Good morning, Diane.

(b)(5) Deliberative

Thanks.

From: Patel, Rohan
Sent: Friday, January 27, 2012 9:17 AM
To: Zichal, Heather R.; Boots, Michael J.
Subject: GHG

1. **EPA CLIMATE RULES EXPECTED NEXT FRIDAY.** The Environmental Protection Agency is likely to issue a proposed new rule next Friday that would attempt to counter climate change by regulating greenhouse gas emissions from power plants, sources familiar with EPA's deliberations tell *National Journal* . But the rules are likely to apply only to new power plants, sparing the nation's existing plants from regulations. That's a move which will anger environmentalists -- who are still urging the administration to rein in pollution from existing plants. But it may defuse industry criticism of the regulation -- and postpone possible power bill increases until long after the November election.

Subject: Bloomberg Fuel Fix Blog: Americans gaining energy independence

Americans gaining energy independence

<http://fuelfix.com/blog/2012/02/07/americans-gaining-energy-independence/>

The U.S. is the closest it has been in almost 20 years to achieving energy self-sufficiency, a goal the nation has been pursuing since the 1973 Arab oil embargo triggered a recession and led to lines at gasoline stations.

Domestic oil output is the highest in eight years. The U.S. is producing so much natural gas that, where the government warned four years ago of a critical need to boost imports, it now may approve an export terminal.

Methanex Corp., the world's biggest methanol maker, said it will dismantle a factory in Chile and reassemble it in Louisiana to take advantage of low natural gas prices. And higher mileage standards and federally mandated ethanol use, along with slow economic growth, have curbed demand.

The result: The U.S. has reversed a two-decade-long decline in energy independence, increasing the proportion of demand met from domestic sources over the last six years to an estimated 81 percent through the first 10 months of 2011, according to data compiled by Bloomberg from the U.S. Department of Energy. That would be the highest level since 1992.

"For 40 years, only politicians and the occasional author in Popular Mechanics magazine talked about achieving energy independence," said Adam Sieminski, who has been nominated by President Barack Obama to head the U.S. Energy Information Administration. "Now it doesn't seem such an outlandish idea."

The transformation, which could see the country become the world's top energy producer by 2020, has implications for the economy and national security — boosting household incomes, jobs and government revenue; cutting the trade deficit; enhancing manufacturers' competitiveness; and allowing greater flexibility in dealing with unrest in the Middle East.

Output Rising

U.S. energy self-sufficiency has been steadily rising since 2005, when it hit a low of 70 percent, the data compiled by Bloomberg show. Domestic crude oil production rose 3.6 percent last year to an average 5.7 million barrels a day, the highest since 2003, according to the Energy Department. Natural gas output climbed to 22.4 trillion cubic feet in 2010 from 20.2 trillion in 2007, when the Federal Energy Regulatory Commission warned of the need for more imports. Prices have fallen more than 80 percent since 2008.

At the same time, the efficiency of the average U.S. passenger vehicle has helped limit demand. It increased to 29.6 miles per gallon in 2011 from 19.9 mpg in 1978, according to the National Highway Traffic Safety Administration.

The last time the U.S. achieved energy independence was in 1952. While it still imported some petroleum, the country's exports, including of coal, more than offset its imports.

Environmental Concern

The expansion in oil and natural gas production isn't without a downside. Environmentalists say hydraulic fracturing, or fracking — in which a mixture of water, sand and chemicals is shot underground to blast apart rock and free fossil fuels — is tainting drinking water.

The drop in natural gas prices is also making the use of alternative energy sources such as solar, wind and nuclear power less attractive, threatening to link the U.S.'s future even more to hydrocarbons to run the world's largest economy.

Still, those concerns probably won't be enough to outweigh the benefits of greater energy independence.

Stepped-up oil output and restrained consumption will lessen demand for imports, cutting the nation's trade deficit and buttressing the dollar, said Sieminski, who is currently chief energy economist at Deutsche Bank AG in Washington.

Cutting Trade Deficit

With the price of a barrel of oil at about \$100, a drop of 4 million barrels a day in oil imports — which he said could happen by 2020, if not before — would shave \$145 billion off the deficit. Through the first 11 months of last year, the trade gap was \$513 billion, according to the Commerce Department. Crude for March delivery settled at \$96.91 a barrel yesterday on the New York Mercantile Exchange.

The impact on national security also could be significant as the U.S. relies less on oil from the Mideast. Persian Gulf countries accounted for 15 percent of U.S. imports of crude oil and petroleum products in 2010, down from 23 percent in 1999.

"The past image of the United States as helplessly dependent on imported oil and gas from politically unstable and unfriendly regions of the world no longer holds," former Central Intelligence Agency Director John Deutch told an energy conference last month.

Arab Oil Embargo

That dependence was underscored in October 1973, when Arab oil producers declared an embargo in retaliation for U.S. help for Israel in the Yom Kippur war. The U.S. economy contracted at an annualized 3.5 percent rate in the first quarter of the next year. Stock prices plunged, with the Standard & Poor's 500 Index dropping more than 40 percent in the year following the embargo.

Car owners were forced to line up at gasoline stations to buy fuel. President Richard Nixon announced in December that because of the energy crisis the lights on the national Christmas tree wouldn't be turned on.

Today, signs of what former North Dakota Senator Byron Dorgan says could be a "new normal" in energy are proliferating. The U.S. likely became a net exporter of refined oil products last year for the first time since 1949. And it will probably become a net exporter of natural gas early in the next decade, said Howard Gruenspecht, the acting administrator of the EIA, the statistical arm of the Energy Department.

Cheniere Energy Partners LP may receive a construction and operating permit as early this month from the Federal Energy Regulatory Commission for the first new plant capable of exporting natural gas by ship to be built since 1969 in the U.S.

Houston-based Cheniere said it expects the \$6 billion plant to export as much as 2.6 billion cubic feet of gas per day.

Mitchell the Pioneer

The shale-gas technology that's boosting U.S. natural gas production was spawned in the Barnett Shale around Dallas and Fort Worth by George P. Mitchell, who was chairman and chief executive officer of Mitchell Energy &

Development Corp.

Helped by a provision inserted in the 1980 windfall oil profits tax bill to encourage drilling for unconventional natural gas, the Houston-based oil man pursued a trial-and-error approach for years before succeeding in the late-1990s. The fracking method he devised cracked the rock deep underground, propping open small seams that allowed natural gas trapped in tiny pores to flow into the well and up to the surface.

Recognizing that Mitchell was on to something, Devon Energy Corp. bought his company in 2002 for about \$3.3 billion and combined it with its own expertise in directional drilling, a method derived from offshore exploration.

Hunting for Oil

Traditional vertical drilling bores straight down, like a straw stuck straight in the earth. Directional drilling bends the straw, boring horizontally sometimes a mile or more through the richest layer of rock, allowing more of the trapped fuel to make it into the well. This slice of rock is like the kitchen, where ancient plants and creatures came under so much pressure that they cooked into natural gas and oil.

The oil boom a century ago tapped reservoirs of fuel that rose out of those layers and got trapped in large pockets closer to the earth's surface, or used vertical wells that could get out only a portion of the fuel stored in the rock. The new technology has Devon and its competitors hunting beneath decades-old oil plays long thought depleted.

About an hour's drive north from where Devon's soon-to-be-completed new glass headquarters towers 50 stories above downtown Oklahoma City, the company is exploring for oil in the Mississippian and other formations, where oil majors once made their fortunes. It's racing companies such as Chesapeake Energy Corp. and SandRidge Energy Inc. to buy leases and drill wells.

North Dakota Booming

Crude production in the U.S. is already increasing. Within three years, domestic output could reach 7 million barrels a day, the highest in 20 years, said Andy Lipow, president of Lipow Oil Associates in Houston, a consulting firm. The U.S. produced 5.9 million barrels of crude oil a day in December, while consuming 18.5 million barrels of petroleum products, according to the Energy Department.

North Dakota — the center of the so-called tight-oil transformation — is now the fourth largest oil-producing state, behind Texas, Alaska and California.

The growth in oil and gas output means the U.S. will overtake Russia as the world's largest energy producer in the next eight years, said Jamie Webster, senior manager for the markets and country strategy group at PFC Energy, a Washington-based consultant.

While U.S. consumers would still be susceptible to surges in global oil prices, "we'd end up sending some of that cash to North Dakota" rather than to Saudi Arabia, said Richard Schmalensee, a professor of economics and management at the Massachusetts Institute of Technology in Cambridge.

1.6 Million Jobs

The shale gas expansion is already benefiting the economy. In 2010, the industry supported more than 600,000 jobs, according to a report that consultants IHS Global Insight prepared for America's Natural Gas Alliance, a group that represents companies such as Devon Energy and Chesapeake Energy.

More than half were in the companies directly involved and their suppliers, with the balance coming at restaurants, hotels and other firms. By 2035, the number of jobs supported by the industry will rise to more than 1.6 million, IHS said. Some 360,000 will be directly employed in the shale gas industry.

The oil boom is also pushing up payrolls. Unemployment in North Dakota was 3.3 percent in December, the lowest of any state. Hiring is so frantic that the McDonald's Corp. restaurant in Dickinson is offering \$300 signing bonuses.

State governments are reaping benefits, too. Ohio is considering a new impact fee on drillers and increasing the tax charged on natural gas and other natural resources extracted, Governor John Kasich has said.

In Texas, DeWitt County Judge Daryl Fowler has negotiated an \$8,000-per-well fee from drilling companies to pay for roads in the district, southeast of San Antonio.

Lot of Traffic

"It takes 270 loads of gravel just to build a pad used for drilling a well, which means a lot of truck traffic on a lot of roads that nobody except Grandpa Schultz and some deer hunters may have used in the past," said Fowler, whose non-judicial post gives him administrative control over the county.

The federal government will see tax payments from shale gas rise to \$14.5 billion in 2015 from \$9.6 billion in 2010, according to IHS. Over the period 2010 to 2035, revenue will total \$464.9 billion, it said.

Manufacturing companies, particularly chemical makers, also stand to win as the shale bonanza keeps natural gas cheaper in the U.S. than in Asia or Europe.

Dow Chemical Co., which spent a decade moving production to the Middle East and Asia, is leading the biggest expansion ever in the U.S. The chemical industry is one of the top consumers of natural gas, using it both as a fuel and feedstock to produce the compounds it sells.

First Since 2001

Midland, Michigan-based Dow is among companies planning to build crackers, industrial plants typically costing \$1.5 billion that process hydrocarbons into ethylene, a plastics ingredient.

The new crackers will be the first in the U.S. since 2001, said John Stekla, a director at Chemical Market Associates Inc., a Houston-based consultant.

Vancouver-based Methanex said last month it plans to take apart the idled Chilean factory and ship it to Louisiana to capitalize on natural gas prices.

The shift to increased energy independence is also the result of government policies to depress oil demand.

"Vehicles are getting more efficient, and people who travel won't be driving more miles," said Daniel Yergin, chairman of IHS Cambridge Energy Research Associates.

Automakers have agreed to raise the fuel economy of the vehicles they sell in the U.S. to a fleetwide average of 54.5 miles per gallon by 2025 under an agreement last year with the Obama administration.

No 'Silver Bullet'

The 2008-09 recession helped lower oil demand, and consumption has lagged even as the economy has recovered, said Judith Dwarin, director of energy research for ITG Investment Research in Calgary. Coupled with higher domestic output, "this has translated into an import requirement of some 15.4 barrels per person per year — about on par with the mid-1990s."

She cautioned against thinking that rising oil and gas production is a "silver bullet" for solving U.S. economic woes. Michael Feroli, chief U.S. economist at JPMorgan Chase & Co. in New York, agreed, saying in a Jan. 20 note to clients that oil and gas output accounts for just 1 percent of gross domestic production and isn't likely on its own to be able to pull the economy into above-trend growth.

Cooling on Wind

Some companies are hurting from the shale gas glut. With abundant supplies making it the cheapest option for new power generation, Exelon Corp. scrapped plans to expand capacity at two nuclear plants, while Michigan utility CMS Energy Corp. canceled a \$2 billion coal plant after deciding it wasn't financially viable. NextEra Energy Inc., the largest U.S. wind energy producer, shelved plans for new U.S. wind projects next year.

Investors also are cooling on wind investment, partly because of falling power prices. T. Boone Pickens, one of wind power's biggest boosters, decided to focus on promoting natural gas-fueled trucking fleets after dropping plans for a Texas wind farm in 2010.

"Wind on its own without incentives is far from economic unless gas is north of \$6.50," said Travis Miller, a Chicago-based utility analyst at Morningstar Inc. Natural gas for March delivery settled at \$2.55 per million British thermal units on New York Mercantile Exchange yesterday.

When Obama lauded increased energy production in his State of the Union speech on Jan. 24, he drew criticism from some environmentalists opposed to fracking.

Waning Confidence

"We're disappointed in his enthusiasm for shale gas," said Iris Marie Bloom, director of Protecting Our Waters in Philadelphia. Obama "spoke about gas as if it's better for the environment, which it's not."

Deutch, who headed an advisory panel on fracking for the Energy Department, voiced concern that public confidence in the technology will wane if action isn't taken to address environmental concerns. The potential positive impact of increased North American production are "enormous," he said.

Higher U.S. output lessens the ability of countries like Iran and Russia to use "energy diplomacy" as a means of strengthening their influence, Amy Myers Jaffe, director of the Baker Institute Energy Forum at Rice University, and her colleagues wrote in a report last year.

While the U.S. will still have to pay attention to issues such as Israel's security and Islamic fundamentalism in the Mideast, which could affect oil prices, it won't have to be as worried about its supplies.

Positive 'Shock'

Carlos Pascual, special envoy and coordinator for international energy affairs at the State Department, suggested at a Council on Foreign Relations conference in December that the increased production in the U.S. and elsewhere gives Washington more "maneuverability" in using sanctions to deal with Iran and its nuclear aspirations.

The increased U.S. production of oil and natural gas is a "positive supply shock" for the economy and for national security, said Philip Verleger, a former director of the office of energy policy at the Treasury Department and founder of PKVerleger LLC, a consulting firm in Aspen, Colorado.

"We aren't there yet, but it looks like we're blundering into a solution for the energy problem," he said.

Subject: Bloomberg Fuel Fix Blog: Americans gaining energy independence

<http://fuelfix.com/blog/2012/02/07/americans-gaining-energy-independence/>

The U.S. is the closest it has been in almost 20 years to achieving energy self-sufficiency, a goal the nation has been pursuing since the 1973 Arab oil embargo triggered a recession and led to lines at gasoline stations.

Domestic oil output is the highest in eight years. The U.S. is producing so much natural gas that, where the government warned four years ago of a critical need to boost imports, it now may approve an export terminal.

Methanex Corp., the world's biggest methanol maker, said it will dismantle a factory in Chile and reassemble it in Louisiana to take advantage of low natural gas prices. And higher mileage standards and federally mandated ethanol use, along with slow economic growth, have curbed demand.

The result: The U.S. has reversed a two-decade-long decline in energy independence, increasing the proportion of demand met from domestic sources

over the last six years to an estimated 81 percent through the first 10 months of 2011, according to data compiled by Bloomberg from the U.S. Department of Energy. That would be the highest level since 1992.

"For 40 years, only politicians and the occasional author in Popular Mechanics magazine talked about achieving energy independence," said Adam Sieminski, who has been nominated by President Barack Obama to head the U.S. Energy Information Administration. "Now it doesn't seem such an outlandish idea."

The transformation, which could see the country become the world's top energy producer by 2020, has implications for the economy and national security – boosting household incomes, jobs and government revenue; cutting the trade deficit; enhancing manufacturers' competitiveness; and allowing greater flexibility in dealing with unrest in the Middle East.

Output Rising

U.S. energy self-sufficiency has been steadily rising since 2005, when it hit a low of 70 percent, the data compiled by Bloomberg show. Domestic crude oil production rose 3.6 percent last year to an average 5.7 million barrels a day, the highest since 2003, according to the Energy Department. Natural gas output climbed to 22.4 trillion cubic feet in 2010 from 20.2 trillion in 2007, when the Federal Energy Regulatory Commission warned of the need for more imports. Prices have fallen more than 80 percent since 2008.

At the same time, the efficiency of the average U.S. passenger vehicle has helped limit demand. It increased to 29.6 miles per gallon in 2011 from 19.9 mpg in 1978, according to the National Highway Traffic Safety Administration.

The last time the U.S. achieved energy independence was in 1952. While it still imported some petroleum, the country's exports, including of coal, more than offset its imports.

Environmental Concern

The expansion in oil and natural gas production isn't without a downside. Environmentalists say hydraulic fracturing, or fracking – in which a mixture of water, sand and chemicals is shot underground to blast apart rock and free fossil fuels – is tainting drinking water.

The drop in natural gas prices is also making the use of alternative energy sources such as solar, wind and nuclear power less attractive, threatening to link the U.S.'s future even more to hydrocarbons to run the world's largest economy.

Still, those concerns probably won't be enough to outweigh the benefits of greater energy independence.

Stepped-up oil output and restrained consumption will lessen demand for imports, cutting the nation's trade deficit and buttressing the dollar, said

Sieminski, who is currently chief energy economist at Deutsche Bank AG in Washington.

Cutting Trade Deficit

With the price of a barrel of oil at about \$100, a drop of 4 million barrels a day in oil imports – which he said could happen by 2020, if not before – would shave \$145 billion off the deficit. Through the first 11 months of last year, the trade gap was \$513 billion, according to the Commerce Department. Crude for March delivery settled at \$96.91 a barrel yesterday on the New York Mercantile Exchange.

The impact on national security also could be significant as the U.S. relies less on oil from the Mideast. Persian Gulf countries accounted for 15 percent of U.S. imports of crude oil and petroleum products in 2010, down from 23 percent in 1999.

"The past image of the United States as helplessly dependent on imported oil and gas from politically unstable and unfriendly regions of the world no longer holds," former Central Intelligence Agency Director John Deutch told an energy conference last month.

Arab Oil Embargo

That dependence was underscored in October 1973, when Arab oil producers declared an embargo in retaliation for U.S. help for Israel in the Yom Kippur war. The U.S. economy contracted at an annualized 3.5 percent rate in the first quarter of the next year. Stock prices plunged, with the Standard & Poor's 500 Index dropping more than 40 percent in the year following the embargo.

Car owners were forced to line up at gasoline stations to buy fuel. President Richard Nixon announced in December that because of the energy crisis the lights on the national Christmas tree wouldn't be turned on.

Today, signs of what former North Dakota Senator Byron Dorgan says could be a "new normal" in energy are proliferating. The U.S. likely became a net exporter of refined oil products last year for the first time since 1949. And it will probably become a net exporter of natural gas early in the next decade, said Howard Gruenspecht, the acting administrator of the EIA, the statistical arm of the Energy Department.

Cheniere Energy Partners LP may receive a construction and operating permit as early this month from the Federal Energy Regulatory Commission for the first new plant capable of exporting natural gas by ship to be built since 1969 in the U.S.

Houston-based Cheniere said it expects the \$6 billion plant to export as much as 2.6 billion cubic feet of gas per day.

Mitchell the Pioneer

The shale-gas technology that's boosting U.S. natural gas production was spawned in the Barnett Shale around Dallas and Fort Worth by George P. Mitchell, who was chairman and chief executive officer of Mitchell Energy & Development Corp.

Helped by a provision inserted in the 1980 windfall oil profits tax bill to encourage drilling for unconventional natural gas, the Houston-based oil man pursued a trial-and-error approach for years before succeeding in the late-1990s. The fracking method he devised cracked the rock deep underground, propping open small seams that allowed natural gas trapped in tiny pores to flow into the well and up to the surface.

Recognizing that Mitchell was on to something, Devon Energy Corp. bought his company in 2002 for about \$3.3 billion and combined it with its own expertise in directional drilling, a method derived from offshore exploration.

Hunting for Oil

Traditional vertical drilling bores straight down, like a straw stuck straight in the earth. Directional drilling bends the straw, boring horizontally sometimes a mile or more through the richest layer of rock, allowing more of the trapped fuel to make it into the well. This slice of rock is like the kitchen, where ancient plants and creatures came under so much pressure that they cooked into natural gas and oil.

The oil boom a century ago tapped reservoirs of fuel that rose out of those layers and got trapped in large pockets closer to the earth's surface, or used vertical wells that could get out only a portion of the fuel stored in the rock. The new technology has Devon and its competitors hunting beneath decades-old oil plays long thought depleted.

About an hour's drive north from where Devon's soon-to-be-completed new glass headquarters towers 50 stories above downtown Oklahoma City, the company is exploring for oil in the Mississippian and other formations, where oil majors once made their fortunes. It's racing companies such as Chesapeake Energy Corp. and SandRidge Energy Inc. to buy leases and drill wells.

North Dakota Booming

Crude production in the U.S. is already increasing. Within three years, domestic output could reach 7 million barrels a day, the highest in 20 years, said Andy Lipow, president of Lipow Oil Associates in Houston, a consulting firm. The U.S. produced 5.9 million barrels of crude oil a day in December, while consuming 18.5 million barrels of petroleum products, according to the Energy Department.

North Dakota — the center of the so-called tight-oil transformation — is now

the fourth largest oil-producing state, behind Texas, Alaska and California.

The growth in oil and gas output means the U.S. will overtake Russia as the world's largest energy producer in the next eight years, said Jamie Webster, senior manager for the markets and country strategy group at PFC Energy, a Washington-based consultant.

While U.S. consumers would still be susceptible to surges in global oil prices, "we'd end up sending some of that cash to North Dakota" rather than to Saudi Arabia, said Richard Schmalensee, a professor of economics and management at the Massachusetts Institute of Technology in Cambridge.

1.6 Million Jobs

The shale gas expansion is already benefiting the economy. In 2010, the industry supported more than 600,000 jobs, according to a report that consultants IHS Global Insight prepared for America's Natural Gas Alliance, a group that represents companies such as Devon Energy and Chesapeake Energy.

More than half were in the companies directly involved and their suppliers, with the balance coming at restaurants, hotels and other firms. By 2035, the number of jobs supported by the industry will rise to more than 1.6 million, IHS said. Some 360,000 will be directly employed in the shale gas industry.

The oil boom is also pushing up payrolls. Unemployment in North Dakota was 3.3 percent in December, the lowest of any state. Hiring is so frantic that the McDonald's Corp. restaurant in Dickinson is offering \$300 signing bonuses.

State governments are reaping benefits, too. Ohio is considering a new impact fee on drillers and increasing the tax charged on natural gas and other natural resources extracted, Governor John Kasich has said.

In Texas, DeWitt County Judge Daryl Fowler has negotiated an \$8,000-per-well fee from drilling companies to pay for roads in the district, southeast of San Antonio.

Lot of Traffic

"It takes 270 loads of gravel just to build a pad used for drilling a well, which means a lot of truck traffic on a lot of roads that nobody except Grandpa Schultz and some deer hunters may have used in the past," said Fowler, whose non-judicial post gives him administrative control over the county.

The federal government will see tax payments from shale gas rise to \$14.5 billion in 2015 from \$9.6 billion in 2010, according to IHS. Over the period 2010 to 2035, revenue will total \$464.9 billion, it said.

Manufacturing companies, particularly chemical makers, also stand to win as the shale bonanza keeps natural gas cheaper in the U.S. than in Asia or Europe.

Dow Chemical Co., which spent a decade moving production to the Middle East and Asia, is leading the biggest expansion ever in the U.S. The chemical industry is one of the top consumers of natural gas, using it both as a fuel and feedstock to produce the compounds it sells.

First Since 2001

Midland, Michigan-based Dow is among companies planning to build crackers, industrial plants typically costing \$1.5 billion that process hydrocarbons into ethylene, a plastics ingredient.

The new crackers will be the first in the U.S. since 2001, said John Stekla, a director at Chemical Market Associates Inc., a Houston-based consultant.

Vancouver-based Methanex said last month it plans to take apart the idled Chilean factory and ship it to Louisiana to capitalize on natural gas prices.

The shift to increased energy independence is also the result of government policies to depress oil demand.

"Vehicles are getting more efficient, and people who travel won't be driving more miles," said Daniel Yergin, chairman of IHS Cambridge Energy Research Associates.

Automakers have agreed to raise the fuel economy of the vehicles they sell in the U.S. to a fleetwide average of 54.5 miles per gallon by 2025 under an agreement last year with the Obama administration.

No 'Silver Bullet'

The 2008-09 recession helped lower oil demand, and consumption has lagged even as the economy has recovered, said Judith Dwarin, director of energy research for ITG Investment Research in Calgary. Coupled with higher domestic output, "this has translated into an import requirement of some 15.4 barrels per person per year — about on par with the mid-1990s."

She cautioned against thinking that rising oil and gas production is a "silver bullet" for solving U.S. economic woes.

Michael Feroli, chief U.S. economist at JPMorgan Chase & Co. in New York, agreed, saying in a Jan. 20 note to clients that oil and gas output accounts for just 1 percent of gross domestic production and isn't likely on its own to be able to pull the economy into above-trend growth.

Cooling on Wind

Some companies are hurting from the shale gas glut. With abundant supplies making it the cheapest option for new power generation, Exelon Corp. scrapped plans to expand capacity at two nuclear plants, while Michigan utility CMS Energy Corp. canceled a \$2 billion coal plant after deciding it wasn't financially viable. NextEra Energy Inc., the largest U.S. wind energy producer, shelved plans for new U.S. wind projects next year.

Investors also are cooling on wind investment, partly because of falling power prices. T. Boone Pickens, one of wind power's biggest boosters, decided to focus on promoting natural gas-fueled trucking fleets after dropping plans for a Texas wind farm in 2010.

"Wind on its own without incentives is far from economic unless gas is north of \$6.50," said Travis Miller, a Chicago-based utility analyst at Morningstar Inc. Natural gas for March delivery settled at \$2.55 per million British thermal units on New York Mercantile Exchange yesterday.

When Obama lauded increased energy production in his State of the Union speech on Jan. 24, he drew criticism from some environmentalists opposed to fracking.

Waning Confidence

"We're disappointed in his enthusiasm for shale gas," said Iris Marie Bloom, director of Protecting Our Waters in Philadelphia. Obama "spoke about gas as if it's better for the environment, which it's not."

Deutch, who headed an advisory panel on fracking for the Energy Department, voiced concern that public confidence in the technology will wane if action isn't taken to address environmental concerns. The potential positive impact of increased North American production are "enormous," he said.

Higher U.S. output lessens the ability of countries like Iran and Russia to use "energy diplomacy" as a means of strengthening their influence, Amy Myers Jaffe, director of the Baker Institute Energy Forum at Rice University, and her colleagues wrote in a report last year.

While the U.S. will still have to pay attention to issues such as Israel's security and Islamic fundamentalism in the Mideast, which could affect oil prices, it won't have to be as worried about its supplies.

Positive 'Shock'

Carlos Pascual, special envoy and coordinator for international energy affairs at the State Department, suggested at a Council on Foreign Relations conference in December that the increased production in the U.S. and elsewhere gives Washington more "maneuverability" in using sanctions to deal with Iran and its nuclear aspirations.

The increased U.S. production of oil and natural gas is a "positive supply shock" for the economy and for national security, said Philip Verleger, a former director of the office of energy policy at the Treasury Department and founder of PKVerleger LLC, a consulting firm in Aspen, Colorado.

"We aren't there yet, but it looks like we're blundering into a solution for the energy problem," he said.

EPA FY13 Budget Increases For Core Programs Offset By Key Grants Cuts
Posted: February 10, 2012
EPA's imminent fiscal year 2013 budget proposal will increase funds for core regulatory programs including a roughly \$38 million increase in overall funding for climate rules and increases for air and toxics policies, but these increases are offset by cuts to the agency's Superfund program and clean water and drinking water state revolving loan funds (SRFs).
According to documents reviewed by Inside EPA, President Obama's FY13 budget

due Feb. 13 will propose an overall agency funding level of \$8.3 billion, down roughly \$100 million from its current \$8.4 billion enacted level. The budget is also expected to increase the number of agency full-time equivalent (FTE) positions from its FY12 levels, although it is unclear exactly the scope of that increase. The agency's FTE level in FY11 was 17,359.

Any effort to increase EPA's staffing levels is likely to prompt push-back from House Republicans who have vowed to cut the agency's staff and budget levels. One source tracking the issue expects that Obama's budget plan is unlikely to be taken up by Congress, saying, "This thing will be dead on arrival when it comes to the Hill."

The budget proposal includes a mixture of funding increases -- for greenhouse gas (GHG) programs, Chesapeake Bay cleanup, enforcement and other agency priorities -- and decreases, including significant reductions to large grant accounts, with a roughly \$37 million cut to Superfund and expected cuts to the water SRFs.

As first reported by Inside EPA, the water funds will see a cut in the hundreds of millions of dollars, for a combined reduction of roughly \$359 million between FY12 enacted and FY13. The clean water SRF will drop from \$1.466 billion to \$1.175 billion, with the drinking water program dropping from \$917 million to \$850 million.

"This funding level continues the Federal commitment to provide annual capitalization to the State Revolving Funds that will enable EPA partners to improve wastewater treatment, address nonpoint sources of pollution and estuary revitalization, and to help ensure that water is safe to drink," an agency memo detailing budget numbers says.

A state source had said it would be a "huge concern" if the FY13 budget further cuts the SRFs, saying funding for the programs is already insufficient and that state officials year after year have to fight for funding.

"The sad thing is, [SRF funding] is not enough to begin to deal with the infrastructure needs in this country, but we remain absolutely supportive [of the SRF] as an established and effective vehicle for funding infrastructure that works," the source previously said, adding that "we are not backing away from the SRF."

Meanwhile, Obama will propose to cut Superfund by \$37 million from its FY12 enacted level of \$1.213 billion down to \$1.176 billion in FY13, with the vast majority of the cut coming from Superfund's remedial cleanup program. In the memo detailing budget numbers, the Obama administration says the cut is being made in order "to give priority to completing projects at various stages in the response process as opposed to starting new project phases. This reduction will result in a reduction in the number of site assessments, remedial investigation/feasibility studies (RI/FSSs), remedial designs (RDs), remedial actions (RAs), and post-construction operations."

Cuts to those programs and others -- including EPA's diesel emissions retrofit funding program, which is proposed to drop from almost \$30 million in FY12 to \$15 million in FY13 -- appear to offset gains elsewhere.

Water, Air Funding Increases

Among the programs proposed for an increase are several water quality funds. The Clean Water Act (CWA) section 106 grant program that help states pay for the costs of implementing water pollution control programs would increase from roughly \$238 million in FY12 to \$265 million in FY13 under the budget.

EPA's CWA section 319 program - under which EPA provides grants to states to pay for nonpoint source water pollution projects - would hold roughly steady at \$164 million in FY13, according to the budget proposal.

Water cleanup efforts in the Chesapeake Bay will also increase from \$57.3 million to \$72.6 million to help facilitate the development of watershed implementation pollution control plans and increase monitoring.

EPA is devoting roughly \$8 million in new funding for research on hydraulic fracturing which will "begin to assess potential impacts on air quality, water quality, and ecosystems," says a budget memo describing overall agency priorities.

"In FY 2013, energy and minerals extraction and injection research will focus on understanding and preventing the impacts of subsurface land use practices on water resources, including conducting research to determine whether hydraulic fracturing has adverse effects on drinking water resources," the memo says, noting EPA "will release an Interim Report on the Impacts of Hydraulic Fracturing on Drinking Water Resources" in FY13.

The budget would also see significant increases in funding for climate change initiatives, with the memo detailing a roughly \$38 million across-the-board increase in climate funding, including \$25 in new grant funding for state and local agencies doing GHG permitting, a \$4.5 million increase for the Energy Star product efficiency program and \$1.5 million in new grant funding to assist with GHG reporting requirements for the agency's climate registry. These increases "will allow the Agency to support the full range of approaches to reducing GHGs and the risks its effects pose to human health and the environment and to property," the agency memo on budget priorities says. EPA in that memo justifies the increases by saying, "The economic costs of not addressing climate change will include reduced productivity and increased hospital visits, respiratory and cardiovascular diseases, and even premature death -- especially for certain vulnerable populations like the elderly, the poor, and children."

EPA is also ramping up funding for air programs overall, with roughly \$24 million in new funding for states to help pay for implementing ambient air standards and air rules, \$15 million in new grant funding for monitoring and \$7.1 million to aid the agency in the development of GHG and air toxics rules as well as ambient air standards.

Boost For Chemical Programs

Obama is also proposing a \$44 million increase for chemical programs, calling the area "a key EPA priority," with a focus on chemical safety, increasing support for actions to reduce and assess chemical risks, and obtaining and maximizing the availability to the public of needed information on potentially hazardous chemicals."

The memo detailing funding levels states that \$12 million of expected increases will focus on "Chemical Risk Review and Reduction," and that the increase in funds will enable EPA to "initiate five to ten new risk management actions complete alternative assessments for four additional chemicals; initiate five to ten detailed assessments; issue 75 more test rules for existing chemicals; increase the number of [High Production Volume] chemicals with completed hazard characterizations; double percentage of existing [confidential business information] cases reviewed and, where appropriate, challenged; digitize approximately 16,000 [Toxic Substances Control Act] documents; and implement enhancements to IT systems and related rules/guidance (e-reporting, etc.)."

Elsewhere in the budget, the agency will "redirect or refocus approximately \$36 million within the enforcement and compliance programs in order to accelerate efforts to increase compliance with the nation's environmental laws." The agency will also increase funding to Resource Conservation and Recovery Act programs, including \$2 million "for timely development of the e-manifest system." -- Bobby McMahon (bmcMahon@iwpnews.com This e-mail address is being protected from spambots. Subject: Business Organization Letter Supporting GHG Rulemaking

Dear Acting Director Zients,

Please find attached a letter highlighting broad business community support for EPA's proposal to establish GHG emission limits for new and modified power plants under the New Source Performance Standards program and opposition to attempts to block these important new power plant standards. This diverse group of business organizations have come together to encourage the Office of Management and Budget (OMB) to finalize its review of EPA's proposal, which will clarify risks and opportunities for US businesses, while also leading to technological innovation and investment in the domestic clean energy market.

I hope you will not hesitate to reach out should you have any questions or be in need of additional information about the organizations that have signed the letter.

Best regards,
Angela

Subject: Business Organization Letter Supporting GHG Rulemaking

Dear Acting Director Zients,

Please find attached a letter highlighting broad business community support for EPA’s proposal to establish GHG emission limits for new and modified power plants under the New Source Performance Standards program and opposition to attempts to block these important new power plant standards. This diverse group of business organizations have come together to encourage the Office of Management and Budget (OMB) to finalize its review of EPA’s proposal, which will clarify risks and opportunities for US businesses, while also leading to technological innovation and investment in the domestic clean energy market.

I hope you will not hesitate to reach out should you have any questions or be in need of additional information about the organizations that have signed the letter.

Best regards,
Angela

Subject: Environment as a Latino Issue

Dear Nancy,

I would like to share a CNN article from Maria Cardona, CNN Contributor and Voces Verdes member that highlights the importance of the environment for the Latino community. Additionally, I have shared a letter affirming the support by numerous Latino groups nationwide to thank the Obama administration for adopting new mercury and toxic air pollution standards. We believe that this is an important step towards protecting the health and well-being of communities nationwide.

Please do not hesitate to contact me if you have any questions.

The CNN article and letter (attached) are below:

Why the environment is a Latino issue

By **Maria Cardona**, CNN Contributor

***Editor's note:** Maria Cardona is a Democratic strategist, a principal at the Dewey Square Group, a former senior adviser to Hillary Clinton and former communications director for the Democratic National Committee.*

(CNN) -- Amid all the jockeying of the primary debates, [President Barack Obama's 2013 budget](#) was a breath of fresh air that underscored the priorities we should have as a nation. Sure, politicians may call it a campaign document, but even if you view it as only that, it is a much needed reminder of just what we should be focusing on.

For Latinos, there is plenty in this budget, especially coming on the heels of the president's State of the Union speech a couple of weeks ago, to remind us that there is still reason to be hopeful. Obama's call for greater income equality on taxes, his focus on job creation, including focusing on key elements of his American Jobs Act (supported by 78% of Latinos), his renewed call for DREAM Act legislation in the State of the Union, and yes, his commitment to environmental and public health protections, as well as for the expansion of a clean energy economy.

While not a "typical" Latino statement, the plan to create more clean energy jobs and more responsible energy development is just what the doctor ordered, as far as they are concerned. Although it is down in the latest jobs numbers, [Latino unemployment continues to hover near 11%](#), and with many of the Latino community's job losses stemming from the slowdown in the housing market, they need this boost now.

Interestingly enough, even just a few years ago, environmental issues did not register with Latinos as top concerns for their families. That has changed. [Majorities of Latinos support strong environmental protections](#), especially since many communities happen to be in historically unsafe and polluted environs. So the president's statement -- "We don't have to choose between our environment and our economy" -- which is reflected in his budget, really hits home for Latinos. And that's not what we've been hearing in the news these days. We hear an unrepentant tirade from GOP pundits that regulations are nothing but "job killers." But Obama is telling us they save lives and create jobs?

Well, that not only happens to be the case, but GOP pundits also conveniently [disregard the fact that there were fewer regulations](#) put in place in the first three years of the Obama administration than in the first three years of the George W. Bush presidency.

But let's look at the facts that underscore why Latinos care about this issue. Hundreds of thousands of Americans are already at work in clean energy jobs. More than 100,000 people already work in the solar industry, according to the National Solar Jobs Census. Installing solar panels cannot be outsourced and fits the bill for many construction workers struggling to get by, and is a tremendous opportunity for many Latino entrepreneurs, who already have a strong foothold in the construction industry.

The president has also spoken of jobs that Latinos might get on farms -- wind farms, that is - thanks to the growth of wind power, which the Bureau of Labor Statistics says [now employs 85,000 Americans](#).

More than [150,000 jobs](#) are already out there in the clean car industry — for workers making parts and assembling hybrid and electric cars. And the shift to more advanced vehicles means more opportunity in the coming years.

We keep hearing about these "job killing regulations," but for millions of Americans and especially minority and low income communities, clean air protections are "life-saving regulations." This is another big reason environmental issues are registering on the minds of many Latino families, especially [Latina mothers](#), a key swing vote group in the upcoming elections. Low income communities overwhelmingly suffer the worst impacts of pollution nationally. Cleaning up our communities means protecting our health and creating jobs (after all, someone needs to build and install the equipment necessary to protect us from polluters). Clean air safeguards [generated approximately \\$1.3 trillion in public health and environmental benefits](#) in 2010 alone for a cost of \$50 billion. For Latino families, who often lack health insurance even if they are employed full time, these savings can make the difference between home ownership and foreclosure.

So as you listen to the politicians shouting at each other in Washington, they are drawing a very bright line and letting you know what really matters to them. Ask yourself, "Who has my and my family's best interests in mind?" The folks looking out for public health or the folks representing polluters who don't want to invest in America, or in their employees — not to mention the facilities that are now finally being forced to live up to the law? The folks who see [opportunities to bring manufacturing back](#) to America as we shift to cleaner energy or those working to keep things just the way they are — no matter the price? The answer is pretty clear. And that is what we need right now.

December 21, 2011

Dear President Barack Obama,

We, the undersigned Latino community leaders, organizations, health professionals and concerned citizens would like to thank you and Lisa Jackson, EPA Administrator, for acting on behalf of our health and the health of our families by adopting historic safeguards against mercury and other toxic air pollution.

It is well known that mercury is one of the leading causes of preventable birth defects. With this rule, you have helped to protect our children from increased risks of brain damage, cerebral palsy and other developmental problems. This action will also help to prevent thousands of premature

deaths, heart attacks, and serious respiratory illnesses saving struggling families enormous health care costs, work days lost and much suffering.

This rule is especially important to the Latino community because according to the Centers for Disease Control (CDC), Latino children have higher levels of mercury in their bodies compared with non-Hispanic white children. With 39 percent of Latinos living near a power plant, emissions controls are a critically needed and welcome safeguard.

Truly protective standards for mercury and other air toxics will reduce mercury emissions from power plants and will help Latino children across the country to avoid preventable birth defects and learning delays and have a brighter, healthier future and call on our congressional representatives to stop their attempts to sacrifice the lives and health of Americans.

Sincerely,

Roberto Carmona

This rule is especially important to the Latino community because according to the Centers for Disease Control (CDC), Latino children have higher levels of mercury in their bodies compared with non-Hispanic white children. With 39 percent of Latinos living near a power plant, emissions controls are a critically needed and welcome safeguard.

Truly protective standards for mercury and other air toxics will reduce mercury emissions from power plants and will help Latino children across the country to avoid preventable birth defects and learning delays and have a brighter, healthier future and call on our congressional representatives to stop their attempts to sacrifice the lives and health of Americans.

Sincerely,

Roberto Carmona

Why the environment is a Latino issue

By **Maria Cardona**, CNN Contributor

Editor's note: Maria Cardona is a Democratic strategist, a principal at the Dewey Square Group, a former senior adviser to Hillary Clinton and former communications director for the Democratic National Committee.

(CNN) -- Amid all the jockeying of the primary debates, President Barack Obama's 2013 budget was a breath of fresh air that underscored the priorities we should have as a nation. Sure, politicians may call it a campaign document, but even if you view it as only that, it is a much needed reminder of just what we should be focusing on.

For Latinos, there is plenty in this budget, especially coming on the heels of the president's State of the Union speech a couple of weeks ago, to remind us that there is still reason to be hopeful. Obama's call for greater income equality on taxes, his focus on job creation, including focusing on key elements of his American Jobs Act (supported by 78% of Latinos), his renewed call for DREAM Act legislation in the State of the Union, and yes, his commitment to environmental and public health protections, as well as for the expansion of a clean energy economy.

While not a "typical" Latino statement, the plan to create more clean energy jobs and more responsible energy development is just what the doctor ordered, as far as they are concerned. Although it is down in the latest jobs numbers, Latino unemployment continues to hover near 11%, and with many of the Latino community's job losses stemming from the slowdown in the housing market, they need this boost now.

Interestingly enough, even just a few years ago, environmental issues did not register with Latinos as top concerns for their families. That has changed. Majorities of Latinos support strong environmental protections, especially since many communities happen to be in historically unsafe and polluted environments. So the president's statement -- "We don't have to choose between our environment and our economy" -- which is reflected in his budget, really hits home for Latinos. And that's not what we've been hearing in the news these days. We hear an unrepentant tirade from GOP pundits that regulations are nothing but "job killers." But Obama is telling us they save lives and create jobs?

Well, that not only happens to be the case, but GOP pundits also conveniently disregard the fact that there were fewer regulations put in place in the first three years of the Obama administration than in the first three years of the George W. Bush presidency.

But let's look at the facts that underscore why Latinos care about this issue. Hundreds of thousands of Americans are already at work in clean energy jobs. More than 100,000 people already work in the solar industry, according to the National Solar Jobs Census. Installing solar panels cannot be outsourced and fits the bill for many construction workers struggling to get by, and is a tremendous

opportunity for many Latino entrepreneurs, who already have a strong foothold in the construction industry.

The president has also spoken of jobs that Latinos might get on farms -- wind farms, that is - thanks to the growth of wind power, which the Bureau of Labor Statistics says [now employs 85,000 Americans](#).

More than [150,000 jobs are already out there in the clean car industry](#) — for workers making parts and assembling hybrid and electric cars. And the shift to more advanced vehicles means more opportunity in the coming years.

We keep hearing about these "job killing regulations," but for millions of Americans and especially minority and low income communities, clean air protections are "life-saving regulations." This is another big reason environmental issues are registering on the minds of many Latino families, especially [Latina mothers](#), a key swing vote group in the upcoming elections. Low income communities overwhelmingly suffer the worst impacts of pollution nationally. Cleaning up our communities means protecting our health and creating jobs (after all, someone needs to build and install the equipment necessary to protect us from polluters).

Clean air safeguards [generated approximately \\$1.3 trillion in public health and environmental benefits](#) in 2010 alone for a cost of \$50 billion. For Latino families, who often lack health insurance even if they are employed full time, these savings can make the difference between home ownership and foreclosure.

So as you listen to the politicians shouting at each other in Washington, they are drawing a very bright line and letting you know what really matters to them. Ask yourself, "Who has my and my family's best interests in mind?" The folks looking out for public health or the folks representing polluters who don't want to invest in America, or in their employees — not to mention the facilities that are now finally being forced to live up to the law? The folks who see [opportunities to bring manufacturing back](#) to America as we shift to cleaner energy or those working to keep things just the way they are — no matter the price? The answer is pretty clear. And that is what we need right now.

More Americans believe in climate change: poll

http://www.google.com/hostednews/afp/article/ALeqM5hXv72I7nx7ZTg_QuI3Ix1c3i3uXw?docId=CNG.dca855da9e6c393c07dda475a1590504.e41

WASHINGTON — Nearly two-thirds of Americans believe that climate change is real -- the highest level in two years -- as the public trusted its own observations of rising temperatures, a poll said Tuesday.

The growing acceptance of global warming comes despite fierce political division over the issue in the world's largest economy, with proposals to mandate cuts on carbon emissions failing in Congress.

Sixty-two percent of Americans agree that there is solid evidence that the Earth's average temperature has been getting warmer over the past four decades, according to the survey by the University of Michigan's Gerald Ford School of Public Policy and the Muhlenberg College Institute of Public Opinion.

Twenty-six percent said they did not believe there was evidence of global warming, while the remaining 12 percent said they were unsure, the poll said.

In the survey, almost half of Americans who accepted global warming said that they were primarily convinced by personal observations of warmer temperature or weather changes.

Nine of the 10 warmest years in history have taken place since 2000, according to US space agency NASA.

Last year broke records for severe weather in the United States, with extreme events such as

tornadoes and tropical storms causing more than \$55 billion in damage, according to the National Oceanic and Atmospheric Administration.

The poll showed a sharp gap depending on ideology, with 78 percent of supporters of President Barack Obama's Democratic Party saying there is solid evidence of climate change compared with 47 percent of supporters of the rival Republican Party saying so.

Some leading Republicans including candidates seeking to replace Obama doubt that human activity is causing climate change, with some lawmakers arguing that environmentalists want to hurt business interests.

The survey had found that 65 percent believed in climate change in fall 2009, with the figure slipping to 52 percent the following spring amid staunch opposition in the Senate to a proposal on fighting climate change.

The latest survey took opinions by telephone of 887 US residents in December, with a margin of error of 3.5 percentage points.

Pittsburgh and the surrounding counties have been designated as an ozone non-attainment area under the 1997 8-hour ozone National Ambient Air Quality Standard (NAAQS). As part of their State Implementation Plan (SIP) the State mandated consumption of a low (7.8 lb) Reid Vapor Pressure (RVP) gasoline blend for the summer season (June 1 through September 15) and required installation of Stage II vapor recovery equipment at gas dispensing stations. On February 7, 2011 EPA published a notice in

the Federal Register stating that Pittsburgh had attained the 1997 standard, presumably with the control technologies mentioned above.

On January 26, 2012 Pennsylvania State Senator Vogel, along with 39 cosponsors introduced "An Act amending the act of January 8, 1960 (1959 P.L.2119, No.787), known as the Air Pollution Control Act, further providing for Environmental Quality Board; and repealing control of volatile organic compounds from gasoline-dispensing facilities". This bill would repeal the summer low-RVP gasoline requirement and the gas station vapor recovery equipment for the Pittsburgh area and the surrounding seven counties.

S. 1386 was reported as committed on February 7, 2012 and sent to the Appropriations Committee on February 8. The Senate is scheduled to vote on March 7.

By Janet McGurty and Selam Gebrekidan

NEW YORK, March 1 (Reuters) - The Pennsylvania state senate will vote next Wednesday on a bill that would lift Pittsburgh's unique gasoline blend requirements, aimed at alleviating potential supply problems related to the shutdown of some of the state's refineries that make the fuel.

For many years, the former steel-making capital has used gasoline specially blended to burn cleanly and cut down on air pollution. However, the closure of two of the three Philadelphia-area refineries last year has left the city facing a supply shortage of the 7.8 Reid Vapor Pressure (RVP) fuel.

In January, the state senate, concerned about the effect of the refinery closures on Pittsburgh gasoline supply, introduced a bill -- Senate Bill 1386 -- to lift the special requirement.

"We have overwhelming support in the senate and over the state of Pennsylvania from consumers," said Mike Rader, executive director of the state senate's agricultural and rural affairs committee, adding the bill has found support from 40 out of the 50 state senators.

Buckeye Partners <BPL.N>, which operates a major east-to-west gasoline and diesel pipeline, said shipments in its Chicago-to-Pittsburgh pipeline have increased following the shutdown of Northeast refineries.

A Buckeye representative declined to provide specific volumes. Midwest trade sources say the pipeline is running near full rates with gasoline shipments from Chicago.

The three Philadelphia refineries, which comprise about 50 percent of the northeastern U.S. refining capacity, fell victim to the high price of imported light, sweet crude, which is what they are configured to process into gasoline and diesel.

Sunoco Inc <SUN.N> shut its 178,000-barrels-per-day refinery in Marcus Hook, Pennsylvania last year due to poor margins. It had failed to attract a buyer for the plant.

Supplies will be even tighter if Sunoco cannot find a buyer for its 335,000-bpd refinery in Philadelphia by July 1, at which point it says it will shutter the plant.

At the end of September 2011, ConocoPhillips <COP.N> ceased operating its 185,000-bpd refinery in Trainer and mothballed it while seeking a buyer.

Pittsburgh and the surrounding counties have been designated as an ozone non-attainment area under the 1997 8-hour ozone National Ambient Air Quality Standard (NAAQS). As part of their State Implementation Plan (SIP) the State mandated consumption of a low (7.8 lb) Reid Vapor Pressure (RVP) gasoline blend for the summer season (June 1 through September 15) and required installation of Stage II vapor recovery equipment at gas dispensing stations. On February 7, 2011 EPA published a notice in the Federal Register stating that Pittsburgh had attained the 1997 standard, presumably with the control technologies mentioned above.

On January 26, 2012 Pennsylvania State Senator Vogel, along with 39 cosponsors introduced "An Act amending the act of January 8, 1960 (1959 P.L.2119, No.787), known as the Air Pollution Control Act, further providing for Environmental Quality Board; and repealing control of volatile organic compounds from gasoline-dispensing facilities". This bill would repeal the summer low-RVP gasoline requirement and the gas station vapor recovery equipment for the Pittsburgh area and the surrounding seven counties.

S. 1386 was reported as committed on February 7, 2012 and sent to the Appropriations Committee on February 8. The Senate is scheduled to vote on March 7.

By Janet McGurty and Selam Gebrekidan

NEW YORK, March 1 (Reuters) - The Pennsylvania state senate will vote next Wednesday on a bill that would lift Pittsburgh's unique gasoline blend requirements, aimed at alleviating potential supply problems related to the shutdown of some of the state's refineries that make the fuel.

For many years, the former steel-making capital has used gasoline specially blended to burn cleanly and cut down on air pollution. However, the closure of two of the three Philadelphia-area refineries last

year has left the city facing a supply shortage of the 7.8 Reid Vapor Pressure (RVP) fuel.

In January, the state senate, concerned about the effect of the refinery closures on Pittsburgh gasoline supply, introduced a bill -- Senate Bill 1386 -- to lift the special requirement.

"We have overwhelming support in the senate and over the state of Pennsylvania from consumers," said Mike Rader, executive director of the state senate's agricultural and rural affairs committee, adding the bill has found support from 40 out of the 50 state senators.

Buckeye Partners <BPL.N>, which operates a major east-to-west gasoline and diesel pipeline, said shipments in its Chicago-to-Pittsburgh pipeline have increased following the shutdown of Northeast refineries.

A Buckeye representative declined to provide specific volumes. Midwest trade sources say the pipeline is running near full rates with gasoline shipments from Chicago.

The three Philadelphia refineries, which comprise about 50 percent of the northeastern U.S. refining capacity, fell victim to the high price of imported light, sweet crude, which is what they are configured to process into gasoline and diesel.

Sunoco Inc <SUN.N> shut its 178,000-barrels-per-day refinery in Marcus Hook, Pennsylvania last year due to poor margins. It had failed to attract a buyer for the plant.

Supplies will be even tighter if Sunoco cannot find a buyer for its 335,000-bpd refinery in Philadelphia by July 1, at which point it says it will shutter the plant.

At the end of September 2011, ConocoPhillips <COP.N> ceased operating its 185,000-bpd refinery in Trainer and mothballed it while seeking a buyer.

Pittsburgh and the surrounding counties have been designated as an ozone non-attainment area under the 1997 8-hour ozone National Ambient Air Quality Standard (NAAQS). As part of their State Implementation Plan (SIP) the State mandated consumption of a low (7.8 lb) Reid Vapor Pressure (RVP) gasoline blend for the summer season (June 1 through September 15) and required installation of Stage II vapor recovery equipment at gas dispensing stations. On February 7, 2011 EPA published a notice in the Federal Register stating that Pittsburgh had attained the 1997 standard, presumably with the control technologies mentioned above.

On January 26, 2012 Pennsylvania State Senator Vogel, along with 39 cosponsors introduced "An Act amending the act of January 8, 1960 (1959 P.L.2119, No.787), known as the Air Pollution Control Act, further providing for Environmental Quality Board; and repealing control of volatile organic compounds from gasoline-dispensing facilities". This bill would repeal the summer low-RVP gasoline requirement and the gas station vapor recovery equipment for the Pittsburgh area and the surrounding seven counties.

S. 1386 was reported as committed on February 7, 2012 and sent to the Appropriations Committee on February 8. The Senate is scheduled to vote on March 7.

By Janet McGurty and Selam Gebrekidan

NEW YORK, March 1 (Reuters) - The Pennsylvania state senate will vote next Wednesday on a bill that would lift Pittsburgh's unique gasoline blend requirements, aimed at alleviating potential supply problems related to the shutdown of some of the state's refineries that make the fuel.

For many years, the former steel-making capital has used gasoline specially blended to burn cleanly and cut down on air pollution. However, the closure of two of the three Philadelphia-area refineries last year has left the city facing a supply shortage of the 7.8 Reid Vapor Pressure (RVP) fuel.

In January, the state senate, concerned about the effect of the refinery closures on Pittsburgh gasoline supply, introduced a bill -- Senate Bill 1386 -- to lift the special requirement.

"We have overwhelming support in the senate and over the state of Pennsylvania from consumers," said Mike Rader, executive director of the state senate's agricultural and rural affairs committee, adding the bill has found support from 40 out of the 50 state senators.

Buckeye Partners <BPL.N>, which operates a major east-to-west gasoline and diesel pipeline, said shipments in its Chicago-to-Pittsburgh pipeline have increased following the shutdown of Northeast refineries.

A Buckeye representative declined to provide specific volumes. Midwest trade sources say the pipeline is running near full rates with gasoline shipments from Chicago.

The three Philadelphia refineries, which comprise about 50 percent of the northeastern U.S. refining capacity, fell victim to the high price of imported light, sweet crude, which is what they are configured to process into gasoline and diesel.

Sunoco Inc <SUN.N> shut its 178,000-barrels-per-day refinery in Marcus Hook, Pennsylvania last year due to poor margins. It had failed to attract a buyer for the plant.

Supplies will be even tighter if Sunoco cannot find a buyer for its 335,000-bpd refinery in Philadelphia by July 1, at which point it says it will shutter the plant.

At the end of September 2011, ConocoPhillips <COP.N> ceased operating its 185,000-bpd refinery in Trainer and mothballed it while seeking a buyer.

Pittsburgh and the surrounding counties have been designated as an ozone non-attainment area under the 1997 8-hour ozone National Ambient Air Quality Standard (NAAQS). As part of their State Implementation Plan (SIP) the State mandated consumption of a low (7.8 lb) Reid Vapor Pressure (RVP) gasoline blend for the summer season (June 1 through September 15) and required installation of Stage II vapor recovery equipment at gas dispensing stations. On February 7, 2011 EPA published a notice in the Federal Register stating that Pittsburgh had attained the 1997 standard, presumably with the control

technologies mentioned above.

On January 26, 2012 Pennsylvania State Senator Vogel, along with 39 cosponsors introduced "An Act amending the act of January 8, 1960 (1959 P.L.2119, No.787), known as the Air Pollution Control Act, further providing for Environmental Quality Board; and repealing control of volatile organic compounds from gasoline-dispensing facilities". This bill would repeal the summer low-RVP gasoline requirement and the gas station vapor recovery equipment for the Pittsburgh area and the surrounding seven counties.

S. 1386 was reported as committed on February 7, 2012 and sent to the Appropriations Committee on February 8. The Senate is scheduled to vote on March 7.

By Janet McGurty and Selam Gebrekidan

NEW YORK, March 1 (Reuters) - The Pennsylvania state senate will vote next Wednesday on a bill that would lift Pittsburgh's unique gasoline blend requirements, aimed at alleviating potential supply problems related to the shutdown of some of the state's refineries that make the fuel.

For many years, the former steel-making capital has used gasoline specially blended to burn cleanly and cut down on air pollution. However, the closure of two of the three Philadelphia-area refineries last year has left the city facing a supply shortage of the 7.8 Reid Vapor Pressure (RVP) fuel.

In January, the state senate, concerned about the effect of the refinery closures on Pittsburgh gasoline supply, introduced a bill -- Senate Bill 1386 -- to lift the special requirement.

"We have overwhelming support in the senate and over the state of Pennsylvania from consumers," said Mike Rader, executive director of the state senate's agricultural and rural affairs committee, adding the bill has found support from 40 out of the 50 state senators.

Buckeye Partners <BPL.N>, which operates a major east-to-west gasoline and diesel pipeline, said shipments in its Chicago-to-Pittsburgh pipeline have increased following the shutdown of Northeast refineries.

A Buckeye representative declined to provide specific volumes. Midwest trade sources say the pipeline is running near full rates with gasoline shipments from Chicago.

The three Philadelphia refineries, which comprise about 50 percent of the northeastern U.S. refining capacity, fell victim to the high price of imported light, sweet crude, which is what they are configured to process into gasoline and diesel.

Sunoco Inc <SUN.N> shut its 178,000-barrels-per-day refinery in Marcus Hook, Pennsylvania last year due to poor margins. It had failed to attract a buyer for the plant.

Supplies will be even tighter if Sunoco cannot find a buyer for its 335,000-bpd refinery in Philadelphia by July 1, at which point it says it will shutter the plant.

At the end of September 2011, ConocoPhillips <COP.N> ceased operating its 185,000-bpd refinery in Trainer and mothballed it while seeking a buyer.

EPA, Wyoming agree to more groundwater testing

By MEAD GRUVER
Associated Press

CHEYENNE, Wyo. (AP) -- The state of Wyoming and U.S. Environmental Protection Agency have agreed to additional testing of groundwater that the agency says may have become contaminated by gas development including hydraulic fracturing.

They've also agreed to postpone a scientific peer review of a draft EPA report on the contamination until after the additional sampling and analysis. The peer review was scheduled to begin this month.

Gov. Matt Mead said Thursday that the U.S. Geological Survey will conduct two more rounds of testing in the Pavillion area in central Wyoming before July.

Hydraulic fracturing, or fracking, uses pressurized water, sand and chemicals to crack open fissures within wells and improve the flow of oil and gas. The report released in December was the first time the EPA said fracking may have polluted groundwater.

FOR IMMEDIATE RELEASE
March 12, 2012

**Statement by the President on *The Blueprint for a Secure Energy Future: One-Year
Progress Report***

The progress report I received today from members of my administration underscores the headway our nation has made towards reducing our reliance on foreign oil, while also expanding American made energy. As the report highlights, we have made progress, with imports of foreign oil decreasing by a million barrels a day in the last year alone. Our focus on increased domestic oil and gas production, currently at an eight year high, combined with the historic fuel economy standards we put in place, means that we will continue to reduce our nation’s vulnerability to the ups and downs of the global oil market. We’ve also made progress in the expansion of clean energy, with renewable energy from sources like wind and solar on track to double, along with the construction of our first advanced biofuel refineries. And yet, despite the gains we've made, today's high gas prices are a painful reminder that there's much more work to do free ourselves from our dependence on foreign oil and take control of our energy future. And that’s exactly what our administration is committed to doing in the months ahead.

Diane E. Thompson
Chief of Staff
U. S. Environmental Protection Agency

THE WHITE HOUSE
Office of the Press Secretary

FOR IMMEDIATE RELEASE

March 12, 2012

The Blueprint for a Secure Energy Future: One-Year Progress Report

One year ago, the President put forward a comprehensive plan in the *Blueprint for a Secure Energy Future* that outlined the Administration's all-of-the-above approach to American energy – a strategy aimed at reducing our reliance on foreign oil, saving families and businesses money at the pump, and positioning the United States as the global leader in clean energy.

On Monday, the President will receive a new progress report, showcasing the Administration's historic achievements in each of these areas. The accomplishments in this report, which represent the efforts of six Federal agencies, underscore the Administration's commitment over the past three years to promoting an all-hands-on-deck, all-of-the-above approach to American energy and building a more secure energy future. Attached please find a copy of *The Blueprint for a Secure Energy Future: One-Year Progress Report* .

Report Highlights:

- **Increasing American Energy Independence:** A year ago, the President set a bold but achievable goal of reducing oil imports by a third in a little over a decade, relative to where they were when he ran for office. Thanks to booming U.S. oil and gas production, more efficient cars and trucks, and a world-class refining sector that last year was a net exporter for the first time in sixty years, we have already cut net imports by ten percent – or a million barrels a day – in the last year alone. And with the new fuel economy standards the President announced last year, we are on pace to meet our goal by the end of the decade.
- **Expanding Domestic Oil and Gas Production:** Domestic oil and natural gas production has increased every year President Obama has been in office. In 2011, American oil production reached the highest level in nearly a decade and natural gas production reached an all-time high.

- **Setting Historic New Fuel Economy Standards:** The Obama Administration has put in place the first-ever fuel economy standards for heavy-duty trucks, and proposed the toughest fuel economy standards for passenger vehicles in U.S. history, requiring an average performance equivalent of 54.5 miles per gallon by 2025. Over time, these new standards will save consumers more than \$8,000 in lower fuel costs.
- **Improving Energy Efficiency in 1 Million Homes:** Since October 2009, the Department of Energy and the Department of Housing and Urban Development have completed energy upgrades in more than one million homes across the country. For many families, these upgrades save over \$400 on their heating and cooling bills in the first year alone.
- **Doubling Renewable Energy Generation:** Thanks in part to the Obama Administration's investment in clean energy – the largest in American history – the United States has nearly doubled renewable energy generation from wind, solar, and geothermal sources since 2008.
- **Developing Advanced, Alternative Fuels:** In 2010, President Obama set a goal of breaking ground on at least four commercial scale cellulosic or advanced biorefineries by 2013. That goal has been accomplished, one year ahead of schedule. Together, these projects, and associated demonstration and pilot projects will produce a combined total of nearly 100 million gallons per year of advanced biofuels capacity.
- **Supporting Cutting-Edge Research:** The Department of Energy's Advanced Research Projects Agency – Energy (ARPA-E), which the Obama Administration funded for the first-time ever in 2009, has supported more than 120 individual projects aimed at achieving new and transformational energy breakthroughs.

Even with this progress, there is much more work to be done. Today, we are experiencing yet another painful reminder of why developing new American energy is so critical to our future. Just like last year, gas prices are climbing across the country – except this time, even earlier. While there are no silver bullets to solve these challenges, the Obama Administration will continue to build on the progress we've made over the past three years. Through a sustained, all-of-the-above approach to American energy we'll work to restore middle class security, reduce our dependence on foreign oil, and create an economy that's built to last.

THE BLUEPRINT FOR

MARCH 2012

A SECURE ENERGY FUTURE: PROGRESS REPORT

WHITEHOUSE.GOV

March 12, 2012

President Barack H. Obama
The White House
Washington, D.C. 20500

Dear Mr. President:

In your inaugural address, you called for bold and swift action to lay a new foundation for growth. Your plan for action included an all-out, all-of-the-above energy strategy to reduce our dependence on oil, save businesses and consumers money, and position the United States as the global leader in clean energy. You made this a priority because you believe – and we agree – that an economy built to last must make the most of America's energy resources. It must be fueled by homegrown and alternative energy sources that make us more secure and less dependent on foreign oil.

On the one-year anniversary of your *Blueprint for a Secure Energy Future*, which outlined your goals for American energy, we wanted to present a report on the significant progress we have made. During the last year alone, we established new incentives to increase safe and responsible domestic oil and gas production; proposed the toughest fuel economy standards for cars and trucks in history; provided millions of Americans with efficient and affordable transportation choices; launched new programs to improve energy efficiency in our homes, buildings, public transit, aviation and roadway systems; and took unprecedented steps to make the United States a leader in the clean energy race.

Already, there are signs that our all-of-the-above strategy is making an impact. Domestic oil and natural gas production has increased every year you have been in office. And in 2011, American oil production reached the highest level in nearly a decade and natural gas production reached an all-time high. The Administration's new fuel economy standards are making cars and trucks rolling off assembly lines today more efficient and saving American families and businesses money at the pump. Finally, because of our record investments in energy and transportation, the use of renewable energy like wind and solar has doubled since 2008, communities all across America are seeing new transit, rail and bus services, and tens of thousands of Americans have jobs as a result.

But even with this progress, there is much more work to do. Right now, we're experiencing yet another painful reminder of why developing new American energy is so critical to our future. Just like last year, gas prices are climbing across the country – except this time, even earlier. We know that there are no quick fixes to this challenge. That is why we continue to focus on an all-of-the-above energy approach that builds on the progress we've made over the past three years and makes America more energy secure in the years ahead.

Thank you for your leadership on this critical issue. And thank you for the opportunity to continue to work on behalf of the American people. This past year is a testament to the fact that when we act together, in common purpose and common effort, there is nothing the United States of America cannot achieve.

Sincerely,

Heather Zichal

I. Increasing America's Energy Independence

Highlights

- ❖ Domestic oil production has increased every year President Obama has been in office. In 2011, U.S. crude oil production reached its highest level since 2003, increasing by an estimated 120,000 barrels per day over 2010 levels to 5.6 million barrels per day.
- ❖ Since 2009, the United States has been the world's leading producer of natural gas. In 2011, U.S. natural gas production easily eclipsed the previous all-time production record set in 1973.
- ❖ Overall, oil imports have been falling since 2005, and net imports as a share of total consumption declined from 57 percent in 2008 to 45 percent in 2011 – the lowest level since 1995.

A. Expanding Production of Oil and Natural Gas

The United States: Domestic oil and natural gas production has increased every year President Obama has been in office. In 2011, U.S. crude oil production reached its highest level since 2003, increasing by an estimated 120,000 barrels per day over 2010 levels to 5.6 million barrels per day. In addition, U.S. natural gas production grew by more than 7 percent in 2011 – the largest year-over-year volumetric increase in history – and easily eclipsed the previous production record set in 1973. Currently, the United States has a record number of oil and gas rigs operating – more than the rest of the world combined.

In November 2011, the Department of the Interior (DOI) announced the proposed 2012-2017 Outer Continental Shelf Oil and Gas Leasing Program, which makes more than 75 percent of estimated undiscovered technically recoverable oil and gas resources on the U.S. Outer Continental Shelf available for exploration and development. The proposed program schedules 15 potential lease sales, 12 in the Gulf of Mexico and 3 off the coast of Alaska. Over the coming months, DOI will be working to finalize the Program, building on feedback received during the public comment period, which recently concluded.

On December 14, 2011, DOI held the first oil and natural gas lease sale in the Gulf of Mexico since the *Deepwater Horizon* explosion and oil spill. The sale attracted nearly \$338 million in total bids – about \$100 million more than the average for Western Gulf sales over the previous decade. Moving forward, DOI will hold the consolidated Central Gulf of Mexico Lease Sale 216/222 in New Orleans on June 20, 2012. The sale will include all available unleased areas – nearly 38 million acres – in the Central Planning Area offshore Louisiana, Mississippi and Alabama.

Finally, on America's public lands, DOI held 32 onshore oil and gas lease sales during calendar year 2011, offering 1,755 parcels of land covering nearly 4.4 million acres. In total, 1,296 parcels of land were leased – nearly three-quarters of those offered – generating approximately \$256 million in revenue for American taxpayers, a nearly 20 percent increase in lease sale revenue over 2010 levels.

Worldwide: On February 20, 2012, the Departments of the Interior and State joined officials from the government of Mexico to sign an agreement on the exploration and development of transboundary oil and natural gas reservoirs along the United States' and Mexico's maritime boundary in the Gulf of Mexico. This Transboundary Agreement removes uncertainties regarding development of transboundary resources in the resource-rich Gulf of Mexico and paves the way for development of common safety and environmental standards.

As a result of this agreement, an additional 1.5 million acres of the U.S. Outer Continental Shelf will be made more accessible for exploration and production activities. DOI is working with the Government of Mexico to develop common safety and environmental standards that apply not only in the area covered by the Transboundary Agreement, but in the entire Gulf of Mexico. DOI is also continuing to build strategic relationships with other oil producing countries through its leadership in the International Regulators Forum, the Ministerial Forum on Offshore Energy Safety, and the Energy and Governance Capacity Initiative sponsored by the Department of State.

B. Reducing Imports of Foreign Oil

Every president since Richard Nixon has called for America's independence from foreign oil, but Washington gridlock has prevented action again and again. In order to create a more secure energy future and protect consumers at the pump, that has to change.

In March 2011, the President set a bold but achievable goal of reducing oil imports by a third in a little over a decade, relative to where they were when he ran for office.

We are on track to achieving that goal. When President Obama took office, America imported 11 million barrels of oil a day. By the end of last year, that number dropped to 8.4 million barrels per day.

In the last year alone, in part because of booming U.S. oil and gas production, more efficient cars and trucks, and a world-class

refining sector that last year was a net exporter for the first time in sixty years, we have cut net imports by ten percent – a million barrels a day. And with the new fuel economy standards the President announced last year, we are on pace to meet our goal by the end of the decade.

Since President Obama took office, America's dependence on foreign oil has decreased every year. In 2010, the United States imported less than half of all oil consumed – a first in 13 years. In fact, net imports as a share of total consumption declined from 57 percent in 2008 to 45 percent in 2011 – the lowest level in 16 years.

C. Providing Incentives to Spur More Efficient Oil and Gas Development

In March 2011, President Obama directed DOI to determine the acreage of public lands and waters that had been leased to oil and gas companies but remained undeveloped. DOI issued a report that reached several important conclusions: First, the Department has offered substantial acreage for leasing and resource development, but much of this acreage has not been leased by industry. Second, tens of millions of acres that are currently under lease remain idle. Soon after the release of the report, President Obama released the

Blueprint for a Secure Energy Future, which called for a number of reforms to incentivize efficient oil and gas development.

DOI has reformed the terms of offshore oil and gas leases to include a range of incentives that encourage prompt development and ensure a fair return to taxpayers. These measures include escalating rental rates and tiered durational terms to incentivize prompt exploration and development. In addition, DOI recently issued guidance reinforcing the requirement that offshore lessees demonstrate a commitment to produce oil or gas in order to be eligible for further suspension of the expiration of a lease.

Beginning with Western Gulf of Mexico Lease Sale 218 held in December 2011, DOI increased the minimum bid in deepwater to \$100 per acre, up from only \$37.50, to ensure that taxpayers receive fair market value for offshore resources and to provide leaseholders with additional impetus to invest

in leases that they are more likely to develop. Rigorous analysis of the last 15 years of lease sales in the Gulf of Mexico showed that deepwater leases that received high bids of less than \$100 per acre, adjusted for energy prices at time of each sale, experienced virtually no exploration and development drilling.

Onshore, DOI's oil and gas leasing reforms – implemented in 2010 – are making oil and gas leasing more predictable and increasing certainty for industry and government alike. Between fiscal year 1998 and fiscal year 2009, the percentage of leases protested jumped from one percent to nearly 50 percent, leading DOI to invest vast amounts of staff time and attention in defending time-consuming and costly lawsuits and revisiting the leasing process after receiving direction from the courts. Since implementation of the reforms, the number of protests has declined and the protests that are received are now resolved more quickly. In fiscal year 2011, the percentage of DOI's protested oil and gas leases was down more than 20 percent from 2009.

D. Developing Region-Specific Strategies to Facilitate Responsible Development of Energy Resources

Gulf of Mexico: Currently, the Gulf of Mexico supplies more than a quarter of the nation's oil production, and the Central and Western Gulf remain the two offshore areas of highest resource potential and industry interest—and the areas where the infrastructure supporting the oil and gas industry, including the resources to support an oil spill response, are the most mature and well developed. In the midst of implementing the most comprehensive reforms to oversight of offshore oil and gas activity in U.S. history following the *Deepwater Horizon* oil spill, DOI has continued to approve plans and permits for exploration activities throughout the Gulf of Mexico.

In addition, in February 2012, President Obama welcomed the news that TransCanada plans to build a pipeline to bring crude oil from Cushing, Oklahoma, to refineries along the Gulf of Mexico. This project will help address the bottleneck of oil in Cushing that has resulted in large part from increased domestic oil production, currently at an eight year high. Moving oil from the Midwest to the world-class, state-of-the-art refineries on the Gulf Coast will modernize our infrastructure, create jobs, and encourage American energy production. The Administration has also approved dozens of new pipelines to move oil and gas, including a pipeline known as the Alberta Clipper, which brings oil from Alberta, Canada, to Superior, Wisconsin.

Alaska: A balanced and careful approach to energy exploration and development in the Arctic must account for a range of factors including resource potential; environmental needs; and the social, cultural, and subsistence needs of Alaska Native communities. Last year, President Obama issued an Executive Order to

establish an interagency Alaska working group, which has since been working to improve the efforts of Federal agencies responsible for overseeing the safe and responsible development of onshore and offshore energy in Alaska. For example, the group has been coordinating cross-agency review of Shell's proposed exploration activities in the Chukchi and Beaufort Seas, reviewing Shell's oil spill response plans, and coordinating a government-wide approach to address spill response issues associated with Shell's proposed activities beginning this summer. Potential sales in the Beaufort and Chukchi Seas off the coast of Alaska are scheduled late in the Proposed 2012-2017 OCS Oil and Gas Leasing Program for the next five year cycle in order to facilitate further scientific study and data collection and longer term planning for spill response preparedness and infrastructure. The proposed program also schedules a potential special interest sale in the Cook Inlet in 2013, if industry demonstrates interest.

Onshore, the Administration committed to holding annual lease sales in the National Petroleum Reserve-Alaska (NPR-A). Consistent with that commitment, DOI held a sale in December 2011 that resulted in new leases for over 140,000 acres of the Reserve and generated \$3.6 million in total bids. Later this year, DOI will hold an additional lease sale and finalize an integrated activity plan that will guide future sales in the NPR-A, while providing for adequate consideration and protection of the Reserve's outstanding ecological resources.

E. Raising the Bar for Safety

Offshore Oil and Gas Reforms: Since the *Deepwater Horizon* tragedy, the Obama Administration has launched aggressive and comprehensive reforms to offshore oil and gas regulation and oversight. These new safety measures include heightened drilling safety standards to reduce the chances that a loss of well control will occur, as well as a new focus on containment and response capabilities in the event of an oil spill. New workplace safety rules, including significant ones recommended by the National Commission on the BP *Deepwater Horizon* Oil Spill and Offshore Drilling, have also been implemented and an enhanced proposal is expected to be finalized before the end of 2012 following a public comment period which closed late last year. These reforms are helping to ensure that the United States can safely and responsibly expand development of its offshore energy resources. Since we put in place new safety standards in the wake of the Gulf oil spill, we have approved more than 400 drilling permits. In fact, we are now permitting at levels seen before the spill, all while meeting these important new standards.

Ensuring the Safe and Responsible Development of Natural Gas: The *Blueprint* directed the Secretary of Energy Advisory Board (SEAB) to establish a subcommittee and identify measures that can be taken to reduce the environmental impact and improve the safety of shale gas production. The final SEAB report was issued in November 2011. The Department of Energy, the Environmental Protection Agency, and the Department of the Interior are acting on many of the recommendations. For example the Administration's FY 2013 budget includes a \$45 million interagency R&D program. In addition, DOI is developing new standards to ensure public disclosure of chemicals used in hydraulic fracturing operations on public lands, and the EPA is taking steps to address concerns about potential impacts to water and air resources.

F. Protecting Consumers by Strengthening Oversight of Energy Markets

Combating Manipulation and Fraud: The Administration has pursued unprecedented coordination through the oil and gas prices fraud working group and active monitoring of gasoline and diesel projects in 360 cities across the nation. The CFTC has also taken steps to address loopholes that allowed financial trades to evade oversight by trading in unregulated or overseas markets.

I. Building a 21st Century Transportation Sector

Highlights

- ❖ The Obama Administration has put in place the first-ever fuel economy standards for heavy-duty trucks, and proposed the toughest fuel economy standards for passenger vehicles in U.S. history, requiring an average performance equivalent of 54.5 miles per gallon by 2025. Over time, these standards will save consumers more than \$8,000 in fuel costs.
- ❖ By 2015, because of the investments made by the Obama Administration, the United States will be able to produce enough batteries and components to support the manufacture of one million plug-in hybrid and electric vehicles. The Administration is also carrying out research and development that is aimed at increasing the use of natural gas in transportation and reduce our dependence on oil.
- ❖ In 2011, President Obama set a goal of breaking ground on at least four commercial scale cellulosic or advanced biorefineries by 2013. That goal has been accomplished one year ahead of schedule. Together, these projects, and associated demonstration and pilot projects will produce a combined total of nearly 100 million gallons per year of advanced biofuels capacity.

A. Reducing Consumer Costs at the Pump with More Efficient Cars and Trucks

The First-Ever Fuel Economy Standards for Heavy-Duty Vehicles: In August 2011, the Administration finalized the first-ever national fuel efficiency and greenhouse gas (GHG) emission standards for heavy-duty trucks, vans, and buses spanning model years 2014-2018. These standards, which were developed jointly by the Department of Transportation (DOT) and the Environmental Protection Agency (EPA), with input from key stakeholders, will cut GHG emissions by 270 million metric tons, reduce oil consumption by over 500 million barrels, and save truck owners and operators \$50 billion in fuel costs over the life of the vehicles covered by the program.

Historic New Standards for Passenger Vehicles: In July 2011, President Obama announced the next phase in the Administration's national program to increase the efficiency of light-duty cars and trucks. Taken together with previous steps, the standards we have proposed span model years 2011 to 2025 and represent the first meaningful update in over three decades. Under the final program, average fuel efficiency is expected to nearly double, reaching an average performance equivalent of 54.5 miles per gallon by 2025, saving consumers \$1.7 trillion at the pump – roughly \$8,200 per vehicle – reducing oil consumption by 2.2 million barrels a day by 2025, and slashing greenhouse gas emissions by 6 billion metric tons over the lifetime of the vehicles covered by these standards. The standards were officially proposed by EPA and DOT in November 2011 and are on track to be finalized this summer.

B. Deploying Advanced Technology Vehicles

Bolstering U.S. Manufacturing Capability: To help realize the President's goal of putting one million electric vehicles on the road by 2015, the Department of Energy (DOE) has supported battery and component manufacturing facilities, research and development, deployment of electric vehicle charging infrastructure, and community-based grants to help cities plan for electric vehicles and adopt innovative policies to facilitate market acceptance.

By 2015, the United States will be able to produce enough batteries and components to support one million plug-in hybrid and electric vehicles. In 2009, the U.S. had only two factories manufacturing advanced vehicle batteries. Since then, we have supported 30 new advanced battery and electric vehicle component plants that are opening across the country. In addition, in March 2012, the President launched a clean energy grand challenge to make electric-powered vehicles as affordable and convenient as gasoline-powered vehicles for the average American family within a decade. This national effort is designed to bring together America's best and brightest scientists, engineers, and businesses to work together to solve one of the most pressing energy technology challenges of our time. *EV Everywhere* will enable companies in the United States to produce electric vehicles at lower cost, with an improved vehicle range and an increased fast-charging ability, so average American families will be able to own and drive an electric vehicle as affordable and convenient as today's gasoline-powered vehicles. The savings from using lower-cost electricity instead of gasoline, roughly \$100 per month for the average driver, combined with the reduction of upfront vehicle cost, will lower energy costs for American consumers and businesses.

In addition, earlier this year, the Advanced Research Projects Agency – Energy (ARPA-E) announced that it will launch a new research competition in the coming months that will engage our country's brightest scientists, engineers and entrepreneurs to find ways to harness our abundant supplies of domestic natural gas for vehicles. Under this program, ARPA-E will support teams focused on overcoming several key barriers by developing innovative, low-cost natural gas storage technologies and methods to lower pressure in vehicle tanks and help enable the widespread adoption of natural gas vehicles.

Finally, research and development programs like the Energy Department's SuperTruck initiative are helping make our manufacturers and trucking companies more competitive. While long-haul trucks represent only 4 percent of the on-road vehicles in America, they are responsible for almost 20 percent of the country's on-road fuel consumption, and currently consume more than 30 billion gallons of gasoline a year. SuperTruck is focused on increasing the fuel efficiency of long haul trucks, or 18-wheelers, by 50 percent by 2015. To achieve this goal, companies are developing and improving vehicle technologies in engine efficiency, aerodynamics, waste heat recovery, and hybridization, among other approaches. Through these types of improvements, the Energy Department estimates fuel economy increases could save long-haul truckers more than \$15,000 per truck per year in fuel costs.

Driving Demand: In April 2011, President Obama announced the launch of the National Clean Fleets Partnership, an initiative to help large, private sector companies improve the efficiency of their fleets and reduce the country's dependence on oil. The initiative provides fleets with specialized resources, expertise, and support to incorporate alternative fuels and fuel-saving measures into their operations. Less than a year later, the number of participating companies has tripled. Together, the partners operate more than 1 million vehicles across the nation. In addition, the FY 2013 Budget included a \$1 billion National Community Deployment Challenge that would encourage investment in up to 10 to 15 model deployment communities to overcome the barriers to advanced vehicle deployment. This proposal would be 'fuel neutral,' allowing communities to determine if electrification, natural gas, or biofuels would be the best fit. Deployment Communities would serve as real-world laboratories, leveraging limited federal resources to develop different models to deploy advanced vehicles at scale. The proposal would also support the development of regional LNG corridors where alternative fuel trucks can transport goods without using a drop of oil.

Increasing Affordability: In 2008, a typical battery for a plug-in hybrid electric vehicle with a 40-mile electric range cost \$12,000 (assumes 10kWh batteries). But in part because of the investments made by the Administration, the United States is on track to demonstrate technology by 2015 that would reduce the cost to \$3,600. In addition, DOE is working with industry and state regulators to help our nation's electric distribution systems prepare for mass-market adoption.

The President has proposed to improve the current tax credit for electric vehicles by making the credit scalable based on vehicle performance up to a cap of \$10,000, expanding applicability to a broader range of advanced vehicles, and reforming the credit to make it available at the point of sale. The Administration also supports a new tax incentive for commercial trucks that provides a credit for 50 percent of the incremental cost of a dedicated alternative-fuel truck, including electric and natural gas trucks, for a five-year period.

C. Developing Next Generation Fuel Technologies

Commercializing New Fuel Technologies: In 2011, President Obama set a goal of breaking ground on at least four commercial scale cellulosic or advanced biorefineries by 2013. That goal has been accomplished one year ahead of schedule. Together, these projects, and associated demonstration and pilot projects, will produce a combined total of nearly 100 million gallons per year of advanced biofuels capacity.

In addition, EPA's continued implementation of the National Renewable Fuels Standard (RFS) has supported a growing domestic renewable fuels industry. Last year, industry reported production of approximately 14 billion gallons of renewable fuels, about 8% of total U.S. highway vehicle fuel. In fact, U.S. biofuel production is at its highest level, as average monthly production increased more than 40 percent between 2008 and 2011. EPA worked with stakeholders in evaluating new fuel technologies and feedstocks to support expanded opportunity for these fuels to be an important part of the domestic transportation fuel market. To help support deployment of advanced fuel infrastructure, in 2011, the Department of Agriculture provided over \$4 million in grants to fund 265 flex fuel dispensers in 30 states.

Supporting the Development of "Drop-in" Biofuels: In March 2011, the President directed the Secretaries of Agriculture, Energy and the Navy to work together to advance a domestic industry capable of producing "drop-in" biofuel substitutes for diesel and jet fuel. Responding to that challenge, in August 2011, the Secretaries of Agriculture, Energy, and the Navy announced an intention to partner with the private sector to help produce advanced drop-in biofuel to power military and commercial transportation. The Defense Department and USDA held an event in December 2011 to announce that the Defense Logistics Agency (DLA) has signed a contract to purchase 450,000 gallons of advanced drop-in biofuel—the single largest purchase of biofuel in government history. The fuel will be used in the U.S. Navy's demonstration of a Green Strike Group in the summer of 2012 during the Rim of the Pacific Exercise (RIMPAC), the world's largest international maritime exercise. In addition, later this year, the Administration will release a funding opportunity to initiate the development of one or more innovative pilot or commercial-scale facilities that will produce military grade drop-in biofuels.

D. Improving the Efficiency of the Federal Fleet

In 2009, the Administration set out to achieve a 30 percent reduction in petroleum consumption by the Federal fleet and ensure that 100 percent of fleet acquisitions are advanced technology, alternative fuel vehicles by 2015. In May 2011, the President issued a Memorandum on Federal Fleet Performance that committed the Federal government to achieve these goals. In the same month, GSA successfully launched the Electric Vehicle Pilot Program. Under this program, 116 EVs will be leased to 22 agencies in nine different cities across the United States, saving nearly 30,000 gallons of gas and saving American taxpayers over \$100,000 in fuel costs annually. The first vehicle, a Chevrolet Volt, was delivered to the Department of the Navy in October. The remaining vehicles will be delivered by May 2012. Outside of the pilot, GSA continues to provide options for federal agencies that want to electrify their fleet. In June 2011, GSA

awarded its first light duty electric cargo van, which can carry a payload of up to 1,000 pounds roughly 80 miles without using gasoline. Since GSA's first electric vehicle purchase was made, the agency has handled 187 electric vehicle procurements, including the 116 for the electric vehicle pilot.

In addition to the vehicles, a key part of the pilot program is the acquisition and installation of electric vehicle charging stations. To date, five charging stations have been delivered and are being installed. The remaining 50 stations are being delivered and installed in the coming month. These efforts build on the Administration's strong record in this area. In FY 2010, GSA successfully doubled the federal hybrid fleet, saving nearly 400,000 barrels of oil over the lifetime of the vehicles.

E. Expanding High Speed Rail

President Obama's has established a goal to give 80 percent of Americans access to high-speed rail within 25 years. Over the past three years, the Administration has continued to develop and expand America's high-speed and intercity passenger rail system. In May 2011, DOT announced \$2 billion in high-speed rail, bringing our unprecedented investment to \$10.1 billion to date. In FY 2011, intercity rail ridership surpassed 30 million trips, marking a new record in Amtrak's history.

F. Modernizing the American Aviation Sector

The Federal Aviation Administration (FAA) has continued to improve the performance of commercial aviation and reduce jet fuel consumption through innovations in air space management under the NextGen program, which will transform the ground-based navigation of the last century with a satellite-based navigation of the future. Through 2018, NextGen's operational improvements will save about 1.4 billion gallons of aviation fuel, thereby reducing carbon dioxide emissions by 14 million tons. At an event in Houston in January 2012, NextGen solutions were launched at two major airports and the surrounding airspace. In Houston alone, between 3 and 8.6 million gallons of fuel will be saved, the equivalent of taking between 4,000 to 8,000 cars off the road in the metropolitan area.

II. Powering The Nation's Economy and Enhancing Energy Security

Highlights

- ❖ Through the American Recovery and Reinvestment Act, the Administration made the largest investment in clean energy in history and the United States has nearly doubled renewable energy generation since 2008. According to industry experts, America's wind and solar industry currently account for tens of thousands of jobs.
- ❖ Since 2009, DOI has approved 29 onshore renewable energy projects: 16 solar projects, 5 wind farms, and 8 geothermal facilities – with total capacity of approximately 6,600 megawatts. The first solar project on public lands – 50 MW in Nevada – is anticipated to be fully operational and delivering power to the grid by May 2012.
- ❖ Through DOE's Loan Guarantee Program, the Administration has conditionally committed to support the financing of a new nuclear power plant in Burke, Georgia. This plant received its license from the Nuclear Regulatory Commission in February, making it the first new commercial nuclear power plant approved in the United States in more than three decades. When built, the plant will provide clean electricity to 1.4 million people.

A. Positioning America as the Global Leader in Clean Energy

Doubling Clean Energy Generation: The Obama Administration has made the largest investment in clean energy in history and the United States has nearly doubled renewable energy generation since 2008. In fact, last year, according to industry experts, the United States reclaimed the title as the world's leading investor in clean energy technologies, besting countries like China, India, and Germany.

Financing Deployment: Through loan programs, DOE has supported nearly 40 clean energy projects that are expected to employ more than 60,000 Americans, generate enough clean electricity to power nearly 3 million homes and displace nearly 300 million gallons of gasoline annually. The programs are supporting the world's largest wind farm, the first new U.S. nuclear plant in three decades, and several of the largest solar photovoltaic generation facilities.

To support the continued manufacture, development, and deployment of clean energy technologies, the President's FY 2013 Budget includes \$5 billion in tax credits that will catalyze nearly \$20 billion of total investment in manufacturing capacity for clean energy technologies and create tens of thousands of new construction and manufacturing jobs. The FY 2013 Budget also proposes to extend the 1603 "payments in lieu of tax credits" program and the Production Tax Credit (PTC) for electricity from renewable sources like wind, for which it is due to expire at the end of 2012.

Eliminating Wasteful Fossil Fuel Subsidies: We should not devote scarce resources to subsidizing the use of fossil fuels produced by some of the largest, most profitable companies in the world. The President has called for the elimination of \$4 billion in inefficient fossil fuel subsidies.

Permitting Clean Energy on America's Public Lands: As directed by the President, the Department of the Interior is working to permit 10,000 megawatts of renewable generation capacity – enough to power 3 million homes – from new projects by the end of 2012. Since 2009, DOI has approved 29 onshore

renewable energy projects—about 6,600 megawatts—including: 16 solar projects, 5 wind farms, and 8 geothermal facilities. These projects include the first solar projects *ever* permitted on public lands. In mid-2012, DOI expects that the first solar project on public lands – 50 MW in Nevada – will be fully operational and delivering power to the grid. The Department continues its work on environmentally responsible development of utility-scale renewable energy projects and has prioritized 17 projects, representing another 6,600 megawatts, for review in 2012.

The Department is also making progress on establishing a foundation for renewable energy development on public lands in the future. DOI has launched several important landscape level planning efforts including the Solar Programmatic Environmental Impact Statement (PEIS) that DOI is developing jointly with the Department of Energy. The Solar PEIS analyzes proposed solar energy development areas in six western States—Arizona, California, Colorado, Nevada, New Mexico, and Utah. The Department anticipates finalizing the Solar PEIS by the Fall of 2012.

Offshore, DOI is continuing to make progress in its “smart from the start” planning efforts to identify suitable areas for future wind energy development. Wind energy areas have been identified offshore Delaware, Maryland, New Jersey, Virginia, Massachusetts, and Rhode Island, with steps being taken to move toward holding the first competitive lease sales by the end of 2012. DOI is also proceeding with the permitting of a right-of-way for an offshore “backbone” transmission project that would be capable of transmitting up to 7,000 MW of offshore wind energy to the grid in the Mid-Atlantic States.

Setting a New Standard for Clean Energy in America:

President Obama continues to believe that the best way to create a domestic market for clean energy, drive innovation, and create new energy jobs and industries is to establish a clear, ambitious, and long term policy goal. The centerpiece of the Administration’s strategy is a Clean Energy Standard, or “CES” – which would double the share of electricity from clean energy sources to 80 percent by 2035 from a wide variety of clean energy sources, including renewable energy sources like wind, solar, biomass, and hydropower; nuclear power; efficient natural gas; and coal with carbon capture utilization and sequestration. By creating a market here at home for innovative clean energy technologies, we will unleash the ingenuity of our entrepreneurs – and ensure that America leads the world in clean energy.

While a CES will ultimately require Congressional legislation, the FY 2013 Budget advances this goal by increasing funding for renewable energy research and development, spurring advances in fossil energy technologies that reduce carbon emissions from coal-fired power plants, supporting nuclear energy, and promoting the expansion and use of clean energy across the country, including in rural areas.

B. Leading the World towards A Clean Energy Future

The Clean Energy Ministerial: The Clean Energy Ministerial, announced by President Obama and the Leaders of the Major Economies Forum on Energy and Climate, and led by Energy Secretary Chu, has made progress towards its goal of driving transformational low-carbon, climate friendly technologies by providing tools and platforms to improve the policy environment for energy efficiency, renewable energy, and clean energy access. Notable progress has also been made in the area of appliance and equipment efficiency; Clean Energy Ministerial (CEM) initiatives in these areas alone are estimated to have the potential to save energy equivalent to that which would be generated by 600 mid-size (500-MW) coal-fired power plants by 2030.

Launched the Climate and Clean Air Coalition to Reduce Short-Lived Climate Pollutants: In February 2012, the United States launched the Climate and Clean Air Coalition to Reduce Short-Lived Climate Pollution, a new global initiative to make rapid progress on climate change and air quality. Reducing pollutants that are “short-lived” in the atmosphere, such as methane, black carbon, and hydrofluorocarbons (HFCs), which together account for one-third of current global warming, can prevent more than 2 million premature deaths a year, avoid the annual loss of over 30 million tons of crops, increase energy security, and address climate change. Founding coalition partners include Bangladesh, Canada, Ghana, Mexico, Sweden, and the UN Environment Program.

Asia-Pacific Economic Cooperation (APEC) Summit: At the 2011 Asia-Pacific Economic Cooperation (APEC) Summit chaired by President Obama in Honolulu, leaders agreed to eliminate non-tariff barriers to environmental goods and services, including local content requirements, and cut applied tariffs on such goods and services to 5% by 2015. This will help lower costs, increase the dissemination of clean technologies, and create more green jobs. Leaders further committed to phase out inefficient fossil fuel subsidies and aspire to reduce the energy intensity of APEC economies by 45 percent by 2035.

Ensuring a Level Playing Field through Enhanced Trade Enforcement: In February 2012, the President established a new Interagency Trade Enforcement Center that brings together resources and investigators from across the Federal Government to target unfair international trade practices. In doing so, we will help to ensure that American companies in all sectors, including clean energy, are able to compete and thrive on a level playing field.

C. Increasing Production of Natural Gas Resources

The United States: Since 2009, the United States has been the world’s leading producer of natural gas. In 2011, U.S. natural gas production easily eclipsed the previous all-time production record set in 1973. The Administration is focused on building on this success and taking advantage of the nearly 100 year supply of American natural gas. In his 2012 State of the Union Address, the President announced a new goal to develop natural gas resources in a way that would, according to outside experts, support employment for 600,000 Americans by the end of the decade. This includes jobs involved in the production and distribution of shale gas as well as jobs in companies that supply services and equipment to the shale gas industry.

Worldwide: The State Department and partner agencies including the Departments of Energy, Commerce, and Interior continue to engage interested nations on the safe and environmentally-sound development of unconventional natural gas resources. The Unconventional Gas and Technical Engagement Program (UGTEP) shares the experience and expertise of U.S. federal and state regulators, academic institutions, industry leaders, and community advocacy groups with international partners, including Argentina, Chile, China, Colombia, India, Jordan, Estonia, Latvia, Lithuania, Poland and Uruguay.

D. Jumpstarting the Domestic Nuclear Industry

Supporting Deployment of Nuclear Energy: Since taking office, President Obama has been committed to restarting America’s nuclear industry to create new jobs and provide clean power to America’s communities. In 2010, the Department of Energy issued a conditional commitment for a loan guarantee to support the first U.S. nuclear reactors in more than three decades. The project, which received regulatory approval in February 2012, is located in Burke, Georgia, and will bring two new Westinghouse AP1000 reactors online, supporting 3,500 construction jobs and 800 permanent jobs. When built, the plant will provide clean electricity to nearly 1.4 million people.

Ensuring the Safety of our Nuclear Fleet and Addressing the Challenge of Nuclear Waste Disposal: In July 2011, the Nuclear Regulatory Commission (NRC) Japan Task Force released its final report to determine additional safety measures and procedures that should be required at U.S. reactors in the wake of the Fukushima accident. NRC staff is taking steps to respond to individual safety-related recommendations. In addition, in January 2012, the Administration's Blue Ribbon Commission (BRC) on nuclear waste completed its comprehensive review of policies for managing the back end of the nuclear fuel cycle, including all alternatives for the storage, processing, and disposal of civilian and defense used nuclear fuel and nuclear waste. The Administration is reviewing the BRC's recommendations carefully, and taking steps within DOE's existing authorities to lay the groundwork for a sustainable, consent-based nuclear waste strategy.

E. Investing in Cutting-Edge Clean Coal Technology

Today, approximately 80 percent of the energy consumed in the United States comes from coal, petroleum, and natural gas, with coal-fired power plants accounting for approximately half of the electricity generated. The implementation of clean, state-of-the-art coal-based technologies will help ensure America's energy security while mitigating the environmental impacts of fossil fuel use. With an historic \$3.4 billion in investments, the DOE is working with industry to keep the United States at the forefront of carbon capture, utilization, and storage technologies. These investments are already making an impact. In 2012, we saw the first utility-scale agreement to purchase low-carbon power from a power plant that uses carbon capture technology in Midland-Odessa, Texas. At the same time, the Energy Department is leveraging investments in this technology to study and demonstrate the use of captured carbon to help develop marginal oil wells through enhanced oil recovery (EOR). The learning from these 6 EOR demonstration projects may help drive market demand for captured carbon as well as increase domestic oil production.

F. Leading by Example – The U.S. Military and the Federal Government

The U.S. Military: As part of the President's commitment to a strong national defense, the Defense Department is harnessing energy efficiency and new energy technologies to give our troops better energy options on the battlefield, at sea, in the air, and at home. Through energy improvements, including \$2.5 billion in FY 2013 investments, our military will be better able to project and sustain forces around the world and improve energy security at our bases. Nearly 90 percent of that investment will go toward improving energy efficiency. DoD is investing in better aircraft engines, hybrid electric drives for ships, improved power for patrol bases in Afghanistan, and higher building efficiency at facilities worldwide. DoD is also investing in alternative and renewable energy to benefit the defense mission. That includes solar power at the tactical edge in Afghanistan, R&D on biofuels, and a commitment to add 1 gigawatt of renewable energy at our bases, mostly through private financing and performance based contracts at no net cost to the Federal government.

DoD is also using its military installations to test advanced technologies that can accelerate reductions in the Department's facility energy costs and improve its energy security. Finally, to guide investments and policy, the Operational Energy Strategy Implementation Plan, released in March 2012, serves as a roadmap to transform the way the Department uses energy in military operations.

The Federal Government: In April 2011, Federal agencies and departments released, for the first time, the Office of Management and Budget (OMB) Sustainability / Energy Scorecards. These scorecards enable agencies to target and track the best opportunities to lead by example in clean energy, and hold agencies accountable to meet a range of energy, water, pollution, and petroleum reduction targets. Data for FY 2010 indicate the Federal Government reduced direct greenhouse gas emissions and greenhouse gas emissions associated with electricity and other offsite generated energy used by the Federal government by more than 6 percent. This puts the Federal government on track to meet the goals of reducing direct emissions by 28 percent by 2020, from a 2008 baseline.

III. Building Stronger, Healthier, More Livable Communities

Highlights

- ❖ Since October 2009, the Department of Energy and the Department of Housing and Urban Development have completed energy upgrades in more than one million homes across the country. In many cases, these upgrades save families over \$400 on their heating and cooling bills in the first year alone.
- ❖ Through the President's Better Buildings Challenge, more than 60 private companies, hospitals, cities, states, colleges, and universities, among others, have collectively committed \$2 billion in energy efficiency retrofits to 1.6 billion square feet of property—roughly the equivalent of 500 Empire State Buildings. The President has also directed federal agencies to enter into at least \$2 billion in performance-based contracts over the next two years to achieve substantial energy savings at no net cost to the American taxpayer.
- ❖ Through USDA's Rural Energy for America Program (REAP) and other USDA programs, the Administration has helped approximately 13,000 rural small businesses, farmers, and ranchers, save energy and improve their bottom line by installing renewable energy systems and energy efficiency solutions that will save enough energy to power nearly 600,000 American homes for a year.

A. Promoting Energy Efficiency Across the U.S. Economy

Reducing Energy Bills for Low Income Americans: Since October 2009, the Department of Energy and the Department of Housing and Urban Development (HUD) have completed energy upgrades in more than one million homes. DOE's Weatherization Assistance Program alone has completed energy efficiency upgrades in approximately 860,000 homes across the country. On average, these upgrades save American families more than \$400 on their heating and cooling bills in the first year alone. The Weatherization Assistance Program has also been a successful job creator, supporting an average of approximately 20,000 direct jobs per quarter and thousands more indirect jobs throughout the supply chain.

Lowering Energy Costs for Renters and New Homeowners and Stabilizing Communities: Through the American Recovery Act's Neighborhood Stabilization Program 2 (NSP 2), the Tax Credit Assistance Program (TCAP) and other housing assistance programs, HUD has completed over 9,500 ENERGY STAR installations; and has performed over 17,500 efficient energy modifications that are helping low and moderate income families them save money on their energy bills. The NSP 2 program rehabilitates foreclosed and abandoned properties and sells them to new homebuyers or uses them as rentals. It is estimated that the \$7 billion in NSP 2 will ultimately support over 80,000 jobs.

Improving Energy Efficiency through the ENERGY STAR Program: DOE and EPA's ENERGY STAR program made significant progress in 2011 through its vast network of partners to help Americans make informed decisions about cost-effective ways to save energy at home, at work and in our communities. DOE and EPA began phasing in more rigorous requirements for qualified homes and new and rehabilitated multifamily high rise buildings became eligible to earn the ENERGY STAR for the first time. In another record setting year, more than 7,500 buildings and factories were certified as ENERGY STAR, for a total of 16,500 buildings. Since the program was established 20 years ago, Americans have saved billions on their utility bills.

A Framework for Continued Growth in the Home Energy Upgrade Industry: The Administration has continued to implement initiatives identified through the "Recovery Through Retrofit" initiative and address the barriers to a robust and self-sustaining home energy efficiency market. Accomplishments include the pilot of DOE's Home Energy Score, a new voluntary program that is helping homeowners make cost-effective decisions about energy improvements, and the development of standard work specifications and health protocols for energy upgrades and guidelines for effective training and certification.

Setting New Standards for Residential and Commercial Appliances: In August 2011, DOE issued final energy efficiency standards for home refrigerators and freezers that will improve their efficiency by about 25 percent by 2014. These new standards, developed through a consensus process with manufacturers, consumer groups and environmentalists, are expected to deliver more than \$200 in electricity bill savings for the typical consumer over the lifetime of the refrigerator. These standards are part of a broader Department effort designed to help families save money by increasing the efficiency of residential and commercial appliances and products. Under the Obama Administration, DOE has finalized new efficiency standards for more than thirty products, which are estimated to save consumers more than \$300 billion through 2030.

The "Better Buildings" Initiative: The Better Buildings Initiative the President announced in February 2011 consists of administrative actions, a challenge to the private sector, and legislative proposals aimed at improving energy efficiency in commercial buildings by 20 percent by 2020. The Administration also announced a MOU between the Department of Energy and the Appraisal Foundation to establish standards and guidelines for industry practitioners for factoring energy performance into buildings appraisals, as well as a new competitive grant program (\$1.5 million) for technical and community colleges to create training programs for building energy management.

In December 2011, the President announced new commitments to the Better Buildings Challenge. This is the public-private partnership component of the Initiative and now includes public and private sector commitments totaling more than 1.6 billion square feet, 300 manufacturing plants, and nearly \$2 billion in financing support for building energy upgrades. In addition, to encourage the Federal government to lead in energy efficient practices, the President issued a Memorandum directing agencies to enter into a minimum of \$2 billion in performance-based contracts over the next

two years. These contracts represent an approach to financing retrofits by using long term-energy savings to pay for up-front costs, achieving significant savings at net cost to the American taxpayer.

Unlocking Investments in Industrial Energy Efficiency: The Administration has partnered with manufacturing companies, representing over 1,400 plants, to improve energy efficiency by 25 percent over 10 years. If this performance were achieved by the entire U.S. manufacturing sector over the next decade, savings in total energy costs could exceed \$100 billion. The Administration will continue to take new steps to work with manufacturers and states to support investment in industrial energy efficiency.

In addition, Federal agencies have partnered with state and local officials and businesses through the Economy, Energy, Environment (E3) initiative to help manufacturers streamline their operations, increase their profitability and sustainability, and become more competitive. Finally, the President is urging Congress to pass bipartisan legislation that supports investments in industrial energy efficiency such as combined heat and power and encourages state regulatory reform.

B. Promoting Energy Efficiency and Clean Energy in Rural America

Through USDA's Rural Energy for America Program (REAP) and other USDA programs, the Administration has helped approximately 13,000 rural small businesses, farmers, and ranchers, save energy and improve their bottom line by installing renewable energy systems and energy efficiency solutions that will save enough energy to power nearly 600,000 American homes for a year. Since 2003, REAP has

funded over 1,000 solar projects and over 560 wind projects. In addition, a first-of-its-kind rule from the USDA Rural Utilities Service will soon be finalized and provide new opportunities for loan and loan guarantees in energy efficiency. This program will focus will attract new businesses and create new jobs in rural areas, encourage the use of renewable energy fuels, and support residential and commercial energy audits.

C. Developing Robust Public Transit Options

The TIGER Program: The FY 2013 Budget proposes to permanently authorize the TIGER (Transportation Investment Generating Recovery) program, which has supported innovative projects like multi-modal transportation hubs and streets that accommodate pedestrian, bicycle, and transit access. TIGER has leveraged hundreds of millions of dollars in private, State, and local funds. The proposal includes \$500 million in competitive grant funding in FY 2013 and \$3.4 billion over six years. In addition, the Budget proposes \$108 billion for transit programs over six years, more than doubling the commitment to transit in the prior reauthorization for both existing capacity and capacity expansion.

In three previous TIGER rounds, DOT funded 172 innovative projects in all 50 states, the District of Columbia, and Puerto Rico. Demand has been incredibly high, with over 3,300 applications totaling over \$93 billion requested. This unprecedented investment for buses, subways, and other systems of public transportation will help create thousands of jobs, improve and expand travel options, cut energy use and help make our communities more livable.

Improving Transportation Choices: In 2011, the Federal Transit Administration (FTA) entered into more congestion-relieving major capital construction grants in a single year than ever before. These projects will provide Americans greater transportation choice while reducing our nation's dependence on foreign oil. Looking ahead, the FTA intends to keep the momentum going by investing in many new projects, including Charlotte, North Carolina's 9.3 mile LYNX Blue Line Extension, which would provide commuters along the congested I-85/US-29 a fuel-efficient alternative to high-gas prices.

Maintaining a Reliable, Fuel-Efficient Bus Transit System: In FY 2011, DOT awarded more than \$750 million through the FTA's State of Good Repair discretionary grant initiative, which will significantly help to modernize our nation's bus fleet, including more than \$6 million awarded to Centre Area Transportation Authority in State College, Pennsylvania, to purchase 16 new energy-efficient, compressed natural gas fueled buses.

Investing in Zero-Emission Transit Technology: FTA announced more than \$13 million through the FY 2011 National Fuel Cell Bus Program to continue the development of commercially viable fuel cell bus technologies that will significantly improve fuel efficiency and reduce our nation's dependence on foreign oil. For example, FTA will invest \$3.3 million – half of the total project cost – for UTC Power to integrate the next generation fuel cell into a lightweight New Flyer transit bus. The zero-emission bus will be demonstrated in Connecticut.

The National Clean Diesel Campaign: Through EPA's National Clean Diesel Campaign (NCDC), the Administration has promoted clean air strategies by working with manufacturers, fleet operators, air quality professionals, environmental and community organizations, and state and local officials to reduce diesel emissions. This effort includes the State Clean Diesel Program which provides communities with funds to replace or retrofit outdated diesel engines or to replace older engines with cleaner emerging technologies. From 2008 to 2010, EPA awarded nearly \$470 million to more than 350 grantees in 50 states and the District of Columbia to retrofit, replace, or repower more than 50,000 vehicles and equipment in a variety of industries.

D. Deploying Electrification Infrastructure in American Communities

Before 2009, there were fewer than 500 electric vehicle charging stations in America. But because of the investments made by the Obama Administration, there are over 3,000 chargers deployed today and there will be more than 18,000 by 2012. Under the Transportation Electrification Initiative at DOE, companies are developing, deploying and analyzing EVs and EV infrastructure, and educating the public to help accelerate the market adoption of advanced electric-drive vehicles. The eight projects under the Transportation Electrification Initiative represent the world's largest electric vehicle demonstration project and will result in the deployment of over 13,000 grid-connected vehicles and over 22,000 charging points in residential, commercial, and public locations nationwide by the end of 2013. Through these cost-shared projects, DOE will collect information about how consumers use and charge electric vehicles, which will be critical to informing the broader rollout of electric vehicles and chargers nationwide.

E. Tracking Greenhouse Gas Emissions

In January 2012, for the first time, the U.S. Environmental Protection Agency (EPA) released greenhouse gas (GHG) data collected under the GHG Reporting Program. The data set shows 2010 U.S. GHG emissions from large industrial facilities, and from suppliers of certain fossil fuels and industrial gases. Reporting entities used uniform methods for estimating emissions, which enables data to be compared and analyzed. The data set will be used to inform public policy, identify key sources of GHG emissions over time, and help communities and businesses track emissions and find cost-saving efficiencies.

IV. Innovation for the Next Generation

Highlights

- ❖ The Department of Energy's Advanced Research Projects Agency – Energy (ARPA-E), which the Administration funded for the first-time ever in 2009, has supported more than 120 individual projects aimed at achieving new and transformational energy breakthroughs.
- ❖ To unleash American innovation, the Administration has launched a series of clean energy innovation hubs, which bring together teams of the best researchers and engineers in the United States to solve major energy challenges. The hubs will focus on improving batteries and energy storage, reducing constraints from critical materials, developing fuels that can be produced directly from sunlight, improving energy efficient building systems design, and using modeling and simulation for advanced nuclear reactor operations.
- ❖ The cost of solar modules has come down 400 percent in the past four years, from about \$4 per watt in 2008 to \$1 today. We are well on our way to achieving our ambitious goal – that solar power that costs the same or less than fossil fuels by the end of this decade.
- ❖ In October 2011, the Obama Administration announced that it would accelerate the permitting review of seven proposed electric transmissions lines through a Rapid Response Team for Transmission. These infrastructure projects, when built, will increase grid capacity, facilitating better integration of renewable energy sources, avoiding blackouts, and helping to accommodate the growing number of electric vehicles on the road.

A. Building a 21st Century Electric Grid

Expanding the Grid: In 2009, nine agencies signed a Memorandum of Understanding to improve how high-voltage interstate transmission lines are sited on Federal lands. In October 2011, the Administration announced that it would accelerate the permitting review of seven proposed electric transmissions lines through a Rapid Response Team for Transmission. These infrastructure projects, when built, will increase grid capacity, facilitating better integration of renewable energy sources, avoiding blackouts, and helping to accommodate the growing number of electric vehicles on the road.

Empowering Consumers and Businesses with Energy Data: Building on our commitment in the *Blueprint* to empower energy consumers and foster innovation, the Administration launched a “Green Button” initiative in September 2011 to promote the common-sense idea that electricity customers should be able to download their own energy usage information in consumer-friendly and computer-friendly formats. In response to the Administration’s call-to-action, the three largest electric utilities in California—plus utilities in Texas, Maryland, and Washington, DC – have publicly committed to offer customers the ability to download their own energy usage data in a nationally recognized standard. Armed with their own detailed electricity data, customers will have more opportunities and choices to use a growing array of on-line services that help homeowners and building owners save on their energy bills.

B. Staying on the Cutting-Edge with Clean Energy R&D:

The Advanced Research Projects Agency-Energy (ARPA-E): In 2009, the Administration funded ARPA-E for the first time ever with \$400 million as part of the Recovery Act. The new agency invests in projects that swing for the fences – high-risk, high-reward efforts to develop transformational energy technologies that hold the potential to radically shift our Nation’s energy reality.

Building upon the initial investment, in late September 2011, the ARPA-E program announced 60 cutting-edge research projects in 25 states. In total, The ARPA-E has supported more than 120 individual projects. Projects include: work to develop improved energy storage devices for the electric grid; intelligent building

systems; next generation vehicle batteries that could make longer range electric cars that are cheaper to own and operate than today's gasoline cars; and groundbreaking new liquid fuels that could be produced from bacteria in combination with carbon dioxide and chemical energy or electricity.

After just two years, many of ARPA-E's projects are already generating additional private sector investment. Eleven of the projects have collectively garnered more than \$200 million in private outside funding after an original investment from ARPA-E of just \$39.1 million. Also, several new ventures have already formed spin-off companies from ARPA-E-funded projects, creating yet more new technologies, products, and jobs.

Bringing Together the Best Minds to Advance Critical Energy Research and Development: In order to catalyze innovation, the Obama Administration has launched a series of clean energy innovation hubs, which bring together teams of the best researchers and engineers in the United States to achieve major energy goals. In 2010, the first Energy Innovation Hubs began operations with some of the top scientists from academia, industry, and government charged to collaborate and overcome known barriers in energy technology. The first three hubs focused on how to build more-efficient nuclear reactors, design more energy efficient buildings, and produce biofuel from the sun.

Modeled after the concentration of brainpower and resources that defined the Manhattan Project, these integrated research centers combine basic and applied research with engineering to accelerate scientific discovery in these critical energy issues. In FY 2012, Congress partly funded the President's request to double the number of hubs – providing resources to launch two new hubs this year. The Batteries and Energy Storage Hub will focus on accelerating research and development of electrochemical energy storage for transportation and the electric grid. The Critical Materials Hub will primarily focus on technologies and approaches that increase the availability and reduce or eliminate the need for critical materials for energy efficiency and renewable energy systems. Together, the five hubs will shorten the path from laboratory innovation to technological development, and lead the way toward American competitiveness, economic growth and energy security.

Subject when you are back

(b)(5) Deliberative

Megan Ceronsky, an attorney at the Environmental Defense Fund, said EPA was still in talks with the plaintiffs to set a new timeline for the remaining greenhouse gas rules and had given no sign of renegeing on the agreement. EPA has missed several deadlines for that standard and for the refinery rules, but Ceronsky said that may be because they are proving technically difficult to write.

Yesterday's release of the rule for new plants, which was widely praised by environmentalists -- even as it unleashed fury from some Republicans on Capitol Hill -- removed any doubt that EPA would walk away from its obligations on climate change, Ceronsky said ([Greenwire](#) , March 28).

"I think the fact that the president went forward with this standard today is a huge statement about his commitment to making serious progress toward reducing greenhouse gas emissions," she said.

David Doniger, policy director of the Climate and Clean Air Program at the Natural Resources Defense Council, agreed that Jackson had been misunderstood.

"I don't interpret what she said as any kind of statement that they're not going to work on that," he said.

"We obviously think that the next important step is to issue the existing source standards," he added. "By definition, that's where all today's pollution is coming from."

Killing Coal

So much for an 'all of the above' energy strategy.

For three years the Environmental Protection Agency has imposed a de facto ban on new coal-fired power while doing everything it can to harm existing coal plants. But for once there's something good to say about the latest EPA carbon rule: At least the agency was less devious when it formalized the coal ban last week.

The EPA proposed what are known as "new source performance standards" for carbon under the Clean Air Act, which are part of the agency's "endangerment finding" to limit greenhouse gas emissions. To control CO₂, utilities will need to install new technology, such as capture-and-sequestration systems that are among the world's most complex and expensive industrial equipment.

But great news: The EPA estimates that the total cost of this rule will be \$0. It will have no major effect on the economy. Not a single job will be lost.

How can that be? In its cost estimates, the EPA assumes the U.S. will never complete another coal-fired project. Ever. The agency is conceding that coal development has been shut down as a result of its many new regulations, such as the recent mercury rule and the illegal permitting delays that a federal appeals court slapped down last week.

But there's also a problem. Because the putative "regulatory impact" is zero, there are also no benefits. So why is the environmental lobby applauding the EPA's new rule like a performing seal? Even the EPA itself says the performance standards will apply only to new plants, not the legacy fleet that generates almost half of U.S. electricity. The media were careful to repeat this claim too.

It isn't true. Just as the new rule's fine print reveals that the rules won't apply to the new plants because they'll never be built, it also shows that the rules will put old plants at risk because of another EPA program known as New Source Review.

Whenever a plant upgrades—whether installing a new fan blade or replacing the proverbial toilet seat—it must comply with every rule on the books. So as a utility obeys the mercury rule, say, it will also be caught in the pincer movement of these new carbon performance standards. The green lobby knows this will slowly kill even current coal plants over time.

The problem with carbon capture and storage—apart from costs—is that the technology is still speculative. Even with massive subsidies, not a plant in the world is diverting its CO₂ on a commercial scale and injecting it into spent oil and gas reservoirs underground. The Energy Department says it will take 20 years or more to get to scale, and even that prediction has to be balanced against the bureaucracy's lousy track record. As for plants in areas where such geological formations do not exist, well, they could build pipelines, but the White House has a thing about pipelines.

Everyone in Washington including President Obama claims to favor an "all of the above" energy

portfolio. As misguided as that is—far better to let markets decide which energy sources to develop—the EPA has now admitted that Mr. Obama doesn't really mean it. Coal is not part of his "all." Voters in swing coal states such as Ohio and West Virginia probably do care about that.

News Headline: CLIMATE: Gas switch seen paying mitigation dividend for power, not for cars | 

Outlet Full Name: E&E News PM

News Text: A report published today challenges the conventional wisdom that using natural gas over other fossil fuels will pay widespread dividends in the battle against global warming.

The new report by Environmental Defense Fund scientist Ramón Alvarez says generating more electricity from natural gas could have the immediate effect of reducing heat-trapping emissions of greenhouse gases but would have the opposite effect in transportation, exacerbating global warming for decades or even centuries to come.

"There has been so much public debate about the role of natural gas in our economy, and there are many who would like to believe that natural gas can play a constructive role in helping to transition our nation to a cleaner, lower-carbon future," said Mark Brownstein, chief counsel of EDF's energy program, on a call with reporters. "The work that is presented here today provides an analytical tool to help us figure out what exactly the benefits would be."

The relative climate-related costs and benefits of a broad switch to natural gas hinge on whether methane released during gas production has a greater effect on climate change than the carbon dioxide emissions avoided through natural gas combustion, says the report published in the Proceedings of the National Academy of Sciences.

Gas is a winner if it replaces a fuel that releases more greenhouse gases into the atmosphere than it does, a calculation taking into account emissions from production, transportation and combustion -- an equation often referred to as "well-to-wheel" emissions. This balance differs from one sector to another.

Brownstein and other EDF staffers stress that it's difficult to make concrete recommendations because reliable data do not exist for emissions from gas production. The EDF report relied on U.S. EPA data.

"The problem is, no one knows what the current leakage rate is," EDF spokesman Eric Pooley said.

EPA's 2011 emissions inventory is a place-saver for more concrete information the authors say they hope will become available later. EPA estimates that natural gas production and local distribution leak methane at a rate of about 2.4 percent.

Emissions from coal-fired electric generation are so much greater than gas-combustion plants that a fuel switch would reduce climate-forcing emissions as long as leakage in the natural gas system is less than 3.2 percent, the report says. That would make natural-gas-fired power plants a boon to climate mitigation.

But powering vehicles with natural gas rather than gasoline would not strike the same balance in the near term unless gas producers bring their leakage rate down to a maximum of 1.6 percent, the report says. And replacing diesel with gas would be damaging to the climate unless leak rates were under 1 percent.

The balance shifts over time because the climate-forcing effects of methane and carbon dioxide don't have the same duration. Methane has a more potent effect on climate change than does carbon dioxide, but it stays in the atmosphere a shorter time. Therefore, the value of carbon dioxide avoidance increases over time, while the effects of methane emissions lessen.

So, switching to natural gas vehicles would be damaging to the climate for the first 80 years and then would yield modest benefits on a par with raising fuel economy standards for automobiles by about 3 mpg. The switch from diesel would take 300 years to pay off in carbon terms.

The report comes as EPA prepares to release a new rule for emissions from oil and natural gas production. The main target of the rule is volatile organic compounds, but the rule would also reduce methane emissions by a quarter across the sector, mostly by requiring hydraulic fracturing operations to use "green completion" equipment to cut their emissions.

The American Petroleum Institute has asked the Office of Management and Budget for additional time to comply with the requirement, and to set a threshold for the rule that would exempt nearly all unconventional natural gas production, according to David McCabe, an atmospheric scientist at the Clean Air Task Force.

CATF joined other environmental groups today in writing a letter to White House policy adviser Valerie Jarrett urging the administration to finalize EPA's proposed rule without incorporating the industry's requests.

They said that "green completion" equipment has been available for years and is widely used by many unconventional natural gas producers.

If EPA raises the threshold for regulation, as API requested, gas producers could effectively decide not to employ green completion technology based on their own estimates of their VOCs emissions, the letter said.

Gas is a winner if it replaces a fuel that releases more greenhouse gases into the atmosphere than it does, a calculation taking into account emissions from production, transportation and combustion -- an equation often referred to as "well-to-wheel" emissions. This balance differs from one sector to another.

Brownstein and other EDF staffers stress that it's difficult to make concrete recommendations because reliable data do not exist for emissions from gas production. The EDF report relied on U.S. EPA data.

"The problem is, no one knows what the current leakage rate is," EDF spokesman Eric Pooley said.

EPA's 2011 emissions inventory is a place-saver for more concrete information the authors say they hope will become available later. EPA estimates that natural gas production and local distribution leak methane at a rate of about 2.4 percent.

Emissions from coal-fired electric generation are so much greater than gas-combustion plants that a fuel switch would reduce climate-forcing emissions as long as leakage in the natural gas system is less than 3.2 percent, the report says. That would make natural-gas-fired power plants a boon to climate mitigation.

But powering vehicles with natural gas rather than gasoline would not strike the same balance in the near term unless gas producers bring their leakage rate down to a maximum of 1.6 percent, the report says. And replacing diesel with gas would be damaging to the climate unless leak rates were under 1 percent.

The balance shifts over time because the climate-forcing effects of methane and carbon dioxide don't have the same duration. Methane has a more potent effect on climate change than does carbon dioxide, but it stays in the atmosphere a shorter time. Therefore, the value of carbon dioxide avoidance increases over time, while the effects of methane emissions lessen.

So, switching to natural gas vehicles would be damaging to the climate for the first 80 years and then would yield modest benefits on a par with raising fuel economy standards for automobiles by about 3 mpg. The switch from diesel would take 300 years to pay off in carbon terms.

The report comes as EPA prepares to release a new rule for emissions from oil and natural gas production. The main target of the rule is volatile organic compounds, but the rule would also reduce methane emissions by a quarter across the sector, mostly by requiring hydraulic fracturing operations to use "green completion" equipment to cut their emissions.

The American Petroleum Institute has asked the Office of Management and Budget for additional time to comply with the requirement, and to set a threshold for the rule that would exempt nearly all unconventional natural gas production, according to David McCabe, an atmospheric scientist at the Clean Air Task Force.

CATF joined other environmental groups today in writing a letter to White House policy adviser Valerie Jarrett urging the administration to finalize EPA's proposed rule without incorporating the industry's requests.

They said that "green completion" equipment has been available for years and is widely used by many unconventional natural gas producers.

If EPA raises the threshold for regulation, as API requested, gas producers could effectively decide not to employ green completion technology based on their own estimates of their VOCs emissions, the letter said.

News Headline: CLIMATE: Gas switch seen paying mitigation dividend for power, not for cars
|  

Outlet Full Name: E&E News PM

News Text: A report published today challenges the conventional wisdom that using natural gas over other fossil fuels will pay widespread dividends in the battle against global warming.

The new report by Environmental Defense Fund scientist Ramón Alvarez says generating more electricity from natural gas could have the immediate effect of reducing heat-trapping emissions of greenhouse gases but would have the opposite effect in transportation, exacerbating global warming for decades or even centuries to come.

"There has been so much public debate about the role of natural gas in our economy, and there are many who would like to believe that natural gas can play a constructive role in helping to transition our nation to a cleaner, lower-carbon future," said Mark Brownstein, chief counsel of EDF's energy program, on a call with reporters. "The work that is presented here today provides an analytical tool to help us figure out what exactly the benefits would be."

The relative climate-related costs and benefits of a broad switch to natural gas hinge on whether methane released during gas production has a greater effect on climate change than the carbon dioxide emissions avoided through natural gas combustion, says the report published in the Proceedings of the National Academy of Sciences.

Gas is a winner if it replaces a fuel that releases more greenhouse gases into the atmosphere than it does, a calculation taking into account emissions from production, transportation and combustion -- an equation often referred to as "well-to-wheel" emissions. This balance differs

from one sector to another.

Brownstein and other EDF staffers stress that it's difficult to make concrete recommendations because reliable data do not exist for emissions from gas production. The EDF report relied on U.S. EPA data.

"The problem is, no one knows what the current leakage rate is," EDF spokesman Eric Pooley said.

EPA's 2011 emissions inventory is a place-saver for more concrete information the authors say they hope will become available later. EPA estimates that natural gas production and local distribution leak methane at a rate of about 2.4 percent.

Emissions from coal-fired electric generation are so much greater than gas-combustion plants that a fuel switch would reduce climate-forcing emissions as long as leakage in the natural gas system is less than 3.2 percent, the report says. That would make natural-gas-fired power plants a boon to climate mitigation.

But powering vehicles with natural gas rather than gasoline would not strike the same balance in the near term unless gas producers bring their leakage rate down to a maximum of 1.6 percent, the report says. And replacing diesel with gas would be damaging to the climate unless leak rates were under 1 percent.

The balance shifts over time because the climate-forcing effects of methane and carbon dioxide don't have the same duration. Methane has a more potent effect on climate change than does carbon dioxide, but it stays in the atmosphere a shorter time. Therefore, the value of carbon dioxide avoidance increases over time, while the effects of methane emissions lessen.

So, switching to natural gas vehicles would be damaging to the climate for the first 80 years and then would yield modest benefits on a par with raising fuel economy standards for automobiles by about 3 mpg. The switch from diesel would take 300 years to pay off in carbon terms.

The report comes as EPA prepares to release a new rule for emissions from oil and natural gas production. The main target of the rule is volatile organic compounds, but the rule would also reduce methane emissions by a quarter across the sector, mostly by requiring hydraulic fracturing operations to use "green completion" equipment to cut their emissions.

The American Petroleum Institute has asked the Office of Management and Budget for additional time to comply with the requirement, and to set a threshold for the rule that would exempt nearly all unconventional natural gas production, according to David McCabe, an atmospheric scientist at the Clean Air Task Force.

CATF joined other environmental groups today in writing a letter to White House policy adviser Valerie Jarrett urging the administration to finalize EPA's proposed rule without incorporating the industry's requests.

They said that "green completion" equipment has been available for years and is widely used by many unconventional natural gas producers.

If EPA raises the threshold for regulation, as API requested, gas producers could effectively decide not to employ green completion technology based on their own estimates of their VOCs emissions, the letter said.

Subject 04/13/2012 thru 04/26/2012 Schedule for Lisa P. Jackson

*** Do not copy or forward this information ***

**EPA Administrator
Lisa P. Jackson
Schedule**

04/11/2012 06:24:31 PM

Friday, 4/13/2012

08:00 AM-08:15 AM Hold: Phone Call w/ Secretary Duncan

Ct: Tia Borders, Dept of Education Tia.Borders@ed.gov or (b)(6) Privacy

08:15 AM-09:15 AM Hold: Breakfast with Pete Rouse

Ct: Jess Blakemore: (b)(6) Privacy

Mr. Rouse's office will make a reservation

Location: White House Mess

09:45 AM-10:05 AM Title VI Roundtable

EPA Ct: Helena Wooden-Aguilar - 202-564-0792

**The Administrator will be present for 15 - 20 minutes of this hour-long meeting

Attendees:

- Vernice Miller-Travis, DBA Miller-Travis & Associates
- Michele Roberts, Campaign & Policy Coordinator, Advocates for Environmental Human Rights
- Leslie G. Fields, Esq., Director, Environmental Justice and Community Partnerships, Sierra Club
- Brent Newell, General Counsel, Center for Race, Poverty and the Environment
- Omega Wilson, President, West End Revitalization Association
- Steve Fischbach, Community Lawyer, Rhode Island Legal Services
- Marc Brennan, Esq., Retired Civil Rights Activist
- Robert Garcia, Director and General Counsel, The City Project
- Al Huang, Senior Attorney, NRDC
- Marianne Engelman Lado, Senior Counsel, Earthjustice
- Nicky Sheats, Esq., Ph.D., Director, Center for the Urban Environment, John S. Watson Institute for Public Policy of Thomas Edison State College and representing the New Jersey Environmental Justice Alliance
- Susanna Almanza, People Organized in the Defense of Earth and her Resources
- Joe Rich, Lawyers Committee for Civil Rights Under Law
- Eileen Gauna, School of Law University of New Mexico
- Monique Harden, Esq., Advocates for Environmental Human Rights
- Nathalie Walker, Esq., Advocates for Environmental Human Rights
- Chris Winter, Esq., Crag Law Center

Staff:

- Lisa Garcia, Diane Thompson (OA)
- Scott Fulton, Tseming Yang, Steve Pressman, Julia Rhodes (OGC)
- Vicki Simons, Jonathan Stein, and Helena Wooden-Aguilar (OCR)

Location: Bullet Room

10:05 AM-10:45 AM **FYI: Bullet Room In Use**

Location: Bullet Room

10:30 AM-11:00 AM **Energy, Environment, and Conservation Conference Call with Administration Officials**

CEQ Ct: (b)(6) Privacy

EPA Ct: Kelley Smith/Shira Sternberg

**Administration officials from GSA, DOT, HUD, USDA and DOI at the Undersecretary level will be on this call

Run of Show:

**MOSS will operate the computer and phone used for this call (dial-in: 866-528-5873)

10:30: Welcome and Introductions: Rohan Patel, Associate Director of CEQ

10:35: Administrator Jackson Speaks

10:40: Jon Carson, Director of White House Public Engagement, Speaks

10:45: Question and Answer Session

Best,
Shalini

THE WHITE HOUSE
Office of the Press Secretary

FOR IMMEDIATE RELEASE

April 9, 2012

-

Joint Statement by President Obama and President Rousseff

-

Read the Joint Statement in [Portuguese](#).

At the invitation of President Barack Obama, President Dilma Rousseff made an official visit to the United States on April 9, 2012 to discuss their countries' ongoing relationship on a broad range of bilateral, regional, and multilateral issues. The Leaders expressed satisfaction with the constructive and balanced partnership, based on the shared values and mutual trust that exist between their countries, the two largest democracies and economies in the Americas.

To form a U.S.-Brazil Partnership for the 21st Century, the Leaders reviewed the progress of major dialogues elevated to the Presidential-level in March 2011 - the Economic and Financial Dialogue, the Global Partnership Dialogue, and the Strategic Energy Dialogue. To contribute to the 21st Century Partnership, the Presidents directed a new Defense Cooperation Dialogue between their two Defense Ministers that will also report regularly to the Presidents. They praised the work and acknowledged the importance of numerous other interactions and consultations between their two governments in enhancing bilateral cooperation.

They coincided on the importance of the contributions from civil society and the private sector to create the basis for a US-Brazil Partnership. The Presidents participated in the U.S.-Brazil CEO Forum, noting the important role that the private sector plays in the commercial relationship and welcomed the activities of the April 9, 2012 "US-Brazil Partnership for the 21st Century" conference in Washington focused on

trade and investment, energy, innovation, competitiveness, and education.

The Leaders stressed that partnerships between state and local governments contribute to the fostering of friendship and understanding between their countries and to the advancing of shared national goals. They welcomed the signing of the Memorandum of Understanding to Support State and Local Cooperation, encouraging subnational entities to unite efforts to achieve goals in areas of mutual interest that complement the strengthening of U.S.-Brazil bilateral relations, such as trade and investment, economic opportunity, science, technology and innovation, social inclusion, environmental sustainability, and preparation for the 2014 FIFA World Cup, the 2016 Olympic and Paralympic Games and other megaevents.

The Leaders highlighted the important discussions that have taken place under the Economic and Financial Dialogue (EFD). The Presidents noted their satisfaction with the EFD's expanded focus on infrastructure and investment in both countries and welcomed the creation of a dialogue on investment under the Agreement on Trade and Economic Cooperation. The Leaders also noted the importance of the Commercial Dialogue and the Economic Partnership Dialogue between the two countries. President Obama announced the September 2012 trip of the President's Export Council to Brazil and President Rousseff stressed that high-level sectoral trade missions to the US will be organized, in areas such as foodservice, information technology, health and machinery.

President Rousseff underscored the importance of investment in infrastructure—including in view of the upcoming 2014 FIFA World Cup and the 2016 Olympic and Paralympics Games—as well as in the energy sector, in particular the development of technology and productive capacity in Brazil.

They welcomed the growth of the U.S.-Brazil trade and investment relationship, illustrated by a record \$74 billion in two-way trade in 2011. They further emphasized the importance of the mutual benefits of stimulating increased trade and investment. They reiterated their commitment to the multilateral trading system and to working together to ensure that the World Trade Organization contributes to global economic growth and job creation. The Presidents reaffirmed the commitment of both countries to advance trade in services and manufactured goods and to strengthen collaboration in agricultural policies, research, science-based sanitary and phytosanitary measures, as well as to strive, both in bilateral and multilateral fora, towards the removal of barriers to trade in agricultural products.

They highlighted education as an increasingly important strategic priority for strengthening and supporting all aspects of the U.S.-Brazil partnership, particularly science, technology, innovation, and competitiveness. Recognizing the economic advantages for both countries of increasing contact between Americans and Brazilians, the Presidents welcomed the momentum of and support for the U.S. 100,000 Strong in the Americas and the Brazilian Science Without Borders international exchange initiatives. They hailed the start of activities of the first group of students and researchers participating in Science Without Borders and look forward to welcoming thousands more students in both countries.

The Presidents welcomed the VII US-Brazil CEO Forum's support for the 100,000 Strong in the Americas and Science Without Borders initiatives, and their joint recommendations and commitment to enhanced engagement aimed at strengthening the business environment, increasing bilateral trade and investment, improving infrastructure, enhancing women's economic empowerment, encouraging energy and aviation

cooperation, and tracking progress toward these ends.

In the context of the EFD, the Presidents discussed greater collaboration in international financial institutions and as they look toward the G-20 Summit in Mexico to reduce global imbalances, promote financial stability and inclusion; and to create the conditions for strong, sustained, and balanced growth. They stressed the need to deepen the reform of the international financial institutions, which must reflect the new economic realities and, in this regard, underscored the importance of working together on quota and governance reforms in the IMF.

They welcomed the consolidation of the G20 as the highest forum for coordination of international economic policies and reaffirmed the G20 role in advancing measures to promote inclusive growth, job creation and overcoming global imbalances. They recommended that the two countries' senior representatives to the G20 continue to hold regular bilateral consultations. They noted the continued uncertainty present in the international economy while highlighting the important steps recently taken by European policymakers. They welcomed the continued signs of economic recovery in the United States. The Leaders also highlighted the opportunity for closer cooperation in the Multilateral Development Banks.

The Presidents noted the convergence of positions regarding the application of the "Emissions Trading System" (ETS) of the European Union, to international air transport. They further emphasized that issues related to international civil aviation emissions should be resolved multilaterally.

The Presidents underscored the importance of the upcoming United Nations Conference on Sustainable Development (Rio+20) in Brazil as an opportunity to promote sustainable development through innovation and broad stakeholder engagement. They emphasized the importance of broad participation in the High Level Segment of the Conference, on June 20-22, 2012. In support of this expanded collaboration, they recognized progress on mobilizing investments in smart and sustainable infrastructure in Rio de Janeiro and Philadelphia under the US-Brazil Joint Initiative on Urban Sustainability.

The Leaders praised the strengthening of US-Brazil dialogue on sustainable development and welcomed the adoption of an Environmental Protection Agency-Ministry of Environment Memorandum of Understanding, focused on environmental impact assessment, risk analysis, social inclusion and environmental justice. The leaders also praised the signing of a Memorandum of Understanding on Sustainable Housing and Urban Development to grow cooperative efforts and deepen learning exchange in the field of sustainable housing and urban development in support of the Energy and Climate Partnership of the Americas (ECPA).

They welcomed the outcomes of the 17th Conference of the Parties to the United Nations Framework Convention on Climate Change held in Durban, in December 2011, which reached a comprehensive and balanced result. They further highlighted the importance of the multilateral system in dealing with climate change through effective implementation of the outcomes from Durban.

The Leaders praised the signing of the Memorandum of Understanding on the Aviation Partnership, as

well as progress made toward facilitating greater travel and tourism between their countries while maintaining and improving border security. They noted that the US-Brazil Aviation Partnership will promote bilateral cooperation in infrastructure, air transportation, and air traffic, which will contribute to growth, competitiveness and socioeconomic development in both countries. Areas of engagement may include exchanges of best practices, research and development, innovation, new technologies, sustainability, training, logistics, supply chains and other topics.

The Presidents reviewed the implementation of measures that facilitate the flow of tourists and business executives between the two countries. They committed to work closely together to satisfy the requirements of the of the US Visa Waiver Program and Brazil's applicable legislation to enable US and Brazilian citizens visa free travel. They discussed the "Global Entry" pilot-program and praised the efforts of both governments to facilitate travel, to the benefit of their respective citizens. President Obama recalled his directive to accelerate the U.S. ability to process visas by 40 percent in Brazil this year as well as the Department of State's recent announcement of its intent to open new consulates in Belo Horizonte and Porto Alegre.

They expressed their satisfaction with the advancement of a "Green-Lane" pilot-project on air cargo transportation, aimed at adopting a broad program of mutual recognition of authorized economic operators, to facilitate trade in goods between the two countries.

The Presidents welcomed the adoption of the Brazil-US Action Plan on Science and Technology Cooperation, which reflects the outcome of the March 2012 Joint Commission Meeting (JCM) on Science and Technology and highlighted the creation of a working group on innovation to explore the role of innovation in promoting competitiveness and job creation. The JCM also addressed cooperation in ocean science, technology and observation, disaster management, basic science, measurement standards, including for advanced biofuels, and the importance of access to Earth Observation data. They also welcomed the discussions during the III JCM on health, biomedicine and life sciences, women in science and nanotechnology.

The Leaders highlighted the importance of strengthening the bilateral space cooperation and instructed the appropriate agencies to examine the feasibility of developing joint space projects. They took note of the recent meeting in Brasilia of the Space Security Dialogue.

They highlighted the increasing importance of Internet and information and communication technologies (ICT)-related issues and the need to deepen discussion and expand cooperation between the U.S. and Brazil on issues so vital to their economies and societies. They noted with satisfaction the longstanding collaboration in those areas and welcomed the establishment of a new mechanism for consultations on issues such as Internet governance, Internet/ICT policy, and cyber security.

The Presidents spoke at length about global developments and welcomed the continued progress of the Global Partnership Dialogue (GPD). They welcomed the advancement of educational cooperation, scientific cooperation, and trilateral cooperation under the GPD. The Leaders noted their commitment to promote democracy, respect for human rights, cultural awareness, and social and economic inclusion around the world.

The Presidents concurred that just as other international organizations have had to change to be more responsive to the challenges of the 21st century, the United Nations Security Council (UNSC) also needs to be reformed, and expressed their support for a modest expansion of the Security Council that improves its effectiveness and efficiency, as well as its representativeness. President Obama reaffirmed his appreciation for Brazil's aspiration to become a permanent member of the Security Council and acknowledged its assumption of global responsibilities. The two leaders pledged to continue consultation and cooperation between the two countries to achieve the vision outlined in the UN Charter of a more peaceful and secure world.

In exchanging views on recent challenges in Africa and the Middle East, the Presidents underscored the importance of cooperative efforts to bring about the sustainable settlement of disputes that contribute to peace and stability. They expressed their commitment to support, as a matter of urgency, comprehensive and lasting multilateral solutions to today's pressing global issues and crises.

The Leaders reaffirmed their commitment to government transparency and accountability, as well as citizen engagement as key to strengthening democracy, human rights, and good governance, and preventing corruption. They celebrated their joint launch of the Open Government Partnership (OGP) in New York last September, praised the close collaboration between the two countries as co-chairs of the Partnership and discussed the upcoming OGP meeting in Brasilia, at which more than forty new countries will issue National Action Plans that include concrete new commitments on fighting corruption, promoting transparency, and harnessing new technologies to empower citizens.

President Obama congratulated President Rousseff on Brazil's Freedom of Information Act, and its regional and global leadership role in engaging civil society and attracting a diverse set of countries to the second major high-level meeting. President Rousseff also congratulated President Obama on the U.S. implementation of its OGP plan, including the recent launch of Ethics.gov and the new Green Button initiative to ensure consumers have access to their own energy data.

The Leaders also reviewed and noted the progress of their countries' trilateral development cooperation in Latin America, the Caribbean, and Africa on issues ranging from food security, energy, agriculture, health, decent work, and humanitarian cooperation. They recalled their collaborative work and directed further efforts on trilateral food security cooperation. They welcomed the signing of an agreement on technical cooperation activities to improve food security in third countries.

They encouraged greater trilateral security cooperation and welcomed the recent launching of the pilot project for integrated monitoring system for surplus coca cultivation reduction in Bolivia.

The Presidents praised the cooperation fostered under the Joint Action Plan To Eliminate Racial and Ethnic Discrimination and Promote Equality in the areas of health, environmental justice, access to justice, education, and entrepreneurship in sports megaevents. They noted that as their economies grow, it is important that the benefits accrue to all sectors, including children and aged people and historically marginalized sectors such as women, people of African descent, indigenous peoples, people with disabilities, and LGBT people. They welcomed additional collaboration on LGBT issues in human rights

multilateral fora. They also highlighted progress in bilateral cooperation for gender equality and advancement in the status of women, including efforts aimed at increasing women's political and economic participation in the fields of science and technology; as well as the prioritization of prevention and response to gender-based violence globally.

The Presidents reaffirmed the commitment of both countries to the conclusion of an effective international instrument in the World Intellectual Property Organization that ensures that copyright is not a barrier to equal access to information, culture, and education for visually impaired persons and persons with print disabilities.

They expressed their satisfaction with the positive effect of the dialogue regarding the Hague Convention on the Civil Aspects of International Child Abduction on the implementation of this instrument in Brazil and in the United States.

The Leaders expressed their support for the theme of the upcoming Summit of the Americas, "Connecting the Americas: Partners for Prosperity", which focuses on the role of physical integration, regional cooperation, poverty and inequalities, citizen security, disasters, and access to technologies as a means to achieve greater levels of development and overcome challenges in the Americas.

The Heads of State discussed the importance of continued economic progress and political stability in Haiti, to include the formation of a new government and timely elections. They underlined the achievements of the UN Stabilization Mission in Haiti (MINUSTAH) and encouraged the Government of Haiti (GOH) to work toward strengthening governance and the rule of law. They further encouraged Haiti to continue to pursue the development of the Haitian National Police. To spur new public-private partnerships for Haiti's energy sector, the Leaders committed to working with the GOH on developing and implementing its national energy plan, including its plans to modernize Haiti's electric utility and harness renewable energy sources, like the Artibonite 4C hydroelectric plant, to power Haiti's future development.

The Presidents noted the launch of the Strategic Energy Dialogue (SED) with significant interagency collaboration of both countries. They underscored increased cooperation on oil and gas, biofuels, renewable energy and energy efficiency, science, and clean energy. Underscoring the importance of developing all of these key resources for global energy security, the Leaders directed their governments to seek greater opportunities to work with industry partners to help stabilize global oil and gas markets, increase access to energy, and enhance and promote the development and deployment of renewable, clean and low-carbon energy technologies.

The Leaders noted the importance of broader collaboration on oil and gas exploration; in particular the safe, clean, and efficient production of their countries' oil and gas reserves. They emphasized their commitment to provide opportunities that encourage companies to invest in production and to share their technology and their experience in ways that develop capacity in the oil and gas sector. They highlighted the importance of their governments and industries sharing information on best practices, including on unconventional gas development and through ongoing technical collaboration on deep-water oil and gas operations.

The Leaders committed to continue building on their countries' collaboration on bioenergy technology development and research, as well as sustainability; including for aviation biofuels and cooperation in third countries, such as Global Bioenergy Partnership capacity building in West Africa. They hailed the joint efforts that resulted in the conclusion of the first phase of viability studies for bioenergy production in third countries under the framework of the Memorandum of Understanding to Advance Cooperation on Biofuels.

The Presidents highlighted the importance of their regional cooperation on renewable energy through identification of potential financial resources from multilateral organizations. With regard to energy efficiency, they committed to support regional efforts to increase cooperation in the energy sector and further collaboration under the auspices of the Energy and Climate Partnership of the Americas.

As part of the Presidential Dialogues, the Leaders directed the establishment of a Defense Cooperation Dialogue (DCD) and announced its first meeting on April 24 in Brazil. They noted the importance of the enhanced dialogue in enabling closer bilateral defense cooperation between their countries based on mutual respect and trust. They also observed the DCD will provide a forum for exchanging views and identifying opportunities for collaboration on defense issues around the globe.

They reiterated both countries' strong resolve to support international efforts towards nuclear non-proliferation, nuclear security, and disarmament, aiming to achieve the peace and security of a world without nuclear weapons. In this regard, they expressed support for the review cycle of the Treaty for the Non-Proliferation of Nuclear Weapons (NPT), and the goals identified in the Action Plan adopted by the VIII NPT Review Conference, which includes the entry into force of the Comprehensive Nuclear-Test-Ban Treaty (CTBT), the beginning of negotiations on a treaty banning the production of fissile materials for nuclear weapons or other explosive purposes, and related initiatives. They decided to intensify bilateral and multilateral cooperation in the field of physical protection and nuclear safety, as well as the use of nuclear energy for peaceful purposes.

04/12/2012 06:46:45 PM

Monday, 4/16/2012

08:45 AM-09:15 AM FYI: Daily Briefing
Location: Administrator's Office

09:00 AM-10:00 AM HOLD for Environmental Education Summit
Ct: S. Owens 564.6879

Location: EEOB, Treaty Room

10:00 AM-10:15 AM Depart for Ariel Rios
Location: EEOB

10:15 AM-10:35 AM Rulemaking Issues Discussion
Ct: Noah Dubin - 202-564-7314

Staff:
Bob Perciasepe, Bob Sussman (OA)
Michael Goo (OP)
Scott Fulton (OGC)

Location: Administrator's Office

10:45 AM-11:15 AM One on One with Lisa Garcia
Ct: Andrea Dickerson - 202-564-2349

Staff:
Lisa Garcia (OA)

Optional:
Diane Thompson, Bob Perciasepe, Bob Sussman (OA)
Location: Administrator's Office

11:30 AM-12:00 PM Meeting with Leaders of Sportsmen and Outdoor Conservation Groups
Ct: Dru Ealons 564.7818 and Doretta Reaves 564.7829

Staff:
Bob Sussman (OA)
Dru Ealons (OEAE)

Location: Green Room

12:00 PM-01:00 PM No Meetings

Location: Administrator's Office

01:00 PM-02:00 PM Senior Staff

Location: Bullet Room

02:15 PM-02:45 PM HOLD for Phone Interview with New Jersey Star Ledger

Ct: Alisha Johnson - 202-564-4373

Location: Administrator's Office

03:00 PM-03:15 PM Phone Call with Senator Klobuchar (MN)

Ct: Megan_Lahr@klobuchar.senate.gov, 202-224-6533

**The Senator will call Aaron at 202-564-1783, who will transfer to the Administrator

Topic: Minnesota wild rice

Staff:

Larry Elworth (OA)

Arvin Ganesan (OCIR)

Location: Administrator's Office

03:30 PM-04:00 PM Pre-Brief for Gulf Coast Task Force Meeting

Ct: Caroline Whitehead - 202-566-2907

Staff:

John Hankinson,(GCTF)

Location: Administrator's Office

04:15 PM-05:00 PM Follow-up Title VI Discussion

Ct: Carla Veney - 202-564-1619

Staff:

Scott Fulton, Tseming Yang (OGC)

Gina McCarthy, Janet McCabe (OAR)

Diane Thompson, Lisa Garcia (OA)

Rafael DeLeon (OCR)

Staff:

Scott Fulton (OGC)

Optional:

Diane Thompson (OA)

Location: Administrator's Office

11:00 AM-11:15 AM Press Interview with Dina Cappiello , Associated Press

Ct: Brendan Gilfillan - 202-564-2081

Staff:

Brendan Gilfillan (OEAE)

Location: Administrator's Office

11:30 AM-12:00 PM Emerging Leaders Network Roundtable

Ct: Kelley Smith or Noha Gaber

Ct: Brian Nelson-Palmer - 202-564-6190

Run of Show:

11-11:15 AM: Audience arrival and seating

11:15 AM: Welcome and Opening Remarks

11:30 AM [Administrator arrives/begin IPTV broadcast]:

The Administrator will hold a discussion with moderator Emily Dougherty (OCSP) on her on career path, based on pre-determined questions

11:40 AM: Emily Dougherty will moderate a Q&A session between the Administrator, the audience, staff watching from the Regions

12:00 AM: Brief closing remarks from Host

Staff:

Noha Gaber (OA)

Eric Vance (OEAE)

Location: Green Room

12:00 PM-01:00 PM No Meetings

Location: Administrator's Office

01:20 PM-01:50 PM Drop-by Meeting with Black Mesa Water Coalition

Ct: Marissa McInnis - 202-564-2467

****The Administrator will kick the meeting off then depart after 20 - 30 minutes**

Staff:

Michelle DePass, JoAnn Chase, Karin Koslow (OITA)

Daily Reading File.4.16.12.pdf

Christine Todd Whitman

April 3, 2012

The Hon. Lisa Jackson, Administrator
U.S. Environmental Protection Agency
1200 Pennsylvania Avenue, N.W.
Washington, D.C.

Lisa
Dear Administrator Jackson,

I was interested to read the recent media accounts of the recommendation by the National Environmental Justice Advisory Council (NEJAC) regarding the prevention of chemical disasters at U.S. chemical facilities. I know this is an issue about which we both care very deeply.

In their letter the NEJAC recommended that:

EPA use its authority under the 1990 Clean Air Act section 112 (r), to reduce or eliminate these catastrophic risks, where feasible, by issuing new rules and guidance to fully implement the general duty clause. This action would reduce the danger and imminent threat that chemical plants, chemical manufacturing, and the transport and storage of hazardous chemicals pose to environmental justice and all communities.

I thought it might be helpful to you to know that shortly after the terrorist attacks of September 11, 2001, the EPA seriously considered using section 112 (r) to extend the Agency's existing responsibility for the prevention of accidental releases to include releases caused deliberately.

After careful consideration, I decided that our best alternative was to pursue legislative action to achieve this goal. We felt that enacting a specific law to specifically address the use of the general duty clause was the preferable course of action, since it would likely eliminate, or at least reduce, the potential of a challenge in the courts.

After more than a year of effort working with other departments and agencies and various stakeholders to craft a bill, which included language encouraging the use of inherently safer technologies, the White House decided not to submit the legislation we had drafted. I believed that this decision undermined EPA's ability to carry out its assignment as the lead federal agency in protecting the chemical industry and hazardous materials sector, as provided under the National Strategy for Homeland Security issued in July 2002. I subsequently requested that EPA be relieved of that assignment.

Administrator Jackson

Page 2

Although temporary security legislation was eventually enacted in 2006, it is extremely limited. For example, it actually bars the Department of Homeland Security (DHS) from requiring and particular security measures including chemical hazard reduction. It also exempts thousands of chemical facilities, including all water treatment plants and hundreds of other potentially high-risk facilities, such as refineries located on navigable waters. Since 2009 the EPA and the DHS have asked Congress for authority to implement hazard reduction and eliminate these wholesale exemptions but Congress has failed to act on those requests.

Fortunately, I am advised that the 1990 CAA's authority has not been changed or amended on this subject. The authority we proposed using in our 2002 proposal was the same as the NEJAC is now proposing, section 112(r)(1) of the CAA. It contains an enforceable "general duty" clause that obligates chemical facilities handling the most dangerous chemicals to prevent potentially catastrophic releases to surrounding communities. Facilities with the largest quantities of the most dangerous chemicals (such as poison gases) should assess their operations to identify safer cost-effective processes that will reduce or eliminate hazards in the event of a terrorist attack or accident. This has never been required and today hundreds of these facilities continue to put millions of Americans at risk.

It is well established that safer cost-effective alternatives are widely available. In 2009 the Clorox Company announced plans to convert all of their U.S. facilities. And within 90 days after the 9/11 attacks Washington, D.C.'s wastewater treatment plant converted from chlorine gas to safer liquid bleach. Unfortunately there is still no national program to assess the feasibility or to require the use of safer alternatives at the highest risk facilities.

In 2003 the Government Accountability Office (GAO) concluded that the EPA could *"interpret the Clean Air Act's general duty clause to address chemical facility security from terrorism... According to EPA, it would not have to make any regulatory changes as it currently implements the general duty clause through guidance. Thus, EPA could revise its existing guidance or issue new guidance to include managing the risk of terrorism as within owners and operators' responsibility under the general duty clause."*

Accordingly, I therefore fully support the implementation of the NEJAC recommendations and any other authorities you can apply to reduce these hazards before a tragedy of historic proportions occurs.

Thank you for your commitment to protecting the safety and health of the American people.

Sincerely,

Correspondence Management System

President Barack Obama
The White House
Washington, D.C. 20500

Dear Mr. President:

We commend you for convening the first-ever White House Summit on Environmental Education. It could not be more timely or crucial, in light of the drastic and deeply disappointing cuts proposed in the Fiscal 2013 budget for environmental education programs at EPA, NOAA and NSF.

This summit offers a unique opportunity to develop a new, cohesive, coordinated environmental literacy policy across the Federal government – one that advances not only environmental stewardship, but ensures that all our citizens, and particularly our youth, are prepared with basic knowledge about the environment, energy, and the natural world to succeed in a 21st century workforce and economy. Last year, the No Child Left Inside Coalition—a broad-based coalition comprised of 2,200 environmental, educational, business, health, faith-based, outdoor recreation and other organizations from all 50 states – along with many of our partners from the business community, environmental organizations, and Members of Congress, called on you to issue an executive order to do just that.

We recommended that you create a President's Council on Environmental Literacy co-chaired by Secretaries Duncan and Salazar, with EPA Administrator Jackson and other Cabinet and Sub-cabinet officials, and task them with undertaking a comprehensive assessment of current formal and informal environmental education programs and activities carried out by the Federal government with the goal of developing and submitting to you a thorough and coordinated plan and strategy to promote the education, job skill training, health, and well-being of America's youth and adults through formal and informal environmental education.

We also recommended that an advisory panel of stakeholders be established to review, provide advice, and make recommendations to the Council in the development of the assessments, plans, and strategies. Next week's Summit on Environmental Education provides the opportunity to move forward with these recommendations.

Such a coordinated environmental literacy policy would help to:

- advance your Administration's environmental stewardship, energy, STEM education, workforce development, and health care goals.
- ensure that existing environmental, natural resource, conservation, outdoor, and energy education programs at the Federal level function efficiently in a systematic manner and get the "biggest bang for the buck."
- support the efforts of some 40 States which are now in the process of developing and implementing environmental literacy plans while preserving states' authority to determine their environmental education curriculum.
- achieve your Administration's goals of reconnecting Americans to the great outdoors and raising a healthier generation of citizens.

- ensure that environmental education programs – both formal and informal –reach the greatest number of our youth and citizens of all ages, regardless of their income, race, ethnic or language background, or disability status.

We hope and trust that a coordinated policy developed by an interagency council, with the assistance of stakeholders, will lead to a new vision for environmental education – a vision that addresses the woefully inadequate Federal support for environmental education and results in profound positive impacts on the environmental literacy of our nation's youth and citizens for generations to come.

Your consideration of and leadership on this matter is greatly appreciated.

Message Body

Madame Administrator:

We just sent this letter to President Obama in support of strong rules for New Source Performance Standards and National Emissions Standards for Hazardous Air Pollutants for the Oil and Natural Gas Sector. We wanted to share a copy of this with you. We will be sharing this with OMB OIRA during our meeting on Monday.

If you have questions, please let me know.

Thank you,
Janice Nolen

President Barack Obama
The White House
Washington, DC 20502

Dear President Obama:

When the U.S. Environmental Protection Agency (EPA) proposed important safeguards to address harmful air pollution emitted from the production, processing, transmission and storage from the oil and natural gas industry, we and other leading medical and public health organizations applauded and urged strengthening changes. We urge you to stand strong against requests to weaken or delay the rule with loopholes and exemptions that would have dangerous impacts on public health.

The cleanup of air pollution from oil and natural gas wells is necessary and appropriate given EPA's charge under the Clean Air Act to protect public health from dangerous air pollution with a margin of safety. EPA's proposed standards are an important step towards reducing threats to public health from expanding oil and gas development and they are urgently needed as oil and natural gas production expands.

As professional health and medical organizations, we see irrefutable evidence of serious damage to human health from air pollutants emitted during oil and natural gas production, including sulfur dioxide, nitrogen oxide, and volatile organic compounds (VOCs), including air toxics such as benzene and formaldehyde, as well as increasing levels of ozone and particulate matter. These pollutants can worsen asthma, cause heart attacks, and harm the circulatory, respiratory, nervous, and other essential and vital life systems. They are also linked to cancer, developmental disorders, and even premature death. People most at risk of harm from breathing these air pollutants are depending on you to adopt these standards, including: infants, children and teenagers; older adults; pregnant women; people with asthma and other lung diseases; people with cardiovascular disease; diabetics; people with low incomes; and healthy adults who work or exercise outdoors. President Barack Obama April 13, 2012 Page 2 of 2

Natural gas production is expanding into highly populated areas of the country. The growth in oil and gas development across the nation means that many more people may be at risk from these pollutants unless EPA can provide strong, effective standards for reducing emissions of these pollutants. The adoption of the safeguards against air pollution from oil and natural gas production, as required under the Clean Air Act, will protect the public from life-threatening pollution. Limiting emissions from oil and natural gas production will yield tremendous benefits and significantly reduce adverse health effects.

The nation needs the EPA to strengthen the oil and natural gas standards to effectively protect the health of those most at risk. The standards must be strengthened to keep up with the

expansions and the new technology in the oil and gas industry. Your administration has a historic and momentous opportunity to clean the air of notoriously harmful pollutants that endanger human health.

We trust that you will resist last-minute pressure tactics from polluters seeking delays, loopholes and exemptions and reject any efforts to weaken these important public health safeguards.

Sincerely,

Charles D. Connor, JD

April 13, 2012

President Barack Obama
The White House
Washington, D.C. 20500

Dear President Obama:

We commend you for convening the first-ever White House Summit on Environmental Education.

This summit offers a unique opportunity to develop a new, cohesive, coordinated environmental literacy policy across the Federal government – one that advances not only environmental stewardship, but ensures that all our citizens, and particularly our youth, are prepared with basic knowledge about the environment, energy, and the natural world to succeed in a 21st century workforce and economy. We desperately need to reconnect our youth with the natural world given all the values our outdoor places provide to children.

Last year, the No Child Left Inside Coalition—a broad-based coalition comprised of 2,200 environmental, educational, business, health, faith-based, outdoor recreation and other organizations from all 50 states—along with many of our partners from the business community, environmental organizations, and Members of Congress, called on you to issue an executive order to do just that.

We recommended that you create a President's Council on Environmental Literacy co-chaired by Secretaries Duncan and Salazar, comprised of EPA other Cabinet and Sub-cabinet officials, and task them with undertaking a comprehensive assessment of current formal and informal environmental education programs and activities carried out by the Federal government.

The goal should be to develop and submit to you a thorough and coordinated plan and strategy to promote the education, job skill training, health, and well-being of America's youth and adults through formal and informal environmental education, and quality structured and unstructured outdoor experiences.

We also recommended that an advisory panel of stakeholders, including states, be established to review, provide advice, and make recommendations to the Council in the development of the assessments, plans, and strategies. Next week's Summit on Environmental Education provides the opportunity to move forward with these recommendations.

Such a coordinated environmental literacy policy would help to:

- Advance your Administration's environmental stewardship, energy, STEM education, workforce development, and health care goals.

- Ensure that existing environmental, natural resource, conservation, outdoor, and energy education programs at the Federal level function efficiently in a systematic manner and get the “biggest bang for the buck.”
- Support the efforts of some 40 states which are now in the process of developing and implementing environmental literacy plans while preserving states’ authority to determine their environmental education curriculum.
- I am proud to say that under the leadership of your ally and friend, Governor Martin O’Malley, Maryland was the first state to establish an environmental literacy high school graduation requirement coupled with a variety of programs and initiatives to reconnect our youth with the outdoors.
- Achieve your Administration’s goals of getting Americans out into our great outdoors and raising a healthier generation of citizens.
- Ensure that environmental education programs – both formal and informal – reach the greatest number of our youth and citizens of all ages, regardless of their income, race, ethnic or language background, or disability status.

We hope and trust that a coordinated policy developed by an interagency council, with the assistance of stakeholders, will lead to a new vision for environmental education – a vision that results in profound positive impacts on the environmental literacy of our nation’s youth and citizens for generations to come.

Your consideration of and leadership on this matter is greatly appreciated.

Sincerely,

John R. Griffin
Secretary

REC'D
2012 APR 16 PM 1:06
OFFICE OF THE
COMMISSIONER
ENVIRONMENTAL PROTECTION

Dear Administrator Jackson:

I am a strong supporter of coal production as coal is still a major fuel for the world's electric plants. Therefore, I sponsored Senate Resolution 437 in the Illinois State Senate where it was unanimously adopted on March 29, 2012. Enclosed is a copy of this important Resolution.

Senate Resolution 437 urges the U.S. Army Corps of Engineers, the U.S. Environmental Protection Agency, the President's Council on Environmental Quality, the Illinois Congressional Delegation, and other State government officials to support coal production and the jobs, economic growth, and energy security provided by coal mining by fixing a regulatory system that is frustrating these vital objectives.

Thank you for your attention and consideration in this essential matter.

Sincerely,

Sam McCann
State Senator

Enclosure

09700SR0437

LRB097 14072 KXB 59680 r

STATE OF ILLINOIS
NINETY-SEVENTH GENERAL ASSEMBLY
SENATE

Senate Resolution No. 437

Offered by Senator Sam McCann

WHEREAS, The links between coal production, economic growth, prosperity, and energy security are unbreakable; and

WHEREAS, Coal is the main source of energy throughout the world, provides half of the electricity used in the United States, and is a considerable amount of the electricity generated in the midwest and Illinois; and

WHEREAS, The Illinois Coal Association reports that of all the states, Illinois has the largest reported bituminous coal resources with almost 25% of our nation's reserves; coal bearing rocks underlie about 65% of Illinois (36,806 out of a total of 56,500 square miles), including all or parts of at least 86 of the 102 counties in the State; and

WHEREAS, According to the Illinois State Geological Survey (ISGS), there are 100 billion tons of recoverable coal beneath the surface of Illinois, enough coal to meet the country's need for coal for the next 100 years; there is more energy content in

09700SR0437

2

LRB097 14072 KXB 59680 r

the coal in Illinois than in the oil in Saudi Arabia and Kuwait combined; and

WHEREAS, The industry that mines coal is a highly mechanized one; at the start of 2008, there were 17 mines operating in central and southern Illinois; the bulk of these mines are operated by leading companies in American coal mining; Illinois coal mines produced 32.4 million tons of coal in 2007; and

WHEREAS, Coal mine lands are being restored, as part of the reclamation process, to meet ongoing, economic, recreational, educational, transportation, and housing needs of local communities and the State; and

WHEREAS, The backlog of permit approvals and the lack of transparency in the federal permitting process are jeopardizing jobs, economic opportunity, and coal production throughout Illinois and the region; therefore, be it

RESOLVED, BY THE SENATE OF THE NINETY-SEVENTH GENERAL ASSEMBLY OF THE STATE OF ILLINOIS, that the Illinois General Assembly call upon the U.S. Army Corps of Engineers, the U.S. Environmental Protection Agency, the President's Council on Environmental Quality, and the Illinois congressional delegation and other State government officials to support coal production and the jobs, economic growth, and energy security provided by coal mining by fixing a regulatory system that is frustrating these vital objectives; and be it further

April 13, 2012

Dear Administrator Jackson,

We write to reiterate our support for the Environmental Protection Agency's Bristol Bay Watershed Assessment, and we would like to express our approval for the scrupulousness EPA has brought to its work in the region. In particular, we commend the agency for having consulted regularly and at length with federal, state, and tribal stakeholders; for holding public meetings in several locations in the region; and for providing frequent, detailed updates over the many months that the assessment has been underway.

Your agency should be praised for its timely response to the concerns of the region's residents and many additional stakeholders. We are gratified EPA recognized that the Bristol Bay watershed warrants particular attention and analysis, and we encourage the agency to continue its work on the assessment.

Please find the enclosed copy of our previous letter, dated March 16th, 2011, affirming our support for EPA's undertaking.

Sincerely,

Senator Gary Stevens

The Honorable Lisa Jackson, Administrator
Environmental Protection Agency
1200 Pennsylvania Ave. NW
Washington DC 20460

Dear Administrator Jackson,

We are writing to you to express our support for your agency's Bristol Bay Watershed Assessment. As you know, the Bristol Bay region of Alaska and the high quality waters of its lake, river and stream systems produce and sustain high value wild runs of Sockeye, King, and Coho salmon. These wild salmon returning to Bristol Bay number in the tens of millions each year, supporting and sustaining Alaska's richest commercial fishery. These salmon runs are central to the subsistence lifestyle and diverse Native cultures of the Bristol Bay region. Furthermore, Bristol Bay's salmon producing lake and river systems, especially the Mulchatna and Nushagak River drainages as well as the Iliamna Lake and Kvichak River system, support and sustain an unsurpassed highly valuable fishery for salmon, rainbow trout, char, and grayling.

Because low grade high volume metallic bearing sulfide rock formations in the Bristol Bay watershed have attracted interests in developing mega-scale industrial development projects which may pose substantial long-term risks to the water quantity and quality and biological health of the Nushagak/Mulchatna and Iliamna/Kvichak systems, we are very concerned that these areas be proactively protected. Health and safety risks can put the valuable sustainable wild salmon runs at risk. Diversion, dewatering, and impoundment of free flowing streams in the headwaters area will be necessary to build roads, facilities, and provide water for potential mining operations. The risk these activities would pose to the local economy and lifestyle greatly concern the vast majority of residents in the Bristol Bay region.

We are aware that local residents, fishing interests, tribes, and the Bristol Bay Native Corporation within the Bristol Bay region have asked that the Environmental Protection Agency review the suitability of the Nushagak/Mulchatna and Iliamna/Kvichak headwaters area for dredge and fill permits pursuant to section 404(c) of the Clean Water Act. We see the agency's watershed assessment process as a prudent first step in responding to the concerns of the regions local and indigenous people.

Thus, we are in full support of the Environmental Protection Agency's decision to conduct a thorough scientific review of the unique geologic, hydrologic, and environmental resources of the headwaters area, pursuant to

its authority under the Clean Water Act, to determine if dredge and fill activities necessary to develop industrial projects which may be massive in scale will cause unacceptable adverse impacts to water quantity and quality or expose the sustainable salmon and fishery resources in the headwater area and adjoining lakes, rivers or streams to unacceptable risks of significant loss or damage. If this scientific inquiry reveals that development and operation of a large scale open pit mine, disposal of billions of tons of acid-generating waste rock, and other impacts on water quantity and quality are likely to have unacceptable adverse impacts or expose the salmon and other fishing resources to unacceptable risks of significant loss or damage, the agency should designate the headwaters pursuant to section 404(c) as unsuitable for large scale potentially toxic dredge and fill permits. We believe that after this scientific review, EPA will have the information they need to make informed decisions, and would like these decisions to be proactive, so as to provide certainty for all parties as the permitting process moves forward.

Again, we thank you and your staff for your attention on this matter. You have our support.

Sincerely,

Senator Gary Stevens

Senator Lyman Hoffman

Representative Alan Austerman

Representative Bryce Edgmon

Subject: NRDA early restoration projects and assessment status update

Hi John and Mary Kay,

Attached are the press release announcing the NRDA final phase I early restoration plan and the NRDA assessment status update, which Monica mentioned on yesterday's call. Please feel free to send these materials out to the GCERTF members.

Let me know if you have any questions.

Many thanks,
Jainey

FINAL NRDA Early Restoration Phase I Release.pdfFINAL_NRDA_StatusUpdate_April2012.pdf

Deepwater Horizon Natural Resource Damage Assessment

Deepwater Horizon Natural Resource Trustees Announce Major Progress in Gulf Restoration Effort

For Immediate Release: April 18, 2012

An estimated \$60 million in early restoration projects soon will begin along the Gulf Coast following the nation's largest oil spill, the *Deepwater Horizon* Natural Resource Damage Assessment (NRDA) Trustee Council announced today.

With finalization of the "*Deepwater Horizon* Phase I Early Restoration Plan & Environmental Assessment" (ERP/EA), eight restoration projects will be implemented. The projects provide for marsh creation, coastal dune habitat improvements, nearshore artificial reef creation, and oyster cultch restoration, as well as the construction and enhancement of boat ramps to compensate for lost human use of resources.

The ERP/EA is the first early restoration plan under the unprecedented April 2011 agreement with BP to fund \$1 billion in early restoration projects. The funding enables the trustees to begin restoration before the completion of damage assessment activities.

The trustees are working to move the next phase of early restoration forward. The selection process for future early restoration projects will proceed along the same lines as the first. After reaching preliminary agreement with BP on proposed projects, the trustees will seek public comments before finalizing any future plan.

"Having carefully planned the projects in Phase I and extensively discussed them with the public, we are confident that the projects will achieve our goal of beginning to heal the Gulf's ecosystem and people's enjoyment of it," said Alabama representative Cooper Shattuck, chair of the NRDA Trustee Council's Executive Committee.

The Phase I projects, including two each in Louisiana, Mississippi, Alabama and Florida, were the focus of 12 public meetings held throughout the Gulf states and in Washington, D.C., during the months of January and February 2012.

In addition to speaking at meetings, hundreds of citizens filed comments by mail and online. Following the meetings, more than 500 people and organizations submitted comments, which were gathered and carefully evaluated. The comments, as well as trustee responses to them, are included in the Phase I plan, which can be reviewed at www.gulfspillrestoration.noaa.gov and www.doi.gov/deepwaterhorizon. The NOAA Gulf Spill Restoration site also provides additional information about restoration planning and a [status update](#) on the ongoing damage assessment.

"We are deeply grateful to everyone who took the time to participate in the process and hope for their continued engagement as we move ahead," said Department of the Interior trustee Rachel Jacobson, Acting Assistant Secretary of Fish and Wildlife and Parks. "The public's comments strengthen our belief in these projects, and offer some great ideas for the future."

"The early restoration projects will drive both ecological and economic renewal," said NOAA trustee Monica Medina, Principal Deputy Undersecretary of Commerce for Oceans and Atmosphere. "Through these and future projects, the trustees intend to build a regional restoration economy."

"These projects allow us to begin implementing restoration of Louisiana's natural resources quickly, rather than waiting years for the completion of the full assessment," said Louisiana trustee Garret Graves, chairman of the Coastal Protection and Restoration Authority of Louisiana. "But we continue to be focused on pursuing additional projects with BP. Nearly two years after the start of the oil spill, we hope that BP moves quickly to approve future restoration for the Gulf Coast."

"The Phase I projects mark an important first step in assuring Mississippi's recovery from the Deepwater Horizon spill, but they are only a first step. We will continue to press for additional projects to restore coastal marshes, damaged shorelines and sensitive areas of ocean habitat and estuaries vital to the sustainability of marine ecosystems," said Mississippi trustee Trudy D. Fisher, Executive Director of the Mississippi Department of Environmental Quality. "The health and sustainability of the Gulf of Mexico are vital links to a strong economy and the livelihood of our coastal residents."

"Florida's focus on early restoration has been to ensure environmental impacts are addressed as well as to make up for the loss of access to our natural resources by residents and visitors alike," said Florida trustee representative Mimi A. Drew, special advisor to the Florida Department of Environmental Protection Secretary Herschel T. Vinyard, Jr. "Public confidence in a healthy, high-quality environment in Florida is vital to ensuring a healthy economy."

"Natural systems are interconnected, and these Phase I projects will contribute to making the Gulf system whole," said Carter Smith, Texas Parks and Wildlife Department executive director, representing the Texas trustees. "As we mark this milestone, we're looking forward to advancing Texas-specific project proposals for the next early restoration phase."

NATIONS: Mexico approves groundbreaking climate bill *(Friday, April 20, 2012)*

Lisa Friedman, E&E reporter

Mexico's Senate unanimously approved landmark climate change legislation yesterday that sets the country on a pioneering path to drastically reduce its domestic greenhouse gas emissions. The measure calls for Mexico to cut carbon 30 percent below business-as-usual growth by 2030 and 50 percent by midcentury. It now goes to President Felipe Calderón, who has championed action to control climate change and is expected to sign it. Once the legislation is finalized, Mexico will be only the second country after the United Kingdom to

have domestic global warming legislation in place, activists said. It also will be a leader among developing nations taking concrete steps to rein in explosive carbon growth.

"No developing country in the world has a climate law, let alone a climate law that has this vision and this ambition, that integrates all of the sectors at the national level in a system for climate change," said Vanessa Perez-Cirera, head of climate and energy programs for WWF Mexico. Mexico is the world's 11th-largest economy, as well as the 11th-largest greenhouse gas emitter. But under the rules of the U.N. climate change regime, it is not yet obligated to curb carbon. Activists said yesterday that Mexico has a long way to go -- the new bill, which passed 78-0 just a week after overwhelming House passage, does not put a price on carbon, nor does it mandate that the country meet the emission reduction goals.

But by putting the targets into law and mandating a set of regulations -- including requiring 35 percent of the country's electricity to come from clean sources by 2024; establishing a voluntary carbon market; developing incentives to promote renewable energy; phasing out fossil fuel subsidies; and forcing companies in the largest carbon polluting sectors to report their emissions -- they said the results could be groundbreaking.

"It's a major thing. We're making these targets legally binding, so we're actually putting our actions where our mouth is," Perez-Cirera said.

A surprise vote

"No longer in the future will the business community, or even a large number of members from Pemex [Mexico's state-owned petroleum company] or local governments be able to say, 'I'm not obliged to do anything.' We've heard that so often," said Adrian Fernandez, environmental and climate adviser to the dean of Metropolitan University in Mexico City.

Particularly critical, Fernandez said, are provisions that establish a high-level climate change commission and a national emissions registry, as well as give the National Institute of Ecology -- sort of an in-house think tank to the environment ministry -- expanded powers. The agency also gets a new name, the National Institute of Ecology and Climate Change.

"This is not a small thing. Now, for the very first time, the various ministries and many others will be able to allocate explicitly financial resources devoted to both mitigation and adaptation," he said.

"This will help Mexico in going to the next stage in climate policies, which is tackling the challenge of implementation. Now it's about time to be really moving forward in very serious implementation."

Mexico's iron and steel trade association, CANACERO (Cámara Nacional de la Industria del Hierro y del Acero) did not respond yesterday to a request for comment. The industry group over the past several months has warned that the measure could lead to job losses and hurt the industry's competitiveness.

Analysts said they believe the measure will help shift dynamics in the international climate change talks, where developing and industrialized countries continue to struggle over taking legally binding commitments to cut carbon emissions.

"We see it is in Mexico's interest to achieve these goals, and I would hope Mexico is giving an interesting signal to other countries that this is possible," said Andres Avila, Mexico representative for the Washington, D.C.-based Center for Clean Air Policy.

"This is important, as it shows that Mexico is serious about addressing climate change even if there is a change in leadership," agreed Jake Schmidt, international climate change policy director for the Natural Resources Defense Council. "This is another sign of how times have changed. Developing countries are acting, and questions linger about the U.S.'s actions."

The bill's passage comes on the heels of Mexico's worst drought in more than 70 years, which advocates said played no small part in the debate. The bill focuses heavily on the likely impacts of climate change in Mexico and points to concerns over the increase in extreme weather events. But with the legislative session ending this week, activists said they were not sure it would actually pass. Avila noted that the bill wasn't even on the Senate calendar yesterday. Its reading and subsequent Senate passage caught even close followers of the legislation by surprise.

"It took us two years to have this law," he said. "Like most things in Mexico, we did it at the last minute. But we managed to accomplish it."

Subject: a quick question regarding a short piece I'll do which touches on the EPA-White House relationship

Dear All,

The Center for Progressive Reform has given me a copy of a FOIA they've done, in which EPA staff was clearly taken aback by an White House response to an inquiry John Boehner had made concerning the cost of regulations, such as the MACT rule. I'm not sure who would want to comment on this--maybe EPA and OMB--but I thought it was easiest to email all three of you.

This will be for a short, stand-alone piece which I'll turn around for either tomorrow's paper, if I can get a quick enough response, or a day later if that's impossible,

Thanks, and I'm at the usual numbers if you need to call.

Best,

Juliet

Document Body

Quick look: The numbers in the appendix re: Ozone and MATS, are accurate, but approximate. Re: the Major Source Boilers, looks like they pulled the \$3 billion from the April 2010 proposal, which is accurate, but we finalized (and immediately reconsidered) a significantly less costly boiler rule in February 2011 (\$1.4 billion).

Subject: Re: Letter from the President to the Speaker of the House of Representatives.

I have spoken with Chris Lu, who also was unaware of the letter and it's release prior to it going out the door.

He is following up with OIRA now. I made several points to him for that purpose. First, that we've spent a great deal of time and energy framing these rules with the public health and environmental benefits, and when and how they are driven by statutory, scientific and legal obligations, which this letter and appendix do not. And second, that in the interest of both accuracy and situational awareness tighter coordination would be appreciated and in this case would have avoided a fairly significant error.

Chris found those to be compelling points and I'm sure will relay them to OIRA (Cass and/or Fitzpatrick was the inference), but I would certainly endorse relaying that message to others.

Subject Re: Wash Post inquiry

FYI - here' s the story:

EPA e-mails on anti-pollution rules reveal agency's frustration with White House

By [Juliet Eilperin](#), Thursday, May 3, 12:49 PM

Sometimes the Obama administration operates like a well-oiled machine when it issues pronouncements on how its [proposed regulations](#) will affect the nation.

Other times, it doesn't.

An Aug. 30, 2011, e-mail exchange among [Environmental Protection Agency](#) officials, obtained by the [Center for Progressive Reform](#) under the Freedom of Information Act, provides a glimpse into how agency officials thought the White House failed to adequately capture their work on anti-pollution rules opposed by Republicans and industry officials.

In responding to an [inquiry](#) from House Speaker John Boehner (R-Ohio) about which regulations proposed by his administration would cost more than \$1 billion, President Obama sent a [letter](#) that — in EPA officials' view — not only caught them by surprise but also misstated the cost of one of their rules and failed to highlight the potential benefits of others.

Obama's Aug. 30 letter identified seven rules — four under EPA's jurisdiction — and included an appendix citing costs ranging between \$1 billion and \$90 billion.

The appendix put the price tag of a controversial EPA proposal to cut pollution from [industrial boilers](#) at \$3 billion. That was the initial estimate in August 2010, but EPA had finalized a rule in February 2011 that it estimated would cost less than half that — \$1.4 billion.

That discrepancy prompted Dan Kanninen, EPA's White House liaison, to call and complain to White House Cabinet secretary Christopher Lu, according to the e-mails.

Kanninen wrote his colleagues that he emphasized two points in his conversation with Lu: "First, that we've spent a great deal of time and energy framing these rules with the [public health and environmental benefits](#), and when and how they are driven by statutory, scientific and legal obligations, which this letter and appendix do not. And second, that in the interest of both accuracy and situational awareness tighter coordination would [have] been appreciated and in this case would have avoided a fairly significant error."

“Did anyone get any heads up on this letter?” asked then-EPA press secretary Betsaida Alcantara in one e-mail.

“We did not get contacted,” replied the agency’s deputy administrator, Bob Perciasepe.

The boiler rule, which EPA is now reconsidering and could issue within a matter of weeks, has inspired serious resistance on Capitol Hill.

EPA declined to comment on the e-mails.

The Center for Progressive Reform had sought internal White House e-mails in order to obtain more information about Obama’s decision last fall to pull back expected strict smog standards. That Freedom of Information request produced the e-mails about the Aug. 30 letter.

Rena Steinzor, the center’s president, said the exchange is both “illuminating” and “frustrating” because in responding to Congress, the White House didn’t emphasize the health and economic benefits that come from these sort of regulations.

“The White House’s persistent efforts to [placate industry critics](#) undermine the EPA’s effort to communicate the benefits to the public of regulation, and are factually quite dishonest,” Steinzor said. “EPA [may not complain publicly](#). And, the vital information about the positive benefits of public policies — an essential part of the story about those policies — goes missing.”

Asked about the exchanges, White House spokesman Clark Stevens wrote in an e-mail Wednesday that the Aug. 30 letter “included an appendix which responded to the Speaker’s request for rules that met specific criteria.”

“As a result, the rules in the appendix were from several agencies, and [Office of Information and Regulatory Affairs] had worked closely with those agencies during the important interagency review process every draft rule undergoes,” he added. “It goes without saying that the White House coordinates with departments and agencies across the federal government every day.”

Critics of the administration said the e-mails raised questions about how it measures the economic impact of its actions.

“More than anything, these e-mails are another reminder of the enormous and expensive authority that little-known EPA bureaucrats have over broad segments of our economy,” said Brendan Buck, spokesman for Boehner.

Diane Katz, a Heritage Foundation research fellow in regulatory policy, said just because a rule may produce benefits outweighing its costs doesn’t mean that regulation is justified.

“The costs aren’t any less to those entities because of the benefits,” Katz said, adding that the exchange “suggests the White House is not really focused on the costs of regulation.”

Subject: a quick question regarding a short piece I'll do which touches on the EPA-White House relationship

Dear All,

The Center for Progressive Reform has given me a copy of a FOIA they've done, in which EPA staff was clearly taken aback by an White House response to an inquiry John Boehner had made concerning the cost of regulations, such as the MACT rule. I'm not sure who would want to comment on this--maybe EPA and OMB--but I thought it was easiest to email all three of you.

This will be for a short, stand-alone piece which I'll turn around for either tomorrow's paper, if I can get a quick enough response, or a day later if that's impossible,

Thanks, and I'm at the usual numbers if you need to call.

Best,
Juliet

EPA e-mails on anti-pollution rules reveal agency's frustration with White House

By [Juliet Eilperin](#), Thursday, May 3, 12:49 PM

Sometimes the Obama administration operates like a well-oiled machine when it issues pronouncements on how its [proposed regulations](#) will affect the nation.

Other times, it doesn't.

An Aug. 30, 2011, e-mail exchange among [Environmental Protection Agency](#) officials, obtained by the [Center for Progressive Reform](#) under the Freedom of Information Act, provides a glimpse into how agency officials thought the White House failed to adequately capture their work on anti-pollution rules opposed by Republicans and industry officials.

In responding to an [inquiry](#) from House Speaker John Boehner (R-Ohio) about which regulations proposed by his administration would cost more than \$1 billion, President Obama sent a [letter](#) that — in EPA officials' view — not only caught them by surprise but also misstated the cost of one of their rules and failed to highlight the potential benefits of others.

Obama's Aug. 30 letter identified seven rules — four under EPA's jurisdiction — and included an appendix citing costs ranging between \$1 billion and \$90 billion.

The appendix put the price tag of a controversial EPA proposal to cut pollution from [industrial](#)

[boilers](#) at \$3 billion. That was the initial estimate in August 2010, but EPA had finalized a rule in February 2011 that it estimated would cost less than half that — \$1.4 billion.

That discrepancy prompted Dan Kanninen, EPA's White House liaison, to call and complain to White House Cabinet secretary Christopher Lu, according to the e-mails.

Kanninen wrote his colleagues that he emphasized two points in his conversation with Lu: "First, that we've spent a great deal of time and energy framing these rules with the [public health and environmental benefits](#), and when and how they are driven by statutory, scientific and legal obligations, which this letter and appendix do not. And second, that in the interest of both accuracy and situational awareness tighter coordination would [have] been appreciated and in this case would have avoided a fairly significant error."

"Did anyone get any heads up on this letter?" asked then-EPA press secretary Betsaida Alcantara in one e-mail.

"We did not get contacted," replied the agency's deputy administrator, Bob Perciasepe.

The boiler rule, which EPA is now reconsidering and could issue within a matter of weeks, has inspired serious resistance on Capitol Hill.

08:45 AM-09:30 AM Daily Briefing

(Tuesday due to Monday holiday)

Location: Administrator's Office

10:00 AM-10:30 AM One on One with Peter Grevatt

Ct: Florence Claggett - 202-566-0637 (OCHP)

Staff:

Peter Grevatt (OCHP)

Optional:

Diane Thompson, Bob Perciasepe, Bob Sussman (OA)

Location: Administrator's Office

10:45 AM-11:05 AM Conference Call with R5 re: Clyde, OH

Ct: Felicia Williams - 312-353-5697

**Aaron will call Felicia at 312-353-5697 who will transfer to Susan

Staff:

Susan Hedman (R5)

Optional:

Diane Thompson, Janet Woodka (OA)

Location: Administrator's Office

11:15 AM-11:45 AM One on One with Lisa Garcia

Ct: Andrea Dickerson - 202-564-2349

Staff:

Lisa Garcia (OA)

Location: Administrator's Office

12:00 PM-01:00 PM No Meetings

Location: Administrator's Office

01:00 PM-02:00 PM Senior Staff

Location: Bullet Room

02:00 PM-02:30 PM Meeting with Marathon CEO, Clarence Cazalot

Ct: Ryan Robison - 202-564-2856
Marathon Ct: Brandon Kirkham - 202-329-4160

Attendees:

Clarence Cazalot, Chairman, President and CEO, Marathon Oil
Eileen Campbell, Vice President, Public Policy, Marathon Oil
Brandon Kirkham, Director, Federal Government Affairs, Marathon Oil

Staff:

Bob Perciasepe, Bob Sussman, Janet Woodka (OA)
Location: Administrator's Office

02:45 PM-03:15 PM One on One with Lek Kadeli

Ct: Nathan Gentry - 202-564-9084

Staff:

Lek Kadeli (ORD)

Optional:

Diane Thompson, Bob Perciasepe, Bob Sussman (OA)

Location: Administrator's Office

03:30 PM-04:00 PM One on One with Bob Perciasepe

Ct: Teri Porterfield - 202-564-7683

Staff:

Bob Perciasepe (OA)

Location: Administrator's Office

04:15 PM-05:00 PM Briefing re: Analysis of Impact of Sackett v . EPA

Ct: Linda Huffman - 202-564-3139

Staff:

Cynthia Giles, Larry Starfield, Steve Chester, Pam Mazakas, Mark Pollins, Carol
Holmes, Elliott Gilberg (OECA)
Scott Fulton (OGC)
Ken Kopocis (OW)

Optional:

Bob Perciasepe, Bob Sussman, Diane Thompson (OA)
Arvin Ganesan (OCIR)

Location: Bullet Room

Wednesday, 5/30/2012

08:00 AM-10:00 AM Out of Office

Location: Out of Office

10:30 AM-11:30 AM HOLD for On-Camera CNN Interview

Ct: Alisha Johnson - 202-564-4373

**Includes drive times to potential locations

Location: TBD

12:00 PM-01:00 PM No Meetings

Location: Administrator's Office

01:30 PM-02:15 PM JIUS Update
