**Re: *Groundwater Monitoring Work Plan and Quality Assurance Project Plan
PPG Oak Creek Facility – Former Tank Area
Oak Creek, Wisconsin
USEPA ID No. WID059972935
Wisconsin FID No. 241014620***

Dear Mr. Sasnow:

CB&I Environmental & Infrastructure, Inc. (CB&I), on behalf of PPG, is providing the enclosed Groundwater Monitoring Work Plan (Work Plan) and Quality Assurance Project Plan (QAPjP) for your review and approval.

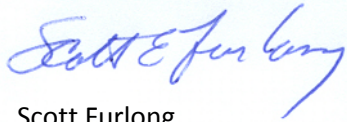

Prior to finalizing a Statement of Basis for PPG's Oak Creek facility, the U.S. Environmental Protection Agency (USEPA) has requested that PPG conduct a one-time groundwater sampling event in order to define current groundwater quality and groundwater flow conditions at the facility's former Tank Farm Area. The Work Plan outlines several activities that must be performed in advance of the sampling event including, but not limited to, the abandonment and installation of monitoring wells and repairs to existing monitoring wells.

As outlined in the Work Plan, following your approval of the enclosed documents, PPG estimates that it will take approximately six to eight weeks to complete the field work and prepare a final report summarizing the groundwater monitoring event. This schedule includes the time required to procure and mobilize subcontractors, install/abandon/repair monitoring wells, and collect and analyze the groundwater samples.

CB&I shall provide at least a two-week notice via e-mail to USEPA before commencing the field work activities described in the Work Plan.

Should you have any questions regarding the Work Plan and/or QAPP, please feel free to contact either Bill Stanhope or me.

Sincerely,

Scott Furlong
Project Manager
