant site that emits or has the potential to emit any single HAP at a rate of 10 tons (9.07 megagrams) or more per year or any combination of HAP at a rate of 25 tons (22.68 megagrams) or more per year, except that for oil and natural gas production facilities, a major source of HAP emissions is determined for each surface site. Since the Tap-1 compressor station is not located on the same surface site as River Bend, the emissions from neither River Bend nor the wellsites shall be aggregated for the purposes of determining a major source of HAP. Therefore, the reciprocating internal combustion engines at the Tap-1 compressor station (T1C-1 and T1C-2) are subject to the area source requirements of this subpart.

#### P. 40 CFR Part 63, Subpart DDDDD (Boiler MACT): National Emission Standards for Hazardous Air Pollutants for Major Sources: Industrial, Commercial, and Institutional Boilers and Process Heaters

This rule establishes national emission limitations and operating limitations for HAP emitted from new and existing industrial boilers, institutional boilers, commercial boilers and process heaters that are located at major sources of HAP. For the purposes of this subpart, a major source of HAP is as defined in §63.2, except that for oil and natural gas production facilities, a major source of HAP is as defined in §63.761. Boilers or process heaters that combust natural gas for fuel or have a maximum designed heat input capacity less than 10 MMBtu/hr are subject to work

practice standards in lieu of emission limits. For the purposes of this subpart, an affected unit is an existing unit if it was constructed prior to June 4, 2010.

The dehydration unit reboiler and heaters at River Bend meet the definition of process heaters in the rule. However, because River Bend is subject to the major source requirements of 40 CFR part 63, subpart HH, the EPA's "once in, always in" policy<sup>2</sup> allows XTO to account for the reductions of PTE achieved through compliance with previous MACT standards prior to the first compliance date of subsequent MACT standards. Based on the information provided by XTO in their Part 71 application, the PTE at River Bend with federally enforceable controls was below major source thresholds for HAP as of the first compliance date of this subpart (January 1, 2016 for existing process heaters and April 1, 2013 for new process heaters). Therefore, River Bend does not meet the definition of a major source under the rule and this subpart does not apply. This subpart does not apply to the RBU 6-15E wellsite, RBU 7-15E wellsite, RBU 11-15E wellsite, or Tap-1 compressor station because they do not meet the definition of a major source under the rule.

#### Q. 40 CFR Part 63, Subpart JJJJJJ (Boiler MACT (for Area Sources)): National Emission Standards for Hazardous Air Pollutants for Area Sources: Industrial, Commercial, and Institutional Boilers

This rule establishes national emission standards and operating limitations for HAP emitted from new and existing industrial boilers, institutional boilers, and commercial boilers that are fueled by coal, biomass, or oil and are located at area sources of HAP. For the purposes of this subpart, an affected unit is an existing unit if it was constructed prior to June 4, 2010.

Based on the information provided by XTO in their Part 71 application, there are no industrial, commercial or institutional boilers located at River Bend, RBU6-15E wellsite, RBU 7-15E wellsite, RBU 11-15E wellsite, and Tap-1 compressor station as defined in the rule. Therefore, subpart JJJJJJ does not apply.

#### R. 40 CFR Part 64: Compliance Assurance Monitoring

Pursuant to requirements concerning enhanced monitoring and compliance certification under the CAA, the EPA promulgated regulations to implement compliance assurance monitoring (CAM) for major stationary sources of air pollution, for purposes of Title V permitting that are required to obtain operating permits under Part 71. The rule requires owners or operators of such sources to conduct monitoring that provide a reasonable assurance of compliance with applicable requirements under the CAA. The effective date of this rule is November 21, 1997.

#### 1. CAM Applicability

According to §64.2(a), CAM applies to <u>each</u> pollutant specific emission unit (PSEU) located at a major source which is required to obtain a Part 71 permit if the unit satisfies all of the following criteria:

<sup>&</sup>lt;sup>2</sup> See EPA's May 16, 1995 guidance document titled "Potential to Emit for MACT Standards -- Guidance on Timing Issues"

- (a) The unit is subject to an emission limitation or standard for the applicable regulated air pollutant other than an emissions limitation or standard that is exempt under §64.2(b)(1);
- (b) The unit uses a control device to achieve compliance with any such limit or standard; and
- (c) The unit has pre-control device emissions of the applicable regulated pollutant that are equal to or greater than 100 percent of the amount, in tpy, required for a source to be classified as a major Title V source.
- 2. CAM Plan Submittal Deadlines
  - (a) <u>Large pollutant-specific emissions units</u>. A CAM plan submittal for all PSEUs with the PTE (taking into account control devices) of any one regulated air pollutant in an amount equal to or greater than 100 percent of the amount, in tpy, required for a source to be classified as a major source, is due at the following times:
    - (i) On or after April 20, 1998, if by that date, a Part 71 application has either:
      - (A) Not been filed; or
      - (B) Not yet been determined to be complete.
    - (ii) On or after April 20, 1998, if a Part 71 permit application for a significant modification is submitted with respect to those PSEUs for which the requested permit revision is applicable; or
    - (iii) Upon application for a renewed Part 71 permit and a CAM plan has not yet been submitted with an initial or a significant modification application, as specified above.
  - (b) <u>Other pollutant-specific emissions units</u>. A CAM Plan must be submitted for all PSEUs that are not large PSEUs, but are subject to this rule, upon application for a Part 71 renewal permit.

Based on the information provided by XTO in their Part 71 application, dehydration unit RBD-1 is a PSEU with pre-controlled emissions that equal or exceed 100 percent of VOC and HAP thresholds. However, RBD-1 is subject to the major source requirements of 40 CFR part 63, subpart HH and thus meets the exemption criteria of §64.2(b)(1). Since no other PSEUs at the facility have pre-controlled emissions that exceed or equal 100 percent of major source thresholds, River Bend is not subject to CAM requirements.

#### S. 40 CFR Part 68: Chemical Accident Prevention Provisions

This rule applies to stationary sources that manufacture, process, use, store or otherwise handle more than the threshold quantity of a regulated substance in a process. Regulated substances include 77 toxic and 63 flammable substances which are potentially present in the natural gas

stream entering the facility and in the storage vessels located at the facility. The quantity of a regulated substance in a process is determined according to the procedures presented under §68.115. Sections 68.115(b)(l) and (2)(i) indicate that toxic and flammable substances in a mixture do not need to be considered when determining whether more than a threshold quantity is present at a stationary source if the concentration of the substance is below one percent by weight of the mixture. Section 68.115(b)(2)(iii) indicates that prior to entry into a natural gas processing plant, regulated substances in naturally occurring hydrocarbon mixtures need not be considered when determining whether more than a threshold quantity is present at a stationary source. Naturally occurring hydrocarbon mixtures include condensate, field gas, and produced water. Based on the updated information provided in XTO's application, River Bend, RBU 6-15E wellsite, RBU 7-15E wellsite, RBU 11-15E wellsite, and Tap-1 Compressor Station do not have regulated substances above the threshold quantities in this rule; and therefore, they are not subject to the requirement to develop and submit a risk management plan.

#### T. 40 CFR Part 71: Emergency Provisions

In this draft initial Part 71 permit, the EPA is proposing to not include the "Emergency Provisions" contained in the regulations in 40 CFR part 71 applicable to federal operating permit programs. Specifically, in the regulations discussing the contents of Title V operating permits issued under the federal operating permits program, 40 CFR 71.6(g) provides that certain "emergency" events can constitute "an affirmative defense in an action brought for non-compliance" with certain emission limits contained in the permit, when certain conditions are met. However, nothing in the CAA or 40 CFR part 71 requires that these types of emergency provisions be included as conditions in operating permits issued by the EPA, and for the reasons discussed below, we are exercising our discretion not to include them in this draft initial Part 71 permit.

In 2014, a federal court ruled that the CAA does not authorize the EPA to create affirmative defense provisions applicable to certain enforcement actions. See NRDC v. EPA, 749 F.3d 1055 (D.C. Cir. 2014). The court ruled that sections 113 and 304 of the CAA preclude the EPA from creating affirmative defense provisions in the Agency's regulations imposing HAP emission limits on sources. The court concluded that those affirmative defense provisions purported to alter the jurisdiction of federal courts generally provided in the CAA to assess liability and impose penalties for violations of emission limits in private civil enforcement cases, and that the CAA did not provide authority for the EPA to do so. Consistent with the reasoning in the NRDC v. EPA court decision, the EPA has determined that it is also not appropriate under the CAA to alter the jurisdiction of the federal courts through affirmative defenses provisions in its Title V regulations, such as those contained in the emergency provisions of 40 CFR 71.6(g), and that such provisions are inconsistent with the CAA. In light of the above-described D.C. Circuit Court decision and the EPA's obligation to issue Title V permits consistent with the applicable requirements of the Act, it is no longer appropriate to propose to include permit conditions modeled on affirmative defenses such as those contained in the emergency provisions of 40 CFR 71.6(g) in operating permits issued by the EPA.

Although the EPA views the Part 71 emergency provisions as discretionary (i.e., neither the

statute nor the regulations mandate their inclusion in Part 71 permits), the EPA is considering whether to make changes to the Part 71 Permit Program regulations in order to ensure the EPA's regulations are consistent with the recent D.C. Circuit decisions; and if so, how best to make those changes. Until that time, as part of the normal permitting process, it is appropriate for the EPA permitting authorities to rely on the discretionary nature of the existing emergency provisions to choose not to continue to include permit terms modeled on those provisions in Part 71 permits that we are issuing in the first instance or renewing. By doing so, we are not only fulfilling the EPA's obligation to issue Title V permits consistent with the applicable requirements of the Act, but we will also help ensure that permittee's do not continue to rely on permit provisions that have been found legally invalid.

Accordingly, in this draft initial Part 71 permit, the EPA is exercising its discretion to not include the "Emergency Provisions," in order to ensure the Part 71 permit is in compliance with the applicable requirements of the Act.

#### III. <u>EPA Authority</u>

Title V of the CAA requires that the EPA promulgate, administer and enforce a federal operating permit program when a state does not submit an approvable program within the time frame set by Title V or does not adequately administer and enforce its EPA-approved program. On July 1, 1996 (61 FR 34202), the EPA adopted regulations codified at 40 CFR part 71 setting forth the procedures and terms under which the agency would administer a federal operating permit program. These regulations were updated on February 19, 1999 (64 FR 8247) to incorporate the EPA's approach for issuing federal operating permits to stationary sources in Indian country.

As described in 40 CFR 71.4(a), the EPA will implement a Part 71 program in areas where a state, local, or tribal agency has not developed an approved Part 70 program. Unlike states, tribes are not required to develop operating permits programs, though the EPA encourages tribes to do so. See, e.g., Indian Tribes: Air Quality Planning and Management (63 FR 7253, February 12, 1998) (also known as the "Tribal Authority Rule"). Therefore, within Indian country, the EPA will administer and enforce a Part 71 federal operating permit program for stationary sources until a tribe receives approval to administer their own operating permit program. The Ute Indian Tribe has not applied for or received delegation of Part 71 or approval to administer their own operating permit program under 40 CFR part 70, so the EPA administers Part 71 within the exterior boundaries of the Uintah and Ouray Indian Reservation.

#### IV. <u>Use of All Credible Evidence</u>

Determinations of deviations, continuous or intermittent compliance status, or violations of the permit are not limited to the testing or monitoring methods required by the underlying regulations or this permit; other credible evidence (including any evidence admissible under the

Federal Rules of Evidence) must be considered by the Permittee and the EPA in such determinations.

#### V. <u>Public Participation</u>

#### A. Public Notice

As described in 40 CFR 71.11(a)(5), all Part 71 draft operating permits shall be publicly noticed and made available for public comment. The public notice of permit actions and public comment period is described in 40 CFR 71(d).

There will be a 30-day public comment period for actions pertaining to a draft permit. Notification will be given for this draft permit by providing notice to the permit applicant, the affected state, tribal and local air pollution control agencies, the city and county executives, and the state and federal land managers which have jurisdiction over the area where the source is located, as well as to all persons who have submitted a request to be included on the mailing list.

If you would like to be added to our mailing list to be informed of future Part 71 permit actions or other CAA permits issued in Indian country, please send an email using the link for the Region 8 CAA public comment opportunities provided at <a href="https://www.epa.gov/caa-permitting/caa-permit-public-comment-opportunities-region-8">https://www.epa.gov/caa-permitting/caa-permit-public-comment-opportunities-region-8</a>, or send your name and address to the contact listed below:

Part 71 Permitting Lead U.S. Environmental Protection Agency, Region 8 1595 Wynkoop Street (8P-AR) Denver, Colorado 80202-1129

Public notice will be provided at <u>https://www.epa.gov/caa-permitting/caa-permit-public-</u> <u>comment-opportunities-region-8</u> giving opportunity for public comment on the draft permit and the opportunity to request a public hearing.

#### B. Opportunity to Comment

Members of the public are given an opportunity to review a copy of the draft permit prepared by the EPA, the application, this Statement of Basis for the draft permit and all supporting materials for the draft permit. Copies of these documents are available at:

Uintah County Clerk's Office 147 East Main St #6 Vernal, Utah 84078 Contact: Michael Wilkins, Uintah County Clerk at (435) 781-5361 or <u>mwilkins@co.uintah.ut.us</u>

and

Ute Indian Tribe Energy and Minerals Department Office 988 South 7500 East, Annex Building Fort Duchesne, Utah 84026 Contact: Minnie Grant, Air Coordinator, at (435) 725-4900 or <u>minnieg@utetribe.com</u>

and

U.S. Environmental Protection Agency, Region 8 1595 Wynkoop Street (8P-AR) Denver, Colorado 80202-1129 Contact: Eric Wortman, Environmental Scientist, at (617) 918-1624 or <u>wortman.eric@epa.gov</u>

All documents are available for review at the Region 8 office Monday through Friday from 8:00 a.m. to 4:00 p.m. (excluding federal holidays). Electronic copies of the draft permit, statement of basis and supporting permit record may also be viewed at: https://www.epa.gov/caa-permitting/caa-permit-public-comment-opportunities-region-8.

Any interested person may submit written comments on the draft Part 71 operating permit during the public comment period to the Part 71 Permitting Lead at the address listed in Section A above, or by email using the instructions on the public comment opportunities web site address listed above. All comments will be considered and answered by the EPA in making the final decision on the permit. The EPA keeps a record of the commenters and of the issues raised during the public participation process.

Anyone, including the applicant, who believes any condition of the draft permit is inappropriate should raise all reasonable ascertainable issues and submit all arguments supporting their position by the close of the public comment period. Any supporting materials submitted must be included in full and may not be incorporated by reference, unless the material has already been submitted as part of the administrative record in the same proceeding or consists of state or federal statutes and regulations, EPA documents of general applicability or other generally available reference material.

The final permit will be a public record that can be obtained upon request. A statement of reasons for changes made to the draft permit and responses to comments received will be sent to all persons who comment on the draft permit. The final permit and response to comments document will also be available online at: <u>https://www.epa.gov/caa-permitting/caa-permits-issued-epa-region-8</u>. Anyone may request a copy of the final permit at any time by contacting the Tribal Air Permit Program at (800) 227–8917 or by sending an email to r8airpermitting@epa.gov.

#### C. Opportunity to Request a Hearing

A person may submit a written request for a public hearing to the Part 71 Permitting Lead, U.S. EPA Region 8, by stating the nature of the issues to be raised at the public hearing. Based on the number of hearing requests received, the EPA will hold a public hearing whenever it finds there is a significant degree of public interest in a draft operating permit. The EPA will provide public

notice of the public hearing. If a public hearing is held, any person may submit oral or written statements and data concerning the draft permit.

#### D. Appeal of Permits

Within 30 days after the issuance of a final permit decision, any person who filed comments on the draft permit or participated in the public hearing may petition to the Environmental Appeals Board (EAB) to review any condition of the permit decision. Any person who failed to file comments or participate in the public hearing may petition for administrative review, only if the changes from the draft to the final permit decision or other new grounds were not reasonably foreseeable during the public comment period. The 30-day period to appeal a permit begins with the EPA's service of the notice of the final permit decision.

The petition to appeal a permit must include a statement of the reasons supporting the review, a demonstration that any issues were raised during the public comment period, a demonstration that it was impracticable to raise the objections within the public comment period, or that the grounds for such objections arose after such a period. When appropriate, the petition may include a showing that the condition in question is based on a finding of fact or conclusion of law which is clearly erroneous; or, an exercise of discretion, or an important policy consideration that the EAB should review.

The EAB will issue an order either granting or denying the petition for review, within a reasonable time following the filing of the petition. Public notice of the grant of review will establish a briefing schedule for the appeal and state that any interested person may file an amicus brief. Notice of denial of review will be sent only to the permit applicant and to the person requesting the review. To the extent review is denied, the conditions of the final permit decision become final agency action.

A motion to reconsider a final order shall be filed within ten days after the service of the final order. Every motion must set forth the matters claimed to have been erroneously decided and the nature of the alleged errors. Motions for reconsideration shall be directed to the Administrator rather than the EAB. A motion for reconsideration shall not stay the effective date of the final order unless it is specifically ordered by the EAB.

#### E. Petition to Reopen a Permit for Cause

Any interested person may petition the EPA to reopen a permit for cause, and the EPA may commence a permit reopening on its own initiative. The EPA will only revise, revoke and reissue, or terminate a permit for the reasons specified in 40 CFR 71.7(f) or 71.6(a)(6)(i). All requests must be in writing and must contain facts or reasons supporting the request. If the EPA decides the request is not justified, it will send the requester a brief written response giving a reason for the decision. Denial of these requests is not subject to public notice, comment, or hearings. Denials can be informally appealed to the EAB by a letter briefly setting forth the relevant facts.

United States Environmental Protection Agency Region 8 Air Program 1595 Wynkoop Street Denver, Colorado 80202

#### Air Pollution Control Permit to Operate Title V Operating Permit Program at 40 CFR Part 71

In accordance with the provisions of Title V of the Clean Air Act (CAA) and the Title V Operating Permit Program at 40 CFR part 71 (Part 71) and applicable rules and regulations,

#### XTO Energy, Inc. River Bend Dehydration Site (River Bend)

is authorized to operate air emission units and to conduct other air pollutant emitting activities in accordance with the permit conditions listed in this permit.

This source is authorized to operate at the following location(s):

Uintah and Ouray Indian Reservation, Uintah County, Utah River Bend: Latitude 39.94851N, Longitude 109.77057W Tap 1 Compressor Station: Latitude 39.95027N, Longitude 109.77465W RBU 6-15E Wellsite: Latitude 39.94851N, Longitude 109.77057W RBU 7-15E Wellsite: Latitude 39.95026N, Longitude 109.76701W RBU 11-15E Wellsite: Latitude 39.94478N, Longitude 109.76979W

Terms not otherwise defined in this permit have the meaning assigned to them in the referenced regulations. All terms and conditions of the permit are enforceable by the EPA and citizens under the CAA.

#### **Description:**

Natural gas produced from area wells is compressed at existing offsite locations up to a line pressure of 850 to 1,000 pounds per square inch gauge (psig) and then sent to the River Bend natural gas dehydrator site through 6" and 10" gathering flowlines. Once the gas enters the site, it flows through two (2) two-phase separators in order to reduce water and condensable liquids content in the gas stream, prior to entry into the triethyle ne glycol (TEG) dehydration system. The liquid produced from the inlet separators is then sent to a 30,000-gallon pressurized flash separator. The purpose of the flash separator is to flash the high-pressured liquids and route the flash gas back to the high-pressure gathering system, thereby eliminating the flash emissions from being vented to the atmosphere. The pressurized flash separator is then set to discharge the separated liquids at a pressure of approximately 50 psig into either of the onsite 400-barrel atmospheric liquid storage tanks. The 400-barrel liquid storage tanks are used for temporary storage prior to the liquids being hauled offsite by tanker truck.

Following the inlet separation, the gas is discharged into the TEG natural gas dehydration system for further water removal from the natural gas stream. The TEG natural gas dehydration system consists of a 45 million standard cubic feet per day (MMscfd) capacity natural gas TEG dehydration process still vent, a 1.5 million British thermal units per hour (MMBTU/hr) natural gas-fired process heater and a TEG regenerator. The TEG natural gas dehydration system emissions are controlled by a thermal oxidizer. The TEG natural gas dehydration system utilizes a benzene, toluene, ethylbenzene and xylene (BTEX) emissions control system that

captures vapors from the still vent and the flash tank and sends the vapors to the thermal oxidizer for destruction. Following dehydration, the natural gas stream leaves the site via a metered sales pipeline. The station has on-site electrical power supplied by a 65 kilowatt (kW) Capstone natural-gas fired microturbine-driven generator. In addition, the pneumatic control devices are operated by plant air supplied by the on-site electric driven air compressor.

Other production equipment located at River Bend consists of three (3) production wellsites (RBU 6-15E, RBU 7-15E, and RBU 11-15E). Each wellsite includes  $a \le 400$ -barrel storage tank, natural gas-fired heaters, as well as minimal fugitive and truck loading emissions. The RBU 11-15E wellsite also operates a small 0.20 MMscfd capacity TEG natural gas dehydration system. The RBU 6-15E wellsite is located within the property boundaries of River Bend but does not discharge directly into River Bend. The RBU 7-15E and RBU 11-15E wellsites are located on a separate surface sites within a quarter mile of River Bend. The gas produced at the three (3) wellsites enters the common field gathering system and ultimately into off-site compressor stations. One of these compressor stations, the Tap-1 Compressor Station (Tap-1), is also located within a quarter mile of River Bend and consists of two (2) natural gas-fired compression engines, two (2) condensate tanks, natural gas-fired heaters, truck loading emissions and fugitive emissions.

\*Insignificant emission units can change at the facility as long as the new or replacement units meet the criteria for insignificance, and XTO supplies information as required under 40 CFR part 71 and this permit. The insignificant emission unit status does not exempt these emission units from the requirements of any standards that may apply under 40 CFR parts 60 or 63. \*\*MMBtu = million British thermal units.

#### II. <u>National Emission Standards for Hazardous Air Pollutants from Oil and Natural</u> Gas Production Facilities: 40 CFR Part 63, Subpart HH

#### A. Applicability [40 CFR 63.760]

- 1. 40 CFR part 63, subpart HH applies to the 45 MMscfd TEG dehydration unit identified as RBD-1 in Table 2 of this permit. [63.760(b)(1)(i)]
- 2. Notwithstanding conditions in this permit, the Permittee shall comply with all applicable requirements of 40 CFR part 63, subpart HH.

#### B. General Standards [40 CFR 63.764]

- 1. The General Provisions at 40 CFR part 63, subpart A apply as specified in Table 2 of 40 CFR part 63, subpart HH. Notwithstanding conditions in this permit, the Permittee shall comply with all applicable requirements of 40 CFR part 63, subpart A.
- 2. All reports required under 40 CFR part 63, subpart A shall be sent to the EPA at the following address as listed in §63.13:

Director, Air and Toxics Technical Enforcement Program, 8ENF-AT Office of Enforcement, Compliance and Environmental Justice 1595 Wynkoop Street, Denver, CO 80202–1129

- 3. Except as specified in §63.764(e), the Permittee shall comply with the following requirements for the glycol dehydration units:
  - (a) The control requirements for glycol dehydration unit process vents specified in §63.765;
  - (b) The monitoring requirements specified in §63.773; and
  - (c) The recordkeeping and reporting requirements specified in §§63.774 and 63.775.
- 4. At all times the Permittee shall operate and maintain any glycol dehydration unit, including associated air pollution control equipment and monitoring equipment, in a manner consistent with safety and good air pollution control practices for minimizing emissions. Determination of whether such operation and maintenance procedures are being used will be based on information available to the EPA which may include, but is not limited to, monitoring results, review of operation and maintenance procedures, review of operation and maintenance records and inspection of the unit.

#### C. Glycol Dehydration Unit Process Vent Standards [40 CFR 63.765]

The Permittee shall comply with the control equipment requirements as follows:

- 1. Except as specified in §63.765(c), the Permittee shall comply with the applicable requirements for controlling air emissions specified in §63.765(b).
- 2. For each closed-vent system, the Permittee shall comply with the closed-vent system requirements specified in §63.771(c);
- 3. For each control device, the Permittee shall comply with the applicable control device requirements specified in §63.771(d) or §63.771(f); and
- 4. For each process modification made to comply with the glycol dehydration unit process vent standards at §63.765(c)(2), the Permittee shall comply with the process modification standards specified in §63.771(e).

#### D. Test Methods, Compliance Procedures and Compliance Determination Requirements [40 CFR 63.772]

The Permittee shall determine compliance with the requirements of 40 CFR part 63, subpart HH using the applicable test methods and compliance procedures specified in §63.772.

#### E. Inspection and Monitoring Requirements [40 CFR 63.773]

- 1. For each closed-vent system or cover required for the Permittee to comply with 40 CFR part 63, subpart HH, the Permittee shall comply with the inspection and monitoring requirements specified in §63.773(c).
- 2. For each control device required for the Permittee to comply with 40 CFR part 63, subpart HH, the Permittee shall comply with the inspection and monitoring requirements as specified in §63.773(b) or §63.773(d).

#### F. Recordkeeping Requirements [40 CFR 63.774]

- 1. The recordkeeping provisions of 40 CFR part 63, subpart A, that apply and those that do not apply to the Permittee are listed in Table 2 of 40 CFR part 63, subpart HH.
- 2. The Permittee shall maintain the records specified in §§63.774(b), (c), (d), (e), (g) and (h).
- 3. Except as specified in §§63.774(c), 63.774(d) and 63.774(f), the Permittee shall maintain the records specified in §63.774(b).
- 4. If compliance with the benzene emission limit specified in §63.765(b)(1)(ii) is elected, the Permittee shall document, to the Administrator's satisfaction, the items in §63.774(c).
- 5. For glycol dehydration units operating at the source that meet the exemption criteria in §63.764(e)(1)(i) or §63.764(e)(1)(ii), the Permittee shall maintain records as specified in §63.774(d). The Permittee shall maintain the records as specified in §63.774(d) for emission unit RBU 11-15E D-1 as identified in Table 2 of this permit.
- 6. The Permittee shall keep records of the requirements of §63.774(e) when using a flare to comply with §63.771(d).
- 7. The Permittee shall maintain records, pursuant to §63.774(g), of the occurrence and duration of each malfunction of operation (i.e., process equipment) or the air pollution control equipment and monitoring equipment. The Permittee shall maintain records of actions taken during periods of malfunction to minimize emissions in accordance with §63.764(j), including corrective actions to restore malfunctioning process and air pollution control and monitoring equipment to its normal or usual manner of operation.
- 8. The Permittee shall keep records of the requirements of §63.774(h) when using a control device whose model is tested under §63.772(h) to comply with §§63.771(d), (e)(3)(ii) and (f)(1).

9. The Permittee shall keep records, pursuant to §63.774(i), of the date the semi-annual maintenance inspection required under §63.773(b) is performed when using a control device whose model was tested under §63.772(h).

#### G. Reporting Requirements [40 CFR 63.775]

- 1. The reporting provisions of subpart A of this part, that apply and those that do not apply to the Permittee are listed in Table 2 of this subpart.
- 2. The Permittee shall submit the information specified in §63.775(b).
- 3. The Permittee shall submit Notification of Compliance Status Reports as specified in §63.775(d).
- 4. The Permittee shall submit Periodic Reports as specified in §63.775(e).
- 5. The Permittee shall submit notifications of process changes as specified in §63.775(f).
- 6. The Permittee shall comply with any applicable electronic reporting provisions specified at §63.775(g).

#### III. National Emission Standards for Hazardous Air Pollutants for Reciprocating Internal Combustion Engines: 40 CFR Part 63, Subpart <u>7222</u>

#### A. Applicability [40 CFR 63.6585]

40 CFR part 63, subpart ZZZZ applies to the following emission units:

- 1. Caterpillar 3516 LE engine identified as T1C-1 in Table 2 of this permit.
- 2. Caterpillar 3516 LE engine identified as T1C-2 in Table 2 of this permit.

#### B. General Provisions [40 CFR 63.6665]

- 1. The General Provisions at 40 CFR part 63, subpart A apply as specified in Table 8 of 40 CFR part 63, subpart ZZZZ. Notwithstanding conditions in this permit, the Permittee shall comply with all applicable requirements of 40 CFR part 63, subpart A.
- 2. All reports required under 40 CFR part 63, subpart A shall be sent to the EPA at the following address as listed in §63.13:

Director, Air and Toxics Technical Enforcement Program, 8ENF–AT Office of Enforcement, Compliance and Environmental Justice 1595 Wynkoop Street, Denver, CO 80202–1129

# C. Operation and Maintenance Requirements [40 CFR 63.6603, 63.6605, and 63.6625]

1. Engine units T1C-1 and T1C-2 are subject to the requirements for existing nonemergency spark ignition (SI) four-stroke lean-burn (4SLB) remote stationary reciprocating internal combustion engines (RICE) > 500 site-rated hp at an area source of HAP constructed prior to June 12, 2006 of 40 CFR part 63, subpart ZZZZ. The permittee shall evaluate the status of engine units T1C-1 and T1C-2 every 12 months to determine the engines meet the definition of remote stationary RICE. If the annual evaluation of the remote status of an engine indicates that the stationary RICE no longer meets the definition of remote stationary RICE in 40 CFR 63.6675, the permittee shall comply with all of the requirements for existing non-emergency ignition (SI) fourstroke lean-burn (4SLB) stationary RICE > 500 site-rated hp at area sources of hazardous air pollutants (HAP) that are not remote stationary RICE within 1 year of the evaluation and apply for a modification to this permit.

- 2. The permittee shall comply with the requirements in Table 2d of 40 CFR part 63, subpart ZZZZ as specified in §63.6603(a).
- 3. The permittee shall comply with the emission limitations, operating limitations and other requirements in 40 CFR part 63, subpart ZZZZ at all times.
- 4. The Permittee shall operate and maintain any affected source, including associated air pollution control equipment and monitoring equipment, in a manner consistent with safety and good air pollution control practices for minimizing emissions at all times. The general duty to minimize emissions does not require the Permittee to make any further efforts to reduce emissions if the required levels have been achieved. Determination of whether such operations and maintenance procedures are being used will be based on information available to the EPA, which may include, but is not limited to, monitoring results, review of operation and maintenance procedures, review of operation and maintenance records and inspection of the source.
- 5. The Permittee shall meet the monitoring, installation, collection, operation and maintenance requirements as specified in §63.6625.

#### D. Continuous Compliance Requirements [40 CFR 63.6640]

1. The permittee shall demonstrate continuous compliance with the emission limitations, operating limitations and other requirements in Table 2d that apply according to the methods specified in Table 6 of 40 CFR part 63, subpart ZZZZ.

# E. Recordkeeping and Reporting Requirements [40 CFR 63.6603, 63.6640, 63.6655, and 63.6660]

- 1. The Permittee shall keep records as specified in §63.6655.
- 2. The Permittee shall keep the records in the format and for the duration as specified in \$63.6660.
- 3. The permittee shall keep a record of initial and annual evaluations of the remote status of the stationary RICE. The initial evaluation must indicate that the stationary RICE

met the definition of remote stationary RICE in § 63.6675 as of the initial compliance date, October 19, 2013. The annual evaluations are thereafter required to be performed every 12 months.

- 4. The permittee shall report each instance in which an operating limit in Table 2d of 40 CFR part 63, subpart ZZZZ was not met. These instances are deviations from the operating limitations and must be reported according to the reporting requirements of \$63.6650(f) and in the semiannual monitoring report required under the Facility-Wide Reporting Requirements section of this permit.
- 5. The permittee shall report each instance in which the requirements in Table 8 of 40 CFR part 63, subpart ZZZZ, were not met.

# IV. Facility-Wide Requirements [40 CFR 71.6(a)(1)]

Conditions in this section of this permit apply to all emissions units located at the source, including any units not specifically listed in Table 2 and Table 3 of the Facility Emission Points section of this permit.

# A. Recordkeeping Requirements [40 CFR 71.6(a)(3)(ii)]

The Permittee shall comply with the following generally applicable recordkeeping requirements:

- 1. If the Permittee determines that his or her stationary source that emits (or has the potential to emit, without considering controls) one or more HAP is not subject to a relevant standard or other requirement established under 40 CFR part 63, the Permittee shall keep a record of the applicability determination on site at the source for a period of 5 years after the determination, or until the source changes its operations to become an affected source, whichever comes first. The record of the applicability determination shall include an analysis (or other information) that demonstrates why the Permittee believes the source is unaffected (e.g., because the source is an area source). [40 CFR 63.10(b)(3)]
- 2. The permittee is the owner or operator of a TEG dehydration unit that is exempt from the control requirements under §63.764(e) (Unit RBU 11-15E D-1). The permittee shall retain each determination used to demonstrate that actual flowrate of natural gas throughput is less than 85,000 scm/day (3,000,000 scf/day) or the actual average benzene emissions are below 1 tpy. [40 CFR 63.764(e)(1), 63.772(b)(2) and 63.774(d)(1)]
- 3. Records shall be kept of off permit changes, as required by the Off Permit Changes section of this permit.

# B. Reporting Requirements [40 CFR 71.6(a)(3)(iii)]

1. The Permittee shall submit to the EPA all reports of any required monitoring under this permit semiannually. The first report shall cover the period from the effective date of this permit through December 31, 2017. Thereafter, the report shall be submitted semi-

annually, by April 1<sup>st</sup> and October 1<sup>st</sup> of each year. The report due on April 1<sup>st</sup> shall cover the 6-month period ending on the last day of December before the report is due. The report due on October 1<sup>st</sup> shall cover the 6-month period ending on the last day of June before the report is due. All instances of deviations from permit requirements shall be clearly identified in such reports. All required reports shall be certified by a responsible official consistent with the Submissions section of this permit.

To help Part 71 Permittees meet reporting responsibilities, the EPA has developed a form "SIXMON" for 6-month monitoring reports. The form may be found on the EPA's website at: <u>https://www.epa.gov/title-v-operating-permits/epa-issued-operating-permits</u>]

- 2. "Deviation" means any situation in which an emissions unit fails to meet a permit term or condition. A deviation is not always a violation. A deviation can be determined by observation or through review of data obtained from any testing, monitoring, or recordkeeping established in accordance with §71.6(a)(3)(i) and (a)(3)(ii). For a situation lasting more than 24 hours which constitutes a deviation, each 24-hour period is considered a separate deviation. Included in the meaning of deviation are any of the following:
  - (a) A situation where emissions exceed an emission limitation or standard;
  - (b) A situation where process or emissions control device parameter values indicate that an emission limitation or standard has not been met; or
  - (c) A situation in which observations or data collected demonstrate noncompliance with an emission limitation or standard or any work practice or operating condition required by the permit.
- 3. The Permittee shall promptly report to the EPA deviations from permit requirements, including those attributable to upset conditions as defined in this permit, the probable cause of such deviations, and any corrective actions or preventive measures taken. "Prompt" is defined as follows:
  - (a) Any definition of "prompt" or a specific time frame for reporting deviations provided in an underlying applicable requirement as identified in this permit.
  - (b) Where the underlying applicable requirement fails to address the time frame for reporting deviations, reports of deviations will be submitted based on the following schedule:
    - (i) For emissions of a HAP or a toxic air pollutant (as identified in the applicable regulation) that continue for more than an hour in excess of permit requirements, the report must be made within 24 hours of the occurrence.
    - (ii) For emissions of any regulated air pollutant, excluding a HAP or a toxic air pollutant that continues for more than 2 hours in excess of permit requirements, the report must be made within 48 hours.
    - (iii) For all other deviations from permit requirements, the report shall be submitted with the semi-annual monitoring report.

(c) If any of the conditions in (i) or (ii) of paragraph (b) above are met, the Permittee shall notify the EPA by telephone (1-800-227-6312), facsimile (303-312-6409), or by email to <u>r8airreportenforcement@epa.gov</u> based on the timetables listed above. [Notification must specify that this notification is a deviation report for a Part 71 permit]. A written notice, certified consistent with the Submissions section of this permit must be submitted within 10 working days of the occurrence. All deviations reported under this section must also be identified in the 6-month report required under Condition 1 in this section of this permit.

[Explanatory note: To help Part 71 Permittees meet reporting responsibilities, the EPA has developed a form "PDR" for prompt deviation reporting. The form may be found on the EPA's website at: <u>https://www.epa.gov/title-v-operating-permits/epa-issued-operating-permits</u>]

#### V. General Provisions

#### A. Annual Fee Payment [40 CFR 71.9]

- 1. The Permittee shall pay an annual permit fee in accordance with the procedures outlined below.
- 2. The Permittee shall pay the annual permit fee each year no later than April 1<sup>st</sup>. The fee shall cover the previous calendar year.
- 3. The fee payment shall be in United States currency and shall be paid by money order, bank draft, certified check, corporate check, or electronic funds transfer payable to the order of the U.S. Environmental Protection Agency.
- 4. The Permittee shall send fee payment and a completed fee filing form to:

| For regular U.S. Postal Service mail | For <u>non-U.S. Postal Service express</u> |
|--------------------------------------|--------------------------------------------|
|                                      | Mail (FedEx, Airborne, DHL, and UPS)       |
|                                      |                                            |
| U.S. Environmental Protection Agency | U.S. Bank                                  |
| FOIA and Miscellaneous Payments      | Government Lockbox 979078                  |
| Cincinnati Finance Center            | U.S. EPA FOIA & Misc. Payments             |
| P.O. Box 979078                      | 1005 Convention Plaza                      |
| St. Louis, MO 63197-9000             | SL-MO-C2-GL                                |
|                                      | St. Louis, MO 63101                        |

5. The Permittee shall send an updated fee calculation worksheet form and a photocopy of each fee payment check (or other confirmation of actual fee paid) submitted annually by the same deadline as required for fee payment to the address listed in the Submissions section of this permit.

[Explanatory note: The fee filing form "FF" and the fee calculation worksheet form "FEE" may be found on the EPA's website at: <u>https://www.epa.gov/title-v-operating-permits/epa-issued-operating-permits</u>]

- 6. Basis for calculating annual fee:
  - (a) The annual emissions fee shall be calculated by multiplying the total tons of actual emissions of all "regulated pollutants (for fee calculation)" emitted from the source by the presumptive emissions fee (in dollars per ton) in effect at the time of calculation.
    - (i) "Actual emissions" means the actual rate of emissions in tpy of any regulated pollutant (for fee calculation) emitted from a Part 71 source over the preceding calendar year. Actual emissions shall be calculated using each emissions unit's actual operating hours, production rates, inplace control equipment, and types of materials processed, stored, or combusted during the preceding calendar year.
    - (ii) Actual emissions shall be computed using methods required by the permit for determining compliance, such as monitoring or source testing data.
    - (iii) If actual emissions cannot be determined using the compliance methods in the permit, the Permittee shall use other federally recognized procedures.

# [Explanatory note: The presumptive fee amount is revised each calendar year to account for inflation, and it is available from the EPA prior to the start of each calendar year.]

- (b) The annual emissions fee shall be increased by a GHG fee adjustment for any source that has initiated an activity listed in the table at §71.9(c)(8) since the fee was last paid. The GHG fee adjustment shall be equal to the set fee provided in the table at §71.9(c)(8) for each activity that has been initiated since the fee was last paid.
- (c) The Permittee shall exclude the following emissions from the calculation of fees:

(i) The amount of actual emissions of each regulated pollutant (for fee calculation) that the source emits in excess of 4,000 tpy;

- (ii) Actual emissions of any regulated pollutant (for fee calculation) already included in the fee calculation; and
- (iii) The quantity of actual emissions (for fee calculation) of insignificant activities [defined in \$71.5(c)(11)(i)] or of insignificant emissions levels from emissions at the source identified in the Permittee's application pursuant to \$71.5(c)(11)(i).
- 7. Fee calculation worksheets shall be certified as to truth, accuracy, and completeness by a responsible official.

[Explanatory note: The fee calculation worksheet form already incorporates a section to help you meet this responsibility.]

8. The Permittee shall retain fee calculation worksheets and other emissions-related data used to determine fee payment for 5 years following submittal of fee payment. [Emission-related data include, for example, emissions-related forms provided by the

EPA and used by the Permittee for fee calculation purposes, emissions-related spreadsheets, and emissions-related data, such as records of emissions monitoring data and related support information required to be kept in accordance with §71.6(a)(3)(ii).]

- 9. Failure of the Permittee to pay fees in a timely manner shall subject the Permittee to assessment of penalties and interest in accordance with §71.9(l).
- 10. When notified by the EPA of underpayment of fees, the Permittee shall remit full payment within 30 days of receipt of notification.
- 11. A Permittee who thinks an EPA-assessed fee is in error and who wishes to challenge such fee, shall provide a written explanation of the alleged error to the EPA along with full payment of the EPA-assessed fee.

### B. Annual Emissions Inventory [40 CFR 71.9(h)(1) and (2)]

- 1. The Permittee shall submit an annual emissions report of its actual emissions for both criteria pollutants and regulated HAPs for this source for the preceding calendar year for fee assessment purposes. The annual emissions report shall be certified by a responsible official and shall be submitted each year to the EPA by April 1<sup>st</sup>.
- 2. The annual emissions report shall be submitted to the EPA at the address listed in the Submissions section of this permit.

[Explanatory note: An annual emissions report, required at the same time as the fee calculation worksheet by §71.9(h), has been incorporated into the fee calculation worksheet form as a convenience.]

# C. Compliance Requirements [40 CFR 71.6(a)(6), Section 113(a) and 113(e)(1) of the CAA, and 40 CFR 51.212, 52.12, 52.33, 60.11(g), 61.12]

- 1. Compliance with the Permit
  - (a) The Permittee must comply with all conditions of this Part 71 permit. Any permit noncompliance constitutes a violation of the CAA and is grounds for enforcement action; for permit termination, revocation and reissuance, or modification; or for denial of a permit renewal application.
  - (b) It shall not be a defense for a Permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit.
  - (c) For the purpose of submitting compliance certifications in accordance with §71.6(c)(5), or establishing whether or not a person has violated or is in violation of any requirement of this permit, nothing shall preclude the use, including the exclusive use, of any credible evidence or information, relevant to whether a source would have been in compliance with applicable requirements if the appropriate performance or compliance test or procedure had been performed.

- 2. Compliance Schedule [40 CFR 71.5(c)(8)(iii)]
  - (a) For applicable requirements with which the source is in compliance, the source will continue to comply with such requirements.
  - (b) For applicable requirements that will become effective during the permit term, the source shall meet such requirements on a timely basis.
- 3. Compliance Certifications [40 CFR 71.6(c)(5)]
  - (a) The Permittee shall submit to the EPA a certification of compliance with permit terms and conditions, including emission limitations, standards, or work practices annually by April 1<sup>st</sup>, and shall cover the same 12-month period as the two consecutive semi-annual monitoring reports.

[Explanatory note: To help Part 71 Permittees meet reporting responsibilities, the EPA has developed a reporting form for annual compliance certifications. The form may be found on the EPA's website at: <u>https://www.epa.gov/title-v-operating-permits/epa-issued-operating-permits</u>]

- (b) The compliance certification shall be certified as to truth, accuracy, and completeness by a responsible official consistent with §71.5(d).
- (c) The certification shall include the following:
  - (i) Identification of each permit term or condition that is the basis of the certification;
  - (ii) The identification of the method(s) or other means used for determining the compliance status of each term and condition during the certification period, and whether such methods or other means provide continuous or intermittent data. Such methods and other means shall include, at a minimum, the methods and means required in this permit. If necessary, the Permittee also shall identify any other material information that must be included in the certification to comply with section 113(c)(2) of the CAA, which prohibits knowingly making a false certification or omitting material information;
  - (iii) The status of compliance with each term and condition of the permit for the period covered by the certification based on the method or means designated in (ii) above. The certification shall identify each deviation and take it into account in the compliance certification;
  - (iv) Such other facts as the EPA may require to determine the compliance status of the source; and
  - (v) Whether compliance with each permit term was continuous or intermittent.

# D. Duty to Provide and Supplement Information [40 CFR 71.6(a)(6)(v), 71.5(a)(3), and 71.5(b)]

1. The Permittee shall furnish to the EPA, within a reasonable time, any information that the EPA may request in writing to determine whether cause exists for modifying,

revoking, and reissuing, or terminating the permit, or to determine compliance with the permit. Upon request, the Permittee shall also furnish to the EPA copies of records that are required to be kept pursuant to the terms of the permit, including information claimed to be confidential. Information claimed to be confidential must be accompanied by a claim of confidentiality according to the provisions of 40 CFR part 2, subpart B.

2. The Permittee, upon becoming aware that any relevant facts were omitted or incorrect information was submitted in the permit application, shall promptly submit such supplementary facts or corrected information. In addition, a Permittee shall provide additional information as necessary to address any requirements that become applicable after the date a complete application is filed, but prior to release of a draft permit.

### E. Submissions [40 CFR 71.5(d), 71.6(c)(1) and 71.9(h)(2)]

1. Any document (application form, report, compliance certification, etc.) required to be submitted under this permit shall be certified by a responsible official as to truth, accuracy, and completeness. Such certifications shall state that based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete.

[Explanatory note: the EPA has developed a reporting form "CTAC" for certifying truth, accuracy and completeness of Part 71 submissions. The form may be found on the EPA's website at: https://www.epa.gov/title-v-operating-permits/epa-issued-operating-permits]

2. All fee calculation worksheets and applications for renewals and permit modifications shall be submitted to:

Part 71 Permit Contact, Air Program, 8P-AR U.S. Environmental Protection Agency, 1595 Wynkoop Street Denver, Colorado 80202

3. Except where otherwise specified, all reports, test data, monitoring data, notifications, and compliance certifications shall be submitted to:

Director, Air Toxics and Technical Enforcement Program, 8ENF-AT U.S. Environmental Protection Agency, 1595 Wynkoop Street Denver, Colorado 80202

#### F. Severability Clause [40 CFR 71.6(a)(5)]

The provisions of this permit are severable, and in the event of any challenge to any portion of this permit, or if any portion is held invalid, the remaining permit conditions shall remain valid and in force.

### G. Permit Actions [40 CFR 71.6(a)(6)(iii)]

This permit may be modified, revoked, reopened, and reissued, or terminated for cause. The filing of a request by the Permittee for a permit modification, revocation and reissuance, or termination, or of a notification of planned changes or anticipated noncompliance does not stay any permit condition.

#### H. Administrative Permit Amendments [40 CFR 71.7(d)]

The Permittee may request the use of administrative permit amendment procedures for a permit revision that:

- 1. Corrects typographical errors;
- 2. Identifies a change in the name, address, or phone number of any person identified in the permit, or provides a similar minor administrative change at the source;
- 3. Requires more frequent monitoring or reporting by the Permittee;
- 4. Allows for a change in ownership or operational control of a source where the EPA determines that no other change in the permit is necessary, provided that a written agreement containing a specific date for transfer of permit responsibility, coverage, and liability between the current and new Permittee has been submitted to the EPA;
- 5. Incorporates into the Part 71 permit the requirements from preconstruction review permits authorized under an EPA-approved program, provided that such a program meets procedural requirements substantially equivalent to the requirements of §§71.7 and 71.8 that would be applicable to the change if it were subject to review as a permit modification, and compliance requirements substantially equivalent to those contained in §71.6; or
- 6. Incorporates any other type of change which the EPA has determined to be similar to those listed in (1) through (5) above.

[Note to Permittee: If 1 through 5 above do not apply, please contact the EPA for a determination of similarity prior to submitting your request for an administrative permit amendment under this provision.]

# I. Minor Permit Modifications [40 CFR 71.7(e)(1)]

- 1. The Permittee may request the use of minor permit modification procedures only for those modifications that:
  - (a) Do not violate any applicable requirement;
  - (b) Do not involve significant changes to existing monitoring, reporting, or recordkeeping requirements in the permit;

- (c) Do not require or change a case-by-case determination of an emission limitation or other standard, or a source-specific determination for temporary sources of ambient impacts, or a visibility or increment analysis;
- (d) Do not seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement and that the source has assumed to avoid an applicable requirement to which the source would otherwise be subject. Such terms and conditions include:
  - (i) A federally enforceable emissions cap assumed to avoid classification as a modification under any provision of Title I; and
  - (ii) An alternative emissions limit approved pursuant to regulations promulgated under Section 112(i)(5) of the CAA;
- (e) Are not modifications under any provision of Title I of the CAA; and
- (f) Are not required to be processed as a significant modification.
- 2. Notwithstanding the list of changes ineligible for minor permit modification procedures in 1 above, minor permit modification procedures may be used for permit modifications involving the use of economic incentives, marketable permits, emissions trading, and other similar approaches, to the extent that such minor permit modification procedures are explicitly provided for in an applicable implementation plan or in applicable requirements promulgated by the EPA.
- 3. An application requesting the use of minor permit modification procedures shall meet the requirements of §71.5(c) and shall include the following:
  - (a) A description of the change, the emissions resulting from the change, and any new applicable requirements that will apply if the change occurs;
  - (b) The source's suggested draft permit;
  - (c) Certification by a responsible official, consistent with §71.5(d), that the proposed modification meets the criteria for use of minor permit modification procedures and a request that such procedures be used; and
  - (d) Completed forms for the permitting authority to use to notify affected States as required under §71.8.
- 4. The source may make the change proposed in its minor permit modification application immediately after it files such application. After the source makes the change allowed by the preceding sentence, and until the permitting authority takes any of the actions authorized by §71.7(e)(1)(iv)(A) through (C), the source must comply with both the applicable requirements governing the change and the proposed permit terms and conditions. During this time period, the source need not comply with the existing permit terms and conditions it seeks to modify. However, if the source fails to comply with its proposed permit terms and conditions during this time period, the existing permit terms and conditions it seeks to modify may be enforced against it.

5. The permit shield under §71.6(f) may not extend to minor permit modifications.

# J. Significant Permit Modifications [40 CFR 71.7(e)(3), 71.8(d) and 71.5(a)(2)]

- 1. The Permittee must request the use of significant permit modification procedures for those modifications that:
  - (a) Do not qualify as minor permit modifications or as administrative amendments;
  - (b) Are significant changes in existing monitoring permit terms or conditions; or
  - (c) Are relaxations of reporting or recordkeeping permit terms or conditions.
- 2. Nothing herein shall be construed to preclude the Permittee from making changes consistent with Part 71 that would render existing permit compliance terms and conditions irrelevant.
- 3. Permittees must meet all requirements of Part 71 for applications, public participation, and review by affected states and tribes for significant permit modifications. For the application to be determined complete, the Permittee must supply all information that is required by §71.5(c) for permit issuance and renewal, but only that information that is related to the proposed change.

# K. Reopening for Cause [40 CFR 71.7(f)]

The permit may be reopened and revised prior to expiration under any of the following circumstances:

- 1. Additional applicable requirements under the CAA become applicable to a major Part 71 source with a remaining permit term of three or more years. Such a reopening shall be completed no later than 18 months after promulgation of the applicable requirement. No such reopening is required if the effective date of the requirement is later than the date on which the permit is due to expire, unless the original permit or any of its terms and conditions have been extended pursuant to §71.7(c)(3);
- 2. Additional requirements (including excess emissions requirements) become applicable to an affected source under the acid rain program. Upon approval by the Administrator, excess emissions offset plans shall be deemed to be incorporated into the permit;
- 3. The EPA determines that the permit contains a material mistake or that inaccurate statements were made in establishing the emissions standards or other terms or conditions of the permit; or
- 4. The EPA determines that the permit must be revised or revoked to assure compliance with the applicable requirements.

# L. Property Rights [40 CFR 71.6(a)(6)(iv)]

This permit does not convey any property rights of any sort, or any exclusive privilege.

### M. Inspection and Entry [40 CFR 71.6(c)(2)]

- 1. Upon presentation of credentials and other documents as may be required by law, the Permittee shall allow the EPA or an authorized representative to perform the following:
- 2. Enter upon the Permittee's premises where a Part 71 source is located or emissionsrelated activity is conducted, or where records must be kept under the conditions of the permit;
- 3. Have access to and copy, at reasonable times, any records that must be kept under the conditions of the permit;
- 4. Inspect at reasonable times any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under the permit; and
- 5. As authorized by the CAA, sample or monitor at reasonable times substances or parameters for the purpose of assuring compliance with the permit or applicable requirements.

# N. Transfer of Ownership or Operation [40 CFR 71.7(d)(1)(iv)]

A change in ownership or operational control of this source may be treated as an administrative permit amendment if the EPA determines no other change in this permit is necessary and provided that a written agreement containing a specific date for transfer of permit responsibility, coverage, and liability between the current and new Permittee has been submitted to the EPA.

# O. Off Permit Changes [40 CFR 71.6(a)(12) and 40 CFR 71.6(a)(3)(ii)]

The Permittee is allowed to make certain changes without a permit revision, provided that the following requirements are met, and that all records required by this section are kept for a period of five (5) years:

- 1. Each change is not addressed or prohibited by this permit;
- 2. Each change shall meet with all applicable requirements and shall not violate any existing permit term or condition;
- 3. Changes under this provision may not include changes subject to any requirement of 40 CFR parts 72 through 78 or modifications under any provision of Title I of the CAA;
- 4. The Permittee must provide contemporaneous written notice to the EPA of each change, except for changes that qualify as insignificant activities under §71.5(c)(11). The written notice must describe each change, the date of the change, any change in emissions, pollutants emitted, and any applicable requirements that would apply as a result of the change;
- 5. The permit shield does not apply to changes made under this provision;

- 6. The Permittee must keep a record describing all changes that result in emissions of any regulated air pollutant subject to any applicable requirement not otherwise regulated under this permit, and the emissions resulting from those changes;
- 7. The notice shall be kept on site and made available to the EPA on request, in accordance with the general recordkeeping provision of this permit; and
- 8. Submittal of the written notice required above shall not constitute a waiver, exemption, or shield from applicability of any applicable standard or prevention of significant deterioration (PSD) permitting requirements under 40 CFR 52.21 that would be triggered by the change.

# P. Permit Expiration and Renewal [40 CFR 71.5(a)(1)(iii), 71.5(a)(2), 71.5(c)(5), 71.6(a)(11), 71.7(b), 71.7(c)(1) and 71.7(c)(3)]

- 1. This permit shall expire upon the earlier occurrence of the following events:
  - (a) Five (5) years elapse from the date of issuance; or
  - (b) The source is issued a Part 70 or Part 71 permit under an EPA-approved or delegated permit program.
- 2. Expiration of this permit terminates the Permittee's right to operate unless a timely and complete permit renewal application has been submitted at least six months but not more than 18 months prior to the date of expiration of this permit.
- 3. If the Permittee submits a timely and complete permit application for renewal, consistent with §71.5(a)(2), but the EPA has failed to issue or deny the renewal permit, then all the terms and conditions of the permit, including any permit shield granted pursuant to §71.6(f) shall remain in effect until the renewal permit has been issued or denied.
- 4. The Permittee's failure to have a Part 71 permit is not a violation of this part until the EPA takes final action on the permit renewal application. This protection shall cease to apply if, subsequent to the completeness determination, the Permittee fails to submit any additional information identified as being needed to process the application by the deadline specified in writing by the EPA.
- 5. Renewal of this permit is subject to the same procedural requirements that apply to initial permit issuance, including those for public participation, affected State, and tribal review.
- 6. The application for renewal shall include the current permit number, description of permit revisions and off permit changes that occurred during the permit term, any applicable requirements that were promulgated and not incorporated into the permit during the permit term, and other information required by the application form.

XTO Energy Inc. Riverbend Dehydration Site EPA Title V – Part 71 Permit V-UO-000026-2011.00 Application Update Information Uintah County, UT

US Certified Mail No: 7016 2140 0000 8376 9895

Part 71 Permit Lead U.S. EPA – Region 8 1595 Wynkoop Street, Mail Code 8P-AR Denver, CO 80202

To Whom It May Concern:

XTO Energy, Inc. (XTO) hereby submits the accompanying application update and supplemental information pursuant to the U.S. EPA's request for the XTO Energy Inc. Riverbend Dehydration Site located in Uintah County, Utah. The information submitted in this update includes the following items:

- Response to EPA Information Request.
- Updated PTE table.
- Updated Regulatory Applicability table.
- Description of relevant modifications.
- Updated map of the River Bend Dehydration site and Surrounding Facilities.
- Updated GIS form.
- Updated EPA EUD forms.
- New EPA EUD forms for the applicable aggregated sources.
- Updated applicable EMISS forms.
- Updated applicable EPA IE forms.
- Updated supporting emissions information.
- Signed EPA CTAC form.

The attached information is certified by the Responsible Official for the XTO Energy Inc. Riverbend Dehydration Site using the completed EPA CTAC form.

Should you have any questions regarding this submittal, please feel free to contact me by phone at 817-885-2672 or by email at craig\_allison@xtoenergy.com.

Sincerely,

Craig Allison EH&S Advisor XTO Energy Inc

WCA/encl Cc: Mr. Eric Wortman, U.S. EPA Region 8 Air Permitting

# CERTIFICATION OF TRUTH, ACCURACY, AND COMPLETENESS (CTAC)

This form must be completed, signed by the "Responsible Official" designated for the facility or emission unit, and sent with each submission of documents (i.e., application forms, updates to applications, reports, or any information required by a part 70 or 71 permit).

| A. Responsible Official                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

# **XTO Uintah Basin Title V Applications – 2016 / 2017 EPA Information Request Response** 3/8/2017

#### **Riverbend Dehy EPA Questions:**

- A. Following up to our phone conversation a couple weeks back, can you please confirm if Tap 1 Compressor Station is still operating and how far away it is from the Riverbend Dehy site? The RBU Dehy Site is approximately 0.19 miles (< ¼ mile) from the Tap-1 Compressor Station. The Tap-1 Compressor Station is still in-service.
- B. In the July 2011 response from XTO to our information request for multiple U&O facilities, XTO (then SGG) provided lat/long coordinates for the Tap 1 Compressor Station and the Riverbend Dehydration site. My preliminary analysis of those coordinates puts the Tap 1 CS at 0.19 miles from Riverbend Dehy. If Tap 1 is < ¼ mile from Riverbend Dehy, we need to evaluate the equipment operating at the sites to determine if Tap 1 and Riverbend have "shared" equipment and should be treated as one source under the revised definition of major source in part 71. Based on the determination that the Tap-1 Compressor Station and the RBU Dehy site are within ¼ mile of each other, The Tap-1 Compressor Stations receives natural-gas production from nearby wells and serves to compress the produced gas up to a pressure whereby the gas can enter the XTO operated gas gathering system. The natural gas then goes into Gathering system pipeline segment that discharges directly into the RBU Dehy site. The Tap-1 Compressor Station and the RBU Dehy site do not "share" any surface equipment other than the connecting pipelines. The gas from Tap-1 becomes comingled with the other inlet gas streams from other production areas at the inlet (pipeline manifold) of the RBU Dehy site. The gas from the Tap-1 compressor station does require dehydration at the RBU Dehy site prior to being sold.</p>
- C. Please provide the following information by March 8<sup>th</sup>:
  - a. The distance between Tap 1 Compressor Station and Riverbend Dehydration Site
    - b. If the distance is < ¼ mile, please provide the following:
      - i. A list of equipment operating at Tap 1 CS See attached.
      - ii. The PTE for the equipment operating at Tap 1 CS See attached.
      - iii. If the two sites share equipment (i.e. what is the operational relationship between the sites). The Riverbend Dehy site receives the compressed gas from the Tap-1 Compressor Station to allow the gas to be dehydrated prior to sales.
- D. I had a question regarding the two wellsites at the Riverbend facility with regard to the revised definition of a major source. Since RBU 6-15E is located on the same surface site as Riverbend Dehy, it is included as part of the same source. Similar to my questions on Little Canyon, I'm working on EPA's interpretation for the RBU 7-15E wellsite since it's located within a ¼ mile of Riverbend Dehy but not on the same surface site.
  - a. The RBU 6-15E and 7-15E wellsites discharge gas into the common gathering pipeline then to Tap-1 Compressor Station and not directly to the Riverbend Dehydrator Site. That is correct.
  - b. My understanding from the application is that the gas then flows to an offsite compressor station for further processing. Yes, the gas flows from the wells into the common gathering system and then into the Tap-1 Compressor Station which is located within a ¼ mile of the River Bend Dehy site.
  - c. Does the gas eventually come back to Riverbend Dehy Site before going to market or can it go elsewhere? Yes, it eventually goes to RB dehy site through the discharge of the Tap-1 Compressor Station.
  - d. In other words is the operation of Riverbend Dehy site necessary for the RBU 7-15E wellsite to produce gas to market or can both sites operate independently of each other? The sites cannot operate separately in the sense that the wells require their gas to be compressed at Tap-1 which discharges directly to the Riverbend Dehy site. Therefore, they are tied together operationally.

                                                                                                                                                                                                                                                                         |

#### XTO ENERGY INC. - UINTAH COUNTY, UTAH

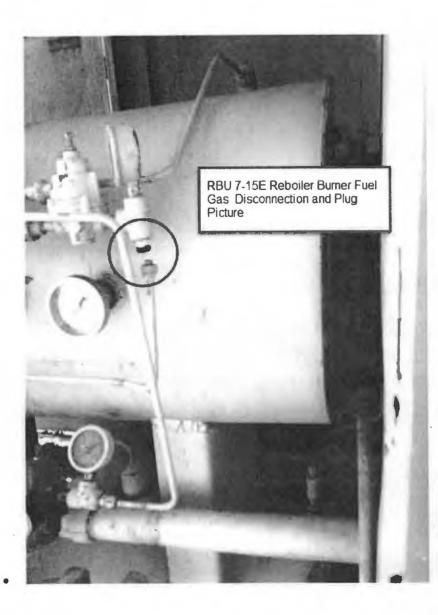

#### **XTO ENERGY INC. – RIVERBEND DEHYDRATION SITE DESCRIPTION OF RELEVANT APPLICATION MODIFICATIONS**

- Due to the update in the EPA aggregation policy to include locations within ¼ mile of the permitted location, the following locations were added into the Riverbend Dehydration site application since the original 2009 application was filed (refer to the attached map providing a location of the affected facilities around the Riverbend Dehydration site:
  - o Tap-1 Compressor Station
  - o RBU 11-15E
- Both the RBU 6-15E and RBU 7-15E natural gas dehydration systems were permanently disconnected and
  placed out of service as of July 28, 2017 (refer to the following pictures taken on 7/28/2017 and the
  accompanying work order).

# **Work Request**

Date: 7/25/17

Run 203

Location: RBU 6-15E & RBU 7-15E

Work Order: Remove Kimray glycol circulating pump from Dehy side of production unit, Plug any open ended lines. Disconnect, Block, Blind flange or thread plug Absorber tower inlet & outlet lines from any service or gas flow. Disconnect, Block or thread plug fuel supply to the Dehy fire box.

**Contractor/Department: Production Dept.**

#### I. Emission Unit Identification

Assign an emissions unit ID and describe each emissions unit at the facility. Control equipment and/or alternative operating scenarios associated with emissions units should by listed on a separate line. Applicants may exclude from this list any insignificant emissions units or activities.

| Emissions Unit ID Description of Unit |                                                                                 |
|---------------------------------------|---------------------------------------------------------------------------------|
| RBF-1                                 | Fugitive Emissions                                                              |
| RBD-1                                 | 45 MMSCFD Glycol Dehydrator (controlled by thermal oxidizer)                    |
| RBTO-1                                | Thermal Oxidizer Emissions                                                      |
| RBL-1                                 | Condensate Truck Loading Emissions                                              |

### J. Facility Emissions Summary

Enter potential to emit (PTE) for the facility as a whole for each air pollutant listed below. Enter the name of the single HAP emitted in the greatest amount and its PTE. For all pollutants stipulations to major source status may be indicated by entering "major" in the space for PTE. Indicate the total actual emissions for fee purposes for the facility in the space provided. Applications for permit modifications need not include actual emissions information.

| NOx 38.8 tons/yr                                                                        | VOC104.7 tons/yr SO20.1 tons/yr |  |  |  |  |  |
|-----------------------------------------------------------------------------------------|---------------------------------|--|--|--|--|--|
| PM-100.3 tons/yr                                                                        | CO69.7 tons/yr Lead0.0 tons/yr  |  |  |  |  |  |
| Total HAP24.3 tons/yr                                                                   |                                 |  |  |  |  |  |
| Single HAP emitted in the greatest amount PTE tons/yr                                   |                                 |  |  |  |  |  |

OMB No. 2060-0336, Approval Expires 05/31/2019

# Federal Operating Permit Program (40 CFR Part 71) EMISSION CALCULATIONS (EMISS)

Calculate potential to emit (PTE) for applicability purposes and actual emissions for fee purposes for each emissions unit, control device, or alternative operating scenario identified in section I of form **GIS**. If form **FEE** does not need to be submitted with the application, do not calculate actual emissions.

A. Emissions Unit ID \_T1C-1\_\_\_\_\_

### **B. Identification and Quantification of Emissions**

For each emissions unit identified above, list each regulated air pollutant or other pollutant for which the source is major, then list any other regulated pollutant (for fee calculation) not already listed. HAP may be simply listed as "HAP." Next, calculate PTE for applicability purposes and actual emissions for fee purposes for each pollutant. Do not calculate PTE for air pollutants listed solely for fee purposes. Include all fugitives for fee purposes. See instructions concerning GHGs. Values should be reported to the nearest tenth (0.1) of a ton for yearly values or tenth (0.1) of a pound for hourly values.

OMB No. 2060-0336, Approval Expires 05/31/2019

# Federal Operating Permit Program (40 CFR Part 71) EMISSION CALCULATIONS (EMISS)

Calculate potential to emit (PTE) for applicability purposes and actual emissions for fee purposes for each emissions unit, control device, or alternative operating scenario identified in section I of form **GIS**. If form **FEE** does not need to be submitted with the application, do not calculate actual emissions.

A. Emissions Unit ID \_T1P-1 / T1P-2\_\_\_\_\_

#### B. Identification and Quantification of Emissions

For each emissions unit identified above, list each regulated air pollutant or other pollutant for which the source is major, then list any other regulated pollutant (for fee calculation) not already listed. HAP may be simply listed as "HAP." Next, calculate PTE for applicability purposes and actual emissions for fee purposes for each pollutant. Do not calculate PTE for air pollutants listed solely for fee purposes. Include all fugitives for fee purposes. See instructions concerning GHGs. Values should be reported to the nearest tenth (0.1) of a ton for yearly values or tenth (0.1) of a pound for hourly values.

| Air Pollutants | Emission Rates                             |                   |                     |         |

# E. VOC-containing Substance Data

List each VOC-containing substance consumed, processed or produced at the emissions unit that is emitted into the air. In the name column, if providing a brand name, include the name of the manufacture; if the substance contains HAP, list the constituent HAP.

# E. VOC-containing Substance Data

List each VOC-containing substance consumed, processed or produced at the emissions unit that is emitted into the air. In the name column, if providing a brand name, include the name of the manufacture; if the substance contains HAP, list the constituent HAP.

| Substance<br>Name<br>(Chemical,<br>Brand Name) | CAS No. | Substance<br>Type | Actual<br>Usage<br>(gal/yr) | Max<br>Usage<br>(gal/day) | Max<br>Usage<br>(gal/year) | VOC<br>Content<br>(Ib/gal) |

|                             |                              |

### E. Ambient Impact Assessment

|                               | This information must be completed by temporary sources or when ambient impact assessment is an applicable requirement for this emissions unit (This is not common)). |  |  |  |  |  |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|--|
| Stack height (ft)12           | Inside stack diameter (ft)0.25                                                                                                                                        |  |  |  |  |  |
| Stack temp (F)350             | Design stack flow rate (ACFM)                                                                                                                                         |  |  |  |  |  |
| Actual stack flow rate (ACFM) | Velocity (ft/sec)                                                                                                                                                     |  |  |  |  |  |
|                               |                                                                                                                                                                       |  |  |  |  |  |

# INSTRUCTIONS FOR EUD-3 EMISSIONS UNIT DESCRIPTION FOR PROCESS SOURCES

This form is designed to describe emissions units for processes for which forms EUD-1 or EUD-2 are not appropriate. For example, sources such as rock crushers and asphalt batch plants. This form will help you to collect and organize technical information, including operational characteristics, applicable requirements, compliance terms, and emissions for each emissions unit.

**Section A** - The emissions unit ID should be consistent with the one used in section I of form **GIS**. Enter the four-digit SIC code for the unit, which may be different form that used for the facility as a whole. In addition, complete the Source Classification Code (SCC), if known or available, but this is not mandatory.

**Section B** - There may be other information that the permitting authority will need to know that is not specifically requested on the forms and that should be included on attachments. Such information would include information needed to adequately identify the emissions unit and to determine its applicable requirements.

Section C - The amount of raw materials that are processed and/or the number of activities performed are values that are typically multiplied by emissions factors to calculate PTE and actual emissions.

**Section D** - Identify and describe any associated air pollution control device. Attach copies of correspondence from the vendor documenting these values, if available, or indicate how these values were otherwise determined (e.g., AP-42).

Section E - Complete this section only if ambient impact assessment is an applicable requirement or the facility is a temporary source. This is not common.

# Federal Operating Permit Program (40 CFR Part 71) EMISSION CALCULATIONS (EMISS)

Calculate potential to emit (PTE) for applicability purposes and actual emissions for fee purposes for each emissions unit, control device, or alternative operating scenario identified in section I of form **GIS**. If form **FEE** does not need to be submitted with the application, do not calculate actual emissions.

# A. Emissions Unit ID \_RBD-1\_\_\_\_\_

### **B.** Identification and Quantification of Emissions

For each emissions unit identified above, list each regulated air pollutant or other pollutant for which the source is major, then list any other regulated pollutant (for fee calculation) not already listed. HAP may be simply listed as "HAP." Next, calculate PTE for applicability purposes and actual emissions for fee purposes for each pollutant. Do not calculate PTE for air pollutants listed solely for fee purposes. Include all fugitives for fee purposes. See instructions concerning GHGs. Values should be reported to the nearest tenth (0.1) of a ton for yearly values or tenth (0.1) of a pound for hourly values.

|                |                                  | Emission Rate     |                     |         |
|----------------|----------------------------------|-------------------|---------------------|---------|
|                | Actual                           | Potentia          | l to Emit           |         |
| Air Pollutants | Annual<br>Emissions<br>(tons/yr) | Hourly<br>(lb/hr) | Annual<br>(tons/yr) | CAS No. |

|                |                                  |                   |                     |         |

# Federal Operating Permit Program (40 CFR Part 71) INSIGNIFICANT EMISSIONS (IE)

On this page list each insignificant activity or emission unit. In the "number" column, indicate the number of units in this category. Descriptions should be brief but unique. Indicate which emissions criterion of part 71 is the basis for the exemption.

| Number | Description of Activities or Emissions Units | RAP<br>(except HAP) | НАР    |

### UNCONTROLLED CONDENSATE TRUCK LOADING EMISSIONS

Company: XTO Energy Inc. Facility Name: Riverbend Dehydration Site Facility Location: Uintah County, Utah

### AP - 42, Chapter 5.2

#### L<sub>L</sub> = 12.46 x S x P x M / T Emissions = L<sub>L</sub> \* Throughput

TABLE 1. Emission factors are calculated utilizing AP-42 equations and data from EPA TANKS 4.09 LL is converted to tpy VOC emissions per barrel of production per

L<sub>L</sub> = Loading Loss Emission Factor (lbs VOC/1000 gal Loaded)

S = Saturation Factor (0.6 For Submerged Loading - Dedicated Service)

P = True Vapor Pressure of the Loaded Liquid (psi)

M = Vapor Molecular Weight of the Loaded Liquid (lbs/lbmol)

T = Temperature of Loaded Liquid (°R)

|               |         |     |           |    |        |             |        | L      |             | Production | VOC    |

CONDITIONS AND DEFINITIONS Engine rating obtained and presented in accordance with ISO 3046/1, adjusted for fuel, site altitude and site inlet air temperature. 100% rating at maximum inlet air temperature is the maximum engine capability for the specified fuel at site altitude and maximum site Inlet air temperature. Maximum rating is the maximum capability at the specified aftercooler inlet temperature for the specified fuel at site altitude and reduced inlet air temperature. Lowest load point is the lowest continuous duty operating load allowed. No overload permitted at rating shown.

CONDITIONS AND DEFINITIONS Engine raling obtained and presented in accordance with ISO 3046/1, adjusted for fuel, site altitude and site inlet air temperature. 100% rating at maximum inlet air temperature is the maximum engine capability for the specified fuel at site altitude and maximum site inlet air temperature. Maximum raling is the maximum capability at the specified aftercooler inlet temperature for the specified fuel at site altitude and reduced inlet air temperature, Lowest load point is the lowest confinuous duty operating load allowed. No overload permitted at rating shown.

For notes information consult page three.

## NATURAL GAS FUELED HEATER EMISSIONS

Company: XTO Energy

Facility Name: TAP 1 Compressor Station Facility Location: Uintah County, Utah

|                                    | HEATER            | HEATER     | FUEL*                   | HOURS OF                | FUEL                | NOx                               |                        | CO                                |                        |

Criteria emissions rounded to the nearest 1/100 of a ton, VOC/HAP rounded to 1/1000 of a ton.

EF AP-42<sup>1</sup> = emission factor from AP-42 Table 1.4-1, Small Boilers <100 MMbtu/hr (EPA 7/98), Standard = 1,020 Btu/scf

EF AP-42<sup>2</sup> = emission factor from AP-42 Table 1.4-2 (EPA 7/98)

EF AP-42<sup>3</sup> = emission factor from AP-42 Table 1.4-2 (EPA 7/98)

Fuel Heat Value (Btu/scf) \* 1,000,000 (scf/MMscf) \* Heater Efficiency

NOx/CO/TOC Emissions (tons/yr) = AP-42 EF (lbs/MMscf) \* Fuel Consumption (MMscf/yr) \* (Fuel Heat Value/ Standard Fuel Heat Value) / 2,000 (lbs/ton) -Standard Fuel Heat Value, Natural Gas (AP-42, 7/98, p1.4-5) = 1,020 Btu/scf

VOC emissions assumed equal to TOC emissions

| Storage Tank | 25.000     | 9.125           | 0.6        | 4          | 26.79    | 545             | 1.4700          | 0.2817      |
| TOTAL        | 25.000     | 9.125           |            |            |          |                 |                 | 0.2817      |

Loading Losses (lbs/1,000 gal) = 12.46\*S\*P\*M

(AP-42 Section 5.2, Equation 1)

Loading Emissions (tons/year) = Loading Losses (lbs/1,000 gal) \* Oil Sales (1,000 bbls/yr) \* (42 gal/bbl) 2,000 lbs/ton

Degrees R =

Degrees F + 460

| Mode of Operation                   | S Factor |
|-------------------------------------|----------|
| Submerged loading of a clean tank   | 0.5      |
| Submerged loading-dedicated service | . 0.6    |
| Submerged loading-vapor balance     | 1.00     |
| Splash Loading-clean tank           | 1.45     |
| Splash loading-normal service       | 1.45     |
| Splash loading-vapor balance        | 1.00     |

Tank Truck S Factors

## Condensate Tank Emissions (F/W/B)

Company: XTO Energy Facility Name: TAP 1 Compressor Station Facility Location: Uintah County, Utah Description: Uncontrolled - Two (2) X 300 bbl vertical, fixed-roof storage tanks
