<p>SUMMARY (Describe the water system in a paragraph or two)</p> <p>_____</p>																																	
<p>The following abbreviations will be used throughout this document: NI = no information, NA = not applicable, NR = not requested, @ = potential significant deficiency.</p>																																	

SIGNIFICANT DEFICIENCIES

Significant deficiencies include, but are not limited to, defects in the design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage, or distribution system, that EPA determines to be causing, or have the potential for causing, the introduction of contamination into the water delivered to consumers. Please note the instructions for responding to significant deficiencies in the attached cover letter. Failure to provide a response to EPA could result in a violation.

UNCORRECTED SIGNIFICANT DEFICIENCIES FROM PRIOR SANITARY SURVEY

Numbered significant deficiencies and associated numbered photos if applicable

RECOMMENDATIONS

Numbered recommendations and associated numbered photos if applicable

How many master meter connections exist from the wholesale system to the consecutive system? _____

Who is responsible for maintenance of the master meter connection(s) from the wholesale system?

- Wholesaler
- Consecutive system

Comments: _____

If the consecutive system is responsible:

Check the condition of the principal master meter and the pit for leaks or flooding and describe any concerns: _____

How often are the master meter connections inspected? _____

How often are the master meter connections serviced? _____

Is there standing water present in any meter pits? Yes No

If so, what is the source of the standing water?

- Leaks @
- Groundwater
- Don't know @

Comments: _____

If PWS Purchases Water from a WATER HAULER:

Name of hauler: _____

WY Dept. of Agriculture license number: _____

Name of the water system supplying water to the hauler: _____

Is there a water tight cap on the (water system's) fill port? @ Yes No

How does the operator check chlorine residual at the time of delivery? _____

Is the backup water source physically disconnected from the water system? Yes No _____
 (if this is a raw water source and is still physically connected to the system, then stop filling out this section and complete the applicable source data section)

Backup source name: _____

Facility ID (from PWS Inventory, e.g., IN01, WL01, etc.): _____

Are there seasonal algal blooms present? Yes No NA

Describe: _____

Is an algaecide ever used to control algae? Yes No NA

If yes, describe: _____

Please copy or photograph any available construction diagrams or "as-builts" and submit with the sanitary survey report

Are there any sources of pollution near the emergency backup source (e.g., agriculture/industrial activities, cleaning supplies, oil/fuel, etc.) which could impact water quality? @ Yes No

If yes, indicate impacted emergency backup source(s) and provide general location and comments (please locate on aerial map and provide photos): _____

How far from the emergency backup source is the source of pollution located? _____

Mice or other animals and their droppings in immediate area (**well house, vault, pit, etc.**). Yes No _____

DISTRIBUTION BOOSTER PUMP STATIONS

NA

Total number of booster stations in the distribution system: _____

Are there any new booster stations since the previous survey? Yes No

Are there any booster stations the system has had problems with since the previous survey? Yes No

Are there any booster stations where chlorine is added? Yes No

Note to surveyor: If there are new or problem booster stations, or if there are booster stations where chlorine is added, inspect each of them, complete the necessary sections below, and take photos of each station inspected. For booster stations where chlorine is added, add the booster station as a treatment process under the "Water Treatment Data" section, in addition to filling out the booster pump station section below.

If there are no new or problem booster stations, inspect one booster station as a representative of the entire system, complete one section below, and take photos of the one station inspected.

Yes No

- Is there a flow meter to monitor/alarm or a flow restrictor valve so the max flow rate is not exceeded? Describe how the system ensures the flow does not exceed max flow rate: _____
- Is there an intensity sensor and alarm (visible/audible) to indicate low intensity?
- Is there a UV lamp status alarm (visible/audible) to indicate lamps off?
- Is there a UV lamp age counter/alarm?
- Is there an automatic shut-off fail-safe solenoid valve so that water does not flow through the unit without adequate treatment?
- Are there spare bulbs on hand?

How often are the unit cleaned and the bulbs changed? _____

Point of use Treatment

For PWSs with required Point of Use (POU) treatment, ask the operator –

Yes No NA

- Is the system adhering to the O&M Plan approved by EPA and conducting maintenance per the manufacturer's recommendations?
 (i.e. Is the operator replacing POU filters in accordance with the maintenance plan or manufacturer recommendations).
- Is the system following its EPA-approved POU sampling plan?

If No, explain any difficulties: _____
