

# AVERT Future Year Scenario Template

U.S. Environmental Protection Agency  
State Energy and Environment Program

# AVERT's Modules and Data Files

Most users will only need to use the Regional Data Files and AVERT Main Module to calculate emissions

# AVERT Future Year Scenario Overview

- Purpose
  - AVERT is not forward-looking: cannot predict EGU retirements, new additions, or emissions modifications.
  - Future Year Scenarios allow users to
    - Remove EGU from analysis.
    - Include additional proxy EGU.
    - Modify emissions characteristics.
- Advanced use of AVERT
  - Excel spreadsheet
  - Read into AVERT Statistical Module
- Each spreadsheet becomes a scenario.
  - Spreadsheet becomes input file for AVERT Statistical Module.
  - Each future year scenario template is specifically designed to match the same historic base year.

# Use AVERT Future Year Scenario in Statistical Module

- Obtain Future Year Scenario Template (slides 5-8).
- Modify Future Year Scenario Template (slides 9-11).
- Save Future Year Scenario Template with a meaningful name.
- Run Statistical Module (slides 13-16).
  - Provide a unique name for the statistical module run (slide 13).
  - Choose saved future year scenario (slide 15).

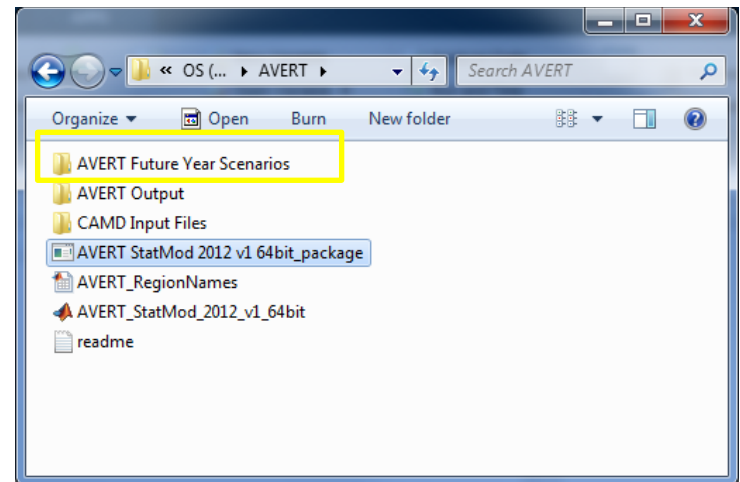

# AVERT Statistical Module

## Obtain Correct Version

- AVERT Statistical Module is sensitive to PC specifications.
- Requires 64-bit operating system.
- Obtain correct version of MCR from Mathworks:  
**R2012b (8.0).**
  - **Use the exact version noted on the AVERT website and in the user guide. An older or newer version will give you an error when you try to run the analysis.**
- Determine if your Windows system operates in a 32-bit or 64-bit environment.
  - Find this information in “properties” of “My Computer” in Windows XP, or “Computer” in Windows Vista, Windows 7, or Windows 8.
  - Follow these instructions: <http://windows.microsoft.com/en-us/windows7/find-out-32-or-64-bit>.

# AVERT Statistical Module Unpacking and Startup

- Download the AVERT Statistical Module package.
- Run the executable to decompress the package to three files and three subfolders.

To obtain historical base years, visit <https://www.epa.gov/statelocalenergy/download-avert> and obtain both the CAMD input file and the Future Year Scenario Template for that same year.

# AVERT Statistical Module File Structure

- **AVERT Future Year Scenarios**

- Excel-based input files for altering EGU

- **AVERT Output**

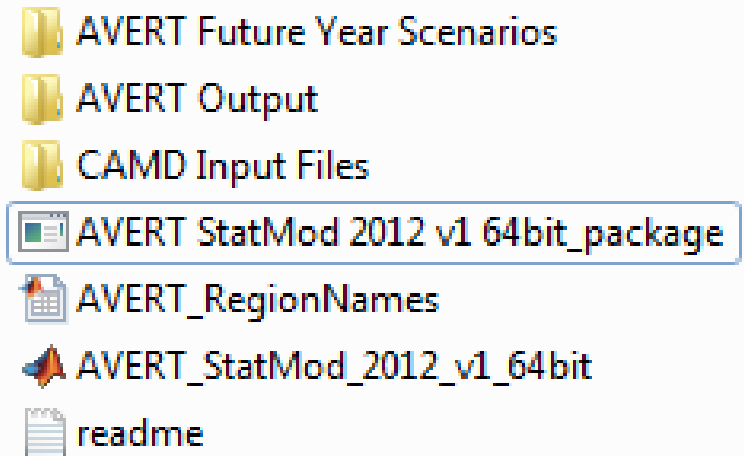

- Statistical Module output files
- These become Main Module input files (Excel version)

- **CAMD Input Files**

- Processed CAMD data files
- New versions expected 2<sup>nd</sup> quarter annually

- **AVERT\_StatMod\_2012\_v1\_64bit**

- Executable

# Obtaining Other Base Years

To obtain additional historical base year data, visit:

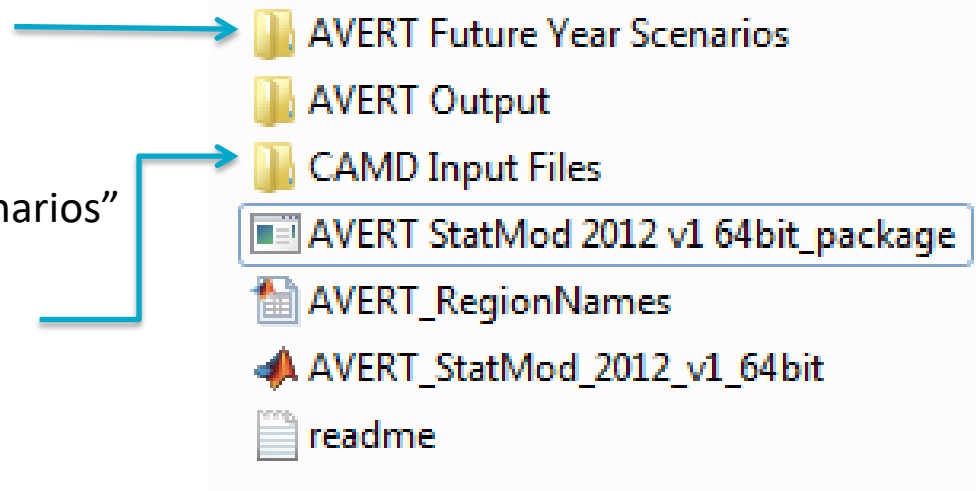

<https://www.epa.gov/statelocalenergy/download-avert>

Download AVERT Future Year Scenario for the same historic base year.

- Place the file in “AVERT Future Year Scenarios”

- Download the CAMD input file for the historic base year.

- Place the file in “CAMD Input Files”

**Note:** Historical base years must match up with the Future Year Scenario Template.

# AVERT Future Year Scenario Retires and Modifications

- Find EGU of interest, or filter by state or region.
- To retire, select “Yes” in the “Retire?” column.
- To change emissions rate, select “Yes” in the “Revise Emissions Rates?” column and enter new rate(s) in columns I, J, K, or L.

- Choose proxy unit capacity (will scale all other factors)
- Choose state (within region)
- Choose county (within region)
- Save file

# Use AVERT Future Year Scenario in Statistical Module

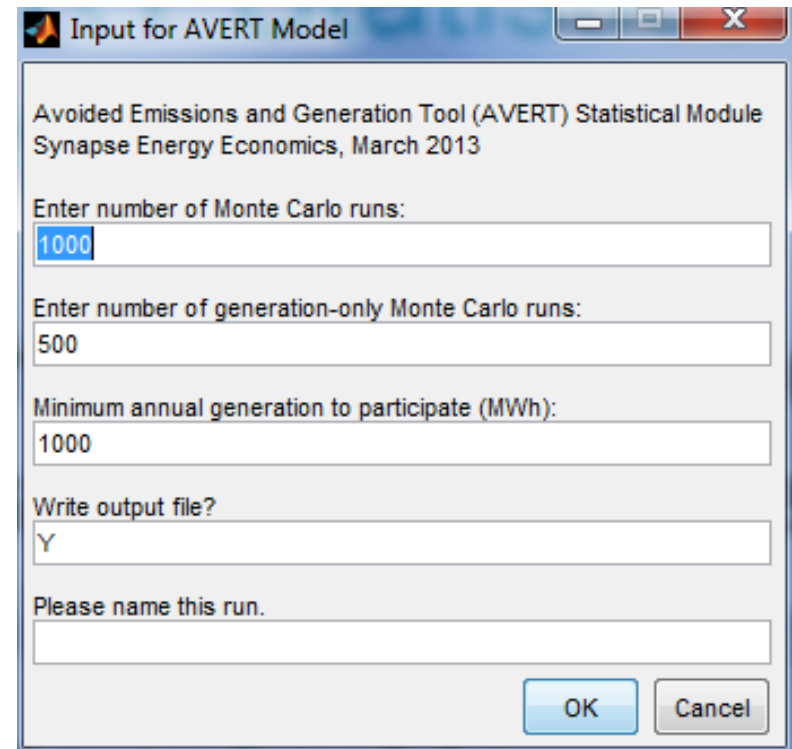

- Run Statistical Module (slides 13-16).
- Provide a unique name for the statistical module run (slide 13).
- Choose saved future year scenario (slide 15).

# AVERT Statistical Module

## Input Parameters

- Higher number of Monte Carlo (MC) runs reduces noise.
  - For test runs, use a low number of MC runs (10) and generation-only MC runs (5).
  - For final runs, use a high number of MC runs (1,000) and generation-only MC runs (500).
- Select “Y” to write output and save runs.

Input for AVERT Model

Avoided Emissions and Generation Tool (AVERT) Statistical Module  
Synapse Energy Economics, March 2013

Enter number of Monte Carlo runs:  
1000

Enter number of generation-only Monte Carlo runs:  
500

Minimum annual generation to participate (MWh):  
1000

Write output file?  
Y

Please name this run.

*Use letters and numbers only.  
No special characters and no spaces.*

# AVERT Statistical Module

## Choose Data File

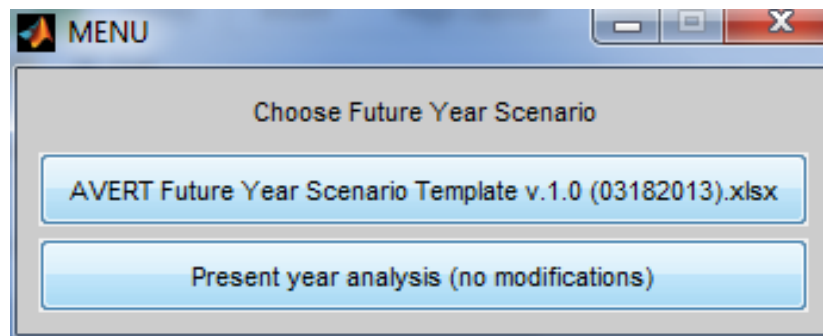

- Choose base year for analysis.
  - Data now available from 2017 through 2019.
  - New data will be ready by the second quarter of the next year.
    - Requires data to be vetted by EPA and post-processed.

# AVERT Statistical Module

## Choose Future Year Scenario

- Select either
  - Saved future year scenario
  - Present year analysis

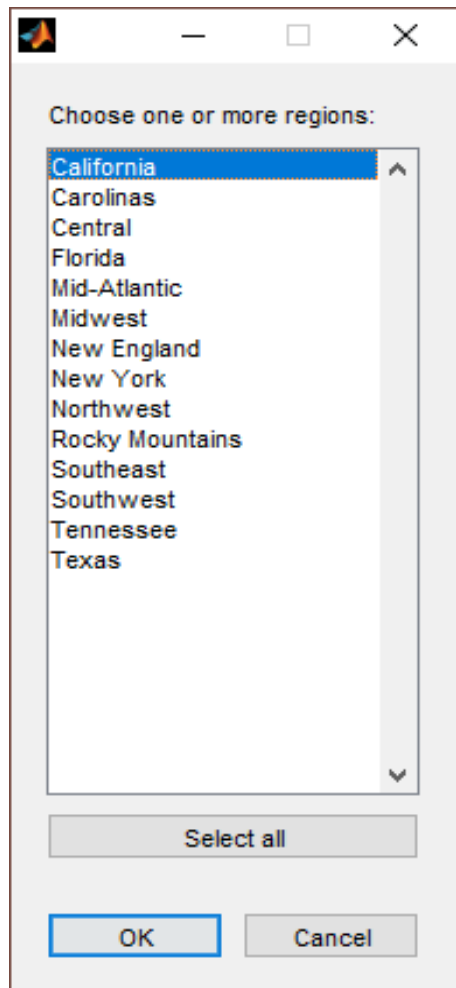

Present year analysis makes no modifications to the AVERT dataset.

- Uses EGU that exist in data year
- No changes in emissions rates

# AVERT Statistical Module

## Choose Region(s) of Interest

- Choose region (or multiple regions) of interest.
- Same regions as in AVERT Main Module
- Once you hit “OK”, the program will run uninterrupted until completion.
  - Program returns updated run status on a regular basis.
  - Output graphic and file indicate successful completion.
