

Welcome to the UIC Data Application Comprehensive Training Webinar. In this webinar, we will discuss and demonstrate how state and regional staff can use the new application to submit and review UIC inventory and Form 7520 data.

This training webinar is one of four training webinars being held in October and November. Links to this presentation, as well as various other supporting materials are available on the landing page of the application and will also be posted at the www.epa.gov/uic site soon.

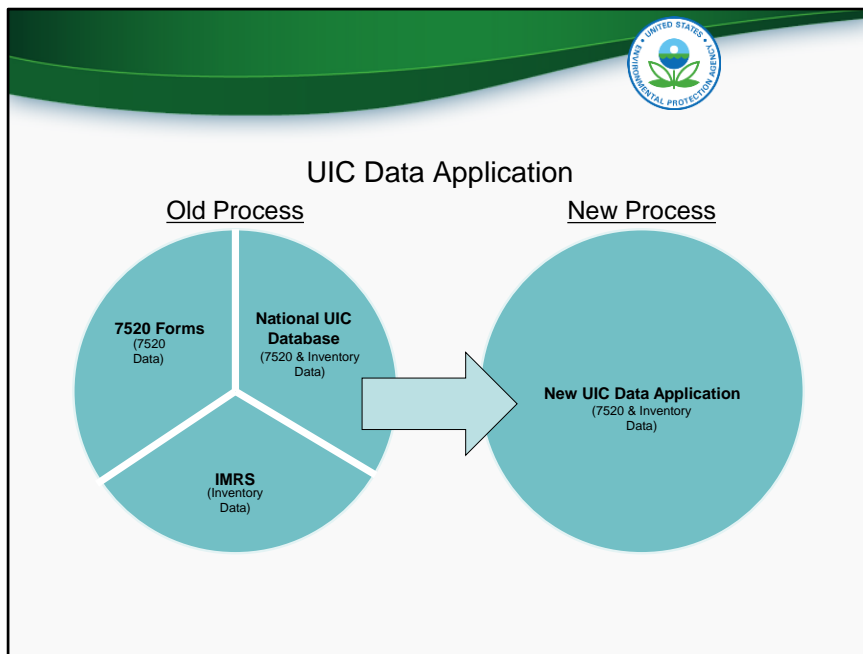

Agenda

Purpose: Programs understand how to use application

- What is UIC Data Application? (Quick refresher, development timeline)
- How to access the application
- Workflow
- Manual Data Entry
- "Batch Upload" function for automated data entry
- Reports
- User testing
- Q & A

The purpose of this webinar is to help UIC programs understand the features and functions of the UIC Data Application and how programs can use it to submit and review UIC inventory and Form 7520 data.

We will start with a quick refresher on the UIC Data Application and the timeline for completion. We will then demonstrate how users can access the application and discuss the workflow that each record goes through. From there, we will show how there are two methods that users will be able to enter data: manual data entry and batch upload. We will demonstrate each of these methods so that users understand how they can perform these functions for both Inventory and Form 7520 data. Note that batch upload was the subject of a previous training webinar, and that other materials are available for further detail on how to use the batch upload templates. Next, we will show the reporting services that are available in the application. After all of the features of the application have been explained and demonstrated, we will provide more information about the user testing process. And finally, we will recap what we have learned, and provide a way for you to ask any questions you may have.

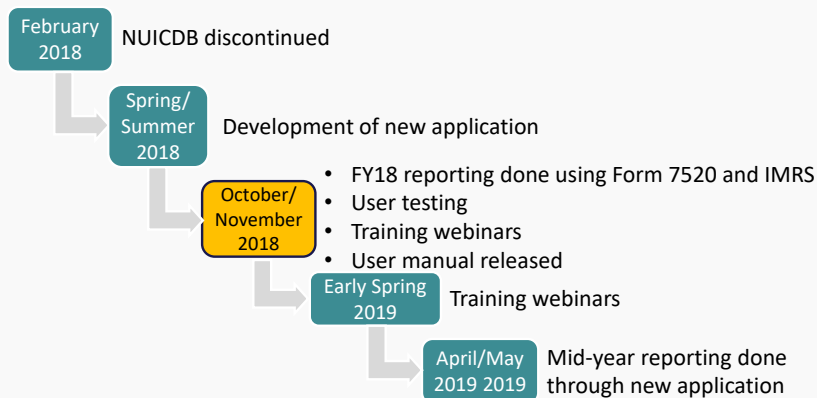

Recently, programs have reported data to EPA in three ways:

- The Form 7520-1 through 7520-4 as hardcopy
- Inventory data submitted electronically via the Inventory and Measures Reporting Service (IMRS), or
- Both inventory and Form 7520 data submitted electronically to the National UIC Database

The new application that is being developed will replace those three mechanisms and serve as a one-stop-shop for 7520 forms 1-4 and well inventory data submission. The new application will also house various reporting and analysis tools that UIC programs may find useful.

Key Dates for Application Development

This slide shows several key dates in the development of the new UIC Data Application. In February of 2018, the National UIC Database was discontinued. During spring and summer 2018, EPA contracted a developer to create the new application. Development is now complete, and EPA is currently holding user testing from October to November 2018. For end-of-year reporting for federal fiscal year 2018, programs should submit hardcopy Form 7520's. Inventory should be submitted through IMR. Today's webinar is one of four webinars that EPA is holding in October and November of 2018. EPA will also hold additional training webinars in Spring 2019 as the application becomes the sole means of reporting data from the Form 7520-1 through 7520-4 and inventory reporting for mid-year reporting in April/May of 2019.
