U.S. EPA

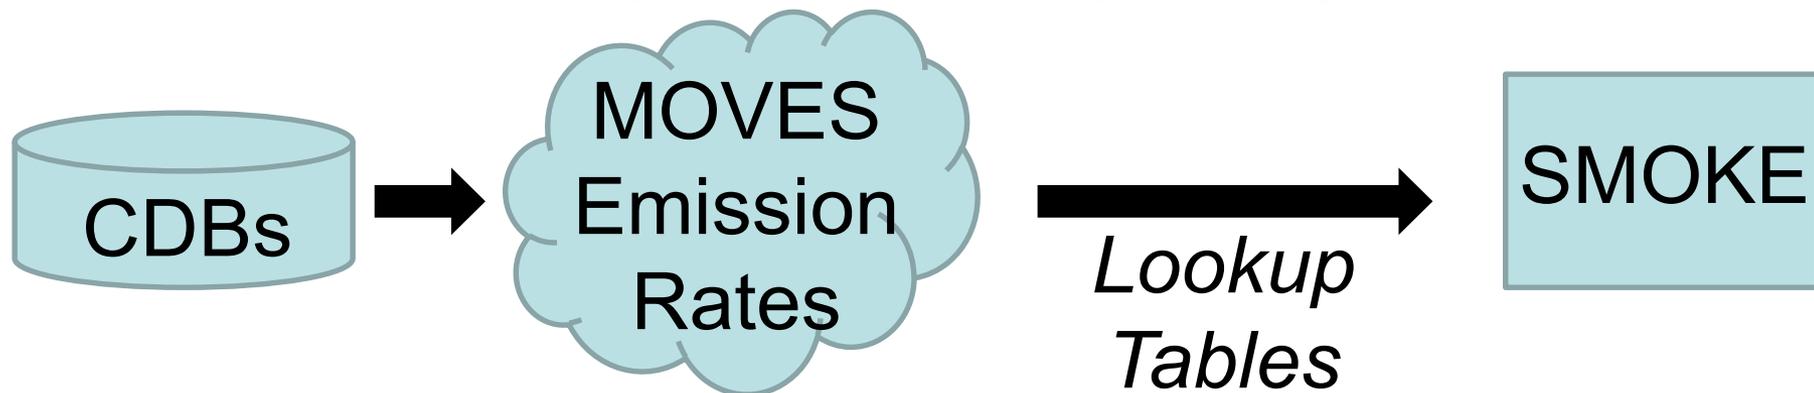

U.S. EPA 2019 Emissions Inventory Conference  
Dallas, Texas

# National Emissions Inventory (NEI)

- 3-year cycle
- All pollutants
- All sectors
- All counties
- For on-road sector, states can submit MOVES county databases (CDBs)

# What's inside a CDB?

- Vehicle-Miles Traveled
- Temperature & Humidity
- **Vehicle Population**
- **Vehicle Age Distribution**
- **Fuel Type Mix**
- Fuel Properties/Market Shares
- Average Speed Distribution
- Road Type Distribution
- VMT Fractions
- I/M Compliance/Waiver Rates

**State Agency  
Submittals**

**IHS-Polk  
Nationwide  
Coverage**

# CRC A-115 Data Purchase

- IHS-Markit (formerly Polk)
- July 1, 2017 data pull
  - Population by MOVES source type
  - All U.S. counties
  - Model years 1961-2018
  - 13 million motorcycles, 271 million light duty, and over 8 million heavy duty vehicles

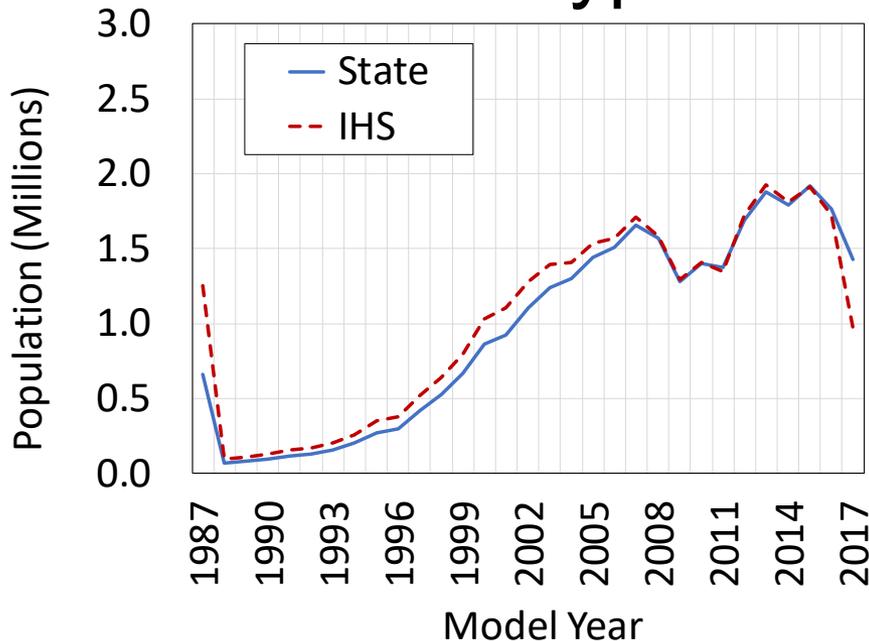

# CRC A-115 Data Analysis

- Calculated MOVES inputs for NEI
- Can we learn anything from 2014 that can improve the 2017 NEI?
- The VIN decode group
  - DMV → Local/State Air Agency
  - DMV → IHS-Markit

# IHS light-duty vehicle count higher than States by ~6%

## Cars

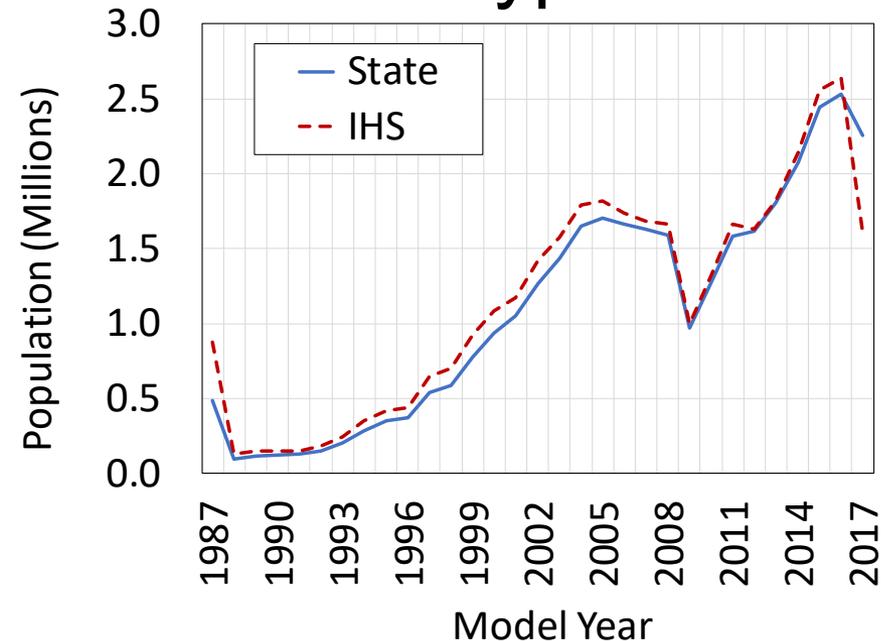

### Source Type 21

State = 29.8 m  
IHS = 31.8 m (+6.5%)

## Light Trucks

### Source Type 31+32

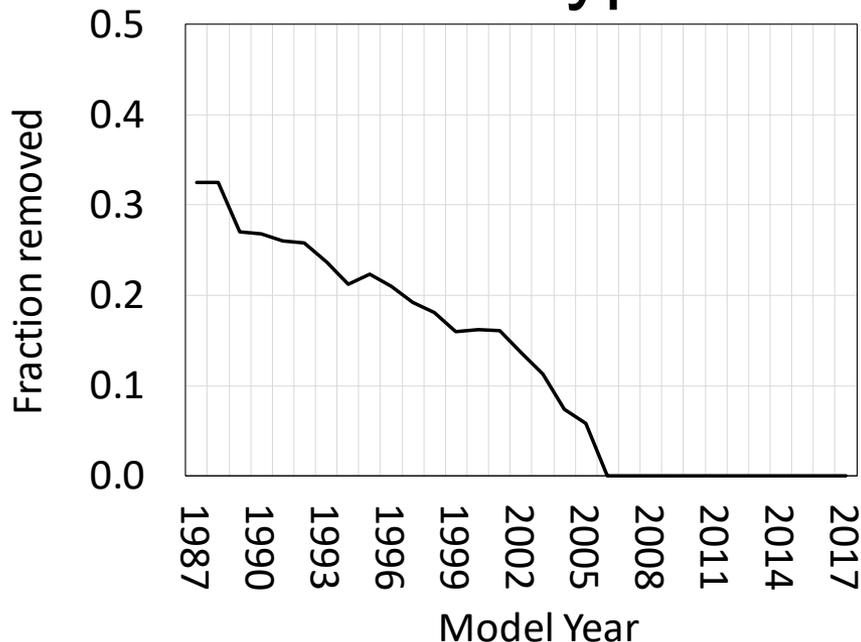

State = 33.7 m  
IHS = 35.7 m (+5.9%)

# Adjustment to IHS for the NEI by vehicle, age

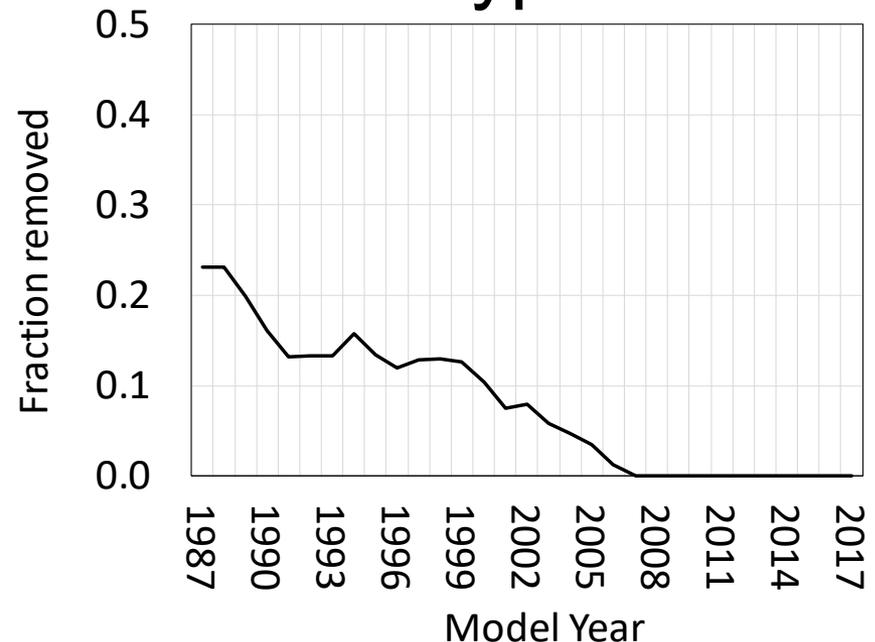

## Cars

### Source Type 21

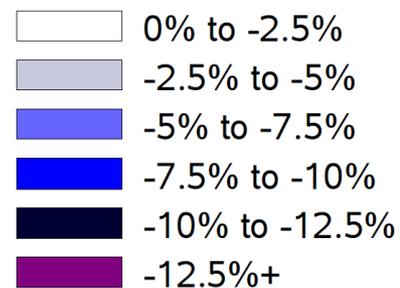

## Light Trucks

### Source Type 31+32

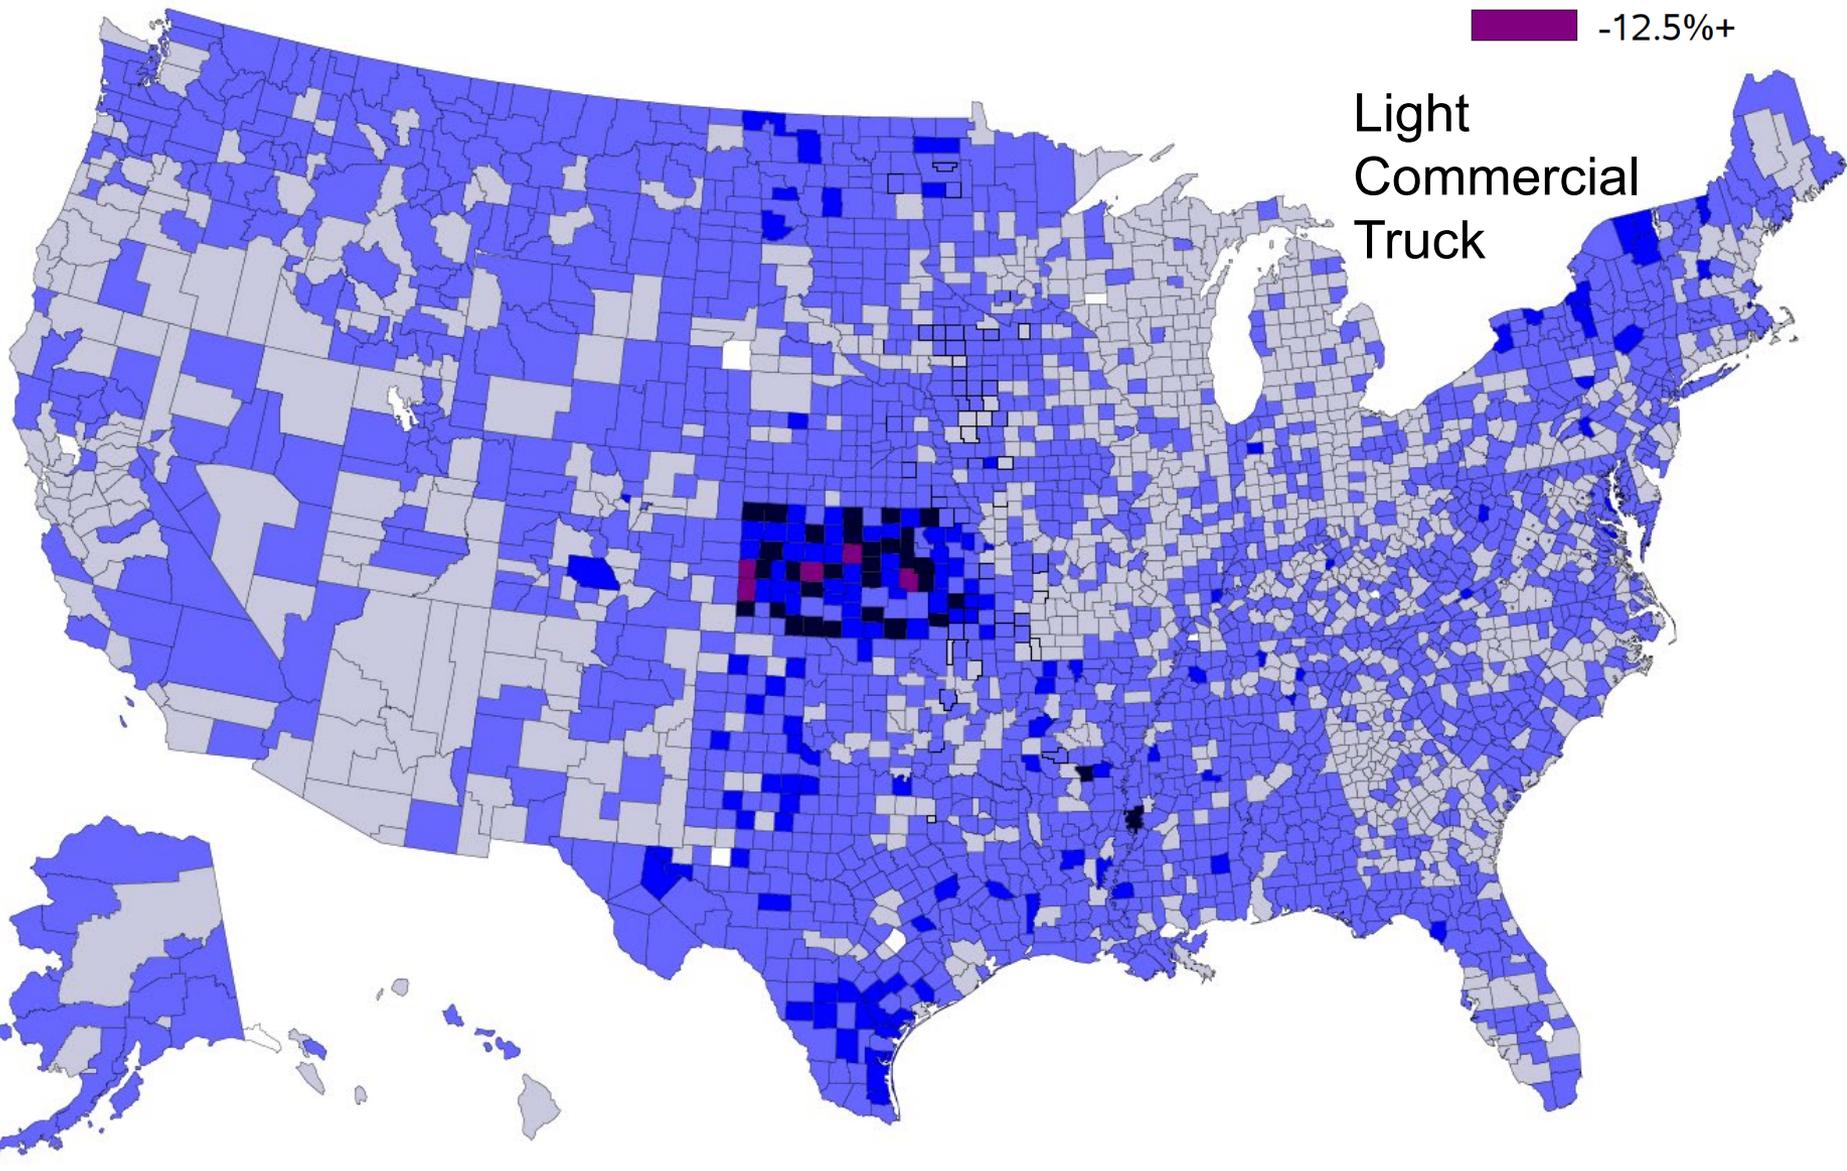

In addition, removed all LDVs flagged as “antique.”

# Reduction in IHS vehicle age from adjustments, no antiques

Light  
Commercial  
Truck

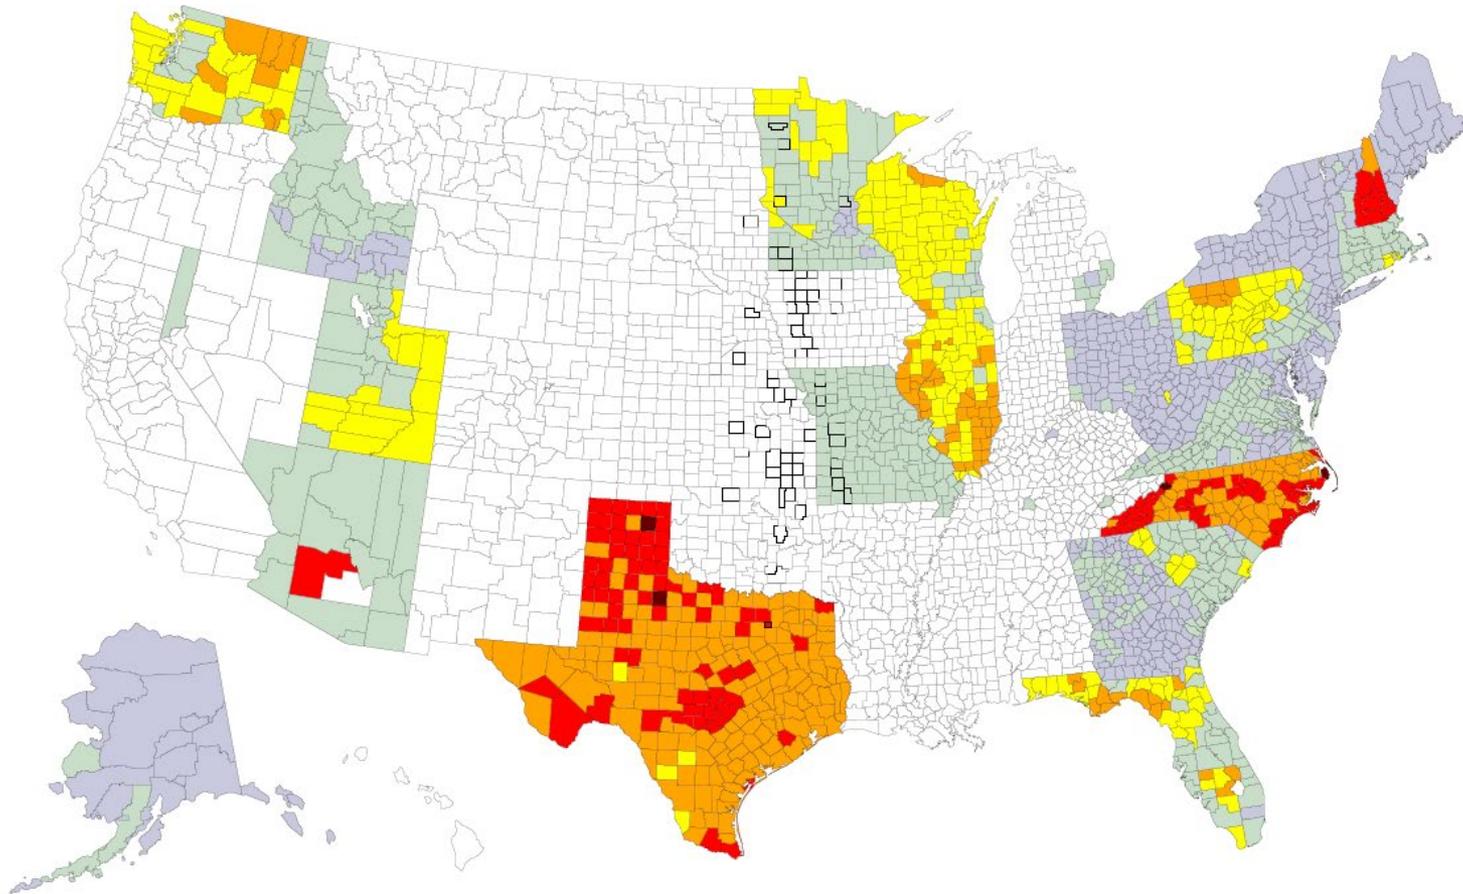

# Cars vs. Light Trucks

## Difference = States - IHS

Car fraction  
difference

# Outliers in the IHS Data

- Light commercial trucks with 35-65% of the vehicles are brand new
- Excluded these county outliers in the grouping of age distributions by representative county

# Summary

- IHS-Polk data from CRC A-115 provides nationwide coverage
- Overlap with submittals in 16 agencies
  - Consistently higher #s of older vehicles in IHS
  - Inconsistent Car vs. Light Truck splits from states
- MJO MOVES workgroup reviewed trends, spotted outliers
- Collaboration among groups has led to data improvements
