

Great Basin Depressional and Slope Wetlands Profiles by Subclass

Introduction

The wetland profiles described in this booklet are based on HGM subclasses. The state is divided into three major Ecoregions – Great Basin (13), Colorado Plateau (20) and Rocky Mountain (19).

EPA Level III Ecoregions

The subclasses in the Great Basin are driven by the salinity of the water and the water regime (determined through principal components factor analysis of reference standard sites in the entire class). The salinity is based on electrical conductivity and given in dS.

The classes of salinity are as follows:

- 1 Low salinity < 7.5 dS
- 2 Moderate salinity ≥ 7.5 and < 22.5 dS
- 3 High salinity / hypersaline ≥ 22.5 dS

Water regime classes for depressions are as follows:

- 0 Ephemeral – surface water is present in some years for brief periods (<3 months)
- 1 Seasonal – surface water is present in most years for 3-6 months
- 2 Semi permanent – surface water is common to persistent in most years for 6-12 months
- 3 Permanent – surface water is continuously present in all years.

Water regime classes for slopes are as follows:

- 1 Seasonal slope - Average depth to water table > 20 inches
- 2 Persistent slope - Average depth to water table ≤ 20 inches

Hydrogeomorphic Depression and Slope Wetland Class Descriptions

Depressional wetlands are topographic depressions with closed contours. Water sources are precipitation, runoff and/or groundwater. Water flow vectors are toward the center of the depression. The dominant hydrodynamics are vertical. They may or may not have inlets and outlets.

Slope wetlands occur at points of surface changes, breaks in slope or stratigraphic changes. Groundwater and runoff are the primary water sources. Water flow is unidirectional (down slope/ gradient). Water may discharge to a stream, lake or depression.

Great Basin Ecoregion

The ecoregion is made up of north-south trending, fault block mountain ranges whose bases are buried in their own alluvium. Valley bottoms often contain salt pans, salt flats or fresh to saline lakes and ponds. The slopes directly above the pans are complexes of alluvial fans. Valleys on the east sides of the mountains tend to fall less steeply and are generally longer than those on the west sides. There are few perennial streams (all drain internally) and there are many small springs. Large lakes and marshes occur in the valley bottoms and may be fresh or saline. The natural vegetation from low to higher elevations is saltbrush-greasewood, Great Basin sagebrush, pinyon-juniper woodland and western spruce-fir forest.

The average annual precipitation ranges from about 12 inches in the lower valleys to more than 30 inches at higher elevations. Average annual temperature is in the low 50's in the valleys and low 40's in the mountains. Summers are usually hot and dry. Most of the summer precipitation is the result of thunderstorms that build up over the mountains. Precipitation is light during the summer and early fall. It reaches a maximum in the spring when storms moving in from the Pacific are most intense. About one third of the precipitation falls as snow during the period between December and March.

Soils in the region range from mesic Aridisols at low elevations to frigid Mollisols at higher elevations. Entisols occur on fans, floodplains and in valley bottoms. Basin soils are often saline and alkaline.

Hypersaline (EC > 22.5 dS) seasonal or semi permanent depressions

(these sites may be moderately saline (7.5 – 22.5 dS) at other times of the year)

Vegetation index of biological integrity (VIBI) = (native/noninvasive score + index of similarity) / 2

Native/noninvasive score = ratio of native/noninvasive species* in the five dominant species / 5 or the total number of dominants if less than 5.

Index of similarity = ratio of number of species at site found in reference standard sites / number of species found at site

*Distichlis stricta(desert salt grass) is counted as FACW, not FAC

Dominant species

1st dominant - *Distichlis stricta* (desert salt grass) is always the first dominant in reference sites with average cover of .26 and it makes up an average of 84% of the total vegetative cover

2nd dominant – *Salicornia utahensis* (Utah samphire) or more often, *Salicornia europaea* (annual samphire) are the second dominant in all reference sites with average cover of .03

3rd dominant - *Triglochin maritima* (maritime arrowgrass) or *Cordylanthus maritimus* (alkali birdsbeak) with average cover of .01 *Scirpus maritimus* (alkali bulrush) at .01 with some disturbance

4th dominant – *Suaeda depressa* (broom seepweed), *Triglochin palustris* (marsh arrowgrass) with average cover of .01

5th dominant – *Sporobolus airoides* (alkali saccaton) and *Triglochin maritima* (maritime arrowgrass) with average cover of .01

*see App. 1

Vegetation species richness –

Average species richness is 4 (range 1-5), often including *-Distichlis stricta* (desert salt grass), *Salicornia europaea* (annual samphire) and *Triglochin maritima* (maritime arrowgrass). Species richness tends to increase with disturbance, with average species richness increasing to between 6 and 7 species.

Typical invasive species

Hordeum jubatum (foxtail barley), *Phragmites australis* (common reed), *Kochia scoparia* (summer cypress)

Plant list for reference standard sites

Distichlis stricta(desert salt grass)

Salicornia europea / utahensis(annual and utah samphire)

Triglochin maritima / palustris(maritime and marsh arrowgrass)

Cordylanthus maritimus(alkali birdsbeak)

Scirpus maritimus(alkali bulrush)

Suaeda depressa(broom seepweed)

Sporobolus airoides(alkali saccaton)

Sites surveyed are located in Box Elder, Salt Lake, Tooele and Utah Counties. **All sites in Salt Lake and Tooele Counties are below 4217 feet.**

Dominant species

1st dominant - *Distichlis stricta* (desert salt grass) is always the first dominant in reference sites with average cover of .28.

2nd / 3rd dominant – *Salicornia utahensis* (Utah samphire)(average cover .01) in 67% of sites, *Scirpus maritimus* (alkali bulrush) (average cover .02) in 83% of sites or *Salicornia europaea* (annual samphire) (average cover .05) in 33 % of sites.

4th and 5th dominant – *Triglochin spp* (arrowgrass) (average cover .01) in 50% of sites, *Allenrolfea occidentalis* (iodine bush) (average cover .01) in 16 %, *Sarcobatus vermiculatus* (greasewood) (average cover .01) in 16% of sites.

Other species occurring – *Puccinellia nuttalliana* (Nuttall's alkaligrass), *Scirpus acutus* (hardstem bulrush) and *S. americanus* (Olney's threesquare)

Nonnative/ invasive species – *Hordeum jubatum* (foxtail barley), *Polypogon monspeliensis* (rabbitfoot grass)

Vegetation species richness

Species richness of plants in reference sites averages 7 species, ranging from 5-7. In disturbed sites, it falls to 3 and climbs as high as 11.

Plant list for references standard sites

<i>Distichlis stricta</i> (desert salt grass)	<i>Allenrolfea occidentalis</i> (iodine bush)
<i>Salicornia europaea / utahensis</i> (annual and utah samphire)	<i>Scirpus acutus</i> (hardstem bulrush)

South of Goshen, Utah County

South of Hull Lake, Public Shooting Grounds, Box Elder County

Pond in Blue Lake Complex, Tooele County

Freshwater(EC \leq 7.5 dS) seasonal, semi permanent and permanent depressions

Note: There are virtually no natural, unimpacted sites in this subclass. All natural sites are impacted to some degree and all other sites are created or ‘enhanced’/impounded management areas.

Vegetation index of biological integrity(VIBI) = (native/noninvasive score + index of similarity) / 2

Native/noninvasive score = ratio of native/noninvasive species in the five dominant species / 5 or the total number of dominants if less than 5.

Index of similarity = ratio of number of species at site found in reference standard sites / number of species found at site

Seasonal freshwater depressions

Among the seasonal sites, water quality is least impacted at Duck Lake, Public Shooting Grounds, although lead is elevated (.06), with the average being .02-.03 mg/L. Duck Lake scores a 1.00 for it's vegetation IBI.

<u>Water chemistry Duck Lake</u>

Dominant species

1st – *Distichlis stricta* (desert salt grass) (average cover .22) in all reference sites

2nd – *Scirpus americanus*(Olney's threesquare) and/or *Scirpus maritimus* (alkali bulrush) (average cover .11) in all reference sites

3rd *Salicornia europaea* (annual samphire) in all reference sites (cover .06)

4th / 5th In 50 % of sites *Sarcobatus vermiculatus*(greasewood) and/or *Allenrolfea occidentalis* (iodine bush) (cover .01)

Species occasionally occurring –*Puccinellia nuttalliana* (Nuttall's alkaligrass) *Poa palustris* (fowl bluegrass)

Common nonnative and invasive species - *Polypogon monspeliensis* (**rabbitfoot grass**), *Hordeum jubatum*(**foxtail barley**), *Phragmites australis*(**common reed**), *Typha spp* (**cattail**), *Agrostis stolonifera* (**redtop bentgrass**)

Vegetation species richness

In reference standard sites average species richness is 6. In disturbed sites it climbs as high as 15 species. In general, disturbance increases the species diversity.

Plants list for reference standard sites

Distichlis stricta (desert salt grass)
Scirpus americanus(Olney's threesquare)
Scirpus acutus (hardstem bulrush)
Scirpus maritimus(alkali bulrush)
Eleocharis palustris(common spikerush)
Alisma plantago-aquatica (water plantain)
Salicornia europaea (annual samphire)
Salicornia utahensis (Utah samphire)
Poa palustris (fowl bluegrass)*
Juncus arcticus (wiregrass)
Allenrolfea occidentalis(iodine bush)
Carex praegracilis (blackcreeper or clustered field sedge)
Carex nebrascensis (Nebraska sedge)
Carex spp.
Iris missouriensis * (Missouri iris)
Nitrophila occidentalis (western boraxweed or niterwort)
Elymus triticoides (beardless or creeping wild rye)
Potamogeton species (pondweed)
Agropyron trachycaulum (slender wheatgrass)
Potentilla anserina (common silverweed)
Senecio hydrophilus (water groundsel)
Solidago missouriensis (goldenrod)

Mentha arvensis (field mint)
Aster chilensis (common California daisy)
Asclepias speciosa (showy milkweed)

Semi-permanent and permanent freshwater depressions

Among the semi-permanent and permanent sites, water quality is least impacted at Fish Springs. It does not, however, score well on the vegetation IBI and zebra snails were collected from the site.

Dominant species

1st – *Eleocharis palustris* (common spikerush) (average cover .29) in 75% reference sites

2nd – *Scirpus spp.*, usually *Scirpus americanus* (Olney's threesquare) (average cover .23) in all reference sites

3rd *Juncus arcticus* (wiregrass) in 75% reference sites (average cover .09)

4th / 5th In 50 % of sites *Distichlis stricta*(desert salt grass) (average cover .14)

Species occasionally occurring – *Alisma plantago-aquatica*(water plantain),

Potamogeton spp. (pondweed), *Carex praegracilis* (blackcreeper or clustered field sedge), *Iris missouriensis* (Missouri iris), *Asclepias speciosa* (showy milkweed)

Common nonnative and invasive species - *Polypogon monspeliensis* (**rabbitfoot grass**), *Hordeum jubatum*(**foxtail barley**), *Phragmites australis*(**common reed**), *Typha spp*(cattail), *Rumex crispus* (curley dock), *Nasturtium officinale* (watercress), *Trifolium repens* (white clover), *Lythrum salicaria*** (**purple loosestrife**)

Vegetation species richness

In reference standard sites average species richness is 11-12. In disturbed sites it climbs as high as 22-23 or drops as low as 5 species.

Plants list for reference standard sites

Distichlis stricta (desert salt grass)

Scirpus americanus(Olney's threesquare)

Scirpus acutus (hardstem bulrush)

Scirpus maritimus(alkali bulrush)

Eleocharis palustris(common spikerush)

Alisma plantago-aquatica (water plantain)

Salicornia europaea (annual samphire)

Salicornia utahensis (Utah samphire)

Poa palustris (fowl bluegrass)

Juncus arcticus (wiregrass)

Allenrolfea occidentalis(iodine bush)

Carex praegracilis (blackcreeper or clustered field sedge)

Carex nebrascensis (Nebraska sedge)

Carex spp.

Iris missouriensis (Missouri iris)

Nitrophila occidentalis (western boraxweed or niterwort)

Elymus triticoides (beardless or creeping wild rye)

Potamogeton species (pondweed)

Agropyron trachycaulum (slender wheatgrass)

Potentilla anserina (common silverweed)

Senecio hydrophilus (water groundsel)

Solidago missouriensis (goldenrod)

Sarcobatus vermiculatus (greasewood)

Ranunculus spp. (buttercup)

Sagitteria cuneata (arrowleaf)

Sueada depressa (seepweed)

Mentha arvensis (field mint)

Aster chilensis (common California daisy)

Asclepias speciosa (showy milkweed)

**** at one site in the semi-permanent / permanent sites , we found exotic zebra snails which are a vector for a fish killing disease and are reported from another site in this group of surveyed sites**

**** at one seasonal site – found New Zealand mud snails**

Dominant species

Salicornia europaea (annual samphire) is the dominant species in all reference sites with an average cover of .20

Sarcobatus vermiculatus (greasewood) occurs in 33% of sites with an average cover of .01

Invasive species include *Hordeum jubatum*(foxtail barley) and *murinum* (rabbit barley), *Kochia scoparia*(summer cypress), *Puccinellia distans* (weeping alkaligrass)

Species richness

Average species richness is 1-2 species. With disturbance richness climbs to 5-6 species.

Plant list for reference standard sites
