XI	RISK ASSESSMENT WORK PLANS
----	----------------------------

P.1 INTRODUCTION

40 CFR 270.10(j) requires the submittal of information on the potential for the public to be exposed to releases. At a Minimum, this must include:

- C Reasonably foreseeable potential releases
- C Potential pathways of human exposure
- C Potential magnitude and nature of exposure

While the federal requirement only applies to surface impoundments and land disposal units, which are not part of the SWT Parker facility, the EPA has required SWT to conduct human health and ecological risk assessment on emissions from the facility.

These assessments are currently underway utilizing the results of the Performance Demonstration Testing that has been conducted at the facility. The approved risk assessment work plans are included in Appendix XI.
