**“Actual emissions”** means the quantity of federally regulated air pollutants emitted from a stationary source considering emissions control equipment and actual hours of source operation or amount of material processed.

**“CO<sub>2</sub> equivalent emissions”** (CO<sub>2</sub>e) shall represent an amount of GHGs emitted, and shall be computed by multiplying the mass amount of emissions tpy, for each of the six greenhouse gases in the pollutant GHGs, by the gas’s associated global warming potential published at Table A - 1 to Subpart A of 40 C.F.R. Part 98 - Global Warming Potentials (which is incorporated by reference as of the effective date of the federal final rule published by EPA in the Federal Register on November 29, 2013 [78 FR 71948]), and summing the resultant value for each to compute a tpy CO<sub>2</sub> equivalent emissions.

**“Commission”** means the Arkansas Pollution Control and Ecology Commission.
