National Fish Tissue Data Repository: Data Entry Guide - Version 1.0

ODES123

*National Fish Tissue Data Repository
Data Entry Package*

Special Notice To NFTDR Data Submitters

The ODES123 Data Entry Package offers two major features: a data template and menu system. The data template shows the layout of your data entry. Data fields are entered in columns, and each column is labeled with the name of that data field. The menu system provides help screens and dictionaries. A separate help screen is provided for each data field. On a help screen, you can see a description of the data field, notation of required and coded fields, and an example of what to enter in a particular column. The dictionaries show the appropriate ODES code for data fields requiring codes.

The ODES123 Data Entry Package is designed to work in conjunction with both Lotus 1-2-3 for Windows and Lotus 1-2-3 Release 3. Instructions for using ODES123 in conjunction with these packages are provided in this manual. Directions for using Release 3 and Windows vary slightly, so be careful to follow the appropriate instructions when this manual refers directly to Lotus 1-2-3.

*If you are using a different version of Lotus (e.g., Release 2) or another spreadsheet package (e.g., Excel), you can still use the ODES123 data template. Unfortunately, you will not be able to use the menu system with packages other than Lotus 1-2-3 Release 3 or Lotus 1-2-3 for Windows. To access the template, follow the instructions in your software documentation. The name of the Lotus file that you will use is **Version2.wk1**. If you have any difficulties, please contact the ODES technical support staff for assistance. Since you will not be able to access the menu system, the information contained on the help screens are provided in the section of this manual entitled *Understanding the Template*. The dictionaries are also provided for your convenience in Appendices A, B, and C.*

ODES123: Introduction

Introduction

The National Fish Tissue Data Repository (NFTDR) stores fish and shellfish tissue contaminants data submitted by state and federal agencies to EPA's Ocean Data Evaluation System (ODES). Despite its name, ODES stores data from freshwater and estuary species as well as marine sources. ODES provides tools for retrieving, downloading, and analyzing data stored in the system. If you are interested in retrieving information from the National Fish Tissue Data Repository portion of ODES, please consult the *NFTDR User Manual*. For additional information about ODES or copies of ODES related documents, call the ODES technical support staff at (703) 841-6279. To review procedures for collecting and analyzing fish tissue samples, please refer to *Assessing Chemical Contaminant Data for Use in Fish Advisories: Volume 1 - Fish Sampling and Analysis*.

A data entry package was developed to assist state and federal agencies in submitting data to the National Fish Tissue Data Repository. The data entry package consists of a basic template containing all data fields and a user-friendly menu system. The package provides help screens and dictionaries listing necessary data codes. This documentation explains the data entry package, requirements for submitting data, and a description of each ODES data field. A hard-copy list of all data codes is also provided.

This document is divided into five major sections: *Introduction*, *Getting Started*, *Using the Menu System*, *Understanding the Template*, and *Final Steps*. *Introduction* explains procedures for submitting data to NFTDR. *Getting Started* describes how to load the data entry package onto your computer and provides basic information about the package. Help screens and dictionaries are explained in *Using the Menu System*. The structure of the data entry template and data fields are described in the section entitled *Understanding the Template*. *Final Steps* explains how to save your data and exit the software package. In addition, all necessary code dictionaries are provided in the Appendices for easy reference. If the appropriate dictionary does not list a code that you need to enter, **PLEASE REQUEST A NEW CODE FROM THE ODES TECHNICAL SUPPORT STAFF**.

Before using the template, it is suggested that you read this documentation. Please be aware that if you use keys and/or commands other than the ones specified on the screen menus and in the documentation, you may unintentionally exit the package and lose any data that have not been saved.

Submission Requirements

NFTDR participants are requested to submit fish tissue monitoring data to EPA on an annual basis. Data for a given year should be separated by quarter. The quarters are defined as follows: January - March, April- June, July - September, and October - December. Each data set (a single quarter) should be in a separate file on a floppy disk. In other words, if monitoring data were collected during three out of four quarters in a given year, the floppy disk should contain three separate files. These files can be created using the software package described in this documentation. This package is used in conjunction with the Lotus 1-2-3® software package. If have any questions about formatting or submitting data, please call the ODES technical support staff at (703) 841-6279.

In addition to monitoring data, participants need to provide an abstract of data collection and analysis methods. The abstract pertains to all tissue contaminant data collected during a particular year. It is not necessary to write separate abstracts for each quarter; however, please note any differences among the quarters. Please note also that the abstract should include the name and telephone number of an individual who is familiar with the data set and who may be contacted by ODES users if they have questions about the data. Appendix D provides a data questionnaire and an example that should serve as a model for the technical abstract. Abstracts should be saved as a DOS text file that is no wider than 79 columns and on the same diskette as your data in ODES format.

To ensure the data are properly handled once they reach EPA, please enclose a cover letter that provides basic information about the data set(s). A sample cover letter is shown in Figure 1. Required information is italicized. The filename is simply the name of the file on your diskette. Survey dates are the range of dates that data were collected. The senior scientist is the principal scientist or investigator related to that data set. The agency or organization is the principal scientist's organization, agency, or institution. Note that the information is divided by quarters. This division may cause duplication within the cover letter (e.g., scientist and agency), but will ensure that the proper information is stored with each data set.

Three important pieces of information that should be included in the cover letter:

- Name of the state where the data were collected
- Notation that the data are related to the National Fish Tissue Data Repository
- Name, phone number, and address of a contact person for the data

Additional items to be noted:

- You may submit your data and abstract on either a 3 1/2" or 5 1/4" diskette.
- Data submitted in a format other than the one discussed in this manual will not be loaded into the NFTDR.

Washington, DC 20460*

Subject: National Fish Tissue Data Repository Data Submission

Enclosed please find the diskette containing *TEXAS* data submissions for 1992. This year, we collected data during two quarters.

April - June
Filename: odesdata.1
Survey dates: April 15 - June 30, 1992
Senior scientist: Henry Smith
Agency or organization: TX Dept. of Environment

July - September
Filename: odesdata.2
Survey dates: July 1 - July 31, 1992
Senior scientist: Henry Smith
Agency or organization: TX Dept. of Environment

If you have any questions concerning this data or the information enclosed for this submission, please contact *Mike Miller* at (817) 555-1212.

ODES123: Getting Started

Getting Started

Using ODES123 for the First Time

Before using this package, you should make a copy of the original disk and keep the original in a safe place. Use your copy to run ODES123. This extra step provides you with an original in case you need to re-install the software. If you need a new copy of the software package, please call the ODES technical support staff at (703) 841-6279.

The ODES123 data entry package requires that Lotus 1-2-3[®] be installed on your computer. You need not, however, be familiar with Lotus to use this package. If you are using Lotus 1-2-3[®] for Windows or Lotus 1-2-3[®] Release 3, you should install ODES123 according to the instructions provided below.

To install the software on your C: drive, insert the ODES123 disk into a disk drive.

- If the ODES123 disk is in the A Drive:
Type **A:**
A:> should appear on your screen.
Type **INSTALL A:**
- If the ODES123 disk is in the B Drive:
Type **B:**
B:> should appear on your screen.
Type **INSTALL B:**

Once the software package is installed, a message appears describing how to access the software. After reading this message, you will be at the C:\> prompt. You are now ready to use the data entry package. To start the package, continue with the instructions on the next page. In the future when you want to use ODES123, you can simply start with the instructions on the next page.

If you are using a different version of Lotus 1-2-3[®] (e.g., Release 2), then you should make a copy of the file Version2.wk1. Version2.wk1 is the data entry template that you will use to enter data. The file is a standard spreadsheet. After you have completed entering the data, save the worksheet as a text file. You can save the data as a text file by printing the worksheet to a file rather than a printer.

Accessing ODES123

- 1) Start your copy of Lotus 1-2-3® as usual.
- 2) Retrieve the file ODES123.WK3 from the C:\ODES123 directory. The steps for retrieving a file with Release 3 and Windows are shown in the figures below.

Figure 2a: Retrieving ODES123 with Lotus 1-2-3® Release 3

| Task | User Response |
|---|---|
| Enter Lotus Menu System | / |
| Use Lotus file options | F for File |
| Retrieve Lotus file | R for Retrieve |
| Select ODES123 software package Clear completely the filename & directory that appear at prompt | <Esc><Esc> (# of times you press <Esc> may vary) |
| Enter new directory & filename | C:\ODES123\ODES123.WK3 <Enter> |

Figure 2b: Retrieving ODES123 with Lotus 1-2-3® for Windows

| Task | User Response |
|---|--|
| Use Lotus file options | Click on FILE in the menu bar at the top of the screen |
| Retrieve Lotus file | Click on OPEN in the File menu options |
| Select ODES123 software package Designate the name of the file to retrieve | In the File Name box, type C:\ODES123\ODES123.WK3 Click on the OK button after typing the filename |

To begin entering data, you may skip directly to the section entitled *Using the Menu System*. Please note, however, that the remainder of this section provides instructions for saving your data and continuing data entry at a later time.

Saving Data for Later Use

You should periodically save the data in your template as you would for a standard Lotus spreadsheet. The steps for saving data are shown below for both Lotus 1-2-3® Release 3 and Lotus 1-2-3® for Windows.

Figure 3a: Saving data with Lotus 1-2-3® Release 3

| Task | User Response |
|---|---|
| Enter Lotus Menu System | / |
| Use Lotus file options | F for File |
| Save current file | S for Save |
| Enter unique name for data file Clear filename & directory that appear at prompt | <Esc><Esc> (# of times you press <Esc> may vary) |
| Enter new directory & filename | Name of your choice (e.g., C:\ODESDATA) |

Figure 3b: Saving data with Lotus 1-2-3® for Windows

| Task | User Response |
|---------------------------------|---|
| Use Lotus file options | Click on FILE in the menu bar at the top of the screen |
| Save current file | Click on SAVE AS in the File menu options |
| Enter unique name for data file | In the File Name box, type the filename (e.g., C:\ODESDATA) Click on the OK button after typing the filename |

When you are finished entering data and are ready to submit your data to NFTDR, use the procedures described in the *Final Steps* section of this manual.

Retrieving Data from Previous Sessions

You may wish to retrieve data that you began entering during a previous session. The procedure for opening that file is shown below. In order to use this procedure, your data should have been stored in the format shown on the previous page rather than in the text format described in the *Final Steps* section.

The instructions in Figure 4 start from the ODES123 menu system. To access the ODES123 menu system using Lotus 1-2-3® Release 3, press <Alt> and *H* simultaneously. Press <Ctrl> and *H* at the same time if you are using Lotus 1-2-3® for Windows. If you have not yet entered Lotus or the ODES123 data entry package, follow the directions in Figure 2. You should now be in the ODES123 menu system that includes the options **BEGIN**, **HELP**, **DICTIONARIES**, and **TEMPLATE**. Use the instructions in the figure below that corresponds with your version of Lotus to retrieve your data. If you encounter any problems, please contact the ODES technical support staff.

Figure 4a: Retrieving data with Lotus 1-2-3® Release 3

| Task | User Response |
|--|---|
| Exit ODES123 menu system | B for Begin or T for Template |
| Use Lotus menu system | / |
| Use Lotus file options | F for File |
| Open a worksheet file | O for Open |
| Select Before current worksheet | B for Before |
| Enter name of data file Clear filename and directory that appear at prompt | <Esc><Esc> (# of times you press <Esc> may vary) |
| Enter directory and filename | Name you previously assigned (e.g., C:\ODESDATA) |
| Access ODES123 menu system | Press <Alt> and H simultaneously |

Figure 4b: Retrieving data with Lotus 1-2-3® for Windows

| Task | User Response |
|--|---|
| Exit ODES123 menu system | B for Begin or T for Template |
| Use Lotus file options | Click on FILE in the menu bar at the top of the screen |
| Open a worksheet file | Click on OPEN in the File menu options |
| Enter name of data file Clear filename and directory that appear at prompt | <Esc><Esc> (# of times you press <Esc> may vary) |
| Enter directory and filename | Name you previously assigned (e.g., C:\ODESDATA) |
| Access ODES123 menu system | Press <Ctrl> and H simultaneously |

ODES123: Using the Menu System

Using the Menu System

When you first start ODES123, the menu system appears. To select an item on a menu, use the arrow keys to highlight the option and press <Enter>. After exiting the menu system, you can return to the menu at any time. Using Release 3, press <Alt> and *H* at the same time to access the menu. Using Windows, press <Ctrl> and *H* simultaneously. As you are entering data, regularly save the template using a unique filename.

PLEASE NOTE: When using the template, do NOT press <Esc> to exit the menu system. Using <Esc> exits you from the menu system but will not return you to your data. In addition, using <Esc> may cause you to lose all unsaved data.

As shown below, the main menu contains four options: **BEGIN**, **HELP**, **DICTIONARIES**, and **TEMPLATE**. When highlighted, each option is accompanied by a one-line description under the list of options.

| |
|---|
| Begin Help Dictionaries Template Go to the first entry cell in the template |
|---|

BEGIN returns you to the top left hand corner of the template. **HELP** provides additional menus containing descriptions of each data field in the template. Selecting **DICTIONARIES** allows you to access the codes for specific data fields in the template. **TEMPLATE** takes you from the menu system and returns you to your last position in the template.

The remainder of this section describes **HELP** and **DICTIONARIES** in more detail. Both subsections provide an overview, a sample menu and screen, and an example. You should try the example the first time you use the menu system to become familiar with its capabilities. Remember, you can return to the menus at any time in Release 3 by pressing <Alt> and *H* at the same time. In Windows, you can return to the menus by pressing <Ctrl> and *H* simultaneously.

The Help Option

This option contains menus listing each of the data fields. The data fields use the same naming convention as the column headings in the template. A one-line description is provided on the menu when you highlight the data field name. To view the help screen for a data field, you should move the cursor to that variable and press <Enter>.

Each help screen provides specifications for that particular data field. For example, some entries should be expressed in meters with a maximum value of 99.9 and contain no more than one decimal position. These screens also provide an example entry such as "1:30pm=1330". These examples provide the common format first and the ODES format second. **PLEASE ENTER THE ODES FORMAT IN THE TEMPLATE.** The help screen also indicates which data fields are required and which use a code to represent a definition. For example, if you wish to obtain additional information about the "time" data field, highlight **TIME** from the help menu and press <Enter>.

```
> Sample Time: Time the sampling started
>   in a HHMM format where HH is the hour
>   (00-23), and MM are the minutes (00-59).
>
>
> Example: 1:30 in the afternoons= 1330
```

If you do not see the data field of interest on the first help menu, select **MORE** to view additional choices. The last help menu contains a **REVIEW** option that allows you to go back to the first help menu. **QUIT** sends you back to the initial menu that contains **BEGIN, HELP, DICTIONARIES, and TEMPLATE.**

EXAMPLE:

While entering template data, you need to know what the data field 'C/S#' represents.

1) Enter the ODES123 Menu system.

Lotus 1-2-3® Release 3: Press <Alt> and *H* simultaneously.

Lotus 1-2-3® for Windows: Press <Ctrl> and *H* simultaneously.

2) Select the Help Option by highlighting **HELP** and pressing <Enter>.

```
Begin Help Dictionaries Template
Help with the ODES Data Entry Package
```

3) Since 'C/S#' does not appear on the first Help Menu, highlight **MORE** and press <Enter> to view the second help menu.

```
Site Lat Long Date Time Depth More Quit
More Choices for Help
```

4) Highlight **C/S#** and press <Enter>. You then see the **C/S#** help screen shown below.

```
Loc'n Elev Waterbody C/S# C/S More Quit
Composite or Specimen Number
```

```
HELP
> Composite or Specimen Number: 2-digit identifier
> assigned by the investigator to represent the
> sample's individual specimen or composite.
> Denote composite or specimen in the C/S data
> field.
> Examples: Composites= 01, Samples= 01
```

5) To exit the Help Menus, highlight **QUIT** and press <Enter>.

```
Loc'n Elev Waterbody C/S# C/S More Quit
Quit Help Screens
```

6) From the main menu highlight **TEMPLATE** and press <Enter>. This option returns you to your previous position in the template.

```
Begin Help Dictionaries Template
Quit the Menu System and return to your last position in template
```

The Dictionaries Option

The Dictionaries Option provides two additional menus containing the variables for ODES codes. Each dictionary contains a code and corresponding definition as shown in the sample menu below.

Loc'n Gear Organ Stg Unit Meth/Clean/Inst More Quit
Location Code

If the variable of interest does not appear on the first menu, use the **MORE** option to examine the second menu. You can return to the first menu by selecting **REVIEW**. Highlighting a variable provides you with a one-line description of the variable. Highlighting the variable and pressing <Enter> displays the first page of that variable's dictionary.

Some dictionaries fit on a single screen and others occupy multiple screens. In cases where the dictionary fits on one screen, the menu containing dictionary choices remains. You may use this menu to select another dictionary or **QUIT** the Dictionary Option. For dictionaries that extend beyond a single screen, a subsequent menu appears along with the dictionary. This menu allows you to move around the dictionary. For example the **UP** option moves you up one screen in the dictionary. **END** moves you to the last screen of the dictionary. To exit a multiple screen dictionary and use another dictionary, select the **OTHER** option. The **QUIT** option in the menu returns you to the original **BEGIN, HELP, DICTIONARIES, and TEMPLATE** menu.

If you need a code that is not included in a dictionary, please contact the odes technical support staff rather than assigning your own code. In many cases more than one user may need the same code; calling the support staff ensures duplicate codes are not assigned.

EXAMPLE:

While entering data on the template, you need to know the ODES unit code for ug/ml.

1) Enter the ODES123 Menu system.

Lotus 1-2-3® Release 3: Press <Alt> and *H* simultaneously.

Lotus 1-2-3® for Windows: Press <Ctrl> and *H* simultaneously.

2) Select the Dictionaries Option by highlighting **DICTIONARIES** and pressing <Enter>.

Begin Help **Dictionaries** Template
Access the ODES Code Dictionaries

3) Highlight **UNIT** and press <Enter>. You then see the ODES unit codes. A portion of that screen is shown below.

Loc'n Gear Organ Stg **Unit** Meth/Clean/Inst More Quit
Location Code

| UNIT CODE DICTIONARY | |
|---------------------------------|---|
| Weight/Volume, ppm (e.g. ug/ml) | A |
| Weight/Weight, ppm (e.g. ug/g) | B |
| Volume/Weight, ppm (e.g. ul/g) | C |
| Volume/Volume, ppm (e.g. ul/l) | D |
| Activity/Volume (e.g. uCi/l) | E |
| Activity/Weight (e.g. uCi/g) | F |
| mg/sqsm | G |
| mV | H |

4) To exit the Dictionary Menus, highlight **QUIT** and press <Enter>.

End Down Other **Quit**
Quit the Dictionary Option

5) From the main menu highlight **TEMPLATE** and press <Enter>. This option returns you to your previous position in the template.

Begin Help **Dictionaries** **Template**
Quit the Menu System and return to your last position in template

**ODES123:
Understanding the
Template**

Understanding the Template

The template is divided into three different levels of data: station, sample, and source. The station level describes where the information was collected. The sample level provides specific information about a single sample, and the source level contains the analytical laboratory results.

These levels can be thought of as a sideways pyramid with the station level at the left tip and the source level at the foundation on the right (Figure 5). As you move across the pyramid, the information becomes more comprehensive. Starting at the left (station level) and moving right, the entries become more specific and link the tip of the pyramid to the foundation. Without specific analytical results that are reported at the source level, the pyramid falls. Each station record can refer to one or more sample levels, and each sample record needs at least one source record. To make the data useful, the foundation layer must be present and should be able to be traced back to the tip of the pyramid.

Figure 5: ODES Data Structure Pyramid

| | | |
|---------------------------|-------------------------------|-------------------------------|
| Station 1 Snake River | Sample 1 Trout | Source 1 Al Concentration |
| | | Source 2 Pb Concentration |
| | | Source 3 Mg Concentration |
| Station 2 Jackson Lake | Sample 2 Bass | Source 4 Al Concentration |
| | | Source 5 Cu Concentration |
| | Sample 3 Trout | Source 6 PCB Concentration |
| | | Source 7 Pb Concentration |
| | | Source 8 Pb Concentration |
| Sample 4 Bass | Source 9 Mg Concentration | |
| | Source 10 Mg Concentration | |
| | Source 11 Pb Concentration | |
| | Source 12 Al Concentration | |

In the data pyramid in Figure 5, twelve source records are reported. The first three records can be linked to Sample 1 and Station 1. Five source records are reported for Station 2. Two of those records correspond to Sample 3 and the other records are linked to Sample 4.

Before entering your data into the template, it is important that your data conform to the organization of the data pyramid. Assume you sampled at two locations. Therefore, divide your results into two groups based on these locations: Jackson Lake and Snake River. At both stations, you caught trout and bass, so divide each station into two samples. A sample can be either a specimen or composite. Please note that if you divided a set of trout into two composite samples for analysis, you should not group them together for reporting purposes. Finally, you should have one source record for each laboratory test performed on a single sample.

In Figure 5, seven laboratory tests are reported for Snake River and five are reported for Jackson Lake. The Snake River values come from two samples: one sample for trout and one for bass. Sample information includes the taxon and tissue as well as the gear used to catch the specimen. The first sample contains three laboratory results or source records. The second sample consists of four analytical records. When entering data in the template, record station information, one sample record, and a corresponding source record on the first line. Continue to record source data directly below the first source record until all data for that sample is entered. After entering the information about the Snake River trout, move back to the sample level in order to enter information about the bass caught at the same location on the Snake River. After recording all the data collected from the Snake River, you are ready to move back to the station portion of the template and enter your next station, Jackson Lake. Similar to entering Snake River data, you need to group your data into two samples. In the data pyramid, Jackson Lake data are recorded in records 8 through 12. Please note that when you enter a level above the source level, all lower levels must be included or the pyramid collapses. For example, you cannot have a new station record unless new sample and source records are entered on the same line.

After entering the data, your file should be similar to this data pyramid (Figure 5). The first line of entries on the template should include Station 1, Sample 1, and Source 1. If more than one source record is part of Sample 1, then enter the information for the second source record directly below Source 1. You do not need to re-enter the information for Station 1 or Sample 1. If no information is recorded in a higher level, ODES assumes the information from the previous entry at that higher level is still valid.

You should begin your data submission process by understanding the ODES data structure and organizing your data accordingly. The template provides a standard process for data entry, but may not conform directly to your data. For example, your laboratory reports may group data by

analytical tests rather than by station. In such cases, you must sort your laboratory reports to correspond with the ODES data structure and the ODES123 data template. This re-organization of data eliminates the need to enter sample or station information more than once.

The actual template includes a header line and symbols to divide the record levels. The header line in your template tells which data fields should be recorded in each column. As you page through the template, this header remains on the first line. Columns of symbols (<>,##) are used to separate the different levels of the pyramid. Data fields to the left of the symbols correspond to higher levels, and information to the right corresponds to lower levels of the pyramid. Station data starts on the left side of the template and extends to the column of <>. Sample data is recorded in the fields between the columns of <> and ##. The source data starts to the right of the ## columns to the end of the template. **Note that the header uses capital letters for required fields, and coded fields are differentiated by color.**

The next three subsections of this manual describe the data that are included in each level of the pyramid. Each section contains an explanation about the data level as well as a table that gives the name and description of the data fields shown on the template. The table also signifies whether a data field is required and/or uses an ODES code. If the column labeled "Required Field" is marked then you must include that piece of information. If it is not marked, the field is optional. Similarly, the "ODES Code" column is marked for fields requiring a special ODES code. The description in the following tables explains how to enter both QA and field data. Please follow the format provided in this manual to ensure the data are properly formatted for ODES.

Station Data Fields

Station data fields describe the site where data were collected and should be reported for each new location. The station portion of the template starts on the left and extends to the column of $\langle \rangle$. The header line for the station level portion of the template is shown below.

```
SITE  LAT  LONG  DATE  Time  Depth  Loc'n  Elev  Waterbody  <>
                                             <>
```

This record level uses ODES codes for the Station Location (Loc'n) data field. Note that you can access the location code dictionary through the Menu System, or you may consult the hard copy provided in Appendix C of this manual.

NOTE: You may wish to report quality assurance data (e.g., spikes, blanks). All QA data should be grouped together at the top of the data file, prior to the field data. Please identify quality assurance data by entering "QA" in both the LAT and LONG data fields, then proceed to the sample level data fields that begin on page 22. The "QA" signifies to the ODES staff that the following lines represent quality assurance data.

Figure 6: Data Fields for Station Level

| Data Field | Description | ODES Code | Required Field | Example(s) |
|------------|---|-----------|----------------|---------------------------------|
| Site | 3-character code assigned by scientist to identify the sampling site. Each code should be unique and may consist of numbers and/or letters. | | • | 1st site = 001 |
| Lat | Latitude: Approximate latitude of the sampling site with the format DDMSS where DD is degrees, MM is minutes, and SS is seconds. | | • | 98030 (for QA data enter QA) |
| Long | Longitude: Approximate longitude of the sampling site with the format DDDMMSS where DDD is degrees, MM is minutes, and SS is seconds. | | • | 07030 (for QA data enter QA) |
| Date | Date of sample collection in a YYMMDD format where YY is the year, MM is the month, and DD is the day. | | • | 01 20 98 = 930120 |
| Time | Time the sampling started in an HHMM format where HH is the hour (00 to 23) and MM is the minutes (00 to 59). | | | 1:30pm = 1330 |
| Depth | Depth at the site in meters. Maximum value is 9999.9 meters and includes only one decimal place. | | | 15.5, 0.9, 12, 133 |
| Loc'n | Location: 1-character code that describes the type of location where the sample was taken. | • | | Stream = A |
| Elev | Intertidal Elevation: Elevation of the sample site in meters with the maximum value of 99.9. | | | -5, 9.9, 20, 25.8 |
| Waterbody | Descriptive name of up to 15 characters. | | | Gulf of Mexico |

Sample Data Fields

Sample data fields are entered between the station and source fields in the pyramid. This positioning means there should be at least as many source records as sample records and the same number or more sample records than station records. These data fields are between the <> and ## columns as shown below. This level includes several ODES codes as signified in the data field descriptions below.

<>SAMP# C/S# C/S GEAR TAXA # Sex Stg ORGAN WetWgt DryWgt Length Code Lipid#
<> #:

Figure 7: Data Fields for Sample Level

| Data Field | Description | ODES Code | Required Field | Example(s) |
|------------|--|------------|----------------|--|
| Samp# | Sample Number: An identifier assigned by the investigator, usually numbered sequentially. QC sample numbers should begin with the codes shown in Appendix C. | if QA data | • | Field Data = 001 QA Lab Blank = L01 |
| C/S# | Composite or Specimen Number: An identifier assigned by the investigator representing the sample's specimen or composite. | | • | C/S# = 01 |
| C/S | Level of Information (composite or specimen): 1-character code to indicate whether analysis is based on a specimen or composite. | • | • | Composite = C Specimen = S |
| Gear | 2-character code to describe the type of gear used to collect taxa. See Appendix C for codes. | • | • | Net = 01 |
| Taxa | 12-digit code to indicate the taxon that was analyzed. See Appendix B for codes. | • | • | <i>Salmo trutta</i> = 875501030600 |
| # | Number of Individuals: Total number of individuals that compose a composite sample. Use 1 for individual samples. Maximum value of 99999 individuals. | | | 10 individuals in composite = 10 |
| Sex | 1-character code to identify the sex of the individual. Use majority sex for composite samples. See Appendix C for codes. | • | | Male = 1 |
| Stg | Life Stage: 1-character code to identify the life stage of the sample. Use predominant life stage if sample is a composite. See Appendix C for codes. | • | | Juvenile = 7 |

Figure 7 cont.

| Data Field | Description | ODES Code | Required Field | Example(s) |
|---------------|--|-----------|----------------|------------------|
| Organ | 2-digit code to identify the organ or portion of the sample analyzed. See Appendix C for codes. | • | • | Muscle = 01 |
| WetWgt | Wet Weight: Total weight of sample, in grams. Maximum value is 99999.99 grams. Include up to 2 decimal places. | | | 55.7, 222.12, 15 |
| DryWgt | Dry Weight: Percentage of total sample remaining after drying. Value should be expressed in percentage of weight with up to one decimal place. | | | 50.4% = 50.4 |
| Length | Length of individual in whole centimeters (mean length of all individuals for a composite sample). | | | 1.2 cm = 1 |
| Code | Length Code: 1-character code describing the method for measuring length. See Appendix C for codes. | • | | total length = 5 |
| Lipid | % Extractable Lipids: Lipids extracted as a percentage of whole to one decimal place. Maximum value is 99.9. | | | 15.27% = 15.3 |

Source Data Fields

Every line in your file should contain information in the source data fields. Source represents the foundation of your pyramid. Without this level, higher level information is irrelevant. The source data fields describe the analytical results obtained from your study. The fields are located to the right of the ## column and read as follows:

```
##Rep CHEMICAL AMOUNT UNIT Qual METH Clean Clean Clean Inst Link Link Link Basis
##
```

Figure 8: Data Fields for Source Level

| Data Field | Description | ODES Code | Required Field | Example(s) |
|-----------------|---|-----------|----------------|--------------------|
| Rep | Replicate Number: 2-digit identifier for each replicate sample. Use a sequential numbering scheme. | | | 1st replicate = 01 |
| Chemical | 10-character code to identify the chemical analyzed. See Appendix A for codes. | • | • | Lead, total = LEAD |
| Amount | Amount of chemical detected in the tissue. The units are listed in the unit code field. Use up to 4 digits and include a decimal if needed. | | • | .0005, 7.05, 100.5 |
| Unit | 1-character code to describe the units of reported concentration. See Appendix C for codes. | • | • | mg/mL = A |
| Qual | Qualifier Code: 1-character code to provide additional qualifying information about the measurement. See Appendix C for codes. | • | | Estimated = E |
| Meth | 2-character code to indicate the method used to extract or digest the sample matrix and remove or isolate the chemical of concern. See Appendix C for codes. | • | • | Filtration = 54 |
| Clean | Clean-up Code: 2-character code to indicate an additional step taken to further purify the sample extracts or digestates. You may enter up to three clean-up codes. See Appendix C for codes. | • | | Filtration = 54 |
| Inst | Instrument Code: 2-character code to identify the chemical analyses method(s) used for analyzing the sample. Code should represent final analysis method or combined methods. See Appendix C for codes. | • | | Filtration = 54 |

Figure 8 cont.

| Data Field | Description | ODES Code | Required Field | Example(s) |
|--------------|---|-----------|----------------|-------------------------------|
| Link | 3-character ID for QC sample(s) associated with chemical concentrations reported on this line. ID should match a QC sample number for quality control data. | | | Link with 1st Lab blank = L01 |
| Basis | Measurement Basis: 1-character code to indicate whether chemical measurements were on a wet or dry weight basis for tissue analysis. | • | | WetWgt = W DryWgt = D |

ODES123: Final Steps

Final Steps

Once you have completed entering all data into the spreadsheet package, save the data on a diskette. Use the Lotus 1-2-3® menu system to save the data as a print file. This process will create an ASCII file that can be read by ODES. To accomplish this task, follow the steps shown in the appropriate figure below.

Figure 9a: Saving your data for ODES with Lotus 1-2-3® Release 3

| Task | User Response |
|--|---|
| Move to upper right corner of submissions file | Use arrow keys to move to cell A2 |
| Enter Lotus Menu System | / |
| Use Lotus print option | P for PRINT |
| Print worksheet to a file | F for FILE |
| Enter name of file | Follow prompts by Lotus |
| Specify that you wish to print from a range of cells in the worksheet | R for RANGE |
| Identify the current cell (A2) as the upper left corner of the print range | Press "." |
| Identify the lower right corner of the print range | Use the arrow keys to move to the lower right cell of your template and press <Enter>. (Lotus will highlight the range that you have selected.) |
| Save data | G for Go |
| Exit option | Q to Quit |

Figure 9b: Saving your data for ODES with Lotus 1-2-3® for Windows

| Task | User Response |
|-----------------------|---|
| Highlight the data | Go to cell A2 (top left corner of template) Select the whole range of your data by clicking and holding down the mouse button on cell A2 and dragging the pointer to the bottom right corner of your data without releasing the button. When the mouse pointer is in the bottom right corner cell, release the mouse button. |
| Create a text file | Click on FILE in the menu bar at the top of the screen. Click on the EXTRACT TO in the File menu options. Click on the circle next to the word TEXT under the Save As heading to save your data as a text file. |
| Verify the data range | Check the RANGE box to verify that the full range of data is included. |
| Specify the filename | Type the DOS pathname in the File Name box (e.g., C:\ODES123\ODESDATA). Click on the OK button after you have selected the TEXT option, verified the RANGE, and specified the name. |

You are now finished formatting your data and are ready to exit both ODES 123 and Lotus. You do not need to save the original template before exiting. **If you do save the template under the original filename (TEMPLATE.WK3), you will not have a clean template the next time you are ready to use this software package.**

Follow the steps below to exit ODES 123 and Lotus 1-2-3[®] simultaneously.

Figure 10a: Exiting ODES123 with Lotus 1-2-3[®] Release 3

| Task | User Response |
|---------------------------|---------------|
| Enter Lotus Menu System | / |
| Exit Lotus 1-2-3 | Q to Quit |
| Are you sure? | Y for Yes |
| Have you saved your data? | Y for Yes |

Figure 10b: Exiting ODES123 with Lotus 1-2-3[®] for Windows

| Task | User Response |
|--------------------------------|---|
| Exit Lotus 1-2-3 | Click on FILE in the menu bar at the top of the screen. Click on EXIT in the File Menu options. |
| Save all files before closing? | Click on NO. |

The final step in submitting data is writing your annual abstract. A data questionnaire and sample abstract are provided in Appendix D. Your completed abstract should be saved in standard ASCII format no more than 79 columns wide (e.g., as DOS text in a word processor). When you have finished entering data on the template and have prepared the accompanying abstract, please send the diskette (3 1/2" or 5 1/4") along with a cover letter (see p. 3) to:

**ODES Data Manager
U.S. EPA (WH-585)
401 M Street S.W.
Washington, DC 20460.**

If you need more details or have any questions, please contact the ODES technical support staff at (703) 841-6279.

Taxa Codes

APPENDIX B

Taxa Codes

The following pages contain four lists of fish species with their associated ODES codes:

B.1: Taxa Sorted by Common Name *page B-2*

B.2: Taxa Sorted by Scientific Name *page B-29*

The lists were derived from estuary and marine species encountered in National Marine Fisheries Service creel censuses during 1987-92, freshwater species known to have been sampled in one or more tissue monitoring studies, and species recommended for sampling in the U.S. Environmental Protection Agency's Assessing Chemical Contaminant Data for Use in Fish Advisories: Vol. 1 - Fish Sampling and Analysis. An effort has been made to make the lists as comprehensive as possible. Should you, however, have tissue monitoring data for a species not on the lists, PLEASE CONTACT THE ODES TECHNICAL SUPPORT STAFF AT (703) 841-6279 TO OBTAIN A CODE NUMBER FOR THAT SPECIES.

APPENDIX B.1

TAXA SORTED BY COMMON NAME

**Data Questionnaire
& Sample Abstract**

APPENDIX D

QUESTIONS TO BE CONSIDERED WHEN PREPARING AN ODES ABSTRACT

Because of the many types and sources of data that may be added to ODES, it is of great value for users to know the goals and techniques of each sampling program. Much of this information, so valuable for interpretation of data, is not inherent in the data; it can only be supplied in narrative form. Each data submitter is therefore requested to provide a descriptive overview of the sampling program. The following questions are intended to indicate the important issues which affect a data set's use and its comparability to other data sets. You should use the following set of questions as a guide to the type of information to include in your abstract. The information supplied in your abstract will help all ODES users choose data appropriate for their purposes.

State or Federal Agency: _____

Please give the name of an individual who can be contacted for additional information concerning this data set:

_____ (name)
_____ (organization)
_____ (address)

Phone: () - _____

1. Please describe the goals of the sampling program.
2. Please describe the distribution of the sampling stations throughout the water body sampled. If stations were selected in order to characterize some particular feature (e.g., a chemical spill), please identify this feature and present the rationale for the placement of stations in relation to this feature.
3. Please describe the gear, any special features of its application and techniques used for sample collection.
4. How were samples collected and handled during transportation? How were samples stored?

5. What tissues were analyzed?
6. Please provide the following information on analytical techniques for each class of chemical compounds.

| Analyte | Sample Size | Container Type and Preparation | Sample Preservation | Holding Time Range | Method | Instrumentation | Detection Limits |
|---------|-------------|--------------------------------|---------------------|--------------------|--------|-----------------|------------------|
|---------|-------------|--------------------------------|---------------------|--------------------|--------|-----------------|------------------|

7. Please provide the following information on the frequency of laboratory quality control checks and provide a copy of the results of any such analyses:

| Analyte | No. of Samples | No. of Duplicates | No. of Blanks | Matrix Spike # | Material Used Amt. | Analytical Standards # | Material Used |
|---------|----------------|-------------------|---------------|----------------|--------------------|------------------------|---------------|
|---------|----------------|-------------------|---------------|----------------|--------------------|------------------------|---------------|

8. If results submitted to ODES have been corrected for blanks or recovery response, please describe the manner in which this has been done.
9. Please describe any feature of this data set which may affect its use to generally characterize environmental data.
10. Please describe the quality assurance/quality control procedures used to verify the correct coding and entry of data.
11. If any other types of data were collected concurrently which have been or will be added to ODES, please indicate the appropriate ODES file type(s).
12. In what report or document can the raw data be found? How could an individual obtain a copy of the raw data?

SAMPLE ABSTRACT

CONTACT: RUSSEL W. KIESLING, RESEARCH ADMINISTRATOR
GALVESTON BAY NATIONAL ESTUARY PROGRAM
UNIVERSITY OF HOUSTON - CLEAR LAKE
2700 BAY AREA BLVD., BOX 164
HOUSTON, TX 77508
PHONE: (713) 332-9957

PROGRAM: National Estuary Program *NOTE: Use Program: National Fish Tissue Data Repository*
FILE TYPE: Bioaccumulation *NOTE: Also enter Bioaccumulation*
NUMBER OF STATIONS SAMPLED: 4
SAMPLING PERIOD: Summer (July-September) 1990
SPECIES COLLECTED: Southern flounder (*Paralichthys lethostigma*), black drum (*Pogonius cromis*), redfish (*Sciaenops ocellata*), speckled trout (*Cynoscion nebulosus*), hardhead catfish (*Arius felis*), croaker (*Micropogonius undulatus*), jackfish (*Caranx hippos*), mullet (*Mugil cephalus*), gafftop sail catfish (*Bagre marinus*), sheepshead (*Archosargus probatocephalus*), and shark (*Lamniformes*)
NUMBER OF VARIABLES MEASURED: 104 (46 aromatic hydrocarbons, 48 pesticides and PCBs, and 10 trace metals)
SAMPLING EQUIPMENT USED: Gill nets (100-600 ft long, 6 ft deep, with 1, 2, or 3 inch square mesh) and hook-and-line
ANALYTICAL TECHNIQUES: Aromatic hydrocarbons by gas chromatography/mass spectrometry (GC/MS)-selective ion monitoring mode (SIM) after silica gel/alumina column and HPLC purification; pesticides and PCBs by gas chromatography/electron capture detection (GC/ECD) after silica gel/alumina column and HPLC purification; mercury by cold vapor atomic absorption spectrometry (CVAAS); other trace metals by flame or graphite furnace atomic absorption spectrometry (FAAS or GFAAS).

DATA SET VERIFIED BY SUBMITTER

GENERAL COMMENTS

Galveston Bay is one of the largest estuaries in the United States and the largest in Texas. Its 600 square miles of shallow, low salinity water provide highly productive habitat for fish, crab, oysters, and shrimp. This study was initiated to provide information on the concentrations of heavy metals and organic priority pollutants in edible fish and shellfish from Galveston Bay. The data were used to assess potential risks to human health posed by the consumption of seafood organisms from Galveston Bay.

Southern flounder (*Paralichthys lethostigma*), black drum (*Pogonius cromis*), redfish (*Sciaenops ocellata*), speckled trout (*Cynoscion nebulosus*), hardhead catfish, croaker, jackfish, mullet, gafftop sail catfish, sheepshead, and shark were collected by gill netting or hook-and-line from four sites in Galveston Bay on 30 July-3 August and 4 September 1990. The four sites were Morgans Point, at the mouth of Galveston Ship Channel, Eagle Point, off of San Leon, Carancahua Reef, in the West Bay, and Hanna Reef, in the East Bay. Because of an oil spill near the Eagle Point site, only ten of the desired thirty fish could be collected during the first cruise. An additional cruise in September was necessary to collect a sufficient number of fish at this site. For collection purposes, a site was considered to be a circle with a radius of 1.5 miles around a central location.

All stations are assigned an ODES station code for use in all the ODES tools. The ODES station codes for Galveston Bay consist of the prefix GBE followed by a four-character identifier. The following table gives the ODES station codes for the bioaccumulation stations sampled in the Galveston Bay monitoring program.

| Original Station Code | ODES Station Code | Location |
|-----------------------|-------------------|-----------------|
| HR | GBEHR01 | Hanna Reef |
| CR | GBECR01 | Carancahua Reef |
| MP | GBEMP01 | Morgans Point |
| EP | GBEEP01 | Eagle Point |

Data were checked for proper formats and were screened for improbable values. An abbreviated technical review of results was performed. Bioaccumulation data from shellfish collected in a previous sampling effort have also been submitted to ODES under reference ID 144BGB9002.

FIELD AND LABORATORY TECHNIQUES

Fish were collected from small boats at four different sites in Galveston Bay. Only individuals of legal market size were collected and analyzed. All fish were collected using a gill net, with the exception of the September sampling at Eagle Point, which utilized hook-and-line fishing. Thirty fish were collected from each station, except at Carancahua Reef, from which only twenty-seven fish were collected.

As the fish were removed from the gill net they were placed in an ice chest until they could be field processed. Ice chests were scrubbed with detergent and then rinsed with tap water. After completing a gill net set the fish were weighed, measured for length, and inspected for lesions or deformities. The gall bladder and liver were then removed. The remaining fish tissue, gall bladder, and liver were packaged separately and placed in an ice chest. The fish tissue was wrapped in clean, combusted, heavy duty aluminum foil with the tissue towards the dull side of the foil. The foil was taped down with fiber tape and labelled with the collection site, date of collection, and species information on the foil. Only one fish was wrapped in each foil sheet.

After field processing the samples were immediately stored on ice in the field until the day's sampling was complete. The samples were then taken to an electric freezer and stored frozen until the entire freezer was transported back to the lab for further processing. All further sample processing was performed in the laboratory under clean room conditions.

In the laboratory, fillets of muscle tissue were taken from each fish. Composites of liver tissue were created from one to three fish (generally two) of a given species at each station. A "composite" of liver from one fish was necessary when only one fish of a given species was collected at a site. From twelve to fourteen liver composites were created from fish at each site. Each muscle or liver sample was homogenized, acidified, and purified. The extract was first purified to remove matrix interferences using a silica gel/alumina column and further purified by HPLC. Muscle tissue from each individual specimen was analyzed separately. The table below gives the fish species analyzed at each site.

| HANNA REEF | | EAGLE POINT | |
|-------------------|--------|----------------------|--------|
| Species | Number | Species | Number |
| Southern flounder | 10 | Southern flounder | 6 |
| Black drum | 4 | Black drum | 8 |
| Redfish | 4 | Redfish | 3 |
| Speckled trout | 10 | Speckled trout | 6 |
| Croaker | 2 | Sheepshead | 3 |
| | | Hardhead catfish | 3 |
| | | Jackfish | 1 |
| MORGANS POINT | | CARANCAHUA REEF | |
| Species | Number | Species | Number |
| Southern flounder | 3 | Southern flounder | 10 |
| Black drum | 6 | Black drum | 4 |
| Redfish | 8 | Redfish | 7 |
| Hardhead catfish | 11 | Hardhead catfish | 3 |
| Mullet | 2 | Shark | 1 |
| | | Sheepshead | 1 |
| | | Gafftop sail catfish | 1 |

Aromatic hydrocarbons were determined by gas chromatography/mass spectrometry (GC/MS)-selective ion monitoring mode (SIM). Pesticides and PCBs were determined by gas chromatography/electron capture detection (GC/ECD). Mercury was determined by cold vapor atomic absorption spectrometry (CVAAS), while the other trace metals were determined by flame or graphite furnace atomic absorption spectrometry (FAAS or GFAAS).

A full suite of QA/QC procedures were performed, including continuing calibration checks of the analytical equipment, method blank analyses, surrogate compound analyses, matrix spike analyses, and standard reference material analyses, when available. None of the results of these analyses were reported to ODES. Only the results of the surrogate compound analyses for aromatic hydrocarbons were available for review. The recoveries of the surrogate compounds (Naphthalene-d8, Acenaphthene-d10, Phenanthrene-d10, Chrysene-d10, and Perylene-d12) were generally acceptable (greater than 30 percent) with the exception of one speckled trout from Eagle Point (Sample H61, Specimen 50) which had recoveries less than 10 percent for all surrogate compounds. The sample aromatic hydrocarbon concentrations may be underestimates for this specimen.

DATA USE AND COMPARABILITY

Muscle samples from each individual fish were analyzed separately and data were reported in ppb on a dry weight basis. Data from the liver composites were also reported in ppb on a dry weight basis. Compounds not detected above the method detection limit (MDL) for the respective compound were reported with a zero concentration. The detection limits for the organic compounds based on a 1 gram sample ranged from 3 to 18 ppb for aromatic compounds and 0.5 to 6 ppb for pesticides and PCBs.

Since the majority of the QA/QC analyses performed were unavailable for review, it is not possible to determine the accuracy of the sample analyses. In light of this omission, these data should be used with caution.

Just prior to the July sampling effort, there was an oil spill at Apex Barge, near the Eagle Point site. Liver composites and some fish muscle tissue from fish collected at Eagle Point at this time showed elevated concentrations of alkylated PAHs. Alkylated PAHs are typically associated with petroleum products. Caution should be used when extrapolating PAH data from this site to PAH data from other sites which were relatively unaffected by the oil spill.

Only three species (southern flounder, black drum, and redfish) were collected at a Bioaccumulation data from these three species only should be used for analysis of inter-station variability among all sites. Comparisons between pairs of stations are possible for several other species. Given the above caveat, significant differences among individual stations may be detected using parametric or nonparametric tests, because of the multiple analyses performed for most species at a given station.
