I checked our files for the production used in permit development over the years'. I found the production figures for these dates:

2008 - C5 furnace = 4755 tons/day  
C6 furnace = 4497 tons/day

2001 - C5 = 4581 tons/day  
C6 = 4729 tons/day

1990 - C5 = 4015 tons/day  
C6 = 3883 tons/day

1983 = 5605 tons/day combined for C5 and C6.

Note that figures before 2001 do not reflect the entire iron production for the facility. The plant had other blast furnaces in operation before that. They have shut down at least two furnaces over the last 25 years.

If you need more details than this, I suggest contacting the company directly. I will send you the antidegradation 'de minimis' analysis soon.
