This is a renewal of an existing permit issued on April 24, 2015, with an effective date of June 1, 2015, and an expiration date of May 31, 2020. The proposed changes from the current permit are:

1. Electronic DMR reporting requirements have been updated in the draft permit.
2. MQL requirements in Part II of the draft permit to reflect sufficiently sensitive EPA-approved analytical methods have been updated.

A Statement of Basis is available and describes the rationale for permit conditions. Under the SIC code 4612, Crude Petroleum Pipelines, the facility is an existing "for hire" bulk storage terminal for refined petroleum products. The facility plans to construct new tanks and pipelines at the site for the storage and conveyance of crude oil.
