| H2KH4       | 045            | A-5388 MEDIA CHECK      | 03/28/06            |                  |

**NOTE (S) :**

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

## **PROJECT NARRATIVE**

### **H6D030169 – Revised 05/15/06**

The results reported herein are applicable to the samples submitted for analysis only.

This report shall not be reproduced except in full, without the written approval of the laboratory.

**The original chain of custody documentation is included with this report.**

#### **Sample Receipt**

Custody seals were not present upon sample receipt at STL Knoxville; however, the samples were hand delivered by the field test team.

The “Relinquished by” field on the chain of custody documentation was not signed by the field sampling team members. Samples were hand delivered by the sampling team, but custody was not relinquished.

#### **Quality Control**

Unless otherwise noted, all holding times and QC criteria were met and the test results shown in this report meet all applicable NELAC requirements.

#### **Volatile Organic Sampling Train (VOST) Preparation and Analysis**

VOST tubes and condensate samples were analyzed for the volatile organic target analytes by purge and trap GCMS using STL Knoxville standard operating procedures KNOX-MS-0011 and KNOX-MS-0015, based on the following methods:

- SW-846 5041A, “Analysis for Desorption of Sorbent Cartridges from Volatile Organic Sampling Train (VOST)”
- SW-846 8260B, “Volatile Organic Compounds by Gas Chromatography/ Mass Spectrometry (GC/MS)”

Samples were received as SW-846 Method 0030 trains. Each Tenax and Tenax/charcoal tube is separately prepared by spiking a known amount of surrogate onto the media using a flash vaporization device. Volatile compounds are introduced into the gas chromatograph by thermal

This list of approvals is subject to change and does not imply that laboratory certification is available for all parameters reported in this environmental sample data report.

## PROJECT NARRATIVE

### H6D030169 – Revised 05/15/06

desorption of the analytes from the VOST tube using a clamshell oven and a purge and trap system of introduction. VOST condensates are spiked with surrogates and purged directly to the GC column. The components are separated using gas chromatography and detected using a mass spectrometer, which collectively provide both qualitative and quantitative information.

Sample final results were calculated using the following equations:

$$\text{VOST Result, ug} = (\text{On column concentration, ug/L}) * (\text{Purge Volume, L})$$

$$\text{Condensate Result, ug/L} = (\text{On column concentration, ug/L}) * \text{Dilution Factor}$$

Batch matrix spike/matrix spike duplicate recoveries for the condensates were acceptable for all analytes except benzene, toluene and chlorobenzene. The matrix spike/matrix spike duplicate results are attributed to matrix effects. The laboratory control sample showed acceptable results indicating that the analysis was in control.

The following samples gave results for chlorobenzene and/or tetrachloroethene that were above the original laboratory calibration range, and flagged with an “E” qualifier:

- G-2910-R1-VOST Pair #2 Tenax
- G-2912-R1-VOST Pair #3 Tenax
- G-3089-R3-VOST Pair #1 Tenax
- G-3091-R3-VOST Pair #2 Tenax
- G-3093-R3-VOST Pair #3 Tenax

Reanalysis at a dilution was not possible since the entire sample is consumed during these types of analyses.

In order to obtain results for which precision and accuracy assessment can be measured for the “E” qualified values, additional procedures using an extended calibration range were undertaken. New calibration standards for chlorobenzene and tetrachloroethene were analyzed on 5/3/06 on the same associated instrument at concentrations of 10, 80, 160, 240 and 320 µg/L. These concentrations in the standard correspond to total amounts of the analytes of 0.25, 2, 4, 6 and 8 µg. The high standard exhibited some saturation for chlorobenzene at the highest values, but was used in the curve, because the loss of response due to saturation for this analyte is small and

STL Knoxville maintains the following certifications, approvals and accreditations: Arkansas DEQ Cert. #05-043-0, California DHS ELAP Cert. #2423, Colorado DPHE, Connecticut DPH Cert. #PH-0223, Florida DOH Cert. #E87177, Georgia DNR Cert. #906 (SDWA, expires 6/24/05), Hawaii DOH, Illinois EPA Cert. #000687, Indiana DOH Cert. #C-TN-02, Iowa DNR Cert. #375, Kansas DHE Cert. #E-10349, Kentucky DEP Lab ID #90101, Louisiana DEQ Cert. #03079, Louisiana DOHH Cert. #LA030024, Maryland DHMH Cert. #277, Massachusetts DEP Cert. #M-TN009, Michigan DEQ Lab ID #9933, New Jersey DEP Cert. #TN001, New York DOH Lab #10781, North Carolina DPH Lab ID #21705, North Carolina DEHNR Cert. #64, Ohio EPA VAP Cert. #CL0059, Oklahoma DEQ ID #9415, Pennsylvania DEP Cert. #68-00576, South Carolina DHEC Lab ID #84001001, Tennessee DOH Lab ID #02014, Utah DOH Cert. # QUAN3, Virginia DGS Lab ID #00165, Washington DOE Lab #C120, West Virginia DEP Cert. #345, Wisconsin DNR Lab ID #998044300, US Army Corps of Engineers, Naval Facilities Engineering Service Center and USDA Soil Permit #S-46424. This list of approvals is subject to change and does not imply that laboratory certification is available for all parameters reported in this environmental sample data report.

## **PROJECT NARRATIVE**

### **H6D030169 – Revised 05/15/06**

inconsequential to the quantitation. Subsequently, new average response factors for chlorobenzene and tetrachloroethene were calculated for the calibration range of 0.25 to 8 µg on the VOST tubes. The %RSD values calculated for the new response factors were acceptable for both compounds.

The new calibration data was not simply appended to the original curve. Instead, a new calibration curve was used to completely re-quantify the results and a percent difference was measured to assess the drift of response factors for the compounds analyzed on the different days.

As stated above, the following samples gave results for chlorobenzene and/or tetrachloroethene that were originally above the laboratory calibration range, and flagged with an “E” qualifier:

- G-2910-R1-VOST Pair #2 Tenax
- G-2912-R1-VOST Pair #3 Tenax
- G-3089-R3-VOST Pair #1 Tenax
- G-3091-R3-VOST Pair #2 Tenax
- G-3093-R3-VOST Pair #3 Tenax

These samples and the associated daily calibration check standard that were analyzed with these samples on 4/7/06 were re-quantified relative to the new extended calibration run on 5/3/06 curve. The re-quantified results are presented as a separate, additional report. The original data is also included which displays the “E” flagged data for comparison.

Note that the original initial calibration was still valid and being used for other analyses when the extended initial calibration curve was analyzed. Therefore, no major maintenance of the instrument had been performed during the time span from the initial calibration performed on 2/15/06 and the extended range calibration that was performed on 5/3/06. The %D (drift measurement) of the analytes based on the daily standard relative to either initial calibration curve is within the specifications of the method. Therefore, both calibration curves represent acceptable and compliant performance of the instrument for the entire analytical time span, inclusive of the day that the sample data were collected. The extended-range calibration bracketed the data within the range of the calibration, even though the new calibration was performed after the samples were analyzed, representing an external calibration method which is not the normal way to execute the referenced analytical method (SW-8260B).

## PROJECT NARRATIVE

### H6D030169 – Revised 05/15/06

The exact response of any GC/MS instrument normally varies from day to day. This is the reason that daily calibration verification standards are analyzed, which is to judge whether the drift of the instrument calibration is significant in magnitude or is normal such that the curve is allowed to be in continued use. For either of these initial calibration curves, the drift (or change in response factor between the calibration used for quantification and the daily calibration verification standard) is within specifications of the method. The new, extended range calibration curve indicates linearity of the response to a level that is inclusive of the response of chlorobenzene and tetrachloroethene in any of these samples. The new response factors are somewhat higher (12% for tetrachloroethene and 10% for chlorobenzene) resulting in recalculated results approximately 10% lower than the original results, as shown by the following table.

| STL<br>Lot-Sample<br>Number | STL<br>Work<br>Order<br>Number | Client Sample ID                | Target Analyte                     | Original<br>Result<br>( $\mu$ g) | Recalculated<br>Result<br>( $\mu$ g) |

VOST Tenax tubes were spiked with 6  $\mu$ g of chlorobenzene and tetrachloroethene and analyzed on 5/9/06. VOST Tenax tubes were spiked with 12  $\mu$ g of chlorobenzene and tetrachloroethene and analyzed on 5/3/06. The tubes were analyzed to show percent recovery results for a high concentration spike and spikes comparable to the sample levels observed. These analyses were quantified against the new calibration curve as well, and is presented in a table below, with the raw data placed in the miscellaneous data section of the data package.

---

STL Knoxville maintains the following certifications, approvals and accreditations: Arkansas DEQ Cert. #05-043-0, California DHS ELAP Cert. #2423, Colorado DPHE, Connecticut DPH Cert. #PH-0223, Florida DOH Cert. #E87177, Georgia DNR Cert. #906 (SDWA, expires 6/24/05), Hawaii DOH, Illinois EPA Cert. #000687, Indiana DOH Cert. #C-TN-02, Iowa DNR Cert. #375, Kansas DHE Cert. #E-10349, Kentucky DEP Lab ID #90101, Louisiana DEQ Cert. #03079, Louisiana DOHH Cert. #LA030024, Maryland DHMH Cert. #277, Massachusetts DEP Cert. #M-TN009, Michigan DEQ Lab ID #9933, New Jersey DEP Cert. #TN001, New York DOH Lab #10781, North Carolina DPH Lab ID #21705, North Carolina DEHNR Cert. #64, Ohio EPA VAP Cert. #CL0059, Oklahoma DEQ ID #9415, Pennsylvania DEP Cert. #68-00576, South Carolina DHEC Lab ID #84001001, Tennessee DOH Lab ID #02014, Utah DOH Cert. # QUAN3, Virginia DGS Lab ID #00165, Washington DOE Lab #C120, West Virginia DEP Cert. #345, Wisconsin DNR Lab ID #998044300, US Army Corps of Engineers, Naval Facilities Engineering Service Center and USDA Soil Permit #S-46424. This list of approvals is subject to change and does not imply that laboratory certification is available for all parameters reported in this environmental sample data report.

**PROJECT NARRATIVE**  
**H6D030169 – Revised 05/15/06**

***Spiked Tenax Tube Recovery***

| Target Analyte    | Spiked Amount<br>( $\mu\text{g}$ ) | Recovered Amount<br>( $\mu\text{g}$ ) | Percent Recovery<br>(%) |
|-------------------|------------------------------------|---------------------------------------|-------------------------|
| Chlorobenzene     | 6.0                                | 3.68                                  | 61%                     |
| Tetrachloroethene | 6.0                                | 4.78                                  | 80%                     |
|                   |                                    |                                       |                         |
| Chlorobenzene     | 12                                 | 7.60                                  | 63%                     |
| Tetrachloroethene | 12                                 | 9.66                                  | 80%                     |

In conclusion, the re-run data presents defensibility for the data beyond the original calibration points. The data demonstrate that linearity is reasonably extended beyond the top calibration point of the method and includes all the “E” values reported in the original data set. There is no systematic low bias observed for this data and no obvious measurement error. The sample concentrations obtained are defensible and should be acceptable for use for their intended purpose.

One surrogate recovery for sample G-3095-R3-VOST Pair #4 Tenax was outside QC limits. However, reanalysis of the sample was not possible since the entire sample was consumed during analysis. The archive pair G-3089-R3-VOST Pair #1 Tenax was analyzed which confirmed sample matrix effects.

| Bromofluorobenzene                     | 78        | (50 - 125) |       |        |

**NOTE(S) :**

J Estimated result. Result is less than RL.

B Method blank contamination. The associated method blank contains the target analyte at a reportable level.

## NOTE(S) :

J Estimated result. Result is less than RL.

B Method blank contamination. The associated method blank contains the target analyte at a reportable level.
