

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
Washington, DC 20460

OFFICE OF
AIR AND RADIATION

APR - 8 2019

Mr. Steve Hoke
Clean Diesel Group LLC
10505 Plaza Drive BLDG C
Whitmore Lake, MI 48189

Dear Mr. Hoke:

The U.S. Environmental Protection Agency (EPA) has reviewed your request for verification of the Clean Diesel Group LLC's (CDG) Semi-Active Electric Diesel Particulate Filter (SEF) System for on-road application. The SEF System is a diesel oxidation catalyst (DOC) and a non-catalyzed diesel particulate filter (DPF) with an electric element to initiate filter regeneration for broad applicability on vehicles with low temperature exhaust profiles. The SEF system also includes a back pressure monitoring and warning system, and Regeneration Control Station Assembly. Based on the information provided, EPA hereby verifies that this technology reduces emissions of certain criteria pollutants by the percentages described in the table below.

This verification approval is based on the technical information and test data provided along with the in-use compliance test report approved by the California Air Resource Board (CARB). CARB's in-use approval is accepted by EPA through the reciprocity policy.

Technology	Engine Model/Application	Fuel, Max Sulfur (ppm)	Reductions (%)			
			PM	NO _x	HC	CO
Semi-Active Electric Diesel Particulate Filter (SEF) System	On-road, 4-stroke diesel engines, turbocharged or naturally aspirated for engines rated ≤400 hp, originally manufactured from model year 1991-2006, and engine family name listed in the Attachment A	15	90	N/A	65	60

The following criteria must be met for appropriately retrofitted engines to achieve the aforementioned emission reductions:

1. The engine must meet at a certified PM emission level of at most 0.25 grams per brake horsepower-hour.
2. The engine must have rated exhaust flow not to exceed 2,700 cubic feet per minute.

3. The engine must be used by an on-road motor vehicle with a manufacturer's Gross Vehicle Weight Rating of over 14,000 pounds.
4. The engine must be rated to no more than 400 horsepower and it must have a displacement of no more than 13 liters.
5. The engine may be certified as having exhaust gas recirculation.
6. The engine may be mechanically or electronically controlled.
7. The engine must be well maintained and not consume lubricating oil at a rate greater than that specified by the engine manufacturer.
8. The vehicle may not be equipped with an oil burning system and lube oil or other oils may not be mixed with the fuel.
9. The engine must not have been originally certified or equipped with a diesel particulate filter.
10. The engine must remain in its original certified configuration, except that if an OEM oxidation catalyst is present, it may be removed if the SEF System is installed. Should the SEF System be removed, the OEM oxidation catalyst must be re-installed, returning the engine to its original certified configuration.
11. The system must be installed with a backpressure monitor to notify the operator when the backpressure limit is reached. The notification must occur and be clearly visible to the operator while the vehicle or equipment is in use.
12. Use of the SEF system requires a Regeneration Control Station Assembly for periodic regeneration of the filter.

Prior to the sale and/or installation of an SEF Muffler System, CDG must provide each prospective owner/purchaser of the SEF Muffler System with a written estimate of regeneration frequency required for each SEF installation for each in various weather conditions. The required regeneration frequency may range from every 1 to 30 days. Also, prior to sale and/or installation of an SEF Muffler System, CDG must provide each prospective owner/purchaser of the SEF Muffler System with a written estimate of the number and cost of Regeneration Control Station Assemblies required to support their systems. CDG must also ensure that the installation of the SEF Muffler System conforms to all applicable industrial safety requirements.

CDG estimates that this device will incur no discernible fuel economy penalty when used in a compatible application. No changes are permitted to the SEF device without the written approval of EPA. This verification does not automatically confer to modified devices or devices that are similar to this original verification. Changes to the verified device without EPA written approval shall invalidate this verification. EPA reserves the right to conduct testing of technologies

submitted for verification. Verification approval and web listing may be revoked if the technology is modified from the device tested and described in the application or if it fails to meet requirements in EPA testing.

Information on CDG's SEF System, percent reduction, and applicable engines will be posted on the EPA's Verified Technology List website at: <https://www.epa.gov/verified-diesel-tech/verified-technologies-list-clean-diesel>. EPA reserves the right to review and/or revoke this verification if these operating criteria are not met or if information becomes available regarding the safety, design and/or operation of the technology.

Thank you for participating in EPA's Technology Assessment Center Verification Program. If you have any questions or comments, please contact Britney J. McCoy, of my staff, at 202-343-9218.

Sincerely,

Karl Simon, Director
Transportation and Climate Division
Office of Transportation and Air Quality

EPA/CARB-Approved Engine Families for Semi-Active Electric Filter (SEF) Muffler System
Attachment A

Notes:

1. Engines have maximum power of more than 400 horsepower (hp). Not all engines in this family are approved for the SEF Muffler System. The SEF Muffler System is only verified for engines rated to no more than 400 hp.
