CLEAN & RENEWABLE

- **Clean** = Energy that does not pollute and/or greatly reduces pollution into the environment, including reductions in air contaminants, greenhouse gas emissions, and the production of waste.
- **Renewable** = Energy generated from an unlimited source with zero or nearly zero pollution. Includes generation from sustainable sources such as wind, solar, geothermal, hydro, and biomass.

Clean & Renewable = Energy that has little to no pollution and is generated from an unlimited source

ENERGY EFFICIENCY UPGRADES

ELECTRIFICATION

Move from natural gas to electric equipment as equipment is being replaced / upgraded

RENEWABLE ON SITE GENERATION POTENTIAL

A large array of solar panels is installed on a roof, angled towards the sun. The panels are dark blue with a grid of silver lines. In the background, there are green trees and a clear blue sky with a few wispy clouds. The text "RENEWABLE ON SITE GENERATION POTENTIAL" is overlaid in white, bold, sans-serif capital letters.

OUR PLAN - FLEET

- At least 3 EVs will be added to the fleet
- As vehicle “age out”, look to replace with EVs or hybrids
- Track data to demonstrate value of switch (e.g., economic, environmental)

WILD CARDS

“Wild cards” are additional ideas that will help us move forward with achieving our goal of 100% clean and renewable municipal operations

NET-ZERO FIRE STATION

ITS THE THIRD FIRE STATION IN THE COUNTRY
TO BOAST A **NET ZERO** STATUS

RENEWABLE ENERGY OFFSETS

We will also explore the purchasing of renewable energy credits to help offset emissions. This may be a short-term strategy and/or a technique to offset Scope 3 emissions (e.g., commuting).

- 1 Most renewable projects send their power to the same electric grid as coal and gas-fired generators.
- 2 When you buy power from the grid, you are getting that comingled power.
- 3 Buying RECs allows you to notionally “re-segregate” that power, so that the renewable power is dedicated only to you.
- 4 Each REC is independently tracked and verified.

BATTERY STORAGE

Continue working with
UM colleagues and
others to advance
battery storage
potential

SUMMARY OF PLAN

Short Term (0-3 years)

- Efficiency upgrades at all sites identified in energy audit (starting with Wheeler and Veterans)
- Energy audit of other city facilities
- Efficiency upgrades identified during new energy audit
- Purchasing of electric & hybrid vehicles
- Electrification
- Legal reviews and specification gathering for onsite and offsite renewable generation
- Design net-zero fire station
- Creation of financing models

- Opportunity tracking
- Energy Monitoring

Medium Term (3-5 years)

- Continued efficiency upgrades
- Continued electrification
- Onsite Installation of renewables (e.g., Wheeler and Veterans)
- All new facilities = net zero
- Built net-zero fire station
- Continued legal review and specification gathering for onsite and offsite renewable generation
- Offsite installations (e.g., Landfill and Geddes)
- More EVs, including more than light duty vehicles

- Efficiency Upgrades
- Funding Identification

Long Term (5+ years)

- Continued onsite renewable installations
- Continued offsite renewable installations

- Greenhouse Gas Inventories
- Staff Training and Engagement
