

Comments on EPA Method TO-11A

Thank you for your interest in providing comments on Method TO-11A. Please fill out this form electronically to submit your comments, and we will give them careful consideration as we review and update the method. At this time, we are interested only in substantive technical comments regarding use of the method (rather than grammar, spelling, etc.).

Please use the space provided on the following pages for your comments, and reference each comment by section, page, and line numbers corresponding to those in the [designated review file](#). For general comments about the method that are not related to specific sections, enter a 0 in the section, page, and line number fields. In addition, supplying any relevant references and supporting information in the allotted space for each comment will facilitate our assessment.

When making multiple comments, please use a separate page for each comment. This form provides space for 10 comments. If you wish to make more than 10 comments, we request you download and complete an additional form.

Please e-mail your completed forms to Zora Drake (drake.zora@epa.gov) of Jacobs Technology Inc., with a copy to Karen Oliver (oliver.karen@epa.gov) of EPA by Tuesday, May 1, 2018.

Also please provide the following information about you and your organization. We will not share this information, but may use it to follow up with you if we have questions based on your comments.
