ACKNOWLEDGEMENTS

This document was originally prepared for EPA Region 5 by the John A. Volpe National Transportation Systems Center (Volpe Center). This document was reviewed and edited by David Wilson and Mary Tierney of EPA Region 5; William Halloran and Joseph Monaghan of the Volpe Center; and John Hennessy and Ellen Baptiste-Carpenter of Battelle Laboratories, Inc. Other technical reviewers from EPA include Patricia Scott, Chemist, EPA Region 5; Douglas Yeskis, Geologist, EPA Region 5; Luanne Vanderpool, Geologist, EPA Region 5; Anthony Kahaly, EPA Region 5, RCRA Division; and Andy Crossland, Hydrogeologist, EPA, Region 2. Other reviewers include Steve Losier of the Volpe Center; Janet Magurn, Scot Weaver and Dave Abercrombie of EarthSoft, Inc.; Rosanna Buhl of Battelle Laboratories, Inc.; and Izak Maitin of the New Jersey Department of Environmental Protection.

EarthSoft Inc. developed the Electronic Data Processor (EDP) and reviewed the EDD format to assure its technical accuracy.

This documentation was reviewed and updated by Diann Cox-Tramel (Region 2), and John Canar, Region 5 and updated on March, 2019 to meet the standards and requirements of EPA Region 5.

DISCLAIMER OF ENDORSEMENT

EXECUTIVE SUMMARY

The purpose of this specification manual is to provide detailed instructions on how to report environmental data electronically to the United States Environmental Protection Agency (EPA) Region 5. The types of data can be reported electronically include, for example, data generated during site characterization and investigation phases, data recorded when installing monitoring wells, and monitoring data that is routinely collected from a variety of media. This manual describes the procedural and formatting requirements you need to know to submit your Electronic Data Deliverable (EDD) to the EPA Region 5 Superfund Division.

This EDD Comprehensive Specification manual describes the requirements for reporting all **current** and future environmental data to EPA Region 5. EPA recognizes that some information about data collected in the past may not be readily available and, by reducing the requirements for electronic basic data, is endeavoring to strike a balance between minimizing the amount of effort involved in inputting information and maximizing the ability to document remedy progress. Environmental data collected and analyzed **prior** to the initial use of this EDD Comprehensive specification manual should be reported using the EPA Region 5 "Basic Manual for Historic Electronic Data". The reporting requirements of the "Basic Manual for Historic Electronic Data" are a subset of this comprehensive EDD Comprehensive specification manual.

The EPA Region 5 EDD is comprised of four groups: Field, Lab, Basic, and Facility.

The first group of the EDD is the Field, which contains the data for the point of contact, site information, Locations, as well as drilling activities, lithology, well installation, well construction and well segment, geotechnical sample information, water levels, water table, downhole logging methods, Extraction and Injection wells, and Soil Gas survey data. Those files are:

Field- the folloing **three** files can be submitted once unless there are new/ additional locations to the site

- Data Provider (named as "EPAR5DATAPROVIDER v3" is the point of contact for EDD and file providing the information)
- Subfacility (named as "EPAR5SUBFACILITY v3", which is the general information about the
- Location (named as "EPAR5LOC v3", which is the information regarding the sampling locations)

The following files are included in the **Field section**, which contains the field data, please submit the data when they are available:

- Drilling Activity (named as "EPAR5DRA v3", which is the information about drilling activities resulting form the soil borings.)
- Lithology (named as "EPAR5LTH v3", which is the lithology information for the borings.)
- Well (named as "EPAR5EPAR5WEL_v3", which contains the monitoring well information related to well instruction)
- Well Construction (named as "EPAR5WSG v3", which contains the well construction details and well segment data.)
- Geology Sample (named as "EPAR5GSMP v3", which contains the geotechnical sample information)
- Water Level (named as "EPAR5GWTR v3", which contains the information on water levels measured from the soil borings or wells.)
- Water Table (named as "EPAR5TBL v3", which contains the information pertaining the water table)

- Downhole Logging (named as "EPAR5DHP v3", which contains the data from downhole logging methods such as Cone Penetrometer Tests and geophysics.)
- Extraction and Injection Wells (named as "EPAR5EIW v3", which contains the data about extraction and Injection wells)
- Soil Gas (named as "EPAR5EPAR5SoilGas_v3", which contains the imports soil gas survey data.)

In most cases, the vast majority of the electronic data submitted over the life of the project, and that will be submitted on a reoccurring, routine basis, will be lab data.

The Lab EDD files contain data related to chemistry field measurements, sample collection information, sample tests and result QC. The Lab EDD files are the:

- Sample (named as "EPAR5SMP v3", which contains the information about sample collection)
- Test Result (named as "EPAR5TRS v3", which contains the information concerning analytical tests and lab results performed on samples.)
- Test Result QC (named as "EPAR5TRSQC v3", which contains the information about the analytical test performed on samples with quality control data elements)
- Batch (named as "EPAR5BAT v3", which contains the data that related the individual samples to the batch identifier.)

Basic Submittals

The Basic EDD files contain historical operation and maintenance (O&M) data. The EDD files are the:

- Basic Location (named as "EPAR5_BasicLOC_v3", which contains the information about sampling locations from historical data)
- Basic Water Level (named as "EPAR5 BasicWTR v3", which contains the information regarding groundwater level measurements)
- Basic Chemistry Sample (named as "EPAR5 BasicChem v3", which contains the information about sample collection)
- Basic Geology (named as "EPAR5 BasicGEO v3", which contains the information about geology data)

Faciltiy

The facility data includes an electronic base map of the site property, one file containing general information about the site and about the point of contact for the EDD, and a file containing data pertaining to site sampling locations.

• Files (named as "Files v3", which contains any supplementary information about site such as a base map, a cover letter about the data, data provider, or the site sampling information.)

Of the files listed above, the Lab and Field files that most data providers will submit will be the Well, Water Level, Extraction Injection Wells, Sample, Test/Result OC files. The Test Result with OC and Batch files will only be submitted in those rare cases where EPA requires QA/QC data in electronic format. The Extraction/Injection Well file will only need to be submitted for sites with extraction or injection wells.

The process for creating Field, Lab, and/or Facility EDDs are shown in Figures E-1 and E-2, respectively. The process begins by identifying the software tool that will be used. Many software tools, such as text editors, word processors, spreadsheets, and databases, are capable of creating EDDs. Because spreadsheets and databases are designed to enter and manage data, however, they are generally preferred for creating EDDs. The production of the data tables will normally be a collaborative effort between laboratories and environmental contractors. The laboratories will typically produce the test/result tables while the contractors normally will produce all of the other tables.

As shown in Figures E-1 and E-2, decision points are included in the EDD creation process to ensure that Field EDD files have been submitted for a site, as well as to prevent redundancy when getting ready to submit Lab EDDs. For example, one of the Field EDDs called the SUBFACILITY file, which contains data describing the site and site contact information, should generally only be reported once (unless, as previously noted, a change occurs). Similarly, another Field EDD file, the Location file, which contains locational data, typically only needs to be reported once. The only time a Location EDD file would be resubmitted is if **the data changed in some way**. For example, if settling occurs at a site over time, a resurvey of site monitoring wells may be warranted. If the survey results show changes in the elevations of the monitoring wells, the Location file would have to be resubmitted.

The final step before submitting an EDD to EPA Region 5 is to check it using the Electronic Data Processor (EDP) software application that is currently provided on the EPA Region 5 website (located at https://www.epa.gov/superfund/region-5-superfund-electronic-data-submission). This software application will identify any formatting errors in the files that must be corrected prior to submitting the EDD.

1. INTRODUCTION TO THE EPA REGION 5 ELECTRONIC DATA DELIVERABLE (EDD)

The EPA Region 5 Superfund Division has developed an electronic data management system to improve how environmental data from Superfund sites are acquired and managed. The system will accelerate the review of environmental data submittals, improve service to the regulated community, and enhance the protection of the environment and the public. A vital element in the electronic transfer of environmental data is the submittal of data in a standardized, "computer-friendly" format. The specifications and formatting requirements for the EPA Region 5 EDD were developed to facilitate the transfer of data from data providers to the EPA.

NOTE: This EDD Comprehensive Specification manual describes the requirements for reporting all **current** and **future** environmental data to EPA Region 5. Environmental data collected and analyzed **prior** to the initial use of this EDD specification manual should be reported using the EPA Region 5 "Basic Manual for Electronic Data". EPA recognizes that some information about data collected in the past may not be readily available and, by reducing the requirements for electronic historical data, is endeavoring to strike a balance between minimizing the amount of effort involved in inputting information and maximizing the ability to document remedy progress.

The EPA Region 5 EDD is in part based on standard EDDs used in applications developed by EarthSoft, Inc. However, the format is designed to be software-independent and easy to achieve. Any spreadsheet, database, or text editor can be used to create the EDD files. Examples of applications that can be used to create Region 5 EDDs include Access, FoxPro®, Excel, and Notepad.

Basically, the EDD is a series of files used to report data. For example, one file is used to report location data while another is used to report samples collected at a location. Multiple files are used to eliminate the need to report redundant data. For example, the data for a location (e.g., coordinates and elevations) are reported once in the location (EPAR5LOC_v3) file. Many years of sampling and analytical data may be reported for that location without having to submit the LOC file again.

This specification manual includes examples of EDD files populated with data. In addition, several EDD templates are currently available on the EPA Region 5 E-Data website (https://www.epa.gov/superfund/region-5-superfund-electronic-data-submission) for loading data into the EDD format. The website also contains a no-cost software program, the Electronic Data Processor (EDP) that needs to be used to check EDD files before they are submitted to EPA Region 5. The EDP is a single application that checks all EDD files and provides a much easier user interface for identifying and correcting errors.

This EDD Comprehensive Specification Manual discusses EDD submittals in three separate sections:

- General reporting requirements and submission process are discussed in Section 2.
- The Facility and Field file structures (i.e.data provider, subfacility, location, water level) are defined in Section 3.
- The Lab file structures are defined in Section 4. In most cases, lab data accounts for the majority of data that is reported.

Each file must be reported exactly as defined in these sections. Any deviations will result in loading errors.

EPA Region 5 expects all fields referred to as "Required", "Not required" or "If available" to be filled in. If data for fields referred to as "If available" meaning the data can be reported when available, such as the result values and the unit. If users reported the result values, it is preferred to report he unit as well. Data fields indicated as "Not required" meaning the fields are not required fields. These fields were only included so that other EPA regions or states could use the same EDD but have slightly different data type requirements.

Currently, EPA is working to finalize EDD requirements that would be national standards for Superfund data for all 10 EPA Regional offices. When this national Superfund EDD is finalized, data providers who have already begun submitting data according to the EPA Region 5 format will be given time to transition to any national format changes.

2. GENERAL EDD REPORTING REQUIREMENTS

2.1 File Formats

With the exception of the electronic base map, all data from the EPA Region 5 data providers must be reported as **text files**. Each data field must be separated either by tabs (tab-delimited) (indicated by the suffix "txt" on the file name) or comma-delimited (indicated by the suffix "csv" on the file name). One other option is to enclose each field in double quotation marks (") (indicated by the suffix "txt" on the file name). However, because using double quotation marks to delineate fields is typically more time consuming (unless the data are already in this format), it is anticipated that this method will not be widely used. Data fields containing no information should not be simply omitted. Instead they should be represented by the delimiter of choice, e.g., by two tabs in tab-delimited files or two commas in commadelimited files (see example in Section 2.16). The maximum length of each text field is indicated in parentheses in the EDD tables shown in Sections 3 and 4. If the information is less than the maximum length, there is no need to add spaces to the record to ensure that all spaces are used. Maximum length requirements imply that the field can be no longer than the specified number of characters. However, it is completely acceptable to fill the field with fewer characters than the maximum number. Each record—which is the term used for each line of information—must be terminated with a carriage return/line feed (created by pressing the "Enter "key in a text editor).

2.2 Field Data Submittals

The Field data submittal consists of the initial data submittal and the field data including: Data Provider (DataProvider), Subfacility, and the Location (Location) file including facility center point in latitude longitude coordinate, and the field data including drilling activities, lithology, well installation, well construction and well segments, geotechnical sample information, water levels, water table, downhole logging methods, extraction and injections wells, and Soil gas survey data. The first three files in the Field submittals provide information pertaining to the site, the site EDD contact, and site sampling locations. These files generally only need to be submitted once at the beginning of the project. These files only need to be resubmitted if any changes occur. Examples of changes that would require resubmittal include changes in site contact information or location data that changes after being resurveyed. New sampling locations established after the initial Location file submittal will require a new submittal with data only pertaining to the new locations. Table 2-1 provides general information on the first three files in the Field EDD section, sometimes; data provider will submit a cover letter or base maps in the Files_v3 in the Facility secion. Table 2-2 provides general information on the field data files in the Field EDD section.

Table 2-1 General information on the files that comprise the first three files in the Field EDD section

| File Type | File Name | Created By | Contents | What makes a row of data unique? | Dependenc e of other files on these data |
|------------------|------------------------------------|------------------|-------------------------------------|----------------------------------|---------------------------------------------------|
| Data Provider | EPAR5DATAPROVIDER _v3.txt (or csv) | Data Provider | Information about the data provider | Data_Provider | Not applicable |

| File Type | File Name | Created By | Contents | What makes a row of data unique? | Dependenc e of other files on these data |
|------------------------------|--------------------------------------|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| Subfacility (Section 3.3) | EPAR5SUBFACILITY_v 3.txt (or csv) | Data provider | One-time definition of site including EPA Region 5 data providers' contact information. | Facility_code, subfacility_name , subfacility_task_ codeetc | The location file cannot be loaded without properly referenced subfacility (facility_cod e). |
| Location (Section 3.4) | EPAR5LOC_v3. txt (or csv) | Data provider's surveyor | One entry for each location on a site including a facility center point. Contains elevation, coordinate and general locational data. Facility center point is required for the initial submittal. Data should only be reported once for a location. | sys_loc_code | Sample, water levels, field measuremen ts, and extraction well data can only be reported for locations that are defined in this file. |

Data provider, Subfacility, and location files are generally only need to be submitted once at the beginning of the project, along with the **Files_v3 file** in the **Facility** section.

| File Type | File Name | Created by | Contents | What makes a row of data unique? | Dependence of other files on these data |
|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|-------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|--------------------------------------------------|
| File_v3 | The site's base map in Lat/Long and the file format must be in .dxf or drawing (.dwg) or ArcGIS Shape files. Another file type can be documents or pdf, such as cover letter or any kind of documents. | Data provider | #1. Basemap of sites in (.dxf), drawing (.dwg), or ArcGIS Shape File. #2. Cover letter or any documents in .pdf or doc files | Not applicable | Not applicable. |

Field EDD submittals contain data obtained during subsurface investigations at the site. When submitting the Field EDD, all field EDD files for which information is available should be submitted. The Field EDD includes files for Drilling Activity (EPAR5DRA_v3), lithology data (EPAR5LTH_v3), general well information (EPAR5EPAR5WEL_v3), well construction information (EPAR5WSG_v3), geology sample data (EPAR5GSMP_v3), general information about the water table (EPAR5GWTR_v3), Water Table (EPAR5TBL_v3), downhole logging methods point data (EPAR5DHP_v3), extraction and injection well

(ExtractionInjectionWells), soil gas survey data (SoilGas). Unlike the Lab EDD, where submittals are typically submitted on a cyclic basis, in most cases the Geology EDD is submitted only once. Additional Geology EDDs are submitted only if new geology data are collected.

Sites reporting data from monitoring wells installed or from geology-related activities completed more than one year prior to the date of data submittal are not required to submit the Field EDD files – <u>unless</u> the monitoring wells are being used for operation and maintenance (O&M) monitoring. However, for all newly installed monitoring wells or current geology data collection efforts (i.e., within one year from the date of data submittal), data providers must submit all applicable Field files as detailed in Section 3.

Table 2-2 provides general information on the files that make up the field files in the Field EDD. Detailed instructions for creating the Field EDD files are provided in Section 3, "Formats for Field Files". Instructions for submitting your EDDs to EPA Region 5 are presented in Section 2.15.

Table 2-2 General information on the files that comprise the field files in the Field EDD section

| File Type | File Name | Created By | Contents | What makes a row of data unique? | Dependence of other files on these data |
|---------------------------------------|-------------------------------|----------------------------------------------------|--------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|
| Drilling Activity (Section 3.5) | EPAR5DRA_v3. txt (or csv) | Data provider's geologist | General Information regarding soil borings. | sys_loc_code drill_event | None. |
| Lithology (Section 3.6) | EPAR5LTH_v3.txt (or csv) | Data provider's geologist | Lithology data for the borings. | sys_loc_code start_depth | None. |
| Well (Section 3.7) | EPAR5WEL_v3. txt (or csv) | Data provider's geologist | General information regarding well installation. | sys_loc_code | Well construction and water level data can only be reported for wells that are defined in this file. |
| Well Construction (Section 3.8) | EPAR5WSG_v3.txt (or csv) | Data provider's geologist | Well construction details recorded during well construction and well segments. | sys_loc_code segment_type start_depth end_depth material_type_ code depth_unit | None. |
| Geology Samples (Section 3.9) | EPAR5GSMP_v3. txt (or csv) | Data provider's geologist or laboratory | Contains geotechnical sample information | Sys_loc_code, geo_sample_code | None. |
| Water Level (Section 3.10) | EPAR5GWTR_v3.tx t (or csv) | Data provider's field sampling team(s) | Contains water levels measured from he soil borings or wells | sys_loc_code measurement_date | None. |
| Water Table (Section 3.11) | EPAR5TBL_v3. txt (or csv) | Data provider's geologist | General information pertaining to water table. | sys_loc_code type | None. |

| File Type | File Name | Created By | Contents | What makes a row of data unique? | Dependence of other files on these data |
|---------------------------------------------------|----------------------------------|----------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------|-----------------------------------------------|
| Downhole Point (CPT) Data (Section 3.12) | EPAR5DHP_v3. txt (or csv) | Data provider's geologist | Results of all downhole logging such as CPT, resistivity, or other geophysical logs. | sys_loc_code depth param | None. |
| Extraction- Injection Well (Section 3.13) | EPAR5EIW_v3. Txt (or csv) | Data provider's field sampling team(s) | Data that relates to any extraction wells that are operating as part of the remedial action and injection wells. | sys_loc_code start_measurement_date end_measurement_date | None. |
| Soil Gas (Section 3.14) | EPAR5SoilGas_v3. Txt (or csv) | Data Provider's geologist | Results of information regarding the soil gas | sys_loc_code | None |

2.3 Lab Data Submittals

Lab EDDs are submitted after each round of sampling and include the following types of files: chemistry sample information (EPAR5SMP_v3), Test Result (EPAR5TRS_v3), test/results with QC (EPAR5TRSQC_v3), batch information (EPAR5BAT_v3).

Table 2-3 provides general information on the files that make up the Lab EDD files. Detailed instructions for creating the Lab EDD files are provided in Section 4, "Formats for Lab EDD Files". Instructions for submitting your EDDs to EPA Region 5 are presented in Section 2.15.

Table 2-3 General information on the files that comprise the Chemistry EDD

| File Type | File Name | Created By | Contents | What makes a row of data unique? | Dependence of other files on these data |
|------------------------------|------------------------------|-----------------------------------------------------|--------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------|
| Sample (Section 4.1) | EPAR5SMP_v3. txt (or csv) | Data provider's field sampling team(s) | One row for each sample collected at the site. | sys_sample_code sample_matrix_code sample_type_code sample_source sample_date | Tests/results QC and batch data can only be reported for samples that are defined in this file. |
| Test Result (Section 4.2) | EPAR5TRS_v3.txt (or csv) | Data provider's field sampling team (s) | Contains data concerning analytical tests and results performed on samples. | Sys_sample_code Lab_anl_method_na me Analysis_date | None |

Table 2-3 General information on the files that comprise the Chemistry EDD

| File Type | File Name | Created By | Contents | What makes a row of data unique? | Dependence of other files on these data |
|--------------------------------------------------|--------------------------------|--------------------------------------------|--------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------|-----------------------------------------------|
| Test/ Result with QC Data (Section 4.3) | EPAR5TRSQC_v3.tx t (or csv) | Data provider's contractor lab(s) | Test/Result file with additional fields for QC data. | sys_sample_code lab_anl_method_ name analysis_date analysis_time total_or_dissolved test_type cas_rn | None. |
| Batch (Section 4.4) | EPAR5BAT_v3. txt (or csv) | Data provider's contractor lab(s) | Data that relate the individual samples to the batch identifier | sys_sample_code lab_anl_method_ name analysis_date analysis_time total_or_dissolved test_type test_batch_type | None. |

2.4 File Naming Convention

-Sign and Submit

After using the tools outlined above to resolve all of the issues in a set of Data Files the data is ready to be submitted for loading into the EQuIS 6.5.1 database. The Sign and Submit tool was designed to facilitate submittal of data to EQuIS Enterprise EDP. Sign and Submit option packages the data files with the correct naming convention which allows easy submittal of data packages. Use of the Sign and Submit feature requires a user name and password which can be obtained from the EPA Region 5 database administrator. Please email to canar.john@epa.gov for the information.

To use the "Sign and Submit" feature, after data files have been loaded and all of the errors have been resolved.

1. Select Sign and Submit from the Application Menu. This will open the Sign and Submit window.

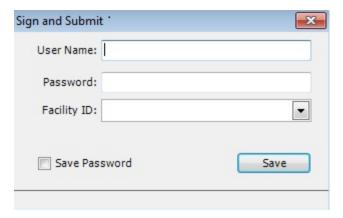

Figure 13: Sign and Submit Window

- 2. Enter your User Name and Password, and select the facility ID from the drop down that applies to the data package being submitted. If the Facilty ID does not exist, users can send a request to Region 5 contact to add it to the list.
- 3. Click the Save button, and verify if the facility you selected is corrected:

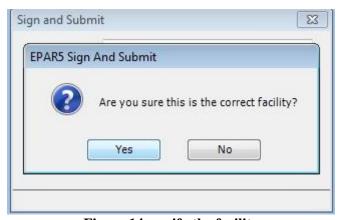

Figure 14: verify the facility

- 4. Click "Yes". Users will be prompted to provide a filename and location where you would like to save the file. The Sign and Submit feature will save an archived ("zipped") **file named with the current date, a period, the Facility ID, a period and the Format File name used to create the EDDs**. (Example file name: '20160811. MID000000001.EPAR5.zip'). The contents of the Zipped file include text files named for the sections of the format used to create them.
- 5. Select Save. Once the zipped EDD Package has been saved the following screen will appear.

Figure 15: saved the EDD file

6. Select OK

After the zipped file has been created the EDD Package is ready to be submitted to your regulator for loading into EQuIS Professional EDP or EQuIS Enterprise EDP.

-Each EDD file naming convention

Each file, except the base map file, must be named according to the following convention:

EDDFileFormat_v3.txt (or .csv)

This is the same file name as it is shown in th EPA Region 5 EDD format. The name of the site base map file should include the site name and EPAID and be saved in .dxf format.

Table 2-4 describes the naming formats and for the various Initial, Chemistry and Geology EDD files.

Table 2-4 EDD File Naming Formats

| File Type | File Contents | EDD File Name | Submittal Type |
|--------------|------------------------|-------------------------------------------------------------------------------------------------------|-------------------|
| Facility | File | Sitename.DXF, *.dwg, or shape files from ArcGIS, or Sitename.doc files from MS WORD for cover letters | Non- Recurring |
| Field | Data Provider | EPAR5DataProvider_v3.txt | Initial |
| Field | Subfacility | EPAR5Subfacility_v3.txt | Initial |
| Field | Location | EPAR5LOC_v3.txt | Initial |
| Field | Drill Activity | EPAR5DRA_v3.txt | Non- Recurring |
| Field | Lithology | EPAR5LTH_v3.txt | Non- Recurring |
| Field | Well | Wel_v3.txt | Non- Recurring |
| Field | Well Construction | EPAR5WSG_v3.txt | Non- Recurring |
| Field | Geotechnical Sample | EPAR5GSMP_v3.txt | Non- Recurring |
| Field | Water Level | EPAR5GWTR_v3.txt | Recurring |
| Field | Water Table | EPAR5TBL_v3.txt | Non- Recurring |

Table 2-4 EDD File Naming Formats

| File | File Contents | EDD File Name | Submittal |
|-------|------------------|---------------------|-----------|
| Type | | | Type |
| Field | Down Hole | EPAR5DHP_v3.txt | Non- |
| | Point (CPT) Data | | Recurring |
| | Data | | |
| Field | Extraction – | EPAR5EIW_v3.txt | Recurring |
| | Injection Well | | |
| | | | |
| Field | Soil Gas Data | EPAR5SoilGas_v3.txt | Non |
| | | | Recurring |
| Lab | Sample | EPAR5SMP_v3.txt | Recurring |
| Lab | Test Result | EPAR5TRS_v3.txt | Recurring |
| Lab | Test/Results | EPAR5TRSQC_v3.txt | Recurring |
| | QC | | |
| Lab | Batch | EPAR5BAT_v3.txt | Recurring |

2.5 Data Integrity Rules

Data providers are responsible for running three types of integrity checks on their data.

- Validity: All codes used in a data set must be valid. Valid values for all coded fields are either provided in the description columns of the tables in Sections 3, and 4 or in the tables in the Appendix of this manual. For example, sample matrix information is inputted in the sample_matrix_code field of the sample file and must be reported using one of the values provided in Table A-1 in the Appendix.
- **Row Uniqueness:** Row uniqueness must be verified using the guidance provided in Tables 2-1, 2-2, and 2-3. Row uniqueness is assured when no two rows in a file contain the same values for all the fields listed under the heading "What makes a row of data unique?" In database terminology this is called a primary key. For example, no two rows in the sample file can contain the same sys_sample_code (commonly called a sample identifier). In addition, no two rows ever reported for a single site can contain the same sys_sample_code. Each sys_sample_code must be unique for a site.

Files that have a primary key consisting of multiple fields, such as the water level file, must have a different value in at least one of the prmary key fields. For example, no two rows in the water level file can have the same sys_loc_code, measurement_date. For example, two rows with sys_loc_code of "SB-01", measurement_date of "05/02/2000 00:00" would violate row uniqueness. However, row uniqueness would not be violated if one row had a sys_loc_code of "SB-01", measurement_date of "05/02/2000 00:00:00" and the other row had sys_loc_code of "SB-01", measurement_date of "06/12/2000 00:00:00".

• Row Integrity: The relationship between rows within the files of the EDD must be assured by enforcing the "referential integrity" rules discussed in Tables 2-1, 2-2, and 2-3 under the column labeled "Dependence of other files on these data." For example, the values in the sys_sample_code field in the Test/Result file must match with the corresponding fields in the Sample file. Logical relationships between the various Lab EDD files are shown in Figure 2-1. The lines connecting the

files show which column(s) (or field(s)) are related in the two files. The file on the side with the "1" at the end of the connecting line contains one row that is related to more than one row in the related file on the other side. For example, one row in a SUBFACILTY EDD file may correspond to many rows in a LOCATION EDD file because there are always more than one, and in most cases many locations, designated at a site. The logical relationship between the FIELD EDD files is limited to the requirement that all entries in the sys_loc_code fields appear in the LOCATION EDD file.

Test Result QC Location Sample Subfacility 1 1 Data_provider sys_sample_code Facility_code sys_sample_code subfacility_code lab_anl_method_name ∞ sys_loc_code sample_name analysis_date sample_matrix_code x_coord total_or_dissolved y_coord sample_type_code subfacility_name column_number surf elev sample_source test_type elev_unit parent_sample_code subfacility_task_code lab matrix code coord_type_code sample_delivery_group subfacility_desc1 analysis_location observation_date sample_date basis longitude sample_time subfacility_desc2 container_id latitude sys_loc_code dilution_factor start_depth alt_identifier contact_name prep_method end_depth horz collect method code prep_date horz_accuracy_value depth_unit address1 leachate_method chain_of_custody horz_accuracy_unit leachate_date address2 horz_datum_code sent_to_lab_date lab_name_code elev_collect_method_code sample_receipt_date city gc level elev_accuracy_value sampler state lab sample id elev_accuracy_unit sampling_company_code zip code percent_moisture elev datum code sampling_reason subsample_amount sampling_technique source scale subsample_amount_unit phone numbeer subcontractor_name_code task_code analyst_name verification_code collection_quarter alt_phone_number instrument_id reference_point composite_yn comment geometric_type_code composite_desc fax_numbeer preservative sample_class rank final_volume loc_name custom_field_1 email_address final volume unit loc_desc custom_field_2 cas_rn loc_type custom_field_3 chemical_name loc_purpose comment result_value primary_site_code result_error_delta within_facility_yn result_type_code loc_county_code ∞ sys_lo loc_district_code detect_flag loc_state_code lab_qualifiers loc_major_basin validator_qualifiers loc_minor_basin interpreted_qualifiers remark validated_yn total_depth method_detection_limit depth_to_bedrock reporting_detection_limit depth_to_top_of_screen quantitation_limit depth_to_bottom_of_screen result_unit top_casing_elev detection limit unit datum_value tic_retention_time datum unit minimum_detectable_conc step or linear counting_error datum collection method code uncertainty datum_desc critical_value datum_start_date validation_level result_comment

Figure 2-1 Relationships between Lab file data structures.

Shaded fields are required to have data. Blue fields define row uniqueness for the specified file.

2.6 Definition of a Facility, Site, and Location

To submit and error-free EDD, it is important to understand how EPA Region 5 defines facility, site, and location for the purposes of this EDD Specification Manual. Each facility (facility_id) will be identified with its EPA ID number (see Table A-22 in the Appendix.) As EPA requirement, a facility center point must be populated with the latitude and longitude centroid of the facility (*). The site (site_code) will be the operable unit identifier. There will always be at least one operable unit per facility. The way the location term is used is that each site can contain one or more locations, as long as they are distinct points defined by X and Y universal transverse Mercator (UTM) coordinates Examples of locations include soil borings, monitoring wells, and sampling locations. Each location identifier (sys_loc_code) must be unique for a facility.

Figure 2-2 provides a diagram of the facility components.

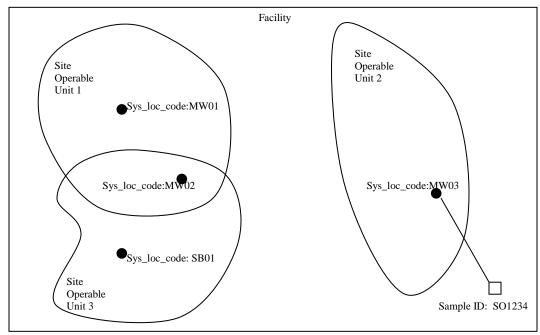

Figure 2-2 Facility component definitions

Facility ID = EPA ID #

Site = Site Operable Unit = site_code <u>Must be unique at a Facility</u> Location= sample location = sys_loc_code Must <u>be unique at a Facility</u>

2.7 Reporting Null Values

When a field is <u>not</u> listed as required in Sections 3, and 4 and the data is not available or applicable, a null or blank may be appropriate. However, tabs or commas must still delimit the blank value. In other words, the number of fields is always the same, whether or not the fields include data. So a blank field in a tab-delimited file would appear as "<TAB><TAB>" and a blank field in a comma-delimited file would appear as ",".Table 2-5 shows a number of examples.

Example Comment

"data_one"<tab>"data_two" <tab>"data_three"

"data_one","data_two","data_three"

"data_one","data_two","data_three"

"data_one","data_two","data_three"

"data_one","data_two","data_three

Table 2-5 Examples of how to report null values

Table 2-5 Examples of how to report null values

| Example | Comment | | |
|------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|--|--|
| "data_one" <tab><tab>"data_three" "data_one",,"data_three"</tab></tab> | O.K. Optional field not populated, 2 tabs or 2 commas between first and third field. | | |
| "data_one" <tab>"data_three"</tab> | Not O.K . Optional field omitted, only 1 tab or | | |
| "data_one","data_three" | comma between first and third field. | | |

2.8 Valid Values

Valid values, also known as reference values or code lists, govern the contents of some fields in the EDDs. In other words, some fields may only be populated with data that matches a value listed in the EPA Region 5 list of valid values. The lists of valid values are provided in the "Valid Values Table Reference Manual". A list of all the data fields that must contain valid values is presented in Table 2-6 (below). This list is also cross-referenced to the EDD file(s) the field appears in. If data providers need to enter a value not already in the Region 5 list in the Appendix, they can request the proposed addition to the valid value list in the EDD cover letter. The data provider should explicitly state the valid value that she/he would like added, provide a description of the value, and explain why the addition is necessary. In the case of requesting a new aboratory code, the data provider should include the full name of the laboratory and its address. When requesting an addition of an analyte, the data provider must include the appropriate CAS number or ERPMS code along with a description of the analyte.

Table 2-6 Cross-reference between the valid value tables in appendix and the EDD files

| Valid Value Table Name Table Number | | Field Name | EDD File |
|-------------------------------------|------|--------------------------------------|---------------------------------|
| Matrix A-1 | | sample_matrix_code, lab_matrix_code | Chemistry Samples, Test/Results |
| Geometric type | A-2 | Geometric_type_code | Location |
| Horizontal Collection Method | A-3 | horz_collection_method_code | Location |
| Horizontal Accuracy Unit | A-4 | horz_accuracy_unit | Location |
| Horizontal Datum | A-5 | horz_datum_code | Location |
| Elevation Collection Method | A-6 | elev_collect_method_code | Location |
| Elevation Datum | A-7 | elev_datum_code | Location |
| Material | A-8 | Material_type | Basic Geology |
| Location Type | A-9 | loc_type | Location |
| Qualifier | A-10 | lab_qualifiers, validator_qualifiers | Test/Results |
| Result Type | A-11 | result_type_code | Test/Results |
| Sample Type | A-12 | sample_type_code | Chemistry Samples |
| Geologic Unit | A-13 | Geologic_unit_code | Geotechnical Samples |
| Standard Preparation Method | A-14 | lab_prep_meth | Test/Results |
| Analyte | A-15 | cas_rn, chemical_name | Test/Results |
| Lab Analysis Method Name | A-16 | lab_anl_method_name | Test/ Results |

| Valid Value Table Name Table Number | | Field Name | EDD File |
|-------------------------------------|------|------------------------------------------|----------------------------------------------------|
| Laboratory | A-17 | lab_name_code | Test/Results |
| Unit | A-18 | various_unit fields throughout all files | All Files |
| Geology Soil Materials | A-19 | material_type | Lithology, Geology Samples |
| Well Segment and Materials | A-20 | segment_type, material_type_code | Well Construction |
| Hydrologic Unit Codes (HUC)-Basin | A-21 | loc_major_basin | Location |
| EPA Facility IDs | A-22 | facility_id, site_name | Site |
| Company code | A-23 | Data_provider | Location, Sample, Test Result, Data Provider |
| Total or dissolved | A-24 | Total_or_dissolved | Test Result, Test Result QC, Batch |
| Test Type | A-25 | Test_type | Test Result, Test Result QC, Batch |
| Test Batch Type | A-26 | Test_batch_type | Batch |
| Reference Point | A-31 | reference_point | Location |
| Source_scale | A-32 | Source_scale | Location |

2.9 Reporting Re-Tests

For initial tests, all analytes should be reported. In the case where retests are performed on a sample, the result that is considered the reportable result should indicate a "Y" (for "yes") in the reportable_result field. The initial test, and any retest result not considered reportable will have reportable_result set to "No". Table 2-7 provides examples of reporting re-tests.

Table 2-7 Example of reporting re-tests

| Test | Chem | | Result | Detect | Lab | Reportable | |
|-----------|---------|-----------|--------|--------|------------|------------|--------------------------------|
| Type | Name | Cas rn | Value | Flag | Qualifiers | Result | Result_Comment |
| Initial | Benzene | 71-43-2 | 1000 | Y | Е | No | too concentrated to quantitate |
| Initial | Toluene | 108-88-3 | 5 | N | U | Yes | not detected |
| Initial | Xylenes | 1330-20-7 | 5 | N | U | Yes | not detected |
| dilution1 | Benzene | 71-43-2 | 780 | Y | | Yes | Quantitated |

2.10 Reporting Non-Detects

Non-detects must be reported as shown in the example below. Each non-detect row must show an "N" in the detect_flag field, must have an actual value entered in the reporting_detection_limit and detection_limit_unit fields, and must contain a null in the result_value_field. The reporting_detection_limit cannot be negative unless one of the radiological fields (including minimum_detectable_conc, counting_error, uncertainty, critical_value) are populated. Table 2-8 presents examples of how to report non-detects.

Table 2-8 Example of reporting non-detects

| | Value | Flag | Detection Limit | Limit Unit | | qualifiers |
|----------|-------|------|--------------------|------------|--------------|------------|
| 108-88-3 | .15 | Y | .005 | ug/ml | | U |
| 108-88-3 | | N | .005 | ug/ml | not detected | U |

2.11 Reporting Tentatively Identified Compounds

Tentatively Identified Compounds (TICs) should be reported when available. The naming of TICs should be applied in a cascade fashion. The TIC should be identified to analyte name if possible. If this is not possible, then the class of the TIC should be entered. If neither an analyte name nor a class can be identified, the TIC should be identified as Unknown. The EPA Region 5 EDD only allows for reporting up to 10 TICs. Only the 10 most concentrated or most relevant TICs should be reported. Table 2-9 shows examples of the nomenclature for TICs. As an example, if a sample has three Unknown Hydrocarbons, then the TICs are labeled UnkHydrocarb1, UnkHydrocarb2, and UnkHydrocarb3. TIC names are to be reported in the cas_rn field, Pos #31, of the Test/Result file (Tables 4-3 and Table 4-4). In addition, the result_type_code, Pos # 35 in the Test/Result file should have "TIC" for all TIC records.

Table 2-9 Example nomenclature for TIC reporting

| TIC Name | Number for TIC | Reported Name in cas_rn |
|---------------------|----------------|--------------------------------|
| Unknown | 1-10 | Unknown1 – Unknown10 |
| Unknown Hydrocarbon | 1-10 | UnkHydrocarb1 - UnkHydrocarb10 |
| Unknown PAHs | 1-10 | UnkPAH1 - UnkPAH10 |
| Unknown Aromatics | 1-10 | UnkAromatic1 - UnkAromatic10 |
| Unknown VOA | 1-10 | UnkVOA1 - UnkVOA10 |
| Unknown SV | 1-10 | UnkSV1 - UnkSV10 |

2.12 Data Types

The table below describes the data types used in the chemistry and geology file descriptions. In addition to the types listed below, certain fields have single and double data types. The single data type stores numbers from -3.402823×10^{38} to $-1.401298 \times 10^{-45}$ for negative values and from 1.401298×10^{45} to 3.402823×10^{38} for positive values, with a decimal precision of up to 7 digits. The double data type stores numbers from $-1.79769313486231 \times 10^{308}$ to

 $-4.94065645841247 \times 10^{-324}$ for negative values and from 1.79769313486231 x 10^{308} to

 $4.94065645841247 \times 10^{-324}$ for positive values, with a decimal precision of up to 15 digits.

Table 2-10 Data type descriptions

| Type | Description | Decimal Precision | Comments |
|------------|------------------------------------------------------------------------------|----------------------|---------------------------------------------------|
| Integer | Stores numbers from –32,768 to 32,767 (no fractions). | None | |
| 'Y' or 'N' | Boolean field used to indicate yes or no to a question. Enter either Y or N. | NA | |
| Time | Time in 24-hr (military) HH:MM:SS format. | NA | Text (8) is standard length for time. |
| Date | Date format is MM/DD/YYYY. | NA | |
| Text | Stores characters and numbers. | NA | Length restrictions are indicated in parentheses. |

2.13 Data Entry Tools Provided to Create the EDD Files

| EDD files can be produced using any software with the capability to create text files. These files are |
|--------------------------------------------------------------------------------------------------------|
| especially easy to create using spreadsheet or database software packages. However, if these are |
| unavailable, the files can be created using a word processor or text editor. Table 2-11 provides |
| instructions for creating tab-delimited text files from some widely-used software packages. |

Table 2-11 Instructions for producing tab-delimited text files from some software packages

| Package | Туре | Instructions | | | |
|-------------|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|
| Access | Database | Create tables using file structures in Sections 3 and 4. After data are entered, close table. Click on table name (under table tab) and then select "File," "Save As," from the top menu. Save to an externa file or database. Change "Save as Type" to a text file. Change the file extension from "txt" to "tab." Press OK. This will start the export wizard. In the export wizard, select "Delimited," then press the "Next" button. Select "Tab" as the delimiter type and "as the text qualifier. Press the "Next" button. Select a destination and name for the file. Press the "Finish" button. | | | |
| Excel | Spreadsheet | 1. Select "File," "Save As," from the top menu. Change "Save as Type" to a "Text (Tab Delimited)" file. Press the "Save" button. | | | |
| Quattro® v8 | Spreadsheet | 1. Select "File," "Save As," from the top menu. Change the "File Type" to "ASCII Text (Tab Delimited)." Press the "Save Button." | | | |
| Word | Word Processor | [Note: A word processor is not the best tool for the job! A large paper size will have to be selected to prevent wrapping for most files.] [wrapping?] 1. Enter data into a table in Word. Any text entered must be contained within double quotes. 2. Select "Table," "Select Table," from the top menu. When the table is highlighted, select "Table," "Convert to Text," "Separate Text with Tabs." 3. Select "File," "Save As," from the top menu. Change "Save as Type" to "MS DOS Text (*.txt). | | | |
| Lotus 1-2-3 | Spreadsheet | 1. Select "File," "Save As," from the top menu. Change "Save as Type" to a "Comma Separated Value (CSV)" file. Provide file name. Press the "Save" button. | | | |

2.14 Using the Electronic Data Processor to Check EDD Formatting

The Electronic Data Processor (EDP) can be used by Data Providers to check EDD files prior to submittal to EPA Region 5. The EDP is a no-cost application that performs a series of formatting checks on the files and then identifies any records that have errors along with a description of the errors. This allows the Data Provider to correct the errors before sending the files to EPA Region 5. EDD files that pass through the EDP error-free should also result in error-free import at EPA Region 5.

EDP is currently available as a no-cost download from the EPA Region 5 website located at at https://www.epa.gov/superfund/region-5-superfund-electronic-data-submission. Instructions on how to install and use the EDP are also provided on the website.

2.15 Submitting Your EDD to EPA Region 5

Each EDD must be checked using the EDP and the most updated EDD format before submitting to EPA Region 5. Please follow the three steps below to submit your EDD data:

Email to get the username, password:

-Send email to canar.john@epa.gov to get the username, and password. Data providers are required to get the username, and password to use the Sign and Submit process to create a EDD zip package after the data has been checked with the EDP with no errors. The Sign and Submit process allows data provider to save the EDD in their preferred folder or directory. The EDD zip package should be named using the naming convention that was shown in section 2.4.

Email to EPA Region 5 EQuIS Enterprise Database:

- Once the EDD zip file has been created, the EDD is ready to be emailed to EPA EQuIS Enterprise processor. Please follow the following 2 steps:
- 1. Change the file extention from ".zip" to ".edd". In other words, your EDD is zipped in EDP, such as "20160811. MID000000001.EPAR5.zip", you need to change the file extention to ".edd", meaning the file name will become "20160811. MID000000001.EPAR5.edd"
 - 2. Send the ".edd" file to to EPAR5@EOuISOnline.com

Notify EPA Region 5 when the data is sent to the EPA Region 5 EQuIS Enterprise database:

Please notify the EDD database administrator canar.john@epa.gov for each EDD that has been emailed to the EPA Region 5 EQuIS Enterprise database.

EDD submittal types

There are three possible EDD submittal types: an original submittal, an error correction resubmittal, and an update submittal. These three EDD types are described below.

- Original Submittal: An original EDD submittal contains data being submitted for the first time to EPA Region 5. EPA Region 5 will process and check the EDD. If there are no errors in any of the EDD files, EPA will import the data to the permanent database. EPA Region 5 can only import and accept the EDD submittal if all files in the submittal are error-free. If any of the files on the EDD contain errors, EPA will send the data provider a letter specifying the errors that need to be corrected.
- <u>Correction Resubmittal</u>: In the case where an original EDD submittal contains errors, the entire EDD submittal will be returned to the data provider along with an error report explaining

the problems identified. The data provider should then correct the errors, check the files again with the EDP, and then resubmit the entire EDD. A response is required within 30 days. It is important that the resubmitted EDD contain all of the files and the SAME FILE NAMES (i.e., use the same site name and submittal date in the file name as was used in the original submittal) as those in the original submittal. Thus, the EDD resubmittal will be identical to the original submittal in everyway except the errors are corrected.

■ Update Submittal: This type of submittal updates data that has previously been accepted by EPA Region 5. The files of an update submittal should contain only data for the records being updated. For example, say a data provider submits an EDD in 2014 that includes a location file (e.g., EPAR5LOC_v3.txt) that contains ten locations, and the EDD is accepted by EPA Region 5 and loaded into the EPA database. If, in 2016, the site is resurveyed, and it is discovered that three of the locations' coordinate information has changed due to increased accuracy, a new location file containing data for only those three locations would need to be submitted as an update submittal. The update submittal would be included in a cover letter and name the file correctly. Note: All required fields need to be populated for the three locations regardless of whether or not these fields were updated. The reason for the update submittal and the records that have been changed must be clearly indicated in the cover letter accompanying the updated EDD.

2.16 Examples of Field, and Lab EDD Files

Examples of Field and Lab EDD files with the first few rows of the EDD populated with a typical data set are presented in Figures 2-3, 2-4, 2-5, and 2-6. These examples were produced using Excel worksheets. To submit these files, the data provider would save the files as text delimited files (txt) or comma separated files (csv), check the files using the EDP, and then send the error free files to Region 5. In order to fit the examples on one page, not all of the fields (i.e., columns) were included for certain files (e.g., Subfacility, Location, and Sample). The notation "Additional Fields" has been inserted where, for purposes of these examples, one or more fields have been omitted. It should be noted that all fields must appear in the EDD files you submit regardless of whether or not the field is populated (see Section 2.7 regarding reporting blanks, or "null" values). Special cases discussed in previous sections of this manual, as well as more standard types of data, are illustrated below.

Figure 2-3. Example Field EDD ready for conversion to text file

Subfacilty File (EPAR5SUBFACILITY_v3):

| subfacility_co | subfacility_na | subfacility_task_c | subfacility_des | subfacility_de | contact_name | address1 | Additional | email_address |

Figure 2-5. Examples of QC data fields in a Chemistry EDD

QC fields in a normal field sample (i.e., sample_type_code = N, TB, etc.)
The following table shows some of the fields in the test/result (TRS) file for a normal field sample. Notice that all QC fields are blank.

| | | | | • | | | | ` | | | |
|---------|--------------|----------------------|--------------------|-----------------------|-----------------------|------------------------------|----------------------------|-------------------------------|-------------------------------|--|--|
| cas_rn | result_value | qc_original _conc | qc_spike_ added | qc_spike_ measured | qc_spike_ recovery | qc_dup_ original_ conc | qc_dup_ spike_ added | qc_dup_ spike_ measured | qc_dup_ spike_ recovery | | |
| 93-76-5 | 1.56 | | | | | | | | | | |
| 94-75-7 | 3.17 | | | | | | | | | | |
| 94-82-6 | 2.31 | | | | | | | | | | |

QC fields in a normal field sample with surrogates (i.e., sample_type_code = N, TB, etc.)

The following table shows some of the fields in the test/result file (TRS) for a normal field sample. Notice that QC fields are blank except in rows related to surrogate samples. Many data providers will only need to populate the recovery field data; the spike-added and spike-measured fields will not be needed in most situations.

| Cas_rn | result_value | result_unit | result_type_ code | qc_original_ conc | qc_spike_added | qc_spike_ measured | qc_spike_ recovery |
|---------|--------------|-------------|----------------------|----------------------|----------------|-----------------------|-----------------------|
| 93-76-5 | 1.56 | mg/l | TRG | | | | |
| 94-75-7 | 3.17 | mg/l | TRG | | | | |
| PHEN2F | | mg/l | SUR | | 12.5 | 12.9 | 103 |

QC fields in a laboratory method blank sample (i.e., sample_type_code = LB)

The following table shows some of the fields in the test/result file for a laboratory method blank sample. Notice that all QC fields are blank.

| cas_rn | result_ value | lab_ qualifier | qc_ original_ conc | qc_spike_ added | qc_spike_ measured | qc_spike_ recovery | qc_dup_ original_ conc | qc_dup_ spike_ added | qc_dup_ spike_ measured | qc_dup_ spike_ recovery |

| 94-82-6 | 0.01 | | | | | | | | | |

Figure 2-5. Examples of QC data fields in a Chemistry EDD (continued)

QC fields in a matrix spike (i.e., sample_type_code = MS)

The following table shows some of the fields in the test/result file for a matrix spike sample. Notice that all "dup" QC fields are blank and that the result_value field is not needed. Also, the qc_rpd field would be blank for these rows. Many data providers will only need to populate the calculated recovery field (qc_spike_recovery).

| cas_rn | result_ value | qc_ original_ conc | qc_spike_ added | qc_spike_ measured | qc_spike_ recovery | Qc_rpd | qc_dup_ original_ conc | qc_dup_ spike_ added | qc_dup_ spike_ measured | qc_dup_ spike_ recovery |
|---------|------------------|--------------------------|--------------------|-----------------------|-----------------------|--------|------------------------------|----------------------------|-------------------------------|-------------------------------|
| 93-76-5 | | 1.56 | 4.18 | 5.36 | 90.9 | | | | | |
| 94-75-7 | | 3.17 | 4.18 | 7.15 | 95.2 | | | | | |
| 94-82-6 | | 2.31 | 4.22 | 5.66 | 79.3 | | | | | |

QC fields in a matrix spike duplicate (i.e., sample_type_code = SD)

The following table shows some of the fields in the test/result file for a matrix spike duplicate sample. Notice that all "dup" QC fields are filled in and that the result_value field is not needed. Also, the qc_rpd field would be completed for these rows. Many data providers will only need to populate the calculated recovery field (qc dup spike recovery).

| cas_rn | result_ value | qc_ original_ conc | qc_spike_ added | qc_spike_ measured | qc_spike_ recovery | Qc_rpd | qc_dup_ original_ conc | qc_dup_ spike_ added | qc_dup_ spike_ measured | qc_dup_ spike_ recovery |
|---------|------------------|--------------------------|--------------------|-----------------------|-----------------------|--------|------------------------------|----------------------------|-------------------------------|-------------------------------|
| 93-76-5 | | | | | | 10 | 1.56 | 4.23 | 5.70 | 97.8 |
| 94-75-7 | | | | | | 12 | 3.17 | 4.23 | 7.62 | 105 |
| 94-82-6 | | | | | | 15 | 2.31 | 4.13 | 5.33 | 73.1 |

QC fields in a matrix spike/matrix spike duplicate (i.e., sample_type_code = MSD)

The following table shows some of the fields in the test/result file for a matrix spike/matrix spike duplicate considered as a single sample. (Note: Matrix spike and matrix spike duplicate samples can be reported either this way or as two separate samples as shown above). Notice that all QC fields are filled in and the result_value field is not needed. Also, the qc_rpd field would be completed for these rows. Many data providers will only need to populate the calculated recovery fields (qc_spike_recovery and qc_dup_spike_recovery).

| cas_rn | result_ value | qc_ original_ conc | qc_spike_ added | qc_spike_ measured | qc_spike_ recovery | Qc_rpd | qc_dup_ original_ conc | qc_dup spike_ added | qc_dup spike_ measured | qc_dup spike_ recovery |
|---------|------------------|--------------------------|--------------------|-----------------------|-----------------------|--------|------------------------------|---------------------------|------------------------------|------------------------------|
| 93-76-5 | | 1.56 | 4.18 | 5.36 | 90.9 | 7 | 1.56 | 4.23 | 5.70 | 97.8 |
| 94-75-7 | | 3.17 | 4.18 | 7.15 | 95.2 | 10 | 3.17 | 4.23 | 7.62 | 105 |
| 94-82-6 | | 2.31 | 4.22 | 5.66 | 79.3 | 8 | 2.31 | 4.13 | 5.33 | 73.1 |

QC fields in a LCS (i.e., laboratory control sample, blank spike, sample_type_code = BS)

The following table shows some of the fields in the test/result file for an LCS sample. The qc_rpd field would be blank for these rows. Many data providers will only need to populate the calculated recovery field (qc_spike_recovery). LCS duplicate samples (i.e., sample_type_code = BD) and LCS/LCSD samples (i.e., sample_type_code = BSD) follow the patterns similar to the SD and MSD samples described above.

| cas_rn | result _value | qc_original _conc | qc_spike_ added | qc_spike_ measured | qc_spike_ recovery | qc_dup_ original_ conc | qc_dup_ spike_ added | qc_dup_ spike_ measured | qc_dup_ spike_ recovery |
|---------|------------------|----------------------|--------------------|-----------------------|-----------------------|------------------------------|----------------------------|-------------------------------|-------------------------------|
| 93-76-5 | | | 5.00 | 5.26 | 105 | | | | |
| 94-75-7 | | | 1.00 | 1.02 | 102 | | | | |
| 94-82-6 | | | 12.5 | 12.9 | 103 | | | | |

3. FORMATS FOR Facility Files and Field Files

This section contains information regarding the base map and the two files included in the Facility EDD. These files need to be submitted prior to, or in conjunction with, the first Field EDD submittals These files only need to be submitted once unless information in the files changes or additional information, such a new sampling location, needs to be added. Columns marked "Required" must be reported for each row in the file. If these fields are not reported, errors will be identified in the EDD and the EDD will need to be resubmitted. Columns marked "If available" should also be reported if possible.

3.1 Facility EDD Files

Site Base Maps in the file section (Files_v3)

Site base maps can be submitted in CAD files in a DXF interchange format, or drawing (.dwg) file, or Shapfiles generated from ArcGIS. The maps should include all well locations, waste management units, landfills, buildings, and roads. **Do not include any groundwater contours, contaminant contours, or other temporal type information.** If the CAD file is available in real world locational coordinates, provide the coordinates along with a brief text description of the type of projection and datum used. (Note: UTM NAD 83 is the data type preferred by EPA Region 5). Also include text descriptions of the units and scale of the base map. The site base map file should be named according to the following example:

SiteName.DXF (or dwg, or shape files)

The file section allows you to load supplementary information into EQuIS, such as Map, drawing files. The naming convention of the File_v3 is:

File_v3.txt (or .csv)

Table 3-1 Files (Files_v3) structure

| Pos# | Column Name | Data type | Required | Description | Valid Values In Appendix |
|------|------------------|------------|--------------|---------------------------------------------------------------|-----------------------------|
| 1 | File_name | Text (255) | Yes | Name of the file | No |
| 2 | File_type | Text (20) | Yes | Type of the file | No |
| 3 | File_date | Date time | If available | Date of the file | No |
| 4 | Title | Text (255) | If available | Title of the file | No |
| 5 | Author | Text (255) | If available | Author of the file | No |
| 6 | Confidential _yn | Text (1) | If available | Whether or not the file is confidential | No |
| 7 | Remark | Text (255) | If available | Remark for the file | No |
| 8 | Place_type | Text (50) | If available | Type of the place tis file is associated with | No |
| 9 | Place_code | Text (50) | If available | Code/identifier of the place this file is associate with | No |
| 10 | Place_subcode | Text (50) | If available | Subcode/ identifier of the place this file is associated with | No |
| 11 | Content | | | Content of the file | No |

3.2. Field Files-DATAPROVIDER

This section contains tables that define the file structures for the FIELD EDD. The file structures include the first three initial EDD files: Data Provier, Subfacility, and Locations, also the drilling activity, lithology, well, well construction, geotechnical samples, water levels, Water Table, downhole point, extraction injection wells, and Soil Gas data. The columns marked "Required" must be reported for each row in the file. If an EDD is submitted with one or more "Required" fields not filled in, EPA will not be able to load the EDD into its database, and the EDD will have to be returned to the data provider for correction(s). The columns marked "If available" should also be reported whenever possible. Examples of the EDD files that make up the Field EDDs are provided in Figure 2-6, section 2.16.

Data Provider (EPAR5DATAPROVIDER_v3)

The Data Provider EDD file provides general information about the data provider who is the contact for the data on the site.

EPAR5DataProvider_v3.txt (or .csv)

Table 3-2 Data Provider (EPAR5DataProvider_v3) File Structure

| Pos# | Column Name | Data Type | Required | Description | Valid Values |
|------|---------------------------|-----------|-----------------|----------------------------------------------------------------------------------------|--------------|
| | | | | | In Appendix |
| 1 | Data_Provider | Text(20) | Required | This is the name of the company who is responsible for providing the site data. | A-23 |
| 2 | Data_Contact _Person | Text(30) | Not Required | This is the name of the contact person who is responsible for providing the site data. | No |
| 3 | Data_Contact _Address1 | Text (40) | Not required | Data Provider address 1 | No |
| 4 | Data_Contact _Address2 | Text (40) | Not required | Data Provider address 2 | No |
| 5 | Data_Contact _City | Text (30) | Not required | Data Provider city | No |
| 6 | Data_Contact _State | Text(5) | If Available | Contact state | No |
| 7 | Data_Contact_zi pcode | Text(10) | Not required | Contact zip | No |
| 8 | Data_Contact _email | Text(60) | Required | Contact email address | No |
| 9 | Data_Contact _Phone | Text(30) | Not Required | Contact phone number | No |

3.3 SUBFACILITY EDD File

The SUBFACILITY EDD file provides general information about a site and provides the name, e-mail address, and other contact information for the main EDD data contact for the site. An example of a Subfacility file is provided in Figure 2-3, section 2.16. **NOTE**: If the SUBFACILITY EDD file was previously submitted, including as part of a "Historic Data EDD", as described in the Region 5 "EDD Manual for Historical Data", you DO NOT need to resubmit the file again.

Each SUBFACILITY file must be named according to the following convention:

EPAR5SUBFACILITY_v3.txt (or .csv)

Table 3-3 SUBFACILITY (EPAR5SUBFACILITY_v3) data file structure

| Pos# | Column Name | Data Type | Required | Description | Valid Values |
|------|-------------------|-----------|--------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| | | | | | In Appendix |
| 1 | SUBFACILITY_c ode | Text(20) | Required | Code indicating the site operable unit for which the data is collected, or area of concern (AOC). Typically the code is "01" unless there is a second or third operable unit at facility. Codes of "02" and "03" should be used for second and third operable units, respectively. Contact the EPA RPM if unsure of proper code. | No |
| 2 | subfacility_name | Text(60) | Required | Name of site | Table A-22 |
| 3 | site_task_code | Text(40) | Required | Code used to associate individual samples to a specific sampling event. The format for this field is XX-P#, XX is the type of task required and P# is the phase. | No |
| 4 | subfacility_desc1 | Text(255) | If available | General description of the site. | No |
| 5 | subfacility_desc2 | Text(255) | If available | Additional description of site, if necessary. | No |
| 6 | contact_name | Text(50) | Required | Name of person to contact if EPA Region 5 has any questions about the EDD. | No |
| 7 | address1 | Text(40) | Required | Site address, part one. | No |
| 8 | address2 | Text(40) | Not required | Site address, part two. Default to null if information is not needed | No |
| 9 | City | Text(30) | Required | Site city. | No |
| 10 | State | Text(2) | Required | Site state. | No |
| 11 | Zipcode | Text(10) | Required | Site zip code. | No |
| 12 | phone_number | Text(30) | Required | Site contact phone number. | No |
| 13 | alt_phone_number | Text(30) | If available | Alternate phone number for site contact. Default to null where the data are not available. | No |
| 14 | fax_number | Text(30) | If available | Fax number of site contact. Default to null where the data is not available. | No |
| 15 | email_address | Text(100) | Required | Site contact e-mail address. | No |

3.4 Location EDD File (EPAR5LOC_v3)

The primary purpose of the Location EDD file is to define the sampling locations for a site. Each EPA ID must have a center point identified. The location section will be used to enter the center point. This file is referred to as one of the Initial EDD files because it needs to be submitted -- and error-free -- before EDD files that contain chemistry and geology data can be used. Each row of the Location file contains the definition of a unique sampling location. Do not create any records (i.e., rows) for any samples not associated with a specific sampling location, such as field blanks and trip blanks. In the case of multiple wells located in one borehole, each well in the borehole must have a unique sampling location identifier (sys_loc_code).

Each sampling location should only be reported once for a site. The only time data a previously reported location should be resubmitted is if some information about the location changes, such as when a location

is resurveyed after settling has occurred or after a resurvey using an instrument or methodology with higher accuracy. When resubmitting changes to the Location file, the file should contain rows pertaining to the affected locations only. As in a typical EDD submittal, all "required" fields should be populated when updating data. Changes in the resubmittal should be described in the cover letter accompanying the EDD, and the EPA RPM should receive a copy of the letter or should be otherwise notified. See section 2.15 "Submitting Your EDD to EPA" for more information regarding submitting updated data files.

The data structure of the LOCATION EDD file includes fields (Table 3-4 below) to collect data requirements of EPA's Locational Data Policy (LDP). LDP requires geographic coordinates and associated method, accuracy, and description (MAD) codes for all environmental measurements collected by EPA employees, contractors, and grantees. A key premise of the LDP policy is that secondary use of these data in geographic information systems (GIS) and statistical mapping programs are significant to the overall mission of the Agency. To facilitate the integration of data, EPA has established the LDP to standardize the coding of geologic coordinates and associated attributes. Therefore, in addition to location coordinates being reported in UTM meters, Region 5 requests that coordinates be reported in latitude and longitude, along with associated attributes, if the data is available. An example of a Location file is provided in Figure 2-3, section 2.16.

Each Location file must be named according to the following convention:

EPAR5LOC_v3.txt (or .csv)

Table 3-4 Location Data (EPAR5LOC_v3) File Structure

| Pos# | Column Name | Data Type | Required | Description | Valid Values In Appendix |
|------|---------------|----------------------------------------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| 1 | Data Provider | Text(20) | Required | Data Prodiver company code | A-23 |
| 2 | Facility_code | Text (20) | Required | Facility ID | A-22 |
| 3 | sys_loc_code | Text(20) | Required | Location ID, such as MW-01, A24, SW12, or SB-2S, for all samples collected, including groundwater samples, hydropunch samples, surface water/sediment samples, and soil samples. For facility center point, sys_loc_code = "FAC CENTER POINT" | No |
| 4 | X_coord | Number w/decimal precision up to 15 | Required | Sampling location numeric x UTM NAD83 coordinate in meters. | No |
| 5 | Y_coord | Number w/decimal precision up to 15 | Required | Sampling location numeric y UTM NAD83 coordinate in meters. | No |

Table 3-4 Location Data (EPAR5LOC_v3) File Structure

| Pos# | Column Name | Data | Required | Description | Valid Values |
|------|------------------------------|----------------------------------------------|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------|
| | | Type | _ | | In Appendix |
| 6 | surf_elev | Number w/decimal precision up to 15 | Not Required | Elevation of the ground surface, or if location is for surface water samples, water surface elevation. | No |
| | | | | For water surface elevation, use the average annual elevation. Note: Subsequent water surface elevations should be obtained during the surface water sampling period and reported in the Water Level EDD file (see sections 4.2 and 4.4). | |
| 7 | elev_unit | Text(15) | Required | Unit of measurement for elevations. | Units must be in ft/m |
| 8 | coord_type_code | Text(20) | Required | Sampling location coordinate system description . Must be 'UTM Zone nn' | No |
| 9 | observation_date | DateTime | Not required | Date observation or site survey was made. | No |
| 10 | Longitude | Text(20) | Not required | X_ state plane or UTM NAD83 coordinate | No |
| 11 | Latitude | Text(20) | Not required | Y_ state plane or UTM NAD83 coordinate | No |
| 12 | identifier | Text(20) | Not required | Use State Plane or UTM NAD83. Code for the coordinate type used for alt_x and alt_y. Values are: 'UTM ZONE 17', 'UTM ZONE 18', 'SP' | No |
| 13 | horz_collect_method_c ode | Text(2) | If available | Method used to determine the latitude/longitude measurements. Horizontal Collection Method. | Table A-3 |
| 14 | horz_accuracy_value | Text(20) | Not required | Accuracy range (+/-) of the latitude and longitude. Only the least accurate measurement should be reported, regardless if it is for latitude or longitude. | No |
| 15 | horz_accuracy_unit | Text(1) | If available | Unit of the horizontal accuracy value. | Table A-4. Enumeration list contains the codes and description |
| 16 | horz_datum_code | Text(1) | If available | Reference datum of the x_coord and y_coord | Table A-5 |

Table 3-4 Location Data (EPAR5LOC_v3) File Structure

| Pos# | Column Name | Data | Required | Description | Valid Values |
|------|------------------------------|-----------|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------|
| | | Type | | | In Appendix |
| 17 | elev_collect_method_c ode | Text(2) | If available | Method used to determine the ground elevation of the sampling location. | Table A-6 |
| 18 | elev_accuracy_value | Text(20) | Not required | Accuracy range (+/-) of the elevation measurement. | |
| 19 | elev_accuracy_unit | Text(8) | Not required | Unit of the elevation accuracy value. | Table A-18. Enumberation list contains the codes and description. |
| 20 | elev_datum_code | Text(1) | If available | Reference datum for the elevation measurement | Table A-7 |
| 21 | source_scale | Text(2) | Not required | Scale of source used to determine the x_coord and y_coord. | Table A-32 |
| 22 | subcontractor_name_co de | Text(20) | If available | Code used to distinguish subcontractor name. | Table A-23 |
| 23 | verification_code | Text(1) | Not required | This field is only to be used by EPA Region 5 personnel. Please leave blank. | No |
| 24 | reference_point | Text(2) | Not required | Describes the place at which coordinates were established. Use codes from Table A-2 in the Appendix. | Tabel A-31 Enumeration list is available in this field. |
| 25 | geometric_type_code | Text(20) | If available | Value: 'POINT' | A-2 |
| 26 | Rank | Numeric | Not required | This field is for by EPA Region 5 future use. Please leave blank. | No |
| 27 | loc_name | Text(40) | Not required | Sampling location name. | No |
| 28 | loc_desc | Text(255) | Not required | Sampling location description. | No |
| 29 | loc_type | Text(10) | If available | Description of sampling type, such as direct push, extraction well, or sediment. Use "CENTROID" to identify facility center point. Use codes from Table A-9 in the Appendix. | Table A-9 |
| 30 | loc_purpose | Text(20) | Not required | Sampling location purpose. | No |
| 31 | Primary_subfacility_co de | Text(20) | Required | Unique code for site or area. Must match subfacility_code field from Table 3-3: Subfacility File Data Structure. | No |
| 32 | within_facility_yn | Text(1) | Required | Indicates whether this sampling location is within facility boundaries, "Y" for yes or "N" for no. | No |

Table 3-4 Location Data (EPAR5LOC_v3) File Structure

| Pos# | Column Name | Data Type | Required | Description | Valid Values In Appendix |
|------|------------------------|----------------------------------------------|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| 33 | loc_county_code | Text(20) | Not required | Location county code; controlled vocabulary using FIPS (Federal Information Processing Standard) codes. FIPS codes can be found via the internet at https://www.epa.gov/enviro/state-fips-code-listing | No |
| 34 | loc_district_code | Text(20) | Not required | Use the EPA region code '005' | No |
| 35 | loc_state_code | Text(10) | If available | Location state code; controlled vocabulary using FIPS codes. | No |
| 36 | loc_major_basin | Text(8) | If available | Location major basin; controlled vocabulary using HUC (hydrologic unit codes | Table A-21 |
| 37 | loc_minor_basin | Text(20) | Not required | Location minor basin; controlled vocabulary using HUC codes. Any digits after the 8 th (first 8 are reported in loc_major_basin) should be reported here. | No |
| 38 | Remarks | Text(255 | Not required | Location specific comment. | No |
| 39 | total_depth | Number w/decimal precision up to 15 | Not required | Total depth below ground surface of boring, in feet. | No |
| 40 | depth_to_bedrock | Number w/decimal precision up to 15 | Not required | Depth below ground surface of bedrock in feet. | No |
| 41 | depth_to top_of_screen | Number w/decimal precision up to 15 | Not required | Depth in feet below ground surface to the top of the well screen. This information is required to obtain the vertical location from which the groundwater sample was taken. Leave null if well is not at this location. | No |

Table 3-4 Location Data (EPAR5LOC_v3) File Structure

| Pos# | Column Name | Data Type | Required | Description | Valid Values In Appendix |
|------|-----------------------------------|----------------------------------------------|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| 42 | depth_to_bottom_of_sc reen | Number w/decimal precision up to 15 | Not required | Depth in feet below ground surface to bottom of well screen. This information is required to obtain the vertical location from which the groundwater sample was taken. | No |
| | | | | Leave null if well is not at this location. | |
| 43 | top_casing_elev | Number w/decimal precision up to 15 | Not required | Elevation of the top of casing in feet. Leave null if well is not at this location. | No |
| 44 | datum_value | Number w/decimal precision up to 15 | Not required | Datum value | No |
| 45 | datum_unit | Text (15) | If available | Datum unit | Table A-18 |
| 46 | step_or_linear | Text (6) | Not required | This field is for by EPA Region 5 future use. Please leave null. Value: 'Step', 'Linear' | No |
| 47 | datum_collect_method _ code | Text (2) | Not required | Datum collect method | No |
| 48 | datum_desc | Text(70) | Not required | Datum description | No |
| 49 | Datum_start_date | DateTime | Not required | Datum start date | No |

3.5 Drill Activity EDD File

The drill activity (DRA) EDD file contains general information pertaining to the drilling activities resulting from the soil boring. Each drill activity file must be named according to the following convention:

EPAR5DRA_v3.txt (or .csv)

Table 3-5 Drill activity (EPAR5DRA_v3) file data structure

| Pos# | Column Name | Data Type | Required | Description | Valid Values In Appendix |
|------|--------------|--------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| 1 | sys_loc_code | Text (20) | Required | Soil boring or well installation location. Must be a valid code for the facility and must match one of the reported values in the sys_loc_code field of the location EDD file (Table 3-4) submitted in the current or previous EDD. | No |

| Pos# | Column Name | Data | Required | Description | Valid Values |
|------|----------------|---------------------------------------------|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|
| | | Type | | | In Appendix |
| 2 | drill_event | Text (20) | Required | Used to identify drilling event. Examples of drilling events could be "initial" for initial drilling or "second" for a subsequent drilling at the same sys_loc_code. | No |
| 3 | start_depth | Number w/decimal precision up to 7 | Not required | The start depth, in feet below ground surface, of the drilling. | No |
| 4 | end_depth | Number w/decimal precision up to 7 | Not required | End depth, in feet below ground surface of the drilling. | No |
| 5 | drill_date | Date Time | Not required | Date drilling began | MM/DD/YYYY format. |
| 6 | Diameter | Number w/decimal precision up to 7 | Not required | Diameter of boring. | No |
| 7 | diameter_unit | Text (15) | If available | Unit corresponding to measured diameter. See Table A-18 in the Appendix for appropriate value. | Table A-18 |
| 8 | drill_method | Text (50) | Not required | Method used to drill boring. | No |
| 9 | fluid | Text (50) | Not required | Description of fluid used during drilling. | No |
| 10 | viscosity | Text (50) | Not required | Viscosity of drilling fluid. | No |
| 11 | hammer_wt | Text (50) | Not required | Weight of hammer, in pounds, used for sampling. | No |
| 12 | hammer_fall | Text (50) | Not required | Distance of hammer fall during sampling in inches. | No |
| 13 | lift_mechanism | Text (50) | Not required | Type of mechanism used to lift hammer. | No |
| 14 | new_yn | Text (1) | Not required | This field is to indicate whether this is a new boring. Enter "Y" for yes or "N" for no. | Y = yes N= no |
| 15 | repair_yn | Text (1) | Not required | Is this drilling event to repair an existing boring? "Y" for yes or "N" for no. | Y = yes N= no |
| 16 | deepen_yn | Text (1) | Not required | Is this drilling event to deepen an existing boring? "Y" for yes or "N" for no. | Y = yes N= no |
| 17 | abandon_yn | Text (1) | Not required | Has the boring been abandoned? "Y" for yes or "N" for no. | Y = yes N= no |
| 18 | replace_yn | Text (1) | Not required | Is this boring event to replace an existing boring? "Y" for yes or "N" for no. | Y = yes N= no |
| 19 | public_yn | Text (1) | Not required | Is well being install for a public use? "Y" for yes or "N" for no. | Y = yes N= no |
| 20 | Purpose | Text (70) | Not required | Describe the purpose of the boring event. | No |

3.6 Lithology EDD File

The lithology (LTH) EDD file contains all the lithology data for soil borings. For each lithologic unit, 16 fields are available for populating with data about the boring. Optional comments can be recorded in the

remark1 and remark2 fields to describe depth-specific observations within a lithologic unit. Each lithology EDD file must be named according to the following convention:

EPAR5LTH_v3.txt (or .csv)

Table 3-6 Lithology (EPAR5LTH_v3) file data structure

| Pos# | Column Name | Data | Required | Description | Valid Valued |
|------|-----------------|----------------------------------------------|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| | | Type | | | In Appendix |
| 1 | sys_loc_code | Text(20) | Required | Soil boring or well installation location. Must be a valid code for the facility and must match one of the reported values in the sys_loc_code field of the location EDD file (Table 3-4) submitted in the current or previous EDD. | No |
| 2 | start_depth | Number w/decimal precision up to 15 | Required | The start depth, in feet below ground surface, of the lithologic unit. | No |
| 3 | material_type | Text(40) | If available | The type of material that composes the lithologic unit. See Table A-19 in the Appendix for appropriate values. | Table A-19 |
| 4 | geo_unit_code_1 | Text(20) | If available | The data provider's interpretation of the hydrogeologic unit present at this lithologic unit, e.g., aquifer 1, aquitard 1, aquifer 2, upper clay unit. See Figure A-2 in the Appendix for examples. | No |
| 5 | geo_unit_code_2 | Text(20) | If available | Alternate geologic unit grouping. This can be a sub-classification of geologic_unit_code_1 or a layer used for groundwater flow/transport computer modeling that contains the lithologic unit. See Figure A-2 in the Appendix for examples. | No |
| 6 | remark_1 | Text(255) | Not required | Comments (if any) on the lithologic unit. | No |
| 7 | remark_2 | Text(255) | Not required | Additional comments on the lithologic unit. | No |
| 8 | Moisture | Text(1) | Not required | Was any moisture detected within the lithologic unit? "Y" for yes or "N" for no. | Y = yes N=No |
| 9 | Permeable | Text(20) | Not required | Description of the permeability of the lithologic unit such as "impervious," "semi," "pervious," or "very." | No |
| 10 | consolidated_yn | Text(1) | Not required | Was lithologic unit consolidated? "Y" for yes or "N" for no. | Y=yes N=no |
| 11 | Color | Text(20) | Not required | Color of the lithologic unit. | No |
| 12 | Observation | Text(255) | Not required | General field observations of the lithologic unit. | No |
| 13 | Consistency | Text(20) | Not required | Description of the consistency of the soil, such as "very soft," "soft," "firm," "hard" or "very hard." | No |

Table 3-6 Lithology (EPAR5LTH_v3) file data structure

| Pos# | Column Name | Data Type | Required | Description | Valid Valued In Appendix |
|------|-------------|--------------|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| 14 | Sorting | Text(20) | Not required | Geologic description of the grain size distribution of the lithologic unit. Use "poor" for soil with a wide range of particle sizes or "well" for soil with a narrow range of particle sizes. | No |
| 15 | Grainsize | Text(20) | Not required | Description of grain size. | No |
| 16 | Odor | Text(20) | Not required | Description of odor from the soil. | No |

3.7 Well EDD File

The well (EPAR5WEL_v3) EDD file contains general information relating to well installation. Each well file must be named according to the following convention:

EPAR5WEL_v3.txt (or .csv)

Table 3-7 Well (EPAR5WEL_v3) file data structure

| Pos# | Column Name | Data Type | Required | Description | Valid Value In Appendix |
|------|---------------------|--------------------------------------------------|--------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|
| 1 | sys_loc_code | Text(20) | Required | Well installation location Must be a valid code for the facility and must match one of the reported values in the sys_loc_code field of the location EDD file (Table 3-4) submitted in the current or previous EDD. | No |
| 2 | Alternate_Well _id | Text(30) | Not required | Well identification number | No |
| 3 | well_descriptio | Text(30) | Not required | Used for additional well description if necessary. | No |
| 4 | well_owner | Text(30) | Not required | Name of entity that owns the well. | No |
| 5 | well_purpose | Text (20) | Not required | Purpose of well. | No |
| 6 | well_status | Text (20) | Not required | Current status of well. | No |
| 7 | top_casing_ elev | Number w/decim al precision up to 15 | Not required | Elevation of the top of well casing. Elevation must be in feet. | No |
| 8 | datum_value | Number w/decim al precision up to 15 | Required | Elevation of datum used to reference measurement of water level depths. (EPA normally uses top of well casing for datum.) | No |
| 9 | datum_unit | Text(15) | Required | Unit of measure for the well datum | Table A-18 |
| 10 | datum_desc | Text (70) | Required | Description of the datum, such as "top of well casing." | No |

Table 3-7 Well (EPAR5WEL_v3) file data structure

| Pos# | Column Name | Data Type | Required | Description | Valid Value In Appendix |
|------|-------------------------------|--------------------------------------------------|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|
| 11 | step_or_linear | Text (6) | Not required | Use only for re-surveys of well elevations. If a section of the well casing was removed or added use "step" as the value. If nothing was added or removed from the last survey, use "linear" as the value. | No |
| 12 | Datum_start_da te | DateTim e | Required | Date that datum was first used to take measurements. | MM/DD/YYYY format. |
| 13 | datum_collect_ method_code | Text (2) | If available | Method used to determine the datum elevation. Use codes from Table A-6 in the Appendix | Table A-6 |
| 14 | depth_of_well | Number w/decim al precision up to 15 | Not required | Depth below ground surface of the well bottom. | No |
| 15 | depth_unit | Text (15) | If available | Unit of measurement for depth. | Table A-18 |
| 16 | depth_measure_ method | Text (20) | Not required | Method of measuring depth of well. | No |
| 17 | stickup_height | Text (8) | Not required | Height of casing above ground surface. | No |
| 18 | stickup_unit | Text (15) | If available | Unit of measure for the stickup height | Table A-18 |
| 19 | sump_length | Text (20) | Not required | Length of sump. | No |
| 20 | sump_unit | Text (15) | If available | Unit of measure for the sump length. | Table A-18 |
| 21 | Installation_dat e | Date | Not required | Date of well installation | MM/DD/YYYY format. |
| 22 | construct_start_ date | DateTim e | Not required | Date well construction began | MM/DD/YYYY format. |
| 23 | construct_comp lete_date | DateTim e | Not required | Date well construction was completed | MM/DD/YYYY format. |
| 24 | construct_ contractor | Text (20) | If available | Name of contractor that installed well. | No |
| 25 | pump_type | Text (20) | Not required | Type of pump used at well such as centrifugal, propeller, jet, helical, rotary, etc. | No |
| 26 | pump_capacity | Text (6) | Not required | Capacity of pump. | No |
| 27 | pump_unit | Text (15) | If available | Unit of measure for the pump capacity and yield. | Table A-18 |
| 28 | pump_yield | Text (6) | Not required | The yield of the pump. | No |
| 29 | pump_yield_ method | Text (20) | Not required | Method used for pump yield. | No |
| 30 | weep_hole | Text (1) | Not required | Is there a weep hole? "Y" for yes or "N" for no. | Y=yes N=No |
| 31 | head_configurat | Text (50) | Not required | Description of the well-head. | No |
| 32 | access_port_yn | Text (1) | Not required | Is there an access port? "Y" for yes or "N" for no. | Y=yes N=No |
| 33 | casing_joint_ty pe | Text (50) | Not required | Type of casing joint, such as "threaded," "flush," or "solvent-welded." | No |
| 34 | Perforator_used | Text (50) | Not required | Description of well perforation, such as "slotted," "drilled," or "wound." | No |

Table 3-7 Well (EPAR5WEL_v3) file data structure

| Pos# | Column Name | Data Type | Required | Description | Valid Value In Appendix |
|------|-------------------------------|--------------------------------------|--------------|--------------------------------------------------------|----------------------------|
| 35 | intake_depth | Number w/decim al precision up to 15 | Not required | Depth in feet below ground surface of the well intake. | Feet |
| 36 | Disinfected_yn | Text (1) | Not required | Was well disinfected? "Y" for yes or "N" for no. | Y=yes N=No |
| 37 | historical_ reference_elev | Number w/decim al precision up to 15 | Not required | Leave null. | No |
| 38 | geologic_unit_c ode | Text (20) | If available | Geologic unit in which the well intake is installed. | No |
| 39 | Remark | Text (255) | Not required | Available for general remarks. | No |

3.8 Well Construction EDD File

The well construction (WSG) file contains information relating to well construction and well segments. Information is required for all well segments within each well, including surface plug, protective casing, well casing, annular backfill, annular seal, screen, and filter pack. In order to obtain the depth of groundwater samples, it is particularly important that the depths of the top and bottom of the well screen be submitted for each well. Each well construction EDD file must be named according to the following convention:

EPAR5WSG_v3.txt (or .csv)

Table 3-8 Well construction (EPAR5WSG_v3) file data structure

| Pos# | Column Name | Data Type | Required | Description | Valid Value In Appendix |
|------|------------------------|----------------------------------------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|
| 1 | sys_loc_code | Text(20) | Required | Well installation location. Must be a valid code for the facility and must match one of the reported values in the sys_loc_code field of the location EDD file (Table 3-4) submitted in the current or previous EDD. | No |
| 2 | segment_type | Text(20) | Required | Type of segment within well (e.g., protective casing, well casing, screen, etc.). | Table A-20 |
| 3 | material_type_ code | Text(20) | Required | Material description of well segment. Use values. | Table A-20 |
| 4 | start_depth | Number w/decimal precision up to 15 | Required | Depth, in feet below ground surface, of the top of the described segment. | No |
| 5 | end_depth | Number w/decimal precision up to 15 | Required | Depth, in feet below ground surface, of the bottom of the described segment. | No |
| 6 | depth_unit | Text(15) | Required | The unit of depth measurements. | Table A-18 |

Table 3-8 Well construction (EPAR5WSG_v3) file data structure

| Pos# | Column Name | Data Type | Required | Description | Valid Value In Appendix |
|------|----------------------|----------------------------------------------|-----------------|---------------------------------------------------------------------------------|----------------------------|
| 7 | inner_diameter | Number w/decimal precision up to 15 | Not required | The inside diameter of the described segment. | No |
| 8 | outer_diameter | Number w/decimal precision up to 15 | Not required | The outside diameter of the described segment. | No |
| 9 | diameter_unit | Text(15) | If available. | The unit of diameter measurements | Table A-18 |
| 10 | Thickness | Number w/decimal precision up to 15 | Not required | Thickness of the described well segment. | No |
| 11 | thickness_unit | Text(15) | If available | The unit of measurement for thickness. | Table A-18 |
| 12 | slot_type | Text(20) | Not required | Type of slots in screen segment such as bridge, shutter, and continuous. | No |
| 13 | slot_size | Number w/decimal precision up to 15 | Not required | Width of slots. | No |
| 14 | slot_size_unit | Text(15) | If available | The unit of measurement for slot size | Table A-18 |
| 15 | perf_length | Number w/decimal precision up to 15 | Not required | Length of perforated portion of screen in feet. | No |
| 16 | screen_type | Text(15) | Not required | Type of screen. | No |
| 17 | material_quant ity | Text(20) | Not required | Quantity of material used in pounds. Applicable to annular seal/fill material. | No |
| 18 | material_densi ty | Text(20) | Not required | Density of the annular seal material in lbs/ft ³ . | No |
| 19 | Remark | Text(255) | Not required | Remarks regarding the segment. | No |

3.9 Geology Samples EDD File

The Geology Samples (GSMP) EDD file contains geotechnical sample information. (Samples results related to chemical analyses should be reported using the Lab EDD.) Each Geology sample EDD file must be named according to the following convention:

EPAR5GSMP_v3.txt (or .csv)

Table 3-9 Geology samples (EPAR5GSMP_v3) file data structure

| Pos# | Column | Data | Required | Description | Valid Values |
|------|--------|------|----------|-------------|--------------|
| | Name | Type | | | In Appendix |

Table 3-9 Geology samples (EPAR5GSMP_v3) file data structure

| Pos# | Column Name | Data Type | Required | Description | Valid Values In Appendix |
|------|------------------------|----------------------------------------------|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|
| 1 | sys_loc_code | Text(20) | Required | Sample collection location. Must be a valid code for the facility and must match one of the reported values in the sys_loc_code field of the location EDD file (Table 3-4) submitted in the current or previous EDD. | No |
| 2 | geo_sample_ code | Text(40) | Required | Unique sample identifier. Considerable flexibility is given in the methods used to derive and assign unique sample identifiers, but uniqueness throughout the database is the only restriction enforced. | No |
| 3 | sample_name | Text(50) | Not required | Use to provide a name or description of sample. Does not have to be a unique throughout database. | No |
| 4 | sample_top | Number w/decimal precision up to 15 | Required | Depth, in feet below ground surface, to top of sample. | No |
| 5 | sample_ bottom | Number w/decimal precision up to 15 | Required | Depth, in feet below ground surface, to bottom of sample. | No |
| 6 | Sample_date | DateTime | Not required | Date sample was collected. | MM/DD/YYYY HH:MM:SS format |
| 7 | sample_ method | Text(30) | If available | Method used to obtain sample, e.g., split spoon or Shelby tube. | No |
| 8 | material_type | Text(40) | If available | Material type of geologic sample | Table A-8 |
| 9 | sample_desc | Text(255) | Not required | General description of the sample or sampling activities. | No |
| 10 | geologic_ unit_code | Text(20) | If available | Code used to identify the geologic unit of the sample. | No |
| 11 | liquid_limit | Number w/decimal precision up to 7 | Not required | Liquid limit (LL) of the sample. | No |
| 12 | plastic_limit | Number w/decimal precision up to 7 | Not required | Plastic Limit (PL) of the sample. | No |
| 13 | shrinkage_ limit | Number w/decimal precision up to 7 | Not required | Shrinkage limit of the sample. | No |
| 14 | flow_index | Number w/decimal precision up to 7 | Not required | Flow index of the sample. | No |

Table 3-9 Geology samples (EPAR5GSMP_v3) file data structure

| Pos# | Column Name | Data Type | Required | Description | Valid Values In Appendix |
|------|----------------------|---------------------------------------------|-----------------|---------------------------------------|-----------------------------|
| 1.7 | | | 37 | | |
| 15 | plasticity_ index | Number w/decimal precision up to 7 | Not required | Plasticity index of the sample. | No |
| 16 | Activity | Number w/decimal precision up to 7 | Not required | Activity of the sample. | No |
| 17 | Е | Number w/decimal precision up to 7 | Not required | Void ratio of the sample. | No |
| 18 | e_max | Number w/decimal precision up to 7 | Not required | Maximum void ratio of the sample. | No |
| 19 | e_min | Number w/decimal precision up to 7 | Not required | Minimum void ratio of the sample. | No |
| 20 | N | Number w/decimal precision up to 7 | Not required | Porosity of the sample. | No |
| 21 | specific_ gravity | Number w/decimal precision up to 7 | Not required | Specific gravity of the sample. | No |
| 22 | W | Number w/decimal precision up to 7 | Not required | Water content of the sample. | No |
| 23 | opt_w | Number w/decimal precision up to 7 | Not required | Optimum water content. | No |
| 24 | S | Number w/decimal precision up to 7 | Not required | Degree of saturation of the sample. | No |
| 25 | K | Number w/decimal precision up to 7 | Not required | Hydraulic conductivity of the sample. | No |
| 26 | K_unit | Text(15) | If available. | Unit of measure for K. | Table A-18 |
| 27 | unit_wt | Number w/decimal precision up to 7 | Not required | Unit weight of the sample. | No |

Table 3-9 Geology samples (EPAR5GSMP_v3) file data structure

| Pos# | Column Name | Data Type | Required | Description | Valid Values In Appendix |
|------|-------------------------|---------------------------------------------|-----------------|-----------------------------------------------------------------------------------------------------|-----------------------------|
| 28 | sat_unit_wt | Number w/decimal precision up to 7 | Not required | Saturated unit weight of the sample. | No |
| 29 | dry_unit_wt | Number w/decimal precision up to 7 | Not required | Dry unit weight of the sample. | No |
| 30 | dry_unit_wt_ max | Number w/decimal precision up to 7 | Not required | Maximum dry unit weight of the sample. | No |
| 31 | dry_unit_wt_ min | Number w/decimal precision up to 7 | Not required | Minimum dry unit weight of the sample. | No |
| 32 | density_unit | Text(15) | If available | Unit of measure for the densities of the sample. | Table A-18 |
| 33 | rel_density | Number w/decimal precision up to 7 | Not required | Relative density of the sample. | No |
| 34 | rel_ compaction | Number w/decimal precision up to 7 | Not required | Relative compaction of the sample. | No |
| 35 | Consistency | Text (20) | Not required | Description of the consistency of the soil sample such as very soft, soft, firm, hard or very hard. | No |
| 36 | organic_ carbon | Number w/decimal precision up to 7 | Not required | Organic carbon content of sample. | No |
| 37 | organic_ carbon_unit | Text (15) | If available | Unit of measurement of organic content. Use values from Table A-18 of the Appendix. | No |

3.10 Water Levels

The Water Level (EPAR5GWTR_v3) EDD file contains information on water levels measured during sampling activities. Groundwater levels and surface water elevations should be reported using this file; however, in most cases, the file will be used to report groundwater levels. When surface water samples are collected, however, this EDD file should be used to record water surface elevations at the time the samples were collected. Surface water elevations reported in this file will be used as the reference elevation for surface water sample depths (i.e., start_depth, field 11, and end_depth, field 12 in the lab

Sample (EPAR5SMP_v3) EDD file. See Table 4-1). When using the Water Level EDD file for reporting surface water data, only the first six fields (fields 1 through 6) and the "remark" field (field 17) should be populated. All fields in the Water Level EDD file, however, should be populated for groundwater elevation data (if data is available). An example of a Water Level file is provided in Figure 2-4, section 2.16. Each water level file must be named according to the following convention:

EPAR5GWTR_v3.txt (or .csv)

Table 3-10 Water Level (EPAR5GWTR_v3) file data structure

| Pos# | Column | Data | Required | Description | Valid Values |
|------|-------------------------------|----------------------------------------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|
| | Name | Type | | | In Appendix |
| 1 | sys_loc_code | Text(20) | Required | Water level measurement location. Must be a valid code for the facility and must match one of the reported values in the sys_loc_code field of the location EDD file (Table 3-4) submitted in the current or previous EDD. | No |
| 2 | Measurement_ date | DateTime | Required | Date of water level measurement If exact date is not known, enter the best estimate for the date of sampling. If an estimated date is entered, note this and provide an explanation for how the estimate was made in both the EDD cover letter and in the comment field in this file (field 10). | MM/DD/YYYY HH:MM:SS format |
| 3 | historical_ reference_elev | Number w/decimal precision up to 15 | Required | For groundwater samples, the value in this field should be the elevation, in feet above mean sea level, of the reference point used to take measurements of the water level depth. Typically the reference point for groundwater measurements is the top of the well casing. For surface water samples, the value in this field should be the elevation of the surface water in feet above mean sea level. If elevation is given in units other than feet above mean sea level, please indicate the unit used in the remarks field (field 17). | No |

Table 3-10 Water Level (EPAR5GWTR_v3) file data structure

| Pos# | Column Name | Data | Required | Description | Valid Values |
|------|--------------------------|---------------------------------------------|--------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| | | Туре | | | In Appendix |
| 4 | water_level_de pth | Number w/decimal precision up to 7 | Required | For groundwater, the value in this field should be the depth of ground water below the elevation defined in historical_reference_elev field (field 5). For surface water, the value | No |
| | | | | in this field should be the default value of "0" | |
| 5 | water_level_el ev | Number w/decimal precision up to 7 | Not required | Elevation of water level. Elevation must be in feet. | Feet |
| 6 | corrected_dept h | Number w/decimal precision up to 7 | Not required | Depth of water level after any necessary corrections, e.g., if free product was encountered. | No |
| 7 | corrected_elev | Number w/decimal precision up to 7 | Not required | Corrected water level elevation that corresponds to the corrected depth. Elevation must be in feet. | feet |
| 8 | measured_dept h_ of_well | Number w/decimal precision up to 7 | Not required | The depth below ground surface to the bottom of the well. | No |
| 9 | depth_unit | Text (15) | If available | Unit used for depth measurements. See Table A- 18 in the Appendix for appropriate values. | Table A-18 |
| 10 | Technician | Text (30) | Not required | Name of technician measuring water level | No |
| 11 | dry_indicator_ yn | Text (1) | Not required | This field is used to indicate whether or not a well is dry "Y" for yes or "N" for no. | Y= yes N=No |
| 12 | measurement_ method | Text (20) | Not required | Method used to make water level measurements. | No |
| 13 | batch_number | Text (10) | Not required | Batch number of group of measurements. | No |
| 14 | dip_or_elevati on | Text (10) | Not required | Use either "elevation" or "dip." Use "elevation" if water level measurement is above the datum (i.e., artesian well) or "dip" if water level is below datum. | Elevation Dip |
| 15 | Remark | Text (255) | Not required | Any necessary remarks related to groundwater or surface water information provided in this EDD file. | No |

Table 3-10 Water Level (EPAR5GWTR_v3) file data structure

| Pos# | Column Name | Data Type | Required | Description | Valid Values In Appendix |
|------|----------------|---------------------------------------------------|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| 16 | Lnapl_cas_rn | Text (15) | If applicable | Analyte code of the light non-aqueous phase liquid (lnapl) present in the well. Use appropriate valid value from Table A-15 in the EDD Specification Manual Valid Value Appendix. | Table A-15 |
| 17 | Lnapl_depth | Text Number with precision of up to 7 | Not required | Depth to the top surface of the lnapl in feet below the reference elevation. | No |
| 18 | Dnapl_cas_rn | Text (15) | If applicable | Analyte code of the dense non-aqueous phase liquid (dnalp) present in the well | Table A-15 |
| 19 | Dnaple_depth | Number with precision of up to 7 | Not required | Depth to the top surface of the dnapl in feet below the reference elevation | No |
| 20 | Task_code | Text(40) | Required | Code used to associate individual samples to a specific sampling event. The format for this field is XX-P#, XX is the type of task required and P# is the phase. | No |

3.11 Water Table EDD Files

The water table (EPAR5TBL_v3) EDD file stores data pertaining the water table and is used to record groundwater data during drilling activities. Each water table EDD file must be named according to the following convention:

EPAR5TBL_v3.txt (or .csv)

Table 3-11 Water table (EPAR5TBL_v3) file data structure

| Pos# | Column Name | Data Type | Required | Description | Valid Values In Appendix |
|------|----------------|--------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| 1 | sys_loc_code | Text (20) | Required | Soil boring or well installation location. Must be a valid code for the facility and must match one of the reported values in the sys_loc_code field of the location EDD file (Table 3-4) submitted in the current or previous EDD. | No |
| 2 | Туре | Text (20) | Required | Aquifer designation, such as unconfined1, confined1, or confined2. | No |

Table 3-11 Water table (EPAR5TBL_v3) file data structure

| Pos# | Column Name | Data Type | Required | Description | Valid Values In Appendix |
|------|------------------------------|----------------------------------------------|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| 3 | Sequence | Text (20) | Required | Designation of when water level measurement was taken. Use "unstabilized" if measurement was taken before water stabilized and use "stabilized" if measurement taken after stabilization. | No |
| 4 | Depth | Number w/decimal precision up to 15 | Required | Depth of water table, in feet, below reference point. | Feet |
| 5 | flowing_yn | Text (1) | Not Required | Is the water table flowing? "Y" for yes or "N" for no. | Y=yes N=No |
| 6 | measurement_ method | Text (50) | Not required | Method of measuring water table depth. | No |
| 7 | capped_pressu re | Number w/decimal precision up to 15 | Not required | Hydrostatic pressure of confined aquifer. | No |
| 8 | capped_pressu re_ unit | Text (15) | If available | Unit of measure for capped pressure. Use values from Table A-18 in the Appendix. | Table A-18 |
| 9 | reference_poin t | Text (50) | Not required | Description of reference point from which depth measurements were taken. | No |
| 10 | reference_elev ation | Number w/decimal precision up to 15 | Required | Elevation of the reference point from which depth measurement were taken. Elevation must be in feet. | No |
| 11 | Temperature | Number w/decimal precision up to 15 | Not required | Temperature of water in the water table. | No |
| 12 | temperature_u nit | Text (15) | If available | Unit of temperature. Use values from Table A-18 in the Appendix. | Table A-18 |

3.12 Geology Down Hole Point Data EDD File

The Geology downhole point data (DHP) EDD file stores data from down hole logging methods such as Cone Penetrometer Tests and geophysics. All down hole logging data should be submitted electronically. Report the parameter being measured in the "param" field, such as resistivity, and report the measured value at the depth of the measurement. Table 3.12a presents the DHP EDD file structure.

Each Geology downhole point data EDD file must be named according to the following convention:

EPAR5DHP_v3.txt (or .csv)

Table 3-12 Geology Downhole Point (EPAR5DHP_v3) File Data Structure

| Pos# | Column Name | Data Type | Required | Description | Valid Values In Appendix |
|------|----------------|----------------------------------------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| 1 | sys_loc_code | Text(20) | Required | Sample collection location. Must be a valid code for the facility and must match one of the reported values in the sys_loc_code field of the location EDD file (Table 3-4) submitted in the current or previous EDD. | No |
| 2 | Depth | Number w/decimal precision up to 15 | Required | Depth of measurement below ground surface in feet. | No |
| 3 | Param | Text(20) | Required | The parameter being measured, such as tip stress, resistivity, or pore pressure. | No |
| 4 | param_value | Number w/decimal precision up to 15 | Required | The measured value of the parameter. | No |
| 5 | Param_unit | Text(15) | Required | Measured unit of the parameter | No |

Table 3.12a Example of downhole point data file

| Sys_loc_code | Depth | Param | Param_Value |
|--------------|-------|---------------|-------------|
| MW01 | 10.8 | Tip Stress | 612 |
| MW01 | 11.2 | Tip Stress | 624 |
| MW01 | 10.8 | Sleeve Stress | 6.1 |
| MW01 | 11.2 | Sleeve stress | 5.8 |
| MW02 | 9.5 | Resistivity | 510 |
| MW02 | 10.1 | Resistivity | 521 |
| MW02 | 11.0 | Resistivity | 889 |

3.13 Extraction – Injection Well (EPAR5EIW_v3) EDD File

The Extraction-Injection Well (EIW) EDD file should be submitted on a regular (e.g., quarterly) basis for all sites where extraction and/or injection wells are a part of the remedial action at the site. The purpose of the EIW EDD file is to provide EPA Region 5 with designed pumping rates as well as the actual pumping rates for each well during a particular reporting period. This information will be useful for determining if the remedial system is successfully capturing the contaminant plume. An example of an Extraction-Injection Well file is provided in Figure 2-4, section 2.16. Each Extraction-Injection Well EDD file must be named according to the following convention:

EPAR5EIW_v3.txt (or .csv)

Table 3-13 Extraction-Injection Well (EPAR5EIW_v3) file data structure

| Pos# | Column Name | Data Type | Required | Description | Valid Values In Appendix |
|------|------------------------|----------------------------------------------|--------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 | sys_loc_code | Text(20) | Required | Well installation location. Must be a valid code for the facility and must match one of the reported values in the sys_loc_code field of the location EDD file (Table 3-4) submitted in the current or previous EDD. | No |
| 2 | start_measure_date | DateTime | Required | Date that the pumping rate measurements began. | MM/DD/YYYY HH:MM:SS format |
| 3 | end_measure_date | DateTime | Required | Date that the pumping rate measurements concluded in MM/DD/YYYY HH:MM:SS format. | MM/DD/YYYY HH:MM:SS format |
| 4 | avg_pump_rate | Number w/decimal precision up to 15 | Required | Average pumping rate. Recommended method is to use volume pumped divided by the reported date span. i.e., from the (start_measurement_date to end_measurement_date) | No |
| 5 | pump_rate_unit | Text(15) | Required | Unit of measure for the pumping rate. Use values from Table A-18 in the Appendix. | Table A-18 |
| 6 | pct_operating_time | Text(3) | Not required | Percentage of the measurement time interval during which the well was operating. Use a value from 0 to 100 (do not include the percent symbol, "%"). | No |
| 7 | operating_ mode | Text(14) | Required | Mode in which well was operating during the reported interval. | EXTRACTION, INJECTION, RECIRCULATION, PULSE, DEVEL, UNUSE. |
| 8 | design_rate | Text(14) | Required | Pumping rate as specified in the approved remedial design report for fully capturing site groundwater contamination. | No |
| 9 | design_rate_unit | Text(14) | Required | Unit of measure for the design pumping rate. Use values from Table A-18 in the Appendix. | Table A-18 |
| 10 | rate_measurement_t ype | Text(14) | Not required | Type of measurements used for averaging. | TOTALIZER (totalizing flow meter), MANIFOLD (estimated from total manifold flow), ESTIMATE (estimate from prior values), AVERAGE (average of instantaneous measurements |
| 11 | suction | Text(14) | Not required | Vacuum in well (e.g., wellpoint vacuum) or well casing (e.g., vacuum well), reported in equivalent feet of water. | No |

Table 3-13 Extraction-Injection Well (EPAR5EIW_v3) file data structure

| Pos# | Column Name | Data Type | Required | Description | Valid Values In Appendix |
|------|-------------|--------------|--------------|--------------------------------------------------|-----------------------------|
| 12 | remark | Text(255) | Not required | Remarks regarding the pumping rate measurements. | No |
| | | | | | |

3.14 Soil Gas Data EDD File

The soil gas (EPAR5SoilGas_v3) data file contains soil gas survey data.

Each Soil Gas data EDD file must be named according to the following convention:

EPAR5SoilGas_v3.txt (or .csv)

Table 3-14 Soil Gas (EPAR5SoilGas_v3) Survey file data structure

| Pos# | Column Name | Data | Required | Description | Valid Values |
|------|------------------------|-----------|--------------|-------------------------------------------------------------|--------------|
| | | Type | | | In Appendix |
| 1 | sys_loc_code | Text(20) | Required | Sample collection location | N/A |
| 2 | survey date | Datetime | Required | Sample survay date | N/A |
| 3 | Parameter_code | Text(20) | Required | Parameter measured by soil gas survey | N/A |
| 4 | Reading_depth | Text(8) | Not required | Depth of soil gas survey measurement | N/A |
| 5 | Reading unit | Text(15) | If available | Parameter measured by soil gas survey | N/A |
| 6 | Reading | Text(8) | Not required | Soil gas survey measurement | N/A |
| 7 | Depth_unit | Text(15) | If Available | Unit of measure of soil gas survey measurement | N/A |
| 8 | Sampling_method | Text(10) | Not required | Sampling method | N/A |
| 9 | Instrument_type | Text(15) | Not required | Instrument type | N/A |
| 10 | East | Text(14) | Not required | Easting coordinate of soil gas survey measurement | N/A |
| 11 | North | Text(14) | Not required | Northing coordinate of soil gas survey measurement | N/A |
| 12 | Secondary_east | Text(14) | Not required | Secondary easting coordinate of soil gas survey measurement | N/A |
| 13 | Secondary north | Text(14) | Not required | Secondary easting coordinate of soil gas survey measurement | N/A |
| 14 | Lithology_code | Text(10) | Not required | Lithology code | N/A |
| 15 | Area_desc | Text(70) | Not required | Discription of area | N/A |
| 16 | Equipment_code | Text(60) | Not required | Equipment_code | N/A |
| 17 | Borehole_drill_met hod | Text(10) | Not required | Drilling method | N/A |
| 18 | Technician | Text(50) | Not required | Technician | N/A |
| 19 | Remark | Text(255) | Not required | remark | N/A |

4. FORMATS FOR LAB FILES

This section contains tables that define the file structures for the Chemistry EDD. The file structures include chemistry sample, sample parameter, test/result QC, and Batch file. Please notice that some columns are labeled as "Reserved for future use." These columns should simply be reported as null values and are only needed to comply with standard EQuIS® reporting formats. Columns marked "Required" must be reported for each row. If an EDD is submitted with one or more "Required" fields not filled in, EPA will not be able to load the EDD into its database, and the EDD will have to be returned to the data provider for correction(s). Columns marked "If available" should be filled in if at all possible.

4.1 Lab Sample EDD File

The Chemistry Sample EDD file contains data for samples collected at a site and location. The unique identifier for each sample is recorded in the sys_sample_code. For trip blank samples, please record the sys_sample_code as "TB" plus the date on which the sample was collected in MMDDYY format. For example a trip blank collected on April 5, 2000 would have a sys_sample_code of TB040500. A sys_sample_code of 'Trip Blank' is unacceptable because it cannot be distinguished from another trip blank labeled the same way. For samples that are not associated with a specific sampling location, such as trip blanks or field blanks, leave the sys_loc_code field (field 10) null. For surface water samples, record the sample depths, start_depth (field 11) and end_depth (field 12), as depth below the water surface elevation. The water surface elevation at the time of the sampling should be recorded in the Water Level file (see Section 4.3). An example of a Lab Sample file is provided in Figure 2-4, section 2.16.

Each Lab Sample file must be named according to the following convention:

EPAR5SMP_v3.txt (or .csv)

Table 4-1 Lab sample (EPAR5SMP_v3) file data structure

| Pos# | Column Name | Data Type | Required | Description | Valid Values In Appendix |
|------|--------------------|--------------|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| 1 | Data_provider | Text (20) | Required | Date provider company code | A-23 |
| 2 | sys_sample_code | Text(40) | Required | Unique sample identifier. Each sample at a facility must have a unique value, including spikes and duplicates. You have considerable flexibility in the methods used to derive and assign unique sample identifiers; however, uniqueness throughout the database is required. | No |
| 3 | sample_name | Text(50) | Not required | Additional sample identification information as necessary. Is not required to be unique (i.e., duplicates are OK). Can be the same value as in the sys_sample_code field. | No |
| 4 | sample_matrix_code | Text(3) | Required | Code that identifies the matrix being sampled, such as soil, groundwater, or sediment. For acceptable valid values, see Table A-1 in the Appendix. | Table A-1 |

Table 4-1 Lab sample (EPAR5SMP_v3) file data structure

| Pos# | Column Name | Data Type | Required | Description | Valid Values In Appendix |
|------|------------------------|----------------------------------------------|--------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------|
| 5 | sample_type_code | Text(3) | Required | Code that distinguishes between different types of samples, such as normal field samples versus laboratory method blank samples. For acceptable valid values see Table A-12 in the Appendix. | Table A-12 |
| 6 | sample_source | Text(10) | Required | Identifies where the sample originated. Use either "Field" or "Lab". Use "Field" for all samples originating from the field and use "Lab" if sample originated from the laboratory. | Field Lab |
| 7 | parent_sample_code | Text(40) | Required for field duplicate samples | Unique identifier of the original sample from which the current sample was derived, i.e. the "parent" sample. Required for samples with a sample_type_code of "BD", "FD", "FR", "FS", "LR", "MS", "MSD" or "SD." | No |
| 8 | sample_delivery_ group | Text(10) | Not required | EPA and most EPA Reigon 5 data providers are accustomed to using the Contract Laboratory Program (CLP) document definition of the sample delivery group (SDG). However, the CLP definition of an SDG relates to a lab payment group which is not what is being asked for in this field. For the purposes of this field in this EDD, the value entered should correspond more to the "sampling event/ matrix" with which the sample is associated. For example, the SDG for ground water samples should be different from that for surface water samples. This will prevent flags associated with surface water matrix effects from being propagated to ground water results | No |
| 9 | sample_date | DateTime | Required | Date sample was collected in MM/DD/YYYY HH:MM:SS format. | MM/DD/YYYY HH:MM:SS format. |
| 10 | sys_loc_code | Text(20) | Required* | Sample collection location. Must be a valid code for the facility and must match one of the reported values in the sys_loc_code field of the location EDD file (Table 3-4) submitted in the current or previous EDD. * Field should be null if sample is not associated with a specific location, such as QC samples (e.g., field blank, trip blank) and this code cannot be the same as sys_sample_code | No |
| 11 | start_depth | Number w/decimal precision up to 15 | Not required | Beginning depth (top) of sample in feet below ground surface for Soil or Groundwater sample. Only use for groundwater samples if discrete samples are taken at different depth elevations from a single well, i.e. multiple well packer samples. | No |

Table 4-1 Lab sample (EPAR5SMP_v3) file data structure

| Pos# | Column Name | Data Type | Required | Description | Valid Values |
|------|------------------------|----------------------------------------------|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| | | | | | In Appendix |
| 12 | end_depth | Number w/decimal precision up to 15 | Not required | Ending depth (bottom) of sample in feet below ground surface for Soil or Groundwater sample. Only use for groundwater samples if discrete samples are taken at different depth elevations from a single well, i.e. multiple well packer samples. | No |
| 13 | depth_unit | Text(15) | If available | Unit of measurement for the sample beginning and end depths. For valid values, see Table A-18 in the Appendix. | Table A-18 |
| 14 | chain_of_custody | Text(15) | Not required | Chain of custody identifier. A single sample may be assigned to only one chain of custody. | No |
| 15 | sent_to_lab_date | DateTime | Not required | Date sample was sent to lab in MM/DD/YYYY format. | No |
| 16 | sample_receipt_date | DateTime | Not required | Date that sample was received at laboratory in MM/DD/YYYY format. | No |
| 17 | sampler | Text(30) | Not required | Name or initials of sampler. | No |
| 18 | sampling_company_c ode | Text(10) | Required | Name or initials of consulting company performing sampling. (This field does not have a controlled vocabulary, i.e., there is no table of valid values for this field.) | No |
| 19 | sampling_reason | Text(30) | Not required | Reason for Sampling | No |
| 20 | sampling_technique | Text(40) | If available | Sampling technique. | No |
| 21 | task_code | Text(40) | Required | Code used to associate individual samples to a specific sampling event. The format for this field is XX-P#, XX is the type of task required and P# is the phase. | No |
| 22 | collection_quarter | Text(5) | Not required | Report as null. | No |
| 23 | composite_yn | Text(1) | Required | Is sample a composite sample? Enter "Y" for yes or "N" for no. | Y= Yes N=No |
| 24 | composite_desc | Text(255) | Not required | Description of composite sample. If sample is not a composite, leave this field null. | No |
| 25 | sample_class | Text(10) | Not required | Report as null. | No |
| 26 | custom_field_1 | Text (20) | Not required | Report as null. | No |
| 27 | custom_field_2 | Text(50) | Not required | Report as null. | No |
| 28 | custom_field_3 | Text(50) | Not required | Report as null. | No |
| 29 | comment | Text(255) | Not required | Any comments regarding the sample. | No |

4.2 Lab Test Results EDD Files

The Lab Test Results EDD files contain data relating data concerning analytical tests and results performed on samples.

Each Lab Test Results EDD file must be named according to the following convention:

EPAR5TRS_v3.txt (or .csv)

Table 4-2 Lab Test Results (EPAR5TRS_v3) EDD file data structure

| Pos# | Column Name | Data Type | Required | Description | Valid Values In Appendix |
|------|-------------------------|--------------|--------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------|
| 1 | sys_sample_code | Text(40) | Required | Sample identifier of the sample that was tested and analyzed. Must match one of the reported values in the sys_sample_code field of the EPAR5SMP_v3 file submitted in the current or previous EDD. | No |
| 2 | lab_anl_method_ name | Text(20) | Required | Laboratory analytical method name or description. For acceptable valid values, see Table A-16 in the Appendix. Default to "Unknown" if data is unavailable. | Table A-16 |
| 3 | analysis_date | DateTim e | Required | Date of sample analysis in MM/DD/YYYY HH:MM:SS format. May refer to either beginning or end of the analysis. For measurements taken in the field (e.g., pH, dissolved oxygen), use the same date as sample date | No |
| 4 | total_or_dissolved | Text(1) | Required | Must be either "D" for dissolved or filtered [metal] concentrations, and "T" for every other case. | A-24 |
| 5 | column_number | Text(2) | Not required | Report as null. | No |
| 6 | test_type | Text(10) | Required | Type of test | A-25 |
| 7 | lab_matrix_code | Text(3) | If available | Code that identifies the matrix, such as soil, groundwater, and sediment, being sampled The matrix of the sample as analyzed may be different from the matrix of the sample as retrieved (e.g., leachates), so this field is available at both the sample and test level. | Table A-1 |
| 8 | analysis_location | Text(2) | Required | Must be either "FI" for field instrument or probe (i.e, "in the field" measurements such as pH, temperature, conductivity, and dissolved oxygen), "FL" for mobile field laboratory analysis, or "LB" for an analysis done at a fixed-based laboratory. | FI = Field Instrument FL = Mobile Field lab LB = Fixed based lab |

Table 4-2 Lab Test Results (EPAR5TRS_v3) EDD file data structure

| Pos# | Column Name | Data | Required | Description | Valid Values |
|------|-----------------|-------------------------------------|--------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------|
| | | Type | | | In Appendix |
| 9 | Basis | Text(10) | Required | Must be "Wet" for wet-weight basis reporting, "Dry" for dry-weight basis reporting, or "NA" for tests for which this distinction is not applicable. EPA prefers that results are reported on the basis of dry weight where applicable. | Wet= wet-weight Dry= dry weight N/A = not applicable |
| 10 | container_id | Text(30) | Not required | Report as null. | No |
| 11 | dilution_factor | Number w/decim al precision up to 7 | Not required | Effective test dilution factor. | No |
| 12 | prep_method | Text(20) | If available | Laboratory sample preparation method name or description. Must use valid value from Table A-14 in the Appendix. | Table A-14 |
| 13 | prep_date | DateTim e | Not required | Beginning date of sample preparation | MM/DD/YYYY HH:MM:SS format |
| 14 | leachate_method | Text(15) | Not required | Laboratory leachate generation method name or description. The method name should be sufficient to reflect the operation methodology used by the laboratory (see analysis method discussion). | No |
| 15 | leachate_date | DateTim e | Not required | Beginning date of leachate preparation | MM/DD/YYYY HH:MM:SS format |
| 16 | lab_name_code | Text(20) | If available | Unique identifier of the laboratory as defined by the EPA. Controlled vocabulary [Note: If the lab you are using does not appear in Table A-17, you may propose a valid value for the lab for addition to the EPA Region 5 list. Please provide information about the lab in the cover letter accompanying your EDD | Table A-17 |
| 17 | qc_level | Text(10) | Not required | submittal.] Not limit to "Screen" or "Quant", visit Appendix B in the https://semspub.epa.gov/work/HQ/17 6101.pdf for more values | No |
| 18 | lab_sample_id | Text(20) | Not required | Laboratory LIMS sample identifier. If necessary, a field sample may have more than one LIMS lab_sample_id (maximum one per each test event). | No |

Table 4-2 Lab Test Results (EPAR5TRS_v3) EDD file data structure

| Pos# | Column Name | Data | Required | Description | Valid Values |
|------|---------------------------|----------|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------|
| | | Type | | | In Appendix |
| 19 | percent_moisture | Text(5) | Not required | Percent moisture of the sample portion used in this test; this value may vary from test to test for any sample. Numeric format is "NN.MM," i.e., 70.1% could be reported as "70.1" but not as "70.1%." | No |
| 20 | subsample_ amount | Text(14) | Not required | Amount of sample used for test. | No |
| 21 | subsample_ amount_unit | Text(15) | If available | Unit of measurement for subsample amount. Must use valid value from Table A-18 in the Appendix. | Table A-18 |
| 22 | analyst_name | Text(30) | Not required | Report as null. | No |
| 23 | instrument_id | Text(50) | Not required | Report as null. | No |
| 24 | comment | Text(255 | Not required | Comments about the test as necessary. | No |
| 25 | preservative | Text(20) | If available | Sample preservative used. | No |
| 26 | final_volume | Numeric | Not required | The final volume of the sample after sample preparation. Include all dilution factors. | No |
| 27 | final_volume_unit | Text(15) | If available | The unit of measure that corresponds to the final_amount. | No |
| 28 | cas_rn | Text(15) | Required | Analyte code | Table A-15 |
| 29 | chemical_name | Text(75) | Required | Chemical name | Table A-15 |
| 30 | result_value | Numeric | Not required | Analytical result reported at an appropriate number of significant digits. | No |
| 31 | result_error_delta | Text(20) | Not required | Error range applicable to the result value; typically used only for radiochemistry results. | No |
| 32 | result_type_code | Text(3) | Required | Must be either "TRG" for a target or regular result, "TIC" for a tentatively identified compound. Use "TRG" for measurements taken from the field (e.g., pH, dissolved oxygen) | TRG = Target or regular TIC = Tentative identified |
| 33 | reportable_result | Text(10) | Required | Must be either "Yes" for results that are considered to be reportable, or "No" for other results. This field has many purposes. For example, it can be used to distinguish between multiple results where a sample is retested after dilution. It can also be used to indicate which of the first or second column result should be considered primary. The proper value of this field in both of these two examples should be provided by the laboratory (only one result should be flagged as reportable). | Yes No |

Table 4-2 Lab Test Results (EPAR5TRS_v3) EDD file data structure

| Pos# | Column Name | Data Type | Required | Description | Valid Values In Appendix |
|------|-------------------------------|--------------|---------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------|
| 34 | detect_flag | Text(2) | Required | Maybe either "Y" for detected analytes or "N" for non-detects. "Y" should be used for detected target compounds and TICs only (i.e. result_type_code is "TRG" or "TIC"). | Y = detected N = non-detects |
| | | | | Also use "Y" for estimated (above detection limit but below the quantitation limit) or ">" and "<" for tests such as flash point. Note that "<" must not be used to indicate non-detects. | |
| 35 | lab_qualifiers | Text(10) | Not required | Qualifier flags assigned by the laboratory. | No |
| 36 | validator_qualifiers | Text(10) | Not required | Qualifier flags assigned by the person who validates the laboratory data. The interpret qualifier is required if lap_qualifier or validator _qualifier are populated | No |
| 37 | Interpreted_qualifier | Text(20) | If available/ Required | Interpreted qualifier flag assigned by the data provider. The interpret qualifier is required if lap_qualifer or validator _qualifier are populated | Table A-10 |
| 38 | Validated_yn | Text (1) | Required | Indicates if the result has been validated | |
| 39 | organic_yn | Text(1) | Required | Must be either "Y" for organic constituents or "N" for inorganic constituents. Use "Y" for measurements taken from the field (e.g., pH, dissolved oxygen) | Y= organic N= inorganic |
| 40 | method_detection_ limit | Text(20) | Not required | Report as null. The minimum concentration of an analyte that can be measured and reported with 99% confidence that the analyte concentration is greater than zero, as determined for a specific procedure. | No |
| 41 | reporting_detection_ limit | Numeric | Not required | Must be reported if sample result is "non-detect." The minimum concentration of an analyte that can be measured and reported with 99% confidence that the analyte concentration is greater than zero, as determined for a specific procedure, which is equal to or greater than the MDL. | No |
| 42 | quantitation_limit | Text(20) | Not required | Concentration level above which results can be quantified with confidence. The value must reflect conditions such as dilution factors and moisture content, and must be sample-specific. | No |
| 43 | result_unit | Text(15) | If available | Units of measurement for the result. Must use valid values from Table A-18 in the Appendix. | Table A-18 |

Table 4-2 Lab Test Results (EPAR5TRS_v3) EDD file data structure

| Pos# | Column Name | Data Type | Required | Description | Valid Values In Appendix |
|------|----------------------|--------------|--------------|--------------------------------------------------------------------------------------------------------|-----------------------------|
| 44 | detection_limit_unit | Text(15) | If available | Units of measurement for the detection limit(s). Must use valid value from Table A-18 in the Appendix. | Table A-18 |
| 45 | tic_retention_time | Text(8) | Not required | Report as null. | No |
| 46 | result_comment | Text(255 | Not required | Result specific comments. | No |

4.3 Lab Test/Result with QC Data EDD File

The Lab test/results with QC (TRSQC) EDD file contains data from analytical tests performed on samples along with quality control data.

Each Chemistry test/results with QC EDD file must be named according to the following convention:

EPAR5TRSQC_v3.txt (or .csv)

Table 4-3 Chemistry test/results with QC (EPAR5TRSQC_v3) data file structure

| Pos# | Column Name | Data Type | Required | Description | Valid Values |
|------|-------------------------|--------------|--------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------|
| 1 | ava sample anda | Text(| Required | Sample identifier of the cample that | In Appendix |
| 1 | sys_sample_code | 40) | - | Sample identifier of the sample that was tested and analyzed. Must match one of the reported values in the sys_sample_code field of the EPAR5SMP_v3 file submitted in the current or previous EDD. | |
| 2 | lab_anl_method_ name | Text(20) | Required | Laboratory analytical method name or description. For acceptable valid values. Default to "Unknown" if data is unavailable. | Table A-16 |
| 3 | analysis_date | DateT ime | Required | Date of sample analysis in MM/DD/YYYY HH:MM:SS format. May refer to either beginning or end of the analysis. For measurements taken in the field (e.g., pH, dissolved oxygen), use the same date as sample date | |
| 4 | Total_or_dissolved | Text(| Required | Enumeration list contains the values | A-24 |
| 5 | column_number | Text(2) | Not required | Column number, if null, "NA" will be placed in this field | No |
| 6 | test_type | Text(| Required | Type of test. | A-25 |
| 7 | lab_matrix_code | Text(3) | If available | Code that identifies the matrix, such as soil, groundwater, and sediment. The matrix of the sample when it is analyzed may be different from the matrix of the sample when it is collected (e.g. leachates), so this field is available at both the sample and test level. | Table A-1 |
| 8 | analysis_location | Text(2) | Required | Must be either "FI" for field instrument or probe (i.e, "in the field" measurements such as pH, temperature, conductivity, and dissolved oxygen), "FL" for mobile field laboratory analysis, or "LB" for an analysis done at a fixed-based laboratory. | FI = Field Instrument FL = Mobile Field lab LB = Fixed based lab |
| 9 | Basis | Text(10) | Required | Must be either "Wet" for wet-weight basis reporting, "Dry" for dry-weight basis reporting, or "NA" for tests for which this distinction is not applicable. EPA prefers that results are reported on the basis of dry weight where applicable. | Wet= wet- weight Dry= dry weight N/A = not applicable |
| 10 | container_id | Text(30) | Not required | Report as null. | No |

Table 4-3 Chemistry test/results with QC (EPAR5TRSQC_v3) data file structure

| Pos# | Column Name | Data | Required | Description | Valid Values |
|------|---------------------------|--------------|--------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------|
| | | Type | | | In Appendix |
| 11 | dilution_factor | Nume ric | Not required | Effective test dilution factor. | No |
| 12 | prep_method | Text(20) | If available | Laboratory sample preparation method name or description. Must use valid value from Table A-14 in the Appendix. | Table A-14 |
| 13 | prep_date | DateT ime | Not required | Beginning date of sample preparation. | MM/DD/YY YY HH:MM:SS format |
| 14 | leachate_method | Text(15) | Not required | Laboratory leachate generation method name or description. The method name should be sufficient to reflect the operation methodology used by the laboratory (see analysis method discussion). | No |
| 15 | leachate_date | DateT ime | Not required | Beginning date of leachate preparation | MM/DD/YY YY HH:MM:SS format |
| 16 | lab_name_code | Text(20) | If available | Unique identifier of the laboratory as defined by the EPA. Controlled vocabulary; see the lab valid value table in appendix. | Table A-17 |
| 17 | qc_level | Text(10) | Not required | Not limit to "Screen" or "Quant", visit Appendix B in the https://semspub.epa.gov/work/H Q/176101.pdf for more values | No |
| 18 | lab_sample_id | Text(20) | Not required | Laboratory LIMS sample identifier. If necessary, a field sample may have more than one LIMS lab_sample_id (maximum one per each test event). | No |
| 19 | percent_moisture | Text(5) | Not required | Percent moisture of the sample portion used in this test; this value may vary from test to test for any sample. Numeric format is "NN.MM," i.e., 70.1% could be reported as "70.1" but not as "70.1%." | No |
| 20 | subsample_amount | Text(14) | Not required | Amount of sample used for test. | No |
| 21 | subsample_amount_ unit | Text(15) | If available | Unit of measurement for subsample amount. Must use valid value from Table A-18 in the Appendix. | Table A-18 |
| 22 | analyst_name | Text(30) | Not required | Report as null. | No |
| 23 | instrument_id | Text(50) | Not required | Report as null. | No |
| 24 | Comment | Text(255) | Not required | Comments about the test, if necessary. | No |
| 25 | Preservative | Text(20) | If available | Sample preservative used. | Table A-27 |

Table 4-3 Chemistry test/results with QC (EPAR5TRSQC_v3) data file structure

| Pos# | Column Name | Data Type | Required | Description | Valid Values In Appendix |
|------|--------------------|--------------|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------|
| 26 | final_volume | Nume ric | Not required | The final volume of the sample after sample preparation. Include all dilution factors. | No |
| 27 | final_volume_unit | Text(15) | If available | The unit of measure that corresponds to the final_amount. | Table A-18 |
| 28 | cas_rn | Text(15) | Required | Analyte code | Table A-15 |
| 29 | chemical_name | Text(75) | Required | Chemical name. | Table A-15 |
| 30 | Result_value | Nume ric | Not required | Analytical result reported at an appropriate number of significant digits. May be blank for non-detect results. | No |
| 31 | Result_error_delta | Text(20) | If available | Error range applicable to the result value; typically used only for radiochemistry results. | No |
| 32 | Result_type_code | Text(10) | Required | Must be either "TRG" for a target or regular result, "TIC" for a tentatively identified compound, "SUR" for surrogates, "IS" for internal standards, or "SC" for spiked compounds. Use "TRG" for measurements taken from the field (e.g., pH, dissolved oxygen). 'CAL' for calculated pore water concentrations. | Table A-11 |
| 33 | reportable_result | Text(10) | Required | Must be either "Yes" for results that are considered to be reportable, or "No" for other results. This field has many purposes. For example, it can be used to distinguish between multiple results where a sample is retested after dilution. It can also be used to indicate which of the first or second column result should be considered primary. The proper value of this field in both of these two examples should be provided by the laboratory. | Yes No Y N |
| 34 | detect_flag | Text(2) | Required | Maybe either "Y" for detected analytes or "N" for non-detects. "Y" should be used for detected target compounds and TICs only (i.e. result_type_code is "TRG" or "TIC"). Also use "Y" for estimated (above detection limit but below the quantitation limit) or ">" and "<" for tests such as flash point. Note that "<" must not be used to indicate non-detects. | Y= detected N = non- detects |
| 35 | Lab_qualifiers | Text(| Not required | Qualifier flags assigned by the laboratory. | No |

Table 4-3 Chemistry test/results with QC (EPAR5TRSQC_v3) data file structure

| Pos# | Column Name | Data | Required | Description | Valid Values |
|------|-------------------------------|--------------|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------|
| | | Type | | | In Appendix |
| 36 | validator_qualifiers | Text(10) | Not required | Qualifier flags assigned by the person who validates the laboratory data. | No |
| 37 | Interpreted_qualifier s | Text(10) | If available | Interpreted qualifier flag assigned by the validator. When the validated_yn = N (no, meaning the data is not validated by validator), the interpret qualifier is required if lab_qualifier or validator _qualifier are populated. If the validated_yn = Y (yes, meaning the data has been validated and the validator agreed witht eh lab qualifier), then they should populate the validator_qualifier and the interpreted_qualifier. If the validated_yn = Y (yes, but the validator does not agree with the lab_qualifier), then the validator will leave the qualifier NULL and the final qualifier is also NULL. When populating the interpreted_qualifier, please use the qualifier in the Valid Value in A-10 with the description that can closely match with the lab qualifier. | A-10 |
| 38 | Validated_yn | Text (1) | Required | Must be either "Y" for validate or "N" for not validate. | Indicated if the result has been validated |
| 39 | Organic_yn | Text(| Required | Must be either 'Y' for organic constituents or 'N' for inorganic constituents. | No |
| 40 | method_detection_li mit | Text(20) | If available | Report as null. The minimum concentration of an analyte that can be measured and reported with 99% confidence that the analyte concentration is greater than zero, as determined for a specific procedure. | No |
| 41 | reporting_detection_ limit | Nume ric | Not required | Must be reported if sample result is "non-detect." The minimum concentration of an analyte that can be measured and reported with 99% confidence that the analyte concentration is greater than zero, as determined for a specific procedure, which is equal to or greater than the MDL. | No |

Table 4-3 Chemistry test/results with QC (EPAR5TRSQC_v3) data file structure

| Pos# | Column Name | Data | Required | Description | Valid Values |
|------|--------------------------|--------------|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| | | Type | | | In Appendix |
| 42 | quantitation_limit | Text(20) | Not required | Quantitation limits refer to a minimum concentration of an analyte that can be measured within specified limits of precision and accuracy. They are generally 5-10 times the detection limit. Thus, when quantitation limits are used as reporting limits, the laboratory is saying that the analyte is not present in a sufficient amount to be reliably quantified (i.e., at a concentration above the quantitation limit). It may be present and even positively identified or "seen" at a lower concentration. | No |
| 43 | Result_unit | Text(15) | If available | Units of measurement for the result. Must use valid values from Table A-18 in the Appendix. | Table A-18 |
| 44 | detection_limit_ unit | Text(15) | If available | Units of measurement for the detection limit(s). Must use valid value from Table A-18 in the Appendix. | Table A-18 |
| 45 | tic_retention_time | Text(8) | Not required | Report the value and time when the result type is TIC. | No |
| 46 | Result_comment | Text (255) | Not required | Result specific comments | No |
| 47 | qc_original_conc | Nume ric | Not required | The concentration of the analyte in the original (unspiked) sample. Might be required for spikes and spike duplicates (depending on user needs). Not necessary for surrogate compounds or LCS samples (where the original concentration is assumed to be zero). | No |
| 48 | qc_spike_added | Nume ric | Not required | The concentration of the analyte added to the original sample. Might be required for spikes, spike duplicates, surrogate compounds, LCS and any spiked sample (depending on user needs). | No |
| 49 | qc_spike_measured | Nume ric | Not required | The measured concentration of the analyte. Use zero for spiked compounds that were not detected in the sample. Might be required for spikes, spike duplicates, surrogate compounds, LCS and any spiked sample (depending on user needs). | No |

Table 4-3 Chemistry test/results with QC (EPAR5TRSQC_v3) data file structure

| Pos# | Column Name | Data Type | Required | Description | Valid Values In Appendix |
|------|---------------------------|--------------|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|
| 50 | qc_spike_recovery | Nume ric | Not required | The percent recovery calculated as specified by the laboratory QC program. Always required for spikes, spike duplicates, surrogate compounds, LCS and any spiked sample. Report as percentage multiplied by 100 (e.g., report "120%" as "120"). | No |
| 51 | qc_dup_original_ conc | Nume ric | Not required | The concentration of the analyte in the original (unspiked) sample. Might be required for spike or LCS duplicates only (depending on user needs). Not necessary for surrogate compounds or LCS samples (where the original concentration is assumed to be zero). | No |
| 52 | qc_dup_spike_ added | Nume | Not required | The concentration of the analyte added to the original sample. Might be required for spike or LCS duplicates, surrogate compounds, and any spiked and duplicated sample (depending on user needs). Use zero for spiked compounds that were not detected in the sample. Required for spikes, spike duplicates, surrogate compounds, LCS and any spiked sample. Also complete the qc-spike-added field. | No |
| 53 | qc_dup_spike_ measured | Nume | Not required | The measured concentration of the analyte in the duplicate. Use zero for spiked compounds that were not detected in the sample. Might be required for spike and LCS duplicates, surrogate compounds, and any other spiked and duplicated sample (depending on user needs). Also complete the qc_spike_measured field. | No |
| 54 | qc_dup_spike_ recovery | Nume ric | Not required | The duplicate percent recovery calculated as specified by the laboratory QC program. Always required for spike or LCS duplicates, surrogate compounds, and any other spiked and duplicated sample. Also complete the qc_spike_recovery field. Report as percentage multiplied by 100 (e.g., report "120%" as "120"). | No |
| 55 | qc_rpd | Text(8) | Not required | The relative percent difference calculated as specified by the laboratory QC program. Required for duplicate samples as appropriate. Report as percentage multiplied by 100 (e.g., report "30%" as "30"). | No |

Table 4-3 Chemistry test/results with QC (EPAR5TRSQC_v3) data file structure

| Pos# | Column Name | Data Type | Required | Description | Valid Values In Appendix |
|------|-------------------------|--------------|--------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| 56 | qc_spike_lcl | Text(8) | Not required | Lower control limit for spike recovery. Required for spikes, spike duplicates, surrogate compounds, LCS and any spiked sample. Report as percentage multiplied by 100 (e.g., report "60%" as "60"). | No |
| 57 | qc_spike_ucl | Text(8) | Not required | Upper control limit for spike recovery. Required for spikes, spike duplicates, surrogate compounds, LCS and any spiked sample. Report as percentage multiplied by 100 (e.g., report "120%" as "120"). | No |
| 58 | qc_rpd_cl | Text(8) | Not required | Relative percent difference control limit. Required for any duplicated sample. Report as percentage multiplied by 100 (e.g., report "25%" as "25"). | No |
| 59 | qc_spike_status | Text(10) | Not required | Used to indicate whether the spike recovery was within control limits. Use the "*" character to indicate failure, otherwise leave blank. Required for spikes, spike duplicates, surrogate compounds, LCS and any spiked sample. | No |
| 60 | qc_dup_spike_ status | Text(10) | Not required | Used to indicate whether the duplicate spike recovery was within control limits. Use the "*" character to indicate failure, otherwise leave blank. Required for any spiked and duplicated sample. | No |
| 61 | qc_rpd_status | Text(10) | Not required | Used to indicate whether the relative percent difference was within control limits. Use the "*" character to indicate failure, otherwise leave blank. Required for any duplicated sample. | No |

4.4 Lab Batch Data (EPAR5BAT_v3) EDD File

The Lab Batch (EPAR5BAT_v3) EDD file contains data that relate the individual samples to the laboratory batch identifier. For the most part, as with the TestResultQC EDD file, the BATCH EDD file will only need to be submitted by EPA contractors that are submitting quality data elements with their reports. The purpose of this EDD file is so laboratory quality control samples can be associated with the correct field samples with which they were processed and analyzed. This EDD file has been structured to allow samples to have different batch IDs for various phases of analysis (e.g., preparation phase, analysis phase). The majority of samples will only have one batch ID assigned by the laboratory. It is important that the values in the sys_sample_code, lab_anl_method_name, analysis_date, analysis_time, total_or_dissolved and test_type fields match those found in the TestResultQC EDD files. Each Chemistry batch file must be named according to the following convention:

EPAR5BAT v3.txt (or .csv)

Table 4-4 Lab batch file (EPAR5BAT v3) data structure

| Pos# | Column Name | Data type | Required | Description | Valid Values In Appendix |
|------|-------------------------|-----------|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------|
| 1 | sys_sample_code | Text(40) | Required | Sample identifier of the sample that was tested and analyzed. Must match one of the reported values in the sys_sample_code field of the EPAR5SMP_v3 file (Table 4-1) submitted in the current or previous EDD. | No |
| 2 | lab_anl_method_ name | Text(20) | Required | Laboratory analytical method name or description. For acceptable valid values, see Table A-16 in the Appendix. Default to "Unknown" if data is unavailable. | Table A-16 |
| 3 | analysis_date | Datetime | Required | Date of sample analysis. May refer to either beginning or end of the analysis. | MM/DD/YYYY HH:MM:SS format. |
| 4 | total_or_dissolved | Text(1) | Required | Enumeration list contains the values | A-24 |
| 5 | column_number | Text(2) | Not required | Report as null. | No |
| 6 | test_type | Text(10) | Required | Type of test. | A-25 |
| 7 | test_batch_type | Text(10) | Required | Lab batch type. This is a required field for all batches. | A-26 |
| 8 | test_batch_id | Text(20) | Required | Unique identifier for all lab batches. | No |

5. TECHNICAL SUPPORT

EPA Region 5 provides technical support for users of this Comprehensive EDD Specification Manual. For questions concerning data, data formats, and EDD submittal procedures, please contact EDD EQUIS Coordinator. For more general questions, relating to the site, please contact the EPA RPM assigned to the site.
