

LMOP Special Session Presentations and Interactive Map of LFG Energy Projects

The Landfill Methane Outreach Program (LMOP) is pleased to announce the proceedings from the LMOP National Landfill Gas Energy Special Session (LMOP Special Session) are now available on the LMOP website. The LMOP Special Session was held March 6, 2018 in Denver, Colorado and featured five presentations. Topics presented included trends in landfill gas energy and solid waste management, information about renewable natural gas project development, and opportunities for automotive engine-powered generators for landfill gas electricity generation. You may [access the proceedings on LMOP's website](#).

In case you haven't seen, we encourage you to view our recently published GIS-based [National Map](#) of landfill gas energy projects and landfills. This interactive map shows project and landfill data geographically and can be filtered based on project type (Electricity, Direct Use, High BTU, and Vehicle Fuel) or landfill status (including candidate landfills and landfills with projects).

Learn more about LMOP from the [LMOP website](#).
