

# EPA's BEACH Report:

## Michigan 2007 Swimming Season

July 2008

### Introduction

The BEACH Act of 2000 requires that coastal and Great Lakes states and territories report to EPA on beach monitoring and notification data for their coastal recreation waters.

The BEACH Act defines coastal recreation waters as the Great Lakes and coastal waters (including coastal estuaries) that states, territories, and authorized tribes officially recognize or designate for swimming, bathing, surfing, or similar activities in the water.

This fact sheet summarizes beach monitoring and notification data submitted to EPA by the State of Michigan for the 2007 swimming season.

## 2007 Summary Results

*How many notification actions were reported and how long were they?*

Michigan’s approach is to issue a beach advisory when water quality standards are exceeded at a particular beach that warns people to avoid contact with the water. A total of 32 monitored beaches had at least one advisory issued during the 2007 swimming season. About 63 percent of Michigan’s 48 notification actions lasted two days or less. Figure 2 presents a full breakdown of notification action durations.

*What percentage of days were beaches under a notification action?*

For Michigan’s 2007 swimming season, actions were reported about 3 percent of the time (Figure 3).

*How do 2007 results compare to previous years?*

Table 2 compares 2007 notification action data with monitored beach data from previous years.

*What pollution sources impact monitored beaches?*

There are no known sources of pollution for most of Michigan’s monitored beaches (Figure 4).
