

**Forsyth County**  
**Office of Environmental Assistance and Protection**

---

May 22, 2017

Mr. Todd Rinck  
U.S. Environmental Protection Agency  
Region 4  
Atlanta Federal Building  
61 Forsyth Street  
Atlanta, GA 30303-8960

Dear Mr. Rinck:

This letter and accompanying Annual Network Plan report on the status of the **Ambient Air Monitoring** commitments for the FY-17 105 Grant Work plan for Forsyth County, North Carolina (Reporting Organization 37-067). The entire Plan follows the Executive Summary, complete with staff field reviews as well as a copy of the published public notice.

Sincerely,

Jason R. Bodenhamer, Program Manager  
Analysis and Monitoring Division  
Forsyth County Office of Environmental Assistance and Protection

Enclosures

cc: Bob Ragland (FCEAP)  
Donnie Redmond (NCDENR)  
Joette Steger (NCDENR)  
Ryan Brown (EPA-Region IV)

## **Executive Summary**

---

### ***Submit by July 1, 2017 an evaluation to demonstrate the requirements of 40 CFR Part 58.10 (a)(1) (Annual Network Evaluation) have been met.***

This review was conducted and submitted by July 1, 2017.

### ***Quality Assurance Procedures.***

On February 5, 2013, this Office was notified that the submitted QMP was approved. This Office has also received approval of SOPs within the last year associated with our equipment used in our network including: SO<sub>2</sub>, NO<sub>2</sub>, Ozone, PM 2.5 (FRM), Calibrators, and Zero Air Supplies. Other documents have been submitted to EPA but have to be approved as of May 23<sup>rd</sup>, 2017 include a Data Handling SOP and a criteria pollutant QAPP.

### ***Categorization of Ambient Monitors and Auxiliary Equipment.***

The evaluation was completed in January 2017. We currently have backup equipment for each monitoring device stored in our office in the case of equipment failure. The current emphasis remains maintenance of the monitoring buildings and consolidation of the network. Capital funds are available in limited quantity and are available for proper planning for future network needs.

### ***Notify EPA within 30 days after exceedances/violations of NAAQS.***

The Forsyth County Office of Environmental Assistance and Protection remained an active participant in the AirNow program. Part of that program ensures that all local and regional exceedances/violations of the NAAQS are submitted to EPA and all others affected in a timely fashion.

### ***Comply with Exceptional Events Policy.***

No situations requiring exceptional event flagging occurred since the last Annual Network Review period.

### ***Submit list of urban areas for which AQI is reported.***

Forsyth County reports the AQI for our part of the Greensboro-Winston-Salem-High Point MSA. AQI statistics are available in local newspapers, on the Office's web site at <http://www.forsyth.cc/EAP/>, Real time data (updated hourly) are also available at: <http://www.forsyth.cc/EAP/airmonitoringdata.aspx>

### ***Attend Region 4 QA Meeting & AIRS Conference.***

Jason Bodenhamer and Cary Gentry attended the 2017 EPA Region 4 Ambient Monitoring Workshop in Athens, Georgia.

### ***Submit air quality forecasts for MSA's >500,000 population to EPA AIRNOW.***

Forsyth County has been a leader in this area and submits air quality forecasts for multiple pollutants to AIRNOW on a year-round basis. Several presentations on this program have been given at recent EPA National Forecasting and Outreach Conferences.

### ***Changes in the SLAMS/NAMS Network***

No changes in the network have occurred since the last annual network plan.

### ***Data Submittal Criteria***

All SLAMS and PARS data were submitted to AQS within 90 days of the end of each quarter. AQS data reports were also reviewed after data submittal was completed to verify AQS data was correct. All data was certified by May 1, 2017.

### ***National Performance Audit Program***

All NPAP audits were completed by an EPA contractor and the results were submitted into AQS.

### ***Continued-Annual Network Evaluation***

Forsyth County has realigned the local monitoring network in recent years to account for changes in population, land use, and traffic patterns.

### **OZONE**

The maximum impact downwind site is operated by the State program in Rockingham County (Bethany School, 37-157-0099). The secondary wind direction is measured by the Union Cross site (37-067-1008). In addition, the Clemmons Middle site (37-067-0030), established in 2005, monitors the southwest sector of Forsyth County. Another ozone monitor at Hattie Avenue (37-067-0022) has operated since 1993.

### **CARBON MONOXIDE**

The microscale Peters Creek site (37-067-0023) was shut down December 31, 2015.

### **SULFUR DIOXIDE/NITROGEN OXIDES**

Sulfur dioxide levels have been measured at the Hattie Avenue site (37-067-0022) since 1983. Readings are considered to be characteristic of background levels in Forsyth County. On occasion, the site is impacted by plume touchdowns from the Duke Energy Belews Creek Generating Station located approximately 20 miles to the northeast in Stokes County. In compliance with the most recent monitoring data requirements, 5-minute SO<sub>2</sub> averaged data from this site is reported along with 1-hour data.

Nitrogen oxide levels have been measured at the Hattie Avenue site (37-067-0022) since 1984. Readings represent the neighborhood impact of major transportation related emissions from inter-city and intra-city traffic on Business I-40 and U.S. 52 bisecting Winston-Salem. Both monitors satisfy the most recent monitoring criteria related to the 1-hour SO<sub>2</sub> and NO<sub>2</sub> standards.

### **PARTICULATE**

Continuous PM<sub>10</sub> (TEOM) concentrations continue to be recorded at the Hattie Avenue site (37-067-0022). These readings are representative of a maximum impact particulate site influenced by background emissions and locally generated transportation emissions.

### **FRM STATUS**

FRM PM<sub>2.5</sub> samplers have been established at Hattie Avenue (37-067-0022; 1/3 frequency + 1/6 collocated) as part of Forsyth County's EPA approved PM<sub>2.5</sub> monitoring plan. Data collection has been quite successful and validated concentration and QA information has been reported to AQS through March 2017.

### CONTINUOUS STATUS

A continuous PM2.5 (TEOM) was installed at the Hattie Avenue site in June 1999 and it was joined by an additional PM10 TEOM in October 1999. The data set continues to indicate excellent agreement between the FRM PM2.5 data and 24-hour averages obtained from the TEOM. An additional PM2.5 TEOM was established in the Clemmons area of Forsyth County in the spring of 2005.

### SPECIATION STATUS

A speciated PM2.5 monitor (1/6 frequency) began operation on September 22, 2001 and a carbon speciated PM2.5 monitor (1/6 frequency) began operation on February 28, 2007 at Hattie Avenue. Validated data sets have been received from RTI through December 2016.

### AIR TOXICS

A (1/6) day air toxic sampler operated in conjunction with the NCDAQ has been resident at the Hattie Avenue site since 2000. Air toxic data remains under NCDAQ control. This Office does not review or upload this data to AQS.

### LEAD

No lead monitors are currently in place at any sites within Forsyth County. Based on the interpretation of the lead monitoring requirements, recent population data, and recent source emission inventory data, there are no sources that emit more than 700 lbs of lead per year. Therefore, there are no immediate plans for lead monitoring in the County.

### VISIBILITY PROGRAM

With financial assistance from Region 4 and the NCDAQ, a visibility camera system was established for the Triad area during 2002. The associated web site combines pictures of two mountain scenes with hourly updated ozone and PM2.5 AQI statistics. A nephelometer was installed in 2004 to provide visual range data. The information is available at: <http://www.forsyth.cc/EAP/hazecam.aspx>.

# 2017 Annual Monitoring Network Plan

**CERTIFICATION**

By the signatures below, the Forsyth County Office of Environmental Assistance and Protection (FCEAP) certifies that the information contained in the 2016 Annual Monitoring Network Plan is complete and accurate at the time of submittal to EPA Region 4. However, due to circumstances that may arise during the sampling year, some network information may change. A notification of change and a request for approval will be submitted to EPA Region 4 at that time.

## ***Introduction***

The Forsyth County Office of Environmental Assistance and Protection's (FCEAP) monitoring program provides air quality monitoring services in Forsyth County, NC. FCEAP is a state "certified local air pollution program" whose purpose(s) are to improve and maintain ambient air quality and reduce exposure to unhealthful air pollutants.

FCEAP has operated an air quality monitoring program since the early 1970's. The air monitoring services provided by the program are conducted to measure concentrations of criteria air pollutants (NO<sub>2</sub>, SO<sub>2</sub>, PM, and O<sub>3</sub>) in accordance with USEPA regulatory requirements. Measurements are used to assess compliance with National Ambient Air Quality Standards (NAAQS). The NAAQS define air pollutant concentration level thresholds judged necessary to protect the public health and welfare.

The FCEAP air monitoring program operates a network of state and local air monitoring stations (SLAMS) in Forsyth County. The current network configuration consists of seven monitoring stations that measure concentrations of criteria air pollutants. In addition to the SLAMS network the county network also includes monitoring for meteorological parameters and visibility conditions.

The annual monitoring network plan, as provided for in 40 CFR Part 58.10, *Annual Monitoring Network Plan and Periodic Network Assessment* must contain the following information for each monitoring station in the network:

1. The Air Quality System (AQS) site identification number for existing stations.
2. The location, including the street address and geographical coordinates, for each monitoring station.
3. The sampling and analysis method used for each measured parameter.
4. The operating schedule for each monitor.
5. Any proposal to remove or move a monitoring station within a period of eighteen months following the plan submittal.
6. The monitoring objective and spatial scale of representativeness for each monitor.
7. The identification of any sites that are suitable and sites that are not suitable for comparison against the annual PM<sub>2.5</sub> NAAQS.
8. The Metropolitan Statistical Area (MSA), Core-Based Statistical Area (CBSA), Combined Statistical Area (CSA) or other area represented by the monitor.

The following information below replicates the Forsyth County Air Quality ambient air monitoring network plan and continues in the following sections outlined below:

**II. Site Description Background Information and Definitions:** An outline of the designations, parameters, monitoring methods, and the basis for site selection.

**III. Network Summary:** This section presents an overview of the total number of sites and monitors in Forsyth County. Also included is a listing of all proposed changes to the current network.

**IV. Air Monitoring Station Description:** Each air monitoring station is described in detail as per the outline in (II.) above. Modification to the network as determined by an annual review process will be made each year to maintain a current up-to-date network description document.

## **Site Description Background Information and Definitions**

### **1. Site Description**

Specific information is provided to show the location of the monitoring equipment at the site, if the site is located in a CSA/MSA, the AQS identification number, the GPS coordinates, and evidence that monitors and monitor probes conform to the siting criteria.

### **2. Date Established**

The date when each existing monitoring station was established is shown in the description. For those stations, which are proposed, a date is provided when it is expected for the station to be in operation.

### **3. Site Approval Status**

Each monitoring station in the existing network has been reviewed with the purpose of determining whether it meets all design criteria for inclusion in the SLAMS network. Stations that do not meet the criteria will either be relocated in a nearby area or, when possible, re-sited at the present location.

### **4. Monitoring Objectives**

Per 40 CFR 58 Appendix D, Section 1.1:

*“The ambient air monitoring networks must be designed to meet three basic monitoring objectives. These basic objectives are listed below. The appearance of any one objective in the order of this list is not based upon a prioritized scheme. Each objective is important and must be considered individually.”*

The objectives are summarized below:

- (a) Provide air pollution data to the general public in a timely manner.
- (b) Support compliance with ambient air quality standards and emissions strategy development. Data from FRM (Federal Reference Method), FEM (Federal Equivalent Method), and ARM (Approved Regional Method) monitors for NAAQS pollutants will be used for comparing an area’s air pollution levels against the NAAQS.
- (c) Support for air pollution research studies.

### **5. Monitoring Stations’ Designations**

Most stations described in the air quality surveillance network are designated as State and Local Air Monitoring Stations (SLAMS). In addition, some of these stations fulfill other requirements, which must be identified. In this description of the network, designations are also made for National Air Monitoring Stations (NAMS), Special Purpose Monitors (SPM), and National Core (community oriented) stations (NCore). The following is the criteria used for each of these designations.

## ***SLAMS***

Requirements for air quality surveillance systems provide for the establishment of a network of monitoring stations designated as State and Local Air Monitoring Stations (SLAMS) that measure ambient air concentrations of those pollutants for which standards have been established. These stations must meet requirements that relate to four major areas: quality assurance, monitoring methodology, sampling interval and siting of instruments and instrument probes.

## ***NAMS***

Within the SLAMS network certain monitors are selected to provide the USEPA with timely data for use in national trends analysis. These NAMS monitors are identified in the summary of network stations.

## ***SPM***

Not all monitors and monitoring stations in the air quality surveillance network are included in the SLAMS network. In order to allow the capability of providing monitoring for various reasons such as: special studies, modeling verification and compliance status, and other objectives; certain monitors are designated as Special Purpose Monitors (SPM). These monitors are not committed to any one location or for any specified time period. They may be located as separate monitoring stations or be included at SLAMS locations. Monitoring data may be reported, provided that the monitors and stations conform to all requirements of the SLAMS network.

## ***NCORE***

National Core (community-oriented) multi-pollutant monitoring station data will be used to evaluate the regional air quality models used in developing emission strategies, and to track trends in air pollution abatement control measures' impact on improving air quality.

## ***6. Monitoring Methods***

Sampling and analytical procedures for criteria air pollutant monitoring performed in the FCEAP ambient air monitoring network are conducted in accordance with applicable USEPA Designated Federal Reference (FRM) or Equivalent (FEM) Methods unless otherwise noted. Analytical techniques for non-criteria air pollutant monitoring (methods employed that are not USEPA Designated Federal Reference (FRM) or Equivalent (FEM) Methods) are documented in the applicable FCEAP Quality Assurance Project Plans (QAPP), FCEAP Standard Operating Procedures (SOP), or the appropriate North Carolina Division of Air Quality (NCDAQ) QAPP or SOP. Methods used by FCEAP for criteria pollutant monitoring are listed below:

### ***Particulate Matter 10 microns in size (PM<sub>10</sub>)***

All PM<sub>10</sub> samplers operated by FCEAP are operated as federal reference method (FRM) or equivalent samplers and are operated according to the

requirements set forth in 40 CFR 50 and 40 CFR 53. Listed below is the USEPA Designated Reference or Equivalent Method used in the FCEAP monitoring network:

Method	Designation Number	Method Code
R&P TEOM Series 1400a	EQPM-1090-079	079

***Particulate Matter 2.5 microns in size (PM<sub>2.5</sub>)***

With the exception of continuous samplers and speciation samplers all PM<sub>2.5</sub> samplers operated by FCEAP are either FRM or FEM samplers. Listed below is the USEPA Designated Reference or Equivalent Method used in the FCEAP monitoring network:

Method	Designation Number	Method Code
R & P Partisol-Plus 2025i PM-2.5 Seq.	EQPM-0202-145	145

***PM<sub>2.5</sub> Speciation sampling and analysis***

In addition to operating PM<sub>2.5</sub> samplers that determine only PM<sub>2.5</sub> mass values, FCEAP also operates PM<sub>2.5</sub> speciation samplers that collect samples that are analyzed to determine the chemical makeup of PM<sub>2.5</sub>. Data collected using this method cannot be compared to the NAAQS. Listed below is the method used in the FCEAP monitoring network:

Method	Designation Number	Method Code
MetOne SASS	NA	NA
URG	NA	NA

***Sulfur Dioxide***

Instruments used to continuously monitor sulfur dioxide levels in the atmosphere employ the pulsed UV fluorescence method. Listed below is the USEPA Designated Reference or Equivalent Method used in the FCEAP monitoring network:

Method	Designation Number	Method Code
Thermo Electron 43A, 43C-TLE, 43i	EQSA-0486-060	560

***Ozone***

Ozone is monitored using the UV photometry method. Listed below is the USEPA Designated Reference or Equivalent Method used in the FCEAP monitoring network:

Method	Designation Number	Method Code
Teledyne – Advanced Pollution Instrumentation, Inc. Model 400E	EQOA-0992-087	087

### **Nitrogen Dioxide**

The chemiluminescence method is used in monitoring the nitrogen dioxide level in the ambient air. Listed below is the USEPA Designated Reference or Equivalent Method used in the FCEAP monitoring network:

Method	Designation Number	Method Code
Teledyne – Advanced Pollution Instrumentation, Inc Model 200A, 200AU, 200E, 200EU	RFNA-1194-099	099

### **Air Toxics**

Air toxics sampling is conducted in Forsyth County using equipment on loan from the State of North Carolina, Division of Air Quality. Listed below is the USEPA Designated Reference or Equivalent Method used in the FCEAP monitoring network:

Method	Designation Number	Method Code
Compendium Method for Toxic Organics	Compendium Method TO-15	150

## **7. Quality Assurance Status**

FCEAP has an extensive quality assurance procedure to ensure that all air monitoring data collected meets established criteria for precision and accuracy. FCEAP operates according to EPA approved Quality Assurance Project Plans (QAPP) and Standard Operating Procedures. Staff members audit instrumentation on a scheduled basis to ensure that each instrument is calibrated and operating properly. Data validation is performed monthly to ensure data reported by each instrument is recorded accurately in the air quality monitoring database.

## **8. Scale of Representativeness**

Each station in the monitoring network must be described in terms of the physical dimensions of the air parcel nearest the monitoring station throughout which actual pollutant concentrations are reasonably similar. Area dimensions or scales of representativeness used in the network description are:

- (a) Microscale - defines the concentration in air volumes associated with area dimensions ranging from several meters up to about 100 meters.
- (b) Middle scale - defines the concentration typical of areas up to several city blocks in size with dimensions ranging from about 100 meters to 0.5 kilometers.
- (c) Neighborhood scale – defines concentrations within an extended area of a city that has relatively uniform land use with dimensions ranging from about 0.5 to 4.0 kilometers.
- (d) Urban scale - defines an overall citywide condition with dimensions on the order of 4 to 50 kilometers.
- (e) Regional Scale - defines air quality levels over areas having dimensions of 50 to hundreds of kilometers.

Closely associated with the area around the monitoring station where pollutant concentrations are reasonably similar are the basic monitoring exposures of the station. There are six basic exposures:

- (a) Sites located to determine the highest concentrations expected to occur in the area covered by the network.
- (b) Sites located to determine representative concentrations in areas of high population density.
- (c) Sites located to determine the impact on ambient pollution levels of significant sources or source categories.
- (d) Sites located to determine general background concentration levels.
- (e) Sites located to determine the extent of regional pollutant transport among populated areas; and in support of secondary standards.
- (f) Sites located to measure air pollution impacts on visibility, vegetation damage, or other welfare-based impacts.

The design intent in siting stations is to correctly match the area dimensions represented by the sample of monitored air with the area dimensions most appropriate for the monitoring objective of the station. The following relationship of the six basic objectives and the scales of representativeness are appropriate when siting monitoring stations:

<b>Site Type</b>	<b>Appropriate Siting Scales</b>
1. Highest concentration	Micro, middle, neighborhood (sometimes urban or regional for secondarily formed pollutants).
2. Population oriented	Neighborhood, urban.
3. Source impact	Micro, middle, neighborhood.
4. General/background & regional transport	Urban, regional.
5. Welfare-related impacts	Urban, regional.

**Table 1 - Siting Objectives and Scales**

### **9. Data Processing and Reporting**

All ambient air quality data are stored in the Environmental Data Acquisition System (EDAS) database located on the 5th floor of the Forsyth County Government Center, FCEAP, 201 N. Chestnut Street, Winston-Salem, North Carolina. On a daily basis the EDAS data are backed up and maintained at an off-site location. After all monthly data validation procedures are successfully completed, data is transmitted to the USEPA’s national Air Quality System (AQS) database. The AQS database is maintained by EPA as the official repository of the fully quality assured ambient air quality dataset.

Table 4 - Clemmons Middle School Monitoring Station Summary

### (b) Site Description and Statement of Purpose

An ozone monitor and PM<sub>2.5</sub> TEOM have been located at a manufactured structure since April 27, 2005. The site is located in a mixed use environment at latitude N36.025931° and longitude W80.342257°. The site elevation is 245 meters above sea level. The nearest road is Fraternity Church Road with an annual traffic volume of 4100 vehicles (2013) at a distance of 40 meters from the sample inlet. This site combined the PM<sub>2.5</sub> equipment from site 37-067-0024 and the ozone equipment from site 37-067-0027 when these sites were forced to relocate.

The inlet of the samplers is approximately 4 meters above ground level and 1 meter above roof level. There were trees encroaching on the minimum distance from the inlet and those trees were removed during the summer of 2015. The area

is a transition zone of business (~50%) to residential (~50%) within a 1 km radius. The samplers are SLAMS.

The ozone instrument is operated during the North Carolina ozone monitoring season which begins March 1 and ends October 31. The ozone instrument operates continuously during this period.

### **OBJECTIVE AND SPATIAL SCALE**

The monitoring objectives of the instruments are to measure: 1) upwind background ambient concentrations and 2) population exposure.

The site is a neighborhood spatial scale for ozone and PM<sub>2.5</sub>. Data from this site is used to assess compliance with the NAAQS for ozone and PM<sub>2.5</sub>.

The site is located in the Winston-Salem, NC Metropolitan Statistical Area<sup>4</sup>. The principal cities and counties in the MSA are Winston-Salem, Davie County, Forsyth County, Stokes County, and Yadkin County, NC.

NO <sub>2</sub>	Chemiluminescence	099	Continuous
SO <sub>2</sub>	UV Pulsed Fluorescence	560	Continuous

Table 5 - Hattie Avenue "A" Monitoring Station Summary

### (b) Description and Statement of Purpose

The Hattie Avenue A site monitors ozone, sulfur dioxide, and oxides of nitrogen. The site is located in the 1300 block of Hattie Avenue in downtown Winston-Salem. The site is located approximately 2.2 km NE of downtown, 1.1 km E of US52 and approximately 1.8 km NNW of Interstate 40 Business in a residential district at latitude N36.110941° and longitude W80.224423°. The site elevation is 284 meters. The nearest road, Hattie Avenue, is 27 meters from the inlets and has a daily traffic flow of 6000 vehicles (2003). The nearest tallest building is St. Benedict's Church (approximately 10 meters). The inlets are approximately 43 meters from the shopping center. The inlets are approximately 4 meters above the ground and 1 meter above the roof of the monitoring station. The area is residential. The ozone, sulfur dioxide, and NO<sub>2</sub> monitors are all SLAMS.

The ozone instrument is operated during the North Carolina ozone monitoring season which begins March 1 and ends October 31. The ozone instrument operates continuously during this period.

The SO<sub>2</sub> and NO<sub>2</sub> instruments operate continuously.

The site complies with the siting requirements of 40CFR58 for criteria air pollutants. It is recommended that the current site status be maintained.

## **OBJECTIVE AND SPATIAL SCALE**

The monitoring objectives of the instruments are to measure: 1) background ambient concentrations and 2) population exposure.

The site is a neighborhood spatial scale. Data from this site is used to assess compliance with the NAAQS for ozone, sulfur dioxide, and nitrogen dioxide.

The site is located in the Winston-Salem, NC Metropolitan Statistical Area<sup>4</sup>. The principal cities and counties in the MSA are Winston-Salem, Davie County, Forsyth County, Stokes County, and Yadkin County, NC.

Table 6 - Hattie Avenue "B" Monitoring Station Summary

#### (b) Description and Statement of Purpose

This Hattie Avenue site monitors PM<sub>2.5</sub> and PM<sub>10</sub>. The site is located in the 1300 block of Hattie Avenue in Winston-Salem. The site is located approximately 2.2 km NE of downtown, 1.1 km E of US52 and approximately 1.8 km NNW of Interstate 40 Business in a residential district at latitude N36.110892° and longitude W80.224432°. The site elevation is 284 meters. The nearest road, Hattie Avenue, is 27 meters from the inlets and has a daily traffic flow of 6000 vehicles (2013). The nearest tallest building is St. Benedict's Church (approximately 10 meters). The inlets are approximately 43 meters from the shopping center. The inlets are approximately 4 meters above the ground and 1 meter above the roof of the monitoring station. The area is residential. The monitors are SLAMS.

The PM<sub>2.5</sub> FRM sampling frequency is on the 1 in 3 day schedule and the co-located FRM is on the 1 in 6 day.. The sampling interval is 24 hours, from midnight to midnight every day.

The PM<sub>2.5</sub> Speciation sampling frequency is 1 in 6 days. The sampling interval is 24 hours, from midnight to midnight every six days.

The PM<sub>2.5</sub> and PM<sub>10</sub> TEOM instruments operate continuously.

Monitoring for Urban Air Toxics (UAT) is currently conducted at this site by the North Carolina Division of Air Quality (NC-DAQ), Toxics Protection Branch (TPB). Currently, the NC-DAQ TPB collects whole air samples in stainless steel 6 liter- pressurized canisters. The samples are then analyzed using cryogenic preconcentration gas chromatography with mass spectrometric detection (GC/MS) via the Compendium Method for Toxic Organics (TO) 15 for the list of 68 compounds (below).

- Propene
- Freon 12
- Freon 22
- Freon 114
- Chloro Methane
- (Methylchloride)
- Isobutene
- Vinyl chloride
- 1,3-Butadiene
- Bromomethane
- Chloroethane
- Freon 11
- Pentane
- Ethanol
- Isoprene
- Acrolein
- 1,1-Dichloroethene
- (Vinylidene chloride)
- Freon 113
- Methyl Iodide
- Isopropyl Alcohol
- Carbon Disulfide
- Acetonitrile
- Methylene chloride
- Cyclopentane
- MTBE
- Hexane
- Methacrolein
- Vinyl Acetate
- 1,1-Dichloroethane
- Methyl Vinyl Ketone
- Methyl Ethyl Ketone
- 1,2 Dichloroethene
- Chloroform
- 1,1,1-Trichloroethane
- (Methyl chloroform)
- Cyclohexane
- Carbon Tetrachloride
- Benzene
- 1,2-Dichloroethane
- (ethylene dichloride)
- 1-Butanol
- Trichloroethylene
- 2-Pentanone
- 3-Pentanone
- 1,2-Dichloropropane
- 1,4-Dioxane
- Bromodichloromethane
- trans-1,3  
Dichloropropene
- Methyl Isobutyl Ketone
- Toluene
- cis-1,3  
Dichloropropene
- 1,1,2-Trichloroethane  
(vinyl trichloride)
- Ethylpropylketone
- Tetrachloroethylene  
(perchloroethylene)
- Methyl Butyl Ketone
- Dibromoethane
- Chlorobenzene  
(phenylchloride)
- Ethylbenzene
- m- & p-Xylene
- o-Xylene
- Styrene
- Bromoform
- 1,1,2,2-  
Tetrachloroethane
- 1,3,5-Trimethylbenzene  
(mesitylene)
- 1,2,4-Trimethylbenzene  
(pseudocumene)
- m-Dichlorobenzene
- 1,2,3-Trimethylbenzene
- p-Dichlorobenzene
- Benzylchloride
- o-Dichlorobenzene
- 1,2,4-Trichlorobenzene

The site complies with the siting requirements of 40CFR58 for criteria air pollutants. There are no proposed changes for this site. It is recommended that the current site status be maintained.

Table 7 - Union Cross Monitoring Station Summary

##### (b) Site Description and Statement of Purpose

An ozone monitor has been located at this site since April 1, 1998 along with a meteorological tower since 1997. The site is located approximately 10 km SE of the central business district at latitude 36.050746° and longitude -80.143826°. The site elevation is 285 meters above sea level. The nearest road is Piedmont Memorial Drive with an annual traffic volume of 650 vehicles (2011) at a distance of 55 meters from the sample inlet.

The inlet is approximately 4 meters above the ground and 1 meter from the roof. The area is residential. The ozone sampler is SLAMS.

The ozone instrument is operated during the North Carolina ozone monitoring season which begins March 1 and ends October 31. The ozone instrument operates continuously during this period.

The site complies with the siting requirements of 40CFR58 for criteria air pollutants. There are no proposed changes for this site. It is recommended that the current site status be maintained. Current building replacement is scheduled for 2017 by the building placed next to it in the pictures.

## **OBJECTIVE AND SPATIAL SCALE**

The monitoring objective of the instrument is to measure population exposure.

The site is a neighborhood spatial scale for ozone. Data from this site is used to assess compliance with the NAAQS for ozone.

The site is located in the Winston-Salem, NC Metropolitan Statistical Area<sup>4</sup>. The principal cities and counties in the MSA are Winston-Salem, Davie County, Forsyth County, Stokes County, and Yadkin County, NC.
